After payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, income-tax, and corporation profits tax, the accounts show a profit of £301,969 6s 7d, to which falls to be added the balance brought forward from last year of £83,501 0s 1d, making an available total of £385,470 6s 8d.

After setting aside the sum of £120,000 to contingency reserve account, and allowing the sum of £60,000 for the interim dividend of 6 per cent., free of income-tax, paid on October 23, 1923, the directors now recommend the payment of a further dividend of 12 per cent., making a total of 18 per cent. for the year, free of income-tax, and that the balance of £85,470 6s 8d be carried forward.

From the figures you will see that the business of the bank continues to expand.

In the accounts for the previous year—to March 31, 1923—shareholders will recollect an item of £25,000 allocated in our profit and loss account to staff pensions fund. After very careful consideration, and after your directors having taken advice of counsel upon their powers in administering a pensions fund, it is considered to be to the advantage of both the bank and the staff that the pensions fund should continue for the present upon its original basis, and not be made into a separate legal trust. The

£25,000 referred to will consequently disappear under the head of pensions fund, and will be added to the bank's contingency reserve.

Mr H. Bendixon seconded the motion, which was carried unanimously.

GRESHAM FIRE AND ACCIDENT INSURANCE SOCIETY, LIMITED.

CHAIRMAN'S REVIEW OF THE PAST YEAR'S RESULTS. CONTINUED STEADY PROGRESS.

The fourteenth annual general meeting of the Gresham Fire and Accident Insurance Society, Limited, was held, on Tuesday, the 20th instant, at the head office of the society, 188-190 Fleet street, London, E.C., Sir Reginald MacLeod of MacLeod, K.C.B. (the chairman), presiding.

The general manager and secretary (Mr T. Brand Miller) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—There is a good deal of business before us to-day, so I will at once proceed to pass in review the accounts which are in your hands. The fire premium income amounted to £157,365, which is £16,447 more than in the previous year. The fire claims required £77,750, the ratio being 49.4 per cent., or 8.2 per cent. less than in 1922. The commission and management expenses taken together amount to 42.8 per cent., against 42.4 per cent. for 1922. After providing the usual reserve for unexpired risks a balance of £6,391 is carried from the fire account to the credit of the profit and loss account.

ACCIDENT BRANCH.

In the accident account the premium income also shows an increase, standing at £117,659, against £111,186 for the previous year, the increase being £6,473. The claims at £55,239 have been heavier, amounting to 46.9 per cent., compared with 42.1 per cent. for 1922. The increase in the accident claims occurs entirely in our foreign accident business, but the higher ratio of 46.9 per cent. is one which is really very satisfactory, on the whole, as compared with the experience of other companies doing a general accident business. The commission and expenses of management taken together in this department are 46.1 per cent., compared with 46.2 per cent. for 1922. The directors would like to see this ratio reduced, and the subject is always before them, and no opportunity is lost in effecting desirable economies which do not hamper the efficiency of the working of the business. Combining the results of the society as a whole, the total income from all sources amounted to £287,054, an increase of nearly £20,000 over the previous year. The claims paid and outstanding, amounting to £132,990, represent 48.35 per cent., against 50.74 per cent. for 1922, a reduction of close upon 2½ per cent. The expenses of management and commission represent 44 per cent., compared with 43.82 per cent., which shows a trifling increase over the previous year.

The excess of receipts over expenditure is £26,572 19s 3d, and to this amount must be added the sum of £10,020 standing at the credit of profit and loss account at the beginning of the year, and the balance of the contingency reserve, amounting to £2,500. This reserve was held to meet possible losses through non-payment of enemy debts. These have now been fully liquidated, and it is no longer necessary to retain this reserve in being. After providing for the usual reserve for unexpired risks there is an available balance of £31,071 15s 5d, against £30,870 in 1922.

Our income from investments is now over £12,000, which is an increase of £2,000 over 1922, and the directors recommend the payment of a dividend of 6 per cent., less income-tax, which is the same as last year, and will absorb £9,225. We have also applied a sum of £12,362 7s 2d for the further reduction of the establishment of business account in pursuance of our recognised policy in this matter, and the balance remaining, viz., £9,484 8s 3d, is carried forward. I referred last year to the burden of taxation, with special reference to the corporation profits tax. One moiety was removed last July, and complete repeal will take effect from next July.

RESULTS EMINENTLY SATISFACTORY.

Looking at the accounts as a whole, we are of opinion that the results are eminently satisfactory. Steady progress has been made under most adverse conditions. When I addressed you a year ago I expressed a hope that the financial and commercial difficulties of the country would gradually, but surely, be overcome. At the end of 1923 no one could point to any great improvement in the trading conditions over those of the previous year, and it is on that account all the more gratifying that the premium income of the society shows a substantial increase of close on £23,000, or nearly 10 per cent. over that of the previous year. We are also glad to see a reduction in the claims ratio to 48.35 per cent. The expense ratio is practically the same as in the previous year. All outstanding liabilities which can be foreseen have been provided for, and the

society has weathered the periods of extreme stress in the general conditions of trade at home and abroad with considerable success. The year now past has undoubtedly been one of difficulty for assurance business, and it is with a real sense of obligation that I wish to say on behalf of the board how we realise and appreciate the competence and devotion shown by our general manager and by his staff at home and abroad. I now move: "That the directors' and auditors' reports be approved and adopted, and that a dividend at the rate of 6 per cent., less income-tax, be paid upon the paid-up capital of the society." I shall ask the deputy-chairman to second the resolution.

Mr Courtenay C. S. Fooks (deputy-chairman) said: Gentlemen,—Since my colleagues on the board paid me the honour of electing me as deputy-chairman of the board two years ago it has been my practice at the annual general meetings merely to second the resolutions proposed by the chairman that the report and accounts be adopted. But on the present occasion I have been asked, and I willingly comply with such request, to add a few sentences to merely and formally seconding the resolution so ably and with such clarity proposed by the chairman. It is not necessary for me to enter into any detail on the accounts. From an insurance point of view, and having regard to the troublous and hazardous times trade has experienced for some lengthened period, I am of opinion that our position is one of which the directors and management may well be proud. Our society was started when we had no idea of the possibility of a world war. We have come through many anxious times, but with a full faith in our gradual progress and ultimate success. I think that, if we carry out the policy hitherto pursued, it will be recognised by everyone with insurance experience that such a policy has been justified. We do not aim at high figures, which mean speculative risks. But we do aim at, and I think we may fairly claim to have attained, a gradual and progressive advance in our figures on sound lines. I beg to second the resolution which the chairman has proposed.

The resolution was carried unanimously.

Immediately following the annual meeting an extraordinary general meeting was held to consider a proposal to alter the society's memorandum of association. The Chairman briefly explained the intention of the directors, which, he stated, was merely to bring the statutes of the society into line with those of other companies transacting a similar composite business. The resolution embodying the proposed alteration was put to the meeting and carried.

MOTOR UNION INSURANCE COMPANY, LIMITED.

"VERY SATISFACTORY POSITION."

The seventeenth ordinary general meeting of the Motor Union Insurance Company, Limited, was held, on the 20th instant, at the head offices, 10, St. James's street, London.

Mr C. H. Dodd (chairman of the company) presided.

The general manager and secretary (Mr H. F. Baker) read the notice convening the meeting and the report of the auditor.

The Chairman, in moving the adoption of the report and accounts, said that in the fire insurance account the premium income at £446,714 was about £6,000 less than last year. Claims paid and outstanding had amounted to £238,940—a ratio of 53.4 per cent., as against 55.3 per cent. in the previous year. Commission and expenses of management were somewhat lower, with a ratio of 44.1 per cent., against 46.1 per cent., and after making the usual reserve of 40 per cent. for unexpired risks, they had transferred to profit and loss £8,194, as against £15,086 the year before. Looking at the figures only, shareholders might come to the conclusion that the fire account was going the wrong way, as the premium income was smaller, but that was not the case. The fire account was in a very healthy condition, and the actual number of direct policies issued was far in excess of any previous year; the fall in the actual income was due to a reduction in values, which had given the company a smaller average premium per policy. The great feature was that the company's direct connection was not only being maintained in very difficult circumstances, but, in spite of keen competition, increased at all the places where the company was doing fire insurance throughout the world. The accident insurance account was only a small one, and last year it had suffered a few fatal accidents which had naturally had a severe effect, and the result was that they had had to transfer from profit and loss account the sum of £1,278. As to the employers' liability insurance account, after making the usual reserves, they were able to transfer to profit and loss £4,067, as against £5,974. The account was growing slowly, but owing to recent legislation he was afraid that employers' liability insurance was not going to show any very great profit in the future.

MOTOR AND GENERAL INSURANCE DEPARTMENT.

The main feature of their business was, however, the motor and general insurance account. The premiums there had risen from £1,030,000 to £1,092,000—a very satisfactory increase of £62,000. Claims paid and outstanding amounted to £538,775, as against

£541,960, with a ratio of 49.3 per cent., as against 52.6 per cent. After making the usual reserves they transferred to profit and loss £44,336, as against £40,814. The increase in premiums shown was a very satisfactory feature, and was really cause for more gratification than the figures themselves would actually indicate, because, here again, the fall in values had had an effect upon the account, the average premium for the insurance of cars being lower than in the previous year. They were still in the position to claim that they were doing the biggest direct motor insurance business in the world.

The marine account showed the considerable drop in the premium income from £484,071 to £343,181, but that decrease was in accordance with the desire of the directors, as marine insurance at the present time was a very difficult proposition. The board did not think, in the present circumstances, that it was advisable to transfer any sum to profit and loss from that account.

LIFE ASSURANCE AND ANNUITY ACCOUNT.

The life assurance and annuity account was in a very healthy condition; 331 life assurance policies had been issued, assuring £160,593, at annual premiums of £6,231, and single premiums of £139. After deducting reassurance premiums, the life premium revenue had amounted to £25,358. At the end of the year there were 1,555 policies in force, the sum assured and bonuses under which amounted to £732,456, of which amount £88,389 had been reassured, leaving £644,067 at the company's risk, with an annual net premium income of £25,833. The life assurance and annuity funds at the end of the year amounted to £106,422. Considering that the life assurance department had only been in existence for a few years, he thought shareholders would agree that the figures were eminently satisfactory. Dealing with the profit and loss account, the Chairman said that, out of the balance of £190,370, the year's dividend on the cumulative preference shares and an interim dividend of 4s per share on the ordinary shares had already been paid, and the board proposed that a final dividend of 6s per share should be paid on May 31st next, making a total of 50 per cent. for the year, or the same as had been paid for the past four or five years. After granting £2,000 to the staff pension fund, there would remain to be carried forward £104,116, as against £81,848 last year. Taking all things into consideration, and the difficulties of the times through which they were passing—keen competition and the cutting of rates, especially in the marine

department—he thought the shareholders would agree that the position disclosed was very satisfactory.

Mr S. D. Hollingsworth seconded the motion, which was carried unanimously.

LANADRON RUBBER ESTATES, LIMITED.

POSITION AND PROSPECTS OF THE INDUSTRY.

The sixteenth ordinary general meeting of the Lanadron Rubber Estates, Limited, was held, on the 19th instant, at 1-4, Great Tower street, London, Mr Eric Macfadyen, M.P. (chairman of the company), presiding.

Mr J. McInnes, on behalf of the secretaries (Messrs Harrison and Crosfield, Limited), having read the notice calling the meeting,

The Chairman, in moving the adoption of the report and accounts, said that last year they earmarked £8,000 for special depreciation, and this year they had further depreciated on ordinary lines. As a result, their buildings, machinery, and similar items now stood at a very conservative valuation. They had taken into the trading account 1,098,150 lbs, that being the amount they were permitted to export under the regulations for controlling export. They actually produced a crop somewhat in excess of that figure; the surplus was in the factory at the end of the year, and the profit on that surplus would be taken into the accounts for 1924. That surplus had been taken into the balance-sheet as an asset valued at the bare cost of collection and curing. That was the explanation of the item which appeared in the balance-sheet for the first time, "Advance expenditure on account of 1924." There was no other item in the balance-sheet which he need refer to, except that their liquid resources were in excess of a sum equivalent to a quarter of their paid-up capital.

PRODUCTION COSTS.

As regarded the cost of production, the f.o.b. cost, including depreciation, rose during the year to 8.05d per lb, as against 7.99d per lb last year, a rise of .06d. Part of that increase was due to the export duty payable to the Government under the Stevenson scheme. The remainder was due to the heavier incidence per lb of a fairly constant figure of general charges on a crop reduced by one-eighth as compared with the previous year. They were not, of course, producing anything like the crop they

might produce; in fact, they produced last year only three-fourths of that in 1920, and he would like to bring these facts to the attention of those who were disposed to criticise the Stevenson scheme as having favoured unduly the old producers as compared with the young producers. This was one of many instances which could be adduced to show that there was no justification for thinking so.

POSITION AND PROSPECTS OF THE INDUSTRY.

There was a disposition at the present moment when prices were disappointingly low to undervalue what the Stevenson scheme had done for the industry. It should be remembered that before that scheme was adopted rubber was selling at under 7d per lb, and that although the scheme had been robbed of much of the efficacy that it might have had but for the refusal of non-British producers to join in, there was no question that it had held off the market in 1923, at the lowest estimate, at least 40,000 tons of rubber, and it was only necessary to consider what would have been the effect if the overstocked market had been glutted with that additional weight of rubber.

According to the best authority he knew, the absorption of rubber by the trade during the last four years was as follows:—In 1920, 330,000 tons; in 1921, 265,000 tons; in 1922, 385,000 tons; and in 1923, 405,000 tons. That steady progress was the justification for endeavouring so to maintain the price of rubber at such a level that the existing area might be kept in existence for the time when the whole of the produce would be wanted by the market. It was only necessary to compare those figures of absorption by the trade with the potential output of the plantation industry to-day to realise the necessity for adhering to the scheme adopted for reducing exports to meet the actual demand. How soon all the rubber they could produce would be required it would be rash to prophesy. The hopes entertained by producers a year or 18 months ago had proved over-optimistic; they had, in fact, been adjusting themselves to a revolution in the tire industry. The bulk of the rubber went into tires, and as every motorist would agree, they were now getting better value in tires than a few years ago. The effect on demand of the increased life of the tire was an interesting subject for speculation. Ultimately, the resulting cheapening of car-running costs would bring a return of prosperity to both the producing and manufacturing side of the industry.

In the case of Lanadron, they could produce much greater crops, but if they had done so, in the absence of the Stevenson scheme, they would have produced it at a loss. As it was, their actual profit for the year was £18,632. They were proposing to distribute practically the whole of that in a 5 per cent. dividend, and in spite of the uncertain outlook for the industry they felt that the strong financial position of the company, built up by years of conservative control, justified them in that course.

In conclusion, the Chairman referred to the debt that the shareholders owed to the staff and agents in the East.

The report and accounts were unanimously adopted.

KEPONG (MALAY) RUBBER ESTATES, LIMITED. INCREASED PROFIT—NEW PROPERTIES ACQUIRED.

The nineteenth annual general meeting of the Kepong (Malay) Rubber Estates, Limited, was held, on the 22nd instant, at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, London, Sir Francis Voulès, C.B.E. (chairman of the company), presiding.

The secretary (Mr W. B. Gauld) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: As you will see from the accounts, the net profit for the year was £11,127, as compared with £7,404 for 1922. The amount brought in from last account was £2,611 15s 10d, making a total to profit and loss of £13,738, from which we have to deduct the interim dividend of 4 per cent., less tax, paid on December 20th last, leaving an amount of £9,378 to be dealt with. The directors recommend a final dividend of 6 per cent., less tax, making 10 per cent. for the year, leaving a sum of £3,378 to be carried forward.

The profit for the year was earned on the amount of rubber we were entitled to export during 1923, viz., 542,542 lbs, against 683,840 lbs in 1922, when restriction was only in force for the last two months.

The average gross price realised for the crop was equivalent to 1s 2d per lb landed in London. This compares with an average gross price of 9.08d per lb in 1922.

CAPITAL COST.

The company has not yet settled with the authorities the amount of its production under the new rules of assessment. The capital of the company has been increased during the year from £72,500 to £100,000. During the year a further sum of £28,700 16s 8d has been written off the administration and development account, representing the balance from share premium account for the year. Last year an amount of £24,711 was similarly written off. The

total amount thus applied during the last two years is £53,412 15s 6d, and the amount now outstanding on administration and development account is only £1,813 3s 3d.

It will be observed that the capital of the company is now practically represented by the book cost, or original purchase price, of the various estates. As the company has 3,412 acres of planted rubber this gives an average cost of £31 per planted acre, or, taking the whole area of the estate, viz., 3,831 acres, £26 per acre. That, I think, is a position which the shareholders will regard as very satisfactory.

POLICY OF EXTENSION.

The board have continued their policy of acquiring new areas, and the Sungei Gapi estate, situated at Sungei Tampayan, was taken over in June, 1923. No time was lost in getting the estate into good order, and providing it with the necessary equipment of machinery and buildings. A property at Sungei Buloh was also acquired during the year for the sum of £11,700. This has an area of 207 acres of rubber, three to four years old, and 100 acres of good jungle land. It is situated on the side of the railway opposite our Bujong estate, of which it now forms part, bringing the Bujong division up to a total of 1,400 acres. The board are satisfied that the purchase of these estates was advantageous to Kepong.

The board are in favour of a policy of extension, and are always open to consider favourably the acquisition of adjoining estates or estates that can be worked as an independent unit. Several propositions were considered during the year, but the negotiations did not materialise, and the only properties actually acquired were as above. The general manager, Mr Fraser, in his report, states that all the divisions are in good order, and that he has been well supported during the year by the divisional managers, Mr Barwise and Mr Bell, as well as by the assistants, Mr Martin, Mr Beith, and Mr Donald.

The company is installing machinery for the manufacture of crepe rubber soles. The manufacture will begin shortly, and good results are anticipated.

The general manager reports that there is actual evidence of deposits of tin on part of the estate. The board have authorised a modest expenditure in putting down bores on the low-lying land in the Bujong Division.

We meet to-day under trying conditions, with rubber at a very low price, notwithstanding the sacrifices made by this and other British-owned estates in the way of restriction.

On the whole, however, the experiment has been successful, though it looks as though the restriction must become more drastic automatically.

One very important feature that has to be taken into account is the extended life of the tyres now manufactured.

A committee of the Rubber Growers' Association have also under consideration a scheme for the establishment of a central selling institution. In common with other companies, we await with great interest the result of their labours, and shall give their proposals our most earnest consideration.

We are going through troublous times, and the outlook is uncertain, but of this I am assured—that a sound, well-managed estate like Kepong is bound in the long run to give a good account of itself, and I am gratified to think that this view is held by shareholders generally, as the sales of our shares have been few.

Mr. T. M. C. Stewart seconded the resolution, which was carried unanimously.

CLUNY RUBBER ESTATES, LIMITED. ESTATE IN GOOD ORDER—CENTRAL SELLING SCHEME.

The fourteenth ordinary general meeting of Cluny Rubber Estates, Limited, was held, on the 19th instant, at the registered office, 1 to 4 Great Tower street, London, Mr Charles McArthur (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The directors' printed report gives most of the salient facts in regard to production costs and sale price of crop for the year, and we hope you will regard these as satisfactory under existing circumstances. The estate and property generally are reported to be in good order. Health conditions on the estate have been good, as, fortunately, they have always been.

Turning to the balance-sheet, it will be noted that debentures stand at £4,700, having been reduced by the customary annual redemption of £1,000. Against the balance of £4,700 still to be redeemed, we have £4,000 in general reserve, and to this we now propose to add £500. By this course we wish to ensure the ultimate redemption of the remaining debentures without being dependent upon future profits to meet this liability. On the assets side of the balance-sheet the estate stands at the same figure as last year, capital expenditure of £235 2s 4d, incurred during the year, having been debited to revenue account. Buildings,

furniture, and plant and machinery have been reduced by depreciation on the usual scale. You will note that the total cost of fixed assets, including the estate, is £74,227 10s 7d, which is £4,072 0s 5d less than the amount of the company's capital, plus reserve, after increasing the latter by £500, as we propose to do. Even after providing for ultimate redemption of all debentures it will thus be seen that we have a trifling balance of available capital, which, supplemented by the annual writing off for depreciation, may reasonably be expected to meet future capital requirements of the estate.

With regard to the profit and loss account, assuming that you adopt the recommendation of your directors, we shall carry forward a balance of profit to new account of £6,561 1s 7d. From my remarks regarding capital you will appreciate the fact that this is not required to meet prospective capital expenditure. Nevertheless, it is necessary, more especially in difficult times like the present, as a working capital to carry stocks of rubber and to ensure the continued solvency of the business till the more prosperous times come that we all hope for.

The actual profit for the year amounts to £3,826 17s 11d, or about £636 less than the previous year. This is due in part to conservative stock valuation, in view of unsatisfactory market conditions, but is in the main a direct reflection of restricted output.

With regard to the future, it is practically certain that the crop this company will be permitted to export in 1924 under restriction will show a further material reduction, and, though every possible economy will be exercised, an increased cost per pound of rubber produced is an inevitable result of the reduced crop. What price our rubber will fetch in the market no one can possibly predict. I can only assure you that every effort is being made to keep expenditure at the lowest possible limit, consistent with efficient upkeep. The dominant factor in regard to rubber is that production has gone well ahead of consumption. Restriction, limited as it is to British colonies and dependencies, has at least materially reduced unwanted stocks, and helped producers generally to obtain a very modest profit, and that without hardship to consumers.

The Rubber Growers' Association are at the present time attempting to devise a practicable scheme for co-operative selling of rubber. Your directors are giving what support they can to all such efforts calculated to stabilise the industry, but in any case satisfactory results must of necessity be slow and gradual.

Mr S. Leonard Hunt seconded the motion, which was carried unanimously.

LEDURBY RUBBER ESTATES, LIMITED.

BOARD IN FAVOUR OF CO-OPERATION FOR SELLING PURPOSES.

The fifteenth ordinary general meeting of Ledbury Rubber Estates, Limited, was held, on the 19th instant, at the registered office of the company, 1-4, Great Tower street, London, Mr Eric Macfadyen, M.P. (the chairman), presiding.

The Chairman, in moving the adoption of report and accounts, said: The crop accounted for represents the quantity of rubber exportable at the minimum rate of duty under the restriction scheme for the regulation of exports. We had a surplus of 20,157 lbs over the amount we were licensed to export, and this we dealt with by taking it into the balance-sheet as an asset at the bare cost of collection and manufacture. This explains the heading of "Advance expenditure on account of 1924." That rubber will be exported against 1924 licenses, and the profit attributable to it will be taken into the current year's trading account. Our crop and cost of production were both on a level with the 1922 figures, though I am glad to say that the sale price averaged nearly 1½d per pound more, resulting in an increase in our net profits of almost £3,000. We propose to place £3,000 to taxation reserve and recommend a similar dividend to the one for 1922—namely, 7½ per cent. If approved, these proposals will mean an increase in our carry forward from £17,751 to £20,318, and in view of the uncertainty of the outlook and the instability of the market I feel sure you will agree that our policy is a sound one.

The estates are all in good order and well managed. Labour presented no especial difficulty, and health was fairly good. Mr M. Sharpe Smith, who has been in charge of Kinrara estate for some 15 years past, retired in March last, and we have appointed Mr Clyde Jeavons general manager of the company. Mr Jeavons was formerly in charge of Sione estate, but for the past year or two his services have been lent to the Lanadron Company, whose Lanadron estate he has managed. The crop we shall be allowed to export this year is still an unknown quantity. Standard outputs for estates which were fixed when restriction was brought into force are under revision at the moment, and we have not yet been advised of our figure under the new rules laid down by the F.M.S. Government.

With regard to the prospects of the industry, I went into the position fairly fully at the Lanadron meeting this morning, and

do not propose to cover the same ground again. I may here merely say that your board are in favour in principle of taking a further step in the organisation of the industry by co-operating for selling purposes with other producers, and are hoping that in the near future the Rubber Growers' Association Committee, which has this matter in hand, will be able to place before us a combined selling scheme which the whole industry may be able to accept.

The report and accounts were carried.

PERNAMBANG RUBBER ESTATES, LIMITED. SATISFACTORY FORWARD SALES.

The fourth ordinary general meeting of the Pernambuco Rubber Estates, Limited, was held, on the 21st instant, at the registered offices of the company, 1-4 Great Tower street, London, Mr Eric Macfadyen, M.P. (chairman of the company), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: Our planted area now stands at a capitalisation of £79 per acre. Liquid assets, in which I include the working capital employed in our business, amount to £46,271, in addition to which there is £10,043 uncalled capital, making a total of £56,314, or nearly £12 per planted acre, against which we had outstanding liabilities of £14,812. The acreage statement shows that we still have a considerable immature area upon which future capital expenditure has to be met.

The planted area is now 4,800 acres. Mr Stothard has recently visited all our estates, and informs us that he was favourably impressed with all he saw.

The crop for the past year was 544,645 lbs, of which 514,645 lbs, representing approximately the exportable allowance at the minimum rate of duty under the regulations for control of export, is taken credit for in the accounts. The balance of 30,000 lbs has been taken into the balance-sheet as an asset at the bare cost of collection, manufacture, and distribution. This accounts for the new item, "Advance expenditure on account of 1924."

The cost of production was 9.30d per lb, being an increase of 0.80d per lb when compared with the previous year. This increase is chiefly due to the export duty payable under the Stevenson scheme. As the scheme for the regulation of exports from Malaya is now under revision, no reliable estimate for the current year can be given, but we anticipate that our standard production will be slightly increased.

We sold forward for delivery during January-December, 1924, 24 tons at what looks now the satisfactory price of 1s 5d per lb f.o.b.

The profit for the past year was £9,680 12s 3d, which, added to the amount brought forward, makes a total of £19,528 13s 11d, from which has to be deducted the interim dividend of 2½ per cent. paid last May, leaving a balance of £12,486 3s 11d, which it is proposed should be carried forward subject to income-tax liability, if any.

As your directors considered that before the new shares were issued, which were payable as purchase price for the two estates most recently acquired, it was fair that the old shareholders should receive some distribution out of the profits previously accrued, a dividend of 2½ per cent. was paid last May. You will agree that we ought not to deplete our cash resources by the payment of any further dividend at the present time.

The report and accounts were unanimously adopted.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED. SALES OF CURRENT RECORD.

The twenty-seventh annual general meeting of the Calcutta Electric Supply Corporation, Limited, was held, on the 19th instant, at 3, Clement's Inn, London, the Right Hon. Lord Meston of Agra and Dunottar, K.C.S.I. (chairman of the company), presiding.

The Chairman, in the course of his address, said: The capital position is practically unchanged. The addition of £300,000 to our liabilities represents nothing more than the completion of the £500,000 loan which was raised in 1922, guaranteed by His Majesty's Treasury. There was a corresponding increase in our assets, which was still further supplemented after the close of the year in the shape of additional generating plant and distribution mains. Our sales of electric current reached the record figure of 66½ million units, and our gross receipts advanced accordingly, touching £606,000, or £87,000 more than in the previous year. Our operating costs rose from £234,000 to £276,000, and there was thus a gratifying improvement in our gross profits. This being so, you would naturally ask why our net profits available for distribution are not higher than last year. The answer lies partly in the growth of our capital charges, which will not reach their apex until the sinking fund on our second debentures opens at the end of this year, and partly in the higher reserve for depreciation necessitated by the steady growth of our plant.

THE DIVIDEND.

The free balance of profits being £107,391, we transfer £15,000 to our general reserve, and we recommend once again a dividend of 6 per cent., plus a 1 per cent. bonus, for the half-year, making an all-over dividend of 11 per cent. for the year. The year has not been exempt from vicissitudes or anxieties. Our chief anxiety has been to keep pace with the growth of the demand for electrical energy. Plant ordered and promised years ago continued to be held up by the difficulties of manufacture, and, although we gave 1,640 new connections in 1923, there was still a waiting list of nearly 2,000 at the close of the year. Of our vicissitudes the worst was a serious fire last summer in our central station. Had it not been for the outstanding courage and devotion of our staff, both Indian and European, the consequences might have been far more disastrous. A later trouble arose in the two main cables which connect our generating station at Cossipore with the docks and the southern part of Calcutta generally. They carry current at the high pressure of 30,000 volts. And towards the end of the year faults developed in certain joint-boxes, which temporarily imperilled the southern supply. We are taking every possible measure to assure an alternative or supplementary means of meeting the requirements of our consumers in this important area. However, our current troubles conspire to put us in a stronger position for the future.

Our extensions at the Cossipore power station are now almost complete. Our new plant will soon be earning revenue; indeed, you have seen how marked is the improvement already in the sales of current for the first quarter of 1924. Indian taxation has an upward tendency rather than otherwise, but we are in sight of relief from the British corporation tax. The price of coal in Calcutta has at last begun to fall; and though we have had to revise our salaries to correspond with the increased responsibilities of our staff, we are reaping a more than equivalent return in loyalty and steadfastness. We have been happily free from industrial trouble, and our relations with the Calcutta public are good. Exchange seems to be tending automatically to come to near its old parity of 16d to the rupee. I believe that the political sky in India is clearer than since 1919, and that the future of British capital, administered in the country with a clear eye to the country's advantage, is well assured.

REVISION OF CHARGES.

Such being the outlook, we have felt justified, since the year ended, in revising our charges for domestic supply. In 1920 the effective flat-rate for domestic current was reduced to 3 annas per unit. Unfortunately, a sharp rise in coal, a slump in exchange, and other adverse factors compelled us to impose a surcharge of 15 per cent. in January, 1921. In the next year coal cost us 25s 7½d a ton; and in almost every other direction our expenses rose, until in August, 1922, we were obliged to put our surcharge up to 30 per cent. This compares favourably with the price charged by similar companies to ours; but in view of all the circumstances to which I have alluded we have decided to fix a flat rate of 3½ annas from July 1st next. Our rates for manufacturing supply were only recently lowered, and it is not yet possible to think of reducing them further.

The placing and supervision of contracts for stores, which were formerly in the hands of a private firm on commission, have now been completely taken over by the board. The labour is considerable, but we find that the supplies are expedited, and the control is not less efficient, while there has already been a substantial pecuniary saving. We have had a good, though not uneventful year, and our future prospects, so far as we can judge, are satisfactory.

The report and accounts were unanimously adopted; the proposed dividend and bonus were approved, and the usual formal business transacted, and the proceedings concluded with votes of thanks to the chairman, the directors, and the staff in the East.

BUCHANAN-DEWAR, LIMITED. STRENGTHENED TRADING POSITION.

RECORD YEAR'S BUSINESS.

The ninth annual general meeting of the shareholders of Buchanan-Dewar, Limited, was held, on the 21st instant, at Winchester House, Old Broad street, London, E.C.2, Lord Dewar presiding.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—By rotation Lord Forteviot should have been in the chair to-day, but owing to a slight indisposition he is, I am sorry to say, unable to be with us.

Before we begin the ordinary business, I am sure the meeting would like to put on record our sense of the loss we have sustained through the death of Mr. E. A. Lundy. (Hear, hear.) Mr Lundy was a director of Buchanan-Dewar from the very

beginning; he was a loyal colleague, warmly devoted to the prosperity of the company, and we shall greatly miss his presence at our meetings and his services to the company.

In reviewing the operations of the company for last year, one or two facts are worthy of notice.

As was fully explained at the extraordinary general meetings held on January 29 and February 14, 1924, the issued ordinary capital has been increased to £4,000,000 by the issue of one bonus share in respect of each ordinary share previously issued.

LARGE STOCKS AND DISTILLERIES ACQUIRED.

During the year we purchased several very large stocks of old whisky from companies who have retired from business, and this greatly strengthens our position in dealing with the largely increased demands for our brands. We have also acquired during the year an additional six Highland malt distilleries—namely, the well-known Royal Lochnagar, Benrinnes, Parkmore, Aultmore, Ord, and Pulteney distilleries.

Last year, I am glad to say, has been in every respect much the best year we have ever had, and you will be interested to know that the sales of the brands of the two companies—James Buchanan and Co. and John Dewar and Sons—show both in the home trade and in the export trade a remarkable increase, amounting last year to more than £2,000,000 over the previous year's sales.

DIVIDENDS.

From the accounts you will observe that there has been received in interest and dividends, after deducting the amount capitalised and secretarial and other charges, a sum of £1,102,657, and when the amount brought forward from the previous year of £96,588 is added to this we have available the sum of £1,199,245.

It will be seen from the directors' report that, after providing for the dividends on the two issues of preference shares and allocating £150,000 to reserve as in previous years, this profit permits of a final dividend of 10 per cent. (free of tax) on the increased ordinary capital of £4,000,000. After allowing for the interim dividend of 15 per cent. on the original ordinary capital of £2,000,000, this final distribution of 10 per cent. on the capital as it now stands brings the dividend for the whole year up to a total figure equivalent to 35 per cent. on the old basis, an increase of 5 per cent. over last year. After making the transfer mentioned above, the reserve will amount to £750,000, and in addition we are carrying forward £98,516, which is practically the same as the amount brought in.

SAFE AND CAUTIOUS POLICY.

I think I should also point out here that before the constituent companies paid their dividends to this company they put aside large sums to reserve, independently of any sums we may lay aside for reserve here. The directors desire to continue the safe and cautious policy they have all along pursued, and, while paying substantial dividends, to see that ample and sufficient reserves are provided.

Lord Woolavington, who, as you are no doubt all aware, unfortunately met with an accident at Madeira on his return from his trip to South Africa, has requested me to express his regret that he cannot be present at the meeting to-day.

The chairman concluded by moving the adoption of the report and the accounts.

Mr William Harrison, in seconding the motion, said that Buchanan-Dewar, Limited, through its constituent companies, was in the fortunate position of holding the largest stocks of matured Scotch whiskeys in the trade.

The resolution was carried unanimously.

The chairman then moved the payment of a final dividend on the ordinary shares of 10 per cent., free of tax.

Mr William Harrison seconded the resolution, which was unanimously approved.

The chairman next proposed the appointment of Mr William Morrison as a director of the company in the place of the late Mr E. A. Lundy.

Mr J. F. Johnston seconded the resolution, which was carried unanimously.

On the motion of Mr P. M. Dewar, seconded by Mr William Morrison, the retiring directors (Lord Dewar and Messrs William Harrison and A. J. Cameron) were re-elected.

The auditors (Messrs Price Waterhouse and Co.) were re-appointed, and the proceedings terminated with a cordial vote of thanks to the chairman.

WHITEAWAY, LAIDLAW, AND CO., LIMITED. SUBSTANTIALLY IMPROVED RESULTS.

The 16th annual general meeting of Whiteaway, Laidlaw, and Co., Limited, was held, on the 19th instant, at 5 Cripplegate buildings, London.

Mr Mence Wilkinson (chairman and managing director), who presided, said that the figures for the period under review showed

a substantial improvement when compared with those of the previous year, the profit on trading being £203,521, as against £173,826. The directors proposed to pay a final dividend of 5 per cent., making 10 per cent. per annum, free of tax, and a bonus of 3d per share, free of tax, on the ordinary shares; to carry to reserve account £35,160 (bringing it up to £275,000); to pay £1,500 to the employees' provident fund; and to carry forward £33,876, subject to corporation profits tax. In the balance-sheet freehold and leasehold premises, at £667,679, showed an appreciation of £12,761, due to additions to the company's properties in Calcutta, Shanghai, Penang, Kampala, and Nairobi, to final payments on account of the new buildings at Maymyo and Mombasa, and to the purchase of a property at Lucknow. Out of that total only £8,831 was on account of leaseholds, and the balance represented freehold premises which were not only entirely unencumbered, but were also much more valuable than they appeared in the accounts.

Their holding in Whiteaway, Laidlaw (Java) Stores, Limited, was now £62,820, an increase of £41,667. This venture had made rapid strides during the year under review, and it was found necessary to issue more shares, all of which were held by the parent company. Stock-in-trade, £752,748, showed a reduction of £19,000; debtors and payments in advance, at £37,764, were about £21,000 less; and they had just over £55,000 more cash than they had at February 28, 1923. He thought it would be agreed that the financial position of the company had been substantially improved during the past year. The moderate addition to freehold premises represented a solid and valuable asset. The reduction in the value of the stock, although not quite so large as the directors had hoped, was a step in the right direction, and the large cash balance put the company in a position to finance shipments for the current year on the most favourable terms.

The Chairman having referred at some length to the general condition in the countries in which they were interested, the report and accounts were unanimously adopted.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

INCREASED VOLUME OF TRADE—GOOD PROSPECTS.

The twenty-eighth ordinary general meeting of Callender's Cable and Construction Company, Limited, was held, on the 22nd instant, at the Institute of Journalists, 2 and 4 Tudor street, London, Sir J. Fortescue Flannery, Bart., M.Inst.C.E. (the chairman), presiding.

The secretary (Mr Howard Foulds, F.C.I.S., Assoc.I.E.E.) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that a year ago he ventured to express his confident hope in the future of the electrical cable trade. That hope and confidence still existed. The volume of the company's trade, as distinguished from the volume of trade generally, had been very satisfactory. They had done more business over an increasingly widespread world area than ever before. The profits, however, in proportion to the volume of business done, had been less than they had been accustomed to, but even with this lower ratio of profit they showed a larger total than ever before. They had earned this profit in spite of world competition. They had succeeded because their costs had been reduced.

They had made already and sold very large quantities of that high-tension cable, and they looked forward to its being recognised as a great economiser for power stations and to its very extended use in the future. It would cheapen the applied services of electricity, and therefore be of benefit to the community at large. Prior to the war they had a fine Continental trade, and they had since tried very hard to revive it, but as yet they had not in any degree succeeded, because of the lack of confidence and the continual variation in the rates of exchange. Later on these difficulties must disappear, and the management would not be behindhand in endeavouring to revive successfully the company's Continental connection.

The loss of Continental trade, however, had caused them to turn their eyes more to our Dominions and to India, and the immense natural reserves of water power from the mountains, which could only be harnessed successfully to industrial use by electrical cables, had given the company a very large and useful amount of occupation. They had every reason to believe that the extensions in these directions would be a permanent connection and lead to even increased business in the future. The home demand had been very satisfactory; indeed, this was largely the basis of this prosperity. It was, however, the intention of the board to develop the company's trade in the Dominions and in India to the fullest possible extent.

With regard to the current year, the influx of orders had been satisfactory, and it looked as though 1924 would not, at any rate, be inferior to the past year.

Sir T. O. Callender, J.P. (managing director), in seconding the motion, said that whatever might be the fate of other industries in engineering, the cable-making industry for 1924 would, he had reason to believe, be able to show a good result, and he was sure that Callender's would not be one of those which would disappoint its shareholders.

The report and accounts were unanimously adopted.

BALAGHAT GOLD MINES, LIMITED.

DEVELOPMENT WORK IN DEPTH.

The annual meeting of the Balaghat Gold Mines, Limited, was held on the 23rd instant, at 6 Queen street place, London, Lt.-Col. Sir Donald Robertson, K.C.S.I., presiding.

The Chairman, in moving the adoption of the report and accounts, said that 45,550 tons of ore were milled, yielding 33,383 ozs of gold, that 49,100 tons of sand and slime were dealt with, producing 2,513 ozs of gold, and that 18,750 tons of old dump were treated, from which were obtained 997 ozs of gold. In addition, 166 ozs of gold were obtained from the cyanide slugs, which made a total return for the year of 37,059 ozs of fine gold, which, if compared with the preceding year, gave an increase of 4,239 ozs.

The average assay value of the ore was 14 dwts, 21.69 grs per ton, or 1 dwt 6.75 grs higher than in 1922.

The whole of the output of gold was again sold in India, as higher prices were obtained there, and, of course, shipping and insurance charges were saved. The average price obtained was 91s 11d per fine oz, showing a decrease of 1s 9d per fine oz.

The total amount realised by gold sales was £170,344, and £384 was obtained by silver sales; allowing for an adjustment of the gold sales account for 1922 of £230, the total credit, as shown in the revenue account, was £170,958.

The expenditure on revenue account was £119,412, and the total receipts, after allowing for royalty paid to the Mysore Government, came to £162,985, leaving a profit of £43,573. This shows an increase over the preceding 12 months of £7,235.

The dividends of the year were 2s 6d per share on the preference and 1s 6d per share on the ordinary shares; and at the end of the year the liquid assets, less liabilities, amounted to £50,476, apart from materials, and stores at the mine (£24,009), and machinery and goods in transit (£1,221). Vigorous developments to explore in depth the northern section of the mine were now proceeding below regions in which valuable shoots of ore had been worked at the shallower levels.

Mr Henry C. Taylor (Messrs. John Taylor and Sons, the managers), who recently visited the mine, said that developments in the adjoining Nunddydroog mine would throw light upon the Tennant's main winze section of Balaghat, while the latter company was exploring its northern section, as mentioned by the chairman. It had been a lean year, but there were fair chances of success in the northern section, especially having regard to the experience of the field, while the Nunddydroog workings held out considerable promise.

The report and accounts were unanimously adopted.

(c) Also capitalised bonus 50 per cent. (d) Also capitalised bonus 25 per cent.

ALIANZA COMPANY, LIMITED.—It is proposed to pay a second interim dividend of 20s per share (20 per cent.), making 40 per cent. for the year, in addition to 60 per cent. bonus paid in November, 1923, out of accumulated profits. In view of the payment of this interim dividend, it is not intended to recommend at the annual general meeting the payment of any further dividend in respect of the year ended December 31, 1923.

Reports and Notices.

The council of the Society of Incorporated Accountants and Auditors have re-elected Mr George Stanhope Pitt (Bolton, Pitt and Breden), London, and Major Gwilym Arnold Evans, J.P. (G. A. Evans and Evans), Cardiff and London, to the respective offices of president and vice-president for the ensuing year. The council have also elected as honorary members Sir Malcolm Ramsay, K.C.B., comptroller and auditor-general, exchequer and audit department, and Sir Josiah Stamp, K.B.E., D.Sc., examiner in economics and statistics to the society.

We are informed that J. C. in Thurn and Sons have taken into partnership Mr Albert Johan Fransella.

The name of the Central Provinces Prospecting Syndicate, Limited, has been changed to the Central Provinces Manganese Ore Company, Limited.

We are informed that the registered and secretarial offices of Messrs Richard Thomas and Co., Limited, are being transferred from Bank Buildings, Castle square, Swansea, to Bush House, Aldwych, W.C. 2, on and after May 24th.

We are officially informed that the s.s. "Orama," of 20,000 tons, was launched at the Naval Construction Works of Vickers, Limited, at Barrow-in-Furness, on Tuesday (May 20th), the christening ceremony being performed by Miss Winifred Cook, daughter of Sir Joseph Cook, G.C.M.G., High Commissioner for the Commonwealth of Australia. The Vickers Company are building a sister ship to the "Orama" for delivery next year, and a third steamer, the "Oronsay," of similar design, is being built on the Clyde, and will be launched in the autumn. The Orient Line Fleet will thus be increased by 60,000 tons within the next 18 months.

BANKS.

ALLAHABAD BANK, LIMITED.—The profits of this institution (which is affiliated to the P. and O. Banking Corporation, Limited) for the 12 months ending March 31st last, after placing Rs. 117,471 to depreciation of house property and dead stock, providing for taxation and bad and doubtful debts, amounted to Rs. 7,80,287, against Rs. 4,92,030 for the previous year. The distribution is the same (12 per cent. dividend and 6 per cent. bonus), and Rs. 3,00,000 are placed to reserve, against nothing last year. The directors propose to transfer Rs. 6,00,000 from contingency fund to the reserve fund, which will then stand at Rs. 44,50,000, against a paid-up capital of Rs. 35,50,000. The total of the balance-sheet is nearly 9½ crores, or approximately 6½ millions sterling.

UNION BANK OF SCOTLAND, LIMITED.—By special resolutions confirmed at extraordinary general meeting of the bank, held on 21st inst., it was resolved to alter the denomination of the shares of the bank, each former share of £5 (£10 paid) being now represented by 10 shares of £5 each (£1 paid). The share capital of the bank remains as before, namely, £5,000,000, and is now divided into 1,000,000 shares of £5 each, having £1 per share paid up. The former restriction as to a minimum holding of 10 shares is withdrawn, and transfer fees have been reduced to 2s 6d per deed. Shareholders have been requested to forward share certificates in order that the necessary alteration may be noted thereon.

YOKOHAMA SPECIE BANK.—The profit and loss account for the half-year ended December 31, 1923, shows the net profit of the bank for half-year, after providing for all bad and doubtful debts, rebate on bills, &c., 12,620,364 yen, inclusive of 5,108,236 yen brought forward from last account. The directors propose that yen 1,500,000 be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb yen 6,000,000. The balance, yen 5,120,364, will be carried forward to the credit of next account.

TEA AND RUBBER.

CLONY RUBBER.—This company has maintained its ordinary dividend at 5 per cent. for the year 1923. The net profit amounts of £3,827, against £4,463 for 1922. The sum of £500 is put to reserve, and £6,561 is carried forward, against £6,734 brought in.

LANADRON RUBBER ESTATES.—The report for 1923 shows a net profit of £18,633, against £19,644 for 1922. The ordinary dividend has been reduced from 6 per cent. for 1922 to 5 per cent. for 1923. The sum of £4,000 is put to taxation reserve, and £20,685 is carried forward, against £24,052 brought in.

LEDBURY RUBBER ESTATES.—This company has increased its net profit from £8,736 for 1922 to £11,712 for 1923, but the ordinary dividend is unchanged at 7½ per cent. The sum of £1,000 is put to taxation reserve, and £20,319 is carried forward, against £17,752 brought in.

MISCELLANEOUS.

AMERICAN TELEPHONE, TELEGRAPH COMPANY, NEW YORK.—Issue of new stock to stockholders has been authorised of record of June 10th, one share new stock at par for each five shares outstanding. Payment in instalments as follows:—\$20, August 1, 1924; \$40, December 1, 1924; \$40, April 1, 1925. Interest at 6 per cent. will be allowed on instalments from due date to April 1st, on which date stock will be issued. Payment in full may be made August 1st at \$102.75 per share, and stock issued as of that date, or final instalment of \$82.10 may be paid December 1st, and stock issued as of that date. Company has declared regular quarterly dividend of \$2.25, payable July 15th, October 15th, January 15th, and April 15th, to stock of record of twentieth of each preceding month.

ANGLO-CHILIAN NITRATE AND RAILWAY COMPANY, LIMITED.—The holders of the Four and a Half per Cent. consolidated mortgage bonds of the Anglo-Chilian Nitrate and Railway Company, Limited, are informed that the directors are prepared to offer the sum of £95 for each bond of £100 surrendered to the company on the following conditions:—Bonds must be surrendered with the coupon falling due November 1, 1924, and all subsequent coupons attached. Acceptances, together with the relative surrendered bonds and coupons, must be received by the company at its registered office, 4 London Wall Buildings, E.C. 2, on or before Monday, June 23, 1924. Payment in respect thereof will be made within three days of the deposit of the bonds, as above. Forms of acceptance may be had on application to the company at its registered office, or to the bankers, who usually collect the coupons, but their use is not essential.

HADFIELD'S, LIMITED.—In presenting the report for 1923, the directors point out that the continued depression in the steel and engineering trades during the past year, accompanied by severe cutting of prices, has adversely affected the earnings of the company. The net profit, after payment of debenture interest, is £54,995, against £112,250 in 1922. The dividend is reduced to 4 per cent., less tax, against 5 per cent., free of income-tax, for 1922. The sum of £106,635 is carried forward, against £128,418 brought in. The report further adds that the programme decided upon for the adaptation of the plant and buildings erected during the war to suit post-war production has now been practically completed, and the company is fully prepared to take advantage of any improvements in trade. The balance-sheet shows total assets of £4,178,826. Sundry debtors, investments, and cash are shown in one item as £1,704,770. Stock stands at £580,133. With regard to liabilities, creditors stand at £612,326, and reserve is at £202,893.

MONTEVIDEO GAS AND DRY DOCK.—After providing for interest on debenture stock and other charges, and including £14,076 brought forward from 1922, the balance at the credit of profit and loss available for dividend is £36,168. The ordinary dividend for 1923 is 4 per cent., free of income-tax, and a balance of £14,491 is carried forward. The balance at the credit of reserve account remains at £52,500, the deferred maintenance account at £15,000, and the contingency account at £17,739 9s 3d. Compared with 1922, the total gas sales show an increase of 0.63 per cent., the number of meters in use, however, increased by 5.85 per cent. The dock and workshops department continued to feel the effects of the depression in shipping. The sales of gas since the last issue of new capital in 1902 show an increase of 240.92 per cent. The consumption has now outgrown the capacity of our plant, and it will become necessary to make another issue of capital to meet the cost of a further enlargement of such plant, and the installation of an additional gasholder.

NITRATE PRODUCERS' STEAMSHIP.—The directors have pleasure in submitting to the shareholders balance-sheet and profit and loss account for the year ending April 30th last, duly certified by the auditors. The accounts for year ended April 30, 1924, show a profit for year of £39,080, to which must be added the balance brought forward from last year, viz., £31,603, making a total of £70,683 to be dealt with. From this must be deducted general expenses, directors' fees, income-tax, corporation profits tax, and interim dividend, amounting in all to £45,464, leaving £25,219 for appropriation. It is now proposed to pay a dividend at the rate of 7½ per cent. per annum for the final six months of the year, together with a bonus of 2½ per cent., both free of income-tax, leaving £16,440 to be carried forward.

SECOND MERCANTILE TRUST.—A good start is made by this trust. The report and statement of accounts for the period from March 19, 1923, the date of incorporation, to May 5, 1924, show that after meeting all expenses, the revenue accounts there is a receipt of £40,308. From this amount has been deducted interest on instalments on shares paid in advance of due dates, £46; dividend 5 per cent. preference stock from the due dates of the instalment to May 5, 1924, £17,328, leaving a balance of £23,434. The directors recommend that this balance be appropriated as follows:—In payment of a dividend of 5 per cent. on the ordinary stock, of which an interim dividend of 2½ per cent. on instalments was paid on November 6th last, £17,328; in transferring to reserve account, £4,874; to carry forward to next account, subject to corporation profits tax (if any), £1,232. The balance of the premium on the issue of the shares after writing off all the preliminary and issue expenses, has been placed to reserve account, which account, with the transfer from revenue, amounts to £18,500. The securities held are represented by £761,713 in debenture stocks, £204,313 in preference shares, and £189,035 in ordinary shares.

SIEMENS BROTHERS AND CO.—The profit for the year 1923 amounts to £162,220, against £14,041 for 1922. The sum of £127,310 was brought in, making £289,530 available. The board propose to utilise this sum as follows:—Interest on and redemption of 4½ per cent. debenture stock, £67,439; income-tax liability for

1923, £24,338; dividend on 10 per cent. cumulative preference shares for 18 months to end of 1923, £45,000, leaving £152,762 to carry forward on account of the unsettled liability for excess profits duty. The board point out that the output for the year shows a considerable increase over that for 1922. They also observe that results of trading for current year to date are satisfactory, and, if continued, as seems probable, the board will be in a position to declare an interim dividend on the ordinary shares for the current half-year.

TRUST AND LOAN COMPANY OF CANADA.—This concern has an authorised share capital of £5,000,000, subscribed capital is £3,600,000, and paid-up capital amounts to £1,350,000. The statutory reserve fund is at £113,738. The net profits for year ended March 31, 1924, amounted to £79,743, which, together with the amount brought forward from March 31, 1923, viz., £13,955, amounts to £93,698. Out of this amount the directors have paid an interim dividend, free of income-tax, on December 7, 1923, amounting to £40,500, leaving a balance of £53,198 19s 2d available for distribution. The directors recommend that out of this balance of £53,198 a dividend at the rate of 6 per cent. per annum for the six months ending March 31, 1924, free of income-tax, be declared on the paid-up capital, which, with the dividend paid on December 7, 1923, makes 6 per cent. for the year ending March 31, 1924, and leaves a balance of £12,699 to be carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Growing crops in the United Kingdom are making favourable progress, a higher temperature and useful rains stimulating growth, while the condition of pastures leaves little to be desired. English wheat is sparingly offered, both here and at provincial centres, and prices remain at a firm level, suitable grades being nominally quoted at 11s to 11s 4d per 112 lbs, free on rail. Imported descriptions somewhat irregular, but firmer on balance, with holders more reserved. No. 1 Northern Manitoba quoted 48s 6d, Rosafé, 63½ lbs, 47s, Barusso ditto 46s 9d, and Australian 50s, all per 490 lbs, ex ship. The floating and forward cargo section displayed firm features, with an improved inquiry for Plate descriptions, while sellers generally adopt an attitude of reserve. Steamers of Barusso 63½ lbs afloat said 44s 3d, ditto June 43s 6d, Baril 63½ lbs June 43s 10½d, Australian early June 48s, white Pacific afloat 47s 7½d per 480 lbs. Crop prospects and agricultural operations in most exporting countries are of a favourable character. Flour quietly steady. London standard straight run quoted 38s, patents 40s to 41s, town households 36s per sack delivered in. Of imported, Manitoba patents range from 35s to 37s 6d, Australian 35s 3d to 35s 6d, and soft Pacific 35s per 280 lbs ex store. Maize cargoes are freely offered, and general trend of values in buyers' favour. Plate steamers, May 23rd shipment, sold 35s 6d, ditto May 25th 35s 9d, and June-July 33s 3d to 32s 9d per 480 lbs to Continent, while a part cargo of Karachi barley, June-July changed hands at 31s 9d to Bristol Channel per 400 lbs. Barley: English quiet and malting and seed ranges from 11s 3d-12s 6d per 112 lbs, free on rail. Imported, in better demand and prices firmer. Californian 48s 6d-53s, Chilean brewing 43s-49s per 448 lbs ex ship. No. 4 Canadian western ex-ship 31s 9d, Karachi ex ship 31s 9d-32s, landed 33s 6d, Plate ex ship 32s 6d, landed 34s 3d-35s, as to quality per 400 lbs. Maize steady. Plate, new ex ship to arrive 41s to 39s as to position, Hickory King 40s 6d, landed, Karachi, also Calcutta landed 42s, No. 2 white flat African 40s 6d landed, all per 480 lbs. Oats firm on spot. Plate f.a.q. ex ship 21s 9d, landed 23s, No. 2 Canadian western 26s 3d, No. 3 ditto 25s 3d, No. 2 Canadian feed landed 24s per 320 lbs. English ranges from 9s 6d-11s per 112 lbs, free on rail. Millers' offers quiet and easier. Broad bran quoted at 8s-8s 3d, ordinary 7s 3d-7s 6d, middlings 8s 6d-8s 9d, fine ditto 10s, bags included ex-mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 12s, all per cwt free on rail. Oatmeal unaltered. London made flaked 16s 6d, rolled oats 16s, medium and fine cuts 16s, coarse and medium pinhead 16s, ordinary Scottish oatmeal 17s 6d, and American 16s-16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes, on May 22, 1924, as follows:—Pig-iron: The demand for Cleveland iron is very quiet, more especially has the Continental enquiry fallen off. The present limited output of both Cleveland and East Coast hematite pig-iron is quite sufficient to cope with orders. No. 3 Cleveland G.M.B. pig-iron, 9½ per ton; East Coast hematite mixed numbers, 9½ per ton. Manufactured iron and steel: The steel producers have been assisted by the placing of several shipbuilding orders. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Sellers of foreign ore are disposed to maintain their prices firmly for best ores. Best Rubio is quoted 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The local trade situation is still suffering from the effects of the recent controversy respecting the McKenna duties, which has caused many buyers of steel

to hold off the market. The steel makers, too, are observing an extremely cautious attitude in respect to purchases of raw materials. Merchants dealing in ferro-alloys used in the manufacture of special steels here sold nothing but a few odd lots for several weeks past. As regards ferro-chrome and ferro-silicon, which are imported from the Continent, a condition of scarcity has arisen owing to production being interfered with by labour troubles, and this has sent up prices. It is stated that the output of ferro-silicon has been sold up to the end of July, and deliveries are very meagre. Alloys of high-speed steel are neglected, and prices low. Business in open-hearth steel continues poor, in spite of the absence of serious French and Belgian competition. Large stocks of foreign low-grade steels are on hand in this country, but when these are consumed a revival of buying from home works is confidently anticipated. Good business is reported in wire, wire rope, steel strip, galvanised sheets, saws, and hand-tools generally. There is a brisk overseas demand for tools used in building and general contractors' work. Competition continues keen in all branches of local trade, and much of the business is unremunerative. It is to be feared that ordinary shareholders in industrial concerns have little to hope for in the shape of divi-

THE National City Company, through its offices and affiliations at home and abroad, offers exceptional facilities for the purchase or sale of Dollar Bonds and Short Term Notes. The London Office, which has an extensive statistical department and is in daily cable communication with New York, invites enquiries from European investors relative to American securities.

RICE.—Market firm, with reserve shown on the part of shippers, due to sustained inquiries in local Burmese centres on Japanese account. Two Stars, May-June quoted 15s. c.f. and i., London.

FRUIT (Dried).—Market for currants remained steady, though trade progressed quietly. Pyrgos, $\frac{1}{2}$ -cases, quoted, 46s; Amalia, 48s; Patras, 50s; Gulph, 52s; Panariti, 56s; Vostizza, 63s to 70s. as to quality. Australian $\frac{1}{2}$ -cases, new crop, 63s to 68s. Valencia raisins, $\frac{1}{2}$ -boxes, quoted 40s to 42s. Cape, new crop, 46s to 50s. Sultanias steady. Greek, $\frac{1}{2}$ -cases, 42s. Smyrna boxes, 46s to 50s.

The prices in the following list are revised with the assistance of an eminent firm in each department.

[illegible]

seed quiet. Bombay, May-June, 2-3 per cent.
OILS.—Linseed quiet, and tendency easier. Spot net, naked,
38s 3d; May, 37s; June-August, 36s 9d; September-December,
35s 7½d. Rape quiet. Crude, spot, 45s 6d; refined, 48s 6d. Castor-oil
quiet. First pressure, spot, quoted 64s; second pressure, 62s; and
pharmaceutical, 69s per cwt, Hull, with London 2s per cwt extra.
Cotton lard. Crude Egyptian, spot, 40s; Bombay, 37s; common edible,
46s; deodorised 49s. Chinawood quiet. Hankow, spot (barrels)
83s; June-July, 72s. Cocanaut quiet. Ceylon, spot, 46s 6d; April-
May, 43s 9d; Cochín, ditto, nominally 50s. Soya lard. Oriental,

TALLOW.—Messrs Colchesters and Woolner write on May 21st as follows:—The tallow market continued active during the week, and prices were fully maintained to-day. Somewhat higher prices are being asked for South American tallow for shipment, while Australia offers little. Shipments of tallow from Australasia during April amounted to 2,100 tons, against 3,700 tons during the corresponding month of last year. At auction to-day 1,175 casks tallow were offered, and 728 were sold. Quotations are:—Australian mutton : Fine, 45s ; good to fair, 43s 6d to 42s 6d ; dull to dark, 39s to 37s 6d ; hard, 44s 6d. Australian beef : Fine, 44s 6d ; good to fair, 42s 6d to 40s ; dull to dark, 38s 6d to 37s 6d ; sweet, none. Present shipment from Australasia : Good mixed, nominal. Present shipment from South America, 41s to 39s 6d. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 3d ; melted stuff, 29s 6d per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country : Frail casks, 39s ; home melted, shipping casks, net, f.o.b., good coloured, 40s ; fair to dull, 39s to 38s. Bone fat : White, none ; pale, none ; benzine, 35s ; melted stuff, 35s, f.o.b.

LOANS

The Corporation is prepared to receive Loans on Mortgage of all the Properties, Revenues and Rates of the City. The Mortgages will be repaid in full after six months' notice to be given by either side so as to expire on or after three, five or seven years from the date of the Loan. The Mortgages are a Trustee Security. Interest is paid half-yearly.

For further particulars apply to
J. MITCHELL, City Treasurer, Leeds.

**ALEXANDRIA WATER COMPANY,
LIMITED.**

Notice is hereby given that the Forty-Sixth ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Office, Alexandria, on TUESDAY, the 26th of June, 1924, at 4 o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to Act of Parliament, and to fix the Directors' remuneration.

Holders of Share Warrants to Bearer desiring to attend or to be represented at the Meeting must deposit their Share Warrants in London before the 28th May, 1924, in Alexandria before the 7th June, 1924, until after the Meeting, at Messrs Barclays Bank, Limited, 1 Pall Mall East, London, S.W.1, or at the Anglo-Egyptian Bank, S.W.1, or at Alexandria, or at some other approved bank in London or Alexandria.

Dated Alexandria, Egypt, the 3rd May, 1924.—By Order of the Board,
EDMUND SMITH, Manager.

THE BRITISH OVERSEAS BANK LIMITED.

An arrangement satisfactory to all parties concerned has been made whereby the United Bank of Scotland, Limited, Williams Descon Bank, Limited, and the Prudential Assurance Company, Limited, will acquire the shares holding interests in the British Overseas Bank, Limited, of:—

Anglo-South American Bank, Limited;
Dominion Bank (Canada)
Glyn, Mills & Company;
Charles Hoare & Company;
Imperial Ottoman Bank;
Northern Banking Company, Limited,

as soon as the alterations which may be necessary in the Articles of Association give effect to these changes have been made.

A Notice to Shareholders calling the necessary Meetings will be circulated in the Order of the Board.

CHURCHILL, Chairman.

SOUTHERN PACIFIC CO.

REPORT OF THE BOARD OF DIRECTORS.

To THE STOCKHOLDERS OF THE SOUTHERN PACIFIC COMPANY:

NEW YORK, N.Y., May 8, 1924.

Your Board of Directors submits this report of the operations and affairs of the Southern Pacific Company and of its Proprietary Companies for the fiscal year ended December 31, 1923.

INCOME ACCOUNT—SOUTHERN PACIFIC COMPANY AND TRANSPORTATION SYSTEM COMPANIES, COMBINED.
(Excluding offsetting accounts.)

OPERATING INCOME.		Year ended December 31, 1923.	+Increase. —Decrease.	Per Cent.
RAILWAY OPERATING REVENUES:				
1. Freight		\$199,591,192 30	+ \$19,152,240 67	10.61
2. Passenger		62,158,875 82	+ 3,155,325 96	5.35
3. Mail		3,564,972 83	+ 283,218 32	7.91
4. Express		7,768,245 26	+ 94,872 01	1.24
5. All other transportation		6,802,888 68	+ 1,005,243 80	17.34
6. Incidental		6,921,629 82	+ 1,043,210 38	17.75
7. Joint facility—Credit		175,771 46	+ 40,367 60	18.68

23. Joint facility rents—Net		1,198,416 89	+ 27,606 78	16.16
24. Net railway operating income		\$54,228,025 48	+ \$8,005,177 29	17.32
NON-OPERATING INCOME.				
31. Income from lease of road		\$88,143 60	— \$70,909 07	44.58
32. Income from lease of road—Standard return		1,586 98	— 1,586 98	
33. Miscellaneous rent income		1,009,652 54	+ 126,335 28	14.30
34. Miscellaneous non-operating physical property		300,460 71	+ 18,839 76	6.69
35. Separately operated properties—Profit		16,888 75	+ 13,621 29	44.65
36. Dividend income		4,443,170 00	+ 1,269,125 90	39.98
37. Income from funded securities—Bonds and notes—Affiliated and other companies		3,783,773 79	+ 914,548 46	31.87
38. Income from funded securities—Investment advances—Affiliated companies		2,261,596 23	+ 1,878,777 71	450.77
39. Income from unfunded securities and accounts		509,278 94	+ 365,759 51	41.80
40. Income from sinking and other reserve funds		887,572 54	+ 38,647 11	4.55
41. Miscellaneous income		81,049 50	+ 5,346 34	6.99
42. Total non-operating income		\$13,381,583 60	+ \$3,789,050 97	39.50
43. Gross income		\$67,609,609 08	+ \$11,794,228 26	21.13
DEDUCTIONS FROM GROSS INCOME.				
45. Rent for leased roads		\$239,107 64	+ \$708 58	.30
46. Miscellaneous rents		762,002 43	+ 106,914 89	16.14
47. Miscellaneous tax accruals		542,867 21	+ 64,944 39	13.45
48. Interest on funded debt—Bonds and notes		20,140,613 91	+ 1,036,107 74	5.67
49. Interest on funded debt—Non-negotiable debt to affiliated companies		1,036,107 74	+ 16,993 42	1.67
50. Interest on unfunded debt		97,122 75	+ 9,981 16	9.32
51. Amortization of discount on funded debt		76,562 70	+ 10,856 03	12.42
52. Maintenance of investment organization		23,375 81	+ 14 12	.06
53. Miscellaneous income charges		140,664 62	+ 281,258 07	68.66
54. Total deductions from gross income		\$23,057,124 81	+ \$1,158,103 94	5.88
55. Net income		\$44,552,484 27	+ \$11,956,332 20	36.66
DISPOSITION OF NET INCOME.				
56. Income applied to sinking and other reserve funds		\$1,165,183 42	+ \$37,067 55	3.29
57. Income appropriated for investment in physical property		372,348 32	+ 372,348 32	
58. Total appropriations		\$1,537,531 74	+ \$409,415 87	36.39
59. Income balance transferred to credit of Profit and Loss		\$43,014,952 53	+ \$11,546,916 33	36.66
60. Per cent. of net income on average amount of outstanding capital stock of Southern Pacific Co.:				
(a) Railroad income		10.21	+ 2.38	30.40
(b) Other income		2.73	+ 1.09	66.46
(c) Total		12.94	+ 3.47	36.64

+ Credit. † In arriving at the figures for per cent. of railroad income and per cent. of other income on outstanding capital stock (line No. 60), an estimated apportionment of net income was made by allocating to railroad income, as nearly as possible, the items relating solely to that class, and to other income the items relating solely to that class, the remaining items being apportioned between the two classes on an estimated basis.

TRANSPORTATION OPERATIONS.

Transportation operations for 1923 compare with the previous six years as follows:

	1923	1922	1921	1920	1919	1918	1917
Operating revenues	\$287,204,535	\$262,519,169	\$260,494,965	\$269,269,504	\$280,657,272	\$221,611,206	\$198,971,490
Relative to 1917 (100)	148	138	139	146	124	114	100
Actual 1923 compared with 1917	+ 98,293,145						
Operating expenses	\$207,166,588	\$198,664,456	\$212,572,262	\$242,118,700	\$288,885,172	\$268,491,125	\$200,601,823
Relative to 1917 (100)	172	161	176	201	186	186	100
Actual 1923 compared with 1917	+ 86,564,765						
Operating ratio, per cent.	72.13	73.77	78.88	86.77	78.61	78.75	62.18
Net revenue from railway operations	\$80,038,047	\$68,854,713	\$66,922,103	\$40,155,714	\$51,272,100	\$68,180,081	\$78,369,667

Actual 1923 compared with 1917	+ 8,025,182						
Traffic units (ton miles plus 3 times passenger miles, thousands)	21,044,190	18,012,411	17,451,417	22,010,468	20,196,015	20,886,088	20,876,908
Relative to 1917 (100)	101	86	84	106	97	100	100

SOUTHERN PACIFIC COMPANY—continued.

TRANSPORTATION OPERATIONS—continued.

Conditions affecting railway operations were more nearly normal in 1923 than in any year since 1917, barring the higher costs of labour and materials, and the rise in living cost above pre-war standards. A volume of traffic close to the highest in the Company's history was handled expeditiously and without substantial equipment shortage, there were no major disturbances incident to labour conditions or other causes, yet the net railway operating income, while comparing satisfactorily with recent years, represents the very modest return of but 4.81 per cent. upon the book investment in road and equipment.

Compared with 1922, average compensation per employee decreased 2.8 per cent., reducing operating expenses by \$4,011,000, lower fuel prices saved \$3,819,000, and lower prices of material caused a reduction of \$777,000, the aggregate effect of changes in labour and material prices being to reduce expenses by \$8,607,000. As against this, however, average revenue per ton mile fell 8.06 per cent., and average revenue per passenger mile decreased 1.93 per cent., reduced rates thus being responsible for a decrease of \$17,549,000 in operating revenue. Taxes increased \$1,505,971.

The volume of freight traffic handled by the railroads of the country was unprecedented. Revenue tons carried one mile by all Class I railroads in the western group increased 15.7 per cent., and by your lines 20 per cent., over the preceding year. Freight revenue of all Class I railroads in the western group increased 10 per cent., and of your lines 11 per cent., over the preceding year. Failure of freight revenue to increase correspondingly with increase in tonnage was principally due to the application during the entire year 1923 of 10 per cent. reduction of freight rates which became effective July 1, 1922.

Revenue passengers carried one mile by all Class I railroads in the western group increased 6.11 per cent., and by your lines 7.4 per cent., over the preceding year. Passenger revenue of all Class I railroads in the western group increased 4.6 per cent., and of your lines 5.4 per cent., over the preceding year. Failure of passenger revenue to increase correspondingly with the number of passengers carried one mile is due to the ratio of increase being greater in long haul excursion travel than in the number of local short haul passengers—the latter being carried in increasing volume by motor vehicles.

A moderate increase in mail and express revenue resulted from a general improvement of business, and increase in other transportation and incidental revenue, including revenue from excess baggage, dining cars, restaurants, etc., resulted from increased travel.

The Transportation Act, enacted in 1920, provides that rates shall be so adjusted that carriers as a whole, or in groups designated by the Interstate Commerce Commission, shall earn an aggregate annual net railway operating income equal to a fair return upon the aggregate value of the railway property held for and used in the service of transportation. It provided for an allowance to the carriers for only six months after their relinquishment of Government of a return equivalent to that paid by the Government for the use of the railroads during Federal control. It prescribed as a fair return for the first two years after the enactment of the statute 5 1/2 per cent. of the aggregate value of the railway property held for and used in the service of transportation, and vested discretionary power in the Interstate Commerce Commission to add thereto a sum not exceeding one-half of 1 per cent. The Commission did this, and raised the rate to 6 per cent. It prescribed a fair rate of return thereafter, in pursuance of which the rate was fixed at 5 1/2 per cent. per annum. An impression has been fostered that the railroads have been guaranteed a fixed or minimum return. That there is no foundation for this impression is demonstrated by the results since the enactment of the statute. From September 1, 1920, to December 31, 1923, the railroads of the United States (embracing every railroad with gross earnings of one million dollars or more per annum) received a return on the value of their property held for and used in the service of transportation \$1,086,600,000 less than the fair return contemplated by the Transportation Act, and the Class I railroads embraced in the western group received a return on the value of their property held for and used in the service of transportation \$463,400,000 less than the fair return contemplated by the Transportation Act. If the railroads had been guaranteed a fixed or minimum return, \$1,086,600,000 would now be due them to make up the deficit, but neither this amount nor any part of it has been or will be made good.

The rate of annual return upon the readjusted tentative value (based upon book value of investment in road and equipment) was, by years, as follows:

Years.	Southern Pacific Company.	All Class I Roads in U.S.	Class I Roads in Western District.
1921	3.36%	2.33%	3.59%
1922	4.29%	4.14%	4.09%
1923	4.81%	5.10%	4.57%

In face of the failure of the carriers to earn even approximately the fair return contemplated by the law, they are continuously hampered in their efforts to do so. To illustrate: They were forced to submit to a general reduction of approximately 10 per cent. in freight rates on July 1, 1922; they were ordered by the Interstate Commerce Commission to sell interchangeable scrip tickets on and after March 1, 1923, at a reduction of 20 per cent. below the normal one-way fare, which would have resulted in \$60,000,000 reduction in net revenue per annum—a result fortunately averted by a permanent injunction of the Court; a reduction has recently been ordered in passenger rates to, from, and between points in the states of New Mexico, Arizona and Nevada which will entail a loss of approximately \$8,000,000 per annum in the net revenue of the railroads operating in the States mentioned, including your lines; bills now under consideration by Congress and a petition now pending before the Interstate Commerce Commission in Pullman elimination of the higher charge made to passengers travelling in the cars threaten a loss of the revenue from this surcharge, which, in the case of Class I railroads, would amount to about \$33,000,000 per annum; measures are now under consideration by Congress to require a substantial reduction in rates on the products of agriculture, which it is evident the railroads cannot afford.

Furthermore, the western railroads, including your lines, have suffered the diversion of a very large volume of transcontinental freight to the steamship lines operating through the Panama Canal, which carried last year an aggregate of about 6,000,000 tons between the Atlantic and Pacific Coasts of the United States. The rates made by the steamship lines between the two coasts are substantially lower than the railroad rates between intermediate points which are not accessible to steamship lines. To retain or recover their share of this traffic to steamship lines, by railroad approximating those obtainable by steamship, requires rates by railroad approximating those obtainable by steamship. The so-called long and short haul provision of the Interstate Commerce Law prohibits the railroads from making lower rates between these points than are applicable at intermediate points, unless the authority of the Interstate Commerce Commission shall have been obtained. This authority has been so sparingly exercised by the Interstate Commerce Commission that the transcontinental lines thus far have been excluded from competition for the traffic by being denied the privilege of making low enough rates to participate therein, and a measure is now before the United States Senate which contemplates the withdrawal of all authority from the Interstate Commerce Commission to permit the railroads to meet this competition, notwithstanding the policy declared in the Transportation Act that both rail and water transportation shall be fostered and preserved in full vigor. The loss of a very substantial amount of revenue is being, and will continue to be, sustained unless

this discrimination can be averted and authority can be obtained from the Interstate Commerce Commission to participate in this intercoastal traffic.

Maintenance of Way and Structures increased \$4,429,687.89, or 12.04 per cent.—the result of increased renewals of rails and fastenings, ballasting and roadway maintenance, due to greater weight of train equipment.

Maintenance of Equipment increased \$2,187,422.94, or 4.53 per cent., allocated principally to repairs of locomotives and passenger cars. Transportation service locomotive mileage increased 12.97 per cent., and total car mileage increased 20.16 per cent. Despite demands placed upon the equipment by the heavier traffic moved, the rolling stock was adequately maintained during the year to the Company's standards.

Traffic Expenses increased \$578,359.33, or 12.98 per cent., principally in outside agencies and advertising, in order to obtain our fair share of competitive traffic.

Transportation Expenses increased \$6,105,646.35, or 6.60 per cent. Total transportation service train miles increased 1.12 per cent., passengers carried one mile increased 7.40 per cent., and tons of freight moved one mile increased 21.49 per cent. The number of passengers carried per train increased 2.77 per cent., and the average net tons of freight per train increased 2.34 per cent.

The value of fuel economized in 1923 over 1922 is \$605,015. Close supervision of fuel used by engineers, and improved locomotive design (including superheaters and feed water heaters) have resulted in constant increased efficiency in use of locomotive fuel. Comparing 1923 with 1913, for example, the quantity consumed per 1,000 gross ton miles in passenger service has been reduced from 206.67 to 162.34 pounds, or 21.5 per cent., and in freight service from 192.83 to 142.56 pounds, or 26 per cent., the annual value of this saving being \$6,552,415.

Miscellaneous Operations increased \$19,224.62, or 10.67 per cent., allocating to dining cars, hotels and restaurants, offset by like increases in revenues from these facilities. General Expenses increased \$267,506.00, or 3.21 per cent.

Railway Tax Accruals increased \$1,505,971.59, or 7.99 per cent. The taxes for the year consumed one-fourth of the total net revenue from railway operations, and approximated the aggregate amount paid as dividends to the owners of the property. The increase in taxes is made up of an increase of \$1,240,900 in Federal income taxes, an increase of \$484,200 in taxes payable to the State of California under the King Tax Law, and a net decrease in charges for other taxes, the result of including in 1922 eighteen months' accrual of taxes payable to the State of Arizona in order to place such accrual on a calendar year basis.

As mentioned on page 10 of the 1921 report, the King Tax Law, which became effective July 1, 1921, increased the rate of taxation on gross earnings in California from 5 1/2 per cent. to 7 per cent. As such tax is excessive when compared with the taxes levied upon property in the State generally, you and the Atchison, Topeka & Santa Fe Railway Company instituted suits in equity, in the United States District Court for the Northern Division of California, against the State tax officials to restrain the collection of the tax levied under said law upon the ground that such tax constituted an undue burden upon interstate commerce. At the January, 1924, term of the District Court a decision was rendered denying the relief sought, but proceedings are now under way to take the case to the Supreme Court of the United States, where it is hoped the contention of your Company will be sustained.

Pending adjudication of the matter, the tax has been charged against income at the increased rate of 7 per cent., although payments have continued at the old rate of 5 1/2 per cent. The increased tax from July 1, 1921, the effective date of the King Tax Law, to December 31, 1923, the payment of which has been thus withheld, amounts to \$4,884,178.25, less penalties on amounts so withheld, which also have been charged against income, amount to \$682,700.40. If, as expected, the contention of your Company is upheld by the Supreme Court, the liability aggregating \$5,566,878.65, now carried in the accounts will be wiped out and the amount credited to profit and loss.

Expenses incurred during the year on account of Federal valuation of railroads amounted to \$795,361.73, making the total disbursements on this account from the beginning to the close of the year \$4,731,032.56. The increase of \$1,739,646.39 in net equipment rents is accounted for principally by increased car hire payments due to the larger movement of Pacific Fruit Express cars, in which this Company owns a half interest and indirectly participates in the rental earnings, although they are not included in Southern Pacific operations.

NON-OPERATING INCOME.

The decrease in the account Income from Lease of Road is due, principally, to the inclusion in that account last year of \$66,942.86, representing rental which accrued prior to January 1, 1922.

The increase in the account Miscellaneous Rent Income is due, principally, to increase in ground rent received from industrial concerns; and to the inclusion in such account, in accordance with requirements of the Interstate Commerce Commission, of the rent received this year under temporary sub-lease, effective July 1, 1922, for use of Pier 52 at New York, which last year was credited to the account Miscellaneous Rents as an offset against the rental paid for such pier.

The increase in the account Income from Funded Securities—Investment Advances—is the result, principally, of the results to income this year past due interest on investment advances to Affiliated Companies, which was earned during the year, such interest being taken into the income of the Southern Pacific Company only when it has been earned by the Affiliated Companies.

Of the decrease of \$365,759.51 in the account Income from Unfunded Securities—Interest on Company's own funds used for construction; and the remainder is due, principally, to a decrease in interest received on short term securities which were sold during the year, and to a decrease in interest on demand loans.

DEDUCTIONS FROM GROSS INCOME.

The increase in the account Miscellaneous Rents is the result, principally, of debiting that account, commencing this year, with an annual charge for amortization of improvements on Oakland Pier terminal property, which will revert to the City of Oakland, California, upon the expiration of the Oakland Water front franchise in 1960; and to the inclusion in said account last year of the rental received for Pier 52 at New York, which this year was credited to the account Miscellaneous Rents.

The increase in the account Miscellaneous Tax Accruals is caused, principally, by increases in rates and assessed valuations; and by the tax accruals on additional miscellaneous physical property acquired during the year.

The net decrease in the account Interest on Funded Debt—Bonds and Notes—of \$88,861.06, due to the retirement of \$2,619,110.41 par value of funded debt, less an increase of \$44,916.67, representing the interest accruing during the year on the \$23,100,000 of Equipment Trust Certificates issued during the year.

The decrease in the account Miscellaneous Income Charges is due, principally, to a decrease in this company's proportion of the annual charge for amortization of investment in Associated Pipe Line, the said charge being apportioned among the three owning companies (Associated Oil Company, Pacific Oil Company, and Southern Pacific Company) on basis of use of the pipe line.

The dividends paid for 1923 were appropriated from the profit and loss surplus, and therefore do not appear in the income account. Pay-

SOUTHERN PACIFIC COMPANY—continued.

INCOME ACCOUNT—continued.

ments for 1923 amounted to \$20,663,094.32, as compared with \$20,663,139.32 for 1922. The figures for this year include \$240.00 and those for last year \$285.00, being dividends on stocks of Transportation System Companies held by the public.

The Southern Pacific Company does not take into its income account interest on advances to Affiliated Companies for the construction and acquisition of new lines until the principal of such advances, with interest, has been repaid either in cash, or in stocks and bonds of such companies, the interest included in the cost of such new lines being the amount authorized to be charged thereto under the regulations of the Interstate Commerce Commission. In the case of all other advances to Affiliated Companies, the interest thereon is taken into the income

account of the Southern Pacific Company only when it has been earned by the Affiliated Companies.

FUNDED DEBT.

On December 1, 1923, to provide for the construction and acquisition of new rolling stock, an equipment trust, known as "Southern Pacific Company Equipment Trust, Series F," was created, and an issue of \$23,100,000, par value, Five Per Cent. Equipment Trust Certificates authorized, all of which were issued during the year. The certificates are dated December 1, 1923, and mature serially in lots of \$2,100,000 on December 1 of each year from 1928 to 1938, both inclusive. In accordance with the terms of the trust all certificates were guaranteed by the Southern Pacific Company.

† Represents, principally, interest on advances to Affiliated Companies, which has not been taken into income account. See last paragraph under heading "Deductions from Gross Income."

EQUIPMENT.

To provide for increased requirements and to replace vacated equipment, arrangements were made during the year for the purchase from outside builders, or for the construction at company shops, of rolling stock as follows:

	Ordered from Builders	Built or Purchased at Company Shops	Total
Locomotives—Steam	63	—	63
Locomotives—Electric	—	8	8
Locomotive tenders	—	10	10
Freight-train cars	5,775	1,269	7,044
Passenger-train cars	217	—	217
Electric motor cars	100	—	100
Company service equipment	35	1	36
Total estimated cost	\$28,645,000	—	\$28,645,000

In addition to the above rolling stock the Pacific Fruit Express Company (the stock of which is owned one-half by Southern Pacific Company and one-half by Union Pacific R. R. Co., and which furnishes refrigerator cars to, and operates icing stations for, the Southern Pacific and Union Pacific Systems), ordered during the year 3,057 refrigerator cars, the estimated cost of which is \$10,154,000.

Three additional passenger ferry steamers (San Mateo, Shasta, and Yosemite) have been placed in service between San Francisco and Oakland to accommodate the increase in local passenger and automobile traffic; and contracts were made during the year for the construction of one ocean-going passenger and freight steamer of 11,100 tons displacement, one tug, one steam lighter, and ten hoisting lighters for service in the company's New York-New Orleans and Galveston steamship line. The cost of this floating equipment will approximate \$4,080,000.

Including the Southern Pacific's one-half of the Pacific Fruit Express equipment, the total estimated cost of rolling stock and floating equipment provided for during the year amounted to \$37,762,000.

THE CONTROL BY THE SOUTHERN PACIFIC OF THE CENTRAL PACIFIC THROUGH LEASE AND STOCK OWNERSHIP.

In last year's report it was stated that the Southern Pacific Company had re-acquired control of the Central Pacific pursuant to an order of the Interstate Commerce Commission and subject to the conditions thereby imposed; and that it was expected at an early date to bring the Commission's order and the Company's action thereunder to the attention of the District Court of Utah, charged with entering a final decree pursuant to the opinion of the Supreme Court and the laws of the United States. This has been done, and the District Court has rendered a final decree recognizing the lawfulness of the control acquired under authority of the Commission's order. We therefore have the satisfaction of stating that the question of the Southern Pacific ownership and control of the Central Pacific has now been settled in a manner which is in the public interest and in harmony with latest expression of legislative policy, and which, at the same time, avoids the evil of a separation of the properties.

NATRON CUT-OFF.

The plans completed in 1905 for the construction of the Natron Cut-Off contemplated the construction of a line about 280 miles in length extending from Natron, Oregon, the end of a branch line of the Oregon and California Railroad, to Weed, California, on the main line of the Central Pacific, thus providing for an alternate line between Springfield Junction, Oregon, and Weed, California, shorter in distance, of easier grades, and less curvature than the existing line over the Siskiyou Mountains, via Ashland, Oregon. Work on the Cut-Off was commenced in 1905, and up to February 11, 1914, when the Government instituted its suit attacking the right of your Company to control the Central Pacific, there had been completed and placed in operation 160.88 miles, as follows:

Natron to Oakridge, Oregon	84.39 miles
Weed, California, to Kirk, Oregon	126.49 miles
Total	160.88 miles

As your Company was at that time carrying in its treasury \$30,139,349.53 of bonds and notes of Central Pacific Railway Company and its underlying companies, which had been taken over against advances for construction of Central Pacific branches and extensions, and as it would be called upon to furnish funds to complete the Cut-Off, then estimated at upwards of \$16,000,000, it was deemed advisable to suspend the work until the outcome of the Government's suit had been determined.

On July 2, 1922, in response to inquiries made by various commercial organizations in the State of Oregon, your Executive Committee announced that the Company would proceed with the work of completing the gap in the Natron Cut-Off as soon as its right to hold the Central Pacific had been fully and definitely established. Pursuant to this

promise, and in order to avoid delay, your Company, on March 23, 1923 (following the favorable decision of the Interstate Commerce Commission, but before the final decree of the Federal Court confirming the right of the Southern Pacific to hold the Central Pacific had been rendered), applied to the Interstate Commerce Commission for authority to proceed with such work. The Commission's order granting such authority was dated August 15, 1923, and the work of completing the Cut-Off was commenced on September 1, 1923.

This work involves the construction of 108 miles of main line and 29 miles of sidings over the Cascade Mountains between Kirk and Oakridge, Oregon, including 19 tunnels having an aggregate length of 16,445 feet, the estimated cost of which is \$15,932,589. Up to March 31, 1924, the line had been relocated, shortening the distance from 118 miles to 108 miles, practically all the right-of-way had been acquired, 18.70 miles of track completed, and 18 miles of roadway completed ready for tracklaying. Contracts have been let for the grading and tunneling of an additional stretch of 56 miles, of which 6 miles have been cleared ready for grading.

When completed this Cut-Off as relocated will extend from Natron, Oregon, to Weed, California, a distance of 269.54 miles, and will cost about \$28,700,000. It will shorten the distance between San Francisco and Portland by approximately 20 miles, will give two lines between Weed, California, and Springfield Junction, Oregon, one over the Siskiyou Range with grades of 174 feet to the mile, and one over the Cascade Range with grades of 95 feet to the mile, and will open up a new territory which, it is expected, will furnish your Company profitable traffic.

DOUBLE TRACKING CENTRAL PACIFIC BETWEEN OAKLAND AND OGDEN.

Traffic congestion at the time of the San Francisco Fire in 1906 emphasized the necessity of double tracking certain portions of the Central Pacific between Oakland and Ogden, and it was decided to double track the entire line, proceeding first, however, with the work in the more congested districts. This programme was followed, and up to the end of 1914, when the work was suspended pending the determination of the Government's suit attacking the right of your Company to hold the Central Pacific, there had been completed and placed in operation about 197 miles of second track between Sacramento and Ogden. Following the favorable decision of the Interstate Commerce Commission in the Central Pacific Case, this work was resumed, and an additional 37 miles of second track was completed and placed in operation during the year 1923, making a total of 234 miles of second track completed and placed in operation between Sacramento and Ogden to December 31, 1923. Including 52.5 miles of second track now under construction, the 183 miles of Western Pacific Railroad between Alazon and Weso, Nevada, which your Company is to operate jointly with the Western Pacific, as explained in a separate paragraph, and the second track on the line of the Southern Pacific Railroad between Oakland and Sacramento, this will give an aggregate of 553 miles of second track between Oakland and Ogden, leaving only the following stretches to complete the double tracking of the line, viz:—

Hafed to Oresma, Nevada	104.7 miles
Moor to Valley Pass, Nevada	24.2 "
Lucin to Lakeside, Utah	54.8 "
Saline to West Weber, Utah	20.3 "

Total 204.0 miles

AGREEMENTS WITH WESTERN PACIFIC RAILROAD COMPANY.

On March 7, 1924, the Southern Pacific Company and the Western Pacific Railroad Company announced that they had entered into agreements which, briefly stated, are as follows:—

1. Southern Pacific and Western Pacific to operate their tracks between Alazon (near Wells) and Weso (near Winnemucca), Nevada, a distance of 183 miles, as a double track railroad, for a period of 50 years from August 1, 1924, thus giving each company the benefit of double track service between such points.

2. The Western Pacific, as occasion may arise, to handle traffic for Southern Pacific on the former's line over the Sierra Nevada Mountains between Weso, Nevada and Chico, California, as a bridge, the arrangement including the Sacramento Northern as the section of the bridge between Oroville and Chico, California. The minimum traffic to be moved over the bridge in any year being one-half of the traffic, other than live-stock and perishables, moving to and from Oregon points via Southern Pacific to, from, or through Ogden.

3. Southern Pacific to handle traffic over its line between Nulson and Sacramento, California, as a bridge, both for Western Pacific and for Sacramento Northern, the Nulson branch of the latter at the present time being isolated from the rest of its property.

4. Pacific Fruit Express Company, owned equally by Southern Pacific and Union Pacific, has acquired the right to operate all Western Pacific refrigerator cars in connection with its own refrigerator cars under conditions which assure an equitable distribution of such equipment to shippers of perishable products on Southern Pacific, Union Pacific and Western Pacific Lines. With equipment ordered, this makes a total of 33,606 cars available for the use of the three lines.

SOUTHERN PACIFIC COMPANY—continued.

THE CONTROL BY THE SOUTHERN PACIFIC OF THE CENTRAL PACIFIC THROUGH LEASE AND STOCK OWNERSHIP—continued.

The Nevada paired track arrangement gives your Company a needed second track without the necessity of large capital expenditures therefor, thus conserving capital for other urgent uses.

The bridge arrangement over the Sierra Nevada Mountains gives your company a second route over that formidable range for the movement of Oregon lumber and other non-perishable traffic over a line 38.6 miles shorter and less congested than the present route. On the other hand, the bridge arrangement over your company's line between Suisun and Sacramento will link the Suisun branch of the Sacramento Northern with the parent company's line at Sacramento.

Under the agreement between the Pacific Fruit Express Company and the Western Pacific (which merely establishes in the form of a definite contract an oral arrangement in effect during the past season) all the refrigerator cars serving perishable fruit traffic are placed under the control of the former company, which deals directly with the shippers, its plan of distribution being based on a careful and intensive study of the needs of each section, as determined by the perishable products produced in such section.

These agreements are in accordance with a memorandum dated January 16, 1923, filed with the Interstate Commerce Commission by the Southern Pacific and the Western Pacific at the time of the Central Pacific hearing before the Commission, which memorandum was referred to by the Commission in its decision of February 6, 1923, authorising the continued control of the Central Pacific by your company. With the establishment of these agreements all the suggestions in said memorandum will have been carried out, that feature looking to the establishment of through rates between the east and Southern California points over Western Pacific and Southern Pacific having become operative several months ago.

These agreements will result in greatly increased efficiency in service to the public. The advantages accruing to the two companies in employing the facilities of one for the business of the other are independent of, and have no relation to, the solicitation of traffic, each company having to seek its business as vigorously as before.

The above will show the additional facilities afforded for handling traffic over the very heavy grades of the Siskiyou Mountains and of the Sierra Nevada, two of the three conspicuous obstructions to traffic on the Pacific System. Considerable work has been done on the remaining heavy grades over the Tehachapi Mountains, the situation as to which at the present time is as follows:

Double track has been completed from Mojave to Tehachapi station, a distance of 19.8 miles, and from Bakersfield to Siver, 12.1 miles, a total of 31.9 miles out of the distance of 68 miles from Mojave to Bakersfield, leaving 36.1 miles, or all of the heavy grade on the north slope of the range, yet to complete. Surveys have been completed for a second track on this section, affording a compensated maximum grade southbound of 98 feet to the mile as against the present grade of 132 feet to the mile on the present operated line.

CONTROVERSY ARISING OUT OF THE OREGON AND CALIFORNIA RAILROAD'S LAND GRANT.

This is an accounting suit brought in 1917 by the United States seeking to offset against the compensation of \$2.50 per acre, due the Company for the unsold lands, moneys received by the Company, in excess of \$2.50 per acre, by reason of past sales, leases and otherwise, as well as taxes levied since the forfeiture decision in 1913 and voluntarily paid by the Federal Government to the State of Oregon. When our last year's report was issued this case was being heard in the United States District Court of Oregon. Illness of the trial judge has delayed up to this time the submission of the case; but a decision by the lower court may be expected in the near future.

SOUTHERN PACIFIC RAILROAD COMPANY OF MEXICO.

In last year's annual report mention was made of the agreement dated March 2, 1923, between Southern Pacific Railroad Company of Mexico and the Mexican Government, under which the Railroad Company, in partial settlement of its claims, received notes of the Mexican Government aggregating 13,600,000 pesos, payable at the rate of 200,000 pesos per month, or an aggregate of 2,400,000 pesos per annum. Of the notes so received, notes aggregating 2,400,000 pesos, which matured during the last nine months of the year 1923 and the first three months of 1924, together with the interest thereon, have been paid off.

Under the said agreement the Government pledges itself to study and settle with a spirit of absolute equity and reasonable promptness, the balance of the Railroad Company's claim, amounting to 10,465,000 pesos, the amount to be paid to be based on adequate evidence, and when agreed upon to be covered by notes. During the year a representative of the Government completed an investigation of these accounts and an early adjustment is expected.

The agreement with the Mexican Government provides for the completion by the Railroad Company of the 100-mile gap in the main line between Tepic and LaQuemada; and the rehabilitation by the Railroad Company of the Tonichi Branch, about 90 miles in length, and of the Alamos Branch, about 40 miles in length, which had been partially destroyed by revolutionary forces. Work on the main line was begun on March 6, 1923, and although the work was delayed by unprecedented heavy rains, about 45 miles of right-of-way were cleared and 20 miles of roadway graded, upon which 9 miles of track were completed during the year. As of March 15, 1924, a force of 3,363 men were engaged upon this work, at which date an aggregate of 24.8 miles of grading had been completed and 6.51 miles were nearing completion.

The work of rehabilitating the Tonichi and Alamos Branches was also begun in March, 1923, and 38.9 miles, or 43 per cent. of the former, and 23.3 miles, or 57 per cent. of the latter, was completed during the year.

Excluding interest, the investment of the Southern Pacific Company and Southern Pacific Railroad Company in the Southern Pacific Railroad Company of Mexico, as of December 31, 1923, was \$43,095,409. During 1923, the gross income (after deducting operating costs) of Southern Pacific Railroad Company of Mexico amounted to \$1,209,880.79. Deduction from gross income, excluding interest due to the Southern Pacific Company and Southern Pacific Railroad Company, and the annual charge for amortization of improvements (this item being the annual payment into a sinking fund to retire the investment in the property at the expiration of the life of the concession, under the appropriate provision of the Mexican law) amounted to \$120,571.40, which would leave a net income of \$1,089,309.39, or the equivalent of 2.53 per cent. on the investment.

The average miles of road operated during the year was 1,131.31, as compared with 1,106.81 for 1922.

STATUS OF ACCOUNTS WITH UNITED STATES GOVERNMENT.

In May, 1923, complete and final settlement was made with the Interstate Commerce Commission of all claims of the Southern Pacific Company and Transportation System Companies against the Government under the *guaranty* provision of the Transportation Act of 1920, covering the period from March 1 to August 31, 1920, the companies receiving in such settlement a balance due of \$1,738,859.06.

EMPLOYEES' WELFARE.

On January 1, 1924, the company placed in effect a plan through which employees six months or more in the service may receive the benefit of an expensive group life insurance in one of the largest old line life insurance companies, also insurance against permanent disability resulting from sickness or accident. The company furnishes entirely at its own expense \$250 of such insurance to each employee six months in the service, increasing the free insurance to \$500 at the expiration of the first year of service. Employees are granted the option of subscribing to additional insurance, graded according to their salaries, to a maximum of \$3,000, at rates much lower than applicable to any insurance they might otherwise obtain, which are made possible because of the inexpensive character of group insurance itself, and by reason of the fact that the company makes a substantial contribution to the cost of such additional insurance. The success of the plan was remarkable, 93 per cent. of the eligible employees having made application for all additional insurance procurable; the remaining eligible employees are of course protected by the insurance granted them by the company without cost. The same plan was extended to employees of electric railway lines and other subsidiary corporations of which the Company owns the entire stock. The aggregate insurance thus carried provides 71,170 employees with \$116,343,250 of insurance, representing the largest group insurance policy ever written. It is estimated that the cost of the company's contribution to the plan will approximate the amount paid out in pensions.

Under the pension system put into effect January 1, 1903, there were carried on the pension rolls at the end of the year, 1,333 employees. The payments to pensioners for the year amounted to \$696,921.31, equivalent to six per cent. per annum on an investment of \$11,615,355.16.

GENERAL.

The dividends for the year on the capital stocks of the Southern Pacific Company and its Transportation System Companies held by the public amounted to \$20,663,094.32, as follows:

Dividends on the capital stock of the Southern Pacific Company:	
1½ per cent. paid April 2, 1923	\$5,165,713.58
1½ per cent. paid July 2, 1923	5,165,713.58
1½ per cent. paid October 1, 1923	5,165,713.58
1½ per cent. payable January 2, 1924	5,165,713.58

Total, Southern Pacific Company

Dividends on stocks of Transportation

System Companies held by the public

Total dividend payments for the year

The total taxes for year amounted to

In the annual report for 1922, attention was directed to a reduction in operating expenses of \$16,776,000, substantially all of which, or \$16,850,000, there was an increase in taxes of \$3,320,000.

In 1923 expenses were reduced by (a) \$4,011,000 less paid in wages, (b) \$3,819,000 less cost of fuel, and (c) \$777,000 in lower prices of materials and supplies, a total of \$8,607,000, all of which, and much more, was lost by a total of \$7,549,000 in revenue, due to rate reductions by competent authority, and an increase of \$1,505,971 in taxes, a total of \$19,055,000 due to these two factors. The final result was a decrease in net income of \$10,448,000; in other words, for every dollar in expenses saved during the year, \$2.21 were taken by the public through reductions in rates and increases in taxes.

The most difficult problem confronting railway management to-day is the uncertainty regarding the future of the transportation industry of the country. Leaving aside all question of whether the national policy shall be that of Government ownership or of private operation, it is imperative until and unless a change is made in the present national policy that there should be a well-defined and consistent program for the supervision and regulation of the railways and that there should not be constant proposals for new national and state legislation. Continual tinkering with legislation on this all-important subject breeds such uncertainty that it is impossible for railway management to plan for the future on anything like a comprehensive scale, as under existing circumstances no one can forecast under what conditions they may have to operate. Opinions may differ as to the wisdom and effectiveness of adjusted themselves to its provisions, and a fair trial should be given to it before any radical changes are proposed or made. Too much reasonable return upon the provisions of that Act providing for a maintained there can be no inducement to undertake new or develop existing railway properties along constructive lines.

The investing public cannot be expected to provide for the ever-growing needs of the transportation industry unless it is reasonably property in which it invests will be permitted, under efficient management, to earn a reasonable return. It is most desirable in the interest of both the railways of the country and the public which they serve that a larger portion of the capital they require be provided by issuance of stock rather than of bonds, but it is hopeless to expect the public to invest in the stock of railway companies if all hope of reasonable returns is withheld from them. Continued increase in taxation, coupled with high operating costs and rate reduction, can only be offset by return through efficiency of management and if it is to be feared that an increased greater taxation, further reduction of rates, or oppressive regulatory control in the stock of railway companies, would indeed become discouraging.

A conspicuous instance of the paralyzing effect of Government policy on the railroads is afforded in the litigation, lasting ten years, that Pacific Double-tracking, ballasting, and other improvements designed to improve service to the public were deferred for a period of ten years, to be undertaken only after the settlement of this matter in the Federal Courts.

The Board gratefully acknowledges its appreciation of the loyal and efficient services rendered by officers and employees during the year.

By Order of the Board of Directors,
JULIUS KRUTTSCHNITT,
Chairman of the Executive Committee.

THE MONEY MARKET.

STRINGENCY in the short-loan market was again acute in the early days of the week, when considerable amounts were borrowed from the Bank of England, at the usual ½ per cent. above Bank rate. Thanks to this relief, and also to heavy disbursements by the Government, funds became more plentiful, and discount rates, which had been firm, eased off on the prospect of ease next week, after the payment of the War Loan interest. For immediate business, fine three months' bills were quoted at 3 to 3½ per

cent., but for delivery next week they could be placed at $2\frac{1}{8}$ per cent.

	May 30, 1924.	May 23, 1924.	May 16, 1924.	May 9, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	3	3	..

The Bank return showed a decrease of £1,210,000 in the reserve, practically all due to the outflow of notes for the usual demands for cash at the end of the month. Government and Other securities expanded by £262,000 and £1,117,000 respectively, the latter increase being considerably less than the amount that the market was believed to have borrowed. These increases roughly balanced the decline in the reserve; and on the other side of the account a decline of 3 millions in the Public deposits went to swell Other. There was a reduction of £324,300 in Currency Notes outstanding this week, which includes £1,390,700 for notes called in but not yet cancelled. The fiduciary issue is £235,234,600, or £12,956,300 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange has this week fallen to a very low ebb. Prices are well maintained on the whole, but the tendency, as usual when business is slack, is to let values droop. Gilt-edged stocks have given way a little, but the firmness of Indian Government and Home Corporation stocks has been noticeable. There is no interest in Home Rails, and prices have sagged, but Argentine Rails have been a good market. Rubber shares have recovered a little, but there is little business, and activity in oils is almost entirely professional. Industrials have been irregular, and mines have leaned towards the heavy side.

THE COMMODITY MARKETS.

A quieter tone generally has pervaded markets this week. Sectional strikes have affected the South Wales coal market. Conditions abroad are unfavourable to business in pig-iron. It is announced that some steel-rolling mills have closed, owing to scarcity of orders. Our Sheffield correspondent reports that there is little buying in the iron and steel trades. Tin displayed firmer features, and copper improved on better demand. The wheat markets are inclined to be dull. Sugar was steady at the recent lower level of prices, and tea prices favoured sellers, although the common varieties met with little support. The rubber market was easier. Business in the cotton trade is quiet. Similar conditions are reported from Bradford in the wool industry. The hide market remains steady, while linseed oil is in better demand, and the price has improved.

FOREIGN EXCHANGES.

In the foreign exchange market business has been quiet, with Continental holidays. The chief feature has been a further sharp drop in the value of sterling. From a closing rate of \$4.34 $\frac{1}{2}$ on the 23rd, the quotation at first showed some improvement, rising as high as \$4.35 $\frac{1}{2}$ at one time on Monday. On the two following days it fell away again to a closing rate of \$4.33 $\frac{3}{8}$ on the 28th, and on Thursday afternoon there was a sharp drop on selling of sterling from New York to \$4.31 $\frac{3}{8}$, while yesterday morning's quotation was down to \$4.30 $\frac{1}{8}$. Forward quotations are about the same as a week ago at $\frac{1}{8}$ to $\frac{1}{4}$ cent per month above spot. Preparation for autumn requirements and recent large foreign loans are suggested as explanations for this movement, together with fears of the general political situation in Europe, but it is probable that special operations have also contributed to the fall. The Paris rate, which ended last week at 80.50f showed a little improvement on Monday and Tuesday, but since then has moved up somewhat irregularly to 82.40f yesterday morn-

ing, while Brussels has followed suit from 93.40f to 95 $\frac{1}{2}$ f. Forward rates in Paris have widened on the week from 50 centimes to 70 centimes per month above spot, while Brussels is also rather wide at 12 to 15 centimes per month above. The lira has been very steady, moving only on the week from 98.31 to 98 $\frac{1}{8}$. Berlin shows, if anything, a slight appreciation down to 18,300, as the result of the Reichsbank's determined policy to maintain the mark at the expense of an absolute credit famine, and of increasing failures and unemployment. While this insistence on avoiding a new currency collapse can be well understood, it is still a matter of much doubt whether the country will be able to stand the present enormous strain for a sufficient time to allow agreement to be reached on the Dawes Report, with regard to which the regrettable attitude of the Nationalists is causing further apprehension. Among neutral countries, Holland has moved sharply against us with the \$, from 11.62 to 11.52 $\frac{1}{2}$, and Switzerland from 24.54 to 24.44 $\frac{1}{2}$, and Stockholm from 16.35 $\frac{1}{2}$ to 16.26 $\frac{1}{2}$. Vienna, however, at 308,500, is about the same, while Warsaw has moved against us from 22.55 to 22.40 zloty. Madrid, at 31.60, after being better, shows some improvement on the 31.68 $\frac{1}{2}$ quoted a week ago. Copenhagen, at 25.75 $\frac{1}{2}$, is unchanged on the week; Christiania, however, has depreciated again, from 31.29 $\frac{1}{2}$ to 31.40 $\frac{1}{2}$, after being still higher. Helsingfors, at 173 $\frac{1}{2}$, shows an improvement of $\frac{1}{4}$ mark. In Eastern Europe, Prague at 174 $\frac{1}{2}$ is $\frac{1}{8}$ krone better. Belgrade, at 354 $\frac{1}{2}$, shows a slight depreciation. Bucharest, however, has continued to move up rapidly from 912 $\frac{1}{2}$ to 1,040. Rumours of political changes and the recent disastrous explosion have played their part in this rise, and there is, in addition, a report, at present unconfirmed, of the reimposition of restrictions on grain exports. In the East, the rupee is unchanged on the week at 15 4 29-32d- $\frac{1}{8}$ d, while the yen has appreciated from 15 10 9-32d to 15 10 13-32d. The rise in silver on Continental buying continued until a price of 34 $\frac{1}{2}$ d was reached, but from this there has been a reaction on sales from China. Most of these, however, were uncovered, so the undertone remains strong. The Hong Kong quotation has moved on the week from 2s 5d to 2s 4 $\frac{1}{2}$ d, while Shanghai has also fallen from 3s 4d to 3s 3 $\frac{1}{2}$ d. In South America Rio, after appreciating to 6 3-32d, has fallen back again to 6d, as compared with 5 27-32d a week ago. Buenos Aires has moved from 41 $\frac{1}{2}$ d to 41 $\frac{3}{8}$ d, and Monte Video from 43d to 43 $\frac{1}{2}$ d, while Valparaiso has depreciated a little from 39.20 to 39.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 24th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	6,750	From Revenue	11,679
Interest, &c., on Debt	549	Taken from Exchequer Balances	209
Sinking Fund	1,199		
Subsidies	394		
Reduction of Debt	2,996		
	11,888		11,888

Revenue came in on an increased scale this week, amounting to £11,679,700, against £10,050,400. Customs produced £630,000 more at £3,229,000, while the yield from Excise at £2,267,000 increased by £1,312,000. Estate, &c., duties yielded £830,000 in excess of last year at £1,920,000. The yield from Property and Income-tax was rather low at £481,000, against £1,471,000. Super-tax yielded £1,010,000, against £820,000. Special Receipts produced £1,010,100, against £1,026,600. The week's operations reduced the National Debt by £2,996,600, and caused the following changes:—

(000's omitted.)			
TREASURY BILLS.	£	PUBLIC DEPT. ADVANCES.	£
Treasury Bills	+ 11,187	Public Dept. Advances	— 15,500
4% Treasury Bonds	+ 1,136		
Unemployment Insurance	+ 180		
	+ 12,503		— 15,500

The floating debt was reduced by £4,325,000 to £743,795,500.

FINANCIAL YEAR, 1924-1925 (April 1 to May 24).

THE WEEK IN PARLIAMENT.

MONDAY, MAY 26TH.—*Commons*: Debate on Money Resolution in connection with the Unemployment Insurance Bill. Second reading passed of L.M. and S. Railway (Superannuation) Bill. Report stage concluded of War Charges (Validity) Bill.

TUESDAY, MAY 27TH.—*Lords*: Second reading of Local Authorities (Emergency Provisions) Bill. Committee stage of School Teachers (Superannuation) Bill. *Commons*: Second reading of the Finance Bill.

WEDNESDAY, MAY 28TH.—*Lords*: Debate on the Anglo-Russian negotiations. *Commons*: Government's Airship Scheme and Empire Settlement discussed.

THURSDAY, MAY 29TH.—*Lords*: Committee stage of Prevention of Evictions Bill. Royal Assent given to National Health Insurance (Cost of Medical Benefit) Act, Friendly Societies Act, School Teachers (Superannuation) Act, and the Education (Scotland) Superannuation Act. *Commons*: Debate on Unemployment. Vote of Censure defeated.

FRIDAY, MAY 30TH.—Industrial Councils Bill, second reading.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Fine Cotton Spinners' and Doublers' Association, Royal Insurance, Co-operative Insurance Society, Gresham Life Association, Guardian Assurance, British Overseas Bank, Royal Mail Steam Packet, Brunner Mond, India General Navigation and Railway Nitrate Producers' Steamship, Calcutta Tramways, Shanghai Electric Construction, Cawnpore Electric Supply, and Vickers. At the extraordinary meeting of the British Overseas Bank alterations to the articles of association were unanimously agreed to. The chairman at the Gresham Life meeting reported favourable mortality experience. The chairman at the meeting of the Guardian Assurance said that they had present all the factors which made for substantial profit in the quinquennium. At the meeting of Brunner Mond the chairman pointed out the burden of taxation on industry and also dealt with the question of higher wages. The chairman at the R.M.S.P. meeting exhaustively reviewed the position and prospects. At the India General Navigation and Railway meeting the chairman, in referring to the Cauvery case appeal, pointed out the disabilities, as common carriers, to which they had to submit.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

The Reparations Problem.—The story of Reparations, which, since its ill-omened beginning at Paris in 1919, has passed from crisis to crisis and poisoned the politics of Europe, has come to the end of a chapter, and will shortly begin in a new phase and under altered conditions. We have, therefore, thought it a convenient moment to furnish to our readers in a special supplement a short history of the question during the last five years, together with a summary of the Experts' reports, which will supply the basis from which the new developments will start. The supplement does not attempt to be a commentary upon this story of failure and of hope deferred, or to pass judgment upon its historical importance. Its object is merely to serve as a convenient form of reference.

THE ANGLO-RUSSIAN NEGOTIATIONS.

THE Anglo-Russian Conference held further meetings on the 20th and 27th of the month, and official statements of the proceedings agreed by the two delegations have appeared in the Press. It is evident that the atmosphere remains friendly, and that a genuine desire for a settlement exists on both sides, but the results recorded hitherto are mainly negative. The Russian Delegation do not feel themselves able to offer resumption, in any form, of the service of their pre-war debt unless and until they succeed in obtaining a fresh loan in the London market. His Majesty's Government, on their side, have made it clear that, while their attitude towards such a loan would be benevolent, there could be no question of the Government guarantee for which the Russians are asking, and that they could not accept proposals for scaling down the pre-war debt in the form in which they have been put forward. In order to avoid a deadlock, the British Delegation announced in the course of last Tuesday's session that they would present their own counter-proposals for dealing with the pre-war debt in the precise form of a draft agreement, which they would invite the Russian Delegation to take as the basis for discussion. There for the moment the negotiations stand. While the hand is being played it is hardly the moment to comment or to criticise, especially as we are satisfied that the Government is not in the least likely to jeopardise British interests. But it may be convenient at this stage briefly to indicate what we understand to be the Russian standpoint in these discussions.

From the Russians' point of view, the new loan which they hope to raise is the necessary basis of any arrangement, since without it they have little hope of bringing Russia back to economic life and putting her vast latent resources into circulation. They want to import all manner of equipment: timber ships of 3,000 tons cargo capacity; grain ships of 6,000 tons cargo capacity; oil tankers of 10,000; grain elevators, stationary and movable, mechanical and pneumatic, as well as grain-cleaning machinery of various kinds. On the smaller scale they need every kind of agricultural machinery—ploughs, cultivators, harrows, sowers, mowers, binders; they need tractors and tractor-ploughs; machinery, tools and benches for metal and wood-working; tool steel; iron sheets for transformers; enamels; harbour equipment, including cranes and hoists for loading coal and ore; machinery and materials for communal supply services; cards for their textile industries; pipe-lines (e.g., a second line from Baku to Batum); camel hair and leather belting; wire ropes and wire; manilla ropes, and, in addition to these manufactured products, a considerable quantity of certain raw materials, such as white metals, ferro-alloys, copper, raw hides and skins, cotton (the Turkestan and Trans-Caucasian cotton cannot satisfy the demand of the Moscow mills) and wool. Assuming that, for the economic rehabilitation of Russia, large imports of all these commodities are essential during the next few years, by what means are they to be financed? The Russian Delegation reckon the total value of Russian exports to all countries, on the present level of Russia's economic activity, at not more than £40,000,000 per annum, and this is Russia's sole fund for payments abroad, since she possesses no assets and performs no remunerative services (such as a carrying trade) beyond her own frontiers. Until all this equipment has been imported and has produced its economic effect, the annual value of her exports will not appreciably rise (though, once that effect has been produced, she hopes that it will rise enormously), and she will therefore remain caught in a vicious circle unless she succeeds in supplementing her annual capacity to pay on the present footing by raising a substantial foreign loan.

The loan which the Russian Delegation has in mind is very substantial indeed. They contemplate three annual instalments, each amounting to something like £25,000,000 sterling, and the inducements with which they hope to influence the British investor appear to be

as follows:—(i.) They intend to use the greater part of whatever loan they may raise as credits for purchasing in Great Britain the commodities mentioned above; (ii.) they propose to set aside part of each instalment for the immediate service of the pre-war debt, though on a reduced scale; (iii.) they expect that within three years the productivity of Russia will be so vastly increased, as the result of these imports, that the service of both the new loan and the old debt (on the reduced scale) can be met without difficulty.

What credit is Russia likely to find in the London market if and when she approaches it with these proposals? Obviously that depends in the first place upon the extent to which she is prepared to meet the pre-war claims upon her, since she will hardly find new lenders unless she has substantially satisfied and reassured the old. During the session of the 20th instant the Russian Delegation announced that "claims in this connection would be considered only in the case of those who had held Russian bonds before March 12, 1917. Nor would the claims be admitted of those who had subsequently taken an active part against the Soviet Government." Of these two exclusions, the first is apparently intended to apply only in cases in which bonds have been bought or sold in the market, and not where they have passed by inheritance or gift, while the second would in practice affect few individuals, and is rather a sop to public opinion in Russia than an attempt to repudiate foreign debt by an indirect means. The Russian Delegation also declared, however, "that they could not undertake to pay the pre-war debt at its full value or with back interest," and at the session of the 29th the British Delegation declared, in reply to a question from the Russian side, that this statement was not acceptable.

As the British Delegation indicated at a later stage of the discussion, "the Russian Delegation would be consulting their own interests and those of their Government by endeavouring to meet them" on this question. "They were not proposing that the pre-war debts should be paid in full or immediately," but obviously, if there is a serious prospect of Russia's economic recovery on a great scale within a comparatively short time, Russia's foreign creditors could not reasonably be expected to abandon beforehand their ultimate claims, just as they could not reasonably expect, on their part, to see the service of the debt restored in full in Russia's present economic condition. Here lies the crux of the negotiations, and on its solution the prospects of the projected new loan undoubtedly depend—all the more when it is considered that the Russian Government are not prepared (like Turkey in 1882, or Austria and Hungary since the European War) to submit to any form of external financial control, or even to earmark specific revenues to meet their external obligations. Counting on the potential wealth of their country, they consider it sufficient to make appropriations for interest and sinking fund in their Budget out of general revenues, but here they will surely find themselves in the vicious circle once again. Their wealth, on their own hypothesis, will not become actual until the commodities to be imported on credit have been obtained; the credits depend upon the loan, and the loan depends upon the present Russian Government's treatment of Russia's pre-war creditors. It is to be hoped, therefore, that the forthcoming British draft will provide a basis for agreement. In the meantime, it may be noted in passing that these are not the only negotiations at present in progress. During the session of the 27th the Russian Delegation proposed to postpone the examination of the questions of nationalised property, on the ground that they had "commenced negotiations with certain former owners on the question of granting to them as a concession their former undertaking now nationalised. In the immediate future the Delegation will commence negotiations with certain other former owners, and anticipates that in the course of these negotiations a practical method of settling the question of former owners will be found." If this anticipation is realised, the British ex-owner concessionaires will presumably approach the London market themselves, in order to finance the re-starting of their concerns in Russia, and this may open a channel for the import, on credit, of the equipment, machinery, and other commodities of which Russia stands in need.

MR ASQUITH'S DEBT PROPOSAL.

CONSIDERABLE interest has been aroused by a suggestion made by Mr Asquith in the debate on the Finance Bill last Tuesday for facilitating the repayment of the National Debt. The proposal was not developed in detail, but was put forward as a point that might be considered by the Debt Committee which is now sitting. Mr Asquith suggested that the Government "might give an option to persons who were in a position to do so, and for whom it might be convenient, to hand over such parts of the Debt as were in their possession in return for a certificate of comparative exemption from or reduction in the payment of their income-tax for the next few years." The idea of compounding for future tax payments is one which has been put forward more than once before. But there are several forms of the proposal, some of which could not be entertained. For example, the idea of granting the taxpayer in return for a lump sum down the remission of, say, 3d or 6d in the £ in his individual payment for a given number of years would be a gamble, both for the Treasury and for the taxpayer on the latter's future income. Similarly, the purchase of a rebate of a fixed sum for life would be a gamble on the life of the taxpayer—a risk, by the way, which the Government is constantly taking when it sells life annuities. But the sale of exemption of a fixed sum for a given number of years, particularly if on the premature death of the taxpayer any unused margin were available as a set-off against death duties, would involve no gamble to either party. Such a plan is clearly practicable, and would involve no special machinery for its application. Whether it is worth pursuing it and offering terms on which the option might be taken up entirely depends upon whether these terms would be of advantage to both parties.

It is improbable, and we do not suppose that Mr Asquith imagined, that a large proportion of the debt could be dealt with in this way; but we can conceive that terms could be offered by the Treasury on which it would be worth while for a certain number of taxpayers to compound in respect of certain stocks. The arithmetic of the plan is simply a matter of the present value of annuities for 10, 15, or 20 years, as the case may be. Let us take an example from the 5 per Cent. War Loan, which is the stock of greatest importance in this connection. Now £1,000 will purchase an annuity of about £80 a year for 20 years on a 5 per cent. basis. If the Treasury offered a rebate of £80 a year for 20 years in return for the surrender of £1,000 War Loan, how would the parties stand? The taxpayer now holds a security which may be redeemed at par at any time after 1929, and must be redeemed by 1947. At any time between these dates he may have to accept an equivalent security at a lower rate of interest. The terms offered ensure for 20 years the £50 a year interest which he surrenders, plus an annual repayment of his capital. The suggestion is thus only a new form of the principle of annuities by means of which the Government both before and since the war has on a small scale been paying off debt. The device is specially suitable to cases where business capital is steadily being built up. We could name several large concerns (and there are doubtless innumerable small ones) whose balance-sheets contain considerable amounts of Government securities which, no doubt, in some cases will be steadily transformed into commercial capital. The plan proposed would secure (in the shape of tax rebate) the payment of interest and the steady repayment of principal over the period selected at par, and without running the risk of loss of interest on conversion.

The extent, however, to which the offer might prove a convenience to the public could not be known except by experiment. The advantages from the standpoint of national financial policy are much more definite and certain. We may mention three. In the first place, if it were taken advantage of to any large extent, it would diminish the large blocks of Government stock that will mature in the next 20 years, and have to be replaced by new Government securities. This task of breaking up the 5 per cent. War Loan, which is too large a mass to be dealt with in regard either to redemption or conversion as a whole is one of the big problems of the Treasury.

The plan proposed would in effect ensure the repayment of small sections of it at certain fixed dates. In the second place, it would simplify the operation of debt repayment. In the example quoted the Government would cease to pay £50 a year of interest, but would lose £80 of taxation. Part of this latter sum would, therefore, have to be regarded as a sinking fund payment to redeem the stock that had been surrendered. This is a less disturbing way of dealing with the sinking fund than collecting taxation, and using it to redeem debt in the market. But it has this further considerable advantage—*It is a sinking fund which cannot be suspended by needy Chancellors of the Exchequer* without involving a Government default or fresh borrowing. In this connection, it is significant that Mr Asquith laid special stress on the desirability of finding ways and means of safeguarding and protecting the sinking funds. Finally, the device would be a definite embodiment of the principle that the surrender of capital by the individual taxpayer to assist the Government in repayment of debt is an *alternative* to existing taxation, and not an *additional* resource; for it is clear that if a limited number of persons only compounded—the suggestion is clearly only suitable in certain cases—it could not be made a ground for a general increase in the rate of income-tax.

We have to reconcile ourselves to the fact that the burden of taxation is certain to remain high in this country for many years to come, and therefore any device is to be welcomed which gives the system greater elasticity. Mr Asquith's suggestion is, moreover, in keeping with three fiscal principles that will be of the greatest importance in the next quarter of a century. We therefore agree with him that it is worthy of consideration by the Debt Committee, and at all events merits a little more thought than was bestowed upon it by certain City journals, one of which founded its criticism on the attractive but unfortunately illusory calculation that an annuity of £50 a year for 50 years may be purchased for £288, while the other made the astonishing statement that "for every million of stock accepted and cancelled, the State would save in interest charges, say, approximately £400,000 per annum."

BRITISH SEAPORTS.

LAST autumn Continental shipowners issued statements to the effect that British ports were in many respects obsolete, lacking modern loading and discharging facilities, and that, in the coal and timber trades especially, shipowners suffered loss owing to the prevailing conditions. The Chamber of Shipping of the United Kingdom thereupon—having the same interest as those who complained—appointed a special committee to visit and examine the principal ports of Great Britain, and to compare them with Continental ports. Though the report of this committee was not ready for issue before the holding of the recent International Shipping Conference in London, a general statement was made then by Sir Frederick Lewis, who acted as chairman of the committee; but we

have deferred comment on a matter of vital interest to the commercial status of this country until the full reports are available.

The committee, which included, besides shipowners, representatives of the Federation of British Industries and of the Association of British Chambers of Commerce, appears to have gone to work with promptness and vigour, and has presented a report containing many definite practical suggestions for improvement on particular points. Nevertheless, the report is a disappointing document. As the visiting members of the committee worked southward along the East Coast from Dundee, where they started, they developed more system in dealing with individual ports: the earlier sections are rather scrappy, and will be intelligible only to anyone familiar with the particular localities. By the time the visiting sub-committee had travelled round the coast as far as the Clyde a mass of information, with many proposals for improvement, had been set down, but the summary of conclusions is vague and general. While it is certain that the members of the committee must be familiar with, say, the appliances for handling coal, ores, and grain in Dutch ports, no comparisons are drawn, in spite of the fact that the resolution appointing the committee particularly indicated the comparative facilities of British and foreign ports as a line of inquiry.

Having regard to the fact that the shipowners who carried out the inquiry are engaged in business with all parts of the world, the standpoint of the report is strangely insular. The standard of comparison which the committee took cannot readily be gathered, nor, indeed, is it clear whether it had any. The state of our ports is a matter of national concern. From the time when sea trade shifted from the Mediterranean to the Atlantic, our struggle to become supreme at sea has been the keynote of British history. For the last two hundred years we have been the leading maritime nation. By our sea traffic we grew. Our ports have been vital to the process of development. They are vital still. Even more so now that active brains have brought the great ports, both in Europe and the New World, to a high pitch of efficiency. Despatch at the ports means a saving in the cost of transport, and reduction in costs of manufacture and of living. The only possible standard of efficiency for Great Britain is that our ports must be the best built and the best equipped in the world. The committee presumably was intent on this goal, but they could have defined their standard with greater emphasis.

As examples of the contents of the report may be noted the remark that Tyne Dock, the coal exporting centre on the Tyne above Shields, which is in the hands of the London and North-Eastern Railway Company, is "quite unsuitable for large modern tonnage," though the railway company has, it appears, improvements of the coal shipping facilities in view. Moreover, "the method of discharging ore at Tyne Dock cannot be described as satisfactory." At Middlesbrough, while the best is being done with existing facilities, they are insufficient. At Hull a number of suggested improvements are recommended, including dock extensions, additional equipment and railway facilities.

ties, and increased working hours. In London, the Surrey Commercial Docks come in for severe criticism, but the part of the report dealing with our metropolitan port is apparently not yet complete. The South Wales ports are described and discussed with greater fullness than those on the north-east coast, and numerous detailed suggestions are made. As to Liverpool, Manchester and Glasgow the recommendations cover a variety of matters of construction, equipment, and working. In summarising conclusions, the committee note specially railway facilities, certain entrances and docks, and discharging and loading methods as needing improvement in a variety of ways which are specified in some detail—the desirability of larger railway trucks is specially mentioned—but the difficulties of recent years are emphasised. The dock strike and a spurt of trade last year combined to cause congestion in ports which were crippled as regards development by war and post-war conditions. The report is able to record some important improvements in most centres, notably, perhaps, in British Channel ports. It quite properly calls attention to the fact that our ports were used as "instruments of war," that after the war the cost of improvement was 200 to 300 per cent. above the pre-war level, and that the port authorities have had singularly difficult problems to face—e.g., their inability to introduce a third shift in South Wales ports.

It is clear that much is being done, and the times are admittedly difficult, but the attitude of the foreign critics—shipowners who use our ports—is still that while they are satisfied to a degree, they are not yet by any means content. That projects for improvement are under consideration is not enough. Great efforts must be made to carry them into effect. As a Dutch delegate at the International Shipping Conference pointed out, Rotterdam has a reputation for its modern facilities and appliances. How do British ports compare with this and other Continental ports? Delay means expense, waste, and loss of business. The situation, as a Danish representative added on the same occasion, must in the long run be detrimental to British industry and trade. Owing to quicker loading a shipowner can, it appears (though not from the report under notice), accept almost the same freight for coal to the Mediterranean from an American as from a Welsh port.

As to the real position, there can be little room for doubt. One of the members of the committee of inquiry, speaking at the meeting of the Baltic Conference at The Hague the other day, remarked that, without any beating about the bush, he considered that there was ample justification for the complaints. It is right that the world should know the difficulties we have had to contend with; but it is even more important that the commercial community, backed by public opinion, should insist that the modernisation of our ports is pushed on with the utmost vigour. We imagine that this is the intention of the Chamber of Shipping; it is stated not only that the visits have already aroused much local interest, but also that the Chamber has already taken steps in co-operation with the local chambers to bring the reports to the notice of the port authorities. We trust that the representations will result in prompt action.

BRITISH FIRE OFFICES IN 1923.

THE year which closed in December last was, on the whole, a fairly good one for the world-wide operations of the British fire insurance offices. As was pointed out recently by the chairman of the North British and Mercantile Company, something like 75 per cent. of the business of the large companies is transacted outside this country. The bulk of the premium income is drawn from the United States, where, as we showed in a recent article, the year 1923 was a considerable improvement upon 1922. There was no outstanding foreign disaster except the earthquake and fire which devastated Tokyo and Yokohama, and for the worst consequences of which the British fire offices were not liable under their policy contracts. Some special risks, including the earthquake hazard, were insured, but they did not bulk largely in comparison with the losses in the main disaster. Steps were taken soon after the

news of the earthquake-fire reached this country to disclaim liability under re-insurance contracts with Japanese insurance companies. There was no doubt about the legal position of the British companies, and their attitude was not seriously challenged. In the United Kingdom the most serious fire was the million pound tobacco loss at Victoria Docks, London, which has been described as the most costly London fire since the Cripplegate conflagration of 1897. But, serious as this loss was, it was not overwhelming. The companies are in a far better position to stand between them a million pound fire than they were 27 years ago.

In calculating the results of the 17 companies which we set out below, we have followed a regular system, so far as possible. The various companies' accounts are not quite uniform. Some charge all their expenses to underwriting accounts, others carry a portion of the general costs to the debit of profit and loss. Foreign and Colonial taxes are usually charged to underwriting, though in one or two instances these also appear as a charge in profit and loss. The liabilities for unexpired risks have been taken on the recognised basis of 40 per cent. of the premiums, and adjustments made from any increase or decrease in the premiums. The surpluses, as given below, are those derived from the figures in the official fire insurance statements, and the various adjustments necessary to show the actual results of underwriting are reserved for a second table published with this article.

The Alliance, which has a very fine home business, and since the San Francisco disaster has withdrawn from America, comes first with a surplus of £285,934, or 15.2 per cent. of the premium income. The largest amount of profit was made by the Royal, with £563,578, or 8.4 per cent. of the premiums. The Royal and its allied office, the Liverpool and London and Globe, taken together show a total surplus of £801,732, about 7 per cent. of the huge premium income of £11,470,388. The world-wide company with the best percentage of profit is the London and Lancashire, which made a surplus of £404,906, or 13.4 per cent. This company had the best results in the United States for the year. Among other successful results are those of the Sun, with a surplus of £276,285 (1.9 per cent.) the North British with £344,588 (8.8 per cent.), and the Commercial Union with £525,283 (7.4 per cent.) The Guardian, which eschews America with its glittering premiums and baffling losses, had an excellent surplus of £99,228, or 11 per cent., and the Scottish Union, a well-managed company of moderate size, produced a good profit of £109,266, or 9.8 per cent. From a total fire premium income of about 48 millions, the 17 companies made an underwriting profit of about £3,300,000, or 6.8 per cent.

RESULTS OF FIRE BUSINESS.

We have introduced this year a new table, in which we attempt to show the total underwriting results of all the companies in all departments, the net interest receipts, the taxes paid out of profit and loss, and the dividends provided for the shareholders. The accident and miscellaneous insurance results have been calculated in the same way as for fire. But this method is not recognised as applicable to marine insurance—though some important companies accept it—so that we have been obliged to take the marine profits as those amounts transferred to profit and loss in the various accounts. Any other profits, such as those drawn from the life assurance accounts, have been duly credited. From the underwriting profits, as thus ascertained, we have deducted expenses charged to profit and loss. The second column of net interest receipts

shows the total receipts from interest (less debenture interest) which were earned by the capital, fire, accident, marine, general reserve, and shareholders' funds. The column of taxes includes provision for taxes, as well as amounts actually paid, and also includes foreign and colonial taxation whenever it was not charged to the underwriting accounts. The dividends are not those paid in 1923, but those provided and declared in respect of 1923. The companies broadly regulate their dividends by their net receipts from interest (compare column four with column two), and leave the net underwriting surplus, less taxes, to be invested, and to produce interest, and consequently dividends, in the future. The unusually high dividend of the Alliance was due to a Centenary bonus, and bonuses for the same gratifying centenary reason were paid by the Scottish Union and the Yorkshire.

UNDERWRITING RESULTS, INTEREST, AND DIVIDENDS.

Company.	Underwriting Profits (net).	Interest Receipts (net).	Taxes.	Dividends for 1923.

Yorkshire	123,244	91,809	23,343	105,928

* The Alliance received £77,331 excess profit duty refunded (less taxes on profits).

It will be seen that the results of the year, as measured by the underwriting profits in column one, less the taxes in column three, have added quite substantially to the resources of most of the British insurance offices.

SUGAR AFTER THE BUDGET.

THE views expressed in certain circles to the effect that the revision of the sugar duty under the Snowden Budget would be nullified by an increase in the wholesale price of the commodity owing to aggressive speculative operations have proved incorrect, and it is now generally admitted that the Chancellor of the Exchequer chose the right moment for making this important change. Home consumers have not only benefited by the full extent of the reduction made in the duty, and this immediately it came into force, but they have also been favoured by a very substantial lowering of values in the world's markets owing to the increase in supplies accruing from the bumper Cuban crop. The extent of the reduction to home consumers may be gauged by the adjustments made in prices by the British refiners. These represent altogether 18s per cwt for cubes and fine granulated, and this, of course, is bound to have a very important bearing on the cost of living. Previous to the lowering of the duty, best British cubes were priced wholesale at about 61s 9d. Recently, they stood at 44s 3d, and this works out at a reduction of a little under 2d per lb. Retail buyers have received the full limit of the fall, and Mr Snowden was certainly most fortunate to have made the cut in the duty on top of what has proved to be a falling market, owing to the unexpectedly large increase in the Cuban resources.

During the last few weeks, trade sugar requirements have been filled at a much lower level of prices than anything experts on both sides of the Atlantic would have thought possible just before the cutting down of the import duty by 1½d per lb, or 14s per cwt. One of the main reasons for the sharp depression which overtook the market late in April, following the sharp spurt incidental to the fiscal change, was the substantial and quite unexpected increase in the Cuban crop estimates. A few months back the local and United States experts put the Cuban crop down at 3,700,000 tons, and even lower figures were issued, but the latest advices talk of an outturn of 3,900,000 tons and even the round four millions. The latter, if it turned out to be correct, would approximate very closely the highest crop ever

harvested in Cuba. This took place two years ago. Thus, instead of a surplus of roughly 800,000 tons in this season's world's supplies, as anticipated, based on the early Cuban estimates, running to about 3,600,000 tons, we can now look forward to an apparent surplus of no less than 1,200,000 tons, and this certainly puts a very different complexion on the whole position. Assuming that the United States consumption this year works out at about 5,000,000 tons, or 250,000 tons more than last year, or even allowing for an enlargement in the world's consumption at the considerably reduced prices, with the home takings more especially expanded by the reduction in the duty, the additional increase in the Cuban production of something like 400,000 tons, as compared with the previous season's actual outturn, is calculated to tax the absorbing capacity of the world's markets. According to advices received here recently, the total Cuban production has already amounted to 3,860,000 tons, while the receipts at Cuban ports were still on a pretty heavy scale, their total having been considerably over three million tons. Considering that American requirements should call for about three million tons of Cuban sugar, it can only be surmised that, after meeting European requirements, Cuba will be left to carry into the new season a fairly heavy surplus of over a quarter of a million tons, instead of starting the new season with absolutely bare boards, as happened at the opening of the current one. At any rate, the fact that sugar has been coming into sight considerably in excess of current or prospective needs has entirely changed the aspect of the market within the last month or so, and, therefore, hand-to-mouth buying which has inevitably ensued, combined with decidedly more pressing offers, has had a distinctly depressing effect on the trend of prices. Bull speculation in the first two months of this year was rather aggressive, on the theory that the season's resources would prove barely sufficient to go round, and prices thus became inflated to figures not much under the extreme highest level that was recorded late in February last. Business was then done here in white sugar, type "A," for prompt delivery at 35s, on the basis of the speculative contract, whereas the price lately collapsed to below 24s per cwt, thus indicating a depreciation of over 11s per cwt. Rates for sugar to be shipped within the current season, or on the way to this country, whether raw or refined, likewise came down, more or less, in proportion under increased offers and a slackening demand, after urgent trade needs had been satisfied subsequently to the reduction of the duty.

It seems pretty clear, then, that the relative cheapness of sugar will become accentuated in the near future, as it is obviously premature to look for any important upward reaction owing to the much freer supplies, especially of cane sugar, now circulating in this market and elsewhere. In the case of this country, the following official figures, extracted from the Board of Trade Returns and converted into tons, are rather significant, having regard to the very liberal supplies that were in existence at the end of April:—

	1923.	1924.
	Tons.	Tons.
U.K. imports of raw sugar	394,801	504,592
U.K. imports of all sugars	514,159	573,191
U.K. consumption	471,536	415,024
U.K. stocks of all sugar on April 30 ..	297,700	410,400

It will thus be seen that the total imports for the first four months of this year exceeded the returns for the same period of last year by about 59,000 tons, while the duty-paid entries showed a reduction in home consumption over the same period of about 56,500 tons. The stocks held in bond amounted to 410,400 tons on April 30th last, thus denoting an excess compared with the same date last year of roughly 113,000 tons. There is thus no doubt that trade distributors see not the slightest inducement to increase their holdings beyond actual needs, and that visible supplies promise to continue on a large scale over the remainder of the current season at any rate. This is certainly hardly calculated to encourage new speculation unless prices fall to a more attractive level, and the deferred trade buying movement across the Atlantic sets in and assumes very liberal proportions. The fact may be recalled that in the later part of the summer of 1923 quotations for white sugar futures reached a level considerably

below those now ruling, although the quantities which came into sight then were not so heavy as they are this season on the greatly enhanced showing of the Cuban crop. According to Messrs Willett and Gray, this season's world's production will amount to 19,226,931 tons, as compared with 18,086,473 tons and 17,696,992 tons respectively in the two previous seasons. The revised figures for this season would therefore indicate an excess of about 1,140,000 tons against last season, and well over 1,500,000 tons as compared with the 1921-1922 season. The increase in cane sugar production against last season represents about 470,000 tons, while the production of beet sugar contributes an increase of well over 650,000 tons, of which 173,000 tons relate to the expansion in the last United States crop and the remainder to the European crops.

To what extent trade buying may be stimulated by a further fall in prices is a rather problematical matter just now, although the most active season of the year has now been reached, when American needs usually show a considerable increase. For the present far too much sugar is coming forward, and the market is not able to absorb this except at steadily weakening prices. The new Java sugar, which usually arrives on this side late in the summer, has also to be reckoned with, even after allowing for the prospective increased quantities of this sugar that will be taken this year for India and the Far East. The fact deserves notice that American refiners, who have for some time past been saddled with excessive stocks, are now forcing offers of their granulated sugar on to this market at relatively low prices. This action has compelled home refiners to go as far as possible in the matter of adjusting their prices in order to secure the bulk of the home trade.

The outlook as regards the Continental sowings for the next beet crop is considered good. Mr O. Licht's estimates of their increase amount to 15 to 20 per cent. for the whole of Europe, including Russia, but other advices received lately from another source state that it is now feared that the increase in the German sowings will not exceed 10 per cent., as against the 15 per cent. estimated by Mr Licht. Market developments in the near future will be largely determined by the reports concerning the next European and American beet crops, and the extent of the belated United States demand. As in the case of many other commodities, sugar producers are now faced with the necessity of carrying surplus stocks to a considerably larger extent than last season, until consuming countries are prepared to buy more freely. The outlook certainly does not favour higher prices, and well-informed market opinion here looks for further downward adjustments before sentiment hardens again.

FOREIGN FIRMS AND BRITISH AGENTS.—AN INCOME-TAX PROBLEM.

For more than 80 years it has been established by legislation that "non-residents" are liable to income-tax in respect of any trade exercised by them in the United Kingdom. This principle was laid down in the Income-tax Act of 1842, and is manifestly sound in itself. If a foreign firm does business here it should pay its share of taxation on the profits of that business. In order that the assessment of non-resident firms to income-tax might be facilitated, and collection ensured, the Finance (No. 2) Act of 1915 provided that non-residents might be assessed in the name of their agents in the United Kingdom. Mr McKenna, who was then Chancellor of the Exchequer, pointed out that this liability of British agents to be assessed on the profits of foreign or non-resident principals did not apply to what is commonly called brokerage, or agency business on commission. And an examination of Section 31 of the Finance (No. 2) Act of 1915 does convey the impression that the section was intended to be applicable only to regular agents representative of a non-resident house. It is a well-known principle of judicial interpretation of an Act of Parliament that the intention of the legislature is determined by what is actually expressed in the Act, and not by what may have been stated in Parliament to have been the intention of legislators when the Act was passed by them. So that what-

ever Mr McKenna may have said in the House of Commons when he supported the Finance (No. 2) Act of 1915 is irrelevant to an issue which is at present exciting the painful interest of agents and brokers in the City. The income-tax authorities are at present claiming that any British agent or broker who executes commissions on behalf of a foreign non-resident principal is assessable in respect of the income-tax payable on the profits made by the foreign house out of those commissions. And seeing that the City of London does an enormous brokerage or commission business on instructions from foreign houses, the possibility that brokers or agents may be held by the courts to be liable for the income-tax of these foreign houses is extremely alarming.

So far, the results of litigation have not been very serious. We will explain presently how far they have gone. Our immediate purpose is to look at the Finance (No. 2) Act of 1915, Section 31, which made "non-resident persons chargeable to income-tax in the name of any branch or manager as well as in the name of any factor, agent, or receiver.....though the branch, factor, agent, receiver, or manager, may not have the receipt of the profits or gains of the non-resident." These words by themselves look very wide indeed, but they are modified considerably by Sub-section 6, which runs: "Nothing in Section 41 of the Income-tax Act, 1842 (as amended by any subsequent enactment or by this section), shall render a non-resident person chargeable in the name of a broker or general commission agent, or in the name of an agent, not being an authorised person carrying on the non-resident's regular agency, or a person chargeable as if he were an agent in pursuance of this section, in respect of profits or gains arising from sales or transactions carried out through such a broker or agent." The intention of Sub-section 6, inserted to distinguish between ordinary brokerage or commission business and the regular agency in this country of a foreign house, seems plain enough. It is to make a regular agent or representative of a foreign house assessable for the income-tax of his principal, and to exempt from liability the broker or commission agent who merely carries out specific instructions to buy or sell on account of a foreign house. Until, therefore, the higher Courts—which they have not yet done—interpret Sub-section 6 as meaning the exact opposite of what it appears to mean—and the opposite of what Mr McKenna and the House of Commons intended in 1915 that it should mean—there is no occasion to predict the disappearance of the City's brokerage and agency business—driven by the income-tax authorities to seek the shelter of Rotterdam.

One case which has caused much of the present alarm is not in itself alarming. In fact, much of it is consoling as showing that the judge—Mr. Justice Rowlatt—took much the same view as that which has been expressed above. What no doubt disconcerted the brokers and commission agents of the City was the evident intention of the Crown (meaning the income-tax authorities) to impose upon them, if it could, liability for the income-tax of their foreign non-resident principals. The case determined on April 10th last was "Maclaine and Co., v. W. J. Ecott (H.M. Inspector of Taxes)." Maclaine and Co. were agents for a closely allied firm, Maclaine, Watson and Co., of Java, though technically they were separate firms, and were so dealt with in the action. A good deal of consideration of what, in the legal sense, constituted trade for the Crown and partly against the Crown. The most important part of his judgment, from the point of view of his reference to a former case of "Wilcock v. Pinto and Co.," now under appeal, in which a non-resident sold from abroad through a broker on the market in the United Kingdom. Mr Justice Rowlatt, in deciding that case, held that a broker, though he effects transactions, does not occupy the place of the merchant, and so is not assessable to the merchant's income-tax. "I learn," went on Mr Justice Rowlatt, "that 'Wilcock v. Pinto and Co.' is under appeal, and that the Attorney-General did not shrink from contending that on a market like Covent Garden every foreigner who consigns goods to salesmen there is exercising a trade in this country. If this view turns

out to be correct.....the business results will be curious, because a broker or salesman would not normally contemplate undertaking a liability for income-tax, or possess the figures to make a return, or any means of extracting them. Yet he would undoubtedly be an agent assessable."

No judge ever goes beyond the four corners of a case if he can help it, and nothing is more difficult than to deduce general principles from judicial pronouncements until a test case gets to the House of Lords for final decision. The impression made upon us so far is that brokers and commission agents are protected from assessment for their principal's income-tax by Sub-section 6 of Section 31 in the Finance (No. 2) Act, 1915, and that the mere giving of an order by a foreign house to a broker or agent does not by itself constitute trade in this country by the foreign house. It is the broker or agent here who exercises his own trade or employment. The position is wholly different when the foreign firm has a regular agency in this country—as it were, a branch establishment—through which it does business in the United Kingdom. There appears to be no doubt that such a regular agency is assessable for the foreign house's income-tax in respect of profits made here.

If it should happen, in apparent defiance of Sub-section 6 of Section 31 (quoted above), that brokers or commission agents are held by the higher Courts to be assessable for the income-tax of non-resident principals, then the City of London would be seriously affected in respect to a most important part of its every-day business. Unless the intention of Mr McKenna in the Finance (No. 2) Act, 1915, were re-established by new legislation, a great loss of business would result. No Government could afford to see the City lose its agency business to Continental houses, as it would probably do if the income-tax authorities had their way. The first course would seem to be the fighting of test cases up to the House of Lords, if necessary, and in the meantime representations of the gravity of the question to the Chancellor of the Exchequer. Whatever view the Courts in their wisdom may eventually hold of the "intention," in the judicial sense, of Parliament in 1915, there can be no doubt that the last thing which Mr McKenna or the House of Commons desired to do was to destroy a substantial portion of the business which constitutes this country's "invisible exports."

Notes of the Week.

The Government's Reprieve.—The Conservative motion to reduce the Minister of Labour's salary on the score of failure to deal with unemployment was a serious attempt to execute the Government. But there was never very much doubt that a reprieve would arrive in time to save its life. For while Mr Asquith's decision to vote with the Government lays the Liberal Party open once more to the taunt that it speaks in one sense and votes in another, it was really the only course open to him. Even *The Times*, we are glad to see, admits this, for it comments as follows in its first leading article in yesterday's issue:—

It would be easy enough to cover the Liberals with ridicule for their support in the division lobbies of a Department which they had riddled with criticism on the floor of the House. It is far less easy for most of us to regret sincerely the course which most of them finally chose. The result of any other would have been the defeat of the Government on a motion which had been proclaimed beforehand as equivalent to a vote of censure. That defeat would have been followed, therefore, as Mr MacDonald plainly (we think improperly) stated, by a dissolution of Parliament. Does any Unionist seriously suppose that even his own party—to say nothing of the country—would have been the better in the long run for that momentary triumph?

Less than six months ago we had a general election on the subject of unemployment. There is no sign whatever that the country wants another. Since the last election the only change in the position is that about 236,000 workers have been absorbed into industry. It is easy to contrast the glittering promises of the Labour Party at election time with their performances in office, but the fault is more with the promises than with the performance. Indeed, the whole attack on the Government's unemployment policy is rather unreal. What has happened is that, having experienced the realities of administration, the

Government find that short cuts to the cure of unemployment, though easy to promise, are impossible to produce. They cannot, any more than Mr Baldwin could, wave a wand and bring forth a magic cure. Plans for the substantial relief of unemployment can only be matured slowly. Two years ahead is not too long a time to look forward in concerting large schemes; and it must be perfectly clear to all impartial minds that this is not the time for rushing out hasty and ill-considered plans for attracting large blocks of Labour to State schemes, especially since the absorption of workers into private industry is steadily progressing. Nor is it by any means certain that large scale plans for subsidised schemes of electrification, housing, &c. (even if perfectly conceived) could be put quickly into effect without upsetting the capital market and jeopardising the slow recovery of normal trade and industry by disturbing the general level of wages and prices. There is no harm in applying the spur to the Government; there is no harm in bringing them to book for ridiculous platform promises. But to turn them out at this early stage for not doing the impossible would be a disservice to the country. After this demonstration, we hope that Mr MacDonald will be given the opportunity to perform the great service which the country is confidently looking to him to perform—namely, to secure during the next few months a settlement of the problem of reparations and a new harmony in our relations with France.

Irish Boundary Negotiations.—Our Dublin correspondent writes:—A definite advance in the negotiations attendant on the boundary problem was marked in President Cosgrave's utterances last week-end, both in a speech at Limerick and in a considered statement published as an interview. Referring to Sir James Craig's insistence that the settlement should be a settlement by agreement, he said: "I agree with him that it ought to be"..... but that he could not agree to Sir James Craig's further proposition that "in the event of non-agreement the boundary line was to stand as it was drawn" (i.e., without any such modification as is contemplated in Article xii. of the Treaty). Taking it from Sir James Craig's recent utterances that he admits "as a governing principle" that the boundary must be settled, so far as is geographically and economically practicable, in accordance with the wishes of the inhabitants, Mr. Cosgrave said: "On that basis I see no reason why there should be any delay in proceeding with the business of the settlement." He continued: My Government has already asked that the Boundary Commission be set up without delay. When that is done it will facilitate agreement. If, then, Sir James Craig and I, or any other two men or number of men duly representative, can come together and arrive at a settlement in due accord with the wishes of the inhabitants, we can present our agreement to the Commission for ratification in accordance with the Treaty and the Statutes of both countries. If a settlement is not to be reached in this way, what prospect is there of reaching it otherwise? In the event of a disagreement, the Commission would still be necessary—that is, unless the Treaty is to cease to operate. The establishment of the Commission in the first instance is the sole effective guarantee in sight for arriving at a settlement by consent, or, failing that, for a settlement by procedure." The response of Sir James Craig is not yet forthcoming. Manifest convenience is one attribute of the course suggested by President Cosgrave—because if an agreement were made without the Commission's coming into existence, new machinery would have to be devised to render it operative. There would have to be a new international agreement between Ireland and Great Britain and new statutes in the British Parliament and in the Oireachtas of the Irish Free State respectively. On the other hand, the award of the Boundary Commission becomes as from the date of its issue automatically and immediately operative by virtue of the Treaty and the existing statute law of each country. The dissolution of the City Council of Dublin and the appointment of three Commissioners to carry on the work of the Corporation was mentioned last week. This step was taken by the Minister for Local Government under powers conferred by a recent Act, and in view of a report, since published, of a sworn inquiry held by one of the Department's officials. Extravagance and high rates are the determining factors, and there is

no suggestion of corruption. Overstaffing in particular departments, the maintenance of uneconomic workshops by the municipality, and payment of excessive wage rates for unskilled labour are clearly shown. The rate for the latter is stated to be the equivalent of 70s 4d per week of 44 hours, with pension rights and municipal bank holidays. Two hours of the 44 are stated to have been expended in going to draw the wages. Rates are in the neighbourhood of 20s in the £. It is little wonder that there is an acute housing problem, and that rents, particularly for the poor, are very high. A really progressive and enlightened municipal policy is long overdue.

Labour Disputes in South Wales.—The South Wales coal market, our Cardiff correspondent writes, this week has been disturbed by the recrudescence of sectional strikes on a considerable scale. Since 1914 the industry has been comparatively free from these stoppages, but the outbreak during the past few days has involved the irregular suspension of work at collieries producing about 80,000 tons per week, and employing approximately about 14,000 workmen. The collieries concerned are chiefly those of the United National Coal Company and the Tredegar Iron and Coal Company in the Monmouthshire coalfield. Originally the trouble arose out of differences relating to a question of management, but it has since been complicated by a demand that in the consideration of these differences the employers must negotiate not with the workmen and local trade union officials immediately affected, but with a combined committee of workmen acting independently and without the expressed authority of the South Wales Miners' Federation. The stoppages are a violation of the Conciliation Board agreements, and the employers are demanding a resumption of work before considering the alleged grievances of the workmen. Other disputes have arisen over the working of double shifts, and at two or three collieries the men have served notices. The market has not been appreciably influenced by the reduced output resulting from these stoppages, but the undertone towards the end of the week was a shade firmer.

The Lausanne Treaty and Canada.—What is the meaning of the unity of the British Empire? This is the question now definitely raised by the Correspondence (Cmd. 2146) respecting the Peace with Turkey, which has passed between the Imperial and Canadian Governments. The latter was duly notified by the Duke of Devonshire, as Colonial Secretary, of the arrangements for the Lausanne Conference, and was promised full information as to the proceedings. It made no objection to the arrangements, but remarked that the extent to which Canada would be bound by any Treaty must be left to her own Parliament to decide. It subsequently explained, and has insisted throughout the correspondence, that this does not mean that the Treaty of Lausanne must be submitted to the Canadian Parliament for ratification, but that Canada, not having been directly represented at the Conference, is not a signatory, and is bound by it only so far as her own Parliament may permit. Her final reply contains a reference to the resolution on treaty-making passed at the latest Imperial Conference, which unfortunately is not quoted in full, but the paragraphs cited as applicable to the present case refer to treaties binding on one part of the Empire, while those dealing with treaties binding on more than one part are expressly ruled out. The other Dominions have apparently consented to be bound by the British signature of the Treaty; but Canada holds that it binds Great Britain but not herself. But what of the obligations of Turkey towards citizens of Canada? The Treaty contains provisions relating to the payment of pre-war debts due to Allied nationals from Turkish subjects or the Turkish Government; for the restoration of British property; for the maintenance of insurance contracts, and other business matters; and Canada has given Turkey fresh opportunities of evading them. Meanwhile, as the Duke of Devonshire pointed out in the correspondence, Turkey is at peace with the rest of the Empire and technically at war with Canada. The situation is impossible, but the issue has never yet been raised so clearly, because, when it was started in 1897 by Canada's grant of preference on British goods in spite

of the Anglo-German and Anglo-Belgian Commercial Treaties, Lord Salisbury denounced these, and Canada shared directly in the negotiation of the Peace Treaties, and of those resulting from the Washington Conference. Indeed, the correspondence seems to suggest that the British Government has shrunk from facing the situation. If part of the Empire can be at war and the rest at peace, the Empire becomes merely a loose confederation. Are we to look forward to the re-establishment of unity through an Imperial Foreign Office and an Imperial Senate?

Anglo-Italian Relations.—It has been announced officially that, as a result of direct negotiations between the Prime Minister and Signor Mussolini, an agreement in principle upon the Jubaland question has been reached by the British and Italian Governments. A technical conference is to follow, in order to deal with the practical problems of detail which will arise out of the change of frontier—the most important being that of the seasonal migration of the Somali tribes; but the diplomatic question is settled, and the relations between Great Britain and Italy are thus simplified by the removal of an issue which has remained in suspense for nine years, since the signature of the Treaty of London on April 26, 1915. Coinciding, as it does, with the visit of the King and Queen of Italy to this country, the announcement may be expected to contribute considerably to the increase of goodwill between the two Powers, and the most recent issues of the Italian Press do, in fact, indicate that it has made a gratifying impression in Rome and Milan. The principal significance of the announcement lies, however, not in the settlement of the Jubaland question itself—which has never been difficult to arrange on its own merits—but in its divorce from the question of the Dodecanese, with which it had been coupled by previous British Ministries. This coupling of the two questions was the policy of Lord Curzon so long as he was Secretary of State for Foreign Affairs, and on that point there has been a decided change, or even reversal, of British policy during the last few weeks, for, soon after the present Government took office, Mr Ponsonby declared, in answer to a question in the House of Commons, that the Government were carrying on the policy of their predecessors by insisting that the two questions must be settled simultaneously. Lord Curzon's view was that, on every ground of nationality and self-determination, the Dodecanese ought to be transferred from Italy (who had only acquired these Greek islands from Turkey incidentally during the naval operations of the Turko-Italian War of 1911-12) to Greece, as the country to which the overwhelming majority of the Dodecanesian islanders were affiliated by race. He also felt that Great Britain had a status for taking up the question, since the final disposal of the Dodecanese was an item in the general settlement after the European War, and that Great Britain would do well to employ the bargaining power derived from her willingness to make concessions to Italy in East Africa, in order to influence Italy's policy in regard to these Greek islands. The first point in Lord Curzon's policy is not really an open question, and Mr MacDonald no doubt feels as strongly on the subject as his predecessor in office. The islands ought to be transferred to Greece, but, supposing that this is taken for granted, opinions may differ widely as to the best means of securing Italy's consent. Both in the Treaty of London (1915), on the strength of which Italy intervened in the war, and then again in the Treaties of Sévres and Lausanne, the sovereignty of Italy over the Dodecanese was recognised (rightly or wrongly) without conditions, while the Italian claim to Jubaland arose out of Article 13 of the 1915 Treaty, which promised Italy "equitable compensations" in Africa, in the event of France and Great Britain increasing their holdings in that continent at Germany's expense, as they have done. This claim, though indefinite in extent, was in no way conditional upon Italian concessions in regard to the Dodecanese, since Italy's title to the Dodecanese was actually recognised outright in another article of the very same Treaty. It was not unnatural, therefore, that Italy should object in principle to the "tacking" of the Jubaland and Dodecanese questions for bargaining purposes. It now remains to

be seen whether the removal of this objection by an unconditional settlement of the Jubaland question on lines satisfactory from the Italian point of view will lead on to an equally satisfactory settlement of the straight issue of the Dodecanese between Italy and Greece.

Electrical Progress in the U.S.A.—A correspondent writes:—The thirty-second annual report of the General Electric Company (of the U.S.A.) for the year 1923 contains several features of special interest. The company's factories are situated in thirty-nine cities of the United States; they cover about 2,000 acres, and contain upwards of 25,000,000 square feet of floor space. The orders received in 1923 amounted to \$300 millions—an increase of 25 per cent. over 1922—and compare with \$80 millions in 1914. The 1923 profit available for dividends on the \$198 millions capital stock issued was \$33½ millions, of which about three-fourths was distributed as dividends either in cash or in the form of an allotment of special stock. Important progress is reported during the year from the work of the engineering department and research laboratory. Among the new machines which the engineering department was called upon to produce was a generator of 65,000 kv., a capacity driven by a water wheel. This is now installed, and is in successful operation in the plant of the Niagara Falls Power Company. It is the largest machine of the type ever built. It is worthy of notice that the whole of the patents and franchises, including development and research work, are carried in the company's books at the nominal value of \$1. The company's savings and investment plans for employees are interesting and extensive. At the end of 1923 \$6,118,460 par value bonds of the G.E. Employees' Securities Corporation were owned or were being paid for on the partial payment plan by more than 25,000 employees. There were also outstanding at December 31st employees' 7 per cent. investment bonds of the General Electric Company amounting to \$4,927,730, making a total of \$11,046,190 of investment bonds in the hands of employees. In January, 1924, a further issue of G.E. Employees' Securities Corporation bonds was made, resulting in additional subscriptions of \$5,339,800 from 26,710 employees. The funds of the G.E. Employees' Securities Corporation are invested in shares of the General Electric Company, and in the securities of sixty-three of the leading electric public utility companies in the United States. The enterprise and virility of the General Electric Company is emphasised by the fact that in 1923 it purchased a majority of the common stock of the Canadian General Electric Company, Limited. It is intended to preserve the Canadian character of this company, while promoting its growth and development by the freer interchange of scientific, engineering and manufacturing experience, and by taking full advantage of the resources and facilities of the great American company.

Brazilian Coffee.—While the policy of the Brazilian Government in consolidating its policy of coffee-valorisation continues to meet with criticism in certain quarters, the economic success of the undertaking for 1923, writes a correspondent, has become apparent. Consular invoices covering coffee exports for the past calendar year establish the high record sale of over 6,000,000 bags,* of which no fewer than 5,773,000 found their way to United States markets, while smaller shipments gradually increased as a result of the growing number of independent importers. Moreover, higher prices and record sales were realised, bringing in their wake an improvement in the milreis exchange. Since the beginning of the current year, however, owing to the vagaries of the French exchange, difficulties have been encountered by the Brazilian Warrant Company, whose task is to realise stocks of coffee on behalf of the Brazilian Government, these forming the security for the Coffee Loan of 1922. Up to the end of last month (April), the coffee business in Havre had fallen to a great extent into paralysis, and, at time of writing, little change in the situation has to be recorded. On the other hand, the coffee movement in Brazil itself during

* Standard weight = 132 lbs each.

the first few months of the current year appears to have been less, both in quantity and in value, than for the corresponding period of 1923. On January 1, 1923, the State Government of Sao Paulo increased the arbitrary basic rate per kilo of coffee for the purpose of assessing the 9 per cent. *ad valorem* export tax from 700 to 1,000 reis. Clearances, up to the end of January of last year, avoided the increased tax rate, although some shipments did not actually leave the Brazilian port of Santos before early in February. Prospects for the present year are in favour of heavier exports, while the home consumption, in view of the large increase in population, has become a more important factor. From published figures, taken from the last census, the population of Brazil is now 30,635,605, of whom 29,045,227 were native born, 1,565,961 were foreigners, and 24,417 were described as being of undefined nationality. But Brazil is meeting with increased competition in the coffee market from Ecuador and Colombia among the South American States, and from Guatemala, Costa Rica, and El Salvador among those of Central America. Whereas the United States remains the principal market for the Brazilian berry, Spain takes 50 per cent. of the coffee exports of Ecuador and a not inconsiderable proportion of Central American stocks. Coffee takes second place, however, in the exports of Ecuador, cacao forming the main portion of the foreign shipments, the greater part finding its market in Europe. At the price of 45 sucres per quintal (1.0684 cwt), such as has lately been ruling—although at the close of last year prices were between 27 and 38 sucres per quintal—Ecuadorian growers can make a very satisfactory profit. Stocks of cacao are reported as not being unduly large, although the heaviest movement of the crop has now been completed. For the past year the total receipts of cacao in the Guayaquil market amounted to 27,899,888 kgs.

Co-operative Principle in Insurance.—When organised insurance was trying to make a beginning two hundred and fifty years ago, the idea of co-operation—which has survived in mutual life assurance—struggled hard against the stock company idea for insurance against fire. The sole survivor of those early days was the Hand in Hand, which is now incorporated with the Commercial Union. Two hundred years later, as an offshoot of the co-operative movement in the North of England, was established the Co-operative Insurance Society, which is the insurance branch of the Co-operative Wholesale Society and the allied Scottish Society. The report of this Co-operative Insurance Society for last year shows strength and good management. The fire premiums of £159,099 yielded an underwriting surplus of £22,317 (14 per cent.) after making the usual provision for unexpired risks. In the accident, employers' liability, and general accounts, the premiums were £249,749 and the surplus £21,110 (8.5 per cent.). In the life department (ordinary) the new policies issued numbered 9,501 for £1,619,481, as compared with 12,158 assuring £807,928 in 1922. The premium income was £878,306, the expenses 11.2 per cent. of the premiums, and the ordinary life funds increased by £326,837 to £1,800,411. In the industrial branch the premiums were £758,634, the expenses 43.8 per cent., and the funds increased by £297,655 to £703,149. The interest available for profit and loss was £14,574, and the underwriting profits were £43,427. The interest paid to shareholders was £1,000, the dividend to policyholders £20,864, and the bonus to district managers, agents, &c., was £29,709. The funds on December 31st were £2,888,670.

New Methods on the Rand.—Our mining correspondent writes:—In the flood of annual statements of Transvaal mining companies which occurs during April and the early part of May, it is impracticable to refer to points of a general character. One or two of these were emphasised by Sir Ernest Oppenheimer in his speech at the annual meeting in Johannesburg of the Anglo-American Finance Corporation, a lengthy cabled report of which appeared on Thursday in the columns of an enterprising daily contemporary. Particular attention was devoted last year to drills and drilling. As a result of prolonged research,

hammer "boys" in the stopes, and even the larger types of drilling machines, were replaced by small "jack hammer" machines. Owing to the comparative ease with which the latter can be handled underground, stated the annual report of the Central Mining Corporation, two (or even, with the latest improved type, one) can drill as much in an ordinary shift as a whole gang. The newest jack-hammer machine, using specially prepared steel, is capable of doing about four times the work of the old type. Electrical butt-welding, first introduced at the Springs and Brakpan mines, has demonstrated it to be economically possible to weld and re-use considerable quantities of broken steel. The translation of these improvements into actual working practice is necessarily a gradual process, but a remarkable reduction in ore-breaking costs has already been effected. Material economies have been effected in the use of explosives. A development in connection with ore treatment is the substitution of corduroy concentration for plate amalgamation in the mills. This, in some cases, represents a reversion. There can be little doubt that but for political uncertainties the improved prospects of the industry would be reflected in share quotations. It is quite on the cards that—as in the case of our own election—the apprehensions may prove greatly exaggerated.

General Mining and Finance.—In some circles the hope had been entertained that this Kaffir finance undertaking would re-enter the dividend list with a distribution in respect of 1923. Such anticipation is disappointing, although the profit scores a further satisfactory increase, amounting to £100,300 for last year, as against £78,900 in 1922 and only £40,400 for 1921. Actually the sum available would have provided 10 per cent. upon the net issued capital, but the directors consider it preferable to transfer to reserve the bulk of the profit and loss credit, thus placing the corporation "in a more advantageous position for undertaking any promising new business, and carrying out its legitimate functions as a mining and financial company." Actually the case is rather one of Hobson's choice. It has been pointed out that the balance-sheet valuation of the assets shows a surplus over liabilities of £1,137,800, or 22s per share. But of this £814,800 is locked up in share and debenture holdings, properties, &c., while debtors (including advances, less reserves) figure for £263,600. Disregarding the latter item—a substantial portion of which may not be recoverable—the actual cash surplus is very small indeed. It should be mentioned that the investments are entered at considerably below their market values. With regard to the ex-enemy shares, the directors announce that the number now held totals 860,400. As soon as it is reasonably certain that no more shares will be available from this source, steps will be taken to reduce the issued capital correspondingly. The position of the corporation's subsidiary undertakings was dealt with in our issue of April 19th.

Anglo-Argentine Tramways.—We are always pleased to review the accounts of the Anglo-Argentine Tramways Company, Limited. After perusing the directors' report, manager's report, comparative statements, and last, but not least, a balance-sheet unabridged, together with revenue and net revenue accounts, shareholders must feel that the directors are determined to keep them in close touch with the progress of affairs of the undertaking which they own. In these days it is only too often forgotten that shareholders are proprietors. In the accounts for 1923 gross receipts are a little lower at £4,484,782, and expenditure substantially higher; this results in a net revenue of £1,006,495, as against £1,193,668 for the previous year. Receipts from passenger traffic amounted to £4,421,980, being a decrease of 0.9 per cent., while working expenses at 71.56 per cent. compare with 71.39 per cent. Money was saved over "traffic expenses," and traction expenses were lower on account of cheaper fuel. Results are summarised below from 1908:—

	Gross Receipts.	Gross Receipts per Car Mile.	Expenditure.	*Net Revenue.	Interest, &c.	Balance.
	£	d	£	£	£	£
1908	1,264,841	13.87	790,687	474,154	191,449	282,705
1909	1,938,888	13.25	1,207,222	736,665	355,439	411,226
1910	2,419,186	13.54	1,564,093	858,522	398,378	460,144
1911	2,631,836	13.73	1,723,928	907,907	414,057	493,850
1912	2,778,302	13.96	1,824,021	954,281	442,422	511,859
1913	2,963,191	13.98	1,969,161	994,031	477,630	516,401
1914	2,850,995	13.50	1,880,996	969,999	603,888	366,111
1915	2,709,615	12.82	1,786,740	922,875	657,301	311,211
1916	2,714,225	12.65	1,956,668	757,556	664,716	132,849
1917	2,783,412	12.73	2,051,746	731,666	664,966	105,021
1918	3,012,821	13.61	2,375,564	637,257	665,225	15,063
1919	3,296,957	14.75	2,573,742	723,215	665,495	92,467
1920	4,413,164	17.28	3,198,028	1,215,136	665,775	593,875
1921	4,277,600	17.09	3,305,081	972,519	683,946	303,647
1922	4,529,978	17.53	3,346,981	1,193,668	666,371	527,297
1923	4,484,782	16.61	3,493,573	1,006,495	666,686	339,809

* Including income from interest on investments and deposits.

To this balance of £339,809 is to be added £12,829, the amount brought forward from 1922. And to meet the needs of preference shareholders £20,000 has been transferred from reserve. This brings the available balance to £372,638. The first preference shares received their dividends for 1923, taking £176,000, and the second preference shares £183,000, likewise as dividends for 1923, leaving £13,638 to be carried forward. The company, in its report, continues its record of negotiations with the municipal authorities in Buenos Aires. The report states that:—"The arbitrary reduction in fares from 12 cents to 10 cents (while leaving the company with onerous obligations which the higher fare was intended to mitigate) has continued in operation since April 10, 1923, with the result that the earnings for the year fell short of the amount required to pay the full dividend on the second preference shares, and a transfer of £20,000 from the contingency fund has been necessary to enable this dividend to be paid. It was hoped that, after the deprivations of the war years, the company would be permitted to earn a reasonable return on its capital, but owing to the action of the authorities this hope has been disappointed, and the holders of the ordinary share capital are deprived of a dividend for the tenth consecutive year. No compensation has been received even in respect of the company's contribution to the national pension fund, the claim for which last year was £86,383, although it was specifically provided that, if the increased fare was not continued, an arrangement was to be come to with the Municipality as to the manner of meeting the pensions charge." We confess that we are not without some sympathy for the company, and though we are, of course, listening to only one side of the story, we should be glad to hear that the negotiations have been pressed forward to a settlement satisfactory to both the company and the Municipality.

Malacca Rubber.—Better results are shown in the report for 1923 of the Malacca Rubber Plantations, Limited, and although the ordinary shareholders have still to forgo any dividend distribution, the preference dividend is now paid up to date, profits being sufficient to meet three years of arrears as well as that for 1923. Although the rubber crop was 335,000 lbs smaller than in 1922, the proceeds amounted to £192,900, as against £163,500. Estate expenditure was nearly £11,000 higher at £138,100, and the net profit £18,600 higher at £53,900. The following table compares results for a number of recent years:—

	1914.	1916.	1918.	1919.	1920.	1921.	1922.	1923.

During 1923, 171,036 ordinary shares were issued at a premium of 10s per share. This premium, less expenses of the issue, amounted to £64,700, and was added to the reserve fund, raising it to £564,700. Out of the proceeds of the issue, £150,000 8 per cent. 7-year notes were repaid at 101 per cent. Hence the reduction in the amount

required for interest. The "all-in" costs for the 1923 crop were 10.58d per lb, as against 9.68d in 1922, the slight increase being "due primarily to the lower crop harvested under the restriction scheme." The gross selling price was 1s 2.25d per lb. Out of the 1924 crop 719,040 lbs have been sold forward for delivery at an average price equivalent to 1s 5.25d per lb, landed London.

Ouro Preto.—Last year this Brazilian gold mining enterprise benefited from a number of favourable factors—a low record in the rate of exchange, a marked increase in the average thickness of the ore mined, an expansion in both the quantity and value of the arsenic produced, and a reduction in costs. As a result the profit rose to £32,600. The dividends, however, remained at the same rate as paid for the two preceding years—22½ per cent. on the preference, 12½ per cent. on the ordinary, an increased appropriation being made to reserve, further capital expenditure having to be faced. At 82,100 tons, the ore reserves show a small reduction, and represent barely one year's supply for the mill; this, however, is the normal position. The outlook is described by the mine superintendent as "distinctly encouraging." An interesting point is the acquisition of additional water power, the falls available being expected to yield over 2,000 h.p. in the dry season.

The annual International Exhibition and Sample Fair will be held in Riga from July 20th to August 3, 1924.

VISCOUNT MILNER will preside at a meeting of the Royal Society of Arts (Dominions and Colonies Section) on Monday, June 2nd, at 5 o'clock, when the Rt. Hon. Sir Frederick Lugard, British member of the Permanent Mandates Commission, League of Nations, will read a paper on "The Mandate System and the British Mandates." The paper will be followed by a discussion.

UNITED STATES.—MONEY EASIER—SLACKENING TRADE—APRIL FOREIGN COMMERCE—COTTON CONSUMPTION.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 16.

MONEY markets display further ease. After holding steady at 3½ per cent. for about a fortnight, the rate for call loans on the New York Stock Exchange has dropped to 3 per cent., the lowest level witnessed since the middle of March, when there was a heavy accumulation in banks of Federal income-tax receipts. Owing to pronounced inactivity in the stock market, brokers' borrowings are abnormally light. Funds are in abundant supply, greatly exceeding the demand, and come almost entirely from the large surplus of idle money at this centre, rather than from interior institutions, which apparently find more remunerative employment for their money in their own districts. Time money rates also have worked lower, until loans on both mixed and all-industrial Stock Exchange collateral are readily available at 4 per cent. for all maturities up to four months, with funds for longer periods commanding 4½ per cent., but in very limited request.

The easy tone in money is expected to continue for some time, probably until the domestic political situation and outlook become clearer, and more confidence and activity develop in trade and industry. Contrary to expectations in many quarters, the recent action of the New York Federal Reserve Bank in lowering its rediscount rate from 4½ to 4 per cent. has not been followed by any of the other eleven Federal Reserve Banks throughout the country. It was thought that at least the Boston and Philadelphia institutions would reduce their rates, especially since their ratios of cash reserves to note and deposit liabilities—namely, 89.3 per cent. for Boston and 86.3 per cent. for Philadelphia, are close to the 90.3 per cent. ratio of the New York bank. In other central reserve districts, however, the ratios are considerably below those prevailing in the East, and range in most instances from about 60 to 80 per cent.

National Bank of Commerce in New York

JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$13,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

Trade and industry generally show a further slowing down, lessened activity being noticeable, particularly in iron, steel, and textile manufacturing. Wholesale buying for future requirements is more cautious and limited than ever before experienced in many lines, the most conspicuous example being found in cotton goods. That branch of the textile industry is suffering almost unprecedented depression, so far as mills and selling agents are concerned. In primary markets for cotton goods, buyers continue to operate in a hand-to-mouth way, and similar conditions prevail in wholesale markets. Prices show considerable irregularity on stock merchandise available for spot delivery, but manufacturers are decidedly firm on contracts involving later shipments of goods to be made. Many finished and unfinished lines of cottons are still offered at prices far below parity with the current cost of the staple, and curtailment of production is steadily increasing in both Northern and Southern mills, because of the dearth of forward business. Indications, therefore, point to sharp upward price revisions in cotton goods when demand broadens, if the raw material holds around present levels or works higher; yet merchants, even though their stocks are greatly depleted as a rule, seem to be little impressed with the probability of advances later on, to say nothing of the growing prospect of a marked shortage of many cotton fabrics. In practically all other lines of textiles also trade is extremely slow.

According to the Census returns, cotton consumption in April was 480,000 bales, as compared with 483,928 in March and 576,514 in April a year ago, representing a decrease of 1 per cent. from March and of 16 per cent. from April of last year. Consumption for nine months of the season was 4,558,920 bales, as against 5,040,373 bales in the corresponding period of the preceding season, a decrease of 9½ per cent. Exports of cotton last month amounted to 320,774 bales, an increase of 22 per cent. over April of 1923, while exports for the nine months totalled 5,012,544 bales, against 4,321,108, a gain of 16 per cent. The number of spindles in operation in

April was 31,871,665, as compared with 32,392,171 in March and 35,512,737 in April, 1923, which was the largest number of active spindles ever recorded.

Foreign commerce returns for April show that both exports and imports increased slightly in total value over those of March, but, compared with a year ago, exports gained while imports fell off considerably. Exports last month exceeded imports, whereas in April of last year imports showed a heavy excess. The total value of exports for April, \$343,000,000, represented a gain of 1 per cent. over March and of 5.4 per cent. over April of 1923, while imports were 1 per cent. larger than in March, but 10 per cent. below April a year ago. The excess of exports over imports was \$19,000,000, or about the same as in March, but in April of last year the import excess was \$38,780,458. For the ten months of the fiscal year exports, totalling \$3,670,938,080, showed a gain of 10½ per cent. over the preceding ten months, while imports, valued at \$2,977,077,487, represented a decrease of 3.6 per cent. The export excess for the ten months, amounting to \$693,860,593, was approximately treble that for the corresponding period of the previous fiscal year.

The Treasury's statement of circulation, published this week, shows that some very striking changes took place during April. On May 1st the general stock of money of all kinds in this country amounted to \$8,776,575,139, an increase of approximately \$19,000,000 as compared with April 1st and of \$306,000,000, roughly, over May 1, 1923. Gold coin and bullion totalled \$4,417,401,937, a gain of more than \$49,200,000 over April 1st and of about \$435,600,000 over May 1st a year ago. Money in circulation aggregated \$4,760,113,559, or \$52,700,000 less than on April 1st, but some \$92,000,000 more than on May 1, 1923. The per capita circulation, based upon an estimated population of 112,449,000 on May 1st, was \$42.33, a decrease of 52 cents from April 1st, but an increase of 29 cents over May 1st of last year. As compared with the peak point on November 1, 1920, the per capita circulation as of May 1st this year shows a decrease of \$0.93. During April Federal Reserve notes in circulation decreased by more than \$79,400,000, while the amount of gold certificates in circulation increased approximately \$389,000,000. Gold coin in circulation decreased about \$4,400,000 last month, United States notes \$3,700,000, and National Bank notes \$7,100,000, while silver certificates increased some \$2,900,000 and subsidiary silver about \$1,000,000.

FRANCE.—THE NEW CABINET AND FOREIGN POLICY —THE STRENGTH OF PARTIES—EMPLOYERS AND FAMILY ALLOWANCES.

(FROM OUR CORRESPONDENT.)

PARIS, May 28.

M. POINCARÉ, in addition to being the first of the past Presidents of the French Republic to return to active political life after the expiration of his septennate, has inaugurated many new departures since his withdrawal from the Elysée, but none has been so remarkable as the policy he has adopted towards his probable successor, since he announced a fortnight ago that his Cabinet would present its collective resignation prior to the meeting of the new Chamber on June 1st. Accompanied by his Finance Minister, he has had long interviews, in the presence of the President of the Republic, with M. Herriot, who is to form the new Cabinet, and M. Painlevé, his leading supporter, and at these meetings, it is understood, the heads of the retiring Government and their successors came to a cordial understanding as to the necessity for continuing the present foreign policy of the country, in all its essential features.

The recent speeches of M. Herriot and M. Painlevé leave little doubt that this understanding will largely be acted upon. Their programme will include a cordial agreement with Great Britain—M. Doumergue, the Speaker of the Upper House, and one of the leading members of the new majority, goes further, and insists on the necessity for an actual alliance—the settlement of the Reparations question by agreement between the Allies; the maintenance of the military, but not of the economic and administrative occupation of the Ruhr; full recognition of the inter-Ally debts, and a settlement of

them that will be "fair to all parties"; and an effort to bring about the resumption of commercial and diplomatic relations with Russia, which M. Herriot regards as "indispensable." Add to this that most of the non-Socialist leaders of the new majority have announced that the continuance of a balanced Budget, and the determination to put a stop to borrowing, is to be regarded as a *sine qua non* for the restoration of French credit, and it is evident that in principle, whatever difference there may be in method, there will probably be little change of policy on all essential points.

The composition of the new Government depends very largely on the attitude of the Socialist group, which is the third largest in the Chamber, and numbers 105 (exclusive of the 30 Communists). If these eventually decide to accept office in the new Radical Socialist Cabinet (which should properly be called an Extreme Radical Cabinet, as the members of the so-called Radical Socialist Party are none of them Socialists in the usual meaning of the term), the new Ministry will be constituted exclusively from the Left. As matters stand to-night, however, it appears probable the Socialists will decline to share the responsibilities of office, and will decide either to remain benevolently neutral, or to go into active opposition, as circumstances may decide. In that event, it is regarded as probable that M. Herriot will endeavour to form a Ministry of "Republican Concentration," the members of which will be drawn from his own party (which, with its 142 members, is once more the largest individual group), in co-operation with the three allied groups, the Republican Socialists (39 members), the Gauche Démocratique (76), and the Républicains de Gauche (56), which together would form a solid and practically homogeneous bloc of 313. In that case, the new Cabinet would count very largely on the support of the remains of M. Poincaré's immediate supporters (who number 116 in the new Chamber) on many questions of foreign policy. The Opposition would be reduced to about 150, and would consist of the Socialists and the Communists on the one side and the score of members who now constitute the Extreme Right.

In the first case, supposing the Socialists were represented in the Cabinet and the Communists gave him their support, M. Herriot might count on a majority of 48 at the worst, and very often (on those occasions when he had the Communists against him and the Gauche Démocratique and the Républicains de Gauche with him) on one of about 250. A Ministry of Concentration, on the other hand, would be able to count on a minimum majority of about 60, even with the Socialists and the old Poincarists both voting against it. Such a Ministry would necessarily be much more moderate in its proposals than one in which the Socialists held portfolios, and all indications at present tend to support the view that the Herriot Cabinet will be one of this character. In any case, it is fairly safe to predict that neither the alarmist fears nor the exaggerated joy that were experienced in many directions, and particularly in England, when the "great victory of the Left" was first announced, will be justified by events. A spectacular Amnesty Bill for certain political offenders may be expected almost immediately, and it is probable there may be some tendency to return to the old priest-hating policy of twenty years ago, but in general principles, particularly in regard to foreign affairs, there is likely to be little change, although it is certain the new Cabinet will endeavour to conduct its relations with foreign Governments with a little more *savoir faire* and perhaps with a little less lawyerlike insistence on literal interpretation of contracts.

The fourth annual Congrès des Allocations Familiales, which has been held this week at Mulhouse, in Alsace, has revealed the extraordinary degree of success that has been achieved by this device for improving the situation of the workman. The *allocations familiales*, as I explained a year or two ago, are the extra allowances on a fixed monthly scale which are made by many French employers in respect of each child which has to be maintained by their employees. The system originated at Grenoble, several years ago, and was due to the desire of a group of employers to find some means to stabilise the labour they employed. These employers at first bound themselves individually to pay such extra allowances, but they soon found that, in taking on new em-

ployees, they were tempted to engage single men rather than men with families, for reasons of self-interest. In order to remove this temptation, they decided to form a common and co-operative fund, out of which the extra allowances should be paid. The modified system has proved so successful in working, both to employers and employed, that to-day there are 151 of these common funds or caisses in existence in France, with a total membership of 9,300 firms, employing a total of over 1,000,000 workmen, and distributing over 128,000,000 in "allowances for families" per annum. The rapidity with which the adoption of this system is growing may be gauged from the fact that no fewer than 31 new local associations of employers, comprising 1,700 firms, with 200,000 workmen, and paying allowances amounting to 36,000,000, have been started during the past year.

The average scale of allowances paid by these caisses is from 15f to 10f per month to men with one child, 36f to 46f to those with two, 63f to 81f to those with three, 92f to 124f to those with four, and so on, the amounts paid rising progressively with the increase in the number of children born. The Mulhouse society has raised its rate of allowances to a uniform payment of 31f a month in respect of the first child, rising successively up to 97f 50c for the tenth, so that a workman with ten children would have received by the end of the year 4,375f in addition to his normal standard wages. The Mulhouse congress passed resolutions urging that this system should be generalised throughout the country, strictly under private initiative, as at present, and that it should be extended to comprise not only workmen properly so called, but all other classes of employees, no matter what their rates of pay may be. The system has proved so successful, as a matter of fact, that some months ago the Parliamentary Socialist Party put forward resolutions proposing that it should be rendered compulsory on all employers. This proposal, however, in view of the unfortunate results of State control in other directions, has been universally opposed by the whole of the existing associations as likely, if adopted, to have fatal consequences to the whole movement.

GERMANY.—CABINET—EXCHANGE AND CREDIT— PRICES—FINANCES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, May 27.

THE Reichstag opened to-day, without the participation of the Marx Cabinet, which yesterday resigned as the result of a resolution of the People's Party, but which will carry on business until a new Cabinet is formed. The Communists, according to expectation, celebrated their new strength by making a scene; and it is feared that obstruction, as in the Prussian Diet, may be their only policy. At the time of writing Cabinet prospects are doubtful; the German-Nationals still claim the Chancellorship and have not withdrawn the somewhat provocative candidacy of Admiral von Tirpitz, who was indeed one of the ablest political heads of the Monarchy, but who would probably be regarded abroad as a challenge. A new Marx Cabinet, with or without the Nationals, would probably be the best solution. The three parties represented in the Cabinet which has now resigned have passed unanimously a resolution in favour of accepting the Dawes Report, describing it as an indivisible whole, which must be either taken or rejected, but adding that the laws creating the new railways corporation and the new bank of issue must guarantee German influence in these domains.

Despite the passive trade balance of the last few months, which was repeated, it is believed in April, the ratio between the supply of and demand for foreign exchange has become of late even more favourable; and yesterday the Reichsbank was able to meet the whole demand for the less important exchanges, to raise the allotment of gulden to 10 per cent. of the demand, and to meet 3 (instead of for a long time past 1) per cent. of the demand for dollars and sterling. The causes of this improvement are various. One is the operations of the Gold Discount Bank, whose return for May 23rd shows that £3,610,000 had been lent to importers, against £998,695 a fortnight before. Another cause is that the general shortage of money com-

pels hoarders of exchange, including big firms with large holdings, to realise for marks. Another is the decline in the demand, which has fallen from a maximum of about 400,000,000 gold marks a day to under 100,000,000 gold marks. The latter figures, of course, represent only the demand, not the need, because importers, knowing that they would be rationed, have always asked for more than is necessary.

In the home credit question there is no improvement. The Reichsbank will not relax its new principles; and the last week's returns show that they are working with effect. The note circulation in the week ending May 15th declined by 22,932,174 billion paper marks, and as the Bank's holding of rentenmark notes increased by 66,112,101 rentenmarks, there was an effective circulation decline of over 89 million gold marks. Paper mark discounts increased by 46,895,429 billions, rentenmark discounts by 19,000,932 billions (reckoned in paper marks); while advances both in rentenmarks and paper marks declined slightly. The total of discounts and advances rose by 33 trillion paper marks, which is a moderate increase for a mid-month report, and about equals the decline in the preceding week. The Reichsbank and the Government seem determined not to resume credit-giving; and there have been several utterances showing that this question is regarded as a choice of alternatives between meeting the credit demands of business and maintaining the new stability of the currency. A Deutsche Bank report states that "the calculation that the money stringency will soon be relaxed, and that it will therefore be profitable to hold fast to wares, must be regarded as false. The Reichsbank will take care that that does not happen, because it realises that the stability of the rentenmark is based on the shortage of money, and sees its first and most important task in preventing the collapse of the renten and paper marks during the transition period which will elapse before final currency regulation." Dr Schacht says practically the same thing: "The price reduction must come, and it is better to sell wares at the beginning of the movement than at the end, before they are burdened by high interest rates." Dr Schacht added that in no circumstances would rentenmark inflation be practised, and that the issue of paper marks must go no further. He refuses to raise the discount rate, mentioning as one reason the fact that the Bank holds 800 million gold marks of bills from Agriculture. "The other suggestion, that we should not hold so fast to the stable dollar quotations in Berlin is also impracticable"; this would lead to new inflation. Dr Schacht declared that he can get more credit for the Gold Discount Bank than he could place in Germany, but that Germany's present export basis is too small. She must reduce consumption and make efforts to increase export. Foreign short-term credits are sufficient, but long-term foreign investment credits are lacking. Ministerial-director Schaeffer, of the Finance Ministry, has told the Wholesale Merchants' Association that only foreign capital can relieve the present strain, and that foreigners in their business relations with Germany, "must be given a measure of security which they have not enjoyed since the war."

Prices are falling. The official cost-of-living index number for May 21st is 115, against 116 (the highest point of 1924) on May 14th. Official salaries are being raised to about 80 per cent. of the pre-war level. The present minimum and maximum salaries of an official in the first or lowest rank of the State service are 804 and 1,068 gold marks, in the thirteenth or highest rank 6,300 and 9,600 gold marks, in addition to which are small supplements according to size of family. After the proposed increases, the lowest salary, excluding family supplement, will be 924 gold marks and the highest 13,590 gold marks. Iron and steel prices, in connection with the weakening market, have had sharp drops; bar-iron in the last ten days has fallen from 140 gold marks to 130 gold marks per metric ton, and other kinds of rolled iron have fallen 20 to 25 gold marks a ton.

Federal revenue in the second ten-day term of May totalled 199,852,700 gold marks, and expenditure 206,489,000 gold marks, but the latter contained not only exceptionally large subventions (100,392,300 gold marks) to States and municipalities, but also 50,851,400 gold marks spent on buying back Gold Loan with the aim of supporting the quotation. The lowness of the mere Federal ex-

penditure, including interest on debt, but excluding redemption of debt, is notable. In the last three ten-day terms it was respectively 75,843,200 gold marks, 61,032,000 gold marks, and 55,245,300 gold marks. Normal Budget conditions have prevailed now for about five months (in late November and in December, 1923, though the currency was already stabilised, the evil effect of the former depreciation was not overcome), and the result fully confirms earlier statements that the financing of German Governments is very easy, even if it is assumed, which is not entirely true, that the practical disappearance of debt charges involves an equal diminution in the tax-paying power of the population. The financial returns indicate that, considered as a mere matter of taxation, the Reparations sums last under discussion could be raised, and it is hard to see what, short of formal exclusion measures against German goods, can prevent their being transferred abroad.

The business outlook is doubtful. The unemployment figures in Berlin are practically stable. It is stated officially, though no figures are yet forthcoming, that unemployment in unoccupied territory has fallen by about a third since the last report was issued. The damage done to crops by the severe frosts of last winter is stated in agricultural organs to have been locally much more severe than could appear in the reports, based on averages, for all Germany. In East Prussia 50 per cent. of rye, 30 per cent. of wheat, and 55 per cent. of barley were destroyed, and 223,000 hectares of land under these crops, of which 203,000 hectares were under rye, had to be reploughed. The cost of new seed-corn for this area only is put at 7 million gold marks, and 2 millions worth of nitrates is stated to be required. In part of Pomerania also about 50 per cent. of winter crops perished. Industry, apart from other troubles, is suffering from lack of coal, owing to the continuing strike; Krupps have stopped the work of 30,000 men, and the Deutsche Werke Company, which owns the former State arsenals, and is the biggest industrial concern in the Republic, is also reducing work. The textiles and boot industries report declining orders, but they have work for a long time to come. Although business cannot get money, the buying power of the population, which increased greatly after the currency reform, shows no sign of decline.

Stocks last week had a new fall, the causes being the difficulties of industrial companies and discouraging announcements as to the Reichsbank's credit policy. The *Frankfurter Zeitung's* dividend-payers' index for May 23rd is 446.28, against 512.52 a week before. The index for paper mark loans was only 1.82, against 4.42 at the beginning of the year.

SWEDEN.—MATCH INDUSTRY—INDUSTRIAL CONDITIONS—TRADE BALANCE—TRADE WITH BRITAIN—PRICES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, May 12.

A PROMINENT feature in Swedish business life at present is the expansion of the Swedish Match-making Company. The readiness with which the new issue of 90 million crowns was absorbed is a good sign of the confidence of the public in this branch of industry. With this new issue the stock capital of the Swedish Match-making Company is raised to 180 million crowns, thus being the biggest company in Sweden, putting the big mining concern, Grangesberg-Oxelösund (which with a stock capital of 119 million crowns has hitherto been the biggest), as a second. It is reported from American sources that the Swedish Match-making concern has acquired control of its Japanese competitors. If this is so, it should facilitate the expansion of the Swedish match trade in the East, where the Japanese have been the strongest competitors; as a matter of fact, during the war the Swedish match-makers lost a considerable part of their trade in the Far East on account of Japanese competition, which was supported by the difficulties of sea transport from Europe, the lack of raw materials, &c. As regards the general situation in Swedish trade and industry, one can say that confidence in the future has been restored. People are more optimistic than they were a year ago. On the other

hand, conditions of commerce and industry still leave much to be desired, but this is due to severe competition from countries which have depreciated exchange, labour disputes, bad weather conditions, &c. The long winter, which only recently came to an end—over six weeks later than last year—has caused tremendous losses to the export industry and shipping. The pulp and timber industries are well sold, but have not been able to effect deliveries on account of ice; it is therefore expected that the season will be very active when once started. Unemployment is much smaller than it was, and sounder financial conditions prevail. There are no strikes or other conflicts of any great importance going on at present, and the special unemployment works arranged by the Government are being wound up, and are only going on at a few places where works have to be completed. According to figures issued by the Swedish Employers' Association, not less than 5 million working days were lost by strikes and disputes during 1923. The company results in general are better, but, of course, no big dividends can be expected. The new trade agreement with Soviet Russia, just ratified by the Riksdag, has been greeted with satisfaction, not so much because it is believed that this will open up big trade with our Eastern neighbour, but because one question, which has been the source of much political discussion, has thus been solved.

The trade balance develops in a favourable direction, the difference in import and export being considerably more in our favour for the first quarter this year than for the same period of 1923. Naturally there is still an import surplus; the export surplus does not occur until the shipping season for timber is in full swing. The value of imports for March was 89.7 million crowns and of exports 69.1 million crowns, leaving an import surplus of 20.6 million crowns, compared with 32 million crowns for February. The import surplus for March last year was 47.9 million crowns. For the first three months of this year the total import surplus was 87.0 million crowns, while the corresponding figure last year was 109.2 million crowns. On the import side it is still foodstuffs which are specially high; there are reductions in the import of finished and half-finished materials, while raw materials show signs of increasing.

Figures as to the destination of our export last year show that England has quite regained its position in our export trade. Thus 30.84 per cent. of our total exports went to England during 1923. For 1913 and 1922 the comparable figures were 29.10 per cent. and 24.71 per cent. respectively. Increases in our export to England of pitprops, sawn timber, pulp, and iron ore were the cause of this result. Exports to Germany were for 1913 21.91 per cent., for 1922 8.95 per cent., while for 1923 they were but 7.85 per cent.

The quarterly index issued by the Board of Social Welfare shows a reduction of three points (equal to about 2 per cent.) from January 1st to April 1st, at which date it reached 173. The reduction is specially due to reductions in the prices of foodstuffs.

HOLLAND.—FLOATING DEBT—AMERICAN LOAN—ECONOMIC CONDITIONS—POSITION OF ROTTERDAM.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 19.

In my last letter (*Economist*, April 26th) I discussed the present position of the floating debt of Holland, in connection with the recent issue of a 6 per cent. loan amounting to 85 million florins on the home market. On the basis of a statement then made by the Minister of Finance, the debt which had to be consolidated was computed at about 120 million florins. Since that time the Minister has made a more detailed statement in Parliament, and this, as it presents a very pessimistic view, has caused no little stir in the Dutch Press. The Minister again declared that the amount of floating debt to be consolidated was 120 million florins. This includes a part of the deficit on the budget of the present year, but 40 million florins of uncovered deficits of the ordinary service must be added. The Minister also took into account the chances of a rise in the service of the national debt (in consequence of a possible rise in the general rates of interest) and the expenditure on old-age insurance. He thus brought

up the figures to an amount ranging from 175 to 200 million florins. He further considers it necessary to secure for the extraordinary service of the years 1924 and 1925 an amount of 125 to 150 million florins. Taking all these together, it would become necessary in the course of the next few years to issue a funded loan of 300 to 350 million florins.

It is this high figure which has excited so much general consternation, especially as it had been imagined that the time of big loans was over. But a closer examination of the figures adduced by the Minister will give quite a different impression. In the first place, the Minister had reckoned in with the floating debt the proceeds of the loan recently raised in America, namely, 40 million dollars, or about 100 million florins. This at once reduces the amount that has to be funded to something between 200 and 250 million florins. In the second place, most of the additional costs which the Minister anticipated for the national debt will be raised by means of the retrenchment measures now in hand. Moreover, it is obvious that loans raised for the purpose of extraordinary service must be regarded in a very different light, since these loans, which *inter alia* include building credits, will to some extent pay their own interest and sinking fund. This also invalidates the estimate of the Minister that in 1926, chiefly as a result of the increased interest on the national debt, an amount of 30 million florins will be needed. This amount can be diminished by at least one-half. Taking these emendations into account, the conclusion may be reached that in the course of the next two years not more than 90 million guilders at the outside will be required for the ordinary service, including all deficits on the budget within these two years. The extraordinary service can quite well be left out of account, since, as already stated, the expenditure under this heading will pay its own costs, either immediately or after a few years.

These considerations have caused a certain relief in financial circles. It must not be forgotten that the consolidated national debt from January 1, 1924, to the present moment (thus inclusive of the latest home and American loans) has risen from 1,148,380,000 florins to 2,973,400,000 florins, and the annual service on this debt has within the same period risen from about 40 million florins to about 192 million florins. If everything were to go as the Minister foreshadowed, then in 1926 the national debt would have risen to 3,323,000,000 florins, and the annual service on it to 222 million florins. But it is clear that the figure will be much lower.

Economic as well as financial prospects have come in for their share of attention. Especially is this the case on account of the report of the Dawes Commission, and the results of the French elections: these have given hope of a settlement of the Reparations question, which would also react favourably upon the present commercial and industrial depression. Moreover, the negotiations with Russia at first inspired confidence. These have now, however come to a standstill on account of the very one-sided views prevailing among the Russian statesmen concerning the most-favoured-nation clause. In Holland, however, there are hopes that these negotiations will be resumed. Not that a *de jure* recognition of Russia would do much directly to restore economic prosperity to Holland, but because any return to more normal relations cannot but exercise a beneficial influence.

The port of Rotterdam will be one of the first to benefit by a return to normal conditions in Europe. In the first place, Germany will then be able to recover her strength. How important to Rotterdam is the prosperity of her German hinterland is proved by a comparison of recent figures with those of former years. The whole quantity of goods imported into Rotterdam from overseas amounted in 1913 to 22 million tons. In 1922 this figure was only 14½, and in 1923 only 12 million tons. Of the 22 million tons imported in 1913, 8 million tons were ore for Germany; further, there were 2½ million tons of wheat and rye, of which about 1,400,000 tons were for Germany and 1.6 million tons of maize and barley, of which 0.8 million tons were for Germany. Germany sent *via* the Rhine to Rotterdam, 4.3 million tons of German coal, and 700,000 tons representing products of the German metal industry. That the diminution of the trade of Rotterdam is chiefly due to the depression in Germany is evident

from the fact that the goods cleared at Lobith (the German-Dutch frontier station) from Rotterdam in 1913 amounted to 15.7 million tons of goods, and in 1922 only to 8½ million tons. Just when some improvement was to be noted in the German hinterland in 1922 came the occupation of the Ruhr, which put an end to the more optimistic expectations. In 1923, therefore, the goods cleared at Lobith only amounted to 5.7 million tons. It is easy to understand that in Rotterdam there is eager anticipation of the restoration of normal international relations, although there are other circumstances which militate against the increase of the trade of the port to its pre-war proportions. One of these circumstances is the French "*surtaxe d'entrepôt et d'origine*" levied on non-European goods imported from other than French ports. For most articles this amounts to 36f per 1,000 kg.; for others, especially goods coming from countries which are colonies of European States, it is even higher. When Alsace-Lorraine was again incorporated with the French State, and Antwerp was favoured by exemption from the *surtaxe*, the result was that goods imported for Strassburg *via* Rotterdam were subject to the tax, while those imported *via* Antwerp were free from it. This meant the loss of practically all the traffic between Strassburg and Rotterdam; this is comprehensible when we realise that the tax of 36f per 1,000 kg. works out at more than the whole freight from Rotterdam to Strassburg. This goods traffic between Rotterdam and Strassburg *via* the Rhine has, therefore, been almost wholly transferred to Antwerp.

DENMARK.—FINANCIAL BALANCE—A QUARTER'S TRADE—ECONOMIC CONDITIONS—PRICES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, May 15.

A SUMMARY of Denmark's financial balance with foreign countries for the year 1923 was published a few days ago. In this summary Denmark's net debt to foreign countries at the end of 1923 is estimated to be about 1,400,000,000 kr., as against about 1,100,000,000 kr. at the beginning of the year, corresponding to an increase in gold kroner of from about 845,000,000 kr. to about 920,000,000 kr. The figures for the net debt at the end of 1923 are the final result of a computation showing claims on foreign countries of about 510,000,000 kr. and total debts of about 1,910,000,000 kr. The amount of the debt is arrived at by estimating the value of Danish Government bonds held abroad to be about 550,000,000 kr., or about 70,000,000 kr. more than at the last computation a year ago—partly owing to the rise of the foreign exchange quotations and partly to the export of such securities which has taken place. The municipal debt has been estimated to be about 325,000,000 kr., against about 255,000,000 kr. at the end of 1922; this rise is likewise due to the decline of the krone value and the export of municipal bonds. Further, the Hypothekbank reports that the value of its bonds held abroad is estimated to be about 25,000,000 kr., while the foreign debt of the Exchange Equalising Fund at the end of the year amounted to 55,000,000 kr. The value of Danish Credit Association and Hypothek Association bonds and of

shares in Danish trading concerns has been estimated to be about 215,000,000 kr, against 185,000,000 kr at the end of 1922. Finally, the unbonded (commercial) debt has been computed to be 560,000,000 kr, to which amount it has been considered necessary to add about 80,000,000 kr for goods ordered but not yet paid for. Accordingly, a total of about 1,810,000,000 kr is arrived at, which figure, however, must be regarded as a minimum, to which presumably further about 100,000,000 kr must be added.

On the other hand, the total claims amounted to about 510,000,000 kr—i.e., about 125,000,000 kr for foreign securities, public claims, &c., and about 385,000,000 kr for commercial claims. It is pointed out in this connection, however, that a computation of this description must be rather uncertain for the year 1923, during which the exchange quotations have been so unsettled.

The following table shows the items affecting the financial balance:—

EXPENDITURE.	Kr.
Deficit of the balance of trade for 1923	375,000,000
Expenditure for the bunkering of ships and tourists expenditure, &c.	75,000,000
Interest on public and private debt	65,000,000
Import of securities (purchases)	45,000,000
Increase of unbonded claims	70,000,000
Total	630,000,000
INCOME.	Kr.
Gross freight earnings in foreign trade	200,000,000
Export of securities	90,000,000
Employed out of the equalising fund	55,000,000
Sale of gold by the National Bank	30,000,000
Profits on transit trade via Denmark	30,000,000
Increase of unbonded debt	50,000,000
Total	455,000,000

As will appear from this, no information is available as to how 175,000,000 kr have been covered. It is presumed that the increase of unbonded claims is to some extent merely *pro forma*, and that a consumption of unbonded claims has taken place, without information being given, to the extent of about 50,000,000 kr, and, further, that information has not been obtained about importation of foreign securities (escape of capital) for an amount in excess of the 45,000,000 kr mentioned, this excess corresponding to hidden exports of securities and other means of payment. This would leave an amount of 125,000,000 kr, which has been covered partly by contracting debts abroad, which have not been reported, and partly by income through insurance abroad, trade between foreign countries direct, &c. If these last-mentioned income items are estimated to be about 25,000,000 kr, the unbonded indebtedness would have to be increased by about 100,000,000 kr.

In relation to these figures the developments of the foreign trade during the coming year will be of importance. The figures for March have quite recently been published, together with a summary for the first quarter of the year. It appears that while during January goods for 165,000,000 kr were imported, and during February for 168,000,000 kr, the imports for March have amounted to 195,000,000 kr. In this respect there has accordingly been a continued rise, and the last-mentioned figure proves to be 23,000,000 kr more than the value of the imports during March, 1923. Fortunately, however, the exports have increased at the same time, the figures for the exports of Danish goods being 136,000,000 kr for January, 152,000,000 kr for February, and 155,000,000 kr for March. To this must further be added the exports of foreign goods, which were 11,000,000 kr, 15,000,000 kr, and 17,000,000 kr respectively, the total exports for March amounting to 172,000,000 kr, or 31,000,000 kr more than for March, 1923. The deficit of the balance of trade, which was 18,000,000 kr in January, 1924, and 1,000,000 kr in February, has been 23,000,000 kr in March, as against 31,000,000 in the corresponding month of last year. The total deficit for the first quarter is 42,000,000 kr, the greater part of which falls to the share of March. It appears from this that there has been a rather considerable improvement during these three months. Even considering that the February figure of 1,000,000 kr is extraordinarily low, the surplus of imports has been considerably less than the corresponding for January-March last year, when the total deficit was 104,000,000 kr.

A table of the different markets shows the following figures:—

	Jan.-March, 1923.	Jan.-March, 1924.
	Kilos.	Kilos.
United Kingdom	19,656,000	20,807,000
Norway	414,000	65,000
Sweden	11,000	37,000
Belgium	1,356,000	76,000
France	1,097,000	41,000
Switzerland	848,000	1,217,000
U.S.A.	629,000	2,494,000
Czecho-Slovakia	651,000	243,000
Germany	31,000	4,683,000

Exports to the U.K., Germany, and the U.S.A. have increased, while France and Belgium have imported smaller quantities than during the corresponding period of last year.

Trade conditions in general show no marked change during the last month. The steadiness of the exchange conditions since the establishment of the Exchange Council by the previous Government appears to have had a beneficial effect, especially on commerce. At this stage it cannot yet be said which views the "Rigsdag" will adopt with regard to the exchange propositions of the socialistic Government. There is reason to believe, however, that in connection with some import regulation an increase of the number of members of the Exchange Council will take place, as well as an extension of its authority. On the other hand, the prospects of carrying through the levy on capital in excess of 50,000 kr do not seem favourable for the Bill.

The wholesale price index of the *Finanstidende* for April shows a slight decline owing to the improvement of the krone rate, viz., from 228 to 225. The principal declines this time have been for coal, iron, and various other raw materials, as well as for margarine and coffee, while several agricultural export articles, for instance butter and eggs, show increases, which as far as butter is concerned is connected with increased exports to Germany. Danish wholesale prices are now 10 per cent. higher than at the same time last year.

SOUTH AFRICA.—MINING PROFITS—APPROACHING ELECTIONS—MINERAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 30.

HELPED by a gold currency premium of about 8s 6d per ounce net and about 11s 9d per ounce gross, the cost of realisation and exchange in March being estimated at 3s 3d per ounce, the profit of the Rand gold mines appears pretty well stabilised at a million and a-quarter a month. In March, a 26-day working month, the 35 companies of the Rand made a profit of £1,264,114. The gross premium was £416,250, but the net figure only £329,000. Thus the excess cost of bank exchange and other realisation was £87,250, compared with a normal £38,700, the old pre-war calculation being that realisation was covered by a shilling per ounce. Profits exceeding £100,000 were made by Crown Mines, Government Areas and New Modderfontein, the two latter securing practically £350,000 between them. While there were three mines—Modder Deep, Van Ryn Deep, and Randfontein—which each made about £75,000, the actual fourth in the list, ranged according to profit, was the Randfontein Central. Thus the two largest profit-earners are high-grade mines, 8½ to 9½ dwt, the third, Crown Mines, about the Rand's average, and the fourth, Randfontein, a low-grade mine. Its recovery in March improved to nearly 5½ dwt, as against well under 5 in December and January, while its production of 57,650 ounces was 1,100 in excess of that at the New Modderfontein.

All four mines worked at under a sovereign a ton—Crown Mines 19s 7d, Randfontein 18s 6d, Government Areas 17s 10d, and New Modder 17s 3d. Some mines were operated even more economically; for example, Modder Deep (the only mine whose recovery exceeded 10 dwt) at 16s 5d, and the Simmer and Jack, which returned only a fraction over 4 dwt) at 15s 5d. Thus do extremes in values meet in coincident costs! Robinson Deep's costs were 18s, as against the 23s of its two Eastern neighbours, the City Deep and Village Deep.

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.

ADVANCES UPON OR PURCHASES MADE OF DEBENTURES AND SHARES OF EASTERN PLANTATION COMPANIES. RECONSTRUCTION ISSUES UNDERWRITTEN.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

These are three of the deepest mines on the Rand. At Robinson, which is now doing no development, the recovery fell for the first time in its history to below 4 dwt, the actual figure being 3.85 dwt. Working costs were down to 14s 9d per ton. It is expected that this mine will only be able to last a few months longer, unless, perhaps, it is successful in exploiting the pyritic reef, on which the neighbouring Ferreira Deep is sinking a shaft, with promising values disclosed for the limited amount of work done.

We are in the throes of all the preliminaries of a General Election in June. Whatever be the issue of the contest, it seems pretty certain that neither the Nationalist-Labour "pact," one of the most curious political combinations known to history, nor the S.A. Party will have anything but a small majority. The sentencing of Maritz, responsible for so much bloodshed in the early days of the Great War, to three years without hard labour appears a distinctly inadequate sentence, while the release of the remainder of the Revolt prisoners, including at least one who was sentenced to death for murder, then respited to penal servitude for life, after a little over two years, can only be explained on the ground that political expediency has become subservient to justice. On the civil side, suspended sentences are being so frequently imposed as to make potential criminals little fear the risk of imprisonment, especially if they are first offenders. As a contrast, one hears of three and five years being given for dealing in diamonds and for arson. More and more I am becoming convinced that in South Africa the penalty no longer "fits the crime." All this, of course, reacts on the general security of person and property.

The value of minerals produced in the Union in March was £4,431,341, to which must be added the currency premium of £430,400 (gross), the value of gold at normal price being £3,387,221. Diamonds totalled 187,043 metric carats, valued at £625,181, while just over a million tons of coal had a pit-mouth value of only £309,750. The Transvaal collieries, the largest producers received only 5s a ton, while those of Natal realised 7s 10d. The value of all other minerals—copper, tin, silver, osmiridium, and miscellaneous—scarcely exceeded £100,000. The mines employ 32,000 whites and 279,000 coloured persons. For the quarter the total value, including premium, was just £14½ millions.

ARGENTINA.—CEREAL EXPORTS—EXCHANGE AND MONEY RATES—OPPORTUNITIES FOR BRITISH TRADE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 28.

DURING the past month Argentine conditions in general have been normal, and, on the whole, satisfactory; though, perhaps, one ought to make an exception of the importers who find their profits diminished yet again by loss on exchange. Exporters, on the other hand, make no complaint. Down to April 24th, this year's cereal shipments stand as follows:—Wheat, 2,223,751 tons; maize, 274,975 tons; linseed, 683,905 tons; oats, 263,834 tons. Both linseed and wheat are in excess of the quantities shipped for the same period last year, the latter being half a million tons better. And while the maize shows a decline on actual shipments, this is only due to the harvest being somewhat late. For, according to the first official forecast of the 1924 crop, the grand total of maize will be round about 6,860,000 tons, a figure which is not thought to be unduly exaggerated, notwithstanding that it is roughly two and a half million tons over last year's yield. At the very least, this means an exportable surplus of 5,000,000 tons, and, although the whole of the maize may not be shipped this year, it is reasonable to suppose that at least seven million tons of cereals in general will leave the country between now and the end of November. If all continues well, 1924 will, in this respect, be a record year, and it goes without saying that this movement is already being reflected in the railway receipts. All the lines participate in this improvement,

and the principal systems already show the following percentage increase over the 1923 figures for the corresponding period:—Entre Rios and Argentine North-Eastern, 14 per cent.; Southern, 11 per cent.; Central Argentine, 10 per cent.; Pacific, 6 per cent.; Central Cordoba, 4 per cent.; Western, 2 per cent. Moreover, the latter half of the current year will, it is clear, be very much better than the last six months of 1923, and one may safely confirm the statement made a month ago to the effect that these increases would counterbalance the heavy loss in exchange. If, however, Argentina's export trade is flourishing, one cannot yet say that the import trade has reached a similar level of prosperity. Merchants are still very cautious, and here the unfavourable rate for remitting is undoubtedly acting as a severe handicap to current business.

Some very valuable and straight speaking has recently been heard in this connection from the mouths of three distinguished visitors—Viscount Pirrie, Mr Frank Houlder, and Mr Arthur Cook. While all three gentlemen are primarily connected with shipping interests, it will be allowed that their remarks on the course of trade are founded on wide knowledge of world conditions. All three insisted very strongly on the impossibility of the business man at home realising, from ordinary correspondence, not merely the wonderful progress which Argentina has made since the war, but also what Mr Houlder did not hesitate to describe as: "It's truly extraordinary importance, not only as a source of raw materials and foodstuffs, but also as a market for manufactured goods of every description." What he did not, indeed could not, very well touch upon, was the urgent need for a more elastic temperament on the part of firms at home seeking to sell their wares in Argentina. Their terms must be more liberal, and at the same time they must be prepared to make the good business pay for the bad. In common with most new countries, undue optimism is the principal characteristic of Argentine trade, and efforts to carry on what a home firm would consider "safe conservative business" will mean a very small turnover. It is hard to explain in a few words all that this statement implies. Perhaps if one says that the good business must carry the losses on the bad business, one gets as near to the truth as is possible. In other words, waste little time and less money on bad debts, provided that the volume of orders gives a reasonable profit on total sales. The Argentine Commercial Code is long overdue for revision. Based in theory on the settlement of all commercial difficulties by direct agreement between a debtor and his creditors, the courts merely legalising whatever conclusion may be reached by the parties, its theoretically admirable provisions have in practice lent themselves to grave abuses, for which the slackness of creditors is not a little accountable. Hence the high totals of failures, those for the first quarter of the current year amounting to \$25,334,400, which is two million more than was registered in 1923 for the same period. The leading commercial interests of Buenos Aires are, however, seeking to have the law modified, and are likely to succeed. Meanwhile, again quoting Mr Houlder, "If British trade is to flourish and expand in this country, British business men must be prepared to study the market on the spot to meet, at the cost of whatever sacrifices may be needed, the competition of other nations who are keenly appreciative of what this market means to the future course of international economy."

The semi-official statement that the Minister of Finance will introduce a law dealing with the inspection of banks may be intended to pave the way for the linking-up of such inspection with an obligatory holding of Government bonds, which would at once mean dearer money; the introduction of the Socialist proposal that the Conversion Office be reopened, and gold shipment become

legal, might also have the same effect. Meanwhile though in theory loanable capital in Argentina should soon be much dearer, in actual practice at the time of writing it is cheap; but how long this condition will last is hard to say.

Letters to the Editor.

THE AUSTRALIAN EXCHANGE PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—For the third time within quite recent history—since 1922, in fact—there has arisen an exchange stringency as between England and Australia. The Australian banks are finding so much difficulty in financing the demands upon them for funds and credit in Australia that they will not sell in London funds in, or exchange on, Australia save at a prohibitive price, and, on the other hand, they are prepared, in buying such exchange, to pay par value for it.

Two very different explanations have been put forward for this persistent recurrence of an unnecessary and extremely harmful situation. The one, as advanced by Mr W. Elliot in the *Financial News* of the 8th instant, would localise or confine the cause to Australia. In the main he diagnoses it as an appreciation of the Australian pound, due to the deflationary policy of the Notes Board. If this explanation were establishable it would be a very interesting result in the domain of theory; but, in order to establish it, conclusive proof would have to be adduced of a rise in internal prices in Australia. And furthermore, the actual facts which Mr Elliot advances seem to weaken the argument. For the recent decision of the Notes Board to increase the circulation by £4,200,000 is a distinct reversal of a deflationary policy, and as such the mere declaration should have eased the situation.

The other explanation, which is put forward in the *Times* of the 8th instant, attributes the trouble to a shortage of credit rather than to a shortage of currency. There is more feasibility in this argument, but, in its turn, it suffers from the weakness that the wool-moving season is over, and crop pressure for funds never pinches at the end of the crop-moving season. The pinch, the credit pinch, always occurs at the height of the actual crop movement itself, and at the present moment that crucial point is over and past for the wool crop, just as it is for cotton or wheat.

The real explanation, probably, is, as it was in 1922 and 1923, that we are face to face with an exchange hitch pure and simple. When the figures of recent Australian imports and of recent Australian borrowing can be totalised, it is extremely likely that we shall have revealed to us an annoyingly simple repetition of a lopsided exchange position.

If this diagnosis should prove true, the Australian commercial community would be justified in taking their financial administrators severely to task. During the recent Imperial Conference the British Treasury threw out the plainest hint to Australia, and by implication to all the independent note-issuing Dominions, that it was prepared to co-operate in building an exchange bridge or an exchange mechanism as between London and the Dominions. But instead of seizing the half-outstretched hand the Dominion delegates wasted their time in discussing Mr Darling's Imperial Treasury Bill project, and the occasion was let slip. Quite apart from its complexity and intricacy, the Darling scheme was one which aimed at affecting the supply of credit in the first place and thereby affecting the exchanges only as a result or consequence and in a secondary way. But the actual situation of a mere lopsided exchange position does not call for such a scheme at all. All that is required is a simple exchange machine, not a complicated credit-cum-exchange machine. As between London and Australia, all that we need at any time for exchange purposes is a machine which at a turn of the handle will deliver out Australian pounds in Australia, or sterling pounds in London to the desired amount, and which will equalise the ebb and flow of the exchange all the year round.

The essentials of the machine already exist. If the Australian Dominion would put down in London a fund of £20-£30 millions in the form of negotiable securities, she could realise sterling on such a fund at any time. When, therefore, the Australian exporter wished in Australia to buy sterling, in order to remit to London for debt settlement, he would only need to buy it from a Government exchange office in Sydney or Victoria, let us say. The exchange office would take in Australian notes in Australia, and would deliver out sterling in London, having first realised the sterling by sale or pledge of its sterling securities. When the pressure was over and the exchange tide had turned, the English importer in London who wanted exchange in Australia would apply to the exchange office in London, and would pay sterling into the office as the purchase price of the exchange. With that sterling the exchange office in London would buy back its pledged securities, and would thus rebuild its exchange fund, and in return for the sterling the office would deliver out Australian pounds in Australia to the order of the English importer. The Australian pounds which would thus be paid out would be the notes which had been paid in there during the preceding phase of demand for sterling exchange. The net result would be a mutually compensating tidal flow of paper currency issue, at one moment notes taken in in Australia and delivered out in London, at the next moment notes taken in in London and delivered out in Australia.

It is this mechanism which the Treasury plainly hinted its readiness to support during the Imperial Conference. And it seems incredible that even now, after that initial offer was let slip, an attempt should not be made to build an Imperial exchange bridge or Imperial Exchange Office. The only argument that has ever been advanced against it is that the issue of notes at one end of the machine is a virtual manufacture of notes (which is true), and is therefore bound to be inflationary (which is not true). A moment's consideration ought to convince any unbiassed mind that such an issue of notes is a temporary meeting or satisfying of a dislocated or lop-sided or excessive demand, and that such demand is evidence of momentary or temporary excessive trade activity or trade demand for currency media. The issue is, therefore, a natural alleviation of a tense or pinched situation, and is entirely beneficial, just as the despatch of currency to the agricultural districts is beneficial and fructifying during the crop moving season. In other words, such an issue of paper currency is an automatic response to an economic demand. And the moment the demand is over the reverse process sets in and the notes are retired by an economic law which is as sure and inevitable in its action as the flow and re-flow of the tides.

All this is not theory or mere *ex cathedra* dogmatic utterance. For more than ten years now exactly such a system has been in operation between England and Egypt, and it has stood every strain that has been put upon it. Year after year in his annual address the Chairman of the National Bank of Egypt has explained and emphasised the perfectly automatic action of the expansion and contraction of the Egyptian note issue in response to trade demand, and has shown that the variations between maxima and minima in that note issue are the direct expression and concomitant of the movement of the Egyptian cotton crop, that the period of largest issue of paper corresponds faithfully with the season of most intense requirement of money up-country for the crop movement, and that the moment the economic demand for currency has passed the currency *retires itself*. And so it will always be where the demand for currency is allowed to satisfy itself automatically. All that is required is to erect the mechanism by which the process can work. In the case of Egypt this was accomplished at a stroke when the Egyptian Government established an exchange fund in London; in other words, when it left in London the securities which formed its own Bank-note Redemption Fund. The Australian Government can do the same thing to-morrow, and the exchange difficulties of two Continents will vanish for ever. By reason of the institution of the Treasury note the British Empire has never been in such a favourable position as it is to-day for the erection of an Imperial Exchange machine which shall eliminate all exchange trouble, and which shall make the purchase of

exchange as simple as the purchase of postage stamps. Ten or fifteen years since this could not have been done. So long, that is to say, as we were on a metallic currency basis it could not have been done, for the simple reason that gold cannot be manufactured; its supply cannot be made to increase automatically at any particular moment to meet any particular stress of demand. But with the currency note issue in Great Britain, on the one hand, and an equivalent automatic paper issue in the note-issuing Dominions, on the other, any possible expansion or dislocation in currency demand (which is all that exchange flux means) can be met by turning the handle of a machine. We, the British Empire, are privileged beyond any other competitor nation in the world, in having such a possibility within our grasp. Are we going to allow ourselves to be defrauded of the benefit of such a perfect exchange mechanism simply from inertia, or timidity, or conservatism?—Yours truly,

London, May 20th. WILLIAM A. SHAW, Litt.D.

Books and Publications.

THE FREEDOM OF THE SEAS.*

PROFESSOR POTTER discusses a problem which is not only of intense interest to-day, but is vital in relation to the future of civilisation. The phrase "freedom of the seas," as he points out, "means, and has always meant, many things to many men." He starts by assuming that at any given time the formula refers to that measure of liberty in the use of the sea accorded by international law at that time, and then, after summarising the earlier history, sets out the legal pre-war position, and indicates the effect of the war upon the question. These are all preliminaries, but they are the basis necessary to an understanding of the subject. Like the whole book, these chapters are very well done, for the author has evidently digested thoroughly the extensive international literature of the subject. Passing to the concluding part of his work, the political and present-day aspect of the problem, Professor Potter analyses the policy of Powers whose interests are mainly continental, the policy of maritime Powers, and then, gathering up all his results, presents "the solution of the problem." The scheme of his book is well thought out. His treatment is clear, logical, and, so far as essentials are concerned, exhaustive, but the ultimate solution he offers presents an object towards which progress may be possible, rather than a working policy for the present, though he does indicate some practical steps which may be taken. "In so far as a League of Nations is successful," declares this American professor, "it automatically would solve the problem of the freedom of the seas in time of war. Nothing else can." The reference, it should be noticed, is not to "the" League of Nations, but to "a" league, by which word apparently an inclusive "society" of nations is meant.

The monograph is especially valuable, inasmuch as the viewpoint is detached and impersonal. There is no partisan spirit. The method is scientific, and the attitude judicial. The short-sighted self-interest which has governed various national policies and caused them to veer like weathercocks from time to time as circumstances have changed, is clearly brought out, but the style lacks the dry comments which some writers would have made. The discreet, judicial treatment has the defects of its qualities, for the problem is essentially human. There are no outspoken phrases such, for example, as Dean Inge might have used. "The modern State has discredited itself," declared the Dean, "mainly by being false to the ideals which a State ought to set before itself; by its explicit or implicit rejection of moral standards, by its insatiable greed of territory and power; by its thinly disguised or quite open injustice in dealing with weaker States; and by the wretched quality of its governments, whether monarchical, oligarchical, or democratic..... it has cultivated a brutal worship of power." The problem of the freedom of the seas is, as Professor Potter re-

EAST.

cognises, one of power. He comes to the conclusion that "the real test to be applied in classifying States as maritime or continental, respectively, is not the test of maritime interest but the test of naval power," and, discussing the problem in terms of power, points out that British naval strength is no longer supreme. "There now exists, for the first time in over three centuries, a balance of power at sea. And Great Britain admitted this revolutionary fact by acceptance of the 5-5-3 ratio at the Washington Conference."

The Professor answers in the negative the question whether it would be desirable, or even likely, that America and Britain should "join hands, insist on preserving belligerent rights, and exercise them in concert to preserve peace and order in the world." In a transition from the existing system of independent nations the difficult step is to create or obtain a joint control of the sea. "What destroys international freedom at sea is national exercise of powers of restriction," and the solution is "Anglo-American co-operation and general international organisation for the suppression of international war entirely, and the substitution therefor of international government in a League of Nations. Nothing less can serve all the interests involved. Britain cannot be allowed to go on writing the law of naval war and exercising its rights, nor can we [America] join her in that tyranny; but she cannot be asked to surrender that right unless relieved of the threat of war."

But how is the solution to be attained? Professor Potter thinks that by resuming the work of the Washington Conference and developing the policy of President Wilson, by further international conference to define the laws of territorial waters and of war at sea, and ultimately by defining and enforcing national rights under a League of Nations which would make possible the suppression of international war, the full freedom of the seas may be secured.

Perhaps. But surely the first step towards all this is that modern States and those composing them should turn from "the brutal worship of power." Professor Potter does not mention this, yet to educate people into thinking of something better than aggressive patriotism would seem to be an essential preliminary to the achievement of the full freedom of the seas.

CO-OPERATION UNDER BOLSHEVISM.*

THIS book is a digest, mainly from Russian sources, of a mass of detailed information concerning the co-operative movement in Russia in all its aspects, from its inception by Liberal reformers in the sixties of the last century to its virtual suppression by the Bolshevik Government, and its revival as the result of their "new economic policy." The existence of the Mir or village commune, and of the "Artels" or small temporary associations of artisans, seemed to offer a promising field for the realisation of the principle, and the Zemstovs, in their own way, did their best to promote it, but they allowed too little scope for self-help, and the efforts made were almost wholly frustrated by peasant ignorance and bureaucratic suspicion. But consumers' co-operative societies, set up in the sixties in the Baltic provinces, were copied in Russia proper, and though many collapsed through their members' indifference and their fatal habit of giving credit for purchases, the movement revived towards the end of the last century, and made great progress, especially in Siberia, where enterprise was greater and bureaucratic influences less active. Credit associations on German models were also instituted, and developed greatly. The war gave the societies a fresh and powerful stimulus, and they were greatly helped by the Menshevik Government after the

* "The Co-operative Movement in Russia." By Elsie Terry Blanc. (New York) The Macmillan Company. 1924. 12s net.

revolution of 1917. But the Bolsheviks, regarding the societies as capitalistic, superseded them by transferring their distributive functions to State-created organisations and their educational work to the State schools; they also did their very best to wreck the existing system of co-operative farming. The "New Economic Policy" to some extent reinstated the co-operative system, by restoring shareholding and granting the societies a measure of autonomy. They now are part of the structure of the State as organs of distribution and of foreign trade; they are prevented from internecine competition, and protected against the "machinations" of purely capitalist enterprise. The authoress might have read her proofs more carefully, and her exposition is often obscured by the abundance of her matter and the verbosity of the Bolshevik decrees and resolutions, conscientiously quoted in full. The reader frequently "cannot see the wood for the trees"; but the book should be of great value, especially as a work of reference, to students of the co-operative movement and of the history of Bolshevik Russia.

THE RAILWAY YEAR BOOK.*

THE twenty-seventh annual edition of this volume, which describes itself as "the Whitaker of the Railway World," is of particular interest in that it is the first to contain facts and figures relating to the first year of working of the British railways under the grouping and reorganisation resulting from the Railways Act, 1921. Several new features have been introduced, and statistics for the United Kingdom, hitherto in one group, have been placed in separate sections, the divisions being Great Britain, Northern Ireland, and the Irish Free State respectively. All those interested in railway matters cannot afford to be without this useful work of reference on their shelves. They will find the chronological list of the principal events in railway history from 1776 onwards of peculiar interest.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, June 11.	ACCOUNT, June 12
---------------------	---------------------

THE Stock Exchange is somewhat at a loss to account for the manner in which business has fallen away from most of its markets. Public interest is languid, and not even in the gilt-edged section has there been any real animation during the week now ended. The stock excuses—e.g., the approach of Whitsun, the foreign exchange difficulties, the flood of new issues—are pressed into service to explain the quietude of markets as a whole. All of these reasons, no doubt, play their part, and it is obvious that the outpouring of fresh stock, which has been such a feature of the past few weeks, must have absorbed millions of money that was available for investment. Prices are well maintained, on the whole, but the tendency, as is always the case when business falls away, is to let values droop. The possibility of a defeat of the Government acted as a factor of depression in that opinion inclined to the view that,

on an appeal to the country, the present Government would be again returned to power.

New South Wales, although asking for comparatively little fresh money, laid a check upon buoyancy in the Government market by the offer of £10,000,000 5 per cent. stock at par. This caused a slight weakening in the prices for gilt-edged stocks generally. The firmness of India Government and Home corporation stocks stands out noticeably. The new 4½ per cent. Conversion keeps steadily in the neighbourhood of 98. Activity in Czechoslovak Eights became somewhat chastened on the appearance of other new loans, and the premium fell back from 1½ to 15s. The sharp rises in China 8 per cent. bonds have been followed by an equally sharp reaction, and Riga 4½'s, which also enjoyed a spectacular rise last week, turned dull as sellers came in to take advantage of the jump. French bonds have been weaker, and Germans gave way. The South American list is tolerably well maintained, though Brazilians eased off in sympathy with a dwindling in the milreis.

No one is taking any interest in Home Rails, the consequence being that prices have tended to sag. Argentine railways, by contrast, are a good market, the traffics and the dividend outlook combining to bring speculative investors into the stocks. Antofagasta and United of Havana keep their prices, while Brazilian railway stocks are lower. Nitrate rails and nitrate-producing shares have again fallen on a quiet period. Grand Trunk Pacific debenture is a point or so to the good.

Rubber shares have had a mild recovery, in consequence of the improvement in the price of the produce, but it is difficult to deal, owing to the want of general business. Amongst oil shares, Mexican Eagles provided an unfavourable feature by falling smartly on rumours of possible reconstruction. The British Controlled gamble has been less active. Phoenix came to the fore on the discovery of a new well, but the general oil list attracts merely mild public notice so far as active business is concerned. Imperial Tobacco were sold, apparently by people who wanted to buy British Americans. The stores and hotel group is steady. Watney deferred enjoyed a substantial advance, upon the enlargement of the company's scope of business.

The iron and steel market is irregular. Vickers and Armstrongs went better, though the tendency of the list as a whole is a trifle easier. Pease and Partners are making a new issue of shares to their proprietors. A new Lever issue of preference shares had the effect of putting down the prices of the existing descriptions. The banking market makes steady upward progress, and insurance shares improved their market position. Sudan Plantations have given way upon free selling of new shares by proprietors ready to turn their rights into a cash bonus. Profit-taking in tea shares is again in evidence, and most of the leading favourites are down on the week, though not to any marked extent. The textile group is languid.

The South African market is beginning to look forward to the time when the result of the June elections shall be announced, and people will know better how they stand in relation to Transvaal politics. The market is not a bad one, though devoid of public attention. Tin shares moved up a little as the metal advanced, and a few Mexican mining shares are better. Diamond and copper shares lean to the heavy side. Russians have been stagnant. The Rhodesian market managed to sustain interest in its specialities by reason of remarkably good Cam and Motor cables, and there has been a little support given to Chartered by those who are putting back into the shares the 5s return of capital which they have just received.

The Stock Exchange Benevolent Fund annual dinner was held at the Mansion House, by courteous invitation of the Lord Mayor, last Wednesday night. The collection amounted to £32,475, an excellent result.

New South Wales Government 5% Loan, 1935-55 (Second Issue).—Issue of £10,000,000. This is inscribed stock, 1935-1955, ranking, on and after September 2, 1924, *pari passu* with the existing £12,000,000 of similar stock. Holders of outstanding £8,479,045 New South Wales Government 3½ per cent. inscribed stock, due October 1, 1924, are offered conversion into an equal amount of the new issue. Any portion of the maturing stock not converted will be paid off on October 1st next. Cash subscriptions at par are invited for an amount of the 5 per cent. stock, 1935-55, sufficient to make up, with the 3½ per cent. stock converted, the total of £10,000,000. The prospectus mentions that "the proceeds of this issue will be used to provide £4,419,002, being the balance required for the redemption of the 3½ per cent. stock, and the remainder for railways, tramways, harbours, rivers and bridges, water supply, irrigation, sewerage, and other purposes." New South Wales Government debentures and inscribed stock, issued and payable in London, and the interest, the property of persons not domiciled in New South Wales, are not subject to taxation in that State. An excellent trustee security.

Cohen and Wilks, Limited.—Authorised capital £500,000, divided into 225,000 7 per cent. cumulative participating preference and 275,000 ordinary shares, all of £1 each. This is an issue of 225,000 participating preference shares at par. Preferential shares are also entitled to participate to the extent of 15 per cent. in any further distributable profits remaining in any year after the ordinary shares have received a dividend of 5 per cent., the remaining 85 per cent. of the distributable profits going to the ordinary shares. The company has been formed to acquire the undertaking and assets of Cohen and Wilks, of Manchester, manufacturers of "Aquatite" raincoats, clothing, &c., including the whole of the issued share capital of Bearder, Limited, of Bradford, gabardine cloth, &c., manufacturers; Brooksbank, Limited, of Bradford, spinners; and George Lees and Co., Limited, of Galashiels, Scotch tweed manufacturers, dyers, &c. The net assets are given as £500,134, while profits are stated from 1917. These are sufficient to show a comfortable margin of security for the preference issue. Moreover, an undertaking is given to obtain consent of preference shareholders before borrowing on debentures. The whole of the ordinary shares will be allotted in full satisfaction of the purchase price, which includes nothing in respect of goodwill or trade marks. The preference shares carry no voting rights, save in exceptional circumstances.

Assam Consolidated Tea Estates, Limited.—Authorised capital £650,000, divided into 200,000 8 per cent. cumulative preference and 450,000 ordinary shares, all of £1 each. This is an issue of 150,000 preference shares at par and 350,000 ordinary shares at 21s per share. The company has been formed to acquire as going concerns from a group of Indian rupee companies nine tea gardens in British India. There will be issued to the vendors in satisfaction of the purchase

price, 50,000 preference shares of £1 each, 50,000 ordinary shares of £1 each, and Rs. 15,00,000 (equivalent to £104,687 10s) in 1,000 6 per cent. 20-year notes of the company of Rs. 1,500 each and £420,000 in cash. The area of the estates to be taken over is approximately 31,200 acres, of which 6,749 acres are under tea. The purchase price has been fixed at £624,688. The prospectus states that with the present system of fine plucking the average annual outturn of tea under normal climatic conditions may be estimated at 2,720,000 to 3,200,000 lbs. The outturn in 1922 amounted to 2,762,560 lbs, and in 1923 to 3,156,800 lbs. The net profits of the Indian rupee companies (at exchange 1s 4½d) are shown to have been £73,580 for 1922, and £94,840 for 1923. After payment of the cash portion of the purchase consideration, the underwriting commissions, and the preliminary expenses, a sum of about £50,000 will be available out of the proceeds of the present issue. A clear prospectus and a reasonable flotation.

Southend Waterworks Company.—Offer for sale by tender of £125,000 5 per cent. irredeemable preference stock, the minimum price of issue being £91 per cent. Ordinary stock already issued is stated to be £584,447. Preference stock issued totals £359,321, while debenture stock is issued for £276,423. Profits are given for three years. It is estimated that the dividends on preference stock for the current year will absorb £23,831. Net profit for 1923 is given as £61,408, after payment of debenture charges. Thus a comfortable margin is shown for dividends for preference stockholders. The company was incorporated by special Act of Parliament in 1879. The area of supply, including the county borough of Southend-on-Sea, covers approximately 160 square miles, with a residential population supplied by the company of over 147,000. The gross rental of Southend-on-Sea is £1,017,540 (a portion only of the company's area of supply). An issue which local investors will probably know best how to appraise.

City National Investment Trust, Limited.—Authorised capital £100,000, divided into ordinary shares of £10 each, all of which have been issued at par and are fully paid. The undertaking was formed in 1909, and was converted into a public company in June, 1923. This is an issue of £100,000 5 per cent. debenture stock. The stock will be secured by a trust deed, and constitutes a first floating charge on assets. But what these assets are the advertisement does not disclose. We are informed that arrangements have been made to sell the entire debenture issue to a firm at the price of 95 per cent. These details are given in connection with an application to the Committee of the London Stock Exchange. Another prospectusless issue with insufficient details.

The Galphale Tea and Rubber Estates, Limited.—Authorised share capital £100,000, divided into 1,000,000 shares of 2s. each, of which 600,000 shares have been issued and are fully paid. There is also a 7 per cent. convertible debenture issue of £40,000, of which £24,800 is issued fully paid and £15,200 partly paid. It is stated that £5,700 5½ per cent. debentures are outstanding, repayable at par on June 30, 1925; this represents the balance of an issue of £50,000 5½ per cent. debentures created in March, 1911. The company was formed in June, 1907, and has 2,561 acres under cultivation. "Average profits" are given from 1910 to 1923. This is another prospectusless proposition. But it must be admitted that we have been provided with rather more information than is usually vouchsafed.

Oakhams Gas and Electricity Company, Limited.—Authorised capital £27,000, of which £13,067 has been issued. The authorised loan capital is £13,467, of which £4,300 has been borrowed. This is an offer for sale by tender of £10,000 preference capital in "irredeemable preference shares" of £10 each, the minimum price of issue being par. The net revenue of the company for the year ended December 31, 1923, was £1,396. Interest on loan capital absorbs £193. The total dividend for preference stock will require £668; thus there is a good margin remaining for safety. A reasonable offer, which will no doubt appeal to local investors.

respect of reparations during the period of reconstruction

The company registered in England has, as yet, received a sum of only £50,000.

The position of the association with regard to excess profits duty is now practically determined. Of the amount recovered, £100,000 has been credited to profit and loss account, and after providing for income-tax and for expenditure on reparations, to which the association is already committed, the balance recovered is retained in reserve pending a final settlement of the reparations question, and is included amongst sundry creditors.

We are of the opinion that the balance-sheet as above set forth is properly drawn up so as to exhibit a true and correct view of the state of the company's affairs, according to the best of our information and the explanations given us, and as shown by the books of the company.

Edwin Guthrie and Co.,
Chartered Accountants,
Auditors.

Manchester,
May 13, 1924.

THE CHAIRMAN'S SPEECH.

THE REPORT AND ACCOUNTS.

The Chairman, who was received with cheers, then delivered his address. He said:—

Ladies and Gentlemen—

I propose to follow the usual practice and take the report and balance-sheet as read. You will see from the report that we have again to record the loss of two directors. Mr William Eckersley, as you know, was a very active and valuable member of our board, from the very inception of the association. For many years as a vice-chairman, and even after he retired from active work, he took the greatest interest in the fortunes of the association. He had made every director a personal friend, and we shall deeply deplore his loss. Mr Bramall had given up very active work in the association for some little time, and he has now had to resign for reasons of ill-health. I know that he has taken this step with great regret, but his regret cannot be greater than that of every one of his colleagues at losing him from their councils.

CONDITIONS DURING PAST YEAR.

Turning to the accounts, I have the good fortune to bring before you a balance-sheet which shows a successful year's trading, and, I think, justifies the confidence which our shareholders have accorded to us in such unstinted measure for so many years. It is a matter of common knowledge that the cotton trade has, as a whole, not been doing well, and that sections of it have been losing money heavily. The results obtained by this association have been so widely commented upon that it is only fair to the directors and managers of less fortunate concerns that I should point out that the great section of the trade spinning American cotton, which has had such a lamentable year—a section which might almost be said to be using a raw material different from ours—spun on machinery varying in many ways from ours, and the product of which, used for entirely different purposes, has had to face a condition of trade against which, however capable and hardworking its managers and directors might be, it was impossible for them to meet with success. I am glad to believe that this great section of the trade is already feeling some improvement. Conditions change quickly; first one section of the trade and then another has the advantage, and it may be that some time in the future we shall be looking with mild envy at the profits the heavy section of the trade are then making. While we have had ourselves a more favourable condition of trade to face, it has, all the same, been an anxious and harassing year. Strikes and threatened strikes in many industries, disorganised markets abroad, violent fluctuations in exchanges and in the price of our raw material, have not made business easy. Fortunately, we have had an easy financial position. We have, on the whole, bought our raw material well. The rise in the price of cotton during the year has been of advantage to us, and I am glad to say that our executive and our mill managers have shown great energy in forecasting changes in fashion and in trade, and unlimited enterprise in adapting our products to the necessities of the situation, a work in which they have been well supported by the goodwill and the co-operation of our workpeople. These have all been factors which have contributed to the figures you have in front of you.

BALANCE-SHEET ITEMS.

I know you like to receive some information on the different items that go to make up the balance-sheet, and I will ask you to turn first to the assets side of that sheet. The first item is the value of our associated concerns. For some years we have not been doing more in the way of renewals than was necessary, because we considered the level of cost of building and machinery to

be too high, but at the beginning of this year we felt that the prices of material had arrived at a level which, though high, was likely to be stable for some little time to come, and, so far, this has proved to be correct, and you will see that we have proceeded very actively with the renewals of our mills. The amount spent on new work is £49,326, as against £33,476 last year, and on renewals £265,258, as against £181,397 a year ago. In addition to these sums, we have expended £122,663 in repairs, which has been written off profit and loss account. Depreciation is taken at £180,000, as last year, a sum that, in view of the credit standing to that account, may be considered adequate. These operations result in a net addition to property of £134,584, bringing the total figure to £5,549,051. The considerable sum paid for additions is occasioned by the policy of the directors, who have decided that in any case where the machinery is due for renewal and the mills do not permit of the very latest practice being followed, the mills themselves shall be modernised. As an example, this year we have built a new mill for William Holland and Sons, Limited. It is a considerable building of nearly 70,000 square feet floor space. This not only adds to the size of the concern, but will enable us to properly house the new machinery and to so rearrange the whole of the mills that they will be equal in every way to the best group of mills that could be built to-day. This must add to the profits they are capable of making. You may be assured that the determination of the board is not only to put down new machinery when it is required, but to keep always the form and arrangements of the mills and machinery up to the most modern and the most economical pattern.

SUNDRY INVESTMENT LOANS, ETC.

The sundry investment loans, &c., stands at £4,345,974, showing an increase of £160,608, which is mainly occasioned by the floating balances of capital used to finance our subsidiary firms. As we had ample funds this year in our hands, it has been of advantage to us to advance to these firms the loans they usually obtain from their bankers, and thus effect a saving in interest charges.

STOCKS OF COTTON, YARN AND STORES.

The stocks of cotton, yarn, and stores show an increase of £380,730, but if you bring into last year's account the cotton upon which we had then borrowed money, and take the total stock we held on March 31, 1923, against the present stock, the increase is only £80,730, and I am glad to inform you that this increase is entirely in cotton, the yarn in stock showing a considerable and very welcome decrease, both in weight and in value on the figures of a year ago. These stocks have been very carefully taken at conservative prices, and unless we were to experience a quite considerable fall in the value of our raw material, which does not at the moment appear to be likely, we are perfectly safe.

Trade and other debtors are increased by £81,030, simply the usual variation in trade done. The cash at bankers shows a credit balance that is very satisfactory in view of the demands that the payment of our dividends will make upon it.

LIABILITIES.

On the other side of the balance-sheet you will find no change until you come to the reserves, which are increased by £100,000, the amount you placed on one side for the equalisation of dividends last year.

The insurance fund shows an increase of £5,851, the excess of the premiums charged to this account over the claims allowed.

The research fund is unchanged; the current expenses of this department have been written off from profit and loss account, and we have had no occasion for capital expenditure this year. This department is working actively, and its work on the experimental side has been of great value to the association.

PENSION FUND.

I come now to the three funds for the benefit of our workpeople, and you will note we are asking you to increase the pension fund by £50,000, which will bring it to £231,099, a very long step to the point which will make it a complete and self-acting scheme.

WELFARE FUND.

From the welfare fund we have spent on what I may call capital objects £7,070 during the year, and will have a further six or seven thousand pounds to pay out shortly. We, therefore, hope that you will pass the addition to this fund of the £10,000 we ask for to-day, so that we can continue the very useful work we find in front of us. I need hardly say that the cost of the ordinary work we class as welfare work is written off as an ordinary mill expense through profit and loss account.

SUPERANNUATION FUND.

The superannuation fund has increased by £16,579, but the amount uninvested that we hold is almost the same as last year. I am not going to take up your time with further particulars of

these funds, as I believe one of my colleagues is going to say a word about them, but I should like to point out to you that if you agree to our suggestions you will, for these three funds, have this year set on one side out of your profits for the benefit of our workpeople the satisfactory sum of £70,700.

SUNDRY CREDITORS.

The sundry creditors are increased by £466,942, the greater part of which is due to the advanced price of cotton and to the increased amount of cotton bought to arrive, and by the greater volume of trade to be provided for. The larger reserve for income-tax made necessary by the increased profits of the past two years has also played its part in this account.

PROFIT AND LOSS ACCOUNT.

I will now ask you to turn to the profit and loss account at the top of the sheet. You will see that the profits for the year are £1,038,574, an increase of £95,114 over the previous year's results. You will have noticed from our auditors' report that our old friend E.P.D. plays a part in this figure. I am glad to tell you that we have finally settled our liability on this head with the Inland Revenue. We have been able to transfer the considerable sum we require for our Reparations account, to put on one side the amount necessary to cover the liability for income-tax and corporation tax on this year's profits, and in addition we have been able to bring the sum of £100,000 into the profits of the year.

As in the previous year, the profits also include a small amount for enemy debts, which nearly completes the amount to be collected on this account. The total amount to be dealt with, therefore, including the amount brought forward from last year's accounts, is £1,248,905 11s 11d.

ALLOCATIONS.

From the profit we have to deduct the interest on the debentures, and the sums we are asking you to put on one side for the pension and the welfare funds, leaving a balance of £1,078,905, which you will pick up again on the front page of the balance-sheet. You will find that we have to deduct from it the dividends paid at the half-year, leaving £833,405 11s 11d for your present consideration. The preference and preferred ordinary shares dividend must, of course, be paid, absorbing £98,500. We advise you to place £100,000 to the reserve for the equalisation of dividends, and to declare 10 per cent. dividend on the ordinary shares, leaving a balance to carry forward of £267,405 11s 11d, which is £57,074 7s 2d more than we brought forward from last year's accounts.

COTTON ESTATES IN AMERICA.

Before you vote on this you will desire a word on our subsidiary investments. I take first that in the cotton estates in America, in which, as you know, we own a big block of shares, because it stands out as the unsatisfactory feature in our books this year. The previous year they made a normal crop and a good profit. This year the crop was, like the crop of the estates round them, less than half of that which we are justified in expecting. The reason for this was undoubtedly the weather. We require, and usually get, about 40 inches of rain; last year we had 76 inches. The rain washed the poison necessary to keep the boll weevil in check off the plants; it washed the fertiliser through the soil, and finally spoilt a good part of the crop. It was impossible to make a profit under such conditions. Our reports this year so far are favourable, full acreage is planted, and the plants have come up well, and we must hope that we shall not experience a repetition of such terrible and unusual weather. You will like to know that four members of our board will go to America this autumn to watch your interests in these estates.

MILLS IN FRANCE.

I have nothing but good to report of our mills in France; they have all made more than the average pre-war profits; they are being exceptionally well managed, and the prospects there continue good. The reparation of the mills registered as French companies is complete, with the exception that we have yet some balances to be paid over in French Government bonds. The English mills in France have still some machinery to be set up, but I hope that when we meet you again we shall have the last of these mills completed. Against our war losses on these mills, the English mills in France, the English Government has so far only paid us £50,000, but you may depend on our taking every possible step to obtain reasonable and just treatment in this matter. You must not, however, forget that any further sums we may receive for this purpose will have a considerable liability to the Inland Revenue.

Our other investments which may be looked upon as related to, but more or less outside, cotton spinning, have all shown us satisfactory results.

PROSPECTS FOR THE COMING YEAR.

I am afraid I have already kept you too long, but I expect you will wish me to say one word about the prospects for the coming year. It is dangerous, and, under present conditions, impossible, to risk any very positive opinion upon such a subject. Changes in the position of trade come now with such suddenness, and the political and industrial situation is so uncertain, that a satisfactory state of trade to-day may be converted into a most unsatisfactory one to-morrow. The main factors against us are, without doubt, the uncertain and unsettled condition of our markets abroad, and the very high price that our products attain by the time they come to the public in the finished state. When I remind you that many of our expenses are more than double, and all approaching double the amounts of pre-war days, you will understand the burden we have to carry.

REDUCED WORKING WEEK.

In addition to these extra costs, and largely the cause of them, is the reduction of the working week from 55½ to 48 hours. This with us is equivalent to stopping something like four or five of our largest mills without any reduction whatever in the overhead costs of working. I think we are all in favour of reduced hours of labour if the same can be obtained without ruin to the trade, but it seems to me we may have gone too quickly, and too far in advance of our competitors abroad. I notice with some apprehension that many countries are already beginning to work longer hours, and I think this vital question deserves the very closest attention of both employers and workpeople. It is a problem that cannot be hurried, and only time and goodwill on all sides can solve it, but to my mind it is the key to the situation. On the other hand, we have the good points that our products go to make the finest and most beautiful goods, and that manufacturers and finishers have probably made greater strides in the improvement of cotton goods than those made from any other raw material; that new styles and new fabrics have been invented which have taken the fancy of the public; that these cotton goods to-day are the cheapest form of clothing; and that, in addition, the people who buy them are better able to pay the advanced cost than the users of the bread-and-cheese manufactures of Lancashire. It is a good point, too, that there are no large accumulations of stocks, and that increased demand comes through to us without delay, and, above all, I pin my faith to the splendid condition of our property and to the quality I mentioned before of the adaptability of our management and the quickness it has shown in making all necessary changes to enable us to meet at once any new demands or to cater for any new fashions that may have arisen. Even the political situation seems to me to present features of hope, and the fact that at the present time we are practically fully running, and can, unless any unforeseen event should arise, see our way some considerable distance ahead to full trade at a reasonable profit, makes me feel that we can face the future with a great amount of confidence.

EQUALISATION OF DIVIDEND PAYMENTS.

I do not think I need make any explanation or defence of the dividend we suggest you should confirm, but there is one point relating to dividends which I want specially to mention. It has been brought to our attention more than once by shareholders that it would be a convenience to them if we could make a rather more equal division between our interim and our final dividends. The board has decided to give this careful and favourable consideration when the time for settling the next interim dividend arrives, and I mention this specially now, so that if, in November, you see a rather larger interim dividend declared, you will not jump to the conclusion that this is declared because we have made an increased profit.

CHAIRMAN'S TRIBUTE TO DIRECTORS AND MANAGERS.

You must allow me, before I close, to say one word in acknowledgement of the services that have been devoted to our interests during the past year. It is one of my pleasures to watch other men work, and I can assure you that the managing director, the executive directors, the board, and the mill managers, not forgetting the heads of departments, have all done splendid work, and deserve all the thanks we can bestow upon them. We have always worked well as a team in the Fine Spinners, and the team spirit extends each year. I look forward to the time when this *esprit de corps* may extend from the highest ranks right down to the smallest little piece employed by the association.

Concluding, the Chairman added: I think before putting the resolution to you, this is a convenient time to give you the opportunity of putting any question you may wish to ask. If there are any points about which you would like further information, I shall do my best to answer.

THE RESOLUTION.

No questions being put, The Chairman said: Well, if there are no questions, I will move the first resolution, which reads as follows:— That the directors' report and accounts, as presented to this

meeting, and upon which a report by the auditor has been read, be and the same are hereby received and adopted.

I move it, and I call upon Colonel Phillips Brocklehurst to second it.

COLONEL BROCKLEHURST'S SPEECH.

Colonel R. W. D. Phillips Brocklehurst, one of the vice-chairmen, said: Mr Chairman, ladies and gentlemen,—Before proceeding to the resolution, I should like, in as few words as possible, to tell of something about what, I suppose, the man in the street would call our benevolent activities; but in this connection that word is more or less a misnomer, for I can assure you that we expect and consider that we get a very substantial though indirect return for our money. Now, first among these activities comes our pension fund. We have during the last six years granted 286 pensions of £1 a week to men, and 158 a week to women. During that time 55 have died, leaving on our books 231. The average age of our pensioners to-day is 66, and the average age of those who have died was only 68. We have set aside for this purpose—in addition to the £50,000 we are asking you to grant us to-day—a very considerable sum of money, but I think, with Mr Lee, that at some future time we shall have to ask you further to augment this amount. For it is most difficult to tell when the scheme will become self-supporting. Until the deaths more nearly approximate to the pensions granted, our actuary is very diffident about giving any opinion.

SUPERANNUATION SCHEME EXPLAINED.

Next in importance, I think, comes our superannuation scheme. Under this a workman is entitled to set aside a fixed percentage of his wages weekly in what is called the superannuation "A" account, and on that he draws 3 per cent. interest. To this we add an exactly similar amount in what we call his "B" account, and that also bears interest at the rate of 3 per cent. At the age of 65, if still in our employment, he is entitled to draw both funds. Should he die whilst in our employment before the age of 65, his executors are entitled to draw both funds. Of course, he can at any time withdraw his "A" account, but in that case the "B" fund is sacrificed. Now some of our workpeople have told me that this is really the most popular thing we have done yet, for it has shown some of them that the road towards becoming capitalists on their own account is by no means as hopeless as has heretofore appeared.

WELFARE.

Passing over one or two minor matters, I think this brings us to welfare. In this direction we are still feeling our way, but we are making much more rapid progress. I do not think that up to now we have made any blunders. We have under consideration in different districts two large recreation grounds capable of accommodating a variety of games. Under the auspices of Mr Lee and Mr Howarth we have started an association bowling club, which has been received with the utmost enthusiasm by the men, and Mr Lee has kindly presented a very handsome trophy for competition between the mills.

A large number of our branches have now definitely adopted welfare work, and we have 24 welfare superintendents and two matrons. We have nine canteens working, four more under consideration, and others contemplated. The health and also the convalescent treatment of our people are in the capable hands of Miss Clayton and her assistants.

UPKEEP.

And now, gentlemen, for one moment I would like to refer to another subject, a matter on which we are spending money very freely. It is an old matter, and one which was referred to by Mr Lee, and it is a most important one—that of up-keep. This department is under the management of Mr Bellhouse, and I think really that he is the hardest worked man in the association, for we are always building, extending, adding and adopting new ideas, our object being that each year our mills should be more modern, more up-to-date and better equipped than in the previous year. Now, in this connection I do not think you will find one of the managers in the whole of the association who would say that any reasonable request he had brought forward had been refused.

SATISFACTORY FINANCIAL POSITION.

To return to the balance-sheet, I am glad that we have had another successful year—I think I might almost say an unexpectedly successful year; for I think he would have been a very bold man who when we met here last year had foreshadowed such a balance-sheet as you have before you. On the other hand, in the dividends which we propose, and which we hope you will pass, we are undoubtedly setting up for ourselves a very high standard to live up to. But our financial position is satisfactory, and, given a plentiful crop of cotton, a steady demand for yarn,

and, what is of the greatest importance, no further European complications, I see no cause for undue pessimism. I have much pleasure in seconding the resolution.

The Chairman put the resolution to the meeting, and declared it to have been carried unanimously.

DECLARATION OF DIVIDENDS.

The Chairman: I now move the next resolution:—

That the following dividends be now declared out of the profits of the undertaking, viz.:—

A dividend for the half-year ended March 31, 1924, at the rate of 5 per cent. per annum on the £3,000,000 preference shares, numbered 1 to 3,000,000 inclusive. A dividend for the half-year ended March 31, 1924, at the rate of 5 per cent. per annum on the £940,000 preferred ordinary shares, numbered 1 to 940,000 inclusive. A dividend for the half-year ended March 31, 1924, at the rate of 20 per cent. per annum on the £3,675,000 ordinary shares, numbered 1 to 3,675,000 inclusive. I move that resolution, and call upon Mr John G. Peel to second it.

MR JOHN PEEL'S VIEWS.

Mr John G. Peel, who was cheered on rising, said: Mr Chairman, ladies and gentlemen,—It falls to the duty of the junior vice-chairman of this association to second the resolution as to dividend, and I have regularly done this now for two years. Those two years have been most fortunate ones for me, for each year we have had a satisfactory balance-sheet to put before you. What the position would have been if I had had to come before you and second a resolution for the diminution in the dividend I hardly like to think, and, therefore, from a purely selfish point of view, I hope we shall always stick to the conservative policy we have so far adopted. If you will bear with me one or two moments, I will give you one or two reasons why we ought not to pay a larger dividend, which from the accounts you see we could have done without very great difficulty. We have in this association 30,000 shareholders, of whom 16,000 are ordinary shareholders. We trust a large number of these ordinary shareholders are people who are not in for the purpose of snatching a small profit over a gambling transaction, but that they are people who have put their money in with the idea of drawing a regular dividend and feeling thoroughly safe about it. We should like them to regard us as a kind of banker, safe as the Bank of England, paying a safe and steady dividend, and not as a conjurer who comes before them and produces from his hat a fine, fat rabbit one year, and the next year comes before them, it is true, with a hat in his hands, but with no fine rabbit underneath it at all.

BOARD'S SOUND POLICY.

There is another reason why in these times we should conserve our resources. Money, as you know in these times, is very stringent, and if you have money in your pocket opportunities occur, as they have often done during the past year, and we expect will occur again during the coming year, by which we can gain considerable advantage through being able to put down ready money, and thus be able to secure cheap bargains, which those who have to pay with long-dated bills are not able to secure. We have also the advantage of being able to approach our bankers in a healthy spirit. The banker, you know, is of a race very pleasant to deal with supposing you have a large stick in hand. Then, gentlemen, I will touch upon one other point, the point of cotton, which I ought to know something about, even if I am not always right—which I am not. When I first came into business, about 30 years ago, if the price of cotton went up or down a halfpenny per pound in a week, you went home and told your family about it, with bated breath, and talked about it for months afterwards, and it was always considered a most extraordinary thing. But nowadays the price of cotton will go up or down a penny or twopence per pound in one day, and nobody seems to think very much about it. And yet when you come to think about it, twopence per pound on a bale of Egyptian cotton amounts to £6, and when you are dealing with many thousands of bales, as such an association as ours is doing every year, you can see how necessary it is for us to be prepared for rather sudden fluctuations. I am not pessimistic about cotton myself; I do not really believe there is going to be any very rapid fall in the very near future, but, at the same time, we have to consider the possibility of a fall. We have a long way below us. We are at a high price, and there is the possibility of a fall, as I have said, and because of that, a concern like ours must be prepared. Therefore we ask you not to be annoyed if we do not pay the full amount of dividend we have earned, but conserve an amount which will put this association upon a safe basis.

I have great pleasure in seconding the resolution. As Colonel Phillips Brocklehurst said, we are setting ourselves a high standard by paying 10 per cent., but I believe we shall be able to pay that, and I trust you will be content with it. I second the resolution.

The Chairman put the resolution to the meeting, and declared it carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr. William Howarth (managing director) moved:—

That Messrs R. W. D. Phillips Brocklehurst, John G. Peel, Percy Ashworth, A. E. Dixon, James Marsden, J. B. Walker, and John A. Wanklyn be and they are hereby re-elected directors of the association.

It is a privilege (he said) that I should have had this resolution entrusted to me. You will recollect that "the team spirit" has been referred to in two connections this morning. Well, these gentlemen are all regular members of our team. Two of them are vice-presidents, and you have had the privilege of listening to them this morning. You know that their interests are our interests, and that the association is in safe hands when they are assisting in the guiding of it. Mr Percy Ashworth assists us in many directions. The information he gives us and the way he is able to throw business in our direction and his genial presence are appreciated by every member of the board. Mr Dixon was for many years a member of the executive council, and those who have worked with him have always received what he has had to say with great respect. Mr James Marsden is not at the moment in a happy state of health, but he is one of the old stalwarts, very wideawake, and at the head of one of our largest concerns. We all wish him a speedy recovery, so that he will be able to get back to the direction of the mills. Mr J. B. Walker, whom you have had the felicity of listening to frequently, represents our Scottish shareholders, and does it well. If we earn money we do not pay out, you may rest assured that Mr Walker will tell that tale to his Scottish friends, and tell it in a good way. And I have no doubt that any criticisms the Scotsman may have with regard to 14 per cent., when it might have been possible to pay 15, will be nicely got over when Mr Walker has told his tale. From the tale he tells me, it rather appears that our Scottish friends think they can look after their money in their own way better than we can do it for them. That may be true, but, nevertheless, in the interests of the company, we have to take a different view. Mr Wanklyn does not take quite the active part he formerly took, but is performing very useful service in the capacity of mentor to some of our men. For many years he was the head of our Swindells branch. I am sure that in voting for the team as a whole you will be voting in the interests of the company.

Mr Vernon Bellhouse: I have great pleasure in seconding the resolution.

The resolution was then put to the meeting by the Chairman, and adopted unanimously.

APPOINTMENT OF NEW DIRECTORS.

Mr. William Howarth: Mr Chairman, Ladies, and Gentlemen,—I have great pleasure in moving this resolution:—

That Messrs George Alfred Barnes, Alan Murray Debenham, and Herbert Stowell be and they are hereby elected directors of the association.

In any time and age, circumstances bring about changes. Men fall out of the ranks for one cause or another, and they pass from us. We have lost several members of our board through death or infirmity, and it is necessary that we should replace those former members of the directorate by the best intellects that we can select, those who can best serve us and add to the efficiency of the association. It is a difficult matter when we have so many capable young men aspiring to higher rank to select from, without making invidious distinctions, or creating a feeling of jealousy; but all those who have been passed over must realise that the openings for promotion cannot be extended indefinitely. There is only a certain number that we can find room for, and it may be that future years may bring an opening for more than three of our younger men. I propose for your acceptance these new directors. They have been members of the association for many years. Mr Barnes has been the manager of the Musgrave Spinning Co., now working for this association, and now one of the largest of our branches, and working satisfactorily. We think that the policy of backing the winners, as it were, is a great one. Mr Barnes is working, and has worked, very successfully for the association. Mr Debenham is at the head of our Swindells branch, which has been extended very largely during the last few years, and is now a magnificent branch, filling an important place in our association's activities. The results are quite satisfactory, and pass on to you activities. We have confidence in Mr Debenham in the form of dividends. We have confidence in Mr Debenham and in the other gentlemen we commend to you in this resolution. As regards Mr Stowell, he is the head of our statistical department. In an institution like ours, it is necessary to have statistics ready for reference at any moment. It is for us to consider them, and for it may be to discount them, but it is necessary to have them. Mr Stowell has seen to that. His figures are always admirably

arranged, so that we cannot say we are suffering from any omission in that respect. I now submit this resolution for your acceptance. The three gentlemen named will form a little coterie for the time being, in the hope and belief that they will emulate their predecessors in all those excellent qualities that marked their work for this association.

Mr. Percy Ashworth: Mr. Chairman, ladies and gentlemen, I have great pleasure in seconding the resolution. The other day I had an opportunity of going over the mills of the Musgrave Spinning Company, and I can assure you that in the matter of organisation they are absolutely up to date, and that is due in a great measure to the knowledge and energy of the manager, Mr Barnes. Mr Howarth has spoken of the other two gentlemen; I think it only fitting that their services should be recognised, and I trust the resolution now proposed will meet with the shareholders' approval.

The resolution was carried unanimously.

ELECTION OF AUDITORS.

Mr G. St. Clair Robertson moved, and Mr Fred A. Tomlinson seconded, the next resolution, which was as follows:—

That Messrs Edwin Guthrie and Co., chartered accountants, of 71 King street, Manchester, be and they are hereby appointed auditors of the association until the next ordinary general meeting of the association, and that they be paid the sum of £1,500 as remuneration for their services, inclusive of out-of-pocket, travelling, and hotel expenses. This was carried without comment.

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

Mr A. Linney Arnold, speaking from the body of the hall, said: It is my privilege to be entrusted with the resolution with which the proceedings of the annual meeting of this association usually terminate. This resolution is in very explicit and very formal terms, namely:—

That the thanks of this meeting are due and are hereby tendered to Mr H. W. Lee for the ability and courtesy with which he has presided over this meeting.

I am, however, given to understand that it is within my province to extend that resolution a little. We all acknowledge—and I think more so this morning than on any previous occasion—the ability and the courtesy with which our chairman has dealt with the balance-sheet and the proceedings of the past year, and with the whole of the interests of the shareholders. He has presented to us a balance-sheet which I can only describe as a thoroughly sound, Lancashire balance-sheet. And he has presented it to us in a thoroughly sound way. That is to say, he has not been afraid to tell the shareholders anything. He and the other directors, indeed, have taken the shareholders into their confidence. I have only one comment to make about the balance-sheet. I had intended to make it in any case, but what the chairman and Colonel Phillips Brocklehurst have said, and the way we received their remarks, encouraged me to feel that what I am going to say will voice the feelings of all of us. It is that I hope the directors will continue in their policy of setting aside money for research and welfare work. I am quite sure that shareholders in a company which wisely expends money on research work and on welfare work have every reason to be satisfied with their prospects. The money is, perhaps, as well invested—perhaps better invested—than any other money used by the directors; and I hope the directors will appreciate that their policy has the entire approval of the shareholders. Although the resolution is very formal, I want you to be good enough to pass it in such a way that it will go not only to the chairman, but from him to the executive directors, to the other directors, and to the staff, because a balance-sheet like this shows that excellent work has been done by all those who are serving the association. And if we pass this resolution, as I hope we will, with great cordiality, it will show that our thanks are given to the chairman for the manner in which he has presided over the meeting, and for the work he has done in the past year, and to those behind him whom he represents, for all the work they have put in for the benefit of the association during the past year. I beg to move the resolution.

Alderman W. J. Smith seconded the resolution, and it was passed with hearty acclamation.

CHAIRMAN'S REPLY.

The Chairman, responding, said: Mr Linney Arnold, Mr Smith, ladies and gentlemen, I thank you from the bottom of my heart, on behalf of not only myself, but of the whole of the fine spinners and the staff, for the resolution you have passed. It is a great encouragement to men who are working, and working very often under difficult conditions, to know that they have a body of shareholders who are behind them, and who realise their difficulties, and are responsive to the efforts they make. The meeting then ended.

BRUNNER, MOND, AND COMPANY, LIMITED.

COMPANY'S STRONG POSITION.

SYNTHETIC AMMONIA WORKS.

WAGES IN "SHELTERED" AND "UNSHELTERED" TRADES.

The annual ordinary general meeting of Brunner, Mond and Co., Limited, was held at the Midland Adelphi Hotel, Liverpool, on the 23rd instant, Mr Roscoe Brunner (chairman of directors) presiding over a large attendance.

The Chairman at the outset referred to the great loss which the company had suffered on the previous Tuesday by the death of Mr. A. Travers Hawes, one of their colleagues, who was an old director of the Castner Kellner Alkali Company, and who joined their board in 1916 under the agreement with that company. Mr Gerald Balfour and Sir John Jarmay were, added the chairman, attending the funeral that day, which accounted for their absence from the meeting.

At the Chairman's suggestion a vote of condolence with Mrs Hawes and family was carried, the shareholders standing in silence.

BALANCE-SHEET ITEMS.

The Chairman, in moving the adoption of the directors' report and statement of accounts, the payment of the usual preference dividend, and of a dividend to the holders of ordinary shares at the rate of 10½ per cent. per annum, said:—Looking at the balance-sheet, the first item on the assets side, freehold land, &c., shows an addition of £450,000 in round figures, which is rather less than the annual addition for the last few years. The second item has been altered in title from "Investments in associated companies, &c.," to "Investments and associated company balances." We have, as you know, advanced money to our subsidiary companies—Synthetic Ammonia and Nitrates, Limited, and the Buxton Lime Firms, Limited. The moneys so advanced used to appear in the item "Debts owing to the company," but our auditors have asked us to include them in the investment item. That item, accordingly, shows an addition of £1,140,000. The debts owing to the company are down, partly due to this cause, by £1,639,000, and the difference is in the item of cash at bank which is up by £537,000.

LIABILITIES.

On the liabilities side the issued capital is up by £48,000, due to the issue of ordinary shares last year to our staff and workpeople. Those shares were issued at the price of 25s. We have received £22,000 on applications for new shares recently allotted to the same classes. General reserve account has had £12,000 added to it, being the premium on the shares allotted to staff and workpeople last year. Depreciation account has had £200,000 added to it, which is charged against the gross profits of the year. We have written off suspense account the sum of £186,000. This is not at all a "mystery" account, as one of the financial writers described it. My father on several occasions described it as a "scrapping" account, and we use it in order to keep the whole of our apparatus completely up to date. I can assure you that unless we keep the whole of our apparatus up to date we should very soon fall behind in fighting for the markets of the world, and very soon should lose our supremacy. The item savings bank depositors, at £118,000, is up by £11,000, in spite of the fact that out of this fund there have been many withdrawals to pay for shares allotted. Upon that our workmen are to be congratulated. Debts owing to the company are down by £41,000.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, the first item on the debit side, directors' and general office salaries, and auditing is less by £1,900; general charges are less by £1,300; so that you can see we are exercising due economy in these matters. On the other hand, bad and doubtful debts are up by £800, though this figure is still small looking to the magnitude of our business. On the credit side, the second item—namely, investment and loan revenue, is less by £12,000. Rents are less by £6,000, partly due to the fact that we have had to reduce rents on the very costly houses we built shortly after the war; so that the gross profits, after deducting £200,000 for depreciation, are less by £81,000, and the net profits are less by £97,700 than last year.

There are several reasons for this drop in our profits. First, both we and our associated companies have reduced the prices of our products where possible, in order to encourage our trade.

Secondly, the price of fuel has increased, and, thirdly, during this year we have had a coal strike and a dockers' strike.

ALLOCATIONS.

Turning to the report, the available balance is £1,641,000, which you will be asked to dispose of by paying the usual 7½ per cent. preference dividend; by paying a final dividend of 14 per cent. on the ordinary shares, making a total for the year of 10½ per cent.; by placing to general reserve £88,000, making it a round £1,000,000; by placing to suspense account £150,000; leaving to be carried forward an amount of £86,000.

It is just as disappointing to your directors to have to propose a lower dividend as it is to all of us as shareholders to receive it; but after balancing good indications against bad, it seems to me that we may look forward with confidence to the future.

Before I deal with the future I should like to answer some questions put by shareholders. We are told by one shareholder that there is a rumour that we lost millions in the Japanese earthquake. I, personally, have not heard the rumour; the fact is that the total loss is about £25,000. This loss is suffered by our Japanese Co., and the increase of trade which they have lately shown bids fair shortly to wipe out the whole of the loss. We were asked a question about what is said to be our action at law against the Gas Light and Coke Co. That action was not brought by us, but by the Castner Kellner Alkali Co., and as the case has gone to the Appeal Court, it is therefore *sub judice*, and I am not allowed to refer to it.

MANCHESTER SHIP CANAL BILL.

I spoke last year at some length about the action against the Manchester Ship Canal Co. That company is now promoting a Bill in Parliament which embodies the agreement which I told you last year was so nearly reached during the progress of the litigation. It is too early yet to estimate the value of that agreement. The costs and the back tolls were naturally heavy, but I am happy to be able to tell you that the whole of those costs and the whole of the back tolls have already been taken care of in our accounts.

Several shareholders have pressed us to give on our dividend warrant counterfoils the whole of the income-tax figures, and the Income Tax Payers' Society has urged shareholders to press directors to give the complete figures, which means gross dividend, income-tax deducted, and the net dividend. We give the dividend per share and the income-tax per share, and it is necessary to use decimals in each case; but we also give the rate of dividend, so that the amount of tax can be worked out without using the decimals. I cannot think, however, that there are very many shareholders of Brunner, Mond and Co. who are not able to use decimals in calculating the amount of income-tax they have to pay, but if we had to give all the figures on the warrants of our 31,000 shareholders, we should be put to the expense of a considerably increased staff, and, worse still, the payment of our dividends would be delayed by several weeks. I venture to think that the small disadvantage which now exists is more than outweighed by the advantage of early payment.

WALLERSCOTE WORKS.

As to the future, our Wallerscote Works are now a great feature of the landscape, as the local shareholders well know. I do not care yet to give a date when they will begin to produce, but I venture to say that those works will be the best in the world.

Synthetic Ammonia and Nitrates, Limited, started their plant at Billingham in December last. I have told you before that the process was new to us, that much of the engineering was new to British science, and we expected there would be difficulties. There were very considerable difficulties, but they have been surmounted, and the process is working to our complete satisfaction; so much so, that our staff there is busily engaged in designing plant for an extension of the output and for the production of ammonia salts other than sulphate. The sulphate of ammonia produced at these works is the purest on the market, and it has met with great favour all over the world.

You will all of you, no doubt, have noticed references in the newspapers to the Magadi Soda Co., which is now, after a uniformly unsuccessful career, in compulsory liquidation. We

have made certain proposals to the Official Receiver and the Colonial Office for the reconstruction of that company. Those proposals are still under consideration, and no decision has yet been reached. I hear this morning there is a rumour on the Stock Exchange that the persistent buying of Magadi shares is due to purchases by Brunner, Mond interests. I have to tell you that no purchases have been made by Brunner, Mond and Co., nor in their interest, nor, so far as I know, has any individual connected with Brunner, Mond and Co. purchased a single share.

BURDENS ON INDUSTRY.

And now to balance the good and the bad times for the future. Some of the good I have spoken of. The removal of the corporation profits tax from July 1 will benefit our company and our subsidiary companies, as well as every other company in the country. Trade is certainly not on the down grade, but, on the contrary, in certain directions it is improving. It is still overburdened by too heavy taxation, and I think you will all agree that too little effort is being made to lighten that burden. Rates press heavily upon industry, and the various housing schemes of various Governments increase the burden. Nothing but the removal of Government control and the free play of supply and demand will, to my mind, give us the houses we want at the rents we want. We want reasonable rents, and both employers and workmen must realise that they cannot hold the country to ransom by asking unreasonable prices, unreasonable profits, and inordinate wages.

QUESTION OF WAGES.

As to wages, there is a strong and growing feeling of resentment against the demand for increases in wages in the so-called "sheltered" trades. Why should there be pampered classes among workpeople? What right has a municipal employee to higher wages than those of a skilled fitter? I have every sympathy with the fitter; he is not getting enough, compared with other men, nor in view of the cost of living. We have had motor-omnibus drivers striking to help tramway drivers to get increased wages, and, those wages having been raised, the motor-omnibus drivers and conductors are now claiming higher wages for themselves. The public has to pay either in increased fares or increased rates. Where is it to stop? Naturally engineering employees ask for higher wages when they see all these rises secured by others, and the engineering trade, struggling now against world competition, will be further hampered.

The Chemical Employers' Federation, in common with most employers, has been asked for increases of wages. We twice postponed discussion because the conditions of our industry did not warrant the increases, but lately we consented to go before the Industrial Court. The hearing took place last week, but the award has not yet been delivered. We asked the Court to say not only that the increases we have given, as compared with the cost of living, leave our men better off than they were in pre-war days, but that the state of our industry does not justify increases of wages, and we strongly urged upon the Court that our rate of wages should not be compared with the wages of the sheltered trades, but with those of trades which, like ourselves, are dependent for their success upon their ability to compete in the world's markets.

UNEMPLOYMENT INSURANCE QUESTION.

I spoke of the burden upon industry of taxes and rates. The National Confederation of Employers' Organisations, in which I am an office bearer, and which includes in its membership nearly all the important federated employers' organisations of the country, has recently circulated a report upon the unemployment insurance question, and last week they sent to members of Parliament a pamphlet giving reasoned objections to the Unemployment Insurance (No. 2) Bill which received a second reading a few days ago. The Confederation urge that before permanent scales of unemployment benefit based upon abnormal conditions should be given the force of law, there should be a review of the Royal Commission of 1909 on the Poor Law in the light of the experience gained since 1911 of unemployment insurance.

In one of the final paragraphs of that pamphlet the Confederation give these startling figures:—"The cost of unemployment insurance, which in 1913-14 was £2,000,000 and in 1922-23 was £48,000,000, cannot be viewed as an isolated item of charge; it is only one of several charges which result from the social services as a whole. The social services of Workmen's Compensation, Old Age Pensions, Poor Law, Health Insurance, and Unemployment Insurance, which cost in 1913-14 the sum of £55,000,000, cost for 1922-23 the sum of £165,000,000. The money for social services has to come out of industry, and the amounts which competing countries spend in industry, and the amounts which competing countries spend in these matters is fractional compared with what British industry has to bear." I suggest that every shareholder of every company should take his part in pressing for economy in Imperial and local government.

Given relief from its heavy burden, freedom from strikes, a little more common sense on the part of trade union leaders, a rather stiffer attitude on the part of employers towards unreasonable demands for increases of wages, we should get that improvement in trade which will enable industry generally to pay those higher wages which we know will lead to increased consumption, and therefore a further increase of trade.

SIR ALFRED MOND'S SPEECH.

Sir Alfred Mond, who was warmly greeted on his first appearance after his reappointment as a director of the company, seconded the resolution, and said, though they might be disappointed at the slight reduction in dividend, they would see from the figures that the directors were conserving out of the profits a considerable amount in order that their great business might be maintained on sound lines. It was easy to obtain a cheap popularity and a fictitious share value by distributing all their profits, especially if there were no intention of continuing a business for generations; but he reminded the shareholders that the policy of Brunner, Mond and Co. for over 50 years had been to stand at the head of the chemical industry by continuous improvements in their plant, by development and scientific invention, and, if necessary, by modifications and re-modifications. On the subject of higher wages, Sir Alfred remarked that they could not be paid out of the relatively small amount of surplus wealth in the country, but only out of greater productivity and a more economical production by the great industries of the country, and it was the duty of all who were interested in industry to labour to that end.

"REMARKABLE SCIENTIFIC ACHIEVEMENT."

The speaker referred in glowing terms to the remarkable scientific achievement of the staff in connection with the Synthetic Ammonia Works, and declared that it was a remarkable tribute that the technical difficulties and complexities of the process had been overcome in so short a time. He reminded the shareholders that this was not merely a commercial matter, but it was of great national importance, inasmuch as it would, if the occasion arose—and they hoped it would never arise—be the means of supplying high explosives for the security of the country. Sir Alfred pointed to the fact that it took Germany 15 to 20 years to develop the method of making synthetic ammonia, and that without it Germany could not have carried on the war for six months. He was proud to think that in this new undertaking Brunner, Mond, and Co. were following the tradition that they looked upon their firm not merely as a moneymaker, but as one rendering service to the country and to the world at large.

TRADE PROSPECTS IN THE EAST.

Referring to his recent visit to India, Sir Alfred said both there and in the East generally trade would expand as the world secured peace, and if, as they hoped, there was to be a settlement of the European question, on the report of the Dawes Commission, trade would settle down, and there would be a large expansion of business. This, in his opinion, was what was required to bring us back to normal conditions, and would, he felt sure, be one of the greatest factors in restoring the trade of the world.

There were no questions, and the resolution was unanimously carried.

On the proposition of the Chairman, seconded by Mr Emile Mond, the six retiring members of the board of directors—namely, Sir John Brunner, Mr A. Colegate, Mr H. Glendinning, Mr J. H. Gold, Mr C. F. Poole, and Mr L. Solvay—were re-elected.

Colonel J. A. Saner moved, Mr R. D. Cripps seconded, and it was resolved, that the directors, other than those under written agreement, each be paid at the rate of five hundred pounds (£500) per annum for services rendered during the year ended March 31, 1924.

Messrs Edmund D. White and Sons, chartered accountants, of Liverpool, were re-appointed auditors.

VOTE OF THANKS TO OFFICIALS AND STAFF.

Sir John Brunner proposed a cordial vote of thanks to the officials, staff, and workmen of the company, and of the subsidiary companies at home and abroad, declaring that the entire staff was at the highest pitch of efficiency he had ever known. Sir John also alluded to the success of the scientific work in connection with Synthetic Ammonia and Nitrates, Limited.

Mr J. I. Watts, in seconding the motion, said it must not be forgotten that Brunner, Mond, and Co., with its world organisation, had "an Empire on which the sun never sets."

The motion was unanimously passed, and the hearty thanks of the meeting having been accorded to the chairman and directors, on the proposition of Mr W. Sutherst, the proceedings terminated.

ROYAL INSURANCE COMPANY, LIMITED.

EXCELLENT RESULTS OF THE YEAR.

FIRE PREMIUM EXCEEDS £6,700,000.

RETIREMENT OF MR THOMAS WOODSEND.

The seventy-ninth annual general meeting of shareholders in the Royal Insurance Company, Limited, was held on Monday, May 26, 1924, in the board room of the company's head office building, No. 1 North John Street, Liverpool, at 12 o'clock noon. Mr Thomas Woodsend (chairman of the company) presided over a large attendance of directors and shareholders.

The Chairman: Ladies and gentlemen, I presume it will be your desire to take the report and accounts as read.

I think I may be pardoned in saying that I undertake my annual review of the operations of the company with a considerable feeling of satisfaction—justified by the excellence of the results shown in the accounts which have been submitted to you. For whilst these results do not equal those of the exceptional years 1918 and 1919, still they indicate a degree of prosperity which in these times of general business depression is very gratifying.

FIRE DEPARTMENT.

In the fire department our premiums are again on the up-grade, and at £6,709,350 show an increase of £282,228. To a large extent this is accounted for by the improved business conditions in the United States to which I referred a year ago. Our losses, including contributions to fire brigades, were £123,699 less than those of the previous year, and the ratio is reduced from 53.28 per cent. to 49.19 per cent., a very favourable percentage indeed for a company doing a world-wide business. Our expenses continue to be high, especially commissions, which have increased slightly from 15.23 per cent. to 15.39 per cent. Management expenses also keep high, in spite of continuous efforts towards economies, but still we are moving in the right direction, as shown by the reduction, slight though it be, from 25.54 per cent. to 25.34 per cent. The net fire profit, after adjustment of the reserve for unexpired premiums on the customary 40 per cent. basis, amounts to £563,578, being 8.39 per cent. of the premiums, which under all the circumstances I consider very satisfactory. We have strengthened the additional reserve in this account by £400,000 in order to keep the total fire fund more or less equal to one year's premiums.

LIFE DEPARTMENT.

Our operations in the life department show that, whilst the total new sums insured amounting to £3,351,446 were £335,735 less than the corresponding figures in 1922, the fact that we issued a slightly larger number of new policies is a clear indication that the falling-off is in no wise due to any diminution of the company's popularity, nor to any slackening of effort on the part of its officials. We are very well satisfied with the progress made in this department, and have no doubt but that when we have our actuary's report on the present quinquennium, which terminates December 31st next, we shall be able to congratulate ourselves upon the results achieved.

Our annuity section shows a remarkable expansion, the purchase money and premiums having increased by over £100,000 from £181,742 to £298,640, and this, in spite of the fact that we have, following the decreasing yield obtainable on gilt-edged investments, considerably stiffened our terms. The continued demand for this form of contract is not without significance from a social point of view, as indicating how the higher cost of living is driving people to seek larger incomes than can be obtained through investment of money in ordinary securities.

MARINE DEPARTMENT.

It is pretty generally known that the marine insurance market continues to pass through very difficult times. The values of ships and cargoes continue to fall, and rates of premium on both hulls and cargo still show a downward tendency. The market has suffered from severe competition, and, as a matter of fact, it is clear that, owing to the depressed condition of international shipping trade, there is not enough business to go round.

It is gratifying to know that the "Royal" marine department and the "British and Foreign" more than held their own, and there was but a small diminution in premium turnover in the year 1923 as compared with 1922.

It is a matter of congratulation that the underwriters in Liverpool and London, New York and San Francisco, and their colleagues elsewhere, have, by careful discrimination, been able to show an underwriting profit on the closed year, viz., 1922, of £112,148, after making full provision for all possible future claims. In this connection I would like to make special reference to our New York departments, where the present unfavourable conditions of marine insurance are possibly reflected more acutely than else-

where, and consequently the success of our operations must be particularly gratifying to Mr Simpson and Mr Hoffman, our underwriters, as it is to us.

ACCIDENT DEPARTMENTS.

In our personal accident departments premiums show an increase of £9,368, and the profit of £5,582 is fairly satisfactory in this somewhat limited section of our operations. In the employers' liability department our premiums have increased by £10,538, a hopeful indication, I believe, that industry in this country has now passed the worst and that we are again on the up-grade. We have realised a satisfactory profit on this account, which, together with the interest shown therein, has enabled us to transfer £100,000 to profit and loss account. We have made a special transfer of £20,139 to general insurances account, and I would explain that this has been done in connection with our workmen's compensation business in the Irish Free State, which is now included in the general insurances account, the employers' liability account proper being confined to business in the United Kingdom and Northern Ireland.

The new Workmen's Compensation Bill, to which I referred a year ago, duly became law, and as a consequence considerably increased payments have now to be made to injured workpeople. The insurance companies are continuing to cover this increased liability without additional premiums, and as, in addition, it has been found advisable to enter into an arrangement with the Government as to the basis on which this business will in future be transacted, I fear that we must reconcile ourselves at the best to a very narrow percentage of profit for the future.

GENERAL INSURANCES ACCOUNT.

Our general insurances account shows a very large increase in premium income, amounting in all to £807,013. To some extent this increase is brought about by internal readjustments, such as the Irish Free State alteration, to which I have referred, and which necessitates an unusual entry in this account also. Principally, however, the increase is due to the enterprise of our deservedly popular daughter company in the United States, the Royal Indemnity Company, and to a very important development in our motor insurance business in this country, which with considerable success we have been seeking to augment.

Those of you who take the trouble to read the speeches of the chairmen of the various insurance companies cannot fail to have been struck by the fact that many of these gentlemen have referred to the unfavourable conditions of casualty business, and chiefly to that section of it which deals with workmen's compensation business in the United States. In transacting as we do a large general business of this kind in America, we have been subjected to the same adverse conditions, and, while the profit shown on this account is not quite a per cent. of the premiums, I think we may congratulate ourselves that, small as it is, we are able to show a balance on the right side, and we think that it reflects very great credit upon those gentlemen who are looking after the interests of the Royal Indemnity Company in the United States that we are able to show a result which compares favourably with the general experience of offices transacting a large volume of this business. Steps are being taken to ensure a more reasonable return to the companies in connection with this workmen's compensation business in America, and there is every reason to hope that in time the business will be placed upon a normal profit-yielding basis, although the improvement is not likely to manifest itself in the immediate future.

PROFIT AND LOSS ACCOUNT.

The item "interest and dividends" in this account is the one which receives the marked attention of our shareholders, and it will have been very gratifying to you to have observed the very substantial increase as compared with 1922, an increase which to some extent is brought about by the reduction which took place last year in the rate of income-tax. And it is a matter of considerable satisfaction to us to know that an appreciable factor in the increase has been the augmented dividend which we have obtained upon our holding of the shares of the Liverpool and London and Globe. I am sure that our shareholders will have appreciated the improvement in the results of that company as set out in the report and accounts which we sent out along with our own.

You will observe that in addition to the ordinary transfers from the various underwriting accounts, we have also transferred

£200,000 from the general contingencies fund. At our last annual meeting I was able to tell you that the necessity for continuing this fund for its original purpose no longer existed, the market value of our investments then having been considerably in excess of the amount at which they appeared in our books. The position in this latter respect has not materially changed, and at the end of 1923 the market value was, if anything, somewhat higher than at the end of 1922, and there has been a further appreciation since. Your directors, therefore, have not hesitated to make further use of the fund by transferring £200,000 to the profit and loss account, leaving the balance of the general contingencies fund at £1,000,000. Of the £200,000 so transferred, £70,275 goes to cover the loss realised on certain investments which we thought it desirable to dispose of during the course of the year, and which stood in our books at a higher value than they realised.

There is a new item in the account this year, namely, £21,411, viz., "Expenses not charged to other accounts." We have found it necessary to proceed in this way in regard to certain items of a general nature which it is becoming increasingly difficult to allocate with anything like exactitude to any one of the particular underwriting accounts.

DIVIDEND.

The essential facts in regard to our dividend have already been made known to you, and nothing is left for me to add beyond expressing the satisfaction of the directors that the situation of the company admits their recommending to you the present increase of 15 per share, and their further announcing a similar increase of 15 per share in the interim dividend, which will be paid in November next.

PROSPECTS.

In conclusion, I would add a passing remark in regard to the present year, of which the best I can say at the moment is that so far we have no reason to anticipate that it will be inferior to the one which has just closed. We are dependent in a large degree upon the course of events in the United States whence we draw so large a proportion of our business in every department. The present prosperity in that great country augurs well for insurance prospects, but one cannot but feel that conditions there are poised on a somewhat delicate balance, liable to be swayed one way or the other by imperceptible currents, whose incidence it is difficult to gauge. Our general manager recently returned from a visit to New York, which, though brief, will nevertheless prove of appreciable value, inasmuch as he had an opportunity of discussing, at a conference, matters of moment with our leading representatives in the United States and Canada. On account of the magnitude of our interests we endeavour to keep in close contact with our operations in North America, and there is no better method than by the visits which our general manager makes, more or less annually, to the other side, for the purpose of consultation with our officials there, to whose loyal and efficient services we owe so much.

In Europe there are signs that the dull, seemingly impenetrable clouds which have obscured the social and financial atmosphere since the Armistice may possibly be breaking, and that a brighter era is about to dawn, which we hope will inaugurate a period of general prosperity in which we are bound to participate. In the meantime, conditions remain very difficult, more difficult from the point of view of unbridled competition than has ever been the case in our experience, but we have before us in the results of 1923 a good indication of the capacity of our company to maintain a steady course, even under adverse conditions, and so we are enabled with justifiable confidence to look hopefully towards the future.

CHAIRMAN'S RESIGNATION.

Before sitting down I wish to make a short personal statement, and to intimate to you that I have informed my co-directors that, owing to advancing years, it is not my wish to continue in the chairmanship of the board, which distinguished position I have had the honour to occupy for the last six years. It is a matter of great satisfaction to me that during these years the company has increased its business materially, the income from premiums in the fire, life, accident, and marine departments having been augmented by practically three and a half millions, an increase of 33 per cent., the funds of the company during the same period having increased in almost the same ratio, by nearly seven and a half millions. The dividends paid to the shareholders have marked the progress of the general improvement made.

I wish to thank the other members of the board for the unvarying support they have given me in the discussions of the difficult problems that have come up for decision from time to time.

I desire also to leave on record my hearty appreciation of the unvarying courtesy I have met with at the hands of the managerial and departmental staffs, and I hope the present success of the company may go on increasing and provide other proofs of the firm foundation on which stands the great Royal Insurance Company.

MOTOR INSURANCE

"GLOBE" Comprehensive Policies afford complete protection and security, combined with efficient claims service.

Holders of Private Car Policies are authorised to arrange immediate repairs.

General Manager and Secretary:—HUGH LEWIS.

THE RESOLUTION.

I have now pleasure in moving the first resolution, which is as follows:—"That the report of the directors be approved and adopted, and that a dividend of 15s per share, less income-tax, be payable on or after Tuesday, the 27th instant, making, with the interim dividend paid in November last, 25s per share, less income-tax, for the year 1923."

Mr W. R. Glazebrook (one of the deputy-chairmen), seconded the motion.

Mr John Hedges congratulated the board on the splendid report submitted, and the motion was then carried unanimously.

The retiring directors were re-elected, and an increase in the directors' fees was unanimously approved. Messrs Harwood-Banner and Son were re-appointed auditors, and a vote of thanks to the London board, also to the members of the company's local boards, and to its officers and agents at home and abroad, and to the boards of directors and officials of allied companies for their valuable services during the past year was passed.

The meeting concluded with a very hearty expression of thanks to the chairman for presiding.

BRITISH OVERSEAS BANK, LIMITED. ALTERATION OF ARTICLES AGREED TO.

An Extraordinary General Meeting of the British Overseas Bank Limited, was held on Wednesday, May 28th, at the offices of the Bank, 33, Gracechurch Street, London, E.C., Viscount Churchill, G.C.V.O., presiding.

The Chairman: I will ask the Secretary to read the notice convening the meeting.

The Secretary (Mr A. E. Thorne) read the notice accordingly. The Chairman: Gentlemen, I should like to say I have received a letter of apology from Mr Norman Hird, the General Manager of the Union Bank of Scotland, who is detained up North on very important business; otherwise, he tells me, he has looked forward to coming here to-day. I think the circumstances which have rendered necessary the calling of this Extraordinary General Meeting are very fully explained in the circular letter which I sent out to the shareholders, dated May 19th, and I think I cannot do better than ask the Secretary if he will kindly read that; then we shall have the business fully before us.

The Secretary read the circular as follows:—

To the Shareholders.

Dear Sir (or Madam),—

You will remember that in December of last year you were called together to pass certain alterations in the Articles of Association of your Bank, as the original constitution had proved cumbersome. It was hoped that the alterations then effected would have got over the difficulties that had been found to exist.

In practice this has since proved not to be entirely the case, and with a view to the simplification of interests and consequently of working, an arrangement has been arrived at which is satisfactory to all parties. Under this the Union Bank of Scotland, Limited, Williams Deacon's Bank, Limited, and the Prudential Assurance Company, Limited (who have all been Shareholders since the inception of the Bank), will acquire the share interests in your Bank of:—

Anglo-South American Bank, Limited.
Dominion Bank (Canada).
Glyn, Mills and Co.
Charles Hoare and Co.
Imperial Ottoman Bank.
Northern Banking Company, Limited.

It is believed that this change will attain the desired result: it involves no alteration in Capital or in the existing rights of the "A" Shareholders, but simply reduces the number of "B" Shareholders to three—viz., one Bank in Scotland, one Bank in England, and a leading Insurance Company.

A formal Notice convening Meetings of Shareholders is enclosed in order to adopt new Articles of Association to give effect to the change.

The main differences between the new and the old Articles are:—
(a) All restrictions on the transfer of "B" Ordinary Shares are removed.

(b) The special provisions relating to appointment of directors by the "B" Ordinary Shareholders are rescinded, and in future the Directors will be appointed by the Company in General Meeting, subject to the usual power for the continuing Directors to fill casual vacancies or to appoint additional Directors.

As soon as the new Articles have been adopted, the following Directors and Honorary Councillors will retire from office.

The Earl of Chichester, Mr A. G. Gumpert, Mr Henry Hoare, Brig.-General A. Maxwell, C.M.G., D.S.O., Mr E. W. H. Barry, Mr J. R. Bristow, Mr Laurence Currie, Mr S. L. Jones, Mr W. E. Wells,	} Directors. } Honorary Councillors.
--	--

By order of the Board,
CHURCHILL,
Chairman.

The Chairman: In order to carry these proposals into force, I beg to move:—

"That the regulations contained in the printed document submitted to this meeting, and signed for identification by the Chairman of the meeting, be and the same are hereby adopted as the Articles of Association of the Company in lieu of the whole of the existing Articles of Association."

I will call upon Mr R. T. Hindley to second the motion.

Mr Hindley: I have much pleasure in seconding the resolution.

Chairman: Before putting the resolution to the meeting, I shall be glad to receive any questions that shareholders may have to put in this connection.

No questions being asked, the resolution was put to the meeting and the Chairman declared it carried unanimously.

The Chairman: That, gentlemen, concludes the business; I am very much obliged to you for coming here to-day.

GUARDIAN ASSURANCE COMPANY, LIMITED. FAVOURABLE QUINQUENNIAL PROSPECTS.

The annual general meeting of the Guardian Assurance Company, Limited, was held, on the 28th instant, at the head office, 68 King William Street, London.

The Hon. Evelyn Hubbard (the chairman) said that in the life department the company had granted 1,429 new assurances, and the net new sums assured amounted to £1,071,727. The premium income, at £454,826, showed an increase of £12,780 on that of 1922, and the net income from interest, £209,537, was £18,511 more. The life fund, including the investment reserve fund, amounted to £4,822,032, an addition in the year of £275,000. They had now completed four out of the five years at the close of which they would value their liabilities and ascertain the surplus in the life fund from which bonuses were derived, so that at the next annual meeting they would know the result of the whole quinquennium. During each of the past four years they had derived a substantial profit from mortality; and, as the life fund was protected by investment reserves yielding a high rate of interest, while the expenses were certainly moderate, they had present all the factors which made for substantial profit in the quinquennium.

FIRE DEPARTMENT.

With regard to the fire department, the year had been happily free from any great conflagration abroad in which the company was concerned. But their revenue was still suffering from the effects of depreciating foreign exchanges, which, together with the continued delay in the revival of business, had contributed to postpone that increase in revenue which the board hoped to be able to show before long. The profit on the trading account of £99,228 was satisfactory, and, with the interest on the fire fund of £49,934, they had the substantial surplus on the account of £149,162. By the reduction in their liabilities £32,500 was set free, and credit was taken for this amount in the reserve for unexpired risks. But the directors considered it a prudent course to replace this sum in the account by putting it

in the general reserve and even adding to general reserve £28,500, so that while the reserve for unexpired risks, calculated at £50 per cent., was brought down, in consequence of the reduction in the premium income, by £32,500, the general reserve was augmented by £61,000. The total fire fund was accordingly £1,171,000, against £1,142,500. After making these provisions, and also for a small loss in exchange, they transferred to profit and loss £88,101, against £50,206 last year.

In the accident, burglary and general fund the profit was £71,094, and, with the interest on the reserve funds, there was a total surplus of £92,362. After a small adjustment in the reserve for unexpired premiums, and charging £604 for loss in exchange and augmenting the general accident reserve by £20,000, they carried to profit and loss £71,758, against £82,456 in 1922. The total fund in this department was £374,200, as against £354,500 in the previous year.

MARINE ACCOUNT.

They had closed the 1922 marine account by transferring £14,000 to suspense for claims, which might yet arise on the 1922 account and previous years. Interest revenue produced £16,179, and they had, nevertheless, carried to profit and loss only £18,870, against £22,900. They had always been cautious in their transfers to profit and loss from this department, but in 1923 they had had to provide for a relatively large sum—namely, £12,500—for loss in exchange. The premiums in 1923 were £127,414, against £123,121 in 1922. The first year's settlements—that is, in 1923—amounted to £23,404, or 18.3 per cent., which was moderate. The amount of the fund at the end of the year was £313,152.

They left intact in the several accounts the investment reserves. As he said a year ago, while they retained their investment reserves, they could look forward with confidence to a general revival in industries, though the revival might again cause a fall in the values of securities such as the company held when capital was required for the purposes of manufacture. As against such contingency they had in these investment funds most ample provision.

In the profit and loss account the aggregate of the transfers from the trading accounts was £178,730, or £23,166 more than a year ago. They transferred £20,000 to staff pensions fund, which would then amount to £76,328. They carried out of profit and loss £180,444, and, after payment of the dividend, they would have a balance of £114,957 (or approximately £10,000 more than last year), which might be subject to some taxation either at home or abroad. The interest derived from their investments on the mean of their funds in 1923 was £5 9s 10d per cent. before deduction of tax, and £4 10s 2d net.

The report and accounts were unanimously adopted, and a dividend of 7s per share, less income-tax, for the year was declared.

GRESHAM LIFE ASSURANCE SOCIETY.

FAVOURABLE MORTALITY EXPERIENCE.

REDUCTION IN EXPENSES.

RATE OF INTEREST INCREASED.

BRIGHT QUINQUENNIAL PROSPECTS.

The seventy-fifth ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on Tuesday, May 27th, at the chief office, 188-190 Fleet Street, London, E.C.

Sir Reginald Macleod (of MacLeod), K.C.B. (the chairman), presided.

Mr Alex. Lawson (general manager and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—A year ago I spoke with some confidence as to the position of the society. I am glad to say that the results as to the year's working fully justify that confidence. The precise of the year's work are set forth in the report in your hands, details of the year's work are set forth in the report in your hands, and I shall touch only on the most important items. Four thousand policies have been issued, assuring £2,091,000, of which £132,000 has been reassured. The care taken in selection is shown by the fact that 330 proposals for £219,000 have been declined. The premiums for new assurances effected amount to £94,637, which, minus a slight reduction from the previous year, are still at a very satisfactory figure. The total income of the society has increased from £1,101,000 to £1,128,000. You are well aware of the reduction in territorial area available for our business owing to the war, and the upheavals after the war, and in one case to Governmental action. The disappearance of the whole of the Austro-Hungarian Empire and the elimination of Italy has made an enormous gap

which has been to a wonderful extent filled by intensive cultivation of our own Empire and of those countries in Europe, Africa, and South America where we do business. But we are confident greater results can be, and will be, obtained, and that, with our organisation, with our experience, and with the growing intrinsic value of the policies we have to sell, much more may be, and will be, done. I want you to realise that our society is bearing with ease its 75 years, that it is intensely vital, and that we mean to go ahead.

CLAIMS RATIO.

Turning to charges upon our funds, the death claims amount to £206,000, being a reduction of £25,000 as compared with 1922, which, again, was less by a similar amount than that for 1921. The percentage of claims by mortality has been progressively favourable, being only 63 per cent. of the expectation in the year under review, 73 per cent. in 1922, and 78 per cent. in 1921. It is not suggested that the ratio can remain at the low level of last year, but the claims so far as they have emerged for 1924 continue to be satisfactory. This favourable mortality is the more striking in view of the wide field over which the society's operations are conducted, and bears witness to the efficiency of our administrative methods, which have been gradually perfected as the result of long and varied experience. The claims on matured endowments, a very favourite form of assurance in this society, have required £272,000, an increase of £13,000 on 1922, but a decrease of £54,000 on the figures required in 1921. In every case such policies have left a profit to the society, and the sum involved—greater or less—in any particular year is accidental. The assets appearing in the balance-sheet amount to £7,039,000, being an increase on 1922 of £237,000, which was itself an increase over 1921 of £119,000.

The life expenses at 23.96 per cent. show a reduction of nearly 3 per cent. following on a reduction of nearly 4 per cent. in the previous year. I entered somewhat fully into the question of expenses last June, and need say no more to-day than that every outlay continues to be most carefully watched with a view to economy, and the tendency is in the right direction.

INVESTMENT OF FUNDS.

The investment of our funds, and when occasion serves, the reinvestment, engages the continual attention of the board, and, with a view to reduce as far as possible oscillation of values, preference is given to bonds or debentures with a definite date of maturity, and a very large proportion of our investments both at home and abroad are in that category. The rate of interest realised on our investments after deduction of income-tax has increased from £4 5s 1d in 1921 to £4 7s in 1922, and £4 9s in 1923. This progressive improvement is, I think, eminently satisfactory. As a matter of interest, I may add that the yield per cent. in the year before the war was £4 2s 7d. I do not think it is necessary to occupy your time by detailed reference to the figures in the revenue accounts or on the balance-sheet, but shall be happy to reply if information is, on any point, desired. There is no change sufficiently remarkable to require special explanation. I would, however, refer you to an entry in the life revenue account of £43,016 under the designation of assets surrendered in respect of the society's Czechoslovak and Yugoslav business. I referred when addressing you last year and in 1921 to arrangements in progress for cession of our business in the old Austro-Hungarian Empire through the several Governments into which that Empire was divided. Further progress has been made, and you will be glad to see that satisfactory arrangements have been concluded for the cession of our business in Czechoslovakia and Yugoslavia. The assets surrendered were almost entirely composed of local investments formerly deposited with the old Austrian Government, and the society is relieved of the whole of the liability to its policy-holders in those countries.

FORTHCOMING QUINQUENNIAL.

Gentlemen, we are now almost in the middle of the last year of our quinquennium, and from what I have said you will realise that we look forward with some confidence to the report we shall submit to you next year giving the result of our five years' operations. If the results are good do not think that it is always plain sailing. We have frequently to call on our general manager and his assistants and upon our actuary and the members of his staff to undertake intricate and difficult negotiations at home and abroad. Our managers, both here and at our foreign branches, have arduous and anxious duties, and I am glad to be in a position to assure you that your staff of all ranks and positions serve the society with admirable zeal and good will.

I have pleasure in moving the adoption of the report and accounts.

Mr Courtenay C. S. Fooks (deputy-chairman) seconded the resolution, which was unanimously adopted.

ROYAL MAIL STEAM PACKET COMPANY.

LORD KYLSANT ON THE POSITION AND FUTURE OF BRITISH SHIPPING.

The ordinary general meeting of the Royal Mail Steam Packet Company was held, on the 29th instant, at the Cannon street Hotel, London, the Lord Kyslant, G.C.M.G., presiding.

Mr D. I. Couradi, the secretary, having read the notice calling the meeting and the auditors' report,

The Chairman, in the course of his speech, said: This old company was established under Royal Charter granted by Queen Victoria at the commencement of her long reign, and for 85 years it has been carrying on mail, passenger, and cargo services to and from the many parts of the world in which for generations its name has been a household word. In common with other shipping companies, we have been passing through a difficult and trying period. Throughout the world the number of passengers and the volume of goods moving is less than in pre-war days, whilst expenses remain far above pre-war levels.

Times like these justify the conservative financial policy the court of directors have pursued in past years of endeavouring to ensure a steady, reasonable return to stockholders while providing our clients with highly efficient and progressive shipping services.

The accounts set out the position of the company, and do not call for special comment.

Interest on debenture stocks and dividends on preference stocks have been paid, and after making provision for taxation and the usual five per cent. depreciation on the first cost of the vessels, we recommend the payment of a final dividend on the ordinary stock, which, with the interim dividend already paid, will make a total distribution of 6 per cent. for the year, the same as for the previous two years. A slightly larger balance remains to be carried forward.

Our reserve fund stands at £1,600,000, and the insurance fund, which has been slightly increased, now stands at £1,177,000.

SERVICES.

Our various services have been regularly maintained throughout the year.

With a view to further improving and developing our North Atlantic service, our "O" boats have now all been converted to "cabin" class ships. This change has been appreciated by our passengers, and should tend to strengthen the company's position in competition for trans-Atlantic saloon traffic. In the steerage section of the North Atlantic trade, the United States Immigration Restrictions continue to handicap expansion.

CANADA.

On the Canadian route, calls were made during the past winter by our "O" steamers at Halifax, and we are supplementing this service during the present summer by sending some of the "O" boats to Quebec. Canada, with her unoccupied lands and incalculable natural resources, offers magnificent prospects to the intending settler from Europe. The Royal Mail Company has close ties with the great Dominion by reason of its Canada-West Indies mail service, its important freight service to and from the North-West Pacific ports of Canada as well as its trans-Atlantic passenger service with Canada's eastern seaboard.

BRAZIL AND RIVER PLATE.

There was an improvement in the South American branch of the company's business during 1923, the numbers of both saloon and steerage passengers showing increases over the previous year. In order to make this service more attractive to the travelling public, and at the same time to meet the convenience of business people, our "A" steamers have been accelerated, the round voyage being shortened by about four days. Competition on this route is very keen, but by continuing to place at the disposal of passengers a thoroughly efficient, comfortable and rapid service of high-class vessels, coupled with an equally capable organisation on shore, we are maintaining our position as the premier South American line. It is with this object in view that we are building two magnificent new "A" boats for service on the South American route. These mail and passenger vessels, which are to be motor-driven, will be of 22,000 tons gross register each, and will form a striking new feature in South American waters.

CANADA—WEST INDIES.

Our contract for the Canadian-West Indian service having expired, the Canadian Government invited tenders for a new long-term contract for the service. We submitted a very moderate tender, which was the most favourable offer received, but the Canadian Government did not see its way to accept it. As the result of further negotiations, it has since been agreed that we will continue the present service for a further period of twelve months, before the expiration of which time I trust it may be possible to arrive at a mutually satisfactory arrangement for a contract over a number of years. Naturally contractors are in a position to afford

better facilities under long-period agreements than by short-term arrangements. The exchange of commodities between Canada and the West Indies, under the reciprocal trade arrangements in force between the respective administrations, continues steadily to develop, whilst the number of passengers passing to and fro tends to increase.

BRITISH EMPIRE EXHIBITION.

The great British Empire Exhibition at Wembley, where this company is appropriately represented, should in the current year be the means of attracting a number of visitors from overseas, which should help to increase the passenger traffic on our various routes.

CRUISES.

Our cruises continue to be popular and attractive, and we have decided to extend this feature. They afford the travelling public a practical demonstration of the comfort of an overseas voyage by a Royal Mail liner. We are now converting the "Araguaya," of 10,500 tons, into a cruising yacht, so that, with the "Arcadian," we will have two vessels specially equipped for this branch of our business.

FREIGHT—OUTWARD.

As already mentioned, cargo on nearly all routes has continued to be restricted in quantity, but there are some welcome signs of steady improvement in this regard, particularly in exports to Brazil, Argentina, West Indies, and the North Pacific. There is also a tendency for rates of freight to become more stable, as the result of a better understanding between the Continental and British Lines. On the other hand, depreciated exchanges in South America tend to hamper exports to those countries, whilst the increased home manufacture of articles hitherto shipped from Europe in considerable quantities is another factor in limiting the expansion of export business from Europe. In addition to maintaining our regular cargo services to and from Argentina and Brazil, we have continued our freight services with the West Indies, whilst we have continued to develop the trade with the North Pacific Coast. On the latter route we are placing a third motor vessel, of which we expect delivery next month.

FREIGHT—HOMEWARD.

In the homeward cargo trade, the year 1923, generally speaking, compares somewhat unfavourably with 1922. The principal reason for this was the greater uncertainty of the political situation on the Continent, which caused violent fluctuations in European exchanges, reflecting adversely on the produce markets and making merchants reluctant to undertake commitments.

SUMMARY OF SERVICES.

In connection with the numerous services I have briefly outlined, and combined with those of our Associated Shipping Companies, it may be of interest to you to know that, for the period of 12 months ended December 31, 1923, the vessels of the Royal Mail Steam Packet Co. and its Associated Companies covered nearly 15,000,000 miles; carried over 1,000,000 passengers and over 10,000,000 tons of cargo; made over 54,000 entries into ports, and employed on ship and shore an average daily number of over 47,000 men. These figures, I think you will agree, are noteworthy as showing the magnitude of our operations.

FLEET.

Our fleet has been maintained in good order and condition. One vessel, the "Oruba," was sold during the year for breaking-up purposes, being no longer required for our services. The "Caracquet," which stranded near Bermuda in June last year, became a total loss, but I am glad to say that all passengers, crew, and mails were safely landed. This vessel's place in the Canada-West Indies service has been taken by the cargo vessel "Teviot." The company's fleet, exclusive of vessels building, now consists of 46 ships, of over 366,000 tons gross register, which, together with the fleets of our Associated Companies, brings up the total tonnage to over 2,120,000 gross register tons.

VESSELS BUILDING.

I have already referred to the three large motor ships now building. These are the "Asturias" and "Alcantara" for the Brazil and River Plate Service, and the "Lochmonar" for the North Pacific trade.

The Trade Facilities Acts were passed to stimulate trade and to secure additional employment in this country, and under the financial facilities thus afforded orders were placed for these new ships, which, though needed, we would under ordinary circumstances have deferred building until conditions generally were more propitious; but in order to meet the wishes of the British Government and the Government of Northern Ireland, who guaranteed the necessary capital, we put the work in hand.

Thus regular employment has been found for a large number of shipyard workers, steel workers, colliers, and others who would otherwise have been out of employment and forced to live on doles, which all good workmen hate. I specially include the colliers, as

It is often forgotten by the public that no less than 400 tons of coal are used to make 100 tons of shipbuilding steel.

WORKING COSTS.

To a company of this magnitude, consuming vast quantities of coal and oil, the cost of fuel is an all-important matter, and in my view prices are still abnormally high. In connection with services carried on in competition with vessels of other maritime nations, many of whom have the big advantage over British shipowners of extremely low working costs, wages are an important factor. British shipowners are always desirous of paying a fair wage, but when voyages are undertaken there must be a prospect of making ends meet, and it is generally realised that it is better for seafaring men to secure moderate wages than for ships to be laid up and crews to be idle. The considerable amount of labour unrest which characterised the year under review hampered trade recovery. Shipping was adversely affected, particularly by the unofficial dock strike in August last year and by the unofficial shipyard workers' strike at Southampton.

OFFICES.

Our City offices in Moorgate have been the headquarters of the company for eighty-five years, but although they have been adapted and extended from time to time, they are now proving too small, and we are unable to extend them further, as the back portion of the block belong to H.M. Post Office, and is occupied by the City branch of the Inland Revenue. We therefore had to look about for a larger site, and I found a suitable site in the centre of the City, of one and a-half acres in extent. This is the former site of the headquarters of another historic chartered company, namely, the great East India Company, commonly called "John Company," founded in 1600, which laid the foundations of our Indian Empire. There are few spots in the City of London which are richer in historical associations than the area on which the old East India House stood. The house was the resort of all the great soldiers who served the Company, from Clive to the Duke of Wellington, and all the Governors-General from Warren Hastings to Dalhousie and Canning. A further interesting association of the house is that for thirty-three years Charles Lamb found his daily occupation in the Accountant-General's office. We decided to acquire this site, and, in conjunction with Mr William Burton, ultimately secured the whole site, and arranged to retain half an acre facing Leadenhall street and Lime street, on which we propose to erect a block of offices for the accommodation of the Royal Mail and most of its associated companies.

We sold the remaining portions to another world-famous British institution, viz., the Corporation of Lloyd's, who have been established at the Royal Exchange since 1774, so that this famous and magnificent site will in future be the home not only of the oldest ocean chartered company incorporated by Royal Charter in 1839, but also of the venerable Corporation of Lloyd's, which for over two centuries has been closely connected with British shipping.

To meet the requirements of our business in the West End, we have arranged to rebuild the greater portion of our fine corner site in Cockspur street.

MANAGEMENT.

Last year Mr J. W. Clark retired from the active management of the company, after over forty years' service, but we are fortunate in retaining the benefit of his ripe experience and wisdom as a member of the court of directors. Mr P. G. M. Mitchell, who has been in the company's service for over thirty years, has been appointed manager, and we look forward to continued steady progress under his very able management. Mr C. C. Barber has been appointed acting assistant manager in place of Mr H. A. P. Cotton, who, after thirty-one years' service, retired at the end of last year on account of ill-health.

STAFF.

I would like to take this opportunity of recording the court of directors' warm appreciation of the loyalty and good work of the management, officials, and staff, both ashore and afloat, at home and abroad. In a big organisation the character of the personnel is vitally important, and it is more than ever essential that everyone connected with the company should do their utmost to add to its great traditions.

UNITED STATES OF AMERICA.

The desire on the part of the United States of America to participate in the ocean-carrying trades of the world has been followed with universal interest. Prior to the war, America was not a great ocean ship-owning nation, and many of the services between her ports and the rest of the world had been built up and maintained by British lines. The United States, however, as a result of the war, found itself in possession of a large ocean-going fleet, and, in order to find employment for the vessels, inaugurated services to and from various parts of the world. Great Britain has always viewed with friendly interest the desire of the United States to do an increased share of ocean transport.

So far as this company and its associates are concerned, who for many years have contributed their share to the inception and building up of several trades from America to other parts of the world, we have always been and are desirous to collaborate and co-operate in carrying on services to and from American ports. We believe that, in the seven seas, there is ample room for all, and that, with goodwill, all can work together harmoniously for mutual benefit.

THE FUTURE.

Looking to the future, I feel on the whole there is reason for a moderate optimism as regards British shipping, but there are some big and difficult problems before us. One of these is what is the best and most economical means of propulsion of ships. Immense strides have been made in recent years in the propelling machinery for ships, involving practically a revolution in marine engine construction. The motor engine has many advantages in the economy of fuel, saving of space, cleanliness, &c., but it is still much more costly to build than the steam engine. I believe that the motor ship has come to stay, but this raises an all-important question that may have a great bearing upon the issue.

Though oil is extracted from the earth by a large number of comparatively small producers, it is, so far as marketing is concerned, for all practical purposes, actually controlled by a few large concerns, nearly all of which are either foreign or practically controlled, directly or indirectly, by foreign interests. Whilst I realise that the great oil organisations deserve great credit for what they have done in developing both the production and use of oil, shipowners who decide to have their vessels fitted with internal combustion engines have to face the risk of the advantages of the motor vessel being largely negated by possible advances in the cost of oil fuel. The considerable rises that have taken place in the cost of oil fuel have attracted the attention of shipowners to what they may have to face in years to come if motor vessels should increase considerably in number, unless new large oilfields are opened up or British scientists find some way of economically extracting oil from coal or from some other British commodity.

Another problem confronting shipowners of all nations is the fact that, along with diminished world trade, the world's shipping tonnage has increased by 18 million tons since 1913. Consequently, while expenses of working British ships are still almost double the pre-war standard, rates of freight have fallen in many cases to non-commercial levels, and in order to maintain regular services it is often necessary to send vessels, which otherwise would be laid up, on voyages involving a certain loss. Under these circumstances competition is extraordinarily acute, more particularly on the part of those Continental lines in whose cases expenses, especially wages, owing to depreciated currencies, &c., are far below our own. It was high operating costs in pre-war years that militated against America having a big mercantile marine, because of the competition of vessels with low working costs. Now, the operating costs of British shipping are much higher than those of the vessels of other countries with whom our shipping is in competition. It is for this reason that British shipowners are more than ever obliged to devote the closest attention to economy in working expenses. These conditions may be ameliorated by a general improvement in trade, of which there are some tangible signs, and in any revival of world trade I believe British shipowners will still be able to hold their own.

So far as this company is concerned, we are keeping thoroughly abreast of the times, and with a fine fleet of up-to-date vessels and an efficient and alert organisation we are prepared, as in the past, to take our full share in carrying on British overseas trade.

The report and accounts were unanimously adopted.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

CHAIRMAN'S CRITICISMS OF LABOUR'S POLICY.

The annual meeting of the Nitrate Producers' Steamship Company, Limited, was held, on the 28th instant, at 20 Billiter buildings, London, E.C., Sir John Latta, Bart., presiding.

The Secretary (Mr James A. Walker) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that the profits shown were the lowest in the history of the company. There was evidence of a slight improvement in trade, but he feared the difficulties, both artificial and real, by which cargo steamers were beset would prevent them getting their fair share in it. Without a scintilla of protection, either at home or abroad, the tramp steamer had to face the full blast of world competition in order to secure employment, while every workman that the owner had to employ enjoyed union protection. In anticipation of Socialism, strikers appropriated railway rolling-stock, public and dock, general utility companies, &c., and by peaceful picketing, under Government protection, held all and sundry to ransom until their demands were granted. The selfish and illogical policy of labour had so inordinately increased work-

ing costs that the expenses of steamers in British ports were almost too grievous to be borne. Labour had the power arbitrarily to enforce its uneconomic theories, but only at the expense of employment, as lower freights were being accepted to and from continental ports, with inestimable advantages to foreign artisans, manufacturers, and merchants.

The public seemed to think the so-called rich shipowners had the whip-hand in strikes, but the other side must be considered. The public should imagine for a moment the responsibility and nervous strain occasioned by the enforced idleness of ocean liners, particularly of the passenger class. Apart from the incalculable liability incurred by the disturbance of prearranged seasons commitments their daily expenses were fabulous, so that the impulse to settle on any terms was almost irresistible.

Unfortunately the attention of the Government was directed more to artificial efforts to allay unemployment than to attack the cause of it courageously. In that connection their interference with the shipping industry had led them on to dangerous ground. It was not from lack of funds that experienced ship managers refrained from building, but because they felt that to add to the present overwhelming surplus of world tonnage would simply prolong the depression and reduce the market value of existing ships. The Government, nevertheless, boldly stepped in against such experience, and agreed to guarantee up to £20,000,000 on the recommendation of a committee appointed to deal with such advances. With "tons of money" thus begging, no shipowner could be blamed for taking advantage of it. On the other hand, there was no certainty that unemployment in the long run would be substantially lessened.

In conclusion, the Chairman said:—There is no remedy for our present troubles but to work a little harder, more consistently, and with better will, when the cost of living, by increased production, will rapidly fall, world's prices be met, and employment created for the skilled artisans who, largely due to the burdensome restrictions imposed on them by labour unionism, are leaving our shores in steadily increasing numbers. The emigration of these magnificent men is of inestimable value to our foreign competitors, but an irretrievable loss to us. The present Government has been compelled to face economic actualities, and there is evidence that this practical experience is having a sobering and beneficial effect. I was pleased to notice that Mr Ramsay MacDonald, in a recent speech in Wales, was reported to have said:—

"I am very much disturbed about the industrial outlook, for I know whatever mechanical change is made—whether protection or nationalisation—without the capacity to work, without the skill and willingness to work, we cannot produce the goods."

The report and accounts were unanimously agreed to.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED.

STEADY IMPROVEMENT IN TRAFFIC.

The meeting of the Calcutta Tramways Company, Limited, was held at Queen Victoria street, London, on the 27th instant, Mr John G. B. Stone presiding.

The Chairman, in the course of his address, said:—The addition to the capital account for the year amounts to £30,060, and is mainly represented by the balance of the cost and equipment of the 25 new trains, including new distributing cables, less the cost of balance of D.C. plant and of plant rendered obsolete by the taking of bulk supply transferred to depreciation account, the final result being a balance remaining to the credit of capital account of £73,911.

Turning to the revenue account, the traffic receipts were again greatly reduced at the commencement of the year by the strike of the drivers and conductors, which started on December 21, 1922, and as a result of which the suspension of our services was continued for the first 21 days of 1923. Since then, however, a steady improvement in our traffic has been maintained throughout the year. With the extra trains we have been able to increase and also to reorganise and provide a more regular service, which has undoubtedly been appreciated by the public.

As regards the motor 'bus traffic, although the results from a revenue point of view cannot be considered satisfactory, the 'buses fulfil their mission in catering for race traffic and in affording additional riding facilities on congested lines, and were particularly useful during the period of the strike. Our policy is to assist in solving the traffic problems of the city where we can do so, having due regard to the interests of our shareholders.

As regards the Indian expenditure, the principal items responsible for the decrease of nearly 7 per cent. are power expenses and maintenance and repairs, the former due to the taking of bulk supply from the Supply Company, and the latter mainly to the gross expenditure being brought back to normal after the additional expenditure incurred in 1922 in making up arrears of postponed repairs.

In dealing with the available balance, after transferring £50,000

to depreciation fund, and writing off £5,000 to suspense account, the board considered it prudent to strengthen the financial position of the company by placing the sum of £11,000 to general reserve account.

Our traffic receipts for the current year show an aggregate increase of Rs. 5,53,859. Although this was helped in the first month of the year by the comparison with the strike period of 1923, the result reflects the steady growth of our business.

The report and accounts were unanimously adopted.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.

INCREASE OF CAPITAL.

The eighteenth annual general meeting of this company was held, on the 28th instant, at Basildon House, London, Sir Alfred Dent, K.C.M.G. (the chairman), presiding.

The Chairman, in the course of his speech, said:—The operating profit, at £101,771, shows an increase of £4,773 as compared with the preceding year, and this is the first occasion on which it has run into six figures. The growth of our business in Shanghai ought to have resulted in a far greater addition to our profits, but was to a large extent neutralised as the result of the loss sustained by depreciation of subsidiary coinage. There was a considerable falling off in the profit on exchange, partly because the rate was not so favourable as in the preceding year, and partly because material sums were absorbed locally in capital expenditure and in renewals, and were therefore not available for remittance. Renewals will continue to be heavy for some time to come. The net result is a profit, before making appropriations, of £107,433 as compared with £113,299. We have maintained the allocation to reserve for renewals at £15,000, and the reduction in the rate of corporation profits tax from 1s in the £ to 6d half way through the year has allowed us to set aside £4,000 as compared with £5,000 in the preceding year. We recommend a final dividend of 8 per cent., making 20 per cent. for the year, carrying forward £24,393, or £7,364 in excess of the amount brought in.

The increased loss by depreciation of subsidiary coinage is the result of a higher percentage applied to larger takings and amounted to £168,450. When I addressed you last year the directors had under consideration the desirability of revising the scale of fares in such a way as to offset this loss to some extent, but it was not until the last week of January this year that it was practicable to carry this intention into effect. The result was immediately apparent, and although we carried somewhat fewer passengers, we obtained a higher average per passenger and a very appreciable increase in effective receipts, which is reflected in an improvement in the operating profit for each month since the change took place.

EXTENSION OF SYSTEM.

The long-drawn-out negotiations with the municipal council for a concession to extend the electric system under railless traction have only recently reached finality. The development to be undertaken is of great importance, inasmuch as it provides for the opening, during the next three years, of about 15 miles of new traffic routes, which have been selected in such a way that they will be co-ordinated with the tramway system, and our route mileage will thereby be nearly doubled. By a rearrangement of overhead wires it will be possible to run trams and trolley buses over the same routes, which will permit of the necessary frequency of service in the denser traffic areas. Arrangements for the equipment of the extensions are well forward. A satisfactory feature of the railless concession is that our capital expenditure under it will be in respect of our own property. We shall have nothing to pay for the reconstruction of the roads, which is undertaken by the council and is already well advanced. By way of recouping the council for its capital outlay and the cost of maintaining the roads, we are to pay two cents for every car mile run by the trolley buses, in addition to the 5 per cent. royalty on gross receipts. It is noteworthy that, whereas the undertaking as it now stands has cost well over half a million sterling, the route mileage will be nearly doubled by the expenditure of about half that sum. Minor extensions of the tramway system, mainly in the form of doubling of track, are being taken in hand concurrently with development under railless traction.

NEW ISSUE OF SHARES.

In order to provide for the important extensions now in contemplation further money will be required, and it is proposed to make an issue of 100,000 new shares. The price of issue is to be £2 per share, and shareholders will be entitled to take up one new share (neglecting fractions) for every four shares now held. The new shares will not rank for dividend in respect of the current year, but interest (less income-tax) will be paid on January 1, 1925, at the rate of 6 per cent. per annum on the full £2 per share, from the date of payment to December 31st next. The new shares will rank *pari passu* with the shares now issued as regards all

distribution in respect of the year 1923 and subsequently. Current results justify the belief that profits will permit of the maintenance of the present rate of dividend on the increased capital.

A matter which has required a great deal of patience and persistent effort is that of the reorganisation of Singapore Electric Tramways, Limited, but progress, if slow, has been continuous, and a power station and tramway which were on the verge of becoming derelict are now earning a profit. The present stage of our company's history is of considerable importance, in view of the rearrangement of fares in Shanghai and pending developments in that city and in Singapore, and I think we are justified in regarding the future with confidence.

The report and accounts were unanimously adopted.

A resolution was also passed increasing the capital to £500,000 by the creation of 100,000 new shares of £1 each.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

GREATLY IMPROVED RESULTS.

The annual general meeting of the shareholders of the Cawnpore Electric Supply Corporation, Limited, was held, on the 28th instant, at Winchester House, London, Mr John G. B. Stone, chairman of the company, presiding.

The representative of the secretaries (Messrs Kilburn Brown and Co.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The accounts show marked improvement on those for the previous year. The accounts for 1922 showed a surplus on the year's working of £21,647. This figure in the 1923 accounts stands at £46,319. During the year no fresh capital was issued, but we had to bear full interest charges, raising this item from £5,543 to £13,712. Out of the year's profits your directors decided to transfer certain sums to depreciation and renewals reserve and to general reserve, and to write £710 off the investment account and £1,031 off the new share issue expenses. This will round off the reserve for depreciation and renewals at a figure of £40,000 and the general reserve to £11,500.

After dealing with the above amounts and providing for the preference share dividend and the interim ordinary dividend, there remains £13,817, out of which the Board proposes a final dividend of 7 per cent., which, with the directors' commission, will absorb £11,650, leaving £2,187 to be carried forward to this year. We have transferred from our reserves the sum of £13,500 in order to meet taxation, thereby reducing the total to £51,500. Our auditors have now finally agreed with the income-tax authorities the amount of the tax due on the past three years. We have, therefore, made provision for this payment, and in future we should only have to meet the taxation in each year.

The output of units increased from 7,336,374 in 1922 to 11,808,293 in 1923, and the revenue has risen from £21,647 to £46,319. These figures, you will agree, are satisfactory. The demand for current in Cawnpore continues to expand, and has necessitated further capital expenditure. To meet it the capital of the company has been increased, and the issued ordinary share capital has been brought up to £160,000 by the issue of the small balance of 1,493 shares, and the balance of 78,507 7 per cent. preference shares has also been issued. The preference shares have been made cumulative in respect of dividends by special resolution passed on April 4, 1924. Applications for supply continue to come in freely in our present area, and we are applying for a licence for an extended area in which we anticipate a large addition to the connections already made to the mains. We are advised from Cawnpore that the first of the two new 6,000-kw. sets will come into operation in July or August, and the second very shortly afterwards.

Mr K. A. Scott-Moncrieff seconded the resolution, which was carried unanimously.

VICKERS, LIMITED.

REVIEW OF COMPANY'S INTERESTS—BRIGHTER PROSPECTS.

The fifty-seventh annual general meeting of Vickers, Limited, was held, on the 29th instant, at River Don Works, Sheffield, Mr Douglas Vickers, chairman of the company, presiding.

The Chairman, in the course of his speech, said: Every shareholder is aware that before the war armaments formed a very large proportion of the company's trade. Our works were designed for the production of armaments on a very large scale, and we could claim to have been among the most successful armament makers, not only in this country but in the world. During the war our productive powers were substantially increased, and after the war we were faced with the problem of converting not only the new construction, but many of the old to other purposes. The Washington Conference added to the difficulties of the situation. The task of adaptation of the war workshops to peace purposes and of forming an organisation for new trades, would have been a

most difficult one under any circumstances, but it has been aggravated by depreciated exchanges and the hopeless financial conditions in countries which formerly used to buy engineering products from us.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows an amount of £98,000 in excess of what is required for the preference dividends, and, as the directors consider it wiser not to declare any dividend on the ordinary shares, that sum has been added to the carry forward from the previous year, leaving a sum of £802,634 at credit of the account. We regret to have had to come to this conclusion, especially as many shareholders, seeing the large amount of Government and marketable securities and the cash at the Bank, must think that a dividend might have been paid at the expense of the carry-forward. The directors are, however, confident that their course is the correct one in the interests of the company, and they are confirmed in this by the approval of their financial friends and advisers. In common with all large engineering and shipbuilding firms in the country, we suffered from the want of orders to keep our plant fully employed, and as it is never possible to reduce the staff and general expenses in proportion, the small works' profits made were largely counterbalanced by unabsorbed charges. At Barrow the position was aggravated by the trouble with the boilermakers. In the Sheffield works the motor-car steel, spring, and file departments were all tolerably well employed, but at low prices; the forge departments and armour-plate and gun works were short of work.

At Erith a small but gratifying profit was made, and the results of our aviation factory at Weybridge were good. It has not yet been found possible to find work that suits the Crayford factory and the labour there, and little was done, with somewhat unsatisfactory results.

As to the company's interests coming under the heading of subsidiary and connected companies, the Metropolitan Carriage, Wagon, and Finance Company—by far the largest of these interests—had better results, in spite of adverse conditions, than in 1922, enabling them to pay their preference charges and a substantial dividend on the ordinary shares. Prices were very much cut, but the increase in the volume of work which they were fortunate enough to secure enabled them to reduce their charges. The associated paint works, Docker Brothers, did very well.

The Metropolitan-Vickers Electrical Company were faced with intense competition at home and difficulty in obtaining orders abroad; they paid a reduced dividend—8 per cent.—in consequence. Glovers, our cable works, made good profits.

McKENNA DUTIES.

Reference is made in the report to the probable effect of the suspension of the McKenna duties on the section of these works that make forgings, stampings, and springs, &c., for motor-car makers. Different makes may be affected in different degrees, but the aggregate effect must be a reduction in output equivalent to the number of cars imported, for the English market can only absorb a certain number yearly. This cannot fail to react on us unless we succeed in obtaining a larger share of the trade at some other makers' expense. The Government's decision is doubly unfortunate at a time when the figure of unemployment still stands so high, and when our outside markets are being gradually restricted by protective duties imposed by other Governments and by some of our Colonies and India, with the deliberate intention of encouraging their home manufacture of goods that we used to send from here. The removal of the duties is intended to be in the interest of the purchaser who is supposed to pay them. It would be of

interest to ascertain what benefit eventually accrues to him. We draw the conclusion from our experience that the Government will lose the duty remitted, the profits of the foreign maker will be increased, but that the reduction of price to the purchaser will be small.

In spite of the rather gloomy prospect for the trade in motor-car steel, things look rather brighter now. Our aviation works are very busy, our shipbuilding works better employed than for some time past, though at low prices. We have a few armament orders, and if in general engineering we have found by unpleasant experience that there are some things to which we cannot adapt our works, we have found several other trades that promise well for the future. Our wagon and electrical interests are also in a better position than last year.

To sum up the situation, our armament business is still substantial, though far from what it was before the great war, and we have some compensations in new engineering industries and in the carriage and wagon and electrical interests which we have acquired in the last few years. Better trading conditions alone are necessary for a return to prosperity.

The report and accounts were adopted.

York from London. We append figures relating to Indian trade (on private account) for April, 1924:—

	(In Lacs of Rupees.)		Net	
	Exports.	Imports.	Exports.	Imports.
Merchandise	3,069 ..	2,027 ..	1,042 ..	..
Gold	..	302 ..	..	302 ..
Silver	5 ..	257 ..	..	252 ..
Total net exports	488			

SILVER.

The tendency of the market has been easier, owing chiefly to the position in China, where exports are still languishing, and a certain amount of speculative exchange business takes place, in connection with which sales of silver have been made in this market. Purchases have been made occasionally on Continental account, and also on behalf of India. As a set-off against the former, a further large consignment of Continental silver has been received in London. The undertone is unchanged, for the fresh bear sales on account of China that have taken place represent so much more to be covered at a later date, when, quite possibly, competition may be keener than it is at the moment. Business with America has been fitful.

Reports and Notices.

At a meeting of the board of directors of the Royal Insurance Company, Limited, held on the 26th instant, Mr Thomas Woodsend, who has filled the office of chairman of the company since April, 1918, resigned that position, and Mr W. R. Glazebrook, who has been a member of the board since December, 1909, was elected chairman in his stead. Mr H. M. Beauregard was re-elected a deputy-chairman, and Mr A. Allan Paton, C.B., was elected in a similar capacity.

The seventy-seventh annual general meeting of the Institute of Actuaries will take place on Monday next, June 2nd, at 5 p.m., at the hall of the institute, Staple Inn.

To succeed the late Mr Irvine Stirling, the directors of the Employers' Liability Assurance Corporation, Limited, have appointed Mr G. D. Pike and Mr E. A. Morony as joint district managers for the South-East of Scotland branch at Edinburgh. Both of these gentlemen have been in the service of the corporation for many years under the late district manager.

At the annual general meeting of the Insurance Officials' Society, held on May 27th, Mr E. Roger Owen, of the Commercial Union Assurance Company, Limited, was re-elected president.

(a) Including arrears.

able. The company's business in imported crude petroleum, however, was profitable. Towards the close of the year prices of products somewhat improved. The directors regret that they could not advise payment on January 1st last of an interim dividend, but are pleased that the result of the full year's working enables them now to recommend payment of a dividend of three-and-a-half per cent. for the year on the preference shares. The new refinery at Grangemouth has been practically completed, and a commencement was made with the refining of imported petroleum at the end of the financial year. The throughput is being gradually increased, and it is hoped this refinery will be working to its full capacity at an early date.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of warm, showery weather experienced over the United Kingdom during the past week has stimulated the growth of vegetation, and winter wheat, which was frequently of poor colour, now presents a much better appearance. Spring crops have germinated well, the young plants being regular and healthy. Pastures are in excellent condition, while there is every promise of large yields of hay and clover this season. The market displayed rather quiet features, and after a firm opening, values for most cereals displayed slight irregularity towards the close of the week. Stocks of native wheat are in small compass, conse-

quently available supplies were held for full rates, 11s to 11s 4d being quoted for suitable qualities per 112 lbs free on rail. Imported kinds were in fair request at generally firm rates. No. 1 Northern Manitoba quoted 48s 6d, No. 2 ditto 47s 6d, No. 3 ditto 46s 6d, Barusso 63½ lbs 46s 9d, and Australian 50s, all ex ship per 496 lbs. In the cargo section prices advanced on less favourable weather and crop news from North America, but tendency quieter since owing to freer offerings of Plate descriptions, combined with liberal weekly shipments. Sales included steamers of No. 1 and No. 3 Northern Manitoba early June shipment from Vancouver at 47s 4½d and 45s 4½d respectively, Barusso 63½ lbs June 43s 7½d to 43s 6d, Entre Rios on sample May 29th 42s 7½d, Rosafé 63½ lbs July 44s 6d, Australian afloat 47s 10½d, and loading 48s per 480 lbs. Flour in moderate demand, but prices registered a slight advance for town made in sympathy with the wheat position. London standard straight run quoted 38s 6d, patents 40s 6d to 41s 6d, town households 36s 6d per sack delivered in. Imported quiet. Manitoba patents range from 36s to 37s, and Australian 35s 3d per 280 lbs ex store. Maize cargoes easier on liberal offerings of Plate descriptions. Plate steamer May 21st sold 35s, and yellow Odessa May 10th 36s 9d per 480 lbs. Barley: English quiet at 11s 3d to 12s 6d per 112 lbs free on rail. Imported firm. Californian 48s 6d to 53s, Chilean brewing 43s to 50s per 448 lbs, ex ship. No. 4 Canadian Western ex ship 32s 3d, Karachi ex ship 32s 3d to 32s 6d, ditto landed 33s 3d to 33s 6d as to quality, Plate ex ship 32s 6d, landed 34s 3d to 35s per 400 lbs. Oats steady. Plate f.a.q. ex ship 21s 9d, landed 23s, No. 2 Canadian Western 26s 3d, No. 3 ditto 25s 3d, No. 3 Canadian feed landed 24s, per 320 lbs. English quoted at 9s 6d to 11s per 112 lbs free on rail. Maize quiet. Plate new ex ship to arrive 40s 9d to 38s 9d as to position, ditto landed 42s 9d, Karachi, also Calcutta, landed 42s, No. 2 white flat African 40s 6d landed,

all per 480 lbs. Millers' offals quiet. Broad bran quoted at 7s 9d, ordinary 7s to 7s 3d, middlings 8s 6d to 8s 9d, fine ditto 10s, bags included, ex mill, light 6s 3d, powdered oat husks 7s 3d, feed oats 9s 3d, ground oats 11s 9d, all per cwt, free on rail. Oatmeal steady. London made, flaked 17s, rolled oats 16s 6d, medium and fine cuts 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d to 18s, American 16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to May 24	113,841	271,943	205,772	226,834
38 weeks to May 24	12,238,617	15,794,265	15,156,543	14,950,771
Average price of English wheat per cwt.	11 1	11 0	13 4	13 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated May 29th, is as follows:—Pig-iron: Conditions, particularly abroad, are unfavourable to pig-iron business, and the immediate outlook is not encouraging. There is a fair amount of inquiry, and if only financial conditions on the Continent were to improve there would be good business. Prices are as follows:—No. 3 Cleveland G.M.B. pig-iron, 91s per ton; East Coast hematite mixed numbers, 98s per ton. Manufactured iron and steel: Some steel rolling mills have closed owing to scarcity of orders. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: New business is most difficult to arrange. Consumers are indifferent, and will not buy for forward delivery. Best Bilbao ore is still quoted 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Business in the iron and steel trades is again easier as far as raw and partly manufactured materials are concerned, and no revival of buying is expected until after the end of the half-year. Already consumers are curtailing deliveries of material and fuel in readiness for stocktaking. Owing to the absence of buying, except to cover immediate wants over a period of two months, several large open-hearth furnaces in the district have been shut down, and a further curtailment of output is probable during the next few weeks, as comparatively little tonnage is on makers' books. The greater part of the plant of one of the large Lincolnshire steel works which was closed down a month ago is still idle. The position of soft basic has undergone a considerable change for the worse since the beginning of the year. There is more activity in hard basic and acid steel owing to the considerable consumption of such material in the manufacture of railway tyres, axles, springs, and locomotive forgings. Engineers are consuming more files to-day than at any time last year. The trade in crucible steel is still badly depressed, although a good deal better than for several years past. Overseas trade is moderately good in Sheffield hand tools, but poor in other departments. Foreign competition is much easier than it was, but the buying power of most markets appears to have shrunk in recent months. A large proportion of the business being done in the industry is unremunerative. A good deal of steel is being made at a loss. Nothing favourable can be said of the cutlery and electro-plate branches, as although the output is large, the trade is almost confined to the cheapest classes of goods. The boom in the coal trade has quite come to an end for the present, and the downward tendency which began a month ago progresses. The position of coke has not been so bad for years, as there is little being bought either for home or export, and prices have dropped. Quotations are also being reduced for as much as possible, with the object of holding off the market as the coal owners. Quotations per ton at pits are:—Hand picked branch, 33s; Barnsley best Silken, 28s; Yorkshire hards, 23s 6d; Derbyshire ditto, 21s; Blyths, 22s; Durhams, 25s; nutty slacks, 11s; smalls, 8s upwards.

Our Glasgow correspondent writes as follows:—No marked increase in buying is to be recorded this week. Pig-iron has been rather quieter, with prices only slightly easier. Shipments during last week totalled 241 tons, of which 156 tons were for foreign account. The iron and steel market remains without any decided movement in actual orders, but enquiry both from home and overseas is very heavy, and seems to indicate the beginning of a buying movement, which may or may not materialise into larger proportions, but is certainly encouraging for the present. In addition to the shipbuilding work mentioned last week, a further contract is to be recorded, Messrs. MacLay and McIntyre having

placed an order with Messrs. Alex. Stephen and Sons, Limited, Linthouse, for a steamer having a deadweight carrying capacity of 8,250 tons. Competition from the Continent, which for a time seemed on the point of again making its appearance, is a good way off yet. Belgian prices for semi-raw material are not so attractive as to induce large purchases, considering the uncertainty as to delivery, and some fair orders have been placed by re-rollers with Scotch works. Official prices are unaltered, but export business, to keep mills going, is being accepted at very low figures. Bar iron makers are moderately well employed on local orders, when the quality is of consequence, but re-rollers are securing the bulk of the export business for bars at prices about £2 10s below those quoted for iron bars. Structural engineers are fairly well employed, several orders having been placed locally, including a number for India, within the last week or so. Black steel sheets are in better request, and several good overseas lines have been booked. Japan has shown signs of coming on the market again, but two recent reductions in price seem to have produced a cautious attitude on the part of buyers. Enquiry is improving for galvanised corrugated sheets, but as some large makers are short of orders business can be placed at very low figures.

Our Cardiff correspondent writes:—During the week buyers have found it impossible to obtain Admiralty large coals at less than 27s per ton f.o.b. The quotations for the first-grade Admiralty are from 6d to 1s higher. More cohesion is also apparent in the policy of the colliery salesmen relating to the marketing of the inferior coals. The volume of the export trade is below normal, and the extremely low level of the outward rates of freight has contributed to a scarcity of tonnage for spot positions. The following are the current approximate quotations:—Best Admiralties, 27s 6d to 28s; seconds, 27s to 27s 6d; best dries, 26s 6d to 27s; Black Veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 25s 6d; best bunker smalls, 17s 6d to 18s; ordinary cargo smalls, 16s 6d to 17s; coking smalls, 18s to 18s 6d; anthracite Big Vein, large, 50s to 52s 6d; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 47s 6d to 50s; rubbly culm, 15s 6d to 16s; coke for export, 57s 6d; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 29s to 30s; pitwood, ex ship, 29s to 29s 6d. In the iron and steel trade, tinplate prices are at the minimum, but the outlook has improved, and it is now regarded as unlikely that the minimum prices will be lowered. Exports have improved, but the imports of French and Belgian blooms, billets, and bars have also slightly increased.

METALS.

Tin displayed firmer features, sellers being reserved in face of higher Eastern cables, combined with a fairly active demand. Standard, cash, sold at £207 to £214 5s, and three months £205 to £211 15s. At Thursday's market the tendency of prices ruled in buyers' favour. Standard cash sold at £209 10s, and three months at £208 to £207 to £209 15s. Closing business was again easier. Standard cash sold at £208 5s, and three months £205 to £204 to £206 10s to £206 5s to £206 10s. English ingots quoted at £209 10s to £210. Copper also improved on liberal buying orders, with some reserve on the part of sellers. Standard cash sold at £60 12s 6d to £61 12s 6d, and three months £61 15s to £62 12s 6d. Values were rather easier, while somewhat irregular on Thursday, standard cash quoted at £61 10s to £61 12s 6d, with business in three months at £62 10s to £62 7s 6d to £62 8s 9d. No material change took place at the close. Standard cash sold at £61 10s to £61 12s 6d, and three months £62 7s 6d to £62 10s. Electro's £67 to £67 10s, best selected £65 10s to £66 15s, strong sheets £64 to £67 10s, per ton. Lead firmer at £31 5s to £32 12s 6d as to position. Spelter dearer at £31 2s 6d. Aluminium, home, £125, export £130. Antimony, English special brands, £49 10s to £50.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business in this centre is generally quiet in all departments of the wool textile trade, and in this respect conditions are in keeping with those now prevailing abroad. Both in America and on the Continent the trade seems to have entered upon one of those periods of quietness which occur from time to time, and something is now needed to give a fillip and get things moving. The saving factor is the continued confidence in the strength of the raw material position, and this is enabling topmakers to present a fairly firm front and resist low offers from spinners. It is felt that demand will again revive as soon as some of the present uncertainties have been removed, and this applies particularly to financial conditions. The French exchange and the restrictions on the purchase of sterling in Germany are directly affecting business here, and no real activity can be expected until the position has been cleared up and something approaching stability achieved. In the meantime, it is possible to pick up small lots of tops here and there at prices rather below the market level, but most of the big firms are prepared to hold rather than make any substantial reductions. Merino tops are practically unchanged on the week, but medium and low prepared tops show an easier tendency, and are about 3d cheaper. The same applies to 40s carded. The main trouble in the yarn trade is that spinners of fine qualities and counts find stocks accumulating, and forced sales are having a depressing effect on the market. The crossbred section is still well employed on old orders, but buyers are not doing much on to-day's basis, and export trade is also held up to a large extent on account of the financial difficulties in Germany. The piece trade remains quiet.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

It has been rumoured in more places than one that a movement is on foot for opening the next series of London sales a week later than was originally arranged, but we fail to see any justification for any such event happening. The trade thinks that a six-weeks' vacation is long enough, a sentiment which harmonises with commonsense, and which is well supported by past experience. There is yet ample time to postpone the series a week if a Continental financial crisis develops, but many feel that by the beginning of July both France and Germany will want considerable quantities of wool, and that the market will not by any means be over-supplied. For the past two years it has been patent to anyone with an intimate knowledge of Colonial sales, that when B.A.W.R.A.'s wools were exhausted, six series per year would be adequate for London, and even that number of series, with nine or ten selling days, is far to be preferred before even five series, each one lasting longer than at present. The London market seems to be in a transition period, and it will take time before things settle down to what can be called normal. The large weight of wool, fully 85 per cent. of the clips of Australia, New Zealand, and South Africa, now being disposed of on the spot has queerled the pitch for Coleman street Wool Exchange, but the auctions will never be entirely wiped out, and we may yet live to see the day when a larger quantity of wool will be sold in that historic centre. As one takes stock to-day, it would almost seem as if the rise since last October to the end of April has been a little overdone, these remarks applying both to merinos and crossbreds.

No section of the trade seemed to see any limit to the rise in values, hence the recent check has come with an even greater shock than the circumstances warrant. It would have been far better to have seen a 10 per cent. decline, with a keen demand for wool, than the decline that took place plus large withdrawals. It is not the actual decline which has disturbed the equilibrium so much as the heavy withdrawals necessary if owners were to avoid loss. It is the latter factor which has somewhat upset the majority, and until there is far more doing on the Continent, we cannot see how any real improvement can take place. Of course, strong feelings of optimism are expressed in the future of wool values; it is believed that July will see a wider inquiry for wool, but there will have to be some amelioration of the adverse factors operating to-day if wool is to meet with the same demand as was seen during the earlier months of this year. We readily grant that statistically the raw material occupies a very sound position, but finance and politics abroad are to-day in such a precarious condition that everybody seems at present to be on the defensive.

THE COTTON TRADE.

MANCHESTER, May 29.

A limited business continues to be done in the market. Buyers are still inclined to act with great caution. All interest is centred at the moment on the progress of the new crop in America, and the first Government report is to be published on Monday. Early official statements, however, are no indication of the ultimate yield. A scattered business has been done in fancy cloths and specialities for India and China, but Standard makes remain very quiet, and producers are losing ground. There has been very little activity for the several minor outlets East and West. More cases are mentioned of looms running out of work. Some advices from the home trade are slightly better. American yarns have been purchased

sparingly at irregular rates, and supplies generally are more plentiful than a month ago. Quotations in Egyptian spinings have been firmly held, and in certain quarters fair contracts have been arranged. Very little has been done in yarns suitable for export.

(I.) Comparative Statement of the Cotton Trade.

AFTER being extremely plentiful, money became rather more usable, owing to the repayment of sums due to the Bank of England. Discount rates were steady, and the low rates at which bills were placed in May for delivery this week proved to have been advantageous to sellers. Having very little business to do, bill brokers made attempts to peer into the future, and the general view seemed to be that, though the demands for credit from abroad are persistent and plentiful, and make a higher

BRITISH GOODRICH RUBBER
COMPANY, LIMITED.

Incorporated under The Companies Acts, 1908 to 1917

Authorised.		CAPITAL.	Present Issue.
300,000	7½% Cumulative Preference Shares of £1 each	...	£250,000
400,000	Ordinary Shares of £1 each		400,000
700,000			£650,000

First Mortgage 6½ per cent. Debenture Stock (authorised and issued), £200,000.

THE Company will manufacture in England Goodrich Rubber products now being supplied by the B. F. Goodrich Company (of U.S.A.), who are one of the largest producers of mechanical rubber goods in the world, and whose net sales during 1923 were over the equivalent in sterling of £20,000,000.

The Company will take over the present large Goodrich trade in Great Britain and Dominions and Colonies and the sole right to manufacture and sell Goodrich products in Great Britain and Ireland, and certain selling rights in British Dominions, Colonies and other countries.

AN ISSUE WILL BE MADE DURING THE WEEK-END OF

250,000 7½% CUMULATIVE PREFERENCE SHARES & 150,000 ORDINARY SHARES at par.

20 per cent. of the profits remaining in each year after the payment of the Dividends on the Preference Shares will be carried to a Special Reserve until this Reserve amounts to 20 per cent. of the nominal amount of the Preference Shares issued, when it will be applied in paying up and distributing similar Preference Shares as bonus among the holders of the Preference Shares.

This capitalisation of the Special Reserve should give the subscribers of Preference Shares a capital appreciation of 4s. 0d. per share and a yield on their present investment of 9 per cent. It is estimated that this should be achieved in less than three years.

After deducting preliminary expenses and payment for the works, the Company will have about £425,000 available for additions to the works and working capital.

The annual profits on the turnover available should not be less than £125,000, which figure should be greatly increased as the business develops. On this figure of £125,000 the Preference Dividend is covered 5½ times, after provision of the Debenture Stock interest and Sinking Fund, leaving £71,400 per annum available for the Ordinary Shares.

The B. F. Goodrich Company of America will (through the B. F. Goodrich Co., Ltd.) lend the Company the minimum sum of £250,000 in the form of liquid assets, as an unsecured loan until 1st January, 1927, free of interest until 1st January, 1925. The American Company will hold 204,000 Ordinary Shares in the British Goodrich Rubber Co., Ltd., and no cash consideration is being paid to it.

Prospectuses and application forms can be obtained to-day (Saturday) from Williams Deacon's Bank, Ltd., 20, Birchin-lane, E.C.3; Head Office, Manchester; and Branches: Shaw, Loebell and Co., Pinners Hall, E.C.2; Austin Friars, and Stock Exchange, London, E.C.2; Francis Wood and Co., Basilston House, Moorgate, and Stock Exchange, London, E.C.2; David Q. Henriques and Co., 13, Pall Mall, and Stock Exchange, Manchester; Henry J. Thomas and Co., 130, Bute Street, and Stock Exchange, Cardiff; W. H. Dickinson and Co., The Temple, Dale Street, and Stock Exchange, Liverpool; and at the Registered Office of the Company, Pinners Hall, Austin Friars, London, E.C.2.

level of rates probable later on, there is no reason to expect any sudden official action. Three months' bills could be placed readily at 3 per cent.

	June 5, 1924.	May 30, 1924.	May 23, 1924.	May 16, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3% (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills	3	3	3	3	..

The Bank return showed an increase of £845,700 in the Note circulation, and a reduction of £844,900 in the Reserve. Government borrowing for interest payments was reflected in an increase of £22½ millions in Government securities, and market repayments reduced Other securities by over £3½ millions. Public deposits were reduced by £4½ millions, while Other rose by £23½ millions. The rise of £3,848,800 in Currency Notes this week is doubtless due to holiday demands. The amount outstanding is now £289,924,100, which includes £1,389,600 for notes called in but not yet cancelled. The fiduciary issue is £239,084,500, or £9,106,400 below the maximum.

THE STOCK MARKETS.

Business on the Stock Exchange has again been on a very small scale, the influences which have hindered activity including the violent fluctuations in the exchanges, the French political crisis, the threatened tube strike, and the approaching Whitsuntide holiday. The release of War Loan interest has hardly affected the Consol market, although prices are a shade harder. In the foreign bond market, French Government bonds have fluctuated with the exchanges. There has been practically no business in Home Rails, and Undergrounds have been heavy, but Argentine Rails show a little improvement. Oils and rubbers are dull, and in the miscellaneous group banks and insurance shares have been firm, and trust company stocks have moved up, but elsewhere there has been no feature of interest. Kalfirs have rallied on the rise in the price of gold.

THE COMMODITY MARKETS.

The commodity markets were dull, probably on account of the festive nature of the week and the forthcoming holidays. The coal market at Cardiff is inclined to dullness, but it is expected that after the holidays an improvement will take place. The pig-iron market is quiet; our Middlesbrough correspondent states that "business with the Continent is rendered difficult by reason of the frequent currency fluctuations." The steel trade continues slack. Tin ended with a better tone after being irregular. Copper is in better demand. Trade in the Manchester cotton market continues featureless, and business in wool at Bradford has been slow. Sugar is quiet, and there is not much confidence in the market. Good quality teas were in demand, but the poorer descriptions were sold in the buyers' favour. A steadier tone prevailed in the rubber market. Signs of firmness are noticeable in the hide market at Bermondsey.

FOREIGN EXCHANGES.

In the foreign exchange market, where business was a little more active than of late, interest has again centred round the Paris rate, which has continued to depreciate with intervals of erratic fluctuations. From 82.90 on Friday last there was a fairly sharp rise on Saturday, and on Monday the quotation at one time touched 89.20, recovering, however, at the close to 85.80. Since that time it has been quoted as low as 83.30, and as high as 86.85, the rate yesterday morning being 86.50. In Brussels a rate of 101½ was reached at one time on Monday, since when there has been a recovery, following Paris, to 98½,

as compared with 96.12½ on the 30th. The chief part of the selling this week would appear to have come from the Continent, and the upward movement to have been held by support from New York. Forward rates in Paris are about the same at 60 centimes per month above spot, and in Brussels at 10 to 15 centimes above. The dollar, which closed on Friday last at \$4.30½, remained at first somewhere about that level, but at one time on Wednesday reached \$4.32½, and though yesterday morning it was back at \$4.31½, the tendency seems fairly steady. Forward rates at 1½ to 1 cent. above spot are rather narrower than a week ago. The lira shows a slight upward movement, being quoted at 99½, compared with 98½ on the 30th. The German mark remains steady at 18½ billion, although credit difficulties become increasingly severe. In neutral centres Amsterdam, following the dollar, has moved in our favour from 11.52½ to 11.53½, Switzerland from 24.46½ to 24.52½. In Scandinavia, Stockholm is 16.25½, as compared with 16.26, Christiania has moved up from 31.42 to 31.82½, Copenhagen from 25.64 to 25.64½, while Helsingfors has recovered from 173 to 172. In Central Europe, Vienna is unchanged at 307,500, while in Poland the zloty is also the same at 22.37½. Prague has moved up from 147 to 148. Budapest and Belgrade show little change, but Bucharest, after a slight recovery, is still offered at 1,000 on the uncertainty as to the internal political situation. In the East the rupee is much the same at 18 29-32d, while the yen is a shade cheaper at 18 10½d. Silver was firm up to 35½d on further Continental buying, and the announcement that the Senate had passed a Bill authorising the completion of purchases under the Pittman Act (the measure, however, has still to pass the Lower House). Since then there has been a slight reaction. Hongkong has moved down from 2s 5d to 2s 4½d, Shanghai from 3s 4d to 3s 3½d. In South America Rio has dropped away from 6½d to 5 29-32d, in spite of the announcement of the appointment of a Brazilian "Geddes" Committee. Buenos Aires also shows a reaction from 41½d to 41d, and Montevideo from 43½d to 43 9-32d, while Valparaiso has also depreciated from 39.80 to 41 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 31st:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	5,048	From Revenue	7,640
Interest, &c., on Debt	1,957		
Sinking Fund	100		
Sundries	105		
Reduction of Debt	332		
Added to Exchequer Balances ..	78		
	7,640		7,640

Revenue at £7,640,000 shows no noteworthy change as compared with the corresponding period. Nothing came in from Special Receipts, as against £492,700. Property and Income-Tax yielded £1,122,000, against £1,077,000. Customs produced £1,802,000, against £1,862,000. Excise £1,049,000, against £925,000; and Estate, &c., duties £1,030,000, against £940,000.

The week's operations reduced the National Debt by £332,200, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Treasury Bills	+ 4,341	National Savings Certificates ..	50
4% Treasury Bonds	+ 2,042	Public Debt Advances	6,175
		Sundries	1,290
	+ 7,183		7,515

The floating debt was reduced by £1,830,000 to £741,965,500.

FINANCIAL YEAR, 1924-1925 (April 1 to May 31).

Total Expenditure ..	111,653,982	Raised by Revenue ..	131,474,109
Net Repayments	23,024,383	Decrease in Balances ..	3,204,256
Total	134,678,365	Total	134,678,365

ESTIMATES for YEAR 1924-25.

Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JUNE 2ND.—*Commons*: Second reading of Agricultural Wages Bill.

TUESDAY, JUNE 3RD.—*Lords*: Second reading of L. and N.E. Railway Bill. Debate on Indian politics. *Commons*: Debate on housing proposals.

WEDNESDAY, JUNE 4TH.—*Lords*: Debate on Church measures. Second readings of Pacific Cable Board Bill, and of Bill to amend the law regarding the management of the Imperial Institute. *Commons*: Money resolution in connection with housing proposals amended and passed. Third reading of War Charges (Validity) Bill. Debate on afforestation.

THURSDAY, JUNE 5TH.—*Commons*: Housing money resolution reported.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Suez Canal, Anglo-Argentine Tramways, City of London Real Property, Investment Trust Corporation, British Thomson-Houston, Eagle Oil Transport, Madras Electric Supply, Selangor River Rubber and Leopoldina Railway. The Suez Canal report shows largely increased receipts and an increased dividend. At the Anglo-Argentine Tramways meeting the chairman dealt with the vexed question of the revision of fares. The chairman at the City of London Real Property criticised land taxation and rating proposals. At the Eagle Oil Transport meeting the chairman explained the new arrangement with the charterers.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

SUSPENDING THE LAWS OF SUPPLY AND DEMAND.

THE House of Commons passed the financial resolution relating to the Government's housing scheme on Wednesday. It is true that the resolution was amended by a proviso that the Government subsidy is to be withheld if the supply of labour and of materials at reasonable prices is not increased, but in spite of this improvement it remains a thoroughly unsound economic proposition. In saying this we hasten to add that this criticism is not directed solely against the present Government, who only propose to carry out on a larger scale the unsound principles adopted by their predecessors. Briefly, the resolution authorised the payments to be made to local authorities on the basis of a scheme for building 2½ million houses in 15 years, starting with 90,000 in 1925, and working up to 225,000 in 1934. The Government is to pay £9 per annum per house (or £12 10s if in an agricultural area), and the local authority £4 10s for 40 years, as a means of reducing rents below the cost of production. If a smaller subsidy will bring the rent to the rent of similar pre-war houses, the subsidy will automatically fall. The cost of the full scheme on the rates and taxes together, which is given in full on a later page, rises to £34.4 millions a year in 1940, and falls again from 1964 onwards. The building industry is to form committees to arrange to "deliver the goods," the unions agree to maintain one apprentice to three craftsmen—apprenticeship to be for four years only—and the scheme is to fall through if two-thirds of the scheduled houses are not built or if prices work out unreasonably high.

In the first place, the whole principle of subsidising house building is a vicious one. In this connection we would recall an unanimous resolution of the Brussels Financial Conference:—

While recognising the practical difficulties in the way of immediate action in all cases, the Conference considers that every Government should abandon at the earliest practicable date all uneconomical and artificial measures which conceal from the people the true economic situation; such measures include: (a) The artificial cheapening of bread and other foodstuffs, and of coal and other

materials, by selling them below cost price to the public, and the provision of unemployment doles of such a character as to demoralise instead of encouraging industry. (b) The maintenance of railway fares, postal rates, and charges for other Government services on a basis which is insufficient to cover the cost of the services given, including annual charges on capital account.

This resolution does not specifically refer to housing, but the argument is equally applicable. The housing situation has got into a bad tangle because, during the war, on the one hand, the price of housing accommodation was artificially restricted by Rent Restriction Acts, and, on the other the building industry was largely suspended and its numbers depleted to a great extent by the deliberate recruiting of those engaged in it on an exceptionally large scale. The Government's proposal is bad because it endeavours to perpetuate this disparity by keeping down the price of housing accommodation and by taking no adequate means to revive the pre-war scale of the building industry. The plan which Mr Wheatley accurately described as "suspending the laws of supply and demand" is to be accomplished at a heavy cost which will be, from the financial standpoint, dead loss to the taxpayer. This view was challenged in the debate on the ground that the nation will have the houses as assets. But the community will not see back a penny of its expenditure, for the money it is to find is the excess of the total cost over that part of the cost on which a return will be obtained in the form of rent.

In making this criticism we do not mean to imply that a subsidy is never justified to meet an emergency or to produce a result which is not being achieved by the ordinary operation of competition. But the only rational use of subsidies is to stimulate and develop production. The present scheme fails on this test. As regards the first of the two difficulties, there are now in the building trade 717,120 persons, against 776,359 in 1914. The proposed scale of building presumes an output from the building industry considerably larger than before the war. As a matter of fact, with fewer workers there is rather less output per head than before. It is, therefore, clear that in the absence of some very considerable changes in method no amount of subsidy can produce the result desired. Mr Wheatley apparently has secured an understanding from the labour unions that they will endeavour to secure the old ratio of one apprentice to three skilled people. This may about replace wastage, or even in from five to ten years produce a small increase in the total. But it is quite inadequate for the scheme in hand, when it is remembered that the building trade is to-day fully employed, and that it is in many parts impossible to place new building contracts. Secondly, as regards building materials, there is a tightness in several directions, and all that Mr Wheatley could say to the House was that he had come to an understanding with the brickmakers. But if no special steps are taken, how is it to be expected that labour and capital will be directed into the production of building materials and increase the output? Mr Wheatley's agreement really amounts to this, that makers are not to raise the rate of profit on materials. But when we consider the ramifications in the steel industry, chemicals, and imported timber trades, the profit of the immediate manufacturers of goods used in building houses is a very small part of the cost. Indeed, the Minister, himself, can hardly regard these agreements as a serious means of stabilising prices for fifteen years.

In the circumstances of the time, subsidising the building trade undoubtedly will result, in the future as in the recent past, in the subsidy being added to the cost of building, and will tend to make permanent the inefficient and restricted output which is one of the root causes of our present difficulty. We are all agreed that the disparity in wages and in the ease with which wages may be earned in different trades is one of the great economic difficulties of the country to-day. This scheme, without adding to the total housing accommodation of the country, will immensely increase the "shelter" which the building trade at present enjoys.

But there are other objectionable principles embodied in the plan. One of the most important is that in spite of this vast expenditure the Government proposes to build large numbers of houses considerably below the Addison standard of accommodation, and in order to house the poorer wage earner the country is to be covered with a

multitude of small houses of which we shall be thoroughly ashamed in twenty years' time. A fundamental principle of housing reform is to raise the standard of accommodation. The only way to do this, particularly in present circumstances, is to build better houses and attract into them those of the population who can afford to pay. This will leave room in older and cheaper houses for those with smaller incomes. One member asked why the wage earner should always have the second-hand houses? The questioner might equally well ask why the man whose services are only regarded as worth a low wage should not dress and feed as well as say Members of the House of Commons? So long as we live in a society with unequal incomes it is an absurd inversion to adapt the newest and most expensive houses in the country to the present limited requirements of the poorest. We thought that this principle of raising the housing standard by building for the middle class had been fought for and established before the war. Apparently we were mistaken.

Again, the principles of the scheme are rent restriction and subsidy to an inadequate and inefficient trade. The true objectives to aim at are to raise the production of the country, and therefore also wages and the rents which people can afford to pay, combined with improved efficiency in the building trade, and therefore cheaper houses—the gap to be bridged, meanwhile, by such devices as the remission of rates on all new houses. It is surprising to find the principles embodied in the former policy supported by the Labour Party. The doctrine starts from the pessimistic assumption that the level of wages cannot be raised. We realise that in times of depression it is hard to believe the economic truth that the remedy is in more economical production and greater output, but we hardly expected a Socialist Government to throw up the sponge and take it for granted that wages cannot rise sufficiently for workpeople to pay the cost of the houses they live in.

The arguments, however, assume that the scheme will work. In fact, even its author clearly has considerable doubts. It pretends to lay down a 15 years' policy, the financial burden of which is to be shared between the taxpayer and the ratepayer. But as the Act contains nothing to compel the local authorities to build a single house or to contribute a penny towards the subsidy, its value as a guarantee for the building industry is nil. In any case, its finance is to be overhauled at the end of three years, and the building trade will no doubt remember recent experiences such as the guaranteed price to farmers three years ago, which suggest that Parliament is not to be relied on to implement an agreement for the duration of its own life, far less to bind its successors.

But while making these criticisms, we do not forget the acute urgency of the housing problem. In our view it calls for sounder economics and more imagination than are shown in this scheme. No proposal is the least good which does not start from the foundation of the trouble and aim at enlarging our building resources. Mr E. D. Simon's proposal for payment by results would be one step in this direction. Another and more important is that the nation must insist upon breaking down the trade union restrictions upon the numbers engaged in it. But perhaps the best way of all is boldly to bring in quite different types of labour and material to meet the emergency. There are many proposals which have been proved practicable in this direction, and if any of the reserves of the engineering trade can be used in this connection they must be utilised regardless of the opposition of the building trade. Secondly, if we are to build houses on the scale contemplated by Mr Wheatley, much more attention must be given to their distribution and lay out, which Mr Wheatley leaves to the chance action of hundreds of local authorities. In particular a determined effort should be made to decentralise the industrial population into garden cities, in which the traffic problem is solved by the fact that the worker is within walking distance of his work, and where it is easy to develop the growing tendency for workers to cultivate small pieces of land and obtain therefrom a supplement to their income. Again, we see no evidence of any big attempt to reduce costs through standardisation of plans, &c. The Ministry of Health does next to nothing to make it easy for local authorities to avoid expense, but leaves them to engage their own

architects (adding 5 per cent. to the cost) and to prepare their own quantity statements (another 2½ per cent.), with the result that they all make their own mistakes and fail to profit by one another's experiences. The conditions may work well in the case of a few large municipalities, but will be thoroughly wasteful throughout the country as a whole.

We cannot pretend to suggest a detailed housing policy. But we are certain that one which subsidises inefficiency instead of attacking the root of the trouble by increasing supply is bound to suffer the fate which will befall all attempts to suspend the laws of supply and demand.

THE DEVELOPMENT OF ELECTRICAL POWER IN GERMANY.

IN view of the attention which is now being paid to the problem of electrification and its bearing on industrial reconstruction in this country, the experience of Germany since the outbreak of the war is of considerable interest. Although great progress has been made since 1913, particularly in the development of lignite-fired stations during the war period, and in the exploitation of water power in South Germany since the Armistice, very much still remains to be done before the rôle of electricity in German industrial life attains the importance already achieved in the United States and some other countries. The position at the end of 1922 compares as follows with that at the end of 1913* :—

ELECTRICAL INSTALLATIONS (in Kilowatts).

Source of Energy.	1913.	1922.	As Percentages.	
			1913.	1922.
Black coal	896,305	1,584,967	% 62.0	% 53.2
Lignite	379,637	1,071,767	26.5	36.0
Oil	36,907	49,129	2.5	1.6
Water	131,309	272,726	9.0	9.2
Total	1,444,158	2,978,589	100.0	100.0

These figures, it is true, only relate to public electrical works, and thus leave out of account several small installations owned by private individuals. Before commenting on the interesting developments which this table discloses, it will, however, be as well to give a statistical picture of the production of electrical works in the two years 1913 and 1922 respectively :—

ELECTRICAL PRODUCTION.
(In Millions of K.W. Hours.)

Source of Energy.	1913.	1922.	As Percentages.	
			1913.	1922.
Black coal	1,415,863	3,493,887	% 63.3	% 48.3
Lignite	514,210	2,978,694	23.0	41.2
Oil	47,249	61,303	2.1	0.8
Water	260,866	699,834	11.6	9.7
Total	2,238,188	7,233,718	100.0	100.0

It is unnecessary to stress the fact of increase both in the capacity of the installations and in the actual power produced. What is almost more significant is the increase in the number of K.W. hours per K.W. capacity in 1922 as compared with 1913. This is particularly marked in the case of lignite-fired stations, where it is over twice as great as in pre-war days. The result is due to the erection of large power stations which are linked up with wide areas by high-voltage transmission lines, and are able to maintain a steady load throughout the twenty-four hours. An important factor in this connection is the prevalence of "peak agreements" (*Spitzenausgleiche*) between the various producers. By means of this device, smaller producers feed into the main system during their slack period each day, and draw from it themselves during their busy time. The development

* These statistics were compiled by Director Jahnke, of the Electrowerke Company, and given by him in a lecture at a Lignite Congress recently held in Leipzig.

of this principle is one of the important contributions of the late Hugo Stinnes to the industrial organisation of Germany, and has led to a much more rational utilisation of the power-producing plant of the country, as these statistics clearly show.

The transmission systems themselves are mainly confined to three principal areas. Berlin and the cities of Saxony now obtain the greater part of their electrical power from the large power stations established in the middle German lignite area. The best known of these power stations is, perhaps, that at Zschornowitz, near Wittenberg. In the Rhine-Ruhr area the transmission system owned by the Rhenish-Westphalian Electrical Company is fed from both coal and lignite-fired stations. The latter, which are situated in the neighbourhood of Cologne, provide about 40 per cent. of the power utilised in this area. Lastly, in Bavaria, the so-called *Bayern Werk*, which has recently been completed, provides a high-voltage transmission system which draws its power mainly from the important hydro-electric station on the Walchen See.

The great increase in the relative importance of lignite-fired stations is, of course, apparent from these tables, though it is perhaps worth repeating that black coal remains the principal source of energy in German electrical works.

In view of what is said about the development of water power in Southern Germany, it should be remembered, when considering the relatively small place occupied by hydro-electric works in the figures for 1922, that the principal projects had not then been completed. This year, however, with the great Walchen See undertaking already in operation, and with the Middle Isar works nearing completion, the relative importance of this factor will certainly be much greater than in 1922, when the development in lignite-fired stations was already complete. Even so, however, the capacity of hydro-electric works in that year was already more than double that of 1913.

INDIAN CIVIL SERVICES.

THE Report* of the Royal Commission on the Superior Civil Services in India covers 181 pages of closely printed matter, and contains no less than 64 separate recommendations. We doubt whether the most experienced of Indian or Anglo-Indian authorities would care to express a final or detailed judgment upon the Commission's work without long study and consultation, and where angels fear to tread we do not propose to rush in. But we may without hesitation approach the subject with one or two general comments. The Report, from whatever angle it may be judged, is a document of exceptional importance. In three respects Lord Lee and his colleagues are entitled to congratulation—on the speed and thoroughness with which they explored a very wide, varied, and complicated field; on the remarkable achievement of unanimity by a Commission containing four Indian members and five Englishmen of differing shades of opinion; and finally on the fact that, apart from the inevitable murmurings of extremists, the initial reception of the Report, both in Britain and in India, has been more favourable than could have been expected.

To appreciate the importance of the document, one has only to recall a few of the landmarks in recent Indian history. The problem of the Indian Services has completely changed since it was leisurely reviewed by the Islington Commission between 1912 and 1915. The work of that body was put out of date by the famous statement of the Secretary of State for India in the House of Commons on August 20, 1917, to the effect that the policy of the British Government was that of "the increasing association of Indians in every branch of the Administration, and the gradual development of self-governing institutions, with a view to the progressive realisation of responsible Government in India as an integral part of the British Empire." Moreover, the war had in India, as elsewhere,

created an upheaval both in the cost of living and in the mental attitude in both countries towards the Anglo-Indian problem. There followed the visit of Mr Montagu to India, and the Montagu-Chelmsford Report—an elaborate review of the whole situation, out of which the Government of India Act (1919) finally emerged. It is a matter of contemporary history that the hopes that the reforms instituted by this Act would allay Indian unrest were doomed to failure. In this unrest the question of the Services played a big part. "The relations," says the Lee Report, "between the political classes and the Services instead of being improved were markedly worsened. In the minds of the Services the uncertainty of the political future of India, combined with attacks upon them in the Press and on the platform, and their steadily deteriorating financial condition, produced feelings of anxiety and discontent. In Indian political circles, on the other hand, the new system seemed incomplete and slow in its operation. It seemed incomplete because the self-government granted in the 'transferred' field was limited by the fact that the members of the All-India Services engaged therein were still under the ultimate control of the Secretary of State. It seemed slow in operation because the rate of Indianisation adopted since 1919 was regarded as illiberal." A series of crises, fresh in all our minds, revealed both the great difficulty of the Lee Commission's task and the urgent need that it should at one and the same time restore faith and good heart to the Civil Servants and at the same time make a gesture that would conciliate at least the moderate sections of Indian Nationalist opinion. That dual achievement might well have appeared impossible; but so would the achievement of unanimity on a Commission composed as the Lee Commission was. Backed by unanimity the Commission's gesture has a chance of real success that it would not otherwise have possessed.

Out of the many recommendations those are of primary importance which come under three main heads :—(1) The pace of Indianisation. (2) Recruitment and control by Local Governments of transferred Services. (3) Pay and pensions. The first of these points is the one that will, of course, loom largest with Indians. Briefly, the recommendations are that a proportion of 50 per cent. Europeans and 50 per cent. Indians should be attained in the India Civil Service within about 15 years, and in the India Police Service in about 25 years. In the India Forest Service recruitment should be in the ratio of 75 per cent. Indians and 25 per cent. Europeans in those Provinces in which Forest administration is reserved. In the India Service of Engineers recruitment is recommended in the ratio of 40 per cent. Europeans, 40 per cent. directly recruited Indians, and 20 per cent. Indians promoted from the Provincial Service. In the Political Department, 25 per cent. of the annual recruitment are to be Indians, in the Imperial Customs Service not less than one half. In the Superior Telegraph and Wireless Branch recruits are to be enrolled in the ratio of 25 per cent. in England and 75 per cent. in India, while, by the extension of training facilities, the same ratio is to be aimed at in the Superior Revenue establishment of the State Railways. These recommendations will not satisfy extremists, perhaps, but moderate opinion will recognise that the Commissioners have followed wholeheartedly the spirit of the Government of India Act, which in the forefront of its preamble states that its aim is "to provide for the increasing association of Indians in every branch of the Administration." Indeed, as the Report points out, the old question of how many Indians could be admitted to the Services has given place to the question "What is the minimum number of Englishmen which must still be recruited?" Further, the Report recommends the immediate appointment of the Public Service Commission contemplated by the Government of India.

The recommendations regarding the pay of the services are too long and complicated for full summary here. The main findings are that in the Indian Police Service the basic rates of pay should be increased by Rs.25 per month for the inferior and Rs.50 per month for the superior branch. The Service of Engineers also receives a concession that removes a grievance complained of by the native members. In all the services (except the Women's Branch of the India Educational Service) members are, from the fifth year of service onwards, to be entitled to

* Cmd. 2128. Price 5s net.

remit their overseas pay at 2s per rupee or to draw it in London at that rate. This latter recommendation is explained by the belief of the Commissioners that the fall of the rupee below the 2s level was not contemplated when the present scale of salaries was determined. English members of the Services are accorded the right to four free return passages during service, while some assistance in this direction is accorded in the case of wives and children. As regards pensions and invalid annuities, no general change is made, but an increase is made in the case of those who rise to the top ranks. Increased pensions in the "uncovenanted Services" are also advocated, and various suggestions are made regarding extraordinary pensions, family pensions, and provident funds. Obviously there is not enough in these financial recommendations to satisfy in full the wishes of the Services, but it is possible that they do not fall short of expectation.

The third main heading which we mentioned above referred to the control by Provincial Authorities of the Services which have been "transferred." The present state of affairs is that Provincial Ministers have responsibility without control in the transferred field. This "constitutional anomaly" the Lee Commission proposes to remove by coupling control with responsibility. This proposal will inevitably be received with suspicion by the European members affected, but the Commission is at pains to gild the pill, and perhaps succeeds to some extent by two qualifications or safeguards. In the first place, it assumes that "no change will be made in the position of the existing members of the All-India Services operating in the transferred field," and that they will retain all their rights, present and prospective, as All-India officers. Secondly, they devise various measures calculated to provide security, of which the chief is the proposal that legal contracts, enforceable in a Civil Court (including clauses securing pay, leave rules, passages, remittance privileges, pension rules, &c.) should be entered into between the Provincial Government and each officer recruited under the new scheme. On paper, at any rate, these qualifications and safeguards are of some considerable value.

One of the most important points about the Report is the plea of the Commissioners that: "The main proposalsare vitally interdependent, and, in view of the urgency of the case, it is recommended that they should be considered as a whole and acted upon with as little delay as possible." One may conjecture that, by a process of give and take, the unanimity of the signatories for the scheme as a whole has been achieved in spite of partial objections. In other words, the Report as a whole is an agreed compromise. If this is so it is a warning against piecemeal adoption. It therefore behoves all parties concerned, including the British Government and His Majesty's Opposition, to weigh up very carefully, not whether this or that proposal is the best possible, but whether on balance the whole Report provides a reasonable solution of a whole host of vexed questions. More than that, they must give great weight to the fact that if, as on the whole appears from Indian cables to be the case, the Report shows the way to a long overdue measure of reconciliation between the Services and the Indian public, and if its adoption is likely to perform the inestimable service of restoring Indian belief in the good faith of the British Government, then its rejection, or even reckless criticism of its findings, may destroy a new and unexpected opportunity for a better state of affairs in the administration and public politics of India. No man can say when another such opportunity will arise.

THE WOOL TRADE.

(BY A CORRESPONDENT.)

It must be frankly admitted that the wool trade to-day is passing through a real testing period. Readers will remember that from the beginning of October until a month ago there was a very strong advance in the value of all qualities, but particularly crossbreds, the last series of London sales seeing the peak passed. For many reasons this is to be regretted, but apparently everything is not satisfactory in consuming centres, more particularly in France and Germany, which absorb big weights of Colonial grown wools. One regrets very much that financial considerations are affecting business in Germany, the wool

trade being the first to feel the effect of any adverse factor of the nature named. It was no uncommon thing in pre-war times for the Continent to absorb something like 60 per cent. of the Colonial clips, and although that quantity is not being taken to-day, it would not be much less if normal financial conditions obtained in France and Germany. Germany has always been a big buyer of Australian, New Zealand, and South African wools, simply because her own production of the raw material has dropped so very sensibly compared with a hundred years ago. It is most interesting to refer to the weight of merino wool grown in Germany and exported to England a century ago, but to-day Germany must of necessity help herself very liberally to the products of the British Empire, and consumption would be bigger than ever if German mills could muster the necessary sterling.

It must be admitted that everything indicates that the rise has spent itself. The recent London sales were disappointing when viewed from any standpoint. After the strong finish of the Liverpool sales, when the last of the wool belonging to the British Australian Wool Realisation Association was disposed of, the trade was very optimistic about the approach of the third series of sales in London, but the auctions had not continued many days before it was discovered that the rise had spent itself. On account of the German and French buyers finding themselves in difficulty, competition was exceedingly limited, values for practically all descriptions, except coarse crossbreds, showing some decline. It is true that the fall was on average no more than 5 to 7½ per cent. compared with the close of the previous auctions. At the same time the bulk of the wools sold met with a somewhat cool reception. The industry would have thought little of the small decline registered had it not been for the heavy withdrawals, these being entirely second-hand parcels upon which importers were hoping to make a profit. Naturally, with such a strong statistical position, owners felt that they were justified in putting stiff reserves on to their wools, but with such restricted competition on the part of the Continental section, limits were not realised, hence the bulk of the merinos in particular were taken in. This is one of the worst features that can develop at any public wool sale.

Its effect was bound to be more noticeable after months of steady advances, and at a time when the trade is well supplied with direct imports. The last London sales took place when no section of the trade was really hungry, and with such heavy drafts to meet on account of large importations, even the big Yorkshire topmakers found themselves by no means keen to operate. A firm to-day buying the same weight of wool as in 1914 wants nearly three times the capital. £100,000 will buy no more wool to-day than £35,000 in pre-war times. In the month of October, 1921, a big firm of Bradford importing topmakers purchased 1,400 bales of B.A. 40-44's crossbreds at 63d, clean, c.i.f. English port. Some two months ago the firm purchased from the same party 300 bales of the same quality at 23d, and the credit to be cabled was actually more than that required in October, 1921. This gives some idea of the extra amount of capital required to finance wool to-day.

The following table, compiled from the circular issued by Messrs Buxton, Ronald and Co., shows where values stood in July, 1914, the lowest point in July, 1921, and the level at the recent series of London sales:—

Merino.	1914. July Average.	1921. July Average.	1924. May Average.
Grease—	d d	d d	d d
Victorian: Western good quality and condition..	18-19	21-25	40-44
N.S. Wales: Riverina, good staple and condition.	15-16	17-20	37-40
Queensland: Central, good staple, fair condition	15-16	16-18	34-37
N. Aus.: Fair length and condition	14-15	14-16	31-34
New Zealand: South Island, fair character.....	14-14½	13-15	31-33
Cape: Fair condition (10-12 months).....	9-9½	8-9	22-24
Scoured—			
Victorian: Fair body and colour.....	27-27½	25-28	58-62
Queensland: Good quality, colour and condition.	27-28	29-33	65-69
N.S. Wales: Fair body, rather fatty	23-24	23-26	52-54
N. Aus.: Fair body and colour.....	26½-27½	27-29	57-59
Cape: Fair body and style.....	22½-23½	21-23	50-52
Crossbred—			
Victorian: Half-bred, super; 50-56's.....	16-17	12-14	25-28
Crossbred, medium: 46's.....	12½-13½	6-7½	18-20
coarse; 40-44's.....	11½-12½	5-6	17½-18½
New Zealand: Half-bred, super; 50-56's.....	15½-16½	12-14	25-29
Crossbred, medium: 46's.....	12½-13	6½-7½	18-20
coarse; 40's.....	11-11½	5½-6	17½-18
" " 36's.....	11-11½	5-5½	17-18

Seldom has there been a time when so much attention was paid to wool trade statistics as during recent months. The rapid absorption of the surplus wool held by the British Australian Wool Realisation Association has shown that consumption has been much larger than production, and until recently demand remained strong enough to influence prices in an upward direction. One feels to-day that the advance has been just a little overdone, and it is very difficult to say what is going to happen in face of the adverse factors to which we have already alluded. Notwithstanding the setback that has occurred, the largest users in the trade are still very optimistic, but at the moment users are anything but pleased with the position. No doubt finance is playing a very important part, and if Germany could be relieved of its present financial tightness, a great improvement would soon be seen in all markets. The French political crisis is also having an adverse influence upon the textile industry of Northern France, and while we do not think a strike will materialise among the textile workers of this country, it is influencing some forced sales. Trade in consuming centres has been exceedingly slow since the close of the London sales; hence the future is regarded with some concern. Many think that once the heavy pressure of direct imports is passed, the London July auctions will reveal the strength of the wool position. We should like to see the textile industry of the United States and the West Riding of Yorkshire in a more vigorous state, and it is going to take values all their time to be maintained until to-day's stocks are wiped out. It is too early to talk about the opening of the next season in Australia and elsewhere, but on general trading conditions there can be no justification for the maintenance of to-day's high values for either merinos or crossbreds. On the other hand, there is not much justification for any marked decline. It would have been preferable to have a strong, active market for another three months until current stocks had been liquidated, but users appear to be determined to act cautiously.

BRAZIL'S ECONOMIC PROBLEM.—I.

(BY A BRAZILIAN BONDHOLDER.)

IN the eyes of some of its inhabitants, Brazil is destined, within a few generations, to be one of the greatest, richest, and most powerful countries in the world. There are others who regard their land and its inhabitants with a humorous self-depreciation that is almost English in its critical intensity, but these are rare. A larger minority laugh at themselves and their fellow citizens, but maintain that the country is rich enough to carry even them, quoting a local proverb which says that the only thing that saves Brazil is the fact that its inhabitants go to sleep every night, giving Providence and the country time to correct their mistakes. The case made by the "boosters" is chiefly arithmetical. The population, they say, was 17 millions in 1900, and nearly 31 millions in 1920. It will therefore, on a conservative estimate, be 60 millions in 1945, and will continue to double itself every 25 years. They then usually proceed to compare the position of Brazil to-day with that of the United States after the Civil War, and to foretell that the progress of their country will be at least as rapid and amazing as that of its northern neighbour. Its area is nearly as great, its soil richer, its climate more varied and favourable to growth. Its mineral resources are immense, and their immensity lends itself more readily to flattering imagination because they are hardly explored; and when one objects a lack of coal, one is answered by the unquestionable fact of extraordinarily abundant water-power.

It is a dazzling picture of what might be, and the catalogue of possibilities has plenty of solid basis in fact. After making all allowance for the difficulty presented by the climate of the equatorial swamps of the Amazon Valley, and for the fact that nearly half Brazil consists of tropical forest, the productive possibilities of the country are still enormous, if their development can be undertaken on the

right lines and in the right spirit. The United States, when they began their great forward movement in the sixties of last century, had a vigorous and hard-working population, which was reinforced by a great stream of immigrants from the British Isles and from Northern Europe, and capital from the same sources was poured in in a stream that sometimes enriched the country more rapidly than those who lent it, to provide the transport system without which no natural resources can be tapped and brought to market. In Brazil the population is largely of Portuguese origin, with an important admixture of Italian immigrants. Everybody grants to the Italian the faculties of hard work and thrift, the chief objection to him as a colonist being his tendency to send home his savings and to follow them himself, when he has accumulated enough to live comfortably at home. The Portuguese has not hitherto been specially noted as an efficient organiser of development, but this may be only because his virtues have not been fully recognised. Miss Rebecca West, in one of her articles on America in the *Sunday Times*, related, in protesting against the American prejudice against Mediterranean races, that "there are farms on the New England coast which the Anglo-Saxon population could do nothing with . . . and yet the Portuguese have come along and made that same soil blossom like the rose, and founded healthy and happy and stable agricultural communities."

As will be shown later, the existing population of Brazil has done a great work in developing its resources. Restrictions on immigration into America and other countries ought to help them to get plenty of recruits from Europe, where the conditions are certainly such as to encourage the more enterprising members of the community to seek "fresh woods and pastures new." Being also a land remarkably free from race prejudice, Brazil is thus in a strong position for dealing with her population problem, if she can surmount the other great obstacle to her future progress—namely, her totally inadequate and very inefficient system of transport and communication. For this, as need hardly be said, she needs foreign capital in shiploads, and she will not find it too easy to get it. In the first place, because the saving habit has undoubtedly been checked, by the war and bad war finance in the countries that used to accumulate capital—some people say, for example, that it has been killed, at least for the time being, in Germany by the depreciation of the mark. Secondly, because there is a clamorous demand for capital, for reconstruction and development purposes, in other parts of the world. Thirdly, because the experience of foreign capital in Brazil has not been one of unchequered happiness—the Federal Government has never actually defaulted, but two funding schemes, one of which is still in operation, have smirched its financial escutcheon, while defaults on the part of States and municipalities are not unknown, and private enterprise, investing in railways, tramways and public utilities, has been hit by the unstable exchange, and has in some cases complained of unfair treatment by the authorities, though complaints of this kind need careful sifting before they are taken at their face value. And lastly, because the strong nationalist feeling that has been produced everywhere by the war seems to have taken the form in Brazil of suspicion and prejudice against foreign capital, which, if unchecked, will make her rapid development impossible. The country is there with infinite possibilities; the inhabitants are there ready to work a little bit of it; the immigrants are ready to come and work more and more of it; but the transport system is not able to carry even the crops that are now grown to market and to the ports, much less to take a stream of new immigrants up to the inland farms and to bring down the increased produce that their work would create. Transport is the door through which Brazil has to open her way to wealth, and foreign capital is the key to the door. She cannot unlock the door unless she welcomes foreign capital, makes it feel at home instead of treating it as an "undesirable alien," and gives it a fair chance of making a living.

Let us now see what Brazil has done in production, as measured by her export trade, the only side of her productive life for which full figures are to be had over a period of years. In 1901 her total exports were valued at £40½ millions, with a favourable trade balance of

£19 millions. Of her exports, coffee stood for £24 millions, and rubber for £8½ millions, these two items accounting for more than three-quarters the total. But rubber sang its top note in 1910, with £24½ millions, nearly equalling coffee, which in that year produced £26½ millions, the total exports being valued at £63 millions. Since then, owing to the competition of the Eastern plantations, Brazil's rubber exports have been divided by two in quantity and by twelve in value, producing less than £2 millions last year. Nevertheless, she has more than filled the gap with the help of the rise in sterling prices, and in 1923 her total exports fetched nearly £72 millions, giving her a favourable trade balance of £22½ millions. Of this total, coffee provided no less than £46 millions, or 64 per cent., giving a dangerously one-legged appearance to her trade; but hides, sugar, and cotton were all above the £2 million line, while oil seeds, cocoa, and frozen meat were very near it, the last named only having appeared in the export list in and after 1915. Rice, which used to be imported, is now a considerable item of export. This achievement—highly creditable in view of the reduction in Europe's consumption of coffee and the loss of the rubber monopoly—Brazil has achieved in spite of the diversion in the meantime of much of her capital and energy into industrial development, fostered first by the war and the consequent inability to import many articles that had formerly been produced by European belligerents, and afterwards by a high tariff and the falling value of the milreis. San Paulo, the only State in which figures of industrial development are to be had, shows that it produced in 1910 33½ million metres of cotton textiles, in 1910 75½ millions, and in 1921 197½ millions.

These things Brazil has done under wasteful farming which exhausts one area and goes on to the next, with inadequate transport, and a postal system that would be a farce if it were not a tragedy, and without touching the iron deposits with their mouth-watering possibilities. And now the state of the world's cotton supply, and the great potentialities of her soil in filling the void which is affecting Lancashire so seriously, gives her another great chance of adding to her wealth and increasing her favourable trade balance, which is not yet favourable enough. But that is an item in her financial position which will be dealt with in another article.

BRITISH OVERSEAS BANKING POLICY.

AMERICAN books on British banking usually find a bad market on this side. The reason seems to be that the essential features of our banking system, as of our constitution, are singularly elusive to the foreign observer, who views them at a distance and at second-hand, and in nine cases out of ten brings to the task preconceived notions founded on the workings of his own national system. The more credit is therefore due to the writer of the present work* for his success in producing a volume which may advantageously find a place on the bookshelf of every serious student of British banking methods. And this for two reasons. Firstly, the book contains the judgment of a shrewd and well-informed critic, given after a careful and extended personal study of affairs on the spot. (Dr Robinson goes out of his way to thank the bank executives who "met the tiresome queries of an often too zealous seeker for facts with unfailing British good humour.") Secondly, the subject matter is concerned with an important side of recent bank history which has as yet received very little systematic literary attention. The rapid march of events has already made ancient history of some of the facts, but the validity of the conclusions arrived at does not seem in any way to have been upset. The author covers a large field, but from the point of view of English readers the most interesting chapters are those dealing with the post-war foreign policies of the "Big Five," the British Overseas Bank, and the British Trade Corporation.

The decision of four of the five leading British joint stock

banks to enter a territory almost wholly unfamiliar by establishing foreign branches seems to have been to some extent forced upon those responsible by a desire to accommodate their domestic clients, who, with the resumption of normal foreign commercial intercourse at the end of the war, were pressing for facilities supplied in pre-war days mainly by certain foreign institutions which disappeared from the London money market in 1914. No doubt British bankers desired to be in a position to reap the full fruits of an expected Continental trade boom, but it seems fairly clear that for the most part earnings were, as Dr Robinson states, subordinate to the desire to serve customers in the best possible way. The departure from the British practice of conducting foreign business through the agency of correspondents of the highest possible standing was, nevertheless, not far short of revolutionary. In practice, the competition of the overseas branches of British concerns with native institutions has proved more apparent than real. The accounts kept by these branches have tended to be operated largely for the benefit of British firms or of foreign concerns in connection with their British business. While accounts for foreigners in local currency have not been refused, they have not been solicited. Untoward conditions on the Continent are said to have diverted a certain amount of native business to the British institution, with its traditional conservatism and reflected glory of the parent bank, but this factor does not seem to have been of sufficient importance to create open ill-will among Continental banks acting as agents and correspondents.

The business undertaken is believed by Dr Robinson to have been on the whole profitable, but the difficulties encountered have been very formidable. In some cases the British concern has come in for special attention from the foreign taxgatherers. In at least one instance, unsound practice leading to a disastrous failure on the part of an important competing foreign institution has been responsible for a highly dangerous "run" on the local branch of a British bank. As all the conservatism in the world cannot obviate this danger, it would seem that there is a good deal to be said against establishing an outpost of British banking in any part of the world where any instability exists as regards the position of native institutions. At the present time the tendency is to limit the scope of these foreign branches of the Big Five. In some cases foreign branches have been closed, and in no cases are their powers being extended. That the policy of direct representation overseas did not at any time pass beyond the experimental stage seems to be indicated by the fact that the movement did not, save in exceptional circumstances, extend beyond three countries—namely, Spain, France and Belgium.

The promoters of the British Overseas Bank attacked the problem on different lines. Their policy was to establish contacts with as many foreign institutions as possible, with a minimum of risk, and to acquire a direct stock interest in overseas institutions only in exceptional cases. In practice the bank has concentrated many of its energies on preparing the ground in Central and Eastern European countries for development when a favourable time arrives. In the City of London the bank is best known on account of its intelligence and foreign exchange services. In the first respect it has undoubtedly covered a large field, and has done much to replace the facilities which, up to 1914, were largely monopolised by the London branches of German and certain other foreign banking institutions. Its detailed knowledge of and numerous connections in countries with disturbed currencies have enabled it to fill a real need in the City of facilities for "future" exchange operations.

At the outset of its career no fewer than eight different institutions, operating in a variety of areas, were responsible for its control, but the number has recently been reduced to three. Dr Robinson is inclined to stress the opportunities for mutual interchange of services and information provided by the former régime, but it is a moot point whether the bank will not gain on the whole by the greater elasticity in administrative methods likely to be obtained under the new arrangement. The caution displayed by those responsible for its policy has been amply justified by the course of events up to the present, but obviously only a fractional part of the bank's potential

field of operation has been touched as yet. Its subsidiary, the Anglo-Polish Bank, has developed at a phenomenal rate, and called for substantial capital accretions, partly in consequence of rapid depreciation of the Polish national currency.

The British Trade Corporation was incorporated by Royal Charter in April, 1917, on the lines suggested by a Departmental Committee of the Board of Trade. Two main aspects have been distinguishable in its general policy. It has essayed to encourage British trade directly by filling the rôle of the "industrial" bank, familiar on the Continent, but practically non-existent in pre-war days in London; and to encourage overseas trade indirectly by entering foreign fields, such as Brazil, the Levant, and Southern Russia, formerly held by "enemy" concerns. Fortune has been particularly unkind. The early collapse of the post-war boom greatly limited the corporation's sphere of action at home, and the particular markets to which its activities were directed abroad turned out to be those hardest hit by political instability and economic depression. Dr Robinson sums up its experiences as follows—"Its knuckles have been rapped wherever its interest extended in overseas areas, for the reason that the dramatic ups and downs of world business and the running sores of European politics could not be anticipated at the time when its far-reaching programme was undertaken to meet existing needs." Tribute is paid to the courage with which those responsible have faced the situation, and the energetic way in which they have cleared the decks and laid the foundation for future development whenever that becomes possible. The misfortunes of the past will probably be rich in experience for those guiding the corporation's destinies. Possibly the steady increase in the volume of trade at home and the slow but marked recovery in many foreign markets will, in the near future, enable the corporation usefully to intervene, but it is clear that the ambitious programme set out in the rosy days of 1917-19 will not, at least for several years to come, be a matter of practical politics. There seems to be much force in Dr Robinson's suggestion that it is on the domestic side, and particularly in the sphere of issue business, that the more immediate opportunities for development are to be found.

Notes of the Week.

Our Index Number.—A substantial decline in commodity wholesale prices in May is registered by our Index Number, but this is very largely due to special causes—a substantial decline in sugar prices which has almost synchronised with the reduction in the duty, and a reaction in tin. The decline for the month amounts to 110 points, of which over two-thirds is due to sugar alone. The total is now 4527, which is the lowest figure recorded since October last, and compares with 4412 twelve months ago. The table below shows the changes in the various groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	352	618	464	553	2566	116.6
" Dec., 1915	897	446	731	711	848	3634	165.1

Apart from the changes already referred to, movements during the month have been quite small. In the first group of foodstuffs a seasonal advance in the price of potatoes was offset by a decline in pork. In subsidiary foodstuffs the decline is entirely due to sugar, slight changes in tea and butter counteracting one another. It was explained in last week's *Economist* (page 1101) that a substantial and quite unexpected increase in the Cuban sugar crop estimates produced a sharp drop in prices. The total decline for the month in the quotation, including the duty, amounts to 19s per cwt, namely, from 57s to 38s. In the textile group changes were very small, the net decline amounting to 6½ points. Coal and tin are mainly responsible for the drop in the minerals group, and a decline in tallow is the only change in the miscellaneous group. The table below sets out the changes in each commodity's index number in comparison with that for the end of April, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	81	+ 14	Cotton, A	1654	+ 5	Copper	51½	- 1½
English	86	+ 4	Cotton, E	1594	- 1			
Flour	75	+ 3	Yarn	1604	- 3	Minerals	753	- 35
Barley	85½	- 3	Cloth	146				
Oats	78½	+ 1	Wool, Eng.	154	- 5	Baltic timber	103½	
Potatoes	144	+ 13	Do Aust.	148	- 3	Amer. timber	89½	
Rice	119	+ 1	Silk	99	- 3	Leather	604	
Beef	86½	- 1	Flax	180		Petroleum	108	
Mutton	87½	+ 4½	Hemp	55	+ 4	Oils	764	
Pork	69	- 15½	Jute	90		Oilseed	81	- ½
						Tallow	714	- 3½
Cereals & meat	912	+ 8	Textiles	1,357½	- 6½	Indigo	87	
						Crystals	85½	
Tea	148	- 2	Pig-iron	98	- 1½	Rubber	11½	- ½
Coffee	116½	- 7	Steel rails	95				
Sugar, cane	136	- 67½	Iron bars	96		Miscellaneous	774	- 4½
Sugar, beet	130	- 5	Coal, steam	134	- 9			
Butter	83½	+ 2½	House coal	88	- 6	Total	4,527	-110
Tobacco	116½		Lead	129	- 3			
			Tin	81½	- 14			
Other foods	730½	- 72						

Last month's decline reduces the increase in the total figure over that for the end of July, 1914, from 80.8 per cent. to 76.5 per cent., the latter comparing with 78.6 per cent. at the end of last year, and 63.1 per cent. at the end of July last. The final table shows the relation of each of the groups to the pre-war figure:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec. "	233	229	209	261	230	230.9

Mar. "	155	240	213	173	141	181.0
Apl. "	156	228	221	170	141	180.8
May "	157	208	220	162	140	176.5

Textiles now show the largest increase over the pre-war level, and other food has fallen to the second place for the first time for several years.

The French Political Position.—The events of the present week have done little towards straightening out the confusion of French politics. One step forward, it is true, has been taken. M. Poincaré has definitely resigned, and the newly constituted Chamber of Deputies has met and elected M. Painlevé as President of the Chamber. A majority in his favour was a foregone conclusion, the size of the majority being the interesting point. The voting showed 296 votes for M. Painlevé against 209 votes for M. Maginot, the late Minister for War, and 35 for M. Marty, the amnestied mutineer of Black Sea fame. The impression derived from the voting is that a Radical and Radical-Socialist Government, dependent for a majority on the Socialist group, will be faced with frequent threats to its effective existence. For the moment, however, attention is concentrated on the position of M. Millerand. The earlier expectation that he would resign has given way to

* "Foreign Credit Facilities in the United Kingdom." By Leland Rex Robinson, Ph.D., Columbia University Studies. (London) P. S. King and Son, Limited.

the belief that he will not do so, except as a result of an adverse vote in both the Chamber and the Senate. He will apparently follow the normal constitutional procedure of sending a Presidential address to both bodies. From the Chamber he will certainly receive an adverse answer, but the prospects regarding the Senatorial vote are less clear; and there appears to be a bare possibility of a clash between the two Houses. But before such a contingency could arise, a Government must be formed, and the question of immediate importance is what line M. Herriot will take, when invited by M. Millerand to form a Ministry. M. Herriot's followers' slogan is "Millerand must go," and there has been in the Radical and Radical-Socialist group a very strongly expressed feeling that no member of the group could accept a mandate from M. Millerand. How far this position may be modified it cannot at the moment be said. One course open to M. Herriot is to refuse to form a Ministry, and to press in the Chamber a motion demanding M. Millerand's resignation. It is to be hoped that the development of events will be swift, for not only is the present confusion most disturbing to the exchange, but it cannot fail to exert some influence on the course of political events in Berlin. While the world is waiting and hoping for action on the lines of the Experts' Report, every moment of delay in the clearing up of the French political position is serious.

The Mosul Question.—The negotiations at Constantinople between the British and Turkish Governments regarding the future of the Mosul Vilayet are in suspense while Fethi Bey, the Turkish delegate, is applying for further instructions from Angora; but it is virtually certain that the Conference will break down, since neither party has receded from the respective points of view which were set out so elaborately during the Peace Conference at Lausanne last year. The Turks refuse to abandon their claim to the province because it contains a non-Arab Muslim majority, whereas, in their National Pact of January, 1920, they only renounced their sovereignty over the Arab provinces. The British Government replies that while the population of the city of Mosul itself and of the districts west of the Tigris is Arab, the larger part of the province, lying east of the river, is inhabited not by Turks, but by Kurds (with a minority of Nestorian Christians, whose safety might be compromised by their proved loyalty to the British régime during the period of British occupation). The Turks, however, are anxious to include these Southern Kurds within their frontiers, since there is a Kurdish majority in several of their eastern provinces north of the present line of demarcation, and they are afraid that if Kurdish national self-government develops south of the line, the loyalty of the Northern Kurds towards Turkey may be undermined and their aspirations centred upon national independence. The British Government, on their side, take no interest in the Northern Kurds, and have no intention of creating trouble among them, but—regarding the question of Northern Kurdistan as an internal affair of Turkey—they do not feel that it ought to influence the disposal of Southern Kurdistan; and certainly (if there is not to be a united and independent Kurdistan, at any rate for the time being) the strategic and economic factors are in favour of the political association between the Southern Kurds and the Arabs of Iraq being maintained, and not of assigning the Southern Kurds to Turkey; there the matter stood at Lausanne, and stands to-day, and now that the first step laid down in the Lausanne Treaty (Art. 3, Part II.) has been taken without success, the next step automatically follows: "The frontier," it is provided, "between Turkey and Iraq shall be laid down in friendly arrangement to be concluded between Turkey and Great Britain within nine months [of the ratification of the Treaty]. In the event of no agreement being reached between the two Governments within the time mentioned, the dispute shall be referred to the Council of the League of Nations." Meanwhile, the local *status quo* is to be maintained. It is impossible to anticipate what the decision of the League will be, but it is important that, if it turns out to be wholly or partly unfavourable to Turkish claims, it should be rendered in such a form as to convince the Turks that

it has been given impartially. While Turkey is not yet a member, the British Empire has a permanent place on the Council. The League may therefore be represented, from the Turkish point of view, as an instrument of the Allies, or at any rate of the European peoples, and this might have an adverse effect upon the attitude towards the League of other Oriental nations. It is desirable, therefore, that some of the present Oriental members of the League shall be asked to collaborate in whatever practical steps for investigation and decision the Council may decide to take when the question comes before it.

Stock Exchange Membership.—The Stock Exchange Committee have passed an alteration to the rule regulating admission of candidates to membership of the Stock Exchange, the importance of which change is shown in the fact that it will require confirmation next Tuesday before it can be incorporated into the existing Rule. The new clause proposes that every recommender of a new candidate for admission to the Stock Exchange shall be "Satisfied from personal knowledge as to the candidate's fitness, both financially and in all other respects, to become a member of the Stock Exchange." The step is important, writes a Stock Exchange correspondent, in that it shows that the Committee are alive to the desirability of electing only such candidates as shall possess real qualification for membership. There are very few professions or callings in which admission to the full rights of membership can be obtained with so modest an outlay of money, or so slender qualifications for the office. The mere fact that nominations to Stock Exchange membership are priced at about £50 apiece is indicated as a reflection of the esteem in which membership is held. The action of the Committee may be welcomed upon a broader basis than that which touches the domestic side of Stock Exchange affairs. After all, the Stock Exchange business is one which calls for a good deal of technical knowledge if the member is to carry out faithfully and well his responsibilities to the investing public. Before a candidate is selected to fill any responsible position in the Stock Department of the Public Trustee, he has to pass a fairly stiff examination on a variety of subjects closely connected with finance. He must be able to distinguish between the character of one security and that of another. He must be prepared to give reasons why one particular stock is more desirable than another for a trust, the circumstances of which are set before him. There is no examination of this sort connected with the Stock Exchange. It may be doubted whether any firm of brokers or jobbers in the House set a paper before candidates who wish to enter their employ. Nevertheless, the interest of the public is at stake, and it stands to reason that there should be a sound, practical knowledge of modern financial conditions required from men who are consulted by thousands of people every day. Even in speculative matters the possession of a certain amount of technical knowledge has its value from the point of view of the public. The suggestion has been made many times during the past decade or two that the Stock Exchange as a profession would gain in prestige and service to the public if there were to be examination into the technical qualifications of men who aspire to membership of the House. This is not likely to come from voluntary effort. Classes are formed every winter for the express purpose of teaching Stock Exchange subjects, but the amount of support which they receive is meagre when it is remembered that there are nearly 4,000 members of the House, and probably 10,000 clerks connected with the business. He stands to be called a dreamer and a visionary who claims sound sense for the idea that the Stock Exchange should follow the example set by many other professions in the institution of scholarships and degrees for those who enter upon a business which concerns, literally, millions of money. No doubt it will be argued that the proposed alteration of the rule is somewhat vague in the obligation which it is intended to impose upon those who recommend new candidates for admission to the House, but it points to the fact that the Committee recognise the importance of the matter to the Stock Exchange and to the public.

Cost of Housing Proposals.—The following table contained in a White Paper (Cmd. 2151) shows how the cost to the State and the local authorities of Mr Wheatley's housing scheme rises and falls over 56 years:—

Year.	Exchequer Charge on £.	Charge on Local Rates. £.	Year.	Exchequer Charge. £.	Charge on Local Rates. £.
1924-1925	278,000	135,000	1964-65	22,878,000	11,115,000
1925-26	1,072,000	521,000	1965-66	22,084,000	10,729,000
1926-27	1,905,000	925,000	1966-67	21,251,000	10,325,000
1927-28	2,823,000	1,371,000	1967-68	20,333,000	9,879,000
1928-29	3,827,000	1,859,000	1968-69	19,329,000	9,391,000
1929-30	4,946,000	2,403,000	1969-70	18,210,000	8,847,000
1930-31	6,195,000	3,010,000	1970-71	16,961,000	8,240,000
1931-32	7,601,000	3,693,000	1971-72	15,555,000	7,557,000
1932-33	9,180,000	4,460,000	1972-73	13,976,000	6,790,000
1933-34	10,930,000	5,510,000	1973-74	12,226,000	5,940,000
1934-35	12,894,000	6,231,000	1974-75	10,332,000	5,019,000
1935-36	14,761,000	7,172,000	1975-76	8,395,000	4,078,000
1936-37	16,699,000	8,113,000	1976-77	6,457,000	3,137,000
1937-38	18,636,000	9,054,000	1977-78	4,520,000	2,196,000
1938-39	20,573,000	9,995,000	1978-79	2,583,000	1,255,000
1939-40	22,511,000	10,936,000	1979-80	645,000	314,000
1940-41	23,156,000*	11,250,000			
1963-64					

The maximum of £23,156,000 per annum for the State and £11,250,000 for local authorities runs on for over 20 years—from 1940-41 to 1963-64.

The American Cotton Crop.—Our Manchester correspondent writes:—At the beginning of this week the Department of Commerce of the United States Government published its first report on the cotton crop for the season 1924-25. In the opinion of most private firms a statement of about 67 per cent. was expected, but the report turned out to be 65.6 per cent., against 71 per cent. a year ago. The disappointing figure resulted in a rise in values, but this was only temporary as the higher prices brought out profit taking, and the advance was lost. It was officially announced that the season is late in most of the belt, though not quite so late as last year. Plantings are seven to ten days late. The situation at the moment is serious for cotton users throughout the world. American crops during the last three seasons have not been equal to the requirements of traders, and stocks have been reduced to a very low level. If anxiety is to be removed, it is necessary that the growth for next year should not be less than 13,000,000 bales, and at the present time the information available does not point to so large an amount being grown. It is altogether too early, however, for reliable estimates of the crop to be issued, and everything depends upon the weather conditions in the growing area during the next couple of months. The absence of rain and higher temperatures would very soon bring about a distinct change in the outlook. It may be mentioned that in 1920 the first official report for the season was only 62.4 per cent., yet the growth totalled 13,700,000 bales. Spinners in Lancashire are not disposed to anticipate their future requirements at present prices, but developments in the situation are being watched very closely. It is probable that more reliable news will be received from the commission of the International Cotton Federation, which is about to make an investigation of the crop in America, and their reports, which will be received by cable, will give a lead to spinners in Lancashire.

Burmah Oil Company.—A further improvement in profits is shown in the report for 1923 of the Burmah Oil Company. The directors state that, "in the volume of oil produced, refined, and marketed by the company, 1923 surpassed the previous year of 1922," and crude oil stocks have been restored to the full limits of available storage. "The increased volume of products found a ready sale in usual markets at prices generally unchanged, except in the case of petrol, which was affected both in India and for export by the world's lower values for that product." The trading profit, after allowing £333,237 for depreciation on refineries, pipe lines, &c., was £2,452,512, which compares with £2,428,155 in 1922, when depreciation allowances totalled £149,807. Interest and dividends produced £439,100, as against

* 8 per cent. Prof. Share issue exs. and Dom. Income Tax Refunded.
† Tax free. ‡ Including donation of £50,000 to Cambridge University

There was a saving of over £70,000 in income-tax, but salaries, office rent, charges, &c., absorbed £20,000 more. A sum of £50,000 was required to write off the balance of the charges for an issue of 8 per cent. preference shares; £54,400 was refunded to preference shareholders for Dominion income-tax. The reserve fund is credited with £200,000, as in the previous year, and £136,000 is transferred to Employees' Provident Fund, as against £121,500 a year ago. The higher amount required for preference dividend is due partly to the smaller amount of income-tax deducted and partly to the fact that the £3 millions 8 per cent. preference shares now rank for full dividend. The ordinary dividend is maintained at 30 per cent., free of income-tax. The balance-sheet, of which an analysis will be found in a later column, shows reductions of £732,600 in creditors and of £223,500 in debtors. Cash and loans, at £873,300, are £116,300 lower, while investments, at £4,700,500, show a decline of £38,300. On what basis the later are valued we are not told. The directors circulated with the report the communique which they issued to the Press in February last giving the company's attitude to and position in the negotiations for the sale of the Government's shareholding in the Anglo-Persian Oil Company to the Burmah Oil Company, and for the subsequent joining by the Burmah in a merger with the Royal Dutch and Shell companies.

Bleachers' Association.—A slight improvement in profits is shown in the report of the Bleachers' Association for the year ended March 31st last, the trading profit of £1,091,600 being the second highest in the history of

the company, while the net profit is within £10,000 of the figure for the record year 1919-20. The trading profit, however, is arrived at after charging £379,300 for repairs and maintenance, whereas this item took £410,500 a year ago. The following table gives results since 1907:—

Year Ending March 31.	Trading Profit.	Net Profits.	Prof. Dividend.	Ordinary Dividend.	To Reserve, &c.	Inc. or Dec. to Carry Forward.
	£	£	£	£	£	£

1922.....	950,138	653,888	135,988	296,382	200,000	+ 21,515
1923.....	1,084,714	788,464	135,988	474,216	175,954	+ 2,306
1924.....	1,091,628	795,378	135,988	474,216	175,000	+ 10,174

The depreciation fund is credited with £180,000, as last year, and this is charged before striking net profits. The reserve allocations consist of £125,000 to general reserve, raising it to £1,700,000, and £50,000 to superannuation fund, making a total of £250,140. The ordinary dividend is maintained at 20 per cent., and the balance forward is increased by £10,200 to £361,700. The directors point out that the profits, after deducting all charges prior to debenture stock, interest, and preference share dividend, are equivalent to 9.93 per cent. on the capital employed, as against 9.99 per cent. a year ago, and 8.61 per cent. for 1921-22. A detailed analysis of the balance-sheet will be found in a later column.

Elder, Dempster.—The report for 1923 of Elder, Dempster, and Co., which is partly a holding company, shows a slight decline in profits, but how far this is due to a decline in the earnings of the company's fleet and how far to a drop in receipts from investments in other shipping companies, it is impossible to say. Income from investments and profit at head office and branches is given as £527,600, against £535,700 a year ago. Profits and appropriations for several years are compared below:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.

* Free of tax.

Further increases in the preference capital account for the larger amount required for preference dividend. No allocation is made to reserve, and after reducing the ordinary dividend from 7 to 6 per cent., the balance carried forward is £11,900 lower at £101,800. The main item of the assets side of the balance-sheet, in the customary style of shipping companies, "shipping, industrial and general investments, steamers, stocks, plant, small craft, &c., less depreciation," is £148,300 lower at £12,610,700, but debtors have risen by £417,100 to £1,180,700. Creditors show a reduction of £548,400, and bills payable are £211,900 lower. An analysis of the balance-sheet is printed on a later page.

William Cory.—A slight drop in profits is shown in the accounts of Wm. Cory and Son, Limited, for the year ended March 31st last, but as a larger amount was brought into the accounts than was the case a year ago, the amount available for distribution is slightly greater. The figures below give a comparison of results for a number of years past:—

	1914-15.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
	£	£	£	£	£	£

	58,231	278,308	391,812	478,839	451,825	464,053

The distribution of profits remains the same as in the past two years, with the exception of allocations to reserve. Reserve account is now given as £750,000. But there is a premium on share account which amounts to £440,000, and an insurance fund for steamers of £100,000. Employees' shares have been issued for over £60,000. Total assets are £9,604,477, as against £9,882,762 a year ago. The balance-sheet, of which an analysis appears elsewhere, shows no changes of importance. The position is still a very strong one, British Government securities standing at £2,148,000, at or under cost.

British Electric Traction.—Shareholders will probably be quite satisfied with the progress recorded in the accounts of the British Electric Traction Company, Limited, now published for the year ended March 31, 1924. The ordinary dividend—at six—is increased by 1 per cent., and an additional £30,019 is carried forward. Here is a record showing how the company has fared in recent years:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.

In the large number of companies presenting accounts in these days we are liable to overlook the importance of some of our older undertakings. Formed in 1896, the British Electric Traction is a holding company mainly interested in electrical concerns, which in turn cover a wide field. Investments are given as £4,283,188, and the company is to be congratulated upon its policy of supplying a complete list of its securities. These are many and varied. Its chief holdings of shares in the electricity industry are: London and Suburban Traction, £883,500; Birmingham District, £481,936; Scottish General Transport, £234,230; British Automobile Traction, £221,596; and Northern General Transport, £231,972. Others could be selected from the list, but space alone forbids us detailing them. The balance-sheet will be found fully analysed in our usual column.

Consolidated Diamonds.—A very important point transpired at the meeting of this company held in Cape Town on May 21st. It was nothing less than this—that, contrary to all the assurances previously given, the Union Government had taken out of the hands of the directors the completion of a new agreement fixing the quota which the company would sell to the diamond pool this year. Under the proposed contract, the South-Western diamond producers would have been assured of sales totalling approximately £1,400,000; as it is, their quota will amount to no more than £604,000. Not only is the company seriously damaged by this action, but a grave question of principle is thereby raised. While the Government's claim to take the marketing of diamonds into their own hands has so far been confined to South-West Africa, a recently published report indicates the Minister of Mines to be in favour of the assumption of power by the Government in respect of the Union generally.

There can be little doubt that any such measure would be vigorously opposed by all producers, large and small. With regard to the absence of a dividend, the chairman of the Consolidated Company explained—as pointed out in our recent "Note"—that the amount actually free for distribution was inadequate.

Keeley Silver.—Our mining correspondent writes:—The experience of this Canadian proposition furnishes an admirable exemplification of the outcome of "trying again." The property was abandoned and the camp deserted. But a young Dominion geologist, Dr Mackintosh Bell, after a careful study of the conditions, urged that further development should be undertaken. As a result, the Keeley proved to be one of the richest silver mines of the world. In the year ended February 29th last the output totalled 1,589,000 ozs, or rather more than double that of the preceding period; nevertheless, the ore reserves are now estimated to contain the substantially increased amount of 3,743,000 ozs. On the financial side, comparisons are rendered somewhat difficult by the transfer of the undertaking to a Canadian registered company. However, the profit of \$582,650 represents just over 29 cents per \$1 share, whereof 20 cents were distributed. At the date of the balance-sheet the net liquid assets (allowing for the sum required to provide the final dividend) equalled \$520,000. The company, therefore, is in a position to press forward with its extended development programme. There are, of course, considerable speculative possibilities, but these seem pretty fully discounted in the present quotation for the shares, which represents nearly 150 per cent. premium, and reduces the yield to about 8 per cent.; or 10 per cent. on the basis of the last distribution.

Japanese Trade and Finance.—Advices from Tokyo state that the banks and the silk brokers have at last reached an agreement regarding the silk stocks burnt by the earthquake fire, against which the banks had made advances to the brokers. It has also been agreed that the rates charged by banks for advances to the silk trade this year should be the same as those charged last year. There are signs that the banks are supplying ample accommodation to meet the seasonal demand, but up to the end of May the displacement of credit was slight owing to delay in the production of new cocoons. With the demand for trade slight, and with heavy payments by the Government to fire insurance companies, the banks have been in a comfortable position, and the rate of short loans declined to 7½ per cent. at the end of May, and shortly afterwards further weakened. Commodity markets are dull, prices of rice and cotton yarn remaining unchanged, while the price of raw silk dropped slightly at the close of the month. Quiet conditions rule in the stock markets. At the end of May the note issue of the Bank of Japan was 1,287 million yen, as compared with 1,225 millions a year ago, and discounts and advances 532 million yen, against 312 millions at the end of May, 1923.

Oversea Correspondence.

UNITED STATES.—IMPORTANT LEGISLATION BY CONGRESS—SOLDIER BONUS, IMMIGRATION, AND TAX REDUCTION BILLS ENACTED.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 27.

New legislation, far-reaching in its effects, and bound to have a vital bearing upon future financial and economic conditions in this country, has been enacted by Congress during the past week. The most important measures passed are the soldier bonus, immigration, and tax-reduction bills. By a vote of 59 to 26 the Senate overrode the President's veto of the bonus bill, following similar action by the House, and it therefore becomes law. The new Immigration Act has been signed by the President, although he strongly objected to the Japanese exclusion provision. The compromise tax-reduction

measure, agreed to by the conference committee, has been passed by a practically unanimous vote in both branches of Congress, only six votes being cast against it in the Senate and nine in the House, and is now before President Coolidge for his signature. The general expectation is that he will approve it. While the Bill in many respects falls far short of the administration's programme, and contains numerous objectionable features, including unscientific tax principles, it, nevertheless, will afford considerable relief from present taxes, and is probably the best tax-reduction Act Congress can produce while that body is constituted as it is. The Bill in its present form will undoubtedly become law, because the overwhelming majority vote in the Senate and House makes its repassage certain, in the event that the President should veto it.

As finally passed, the tax-reduction measure during the year 1925 is expected to cut off about \$472,000,000 from present taxes, or approximately \$100,000,000 more than the expected surplus, while upwards of \$150,000,000 expense on account of the soldier bonus legislation will also have to be provided for. The proposed graduated tax on undistributed earnings of corporations was eliminated. Amendments requiring full publicity of tax returns were likewise rejected, but the Bill gives committees of each branch of Congress authority to examine tax returns, and other provisions require the Board of Tax Appeals to hold open hearings in cases of disputes over taxes, with published evidence in cases involving \$10,000 or more, and there must be kept open for inspection in each collection district lists of taxpayers, with names, addresses, and amounts of taxes paid. The Democratic sur-tax and normal tax rates have been retained. The normal rate of taxes on incomes will be 2 per cent. on the first \$4,000 of income, 4 per cent. on incomes from \$4,000 to \$8,000, and 6 per cent. on those above \$8,000. The sur-tax rates begin at 1 per cent. on incomes in excess of \$10,000, and are gradually increased to a maximum of 40 per cent. on incomes of more than \$500,000. Under the new rates a married man having no dependents will pay a tax of \$7.50, instead of \$20 as at present, on an income of \$3,000; \$22.50 instead of \$60 on \$4,000; \$37.50 against \$100 on \$5,000; \$207.50 instead of \$520 on \$10,000; and correspondingly lower taxes on larger incomes. All heads of families are allowed a personal exemption of \$2,500, regardless of the amount of their income; under the present law such an exemption is granted only to those whose net income is less than \$5,000, the allowance to all others being \$2,000.

The action of the United States Senate in overriding President Coolidge's veto of the World-War Adjusted Compensation Act, commonly known as the soldier bonus Bill, was a keen disappointment, though no surprise, to financial and business interests. In banking circles the consensus of opinion is that the bonus legislation will have no material effect upon the credit situation or money market—at least, not for some time to come. It is, perhaps, fortunate that the bonus Bill, if destined to become law, was enacted at a time when this country enjoys an unprecedented credit position and its banking structure is exceptionally strong. Since the bonus Bill has finally become law, a brief outline of its main provisions may prove of interest. According to Washington estimates, 3,038,283 ex-Service men will receive insurance policies under this measure, while 389,583 will obtain cash payments of \$50 or less. The War Department places the

total number of men who were finally accepted and who performed actual military service at 4,051,606. The average insurance policy is figured at \$962. The maximum values of the policies are calculated at approximately \$1,900 for overseas service and \$1,600 for home service. Adjusted service compensation is computed on the basis of \$1 a day for home service and \$1.25 for that overseas, but the first 60 days are not counted. The value of the insurance policies is said to be equivalent to the amount which the adjusted service credit, plus 25 per cent., would purchase at regular prices of insurance based on 4 per cent. interest compounded annually. Applications for the bonus may be made at any time before January 1, 1928, but cash payments will not be distributed until after March 1, 1925. The insurance policies will be dated January 1, 1925. It is provided that loans may be obtained on the policies at any National or State bank up to 90 per cent. of their current face value after two years from the date of insurance. All veterans up to and including the rank of Captain in the army and marine corps and Lieutenant in the navy, also women who served as yeomen in the navy and marine corps, are eligible for the bonus. Provision is made for payment to dependents of deceased veterans of the amount of adjusted compensation to which the latter would be entitled if living.

Under the new immigration law, signed this week by President Coolidge, quotas of all countries are fixed at 2 per cent., based on the foreign-born population in this country according to the 1890 census. It will become effective July 1st, when the temporary Act which limited immigration to 3 per cent. of the foreign-born population here under the 1910 census will expire. The new Act is not only more rigid, in that it excludes Japanese labourers after July 1st, but reduces the total yearly immigration into the United States from about 370,000 to approximately 160,000. In signing the Bill, President Coolidge expressed his hearty approval of its main features, but regretted "the impossibility of severing from it the exclusion provision which, in the light of existing law, affects especially the Japanese." The enactment of this provision, he said, "does not imply any change in our sentiment of admiration and cordial friendship for the Japanese people, a sentiment which has had and will continue to have abundant manifestation. The Bill rather expresses the determination of the Congress to exercise its prerogative in defining by legislation the control of immigration instead of leaving it to international arrangements." On the other hand, he referred to the understanding this country has had for many years with Japan, by which the Japanese Government has voluntarily undertaken to prevent the emigration of labourers to the United States, and it would have been much better in his judgment and more effective in the actual control of legislation if the United States had continued to invite the co-operation of Japan and had "thus avoided creating any ground for misapprehension by an unnecessary statutory enactment," which he described as "deplorable at this time."

GERMANY.—CABINET CRISIS—CREDIT AND DEPRECIATION — EXCHANGE — PRICES — INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 2.

THE obstacles to the formation of a Cabinet have not yet been overcome. The election as Reichstag President of the German-National Wallraf, as against the Socialist candidate, seemed at first to indicate that the new Reichstag grouping would be a loose union of the German-Nationals with most of the moderate parties as against the Left, but the attempt to form a Cabinet on this basis has so far failed. The German-Nationals raised their terms, demanded all the chief portfolios, and a change in foreign and domestic policy, and, in particular, assailed Dr Stresemann, the present Foreign Minister, whom the People's Party wish to retain in that post. At the time of writing Dr Marx is trying to form a central Cabinet without the Nationals, but the People's Party hesitates to go into this. It is very doubtful whether such a Cabinet would survive. The Bavarian

People's Party, which has considerable weight, has pronounced itself as being against any Cabinet which does not include the Nationals. The Socialists are ignored in all these combinations, but as a Cabinet without the German-Nationals would almost certainly have to face Nationalist opposition, a new Marx Cabinet would probably have to depend upon Socialist support. None of the parties seem to realise that their largely personal differences are of small importance compared with the need of creating a stable Government which will take Reparations firmly in hand.

The credit crisis continues, and it has brought forth a detailed statement from the Reichsbank President which confirms the account of official policy sent from here last week. The shortage of working capital suffered by industry is illustrated by the fact that Pirmasens, boot manufacturers, are paying wages partly in boots, which the employees sell as best as they can. The development of interest rates on the Frankfurt-on-Main money market shows clearly that the present high interest rates are determined solely by money shortage, and no longer by fear of currency depreciation. The enormous rates charged in late 1923—about 40 per cent. per day—were, of course, "risk premiums," intended to cover the lender against the certainty that he would get back worse money than he lent. In January, although already the paper mark stabilisation had lasted some weeks, the rate for month-term loans was 23.7 per cent. per month, over 250 per cent. a year. It fell in early February to 3.8 per cent. a month, and rose in early May to 6.3 per cent. a month. "Stable-money" (*wertbeständig*) loans, the repayment of which is guaranteed at the original gold value, could be had in February at 1.75 per cent. per month. In May they cost 5.55 per cent. a month, as against the 6.30 per cent. for non-"stable-money" loans. This shows that while the risk of currency depreciation is, at any rate for short terms, now considered very small, the interest rate on loans subject to no depreciation risk at all has increased more than threefold in the last four months.

Dr Schacht's statement shows that no immediate improvement can be expected from any home source. Summarised roughly, Dr Schacht's view is that the interest of currency stability (which is also the State financial interest) must be put above the interests of industry. It is impossible to expand credit further without dangerously increasing the circulation, imperilling the currency stability, and reverting to the conditions of 1919-23. "Industry," says Dr Schacht, "must look after itself." As a result of the withdrawal of emergency notes and gold loan currency, the whole circulation (reckoned in gold) is to-day at about the same level as at the beginning of the year. Of emergency notes only 175 million gold marks circulate against one milliard then. "The Reichsbank adheres to its resolution to frame its credit policy on considerations of currency, because it has no other means of maintaining the mark's stability." It is impossible to increase further the paper mark circulation. "Against these clear facts the agitation for expansion of credit merely with the aid of the note-printing press is incomprehensible." Dr Schacht refuses to help industrial concerns out of difficulties caused by strikes, or to finance deliveries in kind to the Allies. He concluded by saying that the credit crisis cannot be overcome unless labour peace is restored, and also unless the Republic's liabilities to abroad are regulated. He protested against the ever-growing *Geschäftsaufsicht* (qualified moratorium) system, which is being abused by industrial concerns in order to evade liabilities on bills to the Reichsbank. The Bank, which has already lent 800 million gold marks to industry, has, however, decided to lend 20 millions more, in view of the difficulties caused by the failure of winter crops.

The Reichsbank's policy, helped by the operations of the Gold Discount Bank, has for the moment almost solved the exchange question. Not long ago the Bank was rationing applicants for exchange to 1 per cent. of their demand. Later it was able to meet the whole demand for the minor exchanges, but as late as May 26th it met only 10 per cent. of the demand for gulden, and 3 per cent. each for sterling and dollars. To-day with the exception of dollars, for which the ration was 50 per

cent., 100 per cent. of the demand for all exchanges, including sterling, was met. The daily demand for exchange, which once reached a value of 400 million gold marks (naturally far more than the real need), has now fallen to about one-tenth of that sum. Through the Reichsbank's severe credit policy, hoarders of exchange have been obliged to realise, and, naturally, with the currency depreciation risk fallen very low, as above shown, it is unprofitable to borrow money for exchange purchases at 60-70 per cent. The total of outstanding advances to importers from the Gold Discount Bank on May 23rd was £3,611,279, but this has since risen to about £5,000,000. The shortage of dollars is probably due to the fact that these quote here a little below their parity with the other good exchanges, so that hoarders sacrifice them last. The "black Bourses" which dealt in exchange at above the official rates have now disappeared.

No new general unemployment statistics have been issued. The last Berlin report showed 22,244 unemployed persons receiving public support, against 23,969 a week earlier. There are increasing reports of the shortening of hours and partial closing of factories; but there is so far no sign of the general industrial collapse which was predicted a month ago. The foreign trade report for April shows one more heavy import surplus, a fact which must be taken into account in considering the newly-attained equilibrium in the exchange market. If the passive balances continue it is hard to see how the equilibrium is to be maintained, as the resources of the Gold Discount Bank are limited. Figures (which, as usual, are incomplete owing to imperfect data from occupied territories) are:—

(In Thousands of Gold Marks.)				
IMPORTS.		March.	April.	January-April.
Livestock	8,207	..	9,934	.. 29,630
Food and drinks	163,551	..	175,377	.. 678,257
Raw materials	307,026	..	372,374	.. 1,275,915
Half-finished materials	64,706	..	84,086	.. 266,539
Manufactured goods ..	145,065	..	158,607	.. 526,594
Gold and silver	4,135	..	2,778	.. 13,398
	692,690	..	803,156	.. 2,790,333
EXPORTS.		March.	April.	January-April.
Livestock	313	..	484	.. 1,462
Food and drinks	23,642	..	29,623	.. 86,905
Raw materials	28,248	..	32,336	.. 111,681
Half-finished materials	27,710	..	28,662	.. 114,226
Manufactured goods ..	375,886	..	389,659	.. 1,516,870
Gold and silver	760	..	1,193	.. 4,545
	456,559	..	481,957	.. 1,835,689

In weight imports in April were 2,550,100 metric tons, against 2,481,900 tons in March; exports, 1,020,300 tons, against 860,400 tons. Imports of textiles, materials and finished, continue to increase and exports to decrease. Exports of rolled iron and of iron and steel wares other than machines were 85,798 tons, against 100,240 tons in March, and a monthly average of 193,097 tons in 1922; of machines, 21,537 tons, against 20,567 and 39,895 tons respectively. The unfavourable trade figures are taken as a text for demanding higher import duties, with the aim of excluding foreign goods or compelling competitors to admit German goods more freely. The newest demand is from the aluminium industry, which is almost entirely a war-time creation. Annual production capacity of raw aluminium is at present 28,200 tons; production in 1923 was 10,900 tons, against 14,200 tons in 1922. The new Inn water-power works, with a capacity of 10,000 tons, will be opened this summer. Heavy imports of American aluminium are feared as soon as the existing import-prohibition is removed.

RUSSIA.—TEXTILES—COAL—TIMBER—PRIVATE TRADING—FINANCE.

(FROM OUR CORRESPONDENT.)

Moscow, May 21.

PROFESSOR MANOUILOFF, a well-known Russian economist, writes recently, in the Moscow *Economic Review*, that the Russian textile industry had up to October 1, 1923, received short-term advances from the Soviet banks to the following amounts:—State Bank, 3,980,100 *tchervonetz*; Industrial Bank, 802,500 *tchervonetz*; Moscow Municipal Bank, 800,000 *tchervonetz*; Russian Commercial Bank, 52,100 *tchervonetz*—total, 5,634,700 *tcher-*

vonetz. On January 1st the debt of the textile industry to the State Bank amounted to 4,119,021 *tchervonetz*, and to the Finance Commissariat 297,089 *tchervonetz*. The total credits against textiles opened by the State Bank in 1923 amounted to 10,773,556 *tchervonetz*, 80 per cent. of this sum having been allocated to the purchase of raw materials. The production of textiles in Russia in 1922-23 reached 786,794,300 archines, as compared with 426,029,900 in 1921-22. Wholesale sales in 1923 are estimated at 373 million gold roubles, representing 689 million archines. Unfortunately, there exist no approximate figures of the retail trade, but the Textile Syndicate's report, made in February, 1924, shows that the unrealised stocks in retail hands have increased very considerably, and were valued on January 1, 1924, at 55 million roubles. Since that date textiles have been put on the market in large quantities to effect a reduction of prices, and losses are anticipated by the trust. From October 20th to May 13th the Textile Syndicate had purchased abroad 2 million poods of cotton, of which 1,700,000 poods were American, 290,000 poods Egyptian, and 2,000 Brazilian.

The Coal Administration still refers to difficulties encountered in liquidating the stocks of coal and anthracite in the Donetz basin. Of the estimated production last year of 570 million poods, the undisposed of surplus is put at 97 million poods (1,600,000 tons). The Ukraine Gosplan is endeavouring to turn the sugar, textile and metal industries on to coal fuel, and is proposing to reduce prices for export trade, especially to Italy, Turkey and Austria. The Donetz basin production, October 1st to March 31, 1924, was 271,745,000 poods gross, of which internal consumption was 48,500,000 poods. The number of mines in operation is 170, as compared with 267 last year and 1,800 before the war.

Mr Roudzoutak, Commissar for Railways, attributes the unsatisfactory financial situation of the railways to losses incurred during the depreciation of the *Sovznak* and the smaller goods traffic, due to winter delays caused by snowdrifts and the spring work of clearing the lines. Reduction in expenses (not easy on account of the large minimum maintenance staff necessary), increases of charges, and the postponement of new works are stressed. Mr Roudzoutak considers that foreign loans for railway reconstruction present a dilemma; reconstruction could be effected 50 per cent. with foreign material, yet the acceptance of foreign commodity credits would mean further closing down of Russian factories. In this connection, the Gomza Metallurgical Trust (comprising Sormovo, Mytishtchi, Kolomna, &c., factories) reports that for six months ending March 31st metal goods (pig-iron, steel, locomotive types, tubes, nails, &c.) to the cost price of 33,142,848 roubles were delivered from the factories, but that owing to the obligatory reduction of prices these goods were sold at 27,842,094 roubles—i.e., a deficit of 5,300,754 roubles.

Mr Gromoff, Director of the Central Administration for Forests, who is not a Communist, informed me that the Government's experience with pure forestry concessions had not been happy for the reason that the concessionaires (he cited the particular case of the Otto Wolff concession) had systematically endeavoured to export raw timber from regions in a favourable transport situation, from which

the Government held that sawn timber only should be exported, leaving the raw export from the areas more removed. Mr Gromoff cited the success of one of the mixed timber companies, the Dvinoles, which last year made a profit of 30 per cent. In spite of the difficulties attending the first year's working, all differences with the company had been settled mutually and without recourse to arbitration provided for in the contract. The control of the Inspection of Workers and Peasants Mr Gromoff dismissed as being no more exacting than the control of foreign banks over their clients, and the application of the obligatory Government Labour Code as differing little from the private collective agreements made abroad between employers and workmen; the demands of Russian workmen were, in fact, less than those of foreign workmen. With the present fall in values on the Moscow exchange, timber, in common with other raw materials, is difficult to export. The stocks of sawn timber in hand at the close of navigation last year were 58.4 million cubic feet. The average wages for workmen in the last half of 1923 were 11 to 13 roubles a month. Mr Piatakoff, President of the Concessions Committee, states that "the forest industry is a domain in which we would admit with the greatest will the foreign concessionaire." The area in European Russia available for new concessions is placed at 20 million dessiatins.

The recent sudden creation of the Commissariat for Internal Trade has as one principal aim the institution of an organisation to struggle against private trading, the strong position of which is looked upon with anxiety by the Soviet Commissariats and by the State Co-operatives. Private initiative, on the statement of Mr Kamenev, represents 14 per cent. of the Russian wholesale trade against State Co-operatives 8 per cent., 50 per cent. of the semi-Governmental trade, State Co-operatives 10 per cent.; and 83 per cent. of the retail trade—State Co-operatives 10 per cent. Mr Rykov devoted a large part of a recent speech to the increased importance of and the determination to destroy the Kulacks (richer peasants), who are again beginning to flourish as a result of improved conditions in the agricultural Governments, and who are difficult to suppress, for, unlike the pre-revolution kulacks, who concentrated upon an increase of their land holdings, they now secure a profitable living by lending horses, ploughs, &c., and engaging in trade on the provincial markets. The question of private trading and the strongest measures, including imprisonment and in a few cases even the death penalty, which are being taken against trade officials and private traders, the fear of extinction of the revolutionary spirit which may be the accompaniment of years of peace, and the need of developing and enlarging the Comsomol (Union of Communist Youth) at present occupy an important position in the Soviet Press.

Some steps have been taken to give effect to the decision to transform the Russian Commercial Bank into the Export Bank under the control of the Foreign Trade Commissariat. The president is Mr Taratouta, a Communist, formerly president of the Moscow Cloth Trust and member of the board of the Gosplan. On May 1st the total amount of new rouble and kopeck notes issued by the Finance Commissariat was 108,592,000 roubles, and of tchervonetz by the State Bank 35,200,000. The tchervonetz was quoted on the Moscow exchange on May 14th at 8 roubles 50 copecks. Two State loans were issued in March, the Peasant loan for 50 million roubles in bonds of 5, 3 and 1 roubles, payable December 31, 1925, purchase price 85 per cent. of face value, which it is hoped the peasants will take up and utilise for tax payments—the loan has, in fact, been over-subscribed; and the second five-year lottery loan for 100 million roubles, in bonds of 5, 10 and 50 roubles, interest 6 per cent. This loan has not yet been placed.

A feeling that something favourable will come out of the London Conference—foreign business men are holding up pending its results, and very few are at present in Russia, and no new concessions have been taken up for several weeks—is prevalent, though on the credit question the Soviet authorities, proud of the partial success of their economic and financial policy, are obviously disappointed at the stand taken by the British banks, and have been brought sharply up against the elementary facts which govern credit giving.

POLAND.—THE NEW CURRENCY—INCREASED REVENUES—TRADE DEPRESSION—THE NEW ACT REGULATING THE PRE-WAR DEBTS.

(FROM OUR CORRESPONDENT.)

WARSAW, May 20.

THE introduction of the new currency has been accomplished without any monetary disturbance. The zlotys issued by the Polish Bank are circulating together with the marks, the relation between the two units being fixed at one zloty equal to 1,800,000 marks. The mark is mainly used in payment of smaller sums, while in more important transactions the zloty is more and more replacing the old currency. The foreign exchanges, which have been fixed since the end of April in zlotys, are maintained on a stable level.

Revenue from taxes, customs duties, and monopolies continues to increase. While in January they yielded 27.7 million zlotys, in April the total amount was nearly four times greater, as shown by the figures below (million zlotys):—

	January.	April.
Direct taxes	7.7	50.3
Indirect taxes	8.3	16.9
Import duties	5.4	21.1
Stamp duties	2.5	6.0
Export duties	0.3	3.3
Monopolies	3.5	10.6
	27.7	108.2

The increase of direct taxes from 7.7 to 50.3 zlotys is mainly due to the capital levy, which is to-day one of the principal sources of revenue.

While the financial results of Mr Grabski's reforms have surpassed all expectations, new clouds begin to gather on the economic horizon. As everywhere the cessation of the debauch of the currency has entailed a trade depression which has lately assumed a very serious character. At the end of April Mr Grabski could boast before the Economic Council that the heavy charges of the capital levy were easily supported, and that no business failure can be attributed to the financial reforms started by his administration. Since that date the situation has changed completely, and Poland is now passing through a very severe economic crisis.

The capital famine which has been hampering during recent years the development of Polish industry has become greatly accentuated since the stoppage of the printing press. The monthly rate of discount varies from 5 per cent. to 8 per cent., and it is natural that industry having to support so high a charge cannot compete in foreign markets. The cost of production in Poland's principal export industries, such as iron, coal and textiles, is to-day much above the level in other countries, so that many undertakings are obliged to close their factories. The most serious news comes from Upper Silesia, where the great coal and iron undertakings are suspending work.

The crisis is partly due to increased wages and to decreased productivity of labour. While before the war the wages per ton of coal extracted in Upper Silesia were 0.9 dollars, to-day they are 2.5 dollars. The number of employed workmen is 60 per cent. greater than in 1913, while the production has decreased by 20 per cent.

During the period of inflation the premium which the export trade obtained from the depreciation of the currency enabled Poland, notwithstanding these unfavourable conditions, to sell her products abroad. This stimulant has now ceased to operate, and Polish industry is obliged now to face the difficult problem of increasing the productivity of labour. The manufacturers are demanding a less strict application of the eight-hour day. This demand is vehemently opposed by the labouring class. It is nevertheless certain that increasing unemployment will force the country to undertake some energetic measures for improving the industrial system which during the period of inflation has been neglected in many respects.

The introduction of the new standard made it necessary for the Government to solve the very tangled problem of pre-war debts, and of all obligations incurred during the last ten years. A special Act regulates this matter. Just

as in France after the replacement of the assignats by the *mandats territoriaux* in 1792, and as in Austria in 1811, a special table of depreciation of the paper currency from 1914 to 1924 has been constructed. In Poland the table is more complicated than in the two examples quoted above, because in the territories now forming the Republic four different monetary units were current—the Russian rouble, the Austrian krone, the German and, from 1916, the Polish mark. The table of depreciation establishes the quantity of these currencies which are equal to one zloty in the different periods of depreciation. I give below an extract from this table:—

	Russian Rouble.	Austrian Krone.	German Mark.	Polish Mark.
To August 1, 1914 ..	0.345	0.95	0.81	..
Second half-year, 1916 ..	0.50	1.60	1.09	1.09
First quarter, 1918 ..	0.60	2.00	1.20	1.20
January, 1920	12.00	28.00	9.00	19.00
December, 1920	23.00	..	11.00	100.00
January, 1924	..	..	..	1,600,000.00
April, 1924	..	..	..	1,800,000.00

A debt contracted before the war is expressed in zlotys according to the par of exchange of the gold franc. In proportion with the depreciation of the rouble, the krone, the German and Polish mark, the value of the zloty increases, so that in 1924 it reaches a level surpassing 1½ millions.

This table forms, however, only the basis of further computations. In fixing the amount which a debtor must repay for sums obtained before the war and during the period of inflation, it has become necessary to take into account his financial capacity. If all debts were payable according to their gold value, most landlords, house owners, &c., would be ruined, because their property—partly in consequence of such legislative measures as the Rent Restriction Act—has depreciated. In consequence the gold value of debts has been reduced by the new Act from 90 to 50 per cent. The greatest reductions have been applied in those cases where the property of the debtor has suffered most. According to the different values of rural and urban property in the different parts of Poland, the reductions are smaller or greater. The Polish Act regulating the relation of debtors and creditors constitutes a very interesting attempt to solve a tangled economic problem. It tries to steer a middle course between the postulate of justice which obliges the debtor to repay the real value of what he has obtained and the desire of avoiding a new economic and social crisis.

NORWAY.—STRIKE SETTLEMENT—WAGES AND STANDARD OF LIVING—GOVERNMENT LOAN—GENERAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, May 24.

AFTER upwards of more than thirteen weeks (partly even more than seven months) of stoppage of work, a plebiscite of the workers has to-day agreed to a proposal of settlement, made by the Public Conciliator, backed up by the Government. The details of the agreement will be published this afternoon. Meanwhile, the country will breathe as if relieved from a nightmare.

Captain Gregersen, in the *Employers' Magazine*, has published some very interesting statistics to illustrate the relation between the income and cost of living for an able-bodied workman during the last 35 years. In 1890 the average wages were 2.49 kr a day. In 1895 a rise had taken place to 2.61 kr, or 4.8 per cent. During the same period the cost of living had advanced 1 per cent. If wages had risen proportionately to the cost of living the figure should have been 2.51 kr. Consequently, the standard of living had been improved by 10 ores per day. In 1900 wages had advanced to 3.10 kr, or 24½ per cent., the cost of living by 4 per cent. In 1910 wages were 3.68 kr, an advance of 47.8 per cent., the cost of living 8 per cent., and the standard of living had been improved by 99 ores per day. At the outbreak of the World War, wages were 4.62 kr, or 85.5 per cent. over 1890 level (i.e., not very far from double during 25 years), and the cost of living during the same period had advanced 26 per cent. Consequently, the standard of living was

improved by 1.48 kr per day. During the years 1915, 1916, and 1917, though wages rose rapidly, yet the cost of living rose more quickly. In 1918, however, wages rose to 11.68 kr, or 369.1 per cent. above 1890, the cost of living by 228 per cent., and the improvement of the standard of living was 3.50 kr per day. The peak was reached in 1921, when wages had advanced to 18.62 kr per day, or 647.8 per cent. above 1890, the cost of living (which reached its highest in 1920, 290 per cent. above 1890) was 262 per cent., and the improvement of the cost of living no less than 9.61 kr per day. Since then a down-grade movement has taken place. For February last, average wages were 13.10 kr, or 426.1 per cent. above the 1890 level; the cost of living, at the same time, was 195 per cent. higher. If calculated relatively to the advance of the cost of living since 1890, wages in February last should have been 7.35 kr per day. As they were actually 13.10 kr, it will be seen that the improvement of the standard of living during the same period is no less than 5.75 kr per day; that is to say, wages have advanced very nearly twice as much as the cost of living. At the same time, the average working hours have been reduced from 10 to 8 hours daily. No other wage-earning part of the community in this country—that is to say, salaried persons in the Civil Service, workers in municipal offices, in banks and in business houses generally, as well as teachers, &c.—can show such results; in the case of very many the opposite is the case, the cost of living having advanced far more than the wages, and the standard of living has thus deteriorated.

A Government loan of 50 million kroner was offered for subscription between 7th and 10th inst. at 101 per cent., 6½ per cent. interest. The money is to be used chiefly for the consolidation of floating debt. The loan was quickly over-subscribed. Judging by the statements rendered by 96 private banks to the Finance Department as at March 30th, the financial state of the country is steadily improving, and deflation going on. The loans during the preceding 12 months have gone down by 435 million kroner, namely, from 2,939 kr millions to 2,504 kr millions. At the same time, deposits have been 305 millions less; at March 30, 1923, they were 2,851 kr millions, and at March 30, 1924, 2,546 kr millions, which is all satisfactory. The Stock Market is rather quiet, and the tendency without any marked aspect. The Norwegian krone has improved lately, and at present is around 31.50 kr to the pound sterling. The Spring Fisheries in Northern Norway have been closed, and generally yielded results that are very much above the average. Cold or chilly weather has prevailed until the last few days. In the higher regions there is still much snow and ice on the lakes. Sowing has, therefore, barely commenced in the lower parts—at least, a fortnight later than usual.

GREECE.—THE BUDGET—THE REFUGEE LOAN—ALLIED CREDITS—COST OF LIVING—FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

ATHENS, May 23.

THE speech of the Minister of Finances in introducing the Budget for the financial year 1924-25 sounded an optimistic note. He laid stress on the comparatively small increase of the gold debt, which rose from 419 millions in 1919 to 1,591 million gold drachmæ, whereas the paper debt increased from 105 million to 8,182 million paper drachmæ. By borrowing within the country, the Government was enabled to conduct the war without having recourse to external assistance on a large scale. Taxation rose from 77 million drachmæ in 1912 to 1,125 millions for the financial year 1922-23. The total ordinary revenue has increased from 127 millions in 1912 to 1,711 millions in 1922-23. The final returns for the financial year 1923-24 are not yet available. However, ordinary revenue for the first nine months amounted to 2,146 million drachmæ. The receipts from the revenues assigned for the service of the Public Debt show at 981 millions a satisfactory increase for the past year, as compared with 468 millions for the preceding year. The surplus from these revenues returned by the I.F.C. to the Treasury was

to December 31, 1923, amounts to 283 millions. Expenditure shows the following development:—208 millions in 1912, 943 millions in 1917, 3,496 millions in 1922-23, and 5,216 millions in 1923-24. Budget estimates for the current financial year, the first post-war year, provide for:—

(In Millions of Drachmæ.)		
	Revenue.	Expenditure.
Ordinary	3,459	2,885
Extraordinary.....	486	1,369
Totals	3,945	4,254

Thus a deficit of 309 millions is anticipated for the current year, as against a deficit of 2,875 millions originally estimated for the past year, but subsequently reduced to 1,675 millions in consequence of economies effected after the signing of the Peace Treaty. The estimates for extraordinary expenditure include, moreover, an amount of 596 millions for Army and Navy supplies and for the refugees. By reducing the number of public employees, which has swollen beyond measure, and by economising 10 per cent. on the amounts budgeted for various supplies, the Minister hopes not only to balance the Budget, but even to leave a surplus to be used for the settlement of refugees, for public works, and for the victims of the war. To give effect to his plans, the Minister has introduced, and the latter has passed, a Bill providing for the institution of a Committee consisting of twelve members, to make suggestions to the Government for the cutting down of expenditure.

The Bank of England has granted a second advance of £1,000,000 against the Refugee Loan. It is reported to-day that a preliminary arrangement has been concluded in London between the Bank of England, Hambros Bank and the Governor of the Bank of Greece for the issue in autumn on the London and New York markets of this loan, fixed at £6 millions. At the same time, steps will probably be taken for the payment to Greece of the suspended war credits of the Allies. The unpaid balance of these credits amounts to £6 millions, \$33 millions, and 350 million francs. The Government hopes that its right to these balances will be recognised by the Governments of Great Britain, U.S.A., and France.

The index number for the cost of living in Athens shows a small decline in April at 1,343, as against 1,359.2 in March, and 100 in 1914 (the basis year). A French shipyard has contracted with the Government for the supply of two submarines of a value of 12 million francs. The rates of foreign exchange have somewhat hardened in consequence of the enforcement of regulations which had been left dormant for many months. Exchange on London rose last week up to 230 drachmæ, but has since declined, standing now around 220 drachmæ. A further decline is anticipated, inasmuch as it is expected that the application of these measures will be given up in view of the bad psychological influence they exercise upon the market.

NEW ZEALAND.—RAILWAY STRIKE—PROSPERITY TALK AND ITS DANGERS.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, N.Z., April 27.

THE uncertainty of the economic outlook in the Dominion and the divergent views expressed by political and commercial spokesmen in the last month or two have been intensified during the last few days in an unfortunate railway strike, which is, at the time of writing, still in progress. Owing to the economic recovery that has taken place during the last financial year, and owing particularly to the greatly increased volume of imports, the Minister of Finance has been able to forecast a substantial surplus of almost a million and a half. With one eye on the London money market in view of the next loan, he has spoken optimistically of the future of the Dominion and the strength of its financial position. Pressed by the business community and the farmers to reduce taxation, he last year took off a great amount of the burden upon the larger landholders, and once more freed the farmers from the payment of income-tax. The land-tax, levied on unimproved value, is still a grievance with many farmers, but the fact seems to be that it is not so much the tax as the inflated valuation which resulted from the boom, that

has caused the burden to be so oppressive in the last few years. Most of the lands of the Dominion were re-valued during the boom, and though some of the worst valuations have been reduced, the level of land values generally remains higher than the parity with produce prices. There are anomalies and a peculiarly inequitable incidence of the tax levied on companies as persons, and public opinion on the matter has at last resulted in the appointment of a small Commission, consisting of Mr Justice Sim and four prominent business men, to consider the taxation system of the Dominion. There is room for criticism of this Commission on the ground that the interests represented on it are purely those of the middlemen of the towns, and there is no representative either of the farmers or of the consuming public. Neither is there any skilled economist, though at least two of the members have taken more than a passing interest in economic problems.

The Commission had hardly begun to sit, and the newspapers were full of the expectation of reduced taxation, when the Amalgamated Society of Railway Servants, after negotiations that had been dragging on for about 15 months, presented an ultimatum demanding higher wages. The last stage of the negotiations had been the appointment of a Wages Board, with a neutral chairman, which, after a fortnight's sitting, broke up with no result; and after a further day or two of negotiation the men, failing to obtain any promise of increased wages, came out in the middle of the Easter holidays and a few days before the visit of the Fleet. The strike has now lasted almost a week, and negotiations have just been re-opened by the A.S.R.S., suggesting the appointment of five business men and a professional economist, as a Commission to inquire into the whole railway service, giving a decision first on the question of wages. Cabinet is considering the offer.

Whatever the result of the railway dispute, the important fact is that the Government is faced on every side with financial demands based upon an exaggerated notion of the present economic recovery. Taxpayers clamour for reduced taxes, innumerable deputations suggest the expenditure of millions of pounds all over the Dominion upon public works, and not only the railway servants but the rest of the public services are in negotiation with the Government for higher wages. The Post and Telegraph Officers' Association has very strained relations with the Minister and Cabinet, and the Public Service Association, representing the other departments, has demanded considerable increases also. Any decision taken in respect of the railway service, either as regards hours of work (at present 44 per week) or wages, must clearly affect the other branches of the service. The Minister offered the railwaymen extra wages if they would revert to the 48-hour week, but the men refused to consider any increase of hours.

Much of the difficulty has arisen because of an over-optimistic estimate of the extent of economic recovery in the Dominion. It has been pointed out before in the *Economist* that the cycle in New Zealand leads to alternations of heavy exporting and importing periods. A good export year causes an accumulation of credits in the London balances of the banks, the banks encourage the optimistic tone of the Dominion by making their exchange rates a direct incentive to heavy buying of imported goods. The natural result is that there is always a tendency to over-import periodically.

The high price of wool during the present season is the only justifiable basis for optimism. Estimates made over a wide range of wools (over 60,000 bales) by the largest buyer of wool at the New Zealand sales, show that the increased price averages all round just under 40 per cent. This rate of increase supports almost exactly the estimate made by your correspondent some months ago, that the higher price would mean £3,000,000 to the Dominion over and above what would have come in if the price had remained unchanged. Unfortunately, this does not mean an increased purchasing power, since the quantity of wool produced this year is probably in the neighbourhood of 160 million lbs (rather less than the usual annual production), while the exports last year were swollen to over 321 million lbs by reason of accumulated stocks held over from the slump. Practically no accumulated stocks were available this year.

Almost the whole of these wool values have in the present season gone into the March quarter statistics of trade and banking, and have produced an exaggerated sense of prosperity which is extremely dangerous. The whole clip, with very slight exceptions, was this year sold in the Dominion, the dry season put forward the export by at least a month, not only in wool but in other products also, and the returns of the banks and of the Customs department are swollen in consequence. But it seems evident that the remaining quarters of the year will be very lean as far as exports or receipts are concerned, while there is every prospect of heavy importation and strain on the banks. Industrial disputes and unduly liberal government finance do not encourage optimism in this respect, and despite the almost unanimous opinion to the contrary in the Dominion, large reductions in taxation are under the circumstances of very doubtful political or economic wisdom, when there is little prospect of reduction in the expenses that cause taxation.

Letters to the Editor.

FOREIGN FIRMS AND INCOME-TAX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice in your article on "Foreign Firms and British Agents—An Income-Tax Problem," in your issue of May 31st, the statement, "if a foreign firm does business here it should pay its share of taxation on the profits of that business." In the article you further distinguish between the broker on the one hand, and the regular agent of a foreign firm on the other hand, in order to point out that whereas the latter is a legitimate subject of taxation, the former should be exempt.

Is this a distinction which can reasonably be upheld? And will not an attempt to tax the regular agent on his principal's profits have exactly the same effect as the taxation of the broker? The act itself, as you point out, is careful to exclude the broker, probably for the reason that the great bulk of the entrepôt trade of this country would vanish if an attempt were made to tax him, and a concurrent loss would fall upon the numerous financial, insurance, and shipping interests affected. It should be borne in mind, however, that not the whole of the entrepôt trade is done through brokers, and any policy which suppresses the agent will also drive away some of the entrepôt trade of Britain.

Leaving aside for a moment this distinction, however, is there any foundation in equity for the taxation of a foreign principal who exports his goods to this country? The profits, surely, are made where the labour and capital employed in the manufacture of the goods are situated. Whether the foreign principal sells his goods by correspondence, by sending samples, by sending a traveller, or by employing a broker, makes no difference, surely, to the place where the profits are made. By whatever process they are sold, the profits are still made where the goods are produced. Is it, therefore, just, is it logical not to attempt taxation when the goods are sold in this country by any one of the methods just mentioned, and yet to attempt it when they are sold through a regular agent? One would expect wise policy to promote and foster selling through a regular agent, for in that case employment is given in this country and agents' profits can be taxed, whereas if the foreign principal sells through the post, by sample, or by traveller, no employment is given in this country, and there are no travellers' profits to tax.

It appears to me that the whole question of double taxation is sufficiently difficult already, without complicating it still further by a practice which has no justification in principle, and which only imposes serious obstacles to international trade. The sale of goods from one country to another is not on the same footing as the remittance of dividends from one country to a person resident in another country. In the latter case taxation by the country in which the dividends are earned, and also by the country in which the recipient resides, may be defended, however much it may be deplored, and however many resolutions the League of Nations or the Inter-

national Chamber of Commerce may pass to secure its abolition. But to tax the profits of the sale of goods from one country to another has no justification whatever, nor is a justification created by saying that we will tax those profits when they are made through the mediation of a regular agent, but not when they are made through the mediation of the post, of travellers, or of brokers.

The agent is, in the mechanism of trade, an accessory, just like the broker or the traveller or the telephone. He has been found a very convenient accessory, both to the buyer and the seller. Business is conducted more smoothly, more satisfactorily through him. Why, then, should we render business transactions more difficult by penalising business done through an agent and putting a premium on business done in other ways?

Is it not clear that taxation of non-resident principals through their agents will compel those principals to conduct their business on other lines, to do without the agent? Will they not avail themselves of the services of the broker, or the traveller or the post? Will they not in many cases remove their agents to a neighbouring country where such taxation is unknown? And will not the final result be a great deal of unemployment here and the loss to the revenue of income-tax on the profits of agents—a very large loss indeed.

There appears to be only one defence of the taxation in question: that it is unfair for the foreigner to compete in the British market through his agent, when he does not pay the same taxes as his British competitors. The argument is frankly foolish. The foreign exporter assuredly pays taxes in his own country equivalent to those paid by the British manufacturer in his country.—Yours faithfully,

E. CLASSEN.

Junior Athenæum Club, W. 1,
June 4th, 1924.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with great interest your article on the income-tax of foreign firms and British agents in your last issue. I agree that to the ordinary individual, Sub-section 6 would appear to protect *bona fide* brokerage and commission business—and it was certainly Mr McKenna's intention that it should—but the Board of Inland Revenue take a different view, and have assessed and are assessing the leading commission houses in many of our most important trades. The Board's point of view appears to be that if the foreign or Colonial shipping house habitually works through the same broker or agent, then such broker or agent becomes "a regular agent," and is liable to be assessed. As the natural course is for business to continue to flow through channels which are found to be satisfactory, and this is the reason why so large a proportion of the world's trade is centred in London, it follows that in the view of the Inland Revenue most of the leading commission houses have become the authorised persons mentioned in the Rule, and as such are considered liable to assessment. It is evident that few commission houses can continue to exist if they can be held personally responsible for the income-tax of their foreign shippers, as in most cases they will be quite unable to recoup themselves. If the contention, therefore, of the Inland Revenue is correct, the country will have to face the entire elimination of this branch of business.

As it is so extremely easy for the majority of the foreign shippers to avoid passing their business through British

houses, the effect of this policy must be a reduction in the large revenue which the Government has hitherto drawn from British commission houses, and I may add that the mere threat of taxation on these lines has already diverted considerable international business from London, and this diversion must increase in the future unless some action is taken to remedy the present position.

I understand the London Chamber of Commerce has taken action in this matter, and that an amendment to the Finance Bill, to protect *bonâ fide* commission houses, will be brought forward in the House of Commons in the course of the next few weeks. From the national point of view it would be a disaster if the Inland Revenue should succeed in taxing the vast agency and brokerage business out of the country, and it is, therefore, sincerely hoped that all interests will combine to get this matter satisfactorily adjusted.—Yours faithfully,

K. W. PRICE.

FASCIST FINANCE.*

THIS massive volume of nearly 500 pages, by the former chief private secretary of the Italian Finance Minister and present librarian of the Finance Ministry, is a detailed exposition, illustrated by diagrams and statistical tables, of every item in the financial policy of the Fascist Government during its virtual dictatorship in 1923. Fascism, the author explains, is a middle-class reaction against the combination of Socialists and plutocrats which controlled Italy from 1898 to 1914; it aims at upholding the family, property, and the nation against Socialist attack; at protecting capital, urgently needed by Italy in view of the growth of her population; at encouraging her production—which must chiefly be agricultural—by finding better markets for it; and by reducing the tariffs which hamper the producers. Hence the abolition of succession duties within the family circle; the reinstatement of bonds to bearer; the conclusion of numerous commercial treaties; the stringent retrenchment in the public services; the preparations for transferring the railways from the State to companies; the elimination of the State from economic enterprises except as a shareholder in companies holding concessions; the drastic revision of taxation and its adjustment so as to bring in those who have hitherto escaped—e.g., by extending income-tax to the wage-earning classes and increasing the numbers of agriculturist tax-payers; and the comprehensive plans for solving by improvements of transport and by public works, undertaken independently of the political and local considerations previously determining them, the agrarian problems of the South. And he points triumphantly to the results of the policy, among them the reduction of 29 per cent. in the Budget deficit, the improved revenues of the posts and telegraphs, the increase of production and foreign trade, and the almost total cessation of strikes. Students of public finance and taxation will find discussions and practical illustrations of many of their problems; students of politics will note that Fascist policy is very much that of the English individualist Liberalism of fifty years ago—Free Trade, full scope for private enterprise, public economy, and as little as possible of bureaucratic control. This last aim, indeed, is the reason why Fascism rejects the creation of peasant holdings by compulsory land purchase in Southern Italy. The book is an excellent exposition of the best side of the Fascist movement. But it is not the economic policy of Fascism that its critics condemn. It is its methods, its ideas of foreign policy, and its violent ultra-Nationalism.

A MONEY MARKET PRIMER.*

MR ERNEST SPICER has opportunely brought his useful little manual up to date by publishing a revised and enlarged edition, in which a clear account is given of some of the chief technical influences—such as exchange control, Credit Facilities Act, &c.—which affected the working of the money market during and since the war. Generally very simple and lucid, Mr Spicer may possibly mislead the students for whom he writes by one or two confusing statements. He says, for example, that the "market" for commodities is "a general term for that portion of the existing stock of any commodity which is available for purchase, whether actually exposed or offered for sale or not"—a definition which seems to leave out the demand side of a market altogether, to say nothing of other objections to it.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Amongst the many influences which have conspired to defeat activity in Stock Exchange business this week may be mentioned the violent movements of foreign exchanges, the French political crisis, the possible Tube strike, the approach of Whitsun, and the racing fever. Each of these has played its part in diminishing public interest in stocks and shares. Business has run on very quiet lines. Deduction of quarterly interest from the prices of Consols, Local Loans, certain India Government stocks, and various other gilt-edged issues, including a number of Colonial loans, had no effect in quickening investment. Nor did the distribution of the half-yearly 5 per cent. War Loan dividend suffice to stimulate purchases in the Consol market. The present account runs for twenty-one days, holidays. The long account, which ends next Thursday, has maintained the Stock Exchange tradition that such settlements are invariably bad for business.

While War Loan hardened up on 10½, the two Conversion loans also gained favour, and the prices put on small fractions. Scrip stocks, Queensland, Australia, New Zealand, and others could make little headway against the prevailing apathy, though a good deal of stock has been quietly absorbed by the big buyers.

In the foreign government market, the principal fluctuations have been in French Government bonds, where prices were franc. Brazilians have been a heavy market. The new Czechos, after a dip to ¼ premium, a full point below the

* "The Money Market in Relation to Trade and Commerce." By Ernest Evan Spicer, F.C.A. Fourth edition. Revised and enlarged. H. F. L. (Publishers), Limited. 8s 6d net.

recent best, hardened up on a few buyers coming to market. Dollar stocks of all kinds are better, including Canadian Pacifics, American Rails and American industrials, this being due, of course, to the rise in the value of the dollar as compared with the pound sterling.

Home railway stocks languish in neglect. The threatened strike of electric motormen caused heaviness in Undergrounds, and the rest of the list became limp for want of business. Grand Trunk Pacific debenture remains about 4½, pending the hoped-for payment of 1 per cent. in the near future. Argentine railway stocks strengthened at first, and held part of their improvement. Brazilian railways gave way in sympathy with Brazilian Government bonds. United of Havanas suffered by reason of a strike on the line. Nitrates barely moved throughout the week.

Nothing is doing in rubber shares. An early issue is expected of £350,000 6 per cent. guaranteed debenture stock by the Anglo-Dutch Utilities, Limited. Oil shares have been dull on balance, people selling Shells because of a slight disappointment felt at the dividend being no more than maintained at the previous 22½ per cent. free of tax. The Trinidad group strengthened a trifle upon the declaration of a maiden interim dividend by the Leaseholds Company. The professionals have given something of a rest to British Controlled, Phoenix and Uroz.

Tea shares continue quiet, in spite of the very satisfactory dividends declared week by week. The only noticeable changes in shipping securities are rises in pre-ordinary issues. The banking market is firm, and that for insurance shares, while holding its prices, shows no fresh development of interest. The Bleachers dividend, making 20 per cent. for the year, failed to animate the textile list. Courtaulds strengthened on covering by the bears. Very narrow fluctuations occurred in iron and steel shares; the Consett Company's final dividend of 1s was deemed encouraging. Forestals, after their improvement on re-entry of the shares to the dividend list, reacted a trifle, but Sudan Plantations, which dropped to 5½ on heavy selling of the new issue, jumped to 6½ when these realisations were finished.

The new Lever 7 per cent. preferences have changed hands in many tens of thousands, the average price being about 3d premium. A lively market is now established in the Beecham Estates and Pills ordinary, preference, and debentures. There was a slight rally in newspaper shares, but the Associated Newspapers report, with its good showing, failed to advance the price of the deferred shares. Trust companies' stocks have again been rising day by day, and the demand for preference shares, more especially those of the better class, is noticeably persistent.

Kaffir shares have rallied, on the rise in the price of gold, and the more hopeful feeling that is entertained in regard to the outcome of the Transvaal elections next week. The public, however, are doing very little, the market being left mainly to insiders. Interest in Kaffirs has diverted attention from Rhodesians, which are now quiescent. Consolidated Diamonds gave way, on the report of the meeting, at which the chairman referred to the attempted interference of the Government with the selling arrangements for the stones. Rio Tintos have been rising, other copper shares attracting no attention. The course of tin, the metal, is still too erratic for the public to venture with any degree of freedom upon speculation in tin shares, and the various markets connected with tin are consequently placid. Mild interest continues to centre around Canadians. In Russians there is nothing going on.

Imperial Airways, Limited.—Share capital £1,000,000 divided into shares of £1 each. This is an issue of 500,000 shares at par. The object of the undertaking is to establish an air transport service in Europe. The company is launched under excellent expert guidance. A well-known City house is lending assistance, and the Treasury is granting financial help. The Government has promised £1,000,000 spread over 10 years, beginning with £137,000 per annum for the first four years. The Government is to be represented by two directors. The names of the board inspire confidence; it is reasonable to assume that if flying can be made a profitable commercial proposition these men are the right people for the task. Four existing companies have been absorbed at a cost of £148,750. But profits made by these undertakings are not stated. Although from the investment standpoint other companies could be found which offer better prospects of an early return, it is to be hoped that the company will be well supported by opulent investors.

British Goodrich Company.—Authorised share capital £700,000, divided into 300,000 7½ per cent. cumulative preference and 400,000 ordinary shares, all of £1 each. There is an authorised and subscribed issue of first mortgage 6½ per cent. debenture stock for £200,000. This is an issue of 250,000 preference and 150,000 ordinary shares at par. An interesting feature in connection with the preference shares is that, after payment of the fixed dividend, 20 per cent. of the profits remaining in each year will be carried to a special reserve fund until it amounts to 20 per cent. of the amount of the preference shares issued, when it will be applied in paying up similar shares to be distributed among the holders of the preference shares. It is pointed out that the capitalisation of the special reserve will give a yield of 9 per cent. to preference shareholders. The company is to acquire from the Goodrich Company of America the control of the existing selling organisation in Great Britain, the sole right to manufacture and sell Goodrich products in Great Britain and the whole of Ireland, and rights to sell the products in the British Dominions (except Canada), and certain foreign countries. Arrangements have been made to acquire the works of Wood-Milne, Limited. Profits are estimated at £125,000 per annum. The price payable to the American company is to be satisfied by the allotment of 204,000 ordinary shares, and the American Goodrich Company is to lend the British company, in the form of liquid assets, the equivalent of the sum of not less than £250,000 as an unsecured loan, until 1927. The purchase consideration in respect of the Ajax Rubber Works is £406,000, payable as to £360,000 in cash and 46,000 ordinary shares. The undertaking will be in the hands of men who understand the business, but, on the other hand, it is bound to meet with keen competition.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

INVESTMENT TRUST CORPORATION, LIMITED.

INCREASED DIVIDEND.
IMPROVEMENT IN VALUATION.

The thirty-sixth annual general meeting of the shareholders in the Investment Trust Corporation, Limited, was held, on the 4th instant, at the offices of the Corporation, Gresham House, 24 Old Broad Street, London, Mr Robert Fleming (the chairman) presiding.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors, The Chairman said: Gentlemen,—I suppose we will, as usual, take the report as read.

Another difficult year has passed since we met here on June 6, 1923. Trade has continued unsatisfactory, and conditions, economic and political, throughout the world, continue unsettled; and, while there are here and there indications of some movement, prospects are by no means bright, but we have been fairly active, and the results you will, I think, consider satisfactory.

CAPITAL VALUES.

Dividing the subject, as we have often done, into two parts—namely, capital values and revenue results—I would say with regard to capital account that, as the report shows, the market value of the company's assets is some 2 per cent. more than a year ago. The exact method of valuation, as I have more than once mentioned, is, with regard to the great bulk of our securities—namely, those having a quotation in the official lists of London, New York, or other well-known stock exchange—to take the middle price, which, if you count stamp duty, brokerage, and jobber's turn, is considerably less than we would have to pay to effect a purchase in the market. Of our total number of securities—namely, 419—there are 399 so quoted, leaving 20 stocks and bonds of a total market value of £195,887 not officially quoted. Some of these, though not listed, are fairly saleable; for some we have obtained from brokers what they deemed fair quotations; a very few the directors have valued at what they consider safe prices. Altogether you may count on £5,280,000 as being the fair value of our investments. Not that we could in a day sell £5,000,000 worth of stocks and bonds at close market prices, any more than we could buy them at these quotations. That sum of £5,280,000 shows a value in excess of 7 per cent. over the book cost. The report shows the different classes of security in which the funds are invested.

I might add that the geographical distribution is as follows, in round figures, namely:—Home securities, 36 per cent.; United States, 20 per cent.; Colonial, 8 per cent.; Argentine, 10 per cent.; Brazil, 5 per cent.; other South American, 9 per cent.; Cuba, 2 per cent.; Central America, 1½ per cent.; Mexico, 1 per cent.; Philippines, 1 per cent.; Spain, 1 per cent.; China and Japan, 1½ per cent.; and other countries, 4 per cent.

REVENUE ACCOUNT.

Turning to revenue account, notwithstanding difficult times, our income keeps up. It is £14,970 more than last year, and, besides paying an increased dividend—we propose 17 per cent.—we have a surplus on the year of £29,001, equal to a dividend of 4.67 per cent. on our deferred stock. You will observe that of the large carry forward of £161,239 we have transferred £100,000 to the reserve account, making that fund now the equivalent of our deferred capital, and leaving £61,239 in the carry forward on revenue account.

With a reserve and carry forward exceeding the amount of our deferred stock, and with no liabilities beyond our debenture stock payable in 1987, I have sometimes thought that, if our income keeps up, and when times become normal—which they certainly are not yet—it may not be necessary to retain undivided so large a proportion of our annual revenue. For the eleven years preceding the war our annual retentions averaged 2.71 per cent.; during the war—say from 1915 to 1920—they averaged just under 1 per cent., and for the last four years they have been 4.41 per cent. For the past year the retention, as I have said, was 4.67 per cent.

The directors will carefully consider this question. It must not be forgotten that our investments are only in part of a permanent nature, and for the other part our annual income will in some measure depend on money rates current from year to year.

INVESTMENT POLICY.

We have, as I have said, in all 419 different securities. In the course of the 36 years of the life of the company we must have had, I suppose, one or two thousand. Next to none of them, excepting

our war investment in Government bonds, have been what are known as trustee securities. To buy these does not require the intervention of an investment trust company. We run greater risks than in trustee securities, and continually strive to combine two things which are usually held to be incompatible—namely, high interest and good security. In a list of 419 such investments some unforeseen trouble may be reckoned as certain to arise now and then.

I heard the view expressed the other day by the chairman of a leading trust company that defaulted securities constituted an item somewhat similar to a bank's hidden reserve. They do not appear at all in revenue account, and in a capital valuation they appear at a very low price. On the whole, if they represent intrinsic values, they are likely to get better rather than worse, both from a revenue and capital point of view, as time goes on. But, in any case, we try to keep these irregularities as low as possible, while not forgetting that the central idea of an investment trust is to increase security and profit by a careful selection and a wide distribution of risks.

With these remarks, gentlemen, I beg to move: "That the report and accounts, as presented, be and they are hereby, received, approved, and adopted, and that a dividend of £10 per cent., less income-tax, on the deferred stock, making, with the interim dividend, £17 per cent. for the year ended May 1, 1924, be and the same is hereby declared."

Mr H. A. Vernet seconded the resolution, which was carried unanimously.

On the proposition of the Chairman, seconded by Sir William Guy Granet, G.B.E., the retiring director (Mr Charles Lyall Daleil) was unanimously re-elected.

The auditors (Mr Cecil O. Webb and Mr Lionel Baddeley) were reappointed, on the motion of Mr W. E. Ledger, seconded by Mr. Percy Higginson.

MANAGEMENT EXPENSES.

The Chairman then moved the following resolution:—"That the directors be and are hereby authorised to set aside for management expenses in each financial year commencing with the year ending on May 1, 1925, in addition to the percentages specified in article 108 of the articles of association, a sum not exceeding £3,500."

In doing so, he said: As you know, the expenses of management, as fixed at the time of the formation of the company, 36 years ago, were to be covered by a payment of ½ per cent. on the first £500,000 of capital and ¼ per cent. on any further capital. That, plus legal expenses and auditors' fees, has been the financial basis on which the management has proceeded during all these years. All expenses were to be paid by the directors, such as rent, salaries, stationery, postage, &c., and whatever balance was over went to the directors.

Well, a good deal has happened during these 36 years. Going back only 12 years, when the company for the first time had the present capital of £4,000,000, what do we find?

We find that the revenue 12 years ago, with exactly the same capital as to-day, was £257,135, while to-day it is £309,484. The individual investments to-day number 419, as against 323 in 1912. We find that the salaries of the staff have from time to time increased; stationery, postages, &c., have all, as you know from your own experience, gone up; the only thing that has gone in the opposite direction and has been reduced to the same extent as these other things have been increased has been the balance remaining for the directors. We have added to our staff lately—the increase in the assets and revenue of the company implies more work—and the additional expenditure which this implies naturally further reduces the surplus. In these circumstances you will not be surprised that we, after waiting all these years, feel now like calling a halt and asking you to modify the agreement of 36 years ago, and add, say, £2,500 to the sum then fixed. This will enable us to correct the reduction of the past and meet further payments in connection with the running of the company, either to the directors or otherwise, that time may bring about.

When this has been done you may compare our expenses in relation to our revenue with other trust companies and still find them among the lowest.

The resolution was seconded by Mr. Vernet, and carried unanimously.

A vote of thanks to the chairman, directors, and staff concluded the proceedings.

BROKEN HILL PROPRIETARY.—Four weeks ended May 21st:—Iron and steel works—Coke ovens produced 23,612 tons of coke, 274,149 gallons of tar, and 390 tons of sulphate of ammonia. No. 1 blast furnace produced 12,312 tons of pig-iron. No. 3 blast furnace produced 11,910 tons of pig-iron. Open hearth produced 25,327 tons. Blooming mill produced 23,247 tons. 28-in. mill produced 15,235 tons. 18-in. mill produced 5,723 tons. 12-in. mill produced 3,166 tons. 8-in. mill produced 1,533 tons. Rod mill produced 5,541 tons. Steel foundry produced 796 tons of castings. Iron Knob shipped 37,707 tons. Broken Hill—6,720 tons of crude ore are raised. Crushing plant treated 5,905 tons of crude ore, producing 478 tons of lead concentrates. Slimes flotation plant produced 977 tons lead concentrates and 1,560 tons of zinc concentrates.

BROKEN HILL SOUTH.—Four weeks ended May 31st:—20,505 tons of crude ore and 7,703 tons of de-leaded slimes residues were treated, and produced 3,275 tons of lead concentrates, assaying 64 per cent. lead and 19 ozs silver per ton; also 5,829 tons zinc concentrates, assaying 45 per cent. zinc.

SUZ CANAL COMPANY.

SUCCESSFUL YEAR—DIVISION OF SHARES.

The seventieth annual meeting of the shareholders was held in Paris on the 2nd instant. The report of the council of administration was read to the meeting, and was substantially as follows:—

At our last meeting we reported to you that the traffic through the Canal had at last, during 1922, regained and even surpassed its pre-war volume. The progress of the maritime movement which we have registered since 1919 continued during the last year, and the net tonnage exceeds that of 1922 by nearly 10 per cent. The regularity of this improvement, despite all the economic difficulties of the post-war period, is a remarkable fact, and a striking testimony to the soundness of your business.

Helped by the increase in traffic and by the increase in the profit on exchange, the profits of the year show a large increase over those of the preceding year, allowing us to contemplate a much larger dividend. We propose therefore to pay a dividend of 430f net per share. This is a very satisfactory result, but it must not be forgotten, as we told you last year, that the increased dividend compared with that of ten years ago is really only the counterpart and, one might almost say, the tangible expression of the depreciation of the franc. This depreciation, the manifest exaggeration of which we have all deplored, is happily tending to diminish. It is also important to bear in mind the reaction which the revaluation of the franc may have on your nominal income. We, therefore, think it behoves us to suggest to you that a sum of 20 millions be applied to the extraordinary reserve started in 1920.

In accordance with our usual liberal policy, in view of the increased traffic of the past year, we have reduced the transit rates by 25c to date from January 1st last. We are convinced that, by lowering the charges which press so heavily on the shipping industry, we help the development of shipping, by which we are the first to benefit, and thus serve your interests no less than those of the shipowners.

We submit to-day a resolution for the division of the company's shares. That is, as you know, a practice frequently followed by companies whose shares go to a high premium on the stock exchanges. This has been requested at several meetings, and we consider that now is the time to carry it out. The effect of this division of shares will be to make more convenient a security which had become too cumbersome, to make it more negotiable, to allow partial realisation, and generally to broaden the market in a manner advantageous to all concerned. If, as we feel sure, you pass this resolution, each share of 500f nominal capital will be changed for two new shares of 250f nominal, as soon as the Egyptian Government has sanctioned the necessary alteration of the statutes.

FINANCIAL POSITION.

The total receipts for 1923 at 419,250,419f show an increase over the year 1922 of 113,794,810f. Transit dues account for 8,924,849f of this increase, and the financial service for 150,031,160f. This last increase is due for the most part to the high level attained by the pound sterling in 1923. Our operations, being carried out at an average rate of 75f 264c, have resulted in an apparent increase under the heading of remittances of 101,998,133f compared with 1922. Expenses totalled 58,478,995f. As material has been well written down, we allocate to this fund 15 millions of francs; the replacement of this material could only be effected at much higher prices.

Following the policy which we explained last year, we propose to allocate 50 millions to writing down expenditure on development work. We avoid by this means the necessity for the issue of a loan, which would to-day be too heavy a charge. After these allocations the excess of receipts over expenses amounts to 285,690,898f, to which has to be added 2,106,420f brought forward, making a sum of 287,797,319f. It is proposed to distribute amongst the shareholders 264,061,971f, leaving 23,735,347f, 20,000,000f of which we propose placing to extraordinary reserve, and carrying forward 3,735,347f. We propose a dividend of 493f 710 gross and 430f net, an increase of 110f on that of last year.

CANAL TRAFFIC.

Four thousand six hundred and twenty-one ships traversed the Canal in 1923, representing a net tonnage of 22,730,162 tons, the highest total ever reached. Compared with 1922, there is an increase of 276 ships and 1,986,917 tons. Commercial shipping amounted to 21,302,406 tons net, being 93.7 per cent. of the total. This total passes for the first time the highest pre-war figure. The number of passages made by ships burning Mazout continues to increase, and represents 22 per cent. of the total. The average time of transit in 1923 was 15 hours 20 minutes. This is the best result obtained up to the present. German tonnage increased from 735,129 tons in 1922 to 1,213,691 tons in 1923, and passed from sixth place in 1922 to fourth place in 1923. Shipping at Port

Said, represented by ships which did not pass through the canal, amounted to 1,208,000 tons. The movement of merchandise is still less than pre-war, but the gap is being steadily reduced. The total of cargoes passed through the Canal increased to 22,777,000 tons, and the difference compared with 1912 is only two millions and a half tons, as against four millions in 1922.

This improvement is all the more interesting as it has been made in spite of a drop of more than a million tons in cargoes of coal. Exceptional quantities of coal from the United Kingdom have been absorbed by European markets, and coal from South Africa, Indo-China, and Japan have replaced the French coal on the other side of Suez.

The reduction of coal traffic was happily counterbalanced by an increased traffic in worked metal, cement, and feeding stuffs. During the last three months of the year they have been sent in unprecedented amounts to Japan, where the September catastrophe has raised an immense demand for material of all kinds. The drop in the North and South movement at 490,000 tons is much less than the increase of 1,900,000 tons in return traffic, which increase is mainly accounted for by cereals and sugar.

The current year again shows an improvement on the past year; transit dues on May 15th show an increase of 2,090,000f over the corresponding period of 1923. We hope, therefore, that the year 1924 will show new progress.

ANGLO-ARGENTINE TRAMWAYS COMPANY, LIMITED.

CHAIRMAN ON QUESTION OF TARIFFS.

SETTLEMENT WITH MUNICIPALITY DELAYED.

IMPROVEMENTS ON SYSTEM RETARDED.

The fortieth ordinary general meeting of the Anglo-Argentine Tramways Company, Limited, was held at Winchester House, London, Sir George A. Touche, Bart. (the chairman), presiding.

Mr W. D. Dawes (London manager and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the report for 1923 dealt with a tariff of 12 cents up to April 10th, and for the remaining portion of the year with the reduced tariff of 10 cents. The comparison, therefore, with the previous year, when the tariff was 12 cents, was unfavourable. There was a reduction of £45,197 in gross receipts, owing to the reduced fare, notwithstanding the fact that they carried 49,021,672 more passengers, the total number being 518,533,718. The expenses, owing to the heavy loss on exchange and the larger business done, showed an increase of £146,587, and the reduction in net receipts was therefore £191,784.

TARIFF QUESTION.

Proceeding, the Chairman said: I now come to the troublesome tariff question. We are disappointed that another year has passed and we are still unable to report a settlement. Under the Ordinance of 1920, we were authorised to charge a fare of 12 cents in order that we might meet very onerous burdens. It was seen then that new developments arising out of the traffic situation would soon be necessary. The whole position was to be reviewed at the end of three years. That period expired in April, 1923. The burdens undertaken in 1920 were clearly intended to be of a permanent character. It was never suggested that an eight-hour day, minimum wages, increased salaries, and other charges, and contributions to a national pension fund were to be for three years only. It was obvious that any review of the fare question must be made in the light of these continuing obligations, and should provide for them. It was thus common ground that any change of fare should have been preceded by a general arrangement.

EXTENSION REFUSED.

We opened negotiations well ahead of the expiration of the three years term. These negotiations had for their basis the introduction of a very moderate and inexpensive scheme of sectional and zonal fares. In conjunction with the Lacroze Company, our formal petition was presented to the Municipality of Buenos Ayres in the early part of January last year. When it was obvious that a new settlement could not be reached within the time available (although the delays did not rest with us) we asked that the existing arrangement should be continued pending an agreement of new terms. This most reasonable request was refused, against the advice of the Intendente, and without even a short delay to prepare for the change. The refusal, which seems to have astonished the council itself, was hailed in some quarters as a victory over foreign capital. Foreign capital has been the great ally of Argentina in the development of its wonderful resources. It is, of course, an economic fallacy that any country can be benefited by alienating capital. But we have no monopoly of economic wisdom. Have we not politicians at home who seem obsessed by hostility to British capital? To explain the refusal, which came as a surprise to the

whole business community, might involve an excursion into questions of local politics with which we have no wish to concern ourselves. The adverse vote of the council left us with the obligations on one side of the account and without the corresponding credits on the other.

RESULTS OF REDUCTION.

The result of the arbitrary reduction of fares from 12 to 10 cents is reflected in the figures submitted. These show that we have not been able to earn the full dividend on the second preference shares, and, of course, no dividend at all on the ordinary capital. A company providing the public services which this one renders ought to be in a position to place substantial sums to reserve, and pay a reasonable dividend on its ordinary capital. We can put nothing to reserve, apart from the usual provision for renewals, which I should like to see increased, and for ten consecutive years the ordinary shareholders have had no dividend. This is not as it should be. It is neither equitable, nor in the public interest. In our own concession of 1920, and in the laws relating to railway companies and others working public concessions, a rate of interest on the capital employed much in excess of what we have been allowed to earn is recognised as reasonable and proper. While the present conditions remain, we are placed under a great and unmerited disability.

DEVELOPMENTS RETARDED.

The public are affected as well as the shareholders. The traffic needs are increasing, but you cannot starve the company supplying these needs and at the same time expect a large capital expenditure on developments. Developments are urgently required, but they are held up through no action of ours. We are ready to make them as soon as the financial position will permit of our doing so. They will necessitate a very large capital expenditure, as they involve the construction of a new subway or underground tramway to relieve the congestion in the heart of the city, and construction costs are much higher than they were when we made the existing subway. This subway, according to the unanimous opinion of traffic experts, should be between Constitución—the terminus of the Buenos Ayres Southern, and Retiro—the terminus of the Central Argentine. How can anyone raise the necessary capital if they are not allowed an adequate income? In many respects we are in a better position to meet the needs of the city than anyone else, but only on a reasonable financial basis.

NEW PROPOSALS.

Comprehensive schemes have been prepared, carefully and laboriously. Our engineers have studied the traffic requirements of the city, and have elaborated plans to meet them. Proposals have been submitted on which we have striven to reach a common understanding. They necessarily involve a tariff revision, which has been worked out on a just and equitable basis, and asks for nothing unreasonable. Due and scrupulous care has been given to the wants of the public. But we must also have regard to a fair and legitimate return on the company's capital. This is no more than a right which should be respected. Although the question is still unsettled, it would be a mistake to conclude that no progress has been made.

EXPERTS' REPORT.

The scheme was referred to a special technical commission of engineers and accountants. They tested its figures, and reported in its favour. They were definite in their conclusions as to the company's inability to make further headway with the existing fare. They expressed the view that the present tariff cannot support the entire burden of increased wages, a permanent contribution to the pension fund, and provide a reasonable dividend to the shareholders. They recognised that the financial obligations involved in the policy of constructional development necessitate such a revision as will improve the company's economic status. Their report, in short, was such as would be expected from a strictly impartial tribunal.

AWAITING RATIFICATION.

The report of the technical commission was issued in September. An *ad referendum* agreement was signed and forwarded by the Mayor, with a favourable message to the Council, in November. We had hoped that the *ad referendum* agreement would be ratified by the Municipal Council at latest before the session was adjourned at the end of December. That hope was not realised. As it could not then be dealt with before April of this year, Mr Pedriali came to Europe to confer with the board. He had passed through an exceedingly difficult and anxious time, which had severely taxed his health and strength, but he had not lost heart. He returned to Buenos Ayres when the Council reassembled, and hoped the question would be dealt with in May. Unfortunately, it was not dealt with then. Consideration was delayed. A decision may be

arrived at during the present sitting of the Council, which terminates in July. Whether there will be further delays we cannot say. We hope not, for every month of delay prejudices us, makes more difficult the ultimate task, and defers the alleviation of the traffic problem. In a city growing so rapidly as Buenos Ayres this is a serious matter. Before a new subway could be completed and open for traffic the population will probably be over 2,000,000.

THE MUNICIPAL COUNCIL.

We have no reason to believe that a majority of the members of the Municipal Council are personally hostile to us. It is more reasonable to assume that their actions collectively are governed by considerations of which the purely business project is only one. They are a body which, like our present House of Commons, contains many schools of political thought. One drawback of so many parties is that the path of collective action is a thorny one, as Mr Ramsay MacDonald and Mr Asquith have already discovered. Questions of this sort are best removed from the strife of parties. In time, no doubt, there will grow up a jurisprudence under which cases can be tested and measured and settled solely on the grounds of business and public merit.

WHY A SETTLEMENT SHOULD BE REACHED.

We are still hopeful that a settlement will be reached. We hope this for three reasons. The first is because Buenos Ayres is a very progressive city, and a policy which discouraged development would be reactionary. The Municipal Council wish to serve the public, and the public interest will be best served by stimulating the provision of facilities for travel. The Technical Commission were clearly guided by this consideration, as they expressed the view that the problem is one of public interest, which must be solved in accordance with the requirements of the city's inhabitants. Already the tramways have contributed in no small measure to the development of outlying districts, which have now become populous centres. The second is because we do not believe that so broad-minded a body as the Municipal Council will separate themselves from the world-accepted rule that those who supply the public with a necessity are entitled to a fair return on the capital employed. The tramways are the only public service organisations which, during the period of extraordinary increases in operating expenses, have not been allowed to increase tariffs to a proportionate degree. Thirdly, because, without adequate revenues, the company cannot make desirable improvements in the lot of their employees. The company has always sought to study the interests of its men, in sickness and in health, and is anxious to continue to extend the protection which they lost by the hasty cancellation of the 1920 Ordinance. When it is remembered that we have 11,300 persons in our employment, who with their families and dependents total some 50,000 people, it will be seen that no small proportion of the city's population might have their spending power increased at an infinitesimal cost to the travelling community. Under our new zone tariff scheme the workmen's fares would not be altered. Dealing, as we are, with the chosen representatives of the greatest Latin city in the world after Paris, we cannot believe that a fair and businesslike settlement will not be reached.

NEED FOR PATIENCE.

From our point of view, we have been treated harshly. Our experience does not encourage investments in the Argentine, but I would plead for a suspension of judgment even on that question. Mischief has been done, and it is not to be righted by complaints of a tyrannous abuse of power. I have heard these complaints, but I hope they will prove to be based on a hasty judgment. The world has not yet recovered from the fever of the war. We are living in days of great political unrest. Men are looking at the fabric of society with what they think to be a new vision, although it is as old as civilisation—perhaps older. The aims of democracy are constructive, even if its first impulses sometimes have other origins. Merely to cry aloud will not help. We must continue patiently to seek for a basis of settlement until we find it, however wearisome the task may be. Those who represent the public not infrequently find themselves, owing to their better knowledge, in advance of their constituents. They may think it expedient, in the interests of real progress, to adapt their pace to that of their followers. These things have happened here. Why should they not happen in Buenos Ayres also? May this not explain why some councillors, who recognise the justice of our case, have not yet given it their active support? If so, the delays, although costly to us, may be regarded as temporary. We are advised that public

opinion is moving in our direction. Every visitor to Buenos Ayres comments on the remarkable excellence and astonishing cheapness of our services. The vast majority of the citizens realise this also. Their chief concern is not to be carried at a starvation fare, but to be provided with a good service. Our admirable general manager, Mr Pedriali, who knows every aspect of the local situation, and every person concerned, is not despondent about the future. I think we may take our hopes from him. They may make mistakes in the Argentine, as elsewhere, but it is a great and progressive country. Its debt per capita is small. The check to its prosperity in recent years, which probably has much to do with the present discontent, will soon pass. I believe events will yet show it is not a country we need be afraid to invest in.

In conclusion, the chairman moved: "That the report of the board of directors and the audited accounts for the year to December 31, 1923, now presented to the meeting, be and are hereby received and adopted."

The Right Hon. Lord Wargrave, P.C., seconded the motion, which was carried unanimously.

The chairman next moved: "That the appointment of the Rt. Hon. Sir Philip Lloyd-Greame, P.C., as a director to fill the vacancy on the board be and is hereby confirmed, and that Mr. Leon Cassel, Mr. Wm. Morris, Major-General Sir Frederick Sykes, M.P., and the Rt. Hon. Lord Wargrave, P.C., who retire by rotation, be and they are hereby re-elected directors of the company."

Mr Charles H. Sanford seconded the motion, which was unanimously approved.

The auditors (Messrs Deloitte, Plender, Griffiths and Co. and Messrs James and Edwards) were reappointed, and cordial votes of thanks having been given to the chairman and directors, and to the chairman and members of the local committee, the general manager, sub-manager, the London manager and secretary, the assistant secretary, and to the staffs generally in Buenos Ayres and London, the proceedings terminated.

THE BRITISH THOMSON-HOUSTON CO., LIMITED.

SATISFACTORY POSITION.

FURTHER EXPANSION CONTEMPLATED.

The twenty-ninth ordinary general meeting of the British Thomson-Houston Company, Limited, was held, on June 4th, at the offices, Crown House, Aldwych, London.

Mr H. C. Levis, the chairman, presided.

The assistant secretary (Mr Alfred Clements) read the notice convening the meeting.

The Chairman, having read the auditor's report, said:

The report which has been sent to the shareholders, and which is now formally submitted, is, I think, satisfactory in view of the general trade conditions which existed during 1923. We have been able to make depreciations somewhat in excess of the previous year, pay all interest charges, also the dividends on our preference shares, to recommend a dividend of 6 per cent., less tax, on our ordinary shares, and to increase our reserves.

The value of orders received exceeded the amount for 1922, but the output by the factories was somewhat less than for 1922, due to a considerable amount of the orders being received too late to allow of completion within the year. This is reflected in the balance-sheet in the account comprising "apparatus, &c., finished and in process of manufacture," which has increased nearly £600,000. The improvement in business has been maintained during the five months of this year. The volume on hand now is again high, and, for the present, at least, is increasing.

CAPITAL.

If business continues to expand, it is only a question of time when further capital will be required. This, of course, would be a satisfactory position, as growth is what we desire.

The expenditure on plant and equipment during the year amounted to over £200,000. As I stated at our last annual meeting, it is necessary to continue the development of our manufacturing facilities, and the policy of the company is to do this as rapidly as the business warrants.

It will be of interest to note that the floor space of our various factories amounts to about 2,000,000 square feet, and the number of our employees is about 11,000.

PROFIT AND LOSS.

Turning to the profit and loss account, it will be seen that the profit for the year, after deducting all expenses and charges, other than interest, is £451,778. To this there has been added the amount brought forward from the previous year, £236,671, making the total amount to be dealt with £688,449. From this is deducted £119,286 for interest and £135,440 for various depreciations. There has also been added to the reserve the sum of £50,000, of which £24,000 is the balance remaining from the year under review, and £26,000 was appropriated from the amount carried forward from the previous year. There is then left to be carried to the balance-sheet £383,722. Dividends on the preference shares were paid on June 15th and December 15th, and the directors recommend that a dividend of 6 per cent., subject to income-tax, be now declared and paid on the ordinary shares. That will leave £210,863 to be carried to the next balance-sheet.

It will be observed that £24,390 has been written off the cost of converting the preference shares from "tax free" to "subject to tax," as against £13,125 last year. That was done by using the amount deducted from the dividends for income-tax, and, as stated in the report, it is anticipated that the remainder will be written off by the end of next year.

POWER SECURITIES CORPORATION.

Last year I mentioned the fact that we participated in the formation of the Power Securities Corporation, Limited, and we had reason to believe that it would be a successful enterprise. The result of the first year's working of this company was very satisfactory, and we have every confidence it will continue to achieve its objects.

I would like to invite your particular attention to what we have done at the British Empire Exhibition at Wembley. Not only have we a very attractive and comprehensive exhibit in the space which we have reserved, but our apparatus is also installed in the power house, in the sub-station, and in many other places throughout the Exhibition.

It has not been my custom in presenting the annual report and accounts to comment at any great length on general conditions, but a year ago I ventured to predict an improvement in the electrical industry, and the conditions to-day justify that hope.

Keen competition continues both at home and abroad, and I see no prospect of its falling off, yet, notwithstanding this, the results are satisfactory, and the credit, as is always the case, is principally due to the hearty efforts of the company's employees.

A substantial portion of the orders received by the company have come from abroad, principally from the British Dominions.

WORLD'S POWER CONFERENCE.

Before closing my remarks I should like to briefly mention the World's Power Conference which is shortly to be held in London. This is one of the most important current events in the electrical world, and great credit is due to the British Electrical and Allied Manufacturers' Association and its officials, particularly its

director, in organising the conference, which will be attended by important and representative delegates from all parts of the world. Its deliberations should be helpful in stimulating the electrical industry everywhere, and, because it is held in London, it is probable and natural that its effects will be felt in this country sooner than elsewhere.

I now beg to move, "That the report of the directors produced, together with the annexed statement of the company's accounts to December 31, 1923, duly audited, be now received, approved, and adopted, and that the recommendations therein contained as to dividends or otherwise be adopted and carried out."

Lord Buxton seconded the motion, which was unanimously approved.

The Chairman then proposed that Messrs Edgar A. Carolan, Francis Fraser, Henry N. Sporborg, and Jesse M. Woodward, the retiring directors, be re-elected directors of the company.

The motion was seconded by Mr A. W. Burchard, and unanimously approved.

On the motion of Major W. Martindale, seconded by Mr Owen H. Smith, the auditors (Messrs Price, Waterhouse and Co.) were reappointed.

VOTE OF THANKS.

Major Martindale: I have great pleasure in proposing that a cordial vote of thanks be given to the chairman and directors for their conduct of the affairs of the company, and to the managing director and staff for their valuable services. The past year has been a difficult period for industrial concerns, and we must congratulate ourselves on the results achieved, as well as on the conservative financial policy followed by the directors.

The chairman and the managing director briefly responded to the compliment, and the meeting terminated.

CITY OF LONDON REAL PROPERTY COMPANY, LIMITED.

NEW CAPITAL AND FUTURE DIVIDENDS.

MR. INNES'S CRITICISMS OF LAND TAXATION AND RATING PROPOSALS.

The ordinary general meeting of the City of London Real Property Company, Limited, was held, on the 2nd instant, at the Cannon street Hotel, Cannon street, London, Mr W. E. R. Innes (chairman of the company) presiding.

The secretary (Mr S. Walker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Since our last meeting, and in order to mark the celebration of our diamond jubilee, which takes place this year, we have made very large alterations in the balance-sheet through the revision of our share capital, which has been brought more into line with the value of the company's assets, facilitating an amalgamation with the City and Westminster Properties, Limited.

As a result of this rearrangement, the ordinary capital now stands at 8,000,000 £1 ordinary shares and 1,000,000 4 per cent. (free of income-tax) preference shares, of which all the ordinary and 935,960 of the preference shares have been issued, while the debenture stocks, totalling £578,100, remain the same as hitherto. It is very gratifying to be able to state that all the shareholders in the City and Westminster company accepted the terms of our offer, and the very great majority showed their confidence in this company by electing to accept shares in lieu of cash.

In order to be on the conservative side when making our new issue of shares, we retained a margin of £846,970 from the actual valuation of our properties, and maintained our reserve fund of £500,000 intact. We now propose to add £100,000 out of this year's profits to that account, thereby making it up to £600,000.

LEASEHOLD PROPERTIES AND SINKING FUND.

The increase in value of the leasehold properties has made it necessary to revise the sinking fund calculations, and the annual instalment becomes £17,455, as against £2,213 last year, and, with the addition of the fund reserved for the leasehold properties of the City and Westminster company, the total sum accumulated to replace leaseholds amounts to £204,541.

In making this provision for the replacement of our capital invested in leasehold properties, it must be borne in mind that both the annual instalment and interest have to be provided out of income which has borne tax.

Our revenue account shows a net balance of £484,792, as against £450,082 last year, being an increase of £34,710, of which about £17,000 is due to the inclusion of one quarter's income from the City and Westminster Properties, Limited. This last amount, however, is set off by the increase in the sinking fund just referred to, and the result of the year's working may be considered as very satisfactory.

The balance brought from last account was £78,005, which, added to this year's revenue, makes a total of £562,798. Three quarterly interim dividends have already been paid, absorbing

£163,978, and leaving a balance of £399,719. Out of this the directors recommend a final dividend of 3d per share (free of income-tax) on the present £8,000,000 ordinary capital, payable on the 10th inst.; that £100,000 be added to reserve, as previously mentioned; and that the whole of the expenses of the capital reorganisation, amounting to £69,669, be written off, leaving a sum of £120,690 to be carried forward, as against £78,005 brought in—an increase of £42,690.

An item in the balance-sheet which shows a large increase is that of mortgages at £975,482, as against £594,650 last year, and I think I had better explain these figures. The increase is entirely made up of mortgages taken over when we acquired the City and Westminster Properties, Limited, and in the case of both companies, while there was no fresh borrowing, some reduction was made during the year in the amount of these liabilities.

FUTURE DIVIDENDS.

Having regard to our new capitalisation, I think I had better repeat what I told you at our meeting on December 3rd last, explaining what we hope to do and what we think we can reasonably anticipate being able to do in respect of future dividends, provided business follows a normal course. We propose to commence by paying a quarterly dividend at the rate of 5 per cent. (subject to tax) for the first three-quarters of our financial year, and to pay any extra dividend that we may feel justified in distributing in the last quarter of the year; but I feel it only right to strike a note of caution not to expect anything more than a very small extra amount to commence with, since an increased capital gives added responsibilities, and our object should be to strengthen our position again to enable us to take advantage of any opportunities that may present themselves, and also to safeguard the company in the event of increased burdens being thrown upon it.

In connection with the future, I may refer to the fact that for some time past the corporation of Lloyds has been seeking for a site on which to erect its own offices, and one that would be worthy of its national and world-wide importance. It has been the privilege of one of our subsidiary companies (the East India Avenue Company) to provide probably the finest site in the City for such a purpose—viz., the site of the old East India House in Leadenhall street, and the fair terms agreed will, we trust, be to the advantage both of the Corporation of Lloyds and this company.

Amongst the properties purchased during the year in different parts of the City, Nos. 26 Leadenhall street and 37 Lime street are both freehold, while Nos. 57 Basinghall street, 2 Fenchurch avenue, 48 and 49 Lime street, 3 and 5 Lloyds avenue, 26 Martin lane, 14 Newgate street, and 4-6 Throgmorton avenue are leaseholds. The new building which we are erecting on the site of Nos. 2-5 Fenchurch buildings is progressing satisfactorily.

I should like to express our thanks to the Chancellor of the Exchequer for terminating the corporation profits tax, for which we are truly grateful. Altogether, we have paid away under this tax upwards of £100,000, which would in the ordinary course have been added to the company's reserves and used in the development of its business.

LAND TAXATION AND NEW RATING SYSTEM.

Though I feel it is outside the province of a chairman at a company meeting to touch on anything that savours of politics, I think an exception arises where suggestions of legislation are made in connection with matters with which the company's business is concerned, and that I shall be justified in making a short reference to the fresh proposals for taxation of land and new system of rating.

I am very sorry to read about these, because I think we are all suffering from too much taxation, and I think that, however praise-worthy the intentions of the originators may be, their proposals will defeat their own objects. What the country really needs is a reduction in the cost of building and in the burden of rates. It is only in the case of expensive sites that the value of the land enters to anything but an infinitesimal extent into the cost of building, and the system of taxation applying to land and houses is already so intricate that the creation of further complications and difficulties can only act as a deterrent instead of an encouragement to building. Assuming that the price of land can be lowered by taxing it, such a course will not encourage purchasers for the purpose of development. It is true the vendor may get less, but the purchaser will not gain, because he will in turn have to pay the taxes which cause the reduction in the value of the land, and the only difference to him will be more risk and trouble. In other words, taxation cannot be an encouragement to trade, but must be a hindrance, and by reducing the supply of new buildings the effect might be to increase rents instead of reducing them.

Before concluding I am sure you will like to join in congratulating the managing director, secretary, and staff upon the excellent work they have done.

Mr W. J. M. Burton (managing director) seconded the motion, which was carried unanimously.

Mr Edgar Horne (vice-chairman), in proposing the re-election of Mr W. E. R. Innes and Mr P. M. Evans as directors of the

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital - £10,000,000	Issued Capital - £8,734,660
Reserve Fund - £4,000,000	Paid-Up Capital - £4,367,330

The Bank, in addition to 6 branches in SPAIN, has, with its

company, paid a warm tribute to the services rendered by those gentlemen.

The motion was seconded by Mr Burton, and unanimously agreed to.

The Chairman, in thanking the shareholders on behalf of Mr Evans and himself, said it was very gratifying that the company had been so successful in the past, and he hoped it would continue to be equally so in the future.

On the proposition of Mr Snell, seconded by Mr Colls, Messrs Turquand, Youngs, and Co. were reappointed auditors.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Sir William H. Davison, M.P., said he felt sure the shareholders would not like to separate without tendering their sincere thanks to the chairman, the managing director, the other directors, and the staff for the report which had been submitted. In order to produce such a report a very great deal of work must have fallen upon every one concerned, and the way in which that work had been carried out was eminently satisfactory. With regard to what the chairman had said as to the future, they would all agree that it was essential that in the case of a company such as this, especially now that its capital had been increased, the position should be unchallengeable, security being of the first importance. He also welcomed what the chairman had said as to suggestions recently thrown out in political circles with regard to the taxation of land values. They had already had an experiment—a disastrous experiment—in that way, which was to some extent responsible for the existing deplorable shortage of houses in this country, and the chairman, with his experience of the property market and of the delicacy with which the intricate operations in connection with property acted and reacted one upon the other, was well entitled to sound a note of warning against any further jugglery on the part of amateurs on this very difficult subject.

The vote was seconded by Mr Woodbridge, and passed amid applause.

LEOPOLDINA RAILWAY COMPANY, LIMITED.

Presiding, on the 5th instant, at the meeting of the Leopoldina Railway Company, Limited, at River Plate House, London, Mr Oliver R. H. Bury said that the year's results showed an increase of 23 per cent. in the net currency receipts. On the other hand, there was a further serious fall in exchange of 23.79 per cent., the average rate last year being only 5 13/32d, as against 7 3/32d in 1922, the latter being about half the rate in 1919. When the receipts in currency were converted into sterling the 61,123 contos of reis, instead of producing over £4,000,000, was only equivalent to £1,368,078, while their expenses had to be paid for in sterling; so they were hit both ways. They were, however, able to show net receipts in sterling with a decrease of only £7,485, or 1.75 per cent. The board recommended the payment in full of the interest on the 5 1/2 per cent. preference shares.

He wished again to point out the continuous growth of the traffic. In 1913 their gross receipts in currency were 27,878 contos of reis, which then produced 1,872,000; last year the currency receipts were 61,123 contos, 119 per cent. more; but in sterling they only received £1,368,078—in other words, they did considerably more work for about £500,000 less gross receipts. A limited increase in some of the tariffs was agreed to by the Federal Government and by the States of Rio and Minas in 1922; these increases were quite inadequate at the present low rate of exchange.

They had presented a petition for a general increase in their rates, for the unification of their contracts, and for the solution of several other matters, including the terminal station. The present Government insisted on opening fresh negotiations; a fresh statement of the company's requirements had been presented containing the additional items of increases in the tariffs on coffee, suburban passenger rates, and a further increase of general rates, where obviously justifiable; it also asked for a discussion, in principle, of a sliding scale of rates. They were still awaiting the decision of the Government. The goodwill of the President as expressed by him in his Message to Congress, and therefore to the whole of his country, could not but be regarded as a most valuable asset, and they hoped for a better result.

The report was adopted.

SELANGOR RIVER RUBBER ESTATES, LIMITED.

INVESTMENT IN TENNAMARAM PALM OIL COMPANY.

The fourth ordinary general meeting of the Selangor River Rubber Estates, Limited, was held, on the 3rd instant, in the Council Room of the Rubber Growers' Association, Idol lane, London.

Mr Noel Bingley, chairman of the company, who presided, in moving the adoption of the report and accounts, said that the report and accounts showed a net profit of £10,816 for 1923. Although this was some £1,500 less than the £12,345 earned in the

previous year, it had been on the considerably smaller crop of 600,743 lbs., as compared with 802,842 lbs in 1922, a very severe curtailment necessitated by the export restriction legislation in the Federated Malay States. This crop, after valuing stock on hand at the end of the year (329,999 lbs) at what even, under present market conditions, might, he thought, be called the conservative figure of 10d per lb, came into the accounts at £29,421, while the realised portion averaged 1s 2 1/2d per lb gross, against 10.77d in 1922, or 1s 1.89d net, as compared with a fraction over 10d in the previous year, thus nearly 4d per lb more.

The estimated crop for the current year on the basis of 60 per cent. of their standard production was again 600,000 lbs, against which they had harvested for the first quarter of the year 147,919 lbs. In January last they closed a small contract for 60 tons of 1925 crop, deliverable 5 tons per month, at a price of 1s 3 1/2d c.i.f. New York.

Last year he had dealt fully with the company's investments in Edible Nut Oils, Limited, which then owned the Tennamaram Oil Palm Estate, which was situated in the immediate neighbourhood of the company's Selangor River property, and therefore under the immediate supervision of their manager, Mr Bligh Orr. Last year the directors of the Edible Nut Oils, Limited, were in negotiation for the provision of some £15,000 to £20,000 further working capital required for the installation of the necessary plant to deal with the rapidly increasing output, and to provide funds for bringing the existing acreage into full bearing. The result of these negotiations was that a new company was formed. In exchange for their interest of £23,187 in the Edible Nut Oils Company, which appeared in the balance-sheet, they now held 25,040 ordinary shares of £1 in the new company, the Tennamaram Palm Oil Company, Limited, which represented the company's original investment in the enterprise plus the premium of 8 per cent.

Of the amount of £23,187 at which this investment stood in the company's books only £7,000 represented cash, the balance of £16,187 being fully-paid shares in this company, which were accepted by the vendors at their par value in part payment of the purchase price.

The resolution was carried unanimously.

EAGLE OIL TRANSPORT COMPANY, LIMITED.

THE NEW CHARTERING ARRANGEMENT.

The thirteenth ordinary general meeting of the Eagle Oil Transport Company, Limited, was held, on the 3rd instant, at Winchester House, Old Broad street, London, the Hon. Clive Pearson, the chairman, presiding.

The secretary (Mr C. H. M. C. Wilson) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—After providing for note interest, the net profit of £936,240 is 11d shows a decrease of some £301,000 compared with last year, brought about by a suspension of our full charter rates. We have been able to transfer this year to depreciation and sinking fund reserve the substantial sum of £750,000. There has already been paid the fixed dividend of 6 per cent. on the preference shares, and your sanction will later be asked for the payment of a further 2 per cent., making 8 per cent. for the year. You will not be asked to sanction any dividend on the ordinary shares, and we propose to carry forward, subject to corporation profits tax, the balance of £116,410.

You will desire to hear why it was necessary to enter into an arrangement which has reduced the company's revenue and might be considered, on the face of it, to put the company in a less good position. You will recollect that the original chartering agreement had been intended to give your company a steady and satisfactory income irrespective of the ups and downs of the freight market; that during the period of high war costs our charterers made us substantial contributions year by year towards satisfaction that our charterers had agreed to an amendment of the original chartering agreement upon terms advantageous to us. Since that time, in common with the fall of all values, but in a far greater degree, tanker freight rates have shown such a complete drop that we in our turn were appealed to for a revision of the charter rates, and, upon examination, your directors were satisfied that our freight rates could not be maintained.

THE NEW TERMS.

In their study of what adjustment it might be possible to make, and what form it should take, your directors set themselves to consider how the company's prior charges, the notes and the preference shares, would be affected, and our prime care was that these interests should not be permitted to suffer. We set our- selves to achieve, on the income side, that there should be a sufficient revenue so that the company's note interest be taken care of, and that the preference shares, which, as you know, carry a fixed dividend of 6 per cent., should receive the full 8 per cent. up

to which they are entitled to participate, and to safeguard, on capital account, that the company should set aside a generous amount for depreciation.

Under the new arrangement effective for 1923, at present in force and subject to renewal from year to year, the charterers, as ordinary shareholders, although they are entitled to receive, at any rate, 2 per cent. *pari passu* with an 8 per cent. dividend on the preference shares, have agreed to waive their right to any dividend; and your company has agreed to the suspension of our full rates of charter and the payment by the charterers meantime of rates whereunder the losses of the charterers are reduced. These reduced rates are sufficient to cover the interest on our notes and the full 8 per cent. dividend on our preference shares, and are also sufficient to deal generously in the matter of depreciation. Originally we put aside for depreciation a sum sufficient to write off the total cost of our vessels in a period somewhat less than the estimated average life of a tank steamer. Under our new arrangement the more expensive of our vessels will be written down at a rapid rate, particularly in the year under review and the present year, and, with the cash thus accumulated in depreciation, we shall have sufficient funds to pay off in 1927, if this be then considered desirable, the whole of the outstanding 12-year notes.

The resultant position, therefore, is that we have afforded to the charterers a relief which was essential to them for trading purposes, that on income account our noteholders and our preference shareholders are safeguarded, and that on capital account the security of the preference shareholders and noteholders is improved by reason of the fact that the value of the company's vessels is being written down at a more rapid rate than would be the case under the original agreement.

NOTE REDEMPTION.

Turning to the balance-sheet, you will note that up to the end of the year there have been purchased and cancelled £541,700 of the company's notes, leaving a balance outstanding of £2,458,300. Of the balance there have been purchased to date a further £122,950. I think that you will agree that it is a sound measure to continue this policy and wipe out as early as possible this liability.

With the transfer of £750,000, the depreciation and sinking fund reserve now stands at £2,644,000. The repair and other reserves now stand at some £508,000, having been increased during the year by some £80,000, due to the fact that our repair bills have fallen short by this sum of the amounts set aside in the ordinary course for that purpose, and, therefore, we have not thought it necessary to make any special allocation of profits to the reserve this year.

Mr. Clive Bowring seconded the motion, which was carried unanimously.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

SUCCESSFUL YEAR—INCREASED REVENUE.

The ordinary general meeting of the Madras Electric Supply Corporation, Limited, was held, on the 4th instant, at 1 Queen Victoria street, London.

Mr James Gray, who presided, said that the receipts on capital account during the year consisted of the final instalment on the second registered debentures and the proceeds of the placing of the unissued balance of 94,000 ordinary shares at a premium of 2s per share, the premium, after deducting the cost of the issue, being credited to suspense account, reducing the balance of that account to £14,883. The capital expenditure amounted to £56,625, which included further outlay on the 5,000 k.w. turbo alternator and rotary converters, and also the construction of a cooling tank and canal for condensing purposes. The first portion of the work had been completed, and the remainder was proceeding. The Board of Trade units sold showed an increase of 19.38 per cent., a very large proportion of which was due to an increased demand for power.

The total revenue, including £1,385 for profit on exchange, amounted to £131,143, compared with £114,141, an increase of 14.9 per cent. There was a serious increase in the item of coal, amounting to no less than £12,828, due to its higher cost. Sufficient supplies of the Singareni slack, which they obtained for several years, were no longer procurable, and about one half of their requirements had to be drawn from Bengal at greatly enhanced prices. Since he prepared these remarks, however, they had had news from Madras that they had been successful in placing a contract for a larger quantity of Singareni slack and coal for 1925, which would effect a very considerable saving for next year. The total debits to revenue account amounted to £68,823, compared with £58,044, the balance carried to net revenue account being £62,320, compared with £56,097, an increase of 11 per cent.

The income from investments, temporary loans and transfer fees amounted to £10,352, compared with £4,078. This was due to a greater return from the tramways, and partly to interest from temporary investments available from the issue of ordinary shares

made in June last. They had for distribution £32,384, out of which they recommend a dividend of 8 per cent., free of income-tax.

It had been suggested to the board that they should take into consideration the payment of interim dividends. The board sympathised with the suggestion, and would give effect to it this year, provided that no untoward circumstances arose.

The report and accounts were unanimously adopted.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of May was 72,727 barrels, equal to approximately 10,300 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 11,300 tons.

GENERAL PETROLEUM COMPANY OF TRINIDAD.—Estimated gross production of crude oil for the month of May was 33,323 barrels, equal to approximately 4,760 tons, and the oil delivered to United British Refineries, Limited, amounted to about 4,578 tons.

Reports and Notices.

Mr Frank H. Houlder, chairman of Houlder Brothers and Co., Limited, and a director of the British Bank of South America, left Rio on May 31st on R.M.S.P. *Andes* for England after an extended tour round South America. Previous to his departure from Rio, he was received in audience by the President of the Republic of Brazil.

Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company Sterling 4 per cent. 500-year debenture stock will be closed from the 21st to the 30th instant, both days inclusive, for the preparation of warrants for interest due July 1, 1924.

Messrs White and Shaxson, discount brokers, of 33, Nicholas lane, Lombard street, announce that they have taken into partnership Mr Arthur Horace Penn.

Charles Edward Vernon Rutter, Esq., has been appointed chairman, and David Carter Rutherford, Esq., J.P., deputy-chairman, of the General Life Assurance Company.

Colonel Henry A. Micklem, C.B., C.M.G., D.S.O., has been elected a director of the Sterling Trust, Limited, to fill the vacancy caused by the resignation of Mr John Varley.

At a meeting of the council of the Institute of Chartered Accountants in England and Wales, held on June 4th, Mr Thomas Galland Mellors, F.C.A. (Mellors, Basden and Mellors), Nottingham, was re-elected president, and Mr. George Robert Freeman, F.C.A. (Gane, Jackson, Jefferys, and Freeman), London, was re-elected vice-president for the ensuing year.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to March 31, 1922, compared with those from January 1st to March 31, 1923:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross receipts, Mar., 1924	6,961,470.05	(a) 35,519,322.70
Do do do 1923	9,304,066.90	33,550,720.50
Estimated receipts for three months (Law of Control) 1924	7,225,000.00	2,675,000.00
months (Law of Control) 1923	6,195,685.00	2,294,890.43
Actual receipts for 1924 (three months)	21,284,461.20	(b) 94,413,076.30
Actual receipts for 1923 (three months)	19,038,944.85	71,402,112.50

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. (a), (b) In addition to these amounts, import duties equivalent to £44 in the case of (a) and to £1,766 in the case of (b) were paid in gold at the Piræus Customs. Owing to the change in the Greek calendar from old to new style, both the estimated and actual receipts in the above statement are for fourteen days less in 1923 than in 1924. As regards receipts, subject to the system of plus values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed; in order to guarantee the plus values against eventual diminution in the consumption.

NEW SOUTH WALES GOVERNMENT 5 PER CENT. LOAN 1935-1955, SECOND ISSUE.—Holders of New South Wales Government 3½ per cent. inscribed stock, maturing October 1, 1924, are reminded that the option of conversion into the above 5 per cent. loan will expire on Tuesday, June 10th. List of cash applications for the 5 per cent. loan will also be closed on the same day.

PROVINCE OF BUENOS AYRES 4½ PER CENT. LOAN OF 1910.—The Government of the Province of Buenos Ayres has issued a decree providing for the resumption, in accordance with the conditions of the issue, of the service of interest—which has been in suspense since 1917—on the above loan. The outstanding coupons up to and including coupons due April 1, 1924, should be lodged with the Swiss Bank Corporation, 43 Lothbury, E.C. 2, and 11c Regent street, S.W. 1.

STATE OF BAHIA BONDS.—Under the scheme arranged with the State of Bahia further funds have now been received by the Ethelburga Syndicate, Limited, sufficient to pay the coupons dated January 1, 1922, on the bonds of the 1913 loan and the bonds of the 1915 funding loan.

INSURANCE.

VICTORY.—The report for last year shows that the premiums were £233,741, and the net claims, paid and outstanding, £131,749. Expenses were £53,286, and, after provision for unexpired risks, there was a surplus of £26,544 carried forward, against unexpired liabilities. The further loss on the marine account was £23,818, consisting mainly of the special premium paid to reinsure the company's liability under Greek and Spanish risks. The directors regard the marine account as now closed. The debit balance at profit and loss was £97,138 on December 31st last, which was less than the £100,000 estimated a year ago as the limit of the capital loss. The company has £131,331 invested in British Government securities, of which the market value was £133,453.

RAILWAY.

LIMA RAILWAYS COMPANY.—The report for 1923 points out that The average rate of exchange, at which the remittances of the company have been transmitted for the year, on which basis the accounts are prepared, has been 21.75d, as against 21.18d per sol in the previous year. The general results in Peru have been as follows:—

	Receipts in Peru.	Expenses in Peru.	Net Receipts.
	£ s d	£ s d	£ s d
1923	16,148 5 10	2,596 1 9	13,552 4 1
1922	16,211 19 8	2,117 12 2	14,094 7 6
	— 63 13 10	.. + 478 9 7	.. — 542 3 5

The balance on net revenue account amounts to the sum of £8,099, from which an interim dividend of 1s 8d per share, amounting to £3,333, has been paid already, leaving a disposable balance of £4,766, from which the directors recommend a final dividend of 2s 4d per share, less income-tax, making a distribution for the year of 4s per share.

TEA AND RUBBER.

BAMBRACKELLY (CEYLON) TEA AND RUBBER.—The total issued capital of this concern is £80,000, all in ordinary £1 shares. Reserve account is £8,000. Total assets are £105,322, of which £3,272 is in cash, while the company holds 28,000 ordinary £1 shares, fully paid, at cost in the Lunuva (Ceylon) Tea and Rubber Estates. These stand in the balance-sheet at £33,600. Net profit is £13,437, against £9,637 for nine months ended December 31, 1922. The dividend is 16 per cent. for the year, against 20 per cent. for nine months. The sum of £2,000 goes to taxation reserve, and £2,000 to general reserve, while £2,195 is carried forward.

CHULSA TEA.—A fine start has been made by this concern. To begin with, the ordinary shareholders are to receive 30 per cent. dividend, less tax, and the report states that climatic conditions in the past season were very favourable; rainfall on all divisions showed a considerable increase over that recorded in the previous year. The total crop amounted to 43,333 maunds or 3,466,640 lbs, which showed an appreciable advance on the estimate. A strong market has ruled throughout practically the whole year, and prices have been satisfactory. About 86 per cent. of the crop was shipped for sale in London, and including, at a conservative sales averaged 1s 5.86d per lb. The season's revenue amounted to £246,145; the season's expenditure amounted to £129,599; showing a profit of £116,546. A balance of £24,539 is to be carried forward. The crop estimated for the current season is 43,500 maunds; a severe drought has, however, been experienced in the early months of this year, and output to date is below that of a year ago.

SAPUMALKANDE RUBBER ESTATES.—This company has an ordinary issued capital of £165,000 in shares of £1 each, and a reserve account of £30,000. There are no debentures or preference shares. Its assets total £227,478, of which £10,677 is in cash and £8,270 in British Government securities at cost. The report just issued for 1923 reveals a net profit of £12,648, against £15,045 for 1922. The ordinary dividend is again 7½ per cent. Nothing goes to reserve, against £4,107 in preceding year, but the carry forward is increased from £9,428 to £9,700.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES.—The issued capital of this concern totals £272,800, all in ordinary shares of £1 each. Reserve, including share premiums, stands at £30,878. Total assets are £383,215. Cash stands at £14,997, against £14,414 in preceding balance-sheet. Investment in 5 per cent. War Loan at cost is the same as in the preceding balance-sheet at £19,938. The tea crop jumped from 2,308,951 lbs in 1922 to 2,537,473 lbs in 1923, but cost of production increased from 8.62d per lb to 8.80d per lb. The company, however, secured a better average net price, which amounted to 1s 3.36d per lb, against 1s 0.66d per lb in 1922.

The restricted crop of rubber harvested was 85,302, against 69,639 lbs in 1922. Cost of production was 6.23d per lb, against 7.16d per lb, while the average net price realised was 1s 0.39d per lb, against 10.40d per lb in 1922. With regard to financial results achieved, these make a satisfactory showing, for the net profit has jumped from £39,872 to £66,280. Shareholders, who received 12½ per cent. for 1922, are to receive 22½ per cent. for 1923. The sum of £8,500 goes to taxation reserve account, while £16,859 goes forward, against £7,265 brought in.

MISCELLANEOUS.

ASSOCIATED NEWSPAPERS, LIMITED.—The issued capital of this well-known newspaper concern is £2,600,000. There are no debentures. The deferred shares issued amount to £1,500,000 in £1 shares, fully paid. In the balance-sheet, dated March 31, 1923, the deferred capital was £1,000,000, and the total of all issued capital was £2,100,000. For the year 1922-23 the dividend on the deferred shares worked out at 56½ per cent., and absorbed £562,500. For the year ended March 31, 1924, the dividend on the deferred shares amounted to £550,000. Dividends on ordinary and preference shares absorbed £67,000. The report and accounts for the year ended March 31, 1924, show a trading profit of £909,752, against £680,209 in preceding year. The sum of £158,000 has been transferred from reserves. The sum of £250,000 has been utilised for the allotment of 250,000 fully-paid deferred shares. The sum of £100,000 goes to reserve against investments, and £20,000 is transferred to pension fund. The sum of £175,901 is carried forward, against £94,493 brought in. The total assets are £3,946,735, against £3,555,978. Cash has risen from £447,866 to £693,020. Investments amount to £491,430, against £567,060. Stocks amount to £696,526, against £490,637. The report states that "costs of production in all departments continue to be very heavy, and the price of paper is more than double what it was in pre-war times."

HOVIS, LIMITED.—The directors of this well-known undertaking have issued their report and accounts in the form of an attractive illustrated booklet containing a short description of the works and mills. They intimate that the sales of Hovis during the past year have exceeded all previous records. The company has purchased the flour mills and business of Messrs. C. A. Harrison, Limited, of Lincoln. In connection with welfare work, the directors have purchased the freehold of a ground at Sale, Cheshire, as a sports ground for the staff in the company's Northern district. With regard to financial results, these show net profit on trading amounting to £81,929, against £78,393 in preceding year. The sum of £20,320 goes to depreciation, against £20,472. Reserve has been strengthened by the allocation of £17,085, bringing it up to £180,000. The ordinary dividend has risen from 8 to 9 per cent. The sum of £15,010 is carried forward. The total assets are £979,595, against £949,560. Cash has fallen from £61,930 to £3,333, but investments in British Government securities have risen from £105,803 to £154,769.

MARSTON, THOMPSON, AND EVERSHED, LIMITED.—The report for year ended March 31, 1924, of this brewery undertaking points out that "after making proper allowance for bad debts, depreciation of leases, plant, &c., the net profit on the trading amounts to £101,648, which, together with the balance of £32,085 brought forward from last year, makes £133,733. Out of this sum, £2,000 has been paid for directors' fees, £14,800 for interest on debenture stock, £14,290 for dividends on preference shares, £2,507 for compensation fund charge, £26,975 for an interim dividend upon the ordinary shares (being at the rate of 15 per cent. per annum to September 30, 1923, free of tax), and after providing £5,441, as a reserve for corporation profits tax, there is a disposable balance of £67,719." The directors recommend the payment of a dividend at the rate of 15 per cent. per annum for the half-year ending March 31, 1924, on the ordinary shares amounting to £26,975 (free of tax), that £7,500 be added to the reserve account, and that the balance of £33,243 be carried forward to next year's accounts. It is further stated that "during the year the directors purchased practically the whole of the ordinary shares in the Winchester Brewery Company, Limited, and Marston's Burton beers are now being supplied to the various houses owned by the Winchester Company, and the board have every reason to be satisfied with the purchase." The ordinary capital of this company was increased by the sum of £58,750, for the purpose of acquiring the shares.

RICHARDSONS, WESTGARTH, AND CO.—The directors, in presenting their report for 1923, observe that the year was one of intense depression, and the difficulties in maintaining continuity of work were greatly accentuated by the prolonged dispute in the shipyards and labour unrest generally. During the past year the directors made an offer to the debenture holders to purchase at par the entire issue of £350,000 4½ per cent. debenture stock. By the end of the year over £200,000 had been redeemed by the company and cancelled, and since that time further holdings have been redeemed and cancelled. The 6 per cent. cumulative preference shares are thus placed in a premier position, both with regard to capital and dividends. Moreover, the sum of £100,000 has already been set aside to provide for regular payment of the preference dividend during periods of depression, when the profits earned might be insufficient for the purpose. The net profit, after payment of debenture interest, amounts to £162,394, against £111,297 for 1922. The ordinary dividend is 10 per cent., against 18 per cent. for 1922. The sum of £68,976 is carried forward, against £57,583 brought in. The sum of £95,000 has been put to reserves and depreciation, against £230,000 in 1922. With regard to the balance-sheet, total assets are £1,456,053, against £1,797,240 at end of 1922. Cash has fallen from £540,760 to £174,709, but investments in British Government securities have risen from £427,315 to £528,800.

RUSSIAN TOBACCO COMPANY, LIMITED.—We understand that negotiations are being carried on between the Russian Tobacco Co., Limited, and the Soviet Authorities with a view to the restoration to the company of its former assets and business, which were confiscated during the revolution. The Russian Tobacco Company, Limited, is a British company formed in 1913, and before the revolution controlled the bulk of the tobacco business in Russia, making exceedingly good profits. We further understand that should these negotiations be successfully concluded, arrangements have been made with a strong financial group in London for providing the company with the necessary fresh working capital.

VIROL, LIMITED.—The report for the year ended March 31, 1924 states that the gross profit amounted to £226,743. The net profit, including the amount brought forward, was £92,074, and compares with £82,123 for the previous year. Deducting corporation profits tax and preference dividends, including that due on April 1st, the balance available for distribution is £80,563. The directors recommend the payment of a dividend of 20 per cent. on the ordinary shares, the placing of £15,000 to reserve, raising that fund to £115,000, and the carrying forward, subject to corporation profits tax, of the balance, £50,563. Cash at bankers and in hand amounted to £67,473, as against £60,735 last year. Increases are also shown in the other figures, sundry debtors being £67,690, as against £62,008 for 1923. The directors state the sales for the period under review show a substantial increase over those of the previous year, and constitute a record in the history of the company. A new beverage, Virol and milk in powder form, was placed on the market during the year, and has proved an immediate success. The whole of the heavy initial cost of placing this preparation on the market has been charged to the present accounts.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Wednesday Evening.

Weather conditions were very unsettled during the week, with storms and heavy rains over most parts of the country, causing floods in some parts. Up to the present no reports have been received as to any serious crop damage, though cereals on low-lying lands are affected. A spell of dry, warm weather is needed to stimulate growth of spring sowings and facilitate the planting of potatoes and root crops. Very quiet conditions prevailed at market, buyers being reserved in face of declining prices for most cereals. Native wheat supplies continue in small compass, and values remained steady at 11s to 11s 4d per 112 lbs, free on rail. Imported descriptions were easier in sympathy with lower c.i.f. offers, and a moderate trade resulted. No. 1 Northern Manitoba quoted 48s 3d, No. 2 ditto 47s 3d, No. 3 ditto 46s 3d, Barusso 63½ lbs 46s 9d, and Australian 50s—all ex ship per 496 lbs. The floating and forward cargo section presented a very dull tone, and, with liberal offerings of Plate descriptions, prices generally moved in a downward direction. Part Cargoes of Australian afloat sold 48s, and end-June loading 48s 3d per 480 lbs. Of maize, a steamer of La Plata June-July changed hands at 31s 9d per 480 lbs. Flour in fair request at recent rates. London standard straight run quoted 38s 6d, patents 40s 6d to 41s 6d, town households 36s 6d per sack delivered in. All English country straights in small supply at 35s 6d to 36s 6d per sack delivered to London stations. Imported steady, with a fair inquiry for spot lots, but forward business restricted, owing to high limits imposed by Canadian millers. Manitoba patents range from 36s to 37s 6d as to quality, Australian 35s to 35s 3d, soft Pacific 35s—all ex store per 280 lbs. Barley: English quiet at 11s 3d-12s 6d per 112 lbs, free on rail. Imported steady, but quiet. Californian 48s 6d-53s, Chilean brewing 43s-50s per 448 lbs, both ex ship. No. 4 Canadian Western ex ship 32s 3d, Karachi ex ship 32s 3d-32s 9d, ditto landed 33s 3d-33s 6d, as to quality, Plate ex ship 32s 6d, ditto landed 34s 3d-35s per 400 lbs. Oats dull. Plate f.a.q. ex ship 21s 6d, landed 22s 6d, No. 2 Canadian Western 26s, No. 3 ditto 25s, No. 2 Canadian feed landed 24s—all per 320 lbs. English quoted at 9s 6d-11s per 112 lbs, free on rail. Maize dull and easier. Plate new ex ship to arrive 40s-38s, as to position, ditto landed 42s, No. 2 white flat African landed 40s—all per 480 lbs. Millers' offers steady. Broad bran quoted at 7s 6d-7s 9d, ordinary 7s-7s 3d, middlings 8s 6d-8s 9d, fine ditto 10s, bags included, ex mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oats 9s 3d, ground oats 11s 9d—all per cwt, free on rail. Oatmeal in fair demand at late rates. London made, flaked 17s, rolled oats 16s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated June 4th, is as follows:—Pig-iron: The market is very quiet. Business with the Continent is rendered difficult by reason of the frequent currency fluctuations. East Coast hematite pig-iron is particularly dull at the present time, to-day's quotation being 98s per ton for mixed numbers. No. 3 Cleveland G.M.B. is quoted 91s per ton, but could be done at less for a good order. Manufactured iron and steel: The steel trade continues to be very slack, some inquiries but very few orders. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: There is no change. Very little demand, with the nominal price for best Rubio about 23s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Market for raw and semi-finished iron and steel has almost gone to pieces this week, and

although holiday next week is responsible to some extent for absence of buying and the widespread suspension or reduction of deliveries, the fact cannot be denied that the situation has slumped badly during the last week or two. The production of steel was down in April compared with previous months, but May and June are certain to record still greater reduction, as a number of large steel furnaces have lately been shut down for want of work in some sections. Overseas business has also fallen off considerably, in spite of depression. Prices are not quotably lower. The fact is that the making of crude steel is being carried on at a loss, and rather than increase this by lowering prices producers will prefer to close their furnaces. Business has tapered off again in Sheffield typical cutting steels. Exchange fluctuations are restricting business. With the Continent brisk business is being done in steel sheets, cold rolled strip, motor steel, magnet steel, railway wagons and material, circular saws, and some classes of tools. Files are also moving off better, but, speaking generally, output does not approximate capacity sufficiently near to render trading remunerative. The open hearth steel department is producing at about half capacity. Silver and electro-plate branches have experienced lean times ever since the beginning of the year, nor does buying show any tendency to pick up. Shopkeepers dealing in hardware report dwindling turnovers, due to contraction in purchasing capacity of public. Fuel market is in a state of comparative disorganisation, and it is clear that the remarkable spell of prosperity which it has enjoyed for several years has come to an end. The heavy drop in the demand from the Continent is the chief factor in the collapse, and home sales of house coal are stagnant. Makers of coke cannot now dispose of their output, and prices continue to fall in some

districts. Best Durham foundry coke is now down to 40s per ton. Quotations per ton at pits are: best hand-picked branch, 34s; Barnsley best Silkestone, 28s; Yorkshire hards, 23s; Blyths, 23s 6d; Tynes, 25s; rough slacks, 12s; smalls, 8s to 10s.

Our Glasgow correspondent writes as follows:—The iron and steel market is not so far showing much result from the considerable shipbuilding programme now on hand on the Clyde. It is evident that the continued export inquiry is having a slightly stiffening effect on prices, but the mills are far from their full working capacity, and are anticipating an early call for deliveries of plates and sections from the shipyards. Less disposition is being shown in all branches to give concessions for orders than was the case a week ago. Inquiries from the Continent continue to come forward, and it is quite evident that difficulties there are as prevalent as ever. The Admiralty has inquiries out with steel works here for 15,000 tons steel plates and large tonnages of angles and sections for the Government yards. The Greenock Dockyard Company has this week received instructions to build a 7,000-ton bulk oil-carrying steamer for Glasgow owners. Bar iron makers still complain of shortage of orders. Re-rollers are busy, and sheet makers in certain instances are booked up till well on in August, chiefly those engaged in light gauges for the Far East. As indicated a week ago, Japan has become an active buyer, and it is understood that some 20,000 tons have been placed with the makers of this class of light sheet, a very considerable portion of that tonnage being with local mills. Buying of galvanised corrugated sheets for India has assumed very large proportions, in spite of advances in price demanded by makers. Ten days ago the price had fallen to £16 15s per ton, and it is doubtful whether a specification would to-day be accepted by makers at less than £17 15s. Buyers are evidently anxious to import as much as possible before the proposed duty becomes an accomplished fact. Other markets, including the Argentine, South Africa, and Australia, are also taking fair quantities. Pig-iron shipments were again rather restricted, the total for last week from the Clyde being only 699 tons. Prices, however, remain fairly level.

Our Cardiff correspondent writes:—The strikes in the Monmouthshire coalfield have collapsed as suddenly as they were started. The men employed at the Nine Mile Point and the Risca Collieries of the United National Collieries, Limited, have resumed work against the advice of their local leaders, who urged them to continue the strike, while those employed at the Sirhowy Collieries of the Tredegar Company have complied with the request of the executive committee of the South Wales Miners' Federation that they should return to work and submit their alleged grievances to the Joint Disputes Committee for the coalfield. The Ferndale pits of D. Davis and Sons, Limited, have been idle for several days owing to the partial destruction of the company's power station by fire, but at these pits also work was being resumed towards the end of the week. These stoppages have substantially reduced the output of the coalfield, but so slack is the demand that prices have been unaffected. It is only the co-operation of the colliery salesmen in their efforts to limit underselling that has prevented a fall, and it is hoped that after the holidays, which will involve the loss of half a week's output, the market position will show an improvement. The following are the current approximate quotations:—Best Admiralties, 27s 6d to 28s; second Admiralties, 27s to 27s 6d; best drys, 26s 6d to 27s; black veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 25s 6d; best bunker smalls, 17s 6d to 18s; ordinary cargo smalls, 16s 6d to 17s; coking smalls, 18s to 18s 6d; anthracite big vein large, 50s to 52s 6d; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 47s 6d to 50s; rubbly culm, 15s 6d to 16s; coke for export, 57s 6d; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 29s to 30s; pitwood, ex ship, 28s 6d to 29s 3d.

Conditions in the iron and steel trades are easier, and the minimum prices both of steel bars and tinplates have been reduced. The reduction in the minimum prices of tinplate bars is from £8 19s 9d to £8 12s 6d, f.o.b. works port, less 7s 6d per ton rebate to tinplate manufacturers participating in the stabilisation scheme, and that in tinplates from 23s 6d to 22s 7½d per basis box, f.o.b. This is the first alteration in the minimum prices of tinplates since last November. No definite period has been fixed for the duration of the new prices.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

Improvement in the Cumberland and North Lancashire hematite pig-iron trade is very slow, and though business during the past few weeks has been somewhat brisker, the existence of stocks has prevented any expansion of production. Nearly all the iron lying in the works' yards has now, however, been sold, if not delivered, and as users' early needs are fairly considerable, it will become necessary towards the end of next week to put two additional furnaces in blast in the Furness district. The number at present blowing is 10—eight in Cumberland and two in North Lancashire. The disappointing feature of the situation is that there is no disposition on the part of consumers to contract for future requirements. They could only be induced to do so by lowering prices. Values, it is agreed, are too high, but, on the other hand, with the figure and still keep their furnaces in draught. Even as it is, the margin of profit is a bare minimum. Bessemer mixed numbers are quoted at £5 12s 6d per ton delivered at Sheffield, and £5 17s 6d per ton at Birmingham. The greater part of the make is absorbed by the Midlands and by the local steelworks, but more iron is being sent to Scotland, South Wales, and the Continent than was the case in early April. Special iron is not in good request by Sheffield steel makers, and the market for manganese alloys is dull, though

prices are maintained, ferro being £17 per ton, f.o.b., and spiegel £9 per ton, f.o.b. Matters are very quiet in the steel trade, makers having few orders on their books, and it is doubtful whether the rail mill at Workington, which closes down this week-end after five weeks' activity, will resume again until the end of June, if then. Barrow is still idle. Native hematite iron ore production is being taken by the local smelters, and about 1,000 tons are passing weekly to Scotland and Yorkshire. Superior sorts of low-phosphoric ore are quoted at 22s to 24s, and ordinary kinds at 17s to 18s. The coal trade is very slow, Irish merchants having such large stocks on hand and so much cheap Scotch and Lancashire coal available that they are not placing many orders in Cumberland, though best round is now offered at 27s, house nuts at 25s 6d, and steam nuts at 24s per ton, f.o.b. Industrial fuel is quiet, with best steam at 30s and washed steam at 29s per ton delivered, and there is little doing in the local landsale market. Best house is 38s 2d per ton at pit. Coke is a considerable make at the 390 by-product ovens in operation, and is being sold to the smelters of ordinary iron in the district at 25s to 26s 6d per ton, according to carbon content.

METALS.

Tin commenced with a firmer tone, due to higher cables from the East, combined with a good inquiry for all positions. Subsequently, after easing somewhat on selling pressure, values became irregular, but dearer on balance. Standard cash sold at £212 10s to £214 10s to £210 10s to £212 10s, while finally registered at £211 15s, and three months £208 10s to £212 10s to £209 to £211 15s to £211 5s. The upward movement was continued on Thursday, and offers were fairly well absorbed. Standard cash sold at £214 10s to £214 5s to £215, and three months £214 to £214 5s to £214 12s 6d. English ingots quoted at £217 to £217 10s. Copper in fairly good demand, and tendency of prices firmer. Standard cash sold at £61 12s 6d to £61 17s 6d, and three months £62 15s to £62 10s to £63 to £62 17s 6d. Values were again dearer at Thursday's session, with buyers well in evidence. Standard cash sold at £62 7s 6d, and three months £63 7s 6d to £63 5s to £63 7s 6d. Electrolytic £67 10s to £68; wire bars £68 per ton. Lead firmer, and quoted at £31 7s 6d to £29 5s as to position. Spelter dearer at £31 17s 6d. Antimony, English special brands, £49 10s to £50. Aluminium, home trade, £125; export, £130.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—Business in this centre has again been very slow during the week, and it is obvious that outside influences are having a retarding effect upon development. The fluctuations in the French franc and the financial stringency in Germany are reacting on trade generally, and the demand for tops and yarns on home account is not sufficient to overcome these adverse influences. Confidence in the raw wool position is still maintained, the majority of holders being of the opinion that the present lull will prove to be of a temporary nature, and they are unwilling, therefore, to attempt anything in the way of forced business. On the whole, quotations are nominally unchanged, but values are not being seriously tested, and little improvement can be expected until after the holidays. The bulk of the wool is being held by firms who are able to face a period of quietness without experiencing financial embarrassment, and so traders, as a whole, are largely playing a waiting game. The demand for yarns is negligible, and price-cutting in botanys is still being indulged in. Crossbreds, however, are steady, though users are not doing much at current rates. The position in the piece-goods trade leaves much to be desired. Manufacturers are finding a fair amount of inquiry, especially for stock lots, but buyers are not prepared to pay anything like replacement values, and few will do anything in the nature of forward buying. Much interest has been created locally by a visit of representative traders from Roubaix-Tourcoing. The members of this delegation have been in conference with the various trade federations here, and it is hoped that as a result of the discussions some of the present obstacles to business will be removed, and that a better understanding will result.

COLONIAL WOOL. FROM A CORRESPONDENT.

An important deputation from the Roubaix Chamber of Commerce, and representing all sections of the wool textile industry of Northern France, is visiting Bradford this week. This visit, following that of members of the Bradford Textile Society to Roubaix, is a welcome event, one which it is hoped will contribute a most valuable share to cementing good feeling between traders in the West Riding and Roubaix-Tourcoing. Several conferences have been held in Bradford, and one or two matters of vital interest have been discussed. Perhaps the most important so far in connection with the trade in raw material is the projected international wool federation, worked something on the lines of the British Wool Federation, one of the principal objects being to obtain more statistical information. Although the writer has been connected with the wool trade for thirty years, he has never known a time when figures relating to the world's production and consumption of wool were so carefully studied as is the case to-day. In connection with figures relative to the quantity of wool produced there is very little wanting, it being really some more accurate data about consumption which is required. One of the United States Government departments has made an effort to obtain each month sufficient data to warrant them in publishing figures giving an idea of the actual consumption of wool, both domestic and colonial, but well on towards a dozen of the largest mills refuse to furnish that information, among them being the biggest consumer of all, namely, the American Woollen Company. Nowhere else has such an attempt been made, and nothing but an Act of Parliament will ever enforce the production of figures regarding the consumption of wool in Great Britain.

Whilst recognising the usefulness of such particulars, if they were forthcoming, I am certain that many of the largest users will strongly object to giving them, but now that the trade has got through an abnormal period, which has been entirely the outcome of the war, it will not be difficult in the near future for a careful student of the trade to form a fairly accurate opinion of both supplies and demand. From such information as is now available, it is pretty clear that so far as colonial wool is concerned, no more is being grown than is required for the world's consumptive needs; in fact, there is every likelihood that, in the absence of an increase in supplies, when consumption in Europe and America gets back to normal, there will be a wool famine.

Messrs. Dalgety and Co., Limited, who are recognised as the wool statisticians of Australia and New Zealand, are to be congratulated on the fine list of statistics they publish monthly and annually regarding wool production in those two countries. The Cape Government also issues monthly figures, while the lists of exports from the Argentine and Uruguay are also very fully given. More complete information from some of the other South American countries would help to form a still better idea about the total production and export of the raw material.

MANCHESTER, June 4.

Trade in the market has continued featureless and of unimportant dimensions. Owing to the limited turnover, there is a tendency for spinners and manufacturers to lose ground. The first official report of the United States Government on the cotton crop, although worse than expected, has not had any effect upon the attitude of buyers. Only a miscellaneous business has been done in piece goods for India, most of the bids from the other side being quite unworkable. Trade for China has been restricted to odd lots. The minor outlets East and West have given no support worth mention-

ing. A little more activity is now showing itself in the home trade section, but clearances are being adversely affected by the unseasonable weather. American yarns for home use have moved off slowly. Irregularity in quotations is increasing. Export yarns have attracted very little attention. A steady demand has been met with in Egyptian spinnings, without trade of any importance being done.

VEGETABLE OILS.

Market conditions generally have been steady, and no marked price fluctuations have taken place. Raw linseed oil has been in fair demand by the consuming industries, and prices on balance are about unchanged, current value for prompt and June delivery being £37 per ton naked, ex Hull mill. A very good business is reported in technical or soapmakers' grade of refined cotton oil,

SOUTH-NORWAY.

value of which is around £39, ex Hull mill. Edible descriptions, however, are neglected, and prices incline easier. Egyptian crude offers freely at £38 10s. Other vegetable oils are in only moderate request. Castor oil is 20s cheaper at £59 per ton (barrels), free for first pressure.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market shows signs of firmness, and advances have been secured in the provinces, best ox showing 4d to 1d per lb. improvement in many cases. The position in Bermondsey is regarded as steady, and as tanners are anxious for supplies just now, sellers will probably make more money for their offerings at this week's auctions. On the other hand, frigorific hides continue to show weakness, and tanners are holding off buying until the position is more stabilised. Dry hides are inactive, but at origin holders are firm, 9d being asked for B.A. Americanos. The American position is cabled this week as steady, with best heavy packers offering at 12 1/2 cents.

Business this week in sole leather has been confined to small lots, the close proximity of the holidays telling against speculation of any sort. Home and wet salted bends have gone out to repairers, who, in view of the wet weather, seem a shade busier. Shoe manufacturers are still running on cheap dry hide bends, and in some cases tanners are sold well forward in this class of leather. Offal is a shade quieter, but so far tanners have no accumulations, and hold out for asking prices.

In upper leathers there is little to report, business being confined to small lines of glacé, patent and chrome calf. Suede seems to be falling off in favour, and it is possible a wet summer will see the end of this inefficient material, which quite fails to protect the feet against damp.

Boot manufacturers have been busy this week getting out deliveries before the holidays. Most of the factories will remain closed until Tuesday or Wednesday next week, although in a few fortunate cases an earlier resumption of work will be necessary where export orders have to be executed.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Thursday, June 5.

SUGAR.—The general tone of this market remains quiet, dealers showing no desire to enter into the question of stock, and with offers from the chief producing countries still circulating with freedom, confidence at the moment is found wanting. A fair clearance was recorded in British makes at lower prices. Messrs Tate and Lyle's cubes, crushed, also nibs, reduced 19d per cwt, with others, also forward granulated, 2s. Cubes quoted, A.T., 41s; No. 1, 40s 3d; No. 2, 40s; nibs, 41s 3d; coffee crystals, 41s; granulated, 38s 1 1/2d; fine, also coarse grain, 37s 7 1/2d; No. 1, 37s 4 1/2d; No. 2, also London and T.L., 37s 1 1/2d; ditto forward to July, 37s; yellow crystals, spot, 34s 7 1/2d; caster, finest, 39s 10 1/2d; A, 39s 1 1/2d; B, 37s 9d; pulverised, 38s 6d; mineral water, 37s 6d. Imported kinds quietly dealt in at prices favouring buyers. White Java, spot, 35s; ditto, May-June, steamer, 20s; June-July, 19s 6d; July-August, 19s 3d, c.f. and i.; London. Czech granulated, spot, 35s; ready for shipment, 23s; November-December, 20s, f.o.b., Hamburg. American granulated, June, 18s 3d, c.f. and i.; London. Cuban, basis 96 per cent, June, 18s 3d, c.f. and i. terms, U.K. Dutch granulated, spot, 35s 6d. White terminal market presented quiet features. June delivery sold, 22s 6d to 21s 3d; August, 22s 7 1/2d to 20s 10 1/2d; December, 20s 3d to 19s 6d. Cuban spot, 22s 3/4, against 66s 3/4 last year.

COFFEE.—There was only a quiet movement in spot parcels at about late rates. Export demand remains very slow.

COCOA.—Spot market quiet, but steady. Accra F/F grade, June-August, 28s 6d cwt., f.o.b. terms.

TEA.—Indian auctions totalled 44,000 packages, and while all the better descriptions met a brisk demand at full to occasionally dearer prices commonest tended in buyers' favour. Pekoe sold at 1s 3 1/2d to 1s 9d; broken, ditto, 1s 3 1/2d to 1s 11 1/2d; orange, 1s 4d to 1s 11 1/2d; broken orange, 1s 4 1/2d to 2s 10d per lb in bond. 19,000 packages Ceylon in auction experienced a good demand for finest quality at steady rates, but common kinds tend weaker. Pekoe sold at 1s 4 1/2d to 1s 9 1/2d; broken pekoe, 1s 4 1/2d to 1s 11d; orange pekoe, 1s 7 1/2d to 1s 10 1/2d; and broken orange pekoe, 1s 6 1/2d to 2s 3 1/2d per lb in bond.

RICE.—With no recovery in demand, prices for Eastern grain mark a downward movement. Two Stars, spot, 15s 3d; afloat, 14s 6d; June-July, 15s. No. 3, cleaned, Rangoon, June-July, double bags to the Levant, quoted 15s 4 1/2d. S.Q. shipment to Cuba, double bags, sellers, 15s 9d; ditto, single bags to Japan, 13s 4 1/2d, f.o.b. terms, the preceding being c.f. and i. Japanese peas dull. Spot, sellers, 20s; June-July, 19s 3d; September-October, 19s 9d cwt., c.f. and i.

SPICE.—Pepper market generally quiet. Black Singapore, L.S., May-July, quoted 4 1/2d; Lampung, August-October, 4 1/2d; Muntok, May-July, 7 1/2d; August-October, 7 1/2d. Zanzibar cloves, spot, 11 1/2d lb. Spot tapioca steady, quiet. Fair Penang seed, spot, London, 23s 6d. Singapore flake, June-July, Havre, sellers, 27s. Penang seed, June-July, London, 19s 6d, c.f. and i. Sago flour dull. March-May, sellers, 14s 9d; April-June, 14s 6d; June-July, 14s 4 1/2d, c.f. and i. Liverpool. Desiccated coconut steady, but trade slow. Fine cut, spot, 38s 6d; medium, 39s 3d cwt. Ginger in quiet support, but held steadily.

JUTE.—A fair inquiry was reservedly met, and a firm tone characterised the market. First grade, May-June, Continent, quoted £27 15s; June-July, £27 17s 6d; new crop, August, £27 15s; August-September, £27; September-October, £26 7s 6d per ton. Hessians and twills quietly steady.

HEMP.—Manila kinds were a steady market, with moderate inquiries in force, while shippers are somewhat reserved. J grade, May-July, quoted £38; K, £33 5s; L, £32 5s; M, £27 15s. Manila, packed M, June-July, sold, £29 10s per ton. New Zealand largely nominal. African sisal quiet at previous rates.

SHELLAC.—Market quietly steady. T.N., fair quality, on spot, in bags, quoted 26s; August, 25 1/2s 6d; October, 25 1/2s cwt.

COPRA.—Quietness was again the prevailing feature, demand from crushers failing to extend. F.M.S. Straits, March-May, to Rotterdam, quoted £28 2s 6d; April-June, £27 10s; May-July, £27 7s 6d, paid. Dutch East Indies, March-May, £28; April-June, £27 12s 6d. Ceylon, June, £29 10s. South Sea Islands, £27 5s. F.M. Straits, June-July, Marseilles, £27 5s. Palm kernels formed a quiet market. June-August, Liverpool, sold, £19 1s 3d per ton.

RUBBER.—Business was of fair extent, and a steadier tone predominated. Standard plantation crepe and sheet, spot, also June delivery, sold 10 1/2d to 10 3/4d; July, 10 3/4d to 10 1/2d; July-September, 10 1/2d to 11 1/4d; October-December, 11 1/4d, 11 1/2d, 11 3/4d; January-March, 11 3/4d, 11 1/2d, 11 1/4d. To New York, standard European estate, June-July, quoted 10 1/2d; and July-August, 10 1/2d per lb, c.f. and i. Wild descriptions call for no comment.

EGG PRODUCTS.—There is only a small business doing on about former terms.

FRUIT (Dried).—A firm tone continues, though general course of trade is quiet. Of currants, Pyreos, 1/2-cases, 46s; Amalia, 48s; Patras, 50s; Gulph, 52s; Panaraii, 56s; Vostizza, 63s to 70s; Australian, new crop, 1/2-cases, 63s to 68s. Raisins, Valencia, 1/2-boxes, 38s to 40s; Cape, new crop, 40s to 44s. Sultanas, Greek, 1/2-cases, 52s; Smyrna, boxes, 56s to 70s. Figs, genuine, natural in bags, good, 35s; fine, 38s. Dates met with but retail support at about late rates. Evaporated fruits, Californian apricots, standards, quoted 78s to 80s; choice, 90s; extra choice, 10s; peaches, choice, 48s; extra ditto, 53s; fancy, 58s; apple-rings, 80s. Plums, Oregon, 30/40 quoted 70s; 40/50 at 50s; Bosnian fine, 1/2-cases, 72/77 at 40s cwt.

CANNED GOODS.—Business in most directions is still kept down, but general firmness prevailed regarding trend of values. Of sardines, Portuguese 1/2 flats, quoted 3s to 3s 3d; clubs, 3s 6d to 4s; 12 oz, 5s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobster, fancy halves, 143s. Crayfish, 72s. Salmon: 1 lb flat reds, labelled, quoted 53s; ditto tall, 43s 9d; 1 lb tall pink, 25s 6d to 26s 6d; and cases of 96 1/2 lbs, 28s to 30s per case. Canned fruits: Singapore pines, cubes, 48 1/2 lbs, quoted 6s 9d to 7s; ditto, 24 1/2 lbs, 11s to 11s 6d; slices, 48 1/2 lbs, 6s 3d; Hawaiian slices, 2 1/2 lbs, 14s 9d to 16s (d); Californian apricots, 8s to 11s; ditto peaches, 9s 6d to 12s 6d; pears, 14s to 15s 6d. Italian tomatoes, 7s per dozen tins.

OLIVESEEDS.—Linseed market quiet, but generally firm forward. Indian: Calcutta, afloat, £19 12s 6d; just sailed, £19 12s 6d; April-May, £19 10s; May-June, £19 7s 6d to £19 8s 9d, paid; bold Bombay, May-June, £20 5s. Plate, afloat, £17 12s 6d; April-May, sold, £17 10s to £17 12s 6d; May-June and June-July, £17 12s 6d. Rape seed quiet and easier. Toria, May-June, £17 15s; Jamba, May-June, £13 15s; and real bold Ferozepore, April-May, £17 7s 6d; May-June, at £17 5s. Cotton-seed easier. Egyptian, black, June, £12 15s. Sakellaridis, £11 12s 6d. Bombay, May-June, £10. Gingelly seed firm. Chinese, May-June, £26 5s. Groundnuts steady. Coromandel, machine-dried, June-July, £22 17s 6d; Chinese, decorticated, f.a.q., May-June, £21 12s 6d; bold Bombay, April-May, £22 5s. Soya beans dull. Manchurian, afloat, £11 15s; May-June, £11 13s 9d. Castor seed firmer. Bombay, May-June, £25 2s 6d; Cawnpore, June-July, sold, £22 15s per ton.

WHEAT.—Linseed generally quiet, but prices firm. Spot, net, naked, 39s 3d; June, 38s; July-August, 37s 3d; September-December, 36s 4d. Rape quiet. Crude, spot, 45s; refined, 48s. Castor-oil easier. First pressure, spot, quoted 60s; second pressure, 59s; and pharmaceutical, 65s to 66s per cwt, Hull, with London 2s per cwt extra. Cotton dull. Crude Egyptian, spot, 40s; Bombay, 37s; common edible, 46s; deodorised 49s. Chinawood quiet. Hankow, spot (barrels), 82s; June-July, 72s. Coconut quiet. Ceylon, spot, 46s 6d; June-July, 43s; Cochin, ditto, nominally 50s. Soya dull. Oriental, barrels, May-June, 39s 6d; bulk, 35s 6d. Cod easier. English, spot, 33s 6d to 34s 6d. Groundnuts quiet. English, crushed, naked, spot, 46s; deodorised, barrels, 55s. Turpentine quiet, and easier. American, spot, 69s; July-December, 67s 3d. Rosin steady. American, grade B, 14s; G, 14s; WG, 18s; WW, 20s per cwt. French WW, 17s 6d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner report, dated June 4th, is as follows:—The tallow market was less active during the week, and prices were barely maintained to-day. There was a fairly good

THE MONEY MARKET.

THE increase in market supplies of funds consequent upon the June 1st dividend disbursements has not disappeared quite so rapidly as the market had feared might be the case in the light of last year's experience. Fresh day to day loans have generally been freely obtainable at 1½ per cent. Discount business, however, has been quiet, the permanence of the ease not being trusted, though rates have been rather inclined to fall away because of the

By Order,
F. HAINES, Secretary.
1, London Wall Buildings, London, E.C.2.
6th June, 1924.

plentiful supply of credit. The reduction in the New York rediscount rate, too, has helped to reassure those who were inclined to be apprehensive of an early rise in our own Bank Rate. The rate for fine three months' bills has receded to $2\frac{1}{8}$ per cent., or under, and September Treasury bills have not been better than $2\frac{1}{8}$ per cent.

	June 13, 1924.	June 5, 1924.	May 30, 1924.	May 23, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	5% (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	$2\frac{1}{8}$	3	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease of £441,600 in the active Note circulation, and an addition of £469,100 to the reserve. Only moderate progress was made with the repayment of loans required by the Government for dividend purposes, Government securities showing a contraction of £6,165,000 after last week's increase of £22 $\frac{1}{2}$ millions. Other deposits were £5 $\frac{1}{2}$ millions lower, while changes in Public deposits and Other securities were insignificant. Holiday demands were doubtless responsible for the increase of £4 millions in the Currency note circulation, but the increase of nearly £8 millions in two weeks this year is far greater than last year's Whitsun movement. The amount outstanding is now £293,958,600, which includes £1,388,800 for notes called in but not yet cancelled. The fiduciary issue is £243,119,700, or only £5,071,200 below the maximum.

The statement of the average weekly balances of the clearing banks for May, printed in full on a later page, shows a slight increase in deposits and a further decline in acceptances, as may be seen from the following table, which compares the monthly aggregates of the nine English banks:—

	Dec. 1922.	June, 1923.	Dec. 1923.	Mar. 1924.	Apr. 1924.	May, 1924.
Capital and reserves	116.0	116.3	116.3	118.7	119.0	119.1
Acceptances	72.8	73.8	96.1	99.2	95.2	92.0
Deposits (incl. undiv. profits, &c.)	1,684.7	1,637.7	1,673.1	1,603.2	1,614.7	1,617.8
Total liabilities	1,873.5	1,827.8	1,885.5	1,821.1	1,828.9	1,828.9
Coin, notes, balance at bank, and cheques in course of collection	253.0	240.7	254.2	230.2	236.7	232.6
Money at call	106.0	113.3	111.3	93.5	97.6	101.1
Investments	384.5	355.5	363.8	361.7	357.1	352.4
Discounts	298.3	270.8	276.3	224.0	224.6	235.3
Loans and advances	732.7	746.9	756.5	785.5	790.6	788.2
Cover for accept., premises, &c.	99.0	100.6	123.4	126.2	122.3	119.5
Total assets	1,873.5	1,827.8	1,885.5	1,821.1	1,828.9	1,828.9

Advances have declined by about £2 $\frac{1}{2}$ millions, but discounts have expanded by £10 $\frac{3}{4}$ millions. Cash is down by about £4 millions, but money at call is up by £3 $\frac{1}{2}$ millions.

THE STOCK MARKETS.

The French political crisis has been a leading factor in the Stock Exchange this week. The news of M. Millerand's resignation was hailed as the beginning of the end of that crisis, and the franc and French issues recovered. British Government stocks have been firm, and newly-issued scrips have maintained their prices well. Apart from French stocks, the features of the foreign market have been a sharp fall in Mexicans and a rise in Portuguese 3 per cents. Home Rails suffered from Labour fears, but recovered a little towards the end. Rubber shares were dull and tea shares mainly drooping; the oil market hardened a little after early weakness. Features in the industrial list were few, but Dunlop preference improved on the reorganisation scheme. The buoyancy of the Kaffir market receded a little owing to the approach of the South African elections.

THE COMMODITY MARKETS.

The commodity markets have been in holiday mood. The week has been very quiet in the Manchester district, many merchant houses having closed down entirely. In the wool trade demand is restricted both on home and export account. Sugar prices keep at a steady level, but the supply is easy. Tea prices are firm. A hardening tendency is noticeable for copra. Rubber is inclined to sag. Wheat prices are better. In Cardiff the Coal Exchange did not open its doors until Wednesday; business

has been very quiet. Our Middlesbrough correspondent reports that no pig-iron market was held this week. Tin was slightly better, but copper was easier. Linseed oil opened with a firm tone. Further details of these and other markets will be found on later pages.

FOREIGN EXCHANGES.

On the Foreign Exchange market business, both before and after the holidays, was quiet, but dealings have grown a good deal more towards the end of the week. Interest, as usual, has concentrated on the movements of the Paris rate, which, after being quiet, with some improvement on Friday and Saturday, opened higher again on Tuesday at 80.00, and dropped during the day to 84.75. On Wednesday there were again violent fluctuations between 85.25 and 80.50, with a closing rate of 81.40, while on Thursday the quotation at one time fell to 79.70, rising again at the close to 81.50. Yesterday morning the rate opened above 82, but before lunch had reacted again to 81.55, while forwards were in strong demand at 20 to 30 centimes per month above spot as compared with 60 centimes a week ago. The main reason for these movements is, of course, the French political crisis, but the sudden improvements in quotations are said to have been due to a large extent to heavy buying on German account. Brussels has, as usual, mainly followed Paris, with an improvement from 98.62 $\frac{1}{2}$ on the 6th to 95 yesterday morning. The Italian rate also shows a moderate improvement from 99.30 to 99 $\frac{1}{2}$, after having been rather better. From \$4.31 on the 6th, the New York rate has been firm, with slightly improving tendency, which has received a further impetus from the lowering of the American discount rate. Yesterday morning's quotation of \$4.31 $\frac{1}{8}$, however, showed a slight reaction. Forward quotations are again narrower at par to $\frac{1}{8}$ cent above spot for one month. In neutral markets Amsterdam has moved in our favour from 11.51 $\frac{1}{2}$ to 11.54, Switzerland has appreciated from 24.51 to 24.47 $\frac{1}{2}$, while Madrid has moved in the opposite direction from 31.99 to 32.03 $\frac{1}{2}$. In Northern Europe, Stockholm, at 16.23 $\frac{1}{2}$, is unchanged; Copenhagen, however, has improved from 25.60 to 25.55 $\frac{1}{2}$, while Christiania, where conditions show no improvement, has again depreciated sharply from 31.80 $\frac{1}{2}$ to 31.88 $\frac{1}{2}$. Helsingsfors at 172 is much the same, while the Polish zloty and Riga continue on a parity with the gold franc. In Central Europe the mark is still quoted at 18 billion, the financial strain being slightly relieved by fresh hopes of an understanding with France over the Dawes report. Vienna at 307,000 shows a slight depreciation, and Prague is also slightly cheaper at 147 $\frac{1}{2}$. Bucharest at 985 shows considerable improvement on the refutation of the recent persistent rumours of internal disorders. The Greek rate, however, at one time jumped sharply to 260, on reports of renewed political trouble, but has again moved down to 245. In the East the rupee is much the same at 15 4 31-32d, while the yen shows a further slight improvement to 15 10 $\frac{1}{2}$ d. The silver market has been quiet, with a little buying from China. Reports of the approval of further purchases under the Pittman Act have proved premature, as in the hurry of adjournment the requisite Bill was not brought before the lower house. Hong Kong has fallen away again from 2s 5d to 2s 4 $\frac{1}{2}$ d, Shanghai from 3s 4d to 3s 3 $\frac{1}{2}$ d. In South America Rio has weakened from 6 1-32d to 5 $\frac{1}{8}$ d. Buenos Ayres, on the other hand, has moved up from 41 $\frac{1}{2}$ d to 41 $\frac{3}{4}$ d, Monte Video from 43 $\frac{1}{2}$ d to 43 $\frac{3}{4}$ d. Valparaiso has also appreciated from 40.30 to 39.90.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 7th:—

(000's omitted.)			
EXPENDITURE.		REVENUE.	
Supply Services	6,800	From Revenue	10,502
Interest, &c., on Debt	48,190	Taken from Exchequer Balances	245
Sinking Fund	250	Amount borrowed	44,613
Sundries	120		
	55,360		55,360

Revenue at £10,501,400 compares with £9,169,000 in the corresponding period a year ago. Customs yielded £1,090,000 less at £1,853,000, while Excise yielded £988,000, as against £1,364,000. Estate, &c., duties produced £1,200,000, as compared with £810,000. Property

and income-tax yielded £2,153,000, against £1,220,000, and super tax £940,000, against £900,000. Interest on sundry loans yielded £1,108,200, against nothing in the corresponding period. The week's operations increased the National Debt by £44,613,100, and caused the following changes:—

(000's omitted.)			
	£		£
Treasury Bills	+ 9,839	National Savings Certificates	— 200
4% Treasury Bonds	+ 474		
Bank of England Advances	+ 21,000		
Public Dept. Advances	+ 13,500		
	+ 44,813		— 200

The floating debt was increased by £44,335,000 to £786,300,500.

FINANCIAL YEAR, 1924-1925 (April 1 to June 7).

£		£	
Total Expenditure ..	167,013,915	Raised by Revenue ..	141,975,564
		Decrease in Balances ..	3,449,554
		Amount borrowed ..	21,588,797
Total	167,013,915	Total	167,013,915

ESTIMATES for YEAR 1924-25.

£		£	
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Australia, Banco do Brasil, British Overseas Bank, Burmah Oil Company, Elder, Dempster and Co., Lunuva (Ceylon) Tea and Rubber Estates, City Deep, Taquah and Abosso Consolidated, Premier Oil, and William Cory and Son. Dr Cincinato Braga, at the meeting of the Banco do Brasil, gave an exhaustive review of the position and prospects in Brazil. The chairman at the Burmah Oil meeting answered criticisms of the company's Anglo-Persian shareholding proposals. At the Elder, Dempster meeting the chairman paid a high tribute to the memory of the late Viscount Pirrie. The chairman at the City Deep meeting reported satisfactory development results. At the Lunuva (Ceylon) Tea and Rubber Estates meeting the chairman spoke optimistically of the future of the industry.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RESIGNATION OF M. MILLERAND.

THE British nation has not been tempted to take sides in the internal political conflict which has just come to an end in France, but we have followed its development with intense interest, because the international situation was clearly dependent upon the length of time which it might take the French people themselves to settle their own domestic controversy. The decisive victory of the Left in France, at a moment when the Right is still being held at bay by the Centre in Germany, offers better prospects of a settlement of the Reparations problem than have been presented to international statesmanship at any date since the Reparation chapter of the Versailles Treaty took final form. But such moments do not last; and if the time and energy which might have worked the salvation of Europe had been swallowed up by a prolonged constitutional struggle in France, we might almost have despaired at the unkindness of Fortune in her influence upon international affairs. Happily, however, the internal crisis which so suddenly, and to foreign eyes unexpectedly, arose in consequence of the French elections, has been settled swiftly and, for the moment, decisively, by the reception which President Millerand's message re-

ceived last Tuesday from both the Senate and the Chamber. For our own sake and for the sake of France, we may legitimately rejoice that it will now be possible to form a new French Government, and that this Government will be at liberty to devote its main energies, for the time being, to questions of foreign policy.

It was natural that M. Millerand should not resign without putting his position to the test. He had been elected on September 23, 1920, by a strong majority (695 votes out of 892) of the combined Chamber and Senate, which elect the President, under the Constitution of 1875, in joint session as a National Assembly. Half his seven years' term was still to run; and, constitutionally, the President of the Republic is irremovable unless he is impeached for high treason on the initiative of the Chamber and condemned by the Senate sitting in judgment on him. Nobody had proposed that this formidable piece of constitutional machinery should be set in motion against M. Millerand. His adversaries charged him with the less serious, and at the same time less definite, offence of exceeding his constitutional powers—by open expressions of his personal solidarity with a particular party rather than by specific official acts which could be defined judicially as being constitutional or not. To this M. Millerand could reply that the charge was vague; that, in so far as he had identified himself with a particular policy hitherto, it had been a policy supported by a majority of the Chamber; and that he was being offered no opportunity of showing whether he would not bow to the policy of the new Chamber, whatever it might be—in short, that the Constitution was being threatened not by him, but by his opponents. "In enacting," as he expressed it, "that the President of the Republic is responsible to the Chambers only in the case of high treason, the Constitution intended, in the national interest of stability and continuity, that the Presidential power should be kept for seven years protected against political fluctuations."

It was equally natural, however, that the victorious Left should judge him on his previous record, and here M. Millerand suffered from having passed straight from the premiership to the presidency in 1920. Whatever view might be taken of his conduct since that change in his position, it was undeniable that, as the head of a party government, he had been the architect of the *Bloc National*, which had not only kept the Left out of power but had consistently pursued a policy contrary to theirs—in home affairs even more emphatically than in European questions. Was it humanly possible for M. Millerand, the ex-premier, to act as the constitutional and non-partisan head of the Republic with a Chamber that was determined to reverse the policy for which he had stood as a party politician? It is a distinct weakness in the French political system that it not only permits theoretically, but has consecrated by custom, the rapid passage of politicians from premiership to presidency or *vice versa*.

M. Millerand had, however, not merely passed straight from the political arena into the Elysée. He had declared at the time of his election that he had no intention of regarding the post of President as one removed from political issues, but that, on the contrary, he conceived of the President as responsible for watching the interests of France in her foreign relations. This view he reaffirmed two months ago, when he let it be known at the time of the reconstruction of M. Poincaré's Government that he would not accept a Ministry that intended to depart from the policy of the last few years in foreign affairs, and that if the country by popular vote showed that it desired a different policy, it would not be possible for him to remain President.

Clearly it would be next to impossible to secure harmonious co-operation between anyone holding such views of presidential responsibility and a Government which differed sharply from him on most of the important political issues, and a struggle was thus inevitable. It was only uncertain how many constitutional stages it would have to traverse before reaching a decision. The dominant party in the new Chamber could, and did, restrain its leaders from accepting an invitation to form a Government under M. Millerand's presidency; and it was then open to the President to form a Ministry, without a majority in the Chamber, for the bare purpose of conveying to both Houses a written presidential message—the formal method of communication between the President and the

two representative bodies. This was the function which M. François-Marsal undertook to perform, and last Tuesday he duly delivered M. Millerand's message to the Chamber, and proposed to put it to debate. At the same time, the message was read in the Senate, and much turned upon whether the President would find support there for his contention that his continuance in office for the full term was essential for the preservation of the Constitution. Had the Senate supported him in this, and also consented to a dissolution of the Chamber of Deputies, M. Millerand would have been able to appeal to the electorate. Even so, it is doubtful whether this would have changed the final result, for Marshal MacMahon reached this point in 1877, only to see another hostile majority returned against him, and to be forced, in the end, to resign from an untenable position. As it was, the Senate voted, by a majority of 10, to adjourn till the next day, instead of discussing the message submitted to them, and their vote was announced while the struggle in the Chamber, which was being fought along the same lines, was still in progress. In the Chamber, M. François-Marsal's motion for a debate had been traversed immediately by a counter-motion (in the names of M. Herriot, M. Blum, and several of their respective supporters) to the effect that "the Chamber, resolved not to enter into relations with a ministry which, by its composition, is the negation of the rights of Parliament, refuses the anti-constitutional debate to which it is invited, and decides to adjourn all discussion until the day when a Government presents itself constituted in conformity with the sovereign will of the country."

This motion was carried by 329 votes to 214, and M. Millerand decided in consequence to resign. His only other course would have been to adjourn both Chambers for a month, but that would have produced no change except a dangerous embitterment of feeling, and would have led up to an *impasse* which could hardly have been broken through except by the *ultima ratio* of impeachment.

Happily, this peril has been avoided by the President's acceptance of the defeat which he has suffered at the first stage. Presumably, the National Assembly will now at once elect a President agreeable to the majority of its members, and their nominee will call M. Herriot to office. The new Government's hands will be so full with urgent current affairs, at home and abroad, that the constitutional question will probably be forced into the background for some time to come. But the result of last Tuesday's voting cannot fail to have a permanent influence on French political life. Never, since the foundation of the third Republic, have President and Chamber come so violently into collision. The defeat of MacMahon in 1877 was softened by the eighteen months' delay in his resignation, and he was not driven out of office by any refusal to serve under him on the part of his victorious opponents. Grèvy resigned on account of a personal impropriety imputed to a member of his family. Casimir-Périer resigned not because the Chamber or the Ministry considered that he was exceeding his powers, but because he himself considered that he was being hindered from the due exercise of them. None of these resignations raised so sharp a constitutional issue as the expulsion of M. Millerand from the Presidency by the direct vote of the Chamber and the Senate, and the element of instability now introduced into French politics will only be removed when an agreed interpretation of the constitution on this vital point has confirmed or modified the precedent created by the recent trial of strength.

PROFESSOR CASSEL ON THE GOLD STANDARD.

PROFESSOR CASSEL has few equals in the power of clear analysis and lucid exposition of economic problems, and he fully lived up to his high reputation in these respects in the paper which he read last Wednesday to the Institute of Bankers on the Gold Standard. Sweden is the one country of Europe which has recently taken steps to replace its monetary system on the gold basis, and it was therefore peculiarly appropriate that Sweden's leading economist should propound his views at this juncture to the City of London. In all his writings, and notably in the memorandum written for the Brussels Financial Confer-

ence in 1920, Professor Cassel has looked forward to the restoration of the gold standard as the solution of the world's currency troubles, though his view that it would involve a new parity for many countries of Europe has not always been very palatable to those most directly concerned. The accuracy of his diagnosis has, however, been fully justified by experience. One of the most interesting features of his paper was the relative importance Professor Cassel attached to the various arguments that are tossed to and fro in this discussion. For example, he did not spend any time on the question whether the value of gold is sufficiently steady to make it a satisfactory standard when all the world is anxiously demanding stability in economic affairs. He did something, however, to allay fears on this score by quoting figures to show that since the collapse of the post-war boom American prices have been more steady than those of Great Britain, or, indeed, of any other country. Nor did the lecturer discuss in detail the effect upon trade of stable exchanges—an aspect of the question which would have appealed with special force to the audience which he was addressing. The argument for gold which he pressed most forcefully was the psychological one that it is only the gold standard that can restore confidence generally, and put an end to the currency chaos which even in the last few months has had such a disturbing influence on the course of trade. Sweden has made a start. The Germans were driven last year by utter necessity to deal, as far as circumstances permitted, on a basis of gold prices, and even Russia is struggling by means of a gold anchor to put an end to her helpless drifting. In Professor Cassel's opinion, whatever theoretical arguments might be urged in favour of other solutions, it is only gold that can command the confidence of world opinion, and he adds that Britain's return to gold is the one great act which would stimulate and help the countries of Europe to re-establish their currencies on a sound basis. He recognised that the longer we put this off, and as we find ways of rubbing along on a paper basis, the less active will opinion be in this country to make the effort to carry out this act of assistance to Europe, and he spoke with regret—one might almost say with impatience—of the long five years' delay in this matter.

But perhaps the most valuable contribution made to the discussion was Professor Cassel's analysis of the situation in America. Many in this country have hoped that America's large gold hoard would lead to a rise of prices across the Atlantic, and so bring the pound sterling back to parity without a fall of prices here. But is this hope well founded? America's gold holding is immense, but so is her need of currency. The great bulk of her gold imports are used as reserve for gold certificates. At her present rate of growth her currency requirements involve an increase of \$200 millions a year, and in the next decade will need \$300 millions. If this were met by gold currency or gold certificates this would take nearly all of the world's annual gold production. America to-day could undoubtedly increase her note circulation, or the amount of her bank money, on the basis of her present reserves, but it is equally true that she can go on absorbing gold without being forced on to a higher price level. Indeed, we cannot rule out the possibility that America may follow the opposite path and experience a deflation of prices, and in this connection Professor Cassel fears that in America, much more than in Europe, there still persists the idea that pre-war prices represent the normal or natural level. Such a view has no economic justification under post-war conditions, and could only be held in a country comparatively free from the burden of war debt. But opinions of this kind may undoubtedly exercise an influence on monetary policy.

Professor Cassel, however, believes that those who govern American monetary policy are aiming at stability of prices, and that while the Federal Reserve Board may perhaps not be looked upon with complete confidence by the public, and, indeed, may be subjected to political pressure, its positive action will be generally approved by American opinion when it is represented as aiming at steady but progressive development.

But Professor Cassel does not really show us the way out of our difficulties. American prices have for a long time been steady, at from 63 to 65 per cent. above pre-war level, and are at the moment drifting back to the neighbourhood of 60 per cent. Moreover, she has

imposed a very heavy tariff, which means that, as compared with pre-war conditions, prices (at least of those goods which enter into foreign commerce) must be higher than open market prices. In other words, we must now get a little below the American level before we can re-establish a parity of prices. If this level is, say, 55 per cent. above pre-war, we have to face a fall in the British price level of some 10 to 15 per cent. How is this to be achieved without thrusting us back into the acute industrial depression from which we are so slowly and painfully emerging? That is the practical problem which faces those who are in a position to control our economic situation, through the mechanism of the money market. To this the inevitable answer must be that we cannot risk any serious check to industrial recovery until we are out of the wood and production in this country is fully restored, even though the more distant and indirect effects of getting back to parity might be on balance strongly to our national advantage. The economic and social effects of long drawn-out unemployment have been too serious for us to venture on any heroic measures till our strength is fully restored.

Perhaps in the end this dilemma may be overcome by a little help from the other side. Some reduction of the tariff as a result of the democratic campaign would do a little to ease matters, and Professor Cassel himself does not rule out the possibility of a little inflation of American prices. After all, the margin is not so very great, and we believe that it is a matter in which some help might be forthcoming from a revival of the half-forgotten proposal of the Genoa Conference for a discussion between the central banks of different countries, starting, perhaps, with those of England and America.

THE MAKING OF OIL PRICES.—I.

(BY A CORRESPONDENT.)

It is not often that a business man can bring himself to discuss the economic problems of his own industry with complete detachment, with real frankness and without bias. Yet this has been accomplished by one highly placed in the oil industry in a paper* read before the Empire Mining and Metallurgical Congress which has been held at the British Empire Exhibition, Wembley. Here is an instance of how it pays the business man to keep the public well informed, to take the consumer, as it were, into his confidence. A study of this paper, with its exposition of the making of oil prices, cannot fail to decrease the public suspicion of the big oil organisations by giving a better understanding of their economic position.

Others besides economists will read the following passage, coming from the pen of a business man, with some gratification:—"We who are engaged in industry, and are sometimes prone to imagine that we exercise some effect upon the wealth of the community, are really nothing more than cockleshells tossed about upon a sea of great economic forces.....When, for instance, the price of petrol goes up, I very often read in the papers that it is due to some artificial decision of a trust or to some dark and powerful human agency. I have even seen my own portrait in the newspaper on such an occasion. Those who study the economics are aware that that move may have been postponed or advanced by a few weeks by the operation of some human mind, but that, except for some very small consideration of that sort, that move in price has followed, as surely as the day follows night, an increase in demand or a diminution in supply either in the world's requirements of that commodity itself or in the world's requirements of the means of bringing it from existing sources of supply to the consumer's door."

This is the text of the main argument presented by this paper—that oil prices are determined not by magnates but by the law of supply and demand. The only difference between oil price cycles and those of other commodities is that the oscillations in the

case of crude oil are more frequent and more extreme. This point was illustrated by a detailed analysis of crude oil and gasoline price cycles in the United States covering a period of ten years from 1913. Thus, for example, during the Cushing over-production in 1914 the index number of the weighted average of five different American crude oil prices fell 53 points, while that of gasoline fell only 38 points, and that of the weighted average of all commodities fell but three points. Again, during the post-war inflationary boom the crude oil prices index number went up 122 points and down 204 in the slump that followed, while that of gasoline went up only 38 and down 56. The graph which accompanied this analysis showed very clearly not only that the oscillations in the prices of crude oil were much more violent than those in the prices of gasoline and all commodities, but that gasoline prices made a much smaller departure from the 1913 level than the average of all commodities. The author of the paper explained these peculiarities by the fact that on account of the unique conditions of chance and competition under which drilling for oil was carried on, the big oil organisations were unable to control the volume of the world's supply of crude oil, but that on account of their marketing position they were able to apply some measure of stabilisation to the prices of gasoline.

This explanation does not differ in the main from the opinions which *The Economist* has previously expressed. As everyone knows, Standard Oil has long since given up the idea of controlling the production of oil in the United States. Chance, and blind, unrestricted competition, govern the supply of crude oil to American refineries. "No one can foretell the date," to quote the author again, "when some one or other of the innumerable wild-cat wells that are constantly going down will strike a new field that may flood the markets of the world with quantities exceeding expectations by an amount of such an entirely different order from the variations in demand as to swamp them (the markets) entirely. That experience happened a year ago, when a new field was suddenly struck, and feverishly developed by countless rival interests." It must not be forgotten that the world's production of oil still largely depends on small or independent producers. Some interesting figures on this point were revealed. The production of the Royal Dutch-Shell group was given as 100 million barrels per annum, that of the Standard Oil companies combined at 150 million barrels, and that of the Anglo-Persian-Burmah group at 35 million barrels. The total of these three still leaves about 715 million barrels, or, roughly, 71 per cent. of the world's production to be accounted for by producers independent of these large organisations. That is why, on the one hand, crude oil prices sometimes rise to dizzy heights before the small producers can be induced to undertake the extra drilling and wild-cating required to bring production up, and why, on the other hand, prices must sometimes sink to abysmal depths before the competitive drilling among small companies is checked. "The great organisations," writes the author, "have nothing to do with either rise or fall. In fact, it is because they can eliminate neither chance nor competition in the oil production business that crude oil prices are subject to these violent oscillations."

As regards the prices of gasoline, it is claimed that the big oil organisations can and do effect stabilisation at a lower level than would be possible for individual single-unit companies; in other words, that they can afford to charge a lower price and take a smaller ratio of profit. It is perfectly true that the organisation which embraces all

the correlated functions of production, transport, refining, and marketing is the most efficient organisation for the oil business. It eliminates the risks—and risks, as the author observes, are among the most expensive things in business—which are attached to each functional activity in oil if carried on independently of the rest. It is able to spread its risks of capital over many oilfields in different parts of the globe instead of staking everything on one field or pool. It is able to supply markets the more economically by reason of this world-wide distribution of the sources of production. It can thus guarantee continuity of supply and ensure efficiency in distribution. It becomes the dominating and stabilising force in the markets. Does it use this power in the interests of the consumer?

The author claims to have tangible proof that the answer to this question is in the affirmative. American refiners, he said, attracted from time to time by articles in the newspapers suggesting that exorbitant prices are being obtained for oil products in Great Britain, have sent representatives over here one after another to study the market. The result of that study has been to show them that over any reasonable period the average price at which petroleum products are being sold here by the big distributing organisations is not sufficient to cover the cost of oil in the free markets of America, and of shipping it and distributing it to the consumer. "The fact is," to quote a significant passage, "that the great organisations can only maintain their immensely costly services of distribution to almost every street in the towns, and almost every village throughout the country if they continue to do practically the whole trade, and in order that they may continue to do this they are compelled by the most inexorable economic considerations to maintain their prices at such a level that it pays no one seriously to compete with them." This statement will be welcomed heartily by every consumer of petrol in the country.

(To be concluded.)

SHIPPING COMPANIES' PROFITS.

In compiling a review of shipping profits in 1923, it is perhaps as well, at the outset, to direct attention to the fact that the bulk of the capital invested in sea transport is now represented by "liners." Unfortunately, the operations of these fleets are veiled in considerable obscurity. The rates they charge are, as a whole, unknown to the public; no returns of tonnage carried by them are ever published, and issued accounts are often deficient in detailed items. The balance of the mercantile marine consists of "tramps." And it is from the movements of the latter description of vessel that most shipping statistics are compiled. According to private reports, in 1923 liner holds were filled on an average to 80 per cent. of normal capacity, as compared with 70 to 75 per cent. in 1922. Passenger traffic, though shrunken in comparison with 1913, similarly improved. It has been estimated that the average gross revenue per ton carried by liners in 1923 considerably exceeded 25 per cent. over the average of 1909-13. On the whole, the revenue of shipping in 1923 probably differed little from that in 1922, estimated by the Board of Trade at £110 millions net.

Substantial reductions in the cost of running vessels were made. Wages of crews were reduced by 10 per cent., and port charges brought down to about 60 per cent. over pre-war scale, while the acceptance of low premiums by underwriters curtailed the charge for insurance to something like pre-war figures. The average cost of bunkers was roughly 70 per cent. above the 1918 level, as compared with 60 per cent. in 1922.

We have selected fourteen representative shipping companies, which cover between them most sections of the sea carriage industry. Our first table shows the net profits after payment of debenture interest, for the past three years, of a number of these undertakings, together with the rate of ordinary dividends. Amounts carried forward

for the past three years and allocations to reserve are also appended:—

† Free of income-tax.

The British India Steam state that further reductions in working expenses and improvement in freights have been responsible for better results; last year it may be recalled, this company transferred an unstated amount from reserve. In the profit and loss account appeared the item, "Net result after transfer from reserve funds, and allowing for depreciation on steamers." This is certainly one way of averaging profits. In the balance-sheet for 1921 the reserve fund is given as £500,000; in that for 1922 the fund is down to £400,000, but it is not clear how much of this difference was added to net profit and how much was used in other ways. The Cairn Line was not able to make a profit; indeed, £75,000 has been taken from the contingency account. The directors complain of high wages, port charges, and the cost of handling cargo. But other companies had to face somewhat similar conditions. A year ago the Cairn Line distributed 5 per cent. on its ordinary capital. The Cunard Line maintained profits. Ordinary shareholders of the Eagle Oil Transport having, for the time being, waived their right to dividend distributions, the directors were able to set aside £750,000 for depreciation. Elder, Dempster and Co. is partly a holding company. How far the decline in profits is due to a falling off in the earnings of the company's fleet, and how far to a drop in receipts from investments in other shipping companies, it is impossible to say. Income from investments and profit at head office and branches is given as £527,600, against £535,700 a year ago.

Furness, Withy maintain a bonus distribution. The Houlder Line keeps up a steady progress, but Lampport and Holt withdraw £200,000 from reserves. The accounts of Manchester Liners are rather out of date for the purposes of our review, covering the 12 months ended June 30, 1923. The Oceanic Steam in its report referring to the year 1923, says that "the period under review has been one of exceptional difficulty, and the result of the year's working is much less favourable than previous years." It is pointed out that "in the North Atlantic services the restrictions imposed upon immigration into the United States continue to affect trading results very seriously." The report is couched in pessimistic vein. The Orient Company again distributes 12½ per cent., and places £125,000 to reserves. We have before drawn attention to the accounts of the P. and O. Perhaps it may not be out of place to mention here that in reply to a request for a copy of the directors' report, balance-sheet,

and profit and loss account, the secretary of the Booth Steamship Company wrote: "This company's reports are not now sent to the Press, as they are not of interest to the general public." The preference shares are quoted on the Liverpool Stock Exchange; it would be interesting to know if this quotation is of interest to the general public, and if not, why it was asked for in the first place.

Our second table provides an analysis of the principal assets and liabilities of these companies:—

Name of Company.	Principal Liabilities.			Principal Assets.

† Includes investments under properties, amount not stated. For year ended April 30, 1923, this was set out separately in balance-sheet. † Includes shipping investments. (v) Bills payable, &c. (c) Not stated separately. Included in properties, &c. (d) Represents total assets in one item.

The shipping industry has earned for itself an unenviable reputation in the matter of its accounts. The above table, eloquent in its blanks, is a striking piece of evidence in favour of those who are continually calling upon directors for "more light." By a process of gradual enlightenment the P. and O. give out fresh details. For 1921 assets constituted one item at £23,236,598. Twelve months later the company, in communicative mood, expanded this figure into four items. For 1923 another item is revealed. The chairman of the P. and O. at the annual general meeting, in referring to the demand for more information, said: "There were, doubtless, some people outside that room who would like more information of the company's affairs than was given by the report and accounts and by his, the chairman's speech. To say much more might lead to their being urged to increase the dividend, and to a depletion of their resources, which would be a departure from the conservative policy which had guided the P. and O. Company throughout its existence." In short, the speech was a negation of the modern trend of thought towards publicity.

The reserve fund of the Royal Mail now stands at £1,600,000, and the insurance fund at £1,177,000. With the transfer of £750,000, the depreciation and sinking fund reserve of the Eagle Oil Transport amounts to

£2,644,000; repair and other reserves stand at just over half a million. Notes have been purchased and cancelled during the year for £541,700, leaving outstanding of the note issue £2,458,300.

Our final table shows highest and lowest prices of a number of shipping securities during the past three years, also present prices and yields:—

Name.	Prices.		
-------	---------	--	--

evalu  au Bresil a £36,000,000 par an." This estimate is a good deal higher than those usually given in Brazil, in spite of the fact that it omits several items—of which immigrants' remittances is the most important—which are usually included in the invisible imports. If this estimate of £36 millions sterling, as the amount by which Brazil's exports have to exceed her imports, is correct, she evidently has a long row to hoe before she can, by a true favourable balance, begin to reduce the total of her external obligations of all kinds. Probably, however, the £36 millions were arrived at by assuming that all the foreign capital invested in Brazil ought to be receiving a satisfactory rate of interest. More commonly recorded estimates put the total at £29 to £30 millions, and some go as low as £24 or £25 millions. If the lowest figure be taken, Brazil appears, on the basis of last year's achievement, to be as near to equilibrium as can be expected—or perhaps even desired—in the case of a new country which must continually import new capital if the necessary expansion is to be carried out. But, unfortunately, even on this assumption, the position is not as favourable as it looks, since it is generally admitted by those in Brazil who have studied this question that the balance shown on visible imports and exports is chronically overstated by undervaluation of the imports. As is usual in countries with a high protective tariff, direct smuggling, which removes goods altogether from the official figures and understatement of values, in order to evade part of the payment of *ad valorem* duties, produce too flattering a picture of the trade position.

This question of the trade balance is of great importance, owing to its effect on the value of the milreis, the stability of which is so desirable if foreign capital is to be able to remit to investors overseas the profits earned in milreis without seeing most of them vanish in the process. And there can be no doubt that the large sums which Brazil has to remit abroad each year, in order to meet the service of a foreign debt which has been mostly, if not entirely, spent on unproductive purposes, has been an important cause of the fall in the milreis. The growth in the country's external debt has been rapid, from £56 millions in 1901 to £130 millions now, without including the £9,000,000 "Coffee" loan of 1922. A country that expands its foreign indebtedness more rapidly than its trade balance is likely to find difficulty in maintaining its exchange, and in 1901, as was shown in a previous article, the Brazilian trade balance was over £19 millions, though it was exceptionally high in that year. For the first five years of this century, however, the average balance was £14½ millions, so that roughly it may be said that while the trade balance has increased by 50 per cent., foreign indebtedness has been more than doubled. Seeing that Brazil has had no great war expenditure to face, and can show no great increase in revenue producing national assets, it seems to be clear that, like other young countries with boundless confidence in their economic futures, she has found the purse of the foreign lender more convenient to open than that of her own taxpayers. Her Budget history is a long series of deficits, but here she has only followed the example of many of her most financially respectable neighbours.

But all this is ancient history. As everyone knows, Brazil is now blessed with an administration, under the Presidency of Dr Bernardes, which has turned, or is trying to turn, a new financial leaf in her record. A British mission has been to Brazil, and has doubtless obliged with much salutary advice, to which the Government has, no doubt, given the most careful consideration. What Brazilian bondholders and other investors in the country are eagerly anxious to know is, when and in what form practical results are going to follow from all these efforts and intentions. Some weeks ago the City article of the *Times* whetted our curiosity with a hint that a summary of the report of the mission might shortly be published, but we still have to live on that most unsatisfying diet, hope, and to remind ourselves that it is ridiculous to be impatient, because the progress of reform must necessarily be slow in such a huge and loosely-knit country.

In Brazil also there seems to be a certain amount of disappointment with the slow movement of events. Congress was, as usual, opened at the beginning of May, and was instructed by a Presidential message. Com-

menting on this document, *Wileman's Brazilian Review*, in its issue of May 7th, says that it is "anything but sensational, and therefore disappointing." . . . From the financial point of view the message has little, if anything, new to tell. The mere fact that there must be financial equilibrium, and that special and preventative measures must be put into force, is but the natural desire of a well-intentioned administration whose object is to reconstruct chaotic finances." Perhaps local opinion is also rather too impatient, and it likewise is evidently very curious, too, to know what the Mission recommended. *Wileman* growls at the President for saying so little about the advice given by it. This critic, however, has to admit that "ever since its entry the Government was beset by financial difficulties, singularly aggravated by a multitude of causes. The times were hard, the unhappy effects of accumulated errors were reflected in the credit of the Republic, and completed the depreciation of its currency. Naturally every effort of the present Government was concentrated to combat such a state of things, and the reaction already noticeable, manifested in more stability in exchange, higher quotations in securities, and growth in commercial and industrial business, is but the outcome of these efforts, which must be persisted in." The Message itself, as analysed by *Wileman*, appears to contain much interesting matter. It lays stress on the importance of the institution of the Central Accounting Department of the Republic, which has had the rather surprising effect of enabling the Government to "learn the extent of the country's floating debt." The estimates are now studied by a committee of experts before being submitted to Congress, and, following the English example, the Government has appointed a Commission of business men "to examine in detail the possibilities of reductions in expenditure." Moreover, "the Government," continues Dr Bernardes, "has decided to reorganise the process of estimates, and to insist on financial equilibrium, without which no country can ever prosper. So long as the abuse of opening special credits beyond those estimated by the Government is allowed, there are two Budgets—one ostensive, showing indispensable expenditure and probable revenue, and the other semi-clandestine, authorising expenditure with no means to cover it. If this country wishes to establish order in its finances, this abuse must cease." It thus seems that something definite is being tried, and that the present Government really means to make genuine efforts to put Brazil's finances into a shape more worthy of the wealth of the country. Among the causes which depressed the value of the milreis, the President includes the adverse balance of trade during the three years 1920-22; the reduction in the supply of export bills in virtue of valorisation stocks; political unrest; budget deficits, which rose from 79,968 contos in 1908 to 448,952 contos in 1922; and a floating debt which exceeded 1,000,000 contos—£25 millions with the milreis at 6d. Among the features which promise improvement are the £25½ million favourable trade balance for 1923; the probability that coffee exports may this year realise £50 millions; "the decrease in the budget deficit for 1923, and the probable financial equilibrium in 1924; the excellent impressions obtained by the Mission; renewed confidence in the administration, are all factors which are contributing towards the recovery in exchange." Viewed in relation to the wealth and possibilities of the country, the financial difficulties of Brazil seem to be by no means insoluble, if the necessary effort is made and maintained by her Government and people. Once solved, there need be no recurrence, as long as she can avoid those lapses into prodigality, encouraged by too easy borrowing abroad, that have marked her financial history in the past.

THE CONDITION OF THE TIN MARKET.

(BY A CORRESPONDENT.)

NOTWITHSTANDING the recent rapid fall in prices which broke the standard cash official quotation from £297 10s on March 12th to £201 by May 23rd, there is now considerable interest being shown in the tin market again, and the future course of the market is a matter for considerable speculation, both here and in the United States. It is a remarkable thing that tin on the London market has never once since October 1, 1923, been quoted

officially below £200 per ton. There has been a lot of uncertainty at times, and early in October £201 was registered, but from November onwards there was a very strong upward movement which lifted values to £233 15s. by the close of the year. Early in 1924 the market went ahead again, and during January the value improved from £237 5s to £253 10s. This was followed in February by another well-sustained advance, which left values on February 29th at £288 5s. Early in March the market became very strong, and on the 12th of that month some business was done at over £298, the market officially closing at £297 10s. This was followed by one of the most violent slumps witnessed on the London Metal Exchange for many years. There was a rush to liquidate, accompanied by bear sales, and some of the smaller bulls were left with tin that had been purchased at high prices. By the end of March prices had crumbled away to £254, with the feeling still very feverish and uncertain, and April brought further weakness, the market falling from an opening level of £257 10s to £236 10s. During the month of May the commodity simply went to pieces. Holdings were sacrificed right and left, and with American support withheld, bear selling was again very aggressive. On the 23rd the market just managed to keep above the £200 level, although it was freely predicted that there would be a break in the round figure, and confidence did not return again until the end of last week, when a much firmer feeling was ushered in. Just previous to the close of the markets for the Whitsun holidays, both cash and three months' stood at £217, a fairly large backwardation having run off, and sentiment, on the whole, was more hopeful, although prices after the holidays opened lower and still showed some hesitation, although there was a recovery from the opening level of £213 taken for forward tin.

The commodity has thus for over eight months been held above £200, and this has been a very encouraging development for all tin producers. The average price for tin this year so far is very good, and most of the leading producers must have made fair profits. Rapid changes in a market like tin, which is very often the counter for some heavy speculative transactions, are unavoidable, but if the price can be kept over the £200 mark for the remainder of the year it would prove very satisfactory for all concerned. To the recently resuscitated Cornish tin-mining industry fairly high selling prices are absolutely necessary, as black tin moves in unison with the standard price. If the recent efforts of the bears were not sufficient to depress the London selling price below the £200, they are not likely to be successful over the next few weeks, and after that the autumn trade buying, coupled with the strong statistical position, will make operations of this character very dangerous. It may be stated that reports from the United States received early this month in London spoke confidently of £175 being reached very shortly here due to American manipulative tactics and the absence of buying for account of New York operators, but even if this forecast does prove accurate, the fall would be very short-lived, as already September tin is being dealt in, and this position early this week showed a very firm undertone, although it was put down during early business after the holiday break. The mining companies have received considerable encouragement from the hard undertone shown by the market again after the recent set-back. Tin at anything round about £200 or so is a very good paying proposition to most of the producers, and anything above that, of course, means handsome additions to the profits.

The statistical position of the commodity is very interesting, as the various authorities differ considerably, but, taking Messrs Ricard and Freiwald's figures, we get a total at the beginning of the present month of 18,613 tons for the world's visible supply. This compares with 16,293 tons in the previous month and 18,338 tons a year ago. On May 31, 1922, the world's visible supply amounted to 22,270 tons, and the price was not much over £150; thus, apart from the disposal of a large quantity of the Government-owned tin, it may be claimed that the position generally is much sounder than it was that the position generally is much sounder than it was two years back. The total supplies for all May amounted to 10,631 tons. This compared with the supplies for May, 1923, and also the average for all that year shows

an increase, but this is more apparent than real, and is due to the fact that the return includes the Banka shipments for the month instead of the usual estimate for the previous month. Another authority gives the total supplies for May as 9,454 tons, and thus something between the two may be taken as approximately correct. The May deliveries were poor. The United States took 5,240 tons only, the United Kingdom 1,780 tons, Holland 803 tons, and the Continent, except Holland, 488 tons. In February last the U.S. deliveries amounted to 8,845 tons, and a drop to 5,240 tons at first glance looks bad, but the truth is that the American market this year has been very erratic, and it is evident that tin users in the United States have been greatly puzzled by the course of the market. In the first five months of 1923 the U.S. deliveries never once fell under 6,000 tons. This year we have had 8,845 tons in February, followed by 4,560 tons in March. In April they rose to 7,590 tons, only to fall again last month. But taking the aggregate for the five months of this year it is found that the total works out at 31,130 tons, against 32,254 tons in the same period of last year. Probably last year also a fairly big quantity of refined tin was delivered into consumption, and this is taken to mean that the American demand is falling off, especially as the New York stocks at the close of May showed an increase in the quantities held in warehouse. There was at the close of May 5,638 tons of tin afloat to the United States, and actual American stocks were 4,067 tons; thus it cannot be claimed that users on the other side of the Atlantic are overbought. Taking the twelve months ended May 31st, the total supplies were 106,017 tons, against 97,395 tons in the same period of 1922-23, and 80,659 tons for the 12 months ended May 31st, 1922. The deliveries in the same periods were 105,742 tons, 101,327 tons, and 75,917 tons respectively. This shows a gradually improving position. Thus while for the 12 months ended May 31, 1922, supplies exceeded the deliveries by no less than 4,742 tons, in the following year the margin was 3,932 tons on the reverse side, and for the 12 months ended May 31st last the total supplies were only 275 tons over the deliveries, thus showing that supply and demand are very evenly balanced. The Eastern "Pool" up to the end of May had sold about 12,600 tons, leaving 5,000 tons still to be marketed. Last month, when the price of standard tin on the London market moved between £239 and £201, the Government of the Federated Malay States sold no tin at all, and from this it is obvious that the holders of this metal are prepared to show a certain amount of restraint in disposing of the tin held under the Bandoeng Agreement unless the price is favourable. Seeing that the bulk of this tin cost fully £250 per ton, this policy is, no doubt, the right one, but given more encouraging markets in the autumn all the pooled tin should be cleared by the end of 1924.

The U.K. stocks this week are larger at 3,169 tons, but this is still a moderate total. The tinplate trade here at the moment is rather quiet, but more orders are expected next month. The shipments are running at about 140,000 to 150,000 boxes per week from Swansea, and stocks at 298,663 boxes are not excessive. The Stabilisation Committee has lowered the minimum selling price of tinplates to 22s 7½d, and Welsh steel bars have been put down to £8 12s 6d per ton delivered, less the usual 7s 6d rebate. The home makers are well equipped to face competition, but the American mills of late have been successful in taking contracts for the Far East, and there is no doubt that world business in tinplates is going to be cut very fine in the coming months. Reports from the States indicate that a very brisk season is expected. At the beginning of May there was very little unsold tinplate stock at the mills, and it was hoped to clear all by the end of June. Thus the current month will be a quiet one, both for tin and tinplates, but the American market will begin to show some liveliness early in the third quarter. Canning prospects all over the United States are fairly promising, although bad weather has had an adverse effect on some crops.

Summing up the position of tin, it may be regarded as fairly comfortable from the producers' point of view. The backwardation has run off; statistically the commodity is healthy enough, and although the American purchasers are out of the market for the time being, they will

have to buy in another month or two. The recent short sales would have to be covered on any sign of another upward movement, but for the present there is no urgency. Tin is being carried without much difficulty, but the general position is now much sounder than it was. The future depends largely on American buying, and this may not come up to expectations, due to the slowing up of industry in general in the United States, but there does not appear to be much fear of excessive supplies being offered over the remainder of the year. The attitude of the F.M. States Government shows a certain amount of confidence in the future, and after a period of comparative dullness tin should firm up again, and probably it will rise to about £250, or a little over, in the late autumn. Certainly there is no justification for any bearish talk, and it may be stated that the New York market early this week was very firm, with spot tin up to 42.12½ cents and July on the same level.

COAL PRODUCTION AND CONSUMPTION IN GERMANY.

DURING the war the production of coal proper (Steinkohle) in Germany fell off considerably, despite the fact that there was a considerable influx of labour into the mines. The shortage was intensified after the Armistice by the loss of the Lorraine and Saar coalfields, while in June, 1922, East Upper Silesia was ceded to Poland.

The total production of pre-war Germany was 190 million metric tons in 1913; that of the present area in the same year being 140.8 million tons. In the following table the production of the principal coalfields, exclusive of Lorraine and the Saar, and, since June, 1922, exclusive of the ceded part of Upper Silesia, is given for the last pre-war year and for the past five years:—

COAL PRODUCTION (in Millions of Metric Tons).

Coalfield.	1913.	1919.	1920.	1921.	1922.	1923.
Ruhr-Rhine ..	117.8	72.9	89.8	95.8	98.9	43.5
Upper Silesia..	43.3	25.8	31.8	29.7	19.7	8.7
Lower Silesia..	5.5	4.1	4.2	4.7	5.5	5.3
Saxony	5.4	3.9	4.1	4.5	4.2	3.8
Other fields ...	5.4	1.0	1.4	1.5	1.7	0.9
Total	..	107.7	131.3	136.2	130.0	62.2

It will be seen that the total output of the Ruhr-Rhine coalfield had risen by 1922 to nearly 84 per cent. of the pre-war figure; while the average number of men employed in that year was 568,000, as against 404,409 in 1913—an increase of about 40 per cent.

Last year the Rhine-Ruhr field was, of course, the scene of the passive resistance movement, and production fell off enormously. The general economic dislocation of that year is also reflected in the output figures of the other coalfields, though since the stabilisation of the exchange in November there was a rapid improvement down to April last, when industrial unrest once again reversed the upward movement. The following statistics relating to the German portion of the Upper Silesian field are of considerable interest in this connection:—

	1913.	1922.	—1924—
Output per manshift	1,144 ..	606 ..	Jan. 845 .. Feb. 855
Hours per manshift	9½ ..	7½ ..	8½
Output per hour worked by underground workers	188 ..	122 ..	140 .. 146

It is significant that, with the introduction of the 8½ hour day in January last,* not only was the output per manshift greater than that in 1922, but the same was also true of the output per hour worked. It is essential to remember, however, that since the mark has been stabilised, real wages, though still very low, are nevertheless greater than they were during the period of inflation. In other

* The 7½ hour day continued throughout 1923, but the figures for that abnormal year are of no particular interest here.

words, with stabilisation has come a not unimportant rise in the standard of living of the German working man.

The lignite (brown coal) deposits of Germany are found principally in the Prussian Province of Saxony, in the Cologne district, in Saxony proper, in Lower Silesia, and in Thuringia. Over 99 per cent. of these fields are still included in the territory of the Reich, and production has gone ahead rapidly since the Armistice.

German lignite is of very inferior quality as compared with Bohemian lignite, for example. The moisture content varies from 40 to 60 per cent., and the non-combustible matter from 5 to 10 per cent. For statistical purposes one ton of German brown coal is therefore regarded as the equivalent of two-ninths of a ton of black coal.

In consequence of its moisture content and of its general structure—it is of the consistency of ordinary garden earth for the most part—lignite is usually dried and made into briquettes, an industry which is of considerable importance in the neighbourhood of Halle and Bonn. As a rough approximation, three tons of raw lignite may be taken as the equivalent of one ton of lignite briquettes—two tons as raw material and one ton as fuel for the high pressure briquetting process which, incidentally, is carried through without using any binding material. Adopting these equivalents, we arrive at the following table of lignite production of recent years:—

	(In Millions of Metric Tons.)			Proportion of Lignite Converted into Briquettes.	
	Raw Lignite.	Coal Equivalent.	Briquettes.	%	%
1913	87.2	19.4	21.4	74	
1919	93.6	20.8	19.7	63	
1920	111.6	24.8	24.3	65	
1921	123.0	27.4	28.2	62	
1922	137.2	28.3	29.5	75	
1923	118.3	26.3	26.9	68	

With the exception of 1923, which was a year of economic dislocation, lignite production has expanded steadily since the Armistice, the figures being in every case well above those of 1913. The 1922 output was, in fact, 157 per cent. of the last pre-war year.

The output of briquettes has also expanded, though not in quite the same proportion. In general, indeed, briquette making has absorbed a smaller percentage of a larger total production. This is the more important when it is remembered that raw lignite will not stand the cost of transport and must be consumed locally. The explanation is, of course, to be found in the great importance of lignite-fired power stations in post-war Germany.

To complete this short survey of the German coal industry since the war it is necessary to consider production in relation to foreign trade in coal. This is the more important in view of the attention that has been paid to deliveries on Reparations account, which are included under exports in the following table. Lignite (German and Bohemian) is here given at its coal equivalents:—

	(In Millions of Metric Tons.)			
Year.	Production.	Imports.	Exports.	Consumption.
1913	209.5	16.2	46.0	179.7
1919	128.5	1.4	10.5	119.4
1920	156.2	2.0	23.2	135.0
1921	163.5	2.9	26.8	139.6
1922	158.3	15.4	23.6	150.1
1923	88.5	28.4	1.7	115.2

Perhaps the most significant feature is the steady rise in coal consumption from 1919 to 1922. In the latter year the coal consumed in the present Reich equalled nearly 85 per cent. of the 1913 consumption of pre-war Germany. Whereas, however, Germany had exported nearly thirty million tons in 1913, in 1922 exports only totalled some eight million tons. The effect of the cession of East Upper Silesia upon the coal balance is thus clearly apparent from these figures. For the present, indeed, it seems that coal imports from Poland are inevitable, so long at least as deliveries have to be made on Reparations account.

Last year, for the first time, Germany was on balance a coal importing country, while her coal consumption was only about 64 per cent. of that of the German Empire in 1913. This is, of course, nothing more than a passing phase.

Notes of the Week.

The Tube Strike.—The unfortunate London worker, who, for the third time within six months, has found himself compelled to endure the sufferings of the Black Hole of Calcutta on his way to and from his daily employment, is more interested in the fact that the strike has now collapsed than in understanding its causes. But his inability to understand why his Whit Monday holiday was spoiled for him has produced a justified irritation on the part of the sufferer from the dislocation of the Tubes, which was not felt in anything like the same measure at the time of the bus and tram strike. Understanding, indeed, in this case would increase, not diminish, his annoyance. Behind the complicated difficulties of adjustment as between the craft and the industrial unions, behind the struggle over award No. 728, regulating the position of the railway shopmen, there is what Mr Cramp, on his return from Vienna, bluntly characterised as a "foul disease," an underground movement designed to capture the industrial and political organisation of the workers in the interest of Communism. The reason why the Labour party has always rejected the demand for Communist affiliation has always been this policy—the policy described by its promoters as that of forming "nuclei," or "cells," inside the unions, as inside the local Labour parties, which will undermine the authority and policy of its leaders, accepted by the great mass of the rank and file, who, after all, disbelieve in the Communist theory of prosperity through chaos. In the Electrical Trades Union, as in Mr Bromley's union, there has always been a strong Communist element; the electricians are, moreover, by the very nature of their industry (a "key" industry if ever there was one, in our modern world) apt to think in terms of "shock" tactics, and to believe in the powers of a dictating minority. But though the E.T.U. and the Vehicle Workers, with two other smaller unions, ultimately "recognised" the strike started in the power stations and shops of the G.W.R. and London Electric, at midnight on June 4th, its driving force came not from the unions, but from a Committee with no status, whose headquarters were in the Labour College. It did not succeed, in anything like the measure it hoped, in bringing out either the power or shopmen. Some of the London Tubes were paralysed, but Neasden and Cardiff continued at work; at the same time, the cooler heads in these unions recognised that the unofficial support of the railway shopmen (denounced from the first by the N.U.R.) was prejudicing the claims made by the craft unions. So much was this felt that on Thursday night the local shop stewards of the E.T.U. powermen refused to come out. This spells the collapse of the movement. It leaves its root cause, however, behind. "What is needed," says Mr Cramp, is "greater courage in dealing with disruptive elements," greater courage and less sentimentality. The Labour party still admits individual Communists to membership, and its newspaper is more sympathetic to them than to the Labour Government; at Kelvingrove a Communist was run as the official Labour candidate, with the result, as *Forward* has stated, that a seat that Labour might have won was lost by Communism. The strong line taken by the N.U.R. is, it is to be hoped, the earnest of an intention, by the industrial side of the Labour movement, to put its own house in order. It must know, every responsible union official and member must know, that sporadic strikes represent a most serious menace to the political progress of Labour, and, above all, to its Government; they are the slowest, not the quickest, road to the removal of grievances. So far as the shopmen are concerned, the N.U.R. is preparing an "all grades movement," designed to meet, on constitutional lines, the problem of the craftsman. But the power of the unions to improve their members' conditions is destroyed if they allow a pistol to be placed at their heads by groups or "cells," whose admitted method is to produce chaos in the hope that out of the collapse of society a new order may arise. How they do not know. The chaos is certain; nothing else. It is for the unions to deal with this danger within their ranks; the London hold-up is a warning to them of its urgency. The public have reason to be grateful both to Lord Ashfield and to Mr Cramp for the strong attitude they have adopted.

Mr Wheatley's Housing Scheme.—We devoted an article last week to a critical examination of the main aspects of the housing proposals which Mr. Wheatley has explained to the House of Commons. It is not possible in the space of a single article to traverse all the lines of criticism which suggest themselves, and space forbade us to give any detailed examination of the statistical basis upon which the whole scheme rests. This basis we find to be open to serious doubt. The total number of inhabited private dwellings in 1911 in Great Britain was about 7½ millions; including shops used also as dwellings, the number was 8,150,000. Since in 1891 the number was 6,270,000, the increase in 20 years amounted to nearly 1,900,000. In these 20 years the population increased by 7½ millions to 40,783,000. In the current number of the *Economic Journal*, in an illuminating article on the birth-rate and population, Professor Bowley concludes that "With the present rates of births, deaths, and emigration, the population of Great Britain will increase to 45 or 46 millions about 1941, and then diminish." If we take the higher of Professor Bowley's figures of population, the increase of population between 1911 and 1941 will work out to be 5½ millions. When we make allowance for building done in the three years before the war, for the Addison scheme houses, and for private building, we see that Mr Wheatley's scheme means an increase of at least 3 million houses for this additional population. Even allowing for replacements, for less over-crowding, and a larger proportion of adults, an addition of nearly 40 per cent. of the houses in 1911 is very large, and implies rehousing on a considerable scale. If this is what the scheme means, it reinforces the argument that we do not want to continue building down to our present low standard, but to create a higher standard of accommodation. We do not advance this criticism, or, indeed, any criticism, in a destructive spirit. But we have suffered so long from illusions and false economics in this important matter of housing, that the country has a right, when faced with the huge burden which Mr Wheatley proposes to place upon the payers of taxes and rates, to look with the most meticulous care into the economic and statistical basis of the scheme which he proposes to initiate.

A Current Epidemic.—Every now and then, writes a Stock Exchange correspondent, there springs up an epidemic of bucket-shop offers which, while affording amusement to the informed man, evidently has the effect of catching a certain amount of capital from people who are not in daily touch with financial affairs, and who are ensnared by the hope of realising fabulous fortunes. Such epidemics coincide, as a rule, with activity in some Stock Exchange market that happens to be popular at the moment. The experienced eye will be on the look-out for a flood of recommendations to buy all kinds of worthless South African shares as a result of the little animation which has lately developed in the Kaffir market. The subject would be scarcely worth attention were it not for the fact that cases in the Law Courts show how these allurements fascinate that very class of people which can least afford to lose its money. It may be taken for granted that, for one case presented before the courts, there are probably 500 others in which the victims elect to suffer in silence, rather than to have their folly dragged into the light of publicity. No doubt the share-harpies take full advantage of the knowledge that an extremely small percentage of their followers will ever dare to risk bringing an action against them, considering the publicity in the first place, and, in the second, the uncertainty which exists of their obtaining any sort of redress. In many instances the "speculators" cannot hope to recover any part of cash which has been spent in some wild-cat scheme that may have nothing actually illegal about it, but whose chance of success is one in a million. Of late the whole country, from Land's End to John o' Groats, has been flooded with circulars advising people to take up oil plots in America. Several outside firms have been pushing this class of business with a persistence which suggests that there must be a certain degree of success attendant upon their efforts to obtain subscribers. No doubt there are people who have made fortunes out of some gamble in oil, in the same way as others have from gold and metals, and it is

upon this extremely risky foundation that the advertisers build all kinds of airy prophecies concerning the likelihood of their clients becoming equally successful. Private knowledge can quote instances of servant girls, bus conductors, and others in similar positions of life who are tempted to send money that shall enable them to get rich quick. The appeal to take a hand in these ventures comes with irresistible force to those who have to struggle along upon a modest income, and who, when faced with unexpected calls upon their slender purses, clutch desperately at these bucket-shop offers of speculation that pretend to point to short cuts to wealth and opulence. One difficulty in dealing with these matters is the fact that the people who are most attracted by these offers are not likely to be readers of those few papers in which the dangers are indicated. There are various ways, however, in which business men can warn those around them to steer clear of the whirlpools. In the United States the New York Stock Exchange takes energetic measures to carry the war into the enemy's country, and to do what it can for the protection of the investing public. This action on the part of the New York Stock Exchange has been forced upon it by the extraordinary growth of the bucket-shop fraternity in the States. Ours is a slower-moving country, and the London Stock Exchange has a century-old tradition of dignity to consult. Many of its members are beginning to think, however, that the Stock Exchange might do more to safeguard the public from the attacks which are made upon people's money. The conventional argument is that to prevent a fool from parting with his capital is an impossibility. This attitude has its justification. The great change which recent years have brought about in the investment world must, however, be taken into account. Owing to the incidence of the war, the circle is infinitely greater than it ever was before of people who take an interest in financial affairs. But many of those people are new to the business, and make easy lambs for the wily financial wolves from whose attacks the Stock Exchange might do a good deal to save them, without loss to its own dignity.

Shipping Freight Index.—The decline in freights which commenced in February continued during May, and resulted in a further fall in our freight index. The figure for May was 132.94, as compared with 136.37 for April, the difference being equal to a fall of 2.5 per cent. The movements of the various groups are shown below:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December ".....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57

May, ".....	134.96	148.71	139.02	127.67	124.45	122.85	132.94

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade.....	122.94	- 1.46	S. America—outwards ..	97.16	- 5.20
Bay—outwards ..	135.79	- 12.83	" homewards ..	180.88	- 1.46
" homewards ..	150.00	- 4.84	India—outwards ..	126.32	—
Mediterranean—outwards ..	156.21	- 7.25	" homewards ..	129.02	+ 0.62
" homewards ..	121.88	- 12.41	Far East, &c.	124.45	+ 4.34
North America ..	148.71	+ 2.43	Australia ..	122.85	- 8.90

The fall in our index, which has proceeded for each of the last four months, seems to indicate rather more than a normal seasonal slackening. During May there were signs of tonnage in European waters being in excess of

requirements. Traffic in both coal and ore was considerably reduced in volume, and freights for these cargoes fell sharply. Business from the East and Australia remained stagnant so far as chartering of whole cargo tonnage was concerned, and the only markets booking space in any substantial quantity were North and South America. Even from these quarters the tendency at the end of the month was slightly disquieting, the renewed break in the French exchange and the general political uncertainty in Europe causing a marked check in future purchases of grain. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1913 = 100.	1921.	1922.	1923.	1924.
January	194.59	..	131.60	..	117.11
February	164.54	..	135.76	..	112.75
March	162.17	..	135.53	..	115.23
April	147.48	..	129.46	..	115.45
May	158.42	..	125.12	..	114.55
June	165.73	..	117.45	..	106.82
July	169.87	..	114.52	..	103.39
August	170.60	..	113.16	..	103.16
September	154.47	..	110.37	..	103.04
October	141.85	..	114.42	..	107.86
November	136.47	..	119.43	..	111.21
December	134.66	..	117.39	..	111.81
Mean for year	158.40	..	122.02	..	109.69

It will be seen that the figure for May is approximately the same as that for the corresponding month of 1923. The present position is none the less inherently sounder than it was a year ago, when the catastrophic slump following the artificial "Ruhr boom" was beginning to develop.

Cost of Unemployment.—A White Paper has recently been issued (Cmd. 2,082, price 3d) giving statistics to show the cost to the Exchequer of unemployment relief from the date of the Armistice to March 31, 1924. Excluding poor law relief and liabilities under trade facilities guaranteed schemes, the total is about £170 millions, which is made up as follows:—

Schemes.	Total Approximate Value of Schemes Assisted. Million £.	Approximate Exchequer Contributions from the Armistice to March 31, 1924. Million £.
Training, &c.	102	102
Unemployment insurance	160	42.5
Unemployment Grants Committee..	62	4.5
Resettlement	20	9.25
Acceleration of road schemes	26	8.25
Miscellaneous.....	2	1.25
Land Settlement	19.5	2.25
Women's training, &c.	75	5
	392.25	170.5

The first and largest item in the above table, "training, &c.," includes out-of-work donation (£62.5 millions), training of ex-service officers, men, nurses, and war-widows (£35.7 millions), and grants for resettlement in civil life (£3.7 millions). Excluded from the figures in the table are £24.9 millions of expenditure by poor law authorities from the Armistice to January 26, 1924, while in addition the Exchequer has a contingent liability under the Trade Facilities Act, which at February 29, 1924, amounted to £38.2 millions. The White Paper also sets out the summary figures for unemployment insurance from the Armistice to March, 1924. During the whole period, benefits paid out amounted to about £160 millions, towards which, as stated in the table given above, Exchequer contributions amounted to £42.5 millions.

America and Cotton Cloth Imports.—Our Manchester correspondent writes:—Cotton manufacturers in America are undoubtedly becoming alarmed at the large imports of piece goods, especially from England. The agitation for an increase in the tariff is growing, and trade papers are appealing for immediate action to be taken. According to a Government report published last week, the imports of cotton cloth into the United States during the first three months of 1924 totalled 55,887,096 square yards, of which the United Kingdom supplied 45,656,958 square yards. In the corresponding period of 1923 the imports from all countries were 60,255,982 square yards, the share of the United Kingdom being 46,857,361 square yards. In 1913 the United States was

twenty-fifth in the list of countries taking British cotton goods when ranked in the order of the size of the imports taken. By 1923 the United States had become the fifth most important market. The president of the New Bedford Textile Council is reported to have said that a higher tariff is the only real remedy. It is stated that Lancashire manufacturers are supplying certain cloths at 21 cents per yard, whereas the mills at New Bedford cannot sell the same fabrics at less than 25 cents per yard. The president of the New Bedford Council is credited with the following statement:—"It is a plain case of wholesale dumping of English-made cotton goods into this country, probably for the purpose of establishing a large enough credit in United States funds to cover the British payments to America on the English war debt; but why should the textile industry be made to bear practically alone the whole burden of the British debt payments?" It is understood that the authorities in this country are watching the agitation in the United States very closely, and at the end of last week there was a meeting in Manchester of representatives of firms that are particularly interested in this section of the trade. It is probable that at an early date a reply will be made to the recent statements made in America. It may be said that the charge of "dumping" is not warranted, as most of the cloth exported to the United States is made from Egyptian yarns, and this section of the Lancashire industry is doing fairly well, the goods being sold at a profit.

Morocco: Trade and Finance.—The economic conditions of the three zones making up modern Morocco are described in the Survey (2s net) just published by the Overseas Trade Department, and comprising reports by British Consular officials. Naturally, the French zone contrasts sharply with the rest. Tangier languishes, but will revive after the settlement now pending of its international status, the provision of better shelter for its anchorage, and the completion, expected next year, of the railway to Fez. The Spanish zone agriculturally can never be more than self-sufficing, and its mineral resources, except a little iron and tin, cannot at present be worked; it derives 99 per cent. of its actual wealth from the Spanish army of occupation, so that the announcement that Spanish interference would be limited to "peaceful penetration" temporarily suspended its foreign trade. The French zone shows a marked development, though some critics hold that the railways, the banking, and the public works projected, with their attendant financial burdens, are outrunning the country's needs. Import values, after correcting the figures so as to allow for the rise in prices, have risen in 13 years by about 43 per cent., from 543 million francs in 1913 to 778 millions in 1923; export values in the same time from 120 millions to 272 millions; but the first-named increase is caused mainly by the capital spent by the Government, or brought in by immigrants, and by the requirements of the 70,000 Europeans and a section of the 70,000 Jews; and no demands for new classes of goods have arisen among the 5,000,000 Moors. The large adverse trade balances are partly explained by French Government expenditure, by curtailment through war conditions, by deficient harvests, and by speculative imports sold at a loss. But the disparity cannot wholly be explained away. Still, the progress shown is satisfactory, and the peasant masses are untouched by the depression of the franc. The French loans constitute a Budget charge of 36 million francs annually, and amount at present to 705,624,000f, with 440,140,000f—probably bearing over 7 per cent. interest—authorised besides for public works, not including railways. Still, except for first establishment charges, Morocco pays its way; and the revenue, in 1913 6.5 million francs, was 300 millions in 1923, and increases as French influence extends. Agriculture is progressing; only half the arable land is as yet tilled, and only 2 per cent. by European methods; the breeds of stock are being improved, and a trade with England, subject to quick transport being provided, is hoped for in early vegetables and fruit. Forestry has been taken in hand, and from 1927 there will be large and increasing exports of cork. Of the "limitless" phosphate beds, 4,000 square kilometres are being worked, and are connected by rail with Casablanca—36 per cent. of whose population is now

foreign—while part of the product is to be made into fertiliser there. The other mineral resources (except coal and petroleum) seem promising; extensive plans are in hand for irrigation and the production of electric power; and industrial enterprise has increased—perhaps too rapidly—in Casablanca, Rabat, and Fez. All the reports insist on the need of efforts to recover the position once held by British trade. In the French zone it still led in 1907, with 44 per cent. of the total imports; in 1923 it had dropped to 15 per cent., against 67 per cent. from France. It still leads in cotton goods and coal, and does well in three or four other categories, but in thirty departments of manufactured goods it might well be represented, and is not. As usual, British manufacturers and exporters are urged to study local needs, markets, and trade habits, and to ensure that the purchasers shall be able to understand the terms of their transaction by receiving catalogues in their own language with inclusive prices in francs, and weights and measures according to the metric system.

The Adulteration of Leather.—Our Bermondsey correspondent writes:—The exporting side of the leather trade has been much agitated of late owing to the Adulteration Act, 1923, of South Africa, which comes into operation on July 1st next. Cables from the Union now make it clear that the Act will only prohibit the import of sole leather and cut soles which may not come up to the Government standard, and that it will not apply to boots and shoes which may contain adulterants. It seems an anomalous position, for there is no doubt adulteration in sole leather is detrimental to the health of wearers and deserves penalising. Australia has long prohibited the entry of leather adulterated, and only permits exports on which the added matter is clearly stated on the export forms. It is, however, re-assuring to know that British tanners seldom add artificial weight to leather, unless the amount of uncombined tanning extract comes within that category. On the other hand, every effort is made to produce sole leather as heavy as custom and competition decree, the tanners' profit depending on the legitimate weights he can produce from the finished hide. In America the practice is still followed by sole leather tanners to add glucose and barium to their production, and the writer has seen American sides in England which looked as if they had been whitewashed on the grain or hair side, the efflorescence working out in our humid climate. Twenty years ago the heavier sorts of upper leathers, such as wax kips, were often "loaded" with glucose and barium, but the practice has been almost abandoned. In the case of other leathers, such as box and willow calf, glacé kid, &c., which are sold by measurement, there is, of course, no inducement to add fictitious weight. Disputes, however, as to correct measurement are frequent, and adjustments have often to be made before buyer and seller are satisfied.

Dunlop Rubber.—To please everyone concerned, and reconcile conflicting interests without incurring displeasure from some quarter or other would be a difficult task indeed, and those responsible for the Dunlop scheme of capital reorganisation are probably prepared for some amount of opposition. Frankly, we think the directors have done their best, and have produced a reasonably fair scheme. The total deficiency amounts to £11,353,667. This is made up by £7,731,739, the profit and loss debit balance at June 30, 1922; £4,516,787, the depreciation in interests in subsidiaries, including the American company; £241,855 new issue expenses; and £92,457 reduction in value of land and plant. These items amount to £12,582,838, from which is deducted the balance of the reserve fund, £1,229,171. Briefly, it is now proposed that ordinary shareholders shall be asked to write down their shares to the nominal value of 6s 8d per share. This will provide £9,927,543 towards the deficit. Holders of preference shares of all classes are asked to surrender their contingent rights to participate in surplus profits, namely, $\frac{1}{2}$ per cent. in the case of the "A" and "B" shares, and 1 per cent. in the case of the "C" shares. The holders of the "C" preference shares are asked to consent to a reduction of their capital from £3,000,000 to £2,250,000, with the condition that

the dividend on such shares shall be 10 per cent. per annum calculated on the reduced amount of £2,250,000, which is equal in amount to $7\frac{1}{2}$ per cent. on the original nominal capital of £3,000,000, and that in the event of a winding up of the company, such shares shall rank, subsequent to the "A" and "B" preference shares, but in priority to the ordinary shares, as having a nominal value of £3,000,000 for the purposes of a return of capital. Thus interference with rights of preference shareholders is not of a very drastic nature. This rate of 10 per cent. works out at £15,000 per annum less than the existing rate of 8 per cent. on the unreduced amount (viz., £3,000,000) of the "C" preference shares. The financial effect of this scheme is as follows:—

The deficiency on capital account of £11,353,667 will be met by—

(a) Appropriating the forfeited share account	£ 4,332
(b) Appropriating balance of profits for the 18 months ended December 31, 1923, after providing for the dividends on the "A," "B" and "C" preference shares, and crediting the tax deducted therefrom	671,792
(c) Cancelling share capital to the extent of—	
5s a share in respect of 3,000,000 issued "C" preference shares..	£750,000
13s 4d a share in respect of 14,891,314 issued ordinary shares	9,927,543
	10,677,543
	11,353,667

The issued share capital will be as follows:—

1,000,000 "A" preference shares of £1 each	1,000,000
1,000,000 "B" preference shares of £1 each	1,000,000
3,000,000 "C" preference shares of 15s each	2,250,000
14,891,314 ordinary shares of 6s 8d each	£4,963,771½
2,340,000 ordinary shares of 6s 8d each issued to preference shareholders for dividend arrears (stated to amount to £872,844)	780,000
	5,743,771½
17,231,314 ordinary shares of 6s 8d each.	9,993,771½
Leaving unissued 30,018,686 ordinary shares of 6s 8d each	10,006,228½
	20,000,000

Arrears of preference dividend are to be dealt with by allotting ordinary shares to the amount of the net arrears, after the deduction of tax at 4s 6d. By this arrangement the "A" preference shares will be allotted ordinary capital to the extent of 98.4 per cent. of their arrears; the "B" preference shares 91.3 per cent., and the "C" shares 86.3 per cent., which will give the "A" and "B" shareholders each 15 per cent., and the "C" shares 16 per cent. on their capital in each case. The actual amounts of arrears to which each class of share is entitled before reduction of income-tax were "A" and "B" 19.354 per cent., and "C" shares 20.645 per cent. The directors point out that the reduction of the nominal value of the "C" preference shares under the scheme renders it possible to issue ordinary shares in settlement of preference arrears without reducing the nominal value of the ordinary shares to a still greater extent than is now proposed, and this is the reason for suggesting reduction in the "C" shares. We have received circulars from various quarters criticising this scheme, but on the whole it appears to be one which shareholders should support. The directors have just issued accounts for the 18 months ended December 31, 1923. These show a net profit of £1,451,792, or an earning rate of approximately £1,000,000 per annum.

Hudson's Bay Profits.—The fact that the market found the Hudson's Bay report disappointing is due to the unsatisfactory experience in the Land Department, which the report discloses. In the year 1922-23, net land receipts were £18,340, and a 2 per cent. distribution in respect of this was made. In the past year there was on this department a loss of over £26,000. There is, however, some consolation about this. For the Land Department the accounts are made up for ten months only, in order to enable the financial year to correspond with that for the other branches of the business; and the directors state: "Had the accounts been made up for the full 12 months, they

would not have shown any loss. Results for a number of years are compared below:—

Year Ending	Net Land Receipts.	Fur and Trading Profits.	Total Net Profits.	Ordinary Dividend.
May 31—	£	£	£	£
1909	175,476	80,391	255,867	260,000
1910	240,045	166,156	406,201	400,000
1911	548,512	159,966	708,478	400,000
1912	273,268	196,070	469,338	400,000
1913	589,926	228,324	818,250	500,000
1914	297,302	86,636	383,938	400,000
1915	2,697	30,641	33,338	nil
1916	24,652	266,662	291,314	200,000
1917	140,777	279,708	420,485	300,000
1918	367,841	315,964	683,805	400,000
1919	262,126	406,414	668,540	450,000
1920	174,276	331,757	506,033	400,000
1921	154,161	300,049	454,210	400,000
1922	69,987	450,468	520,455	450,000
1923	18,340	328,440	346,780	195,000
1924	Dr. 26,495	310,417	283,922	200,000

The distribution on the ordinary shares is 20 per cent. (all in respect of trading), against 19½ per cent. in the previous year, and claims £5,000 more. However, Dominion income-tax refund claims only £22,916, against £65,260 a year ago. The company's total fur collections were affected by climatic conditions, and increased competition, but rather better prices were realised. The business in the sales shop showed improvement. Farm land sales for the 10 months ended January, 1924, comprised 27,374 acres for £77,941, an average of £2 16s 11d per acre, compared with 24,976 acres for £75,258, or an average of £3 0s 3d in the previous 12 months. Sales of town lots realised £6,190, against £15,894. At the end of January last the total of unsold lands in the hands of the company amounted to 2,862,412 acres. An analysis of the balance-sheet will be found in a later column.

Lyons' Progress.—Another prosperous year falls to be recorded for J. Lyons and Co., Limited. In the accounts issued for the year ended March 31st last, profits are £33,000 higher than those for the previous 12 months. The generous dividend distribution of 25 per cent. is maintained, as will be seen from the following table, which shows the striking progress made by this undertaking:—

Year Ending Mar. 31.	Gross Profit.	Ex-penses.	Ratio.	Net Profit.	Depre-ciation.	Reserves.	Divi-dends.	Ord. Rate.	Carried For-ward.
1906	£666,550	£473,904	71.1	£192,646	£42,294	£18,000	£133,533	32	£4,505
1907	728,281	496,432	68.3	231,849	55,178	60,000	145,007	32½	6,169
1908	797,591	545,766	69.0	248,825	58,060	40,000	141,866	32½	15,068
1909	969,305	681,454	70.5	287,851	67,452	30,000	183,300	32½	13,833
1910	1,110,488	822,419	74.0	288,069	72,946	10,000	205,090	32½	19,906
1911	1,220,794	918,394	75.0	302,390	79,385	..	201,834	42½	41,674
1912	1,356,480	1,036,421	76.3	320,059	87,003	..	211,256	42½	64,474
1913	1,450,590	1,110,982	76.6	339,608	91,849	69,189	221,551	42½	21,303
1914	1,574,659	1,218,356	77.3	356,303	96,103	..	221,599	42½	59,904
1915	1,520,998	1,244,595	82.0	276,403	109,482	..	191,307	32½	35,518
1916	1,592,879	1,314,586	82.5	278,293	108,594	7,062	169,508	25	28,657
1917	..	..	..	268,475	105,419	..	170,213	25	21,500
1918	..	..	..	316,222	120,835	40,000	170,154	25	6,803
1919	..	..	..	258,077	..	..	159,570	35	45,310
1920	..	..	..	396,684	..	60,000	346,684	42½	35,509
1921	..	..	..	503,323	..	100,000	426,323	42½	12,400
1922	..	..	..	595,615	..	90,866	504,749	25	15,421
1923	..	..	..	631,816	..	100,000	531,816	25	30,239
1924	..	..	..	665,377	..	110,755	554,622	25	25,594

* And 10 per cent. in preferred ordinary shares. † In addition to share bonus.

The balance of premium on shares, after deducting expenses, has been added to the reserve, which now amounts to £739,245. Total assets are shown as £10,689,247, which compares with £9,217,853 a year ago. The increase is mainly accounted for by the item freehold land, plant, &c., which is now £7,040,742, as against £5,324,065 last year. The issued share capital is £5,866,645, as against £4,860,645. The balance-sheet will be found in our usual column, fully analysed.

Forestral Land.—A happier state of affairs is revealed in the account of the Forestral Land Timber and Railways Company, Limited, for 1923. Trading profits from the meagre £136,601 for 1922 have improved to £652,932. In addition to this there is the windfall of a refund of Excess Profits duty amounting to £300,000. Thus the directors have available for shareholders £898,444, after deducting office charges in London. From this sum they allocate £154,575 for depreciation, and £325,000 for reserves, leaving a balance of £418,869 to be disposed of. Distri-

butions to shareholders are appended below, which leaves £204,733 to be carried forward to next year's accounts:—

	1916.	1918.	1919.	1920.	1921.	1922.	1923.
Profit	£1,614,889	£815,980	£992,381	£560,261	£126,314	£115,902	£119,869
To pref. shares	260,788	186,058	92,751	92,751	111,951	111,951	111,951
Preference dividend	15 %	12 %	6 %	6 %	6 %	6 %	6 %
To ordinary shares	504,111	279,922	371,004	432,832	..	..	231,802
Ordinary dividend	27 %	18 %	18 %	12 %	..	..	64 %
Special reserve	250,000	150,000	150,000	..	..	..	..
Excess profits res.	600,000	203,000	..	300,000	..	..	..

The ordinary dividend is perhaps not as high as some optimists expected, but it is a step in the right direction, and it is to be hoped that the difficulties of the past two years have been completely overcome. The depreciation account now stands at £1,143,160, and reserves total £1,399,163. The balance-sheet will be found fully analysed in our usual column.

Zinc Corporation.—Our mining correspondent writes:—The report for 1923 covers a transition period. The treatment of tailings, for which the company was originally formed, was suspended in March, the dumps having been exhausted. After having been shut down since December, 1920, the lead concentrator was started up again early in January, and the zinc concentrator has since been converted to a combined lead and zinc treatment plant; this work has just been completed. The revenue was swollen by the advance in the price of lead, while expenses were smaller than before, with the result that the profit came out at £292,400, as against £141,900 for 1922. A good proportion of the additional earnings is devoted to special appropriations. Mine development and new plant receive £70,000 instead of £50,000; the sum of £20,000 is placed to reserve, with a like amount out of the balance brought forward from 1922. This reserve has been set aside against depreciation in certain holdings, the company having a fairly extensive portfolio. By the way, the interests in other companies subsidiary to the business of the Corporation include 150,000 ordinary shares in the Electrolytic Zinc Company, now quoted on the London Stock Exchange at a small premium. The final dividends declared make the total 35 per cent. on the participating preference, and 30 per cent. on the ordinary shares, as compared with 25 per cent. and 10 per cent. respectively for 1922. On the basis of the 1923 results the preference yield 12½ per cent., and the ordinary a little over 15 per cent. The ore reserves remain at 2,114,150 tons, averaging 14.6 per cent. lead, 2.6 per cent. silver, and 9.4 per cent. zinc. With mining and the treatment plant in full operation, and the price of lead high, the prospects for the current year appear hopeful; unfortunately there is a fly in the ointment in the shape of a fresh demand on the part of the labour unions for higher wages and shorter hours.

Lonely Reef.—The crucial point in the position of this Rhodesian mining enterprise is whether the zone of partial impoverishment at the lower levels will or will not prove a passing phase. There are reasons for hope in this regard, both in the experience of the mine itself and in the experience of other mines in the country, but, of course, development alone can decide. Meantime, the company has sufficient ore opened up to keep the mill going for a couple of years, the reserves at the end of 1923 totalling 156,300 tons, value 14.9 dwts. These figures showed a decline in both quantity and value as compared with those of 12 months previously; a further shrinkage is recorded in the statement for the March quarter, the tonnage being placed at 142,900, and the value at 14.5 dwts. Last year a saving of nearly 5s per ton was effected in costs, with a slight improvement in the percentage of extraction; but these features were more than counterbalanced by the fresh decline in the grade of the ore, the profit of £79,200 falling £14,700 short of the 1922 total. The dividend rate was cut down from 30 per cent. to 20 per cent.; still, the carry forward had to be drawn upon to some extent. An interim dividend at the reduced rate of 5 per cent. has just been declared.

Taquah and Abosso.—The report presented at yesterday's meeting is the first annual statement of the consolidated undertaking, which is in part a reconsolidation. It makes a generally satisfactory showing. The 96,200

tons of ore milled gave a yield averaging 46s 10d, while the expense ratio was 37s 4d. After providing for depreciation and taxes, a profit of £34,500 remained. An interim dividend of 5 per cent. has been paid; and when the final of 7½ per cent. has been disbursed, a modest balance will remain to go forward. The 5s shares now stand in the market at a trifle under par. At 536,900 tons the ore reserves represent about five years' supply for the mill; the value averages 38s 3d or considerably less than last year's yield. Although the native labour supply is a little better than in the past, the shortage is still a source of considerable anxiety. For years past efforts have been made by those at the back of the West African gold industry to secure more native workers, but up to the present little has been achieved. An improvement in this respect would mean much to all the operating companies.

The Mexican Railway Report.—The port strike at Vera Cruz during the last quarter of 1923, and the de la Huertist rising which broke out there in December, have prevented the directors from submitting properly audited accounts and statements to the half-yearly meeting of the shareholders on Wednesday next. They hope to present them at the December meeting; meanwhile, they can only state that the gross earnings for the half-year in question amount, as telegraphed, to \$5,550,400, the expenses to \$5,537,100, showing a net balance of \$13,300. These figures, which are subject to revision on receipt of the final accounts from Mexico, show a decrease as compared with the corresponding period of 1922 of \$1,203,800 in gross earnings, and an increase of \$32,000 in expenses, so that the net receipts have fallen off by \$1,235,800. The small amount of the net balance precludes any payment on the registered "A" stock, representing the deferred interest certificates issued to the holders of 6 per cent. debentures, and the gross earnings for the first five months of 1924 amount to \$4,430,600, a decrease as compared with the corresponding period of 1923 of \$1,858,700, so that the total decrease for the 11 months is \$3,062,500, of which \$2,500,000 is directly attributable to the abortive "revolution." Traffic was interrupted during the first six weeks of this year between Esperanza and Orizaba, but skeleton services were maintained (of course at a loss) on the sections above and below the break, which were held respectively by the Federals and the insurgents; but the Federal successes made it practicable to reopen the line throughout on February 12th. It had suffered less than had been anticipated; the chief damage was to the Metlac Bridge, of which the permanent repair will cost \$12,000. The rolling stock has been damaged, especially the locomotives; much of it is still held by the Federal troops, but details at present are lacking. The rising is suppressed, but the economic position gives rise to anxiety; still, the present traffic is encouraging, especially in Mexican goods. No settlement has been reached as to the 10 per cent. railway tax imposed to provide funds for the fulfilment of the Lamont Agreement, but the directors are hopeful; meanwhile, payments under that agreement are being made to the bondholders on their coupons for 1923. The sum received and credited to the Indemnity Account during the half-year was £78,500, making a total of £437,400. The company may be congratulated on the way in which it has met the difficulties set up by the revolution. It remains to be seen whether the result of the Presidential contest will establish order and peace.

Portuguese Bonds.—We are officially informed that the following resolution was passed and confirmed on Thursday by the Committee for General Purposes of the London Stock Exchange:—"That sellers of bonds for or during the June 12th account be required to furnish the buyer with a declaration that the bonds delivered comply with the conditions laid down by the decree of the Portuguese Government of June 3rd, which enable holders to obtain payment of coupons in sterling. That bargains for future accounts be settled in bonds with such declaration attached until further notice." The decision to pay interest to British holders in sterling instead of francs caused a strong advance in Portuguese 3 per cents. this week.

Transvaal Gold Output.—The monthly statistics of gold output in the Transvaal make a good showing, the output for the month of May reaching 809,003 ounces of fine gold, as compared with 768,923 ounces in April, and 786,564 ounces in May, 1923. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January..	714,182	676,059	670,503	651,593	639,728	764,469	796,768
February..	659,759	636,728	625,530	558,137	639,728	704,970	760,617
March....	696,281	712,379	707,036	671,123	511,338	761,586	795,671
April.....	717,000	694,944	686,979	681,382	629,786	743,651	768,923
May.....	741,317	724,935	699,041	687,776		786,564	809,003
Total (5 months)	3,528,539	3,445,105	3,398,889	3,250,011	1,780,852	3,761,240	3,930,982

October...	679,764	723,722	662,472	707,825	778,159	793,842	..
November..	658,701	677,970	633,737	704,235	764,476	780,639	..
December..	641,245	650,191	632,215	681,847	790,712	778,849	..
Total (12 months)	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	..

In the table below are given the numbers of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Oct., 1923.	Nov., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.	Apr., 1924.	May, 1924.
Gold mines.....	177,047	177,674	177,779	181,659	182,055	176,483	175,022	172,586
Coal mines.....	16,216	16,246	16,142	16,109	15,958	15,763	15,800	15,863
Diamond.....	2,911	2,997	3,239	3,482	3,419	3,170	2,762	2,863
	196,174	196,917	197,160	201,250	201,432	195,416	191,584	191,312

It will be noted that the number of natives employed at the gold mines again shows a decline.

At the meeting of the Royal Statistical Society, on June 17th, Mr John Hilton, Director of Statistics, Ministry of Labour, will read a paper on "Enquiry by Sample; an Experiment and its Results." The meeting will be held in the hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m.

At the Edward VII. rooms, Hotel Victoria, on Tuesday, June 17th, at 8.30 p.m., Sir Maynard Hedstrom will deliver an address before the Royal Colonial Institute on "Fiji: Its Future and Possibilities."

THE Trade Facilities Act Advisory Committee announce that they are removing from their present address, at 16 Finsbury circus, E.C. 2, and that on and after Tuesday, June 10th, their address will be 3 Bank Buildings, Prince's street, E.C. 4. Telephone, City 3151.

Oversea Correspondence.

UNITED STATES.—COTTON REPORT—NEW YORK CITY BOND SALE—TAX-REDUCTION BILL SIGNED—STOCKS AND BONDS—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 3.

THE Department of Agriculture's first monthly cotton report of the season, estimating the condition of the crop on May 25th as 65.6 per cent. of normal, was a complete surprise to the cotton trade. With the exception of 1920, it is the lowest percentage ever reported at the beginning of the season, and compares with 71 per cent. on May 25, 1923, and a ten-year average on that date of 72.8 per cent. Following publication of the report yesterday, speculative markets for the staple became very active and excited, prices showing a maximum rise of about \$3 a bale, as compared with last Thursday's final quotations, before the holiday period. July contracts sold as high as 30½ cents a pound, October at 27½ cents, and December at 26.70 cents. The greater part of the advance, however, was soon lost, because while it was realised that the

crop has had a late start and is backward, the recent falling-off in mill takings and smaller exports offset considerably the exceptionally low condition report. As a matter of fact, the first Government report of the cotton season is not a reliable forecast of what the crop may be. In 1920, for instance, the initial percentage was 62.4, but the yield proved to be 13,439,000 bales, one of the largest cotton crops ever harvested. Last year, on the other hand, with a percentage of 71 as of May 25th, and a heavy increase in acreage over that of 1922, the crop turned out to be only 10,128,000 bales. The Department of Agriculture will not report on planted acreage until next month, but private estimates quite generally agree that 3 or 4 per cent. more land has been planted to cotton than in 1923, which would indicate the largest cotton acreage ever recorded. While it is uncertain how much surplus cotton will remain at the end of the current season, the carry-over promises to be very small, and apparently there will be urgent need of a full crop this year. Despite the extensive curtailment of cotton goods production in this country during the past few months, total consumption of cotton for the season to date is some 200,000 bales more than for the corresponding period of last year. The cotton goods industry is still suffering from acute depression, especially in New England, where many mills are closed for an indefinite period, some run one week and then shut down for a fortnight, while others are running only two or three days a week.

To-day's sale of \$30,400,000 4½ per cent. serial bonds and \$37,000,000 4½ per cent. corporate stock of the City of New York is regarded as the most successful in the city's history. The combined offering, totalling \$67,400,000, was awarded to a syndicate headed by the National City Company, whose bid, for all or none, was 101.1861. Other members of the successful syndicate included the First National Bank, the Bankers' Trust Company, the Guaranty Trust Company, Brown Brothers, and about 25 other prominent banking and investment houses. There were two more all-or-none bids. The issue really amounted to \$137,400,000, but the city's sinking and pension funds had taken \$70,000,000 of that total. The remaining \$67,400,000 offered for sale was oversubscribed more than ten times, the bids aggregating \$725,310,000. The city's premium will reach \$800,000. The vast total of the subscriptions, and the high prices bid for the offering, reflect the abundance of funds seeking investment, due largely to the continued easiness in money. After a temporary rise to 4½ per cent. in the closing week of last month, the rate for call loans on the Stock Exchange has fallen to 2½ per cent., with the supply of funds greatly exceeding brokers' requirements. Time money is freely offered at 3½ per cent. for periods up to 60 days, 4 per cent. for 90 days to four months, and at 4½ per cent. for longer maturities, with demand for accommodation, light and scattered. The commercial paper market is fairly active, with discounts now generally quoted at 4½ per cent. for prime and 4¾ per cent. for other market positions. To-day, however, witnessed some increase in activity, and a more cheerful sentiment prevails as the result of President Coolidge's action in signing the tax-reduction Bill recently passed by Congress. The President accepted that measure, he said, "in spite of its obvious defects," because it was the best law obtainable at this time. It "does not represent a sound permanent tax policy," he declared in a formal statement, "and in its passage has been subject to unfortunate influence which ought not to control fiscal questions." President Coolidge announced that he would work for the ultimate enactment of the Mellon plan, and expressed the hope that "a Bill less political and more truly economic" may be passed at the next session of Congress. To that end, he declared, he would bend all his energies. Tax legislation, therefore, has been eliminated, as a source of unsettlement, from consideration for the present at least. Although the new statute contains many unsatisfactory provisions, adds several very undesirable features to the existing law, and fails to relieve many interests

from excessive taxation to the extent they had expected, it will nevertheless materially lighten the burden of taxpayers generally, especially as it allows all taxpayers a reduction of 25 per cent. in their 1923 income-taxes payable this year.

In its current review of trade and industry in this country, the Federal Reserve Board at Washington says there are indications of a break in the business recession which began several months ago, and while activity in some lines is due to seasonal increases, the belief is expressed that the resulting revival will be more than temporary. During the past month, the Board remarks, greater credit demands were in evidence, but these were met entirely by local financial institutions. While the renewed demands for funds showed, in the opinion of Treasury officials, a spurt in business, they also indicated that commercial banks had plenty of money available for loans, with the result that rates were easier. A general slackening of activity in most lines of industry and business is noted, without, however, any alarming symptoms. The Board reports at considerable length upon conditions in the more important industries. In iron and steel, for instance, it finds that sharp reductions in production continued during April and May. Shipments were relatively steadier, and consequently stocks have been reduced. Bookings, on the other hand, are reported as light, and the volume of unfilled orders continues to decrease. The reduction in steel ingot production from March to April was larger than for any month, except during the 1919 strike, since monthly statistics have been available, and the number of blast furnaces blown out was the greatest for any month since 1921. Nevertheless, the output of both steel ingots and pig-iron was at a higher rate than during last autumn. Further curtailment, the Board adds, has been reported since May 1st, and during the latter part of the month steel mill activity averaged about 62 per cent. of capacity, as against 80 per cent. a month earlier, while several more blast furnaces have also been blown out. Prices have continued to decline, one trade authority's composite iron and steel index on May 21st being \$41.22, as compared with \$42.01 a month before, with concessions from last prices said to have been made on many transactions. Regarding the situation in the automobile industry, the Board points out that production was unusually well maintained throughout the winter, and stocks were large at the beginning of spring, but sales have not been sufficient to take care of capacity production, and at the same time move these stored cars from warehouses. Consequently, the April output and shipments, contrary to usual seasonal trends, were less than in March. Furthermore, production was below that of April, 1923—the first that the output in any month has been less than in the corresponding month in the preceding year. Statistics of employment in Detroit, compiled largely by automobile producers, show further declines in manufacturing activity since May 1st; since the last of March there has been a decline of about 9 per cent. April sales, however, were fairly heavy, the largest producer reporting a record figure for the month and a continuation at this high rate during the first part of May. Commenting on the agricultural situation, the Board notes that, contrary to the downward movement of general commodity prices in April, farm prices of agricultural products and live stock increased; consequently the purchasing power of farm products advanced, and reached the highest point since March, 1923. Attention is called also to the fact that the winter wheat acreage is now 36,896,000 acres, a decrease of about 8 per cent., and is the smallest since 1913, with the exception of 1917, when the abandonment of planted acreage was exceptionally large. On the basis of the May condition, the final yield of winter wheat is estimated at 553,000,000 bushels, the smallest crop since 1917, and 19,000,000 bushels less than in 1923. This would seem to indicate, the Board says, a tendency in the agricultural districts to restrict their crops in view of the over-production of the last year. The slowing down of business is reflected in employment statistics. Between March 15th and April 15th, factory employment decreased more than in any month since July, 1922, as shown by the drop in the Federal Reserve Board's employment index from 99 to 97, which brings employment down to about the same level as in November of 1922.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000

FRANCE.—THE PRESIDENTIAL CRISIS—M. HERRIOT'S PROGRAMME — PRICE MOVEMENTS — CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

PARIS, June 11.

M. HERRIOT'S "new majority" has succeeded in driving M. Millerand out of the Elysée, and by the time this issue of the *Economist* is printed his successor will have been chosen. Who that successor will be is, in the circumstances, of little importance. What is important is that, for the third time in the history of the Third Republic, a French President who has identified himself personally with the policy of one of the existing political parties has been forced to resign his post, in much the same circumstances as those that attended the fall of Marshal MacMahon and M. Casimir-Périer. Rightly or wrongly, the majority of the nation's Parliamentary representatives have unmistakably shown that French public opinion will not tolerate any attempt on the part of the Chief of State to exercise personal power. M. Millerand's fatal mistake was that, not content with creating the Bloc National and leading it to victory at the elections of 1919, he insisted on remaining the leader of that party after his election as President; whereas, in accordance with French practice, it was his duty to hold himself aloof from all party strife, and to confine himself strictly to his constitutional rôle as an absolutely impartial umpire. With M. Millerand's formal presentation of his resignation to the Chambers to-day, the Presidential crisis is over. His removal from office is the natural and logical outcome of the defeat of his party at the polls, and the advent of a new occupant of the Presidential post will in no way change the trend which French foreign and domestic policy will take under the direction of the country's new masters.

The main lines of the programme that is to be followed by M. Herriot—who on Sunday or Monday next will almost certainly take office as Prime Minister—have

been clearly laid down in a letter which he addressed to the leader of the French Parliamentary Socialists when he made his recent unsuccessful effort to induce that party to participate in his future Cabinet. This letter fully confirms my published forecasts that the advent of a Herriot Cabinet "will lead to little or no real modification of either the home or foreign policy of France," and that neither the alarmist fears nor the exaggerated joy that were experienced in many directions when the victory of the Left was first announced will be justified by events. The French, as usual at a General Election, have again been playing politics with all their hearts and souls, but their statesmen, no matter which of the great political parties may be apparently in the ascendant, still remain indubitably and unchangeably French. A general Amnesty Bill for political offenders (which is not to include insubordinate soldiers or "traitors") occupies, as was expected, a spectacular position in the first paragraph of M. Herriot's programme, as a concession to the extremists who clamoured so long for the pardoning of Marty, the leader of the Black Sea mutineers, and the former leaders of the Radical-Socialist Party, MM. Caillaux and Malvy.

The *décrets-lois* which were forced through the Chamber by M. Poincaré, to enable much-needed economies in the public services to be effected speedily, by removing reforms which everybody admits to be necessary outside the miasmic influences of interminable Parliamentary discussion, are to be suppressed. The match monopoly is to be re-established, as a bid for support from the doctrinaire Socialists. The recently re-established diplomatic relations between France and the Vatican are to be again broken off, and the embassy to the Vatican suppressed, and the period of compulsory military service is to be "reduced by the organisation of the nation in arms." Respect for the eight hours law and the rights of organised labour are to be insisted upon, and a national insurance scheme introduced, while employees of the State are to be given the right to organise themselves into trade unions (which has hitherto been refused to them).

So far as foreign policy is concerned, M. Herriot declares that his aim will be to bring about peace by agreement between the nations, and that he will make every effort to strengthen, to this end, the rôle of the League of Nations, the Hague Tribunal, and the International Labour Bureau. He also desires to "re-establish normal relations with Russia." As to the vital question of Franco-German relations, "we accept without any arrière pensée," M. Herriot states, "the report of the experts," but, "in view of the present state of Germany," he does not believe it to be possible to evacuate the Ruhr "before the pledges provided for by the experts shall have been constituted and handed over to the international organisations henceforward qualified to handle them," while he insists that it is necessary, in the interests of peace, to ensure the control of German disarmament by the common effort of the Allies and, as soon as possible, by the League of Nations. The problem of French security, he insists, must be solved by pacts of guarantee placed under the authority of the League. For the rest, it is generally felt here that the test of the new Government's intentions may come with the expiration, at the end of the present month, of the period given to Germany to reply to the last note from the Ambassadors' Conference in regard to the resumption of inter-Allied military control.

The newly-born majority will have ample opportunity to blow off steam in connection with endless subjects of discussion, for the benefit of the more unthinking portion of the electorate, and in the result it is expected the new Legislature will prove little more fruitful in real accomplishment than its predecessors. A sample of what may be expected in the near future is to be seen in the fact that, although half the current financial year has expired already, the new Chamber last week carried, by a show of hands, a proposal to repeal the whole of the present year's Budget, and to carry on for the time being, until the measure already in operation can be recast, by resorting to the system of monthly votes on account! The inextricable confusion into which such a step would throw the nation's finances was apparently entirely overlooked, and it will be left to the Senate to restore matters to order.

The index figure of wholesale prices for May, which has

just been issued by the Statistique Générale, indicates a rise of nine points, as compared with that for April, but is still 42 points below that for March, and no fewer than 87 below that for February. The detailed figures for the month, as compared with those for the three preceding months (which are now based on 100 as representing prices in July, 1914), are as follows:—

Nature and Number of Categories.	May.	April.	March.	Feb.
General index figure (45)	468	459	510	555
Foodstuffs (30)	425	423	455	484
Vegetable foods (8)	423	392	434	441
Animal foods (8)	401	424	430	444
Sugar, cocoa, coffee (4)	488	491	563	682

The figure for May remains appreciably below the average for 1920, which was 589, as worked out on the base of 100 for the period 1901-1910, and which would be approximately equivalent to the figure of 500 if calculated on the base of 100 in 1914, which is the one now used. The rise in the figures, as compared with that for April, is largely due to the increased price of textile products, the rise in which is returned as equivalent to 59 points on the month (after a fall of 151 points during the previous two months). The figure for retail prices in Paris at the end of May (13 articles of prime necessity) is returned as 378, as compared with 380 in April.

Returns showing the area under wheat and other cereals for the coming harvest, which have now been issued by the Ministry of Agriculture, foreshadow that, unless there is a very considerable improvement in the yield from the crops this year, as compared with those for 1923, this country will again have to depend on foreign grown wheat to meet its requirements in 1924-5. On May 1st this year and last year respectively the number of hectares under seed was as follows:—

	1923.	1924.
Winter wheat	5,351,650	5,181,040
Spring wheat	176,060	267,480
Total	5,527,710	5,448,520
Other cereals	3,455,910	3,480,410

The condition of the various crops on May 1st is reported to have been, on balance, below that of last year, winter wheat being returned as equivalent to 70, as compared with 72 last year, and spring wheat at 68, as against 70.1. The most unsatisfactory portion of the return is that which indicates that the area sown with wheat is 79,190 hectares (equivalent to practically 200,000 acres) less than last year.

GERMANY.—POLITICS—CURRENCY—PRICES—FINANCES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 10.

THE prospects of the Marx Cabinet are doubtful. By a vote of 247 against 183 the Reichstag approved of the Government's opening declaration which accepted the Dawes Report as "a practical basis for the speedy solution of the Reparations question." The Communists voted against this resolution, together with the extreme Right parties; but the Socialists, without whose help the Cabinet would have been defeated, have not committed themselves to general support of Dr. Marx. It is not yet clear that the Cabinet will get the two-thirds majority necessary for amending the Constitution. Dr Marx declares that his negotiations with the German-Nationals were from the beginning on the basis of a continuation unchanged of the former Cabinet's acceptance in principle of the Dawes recommendations; and the new Cabinet will not change its policy on this point merely in order to gain support from any outside party. The German-Nationals are reported to be not altogether satisfied with the part they have played since the elections, and to fear that a new Reparations collapse will be put to their door; hence writers of this party declare that Dr Marx's policy

may be regarded merely as an academic demonstration to the world that Germany is willing, because new obstacles, which will make a settlement impossible, are certain, it is added, to be made even by a Left French Government.

The credit crisis shows no signs of diminishing. Industrial firms increasingly report reduction of output as result of shortage of working capital. From Pirmasens it is reported that some boot manufacturers are paying their employees' wages in boots, which the employees sell as best they can. The capital market is almost entirely dead. In April and May not a single loan was floated and no money was raised on bonds. Mortgage money for long terms is sometimes offered at 10 to 20 per cent., but real estate will not bear such burdens. Such capitalisation increases as are reported are mostly in connection with the putting of company capital on a gold mark basis. The Reichsbank has advanced 20,000,000 gold marks to farmers to tide them over the crisis caused by damage to crops during the past winter; and the Rentenbank has agreed to advance 30,000,000 rentenmarks for land improvement on condition that the Labour Ministry makes a loan of the same amount for the same aim.

The exchange market is now fully in equilibrium. The Reichsbank meets 100 per cent. of the demand for all exchanges. Gold Discount Bank discounts on May 31st had risen to £5,384,864. Of the bank's capital, £3,631,650 is still not paid up. The Rentenbank's return for May 31st shows an increase in the interest-bearing loans to the Republic of 100 million rentenmarks, to a total of 1 milliard rentenmarks. Of the 300 million rentenmark non-interest bearing advance which the Republic was entitled to borrow for redemption of paper mark Treasury bills, only 196,459,900 rentenmarks were required, but by now borrowing the surplus 100 million rentenmarks as a supplement to the 900 million rentenmarks already borrowed on interest, the Republic's total borrowing limit of 1,200 million rentenmarks has been reached. Rentenbank loans to industry, *via* the Reichsbank remain unchanged at 800 million rentenmarks. Rentenbank circulation on May 31st was 2,050,361,000 rentenmarks, against 1,951,618,000 rentenmarks at close of April. The Reichsbank's return for May 31st shows a moderate increased demand for credit, but the money needed for month-end settlements was mainly drawn from deposits, which show large declines. The total of discounts and loans increased during the week by 17 trillion paper marks, to a total of 2,163 trillion paper marks. Paper mark discounts rose by 224,737 billion paper marks to 817,867,106 billions; rentenmark discounts by 6,006,389 billion paper marks to 1,137,062,834 billions; paper mark advances by 4,304,820 millions to 20,085,967 billions; rentenmark advances by 6,386,750 billions to 108,511,300 billions. Paper mark note circulation increased by 177,545,743 billions to 926,873,544 billions; and the bank's holding of rentenmark notes fell by 68,689,925 rentenmarks to 321,836,412 rentenmarks. The large increase in circulation is in connection with withdrawal of emergency notes, of which about 200 million gold marks were called in in May.

The cost of living index number for June 4th is unchanged at 113; the official wholesale index number for June 3rd, 118.4, against 120.2 a week earlier. The wholesale food index number fell during the week from 103.4 to 100.9, industrial raw materials from 151.6 to 151.1, home-produced goods from 109.8 to 108.7, and imported goods from 172 to 166.8. The average index number for all May was 122.5, against 124.1 for April.

The Federal Budget for 1924 has been sanctioned by the Reichsrat, and is now before the Reichstag. The Ordinary Budget shows a small surplus. In the second half of the financial year 1923-24, ending March 30th, the number of officials and State-employed workmen was reduced by 396,838, of whom 134,507 are officials, the annual saving being 421,000,000 marks. As result largely of longer working hours, railway officials and workmen have been reduced from 1,002,796 to 729,884. A number of departments, including the Ministries for the Treasury and for Reconstruction, have been abolished altogether. The General Administration Ordinary Budget shows a revenue of 5,300 million marks, of which 4,100 millions are from taxation. Income-tax yields

1-4, GREAT TOWER STREET - - LONDON, E.C.3.

1,300 millions, sales tax 1,400 millions, property tax 376 millions; Customs and taxes on consumption 1,090 millions, of which 160 millions are from Customs duties, 360 millions from tobacco, 231 millions from sugar, 126 millions from beer, 140 millions from the brandy monopoly. Subsidies to the states and municipalities total 1,800 millions, of which 1,200 millions out of income-tax, 288 millions out of sales tax, and 144 millions out of land purchase tax. Against revenue of 5,300 millions is permanent expenditure of 5,100 millions and non-recurring expenditure of 239,100,000 marks—in all 5,339,100,000 marks. As the 5.1 milliards of permanent expenditure include a subsidy towards the Extraordinary Budget of 10,700,000 marks, and a subsidy to the Budget for Execution of the Peace Treaty of 170,200,000 marks, the real General Administration Ordinary Budget, including the non-recurring expenditure, shows a surplus. The General Administration Extraordinary Budget shows expenditure of 733 millions, revenue being 252,500,000 marks plus the above 10,700,000 marks, in all 263,200,000 marks. The Ordinary Budget for Execution of the Peace Treaty shows ordinary expenditure of 461,600,000 marks, extraordinary 179,900,000 marks, total 641,500,000 marks, against which is 20,000,000 marks ordinary and 1,500,000 marks extraordinary revenue, so that the deficit is 640 million marks, or less the above 170,200,000 marks from the surplus of the General Administration Budget 469,700,000 marks. This deficit has to be covered by borrowing. The Budget is drawn on the assumption that tax sovereignty in the occupied and Ruhr districts is fully restored. Railways and posts, whose finances are now entirely separate from the Republic's, will this year deliver no surplus.

Current finances are satisfactory. Receipts in the third May decade term totalled 175,721,813 marks, expenditure 187,101,731 marks, but in expenditure is included 43,784,396 marks spent on redemption of gold loan. In the first two months of the financial year, April-May, receipts were 1,076,962,300 marks, expenditure 1,110,583,620 marks, of which 197,103,149 marks went on redemption of gold loan. The whole debt of the Republic on April 30th was 1,734,200,000 marks, against 2,283,700,000 marks on December 31, 1923.

The condition of industry is fairly good. The Prussian Trade Ministry's monthly report says that experts do not agree as to whether a dangerous crisis is approaching or whether the present slight reaction is merely the natural result of the currency stabilisation. The last detailed unemployment reports, which are for April 30th, show that 3.66 per cent. of trades unions members were without work in the textiles branch, and 2.3 per cent. in the boot and shoe branch; but in the metalworks unions 16.9 per cent were unemployed. The iron and steel industry is depressed, large numbers of orders being cancelled on the ground that money for payment cannot be had. The buying of machinery and chemicals is hindered by the same cause; but an improvement is reported in the electrical branch. The textiles industry complains of declining orders, and of the impossibility of reducing the present high prices as long as 70 to 80 per cent. must be paid for loans. Coal production in April (Saar omitted) was 10,439,145 metric tons, and in January-April, inclusive, 39,776,157 tons, against 5,484,399 tons and 31,064,865 tons in the same periods of 1923; brown coal production 10,247,054 tons and 38,478,382 tons, against 9,334,411 tons and 44,924,827 tons. Crop reports for June 1st show an improvement, but conditions are materially behind those of a year ago. The percentage of area reploughed owing to frost damage in the whole Republic is put as: winter wheat, 6.6; winter rye, 11.9; winter barley, 5.5. The Bourse last week was strongly reactionary, and ended with average quotations the lowest of the year.

CANADA.—MAJORITY FOR THE BUDGET—PROTECTIONIST REVOLT — PROPOSED TARIFF BOARD—THE HOME BANK INQUIRY—CROP CONDITIONS — BUSINESS PROSPECTS — MOTOR INDUSTRY AND McKENNA DUTIES.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 26.

THE fate of the King Government's Budget was never in serious doubt after they reached the decision that it was politically more profitable to placate the Progressives than the high protectionists, and therefore suspended the notorious dumping circular, whose effect was to grant a surreptitious increase of 4 or 5 per cent. in the protection available for many domestic industries. After a Labour amendment, which embodied more radical proposals than the Budget, had been decisively rejected by 204 to 16, the Budget itself was carried by 165 to 53; the minority was composed of all the Conservatives present, plus 4 Protectionist Liberals and one Progressive, and the majority included the rest of the Liberals and Progressives, with the Independents and Labourites. But the withdrawal of the dumping circular brought to more serious dimensions the Liberal Protectionist revolt; in addition to the quartette who actually voted against the Budget, Sir Lomer Gouin and a small group of his followers deliberately abstained, and Mr Walter Mitchell, formerly Provincial Treasurer of Quebec, resigned his seat for the business centre of Montreal, by way of protest at what he designates as an unjustifiable departure from the Laurier-Fielding tariff principles. Another group of French-Canadian members gave evidence of their dissatisfaction and restlessness by complaining of the results of the British preference, and warning the Government that Free Trade was no part of the Liberal programme, and only a very skilful and eloquent appeal by Mr Lapointe, the Minister of Justice, in the closing hours of the debate, kept them in line. The extent of the Protectionist revolt in the Liberal camp is more serious than the division lists indicate; all the dissentients in Parliament are members of standing and capacity, and their defection signifies that the powerful financial and industrial interests of Montreal, whose backing in 1921, more than any other factor, wafted the King Ministry into office, has now been definitely withdrawn. Bereft of their support, but unable owing to its fiscal gyrations to gain the unswerving confidence of the Progressives, the Government, although it has temporarily buttressed its Parliamentary position, remains in a precarious situation. Both Mr Mackenzie King and Mr Meighen delivered speeches of almost three hours' duration, and each made a significant statement. Mr King foreshadowed the establishment not of a Tariff Commission on the lines of the body which functions at Washington, but of a board of tariff and taxation experts who will be attached to the staff of the Department of Finance.

The first stage of Chief Justice McKeown's inquiry into the Home Bank failure has now been concluded, and Parliament is awaiting an interim report from him. But meanwhile the ramifications of the disaster are increasing. As the result of a formal charge by a Conservative member, that Mr Murdoch, the Minister of Labour, had on August 15, 1923, just after a Cabinet meeting, at which an appeal for succour by the directors of the tottering bank had been discussed and rejected, withdrawn \$4,050 of a deposit in the Home Bank, leaving a small balance to share in the débacle which followed on the 17th, and had thereby violated his oath of office that he would make no profit out of information gained in his Ministerial duties. Mr Murdoch virtually admitted the facts, but read correspondence showing that the liquidator of the bank had demanded the return of the sum withdrawn, and that he had made arrangements to comply with the request. The Premier essayed the strange defence that his culpability was diminished by the fact that he sought not a profit, but the aversion of a loss. British dicta in connection with the Marconi case were extensively used, and eventually Mr Murdoch's case was referred to the committee on privileges and elections. His resignation from the Cabinet seems inevitable.

The seeding of wheat is now practically completed in the prairie provinces, except in a few backward districts, and most farmers are now busy

putting in oats and other coarse grains. Conditions are very propitious, there being an abundance of moisture, and some of earlier sown wheat is six inches above ground. Owing to fear of another rust plague, the farmers of Manitoba have greatly reduced their wheat acreage, the cut in some areas being 40 per cent., and a smaller reduction is visible in Saskatchewan, but there is a compensating increase in the wheat acreage of Alberta. There will be no decrease in the total crop acreage, and many farmers are cleansing their land with valuable crops of sweet clover instead of achieving the same end by a profitless summer fallow. Particularly in Manitoba the movement towards mixed farming is gaining numerous recruits, and each year shows a steady gain in the volume of dairy produce raised in the West. Eastern Canada has been afflicted by an abnormal and prolonged spell of cold, wet, and stormy weather, which has greatly hampered seeding operations. Everywhere the season is very late, and on May 23rd the Minister of Agriculture for Quebec reported that seeding had only begun in some sections of the province.

The same spell of bad weather has had adverse effects upon business, for it has retarded the liquidation of the retail stocks of summer wear, and manufacturers and wholesalers have found fresh orders on any large scale difficult to obtain. Both wholesalers and retailers report that their volume of sales during the past two months shows a substantial decrease in comparison with last year's figures. Very large quantities of grain are still moving coastward from the West, and the elevators at Montreal are all filled to capacity. Considering the amount of grain still in the country within four months of the next harvest, grain prices are keeping up very well; the export demand is spasmodic, bursts of great activity being followed by an almost complete cessation.

Mr Moody, a vice-president of General Motors, Limited, whose large Canadian establishments at Oshawa and Toronto are likely, if any firm does, to feel the effects of the removal of the McKenna duties, has issued to the *Toronto Globe* a statement to the effect that no serious results are apprehended by his firm from the change. Other factors besides a preferential access to the British market induced them to manufacture cars in Canada, and the reduction of prices in Britain which will probably ensue ought, while it may force a writing down of present inventories, to result in an increased demand in whose benefits Canadian as well as British and American firms should share. In 1923 the production of motor vehicles in Canada exceeded in number all previous records, the total being 147,482, valued at \$97,369,814, as compared with 101,007 in 1922, and 94,144 in 1920. Employment was afforded in this industry to 9,305 persons, whose salaries and wages totalled \$14,998,267, which was an increase of \$3,724,624 over the previous year. There were 10 firms engaged in the industry in 1923, as compared with 15 in 1922, but the capital involved had risen from 48 to 60 million dollars.

AUSTRALIA.—FOUR STATE LABOUR GOVERNMENTS—FARMERS AND PROTECTION—ASSISTING EXPORTS—B.A.W.R.A.—WHEAT AND WOOL.

(FROM OUR CORRESPONDENT.)

MELBOURNE, April 30.

DURING the last few weeks the political unsettlement has further developed, owing to the Labour victories at the State elections in South Australia and Western Australia, the result of which is that with Tasmania and Queensland there are now four Labour Governments in office instead of one (in Queensland) a year ago. The Labour gains have been largely due to disunion on the anti-Socialistic side between the Nationalists and the Country Party. In Victoria a rupture between these two sections has left matters in a confused state, while in New South Wales and in the Commonwealth Parliament the prospect of a return of Labour to power at the next elections is regarded with apprehension. According to the announcements of some of the Labour leaders, a Commonwealth Labour Government would mean a capital levy to provide for the war debt, combined not with a

reduction, but with a heavy increase in direct taxation to enable expenditure to be increased.

The dissatisfaction of the farmers with the Nationalist Governments is based largely upon the severity with which the burden of protection now weighs upon the country, in addition to the feeling that city interests in other respects are studied excessively at the expense of the country districts. It is difficult, however, to find a practical remedy. The increase in the proportion of town to country population during the last dozen years has weakened the political influence of the country, and when protection is concerned the Nationalists and the Labour Party are at one.

The Commonwealth Premier, Mr Bruce, has, however, announced a programme for assisting export trade. In his speech at Sydney on April 16th he stated that the Government proposes that portion of the Customs revenue shall be employed in rendering help to those producers who depend upon overseas markets. This is to include assistance in finding and developing new markets; ensuring that produce is efficiently and economically marketed, is well advertised, and is sold as Australian produce; freight subsidies, bounties on exports; improvement of refrigerating space; and acceleration of transport services. Assistance in inter-State matters is also part of the programme. Mr Bruce also states that, as a condition precedent to any Government assistance, it will be required that every exporting industry shall thoroughly organise itself, shall demonstrate that it is upon an efficient basis, and shall satisfy the Government that permanent results will be achieved. Although he speaks as a Protectionist, Mr Bruce also talks of requiring a guarantee of efficiency from protected industries.

The report of the British Australian Wool Realisation Association, Limited (Bawra), to December 31, 1923, shows that, including the second capital reduction distribution on February 12, 1924, the total distribution since January 1, 1921, amounts to £21,407,602. Sales of wool during 1923 amounted to £4,587,065, returning a net surplus of £1,322,531, as compared with sales during 1922 amounting to £7,185,198, on which the net surplus was £1,210,865. Adding the 1921 surplus of £13,823, the total surplus to the end of 1923 is £2,547,219. At December 31st last the unsold wool consisted of 209,614 bales, including 81,195 bales Australian owned by Bawra itself and 128,419 bales Australian and New Zealand owned by the British Government. Most of this has since been sold, the final sales being put down for May, 1924, in Liverpool. The skin wool case was decided by the Privy Council on March 24th in favour of the Central Wool Committee. Further questions relating to taxation and otherwise have still to be settled, and until this is done the company cannot be liquidated.

The season continues to shape well, and an increase in wheat and wool production for the 1924-25 season is hoped for, in addition to a favourable butter season. Meanwhile, country trade is going on smoothly, but the outlook for some classes of trade and employment in the towns is affected by the reduced scale upon which Governments have been borrowing outside Australia as regards fresh money. Another factor is that the building activity which has followed the rapid expansion of city population in recent years is beginning to show signs of a little slackening.

JUGOSLAVIA.—POLITICAL CRISIS—BUSINESS CONDITIONS — EXPORT OUTLOOK — LOANS IN PROSPECT.

(FROM OUR CORRESPONDENT.)

BELGRADE, June 8.

DURING April and May business and trade were under the cloud of the ministerial and parliamentary crises. The coming of the Croatian members to Parliament, after five years' abstention, left the Pashitch Government in a minority, and forced it to resign. A long crisis, protracted over 40 days, resulted only in the formation of the same Pashitch Cabinet, which being in a minority, ob-

tained from the Crown prorogation of Parliament until October, and thus left the country in a very stuffy internal atmosphere. Its speaks very well for Yugoslav economic stability, however, that, in spite of this very tense political situation, and the disquieting news from Albania and Roumania, the dinar should have remained absolutely stable at about 350 to the £, which was the level it reached after its great rise in February.

In spite of town depression, business in the country is very active. The peasant has plenty of money, as is shown by the fact that he is making no application to credit co-operatives at a time when relatively large sums are being sunk into new productive co-operatives, the building of storehouses and granaries, the drying of fruit, jam and wine making, &c. The area under cultivation in 1924 is 16.54 per cent. greater than in 1923, and exceeds 6 million hectares. Besides Serbia, with 22.27 per cent., the increase is especially remarkable in Macedonia (22.96 per cent.), and Bosnia-Herzegovina (22.50 per cent.), where the large feudal estates were parcelled out by Agrarian reform. Of the whole area about 134,000 hectares were affected by floods. Harvest indications so far are excellent, especially in the Voivodina, and a harvest well in excess of last year is expected.

Export is proceeding normally, and exceeds that of 1923 both in value and tonnage:—

	Tons.	Tons.	Value in Million Dinars.	
	1923.	1924.	1923.	1924.
January	186,924	220,110	396.7	668.9
February	166,847	228,436	463.1	646.1
March	183,707	266,718	652.7	746.3
April	216,068	260,920	489.5	725.3
Total	753,546	976,184	2,002.0	2,786.6

Export should be favourably influenced by the lowering of export duties, which comes into force on June 10th. Beef, lard, meat products, coal, prepared prunes and plums and honey are now free. The chief reductions of duties are wheat and rye from 60 to 20 dinars, maize and barley from 40 and 100 respectively to 20, flour from 60 to 8, oats from 10 to 5, beans from 200 to 25, horses under three years from 200 to 100, others from 400 to 200, live cattle from 250-150 to 40 per 100 kg; pigs per head from 400-600 to 70, or per 100 kg from 350 to 200; pork from 150 to 100; eggs from 1,000 to 100, live poultry to 100, slaughtered to 50 (from 150), and oil seeds and products from 300 to 100. Timber is freed from duty in kind. To encourage export an agreement for the export of 110,000 hectolitres of wine to Czechoslovakia has been reached. Similarly a great tobacco campaign is being launched, and a loan of £300,000 for the financing of tobacco export is being negotiated.

Even more important are the negotiations between the Government and a big British firm for a loan of £7,000,000 (of which three are to be guaranteed by the British Government), for the building of the Adriatic Railway. Yugoslav business men are very favourably inclined towards this loan, for they hope that it will open the London market to them. This and the rise of the Blair bonds from 70 to 90, after the visit of the Yugoslav delegation to U.S.A., to acknowledge war debts, has brought the representatives of Blair and Co. to London in the hope of launching there the second instalment of 25 million dollars. Their success, however, is rather doubtful. Similarly unsuccessful was an Italian offer of 30 million dollars at 7 per cent. for the building of the Adriatic Railway, under such onerous conditions that the Government had to issue a formal denial of its intention to negotiate the loan.

The final settlement of the Austro-Hungarian Bank resulted in the transfer of the debts on mortgages to the S.H.S. State. This sum amounts to 17,970,415 crowns, or 4,485,104 dinars. The total amount received since the liquidation of the bank began is 32½ million gold crowns, and another two are expected on the liquidation of some smaller accounts.

HUNGARY.—PRICES AND STANDARD OF LIVING— PUBLIC HEALTH — EXCHANGE — HARVEST PROSPECTS.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 27.

In a recent report on the commercial and industrial situation in Hungary, Mr R. J. E. Humphreys, Commercial Secretary to the British Legation in Budapest, quotes figures to show that on January 1, 1924, the weekly expenses of a working-class family of five members amounted to nearly 300,000 crowns, whereas the average wage of a breadwinner at that date would have been about 100,000 only. One very serious and, indeed, pathetic result of the low standard of living caused by the rise in prices is to be seen in the decrease of population according to recent statistics, which are said to show a surplus of deaths over births of something like 30 per cent., a large number of the deaths occurring among infants. Phthisis is given as the prime cause, and this terrible disease is said to be spreading among the people. The inference, of course, is that bad nourishment means weak life, and that people are unwilling to procreate children whom they are unable to support. If Hungary is to be saved commercially at the expense of her population, it is to be feared that the victory will be essentially pyrrhic. The Controller, though coming from a Protectionist country, is not likely to be one-sided in such a question as this, and may be counted upon to use his authority comprehensively. There seems to be no doubt that the restrictions placed upon both imports and exports ought to be done away with as soon as may be. As the crown loses its purchasing power, it naturally goes down. Before Czechoslovakia was granted a loan in 1922, the Czech crown was going up rapidly, and continued to go up until the loan was raised. In the case of Hungary, it is hoped that the Hungarian crown will go up after the loan has been raised, so that the amounts required to pay the interest will be easier to raise. At present the position is exactly the reverse of that of Czechoslovakia when she obtained her loan in 1922, inasmuch as the Hungarian crown has been going down steadily up to the present.

In a recent report of the Hungarian Agricultural Ministry, a more or less hopeful prospect for the harvest is given, especially as regards wheat, rye, sugar beet, potatoes, and maize. The wine prospect is not so good. It is probable that the area under wheat may not be quite so large as that of last year, to a small extent wheat being replaced by maize and potatoes. On the other hand, there is a welcome increase in the area under sugar beet, viz., from 89,000 to 101,000 jochs; in other words, from 133,000 acres to 150,000. As Hungarian sugar is second to none, and is besides one of the most profitable products of the country, this increase is of some importance.

Letters to the Editor.

THE DAWES COMMITTEE REPORT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to submit a few brief remarks in connection with your article, "The Reparation Report" (*Economist*, April 26th, p. 861). You write, "The outstanding feature of the scheme is that it makes no attempt to fix the ultimate sum payable by Germany." It is quite true that the experts were not empowered to fix the total of the German debt, as they themselves expressly state in their report (it is well known that from the very first the French Government were opposed to any such powers being given to them). It is equally true that the French Government (M. Poincaré) and the Agency Havas contend that this omission to fix Germany's final debt offers the possibility of Germany not paying less than provided for hitherto (London Schedule

of Payments), i.e., of France not receiving less. Nevertheless, all of these statements are erroneous; political expediency cannot set mathematical accuracy and logic at naught. The total debt payable by Germany is contained in the experts' report, is, in fact, fixed, even though only indirectly, as I hope to be able to show.

The report fixes not only the rate of interest (5 per cent.) but also provides for a sinking fund (of 1 per cent.) for a large part of the German debt (£250,000,000—the £ = 20 gold marks—industrial bonds, and £550,000,000 railway bonds). A simple calculation proves that these bonds will be redeemed within 36/37 years. It follows that the annuities will number about 36, and that consequently the total German payments will amount to roughly £4.5 billions (36 payments of £125,000,000 each). The possible objection that after redemption of the bonds the "remaining part" of the annuities will continue to be paid does not hold good, since there is nowhere in the report the slightest indication that the experts intend demanding further payments from Germany. The capital value of the debt can also be computed, therefore; it is £2.1 billions, as against the £2.5-£3.25 billions of the London Schedule; in the latter figure account is taken of the £4.1 billion "C" bonds, which Mr Bonar Law expressly described as worthless at the Paris Conference held in the early part of January, 1923. Whilst on the one hand the above calculation leaves the moratorium period out of account, the possible (but probably small) increase of the annuities calculated upon a prosperity index is disregarded. The moratorium reduces the total amount to a slightly lower figure, which thus approximately agrees with the figure named by Mr Bonar Law in 1923 (£19.75 billions). That the payment cannot extend over a period of more than some 36 years is also in conformity with Art. 231 of the Treaty of Versailles, which even provides that the debt should be settled within 30 years. Consequently the report is equivalent to a reduction of Germany's obligations by about one-third. We come to the same result if we base our calculations on the annuities to be paid by Germany instead of on the total capital payment. These annuities are fixed at £125,000,000, and are to cover all German obligations, whatever the origin or the legal definition of the sums involved (reparations, restitutions, costs of armies of occupation, &c.). According to the London Schedule of Payments the payments due on account of the "A" and "B" bonds alone amounted to £150,000,000 annually, and to certainly not less than £175,000,000 if the above-mentioned extra costs are added. It will be seen that this method of calculation shows a similar reduction of the debt.

On the other hand, the report is guilty of a serious omission to which I also drew attention in an article which appeared in the *Frankfurter Zeitung* of April 14th:—The experts clearly set to work with the full intention of making a clean sweep of the past, and consequently they say not a word about the German payments that have already been made to the Reparations Commission, but which, for various reasons, have not yet been credited to Germany. The amounts concerned are very high, as everyone knows, even when based, not on the German estimates, but on those of Moulton and McGuire, of Keynes or even of Prof. Gide. These payments made by Germany will have to be taken into account, no matter how large or how small the amounts involved may be. The most natural solution is that they should be deducted from the first German annuities payable according to the Dawes scheme, should the latter be carried out. In this way the present "partial moratorium" would be a much more complete one, and that—we would emphasise this point—not owing to any particular leniency on the part of the Allies, but by means of German payments previously made. Moreover, to put the payments already made by Germany to this—in my judgment imperatively necessary—use would contribute considerably to relieve the tension between the Allies and Germany.

I hope that you will consider these comments of sufficient interest to justify their insertion in the columns of your paper.—Yours faithfully, (Dr) W. MAUTNER. Spiegelgracht 34, Amsterdam.

Books and Publications.

INTER-ALLIED INDEBTEDNESS.

THE author and publishers of this little volume* are both to be congratulated, for here is given, in handy form, a succinct account of the expenditure incurred by the different belligerents as a direct consequence of the war, and of post-war reconstruction, compared with the wealth and income of the various Powers. In this setting the problem of inter-Allied debts, to which the greater part of this book is devoted, can be studied in its true context, while the historical account of the growth of this form of indebtedness is a model of impartiality.

From the outbreak of hostilities in 1914 down to April 6, 1917, Great Britain acted as banker for the Allies. During this period her net advances totalled \$3,824 millions. From April, 1917, to the end of the war this task devolved upon the United States, which supplied goods to the associated Powers to the value of \$7,077 millions, and American loans continued for two years after the Armistice, and added a further two billion dollars to the total. Meanwhile, of course, Great Britain still continued to lend to her European Allies, though she was also herself a borrower in the United States. The gross total of inter-Allied indebtedness of all kinds—including the post-war relief loans—is given at \$28,261 millions (with accrued interest as to the autumn of 1923), and, of this, Great Britain advanced \$11,171 millions, the United States \$11,861 millions, and France \$3,463 millions. As both Great Britain and France were borrowers as well as lenders, the figures on balance present a rather different picture. In 1923 the United States was a net creditor for \$11,858 millions, while Great Britain was a net creditor for \$4,682 millions. All the other nations, some thirty in number, were net debtors.

The gross cost of the war is given at 94 billion dollars, calculated in terms of the 1913 price level. About 3 per cent. only of the receipts of the belligerents for war purposes came from taxation, 83½ per cent. from borrowing at home, and about 13½ per cent. from borrowing abroad. These latter loans, if and when paid, will, of course, cancel out, as they are derived almost entirely from borrowing between the belligerents themselves. This would leave the net cost of the war, in terms of the 1913 level, at about 81 billion dollars.

The various categories of indebtedness are described country by country, and the author has preferred throughout to set forth the essential facts and to recreate the atmosphere of contemporary opinion rather than to pass judgment himself on the ethics and economics of the problem. At a time when the question of inter-Allied indebtedness is once more coming to the fore, the appearance of this book is doubly welcome, and should do much to enlighten public opinion on one of the most important international questions still awaiting solution.

EQUIPMENT OBLIGATIONS.*

THE title of this work will, no doubt, be better understood in America than in this country, but the subject, although somewhat novel, is an interesting one. The meaning of equipment obligations must first be made clear. These securities usually take the form of bonds, notes, or certificates giving a lien upon specific lots of railway equipment, rolling stock, &c., or upon marine equipment. They are essentially an American product, and were originally created to meet the requirements of needy railroads for borrowing capital on the cheapest terms in order to obtain additional equipment. They thus separate the financing of equipment from the other financial obligations of a company, thereby giving a maximum of security and income to the investor, and they have become so popular in America that strong as well as weak railroads now find it desirable to employ this method of finance. In fact, they seem to be the most commonly accepted means by

which the purchase of new railroad equipment is effected. The outstanding equipment obligations of North American railroads have increased from \$280 millions in 1919, equal to about 2½ per cent. of the total funded debt, to \$804 millions in 1922, equal to about 6 per cent. The underlying agreements—whether contracts of conditional sale or lease—all contain practically the same provisions. The terms of the contracts are similar to those of an ordinary mortgage indenture, and have assumed in America a more or less standardised form. There are five groups of provisions which are regarded as essential in all equipment contracts: (1) Description of property covered; (2) provisions as to payment; (3) marking of equipment with name of owner or trustee; (4) maintenance and replacement of equipment; (5) procedure in case of default.

The thought naturally arises whether the equipment trust device may be susceptible of more extensive application. At present there seems to be no important issue of equipment obligations outside of railroad rolling stock or marine equipment. But might not other forms of movable property be sometimes conveniently financed through the issue of equipment trust securities or equipment bonds? Perhaps the most likely extension of the principle may be in the direction of supplying machinery or other standard movable equipment to manufacturing companies.

There are, however, certain inherent difficulties likely to prevent the extensive application of the equipment trust principle outside the field of railroad and marine equipment finance. First of all, there is no other type of equipment of an equally permanent standard character which is bought and sold in lots large enough to warrant a separate investment issue for the stock markets; then, again, manufacturing equipment is of a more specialised character, and subject in a greater degree to obsolescence. A further point is that the units of railway rolling stock are widely scattered, thus removing the danger of their wholesale destruction by fire or otherwise. Again, railway and marine equipment is of a more or less standardised pattern, and thus commands a wide and ready market. Inquirers will find the subject of equipment obligations fully and ably dealt with in this work, with its appendices, containing model clauses, agreements, &c.

SOVIET RUSSIA.*

In this valuable little book a former German ambassador to the Bolshevik Government describes impartially the genesis and structure of Soviet Russia. This structure has persisted because the Tsarist State was so "stratified" that the strata, once separated, could not recombine; so that the Bolshevik State has secured the support not only of the proletariat, but of the peasantry, the mass of the Tsarist officials, the upper ranks of the industrial workers, and even some of their chiefs and of the military officers. Ostensibly a group of republics, all more or less rigorously controlled from Moscow, it is really an oligarchy camouflaged under democratic forms; an administrative and legislative hierarchy of Boards upon Boards, with a vast Congress nominally supreme, but limited in fact to registering the decrees of its standing committee, which is directed by a Cabinet, and virtually controlled by the tried leaders of the Communist Party, which contains one-half per cent. of the Russian people. This close oligarchy supports itself by the aid of nominally independent bodies, including the Third International, by careful handling of foreign visitors, and by manipulation of news and the Press. The few real opposition groups are powerless, but are tolerated as helping to disguise the true situation; so does a certain amount of inspired

and bogus criticism. Communist economics, the author points out, have failed, and the "new economic policy" is the result. Written before Lenin's death, the book suggests speculation as to the result of his removal, and of the eventual rise of a new generation of leaders. While doubting the value of Bolshevik "culture," Herr Wiedenfeld rests his hopes on the altruistic zeal exhibited alike by the Communists and by the patriotic non-Communists who are sacrificing themselves to co-operate in "remaking" Russia.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, June 25.	ACCOUNT, June 26.

FRENCH politics have played some part this week in the determination of Stock Exchange prices. French issues have been rising, which seems paradoxical in view of the generally expressed opinion that the dullness apparent in some of the more general markets is due to the disturbance caused by the French political crisis. British Government stocks are firm, with the War Loan a little over 101, and other gilt-edged stocks holding their ground. Various British corporation issues are better. The newly-issued scrip stocks are well maintained, and, as is usual when foreign and domestic politics look unsettled, the bulk of investment business tends towards those securities the purchase of which involves the least degree of risk. New South Wales 5 per cent., 1935-55, left with underwriters to the extent of 85 per cent., stands about 1 discount.

Apart from the improvement in French Government, railway guaranteed and municipal bonds, the foreign market is not remarkable for strength. Mexican bonds have fallen fairly sharply. Brazilians gave way, and the tendency of the list as a whole has been to rather lower levels. Portuguese threes, exceptionally, proved a strong feature on the decision to pay interest, to British holders, in sterling and not in francs.

Home Railway stocks suffered in consequence of the fear lest the Tube strike might spread. There was a faint recovery amongst the Undergrounds on the strength of the Whitsun traffics and the impression that the strong stand taken by the directors of the Underground Electric Railways Company would have a favourable effect upon future disputes. Steam stocks

rallied before the week-end. Mexican Rails are, if anything, a little easier on the issue of a report which disappointed the stockholders. Argentine and other foreign railway stocks have been moving within narrow bounds. United of Havana recovered somewhat from the effects of the strike weakness. Antofagasta gave way at first on the dividend being less than was expected, but improved later when the report showed that the company could have paid a substantially higher dividend had the board deemed it discreet to do so. Nitrate Rails have hardened.

Nothing of consequence has transpired in the rubber market, and tea shares continue to droop, with one or two exceptions, notably Assam Frontier shares, which spurred on orders to buy from the East, and Chargolas, where the dividend disappointment became more than compensated by the announcement of a share bonus. The oil market, upset at first by a fresh fall in Mexican Eagles, hardened a little as the week progressed. Last Tuesday's Burmah Oil meeting gave considerable satisfaction. Royal Dutch fell back on sales by holders who wished to take up the new shares. The activity in British Controlled and Phoenix continues to attract the attention of the speculator, and Mexican Eagles rallied from the worst.

Dunlop preferences improved upon publication of the directors' scheme for reorganisation of the capital, the ordinary remaining almost unchanged. The liveliest interest is aroused at the prospect of what Monday's meetings may bring forth, but the share market is surprisingly quiet. Hudson's Bays became dull on the issue of the report. Sudan Plantations maintain the sharp recovery which followed upon last week's spasm of flatness. Tobacco shares are featureless. In textiles business has proceeded upon quiet lines. Iron, steel, and engineering issues are mostly a trifle easier for choice.

Banking shares are better, and the insurance list continues to attract a good deal of support from the North. Shipping shares keep steady. In the group of stores, hotels, and similar companies that are likely to be favourably affected by the British Empire Exhibition, business has dwindled to meagre proportions, though preference shares continue to be in persistent demand. Lyons dropped on the maintenance of the 25 per cent. dividend—some people had been expecting an increase of 2½ to 5 per cent. Marconis yielded ground, the assumption being that the company will not maintain its previous 15 per cent. dividend, and cable stocks are no better, notwithstanding the fact that prices now stand at levels which offer 6 per cent., free of tax, on the money. There is nothing much doing in nitrates.

With the approach of the South African Elections next week, the previous bulls of Kaffirs began to grow restive and to draw in their horns, the consequence being that the buoyancy of prices was not maintained, and the list slipped back from the best. There is a fair amount of public interest being taken in the market, and a good many shares have been lifted at this week's settlement by the purchasers. Chartered are a mild feature of strength amongst Rhodesians. Diamonds gave way on Paris selling, which extended also to Rio Tintos. Russians are a shade better, but Mexican mining shares, together with those of the tin, Indian, and West African gold markets, failed to attract any particular attention from clients. The constant rain is quoted in all the Stock Exchange markets as a factor which tends to make for depression of prices, of energy, and of optimism.

NEW ISSUES.

Royal Dutch Company for the Working of Petroleum Wells in Netherlands India.—Incorporated in Holland. Share capital 600,000,000 fl. Details are given in the Press of an offer to shareholders of 80,364,000 fl. shares of the company, entitled to the final dividend for the financial year 1924, divided into shares of 1,000 fl each, and sub-shares of 100 fl each. For every four shares or four sub-shares held holders have the right to subscribe for one new share or one new sub-share respectively at par, payable July 23rd, at a rate of exchange to be fixed on July 21st. Applications for the new shares must be accompanied by four coupons No. 55 of shares or sub-shares, or multiples thereof. Owing to this procedure, the coupon No. 55 will lose its original character, and after June 30th next will become null and void. The final dividend for the financial year 1923 and the interim dividend on account of 1924 will be paid together on dividend coupon No. 56. It is stated that "the definitive shares" will be ready for delivery on or about July 28th next. The company is not prepared on this occasion to pay the British stamp duty on the new share certificates. They will accordingly be delivered unstamped, and will only become liable to stamp duty when first negotiated, assigned, or transferred in Great Britain and Northern Ireland. The official listing on the Amsterdam and Rotterdam Stock Exchanges has been applied for. The company announce that provincial holders should arrange with their bankers for presentation of their coupons in London, as applications cannot be dealt with through the post.

United Dairies, Limited.—Authorised capital £5,000,000 of which £4,040,636 has been issued. The issued capital consists of 2,068,857 ordinary and 1,971,779 preference shares, all of £1 each. This is an issue of 250,000 6 per cent. non-cumulative preference shares at par, and of 150,000 ordinary shares at 32s per share. This is a holding company, and though its balance-sheets are inclined to be reticent, there is evidence to show that the company is both prosperous and progressive. The reserve fund is given as but £250,000. This appears somewhat small when placed against the £4,040,636 of issued capital. Of course, it may be that some of the constituent companies have their own reserve funds. Profits are given from 1919, but the balance-sheet is strangely silent about assets. Frankly, we are disappointed with the amount of information offered. But, considered as an investment proposition, we believe that the two issues will receive from the public the good reception which they merit.

Gaumont's Trust Corporation, Limited.—Share capital £525,000, divided into 500,000 7½ per cent. cumulative preference shares of £1 each, and 500,000 ordinary shares of 1s each. All the ordinary shares have been issued. The corporation has also outstanding £145,000 7 per cent. notes issued in 1922. The undertaking was incorporated in 1922. The corporation has acquired all the issued share capital in the Gaumont Company, Limited, for £169,375. Net profits of the Gaumont Company are given from 1913, while net assets as at December 31, 1923, are shown as £310,701. These and other details are recorded in a statement which appears in the Press to comply with Stock Exchange regulations. It is practically a misnomer to describe this issue of £500,000 capital as "preference shares." If preference dividends fell in arrears for a year, the margin of security safety provided by ordinary capital would disappear. A prospectus is issued.

The Bognor Gas Light and Coke Company.—Established 1865, incorporated 1908. Authorised share capital £104,700, of which £78,607 has been issued. The loan capital outstanding amounts to £26,250, leaving £26,100 to be raised. This is an issue of £13,000 6 per cent. redeemable debenture stock, the minimum price of issue being par. The stock is to be redeemed at par on June 30, 1934. For the year ended December 31st last revenue amounted to £7,906. Interest on debenture stock, including that now offered will need £2,353. Thus a good margin is available in case of need. A fair offer in its class if obtainable at par.

The Anglo-Dutch Utilities Company, Limited.—Authorised capital £100,000, divided into ordinary shares of £1 each, the whole of which will be subscribed for in cash by the Maatschappij ter Exploitatie der Pamanoeekan en Tjiassem Landen, a company registered in Java, whose entire capital is held by the Anglo-Dutch Plantations of Java, Limited. An advertised statement in the Press refers to an issue of £500,000 6 per cent. guaranteed first mortgage debenture stock. Interest is payable April 1st and October 1st in each year, the first payment being made on October 1, 1924, calculated as and from the due dates of payment. The stock will be secured by a trust deed containing a specific charge on the whole of the shares of the Dutch company, Maatschappij ter Exploitatie van Openbare Werken op de Pamanoeekan en Tjiassem Landen, and a floating charge on the remainder of the assets and undertaking of this company. The Dutch company will be under covenant to execute in favour of the trustees a specific mortgage on its assets when called upon so to do, including the benefit of the contracts with the Maatschappij ter Exploitatie der Pamanoeekan en Tjiassem Landen referred to in this statement, and not to create any other charge upon its assets. An accumulative sinking fund of 3 per cent. will be set aside, starting in the year 1928, and calculated to redeem the whole loan by Decem-

ber, 1946, at which date any outstanding balance will be redeemed. The sinking fund will be applied annually by purchase in the market or by tender, so long as the stock is below par, or by drawings at par. The company reserve the right (a) to purchase the stock in the market or by tender in excess of the sinking fund, and (b) to redeem the whole loan at 107 at any interest date, on giving three months' notice. The stock will be guaranteed both as regards principal and interest by the Anglo-Dutch Plantations of Java, Limited. The statement informs us that a specified firm "have purchased £350,000 debenture stock at 96, and have been paid a commission of 1 per cent. and a fee of 1,000 guineas." The expenses incidental to the sale are payable by the company. Application will be made to the Stock Exchange for permission to deal in the debenture stock, and in due course for an official quotation. The information given in the advertisement is almost as voluminous as that contained in many prospectuses.

The Indestructible Paint Company, Limited.—Authorised share capital £100,000 in shares of £1 each, of which 75,000 have been issued. The company was incorporated in January, 1924, and its objects are indicated by its title. The company has acquired the assets, &c., of a company of a similar name. The purchase consideration was £100,000, payable in cash. Profits are stated from 1919. These and other details are given in the public Press in connection with an application made to the Committee of the London Stock Exchange for permission to deal in the shares of the company. Another prospectusless company with insufficient information to guide an intending investor.

The Amblamania Tea Estates, Limited.—Authorised share capital £70,000, divided into shares of 2s each. Of these 392,500 have been issued at par for cash, and are fully paid, 107,500 are held available for issue in part payment of certain estates, and 200,000 are held in reserve. This is an issue at par of £17,000 7 per cent. convertible debentures of £100 each. The company was formed in 1922, and acquired the Amblamania and Hythe Estates in the Central Provinces of Ceylon. These estates have an approximate total acreage of 722 acres, of which 639 are planted with tea, the whole being in bearing with the exception of a few acres of young tea. The company has now contracted to purchase the Little Valley Estate. This estate, which adjoins the Hythe Estate, is 804½ acres in extent, of which 275 acres consist of tea in full bearing. The purchase price is £17,000, payable £14,000 in cash and £3,000 in fully-paid shares. The debentures are to be secured only by a floating charge, it should be noticed.

Lever Brothers.—It is understood that the recent offer to the shareholders and debenture stockholders of 5,000,000 7 per cent. cumulative preference shares at par has been largely over-subscribed. In view of the heavy clerical work involved, the allotments for the additional shares must not be expected for at least a week.

ACTIVE SECURITIES.

(a) Increased capital. (b) Also capitalised bonus of 40 per cent. (c) Also capitalised bonus 100 %.

HUDSON'S BAY COMPANY announce that the balance available will enable them to recommend a distribution of 5 per cent. in respect of trade and a bonus of 5 per cent. in addition to the interim dividend of 10 per cent. in respect of trade paid in dividend on the 15th inst. There will be no dividend in respect of the land department. The 1924. The total distribution from trade for the year ended May 31, 1924, will be 20 per cent. compared with 17 1/2 per cent. in 1923. The refund of Dominion income involves an additional distribution of £22,916 13s 4d. This refund will be payable to preference and ordinary shareholders, whose names were on the register at would have received an additional dividend of about 3 per cent. PROBST, HANBURY.—The dividend on the preference shares for last year has been paid, together with the first instalment of arrears of dividend on these shares for 1921 and 1922. These payments absorbed £10,000, and it is proposed to pay a dividend of 12 per cent. on the written down value of the ordinary shares, the preference dividend arrears, as provided by the reorganisation scheme, is payable in seven further instalments of £2,000 each. RUSTON AND HORNSBY.—For the third successive year no dividend is forthcoming on the ordinary shares. With regard to the arrears of cumulative dividend on the 5 per cent. and 6 per cent. preference shares, the directors have decided to pay on July 1 next the dividend, less tax, on these shares for the 18 months to December 31, 1922.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of May amounted to 60,614 barrels. KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production for May amounted to 140,903 barrels, or approximately 21,415 tons, including:—St. Helens Petroleum Company, Limited, 30,675 barrels, approximately 5,668 tons; Kern Trinidad Oilfields, Limited, 2,667 barrels, approximately 2,086 tons; Kern Romana, S.A., 37,946 barrels, approximately 381 tons; Kern Mex Oilfields, STEAUA ROMANA (BRITISH), LIMITED, are advised that the approximate fields' gross production of the Steaua Romana Company (Bucharest) for the month of May was 19,820 tons. TRINIDAD LEASEHOLDS.—Oil produced during May, 20,150 tons; oil purchased during May from other companies, 12,000 tons. UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, June 4, amounted to 920 tons. VENEZUELAN OIL CONCESSIONS, LIMITED.—The London management advise that production of crude oil from the La Rosa field for the four weeks ending May 24 was 17,401 metric tons (production for previous four weeks having been 15,417 tons).

COMPANY MEETINGS, &c.

BANCO DO BRASIL.

DR CINCINATO BRAGA'S ADDRESS TO THE SHAREHOLDERS AT THE ANNUAL GENERAL MEETING HELD ON APRIL 26, 1924.

Gentlemen,—

For the second time I have the honour of presiding at your ordinary general meeting, and you are now convened to pass the accounts and transactions of the bank for the year 1923.

During the whole of the year the continuous tension of our exchange caused us much anxiety. To justify this anxiety it is enough to observe that in no year since the date of our political independence has the exchange value of our currency suffered so severe a fall as in 1923. The lowest point reached was on November 7th, when the milreis was quoted at the low record rate of 4 21-32d.

We must frankly confess that this situation was brought about by circumstances easy to be explained, and due as much to economic causes as to those of politico-financial origin.

Among the former, the insufficiency of our transport services stands out. Through lack of transport facilities more than, perhaps, for any other cause, we failed to realise from the European war the advantages other nations obtained. During the years immediately preceding the war the tonnage of our foreign commerce was steadily increasing. It reached in the year 1913 a total of 7,304,000 tons, fell in 1914 to 4,788,000 tons, declined further to 3,510,000 tons in 1918, and in 1923 was 3,575,000 tons.

In these circumstances the product in gold of our exports has not furnished us with the surplus necessary to meet our commitments in the general international balance of payments. Careful calculations have shown that to meet its balance of payments Brazil needs annually an excess of exports over imports of between £25,000,000 and £29,000,000.

This average annual surplus has not been attained since the beginning of the European war, hence the natural and persistent fall in our foreign exchange. In the three years prior to 1923, the disequilibrium was most marked, as it might almost be said that no surplus existed. The figures are as follows:—

Year.	Exports.	Imports.
1920	107,521,000	125,005,000
1921	58,587,000	60,468,000
1922	68,577,000	48,640,000
	234,685,000	234,113,000

Taking into consideration the inevitable contraband, it will be seen that in this period of three years our exports were not even sufficient to cover the absolutely necessary payments for goods passing through the Custom House. That is to say, our foreign trade contributed nothing towards meeting our foreign debt in gold, amounting to over £14,000,000 per annum, nor for private remittances and interest on capital invested in industrial enterprises in Brazil.

In this manner, the economic deficit for the three-year period mentioned cannot have been far short of 90 millions sterling, reduced, however, by 22 millions sterling more or less of external loans, realised during that period by the Federal Government, the Federal District (City of Rio de Janeiro) and the State of Sao Paulo. The situation was further aggravated by remittances, not visible in our statistics, sent out of the country for purchases of German marks, which well-informed bankers here calculate to have absorbed more than 10 millions sterling. This loss to Brazil's economic wealth occasioned over the short period in question was thus more than 500,000 contos of reis. It is to be noted that the depreciation in the franc and the lire also contributed to the already sufficiently pronounced disequilibrium.

This accumulation of adverse factors had its pernicious effect on exchange in 1923. It is not humanly possible to maintain a high rate of exchange without the actual existence of gold bills to meet the heavy calls of a market already deeply overdrawn. And how is it possible to obtain these bills if our exports cannot furnish them?

In nations well organised financially these deficits in the international balance are met by gold bills furnished by credit—that is, by the confidence inspired abroad by nations whose finances have been consistently well directed, and whose politics are conducted lawfully and without discord.

Unfortunately for Brazil, her domestic politics were in a state of unrest during the three-year period immediately preceding 1923. A presidential campaign contested by an irresponsible opposition caused the calling out of the military forces and the declaration of a state of martial law over a long period. In such an atmo-

sphere, lack of confidence in Brazil in financial markets abroad was inevitable and fatal.

To make matters worse, we had also to contend with the falling to pieces of the national finances. Since 1908 the Budget deficits have been as follows:—

Fiscal Year.	Rs.
1908	76,968,419\$000
1909	65,780,180\$000
1910	90,519,538\$000
1911	104,465,297\$000
1912	166,932,040\$000
1913	132,248,998\$000
1914	376,479,158\$000
1915	295,130,452\$000
1916	207,884,140\$000
1917	308,341,056\$000
1918	247,666,640\$000
1919	296,771,928\$000
1920	389,409,751\$000
1921	424,515,318\$000
1922	453,010,923\$000

Taking into consideration our reduced sources of income, these figures show a disastrous state of affairs. Despite the fact that during this period we have had recourse to no less than 14 foreign loans in an attempt to meet these great deficits, while a formidable increase in the internal debt, due to the issue of Government policies (bonds) and paper money, was witnessed, we fell still further behind in 1923, as a floating debt of 1,500,00

traffic is considerably easier. On all lines, as much as possible has been done, within the limits of the budgetary allocations. In fact, 1923 was a year of considerable improvement, which improvement is being energetically continued this year.

With regard to internal politics, peace has been established in the State of Rio Grande do Sul, the danger of a disturbance in the State of Bahia has been overcome, while public order in the State of Rio de Janeiro is complete. The elections for the Chamber of Congress and the election of one-third of the Senate have been carried out in due form, without dispute of any great importance in any of the States of the Union.

As to finances, public expenses have been ruthlessly cut, and all and every fresh public undertaking involving heavy expense has been shelved for the time being. From having a deficit of 424,000,000\$000 (four hundred and twenty-four thousand contos of réis) in 1921, and 453,000,000\$000 (453,000 contos of réis) in 1922, we improved to the extent that the deficit of 1923 was Rs223,000,000\$000, and even this figure includes expenses made for account of previous years, such as 60,000,000\$000 on account of expenses incurred in 1922 and previously, and about 80,000,000\$000 relative to the interest on the floating debt, contracted in previous years. Without these two important items, the deficit of 1923 would have fallen to less than 80,000,000\$000, and if the taxes on invoices, on cash sales, and on incomes had been in force for the whole of the year instead of part of the year it would have disappeared altogether.

As to our external debt, foreign money markets must have been surprised by what is a rare occurrence in the annals of international loans—the repayment by Brazil in less than three years of an external loan of £9,000,000, when the contracted period of the loan was for thirty years.

Our internal money market is already beginning to feel the combined influences of these factors. The pound sterling, which in November last was quoted at Rs51\$544, can now be bought for Rs38\$000. During the current year we expect that the situation will still further improve.

We already appear to be assured of exports considerably in excess of 1923, for which year they were £73,104,000, against £68,578,000 in 1922 and £48,641,000 in 1921.

Apart from coffee, other articles were exported to the extent of £26,106,000 in 1923, against £24,334,000 in 1922 and £13,947,000 in 1921. Compared with 1923, our exports of the following articles should increase in 1924:—Cotton, hides and skins, meats, lard, rubber, cocoa, sugar, carnauba wax and fibre, babassu nuts, tobacco, herva maté tea, oil-producing seeds and nuts, and timber. A slight increase in each of the articles mentioned would give us an export total well above £30,000,000, excluding coffee.

As to coffee, we are already assured of an export for 1924 of more than 15 million bags, which should produce about £60,000,000. Thus, without undue optimism, we may look for an export total of well over £80,000,000 sterling. It is as well to note that from this total the Federal Government will not require to withdraw, as it was obliged to do in 1923, about 12 millions sterling for the service of the coffee valorisation loan, which loan is now liquidated. Also the loss of capital by speculation in German marks has now ceased.

We can thus anticipate that we shall have in 1924 a trade balance to meet all the necessities of our international balance of values.

This balance will naturally depend a great deal on the figure reached by our imports, but it does not appear probable that that figure will be unduly high. The only years in which imports exceeded £52,000,000 were 1911, 1912, 1913, 1919, 1920, and 1921, during which years our exchange varied between 12d and 18½d.

Whenever our exchange has fallen below 12d then the average total of our imports has fallen below £52,000,000, being under £45,000,000 in 1906, 1907, 1908, 1909, 1914, 1915, 1916, and 1917, years of low exchange rates.

The difficulties which the European war brought to manufacturing industries abroad gave to Brazil, thanks to its protective tariff, an opportunity for unexpected development in her national industries, which developed to a surprising extent, assisting her to become less and less dependent on imports.

On the other hand, it is to be expected that the fluctuations in the values of the pound sterling and the dollar will vary within narrower limits, and great assistance in this respect is being obtained from the measure, initiated in 1923, which limits the entries of coffee from the interior into the great coffee markets of Rio de Janeiro and Santos. At first sight it might appear that this measure benefits the coffee farmers exclusively, as guaranteeing a better price for coffee. But it is unquestionable that this measure has a much larger scope, as it renders much more difficult the sudden and severe variations in the values of the pound sterling and the dollar. As a result of this measure, as now in force, coffee export values of about £60,000,000 come into the exchange market, spread over the whole year, instead of flooding it in some months, and causing a shortage in others. As the results of this measure

have been shown to be successful, it is hoped that the same method may be carried out with other articles for export, so as to regularise, where possible, over the whole year the export of our products to foreign markets, or, in other words, the offer of gold bills on our exchange market. The Bank of Brazil will give all assistance possible to any efforts in this direction, as extreme variations in exchange are much worse for the country than is generally thought.

A study of the exchange situation during the last 30 years shows that we have managed to secure various periods, relatively extended, where the variations in the value of the pound sterling during a whole year have been very small. This is shown by the following table:—

Year.	Minimum.	Maximum.	Difference.
1907.....	R\$15\$422	R\$15\$3836	\$414
1908.....	15\$771	15\$836	\$165
1909.....	15\$734	15\$868	\$134
1911.....	14\$798	15\$059	\$261
1912.....	14\$713	15\$059	\$346
1913.....	14\$712	15\$ 00	\$288
1914.....	14\$844	15\$360	\$476

Slight differences such as the above allow of business being developed on a sure basis, but unfortunately during this same period of 30 years we have had years of great difficulty for commercial houses and for payment of Government debts abroad. For example:—

Year.	Minimum.	Maximum.	Difference.
1900.....	R\$17\$067	R\$34\$595	17\$528
1901.....	17\$944	25\$098	7\$154
1905.....	13\$174	17\$655	4\$481
1915.....	16\$992	21\$513	4\$521
1919.....	12\$973	18\$824	5\$855
1920.....	12\$973	25\$264	12\$291
1921.....	23\$704	36\$225	12\$521
1922.....	30\$060	39\$588	9\$528
1923.....	40\$000	51\$544	11\$544

Frequent and violent fluctuations between the above margins producing formidable differences in the milreis value of the pound sterling day by day had the effect of transforming the conservative element of the country, such as agriculturists and merchants, into unwilling gamblers in all their transactions involving the purchase of sterling. Even the most careful and prudent could not hope to escape occasional disaster, and, on the other hand, with the creation of an atmosphere of uncertainty, insecurity, and veritable gambling, everyone endeavoured to obtain the highest possible price for his goods as some sort of guarantee against a fresh rise in sterling when next his bills had to be met. Chance favoured a good many people, who made large fortunes rapidly, and such examples were impressionable and contagious. All classes became imbued with the get-rich-quick idea, and underrated the worth of hard and methodical work and strict economy, which are the only roads leading to enduring national greatness.

As a means of combating these disastrous variations in exchange, the even distribution of our exports over the whole year will greatly help in giving stability to the gold value of our currency.

At the same time the Bank of Brazil is applying part of its reserves for the maintenance of a gold fund in Europe and North America of a sufficient size to allow of furnishing to the exchange market, temporarily, gold bills required in times of small exports, after the coffee export season is over.

The Bank of Brazil has also made a patriotic appeal to the Governments of the various States of the Federal Union, and to the various cities which have external debts, not to wait until the eve of the due date of the instalments of their external debts before entering the exchange market for the total amount of the half-yearly instalments. The most elementary foresight should suggest to them the advisability of being daily, or at least weekly, in the exchange market with the view of accumulating the amounts necessary to meet their obligations. Such action would assure them the average exchange rate for the year, without any upsetting effects on their budgets, would greatly increase their credit, while at the same time benefiting their country. This system is already being followed, where the gold payments of the Federal Government are concerned, the Bank of Brazil converting daily into gold at the exchange of the day the total amount of import taxes received each day in paper.

The practice by banks of purposely lowering exchange rates previous to the entry into the market of the Federal Treasury has been eliminated.

Side by side with these measures, tending to the improvement of our exchange, we have the great work of the present Government in regularising our financial life, to which end it is lending all its energies, with such success that Budget surpluses seem to be possibilities of the near future.

The Federal Government is also giving to the reorganisation of our economic life the attention which this question demands. In all civilised nations which work and prosper the wealth of the community is increased year by year by the profits realised in

the previous years from agriculture and industry. Of such profits a considerable portion goes out of our country in the form of remittances of emigrants to their own countries, in transatlantic freights, in insurance, in dividends on foreign capital employed in the country, and, lastly, in instalments of interest and capital on the foreign loans of the various States and cities and of the Federal Union. But, fortunately for us, the greater part of our profits remains year by year in Brazil, being largely invested in buildings of various kinds and in industrial enterprises. This money is employed in city property, in farm buildings and improvements, and in industrial factories and mills.

There is, however, a certain portion which avoids investment in properties. Such capital is floating, movable, lacking in confidence, and avoids the known difficulties of administration. Always timid, it is only employed where a quick realisation is possible in case of necessity. When not deposited in banks or savings institutions, this floating capital finds its way into public loans, private loans, Government scrip, debentures and shares in limited companies. It is clear that the more we increase and consolidate the wealth of the social community, the more advisable is the employment of our profits in agricultural and industrial production. This is the only sure and certain means of valorising our circulatory medium, the milreis, so that we may increase our national wealth, and instead of being a debtor nation, become a creditor nation.

But, unfortunately, Brazil's ideas in this respect have been mistaken. Instead of attracting floating capital for employment in agricultural and industrial developments, the Governments of the Federal Union, the States and the Cities of Brazil have entered the market against agriculturists and industrialists.

Instead of obtaining through taxation the moneys they needed, the Governments obtain by bond issues at high rates of interest capital which they spend in improving cities and urban properties, and for covering Budget deficits on ordinary expenditure for the most part entirely unproductive. The sums thus diverted are enormous. Leaving on one side the amounts so utilised by State Governments and by the various cities, as details are not readily available, the amount obtained by the Federal Government during the last period of five years, 1919-1923, was as follows:—

	R\$.
Treasury bonds (internal debt)	623,738 : 400\$000
Treasury bills	142,325 : 000\$000
Floating debt	1,596,000 : 000\$000
	2,362,063 : 400\$000

Averaged over the five years, this is equivalent to about 472,000 contos yearly. Estimating the State and municipal loans at a very moderate figure, we arrive at a yearly amount of 500,000 contos.

If our industrial and agricultural production had been aided by, say, not the whole, but even one-half of that sum, it is certain that the present deplorable financial and exchange difficulties would not have existed.

The Federal Government has studied this question, and has come to the conclusion that the best method of diverting part of this floating capital into channels for the development of national production is by the creation of a National Mortgage Bank, following the lines of the skeleton Bill now before Congress. It is to be hoped that the legislative power will give the country, during the present year, the necessary laws and powers.

The projected law will create a type of bond, quotable on the Stock Exchange and secured by two solid guarantees—(1) the mortgage on the building or farm which is the subject of the bond, and (2) the guarantee of the National Treasury. This organisation will permit of loans at a moderate rate of interest, to the benefit of farmers and industrialists. The mortgage bonds will, therefore, be a safe means of employing Brazilian capital in developing the land. Cotton, cocoa, tobacco, sugar, cereal, and other crops are crying out for the credit and assistance which they need and deserve.

The world has witnessed the phenomenon of a surprising economic-financial transformation in Brazil during the short space of three years. These are the facts of yesterday. In 1898 we had an exchange of 58½d, and were at the same time burdened with heavy exchange deficits, the deficit of 1898 being Rs. 463,618,386\$609, a colossal figure considering the small income of Brazil in those days. Now see what happened. In 1900 our exchange had already reached 12 25-64d, and in that year we began to have budgetary surpluses, which, with the exchange remaining firm, were continued in 1902, 1903, 1905, 1906 and 1907, in which latter year our exchange reached the relatively high figure of 18d. Miracles of order and economy in a young, rich country!

The actual position of Brazil at the moment is the counterpart of that transformation, but in larger and more efficient terms of progress and wealth.

In the internal organisation of the Bank of Brazil no event was so important in 1923 as the act which transformed it into the Central Bank of Issue of Brazil.

This fact occurred, as you are aware, immediately after our last annual general meeting, held on March 26, 1923. On May 2nd following, our extraordinary general meeting approved the contract

between the National Treasury and the Bank of Brazil, drawn up in consequence of the legislative decree 4,635, of January 8, 1923, which meeting also approved the alteration in the statutes necessitated by that decree. The law, the minutes of the meeting, the contract, and the statutes are appended. The projected statutes of the National Mortgage Bank are also appended.

The directorate, the staff, and the shareholders of the Bank of Brazil are quite alive to the high distinction and the great confidence placed in the Bank of Brazil by the legislative and executive powers of the nation, as the arbitrator and controller of Brazil's circulatory medium. We are also aware of the great responsibility which rests on us in the carrying out of this mandate. The ideals of honour and patriotism will guide and help us in carrying out our mission.

As to the difficulties, we have no illusions. The Central Bank of Issue commenced its career in the midst of the most difficult and upsetting exchange and financial year in our history, as shown in previous paragraphs. It was to be desired that the Bank of Issue should be founded on a gold basis, should commence to work and develop on the basis of the free and untrammelled conversion of its notes.

Unfortunately, the atmosphere for free conversion does not exclusively depend on any one bank, but on many other interlinked national factors, on which we must base the rational abolition of the existing system. It would be impossible in any one year, least of all in such a year as 1923, to effect the necessary transformation of the economic and financial atmosphere of Brazil. Such a radical reform can only receive from time the necessary strength and approval, and it is the Government which must be responsible for the necessary ways and means of ensuring its success. What is certain is that the Bank of Issue can, in the whirlwind of business, greatly assist us in regaining our financial and economic tranquillity. This result depends largely on the security and prudence of the control of the huge monetary resources which the Bank of Brazil commands. These resources are derived more from deposits than from capital or its right of issue.

In the management of these powerful elements the directorate has systematically refused to grant monetary aid to any operation which does not directly assist the increase of national production, or tended to circulate in a freer manner the national wealth. Such operations as gambling on exchange, stock and share speculations, loans on town lands, building plots, &c., operations involving the attempted cornering of foodstuffs or of the building of luxurious city dwellings or improvements, the financing of lottery, gambling and amusements enterprises, and similar operations, have been consistently refused, however secure the guarantees offered, and however attractive the probable profits. The bulk of our business operations has been genuinely commercial, with due dates of 30, 60 or 90 days. The tying up of capital for longer periods has been carefully avoided. Even so, by restricting ourselves to short-period operations, to the helping of the harvesting of our products, to cleaning the same, and to their transport to internal markets for consumption, or their export abroad, our resources have not been sufficient to comply with all the demands for accommodation, so great has been the effort and the progress made in various parts of the country.

Had the management given effect to requests for increased limits from our branches in various parts the issue capacity of the bank would long since have been exhausted. But the policy of the bank is against emissions whenever, after careful study, the circumstances do not permit. Our operations have been careful and restricted, as being the best course to combat undue increases in the cost of living. On May 3, 1923, the bank could have at once put into circulation its own note issue, had the policy been other than that indicated.

However, May and June both passed without the issue of a single note, despite constant requests for banking rediscounts, which the bank complied with by utilising cash in hand, passing business which would otherwise have been more profitable.

Every year, in July, the feverish activity connected with the harvest of practically every agricultural crop commences. The demand for capital to finance these harvests always increases in the second half-year. The demand was much greater in 1923 than in previous years owing to the fall in exchange causing a big increase in prices of all products. Our available resources in cash in hand were insufficient for the necessities of commerce, although the demands were all legitimate. With other banks the same situation arose.

The conditions of the market did not admit of the floating of an internal loan with which the National Treasury could have consolidated its floating debt, of which the largest creditor is the Bank of Brazil. It is clear, therefore, that we could not expect from the National Treasury the resources which we had there and which our position was daily demanding. Banks were relying on the Bank of Issue for rediscounts.

Under these circumstances issue was inevitable and justifiable from all points of view. In a way it was necessary that, in the midst of all these tumultuous conditions, a Bank of Issue should

not be in existence, so that the arguments against it could be made to prove the necessity for its creation. So far no nation has created a Bank of Issue with the object of never issuing notes. What is required of these institutions is that issue within the strict terms of the law be guided by the actual necessities of legitimate commerce—i.e., that commerce which effects the actual handling of merchandise.

In accordance with these principles, the Bank of Brazil issued in the second half of 1923 banknotes up to a maximum of 380,000 contos of reis. In January, 1924, the issue totalled 439,950 contos of reis. On the date this report was written our issue was reduced to Rs.377,156:000\$000 by the withdrawal of Rs.62,794:000\$000 of our notes. It may not be beside the point to remind you that as the stock of bar gold belonging to the Bank of Brazil in the Amortisation Department (Caixa de Amortisacao) amounts to £10,000,000, the actual value of which in the market at the exchange of 6½d is Rs.369,230:000\$000, it is obvious that our note issue is covered.

If we assess this gold at the exchange rate of 12d, or 20 milreis to the pound sterling, we have 200,000 contos. On that basis our note issue is backed by gold to the extent of 54 per cent., without reckoning a further 246,000 contos of bills of two firms of recognised standing. Few banks of issue of other nations have their notes so strongly guaranteed. However, such calculations are absolutely unnecessary, as notes actually in circulation issued by the Bank of Brazil can be called in without our having to sell even one pound sterling of our stock of gold and without having to use one of the commercial securities forming the joint guarantee for the issue. Our reserves are quite sufficient to enable us to call in the 377,156 contos to which the issue amounts. As a guarantee for the deposits the public places with us our realised capital, our securities, and our cash in hand is sufficient with an ample margin, without it being necessary for us to touch one single pound sterling of our gold.

Notwithstanding this happy position, the patriotic conviction of the necessity of restricting to a minimum our circulating medium so as not to aggravate the inflation of cost prices of necessities, has decided the directorate to make as difficult as possible all rediscounts, the rates for which are being maintained at 9 per cent., 10 per cent., and 11 per cent. respectively for bills of 30, 60, and 90 days' sight, due date, and to abolish rediscounts for longer-dated bills.

Even under these restricted conditions, rediscounts depend on previous consultation. These precautions have been found necessary as a deterrent against those banking establishments, which, although of known solidity, wished to avail themselves permanently of rediscounts as a means of developing their normal business, thus practically turning the Bank of Brazil into a sleeping partner of such establishments. Rediscounting cannot be used in such a manner, but should be utilised as a safety valve in case of exceptional difficulties. Following this principle, we have managed to make the banks in general to understand better and utilise to better advantage the powerful monetary instrument which rediscount really is.

We have given careful attention to the methodical accumulation of reserves, which in due course will be used for the purchase of gold whenever exchange reduces the price of sterling and dollars. The strength of banks of issue is in their stocks of gold.

In order that we might be able to make the encouraging statements we have made in the preceding pages, we have used the greatest care in continually improving our assets. In the various items nothing will be found of a doubtful nature. On the contrary, we have effected big amortisations, reducing the value of our assets to figures much below those current in the markets of the country.

We quite understand that as the responsibility for the monetary system of the country has been transferred from the National Treasury to the bank of issue, the eyes of the whole business world are upon the bank. For example, in order to-day to estimate the financial strength of Great Britain, no one would trouble as much about the figures of the British Budget as about the balance-sheets of the Bank of England. The proof of the financial vitality of the United States is based, not only on a study of its Budget, but upon an examination of the balance-sheets of the Federal Reserve Banks, controlled by the Federal Reserve Board. In view of the Budgetary deficits of France, no one in the financial world would put much faith in the value of the franc, were it not that French finance is represented by the Bank of France, with its great deposits of gold and its great ability as the leader of solid French thrift.

What we can guarantee to the shareholders, and to all Brazilians, is that, in this bank, the directorate and staff will work unceasingly, honourably, and with care, so that the Bank of Brazil shall be esteemed and pointed out as the true index of Brazil's greatness.

But, despite the foregoing, it should be stated that the internal organisation of the bank might be improved in the sense of making it less subject to Governmental influence. The present Government is already looking into this point. Whatever modifications it may

be necessary to make in our statutes with this end in view will be brought to your notice for necessary examination, discussion and approval at an extraordinary general meeting.

Among the items of our balance-sheet of December 31, 1923, you will certainly not have let pass unnoticed the rapid and surprising increase in our reserve fund from 40,000 contos, at which it stood on December 31, 1922, to 90,012 contos at December 31, 1923. Our current operations allow us to expect that this fund will certainly be increased to 100,000 contos in the balance-sheet for June 30th next, which is the amount foreseen in Article 1 paragraph (b) of Legislative Decree No. 4,635 of January 8, 1923. From that time onwards the fund for the redemption of the paper money issued by the National Treasury, amounting to Rs.1,856,590:537\$000, will commence to be put into operation, and thus in the second half-year of 1924 we should commence the regular burning of that paper money.

Whilst it does not actually refer to an operation during 1923, we do not wish to keep back from the knowledge of the shareholders the news that the Bank of Brazil has already been relieved of the necessity of withdrawing and burning the Rs.399,265:567\$000 which figure amongst our liabilities, an obligation referring to emissions of the now extinct Rediscount Department.

The Bank of Brazil was under the obligation to hand that amount, plus interest, a total of Rs.403,102:952\$700, to the Amortisation Department (Caixa de Amortisacao). By arrangement with the Federal Government, the Bank of Brazil was relieved of its obligation, which was balanced by the National Treasury setting off an equal amount owed to us on short-term loans. By this transaction the responsibilities of the Bank of Brazil and the National Treasury for the reciprocal payments mentioned were cancelled.

The notes issued by the Rediscount Department continue in circulation, the redemption of these now falling to the National Treasury. To effect this redemption, it is very probable that a fresh agreement will be entered into between the Government and the Bank of Brazil, the form of the agreement depending on the Government's ideas on the matter.

The Clearing House for Cheques continues to furnish free of charge its great services to the community. The total of cheques cleared was:—

	Rs.
In 1921	2,060,555:96\$384
In 1922	8,012,631:05\$193
In 1923	10,024,682:21\$910

The benefits of these operations are participated in by the cities of Rio de Janeiro, Santos, Sao Paulo, Recife, Porto Alegre and Bahia. We are now studying the steps necessary to extend these services to other cities in Brazil.

The various departments into which the administration of the bank is divided continue to work with all regularity.

The Issue Department, under the direction of Baron de Oliveira Castro, effected the counting and the receiving of the gold stock which the bank acquired from the Federal Government. That stock is composed of the items in the following schedule:—

All issues were effected under the continued checking of the Issue Committee, composed of Dr Antonio Manoel Bueno de Andrade, Dr Carlos Claudio da Silva, and Sr Fortunato Bulcao. Dr Carlos Claudio da Silva acted in substitution for Dr James Darcy.

The movement of Issues during the year was, put shortly, as follows:—

	Rs.
Total of notes issued up to December 31, 1923	428,272:500\$000
Total of notes withdrawn up to the same date	39,272:500\$000
Balance in circulation at December 31, 1923	389,000:000\$000

The Exchange Department worked continuously under the direction of Dr Daniel de Mendonça with the utmost security to the important national interests linked thereto.

In previous pages we have shown how grave and acute for Brazil was the exchange crisis during 1923. We are proud of the quiet confidence with which our Exchange Department gave very nature pass unnoticed by our fellow-citizens. It would be necessary for it not to exist for commerce to properly appreciate the incalculable value of its services in its modest daily efforts. In 1923, more frequently than in other years, the Bank of Brazil was forced to sell its gold bills in large sums for the same prices at which they were bought, which was done to constantly defend the gold value of our currency in the various money markets of the country.

Even thus, despite these most adverse circumstances, the Exchange Department does not show a loss. On the contrary, it contributed largely to the results of the year with considerable profits, which profits were principally obtained from operations in international exchange.

Exchange operations with Brazilian money, bought and sold, amounted to the following:—

	£
In 1920	38,431,381
In 1921	138,054,780
In 1922	140,544,905
In 1923	77,876,557

That the figures for 1921 and 1922 were so large was due principally to the foreign loans realised during that period.

The commercial department of our head office continues under the direction of Dr Augusto Cotrim Morreira de Carvalho. Discounts were effected as follows:—

	Rs.
In 1921	625,246:195\$801
In 1922	781,592:610\$037
In 1923	933,444:176\$791

The agency department developed greatly, under the direction of Drs Norberto Ferreira, Henrique Diniz, and Monteiro de Andrade. On December 31, 1922, the following agencies were in operation:—

Aracajú,	Maranhão,
Bagé,	Mossoró,
Bahia,	Natal,
Barretos,	Pará,
Baurú,	Parahyba de Norte,
Bello Horizonte,	Parnahyba,
Buenos Aires,	Pelotas,
Cachoeira,	Ponta Grossa,
Camocim,	Porto Alegre,
Campos,	Recife,
Corumbá,	Riberao Preto,
Cataguazes,	Rio Grande,
Curityba,	Sant Anna do Livramento,
Cujubá,	Santa Luzia do Carangola,
Feira de Sant Anna,	Santos,
Florianopolis,	Sao Felix,
Fortaleza,	Sao Paulo,
Ilhéos,	Therézina,
Ipameri,	Tres Corações,
Jahú,	Tres Lagoas,
Joinville,	Uberaba,
Juiz de Fora,	Uruguayana,
Maceio,	Varginha, and
Manáos,	Victoria.

During 1923 the following further agencies were opened:—Albuquerque Lins, Barbacena, Bebedouro, Campinas, Campina Grande, Campo Grande, Catanduva, Chavantes, Franca, Garanhuns, Guaxupé, Ijuí, Macahé, Penedo, Piracicaba, Rio Branco, Rio Preto, Santo Amaro, S. Joao da Boa Vista, S. José de Rio Preto, Taquaritinga, and Theophilo Ottoni.

The supervision of the staff was carried out under the direction of Dr Norberto Ferreira, whose services have been of the utmost value to the bank.

The services of the directors in the various branches of the bank's activities have been carried out with commendable care in an atmosphere of cordial relations between themselves and the President. To all I offer the thanks due for their constant, loyal, and efficient efforts in the best interests of the bank. All merit the thanks of the shareholders. I must also commend the staff of the bank, who in the quiet routine of their positions are the true builders of the greatness of our institution.

This general meeting, in addition to examining the accounts for the year 1923, has also to elect a director, as Dr Monteiro de Andrade has concluded his term of office, and to elect also the members of the Fiscal Council and the substitutes, as our statutes demand such election annually.

For any other information, involuntarily omitted from these pages, I am at the disposition of the shareholders.

CINCINATO BRAGA,

President.

Rio de Janeiro,
April 26, 1924.

BALANCE-SHEET AS AT JUNE 30, 1923.

ELDER DEMPSTER AND CO., LIMITED.
TRIBUTE TO LATE LORD PIRRIE.

The fourteenth ordinary general meeting of Elder Dempster and Co., Limited, was held, on the 12th instant, at 23 Billiter street, London, E.C., the Rt. Hon. Lord Kylsant, G.C.M.G. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: We meet to-day under very sad circumstances, as my friend and colleague, Viscount Pirrie, has been taken from us while on a voyage round South America. I have been closely associated with Lord Pirrie for many years, and his death is not only a grave loss to this company and to West Africa, with which country he had been so long connected, and always took such a vivid interest in, but it leaves a void in the business world, in which his position was unique. He was an exceptional force in British industry and commerce, and an outstanding personality.

As a shipbuilder, Lord Pirrie, by common consent, stood head and shoulders above all other shipbuilders, either in this country or abroad, and was recognised by all as the leading shipbuilder in the world. As an employer, his works in Belfast and on the Clyde provided regular employment for tens of thousands, who, under his wise and just management, were willing to leave strikes practically alone and were content to work happily in the shipbuilding yards of Harland and Wolff.

As a business man, he was in the very first rank, and his wise advice, clear financial judgment and unfailing resourcefulness will be sadly missed by all who had the honour and privilege of working with him. As a war worker, what he did for the Empire during the war as Controller of Mercantile Shipbuilding is well known to all, and the country owes his memory a very deep debt of gratitude for the great work he did when the rapid construction of large numbers of new ships was vital to our national existence.

Lastly, as a faithful and loyal friend he had no equal, and his quick, human sympathy and wonderful zest and youthfulness of spirit will always be affectionately remembered. He was in the truest sense a great man. Our heartfelt sympathy goes out to Lady Pirrie, who has always entered so fully into her husband's life and interests. We know what to her this overwhelming and sudden sorrow means.

I will now ask you to rise and in silence and respect pass the vote of condolence with Viscountess Pirrie in her bereavement and grief.

All present then rose and remained standing in silence for a few moments.

The Chairman, proceeding, said: For over half a century this company has regularly maintained ocean services between Great Britain and the West Coast of Africa, and has played a part of which it may feel justly proud in the growth and progress of our great tropical possessions in West Africa and also in the development of trade within the Empire.

Having regard to the various adverse factors incidental to the year under review, the accounts may, I think, be considered not unsatisfactory. After providing for taxation and depreciation, and paying the interest on debenture stocks and the dividends on the preference shares, we recommend the payment of a dividend for 1923 of 6 per cent., less income-tax, leaving £101,796 to be carried forward.

The fleet has been maintained in good order throughout the year. Exclusive of vessels building, it now consists of 81 ships, specially constructed for the particular conditions of the trades in which they are engaged. We have consistently striven to keep abreast, and even ahead, of the requirements of the West African travelling public. Subject to the particular limitations of the trade, our passenger vessels bear comparison with those on any other route. It will be recalled that the first motor passenger liner in the world was placed in commission by us in the West African trade, and this progressive policy has been followed by the addition of other motor vessels to the fleet.

The motor passenger liners have become deservedly popular with passengers to and from the West African Coast.

The trade conditions of the West African Colonies—though still in an unsettled state—showed satisfactory indications of further recovery from the disastrous slump of 1920-21.

In this connection it is gratifying that the total volume of traffic carried by the company's ships in our various services showed an improvement in tonnage as compared with the previous year.

In the West African trade, as in most other shipping trades, the competition of foreign lines has been severe, the number of steamers competing for cargo being greatly in excess of the requirements of the trade.

As England is dependent, more than any other country, upon her foreign and colonial trade, it is imperative that we should at least maintain our competitive ability so that we may at all times be in a position to do business on satisfactory terms in the markets of the world.

The report and accounts were adopted.

THE ROYAL BANK OF AUSTRALIA, LIMITED.

REVIEW OF AGRICULTURAL AND TRADE CONDITIONS.
EXCELLENT WOOL PROSPECTS.

The half-yearly meeting of the Royal Bank of Australia, Limited, was held at Melbourne on April 30th, Mr Randal J. Alcock, J.P. (chairman of directors), presiding.

The report and balance-sheet for the half-year ended March 31, 1924, showed that the net profits were £62,195 19s 7d. Dividend at the rate of 10 per cent. per annum absorbs £37,500; the sum of £20,000 is transferred to the reserve fund (making it £560,000); and £4,695 19s 7d is added to the amount brought forward from the previous half-year (making it £41,001 12s 3d).

DAIRY PRODUCTS.

The Chairman, in moving the adoption of the report and accounts for the half-year ended March 31, 1924 (which appeared in the *Record* for April, page 289), said:—Addressing you six months ago, I expressed a fear that dairy products, then securing a gradual but definite increase in price on the London market, would early this year experience a sharp fall, similar to that which occurred in the previous March. The slump has taken place, consequently a number of factories which had shipped large quantities of cheese and butter overseas will suffer a loss. Last year factories which stored a fair quantity for home consumption during the winter recovered some of their previous losses, but this season the same favourable experience can scarcely be expected, as the bounteous summer rains which have fallen over most of the agricultural districts of the Commonwealth have produced such a wealth of herbage that, so far, the reduction of output normally expected towards the middle and end of summer has practically not taken place. On the other hand, cattle are in excellent condition, owing to the abundant winter feed, and dairy cows should come in next spring in better condition than for many years past.

The cheese market has become depressed to an even greater extent than the butter market. Dried milk, both whole and separated, has, however, experienced recently an increased demand, but prices for these products are always somewhat precarious.

WOOL.

Undoubtedly the greatest degree of prosperity experienced by our primary producers has fallen to the lot of the woolgrower. The wool-selling season has practically closed, as there only remain about 50,000 bales to sell before June 30th. Although the clip only amounted to about 1,625,000 bales, the high prices realised have yielded a very satisfactory financial result. The number of sheep to be shorn in the coming season may not show much increase over that of the past season, but it is expected that the more favourable climatic conditions may produce an average increase in weight of fully 1 lb per head. Prices have been steadily advancing since the opening of the sales in September. On merino the advance is from 20 to 25 per cent., comeback and fine crossbred from 35 to 40 per cent., medium crossbred about 60 per cent., and coarse crossbred about 75 per cent.

Judging by the wool reports from all countries, trade has been fairly good, and the stocks in manufacturers' hands in the chief consuming centres are so small that the new clip on arrival at market should find eager buyers. Unless something unexpected occurs the market prospects for the 1924-25 clip are, therefore, excellent.

The offerings in Australia are now carefully regulated by the National Council of Wool Selling Brokers, in consultation with the Woolgrowers' Council. Although in some quarters the extension of the selling season may not be approved, it is undoubtedly necessary. With such high prices ruling for wool, any acceleration in the sales would create too great a strain on the financial resources of the manufacturers, possibly causing some of them to refrain from buying from time to time. Further, a reasonable extension of the selling season is especially desirable at the present time to avoid embarrassing the banks in negotiating the large time to avoid embarrassing the banks in negotiating the large increase in the amount of buyers' bills in London. A well-considered allocation of wool offerings is absolutely necessary to ensure full competition to the financial gain of the growers and of the Commonwealth. In proof of this it is only necessary to state that the 1923-24 clip will yield probably upwards of £50,000,000. The seasonal conditions throughout the pastoral areas of Australia are, with few exceptions, in every way satisfactory.

COTTON.

The cultivation of cotton is being proceeded with, and results will be watched with interest, not unmixed with anxiety, for it is said that the dreaded boll-weevil has made its appearance in Queensland, and it is evident that progress must be made with caution. As the staple is pronounced satisfactory, however, and the climate and soil appear to be suitable, it is to be hoped that

the initial difficulties to be looked for in establishing a new undertaking may be surmounted, and an important and stable industry secured for Australia.

MEAT MARKET.

The meat market outlook is not bright. This is reflected by the decision of one of our largest freezing and exporting firms to relinquish the business. The inflated prices ruling during the war encouraged the establishment of plants with greater capacity than necessary in normal times. In addition, the disastrous slump in frozen beef has continued and seems likely to continue. Although the cattle industry, as represented by the larger holdings, is the most primitive of all our industries, it is depressing to feel it cannot hold its head above water without the financial assistance of the Government, which means the general taxpayer. The fierce competition from South America, which has the advantage of cheaper labour and shorter transport, together with the diminished demand for frozen beef in competition with the chilled article, has virtually killed the trade from Australia, but it is to be hoped it will be only temporary. During the past year the London market for frozen beef and even for chilled beef has been little above the pre-war level of prices. Mutton, however, remains at a price about 70 per cent. above pre-war levels, and is holding its own in London.

MINING.

Mining still continues in the background, with the exception of tin, the increased demand for which is shown by the enhanced price, but, unfortunately, this metal does not bulk largely in our mining output. The gold production remains at a low ebb, which is not altogether surprising, if it is remembered that the cost of mining same has become augmented to such an extent that only the richer mines can work at a profit.

WHEAT.

The wheat harvest lately gathered on the whole proved excellent, and might have been larger had not the continued dry weather at this time last season led to the curtailment of cropping, especially in the Wimmera. Satisfactory prices have been maintained. At one time a general slump in the world's prices for wheat was feared, when the figure on the Chicago market fell below a dollar a bushel, but the position was stabilised by the action of the U.S.A. Government, which prevented the flooding of the market. The decrease in the American production last year was more than counterbalanced by an increase in the Canadian, but the future is not considered free from anxiety, as is shown by the U.S.A. authorities advocating a reduction in the acreage to be planted, and it is even suggested that the return of Europe to normal agricultural conditions may increase the total production to a figure beyond the world's requirements.

FRUIT.

Fruit culture, an important item in Victoria's primary production, is not in a happy position. It is evident that settlers have been encouraged to embark in this industry to an extent beyond what was warranted, save perhaps in the case of citrus fruits. In consequence, the general taxpayer is once more called upon to assist, but such assistance, which really amounts to "robbing Peter to pay Paul," cannot be maintained indefinitely.

EXCHANGE POSITION.

The exchange position for some time past has been difficult, owing to an undue accumulation of money in London, caused by the heavy exports of wool, wheat, &c., coupled with Government borrowing in London, which created a shortage of currency here. It seems to me that during our export season, from January to June, it ought to be possible to make the currency more elastic, and a temporary increased issue of notes for that purpose, against full cover either here or in London, surely could not be considered as inflation.

BALANCE-SHEET FIGURES.

The figures in the balance-sheet do not call for special reference at this time. You will observe that the item of "bank premises" is somewhat increased, which is caused by the outgoings on the new premises in Flinders lane. It is expected the buildings will be finished by the end of next month, and will add considerably to the architecture of that part of the city and to the comfort and convenience of the bank's clients.

Reference has been made in the report to the retirement in November last of Mr. H. T. Wilson, who had until then been in charge of the bank as general manager since its foundation. I am sure I can voice the wish of you all, as it is the hope of your directors, that he will long be spared to enjoy his retirement, which he so much deserves.

to-day. When my able accountant, Mr Eddington, brought in last year's balance-sheet and laid it before me, and I went over it carefully item by item, and when I had finished doing so, something like the immortal words of our old friend, Ole Bill, came into my mind: "If you know of a better whole"—with a "w," reporters—"show me it." As I say, I do not think I have ever had the pleasure of submitting such a magnificent balance-sheet as I have done here to-day.

PROPOSED VISIT TO INDIA AND BURMA.

In conclusion, I would like to say that it is my intention towards the end of this year to make one of my periodical visits to India and Burma, and on this occasion I am to have the great pleasure and benefit of being accompanied by our managing director, Mr R. I. Watson, on whose ability and great knowledge of oil matters undoubtedly much of the prosperity of the company during the last few years is due. We will, I hope, come back to lay before you at the next annual meeting our impressions formed on the spot of the great organisation in which both of us have served all our business career, and of whose phenomenal prosperity we are both, I think I may say, so pardonably proud. I would again thank Sir Frederick very sincerely for what he has said of me, and I thank you all for the very hearty vote of thanks you have given me to-day.

This concluded the meeting.

PREMIER OIL COMPANY, LIMITED.

An extraordinary general meeting of the Premier Oil Company, Limited, was held, on the 10th instant, to consider a further return of capital—viz., 1s per share—on the realisation of the bulk of the company's holding in the Société Française des Pétroles "Premier." Mr R. Sewell, C.A., F.F.A., the chairman, presided.

The Chairman said that practically the whole of the French interest had been sold recently, the last payment being made about three weeks ago, and, after careful consideration, it had been decided to recommend the distribution of 1s per share, in order to avoid the lengthy delay involved in writing down the capital. Discretion had to be observed in discussing the reasons for realising the holding. Anyone could make his own conclusions regarding the future of Poland and Central Europe generally, and, fortunately for this company, the French view was more optimistic than that held by competent observers in this country. All that could be said confidently was the future was extremely obscure. The variations of Polish exchange could not be disregarded, the less so because the Polish Government from time to time had fixed an arbitrary price for oil. Further, especially after the reconstitu-

tion of the French board, it had to be recognised that this company's control of the situation was, in effect, non-existent.

The company to-day had cash assets of £286,384, and the proposed distribution of 1s per share would absorb £213,178, leaving (allowing for expenses) about £74,000 of cash assets and investments and other assets valued at about £144,000. The proposal was that a new company should be formed with a capital of £250,000 in 5s shares, of which £213,178 should be allotted to the shareholders. This was the speediest and best way of effecting the distribution and bringing the capital into truer relationship with actual values. It also placed them in a position to protect their valuable interests should occasion require.

After very careful consideration, the board felt that the remaining assets were fairly represented by the issued capital of the new company. The main difficulty in making a valuation was the investment in the Indo-Burma Oil Company, although they felt that, having written it down by 60 per cent., the position was fairly represented. That company was now practically self-supporting, and there was ground for hoping that production might increase considerably in the near future. If so, the interest might easily prove highly important.

The directors' scheme was approved, and it was formally resolved to place the company in voluntary liquidation, to effect the cash distribution, and to enter into an agreement with the proposed new company referred to above.

CITY DEEP, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

SATISFACTORY DEVELOPMENT RESULTS.

The twenty-third ordinary general meeting of shareholders was held in Johannesburg, on May 15, 1924, Sir Evelyn Wallers, K.B.E., presiding.

The Chairman, in moving the adoption of the report and accounts, said: I feel sure that you will have studied with considerable satisfaction the annual reports and accounts for 1923, which contain full details of the results of that year's operations. For the first time in the company's history the tonnage milled has passed the million mark, the actual figure being 1,137,500 tons. Despite a fractional decrease in the yield per ton milled, the company's output of gold was also greater in 1923 than in any previous year. The continued decline in the price realised for gold, which averaged only 88s 5d per fine ounce during the year, was more than offset by the further satisfactory reduction of working costs to 23s 5d per ton milled. In the result, the working profit of £764,688 also constitutes a record.

Turning for a moment to the accounts, the balance of working expenditure and revenue account, together with the balance unappropriated at the beginning of the year and a small sum in respect of forfeited dividends, makes a total of £1,011,628. Details of the allocation of this amount are given in the directors' report, which is before you, the chief items being the payment of two dividends totalling 45 per cent. and absorbing £551,720, after adjusting previous dividends on ex-enemy shares, the expenditure of £51,374 on capital account, and no less than £113,886 in respect of Government and provincial taxation. The balance unappropriated, amounting to £294,206, is represented by cash and cash assets, after deducting liabilities, and is carried forward.

RECORD DEVELOPMENT FOOTAGE.

In accordance with the policy enunciated in previous speeches from this chair, every effort was made during the year to push development work ahead at the best possible speed. The development footage actually accomplished reached the record figure of 37,039 feet, an increase of 8,025 feet on the previous year's total. At the same time, the percentage of payability increased to the excellent figure of 78.6 per cent., as compared with 67.7 per cent. for 1922. In consequence, the payable ore developed amounted to 1,286,100 tons, of an estimated value of 7.8 dwts per ton.

The ore reserves, recalculated as at December 31st last, show an increase of 148,900 tons quantity during the year, and a decrease of .4 dwt per ton in average value. This latter result is mainly due to the continued rapid exhaustion of the blocks of high-grade ore situated on the northern boundary of your property. The desirability of mining these blocks as rapidly as possible was pointed out to you last year, local conditions of rock pressure, and so forth indicating that this valuable ore might become inaccessible unless stopped out with all speed.

The continued reduction of working costs, despite heavy expenditure on development operations, can partly be ascribed to the fact that the year's operations were entirely free from interruption by labour disputes, and that the native labour supply was, on the whole, a satisfactory one. During this period of stable industrial conditions, we have been able to concentrate attention on the improvement of our mining and metallurgical methods, and the recent noteworthy reduction in costs is mainly due to the gradual introduction of such improvements into actual working practice. Important economies have been effected in the use of drill steel, explosives and compressed air, and there has been a remarkable extension of the use of jack-hammers for stoping purposes. All stoping at your mine is now done with the latter type of machine, and the satisfactory results which are being derived are illustrated by the fact that 6,694 fathoms of rock were broken during the month of March, with an average efficiency of 1.5 fathoms per machine shift, as compared with an efficiency of about 0.7 fathom only per machine shift before the rock drills committee commenced its researches. A further advantage of the extended use of jack-hammer machines is that stoping operations are now less susceptible than before to the disadvantages entailed by a fluctuating native labour supply.

Reference is made in the annual reports to the fact that, owing to the cessation of mining operations by the New Goch Gold Mines, Limited, the area under tribute to that company has reverted to us. There still remains a small tonnage in this area which can be mined economically from our workings. Since the close of the financial year, your company has sold to its neighbour, the Meyer and Charlton Gold Mining Company, Limited, the undermining and Charlton Gold Mine and Suburban section of rights of the upper portion of the City and Suburban section of the mine, from the surface down to the horizon of the 22nd level of the Meyer and Charlton mine. This area contains certain isolated blocks of ore which cannot be worked conveniently from your mine, while general reclamation work in it can be prosecuted with advantage from the adjacent levels of the Meyer and Charlton.

The high-grade blocks in the upper levels, to which I have already referred, are approaching depletion, with the result that the grade of ore milled during the current year has fallen slightly. This factor has, however, been balanced by the increased tonnage milled, with the result that the monthly profits have been more than maintained. In spite of the larger development programme, to which I shall refer in a moment, working costs show a further decrease to an average of 22s 11d per ton milled for the first four months of the current year as compared with the average of 23s 5d for 1923.

No. 4a sub-vertical shaft has now been advanced to a depth of 636 feet below the 17th level, or a total depth of 5,105 feet below the surface. It is expected that this shaft will intersect the reef before the end of the current year. Good progress has been made with sinking No. 1 incline shaft, which has now reached the horizon of the 20th level. At No. 2 incline, the stripping of the shaft has been completed to the 22nd station, which is the deepest point from which ore will be hoisted in this shaft; the reef below this horizon will be developed from No. 4 vertical shaft.

The development footage has been increased during the current year to a monthly average of over 3,700 feet. On the Main Reef

Leader the payability has averaged 80 per cent., the average value of the payable reef exposed in the first quarter of the year being 480 inch-dwts. The outstanding feature of the present development position is that satisfactory values are being encountered on the lowest levels of the mine, from its eastern boundary right across to the western boundary.

DEVELOPMENT DISCLOSURES.

The following details of development disclosures during the first three months of the current year will be of interest to you. At No. 1 shaft the easterly drives on the 14th, 15th, 16th and 17th levels have, in total, been advanced 1,110 feet, exposing an average value of 7.2 dwts over an estimated stope width of 54 inches. The western drives on the 17th and 18th levels from the same shaft have averaged 9.1 dwts over a stope width of 50 inches, for 390 feet. At No. 2 shaft the eastern drives on the 19th, 20th and 21st level have advanced 690 feet, the average value of reef exposed being 12.1 dwts over a stope width of 44 inches, while the western drives have advanced 780 feet, exposing an average value of 8.8 dwts over a stope width of 55 inches. I may mention that the 21st level is the lowest level of the mine on which reef has so far been exposed. In addition to the satisfactory values exposed in the drives to the west of No. 2 shaft, it is gratifying to find that the various winzes which are now being sunk from the 18th level in this section of the mine are all exposing good values, averaging from 400 to 600 inch-dwts over distances varying between 200 and 800 feet for the various winzes.

The resolution was carried unanimously.

TAAHUAH AND ABOSSO CONSOLIDATED, LIMITED. GOOD RESULTS—ENCOURAGING PROSPECTS.

The ordinary general meeting of Taahuah and Aboosso Consolidated, Limited, was held, on the 13th instant, at the Chartered Institute of Secretaries, 59a London Wall, London, Mr T. F. Dalglish, chairman of the company, presiding.

The secretary (Mr T. J. Foster, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, after referring to the death of Mr D. H. Bayldon, said: Taking the items of stores and materials and sundry debtors in the balance-sheet, amounting respectively to £18,190 15s 6d and £2,023 0s 9d, and adding Government securities, £11,719 5s 9d, gold in hand and cash, £34,372 19s 2d, amounting altogether to £66,306 1s 2d, and deducting sundry creditors and bills payable £23,747 9s 8d, there is a surplus of liquid assets of £42,558 11s 6d. I think you all agree that this is a very satisfactory financial position. Shareholdings in companies, £5,473 19s 4d, represents principally our holding in the Taahuah Central Mines, Limited. Regarding this investment prospecting work is being proceeded with, and, until more settled country is encountered, it will be difficult to form an opinion of the value of this holding. The reef near the surface is most attractive in appearance, being a blue quartz showing free gold, and has all the appearance, in the opinion of experts, of a permanent reef, and it may yet prove to be so in depth.

ESTIMATED PROFIT EXCEEDED.

When we held our statutory meeting just a year ago I was only able to report an estimated profit from March 14th to April 30th of £1,016, and for May of £1,047. We had not then reaped the benefit of the amalgamation of the two mines, and we had suffered somewhat heavily from the loss of hammer boys due for repatriation. We have since then gradually been able to work up to a

higher level of profits, and, during the past three months of the financial year, our average monthly profit has been £3,460. The profit for April is estimated at £3,403, and for May at about £3,500. In making these comparisons an allowance must, however, be made for the increase in the price of gold since a year ago.

The Abosso mine continues to disclose high values and a satisfactory width of reef at the bottom of the mine. The existence of a large body of ore here below the No. 13 level has been proved, which is well above the average of the mine. The complete reconditioning of the Adjah Bippo mine will, it is anticipated, add appreciably to our ore reserves. The figure now included covers only the southern section of the property where it adjoins the Abosso mine. To the north of the shaft there is a large area on the line of reef, including the Cinnamon Bippo Concession, still to be explored, and arrangements have been made to prove this ground gradually by diamond drilling.

From this you will see that, given a sufficient supply of native labour, there is almost no limit to the enlargement of our operations. This supply is, however, the governing factor in our output. During the last six months of the financial year the supply of labour has gradually improved, and the loss of hammer boys by repatriation has been made good. At the moment our position in this respect is more encouraging, as we have been getting supplies from a new source, which, we hope, may lead to a substantial increase.

ORE RESERVES.

To go back a moment to the ore reserves, I think it well to point out that we have followed the practice of the old companies and valued the reserves on a most conservative basis. You will find that over a period of years the actual recovery has, apart from the premium on the gold, exceeded the estimated value of the reserves; it did so last year, and will, I hope, continue to do so.

The result of the year's operations is a profit of £34,538 7s 8d, which I think you will agree is, under the circumstances, satisfactory. It has enabled us to pay an interim dividend of 5 per cent., and we have now the pleasure to recommend a further distribution of 7½ per cent., making together 12½ per cent. for the year. If we could obtain an additional supply of 500 efficient hammer boys it would be easy to double our profits by the treatment of additional tonnage of the ore now accessible in the mines and by the consequent reduction of costs. This is an attainment we always hope to realise by continuous efforts in recruiting, and trust we may, with the assistance of His Excellency Sir Gordon Guggisburg, the Governor of the Colony—who is fully alive to the importance of the industry to the Colony—yet accomplish our ambition.

The returns for the past two months give promise of better results for the current year. If we are able merely to maintain our present output we have every hope of showing an increased profit next year.

Sir Westby B. Perceval, K.C.M.G., seconded the resolution for the adoption of the report and accounts, and it was carried unanimously.

WM. CORY AND SON, LIMITED. OVERSEAS TRADE DEVELOPMENTS.

The 28th annual general meeting of Wm. Cory and Son, Limited, was held, on the 12th inst., at Cannon Street Hotel, London, Sir Arthur C. Cory-Wright, Bart. (the chairman), presiding.

The secretary (Mr R. J. Speller) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the profit for the year was £577,986, and the sum with which they had to deal was £804,938. That result was satisfactory, as many adverse factors had occurred during the past year. The unsatisfactory state of trade was due, to a large extent, to political and economic causes, but undoubtedly the chief reason had been the frequent recurrence of serious labour disturbances. The hope that better days were in store must be indefinitely deferred if there was to be a continuation of the labour troubles.

In spite of the setbacks in the home trade, the directors had continued to develop business abroad, and quite a fair amount of activity had to be recorded in their Continental department. It would undoubtedly have shown even greater expansion had not the export trade been retarded by violent fluctuations in foreign exchanges and the difficulties experienced by importers abroad of securing the necessary credits. During the year they had neglected no opportunity of extending that important branch of their business and of widening the scope of their activities, so that the company was now in a position to avail itself of any benefit that might arise when overseas trading conditions became more normal. One branch of their trade which had shown consistent progress and was proving an important asset was their recent developments in oil fuel.

After pointing out that the balance-sheet revealed a financial position of great stability and strength, the chairman concluded

by saying, with reference to a statement recently appearing in the Press to the effect that the company controlled the retail coal trade of the country, that they were in no way interested in the retail trade, their principal business being the supplying of coal to manufacturers and publicity utility companies and for bunker purposes; they had also a large export trade and were engaged in extensive trade in all parts of the world.

The report and accounts were unanimously adopted.

Rhodesia Broken Hill			
Transvaal Silver	372		

BURMA CORPORATION.—During May 23,204 tons of ore were mined; 23,480 tons of ore were milled in the treatment plant, producing 11,203 tons of lead concentrate; 12,923 tons of lead-bearing material were smelted in the blast furnaces, producing 5,359 tons hard lead for treatment in the refinery. Refinery products were 4,071 tons lead and 431,725 ozs. silver. Of silver production 2,000 ozs were recovered from treatment of copper matte. Experimental zinc plant produced 1,400 tons zinc concentrates, assaying 10.6 ozs silver, 6.6 per cent. lead, and 46 per cent. zinc. In addition to above 400 tons copper matte were produced from the treatment of 1,932 tons copper ore and accumulated smelter by-products.

ELACROSTIC ZINC.—Production during four-weekly period ended May 28th, 3,499 tons zinc; silver-lead product for shipment to Fort Erie for realisation, containing 520 tons lead, 65,000 ozs silver. The above production includes 115 tons of zinc used at the company's works at Risdon.

MOUNT LYLE.—During the four-weekly period ended May 28th there were smelted Mount Lyle ore 976 tons, North Lyle ore (direct to smelters) 515 tons, concentrates 4,532 tons. The converters produced 810 tons of blister copper, containing copper 802 tons, silver 18,027 ozs, gold 256 ozs. The mill treated 7,855 tons of ore, and produced 2,836 tons of concentrates. Furnace ran 28 days. Accumulation of concentrates cleaned up during the period, with exception of about 500 tons distributed over the various sections of the plant. The furnace was closed down on June 2nd to permit of the accumulation of silver.

NORTH BROKEN HILL.—Cable Mary:—North section—21,500 tons of crude ore were treated, producing 3,950 tons lead concentrates, averaging 6.6 per cent. lead, 3.4 ozs silver per ton and 8 per cent. zinc; also 3,550 tons zinc concentrates, averaging 4.5 per cent. zinc, 7 per cent. lead, and 8 ozs silver per ton. British section—15,320 tons of crude ore were treated, producing 2,540 tons lead concentrates, averaging 6.2 per cent. lead, 2.8 ozs silver per ton and 7 per cent. zinc; also 2,135 tons zinc concentrates, averaging 4.9 per cent. zinc, 6.5 per cent. lead, and 8 ozs silver per ton.

SAN FRANCISCO.—May:—Ore treated, 12,508 tons; lead concentrates produced 2,233 tons; zinc concentrates produced 2,504 tons; estimated net smelter return on lead, \$108,776 (U.S. currency); on zinc, \$55,880; total, \$164,656; operating expenses, \$79,941; estimated operating profit, \$84,715; capital expenditure, \$27,339 (April profit, \$103,300).

ZINC CORPORATION.—May:—Lead concentrator treated 15,445 tons of ore, producing 3,494 tons of lead concentrates and 4,285 tons of zinc middlings. Estimated gross profit, with lead at \$24 per ton, \$8,444. Increase (or decrease) for each £1 fluctuation in price of lead, \$2,240.

(a) Dunlop Rubber accounts for 18 months. (b) Refund of Dominion income-tax to June 30, 1923, which would have permitted a further dividend of about 3 per cent. on the ordinary shares. † Free of tax.

MISCELLANEOUS.

BARCELONA TRACTION, LIGHT, AND POWER.—Meetings of the holders of the first mortgage bonds and the income bonds of the Barcelona Traction, Light and Power Company, Limited, have been convened for the purposes primarily of—(a) authorising an increase in the amount and rate of interest of the prior lien "B" bonds; (b) changing the rate of interest on the first mortgage bonds to a fixed rate of 5½ per cent., payable in pesetas, instead of the interest being partly contingent and payable in sterling as at present, with an option to holders who may not wish to retain their bonds; (c) converting the income bonds into first mortgage bonds. The object of the contemplated rearrangement is to reduce the funded debt of the company and as far as possible make the annual charges payable in the currency in which the revenue is earned. Further details of the scheme will be found in our advertisement columns.

LAKE VIEW INVESTMENT TRUST.—The board of this company are to be congratulated upon publishing a complete list of their investments at March 31, 1924. The company has had a good year, the net profit being £55,099, against £19,534 for preceding year. The ordinary dividend has been raised from 6 per cent. to 12½ per cent. A transfer of £10,000 is made to reserve (against nil), and £7,280 is carried forward (against £5,753 brought in). Changes in investments during the year have resulted in a surplus on realisation, out of which £50,000 has been transferred to reserve, making that account £100,000, and £110,000 when transfer from revenue is included. A valuation of the investments as at March 31st showed a total of £1,181,235, as against the balance-sheet figure of £550,976. It is proposed to increase the capital to £600,000 by the creation of 300,000 new shares of 10s each. Shareholders will be given the right to subscribe at par (10s) for two additional shares in respect of each five shares held.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Unsettled and stormy weather has again prevailed over the United Kingdom during the past week, and cereal crops have suffered damage by heavy rains and an absence of sunshine. Wheat, however, is less adversely affected, though winter-grown is somewhat discoloured in some districts owing to excessive moisture, and a spell of sunshine is necessary to obtain normal yields. Supplies of native wheat continue to dwindle at most of the Statute markets, consequently values were on a higher basis, while influenced by the position of imported varieties. Suitable milling grades are nominally quoted at 11s 6d to 11s 9d per 112 lbs, free on rail. Imported descriptions moved off quietly, due to reserved sellers and a further advance in prices. No. 1 Northern Manitoba quoted 50s, No. 3 ditto 48s, Barusso 63½ lbs 47s 6d, and Australian 50s 6d, all per 496 lbs ex ship. In the floating and forward cargo section a very firm tone was apparent, shippers being reserved in face of high American advances combined with the unfavourable crop outlook in Southern and South-Eastern Europe. Sales included steamers of Rosafé 63½ lbs July at 45s 3d, Barusso 63½ lbs June 6th 44s 9d, ditto July 44s 6d, Savarita on sample May 13th 44s 6d, choice white Karachi July 47s, part cargoes of Australian May 48s 1½d, June 48s 3d, and full cargoes afloat at 47s 6d, per 480 lbs. Maize cargoes are depressed on liberal offerings, while the quantity of Plate maize on passage amounts to 3,600,000 qrs, compared with 1,800,000 qrs at corresponding period last year.

Flour advanced slightly in sympathy with the wheat position. London standard straight run quoted at 39s, patents 41s to 42s, and town households 37s per sack delivered in. Imported quietly steady. Manitoba patents range from 35s 6d to 38s, Minnesota 38s 6d to 40s 6d, soft Pacific 35s, and Australian 35s 3d per 280 lbs ex store. Barley.—English quiet at 11s 3d-12s 6d per 112 lbs free on rail. Imported steady, inactive. Californian 49s-55s, Chilean brewing 44s 6d-51s per 448 lbs, both ex ship. No. 3 Canadian Western ex ship 33s 3d, ditto No. 4 31s 9d, Karachi ex ship 32s 6d, Plate landed 34s, Russian landed 33s 6d per 400 lbs. Oats quiet. Plate f.a.q. ex ship 21s 3d, landed 22s 3d, No. 2 Canadian Western 25s 9d, No. 3 ditto 24s 9d, No. 2 Canadian feed landed 23s 9d per 320 lbs. English quoted at 9s 6d-11s per 112 lbs free on rail. Maize easier. Plate ex ship 36s-38s as to position, ditto landed 40s 6d, No. 2 white flat African landed 39s 6d all per 480 lbs. Millers' offals quiet. Broad bran quoted at 6s 3d, digestive ditto 7s 9d, ordinary 6s, middlings 8s 6d-8s 9d, ditto fine 10s bags included ex mill, light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 11s 9d per cwt free on rail. Oatmeal slow. London-made flake 17s, rolled oats 15s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.
Estimated sales of home-grown wheat—	Owts. 83,127	Owts. 213,980	Owts. 101,491	Owts. 98,596
1 week to June 7	12,414,374	16,237,769	15,428,977	11,933,372
40 weeks to June 7	..	..	..	..
Average price of English wheat per cwt.	11 3	11 0	12 10½	20 1

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes on June 12th as follows:—Pig-iron: The usual market was not held this week on account of the Whitsuntide holidays, but generally the pig-iron and steel trade in this district is very much depressed at the present time. No. 3 Cleveland G.M.B. can be bought readily to-day at 90s per ton, which is practically 10s per ton lower than at the beginning of the year. Shipments, both coastwise and foreign, are well up to the average of the last few years, but there is a decided falling off over the first days of this month. The coke market is easier, and 26s per ton is the average price asked for medium qualities of blast furnace coke. The iron ore trade is practically lifeless, with sellers at 23s per ton c.i.f. Tees for best Bilbao Rubio.

Our Sheffield correspondent writes:—Holidays and stocktaking operations are exercising a disturbing effect upon the iron and steel market, and the week has been almost a blank in respect of buying and selling. Nothing much is likely to be done in raw materials until after the end of the month. Apart from temporary influences, opinion is fairly unanimous that in pig-iron and heavy steel a severe contraction of trade has been in operation for some considerable time, and it is supported by the statistics of production. There was an upward curve from the start of the year to March, but it has been downward ever since. As regards the second half of the year, the prospects are by no means favourable. The majority of the large firms engaged in iron and steel manufactures are carrying on at a loss, and the recent immunity from foreign competition appears to have come to an end, as low prices are again being quoted by makers on the Continent. Czechoslovakian firms are offering alloy steels for motor construction and tool steels in the British market at cut prices, and a considerable quantity of this material has been sold. Makers of railway steel have executed the bulk of the large orders given out early in the year by the British companies. The boom in the building of private owners' wagons has also come to an end, and as Indian, South African, and South American trade in railway material has now to be shared with makers on the Continent, the British plants have not sufficient work to maintain full-time running. Sales of stainless steel for engineering parts continue to increase, and the manufacture of this material is proving a valuable side-line to several firms who have specialised upon it. Business in hand tools is fairly brisk on both home and export account, and users are calling for quality goods to a greater extent than in the past. The file branch has gone quieter lately. Conditions in cutlery and plate are generally unsatisfactory. Coke for British blast furnaces has been reduced from 24s to 23s, and the price on the open market is about 27s. Demand and consumption are poor, causing the accumulation of considerable stocks. The weakness of the fuel market also extends to steam and house coal, cobbles, and nuts, whereas slacks remain in good demand. Current quotations per ton at pits are:—Best hand-picked branch, 34s; Barnsley best Silkstones, 28s; Yorkshire hards, 23s; Derbyshire do., 21s; rough slacks, 12s; smalls, 8s.

Our Glasgow correspondent writes as follows:—The pig-iron market remains dull and lifeless, buying being steady, but on a small scale, both for home and export. For the week to Saturday last the shipments from the Clyde amounted to only 653 tons, of which 523 tons were for foreign account. Prices are slightly easier. Steel works are somewhat better off for work, with a fairly steady demand, especially from structural firms, most of whom are very well employed. One firm of roof contractors is full up for several months ahead, and is working night and day on a large contract for abroad. Ship quality plates can be placed for export at £9 5s to £9 10s per ton, and angles at £8 10s, and some business is reported on this basis with foreign buyers. Bar iron makers are finding difficulty in keeping their works going, and makers of tube strips also report slackness. Preparations are going steadily forward in the shipyards for laying down the keels of the steamers recently placed on the Clyde, and specifications are in several instances already in the hands of steel makers for the materials of construction. Representatives of Belgian and German concerns have been offering plates and semi-steel here at prices which show an appreciable saving on those quoted by local works. Several thousand tons of semi-manufactured steel have been bought by re-rollers for delivery in the third quarter of this year. Generally speaking, however, the experience of the last twelve months in the matter of deliveries from the Continent has rather discouraged large consumers, and caution is being exercised. Steady business is being done in black sheets for export, and while some works are not too well off, others are reported to be booked up for a considerable period. Japanese thin sheets are not quite so much in demand as during the last two or three weeks. Galvanised sheets are in strong demand, with the price now £18 per ton for 24 gauge. Indian dealers continue to put forward inquiries for large tonnages, and this appears to have stimulated other markets, which, in view of works filling up, are becoming active purchasers.

Our Cardiff correspondent writes:—The pits in the South Wales coalfield were idle until Wednesday night, and the output for the week is estimated at only between 45 per cent. and 50 per cent. of the average weekly production. The Coal Exchange did not open its doors until Wednesday morning, but that day the attendance was very small, and hardly any business was transacted. In these circumstances, the market has been unsettled, and prices are temporarily more or less nominal. New inquiries are comparatively scarce, but notwithstanding the efforts of the shopmen to extend the strike at the South Wales ports, the operation of the coal hoists on Thursday was practically normal.

The following are the current approximate quotations:—Best Admiralties, 27s 6d to 28s; second Admiralties, 27s to 27s 6d; best drys, 26s 6d to 27s; Black Veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 25s 6d; best bunker smalls,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XXVIII

SATURDAY, JUNE 21, 1924.

No. 4,217.

115 to 115 6d; slices, 48 14 lbs, 6s 3d; Hawaiian slices, 2 1/2 lbs, 14s 9d to 16s 6d; Californian apricots, 8s to 11s; ditto peaches, 9s 6d to 12s 6d; pears, 14s to 15s 6d. Italian tomatoes, 7s per dozen tins. Danish lunch tins are arriving, and their superior quality is appreciated. Beef quiet owing to adverse weather conditions.

HONEY.—New Zealand still marks excellent quality, and new season's is available in the London market.

OLIVESEEDS.—Linedseed market active and firmer. Indian: Calcutta, afloat, sold, £19 15s; April-May, £19 15s; May-June, £19 15s; June-July, £19 12s 6d; bold Bombay, May-June, £20 5s. Plate, afloat, sold, £18 18s; April-May, £17 17s 6d to £18; May-June and June-July, £17 16s 3d to £18. Rape seed irregular. Toria, June-July, £17 12s 6d; Jamba, ditto, £13 17s 6d; and real bold Ferozepore, ditto, £17 2s 6d. Cottonseed inactive. Egyptian, black, June, £12 15s. Sakellaridis, £11 11s 3d paid. Bombay, June-July, £10 1s 3d. Gingly seed firm. Chinese, June-July, £26 5s. Ground-nuts steady. Coromandel, machine-dried, June-July, £22 17s 6d; Chinese, decorticated, f.a.q., ditto, £21 12s 6d; bold Bombay, ditto £22 5s. Soya beans dull. Manchurian, afloat, £11 15s; June-July, £11 13s 9d. Castor seed firmer. Bombay, June-July, £25 5s; Cawnpore, June-July, £23 per ton.

OLIL.—Linedseed firmer, with a better demand. Spot, net, naked, 30s 6d; June, 39s; July-August, 38s 6d; September-December, 47s 6d. Rape quiet. Crude, spot, 45s; refined, 48s. Castor-oil firmer. First pressure, spot, quoted 62s; second pressure, 60s; and pharmaceutical, 67s per cwt, Hull, with London 2s per cwt.

extra. Cotton dull. Crude Egyptian, spot, 39s; Bombay, 37s; common edible, 46s; deodorised 48s. Chinawood quiet. Hankow, spot (barrels), 80s; June-July, 71s. Coconut quiet. Ceylon, spot, 45s 6d; June-July, 42s 6d; Cochin, ditto, nominally 50s. Soya dull. Oriental, barrels, June-July, 39s 3d; bulk, 35s 6d. Cod steady. English, spot, 35s 6d to 36s 6d. Groundnuts quiet. English, crushed, naked, spot, 46s; deodorised, barrels, 54s. Turpentine quiet, but for ward positions easier. American, spot, 68s 6d; July-December, 67s 6d. Rosin quiet. American, grade B, 13s 6d; G, 14s; WG, 17s 6d; WW, 20s per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

ASSETS EXCEED £25,000,000.

The Alliance grants Insurances of all kinds.

LIFE DEPARTMENT.

cent. as often as $2\frac{3}{4}$ per cent., and the discount rate, after being under $2\frac{1}{8}$ per cent., recovered to that figure, while the only demand for new Treasury bills was at $2\frac{3}{4}$ per cent. A slight increase in the supply of ordinary bills was reported, in addition to that of Treasury bills. Whatever the movements of the Federal Reserve rate in the near future, the market now expects no reduction in Bank rate here. Whether a rise is to take place depends, it is held, chiefly on how many other foreign loans follow that for Hungary.

	June 20, 1924.	June 13, 1924.	June 5, 1924.	May 30, 1924.	Previous Rate and Date Changed.

Houses (Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	$2\frac{1}{8}$	$2\frac{1}{8}$	3	$3\frac{1}{8}$	..

The Bank return discloses further substantial repayment of advances required by the Government recently for dividend purposes, Government securities showing a contraction of £10½ millions on the week, following on a reduction of £6.1 millions last week. There was a decline of £648,860 in the active note circulation, while the Reserve rose by £670,922. There was a reduction on currency notes outstanding this week of £2,150,000 to £291,808,500, which includes £1,387,900 for notes called in but not yet cancelled. The fiduciary issue is £240,970,500, or £7,220,400 below the maximum.

THE STOCK MARKETS.

Activity has not been pronounced at any time in the Stock Exchange this week, and became less with the approach of the settlement; but the strength of gilt-edged stocks has been the chief feature. Although fears persist of dearer money later on, they are not yet exerting an influence in the Consol market, which, on the contrary, is assisted by the artificial ease in Lombard street. New issues continue to be rapidly taken up by the public, and "stags" are active once more. Foreign stocks were firm on the whole. Home Rails benefited a little from the Tube strike collapse, but the public are not buying largely. Rubber shares are stagnant, and the oil market weakened on the Shell report. The result of the South African election caused a restriction of business in the Kaffir market, but price movements were slight, apart from East Rands, which exhibited exceptional strength.

THE COMMODITY MARKETS.

Lower prices are quoted for pig-iron, and mixed numbers East Coast hematite have been reduced to 97s per ton at Middlesbrough. Our Glasgow correspondent states that business shows less activity in all branches of the iron and steel trade, while our Sheffield correspondent refers to depressed trade and prospects of lower prices. Tin finished weaker, and copper prices were easier, though offerings were well absorbed. The tone of the Cardiff coal market has improved. There is a slight improvement in the cotton trade, but the movement is slow. Our Bradford correspondent says that little improvement can be expected in the wool trade until financial conditions become more stable on the Continent. Wheat was better on higher American and Argentine prices. Sugar advanced, and a moderate amount of business was effected. The tea market exhibited improving features. Copra prices were firmer, and conditions ruled steady in the rubber market. The boot trade is well employed.

FOREIGN EXCHANGES.

Business in the foreign exchange market has again been very quiet. The main feature of the week was a satisfactory improvement in the value of sterling, due in part to the superabundance of funds in New York and the natural workings of the recent reduction in the New York discount rate, and in part to some special operations during the last few days on the New York side. The tendency to seek for profitable employment of American funds in Europe is again reviving, and may well, unless

some unfortunate political development on this side again shakes confidence, show a definite influence on rates. From a closing rate of \$4.31½ on the 13th, a quotation of \$4.32½ on the 16th, and after a slight reaction it was up as high as \$4.33½ at one time on the 19th, while yesterday morning it was quoted at \$4.34½. Forward rates are again rather narrower at par to 1-32 cent per month above spot. In Paris the franc has reflected the somewhat conflicting opinions as to the prospects of the Herriot Ministry, the main buying and selling during the week, however, having been apparently to a large extent on German account. On the 13th the rate closed at 81.65, but by Monday a wave of speculative buying drove it down at one time as low as 77.40. This was followed by a reaction up to 81.50 on Wednesday, with a subsequent recovery to rather over 80. Yesterday morning it was quoted at 80.50. While following in general the same course, the Belgian franc has slightly reduced the spread between Brussels and Paris, being quoted yesterday morning at 92½, as compared with 94.50 a week ago. Forward quotations in Paris are about 30 centimes per month above spot, about the same as a week ago. In Brussels they are 10 to 15 centimes above. The lira, as the result of internal political troubles, has reacted from 99½ to 100½, after having been below the 100 level since the middle of March. Amsterdam, following the dollar, has moved in our favour from 11.55 to 11.58, while Stockholm, under the same influence, has moved up from 16.25 to 16.34½, and Switzerland from 24.46 to 24.48½. Madrid has also depreciated sharply from 32.05 to 32.28½. In Northern Europe Christiania has continued to depreciate from 31.92½ to 32.03½, and Copenhagen from 25.56½ to 25.62½. Helsingfors, after being higher, is 172½, as compared with 172 a week ago. Riga and Warsaw both maintain their parity with the gold franc. In Central Europe, Berlin shows a slight depreciation at 18.1 billion, and Vienna at 307,500 is also higher, while Budapest, on the approaching loan negotiations, shows a further improvement. Prague is 146½, as compared with 147½, and Bucharest at 980 is also rather better. In the East the rupee has appreciated again slightly from 15 4/31-32d to 15 5d, but the yen, at 15 10½d, has reacted a little. The silver market has been very quiet, with little activity from China or India. American sales have, on the whole, been absorbed by the Continent, but prices have dropped away a little. Hongkong has fallen from 25 5½d to 25 4½d, Shanghai from 3s 4d to 3s 3½d. In South America, Rio is a shade more expensive at 5 31-32d, but Buenos Ayres has fallen away from 41½d to 41 1-32d, and Monte Video from 43 ¾d to 42½d, while Valparaiso has also depreciated from 39.90 to 40.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 14th:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	5,150	From Revenue	7,912
Interest, &c., on Debt	2,318	Amount borrowed	159
Sinking Fund	350		
Sundries	50		
Added to Exchequer Balances ..	203		
	8,071		8,071

A rather pronounced decline is noticeable this week in revenue, which amounted to £7,912,600, as compared with £13,360,800. The decline is primarily due to receipts under heading of Miscellaneous being much lower, Special Receipts yielding only £144,300, against £2,196,600, while Ordinary Receipts brought in £111,300, against £797,100. Customs yielded £534,000 less at £1,321,000, while Excise receipts at £1,078,000 were £945,000 lower. The yield from Property and Income-tax and Super-tax at £1,441,000 and £980,000 respectively shows little change. The week's operations increased the National Debt by £159,000, and caused the following changes:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Treasury Bills	+ 4,239	National Savings Certificates ..	150
Public Debt Advances	+ 4,900	Bank of England Advances ..	9,000
Unemployment Insurance ..	+ 170		
	+ 9,309		9,150

The floating debt was increased by £160,000 to £786,460,500.

FINANCIAL YEAR, 1924-1925 (April 1 to June 14).

EXPENDITURE.		REVENUE.	
£		£	
Total Expenditure ..	174,882,008	Raised by Revenue ..	149,888,186
		Decrease in Balances ..	3,246,025
		Amount borrowed ..	21,747,797
Total	174,882,008	Total	174,882,008
ESTIMATES for YEAR 1924-25.			
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts ..	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

MONDAY, JUNE 16TH.—*Commons*: Lords Amendments to Prevention of Evictions Bill dealt with; Proposed Amendments to London Traffic Bill considered.

TUESDAY, JUNE 17TH.—*Commons*: Debate on Imperial Preference resolutions (first day).

WEDNESDAY, JUNE 18TH.—*Commons*: Debate on Imperial Preference resolutions (concluded).

THURSDAY, JUNE 19TH.—*Commons*: Debate on Board of Trade Vote in Committee of Supply.

FRIDAY, JUNE 20TH.—*Commons*: Second reading of Lead Paint Bill.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Union Discount Co., Dunlop Rubber Co., Antofagasta (Chile) and Bolivia Railway, Richardson, Westgarth and Co., Forestal Land Timber and Railways, Rubber Plantations Investment Trust, Telogoredjo United Plantations, Sapumalkande Rubber, Nirmala (Java) Plantations, Zinc Corporation, Crown Mines, Geduld Proprietary Mines, Modderfontein Deep Levels, W. J. Bush and Co., Lonely Reef Gold Mining, Louise and Co., Channel Tunnel, Waring and Gillow, Hovis, Molassine Co., and British Electric Traction Co. At the Union Discount meeting the proposed increase of capital was agreed to. The chairman at the Dunlop Rubber meeting explained at length the board's reorganisation scheme. At the Richardson, Westgarth meeting the chairman announced important experiments for the development of internal combustion engines. The chairman at the Rubber Plantations Investment Trust meeting reviewed the position of the tea and rubber industries. At the Zinc Corporation meeting the chairman criticised Labour's claims for a shorter working week. The chairman at the Crown Mines meeting announced record development footage, tonnage crushed, and total yield of gold.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE REJECTION OF THE PREFERENCE PROPOSALS.

THE only surprise about the decision of the House of Commons not to sanction the proposals for new preferences which the late Conservative Government made to the Imperial Conference last autumn, is the narrowness of the majorities against Mr Baldwin's resolutions, and the only danger arising from the decision is that sedulous propaganda may cause it to be misrepresented and misunderstood in the Dominions. Attempts will doubtless be made by mischief-makers to represent that decision first as a breach of faith, secondly as a sign that the majority in the British House of Commons cares little for Imperial development or Dominion aspirations, and, thirdly, as a proof of the futility of Imperial conferences. If only the whole debate could be read by everyone who reads of the decision, these three gross misconceptions of the meaning of the vote of the House of Commons on Wednesday would be completely and finally removed.

The charge that Britain has broken faith with the Dominions is really too thin to deceive anyone who has the most elementary knowledge of Imperial relationship, of which one cardinal point is the fiscal autonomy of every partner, including the Mother Country. The people of each nation in the Commonwealth treasure as their most cherished possession the right to decide in a democratic way their own fiscal policy, and on this matter the people of Great Britain reiterated last December the Free Trade views from which at successive elections the majority has never swerved. When Mr Baldwin laid his preference proposals before the Imperial Conference he knew, and every member of the Conference knew, that what he and they decided could only be put into force with the sanction of their respective Parliaments. Indeed, a speech of General Smuts at the Conference expressed the realisation of this fact in the clearest terms. By his tariff programme, of which these preference proposals proved an integral part, Mr Baldwin courted and received a decisive defeat at the polls. The House of Commons on Wednesday merely interpreted the voice of the country as heard six months ago; and the Prime Minister's action in submitting the preference resolutions to the free and unfettered vote of the House was in itself a full and scrupulous observance of good faith. This, we believe, will be readily admitted by every thinking man in the Dominions, irrespective of his fiscal views.

To those who hold, as we do, that the electorate in December explicitly rejected not only a general tariff, but also Mr Baldwin's plans for Imperial Preference, the narrowness of the majorities—namely, 6, 13, 17 and 20 votes—by which the four resolutions were defeated on Wednesday is surprising, and requires explanation. This lies partly in the fact that the four resolutions actually submitted were the most innocuous and trivial of the batch which Mr Baldwin placed on the order paper. Had the later resolutions been submitted, especially those requiring the imposition of new duties, these majorities would surely have swollen to much larger figures, thereby showing the more clearly that the approach to a comprehensive Preference programme becomes quite impossible at an early stage. From this point of view it is a pity that Mr Baldwin did not put his other resolutions to the test of a division. Some, at least, of the Liberal and Labour members who voted for the early resolutions, or abstained from voting, probably based their action on the belief that, rather than risk the possibility of misunderstanding in the Dominions, it was better to go through the farce of sanctioning trivial changes. If this was their attitude, we think it was mistaken. The rejection of the Baldwin proposals is not nearly so likely to produce misunderstanding and friction as their acceptance. For, had even the early resolutions been adopted, they would have become the centre of a party battle, and their removal would have undoubtedly been one of the most fiercely debated topics at the next General Election. Better than this, surely, is what the House of Commons has done—namely, to make clear the indisputable fact that the people of this country will not sanction the taxes on food and raw materials which alone can form the basis of any really effective Preference programme, and are either contemptuous or suspicious of minor tinkering with the question which logically point towards that end. If the voting had gone in favour of the four comparatively harmless resolutions, it would certainly have been construed as a hopeful augury for a fuller programme; and in putting that interpretation upon it the Dominions would have been sadly misled.

Once more a fuller programme of Preference has been ruled out, and the sooner the fact is accepted throughout the Empire, the sooner we shall settle down to the serious examination of more practical lines of Imperial co-operation and development. It is a travesty of the facts to represent the opponents of Preference as being impervious to Imperial ideas. For instance, the Colonial Secretary repudiated this suggestion with scorn; Mr Asquith reviewed the contributions of the Liberal party towards Empire-building, and the Prime Minister, after describing an active emigration policy, expressed the belief that "the large lines of political development, the large lines of constructive democracy, will solve the problem of how this little island, Free Trade on account of its economic problems, the centre, the motherland of self-governing

nations, protectionist, as they say, on account of their economic position, may nevertheless create with them an economic policy that will give them the freedom to be protectionist, that will give us the freedom to be Free Trade, and yet co-operate in building up a strong Commonwealth unity based on sound economic policy." Mr Asquith, after riddling the Baldwin resolutions with criticism, developed a similar theme. Moreover, the speeches of all these three protagonists of the anti-Preference view discussed the problem of how to make Empire conferences the source of useful and effective work. Mr J. H. Thomas threw out the suggestion that leaders of the Opposition, as well as the Premiers, in the Dominions should be invited to join in the discussions, and welcomed the idea of an *ad hoc* Imperial Economic Committee, while Mr MacDonald entered a wider field in advocating "the creation of some sort of workable machinery, so that the public opinion of the whole of our Commonwealth of States should influence the policy for which the Commonwealth must be responsible." There is a disposition in some quarters to believe that, since the Preference resolutions have been rejected, the whole of the work of the last Imperial Conference has been rendered abortive. That, as we have shown before, is not the case. The report of the Conference contained many useful proposals, which, if attention is no longer to be diverted and monopolised by the Preference controversy, may be developed and enlarged. "There is a great deal," as Mr Asquith admitted, "still left undone in the development of Imperial resources, in the extension of credit facilities, in the improvement of transportation and the storage and marketing of produce." That is only the beginning of a programme of useful effort; but as regards machinery for its performance, the decision rests mainly with the Dominions. Successive British Governments have been willing, indeed anxious, for the establishment of closer liaison. Last autumn the proposal to create an Imperial Economic Committee was accepted by all but the Canadian delegates, whose opposition for the moment killed the project. What Mr Thomas now has in mind is machinery which will not be opened to the objections raised by Canada to the last proposal. We can only hope that the idea may grow to fruition.

In the course of the past eight months we have devoted page after page of the *Economist* to the exposition of the grounds for our conviction that, placed as it is, this country cannot afford the risk of any deviation from the path of Free Trade. Rather than re-treading that field of controversy now, we would prefer to attempt to regard the matter as closed, and divert the thoughts of our readers to development of Imperial co-operation on lines adumbrated in Wednesday's debate, though not perhaps on the grand Socialistic plan suggested, strangely enough by Mr Baldwin, who said: "Is it not possible to enter into some arrangement with the Dominions by which the enormous amount of foodstuffs we require to-day may be obtained solely from them by bringing them into this country at cost price, and distributing them with the least possible margin?" But we regretfully deduce from the speeches of the Conservative leaders that the repeated fiscal verdict of the country has not even yet been accepted by them. It is to be feared, in fact, that they may derive from the narrowness of Wednesday's adverse majorities an unwarranted encouragement for the future of the Tariff cause. This being the case, it still behoves all who have a clear grasp of the conditions under which this country lives and trades to keep their powder dry. That is a pity. For if once this controversy could be laid aside, and the uncertainty regarding the fiscal future removed, the concentration upon constructive work of the vast amount of energy and effort expended upon this economic wrangle could hardly fail to bear fruit.

THE NEMESIS OF FASCISM.

THERE is a certain poetic justice in the repercussion of the Matteotti crime upon the position of Signor Mussolini. No one could for one moment suggest that the dictator himself has had any hand in this dastardly affair. Nor have we any wish to belittle the contribution which his régime has made to the restoration of more efficient administration and economic improvement in Italy. But

the power of his party was deliberately and avowedly built up by the use of lawless physical force. The defence has been that the end would be found to justify the means. When once the Fascist Party were securely in the saddle, they could afford to handle their fellow-countrymen more gently, and as soon as they had secured a free hand for the work of political reconstruction, of which Italy (as is admitted on all sides) stands in such urgent need, the nation as a whole would be converted to the necessity of Fascist methods as a stage in national regeneration. This doctrine—which, *mutatis mutandis*, resembles the Bolsheviks' defence of the "Dictatorship of the Proletariat"—has been exploded by the shocking events of the last few days. At the moment when Signor Mussolini—having "made" his electoral law and his election, and thus obtained his crushing parliamentary majority—was preparing to govern with at least the old forms of constitutional procedure, there came upon him this startling demonstration that the violence by which he had risen to power had passed beyond his control.

The victim of the crime was a young parliamentary leader of unimpeachable personal character, disinterested motives, moderate views, and keen intellect. As organising secretary of the United Socialist Party, he had succeeded the leaders of the older generation—Signori Turati and Treves—in the active headship of the constitutional Socialists in Italy. His qualifications made him one of the most formidable political opponents of Fascism, and, as such, he was peculiarly hated by the extremists. He had already been the victim of one physical assault, and had for some time been unable to visit his family in the country for fear of exposing himself to personal danger. He had the courage, however, to persist in his political course. In the debate on the address after the recent opening of Parliament, he had made an effective opposition speech, and in the debate on the estimates, which was to have been held on Friday, the 13th, it was believed that he would attack certain junior members of the Government—one of whom was Signor Finzi, the Under-Secretary for the Interior—on the charge of personal corruption. He had already proved his efficiency in exposing political scandals.

How closely his movements were watched by his enemies was shown by the fate which overtook him on Tuesday, the 10th, three days before this debate was to have been held. Coming out of his house, without a hat, to buy some cigarettes, he was seized by five men, forced into a motor-car, in spite of his struggles and cries for help, and abducted from the heart of Rome into the open country. In an anonymous typewritten letter received several days later by the *Giornale d'Italia*, it was stated that his body would be found buried on a certain property between Vico and Bracciano, about 25 miles to the N.W. of the capital. On Thursday night the car in which he was known to have been kidnapped was deposited in remote stables in Rome, but the police (who had omitted to watch the stables and garages for the return of the car) did not intercept the persons who conveyed it there. It was found in bad condition and stained with blood.

The number of the car was known, because it had been noted by one of the three witnesses who actually saw the kidnapping; but one of the most astonishing features of the crime—and perhaps the most damaging to the reputation of the Fascist régime—is that none of these witnesses appear to have made immediate reports to the police. They seem to have hesitated to implicate themselves until it was evident that action was being taken by the authorities, and this appears not to have been done until the morning of Thursday, 12th, two days after the commission of the crime. From that moment, however, events moved quickly. On Thursday afternoon Signor Mussolini made a statement in Parliament admitting the possibility of a sinister explanation of Signor Matteotti's disappearance, and declaring that he had himself given direct orders to the police to start an inquiry. On Friday, the 13th, the united Opposition passed a resolution boycotting Parliament until the affair had been cleared up, and Parliament was in consequence adjourned indefinitely the same afternoon, after the majority had passed the estimates up to the end of December. More serious still for the Government, the Fascist Parliamentary majority passed a resolution of their own demanding an official inquiry in order to clear the party's reputation.

Meanwhile, the car had been traced to the garage from which it had originally been hired, and the owner stated that he had let it out to the chauffeur of Signor Filippelli, the editor of the *Corriere d'Italia*, which was the organ of Signor Finzi (the Under-Secretary of the Interior). This individual had paid a deposit of 5,000 lire, and had taken the car out next day without taking with him any employee of the garage. On Saturday both Signor Finzi and Commendatore Rossi, the chief of the Press Bureau of the Ministry of the Interior, offered their resignations pending an inquiry, and their resignations were accepted by the Government. Indeed, Signor Mussolini appears to have advised Signor Finzi to submit his personal and official conduct to examination by the Committee of the Parliamentary Majority. As for Rossi, he disappeared, and is rumoured to be in London, while Filippelli and a young Fascist *bravo* called Volpi both bolted, the same day, for the frontier. The circumstances of their flight and capture might have been staged for the cinema. Filippelli was chased and caught by police in motor-boats off Genoa; Volpi was arrested on his road from Milan to Switzerland through the Italian Alps. A day or two later Filippelli's chauffeur gave himself up to the authorities. But a still greater sensation was to come. On Thursday no lesser person than Commendatore Marinelli, the administrative secretary of the Fascist party since its foundation, was arrested in Rome on a charge of complicity in the crime. Meanwhile, Signor Mussolini, who is showing a courageous determination to probe the crime, has appointed a Commission of three judges to collect the evidence; Finzi has been succeeded in office by Signor Federzoni, a moderate Fascist with a good reputation; and Debono, the Chief of the Police, has been dismissed.

The eventual consequences, however, cannot yet be foreseen. The shock has undoubtedly broken the spell—half of terror and half of admiration—which Fascism had succeeded in casting over the Italian public mind. The Press has spoken out; there have been spontaneous public demonstrations of indignation at the crime and sympathy with Signor Matteotti's widow, and the co-operation between the Moderate Socialists and the Popular (Catholic) party, of which there were already symptoms, seems likely to become effective. From the Italian point of view, perhaps, the most serious feature of the crime is its effect abroad. For good or evil, such movements as Fascism concern the whole of Western society, and a portent like the murder of Signor Matteotti cannot be viewed with indifference by the public opinion of neighbouring countries. The British Labour party has sent an official message of sympathy to Signora Matteotti; in the Belgian Senate the Socialists have carried a motion, by a large majority, to send a telegram on the subject to the Italian Chamber; and in the International Labour Conference, which happens to be in session at Geneva, the Workers' Group have refused the Italian Government's request that Signor Rossani, the *soi-disant* representative of Italian Labour, should be appointed to a sub-

committee, on the ground that the organisation which he represents is of a mixed character. These incidents are a rebuff for Fascism, but they are not a rebuff for the Italian nation, whose indignation at the crime, to judge by the latest news, is every whit as strong as the feelings which have been aroused abroad. Painful and abhorrent though these incidents are, we trust that the shock and the far-reaching inquiry that must result from them will at least serve to remove from the Italian people some of the troubles that the future might have contained. But Italy has anxious days before her.

PROGRESS OF OUR OVERSEAS TRADE.

THE outstanding feature of the May trade returns is the considerable increase in imports, the total value of which reached the highest figure since 1920, when, of course, average values were much higher than they are to-day. Although May contained two working days more than the previous month, the rise of £36,000,000 in imports is much greater than can be explained on that ground alone. Since total exports rose by less than £9,000,000 as compared with the April figure, the excess of imports rose from £11,500,000 in April to nearly £39,000,000 last month. In May, 1923, the balance was only £6,000,000. Below are set out the totals for May, and the five months ended May 31st, in comparison with those for the same periods last year:—

MONTH OF MAY.

	1923.	1924.	Increase or Decrease in May, 1924.	
	£	£	£	%
Imports	89,396,346	122,086,599	+ 32,690,253	+ 36.7
British exports	71,554,864	70,260,882	- 1,293,982	- 1.8
Re-exports	11,773,426	13,091,195	+ 1,317,769	+ 11.2
Total exports	83,328,290	83,352,077	+ 23,787	+ .002
Excess of imports over total exports	6,068,056	38,734,522	+ 32,666,466	+ 538.0

FIVE MONTHS ENDED MAY 31st.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	449,516,022	509,940,279	+ 60,424,257	+ 13.4
British exports	319,795,468	326,440,564	+ 6,645,096	+ 2.2
Re-exports	52,908,852	64,104,618	+ 11,195,766	+ 21.1
Total exports	372,704,320	390,545,182	+ 17,840,862	+ 4.8
Excess of imports over total exports	76,811,702	119,395,097	+ 42,583,395	+ 55.4

The returns show that the exceptionally large import total last month was due chiefly to increased arrivals of grain and flour following on a heavy decrease during April, and a significant rise in the imports of raw cotton and wool, petroleum products, and foreign iron and steel manufactures. In our next table are shown the quantities of these and other main items on the import side of

our trade balance-sheet which have come into this country during each month of the present year, together with a comparison between the totals for the first five months of 1923 and 1924 respectively:—

IMPORTS—QUANTITIES.

	1924.					Five Months Ended May 31.	
	Jan.	Feb.	Mar.	Apr.	May.	1923.	1924.
Grain and flour	11.0	10.6	19.8	12.0	20.5	70.2	73.9
Sugar	3.2	2.5	3.0	4.8	4.2	14.4	17.6
Tea	60.3	39.3	29.6	27.2	20.6	159.8	177.2
Raw cotton	2,223	1,446	973	425	1,040	5,061	6,106
Sheep's & lambs' wool, thousand cwt.	608	838	1,153	846	1,247	4,426	4,693
Crude rubber	135	127	130	110	107	649	609
Iron and steel and manufactures thereof	142	190	165	199	300	560	996
Petroleum (refined)	82.4	75.6	84.6	66.2	120.0	395.1	428.7

While imports of raw cotton are still below the relatively high levels reached in the early part of this year, the total for the five months shows an encouraging increase as compared with 1923, while arrivals of sheep's and lamb's wool, though showing considerable monthly fluctuations, are slightly larger than was the case by this time last year. Grain and flour show little change in comparison with 1923, but sugar and tea, the favoured children of the Budget, both show aggregate increases, though monthly arrivals of the latter have, in point of fact, continued to exhibit, since the publication of Mr Snowden's proposals, the same downward tendency which has obtained since the first few weeks of this year. Increased metallurgical production on the Continent is reflected in augmented shipments of iron and steel manufactures to this country, and the growing popularity of the motor car has, doubtless, a close connection with the rise in the total imports of petroleum. In the following table are given similar figures covering the most important heads of our export trade:—

BRITISH EXPORTS.—QUANTITIES.

	1924.					Five Months Ended May 31.	
	Jan.	Feb.	Mar.	Apr.	May.	1923.	1924.
Coal	5.44	5.06	5.19	5.06	5.48	33.22	26.25
Cotton yarn	11.0	14.3	13.2	16.1	18.0	60.2	72.4
Cotton piece goods	354	397	354	378	395	1,806	1,477
Woolen tissues, per sq. yds.	15.7	14.6	10.4	8.3	11.8	56.4	60.9
Linen piece goods	9.4	10.0	10.4	10.1	10.9	37.5	50.8
Leather	23.2	27.7	22.8	29.0	34.5	112.8	137.2
Iron and steel and manufactures thereof	338	331	288	337	407	1,450	1,700

Coal shipments have been fairly steady month by month since the beginning of this year, but the decline in the total as compared with January to May, 1924, testifies to the difficulties encountered by the export coal trade since the passing away of last year's fortuitous "Ruhr" boom. The textile trades are all doing a larger overseas business this year than last, but while cotton and linen appear to have registered an advance since the beginning of 1924, the trade in woollen tissues has slumped to some extent of recent months. Iron and steel exports have fallen off to some extent as compared with 1923 (the decline being probably due, in part, to much the same influences as have affected the coal trade), but prices have been higher this year. A good recovery has, however, been made from the low level of March last, when the incidence of Easter coincided with other influences tending to cause a drop in exports in this group.

The following tables show how average import and export prices have varied, over the same range of commodities, during the period under review:—

IMPORTS—AVERAGE VALUES.

	1924.					Five Months Ended May 31.	
	Jan.	Feb.	Mar.	April.	May.	1923.	1924.
Grain and flour, per cwt.	£ 8 10 3	£ 8 10 2	£ 8 10 9	£ 8 10 9	£ 8 10 7	£ 8 10 7	£ 8 10 7
Sugar	£ 1 8 5	£ 1 9 7	£ 1 9 2	£ 1 8 2	£ 1 7 5	£ 1 6 0	£ 1 8 0
Tea	£ 0 14 8	£ 0 14 9	£ 0 14 3	£ 0 14 6	£ 0 14 5	£ 0 14 6	£ 0 14 6
Raw cotton, per cental	£ 8 10 7	£ 8 9 7	£ 7 18 7	£ 7 15 0	£ 7 19 6	£ 6 11 5	£ 8 4 5
Sheep's and lambs' wool	£ 7 9 10	£ 7 16 7	£ 7 18 0	£ 9 2 10	£ 9 7 7	£ 6 5 0	£ 8 9 2
Iron & steel & manufactures thereof, per ton	£ 9 18 10	£ 9 7 0	£ 9 15 5	£ 8 18 0	£ 9 5 0	£ 9 18 5	£ 9 7 2
Petroleum refined, per 100 gallons	£ 2 9 5	£ 2 12 2	£ 2 3 3	£ 3 11 0	£ 3 8 2	£ 3 4 0	£ 3 1 5

BRITISH EXPORTS.—AVERAGE VALUES.

	1924.					Five Months Ended May 31.	
	Jan.	Feb.	Mar.	Apr.	May.	1923.	1924.
Coal	£ 4 7 1	£ 4 6 1	£ 4 7 1	£ 4 7 1	£ 4 7 1	£ 4 7 1	£ 4 6 1
Cotton yarn	£ 0 3 3	£ 0 3 5	£ 0 3 4	£ 0 3 4	£ 0 3 4	£ 0 3 5	£ 0 3 4
Cotton piece goods, per 100 sq. yds.	£ 3 6 2	£ 3 8 5	£ 3 10 0	£ 3 7 2	£ 3 8 2	£ 3 6 2	£ 3 6 9
Woolen tissues, per sq. yds.	£ 0 3 5	£ 0 3 9	£ 0 3 9	£ 0 3 7	£ 0 3 6	£ 0 3 10	£ 0 3 7
Linen piece goods, per 100 sq. yds.	£ 6 19 11	£ 7 1 5	£ 7 3 2	£ 7 4 7	£ 7 5 2	£ 6 19 11	£ 7 3 0
Leather	£ 15 18	£ 0 15 9	£ 0 18 0	£ 7 15 17	£ 5 16 11	£ 0 15 9	£ 2 16 8
Iron & steel & manufactures thereof, per ton	£ 19 4	£ 0 19 13	£ 0 20 7	£ 0 18 18	£ 0 18 7	£ 0 16 7	£ 0 19 5

The general impression to be gained from these tables would seem to be that while the raw materials of several of our most important industries—cotton and wool, in particular—have risen appreciably in price since this time last year, export prices have, in most cases, failed to respond in anything like the same degree. In order to present as clear as possible a picture of our total trade we have, in a final table, endeavoured to ascertain the average import and export values for each working day during the last five months, and, in a final column, to make allowance for the effect on the trade figures of the separation of the Irish Free State from this country.

AVERAGE DAILY TRADE.
(Million £'s.)

	1924.					Five Months Ended May 31.	
	Jan.	Feb.	Mar.	April.	May.	1923.	1924.
Imports	4.05	4.21	4.42	3.92	4.97	3.87	4.32
British exports	2.57	2.95	2.60	2.86	2.87	2.74	2.77
Re-exports	0.53	0.58	0.54	0.54	0.53	0.46	0.54
Total exports	3.10	3.54	3.14	3.40	3.40	3.20	3.31
Excess of imports over total exports	0.95	0.67	1.28	0.52	1.57	0.67	1.01

The "visible" balance is less satisfactory from our point of view than was the case a year ago, total imports having increased considerably, while total exports have remained stationary. The daily average for British exports would, in fact, appear to have fallen to some extent. One may hope that enhanced purchases of raw materials may be followed in the near future by such increases in our total exports of manufactured goods as will tend to redress the balance.

THE MAKING OF OIL PRICES.—II.

(BY A CORRESPONDENT.)

WHILE the big oil organisations can, and do, stabilise the price of gasoline (petrol), as the index numbers of oil and other commodity prices tend to show, it must be understood that this stabilisation can only be effected within certain limits. Sir Robert Waley Cohen, in the paper under review,* was careful to point out that if crude oil prices soared upwards and remained there for very long periods, gasoline prices could not be kept down unless some other oil product went up in price to a sufficient extent to pay for the deficiency. Actually, owing to the very small proportion of gasoline in some of the crude oils which are the main sources of fuel oil, the price of fuel oil has gone up and down with the price of crude oil so closely as to admit of a considerable degree of stabilisation in the price of gasoline by the large oil organisations.

It would appear at first sight that the consumer of gasoline was merely being made to benefit at the expense of the consumer of fuel oil. But this is not necessarily the case. In the first place, oil is not the necessity for the user of furnace fuel oil as it is for the user of the petrol engine. The author of this instructive paper gave an illustration of the principles involved in the fixing of the fuel oil price. At the beginning of this year there was a large fall in the production of two of the main oilfields

* "The Economics of the Oil Industry," by Sir Robert Waley Cohen, read before the Empire Mining and Metallurgical Congress.

which govern the supply of fuel oil. Prices were raised, with the desired result that those consumers who were least dependent upon oil went over to coal. The wasteful consumption of fuel oil was thus automatically stopped, and the then shrinking supplies of fuel oil thus preserved for Diesel engines, passenger steamships and others to whom the use of oil is a necessity or an economy so great that, even though the disparity between coal and oil prices were to be largely increased, they would still continue to use oil. "Liquid fuel prices," added the author, "have ceased to rise, and if the early hopes prove justified, it will soon be possible to effect some reduction and to spare supplies again for those who are glad to use fuel oil on account of its great economy and convenience, but to whom it is not an absolute necessity. If the rise in fuel oil prices had been postponed until it became obvious that there were no supplies, the dislocation in trade resulting from the inability to meet requirements would have been far greater, and the restoration to a normal situation might easily have been postponed." Whether owners of freight steamships, for whom oil is not regarded as a necessity, will appreciate this policy or not—it is said that they are now so used to conversions from coal to oil and from oil to coal that they are prepared to contract for oil fuel even for a single voyage—it must be conceded that the large oil organisations do render a service to industry at large by moving quickly in response to the changes in the supply of crude oil, so as to husband resources or dispose of surpluses as the case may be.

This brings up, next, an interesting point. It is that the prices of refined oils bear no fixed or systematic relationship to their relative costs of production. The products which a refiner may obtain from the stills vary greatly according to the composition of the crude oil and the method of refining, but an average barrel of American crude oil may be taken to yield under present conditions 46 per cent. of gas and fuel oil, 27 per cent. of gasoline, 10 per cent. of kerosene, 4 per cent. of lubricating oil, and varying quantities of paraffin wax, asphalt, &c. The financial yield, however, is very different from the refinery yield. Of the total income derived from the sale of the products of a barrel of crude oil, the following percentages are given in a U.S. Government publication:—Gasoline, 44.5 per cent., gas and fuel oil, 28.2 per cent., lubricating oils, 9.7 per cent., kerosene, 8.8 per cent., wax, 2.8 per cent., asphalt, .95 per cent., coke, .15 per cent., all others, 4.9 per cent. These figures show that the prices of refined oils bear no relation to the costs of production if those costs be distributed among them according to the percentage of their yield from the crude oil. Compared, for instance, with the average price of gasoline to-day, the cost of refining most gasolines is almost negligible. The products contained in the crude oil all come out of the ground together, and the only difference in their cost is their refining cost. Why, then, is gasoline sold at, say, £20 a ton and fuel oil at, say, £4 a ton? "It is merely," said Sir Robert Waley Cohen, "that the relation between demand and supply of petrol and its value to the consumer is such that it can, and does, pay a much higher proportion of the cost of the crude oil than the proportion in which it is actually contained in the crude oil as it comes out of the ground. In the oil business nothing is so dangerous as to indulge in prophecy, but if the development of the Diesel engine, or some other development that is yet in its infancy or not yet discovered, should make the demand for fuel oil in relation to its supply greater than that for petrol, then there is no reason why fuel oil should not be £20 a ton and petrol £4 a ton. The only fixed ultimate constant which cannot change is that in the long run the prices realisable for the whole of the products of the crude must be such that, taken together, they cover the cost of the crude and of manufacturing and transporting the products to the consumer." And also, for the sake of the investor, a little profit.

That the profit is little, having regard to the exceptional risks of the oil production business and the country-wide service of distribution rendered by the big oil organisations, was the conclusion to which Sir Robert Waley Cohen directed attention. "If anyone cares," he said, "to study the accounts of the great oil concerns, I think he will agree that the price of the remarkable service they render is an extremely moderate one. Looking only at

the organisation of which I have more detailed knowledge, I find that its profits from all sources accumulated together and expressed in terms of its production represent an average annual profit of about three-farthings per gallon. That is throwing in profits on purchased oil, profits on colossal fleets, interest on all the capital invested in tank installations, in lands held throughout every country, and in the great and costly distributing organisations which have been developed in every consuming country." This is certainly an impressive statement. It is clear that if these profits were expressed in terms of oil handled—that is, oil produced plus oil purchased—they would represent an average profit of about one-halfpenny per gallon. This figure practically agrees with that of the Standard Oil Company of New Jersey for its average profit on a gallon of gasoline. It is probably common to all the big oil organisations. That there are small independent companies to be found distributing gasoline at a cheaper price than the big groups does not mean that they are taking smaller profits—they are probably making relatively much larger profits—but that they have not the same overhead expenditure and distributing charges to reckon on to the cost of gasoline delivered at the depot. Whether the distribution costs of the big organisations can be reduced still further—they have been reduced about 4d or 5d a gallon since 1920—depends largely on the degree of competition existing; but that the profit of two or three farthings a gallon could be lessened without turning away the investor who has to furnish the capital for the continued expansion of the oil industry, is very doubtful. The price of oil has to be cheap enough for the consumer and attractive enough for the investor. The big oil groups, on the showing of Sir Robert Waley Cohen, seem to have solved the problem well.

LABOUR ON THE RAILWAYS—SHOPMEN AND DRIVERS.

(BY OUR LABOUR CORRESPONDENT.)

OPINIONS still differ as to whether it was the ultimatums of the London Electric and Great Western managers threatening legal proceedings against men who failed to return to work, in the one case on June 13th, and in the other on June 16th, or the firm attitude of the National Union of Railwaymen, backed, negatively at any rate, by the Associated Society of Locomotive Engineers and Firemen, which caused the collapse of the unofficial strike of Whitweek. The secretary of the unofficial strike committee takes the view that the N.U.R. did it. Obviously, however, the real truth is that an unofficial strike, which remains unofficial, has no chance. It is, whether designedly or no, a challenge to the whole system of collective bargaining, to the whole theory and practice of trade unionism. Everything that the unions have accomplished, throughout years of organisation, would be jeopardised were employers to allow a pistol to be placed at their heads by casual collocations of workpeople, without any recognised status, who disregard the rules accepted on both sides for the conduct of disputes. The action of the unofficial strikers, in fact, put into the companies' hands the weapon of the threatened lockout. It is true that Mr Akehurst protests against the suggestion that there was any Communism in the movement, of which he was the spokesman. Of admitted Communism there may not have been much, but the present tactic of Communism is to admit nothing and to work underground. It is undeniable that, in so far as Mr Akehurst's committee was successful, it would have discredited constitutional action, undermined trades unionism, with the workers and with the employers, and, so far as the railways were concerned, have created an active "nucleus" on approved Moscow lines within them.

Behind all this confused and confusing movement, however, there is a real difficulty, a real grievance. Take, for instance, the railway shopmen, about whom there has been so much trouble in the last twelve months. They, with the engine-drivers, stand as representatives of a group of workers for whom conditions are at present hard. Among the consequences of mass production

and the mass organisation of labour which it involves is the relative depression of the craftsman. The war brought fewer advantages to the skilled man than to the unskilled; he has not, in the main, recovered his lost advantages. Skilled men are worse off to-day, relatively, than unskilled. Amalgamation in a union where the unskilled outnumber him heavily, has for the craftsman as many disadvantages as advantages.

It has for long been the policy of the N.U.R. to bring under their roof all workers who have anything to do with railways, and to have standard rates and the cost-of-living sliding scale applied throughout all grades. It can certainly be argued that the future is with industrial, as against craft, unionism as a principle of organisation. At the present, however, an almost equally good case could be put up for the view that engineers in railway shops have actually more in common with engineers in other shops than they have with porters, platelayers, drivers, or clerks; while drivers of engines go naturally with drivers of motors and other vehicles, clerks in railways with clerks in other industries. Is a railway an industry? It presents no such natural, local unit of organisation as a pit. Mining is an industry. Transport is an industry. But of that comprehensive whole railways are only a department. Meantime, in the transition stage to a wider organisation of the workers, larger groupings and, possibly, a different basis of classification from that on which the actual existing unions have been built up, problems of demarcation, in the widest sense, are at the bottom of a great deal of the present trouble.

In the case of the shopmen, the question has been settled: the N.U.R. has won its point. This was the meaning of the decision of the Industrial Court in June, 1922, to "proceed upon the basis of determining railway rates for the various classes of workpeople (in railway shops), and not to award district rates as such." This is the famous Award 728. It was accepted by the N.U.R. as well as by the Engineering and Shipbuilding Trades' Federation, to which the great majority of shopmen belong. By the middle of 1923, after the new railway grouping had come into effect, Award 728 had been put into operation in all railway shops, irrespective of the unions to which the men employed in them belonged, with the exception of those of the Great Northern and Great Central sections of the new L.N.E.R. Of 130,000 railway shopmen employed in Great Britain, that is to say, 110,000 were by this date working under Award 728; moreover, of the 39,000 shopmen employed by the L.N.E.R., 26,000 were working under it. Doncaster was the one big shop outside. Conditions there were in no sense exceptional, but for some reason not very clear the Engineering Unions, though they had signed the award nationally, stood here on district rates; their attitude was made by the G.N.R. an excuse for not applying the award. In July last the N.U.R. threatened to call out their shopmen unless the award was enforced. A peculiarly difficult strike seemed imminent—a battle between unions. Finally the matter was referred by the Minister of Labour to a court of inquiry, which has just reported (Cmd. 2113). It finds no "exceptional circumstances" justifying the exclusion of the G.N.R. shops from the award; on the contrary, it is to be introduced there by March 1, 1925. At the same time, the court notes the "genuine and strongly held apprehension, shared by all the trade unions," that craftsmen might under it suffer a reduction of status and wages; points out that such was not the intention of Award 728, and provides that difficulties in local interpretation be referred to the Industrial Court before March 1st. On this point it may be noted that the railway companies urge that, as a matter of fact, the position of men in railway shops is better than that of those outside. Thus, while railway shopmen have lost 10s from their war bonus of 26s 6d, outside men have lost 16s 6d in engineering shops, 19s 6d in shipbuilding. The case of the N.U.R. is that a progressive status for shopmen is part and parcel of an "all grades" movement for railway workers. Anyhow, so far as wages are concerned, all railway shopmen are now subject to "railway" rates. The craft unions are meeting the railway staffs in order to put before the companies their demands for a rise in their wages.

The case of the enginemen and firemen is quite different. The Associated Society of Locomotive En-

gineers and Firemen's Union is an independent body, like the Railway Clerks' Association, and was, like the R.C.A., a party to the recent railway award (December, 1923) in the sense that their representatives endorsed it. An award of this character is, after all, a judgment, not a settlement. In the particular case it disclosed serious grievances affecting the members of the A.S.L.E. and F. Some of these were mitigated after the strike of January, 1924, but not all. The question of Sunday work remains unsatisfactory from the drivers' point of view. Discussions between Mr Bromley and the companies seem now to have reached an *impasse*; a fresh ballot of members is to be taken, and the possibility of another strike cannot be excluded, although the margin of difference is narrower than it was in January. Here a craft union is defending the interests of its own skilled members; interests which, it argues, would be compromised were they to be submerged in a huge organisation like the N.U.R. The N.U.R. looks after the average, to which the special case tends to be sacrificed. The problem of the group and the party, so familiar in the political sphere, here shows itself in that of industry.

THE CO-OPERATIVE TRADE POSITION.

(FROM A CORRESPONDENT.)

ALTHOUGH the returns of the retail co-operative societies for the year 1923 were not completed when the Co-operative Congress met at Nottingham on Whit-Monday, it was possible to suggest the likely results based on the figures of 1,311 out of 1,445 societies, and estimating those for the remaining 134. Compared with 1922, the membership of 4,580,623 was an increase of 1.36 per cent. Share capital rose nearly 3 per cent.; sales declined 2.45 per cent., yet profits rose 12 per cent.—a matter that escaped the consideration of the Congress, which was more concerned with political activities, the suggested daily paper, and other big matters, to spend time upon a point of vital detail in the trading basis of the movement. The stock in trade of the societies at the end of last year was £18,739,123, a decline of 8.75 per cent. From the available figures some interesting deductions are obtainable. The share capital is £75,219,903, an average of £16 10s per member. To this must be added loans, &c., of about 12 millions, making £87,000,000, upon which a business with sales of £165,427,590 was done by the societies in England, Scotland and Wales. The average purchases of the individual members were just over £36 for the year. This is less than 15s per week, and shows either that there is a great measure of disloyalty among co-operators, or that the four and a half million members do not represent so many families, but that two or three of a family are in membership in thousands of cases. Probably inquiry would reveal both suggestions as actual facts.

The co-operative position can be observed from another angle. The retail societies have 98,227 employees engaged in distribution and 31,171 in the various productive enterprises, such as bakeries and boot repairing works. This was an increase of just over 1 per cent., while the wages and salaries fell 6 per cent. It is possibly such a comparison alongside of the increased net profit that has encouraged the National Union of Distributive Workers to make a demand for a revival of shop wages on a national basis—a demand that the bulk of the retail societies wish to be postponed until the Grocery Trades Board has gone into the whole matter of shop assistants' wages with a view to some standard of uniformity as between co-operative and private shops. In 1923 the average wage paid to the distributive workers—boys and girls as well as men and women—was £131. Each employee averaged £1,647 of sales, and on such sales secured a net profit of £160. Although there are many grades, from managers to vanboys, included in the 98,227 distributive workers, the fact is clear that each, on the average, contributes a net profit of 10 per cent. on the sales and of about 17 per cent. on the capital involved. The general rule—although there is a tendency

to reduce the return to $4\frac{1}{2}$ or $4\frac{3}{4}$ per cent.—is to pay 5 per cent. interest, leaving about 2s for dividends on purchases, apart from the grants to charitable, educational, political, and organising funds. These facts are significant of the business basis of the movement, the fundamental character of which seems to be only casually recognised by many recent incursionists from other movements.

The need for increased production has been the subject of resolutions at each of the 56 annual congresses that have been held. The movement is not yet, however, fully self-contained, and the following analysis of some of the statistics presented to the assembly at Nottingham is probably the first publication of the proportion of actual co-operative trade in the co-operative movement:—

	1923.
Productions of the English C.W.S.	£ 20,617,273
Productions of the Scottish C.W.S.	5,155,332
Productions of co-partnership productive societies	1,906,629
Production by retail societies (1922 figures)	62,000,000
Total	89,579,234

So that of the total trade of 165 millions done by the retail societies, about 90 millions consists of goods made in the movement, the remaining 75 millions worth of commodities being purchased from outside firms.

The growth of the co-operative movement on its manufacturing side may be illustrated by the progress of the Co-operative Wholesale Society, which first commenced business at 3 Cooper street, Manchester, exactly 60 years ago. At the end of the first 30 weeks of its existence its net sales totalled £51,857, its net profits £267, and its share capital £2,455. At that time the membership of all co-operative societies holding shares in the C.W.S. was 18,337. An average dividend was paid of 1½d in the £. The following table shows corresponding figures, taken at decennial intervals to 1914, and in 1922:—

Year Ended.	Number of Members Belonging to C.W.S. Shareholding Societies.	Share Capital.	Net Sales.	Net Profit.	Average Dividend Paid per £.
January, 1874	168,985	£ 48,126	1,636,950	£ 14,223	d 2
December, 1884* ..	459,734	207,080	4,675,371	54,491	2½
" 1894	910,104	598,496	9,443,938	126,192	2½
" 1904	1,594,145	1,196,703	19,809,196	332,374	4
" 1914	2,336,460	2,130,959	34,910,813	840,069	5
" 1922†	3,494,335	5,101,255	65,904,812	111,268	..

* Fifty-three weeks. † Year of slow recovery from trade depression.

At the present time the society's operations cover a wide field of industry, its various factories carrying on the treatment and manufacture of foodstuffs and tobacco, textiles, clothing and footwear, furniture utensils and domestic requisites, as well as printing, sawmilling, motor vehicle manufacture, coalmining, &c.

In the old days when Hughes, Neale, Holyoake, Mitchell, Shillito, and Greening were the leaders of the co-operative movement, the appeal for more production within itself was constant and insistent; it still comes from their successors, Messrs G. Thorpe and R. Stewart, the chairmen of the two wholesale societies, and from Mr J. J. Worley, of the Co-operative Productive Federation, who declared the Congress Exhibition open; but it is being overwhelmed by the newer and more vigorous men and women, who have given a political turn to the Old Ideals of the movement. It is popular at the present time, when a co-operative M.P. is in the Government and five others give the Premier voting support, but the co-operators would do well to remember that trade is the basis of the movement, and that from the profits of business all their political ventures are financed. They should do nothing to impair their productive and commercial position by a too-eager alliance with one of the three political parties in the State. Signs of its ultimate fusion are abroad; hence the necessity for careful and immediate attention to the real purpose of the movement, viz., the protection of the consumer and the satisfaction of the producer.

ELECTRICITY COMPANIES' RESERVES.

THE two preliminary Bills, No. 1 and No. 2, promoted by the London electricity supply companies, are now safely through the House of Lords, and will shortly be presented to the House of Commons. It will be on the second reading of the Bills that the principal discussion is likely to arise. Those who are in charge of operations think, however, that there will be no great difficulty in securing a passage for the Bills, considering that the antagonists and protagonists are both well familiarised by now with each other's arguments. It is recognised that the time is long overdue for a real effort to be made to place upon a stable footing the electricity supply industry of London, and that the progress of such a deeply important unit in the commercial world has been handicapped for too long by vexatious, and often trivial, causes for delay in the settlement of a unified scheme for the whole of the metropolis. The scheme which holds the field is one for dividing London into three groups, the first of which will comprise the County of London, City of London, South Metropolitan and South London companies; the second will consist of the West-end undertakings; while the third embraces local authorities. Most of the London companies received their concessions in 1888, and these concessions were to expire in 1931 upon terms the precise definition of which remains in doubt to this day. Arrangements, however, have recently been made between the companies and the London County Council whereby the latter will agree to an expansion of the companies' tenure for another forty years under certain conditions. These—which have already been set out in the *Economist*—provide that all the fixed assets held by the companies at the time that this Bill is put into operation are to be handed over, free of cost, in 1971. A sliding scale is to be introduced. The companies are to be allowed to pay dividends on their existing ordinary shares, and on agreed reserves, until 1931, after which date the dividend will be 7 per cent. on both ordinary shares and reserves. The arrangement will not affect debenture stocks, but preference shares will have their lives extended by it by a period of forty years from 1931. The position is one of extreme interest, not only to shareholders, but to consumers as well, and the fact that prices in the share market are hardly moving at all reflects both the uncertainty and the hopes that arise on the present known conditions. The unknown factor is that of what reserves may be agreed upon by the companies and the Electricity Supply Commissioners, for the latter may hold that a company has not treated its reserve account in a proper manner, in which case the figure at which the reserves stand might be written up or written down. Expectation looks for these reserves to be capitalised and distributed amongst the ordinary shareholders, a point on which further doubt arises through a possible claim being made by preference shareholders for a diversion to themselves of part of the reserve funds, although to the average mind it would appear that a reserve fund belongs to ordinary shareholders, seeing that it has been accumulated at the expense of the latter, and that it benefits indirectly the preference shareholders as well. We may take the figures of the companies for the year ended December, 1923, to show the amounts which stand at the credit of depreciation reserve and sinking fund accounts, and add another column giving the dividends for 1923:—

Company.	Capital Issued at December 31, 1923.	At Credit of Depreciation Reserve and Sinking Fund Accounts.	Dividend for 1923.

It cannot be too strongly insisted that the amount for depreciation shown in the above table as reserves in the companies' accounts is not the "agreed" amount, although, of course, quite possibly it may happen to be so when the matter is thrashed out between the company and the Authority. Unless this, however, is borne clearly in mind, it is very possible to be misled by the figures quoted above. The figures are essential for a clear grasp of the position as it exists to-day, but estimates can hardly be built on them, inasmuch as the reserves are not "agreed." It may be added that the companies enjoyed a bumper year in 1922, achieved still better results in 1923, and, if our information is correct, for the current twelve months are likely to do even greater things, in the way of making profits, than they succeeded in accomplishing last year.

Notes of the Week.

The Session Resumed.—The *pièce de résistance* on the Parliamentary menu in this first week of the resumption of the session after the Whitsuntide recess was, of course, provided by the debates on Imperial Preference, which we discuss on a previous page. But the week has had other features, of which the chief was a heavy Government defeat on the London Traffic Bill on Monday. This is the fourth defeat which the Government has suffered in

this its first session, and of the four it was the least important. It took place on a Liberal amendment designed to introduce into the Bill a clause providing for anti-trust legislation; but its political insignificance was quickly assessed by Mr Clynes, who promptly stated that the clause would be re-introduced with Government amendments. But, if political importance is lacking, the incident reflects upon the Government's powers of stage management. For every defeat, however secondary the subject, tends to weaken the prestige of the Government. It appears to have been just one more of those cases, to which we are becoming accustomed, of the failure of the Leader of the House and his Whips to enter into the reasonable and customary process of consultation with regard to approaching business. Possibly the explanation lies partially in the fact that this *contretemps* arose on the first day after the holidays. One of the chief problems for the Government to solve is how to press through the huge amount of legislation that they have in hand. Unless better methods of handling the House are developed than those which Mr Clynes displayed over the London Traffic Bill on Monday, they will find themselves quite unnecessarily hampered in the execution of a very heavy task. During the eight weeks which separate us from the normal date for the autumn adjournment, the Finance Bill must be passed, the battle of the McKenna duties has to be re-fought, and the whole programme of other legislation is in arrears. The situation calls for tact, as well as business capacity, from a Government in an exceptional degree dependent upon the goodwill and assistance of opposition sections.

M. Herriot's Policy.—With a minimum of delay, which is exceedingly welcome under the circumstances, the tangle in French politics has been straightened out. M. Doumergue has been duly elected to the Presidency vacated by M. Millerand, and M. Herriot, promptly summoned to power by the new President, has formed his Government, and declared his policy in the Chamber. The major portion of his statement related to domestic policy and followed expected lines, while the announcement of the withdrawal of the French diplomatic representative at the Vatican was also a foregone conclusion. But important though these matters are, British eyes skate rapidly over these sections of M. Herriot's statement and concentrate upon the passages referring to the Ruhr, Reparations, and a European settlement. A careful perusal of those passages leaves a happy impression. M. Herriot states that France cannot evacuate the Ruhr until the pledges contemplated in the Dawes Report "have been constituted, with just and effective guarantees of execution, and handed over to the international organisations designed to work them." Into these words we are surely justified in reading a most welcome and important change from the attitude of M. Poincaré. He could hardly have been expected to say more at this juncture. The phraseology of the rest of the statement is equally satisfactory. The experts' report is "accepted without *arrière pensée*," including, presumably, the experts' oft-repeated insistence on the indispensability of the economic unity of the Reich. Amnesty is promised for political offenders in the occupied territories, emphasis is laid on the new Government's desire to support and strengthen the League of Nations. "Problems of security" are to be solved by "pacts of guarantee themselves placed under the supervision of the League." The will to peace is illustrated by a proposed change in the Military Service Law, which will reduce the French Army, this, however, to be conditional on the satisfactory solution of the security problem. Altogether both in tone and in substance M. Herriot's declaration comes well up to the expectations of those who saw in the results of the recent French Election the approach of a real hope of European settlement, and the encouragement to be derived from it is heightened by the favourable reception accorded to M. Herriot's statement in Germany. The recent political changes in France have absorbed valuable time, and time is of the first importance. It is, therefore, welcome news that M. Herriot is to meet Mr Ramsay MacDonald forthwith with a vote of confidence from the French Chamber in his pocket.

The South African Elections.—The defeat of the South African Party opens the way for a coalition Ministry consisting of Dutch ultra-Nationalists and Labour extremists, whose only bonds of agreement are their opposition to General Smuts and their hostility to the mine-owners of the Rand. Their alliance for the elections was only effected by the promise of the Nationalists not to raise, during the lifetime of the new Parliament, the question of secession from the British Empire, and it ended automatically with the close of the polls. The Nationalists, moreover, are not only inherently antagonistic to the Labour Party, but are apparently not agreed as to their own vague programme. Some of them desire to cut down expenditure on the defence of the Union, others to increase it and to maintain a standing army, presumably to prepare for independence. Their official programme includes an overhaul of the Civil Service—an approach to the discredited "spoils system" of the United States; tax revision; the segregation of the coloured population—a dangerous item; protection to South African industry; measures of some sort to mitigate poverty and unemployment; the Labour Party desires heavier taxation of the richer mines. The Nationalists also propose the establishment of a State bank, with considerable powers of note issue—which, as their opponents have pointed out, is specially incongruous in the chief gold-producing country of the world. It is predicted, however, that General Hertzog, who will now become Premier, will have to placate his own impatient followers by dissolving Parliament again in order to free himself from his pledge respecting secession, and then the Labour Party will cease to support him. But official experience will teach the new Ministers much. As in England, the Labour extremists have disturbed the election meetings, and the Labour leaders have condemned their action. It will probably be difficult to keep the Coalition together, or to maintain discipline in either of its sections. The hostility to General Smuts has been most conspicuous in his own Transvaal province; but we cannot suppose that he will remain out of office for long.

The U.S. Presidential Election.—The Cleveland Convention, as was expected, has nominated President Coolidge by an overwhelming majority; but the situation may well give his supporters some ground for alarm. Many prominent Republicans have been discredited by the oil lease scandals; but they retain considerable influence in the party organisations of their respective States, and are not likely to use it in active support of his candidature. Originating some seventy years ago as a Liberal party, the Republicans have gradually become as Conservative in spirit as our own "Die-hards," and the "Progressive" tendencies revived by President Roosevelt have disappeared. The Cleveland Convention was described as "the re-birth" of the party, but the platform contains nothing to satisfy the Western farmers, who constitute the strength of the "Insurgent" movement, and whose votes will determine the attitude in the contest of six or seven States of the Middle West. Nor does it appeal to Labour or to the independent "Progressives," or to the numerous voters outside these groups who favour that control of railroad and Trust monopolies for which Senator La Follette, the "Insurgent" leader, has been fighting throughout his career. President Coolidge, indeed, has triumphed over other sections of his opponents within the party by obtaining the adoption of his own plan for a world-court in preference to the various alternatives put forward; but, though the Republican party has made a great advance in its foreign policy since 1919, that will not help it with the "Insurgents." And his wishes have been disregarded by the nomination of General Dawes for Vice-President, either as a popular personage among the German-Americans, or because the party managers desire to put him where he will have no scope for his tendency to independence. The interest now shifts to the four other nominating conventions. The "Farmer Labour Convention," in session this week at Minneapolis, without either its rural or "Progressive" constituents, is now practically Socialist, and can only affect the result by diverting Progressive, Insurgent, and possibly Democratic votes. The Democratic Convention meets in New York next week, and Mr Coolidge's chances depend largely on its platform and choice of candidate. The

Progressives, whose strength seems to be largely, among the discontented railway employees, meet at Cleveland on July 4th; and the Insurgent Republicans, under Senator La Follette, hold their convention shortly at Chicago. They alone can affect the result, by detaching several Western States from the Republicans; and it seems possible that there will be no majority for either of the older parties in the Electoral College. Then the election will have to be conducted by Congress, and it is freely predicted that there may be a deadlock. But it is too early yet for prophecy.

Mexico and Great Britain.—Had President Obregon desired to show that his Government was disqualified from recognition by its inexperience in international relations, he could not have done so more effectively than by his treatment of the British representative. Mr Cummins, as had already been shown by the answers given to questions in Parliament, takes an unfavourable view of the capacity and stability of the present Mexican Government; he is stated to have sent it "a rude communication," and to have given offence previously by his action; but the letters read in Parliament were perfectly proper, and, whatever his precise diplomatic status, he represented the British Government. Doubtless under the circumstances his withdrawal was necessary, but he has deserved well of his country. Recognition of President Obregon may be suspended indefinitely. The negotiations, in fact, appear to be further endangered by the delay in the deposit of the full sum required to carry out the resumption of the debt service under the Lamont Agreement—a delay which no doubt is due to the recent rising, and which, as Mr Ponsonby intimated in Parliament on Tuesday, is a matter for the bondholders and their representatives rather than the Government. The chairman of the Mexican Railway, at the half-yearly meeting on Wednesday, strongly advocated a continuance of the negotiations for recognition. It is to be hoped that President Obregon will refrain from making them impossible.

Irish Free State Affairs.—Our Dublin correspondent writes:—The current issue of the Dublin *Gazette* shows a credit balance in the National Exchequer of £4,525,763. Revenue receipts for the first 75 days of the financial year stand at £4,988,487, compared with £5,829,830 for the first 77 days last year. Post-office, income-tax and Customs show substantial increases, and a falling off of upwards of a million and a-half in Excise receipts has almost certainly a special explanation to the effect that last year's figures included certain items of an abnormal or non-recurrent character. The National Loan stands just under 93—its depression being due to political causes, trouble in the Army and the Boundary controversy. The former is the subject of the report, just published, of the Army Inquiry Committee. The public has not been edified by learning of the existence of two secret societies in the Army—one of which received distinct encouragement from the headquarters staff avowedly as an antidote to the other, which was manned by officers of political antecedents and political aims and ambitions, to which they were inclined to subordinate purely military and disciplinary considerations. There has been a large weeding out, and

ranted by the earnings. The announcement of the Wit. Deep has yet to be made. Several of the smaller producers do not declare interim distributions. The "Johnnies" 15 per cent., tax free, constitutes a record on the present capital.

Chartered's First Dividend.—A Stock Exchange correspondent writes:—The declaration by the British South Africa (Chartered) Company of a dividend of 6d per share, free of tax, came as a surprise to the Stock Exchange market. It was followed by a fall in the price from 11s 3d to 10s 6d. Rumour has been busy for some time past with the anticipation that the company would distribute something to its shareholders as soon as the clerical staff had finished the work of returning the 5s per share capital to the proprietors. The present announcement, however, is to the effect that the 6d per share free of tax will not be paid until early November, and that it is in respect of the 18 months from April 1, 1922, to September 30, 1923. Something of a bullish atmosphere has been created around Chartered during the past few weeks, this being due in some measure to the fact that quite a number of the 30,000 shareholders re-invested their 5s return of capital into Chartered shares. At anything like half-sovereign, Chartered began to look a reasonable speculation, and the shares were taken up to 11s 6d a few days ago, from which, as already noticed, the price reacted to the extent of a shilling. Discussion is now busy around the point as to what price the shares are worth, looking at the Chartered Company as a trading concern, no longer hampered by administrative duties. The company is making money out of the Rhodesian railways, and probably its holdings of securities have appreciated considerably during the past twelve months. Its mining rights must be valuable from the point of view of revenue, and there are many directions into which the board can now branch out that were denied to the company when it was responsible for the partial government of Rhodesia. The company has been in existence for 35 years without returning a penny-piece to any of its shareholders, but hope springs eternal, and the Stock Exchange market view is that there is more encouragement in the outlook at the present time than could have been justified at any period of the company's history during the last decade or two. It may be remarked, as a matter of whimsical interest, that people have been applying to the Chartered Company for the 5s return of capital in respect of all kinds of Rhodesian mining shares: sending their certificates, and even their photographs. A large addition has been made to the clerical staff of the company, and the reason for delaying payment of the sixpenny dividend is that its earlier distribution would have been a matter almost of physical impossibility.

The "Shell" Report.—It is satisfactory to read in the report and accounts of the Shell Transport and Trading Co. that the final payment of Excess Profits Duty has been made. The amount was not stated, but as investments have been reduced from £12,820,686 to £8,355,402, and cash from £539,293 to £149,136—a total reduction of £4,855,441—and as the property account, on the other hand, has only increased by £2,937,105 (from £20,473,267 to £23,410,372), it would appear that the gross earnings of the Shell (i.e., from dividends on shares in subsidiary companies and interest on investments, loans, &c.) show a slight increase at £3,048,687, plus £2,000,000, as against £4,938,084 in 1922. The latest year's results compare as follows with those of previous periods:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Balance forward	£ 265,194	£ 1,239,032	£ 1,136,877	£ 1,242,622	£ 2,007,588	£ 2,069,596	£ 2,993,056

That the company has been able to produce these results in one of the worst years of price slumping ever experienced by the oil industry is a remarkable achievement, and arises no doubt from the enormous increase in the production of its associated companies in the United States. The carry forward is reduced to £230,083, but that, after the payment of E.P.D. to the tune of £2 millions, the liquid resources should still stand at £8½ millions, is some measure of the company's continued financial strength.

John Brown and Co.—The figures of John Brown and Co., Limited, for 1923-24, are now published. As will be noticed from the table given below, a slight contraction in information is part of the trend of affairs. A comparison of results reads as follows:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Gross profit.....	£ 437,834	£ 552,190	£ 468,704	£ 418,836	£ 304,740	£ 311,838	£ ..

Carried forward ..	97,420	192,308	178,929	179,600	180,632	181,551	186,406

Again no allocation is made to reserve, and the ordinary dividend is maintained at 5 per cent. The report states that, "owing to home and foreign competition (the latter assisted by low wages and low rates of exchange), prices of manufactures and shipbuilding have remained very low, and in order to give employment to their workmen the directors have taken many contracts at prices which cover little or nothing beyond wages and cost of material."

Guest, Keen and Nettlefolds.—That the prosperity which follows the undertaking of Guest, Keen and Nettlefolds, Limited, has not been affected by the prevailing industrial depression is revealed in the accounts now published for the year ended March 31, 1924. In the following table we show the progress made by this energetic concern over a number of years:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1922-23.	1923-24.
Gross profits	£ 401,722	£ 446,645	£ 417,141	£ 334,530	£ 884,121	£ 918,939	£ 948,763

Carried forward ..	270,441	417,587	235,687	261,605	264,098	209,665	220,264

As usual, the dividend of 10 per cent. is free of tax. It may be recalled that the year before last, the date of the end of the financial year having been changed from June 30th to March 31st, the accounts related to a period of nine months, and these figures are not therefore comparable. Net profits for the nine months, after payment of debenture interest, amounted to £567,200, and the available balance, including the balance brought forward, was £831,300. During the year an offer was made to D. Davis and Sons and the Consolidated Cambrian, Limited, for an exchange of ordinary shares, and it is now stated that Guest, Keen and Nettlefold hold practically the whole of the ordinary shares in the two companies. To what extent these acquisitions have affected the total profits in the year under review it is difficult to say. Investments have increased from £12,591,018 to £13,338,464, while the ordinary capital has increased from £5,378,153 to £6,293,347. The reserve fund at £2,628,503 is unchanged. Total assets are £18,993,142, as against £18,131,344 last year.

Ebbw Vale.—The directors of the Ebbw Vale Steel, Iron and Coal Company, Limited, are able to present a better picture of affairs for the twelve months ended March 31, 1924. Gross profits are returned as £653,689, which compares very favourably with £426,117 for the

previous year. It is stated that the whole of the company's collieries were fully engaged during the year, except for stoppages occasioned by the strikes of the railway locomotive men and transport workers in January and February last. Profits and their allocation in recent years, and in 1914, have been as follow:—

	YEAR ENDED MARCH 31.				
	1914.	1921.	1922.	1923.	1924.
Gross profits	£ 166,873	£ 633,248	£ 49,501	£ 426,117	£ 653,689

* Withdrawn from reserves.

The outlook for preference shareholders is distinctly bright. It is mentioned that the iron and steel works have been fairly well employed during the whole period, but that prices have been unsatisfactory. The wages paid during the year amounted to £1,055,525, as compared with £1,310,083 for the previous year. General expenses at £10,115 are slightly higher, the comparative figure being £8,427. Legal expenses are £1,392, as against £1,614. Interest on loans is down from £123,402 to £96,760. The detailed information on numerous points afforded by the accounts will be welcomed not only by shareholders, but other members of the investing public. An analysis of the balance-sheet will be found in our usual column.

Howard and Bullough.—The report of Howard and Bullough, Limited, for the last financial year is not inclined to be communicative over the significant falling off in profits. As no explanation of the striking expansion in business was vouchsafed in previous accounts, no doubt the directors take the view that none is needed now that the tide has turned the other way. A summary of past results is appended:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Gross profits ..	£ 163,066	£ 301,152	£ 125,408	£ 128,218	£ 158,749	£ 393,058	£ 597,247	£ 167,987

Carried forward ..	30,000	91,081	53,989	57,207	50,956	94,014	166,261	152,998

Ordinary shareholders receive 12½ per cent. for the year, but the reserve is passed over. In the balance-sheet, which will be found analysed on another page, assets are recorded as £2,942,190, as against £3,037,985 a year ago; cash at bank amounts to £125,074, as compared with £281,359, but stock-in-trade has advanced from £338,791 to £373,910. Reserves total £755,000.

Crosse and Blackwell.—Another scheme of reconstruction comes before us this week. It will be remembered that a detailed report was presented on the reorganisation of the company which was circulated to shareholders in January last. The present scheme submitted is the sequel. It is pointed out that the net tangible assets of the company as on December 31st last were £2,532,619, and a value of £1,450,000 is placed upon the goodwill of the amalgamated companies, making £3,982,619. Liabilities amount to £1,251,650, leaving £2,730,969 to represent the paid-up share capital of £7,354,382, consisting of £3,000,000 of first preference, £1,741,750 of second preference, and £2,612,632 of ordinary shares. It will be recalled that only the first preference shares were directly issued to the public. It is proposed that each £1 first preference share shall be written down to 15s. This is rather a drastic cut, which has to be considered in

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED ALL INSURANCE EXCEPT MARINE Head Office 10, FLEET ST. LONDON E.C.4

ESTABLISHED 1836

General Manager W. A. WORKMAN, F.I.A.

relation to the new participating rights offered by the scheme. The second preference shares are to be written down from £1 each to 4s, and the ordinary shares from £1 to 1s. The share capital will then consist of £2,250,000 of first preference, £348,350 of second preference, and £130,631 of ordinary shares. It is proposed that the first preference shares shall be entitled to 7½ per cent. on their reduced amount and the second preference shares to 10 per cent. on their reduced amount, and these rates shall be non-cumulative until December 31, 1926, after which date the rates will become cumulative. The first preference shares will, in addition, be entitled to a further dividend of 2½ per cent. after the ordinary shares have received 10 per cent., while the second preference shares will be entitled to a further distribution of 10 per cent. thereafter, making 20 per cent. in all on their reduced amount. Any further profits will then belong to the ordinary shares. The directors, in optimistic vein, express the opinion that when the business reorganisation has been completed, and with the return of general trade prosperity, the profits should suffice to pay 10 per cent. on the first preference, 20 per cent. on the second preference, and 10 per cent. on the ordinary shares at a not too distant date. The proposals involve the cancellation of all arrears of dividends on the first and second preference shares, the amount of which has accrued from June, 1921. This is, of course, a serious point for preference shareholders to consider. In the letter to shareholders explaining these proposals it is mentioned that "Those members of the board who have been directors since the inception of the company in 1920, and who are themselves large shareholders, deeply regret the necessity for putting forward such drastic proposals for reorganisation of capital, which is largely due to the policy of expansion adopted in abnormally favourable times." To what extent preference shareholders will acquiesce in this scheme it is difficult to say. But it is well that they should remember that they have the right to dissent. We do not know if preference shareholders are officially represented on the board, but if they are not, and if their rights are to be curtailed, it would be fitting and complementary to elect at least two representatives. With the report is issued the accounts of the company for ten months to December 31st last. This shows a trading loss of £36,174 after charging management expenses of £32,611 to allied companies, and the total adverse balance, after adding interest on loans and the guaranteed dividend on the preference shares of James Keiller and Son and the debit balance brought forward, is £152,422.

Boots Pure Drug.—Profits of Boots Pure Drug Company, Limited, for the year ended March 31, 1924, at £628,620 are lower than those given a year ago. Preference dividends absorb £96,750, which leaves a balance of £531,870 available for ordinary shareholders. A total dividend of 36 per cent. is paid on the ordinary capital, and £100,000 is allocated to reserve. This leaves £210,552 to be carried forward to next year's account, as against £138,682 brought in. It may be recalled that last year a dividend of 360 per cent. was paid on the £100,000 ordinary shares in the company, while the issued capital bearing fixed interest amounts to £1,400,000, and receives a little less than a hundred thousand pounds. This remarkable dividend did not comprise all the

good fortune of the ordinary shareholders. Certain reserves, both in this and subsidiary companies, which were built up against a fall in prices, were not all required. Altogether there was a surplus account, amounting with the balance from the previous year to £1,443,071. As a sequel, the issued share capital of the company has been increased to a total of £2,400,000. Under resolution of the company, 900,000 unissued ordinary shares were paid up in full by the appropriation of £900,000 from the surplus account and distributed among the holders of ordinary shares. Thus the 360 per cent. distribution is maintained. The reserve account is now shown as £503,989. Other interesting items in the balance-sheet will be found compared with previous figures in another column.

Robinson Deep.—The statement for 1923 of this Witwatersrand company is a little belated, being issued in conjunction with a report of the annual meeting, held at Johannesburg in April. All round the showing made is a distinctly satisfactory one. The further reduction effected in the working cost ratio had the result, despite some decline in average revenue, of bringing out the working profit at nearly 10s per ton—a record, at any rate for recent years. The issue of debentures made at the end of 1922, plus the proceeds of the subsequent issue of "B" shares, and a portion of the 1923 profits, enabled the company to replace the revenue expended on capital account. The interim dividend of 6s just declared on the "A" shares, following upon 5s 6d earlier in the year, reduces the arrears to 4s; and unless something unusual happens, this amount will be cleared off at the end of the year with the distribution then due. For some time to come the dividends on the "A" shares will be at the fixed rate of 3s per share per annum—they will become, indeed, a kind of annuity, with the income on a progressively decreasing scale. A maiden distribution on the "B" shares should be announced next December. Although development was restricted by reason of the sinking of additional shafts, the ore reserves, at 2,248,000 tons, value 6.7 dwts, show an increase on the year of 402,200 tons, equal to nearly 22 per cent.; the total represents not far short of three years' supply for the mill. Apparently the process of "sorting" is dispensed with, at any rate on the surface.

Shamva.—Our mining correspondent writes:—At first sight the development position of this huge low-grade Rhodesian proposition does not appear particularly good, the ore reserves having fallen from nearly 2½ millions, averaging 3.5 dwts, to 1,852,400 tons, averaging a trifle less. The explanation, however, is that during the year exploratory work was confined almost entirely to proving the extent of payability of the ore bodies in the seventh level. The results obtained here are described by the consulting engineer as encouraging; and, as a result, a greatly extended scheme for the development of the mine in depth has been laid out and is being vigorously pushed forward. An interesting feature in the position is the discovery of a new ore body since the end of the year. This has now been proved for a length of 400 feet, averaging 4.9 dwts over a width of 11 feet. Such value, although above that of the general average of the mine, is not so good as at first shown; and as a crosscut at 50 feet depth gave the reduced average of 4.3 dwts, albeit over the increased width of 15 feet, the inference is that too much importance should not be attached to the higher value of the ore body. Last year's profit of £118,900 compares with £148,400 in 1922; the grade of the ore treated was lower, while costs, at 108½d, showed a slight expansion, savings in certain directions being rather more than offset by the increased expense of working at greater depth. Accordingly, the reduction in the dividend continued, the 1923 total being 22½ per cent., as against 27½ per cent. for 1922. The rate is now on a 20 per cent. basis. Still, on the whole, the outlook appears fairly hopeful.

Oversea Correspondence.

UNITED STATES.—TREASURY FINANCING—EASY MONEY RATES—POOR CROP OUTLOOK—APRIL RAILROAD EARNINGS—COMMODITIES DECLINE.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 10.

THE United States Treasury's June financing, consisting of an offer of approximately \$150,000,000 of 2½ per cent. Treasury certificates of indebtedness, dated June 16, 1924, and maturing December 15th of this year, is interesting because the low rate marks a return to the pre-war basis, and because the amount of the new issue is surprisingly small. The low interest rate, of course, reflects the present decidedly easy money conditions in this country. Both call and time money quotations now current are the lowest that have prevailed since the spring and summer of 1917. On the Stock Exchange this week the call money rate dropped to 2 per cent. for new loans and renewals. Call money against bank acceptance has fallen to 1½ per cent., the lowest level for demand accommodation against bills ever quoted in this market. Bank acceptance rates on prime eligible 30 to 120-day bills have been further reduced to 2½ per cent. bid and 2¾ per cent. asked—the lowest ever recorded since a market was created here for acceptances following the organisation of the Federal Reserve system. The Treasury, naturally, has taken advantage of the pronounced easiness of money markets. At the same time, the low interest carried by the new certificates clearly indicates that the department expects no permanent stiffening of rates in the near future. The present Treasury offering, together with income-tax payments due on June 15th, and with the balance already on hand, is expected to provide for all requirements until September, when additional financing will become necessary.

The announcement of the low rate referred to, together with the further decline in money rates, stimulated active trading in the bond market, where a heavy demand developed for high-grade investment securities, particularly United States Government issues. Most of the Liberty loan bonds this week established new high records, and others reached new high levels for this year. Every Government issue bearing a 4½ per cent. interest rate is now selling at a premium of a full point or more. The recent sharp rise in prices of such securities, and the consequent lowering of the yield to purchasers, as well as the fact that only about \$150,000,000 new certificates, maturing in six months instead of one year, are to be offered in the face of Treasury disbursements this month, exceeding \$500,000,000 has caused a revival of rumours that the Government may undertake to float next autumn or in December a long-term bond issue carrying a lower rate of interest than the 4½ per cent. war loans. Reports are also current that owing to the recent sharp declines in open market money rates, the New York Federal Reserve Bank, which lowered its rediscount rate from 4½ to 4 per cent. on May 1st, may again reduce its rate in the near future.

As was foreshadowed by the decrease in the volume of freight traffic, combined earnings of all first-class railroads of the United States for April showed a heavy decline from the corresponding month of last year. Gross revenues amounted to \$474,821,580, representing a drop of \$48,482,000 from the April, 1923, total. The decline in earnings, however, was greater than the falling off in traffic. Operating revenues were 9.3 per cent. less than in April of last year, while the number of cars loaded with revenue-paying freight decreased from 3,764,266 in April, 1923, to 3,499,210 in April of this year, a loss of 265,056 cars, or only about 7 per cent. The relatively greater decrease in earnings was perhaps due—partly, at least—to a larger percentage of low-class freight carried than in the previous year. Offsetting this loss in gross earnings to some extent, the railroads reported a reduction of \$26,455,700, or 6½ per cent., in operating expenses, which totalled \$377,692,300 for last April. Net operating income for that month aggregated \$61,821,900, as compared with \$80,239,884 in March, and with

\$83,515,300 in April of 1923, the decline from a year ago amounting to 26 per cent. For four months ended with April of the present year, earnings of railroads in the eastern district were at the annual rate of 5.10 per cent. on their property valuation, in the southern district 5.51 per cent., and in western territory only 3.37 per cent., while in the north-western region the carriers showed 2.12 per cent. earned on their property investment. During April 41 railroads were operated at a loss.

For the sixth successive month, commodity prices declined, on the average, during May, Bradstreet's index number, as of June 1st—namely, \$12.2930—showing a drop of 2.1 per cent. from May 1st. Next to the decline shown as of March 1st, this was the heaviest reaction recorded in the past six months. The downward trend was quite general, though individual losses were not extreme. The June 1st number represents a decrease of 8.1 per cent. from June 1st a year ago. The decline from the peak level of February 1, 1920, is 41 per cent. As compared with the pre-war index number of August 1, 1914, the present number represents an advance of 41 per cent. All of the 13 groups of articles used in the compilation contributed more or less to the further drop last month.

The present outlook for crops in the United States is the poorest for many years. Taking the country as a whole, "the general condition of crops now growing is lower than on any June 1st during the last dozen years," says the Department of Agriculture. Unseasonable weather in most sections is blamed for the unfavourable situation. In the Pacific Coast States crops have suffered severely from unusually warm weather and drought, last month having been the hottest May there on record, excepting 1897, while in most of the States east of the Rockies the coldest May for years, with heavy and frequent rains, caused extensive crop damage. Sowing of spring grain was delayed, and a great deal of replanting was necessary. In Atlantic Coast States, from Virginia northward, present prospects, generally, are reported as close to the average, but that is true of only a few other States. Barring certain fruits, no crop for which forecasts have been made shows an average June 1st condition. While June 1st estimates are not a reliable indication of what the actual harvests will be, it is evident that all crops have had an exceptionally poor start.

The further heavy shrinkage in the United States Steel Corporation's unfilled orders shows how pronounced has been the falling off in new steel business this season. The corporation reports that unfinished orders on its books, as at May 31st, totalled 3,628,089 tons, as against 4,208,447 tons on April 30th, representing a decrease last month of 580,358 tons. The loss during May brought the aggregate amount of business on hand to the lowest level since November, 1914. For April and May the total decrease amounted to 1,154,718 tons. The corporation's shipments last month approximated 1,000,000 tons, while incoming business totalled only about 600,000 tons, indicating that orders to the extent of about 180,000 tons were cancelled. At the May rate of shipments, the leading producer now has about four months' business on hand. The steel situation generally in this country shows no definite change for the better, although the Steel Corporation's unfilled orders are not likely to suffer such a heavy decrease this month, since shipments will probably be smaller than in May. As the summer is usually a dull period, and political considerations are causing unsettlement, no material increase in steel business is expected during the next month or two.

GERMANY.—CABINET AND CREDIT—FINANCES—CURRENCY—PRICES—BANKS IN 1923.

(FROM OUR CORRESPONDENT.)

BERLIN, June 17.

THE credit crisis threatens to develop into a conflict between the Cabinet and the influential business circles which suffer from the deflation policy. The latter have the support of many disinterested experts. The main point of dispute rages around the Reichsbank's methods. It is held by the Government's critics that more liberal credit-giving, even though it must bring an increase in the currency circulation, is the only remedy. The Government and the President of the Reichsbank believe

that the crisis has permanent causes, being due to a real exhaustion of capital. The exhaustion naturally became visible only after inflation ceased supplying a delusive remedy by transferring what little real capital there was out of the pockets of the mark interests into those of business. Dr Schacht's view is that although increased production, if combined with economy at home, would slowly replace the lost capital, the only rapid remedy is long-term foreign credits, here including investments in German securities; and Dr Schacht holds that these credits will not be had until a Reparations settlement gives private foreign investors a real sense of security. In a conversation last week with your correspondent, Dr Schacht pointed out that many German investments which are materially well secured—some of the "stable value" loans, and also mortgages—yield from 12 to 18 per cent. Therefore, in view of the sensitiveness of international capital to even small interest differences, money might be expected to flow into Germany if political conditions were normal. The security question, however, is not merely material, but also political; at present such foreigners as are inclined to lend or invest ask not only whether the security is good and realisable, but also whether (after the Ruhr experience of 1923) there is risk of particular German properties being directly expropriated by the Allies in case no Reparations settlement is arrived at.

Meantime the Reichsbank is determined not to expand credit and inflate. The Minister of Finances, Dr Luther, says with some truth that "the German nation has too quickly forgotten how things formerly were..... If we again resort to inflation we shall bring a catastrophe." Repeating that foreign credit is necessary if production is to continue, Dr Luther points out that the present circulation (gold value) is more than three times that of inflation times. The first effect of the Rentenmark's creation was to produce certain inflationary phenomena; for some weeks the new currency was seriously threatened by its very low home buying power. This threat was soon overcome, and the Rentenmark currency has to-day full gold value. The balanced State finances, which are an outcome of this, are in opposition quarters represented as being too well balanced. In January-May inclusive, for instance, the Government bought back out of its surpluses 477,900,000 gold marks of Gold Loan. The redemption was primarily a currency operation, because the Gold Loan mostly circulated in small units as emergency money. This measure is condemned on the ground that neither deflation nor a reduction of debt was necessary. A former Minister, Prof. Julius Hirsch, declares that the Reichsbank, instead of refusing credit, ought to raise its discount rate until it gets within reach of the interest rate prevailing in the private market. This would encourage savings, and it is more important to increase the supply of credit than to maintain a low rate and to have practically no credit. Dr Hirsch holds that the Reichsbank's present rate should be at least doubled, and he expresses disbelief in the official theory that only foreign capital can end the crisis. Various industrial associations have attacked the official policy on the same grounds.

The Federal finances show remarkable stability. Those taxes which come in continuously have in the last report periods shown almost equal yields, and the whole yield in May was almost exactly equal to that of April. The following table gives (in gold marks, or billions of paper marks) gross receipts for May and for the first two months (April-May) of the new financial year.

Direct taxes—	May.	April-May.
Permanent.....	420,190,153	855,887,458
Non-recurring	4,619,425	17,933,120
	424,809,579	853,820,579
Customs and Excise	92,572,464	185,131,958
Export duties and bread levy .	1,096,366	3,060,961
Other revenue	258,935	508,404
	518,737,345	1,042,521,904

The largest yielder is income-tax, which in May brought 162 million gold marks, whereof 88 millions in form of deductions from wages and salaries, and in April-May 313 millions, whereof 167 millions from wages and salaries. After this come the 2½ per cent. Sales Tax, which yielded 134 and 291 millions respectively; Property

Tax, 38 and 61 millions; Tobacco, 36 and 70 millions; Corporation (Income) Tax, 22 and 48 millions; Customs, 22 and 43 millions; beer, 13 and 23 millions; sugar, 10 and 23 millions; Bourse transfers, 10 and 22 millions. The tax on railway passenger fares yielded 8 and 17 millions; on freight, 11 and 20 millions. Details of the Federal debt, of which the total was given last week, are :—

	April 30th. Millions of Gold Marks.
Funded—	
Paper-mark Debt	0-0
Stable-currency Debt—	
Dollar Treasury Bills	210-0
6 per Cent., redeemable 1935	214-0
" " 1932	52-0
	476-0
Floating—	
Rentenbank Credits, non-interest bearing	200-0
" " interest bearing	900-0
Rentenmark Treasury Bills	158-2
	1,258-2
	1,734-2

The cost of execution of the Peace Treaty in the six months October, 1923-April, 1924, was 460,468,716 gold marks, of which 313,473,856 gold marks was for the Army of Occupation, 24,815,264 gold marks for reconstruction deliveries, 12,702,338 gold marks for the English levy on German export prices, and 11,893,917 gold marks for coal, coke, and by-product deliveries.

The *Frankfurter Zeitung's* half-monthly price index shows for June 12th (98 commodities) 141.32, against a high point this year of 152.34 on April 15th, and a high point since the currency stabilisation of 164.96 on November 29, 1923. The group textiles and leather is 196.63, food 129.54, minerals 132.90, miscellaneous 127.10, industrial finished goods 141.10.

All the leading banks have now published their balance-sheets and profit and loss accounts for 1923. The former, as some of the reports emphasise, are entirely fictitious, and this is shown at once by the fact that some banks do not enter their capital and reserves among liabilities, these being paper mark sums of no value, while most write off their chief assets—buildings, securities, and shares in various undertakings—to sums of 1 gold mark or even 1 gold pfennig each, sums which nevertheless far exceed the capitalisations. The texts of the reports make it quite clear that the banking boom ended with the inflation. This has relieved the banks, which report having closed down numerous local branches and discharged very large numbers of employees. The seven biggest banks have got rid of 50,000 out of 150,000 officials employed in the autumn of 1923. The number of persons employed in all banks at that time is estimated at 375,000, as against about 100,000 in 1913. With exception of the Berliner Handelsgesellschaft, which alone retains its pre-war capitalisation, and pays 1 per cent., no dividends are declared. The banks have devoted their net profits to compensating themselves for "loss of substance"—i.e., the loss through depreciation of their own gold mark capitals. In view of the mark depreciation 1923, comparisons of profits with those of former years have no meaning. The profit and loss accounts show :—

	(Billions of Paper Marks.)	
	Gross Profits.	Administration and Taxes.
Deutsche	24,466,208	22,888,190
Disconto	13,768,722	13,768,722
Darmstaedter	28,483,003	17,102,049
Dresdner	24,415,203	15,006,269

The liabilities of the seven banks on December 31, 1923, totalled 1,161,800,000 billion paper marks, which, reckoned in gold at exchange of one to one billion, is less than a fifth of the total of liabilities (6,067,900,000 marks) in the balance-sheets for 1913. The composition of the assets of the banks has been radically changed through the disappearance of paper mark Treasury bills, which after 1913, and in particular in the first post-war years before commercial bills came back into use, formed the chief, and an immediately realisable, investment. In the assets of the banks also private bills play a very small rôle, totalling for the seven banks mentioned only 39,000,000 billion paper marks, as against cash

106,900,000 billions and 426,800,000 billions balances with other banks. Owing to the disappearance of Treasury bills, the liquidity of the banks is much lower than in former years.

SPAIN. — RECONSTRUCTION — FOREIGN TRADE — TRADE BALANCE—EXCHANGE—DEVELOPMENT PLANS.

(FROM OUR CORRESPONDENT.)

MADRID, June 14.

THE work of the Military Directory has slackened its pace, and in the meantime several commissions appointed to report on various problems have been going on with their work. The Budget is being prepared for July 1st; the Railway Council has finished its report on the all-important railway question and the probable adoption of the conclusions by the Government will place the lines on a paying basis and stop the Government advances. Other commissions are studying a system of agricultural credit, monetary and foreign trade policy, Civil Service organisation, the application of the new municipal system, &c.

Whatever may be the outcome of the present attempt to cure Spain of the plague of our old politicians, the country has already recognised the good intention and hard work of the men engaged in the enormous task of renewing the whole organisation of the State.

Foreign trade figures for last year are compared below with those for 1922 :—

(In Millions of Pesetas.)

	1922.	1923.
Total imports	3,033	3,059
" exports	1,449	1,596
Trade balance	-1,584	-1,463

These figures denote some improvement, as exports are up by 10 per cent., while imports remained practically the same. The unfavourable balance is therefore 121 millions less than in 1922.

Of course, trade payments do not make up the whole economic balance of a country, and it is very difficult to establish for Spain the approximate amounts of invisible exports and imports, owing to lack of good statistics. There is no doubt a balance against us in freight and insurance, but, on the other hand, interest on investments and on foreign balances abroad is largely in our favour. During the war Spain passed from the position of a debtor to that of a creditor country; practically all the external debt and railway shares were bought back; speculation in highly depreciated currencies have ended in the buying of securities of the respective countries; while other investors, trying to avoid the depreciation of our own currency, bought sterling and dollar securities. Tourist traffic is increasing yearly, and certainly exceeds the expenditure of Spaniards abroad, and there is, besides, the money regularly sent to this country by the Spanish communities in South and North America, which is a very considerable item, and has been estimated at 550 million pesetas for 1922. All these items go to compensate to a great extent the unfavourable merchandise trade balance.

There is another good reason for this assertion. If we have imported 1,500 million pesetas more than we have exported, it has not been paid for by inflation, as the note circulation remains without any considerable alteration and bank deposits have rather decreased. It has not been met with gold or silver, because the gold stock at the Bank of Spain is unchanged, and the total exports of both metals only amounted to 3 million pesetas in 1923. We have not settled the account by having recourse to foreign credit, because there have been no issues of Spanish securities abroad nor any appreciable import of foreign capital in Spain. In the general trade balance there is nothing to justify the depreciation of the peseta to the present level. The peseta has been slowly receding from its previous improvement, quoting between 31.40 and 31.95 to the pound in May, and falling to 32.08 on June 5th, while the dollar was quoted between 7.16 to 7.30 during that month, and 7.43 on June 5th.

The commercial treaty provisionally signed with Great Britain in October, 1922, was duly ratified by exchange of

notes on April 23rd last. The *modus vivendi* which regulates our commercial relations with the United States of America has been extended by another year until May 5, 1925, and it is expected that during the year a new agreement will be negotiated with that country. The commercial treaty with Japan has also been extended for a year.

The possibilities of Spain for industrial development are attracting foreign capitalists. At the present moment there are two proposals under examination by special commissions appointed by the Government. One of them refers to the establishment of a complete system of automatic telephone service all over Spain. A company has been already registered with a provisional capital of 1,000,000 pesetas, which may be increased to 100,000,000 pesetas in ordinary shares and 200,000,000 in preferred shares. The promoters are a group of telephone companies of the United States in connection with some of the more important Spanish banks. The other scheme, which has aroused a very great deal of criticism, seems to be backed by well-known banking and financial houses of London and New York, and aims at the construction of electric railways from the French frontier to Algeciras, the direct line from Madrid to Valencia, and two other lines in the South, with a total length of 2,500 kilometres. On the basis of this railway system, they would develop several electric, mining, and chemical industries. But the request is made for a Government guarantee of 5 per cent. interest on a capital of 3,000 million pesetas, at which they fix the cost of the railways, which would be finished in five years' time, passing immediately to the property of the State, and leased to the company for 60 years at a rent of about 200 millions yearly. The scheme is certainly taking, but its opponents state that the projected railways have not been well chosen in relation to the most urgent needs of the country. Public comment has subsidised pending the recommendations of the experts appointed to study the scheme.

AUSTRIA.—POLITICS AND THE LEAGUE—ECONOMIC POSITION—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, June 1.

THE main interest of political circles is at present concentrated upon the forthcoming session of the League of Nations Committee in Geneva. The differences prevailing between the Austrian Government and Political Parties on the one hand, and the League of Nations Commissioner-General on the other hand, especially with regard to the so-called "Normal Budget," have been recently somewhat alleviated. In 1922 the League of Nations Committee, when working out the Reconstruction Scheme, proposed that the future "Normal Budget" (i.e., the Austrian Budget after clearing off the deficit) should amount to 350 million gold kronen. The Austrian Government, which even then considered this figure much too low, now intend to propose that the League of Nations should fix the "Normal Expenditure" at 530 million gold kronen—the Commissioner-General, however, wishes this amount reduced to 490 million. Besides this, the Austrian Government will also ask the Committee's consent to use part of the balance left from the League of Nations' loan for economic investments, especially for the construction of hydro-electric plants and the improvement of agriculture, both of which are the only means by which the present most unfavourable balance of trade can be gradually improved. The position of the present Government will be greatly influenced by the result of the negotiations in Geneva, which, if favourable, will disarm the Social Democratic opposition.

The critical situation on the Vienna Stock Exchange, of course, made its influence felt on economic conditions in general, and led to serious consequences for some banking and trading firms. However, the various alarming rumours spread abroad regarding the financial situation of Vienna lacked all foundation, and were partly traceable to speculative purposes. As a matter of fact, no firms of any great size, with one exception, have got into difficulties—and even this one is solvent, and was only rendered temporarily illiquid by the speculations of some of its directors; its management has now been taken over

Rubber Plantations Investment Trust, Ltd.

ENQUIRIES INVITED ON ALL FINANCIAL MATTERS IN RESPECT OF EASTERN PLANTATIONS. ADVANCES MADE ON APPROVED SECURITY. SECURITIES PURCHASED OR UNDERWRITTEN.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

by the five largest Vienna banks. The banks which actually did collapse are small concerns of no importance and nearly unknown abroad. Some of the post-war bankers, whose business was merely based on speculation during the period of inflation, have disappeared, and this process of purification, due to the gradual return of normal times, will presumably take its natural course in the near future. In commerce also numerous insolvencies have occurred during May, mostly due to losses on the Stock Exchange and to losses by speculative purchases of French goods against credit, especially in the jewellery, textile, wine, and metal trades. It seems, however, that the worst is over.

A symptom that the economic crisis has passed its culminating point may be seen in the decrease of the number of unemployed, which during the month of May fell from 106,264 to 84,180.

It is also worth noticing that, although economic conditions have been continuously becoming worse since the beginning of the year, the total of savings deposits in Austria has steadily risen. These deposits on January 1st were 596,000,000,000 kronen, and by April 1st had risen to 791,000,000,000 kronen. The index figure for the cost of living, which during March and April remained stationary at 11.950 (as against 1 in July, 1914), shows for May an increase of 2 per cent. to 12.210. In view of the present economic depression the Government has brought in a Bill by which the corporation profits tax will be reduced from 50 per cent. to 36 per cent. of the net profits, and the surtax on dividends above 15 per cent. will be cancelled. If economic conditions do not improve soon it is to be feared that the returns of public revenue, which so far have been very favourable, will fall off considerably.

The new Tariff Bill now under discussion in the Parliament provides for a big increase of duties on a great number of goods. In this Tariff Bill, which has the protection of Austrian industries in view, the Government, in order to overcome the opposition of the farmers, was obliged to introduce duties on articles of food, such as 2 gold kronen on grain, 6 gold kronen on flour, 3 gold kronen on rice, &c. (all per 100 kg). These duties, which are comparatively high for a country which is not self-supporting, will certainly cause a considerable increase in the cost of living. On the other hand, it may be hoped that the higher duties will somewhat restrict the consumption of luxury articles, the import of which during last year became excessive and had a very bad influence on the balance of trade.

As may be easily conceived, the National Bank has had to satisfy increased demands for credits during the last six weeks. The amount of bills discounted rose from 1,731,500 million kronen on April 1st to 2,224,600 million kronen on May 15th. During the same period the gold reserve of the bank diminished from 4,060,500 million kronen to 3,715,500 million kronen. During the first ten days of May the Stock Exchange continued dull. Owing to forced sales of very large blocks of shares prices crumbled away every day, although the "Supporting Syndicate" formed by the big banks did its best to take up all the shares offered. On May 10th, however, severe measures against "bear selling" led to extensive covering and to a change in the tendency of the market. Since then there has been but very little business on the Stock Exchange, so that quotations remained more or less stable. Now the large holdings of shares have passed from weak into strong hands, it would seem that the worst of the crisis has been overcome. The present low quotations of shares have at least the advantage that the dividends so far declared for the year 1923, which are all much higher than last year, show a fairly adequate return on the shares. The Creditanstalt, e.g., will pay this year 9,000 kronen, as against 3,200 kronen last

year, the Boden Credit Anstalt 12,000 kronen (3,600 kronen), the Escompte-Gesellschaft 15,000 kronen (3,000 kronen), the Unionbank 8,000 kronen (2,500 kronen). These dividends in general correspond to a return of 4½-5 per cent., as against ½ per cent. last year. The activity on the money market also in May was completely devoted to the settlement of forward engagements in French francs. Although these were very extensive, the Clearing Office of the National Bank succeeded in squaring them all.

ARGENTINA.—THE GENERAL OUTLOOK—PLANS OF FINANCIAL REFORM—INCREASING PRODUCTION.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 26.

COMMERCIALLY and financially considered, the immediate situation in Argentina is difficult to define. Conditions are not on the whole different to those existing at any time during the past five months, and yet there is in the air a certain feeling of malaise; faint, it is true, but at the same time far too general to be pleasant. The trouble over the Pension Legislation, known as Law No. 11,289, has blown over temporarily, but may be revived at the end of the current month, unless Congress has met and taken in hand the re-drafting of the measure—which the politicians seem in no hurry to do. This is all the more unfortunate, seeing that there are many important financial measures in the wind which must, if put into practice, react directly on both finance and trade. Even if, owing to party obstructionism, their discussion and eventual decision is allowed to drag on to the end of the session, the effect upon business can only be described as clogging, and, taken in conjunction with the complicated position of the Republic's national finances, must be prejudicial all round. Schemes of divers sorts are spoken of, mostly in semi-official journals and bureaucratic circles whose opinion carries weight. Thus Dr Oria, sub-secretary of the Minister of Finance, has publicly confirmed a Press comment on the plans of that Department of State, saying that the Minister has finished his draft measures for the introduction of income-tax, for reforming the legislation relative to the banking system of the Republic, for improving the actual currency régime, and for implanting a taxative system adequate to the country's economic progress. None who are well informed regarding Argentina's general position can fail to grasp the importance of such a statement. The basic idea appears to be that with all the proposed reforms and modifications simultaneously put into force, there will be solved, and that on permanently successful lines, the major, if unmentioned, problem of the internal consolidation of the Republic's floating debt, while the cause of the debt—to wit, the recurrent Budget deficits—will be for ever wiped out. Viewed thus broadly, the idea is attractive, but the practical difficulties in the way are far too many and too complex to allow of even a Ministry of Finance blessed with almost dictatorial powers bringing it to a successful issue.

Incidence of taxation in Argentina is incredibly uneven, owing to the fact that pastoral and agrarian proprietors are not only the wealthiest class in the country, but also exercise great political influence. They have escaped the impositions of the Pension Law, which, as things at present stand, is a direct tax on trade and industry amounting to some 12 per cent. of the wages list, and it is very certain that they will for many years to come be but lightly mulcted in respect to income-tax as compared with firms and individuals whose annual receipts can be easily ascertained. Banking legislation and the reform of the currency must affect the very root of the actual Argentine system of values, and revision of the tariff of values for the calculation of Customs dues will inevitably

drive the cost of living still higher than it is at present. Under the Pension Law there should flow into the national treasury, via the Banco de la Nación, between \$30,000,000 and \$35,000,000 paper monthly, to be invested in Government bonds, while further sums would be obtained by making it incumbent on the banks to hold a certain percentage of their deposits in similar securities. In a word, if the measures foreshadowed are all put into operation at once, Argentina is perforce faced with nothing less than a monetary revolution, which, while it may be productive of eventual good, runs very grave hazard of disaster in the event of an unforeseen *contretemps*—e.g., a severe monetary crisis in Europe or the United States, throwing out of gear the very complicated financial mechanism which all these changes must connote. Thus, to illustrate what is perforce rather confused reasoning, during the past month the Ministry of Finance has renewed six months' Treasury bills at 3½ per cent. per annum, but at practically the same time it has borrowed from local banks some \$25,000,000 paper for six months, leaving *Credito Argentino Interno 1923* bonds as collateral, the rate of interest being 4½ and 5 per cent. in the two institutions making the advances. Moreover, a sum of \$4,093,780 gold has been withdrawn from the Conversion Office in the shape of American eagles, for shipment to New York. There bills on London, or other forms of remittance, will be arranged in order that the June service of the foreign debt £884,000, may be met without the Treasury suffering a loss in exchange. This is the first direct withdrawal from the Conversion Office, and therefore the first actual contraction of the circulating medium, the paper dollars, now reduced by \$9,304,045.45, standing at \$1,353,259,939.41. Nothing in itself, this step must greatly strengthen the argument of those who would have the Conversion Office restored to its full uses and the shipment of gold open to all and sundry.

One has, however, to take into account the steady production of the country and the almost equally steady expansion of the producing field. Cotton in the Chaco has now gone well beyond the experimental stage, and if the price of the staple is not brought down to any serious extent during the next twelve months, expansion in this direction is reasonably sure. Colonisation on modern lines is also projected by the Ministry of Agriculture, and, provided that the essential is supplied—namely, land for the newcomer to work and eventually own—general benefit is assured. High cost of living and inordinately slow official procedure, coupled with red-tape methods directly descended from the days of King Philip of Spain, are the greatest practical drawbacks to increase of colonists as opposed to mere wage labourers, as the present Minister of Agriculture, Dr Tomas Le Breton, has publicly admitted. Extension of the State Railways is for the time being somewhat in abeyance, but there has again been published a rumoured offer, from British sources, of funds wherewith to consolidate the \$120,000,000 paper which represents the floating debt of that department, and a scheme for carrying out further construction, the whole being secured by a debenture charge on the system, or a part thereof. No particulars are yet available, but Dr Molina, Minister of Finance, has discussed the matter with the Minister of Public Works, and, provided the terms are not too exigent, something may come of the proposals, which are obviously of mutual benefit to both Argentina and Great Britain. As an offset to this possible British business may be put the important *ad referendum* agreement made between the Municipality of Buenos Aires and an American contracting firm, under which the latter are prepared to carry out and finance the extension of the North Diagonal avenue—two squares of which are already in existence—free of all cost to the city. The extension would run to about 1,200 yards in length, and a round sum of \$150,000,000 paper is mentioned as the possible outlay, but until the Municipal Commission have approved the proposals, further comment is useless. All one may say is that while such a great artery would be of unquestionable benefit to traffic, and beautify the city exceedingly, past experience has shown that opening up avenues through thickly thronged and valuable property works out in practice at a figure far in excess of the highest preliminary estimates.

Letters to the Editor.

"PROFESSOR CASSEL ON THE GOLD STANDARD."

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your interesting article on Professor Cassel's paper which he read before the Institute of Bankers on the 11th instant, you estimate that a return to parity of exchange with America would involve a further fall in prices in this country of about 10 to 15 per cent., and that if this took place it would entail further unemployment. You state we cannot risk this serious check to industrial recovery. With all respect, I would ask, Will this fall necessarily take place, and will it involve a check to the recovery of trade? I doubt it. On the contrary, we are so near to parity now, and the confidence which would be engendered by a bold declaration that Great Britain intended to resume specie payments on a particular date would, I believe, give stability to prices, lead to an improvement in national credit, and therefore an expansion of credit, and would stimulate trade and commerce enormously.

Much as I should like to see a reduction in the American tariff, I am afraid there is little hope of that happening at present. We must rely on ourselves, and as I have stated above, I believe such action would be beneficial, and our example would be followed by others. All of which will hasten, not check, that industrial recovery which we all desire to see. There is also a moral obligation thrown upon the Treasury and the Bank of England to maintain the convertibility of their notes, which many people think is now getting overdue.—I am, Sir, your obedient servant,

D. M. MASON,
Chairman, Executive Committee Sound
June 16th, 1924. Currency Association.

AGRICULTURAL STABILISATION.*

BEFORE discussing "The Agricultural Crisis," the author might usefully have defined it. He gives a number of tables and diagrams showing the rise and fall of prices of commodities, including farm products, during and after the war. The familiar course of the post-war boom and slump is clearly set out, and the existence of a world-wide economic crisis is demonstrated. The long history of British agriculture is punctuated by crises, from that of the fourteenth century to that of the "nineties." The symptoms are well known and easily recognised. Rents of farms tumbling down, farms unlettable at any rent, land neglected and derelict, and agricultural land unsaleable. No such situation is suggested in this book, although it is, of course, apparent that farmers—as well as landowners—were seriously affected by the difficulties of the time. The author has evidently studied carefully the general facts of the period with which he deals, and in the latter part of the book he has something valuable to say with regard to agricultural co-operation. But his grasp of the agricultural situation is a little uncertain. For example, he notes with surprised italics that the return of arable land to grass "actually preceded the fall in prices." Of course it did. Land converted into arable by compulsion naturally returned to pasture when the compulsion was removed. Before the war the proportion of arable land was 45 per cent.; in 1918-19, by ploughing up orders, it was raised to 50 per cent., and it has now fallen to 47 per cent. That is, briefly, the story. Again, the author rightly insists that the sudden slump in prices cannot be accounted for by a general shortage of supplies. While wheat was under control imports had obviously no effect on current prices, but in any case the quantities of wheat landed in this country in any period do not fix the level of prices, which is settled in the world markets. In regard to potato prices, which are normally governed by the home crop, the result of State control

* "The Agricultural Crisis, 1920-23." By R. R. Enfield. Longmans, Green, and Co. 10s 6d net.

was to reverse normal conditions. The crop of 1916 was one of the smallest on record, and prices would have been almost unprecedentedly high if the market had been free. The Food Controller unwisely fixed prices at a normal level, and thus prevented the operation of the ordinary check on demand. The 1917 crop was nearly a million tons in excess of normal demand, and in a free market potatoes would have been abundant. An elaborate and unnecessary system of controlled distribution was put in force, which had the effect of checking consumption and creating local scarcity, while thousands of tons were wasted. In such circumstances prices are meaningless for economic argument.

The book has four chapters, and it is the last which mainly gives it value. The chapter is entitled "Stabilisation," but its main interest lies in a description of the movement in the United States for co-operative marketing, and a discussion of the possibilities of adopting corresponding methods in this country.

The dual problem of stabilisation is stated thus:—

- (1) The stabilisation of the purchasing power of money, which concerns all commodities and all industries, and
- (2) The stabilisation of the prices of specifically agricultural products, where stability is due to other than monetary causes.

It is added that "the two problems are totally different in character as also in their method of solution." This is undeniably true, but it appears to involve the conclusion that nothing is gained by attempting to treat them as one. The stabilisation of prices, whether of agricultural or other commodities, is a question of monetary policy. If a stabilising policy were successfully adopted, it would not necessarily make farming more or less profitable, or affect the relation of agricultural prices to the general level of prices.

"Stabilisation" is a word very much in vogue at present, and it is not surprising that those who are concerned about the future of British agriculture should be attracted by it. There are only two methods by which prices of agricultural produce can be stabilised for the benefit of the producers. One is to form a combination or ring. Mr Enfield observes that "collective trading applied to agricultural commodities is a proved instrument of stabilisation." The dictum does not apply only to agricultural commodities, but it has already been applied pretty effectively to the milk supply in this country. Obviously, if producers are sufficiently organised they can stabilise prices. The other method is by State control, a method which is naturally advocated by the Socialist party. In both cases, of course, the consumers pay, either by higher prices or, under State control, by taxation.

Co-operative marketing as developed in the States may or may not succeed in "stabilising" or maintaining prices against the consumer, but short of this it confers a substantial advantage on the producers by "pooling" supplies, organising distribution, and eliminating the effect of forced sales by weak holders. These are laudable and legitimate objects, and the result is, in a sense, to "stabilise" the price realised by individual producers. But to fix prices of natural products in such a way as to ensure that all producers, in every season, whatever their degree of efficiency, will make a profit, is not stabilisation but Protection, however the process may be camouflaged.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
June 24.

ACCOUNT,
June 25.

The strength of gilt-edged securities stands out as the principal feature of a Stock Exchange week that has not been marked by much activity in any particular class of securities. New issues are being readily taken by the public, and the stag brigade is once more active in applying for any stocks and shares from which there seems to be a prospect of snatching a quick profit after allotment. It is not, however, every new issue that commands a premium, and such shares as Goodrich Preference, Imperial Airways, Assam Consolidated Tea and Caroni Sugar, are amongst those which have fallen to a discount. The success of other offers, however, encourages a good many companies to inquire whether the present is not a propitious time for raising more money, and several important new issues are known to be in readiness to put in an early appearance. Stock Exchange attendance has been affected this week by the bright weather which prevailed at the Ascot meetings.

The War Loan has shaken itself free from adverse influences which were keeping down the price, and has advanced sharply, its improvement being accompanied by rises in Victory bonds, Funding, the Conversion loans, the old War loans and about a score of county and corporation stocks. There is still talk every now and then of a possible stiffening of money rates, owing to the way in which the New York exchange continues to go against the pound sterling, but such apprehension has no effect at present upon the Consol market. Rumour again toys with the possibility of an India Government loan.

The Argentine Republic and Brazil are both said to be contemplating the issue of new loans, and other fresh borrowers are declared to be ready to take advantage of any tempting opportunity for raising new money. This tends to keep back, to some extent, the prices of existing securities, though foreigners on the whole are firm, and modest advances have been scored in a good many cases. The market in French issues has quieted down, and what speculation goes on is mainly on behalf of Continental operators.

Home Railway stocks continue to benefit to some extent from the breakdown of the recent Tube strike, but the public are not buying much in this market at present, evidently fearing lest there may be another outbreak of trouble before long. American Rails are good, and Canadian Pacific rose to 170½ upwards. Grand Trunk Pacific debenture, on the other hand, has declined, because of the uncertainty felt in regard to a payment on account of the interest. Amongst foreign rails, San Paulo gave way noticeably. Argentine stocks maintain a fairly steady appearance, and Antofagasta, after touching 90 on a satisfactory meeting, went back from the best.

With rubber down to 10½d per lb, no inducement is offered to regalanise the share market. Tea shares have been heavy as a whole, in spite of the good dividends now in course of declaration. In the oil market, the Shell report caused weakness in the price of the shares by reason of the contraction shown by profits as compared with those of last year. Rumours of the discovery of another well put up Mexican Eagles, and Lobitos advanced to double figures, on the hope of a bonus share distribution in the near future. The rest of the oil list has been moving somewhat erratically. Textiles are very quiet. The banking market keeps good, and insurance shares steadily improved. Prudentials have been a feature of strength on a rumour, officially denied, to the effect that there is to be a bonus issue.

Crosse and Blackwells weakened, on appearance of the drastic reorganisation proposals. Dunlops are not much affected by the failure of the directors to carry their reconstruction plan, and by the decision arrived at last Monday to appoint shareholders representative of each class, to confer with a view to putting forward some fresh plan. Shipping shares are extremely placid, though the pre-ordinary stocks are good all round. Egyptian issues of various kinds strengthened, because of encouraging reports received in regard to the cotton crop.

In the iron and steel list, Ebbw Vales reacted after a little spurt on news that the company is going to pay off part of the dividend arrears on the preferences. Howard and Bulloughs gave way on the report. Catering shares are steady, though Lyons continue somewhat heavy, owing to the slight disappointment felt with the 25 per cent. dividend. Other catering shares, together with those of the stores and similar companies, show no special feature. Mexican Utilities weakened, on the diplomatic difficulties which have arisen between this country and Mexico, while Marconis are weak, and cable stocks again gave way, the latter after the issue of the Eastern report. Trust companies' stocks pursued their monotonous and satisfactory upward direction. Nitrates attract little public interest, and newspaper shares are neglected. British Ropes ordinary were "introduced," on Thursday, at 23s.

The result of the South African elections came as a mild shock to those who had been looking for General Smuts to secure a small majority, but prices failed to yield ground to any particular extent, though business was certainly checked. East Rands gave an extraordinary exhibition of strength, on the developments, and the prospects of a dividend in the near future. Chartered gave way, on declaration of a dividend of 6d per share net, which is not to be paid until November 3rd. Humourists argue that the payment of a dividend by the Chartered Company will remove the shares from the speculative area, with all the attraction that this atmosphere gives them. Tin, the metal, started to recover, and this exercised a beneficial effect upon West African, Cornish, and Malayan tin descriptions. Canadian mining shares have been heavy, with Mexicans also hanging fire. The copper market is a little unsettled. Proposals to amalgamate Ivanhoe with the Lake View and Star Company caused a sharp rise in the price of the former without affecting the latter. Russians are scarcely mentioned.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Brisbane Water Supply and Sewerage 5% Stock, 1949.—Issue of £1,000,000 stock at £94 per cent. The principal is repayable at par in London on July 1, 1949. The area in which the board operates comprises 738 square miles approximately, including the City and Port of Brisbane, the City of Ipswich, and the Ipswich Coalfields. The population of the area is 263,000. The board was originally constituted in July, 1866, for water purposes only, and in 1909 its operations were extended to include sewerage. The board has already spent on water supply and sewerage works £5,063,563, and the revenue derived from the water services alone for the last six years was:—

	Revenue.	Surplus.
£	£	£
1918	141,477	12,967
1919	170,142	9,771
1920	226,367	11,012
1921	276,316	46,817
1922	331,306	20,594
1923	346,976	22,126

Besides loans of £1,000,000 and £500,000 issued in London bearing interest at 6½ per cent. and 5 per cent. respectively, and of £500,000 issued in Australia, bearing interest at 6½ per cent., the only obligation of the board is to the Queensland Government, amounting to £3,500,651, of which £2,070,170 bears interest at 4 per cent. per annum, and £1,430,481 at 5½ per cent. per annum, and is repayable by half-yearly instalments extending over periods up to 50 years. The present issue of £1,000,000 will rank after the above loans amounting to £2,000,000, but the whole of these loans, aggregating £3,000,000, will rank in priority to the above obligation to the Government, and they are constituted a charge on and secured by the rates and revenues of the board in priority to any other indebtedness. The unimproved value of the rateable land under the jurisdiction of the board is approximately £16,625,000. The present rates vary from 1s 3d in the pound on a minimum improved value of £20 to 5s 4d in the pound on £80,000 improved value. There is no limitation to the rates which may be levied. A sinking fund will be provided of £2 per cent. per annum, which will be used from time to time in purchasing stock of this loan at a price not exceeding £100 per cent. It is pointed out that stock issued and payable in London and the interest, the property of persons not domiciled in Queensland, are not subject to Queensland taxation. A reasonable Australian investment.

Port of Calcutta.—This is an issue of £1,000,000 5 per cent. debentures to bearer at 90. These debentures are repayable at par on July 1, 1984, but the Commissioners reserve the right to repay at par in whole or in part at any time after the expiry of 30 years from the date of issue, subject to six months' notice. The loan is secured upon the tolls, dues, rates, rents, and other charges authorised to be levied, and ranks *pari passu* with other loans of the Commissioners as a first charge upon the properties vested in them. The Commissioners submit each year to the Indian Government an estimate of their income and expenditure, and the tolls, dues, rates and charges can be so adjusted as to give them sufficient income to cover the estimated expenditure, including interest and sinking fund charges on their outstanding loans, and on any further loan they may require to raise. The income and expenditure of the Commissioners for the last nine years have been as follows, converted at 1s 4d to the rupee:—

	Income.	Expenditure.
Year.	£	£
1915-16	1,062,364	993,800
1916-17	1,048,229	1,042,116
1917-18	1,055,945	1,041,957
1918-19	1,270,567	1,060,962
1919-20	1,490,374	1,503,459
1920-21	1,773,868	1,677,413
1921-22	1,461,136	1,602,637
1922-23	1,765,035	1,743,165
1923-24 (estimate)	1,739,000	1,746,000

The unimproved value of the properties vested in the Commissioners on March 31, 1924, was, at an exchange of 1s 4d to the rupee, £14,120,000, and the capital debt on that date amounted to £10,549,000, after deduction of £1,590,000, the amount to the credit of the sinking fund. A good Indian investment.

Gisborne Harbour Board (New Zealand) 5 per Cent. 1954 Loan.—Issue of £250,000 in debentures to bearer. The principal will be repayable at par on July 1, 1954, in London, where also the interest will be payable. The loan is issued to provide funds for further harbour construction, and to repay an existing temporary bank overdraft of £17,766. This overdraft and a loan for £200,000 (the part of the authorised £1,000,000 already issued) maturing in 1944, represent the entire indebtedness of the board. Subject to existing charges this loan is secured by a charge over the Harbour Fund; and also by a special rate of 1d in the £ on the capital value (now £16,941,987) of all rateable property within the board's rating area, which has a population of about 25,000. In addition, the board holds endowments (which include about 45,000 acres freehold land) valued at £183,285, yielding a revenue of £8,780. Gisborne, which is situated in the North Island, is the centre of a farming district, and the value of the imports and exports at the port during 1923 totalled £1,872,008. The amount of accrued sinking fund in respect of the existing loan is £12,480, and a sinking fund of ½ per cent. per annum will be provided in respect of the present issue. This loan is free from all New Zealand taxes, unless held by persons domiciled in the Dominion of New Zealand. The sale of these debentures is being negotiated at £94 per £100. Another prospectusless issue.

British Ropes, Limited.—Authorised share capital £2,000,000 in shares of £1 each, divided into 800,000 6½ per cent. cumulative preference and 1,200,000 ordinary shares. This is an offer for sale of 800,000 6½ per cent. preference shares at par. The company has been formed to effect an amalgamation of seven firms manufacturing wire and hemp rope and binder twine. Net assets of the constituent companies are given as £1,721,156, exclusive of goodwill, which figures as £185,856. The price payable by the company is given as £1,785,560, of which £628,442 is payable in cash and as to £1,157,118 in ordinary shares. Profits are given from 1912, and on these figures the amount required for preference interest, namely, £52,000, is well covered. Although not a prospectus, this "offer for sale" contains much detailed information which is frequently obscured in prospectuses. Under efficient control there are good indications that this amalgamation may prosper. The preference shares carry no voting powers save in exceptional circumstances, and although it is provided that preferential share issues cannot be made ranking in front of this issue unless by consent, we would point out that this proviso does not exclude the issue of debentures. The shares, however, were well received by the public.

The Shropshire, Worcestershire, and Staffordshire Electric Power Company.—Incorporated by Act of Parliament, 1903. Issued share capital £500,000. This is an issue of £650,000 5½ per cent. first debenture stock at 97½ per cent. It will be redeemed by means of a cumulative sinking fund accruing from January 1, 1928, to be applied annually in the purchase of stock under par or by drawings at par, so that the whole debenture stock will be redeemed by January 1, 1963. The company reserves the right to repay the whole of the debenture stock outstanding on or before January 1, 1932, at 110 per cent., or thereafter at 105 per cent., on giving six months' notice. The present issue is made to enable the outstanding debenture stocks to be redeemed. Holders of the existing 5½ per cent. first debenture stock and the 7½ per cent. 10-year guaranteed convertible debenture stock have been given the right until June 19, 1924, to convert into a like amount of the present issue, receiving in addition a cash payment at the rate of £5 10s per cent. in respect of 5½ per cent. first debenture stock converted, and £2 10s per cent., and an adjustment of interest in respect of 7½ per cent. 10-year guaranteed convertible debenture stock converted. A table is given showing "net receipts" from 1919. We should like a clearer definition of "net receipts." Also a little information about the "general expenses" which are to be deducted from "net receipts" would have made for greater clarity. We understand that the issue was oversubscribed.

Rhodesia Minerals Concession, Limited.—Authorised capital £200,000, divided into shares of £1 each. The company was formed on June 4th to prospect for minerals over an area in Northern Rhodesia. The concession is granted by the British South Africa Company. It is conditional upon the expenditure of not less than £2,500 per annum for the three years commencing March 1, 1927. The purchase consideration is 85,000 fully paid shares, whereof 8,500 will be allotted to the British South Africa Company in satisfaction of that company's 10 per cent. interest. The vendor has guaranteed the subscription of 50,000 shares for a commission of 30 per cent. in shares.

It is stated that the Minerals Separation Company is largely interested in the concession. Prospectusless; an application is being made to the Stock Exchange.

The Tennamaram Palm Oil Company, Limited.—Authorised capital £100,000, divided into 70,000 ordinary and 30,000 6 per cent. cumulative participating preference shares, all of £1. The preference shares entitle the holders to a cumulative preferential dividend of 6 per cent. per annum and to participate *pari passu* with the ordinary shares, after the ordinary shares have received a like dividend of 6 per cent. Of the ordinary shares 50,835 have been issued, while of the preference shares 3,100 are 10s paid and 20,000 paid up to the extent of 7s 6d per share. The company was incorporated in December last to take over as a going concern the Tennamaram Palm Oil estate, situated within 35 miles of Kuala Lumpur, in the Federated Malay States. The estate comprises an area of 2,002 acres, of which 1,260 have been planted with oil palms and 50 with coconuts. Production started last year, and in the 12 months to December 31st 1923 tons of oil and 52 tons of palm kernels were obtained by means of hand machinery. A prospectusless issue.

The Colne Valley Water Company.—Incorporated by special Act of Parliament, 1873. Authorised stock capital £790,000, of which £439,202 has been issued. The authorised loan capital is £395,000, of which £190,763 has been issued. This is an offer for sale by tender of £63,000 4 per cent. preference stock, the minimum price of issue being £80 per £100. The net revenue of the company for its last financial year was £48,705. Interest on debenture stock requires £11,028. This leaves £37,677 available for preference stockholders. Preference dividends, including those on the present issue, will need £6,045, which leaves an ample margin for security. At the minimum price of issue a clear 5 per cent. is obtainable, and as the stock is a trustee investment, it is worthy of the investor's attention if the quotation remains close to this figure.

The Hatfield Gas Company, Limited.—The total authorised share capital is £30,000, of which £15,997 has been issued. The authorised loan capital £15,000, of which £5,000 has been issued. This is an offer for sale by tender of £2,998 6 per cent. mortgage debentures, the minimum price of issue being par, to be redeemed at par in 1932. There is also an issue of 300 £10 ordinary shares at a minimum price of £9 5s per share. The latter yield £7 11s 4d per cent. at this price. The net revenue for its past financial year is £1,385. Debenture interest, including the present issue, amounts to £524. These small issues are reasonably well covered, but the narrow market must be considered.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

	Price	Week	Latest	Price	Week	Latest	Price	Week	Latest

COMPANY MEETINGS, &c.

UNION DISCOUNT COMPANY OF LONDON, LIMITED. HISTORY AND PROGRESS. A RECORD OF CONTINUOUS SUCCESS. CAPITAL INCREASE AUTHORISED.

An extraordinary general meeting of the shareholders of the Union Discount Company of London, Limited, was held at Cannon Street Hotel, on Thursday, 12th inst.

Mr William Thomas Brand presided.

The secretary having read the notice convening the meeting, The Chairman said:—Gentlemen, before putting to the meeting the resolution for the proposed increase of capital, I should like to trace the progress of the Union Discount Company since its formation in May, 1885, by the amalgamation of which I was the originator of the General Credit and Discount Company and the United Discount Corporation. Both these companies returned money to their shareholders, and as regards the new company, the former subscribed £600,000 of the capital and provided £300,000 in cash and £60,000 towards a reserve; and the latter subscribed £400,000 of the capital and provided £200,000 in cash and £40,000 towards a reserve.

The Union Discount Company of London, Limited, thus commenced with a subscribed capital of £1,000,000 in £10 shares, of which £5 was paid up, or, say, a paid-up capital of £500,000 and a reserve of £100,000. Mr Christopher R. Nugent, who had been manager of the United Discount Corporation, was appointed manager of the new company, and we have to thank him largely for its present prosperity.

The Union Discount Company started under favourable circumstances, the sequestrators of the two liquidating companies guaranteeing the bills, &c., the new company took over from them, and giving Mr Nugent time to get well into the saddle and look through and amalgamate the business of the liquidating companies taken over.

STEADY INCREASE IN DIVIDENDS AND RESERVES.

We paid 8 per cent. for the first two years and a half. In the second half of 1887 we paid 9 per cent., and continued the same dividend till the crisis of 1890, when we reduced our dividend till June, 1892, to 8 per cent. From December, 1892, to December, 1896, we again paid 9 per cent., by which time we had increased our reserve fund by £65,000. From June, 1897, to June, 1900, we paid 10 per cent. and added a further £40,000 to our reserves. From December, 1900, to December, 1907, we paid 11 per cent. and added £110,000 to our reserve. From June, 1908, to December, 1912, we paid 12 per cent. and added a further

£190,000 to our reserve, raising it to £435,000. In 1913 we paid 12½ per cent. and placed £30,000 to reserve. For 1914-15 we paid 13 per cent. for the first time, less tax. For 1916 we paid 13 per cent., less tax, and commenced to pay a bonus, which was 1 per cent., free of tax. The dividend of 13 per cent. and bonus of 1 per cent. we continued until December, 1918. For 1919 we paid 14 per cent. dividend and a bonus of 1 per cent. For 1920, 14 per cent. and 2 per cent. bonus, free of tax, and for 1922-23 we paid 15 per cent., less tax, and 5 per cent. bonus, free of tax.

In 1885 our capital subscribed was £1,000,000, £500,000 paid up, and reserve £100,000. To-day our subscribed capital is £2,000,000, our paid-up capital £1,000,000, and our reserve £1,250,000.

We have built our present premises in Cornhill, the bulk of which are our own freehold, and we have room for considerable expansion should our business require more office room. Our freehold and leasehold properties stand at a most moderate figure in our balance-sheet—£150,000—and we have a carry-forward of £190,000.

THE NEW CAPITAL.

We ask you to-day to authorise the proposed new issue of capital, as our business keeps growing, and, in consultation with our managers, we think it wise to increase our paid-up capital and reserve as we have done previously from time to time. When you have passed the proposed resolution which this meeting has been called to approve our authorised capital will be £2,500,000. We now propose to issue only 25,000 shares out of the 50,000 new shares we ask you to authorise, keeping in reserve 25,000 shares for future requirements. These shares will be issued to the shareholders at £12, or a premium of £7, which premium will be added to the reserve. This price will give a substantial bonus to the present holders of shares, besides adding £175,000 to our reserve. Our paid-up capital will then be £1,125,000 and our reserve £1,425,000.

As you are aware, in 1922 we lost the services of Mr Christopher Nugent as manager, but we still, I am glad to say, have his valuable advice as a director. We have been extremely fortunate in obtaining the services of Mr Wyse as manager, and he has most ably and successfully filled the position of manager and carried on the traditions of the Union Discount Company.

I think, gentlemen, I have told you the history of a most successful company. We have never looked back, except from December, 1890, to June, 1892, and then we only had to reduce our dividend 1 per cent. for two and a half years. With this exception our record has been one continued success, and I feel sure you will join with me in wishing the Union Discount Company still further success in the future. (Hear, hear.)

After some congratulatory remarks by Mr Chalmers and Mr Tomkinson, the chairman put the following resolution to the meeting:

"That the capital of the company be increased to £2,500,000 by the creation of 50,000 new shares of £10 each, which shall, save as otherwise provided by the terms of issue, rank in all respects *pari passu* with the existing shares of the company."

This was carried unanimously.

The proceedings then terminated.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

"ALL-ROUND IMPROVEMENT IN BUSINESS."

The annual meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London.

Lord Lawrence, of Kingsgate, the Chairman, in moving the adoption of the report and accounts, expressed the hope that all would agree with him that the report in its main features was not unsatisfactory, as it showed that the company had had an all-round improvement in its business, as compared with the preceding year. At the last annual meeting he had, he said, to deal with a situation which had shown improvement during the last six months of the year; at that time they had come through a period of depression in the nitrate industry, and he looked for a continuance of the improvement which was then taking place, and he was glad to say that his anticipations had been fulfilled. The year 1923 had given them increases in practically all classes of traffic as compared with its predecessor. During the past year the company carried 784,842 tons of nitrate compared with 306,719 tons in 1922. At the end of 1922 only nine oficinas were working, but at the end of last year fourteen were manufacturing nitrate. The total number of oficinas served by their own lines, *i.e.*, excluding the Aguas Blancas Railway, was thirty-two. He did not pretend that if all the oficinas were working they should have over double the tonnage, but they would appreciate that, with the increasing demand for nitrate, which seemed evident, there were indications of still further improvement in their nitrate

traffic. Those who were financially interested in nitrate companies would, no doubt, have read of the improvement in the industry as recorded by the chairmen of the various companies at their several meetings, and the latest information continued to be encouraging. They were informed that forward sales of nitrate had been satisfactory, and pointed to a total world consumption for the nitrate year to June 30, 1925, greater than that of the nitrate year which would end in the course of the next fortnight. Whatever the figures might be, it seemed clear from the returns received that the Antofagasta Company would continue to transport its full share.

On their railway there was situated one of the largest borate deposits in the world, and the tonnage which they carried of that traffic in the year under review was 35,955 tons, as against 33,182 tons in 1922. Mineral tonnages generally were satisfactory, and tin gave them a traffic of 75,520 tons as compared with just over 71,000 tons in the previous year. Although the increase was small, it was satisfactory, because it was a long haul traffic for them, and pointed to considerable activity in Bolivia.

A new traffic had recently arisen from that quarter in low-grade ores, consisting of lead and silver slags.

With the increased business in nitrate, copper, and tin, the nitrate establishments and various mining enterprises required additional commodities of every nature, and fuel oil and coal, so that general up traffic was consequently very marked in its increase, the total of 118,320 tons of mining articles being well over double the figure for the previous twelve months.

Col. H. Le Roy Lewis, C.B., C.M.G., D.S.O., having seconded the motion, it was unanimously agreed to.

A cordial vote of thanks having been passed to the chairman and directors, and to the managers and staffs at home and abroad for their services during the past year, the proceedings terminated.

DUNLOP RUBBER COMPANY, LIMITED.

REORGANISATION SCHEME EXPLAINED.

The twenty-fifth ordinary general meeting of the Dunlop Rubber Company, Limited, was held, on the 16th instant, at the Cannon Street Hotel, London, the Right Hon Sir Eric Geddes, G.C.B., G.B.E., chairman of the company, presiding.

The secretary (Mr Arthur Cunningham) having read the notice convening the meeting and the report of the auditors,

The chairman, in the course of his speech, said: My lords, ladies, and gentlemen, our meetings to-day serve a twofold purpose, namely, to submit to you the accounts for the 18 months ended December 31, 1923, and to consider resolutions dealing with the adjustment of the capital account, and thus dealing with the losses incurred in years gone by, when the fortunes of the company were so seriously shaken.

You will recollect that when I addressed you in January last I made a forecast of a million and a quarter profit for the 18 months now dealt with in these accounts after payment of debenture interest. I am glad to say that not only has that estimate been realised, but it has been considerably exceeded. The total net trading profit after the payment of debenture interest, and including the whole of the profits made by our cotton mills, gives a total figure of £1,538,000. This profit, as the report states, does not take into account the deficit on the American company for the year 1923—its year of inception—as that is being dealt with in the reorganisation proposals, being mainly initial and non-recurring charges. Having studied the accounts and report, we feel sure you will agree with us that the company is steadily climbing to a position of prosperity.

BALANCE-SHEET FIGURES.

I propose to deal only very briefly at this meeting with the balance-sheet figures, in view of the time required for discussing the reorganisation proposals, which, as far as we can judge from the number of proxies received, have met with a favourable reception.

Taking first the assets, freehold lands and buildings show a reduction of £114,310, compared with the figure of June 30, 1922, owing to the normal write-off for depreciation and due to the sale of some of our premises no longer required, in spite of the fact that £185,000 additional expenditure on capital account was incurred. Sundry debtors stand at £561,000, which compares with a figure of £948,000 last year. This

very satisfactory, as it has contributed largely to an improvement in our cash position. By the closest supervision and organisation, our finished stocks in relation to sales have been reduced. Since the date of the accounts a further and very gratifying improvement is shown in the cash and liquid assets position of the company. Investments, collectively, have increased by £660,000, due mainly to the transfer from sundry debtors to investments, to which I have already referred, and to a reduction of £868,000 in the "American investment," brought about by the repayment out of the proceeds of their gold bond issue of certain sums advanced by us to that company. The cash position of the company is infinitely stronger than in June, 1922, at which date bank loans amounted to £2,019,000, with cash in hand and bills of £217,000, whereas in the balance-sheet before you, cash, bills, and Government securities represent a net credit of over £1,000,000. The figure standing under the heading of goodwill, royalty, &c., is unchanged, as is also the item of expense of capital issues. The debit balance on profit and loss account remains the same, but against this there is a credit item of £1,451,792, representing the net profit for the 18 months ended December, 1923.

Turning now to the liability side of the balance-sheet, the share capital remains practically unchanged, the only small difference being due to a reduction in unpaid calls. Debenture stock issue is the same, but income stock is reduced through cancellation by purchase of some of that stock, which was obtained at a discount. Reserve account is £322,000 larger than on June 30, 1922, but this is due entirely to the transfer of some items from sundry creditors and credit balances to meet contingencies which will not now arise. Sundry creditors are substantially lower at £804,000, as against £1,293,000, due to the transfers to reserve account mentioned above; only £192,000 is, in fact, owing to trade creditors proper, another striking proof of our solid financial position. I call your attention to the footnote showing contingent liabilities, which has now been changed. We have a contingent liability for possible calls on shares held for £243,000, but that is more apparent than real, as the liability only arises if we chose to impose it ourselves. The other contingent liability which we now have is the guarantee in connection with the gold bond issue of the Dunlop Tyre and Rubber Corporation of America.

PLEDGED DEBENTURES.

I should like to amplify the note to the balance-sheet by saying, what you already know, that the 3,000,000 of unissued debentures are pledged as security in respect of the guarantee of principal and interest given by this company for the American gold bond issue. You will be glad to see when comparing this balance-sheet with the previous one that no contingent liability is referred to on contracts for forward purchases, as that unfortunate chapter in the company's history may now be regarded as closed.

Turning now to the profit and loss account, owing to the fact that these accounts cover eighteen months, against a ten months period of the previous balance-sheet, comparisons are difficult and confusing to the make; the net result, however, is that our profits are much greater, and our interest charges proportionately less. As stated in the report, and notwithstanding the keenness of foreign competition, our sales have increased very greatly in practically all markets, and have reached record figures, and the experience of the current year is, I am glad to say, more than maintaining the satisfactory recovery which these accounts show you. The quality of our products is certainly higher than it has ever been, and, in fact, is admitted by some of our keenest competitors to be pre-eminent. We certainly believe that our products are the best of the world in each class.

BUILDING A GREAT REPUTATION.

There is no doubt that from every evidence we can gather, the company is building up a great reputation, and one which I feel sure will inure more and more to our benefit. Our sales this year show very gratifying increases over the level of last year, which you will remember I told you was greatly in excess of the previous year, but having in mind the facts I have just stated, I look forward to a continuous rise in the sales of the company.

I am sure you will be gratified to learn that other products of the company are showing good results. Motor-cycle tyres have achieved some outstanding successes, and the striking popularity of the Maxfli golf ball of last year is not only being maintained, but is growing, and in every competition the percentage of Maxfli balls is extraordinarily high.

Reference is made in the report to the cotton mills, the rubber estates, the French mills, and the German factory, and with your permission and in the interests of brevity I will not deal with them further, although I should be glad to answer any questions upon them.

The rim and wheel company is showing improved results. I now propose the adoption of the report and accounts for the

eighteen months ended December 31, 1923, and call upon Sir Guy Granet to second the motion.

Sir W. Guy Granet, G.B.E., seconded the motion, and after the chairman had replied to questions on minor matters, it was carried unanimously. The retiring director and the auditors were elected.

The Chairman said that they now came to the sequence of meetings dealing with the reorganisation of the capital of the company. Since his speech had been prepared, he said, certain things had happened, and he thought it would be convenient if he explained exactly what the existing situation was, and to what extent it would modify the speech which had been circulated to the shareholders. The board had prepared a statement, in which they endeavoured to explain the scheme of reorganisation, which the board had elaborated after giving great thought to the matter, and which they believed dealt equitably with all. That that view was shared by a great many shareholders, among whom were some of the largest holders of ordinary shares, was amply demonstrated by the fact that they had over 6,000,000 votes registered in favour of their proposal, and he felt sure they would receive further support from among the shareholders present at the meeting. The resolution, however, had to obtain the sanction of class meetings—the ordinary shareholders and the "A," "B," and "C" preference shareholders—and the adverse vote of any one class might render the proceedings abortive.

PARENT TYRE OPPOSITION.

As, no doubt, shareholders had read, the Parent Tyre Company had definitely declared its hostility to the scheme, not disclosing publicly its reasons for so doing, and as that company owned or controlled about two-thirds of the "C" preference shares, their vote alone could block anything and render the vote of the other shareholders constituting the company absolutely futile. Shareholders might say that the directors should have paid due regard to this matter before formulating the scheme, and he could only say that they had paid every regard, and nothing could illustrate better their difficulties in dealing with the matter than the fact that opposition had also developed from a section of the ordinary shareholders.

The directors would be pleased, in the circumstances, to confer with one or two representatives of each class of preference and ordinary shares. The scheme which had already been formulated aimed at the early resumption of dividend payments, to which, he was sure, the great majority of the shareholders must be looking forward with anxiety. They had discussed matters very fully with the "C" preference shareholders as represented by the three directors of the Parent Tyre Company, and they had thought they had reached practical agreement with them. However, they had been pressed for further modifications, and having the interests of all the shareholders at heart, they did not think it was possible to agree to them. There the negotiations broke down. In the circumstances, he thought it would be better, having heard the board's proposals, to endeavour to get together at a conference the representatives of the various classes of shareholders, so that the directors might discuss the latter with them, and try to get a scheme which can be put through. They felt that in adopting this course they were adopting the only course open to them.

SCHEME EXPLAINED.

The Chairman proceeded to describe the board's scheme. He said:—

In framing the scheme we have endeavoured, so far as our judgment could guide us, to act fairly and reasonably with all classes of shareholders, with due regard to the priority of one class over another, and although it may be unnecessary to do so, I would remind the meeting that after the very great losses made in past years under a board constituted quite differently from the present one, sacrifices must be made, but at the same time the recognition of the losses which have been made in a writing-down of capital is merely giving expression to relative values as now established, and represents no fresh losses.

I would wish to emphasise that after the passing of these resolutions the rights of all classes of preference shareholders are unchanged, with the exception of the surrender of the contingent rights to additional dividend, and in the case of the "C" preference shareholders by a reduction of $\frac{1}{2}$ per cent. in their rate of dividend. So far as the ordinary shareholders are concerned, they are asked to share the equity in the company with the preference shareholders to the extent of 13.58 per cent., but otherwise the whole of the equity remains theirs.

It is unnecessary to mention that the nominal value of a share is immaterial as long as the whole of the equity belongs to its holders.

Let us now consider the magnitude of the problem before the board—how the deficiency with which we are proposing to deal has been arrived at, and what our suggestions are for dealing with it.

THE DEFICIENCY.

The deficiency can be divided into two main categories:—

Balance of—

- (a) Loss on trading in 1921;
- (b) Depreciation in value of assets.

As regards the first class, this loss has already been fully explained, and appeared in the last accounts as a debit item in the balance-sheet. It is the loss of £8,320,000 made in 1921 reduced by the profit of £588,000 for the ten months to June 30, 1922.

As regards the remaining items summarised at the top of page 2 in the circular. These are partly the result of transactions in the period of inflation following the war, and partly the result of disturbed foreign exchanges.

I will give you a few of the more important items which go to make up the figure of £4,516,787, depreciation in investments:

America, £2,383,500. This is largely due to writing down the plant to present-day replacement value, eliminating items representing loss on exchange, money having to be remitted to America when exchange was low and all initial opening-up and development expenses up to December 31, 1923. With the exception of one item, cost of bond issue, which has to be amortised over the life of the bonds, the capital shown, in the opinion of the board of the American company, represents the fair present-day value of the assets.

Dunlop Plantations, £782,000. Largely goodwill paid on acquisition of Johore and Segamat Estates in post-war inflation period.

James Hoyle, Limited, £460,000. Again largely goodwill, and of no value to-day.

Improved Steel Company, £127,000. These works have been written down to saleable value.

D. R. Cotton Mills No. 2, Limited, £66,000. Largely premium on preference shares.

Continental companies, £672,000. This deficiency is mainly due to the depreciated currencies on the Continent.

The remaining items are, I think, self-explanatory. The major portion of item under land and plant represents the writing-off of mould equipment in view of the changes with which we are faced. These items have received the most detailed consideration by the board. You will see, therefore, that we have to face a total deficiency of £12,582,000. That is the magnitude of the problem which confronts us.

From this total we first deduct the available reserves in the company's accounts, viz., £1,229,000, and thus arrive at a total net deficiency of £11,353,000, the burden of which would normally fall upon the ordinary shareholders. Having regard, however, to the special circumstances of the case, it was thought right to ask for some concession from the preference shareholders, and while this scheme was put forward by the board without any suggestion that it had been reached by complete agreement with all our shareholders, we had the advantage of ascertaining the opinions of substantial holders of the different classes of shares.

ORDINARY SHARES.

The ordinary shareholders are asked to write down the nominal value of their shares to 6s 8d, which disposes of the bulk of the deficit, but I would remind ordinary shareholders of what I said before, that except insofar as the 13.58 per cent. share in the equity which they will surrender to the preference shareholders if these proposals are accepted, this reduction in face value is nominal only, so that, excluding 13.58 per cent., the ordinary shareholders will, in fact, be entitled to all the profits available for distribution after the payment of preference dividends.

PREFERENCE SHARES.

The holders of preference shares of all classes are asked to surrender their contingent rights to additional dividend, and the holders of "C" preference shares are asked to consent to a reduction of their nominal capital from £3,000,000 to £2,250,000, with a consequent adjustment of the dividend rate, and a provision that in the event of liquidation their shares shall have the value of £1 each. This leaves them exactly as they were, except that they are invited to drop $\frac{1}{2}$ per cent. in their rate of interest, making it $7\frac{1}{2}$ per cent. instead of 8 per cent. A simple calculation shows that 10 per cent. on £2,250,000 is the same as $7\frac{1}{2}$ per cent. on £3,000,000.

The proposal for dealing with the arrears of preference dividends amounting to £1,126,000 before deduction of income-tax, is to liquidate this by the payment of dividends out of profits, with an obligation upon the recipients to purchase ordinary shares in the company with the sums so declared as dividend on their holdings. The net result, as given in the tables at the top of page 3 of the circular, is that the "A" preference shareholder receives 98 per cent. of his arrears of dividend, "B" preference shareholder receives 91 per cent., and "C" preference shareholder 86 per cent.

These dividends, less income-tax, will find their way into the possession of the preference shareholders in the form of certificates for ordinary shares, except for fractions of 6s 8d, which will be paid in cash.

The reduction in the nominal value of the "C" preference share capital by £750,000 renders it possible to issue the ordinary shares used for satisfying the preference dividend arrears without reducing the nominal value of the ordinary share to a still greater extent than now proposed, and will leave the capitalisation of the company fairly well balanced. It will be seen that resolution No. 3 provides for an increase of the capital from £9,322,000 to £20,000,000 by the creation of 32,000,000 of ordinary shares of 6s 8d face value. This is done in order to preserve the benefits to the shareholders of stamp duty which has already been paid.

UNISSUED SHARES.

Under the articles of association as they stand, the directors would have power to issue these shares on their own authority. The board, however, consider that this power should not extend to such a large block of unissued shares, and propose that their powers should be limited to 6,000,000 shares, out of which, under these proposals, 2,013,942 of the 2,340,000 shares going to the preference shareholders would come, leaving 3,986,058 shares, equal to £1,330,000, a little over 12 per cent. of the total capital at the disposal of the directors, which is not out of keeping for an important company like ours.

Needless to say, the board would give existing shareholders the first opportunity of acquiring these shares if they were ever offered for sale.

Sir Arthur Du Cros, as representing the Parent Tyre Company, defined their attitude to the scheme, and supported the chairman's suggestion for a conference.

After some discussion, the consideration of the reorganisation scheme was postponed, and the suggested committee appointed.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED. POSITION AND PROSPECTS OF TEA AND RUBBER INDUSTRIES.

The fifteenth ordinary general meeting of this company was held, on the 16th instant, in London, Mr Eric Macfadyen, M.P. (vice-chairman), presiding.

Mr E. J. Johnson, F.C.I.S., representing the secretaries (Messrs Harrison and Crosfield, Limited), read the notice calling the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—Ladies and Gentlemen, our chairman, Mr H. J. Welch, much regrets, as do his colleagues, his inability to preside to-day. Mr Welch has not been in the best of health for some little time, and is wisely taking a holiday. It has been our deliberate policy to convert some of our holdings in estates into share holdings as opportunity offered, and as the first half of 1923 was favourable from this point of view, so far as rubber was concerned, we now find ourselves, after a series of transactions, really in the nature of amalgamations, direct owners only of the Sumatran Tea Estates, which we have planted up over the past 13 years. The tea estates now amount to 10,165 acres (subject to resurvey) of tea, and 82,745 acres, of which much the greater part is first-rate plantable land on the east coast of Sumatra. The estates have recently been inspected both by Mr R. T. H. Doughty, our visiting agent, and Mr H. S. Holder, his technical adviser, and I am glad to say that their condition and the work of the staff is favourably reported on by both. The output of the tea estates was 7,518,069 lbs, an increase of over 10 per cent. on the crop of 1922. The net price realised was approximately equivalent to a London-landed price of 1s 2d per lb. This gave us a net profit of 4.85d per lb, comparing with 1.74d per lb in 1922. Our crop this year is estimated at 7,700,000 lbs, and we have sold it forward at almost exactly a penny over last year's prices.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, the limiting factor, of course, has been the low yield on our rubber investments. The income from investments has, however, at £26,166, more than doubled, owing to the fact that in 1923 modest dividends were paid by a number of rubber companies which paid nothing in the previous year. The greater proportion of the profit was derived from our Sumatran tea estates. With the carry forward of £42,620 we have an available profit of £230,548. From this we have transferred £13,500 to taxation reserve, £16,600 to amortisation, and £25,000 to the general reserve account. We propose to pay a dividend of $7\frac{1}{2}$ per cent., leaving £52,488 to be carried forward. The total of investments, taken at or below cost, stands at £1,367,663. The valuation at December 31st last showed a surplus of £38,142 over this figure. That appreciation has since run off owing to the depression in rubber shares. At present-day prices a conservative valuation would show a depre-

ciation of £35,792. An analysis of the total shows approximately 7 per cent. in gilt-edged securities, 10 per cent. in debentures and preference shares, and 83 per cent. in ordinary shares. Excluding shares, debentures, options, and loans, our liquid assets amount to £255,016, against liabilities of £160,859, a surplus of £85,157, subject, of course, to to-day's appropriations.

TEA MARKET.

Tea prices have maintained a comparatively high level since the date of our last meeting, and while there has been an easier tendency in the last six months, prices are still slightly higher than they were a year ago. I estimate that the consuming countries took 28 million pounds more than in 1922, absorbing 749 million pounds. Production appears to have exceeded world consumption by 28 million pounds, against an excess of consumption in 1922 of 31 million pounds. Against some falling off in yield in Northern India during the early and comparatively unimportant months of the new season, there is evidence of increasing exports from Ceylon and the Dutch Indies, and no doubt the world's output will again be greater in 1924. In time we are certain to see a great recovery in Russian demand, but improvement there is slow if steady. There is scope for a gradual increase in time in the consumption of other tea-drinking countries. In reply to certain inquiries as to the class of tea we produce, I may say that the Trust tea may be classed as very useful low-grown medium tea. At present for all but the commonest inferior teas coming forward demand is good, and allowing, of course, for short-time fluctuations, remunerative prices appear likely to rule over a period of years. I am sorry to say, however, there are signs of producers reverting to coarse plucking. This, if resorted to generally, would mean an excess of inferior common and stalky teas, a possibility which is, I think, somewhat of a menace to the market. We ourselves shall not be tempted to alter our standard of plucking, although by so doing it would be open to us greatly to augment our output.

RUBBER INDUSTRY.

During the year under review, the first calendar year of the operation of the Stevenson scheme, the rubber industry was working at a profit, though the level of return was very low for an industry subject to the very special risks to which we are exposed. In the early months of the year the effect of the adoption of the scheme upon market psychology led to a rise in price not fully justified by the statistical position, which was intrinsically much weaker when the price stood at 1s 6d about a year ago than to-day with rubber at 10½d. One effect of the Stevenson scheme has been to relieve the manufacturer of the necessity to protect himself by holding a large stock, as the scheme provides for the automatic increase of exports as soon as the price indicator shows that there is an effective increase in demand. Another important factor in the market, as Mr Eric Miller pointed out recently, has been the discouragement to a great extent of speculation in rubber, but of even greater significance is the insufficiency of dealers capable of taking over for the time being such first-hand rubber as producers must sell, but which at that particular moment may not be wanted by manufacturers. The provision of some such buffer between buyer and seller, if practicable, appears a very desirable supplement to the partial organisation of the industry which has already been achieved. Manufacturers readily admit that a reasonable stability of price around a level which offers a fair remuneration to the capital employed in the producing side of the rubber industry is as much in the interest of the manufacturer as the producer.

PRODUCTION AND CONSUMPTION.

In the current year, in spite of dull trade, we may safely assume that absorption will be not less than some 410,000 tons, while exportable production, to put the case at its worst, will be substantially below that amount, and I anticipate, therefore, that the free stock at the end of 1924 will not be in excess of the world's requirements. This position is undoubtedly due to the Stevenson scheme. There are some 4,200,000 acres of rubber planted in the East, and, allowing for the output of wild rubber, if there were no control of exports in force the available supply on the market would at present be in the neighbourhood of half a million tons per annum. This must have meant a drop in price, the gravity of which it is not difficult to imagine.

Turning now to the actual consumption of rubber goods, the outstanding event of 1923 was the enormous increase in the number of automobiles registered in the United States. Taking a conservative view, it seems likely that the American absorption of crude rubber during 1924 will amount to at least 275,000 tons. The steady though slow increase in the absorption of crude rubber by countries outside the United States, in spite of chaotic trade conditions, is very encouraging. In 1920 those countries absorbed between them 90,000 tons of crude rubber. This absorption was maintained during the following year while economic conditions were almost everywhere at their worst. In 1922 it increased to 105,000 tons. Last year it amounted to over 115,000 tons, and this year it will not be far short of 130,000 tons, and may

even exceed that amount. Tyres remain by far the most important outlet for our produce, but the possibilities for new uses may be judged from the history of the crepe rubber sole, which in only a couple of years or so has come to employ rubber at the rate of some 6,000 tons per annum, and is destined to account for much larger quantities. The industry has been well served by the Rubber Growers' Association in propaganda for this and other new uses for rubber, as well as by the energy it has devoted to the closer organisation, which is more and more recognised as being vital to the industry as a whole, of the producers generally.

BETTER PROSPECTS.

Reverting for one moment to our own position and prospects, we may congratulate ourselves to-day, as I am sure you will all agree, on having so large a proportion of our money invested in tea, but I think I have given you solid grounds for believing that rubber has seen the worst. Without ruling out the probability of temporary setbacks the long view must, I think, be for a gradual improvement, since the world will want more and more rubber, and will consequently have to pay for it a price sufficient once again to tempt capital into the industry. We have played our part in financing this industry through its difficulties, and expect to secure a share in new business when things look brighter. We confidently anticipate a steady appreciation in our holdings corresponding with a higher investment return. Even in the English summer the weather improves some time, and even the rubber industry will one day again be really prosperous. I hope and believe that that day is not very far distant. I now have much pleasure in moving the adoption of the report and accounts.

Mr E. L. Hamilton seconded the motion, which was carried unanimously, and the formal business having been transacted, the proceedings terminated with a vote of thanks to the directors and staff at home and in the East.

MODDERFONTEIN DEEP LEVELS, LIMITED. RECORD TONNAGE AND PROFIT.

The twenty-third ordinary general meeting of shareholders in the Modderfontein Deep Levels, Limited, was held at Johannesburg on May 16th.

Mr P. M. Anderson, chairman of the company, presided, and, in the course of his remarks, stated:—The tonnage milled is a record for the mine, and the profit earned, apart from the premium on gold, is substantially greater than in any previous year. The tonnage milled in 1923 was greater than 1921 (1922 was marred by the strike) by 15,700 tons, the working costs lower by 4s 7d per ton milled, and the working profit, exclusive of the premium on gold, greater by £105,773. This is due almost entirely to the reduction in working costs, as the output for 1923 was only 177 oz greater than in 1921, and is in a large measure due to the improved conditions affecting the employment of labour since the 1922 strike, which have resulted in a substantial increase of the individual output of all underground men.

REDUCED WORKING COSTS.

Compared with the year 1922, working costs show a reduction of 1s 7d per ton milled, which was more than sufficient to cover the reduction in the revenue from gold equivalent to 1s 3d per ton of ore milled. This reduced revenue is due to a fractional decrease in the yield per ton milled and to a fall of 1s 7d per oz in the selling price of gold.

The accounts before you show that the gross profit for the year was £828,945. Taxation absorbed between 14 per cent. and 15 per cent. of this, leaving sufficient for the distribution of two dividends totalling 140 per cent., or 20 per cent. more than last year. The surplus of £6,048 increased the credit balance of the appropriation account to £135,872. In accordance with our usual practice, no expenditure was charged to capital account during the year.

DEVELOPMENT WORK.

The development work done during the year totalled 4,669 ft., which was sufficient to maintain the tonnage and value of the reserves. At the end of the year these were calculated to be 4,800,000 tons of an average assay value of 9.3 dwt over an estimated stopping width of 79 in., the width being 3 in. greater than at the end of the previous year. In addition, there is on the surface dump a reserve of 70,000 tons. As the result of operations during the first four months of the current year, there has been an estimated gross working profit of £298,000 from the 174,900 tons milled. This profit represents an increased rate of about £5,500 per month as compared with the average for last year. Working costs have averaged 16s 5d per ton milled, or a further reduction of 1s per ton. Development during the period amounted to 1,290 ft., of which 595 ft. was on reef. All of this footage was payable, averaging 17 dwt, over 62 in., or 1,052 inch dwt.

The report and accounts were adopted.

NIRMALA (JAYA) PLANTATIONS AND LANDS CO., LTD. IMPROVED PROSPECTS.

Presiding at the annual meeting of this company, held on the 16th instant, Mr Walter Hilliers, the chairman, said the year's result showed a fair improvement, the net profit being £12,214, reducing the adverse balance to £10,487. Prices realised for tea and rubber were about 33d better than in the previous year, and the total net profit would have been higher but for the following reasons. The tea crop, although showing welcome improvement, had not progressed as it should, owing partly to adverse climatic conditions and partly to occasional attacks of blight. There were prospects that crops would improve as a result of better cultivation. Though the present cost could not be called high, even a moderate improvement in crop would have marked effect. The directors believed that the gardens, given fair market conditions, would give a good return. The estimate for the current year should, if no untoward circumstances arose, be fully reached. This crop had been sold forward at a price giving a fair profit. The visiting agent's report showed a satisfactory state of affairs in regard to upkeep, management, and all other matters.

The price realised for rubber was satisfactory, being about 1s 4½d per pound London for all grades. The present cost was by no means high; it would be some pence per pound lower on full production, even with conservative tapping. The directors had again considered it advisable to join the restriction scheme, but it was right to realise what the restriction meant from the profit-earning point of view. They had sold forward five tons monthly, all grades, to the end of 1924 at about 1s 7d London, which was satisfactory. Reports on the rubber fields were satisfactory.

They had about 90 acres planted with cinchona, and intended planting about 150 acres by the end of 1924, and were preparing for a moderate extension next year. There seemed no doubt as to the world's growing requirements of sulphate of quinine, and the price should continue profitable for some time to come.

The financial position at December 31st was satisfactory, and since then the position had been further strengthened. They had at present £30,000 invested in Government securities and £15,000 in cash and stock. The prospective results for the current year pointed to the debit balance at present existing on the revenue account being extinguished, and the preference dividend due to date being paid.

The report and accounts were unanimously adopted.

GEDULD PROPRIETARY MINES, LIMITED. MOST GRATIFYING YEAR. EXCELLENT CURRENT YEAR'S PROSPECTS.

The twenty-third ordinary general meeting of shareholders in the Geduld Proprietary Mines, Limited, was held at Johannesburg on May 16th.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, stated:—The year 1923 stands out as the most gratifying in the history of your company. This can be attributed directly to the successful operation of the increased reduction plant, which came into commission on April 24th, and more satisfactory labour conditions prevailing since the termination of the 1922 strike. The most pleasing feature of the past year was the substantial increase in the dividend distribution, which was approximately 70 per cent. greater than that for the previous year, the amount distributed being £365,214, as against £215,808. In addition, the amount carried forward in the appropriation account was increased by £33,716 to a total of £151,936. The principal factor in this achievement was, of course, the scale of operations, which was well over 50 per cent. greater than in 1922, the tonnage milled being 722,500, as against 460,700.

The average working cost for the year was 19s 4d per ton milled, 1s 1d per ton less than in 1922, and 4s 3d less than in 1921. This further reduction sufficed to offset a fractional decrease in the yield per ton milled and a fall of about 1s 5d per ounce in the average price realised for gold, with the result that the year's operations showed a profit of £469,319, which was £168,376 more than that for the previous year. With sundry revenue the gross profit amounted to £486,201. On working capital account a total of £133,649 was expended, chiefly in connection with the extension of the reduction plant to a nominal capacity of 65,000 tons per month.

THE ADDITIONAL PLANT.

When we last met together, the additional reduction plant had been in operation only about three weeks, but had already given indications that it would be capable of dealing with more than its estimated capacity of 65,000 tons per month, and I suggested that this might be exceeded in two or three months' time with-

out impairing the extraction. You will no doubt have noticed that my anticipations have been fulfilled, the tonnage treated having been in excess of the figure quoted, and the average extraction for the year shows an increase of nearly 6 per cent. The new plant has given entire satisfaction, apart from a somewhat heavier absorption of gold in the early stages than had been anticipated. The operating costs are satisfactory, and the value of the residues after treatment has averaged .346 dwt. per ton for the first four months of this year, compared with .475 last year and .639 in 1922. A review of the situation at the beginning of this year convinced your consulting engineer of the ability of the mine to supply ore in excess of the capacity of the increased plant. Consequently a further extension to a capacity of 75,000 tons per month has been taken in hand. The cost of this extension is estimated at £20,000 while, apart from this sum, about £40,000 will be expended for a compressor and sundry other items which would be required in any case. It is expected that this further extension will be completed about the end of the year.

A total of 24,284 ft. was developed during the year, which was a record for the mine. One of the most encouraging features of this work was the disclosure of high values in the ground developed to the south of No. 2 main incline by means of the 3rd and 5th level south drives. Ore of satisfactory value has also been opened up north of the No. 2 main incline, towards the north-eastern corner of the mine, and in the workings from the No. 7 shaft at the southern end of the mine.

ORE RESERVES.

The ore reserves at the end of 1923 amounted to a total of 5,750,000 tons, of an average assay value of 7.1 dwt. over an estimated stopping width of 63 in.

The 1923 development footage appears likely to be not only reached but exceeded during 1924. Up to the end of last month a total of 8,778 ft. had been accomplished, of which 6,905 ft. on reef had been sampled, the payable section of 2,425 ft. averaging 14.7 dwt. over 43 in., or 632 in.-dwt.

As regards the reduction operations during the first four months of the current year, the features are the milling of 275,700 tons, which indicates that last year's total is likely to be exceeded by 100,000 tons, and the further reduction of 8d. per ton in the working expenses to an average of 18s 8d per ton milled, which constitutes a record for the mine. The total profit for the period is approximately £200,000, or at the rate of about £9,000 per month more than the average for 1923.

The report and accounts were adopted.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED. EARNINGS SUBSTANTIALLY INCREASED.

The twenty-eighth ordinary general meeting of the British Electric Traction Company, Limited, was held, on the 16th instant, at the Holborn Restaurant, London.

Mr J. S. Austen (chairman of the company) presided, and in the course of his speech said:—Ladies and Gentlemen,—We have had a good year; we have earned £15,000 more than last year, which is a considerable sum when you remember that that has to come exclusively from dividends in other companies. I wish here to say that I take no credit for this, because it is nothing more than the natural result of the spadework which was done by your directors in the days before I joined the board.

Perhaps the result is even a little better than it looks, because we suffered a loss of over £10,000 of income from the London and Suburban Traction Company. Our holding in that company is the largest holding we have. We have £900,000, nominal, of stock, and on that we received this year a fraction over 1 per cent. The London and Suburban Traction Company owns practically all the tramways of London, exclusive of those which belong to the municipalities. The temptation is very great to expatiate upon the traffic situation in London to-day, but I resist that temptation because I know that nothing I can say is likely to do any good. But I do wish to say one thing, and that is to express the hope that no factious opposition in Parliament will prevent the passage of the Bill for the Regulation of London Traffic, which is so obviously for the benefit of the public, the employers, and the men.

Electrical energy, I am pleased to say, is one of the sources from which we have this year derived increased benefit, and it is one to which I shall be looking forward in the future, certainly more than from tramways, to derive further additional benefits. The position now is that users have learned by experience that it is cheaper to purchase their supply from a producer in bulk than it is to make for themselves. The result is that power companies now rank, with gas and water companies, as among the most suitable public utility company investments.

Shareholders from time to time ask me as to the valuation of a company, and I must confess I feel an inclination to say I do not know and I do not care. I am not a believer in such valuations, and attach little importance to them. There is

nothing positive about a valuation; it is nothing more than an expression of opinion. You may ask me what is the valuation of this company, drawing a distinction, it may be, between the value of the company and the valuation of the company, though the distinction may be rather a nice one. Well, in answer to that, I will say that if it was possible to offer the whole of the ordinary stock for sale in one block, I should not have the slightest difficulty in finding a number of purchasers at par, and I am equally certain I should find one—which would be quite enough—who would give considerably over par. And now a word about the present year. We are paying 6 per cent., and have the handsome surplus of £30,000, and I think that for the current year we may regard our 6 per cent. as assured. Undoubtedly we are a progressive company.

The report and accounts were unanimously adopted.

W. J. BUSH AND COMPANY, LIMITED. SAFEGUARDING OF INDUSTRIES ACT AND FOREIGN COMPETITION.

The twenty-seventh annual general meeting of W. J. Bush and Co., Limited, was held, on the 16th instant, at the Institute of Chartered Accountants, Moorgate place, London, Mr J. Mortimer Bush (the chairman) presiding.

The secretary (Mr J. H. King) read the notice convening the meeting and the report of the auditors.

The Chairman said:—Business conditions during the past year were similar to those which prevailed in 1922. Our turnover was practically the same, and the moderate increase in the net profit was due to the reversion to our pre-war rate of depreciation on plant and machinery.

The maintenance of our net profit is due in a large measure to the improved efficiency of our processes in our fine chemical department and to working economies in our various factories. Our fine chemical department was greatly extended during the war period, and has since been fostered under the protection afforded by the Safeguarding of Industries Act. This Act expires in September, 1926, when, unless it is extended for a further period, we shall be exposed to world-wide competition. In view of the low rate of wages now being paid on the Continent, and the depreciated currencies existing in competing countries, this will be a serious matter, and we may even be forced to discontinue the manufacture of some of our products.

We are among those who value highly the tariff preferences given to British products by the Dominions. We cannot, however, rely upon such exterior aids, and I am pleased to say that during the past year very gratifying improvements have been achieved by our chemists in several of our processes. I have, therefore, considerable confidence that we shall be able to meet foreign competition in a number of products. The benefit of these improvements will be greater during the current year and in the near future.

During the year a further reduction of £8,000 was effected in our bank loan.

Our subsidiary companies both in America and in Canada made substantial profits, and are in a sound financial condition.

Including the amount brought forward, we have, after adjustment of excess profits duty, income-tax, and corporation profits tax, a sum of £66,306 2s 5d. After making provision for the dividends on the preference shares there remains for disposal £60,056 2s 5d. We propose to pay a final dividend of 7 per cent. on the ordinary shares, making, with the 3 per cent. interim dividend paid in February last, 10 per cent. for the year. This will leave a balance to carry forward of £35,056 2s 5d.

Sir George Hayter Chubb, Bart., seconded the resolution, which was carried unanimously.

HOVIS, LIMITED. INCREASED SALES.

The ordinary general meeting of Hovis, Limited, was held, on the 17th instant, at Caxton Hall, Westminster, London.

Mr A. H. Dence (the chairman), who presided, said that it was proposed to increase the reserve account by £17,085, bringing it up to £180,000. During the year £27,000 had been added to capital expenditure and £20,000 written off in depreciation. The only addition of importance in capital expenditure was the outlay incurred in the purchase of the Lincoln mill. In connection with the company's welfare work a freehold site had been purchased at Sale, Cheshire, for the benefit of the employees of the Northern mills. The book debts and stocks on hand showed an increase of £33,000 as compared with the previous year, and the investments an increase of £50,000, a further £50,000 having been employed in the purchase of short-dated War bonds. The balance at profit and loss account showed an increase of about £5,000. The directors proposed to start a definite provident or benevolent fund for the assistance of those of the company's staff who, from age or misfortune, required

assistance. It was proposed to set aside a definite sum every year, as the earnings of the company permitted, to be vested in trustees for the sole benefit of the staff and employees.

The sales of Hovis had shown a very satisfactory increase during the year under review. A large sum of money had been expended on advertising, and good fruit had been the result. It was a matter of great satisfaction to the directors that, in disseminating information to the public through their advertisements as regarded the health-giving effects of Hovis, they were increasing not only their own prosperity, but were conferring also a benefit on those who learned the lesson. They were convinced that good health in the community was engendered and maintained by the daily consumption of Hovis bread. The side-lines of the company all showed satisfactory returns, but there was one part of the business which was not so profitable as it should be, and that was the white flour. Through over-production, undoubtedly, the prices of white flour were so cut as to render any direct advantage from milling practically negligible. It was to be hoped that reason would prevail, and that millers would cease to vie with each other in selling flour at an uneconomic rate. Taking the business as a whole, the prospects were bright.

The report and accounts were unanimously adopted, and a dividend at the rate of 10 per cent. per annum on the ordinary shares was declared.

CHANNEL TUNNEL COMPANY, LIMITED. STRONGER PUBLIC FEELING IN FAVOUR OF PROJECT.

The ordinary general meeting of the Channel Tunnel Company, Limited, was held, on the 17th instant, at the Cannon street Hotel, London.

The Chairman (Baron Emile B. d'Erlanger) said that, as stated in the report, the Channel Tunnel was an engineering project worthy of our times; it would cement our friendship with France, confer inestimable benefits upon the communities of both countries, provide work for thousands of men for many years, and foster trade between England, France, and the whole of the European Continent. In saying that it was an engineering project worthy of our times he did not want in any way to emphasise the difficulties of the task in constructing the Channel Tunnel, because the very careful studies which had been made of the project showed it to be a relatively easy task compared with many other tunnels which had been constructed. Good relations with foreign countries were based principally upon mutual confidence, and there was no greater token of mutual confidence that we could give to France than the approval and the carrying out of the Channel Tunnel scheme.

Moreover, the project would provide work for thousands of work people, and this he considered to be a very important factor in the present condition of the labour market in England. As to the development of our trade with the Continent, he thought it would confer untold blessing upon this country. There had been of late a revival of interest in the Channel Tunnel scheme, which had sprung up quite spontaneously. The Prime Minister had expressed his willingness to receive a deputation on the subject, and he was very hopeful that the scheme would receive at last the favourable consideration which it deserved, and that liberty would be given to the members of the House of Commons to vote on it in accordance with their own conscience and belief, and without any interference on the part of the Government. In that event he felt certain that the project would be received and accepted by an enormous majority of the House of Commons. Personally, he entertained no doubt whatever as to the money required being raised if the scheme were approved.

Sir Robert Perks said that there was at the present time a stronger public feeling in favour of the Channel Tunnel project, not merely in France, but also in this country, than there had been during the last thirty years, and when it came to a vote in the House of Commons he felt quite sure that they would have a very considerable majority in its favour.

The report and accounts were unanimously adopted.

SAPUMALKANDE RUBBER COMPANY, LIMITED. GOOD CONDITION OF ESTATES.

The fourteenth ordinary general meeting of the Sapumalkande Rubber Company, Limited, was held, on the 16th instant, at the offices of the company, 1-4 Great Tower street, London, Mr C. Heath Clark presiding.

The Chairman, after referring to the absence of Mr H. J. Welch, owing to illness, said that the surplus of liquid assets over liabilities, including the dividend recommended at December 31, 1923, was £21,141. Deducting it from the issued capital, the cost per acre over the 2,620 planted acres worked out at £54 18s 2d, without taking into account the value of the 661 acres of reserve land available for cultivation. The increased rubber cost was due to the reduced crop. The net price realised

for the rubber crop, 11.59d per lb, required a word of explanation. The actual sales to the time the accounts were made up had totalled 369,647 lbs, and had realised an average net price of 1s 2.44d per lb. The balance of the crop exportable under the restriction legislation had been taken in at valuation, and the crop harvested in excess of the exportable percentage had been included at bare cost of production, so that 197,594 lbs had been taken into the accounts at just under 6½d per lb net, the average over the whole crop produced working out at 11.59d per lb.

The estates had been maintained in a clean-weeded condition, and buildings and machinery had been satisfactorily upkept. That systematic cultivation was agriculturally and economically sound was evidenced by the healthy appearance of the estates and the increased crops.

The profit for the year was £12,647, and they recommended a dividend of 7½ per cent. The estimated tea crop for the current year was 330,000 lbs. To the end of May 137,000 lbs had been secured, as against 110,983 lbs to the corresponding date in 1923. The rubber crop could not be accurately estimated, as the percentage exportable under restriction could not be known in advance. The whole tea crop for the current year had been sold at an average net price of approximately 1s 2½d per lb. Of the current year's rubber crop, including forward contracts, 58,352 lbs had been sold at an average net price of approximately 1s 5.64d per lb.

The outlook for tea was very satisfactory, and with regard to rubber there was a good deal of unnecessary pessimism at the present time, when all the known factors of production, stocks and consumption showed a very much stronger position than at any time since the slump.

The reports and accounts were unanimously adopted.

ZINC CORPORATION, LIMITED. SUCCESSFUL RESULTS—SATISFACTORY PROSPECTS.

The thirteenth ordinary general meeting of the Zinc Corporation, Limited, was held, on the 17th instant, at River Plate House, London, Mr F. A. Govett (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that when they met last year he told them that the outlook was for maintenance of the price of lead, and that on that price entirely depended the profit which the company might make. He was basing his estimate at that time on the price of £24 per ton, at which high price it seemed they could make some moderate dividend, but since that time the price had further risen, and for the twelve months of 1923 it averaged no less than £26 10s per ton. As each rise of £1 on the company's present output made a difference of about £2,000, the shareholders would readily understand the reason of the largely increased profits from this source. This year's profit included some outstanding payments for zinc concentrates, but the main reason was the price of lead. The price was now, of course, still higher, and had been much higher than to-day, but all he could do at that moment was to tell them that their profits depended on the price of metals, and that, for reasons which, for the most part, still existed to-day, the outlook was good.

Apart from the higher price realised, they had also obtained some increase in profit from greater efficiency of their treatment of the ores, and possibly, to a certain small extent, from an increased efficiency of labour. The result of these combined forces was shown

in the report. The average price to the end of May this year was about £32 10s, and if they could make an average for the year of £30 per ton, which seemed probable, they might reasonably expect the same dividend for the current year. How long that was going to continue he would not presume to forecast; it was a figure far higher than he would have ever dared to think possible, but he was hopeful, though it might be selfishly in the interests of this company, that high prices might long continue, and so might compensate them for any possible later fall. Should the price fall to £20 the profit, if any, was going to look precarious. The normal pre-war price was about £16, and if there was going to be any Socialist-Communist upset of the world it would seem that consumption might fall to nothing, in which case the united prosperity of the shareholders with good dividends and of the workers with their high scale of remuneration and short hours would disappear.

Following upon an interesting review of the history of the corporation from its formation, he said at the end of this long period the corporation was now in a strong and prosperous condition.

LABOUR'S CLAIMS.

Proceeding, the Chairman said: He had spoken already of some small amount of increased efficiency of labour, and he was hopeful that this might show that labour on the field was beginning to learn a lesson, to appreciate the fact that the only counterpoise, the only justification for high wages and short hours, was high output—an output commensurate with the wages paid. He tried to investigate the fact, but the result was not too encouraging, and at this moment labour was agitating for still higher wages, asking for a 30-hour week below ground instead of 35, and without giving the company any credit for the improved machinery at their disposal, claiming that as there was no diminution of output or reduction from the 44-hour week to the 35 under the Edmunds Temporary Award, so there would be no less output with 30 hours. To his (the chairman's) mind, this indicated but one thing, namely, the extent of the "go slow" business; that if it be true that they could make the output of 44 hours in a week of 30 hours, the men must have been restricted by the unions when the 44-hour week was in force to the equivalent of 30 hours' work. Will or no will, undue restriction of hours infallibly reduced the opportunity to work for all alike.

Nor was there the slightest justification for the claims. The report of the Government's Technical Commission on the hygienic condition of the company's mines clearly showed that there was no reason to reduce from the standard hours of the State, and they claimed the time had now arrived for the cancellation of this temporary award, which was made while this report was pending, and a return to the standard hours of the State. He had read the account of the Labour Conference with the Mine Managers' Association, and, speaking for himself and the Zinc Corporation, he felt he should have been inclined to admit the claim to share in the company's prosperity, but only and always subject to their sharing also in adversity. That was profit-sharing on a sliding scale. The shield, of course, had another side. As a matter of fact, the Broken Hill companies many years ago offered the unions a sliding scale of wages which would have enabled them to participate in the results of rising prices, but this offer was refused, and, further, the Wallaroo and Moonta Copper Mines operated along such lines for a period of years, but it was deliberately abandoned by the miners. Let budding Communists reflect that even if they could have everything in common, we would not be all equally rich, we should be equally poor.

Mr W. S. Robinson seconded the motion, which was carried unanimously.

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

CROWN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

RECORD YIELD OF GOLD.

BURDEN OF TAXATION.

The twenty-eighth ordinary general meeting of shareholders was held in Johannesburg, on May 20, 1924.

The Chairman (Mr. Samuel Evans) said: 1923 was in several respects one of the most satisfactory years we have had since the formation of the Crown Mines. The development footage accomplished, the fathomage broken, the tonnage crushed, and the total yield of gold in fine ounces were greater than in any previous year in the history of the company. Throughout the period we were free from European labour troubles, and we were not at any time as seriously inconvenienced as in previous years by the shortage of native labour. As a consequence, the efficiency of our labour force was satisfactory, and we were able to utilise, on the average, 94.8 per cent. of the capacity of our plants.

There was no change in the company's mining property during the year.

The tons mined during the year totalled 2,881,457, or 9,265 tons per working day, as compared with 2,816,431 tons, or 9,056 tons per working day in 1915, which was the best previous year. The tons mined in 1913 were 2,483,622, or 7,986 tons per working day.

We produced last year 827,872.425 ozs of fine gold, as against 763,062 ozs produced in 1915, and 772,194 ozs in 1913—the highest previous outputs. It will, I am sure, surprise some of you to hear that the gold output of this company in 1923 exceeded that of the whole Commonwealth of Australia (709,491 fine ounces), was nearly double that of India (423,755 fine ounces), and 28 per cent. larger than the gold output of Rhodesia (647,992 fine ounces). Apart from the Transvaal, only two countries produced in 1923 a larger quantity of gold than the Crown Mines, namely, the United States with 2,485,475 fine ounces and Canada with 1,179,500 fine ounces.

REVENUE.

Our receipts from the sale of gold last year totalled £3,745,500, of which £228,921 was due to the premium, which was equal to 55.64d per fine ounce. We also produced 82,450.38 fine ounces of silver, which brought in a revenue of £11,496, or 2s 9.46d per fine oz. Our total revenue for the year from all sources was £3,791,854. Adding £378,822, which we had to the credit of the appropriation account at the beginning of the year, we have a grand total of £4,170,676. Dividends were £623,067 3s 9d, and it will be noted that the balance to the credit of the appropriation account shows an increase on the year of £80,483. During the year we paid on account of the redemption of debentures £138,450, which included £54,500 paid on January 1st last for the redemption of the debentures drawn on November 17, 1922. The amount of debentures outstanding at the end of last year was £150,000. £85,000 will be redeemed this year, and the balance of £65,000 in 1925.

I have already mentioned that the premium on the sale of gold amounted to £228,921. That brings the total sum we have received as premium up to £2,352,957. On the other hand, the increase in our working costs since the commencement of the Great War up to December 31st last totalled approximately £5,300,000. The yield of gold per ton milled was 6.41 dwts, which was above the average of recent years. The working costs, however, although lower than the figures for the five years 1918 to 1922, are still very high, amounting to 19s 6d per ton milled, as compared with 1913 16s 5d; 1914, 15s 7d; 1915, 16s 2d. There are certain items of expenditure which are not included in the figures quoted, such as taxes of Union and Provincial Governments, donations, fees of directors, auditors, debenture trustees, &c. If we take in all our disbursements, exclusive only of the sums spent on capital account and in connection with the debentures, we have in 1923 a grand total of £2,696,600, as compared with £1,940,257 in 1914. In this connection it must be remembered that the development footage which was charged to working costs in 1923 totalled 66,690 ft., as compared with 30,747 ft in 1914. This extra development added approximately £163,875 to the working costs last year.

REDUCTIONS IN WORKING COSTS.

Considerable reductions in working costs were effected last year, by the increased efficiency attained through the use of improved appliances, and methods developed as the result of comprehensive and systematic studies carried out at the mine, and by the Rock Drill Committee of the Central Mining/Rand Mines Group.

The extended use of Jack-hammers has made it possible to reduce the average stopping width from 54.7 inches in January, 1923, to 49.6 inches in April, 1924, and the gold contents of the reef are now being extracted with a less tonnage mined per fathom, and with consequent saving in the transport charges and cost of treatment per fathom mined. And there are other directions in which we are able to report progress. Corduroy concentration in place of amalgamating tables has been introduced at two of the reduction works, and will, as soon as possible, be introduced at the third

plant. This process, which gives less opportunity for the leakage of gold, should lead to some reduction in costs, and is expected to result in a slightly lower residue. In addition, the recovery of a small quantity of osmiridium, amounting approximately to 17 ounces per month, valued at £425, is made possible.

CURRENT YEAR'S RESULTS.

The results obtained this year up to the end of April, compared with those of the corresponding period of last year as follows:—

Four Months ended April 30,			
	1923.	1924.	
Tons milled	845,000	861,000	
Yield:—			
Total fine ounces	268,377	271,410	
Per ton milled, dwts	6.352	6.305	
Value of yield:—			
Total (including premium)	£1,144,023	£1,250,362	
Per ton milled	27s 0.9d	29s 0.5d	
Working costs:—			
Total	£860,925	£851,869	
Per ton milled	20s 4.5d	19s 9.5d	
Working profit:—			
Total	£283,098	£398,493	
Per ton milled	6s 8.4d	9s 3.0d	
Average number of Europeans employed	1,824	1,948	
Average number of coloured employed	15,816	15,505	

A shortage of natives since about the middle of March has adversely affected the results recently.

In 1923 we developed 2,311,924 tons of an average value of 6.5 dwts. At the end of the year our ore reserves totalled 9,076,000 tons, having an estimated average value of 6.4 dwts. 1,426,000 tons, valued at 6.8 dwts, is in shafts and pillars, leaving 7,650,000 tons, having an estimated value of 6.3 dwts available for stoping. It will be noted that, as compared with the position at the end of 1922, there is an increase in the quantity of ore available for stoping of 267,400 tons, and that the value is higher by 0.3 dwt.

Taken as a whole, the development operations in the lower levels of the mine continue to disclose satisfactory values, although in recent months the grade of the ore exposed in drives, in the neighbourhood of 7A shaft, south of the South Rand Dyke, have been somewhat disappointing. In that area up to the end of April 360 feet of drives were sampled in South Reef, of which 170 feet, or 47 per cent., were payable, with a value of 11.1 dwts over a width of 21 inches. During the same period 1,670 feet of Main Reef Leader drives were sampled, of which 630 feet, or 38 per cent., were payable, with an average value of 13.9 dwts over a width of 20 inches. Too much weight should not be given to these results as the area covered is small. No attempt has yet been made to develop South Reef at No. 5A shaft, but the values of the Main Reef Leader there continue to be quite satisfactory, as out of a total drive footage sampled during the current year of 2,740 feet, 2,210 feet, or 81 per cent., was payable, with a value of 11.3 dwts over a reef width of 29 inches.

The opening up of the southern ground is progressing satisfactorily. As the result of the acquisition from the Government of additional mining claims in 1922, a deep level shaft will be sunk to tap the reef in the south-western portion of our property. A railway, over a mile in length, has been laid to serve this shaft, and the necessary work in connection with the installation of plant is being taken in hand to enable sinking to start about the end of this year.

Having regard to all the circumstances, particularly the satisfactory position of our ore reserves and the excellent values disclosed by development operations in recent years, I consider that I am justified in expressing the view that the prospects of this company are brighter to-day than they have been at any time since pre-war days. Even if the premium entirely disappears we should do at least as well as we did last year, provided (1) that the value in commodities and services of gold here and in the rest of the world is not further depreciated; (2) that we are not burdened with increased taxation; (3) that we have an adequate supply of native labour; and (4) that we are reasonably free from interruptions by disputes with organised labour.

BURDEN OF TAXATION.

It is often suggested by politicians that shareholders in Rand gold mining companies have been unduly favoured by the powers that be, and that they ought to be made to carry a larger taxation burden. The taxation of the net profits of the mines has been increased from less than 10 per cent. per annum before Union to 27 per cent. last year, and the burden is considerably heavier now than it was during the war, including the special war levy. The fact is, the taxation burden imposed on the profits of mining companies in the Transvaal is much greater than that imposed on the profits of other industries. Indeed, I am confident that

a thorough investigation by a competent and impartial authority would prove conclusively—(a) that the capital invested in the gold mining industry of the Transvaal is more heavily taxed than the capital invested in any similar enterprise in any other country, and (b) that this industry is subjected to greater interference by Government officials and more numerous and vexatious Government regulations than any other metalliferous mines in the world. The manner in which the Union Government have treated the capital invested in the gold-mining industry no doubt accounts to some extent for the fact that, on the whole, South Africa has not been viewed favourably by European capitalists in recent years. There are very few countries so well endowed by nature as South Africa. The possibilities in connection with the development of coal and iron industries in the Transvaal and Natal, and the cultivation of cotton and other sub-tropical products in our rich, low-lying areas are enormous; but capitalists will hesitate to invest their money here so long as there is a risk that, if their ventures are successful, heavy differential taxation may be imposed on their profits, and that their operations may be subjected to the constant interference of an army of Government inspectors enforcing strict compliance with innumerable and harassing Government regulations.

LANDOWNERS' FOOLISH POLICY.

It is unfortunate that South African landowners, who have in the long run most to lose from attacks on capital and encroachments of the bureaucracy on the rights of property, have not yet realised the gravity of the peril which at present confronts them. In the past 20 years, and largely since Union, a mass of legislation has been placed on the statute books interfering with the rights of land and other property-owners, and a vast army of officials has been brought into existence in order to carry out the numerous laws and regulations which substitute Government meddling for the individual freedom which the farmers of South Africa not so long ago possessed to a larger degree than those of most other countries. I believe that there are in South Africa close on 50,000 farmers who own their own farms. Once they were the controlling factor in this country. In recent years, however, they have allowed themselves to be lulled into a sense of security by the plausible superficialities of leaders who are at heart State Socialists, with the result that the political power which not so long ago was the farmer's has been transferred to the bureaucracy and to organised labour in the towns. South African farm owners have been induced to occupy themselves with all sorts of political questions that do not really matter, and have entirely neglected their own vital interests, so that the bureaucracy has become sufficiently numerous to vote the farmer under the table, and for that state of affairs the farmer himself is responsible. I hardly think that it is an exaggeration to say that the property-owners of South Africa to-day are over-governed, over-taxed, and official-ridden.

MONETARY POLICY.

At our meeting last year I pointed out the possible danger to the Rand gold-mining industry and South Africa generally, which might result from the action of the Government and the Parliament of the Union in persisting in a policy which tended to prolong and aggravate our exchange and currency troubles. The monetary situation here is still unsettled and disquieting. It has no doubt been made worse by the stabilisation policy which the British Government appear to have pursued since the spring of last year, and which has led to a general rise in prices and in the cost of living in England. That has not only depreciated the British paper pound as compared with the dollar, but it has also widened the difference between the purchasing power of the British paper pound and the South African paper pound, with the result that our banks have accumulated in London large balances which can only be transferred to South Africa by making the exchange rate high enough to account, for a part at any rate, of the disparity in the commodity value of the two currencies. There are several ways in which this disparity may be eliminated. The most satisfactory and the only permanent solution would be for both countries to restore the gold standard with as little delay as possible. Then the adjustment in the purchasing power of the two currencies would take place automatically.

If the premium continues for any length of time it is almost certain to bring about a state of affairs here which will nullify or even more than nullify, the benefits which the mining companies now derive from the premium. The level of prices and the cost of living will gradually rise until the South African paper pound has been debased to the level of the British paper pound, unless the rate of exchange is raised to and kept at a level sufficiently high to maintain the equilibrium between the two currencies. Taking everything into consideration, I feel convinced that, if appointed, the expert inquiry suggested by Mr Burton will show that those who are urging the Government to remedy the present exchange situation by definitely linking our currency with that of England, without regard for what

England's currency policy is, are in reality asking for a fresh dose of inflation. In other words, they want South Africa to start again on the "vicious circle" through which we passed in 1920, 1921 and 1922; and the next experiment with inflation may have a far more calamitous ending than the last.

Mr J. Emrys Evans seconded the motion, which was carried unanimously.

MOLASSINE COMPANY, LIMITED.

IMPROVED RESULTS DESPITE DIFFICULTIES.

The annual general meeting of the Molassine Company, Limited, was held, on the 18th instant, at Tunnel Avenue, East Greenwich, London, Mr John Prosser (chairman and managing director) presiding.

The Chairman said: You will see that we made a profit of £17,460 17s 3d, out of which £4,073 5s 11d has been allocated to depreciations, leaving £13,387 11s 4d (subject to corporation profits tax), which with £752 15s 11d brought forward, makes an available balance of £14,140 7s 3d. Of this sum £5,000 has been placed to reserve, and it is proposed to pay one year's dividend on the 7 per cent. preference shares, leaving £2,140 7s 3d to be carried forward. As to the balance-sheet itself, the figures differ very little from those of last year. During the year we have redeemed a further £3,600 worth of first mortgage debenture stock. The sundry creditors are £42,256 12s, against £53,185 0s 5d a year ago.

Cash at bankers is £20,790 8s 8d, against £9,981 16s 6d last year. Sundry debtors are £3,585 7s 7d less, while the stocks are down from £52,388 11s 5d to £41,642 17s 9d.

That we have made a profit of £17,460 17s 3d during the past year is something to be thankful for, although disappointing. Considering the very depressed conditions prevalent in the agricultural world, to have paid expenses is a matter for satisfaction, to say nothing of having made a profit. This company was formed for manufacturing and selling molassine meal for animals, and that is the business for which we are adapted, and for which we have these large works at Greenwich. Our success, therefore, depends upon the prosperity of the British farmer.

Last year the outlook seemed brighter, and we hoped we had seen the worst. Unfortunately, this has not been the case. The prices which the farmer has been able to make for his produce have not been remunerative, and in addition to his other troubles he has had to put up with a serious attack of foot and mouth disease.

It has been quite a common thing for us to receive letters from our customers who made contracts in the early part of the season for a large quantity of molassine meal, asking us to cancel, as all their animals had been destroyed and they had no further use for cattle foods. With regard to dog and poultry foods, we continue to hold our own, although it has not been a good year for the poultry industry, but this, we trust, is only a passing phase.

Mr Stanley W. Goodman seconded the resolution, which was carried unanimously, and a sum of £500 was voted to the directors and staff as an appreciation of their services.

RICHARDSONS, WESTGARTH, & CO., LIMITED.

DEVELOPMENT OF INTERNAL COMBUSTION ENGINE.

The twenty-third annual meeting of Messrs. Richardsons, Westgarth, and Co., the well-known engineers, of Hartlepool, Middlesbrough, and Sunderland, was held on the 17th instant.

Mr. D. B. Morison, Chairman and managing director, presided, and moved the adoption of the directors' report and balance-sheet. They were enabled, he said, to declare a dividend on the ordinary shares of the company of 10 per cent., and to carry forward £68,900.

Having alluded to the fact that the company had recently purchased from the holders and cancelled upwards of £300,000 debenture stock, and had already invested £100,000 in Government securities with the object of providing for the regular payment of dividend on the preference shares during periods of bad trade, Mr Morison continued:—

"The salvation of this company in the immediate future is to be found in the policy your directors have consistently pursued of building up exceptionally strong reserves of cash, and declining to engage in speculative adventures, and, provided that in the future these reserves are utilised strictly for the benefit of the business, and for no other purpose or object, they are amply sufficient to enable the company easily to withstand all the consequences of an abnormally long depression."

Commenting on the continued bad trade and consequent unemployment, Mr Morison named, among other factors that were retarding recovery, "the preaching of fallacious economic doctrines by highly-paid professional talkers of Communistic tendencies." "Everyone," he said, "sympathises with the desire

No silver coinage was reported during the week ending June 7th. The stock in Shanghai on the 16th inst. consisted of about 36,200,000 ounces in sycee, 39,500,000 dollars, and 1,980 silver bars, as compared with about 37,000,000 ounces in sycee, 37,500,000 dollars, and 2,300 silver bars on the 7th inst.

NOTICES.

The directors of Lloyds Bank, Limited, announce that Major P. B. Walker, of Messrs. Wormalds and Walker, Limited, Dewsbury, and Mr E. R. Benson, of Messrs. John Brooke and Sons, Limited, Armitage Bridge, near Huddersfield, have been appointed members of the West Yorkshire Local Board, in succession to the late Sir Joseph H. Kaye and the late Mr Robert Whitworth.

Messrs Morgan, Grenfell and Co., 22 Old Broad street, E.C. 2, announce that Mr Michael George Herbert is admitted a partner in the firm.

Lloyds Bank, Limited, announce that a branch of the bank is now open at 86 and 86A High street, Wimbledon Hill, S.W. 19, under the management of Mr D. Scott Evans, the hours of business being the usual London banking hours. They also announce that attendance is now given at the offices of the bank at Easington Colliery and Horden as follows:—Easington Colliery, daily, 1.30 till 3.30. Saturdays 9.30 till 10.30. Horden, daily (except Saturdays), 10.45 till 12.45.

The Midland Bank announces the opening of a new office at 2 Harbour street, Folkestone, under the management of Mr Frank Fletcher.

The Board of the National Bank of South Africa, Limited, announce with very great regret that, in accordance with the superannuation rules, Mr. William Dunlop, general manager of the bank, and Mr. Archibald Campbell Duff, assistant general manager, will retire from the bank's service on the 31st instant. Mr. Dunlop has accepted an invitation to join the board of the bank, and his appointment in this capacity will take effect as from the 1st proximo. The board announce further that they have appointed Mr. George Robb Paterson (at present an assistant general manager) to succeed Mr. Dunlop as general manager, with effect from the 1st proximo.

Reports and Notices.

Goldsbrough, Mort, and Co., Limited, announce that they have (subject to confirmation by the shareholders) purchased the business of Messrs. Bagot, Shakes, and Lewis, Limited, wool brokers, of Adelaide, and branches throughout South Australia and Western Australia. An extraordinary general meeting of the shareholders of Goldsborough, Mort, and Co., Limited, will be held in Melbourne, on the 27th inst., to arrange for an increase of the capital of the company from £1,000,000 to £1,500,000.

Mr. Percy Good is resigning his appointment of secretary to Style and Winch, Limited, which he has held since its incorporation. He has been elected to a seat on the board of the Dartford Brewery Company, Limited, the control of which Style and Winch have recently acquired.

At the annual conference of the Chartered Insurance Institute held at Bristol on Friday, June 13, 1924, Mr. J. J. Atkinson, F.C.I.I., general manager of the Royal Insurance Company, Limited, was elected president.

We are officially informed that Mr. W. Owen Butler, son of Mr. W. Waters Butler, chairman of the company, has been appointed a managing director, and Mr. Lauchlan Campbell, who has been a member of the staff for the past 27 years, has been elected a director of Mitchells and Butlers, Limited, brewers, Birmingham.

We are informed that a supply of booklets relating to the United States Revenue Act of 1924, with an explanatory digest, has been received by the London office of the National City Company, 34, Bishopsgate, E.C.2, from whom copies may be obtained upon application.

Mr. C. C. Baker (Ball, Baker, Cornish and Co.), Finsbury court, Finsbury pavement, has been appointed by the Court Receiver for the prior lien bondholders of Canada Land and Irrigation Company, Limited.

To succeed Mr. M. J. Mackie, who is retiring after 43 years' service, the directors of the Employers' Liability Assurance Corporation, Limited, have appointed Mr. Frank Travis as district manager for the West Lancashire and North Wales branch at Liverpool. Mr. Travis has been in the service of the Corporation for many years, and latterly as district manager of the City branch in King William street, London.

We are informed by the secretary of Swift of Coventry, Limited, that the proposed voluntary liquidation of Harper-Bean, Limited, in nowise affects the financial position of Swift of Coventry, Limited.

GOVERNMENT STOCKS, &c.

LIBERIAN LOAN OF 1912.—The Council of Foreign Bondholders have received advices from the National City Bank of New York, the fiscal agents for the Liberian loan, that they are in possession of the necessary funds for the encashment of the July, 1924, coupons on the bonds outstanding. There is also a small balance available for sinking fund, which will probably be increased by further payments received before July 1, 1924. The fiscal agents will be glad to receive tenders, which must be in their hands at their offices, 55, Wall street, New York, not later than June 30, 1924. Accepted bonds will be for delivery as early as possible, following receipt of notice by the fiscal agents to the respective bidders, and must bear the coupons due January 1, 1925.

PORTUGUESE BONDS.—The committee of the Stock Exchange passed and confirmed the following resolution on Monday:—"That the resolution passed by the Committee for General Purposes on the 12th instant does not refer to Portuguese 4½ per cent. Bonds (tobacco monopoly)."

BANKS.

NATIONAL BANK OF NEW ZEALAND.—The net profit for year ended March 31, 1924, after paying a bonus to the staff of £17,700, providing for bad and doubtful debts, and including £145,567 brought forward from the previous year, amounts to £389,502. The interim dividend at the rate of 12 per cent. per annum, paid in January last, absorbed £75,000. The sum of £20,000 has been placed to premises account, leaving now available for distribution £294,502, which the directors propose to allocate as follows:—In payment of a dividend at the rate of 12 per cent. per annum for the half-year ended March 31st last, £75,000; in payment of a bonus of 2 per cent., £25,000 (both free of income-tax); to reserve fund (which will then stand at £1,270,000), £10,000; to pension and gratuity funds, £28,944; balance to be carried forward, £155,558. Agencies have been opened at Dominion road (Auckland), Manurewa, Omakau, Ophir, Papatoetoe, Patumahoe. In May last 100,000 new shares were offered to shareholders at a premium of £2 per share in the proportion of one share for every five shares held. The new shares have been allotted, and the premium amounting to £200,000 will be carried to reserve fund, thereby raising it to £1,470,000. The directors have, with much regret, to report the death of their esteemed colleague, Mr. D. W. Duthie, advisory director in New Zealand. Mr. James Bennie Reid, of New Zealand, was appointed to a seat on the board on July 11th last, and his name will be submitted to the meeting for re-election. The board of directors being of opinion that to meet the growing requirements of the Dominion it is desirable to increase the authorised capital of the bank from £4,500,000 to £6,000,000, an extraordinary general meeting of the shareholders will be held on Wednesday, July 2, 1924, after the conclusion of the annual general meeting, for the purpose of considering and, if thought fit, of passing the necessary resolution to effect such increase.

TEA AND RUBBER.

TELOGOREDO UNITED PLANTATIONS.—The net profit has risen from £28,239 for 1922 to £40,149 for 1923. The dividend is unchanged at 12½ per cent. The rubber crop harvested in 1923 was

1,628,085 lbs (against 1,238,612 lbs in 1922), and the coffee crop was 10,340 cwt (against 7,600 cwt). The "all-in" cost of the rubber was 8.11d per lb (against 8.82d per lb), while the coffee cost 41s 7d per cwt (against 51s per cwt). The gross price realised for rubber rose from 1s 0.28d per lb to 1s 2.02d per lb, and the coffee realised 55s 6d per cwt (against 51s 3d).

MISCELLANEOUS.

GROVESEND STEEL AND TINPLATE.—The report shows that the balance at credit of profit and loss account on March 31, 1924, including £109,485 brought forward, was £425,500, from which the following deductions have been made:—Debiture and other interest, £41,102; reserve for depreciation and renewals, £35,803; reserve for taxation, £15,000; leaving £333,594. One year's dividend at 6½ per cent. for the year has already been paid on the preference shares, leaving a balance of £318,351. The directors recommend that this balance be appropriated as follows:—To transfer to reserve fund, £50,000, making total reserve £100,000; write off debenture issue expenses, £20,807; pay a dividend of 25 per cent. (less tax) on the ordinary shares, £125,000; and carry forward £113,484. The total assets are £2,817,458. Cash stands at £104,785; debtors are at £391,134; stocks stand at £430,508; investments, at cost, including shares in associated companies, stand at £438,467. With regard to liabilities, creditors stand at £336,847.

HOULDER BROTHERS AND CO.—The twenty-sixth annual report for year 1923 shows that the revenue account for the year, after provision for taxation, &c., reveals a credit balance of £126,953, to which must be added the carry forward from last year of £16,602, giving a total of £143,555. After making provision for remuneration of managing directors, payment of debenture interest, preference dividend, and the transfer of £25,000 to general reserve, there remains a disposable balance of £97,430. An interim dividend of 4 per cent. on the ordinary share capital of the company was paid on July 11, 1923. A further interim dividend of 4 per cent. was distributed on March 11, 1924, and it is now recommended that a final dividend of 2 per cent., free of tax, be distributed, leaving £17,430 to carry forward to the current year. For previous year dividend was 8 per cent., tax free. The chairman, Mr. F. H. Houlder, has recently been on an extended visit to South America, and has visited all the company's offices, both in the Argentine and the Brazil. He is now homeward bound, and hopes to arrive in time to take the chair at the forthcoming annual general meeting of the company. The company has an ordinary share capital of £800,000 and a preference share capital of £100,000, also a debenture debt of £125,000 in 4½ per cent. stock. Reserves amount to £200,000. Deposits, staff provident fund is at £37,494. Current accounts stand at £912,855. Total assets are £2,240,779. Cash is at £102,854. Current accounts and advances are at £301,150. General investments stand at £1,707,143.

JAMES FINLAY AND CO., LIMITED.—This concern has an issued capital of £2,000,000. Of this £1,500,000 is in ordinary shares and £500,000 in 6 per cent. cumulative preference shares. Reserves total £1,640,008. Banking deposits stand at £723,283. Creditors are at £881,635, and bills payable are at £272,671. Assets total £5,809,335. Investments stand in the balance-sheet at £2,846,883, but their market value on December 31, 1923, was £3,487,013. Cash is at £547,878. Debtors are at £1,266,579. The accounts for the year ended December 31, 1923, show that the credit balance from last year was £318,355; the profit for the year 1923 is £420,084—£738,430. Deduct—dividend paid on preference shares, £30,000; dividends paid on ordinary shares and income-tax thereon, £326,701, leaving £381,738. The directors recommend the payment of a dividend of 10 per cent. on the ordinary shares, £150,000; balance to be carried forward to next year, £231,738. It is stated in the report that no special provision has been made for corporation profits tax, as the directors estimate that all taxation up to April 5, 1924, is fully covered. Prospects for the current year in regard to trading are meantime satisfactory, and the revenue from investments should be considerably in excess of that of 1923.

LOBITOS OILFIELDS.—This well-known oil concern has had a splendid year. It has an ordinary share capital of £400,000 in £1 shares. There are no preference shares or debentures. The balance-sheet shows tank steamers reserve, £200,000. Tank steamers survey reserve, £15,500. Reserve account, £300,000. Taxation reserve account, £150,000. Total assets are £2,218,641. Cash is at £63,486. Investments at cost stand at £566,161. The production for 1923 was 125,491 tons, as compared with 110,010 tons in 1922. The ordinary shareholders are to receive 75 per cent. free of income-tax, for year 1923, against 50 per cent., tax free, for 1922. The net profit is £661,923, against £521,072 for preceding year. The sum of £100,000 goes to reserve account and £125,000 to tank steamers reserve account, also £100,000 to development reserve, while £218,256 goes forward against £181,333 brought in.

SALTS (SALTAIRE).—This company has made a very good start, for after providing for interest, fees, taxation, depreciation, and the debenture interest, the net profit for the year ended March 31st amounted to £170,878. The preference dividend, which has already been paid, being deducted, the directors propose to transfer £26,697 (being the amount of profit accrued prior to the company's incorporation) to reserve, and to pay a dividend on the ordinary shares of 10 per cent. The balance of £10,631 remaining is carried forward. Total assets are £3,794,005, made up as follows:—Goodwill and trade marks stand at £427,650; properties are at £1,513,904; stocks stand at £933,769; debtors are at £526,516; investments (at market value), £316,216; and cash, £75,949.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A welcome change to warm and drier weather conditions occurred during the week, following the recent spell of heavy rains over most parts of the country. The outlook for cereal crops, however, is

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated June 19, 1924, is as follows:—Pig-iron: The demand is weaker and prices inclined to go still lower, although makers are reluctant to sell No. 3 Cleveland G.M.B. below 90s per ton. The price for mixed numbers East Coast hematite has been reduced to 97s per ton, f.o.b. or f.o.t. Middlesbrough, but there is no increased demand. Manufactured iron and steel: Makers are anxious for business, as their order books are very poor, and some works are under-cutting prices in order to try and secure orders. Current quotations are: Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: There is very little business indeed, and prices have a tendency to decrease. Best Bilbao rubio is still quoted at 23s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Depressed trade, stock-taking preparations, and prospects of lower prices are playing havoc with the iron and steel trade, which is experiencing the quietest period of the year. Sales of raw and semi-manufactured materials have for some time past been almost limited to odd parcels picked up at cut prices. The outlook for the rest of the year presents a gloomy aspect, and the prophets do not hope for any revival until next year. Pig-iron prices are being shaded a shilling or two per ton with the object of tempting business. Buyers are deferring the placing of contracts in the belief that the lower cost of coal will enable producers to offer reduced rates. Continental competition is not particularly keen, as there are constant delays and much uncertainty in deliveries from that source. British makers of pig and billets are suffering severe financial handicap from the wholesale suspension of deliveries beyond the periods specified in the contracts, and complain that their leniency in this respect is being badly abused. They would be willing to keep in stock the overdue quantities, but not wanted if the buyers would pay for such material. Railway steel is less active than it has been, but more work is coming forward from the shipyards. The demand for the best tool steels has fallen off. The export returns for May record increased shipments of rails and pig-iron, but many other items are below the figures of April, and the comparison with a year ago is unfavourable. The call for stainless steel for use in connection with engineering parts has been steadily increasing for twelve months, and more than 90 per cent. of the table cutlery produced in the country is made from this material. The electro silver plate and cutlery industries are extremely unsatisfactory in the home market, but the overseas demand is considerably better. Conditions in the fuel market continue to droop, and prices are still falling. The demand for both manufacturing and house coal has dropped off considerably. Coke is also quiet, and stocks are accumulating. Current quotations per ton at pits are:—Yorkshire hard, 23s to 24s; Blyths, 22s to 23s; Durhams, 25s 6d to 26s; Derbyshire, 21s 6d; hand-picked branch, 34s; Barnsley best silstone, 28s; rough slacks, 12s to 14s; smalls, 8s to 10s.

Our Glasgow correspondent writes:—Business shows less activity in all branches of the iron and steel trade. Steel works are not so well supplied with orders as they might be considering the contracts in hand in the shipyards and large structural establishments. Except in the sheet trade export business is generally quiet, only a few lines for quick delivery being recorded. Some benefit is being derived from the small extent to which Continental competition is making itself felt at present. Steel works in Glasgow and neighbourhood are not likely to put the full capacity of plant into operation till after the Fair Holidays in July. Sheet-makers are doing well. Some of the smaller works producing heavy gauges have not much on hand, but others, especially light sheet-makers, are heavily booked and experiencing a brisk demand from Australia, Canada, and the Far East. The Sheet-Makers' Association, at a meeting held last week, decided not to alter the existing fixed prices for sheets $\frac{1}{4}$ in. to $\frac{1}{2}$ in. gauge thick. Values for export—which, of course, are not fixed—are higher. Demand for galvanised corrugated sheets for shipment is still active and considerable, and delivery before September is difficult to obtain. There is nothing new to report as to bar iron and re-rolled steel, any business passing being on a small scale. The pig-iron market remains quiet, with prices unchanged. The exports from Glasgow Harbour for week ending June 14th totalled 477 tons, of which 428 tons went overseas.

Our Cardiff correspondent writes:—The tone of the Cardiff coal market has improved this week, but the improvement is due more to the effects of loss of working time and to greater unity in the sales policy of the collieries than to any marked improvement in demand. The commercial committee of the Monmouthshire and South Wales Coalowners' Association is making strenuous efforts through the group committees of salesmen to minimise under-selling. One at least of these groups is maintaining fairly successful its schedule of minimum prices, but there has been more cohesion lately between the groups dealing with the prices of the first and second-class Admiralty coals. During May the average f.o.b. price at the South Wales ports fell less than the average f.o.b. price of all the coal exported from the United Kingdom in that month. The decrease was from 25s 11d in April to 25s 6½d in May; while from the United Kingdom the decrease was from 25s to 24s 4½d. The smaller fall at the South Wales ports was to an appreciable extent due to the mitigating influence of a sharp rise in the prices of anthracite coals where combined action on the part of salesmen is easier than it is in the steam coal districts, but the collieries in the latter districts have certainly been able to offer a certain amount of effective resistance to the declining tendency of export prices, and towards the end of the present

week the quotations of several grades of coal were marked up by about 6d per ton. This defensive policy has been enforced upon the trade by the pressure of the costs of production. The general wage rate is now 42.22 per cent. above the 1915 standard rates, as compared with the old minimum of 28 per cent., and the latest returns of the revenue of the industry show that, with costs at their present level, the coalowners cannot expect but a small part of the standard profits nominally provided for under the new agreement. Old and unremunerative pits are being closed down in different parts of the coalfield. Some thousands of men are already unemployed, and more notices are impending. The following are the current approximate quotations:—Best Admiralties, 27s 9d to 28s 3d; second Admiralties, 27s to 27s 6d; best dries, 26s 6d to 27s; black veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 26s; Western Valleys, 26s to 26s 6d; best bunker smalls, 18s to 18s 6d; ordinary cargo smalls, 16s to 17s; coking smalls, 18s 6d to 19s; anthracite big vein large, 50s to 52s 6d; machine-made cobbles, 60s to 62s 6d; French nuts, 57s 6d to 60s; stove nuts, 50s to 52s 6d; rubbly culm, 15s to 15s 6d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 57s 6d to 60s; patent fuel, 28s to 29s 6d; pitwood, ex-ship, 26s to 26s 6d.

In the iron and steel trade demand is more active, and although the minimum price of tinplates remains at 22s 7½d per basis box, some makers are quoting 23s, f.o.b. Option contracts are on a fairly large scale. The exports of tinplates in May were greater than in any other month in the history of the industry, and the shipments of galvanised sheets were also in excess of the monthly average in 1913.

METALS.

Tin commenced the week with a firmer tone, due to higher cables from the East and a good demand. Later the market displayed quieter features, and with sellers more in evidence initial advances were not maintained. Standard, cash, sold at £219 5s to £226 to £225, and three months £219 10s to £227 5s to £224 10s to £225. Eastern cables reported sales on the basis of £230 5s, c.i.f. At Thursday's session values declined sharply, standard, cash, being dealt in at £218 15s, and three months £219 to £217 to £

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

cent. The turnover of short bills was small; heat and doubt made the taking of views difficult.

	June 27, 1924.	June 20, 1924.	June 13, 1924.	June 5, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3% (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	2½	2½	3	..

The Bank return shows a rise of £8,264,095 in Public deposits, Other deposits falling by £533,238. Government securities were £1,080,000 lower, a rise of £9,868,107 taking place in Other securities. The active note circulation rose by £1,022,060, and the stock of coin and bullion is £26,019 up, the decline in the Reserve being £996,041. The proportion of cash to liabilities fell back to 16.2 per cent. Currency notes outstanding were reduced this week by £1,492,700 to £290,315,900, which includes £1,386,100 for notes called in but not yet cancelled. The fiduciary issue is £239,479,700, or £8,711,200 below the maximum.

THE STOCK MARKETS.

The volume of Stock Exchange business has tended still further to decline this week. Apprehensions as to a possible rise in Bank rate were responsible for a certain weakness in gilt-edged prices. Recent activity in the new issue market is having some effect on current values, and a number of important loans are in prospect. Home Rails have been lifeless all the week. Both rubber and oil shares remain subject to depressing influences. Among industrial and commercial shares the greatest strength is shown by what may be termed "Empire Exhibition undertakings," e.g., store, drapery, restaurant, and hotel companies. South African markets are recovering from the disturbance caused by the General Election, East Rands being the object of an extensive speculative movement.

THE COMMODITY MARKETS.

There is no outstanding feature in the commodity markets to chronicle. The pig-iron market continues in the buyers' favour, and prices are inclined to weaken further. The slackness in shipbuilding is reflected in the steel rolling-mills, where orders are needed. Business is quiet in Sheffield. Tin advanced quickly, but eventually lost part of the rise. Copper was inclined to be easy. In the cotton trade in some quarters increased business has taken place, but business in the wool trade has been confined within narrow limits. Wheat is firm. A hardening tendency has been observed in sugar quotations, and brisk competition is announced for Indian tea. Copra prices are harder, and better support was forthcoming for rubber. The hide market is in a weak state. Activity has been noticeable in vegetable oils and oilseed dealings.

FOREIGN EXCHANGES.

The foreign exchange market has shown a quietness which amounted almost to stagnation in the latter half of the week. A slight reaction occurred early in the week in the New York rate, which sagged from \$4.33½ on the 20th to \$4.32½ on 24th, but, recovering again, was quoted at \$4.33½ yesterday morning. In this market lower money rates in New York, and anticipation of possible stringency in the money market here at the end of the month, have led to a considerable alteration in forward rates, especially for a short period. Rates are now ½ cent below spot for one month, and approximately ½ cent below for two or three months. Paris has moved somewhat erratically within narrow limits, and although on Monday morning the rate improved on the news of the Chequers conversations to 78.70, as against 80.45 on the 20th, it fell again later to 81.15 as the result of exaggerated reports in the Belgian Press. During the remainder of the week the rate fluctuated between 81.70 and 82.60, largely owing to considerable purchases of sterling in Paris. Yesterday morning the quotation was 81.80. With the prospect of an Inter-Allied Conference in the middle of July, no great movement is to be expected in the immediate future. The Belgian franc has, as usual, followed much the same course, and stood at 93.85 on Friday morning, as against 92.85 a week ago. Forward quotations in Paris remain

about 30 centimes per month above spot, but in Brussels they are slightly narrower at 5-10 centimes per month above instead of 10-15 centimes last week. The lira, which stood at 101 on the 20th, improved slowly to 99½ on the 25th, but has fallen away again to 100½. Amsterdam has reacted again from 11.59 on 20th to 11.52 yesterday morning, and Switzerland followed the same course early in the week, moving from 24.46 on the 20th to 24.37 on the 25th; since when it has returned again to 24.41. Madrid has moved slowly from 32.28 to 32.21. In Northern Europe, Stockholm has fallen from 16.32 to 16.29, and Christiania from 32.03 to 31.95, but Copenhagen has depreciated from 25.62½ to 26. Helsingfors, after touching 173½, stands once more at 173. Warsaw remains steady around 22.50, and Riga about 22.45. In Central Europe Berlin is again slightly higher at 18½ billion, but Vienna is steady at 307,500. Budapest also remains steady round 350,000. Prague is the same at 146½, with Bucharest slightly weaker at 1,000. The rupee is unaltered at 15 5½d, and the yen is ½d stronger at 15 11½d. The silver market has been quiet, and prices have shown a tendency to sag. Continental demand is reported, but both America and the East have been sellers. Hong-kong has fallen from 2s 4½d to 2s 4½d, and Shanghai from 3s 3½d to 3s 3½d. In South America, Rio at 6½d shows some improvement in anticipation of the publication of the report of the Financial Delegation, but Buenos Ayres is ½d cheaper at 4½d. Monte Video has improved to 43d, while Valparaiso, after remaining about 40.50, has depreciated to 41.30 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 21st:—

(000's omitted.)			
EXPENDITURE.		REVENUE.	
Supply Services	6,850	From Revenue	14,556
Interest, &c., on Debt	16,674	Amount borrowed	9,927
Sinking Fund	500	Taken from Exchequer Balances	364
Sundries	1,023		
	24,947		24,847

Revenue amounted to £14,556,000, against £16,175,400 in corresponding week of last year. Customs yielded a lower revenue at £1,968,000, against £3,085,000, while Excise receipts were also lower at £5,953,000, against £7,140,000. Property and Income-tax yielded £1,068,000, against £1,213,000. Special Receipts amounted to £1,487,100, against £1,161,100. The week's operations increased the National Debt by £9,926,600, and caused the following changes:—

(000's omitted.)			
EXPENDITURE.		REVENUE.	
Treasury Bills	+ 9,861	National Savings Certificates	£ 50
Public Debt Advances	+ 10,200	Bank of England Advances	11,000
Treasury Bonds	+ 237		
Sundries	+ 679		
	+ 20,977		— 11,080

The floating debt was increased by £9,045,000 to £795,505,500.

FINANCIAL YEAR, 1924-1925 (April 1 to June 31).

THE WEEK IN PARLIAMENT.

MONDAY, JUNE 23RD.—*Commons*: Second reading of Housing Bill. Bill committed to a Committee of the whole House.

TUESDAY, JUNE 24TH.—*Lords*: Debate on second reading of Liquor (Popular Control) Bill. West Indian Islands (Telegraph) Bill read third time and passed. *Commons*: London Traffic Bill considered as amended in Committee. Arbitration Clauses (Protocol) Bill read a second time.

WEDNESDAY, JUNE 25TH.—*Lords*: Debate on the Sudan, and on Irish Free State representation at Washington. Third reading of Pacific Cable Board Bill. *Commons*: The Old Age Pension Financial Resolution

considered in Committee. Second reading of the Pensions Increase Bill agreed to. The following were also read a second time: Government of India (Leave of Absence) Bill, British Museum (No. 2) Bill, Access to Mountains Bill, Regulation of Railways Bill.

THURSDAY, JUNE 26TH.—*Lords*: Lord Long's Imperial Preference Motion agreed to after debate. *Commons*: Civil Service Estimates. Debate on recent London Underground Railway strike. Report stage of London Traffic Bill continued.

FRIDAY, JUNE 27TH.—*Commons*: Report stage of Legitimacy Bill.

COMPANY MEETINGS OF THE WEEK.

On later pages of this issue will be found the financial section of the Presidential Message of the Republic of the United States of Brazil, and also the reports of the following companies:—J. Lyons and Co., Bleachers' Association, Boots Pure Drug Company, Eastern Telegraph Company, Eastern Extension, Australasia and China Telegraph, Consolidated London Properties, John Brown and Co., Bank of Adelaide, Western Australian Bank, Great Indian Peninsula Railway, Hudson's Bay Company, Guest, Keen and Nettlefolds, Ebbw Vale Steel, Iron and Coal, Sialang Rubber Estates, Barcelona Traction, Light, and Power, Spring Mines, Brakpan Mines, Union Corporation, Tamplin and Sons' Brewery, and Mortgage Company of Egypt. The chairman, at the meeting of J. Lyons and Co., dealt with Wembley criticisms. At the meeting of Boots Pure Drug Company, the chairman, in referring to the Government's invitation to a conference, said they were always willing to help to obtain satisfactory conditions in shops, providing legislation recognised the fact that shops were open for the convenience of, and kept open solely by, the purchasing of the public. Sir Robert Kindersley, at the meeting of the Hudson's Bay Company, made important references to the European outlook and the gold standard question. At the meeting of the Eastern Telegraph Company, the chairman spoke in reassuring terms of wireless competition. The chairman at the Ebbw Vale Steel, Iron and Coal Meeting criticised severely proposals for nationalisation of coal mines. The chairman at the meeting of Consolidated London Properties criticised the Rents Act, the new Rating Bill, and the Rating of Land Values. The chairman at the Bleachers' Association meeting spoke of the successful working of the Pension and Superannuation Funds and the inauguration of a Thrift Fund for female employees.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a survey of the present German agricultural situation.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE GOLD STANDARD.

THE discussion on British monetary policy has revived with some vigour during the last few weeks. The issue is brought to a head in a recent article by the chairman of the Westminster Bank, who suggests an increase in the Bank rate to 5 per cent., supported, if thought necessary, by an increase in the interest allowed by bankers on foreign deposits to, say, 3½ per cent.—a move to be accompanied by a definite statement that it is part of a deliberate attempt to return to the gold standard. This definite suggestion has met with a mixed reception in the City, for it is evident that the policy will be accompanied by some danger to trade and employment. There is reason, however, for thinking that opinion is hardening in favour of some action before very long with the object of getting back to gold, and it is worth while to recall some of the reasons which have caused this movement of opinion.

In the first place, many people are getting anxious as to the consequences of a policy of drift. As Mr Hawtrey points out in the current number of the *Economic Journal*, the Treasury has for some time past exercised practically no influence upon the credit situation. Under the present system of selling Treasury bills by tender to the extent required to keep up Exchequer balances, and with no Ways-and-Means Advances from the Bank of England, Treasury bills differ little for the purposes of the money market from commercial bills, and "so long as the Treasury follows this system, and the money market works, the Government keeps clear of any interference in the regulation of credit."

This leaves the field clear for the Bank of England, but the Bank Court, following tradition, gives no indication of the policy on which it is basing its action. Meanwhile, the last six months have seen a most disturbing swing in the value of the franc. The sterling-dollar exchange failed to show its expected seasonal improvement in the spring of this year, the time when the European political situation looked not unpromising, and the finance houses are finding, as Sir Robert Kindersley reminded us in his speech at the Hudson's Bay annual meeting, that inquiries from abroad are constantly being made as to the future of sterling—inquiries to which even the most skilled financiers must find it difficult to give a categorical and satisfactory answer. The prospect of London being called on to finance various foreign Governments, and doubts of what may come from the London Conference with France, add to this difficulty.

A second cause of the movement of opinion must be found in the Dawes Report, and the suggestion for a Gold Bank of Issue. This point was given prominence in the recent statement issued by the Advisory Council of the Federal Reserve Board, and many people are disposed to think that if Germany and America are both on a gold basis while the £ sterling remains on a paper basis, it will prejudice Great Britain's position in international financial commerce. This point is, perhaps, given undue importance. Germany's hold upon the gold standard is likely, under the most favourable circumstances, to be precarious for some time to come. The experience of the last few years has shown that, provided the exchanges do not fluctuate too widely, a large trade is possible between countries, in spite of the lack of absolute security of exchange based on gold at either end. We hope to see considerable quantities of American capital passing into Germany for the reconstruction of that country, which, according to all accounts, is reaching an acute industrial crisis for want of credit; a need which America is in the best position to supply. But we do not anticipate that American investment in Germany, combined with an attempt to hold Germany's internal currency at a parity with gold, would seriously divert the channels for trade. There is, however, force in the view that if money is to be cheap next winter in America (perhaps cheaper even than it is at present), but very scarce in Europe, the London market will in any case have to face a period of dearer money, and that if this movement is anticipated by a rise of rates in London, a movement of American resources will take place through the London market. Such a movement of funds would tend to restore the sterling dollar exchange, and perhaps make it possible this winter to take preliminary steps to restoring a free gold market here. The doubtful point in this line of argument is as to the future of American trade and prices. Reports from the United States are far from reassuring. Prices are drifting downwards, and if the period of trade activity in the States is definitely over for the present, the next phase may be one in which great efforts will be made by American producers to sell abroad the surplus of their production, which has during the last three years found a ready market at home. Unless the outward movement of capital precedes the outward movement of goods, it will not have the desired effect upon the exchanges. It is therefore difficult to say more than that the period of dearer money in London this winter might be accompanied by something like a restoration of the exchanges. The prospects that this effect would be produced would be greatly increased if it were announced that it was part of a definite and consistent policy, the policy of gradual return to the gold standard to which Mr MacDonald has already committed himself

in words that appear to have attracted insufficient attention abroad.

On the other hand, the prospect of higher money rates is naturally regarded with considerable anxiety. Our monthly trade review shows that the internal industrial situation is not continuing to improve, but is marked by hesitation and uncertainty. The advocates of the gold standard can rightly call attention to the fact that stable exchanges would not only assist Great Britain's position in the sphere of international commerce and finance, but in the long run would have some favourable reaction on our industrial production by eliminating one of the risks that manufacturers have to face under present conditions. And further, that if it was a step towards a more general stabilisation of exchanges, we might anticipate a more rapid recovery of world trade, and of our share in it.

But it is difficult either for the Government or for producers to take so long a view. The former have to consider that a rise in the Bank Rate adds 5 millions a year to the cost of the floating debt, and postpones fresh schemes for funding the maturing debt. The latter, at all events, have to face the possibility that the first effect of dearer money may be to check demand and to lower prices. In any case, the summer months, when the seasonal demand for dollars is high, are not the best time to wrestle with the exchange, and if last year's experience is any guide, we may hope that in September the industrial situation may show much greater elements of strength than it does at the present moment. The present situation is complicated and difficult in itself, but is made much more disconcerting for the trading community in that it does not know, as it knew in the pre-war days, upon what principles the decisions of the Bank of England will be made. Yet it is essential that if any action is to be taken with success, it should command general confidence. We believe that the surest way to secure this confidence is that British policy should be planned in co-operation with American banking policy, and that before any definite steps are taken our authorities should follow the example of the Federal Reserve Board in their recent annual report, and let it be known definitely what our policy is.

THE MONETARY HALF-YEAR.

THE first half of this year, like the first half of last, has seen no change in Bank Rate. But in other respects it has been very different. There has not been that amateur speculation in gilt-edged securities which, on the basis of 1 per cent. money, made the situation precarious twelve months ago. But though the Bank Rate now is 4 per cent., compared with 3 per cent. then, expectations of a further rise have existed throughout the half-year, owing to the facts that trade is more active, the American exchange less firm, and foreign borrowing as persistent as was the case twelve months ago. An additional complication comes from the fiduciary issue of currency notes, which has been within 6 millions of the maximum allowed by the Treasury Minute.

The repayment of 64 millions of Treasury bills during the first three months of the year would not have been possible for the market without assistance of some sort; this assistance came, as last year, principally in the form of well-timed purchases of Treasury bills. Whether this assistance will also be necessary in years when there is no immoderate Budget surplus is a point of some interest. The payment of the half-yearly interest on the War Loan on June 1st, and on the debt to America on June 16th, was more perceptible than before. The effects of the former were a shortage in May, and such a surplus in June that it was not until the last week of that month that the Government was able to repay what it had borrowed from the Bank on Ways and Means. Payment of interest on the American debt accentuated both these features of the half-year, for reasons which were imperfectly understood in Lombard street.

Discount rates reached their highest point, as they did in the first half of 1923, during February, when Treasury bills were sold by tender at 3½ per cent. Thereafter they

declined below 3 per cent., to become firm again at the very end of the period (despite the seasonal attraction of the end-September maturity), owing to such considerations of monetary prospects as have been indicated above. Up to the end of March a steady increase in the supply of commercial paper was generally reported, but thereafter (partly as an after-effect of the dock strike) bills of this sort showed a decrease. The view was expressed that the total amount of commercial paper outstanding had in March reached the figure touched during the post-war boom, which is said to correspond to the pre-war total.

From April 1st to June 21st the excess of Government expenditure over revenue was 35, compared with 23 millions in the same period of 1923, but only 5 millions of this deficit was supplied by a net increase in the supply of Treasury bills, the investment demand for which may now be estimated as about equal to the supply, given the present amount of commercial paper.

FLOATING DEBT.

	December 31, 1923.	March 31, 1924.	June 21, 1924.
Bank of England Advances..	£ 1,750,000	None	£ 1,000,000
Public Department Advances	206,422,500	186,155,500	200,880,500
Treasury Bills	652,280,000	588,320,000	593,625,000
	860,452,500	774,475,500	795,505,500

The following table shows the daily averages for discount rates and money rates during the first half of this year and the previous four years:—

DAILY AVERAGE for FIRST HALF-YEAR.

	1920.	1921.	1922.	1923.	1924.
Bank rate	£ s d 6 8 7	£ s d 6 16 0	£ s d 4 7 1	£ s d 3 0 0	£ s d 4 0 0
Market rate (3 months)	6 2 2	6 2 7	2 19 0	2 4 0	3 7 6
Margin	0 6 5	0 13 5	1 8 1	0 16 0	0 12 6
Short loans	£ s d 4 16 0	£ s d 5 7 2	£ s d 2 18 0	£ s d 1 10 1	£ s d 2 9 10
Deposit rate (banks) ..	4 8 7	4 16 0	2 7 1	1 0 0	2 0 0
Margin	0 7 5	0 11 2	0 10 11	0 10 1	0 9 10

Abroad a reduction in the number of balloon currencies has meant that changes in Bank rates have been more significant than numerous. Slackening trade in America quickly brought the Federal Reserve rate down from 4½ to 3½ per cent., and a spasm of weakness in the exchanges sent the Paris rate, usually so immobile, up from 5 to 6 per cent. Other rises were in Denmark, Holland, Vienna, Riga, and Warsaw. The Indian rate was raised from 7 to 9 and lowered to 6 per cent., and that in Prague was lowered from 5½ to 5 and raised to 6½ per cent. again. The American movement had most influence in London, and it was of interest to note the fairly general opinion that at best it only made a rise here less likely.

CHANGES IN FOREIGN BANK RATES 1st HALF of 1924.

Date.	Indian Bank Rate	Raised 1 % to 8 %
Jan. 3	French	Raised 1 % to 5½ %
10	Danish	Raised 1 % to 7 %
17	French	Raised 1 % to 6 %
17	Dutch	Raised 1 % to 5 %
24	Polish	Reduced 1 % to 5 %
28	Prague	Reduced 1 % to 9 %
31	Riga	Raised 1 % to 8 %
Feb. 14	Helsingfors	Reduced 1 % to 9 %
16	Prague	Raised 1 % to 6½ %
March 5	Indian	Reduced 1 % to 8 %
10	New York	Reduced 1 % to 4 %
April 10	Prague	Reduced 1 % to 6 %
30	Vienna	Raised 3 % to 12 %
May 27	New York	Reduced 1 % to 3½ %
29	Indian	Reduced 1 % to 6 %
June 4

Foreign exchange movements have been numerous and peculiar. The French franc has been the most sensational of the serious currencies, having very nearly touched extreme limits of 120 and 60, and ending where it began, in the neighbourhood of 80. Even a monthly average of daily rates shows a fluctuation between 71 and 97. Italy, on the other hand, has been very steady, so that at one time the lira was more valuable than the French franc,

while the Rentenmark has steadily increased in value during the last quarter. The dollar has borne being looked in the face by the pound without difficulty, even at this season.

Centre.	Method of Quoting.	Par Level.	Rate, Jne. 29, 1923.	Rate, Dec. 31, 1923.	Rate, Jne. 26, 1924.
Paris	Francs to £1	25.224	75.25	84.70	81.80
Berlin	Marks to £1	20.43	730,000	18.20 blms.	18.18 blms.
Vienna	Kr. to £1	24.02	325,000	307,500	307,500
Amsterdam	Florin to £1	12.107	11.704-71	11.394	11.524
Copenhagen	Kroner to £1	18.159	25.954	24.454	26.00
Rome	Lire to £1	25.224	1034.1034	100.1004	100.1004
Switzerland	Francs to £1	25.224	25.86-89	24.75-78	24.40-43
Madrid	Pesetas to £1	25.224	31.464	33.54	32.22
Lisbon	Pence to escudo	534	24-24	144	144
New York	Dollars to £1	4.868	4.868-588	4.324	4.33-334
Buenos Aires	Pence to dollars	47.58	4142-414	408	4043-408
Rio de Janeiro	Pence to dollars	18	584	54	6
Montevideo	Pence to dollars	51	424-43	424-434	424-434
Valparaiso	Dollars to £1	13.33	34.60	40.10	40.60
Calcutta	Ster. to rupee	10 to gold sov.	1/44	1/54	1/54
Hong Kong	Ster. to dollar	..	2/34	2/4	2/44
Shanghai	Ster. to tael	..	3/1	3/4	3/34
Yokohama	Ster. to yen	2448	2/144	2/14	1/11

It may be of interest to note that, while the value of the pound has on balance risen by 40 cents since June, 1920, none of that rise has on balance taken place in the second halves of those four years.

THE FISCAL ISSUE IN AMERICAN POLITICS.

(BY A CORRESPONDENT.)

FOR the outside world, apart from the attitude of parties upon the problem of international organisation, the chief interest in American politics is in the field of fiscal policy. The Republican Party are taking their stand on the Fordney-McCumber Tariff, which in some respects is the apotheosis of high protection, and will try to persuade the electorate that it is the *fons et origo* of the abounding prosperity of the last three years. They can certainly point to great industrial activity during this period, but it was probably due to the special demands created by the need of making up the deficit in building construction and plant renewal for which the interlude of the war had been responsible. It will always be possible to persuade the New England States and Pennsylvania of the virtues of a high tariff, but there will not be complete unanimity. Fall River, in Massachusetts, has been called the "Manchester of America," because it was the chief seat of the cotton industry, and for decades it has been a stronghold of high protection. But the *New Republic* of June 4th described Fall River as a city of "misery, want, unemployment, hunger, and helplessness." There are 111 mills in Fall River, and not a dozen are running full time. The total population is placed at 131,000, and the estimates given of the unemployed range from 30,000 upwards. Already in 1924 \$243,000 has been appropriated by the municipal authorities for poor relief, and half-a-million more will be spent ere the year ends. The reason alleged for this deplorable state of affairs is the transference of the cotton industry to the Southern States, but it will be difficult to induce the voters of Fall River to take any enthusiastic view of the virtues of the Fordney-McCumber Tariff.

But what is a more interesting speculation is the present fiscal views of the farmers of the trans-Mississippi States. Last century, in the days of the Granger and Populist movements, the tariff was their favourite cockshy, and their leaders never ceased to declaim against its oppressions and iniquities. But in recent years there has been a marked reversal of opinion, and the Western farmer became at least a temporary convert to protection. For his placation, stiff duties on agricultural products were included in the Fordney-McCumber Tariff, and Eastern manufacturers openly rejoiced that he had at last been gathered within the Protectionist fold. For his further appeasement, President Coolidge and his predecessor made use of the flexible provisions of the Fordney Tariff Act on more than one occasion, and every care has been taken to allow the farmer access to the full fruits of Protection. But the results have been disappointing, and brought speedy disillusionment. On March 7th, President Coolidge issued a presidential proclamation raising the import duty on wheat by 12 cents—from 30 to 42 cents per bushel—and on that date the price of No. 1

Northern wheat in Minneapolis ranged from \$1.16 to \$1.22. A month later, when the duty went into effect, the range was from \$1.11 to \$1.16, and on June 7th it was from \$1.09 to \$1.15. The measure was very successful in excluding Canadian wheat, for in March, April, and May only 3,500 bushels of wheat entered the United States, but it failed to produce the anticipated rise in price which politicians had glibly promised. The realisation has now come to the more intelligent farmers that the erection of a dam at the international boundary merely accentuates the severity of the competition which American wheat has to meet from Canadian in Europe; the flooding of the European market with Canadian wheat depresses export prices, which in turn bring down domestic prices, and the obvious conclusion is that as long as the United States is a grain-exporting country no tariff can give her farmers better prices. *The North-Western Miller* of Minneapolis expresses the view that:—"The past seven weeks ought to be sufficient to prove to anybody that imports of wheat alone from Canada or from anywhere else cannot be held chiefly responsible for domestic prices."

The Republican managers, however, have evidently made up their minds that no concessions can avert an independent insurgent movement headed by Senator La Follette in the trans-Mississippi States, and in drafting their platform they concentrated their efforts upon proposals which would win support in other quarters. Leading speakers dwelt upon the benefits conferred by the Fordney tariff, and the official platform reasserts a belief in the protective principle, with the safeguarding reservation that the President should possess authority to readjust duties for the avoidance of excessive burdens upon the consumer, and unduly high customs levies. Therefore, it seems reasonably certain that the Republican Party will secure the solid vote of the convinced supporters of protection, and will, if returned to power, attempt no modification of the present tariff policy.

But the politicians of the other parties are convinced that, with the defeat of the strange plan for agricultural relief embedded in the McNary-Haugen Bill, the western farmers may now turn to a lowering of the tariff to cheapen the commodities which they must purchase, and thereby reduce the disparity in price levels, which is the root of the present agrarian troubles. Mr McAdoo, who, despite his unfortunate connection with the oil scandals, is still the favourite for the Democratic nomination, boldly proposes to make tariff reduction one of the leading features of his programme. In a recent public statement he said that he proposed, if elected President, "to repeal the Fordney-McCumber Tariff Bill; to substitute therefor a reasonable and just tariff measure which will give the farmers fair play and the largest possible opportunity to dispose of their products at profitable prices, and permit them and the people generally to buy their necessities at reasonable prices." On different occasions Mr McAdoo has expressed his conviction that the real and fundamental solution of the agricultural problem is to facilitate the purchase of agricultural products by foreign countries. For this purpose he would lower the tariff to encourage imports which would pay for farm produce, and would adopt a foreign policy of co-operation in place of the rigid isolation to which the Republicans pin their faith. Governor Smith, of New York, another possible Democratic nominee, has a huge industrial vote in his own State, and is less enthusiastic for tariff reform; but Senator Ralston, of Indiana, whose chances are rated high, has a long and consistent record as an opponent of high tariffs. The development of industry in the Southern States has brought into existence a strong protectionist wing in the Democratic Party, but a belief in a low tariff policy is inherent in its traditions, and will assuredly be reflected in a liberal tariff platform.

During the Republican Convention the 26 Wisconsin delegates propounded a comparatively radical platform, which was rejected with contumely, and when the supporters of Mr Coolidge began their customary march of demonstration they sat grimly silent amid catcalls and jeers. But their abstention was an ominous portent to intelligent Republicans, who knew that although their machine had smothered the chance of liberal representation from other States, the sentiments of the Wisconsin delegation had many supporters throughout the country.

Plans are now afoot for a convention of insurgent progressives next month, at which Senator R. M. La Follette, of Wisconsin, the acknowledged leader of American radicalism, will be nominated for the Presidency, a platform drafted, and the preliminary work of organisation taken in hand. The success of the British Labour party has had a marked influence upon American Labour thought, which despite the restraining hands of Mr Gompers and other veterans, has been slowly turning to political action, and if, as is prophesied, Mr Warren S. Stone, a leader of the railways brotherhood, is nominated by the new party for the Vice-Presidency, the agrarian insurgents, who are the core of the new movement, can rely upon a huge reinforcement of Labour votes. Senator La Follette cannot hope to win the election outright, but he and his followers expect to be able to dominate the situation at Washington after next March, and have any administration which emerges at their mercy. Their platform will not seem excessively radical to British eyes, but it will certainly include the complete nationalisation of the railways, and drastic measures for the control of trusts and predatory corporations. The Progressives will probably show little enthusiasm for the League, which Senator La Follette has always denounced as a vicious instrument for enforcing an unjust peace, but they will advocate some form of international co-operation. On the fiscal issue, Senator La Follette was for many years a convinced Protectionist, but recent utterances have given evidence of a modification of his views, and many of his leading lieutenants are stern critics of Protection.

It is as yet impossible to judge how far the disillusionment about the benefits of the Fordney tariff to farmers has spread in the North-West, but it is improbable that there will not be strong support at the Progressive Convention for proposals for drastic tariff reform. What seems quite certain is that there will be available in the next Congress a majority, which is not committed to the Fordney Tariff and could without much difficulty be induced to lower its schedules. Even in the present Congress the combination of Democrats and radical Republicans has been able to put through measures quite unpalatable to the regular Republicans. For the cause of Freer Trade, it is fortunate that the slump has come before the election, for the Protectionists will have to accept responsibility for commercial adversity as well as prosperity. There are, moreover, an increasing number of bankers and influential industrialists—among them Henry Ford—who have ceased to believe in a tariff, and if the Western farmers will only revert to their old beliefs on the subject, a far-reaching change in American fiscal policy might be possible. A reversal of the Fordney tariff would be helpful to British trade, but it would be of immense benefit to Canada where the cattle industry is languishing through exclusion from the American market, and a profitable export trade in farm produce from the Eastern provinces to the adjacent industrial centres of the United States has been seriously impaired. But whatever may be the ultimate fruits of the approaching election, the contest bids fair to be the liveliest for many years, and rarely has prophecy about the outcome been so difficult. One thing is certain, the high tide of reaction which began to surge in the United States after the war has definitely receded, and the forces of liberalism cannot fail to gain ground in November.

FINLAND.

(BY A RECENT VISITOR.)

DURING the five years which have elapsed since the proclamation of the republican form of government in Finland much has been done to consolidate the finances and the general economic life of what is certainly one of the most promising of the new European States. Geologically, Finland forms part of what is called Fenno-Scandia, and the historical evolution of the country has also intensified its Scandinavian associations. Out of a total population of over 3½ millions, the Swedish-speaking element numbers approximately 11 per cent., and both Finnish and Swedish are official languages throughout the whole country. Certain minor differences certainly do arise from time to time between the two peoples in the political

sphere, but the fact of common co-operation against Russian oppression in the past combines with an attraction to the Scandinavian point of view, which is shared by both peoples alike, to rule out the possibility of a "minority question," such as is unfortunately only too characteristic of the new States of Central Europe. In financial circles the two nationalities are almost equally represented, but, curiously enough, while industry is mainly in Swedish hands, most of the trade is controlled by the Finnish element.

The whole population is, of course, very small when compared with the great area of the country, which amounts to nearly 150,000 square miles. Finland is thus considerably more than half as large again as Great Britain. The cultivated land, however, only represents a little more than 6 per cent. of the total area, the remainder being composed of forest, swamp, and lake. Even so, agriculture gives employment to over 65 per cent. of the population, and a brief account of recent changes in land ownership will therefore not be out of place. At the beginning of the present century over 60 per cent. of the agricultural undertakings were leaseholds, and the terms of the leases were frequently very onerous and of a type quite unsuited to modern conditions. Thus, although metayage was rare, rentals in labour service were very common indeed. This naturally caused considerable dissatisfaction, and one of the first tasks of the new State was to convert these leaseholds into freeholds. By the end of last year peasant proprietorship had been established in some 63,000 cases, out of a total of approximately 165,000 leaseholds, but, as compensation was paid according to pre-war values, it will be seen that the burden imposed on the landowners was no light one. The process of conversion is expected to be completed in about four years' time, but it is important to notice that this reform does not affect the unit of agricultural production, as all large estates worked as such remain in the hands of their former owners. The peasantry, however, still have an inadequate supply of cultivable land, and it is proposed to increase their holdings by a policy of reclamation of waste land, to be carried through with Government assistance. As this will necessitate considerable capital expenditure, it is, however, unlikely that much will be done in the near future.

From the point of view of foreign trade, the forest wealth of the country is of the very greatest importance. Timber and its derivatives, such as paper and pulp, bulk very large in Finland's exports. Great Britain is the principal customer, with over 40 per cent. of the total exports; while Germany ranks second with a total which has risen during the first four months of this year to nearly 16 per cent. This year, too, there has been a considerable rise in the proportion of exports to Russia, owing to fairly large purchases of Finnish paper. This commodity was usually supplied by Germany, but the recent disagreement between the two countries has been of service to Finland. The advantage is not, however, likely to be permanent, and, although negotiations are at present in progress for Russian purchases of leather in the country, the importance of Russia in Finnish foreign trade will certainly long remain far less than that of pre-war days. Relations between the two countries are now normal, and frontier troubles have practically ceased since the inauguration, three years ago, of a neutral zone ten kilometres wide along the whole length of the Russo-Finnish border in accordance with the terms of the Treaty of Dorpat. By the same Treaty, Finland acquired an outlet to the Arctic Ocean (the Petsam's district), and in this northern forest zone the ultimate possibilities of timber exportation are very great indeed. Improved transport facilities are, however, urgently needed, and although a plan has been worked out for railway construction in this area, the shortage of capital makes progress improbable in the near future. This same trouble is hampering the work of electrical power production, for which the abundance of water power renders Finland a most promising field. Work has, however, been taken in hand on the scheme for harnessing the falls of Imatra, in the South-East of the country, but in the absence of a foreign loan, this is being financed out of revenue. It is true that the Government has a fund from Budget surpluses in the past, but this is largely deposited with the joint stock banks, and could not be

made available for capital construction work without causing considerable dislocation to trade and industry.

The financial situation this year has presented certain difficulties which have been reflected in a slight fall in the exchange, which is not wholly accounted for by the usual seasonal fluctuation. In the first place, the harvest last year was far from satisfactory, and this has necessitated an increase in the imports of foodstuffs. Again, the late winter has delayed the resumption of exports, with the result that the trade balance for the first four months has been more unfavourable than usual. Side by side with this, however, there has been a considerable withdrawal of funds kept on deposit by foreigners in the Finnish banks. At the end of April, 1923, apart from British-owned deposits, which were almost all being accumulated with a view to the financing of genuine business transactions approximately one thousand million Finnish marks were being held on deposit by foreigners, mainly for speculative purposes. For some time past, however, the exchange has been practically stabilised—though what movement there was has been against Finland—and Danish, Norwegian, and other foreign speculators, realising that the hopes of a further rise in Finnish marks were unlikely to materialise, have been withdrawing their holdings to a very considerable extent. The combined effect of these factors has naturally been a considerable reduction in the valuta reserve, but since the month of April there have been signs of considerable improvement. Foreign speculative holdings have now for the most part been liquidated; once they began, the exports have been fully up to expectations, and the harvest failure of last year, by diminishing the purchasing power of the rural community, will almost certainly lead to a reduction in the import of textiles. In well-informed circles in Helsingfors there is held to be a reasonable prospect of a favourable trade balance over the whole of this year.

While the successful manner in which this temporary exchange crisis has been overcome speaks well for the strength of the Finnish currency, an official return to the gold standard is not held to be practicable until this is effected by Great Britain. Trade relations between the two countries are of the greatest importance, and there is considerable doubt as to the wisdom of adopting an independent currency policy for Finland, which the country might perchance fail to maintain.

In the main, conditions in the country may be regarded as fairly normal. The export trade has been on the whole well maintained, and a wise budgetary policy has made possible the establishment of a sound currency. The temporary difficulties of recent months appear to have been successfully overcome, though the shortage of capital still makes itself felt in the financial and industrial life of the country. Without a foreign loan, however, the further development of the economic resources of Finland must necessarily be rather slow. At the same time, progress will not be hindered by the burden of a heavy national debt, for Finland is, in this respect, one of the most fortunate of European countries. In a word, startling developments are unlikely, but everything seems to show that the steady progress of the last few years will be well maintained in the future.

RUBBER PRODUCING COMPANIES IN 1923.

NINETEEN TWENTY-THREE was the first calendar year of the operation of the Stevenson scheme. The Ceylon and Malayan Governments, it is stated, rationed small native producers on a more liberal scale of export allowance than larger producers. From the Dutch East Indies rubber came forward on a substantial scale, and it is observed that a quantity of rubber was sent out of the Malay Peninsula without licence, figuring in "the Straits Settlements statistics as Dutch Indies produce." According to Messrs S. Figgis, the following were the shipments of plantation rubber in 1923:—

Exported from—	1918.	1919.	1920.	1921.	1922.	1923.
Ceylon (and India).....	Tons. 23,000	Tons. 43,000	Tons. 37,900	Tons. 40,100	Tons. 47,000	Tons. 35,000
Malaya, &c. (inc. re-exports).....	134,000	219,000	187,800	159,900	248,000	253,000
Java.....	17,300	35,500	31,000	28,600	33,000	32,000
Sumatra (East Coast).....	12,900	26,500	22,400	29,900	39,000	46,000
Total.....	187,200	324,000	279,100	259,500	367,000	366,000

† December shipments estimated.

Head Office
41 LOTHBURY, LONDON, E.C.2

Estimates vary as to consumption. America, it is thought, has taken 200,000 tons. Probably round about 405,000 tons is the total. World stocks are estimated to have been lower by amounts somewhere between 35,000 tons to 45,000 tons.

The highest price for the year was at the beginning, when 1s 6½d on the spot was paid for standard ribbed smoked sheets, and 1s 6½d for crepe; prices only fell slightly during the next two or three months, but at the end of April they declined to 1s 3½d, and in May fell sharply to 1s 1½d for spot standard grades, which was the lowest price of the year. There were moderate fluctuations through the summer, and in August, with more inquiry from America, the price rose to 1s 4d on the spot. Prices fell in October to 1s 1½d for spot, and the market remained quiet since then, with little change in prices, finally closing at spot value 1s 2½d per lb. Sole crepe of one-eighth and one-quarter of an inch in thickness, by 36 inches long and 13 inches wide, has commanded a premium over standard crepe for the greater part of the year of 6d per lb. The price has for a considerable period ruled around 1s 9d per lb.

For our first table we take 10 representative rubber-growing companies and set out the production of rubber during the past three years, together with the price per lb at which crops were sold. Figures for 1914 are also appended:—

Company.	Production.				Price per Lb.		
	1914.	1921.	1922.	1923.	1914.	1922.	1923.

Sungei Kapar.....	658,616	722,467	664,503	667,149	2 24 0 101	1 14	1 14
United Serdang.....	1,827,943	2,876,188	2,562,227	2,845,881	2 34 0 91	1 24	1 24

The London Asiatic in its report points out that the output for 1923 included the crop from Tangkah Estate taken over as from January 1st and a full year's crop from Batang Benar Estate. With 722,500 lbs the Consolidated Malay was 4,818 lbs in excess of the exportable allowance under the licensing scheme. The Golden Hope also produce the quantity exportable at the minimum rate of duty; no reason is assigned for the sale price recorded above, nor do we find any complementary information on the difference in rubber prices for 1922 and 1923 for the Selangor Rubber Co. in the accounts in front of us. The better price of rubber enabled considerable arrears of cultivation to be undertaken on most estates, while the supply of labour appeared to be satisfactory on most estates.

It is instructive to make a comparison between the prices obtained for rubber and production costs. For

this purpose we set out below the cost of production per lb over a period of years of a few companies:—

COST OF PRODUCTION per LB.

	1913.	1914.	1918.	1919.	1920.	1921.	1922.	1923.
Anglo-Malay ..	1 0 38	0 10 45	0 10 25	0 9 21	0 11 07	0 10 78	0 6 27	0 7 64
Cons. Malay ..	1 0 61	0 11 33	1 1 17	1 0 70	1 2 69	0 9 24	0 6 72	0 9 86
Golden Hope ..	1 2 18	0 11 23	1 2 87	1 0 81	1 2 11	1 0 71	0 8 23	0 8 92
Linggi	1 0 73	0 9 54	1 2 20	0 11 21	1 0 43	0 9 41	0 7 25	0 7 84
London Asiatic	1 4 76	1 0 83	1 1 64	0 10 12	1 0 14	0 9 33	0 8 47	0 8 63
United Serdang	1 4 56	0 11 84	1 1 88	1 0 86	1 2 22	1 1 97	0 7 87	0 7 72

The directors of the Consolidated Malay Rubber Estates observe that "the smaller crops produced under the restriction scheme inevitably resulted in an increased cost of production." This, no doubt, is an aspect which has not been lost sight of by those who discuss the benefits to be derived from restriction schemes. Incidentally, the United Serdang, one of the largest producers, reduces its production cost.

The next table shows net trading results over a number of years:—

Sungei Kapar	65,867	42,364	16,534	2,852	7,288	8,642
United Serdang	72,596	112,813	98,225	Dr 60,607	18,775	67,812

Gloomy 1921 is now forgotten. The turn in the tide set in with 1922, and 1923, while causing no extraordinary excitement among investors, has caused considerable attention to be paid to the industry. If our previous tables are studied, the decrease in profit shown by the Consolidated Malay and Selangor will be understood. The most significant recovery is that of the United Serdang. From a profit of £18,775 to £67,812 is a giant stride; and £9,500 has been allocated to depreciation on mature areas out of profits. The Linggi also makes an excellent return, while the London Asiatic nearly doubles profits—but here the crop from the Batang Benar Estate must be taken into consideration.

Our final table shows dividends over the past three years, comparative prices, and present yields:—

Name and Amount of Share.	Dividends.			Price July 27, 1914.	Price End June, 1923.	Price June 26, 1924.	Present Yield.
	1921.	1922.	1923.				
Anglo-Malay (£1)	nil	7½	6	4	1½	8	6 17 0
Chersonese (2)	12½	10	10	7½	1½	8	8 0 0
Highlands & Lowlands (£1)	2½	7½	7½	12½	1½	18	5 9 0
Linggi (£1)	nil	7½	7½	12½	1½	18	6 6 9
London Asiatic (2)	nil	10	10	7½	1½	8	6 0 0
Selangor (2)	12½	16½	12½	7½	7½	8	6 13 3
Sungei Kapar (2)	nil	10	10	7½	1½	8	8 0 0
United Serdang (2)	nil	5	10	7½	1½	8	8 0 0

† 2/ shares.

There is certainly little in the figures to cause demand for rubber shares. An 8 per cent. return, with future prospects uncertain, is not attractive. It is true that Mr Eric Macfadyen, speaking recently at the annual meeting of the Rubber Plantation Investment Trust, in referring to future prospects, pointed out that:—"The steady, though slow, increase in the absorption of crude rubber by countries outside the United States, in spite of chaotic trade conditions, is very encouraging." He continued: "In 1920 those countries absorbed between them 90,000 tons of crude rubber. This absorption was maintained during the following year, while economic conditions were almost everywhere at their worst. In 1922 it increased to 105,000 tons. Last year it amounted to over 115,000 tons, and this year it will not be far short of 130,000 tons, and may even exceed that amount. Tyres remain by far the most important outlet for our produce, but the possibilities for new uses may be judged from the history of the crêpe rubber sole, which in only a couple of years or so has come to employ rubber at the rate of some 6,000 tons per annum, and is destined to account for much larger quantities."

SUDAN DEVELOPMENT.—I.

(BY A CORRESPONDENT.)

OF the four questions reserved for future discussion at the declaration of Egyptian independence on March 16, 1922, that of the status of the Sudan is by far the most important, and at the same time the most likely to lead to difficulties in the forthcoming conference between Zaghoul Pasha and Mr Ramsay MacDonald. In modern times the interest of Egypt in the Sudan began a century ago, when Mohammed Ali Pasha sent an expedition south for its conquest. Egyptian influence increased steadily, till in the seventies it extended, at least nominally, as far south as the Equator. But even in Gordon's time Egyptian authority could hardly be said to prevail beyond the range of the weapons wielded by the soldiery under the command of the officers who held their brevets from the Khedive. The disasters to Hicks and Gordon are sufficient proof of the precariousness of the hold.

The reconquest began in 1896, and was completed in effect by the occupation of Khartoum and Omdurman on September 2, 1899. This then is, practically speaking, the epoch from which dates the modern history of the country. A retrospect of this history, on its economic side, over the past twenty-five years, not without interest in itself, gains additional importance from the existing political situation.

The extent of the country equals that of Europe between Sicily in the South, Copenhagen in the North, Calais in the West, and Bucharest in the East. It is administered jointly by this country and Egypt, but the British staff comprises only about 110 officials, exclusive of technical servants.

The population, estimated before the Mahdist outbreak at some nine millions, had fallen through death from disease, famine, war and mal-administration and through slave-trading to about 1.5 millions in 1899. It is now roughly estimated to be about 5,910,000. Of these the tribes who dwell to the north of latitude 13 deg. are predominantly of Arab blood, and profess the Mohammedan religion. The tribes to the south of this line are of negroid descent, and are heathen. The former are fairly industrious, but the latter—with exceptions—have still to learn the benefits of systematic work, though the efforts of certain missionary bodies and Government precept are producing their effects. Still, the outstanding problem of the Sudan for many years must be the provision of adequate *main d'œuvre*.

Revenue comes from taxes on land, date palms, animals, and traders—the last a rough income-tax at 4 per cent. on profits below £E.100, 5 per cent. up to £E.500, and 6 per cent. beyond that figure—tribute from nomad tribes, royalties on certain products, rent of Government property, sales of timber and firewood, and from the earnings of Departments, the most important of which are those of Railways and Steamers, Customs, Posts and Telegraphs. Previous to 1913 there figured regularly in the Budget a subvention from Egypt, which had reached a maximum of £E.268,000 in 1902, and also a contribution on account of the expenses of that part of the Egyptian Army which served in the Sudan. This latter item was balanced by the entry of a similar amount on the expenditure side. But this contribution was counterbalanced to some extent dues on any produce landed in Egypt for the Customs Sudan. Various sums were also contributed by Egypt to the Sudan for extraordinary expenditure, generally of a capital nature.

In 1913 all this was changed. The subventions ceased, and at the same time the dues collected on goods destined for the Sudan were handed over to the Sudan Government. But as Egypt continued to pay for that portion of vention continued, though in a veiled form. To judge these payments will not be allowed to pass without challenge.

The following table gives the summarised accounts for 1900, 1910, 1920, 1922, and estimates for 1923, in units of £E.1,000:—

	1900.	1910.	1920.	1922.	1923.
Expenditure	331	1,343	3,565	3,497	3,465
Receipts	156	1,493	4,425	3,499	3,46
Subvention (a)	134	198	..	..	..
" (b)	..	519	..	..	..

(a) Ordinary. (b) Extraordinary. * An exceptional year; a small amount was repaid. † Estimate.

In spite of the withdrawal of the subvention, the accounts have shown surpluses each year since 1913. These surpluses are passed automatically at the end of the year to the reserve fund, to which are credited also the receipts from sales of Government land and various others. This fund is not permitted to accumulate, but is employed in capital and other non-recurring expenditure, and only a small balance is retained to meet unforeseen contingencies. An average amount of £E.175,000 was spent annually in this way in the twenty years ending 1920.

The total sum subventioned by Egypt for extraordinary expenditure between 1897 and 1914 amounts to £E.8,886,000, which constitutes a loan free from interest. In addition to this, the Sudan debt consists of the two loans guaranteed as to interest by the British Treasury, viz., £6,380,000 5½ per cent., redeemable 1929-59, and £3,250,000 4½ per cent. The interest on these two loans comes to close on half-a-million sterling, but though there is no present evidence of the possibility of such a surplus, there is every prospect of its realisation when once the schemes for cotton-growing in the Gash Delta (the Kassala scheme) and on the Gezira mature.

A country of this size is dependent on the development of its communications for its economic development. In this respect the Sudan is fortunate in being intersected throughout its length by the White Nile and its main feeders, which are navigable all through the year, and by the Blue Nile and Sobat, which permit of communication with the eastern part during a portion of the year. These river routes have been increasingly supplemented by a railway system that connects the centre of the country with Egypt on the one hand and with the Red Sea on the other. In 1901 the system consisted of the little used line to Delgo and the line from Wadi Halfa to Halfaya, as the station opposite Khartoum was then called, until its mishandling by the scurrilous led to a change of name. The total length was about 1,150 kilometres. By 1910 they had expanded to 1,981 kilometres, by 1920 to 2,397, and now the recent opening of the Kassala Railway has added a further 345 kilometres.

The railways have always been managed so as to pay their way, as witness the following selections from the report of the Director-General:—

	(Unit, £E 1,000.)			
	1910.	1914.	1918.	1922.
Revenue	392	537	987	1,258
Working expenses	268	387	745	984
Net profit	123	150	242	274
Ratio, expenses to revenue ..	68.4	72.1	75.5	78.3

The last item is of interest, since the Sudan Government has guaranteed the Kassala Cotton Company that operating expenses on the new Kassala Railway will not exceed 70 per cent. of the gross receipts.

Since 1910 the Department of Steamers has been amalgamated with that of Railways, and more recently that of Ports has been also taken over. Co-ordination amongst the transport services is thus more readily secured. The section of fluvial navigation pays its way as a whole, though some sections cost more than they yield. The dock at Port Sudan is still far from being a self-supporting service, but the coming extension of the cotton traffic may alter that.

These docks are being more and more used every year, as the following table shows:—

SHIPPING at PORT SUDAN.

	British.		Foreign.		Total.	
	Number of Vessels.	Tonnage (1,000 Tons).	Number of Vessels.	Tonnage (1,000 Tons).	Number of Vessels.	Tonnage (1,000 Tons).
1910	..	350	..	81	..	432
1912	..	527	..	173	..	700
1914	232	642	57	155	289	797
1920	258	637	50	100	308	737
1921	349	1,173	102	231	451	1,404
1922	342	1,139	110	361	452	1,500

There is also a service of motor vehicles in the south, from the Nile to the Congo State frontier, which in 1922 carried 383 tons of goods and 654 passengers.

Notes of the Week.

The Anglo-French Conversations.—A vital week of preparation for the coming attempt at a European settlement on the basis of the Dawes Committee Report has ended with hopes at least as high as before. It is true that the first exuberance resulting from M. Herriot's conversations with Mr MacDonald at Chequers was damped by certain discrepancies in the accounts of what took place there, and also at Brussels, where, after leaving England, M. Herriot conferred with M. Theunis. The new Prime Ministers of Britain and France have had their first taste of the embarrassment which their predecessors so often suffered from leakages of information, indiscretions of politicians and Press, and unwarranted and irresponsible statements, assumptions, and criticisms. But both, in their respective Parliaments, have quickly nailed the *canards* to the counter, and at the close of the week we are happily able to hope that the fog of misunderstanding, which seemed to threaten to envelop the new *rapprochement*, has been dispersed. We may go back to the terms of the communiqué issued after the Chequers meeting, which announced "general agreement between the British and French points of view," and a "common determination" to meet all difficulties by "a continuous co-operation." The two Premiers have sent a joint note to Germany on the question of disarmament. Invitations have been issued for an inter-Allied Conference to be held in London on July 16th, and America has already agreed to participate, the official announcement to this effect being in rather less restrictive terms than had been expected. Moreover, Mr MacDonald and M. Herriot are both to visit the Assembly of the League of Nations at Geneva in September. From all this arise two large hopes. In the first place, it really looks as though the ground will have been sufficiently explored to allow the Conference to meet with real hopes of concrete achievement. Naturally, optimism must be tempered by the remembrance of many obstacles ahead, of which the principal, of course, are the provision of guarantees of security that will satisfy France, the settlement of inter-Allied debts, and the division of the Reparation spoils. Difficult as these problems are, we derive encouragement from the developments of the past ten days, for it is obvious that they will be approached in a new atmosphere. If Mr Norman Angell's interview with M. Herriot, published in the *New Leader*, may be read literally, the latter has advanced a great deal further from the Poincaré standpoint than we had dared to hope. Be that as it may, a real "will to peace" appears at last to be in the ascendant, and the determination of all the Allies to take advantage of the unique opportunity offered by the Dawes Report, will, we believe, prove strong enough to overcome those obstacles which have so persistently wrecked previous attempts at a settlement.

The Housing Bill in the Commons.—Twice more this week the Government have suffered defeat in the House of Commons. An amendment to the Housing (Financial Provisions) Bill was carried against them by a majority of no less than 146, while a narrower margin against the Government was established on amendment to the London Traffic Bill. The latter defeat was a minor matter, but the former, though not coming within the category of reverses which, in the new circumstances, entail the resignation of the Government, possesses an importance which cannot be ignored. The Government proposed to pass the Bill on to a Standing Committee, but failed to carry their point, and by the large majority mentioned above it was insisted that the Bill should be discussed by a committee of the whole House. This decision to keep the Bill in the House itself represents a very formidable embarrassment to the Government's already overcrowded time-table. The result of the division was greeted with Labour cries of "no grouse shooting this

year"—an amiable way of recognising the probability that the session will have to be abnormally prolonged. In our view, the House took the only possible course in insisting, as a condition of granting a second reading, that the Bill should undergo its committee stage on the floor of the House. In the debate which terminated in this result the main provisions of the Bill were riddled with much the same volley of criticism to which the financial resolutions were subjected a fortnight ago. We have indicated, at some length, in the *Economist* our own views of the shortcomings and dangers of Mr Wheatley's scheme, and do not propose to retrace the ground here. Obviously, if there is any possibility of turning the Bill into a workable measure, that possibility lies only in prolonged hammering and tinkering in the committee stage. It is really surprising that Mr Wheatley should have expected the House to part with any portion of its maximum possible control over a Bill, which in its present form is open to so many vital objections from the financial and economic and social points of view.

Reforming Old-Age Pensions.—The Government issued early in the week a White Paper (Cmd. 2168), explaining the proposals by which they intend to carry out their promise to remove the "thrifty disqualification" for old age pensions, and these were passed in the House of Commons on Wednesday. These proposals do not remove the income disqualification altogether, or make the pension available to all persons over 70, irrespective of private income. To do so, apart from being open to other objections, would have entailed a burden on the Exchequer which would be quite indefensible in the present circumstances. What Mr Snowden's measure means is in effect that private income up to 25s a week will not interfere with the receipt of a full 10s pension, provided that 15s out of the 25s come from sources other than earnings. This proposal certainly does not go far enough to satisfy a section of Labour opinion, but it is in our view a wise and practical policy. Without placing too heavy a burden on the national purse, it removes the chief blot on the old age pension system, and brings within its scope many thousands whose sole disqualification has hitherto been that they have been thrifty enough to put by a little out of their wages for their old age. That is mere justice, and a measure which tends to restore the incentive to saving must be beneficial. The cost of the reform is estimated at £4 millions in the first year, rising later on to £7 millions or more. It was obvious that this measure was certain of passing the House of Commons, for all parties were pledged to the removal of the thrifty disqualification, and it was, in fact, sanctioned without a division.

Irish Free State Industries.—Our Dublin correspondent writes:—Ever since the Treaty in December, 1921, there has been a clear need, growing ever more urgent, of a stimulation of industrial activity. The economic potentialities of Ireland as a well-nigh "untilled field" for industrial enterprise are well known—equally well known is the necessity to make up for the lee-way lost during the post-war insurrectionary period, and to repair the damage inflicted upon the fixed capital wealth of the country by the sabotage of the Communists, anarchists, and irregular republicans. Reference also has been made in these columns more than once to the wisdom of seeking a certain additional stabilisation for the new political institutions by turning energy and idealism to work in the fruitful fields of industrial expansion. The new Trade Loans (Guarantee) Bill, 1924, just carried to a second reading in the Dail, marks the comprehension by the Government of the reality of these factors. It is obviously a stopgap measure pending maturer consideration, and more permanent decisions upon the large questions of policy which are involved in scheme of State assistance to industry—it is, in fact, limited in its operation to one year. It empowers the Minister of Industry and Commerce to guarantee loans to be raised within or outside the Free State which, when applied in capital outlays, are "calculated to promote employment in Saorstát Eireann." The total amount of the loans which may

thus be guaranteed is £750,000. Again, direct loans to the amount of £50,000 may be made, or guarantees of loans may be given (with an aggregate total liability for loans and guarantees of £250,000) when a public authority, or bodies of producers or consumers, or both, embark upon an enterprise "calculated to promote a reduction in the retail prices in Saorstát Eireann of essential commodities." Apart from the safeguards of an Advisory Committee for the Minister, and of the necessity for obtaining the concurrence of the Minister of Finance, it is tolerably clear that the Government aims at getting the banks to do the difficult work of laying down conditions, and of preliminary investigation generally. The provision for the encouragement of a reduction in the retail prices of essential commodities is the rather belated attempt to fulfil Government pledges given some nine months ago, when Labour troubles and the high rate of local wages brought the excessive cost of living figure to the fore. The Government, rejecting suggestions made at the time, and referred to in this column, turned to proposals for the limitation of profits, the regulation of prices, &c., only to be driven at long last by the inexorable logic of the difficulties of local conditions back to the initial suggestion of State aid on the financial side to public or private enterprise, in order to reduce prices. A consumers' association, on co-operative lines, if well officered and supported, would offer the best chance of success, but whether under the machinery of the Bill such an undertaking will ever see the light is yet doubtful. The power, direct or indirect, of the distributing and retail trades has been already shown to be great. They will object strenuously to State-aided competition to curtail their profits. Lack of experience, self-distrust, and a conservatism due to historical causes prevent any chance of the earlier stages of industrial development from being initiated mainly by Irish brains and Irish capital. There is a warm welcome for foreign capital, with the experience of minds trained in development work to back it so long as it is satisfied with reasonable rewards, and does not aim at too drastic an exploitation. But there are schemes and schemes, and the ordinary citizen and the ordinary journalist soon find it hard to appreciate relative merits accurately. To this end some sort of Government supervision seems desirable. And, on the other hand, few investors of foreign capital are willing to proceed without some pledge or guarantee of Government goodwill amounting to positive assistance, or support in certain defined contingencies. Herein lie the principal conditions, to meet which, in the progress of industrial development, a carefully thought out policy is required.

International Maritime Jurisdiction.—The old, but ever-changing problem of national and international jurisdiction over the sea is being investigated by the International Law Association, a committee of which has just prepared the draft of a suggested international convention which would prescribe who should regulate the sea in time of peace. An attempt is to be made, apparently, to put the matter on a footing which is truly international—that is, while the interests and rights of maritime States in their coastal waters are recognised, the sea is taken as the starting point. It is proposed that an international commission should be established, composed of representatives of the Governments of all the maritime States, to regulate the high seas so far as may be necessary in the common interests of all. The commission would also see that certain provisions of the proposed convention relating to territorial waters were carried out. Following the same line as that adopted in the recent convention between ourselves and the United States respecting the regulation of the liquor traffic, the proposed international convention would standardise the three-mile limit for territorial waters, but would allow the exercise of a more extended national jurisdiction for special purposes, such as those connected with Customs or sanitation. The committee rejected proposals that the minimum limit of territorial waters should be four or six miles, and also laid down in the draft convention that the jurisdiction exercised by States over their territorial waters must not

go beyond what is necessary for the maintenance of their laws and the protection of their citizens. Both public and private ships under the flag of another State would be entitled to pass through territorial waters. The exercise of national territorial rights over more extended areas for special purposes would be subject to the approval of the proposed international commission, which would carry out the convention and legislate for the high seas. In its essentials the scheme appears to be sound. An agreement of this kind (under which, among other matters, international questions of fisheries would be dealt with) might serve a useful purpose by providing standing machinery for the adjustment of differences before they become acute. The history of sea power, as Mahan remarked in his classic book on the subject, has been largely a military history, and any plan which would regularise the use of the sea so as to subordinate sectional interests to the common benefit would certainly be advantageous. This plan is to be discussed at a conference of the International Law Association at Stockholm in September.

Raw Cotton Production.—With a view to collecting definite information on essential points, such as area cultivated, yield per acre, cost of production, facilities of transport, &c., the International Cotton Federation a little time ago submitted to well-known authorities in the cotton-growing countries outside the United States and Egypt a questionnaire on the points mentioned above. The Bulletin of the International Cotton Federation, which has been published this week, contains numerous reports and articles relating to replies so far received. Most valuable information has been obtained, and when it is remembered that Texas, the most-favoured cotton State of America, cannot produce cotton at less than 20 cents on the plantation, and that in Georgia and Arkansas the cost of production is near 30 cents, it will be realised that the necessity for extending cotton-growing outside the United States is more urgent than ever. It is possible that Lancashire spindles will not work full time until the industry receives cotton supplies on an economic basis, and not at the high level of prices that has ruled during the last few seasons. The Federation Bulletin contains a paper by Mr L. G. Kilby, the secretary of the Empire Cotton Growing Corporation, which was originally intended to be read at the Vienna Congress of the Federation. The writer reviews at some length the work done in the past, and points the way to developments in the future. Although progress with British Empire grown cotton is slow, the extended areas now under cultivation are beginning to be a factor in considering world supplies. The Bulletin also contains an instructive article on the effect of the boll weevil upon cotton production in the United States, by Mr Joseph A. Becker, statistician of the Bureau of Agricultural Economics at Washington. During the first years of the present century cotton production in the United States tended strongly upward, and reached a level of 14,000,000 bales. In 1915 a break in the trend of production occurred. In face of considerable acreage increases, the present level of production appears to be approximately 10,500,000 bales. Should present prices be maintained, it is not at all unlikely that the average acreages of the next few years will exceed somewhat the 1923 acreage, and make possible an average annual production of about 11,000,000 bales. In years of relatively light boll weevil damage output may reach 13,000,000 bales, but in years of heavy boll weevil damage production may fall as low as 9,000,000 bales.

Cotton in U.S.A.—Our Manchester correspondent writes Of all the countries in the world where cotton manufacturing is carried on it might be expected that in the United States trade would be fairly stable as manufacturers have the advantage of being in close proximity to raw cotton supplies, and the chief support for the industry is the home demand. Manufacturing firms in America, however, seem to experience periods of severe depression in much the same way as other countries. During the last twelve months trade has been very slack, and the leaders of the industry have drawn the attention of the Government to the wretched state of affairs, particular mention being

made of the large and increasing imports of cotton cloths, especially from the United Kingdom. A few weeks ago the question was raised in the Senate, and as a result of a resolution which was passed, the Tariff Commission has just completed a detailed report on the situation. The statement declares that the present depression is worldwide, and that the big imports of cotton cloth are due primarily to the quality of certain grades rather than to general price competition. It is estimated that imports of coarse and medium cloths now constitute about one per cent. of the domestic production of such goods, and imports of fine cloth about 10 per cent. of the domestic production. The report analyses the quantity and value of cloth imported into and exported from the United States under the present Tariff Act, as compared with those under previous Acts. With regard to imports, it is stated that the average receipts per year under the 1922 Act were 193,247,150 square yards, against 76,618,376 square yards under the 1913 Act, and 50,704,094 square yards under the Act of 1909. It is stated that a large portion of the imported cloths are entirely different from cloths produced in America. The great bulk of the domestic fabrics are woven from American cotton yarns, whereas the great bulk of the imports are woven from Egyptian cotton yarns. On practically no quality of cloth made in bulk by the domestic mills is there serious competition from abroad. The United Kingdom supplies most of the cotton cloths imported by the United States. The Commission reported that it was difficult to say to what extent the domestic industry was affected by the post-war increase in the importation of cotton cloths. If it is stated that each yard of imported cloth displaces a yard of domestic fabric, then, since imports are now on the basis of about 200,000,000 square yards per annum, as compared with a pre-war basis of 50,000,000 square yards, it would follow that domestic sales have been affected by approximately 150,000,000 square yards. If the total domestic production be taken as 6,500,000,000 square yards, this post-war increase of 150,000,000 square yards amounts to 2.3 per cent. of the total output. The Commission further considered whether changes in the present tariff rates would be of material assistance in stimulating production and restoring prosperity to the industry, but no investigation of the difference in costs of production in America and abroad has been made, and it was pointed out that if such an examination were undertaken it could hardly be completed within less than a year. The Commission concluded their report with the following statement: "It is the general opinion, as stated by authorities in the industry, that domestic and foreign, particularly British, selling prices are to-day very close to actual cost, but in the absence of verified domestic and foreign costs of production required by the Tariff Act of 1922, the Commission does not feel warranted in suggesting readjustments in the duties on cotton cloths." The leading organisations of manufacturers in the United States are not satisfied with the report. The secretary of the New Bedford Manufacturers' Association has declared that the conclusions of the Commission give an entirely wrong impression when applied to the fine goods section of the trade. A former president of that association has asserted that most of the recent increase in imported fine goods consists of goods the exact counterpart of which have been made, and are being made, in New Bedford mills. The opinion appears to be gaining ground in America that the present tariff is not sufficient to protect the home manufacturer, and there is every probability of the agitation continuing for an increase in the import duties.

Co-operative Trading Progress.—Supplementary to the review of the trading progress of the Co-operative Wholesale Society in last week's *Economist*, our correspondent informs us that the membership of the C.W.S. for 1923 comprised 1,092 societies, with a collective membership of 3,567,410. The share capital was £5,378,835, the sales were £66,205,566, and the net profit (after debiting £1,115,874 interest on capital, shares, loans, deposits, &c., and £630,876 depreciation on property) was £510,797, of which £6,927 was made in the first half and £503,870 in the second half of the year. During the first thirteen weeks of the current year the improvement in trade has continued, and the sales will be reported

to the July business meetings as having reached £16,372,887, an increase of £1,172,331, or 7½ per cent., on the corresponding period of last year. The total supplies from the society's productive works were valued at £5,515,708, an increase of £385,939, or 7½ per cent. The deposits and withdrawals in connection with the C.W.S. Bank during the same thirteen weeks were £128,463,185, an increase of 8 per cent. There are now 1,027 co-operative societies banking with the C.W.S. Bank, while 8,656 branches of trade unions and friendly societies, and 3,235 clubs and other mutual organisations, and 4,812 individuals have current accounts. The recovery of trade has been general throughout the country, but while the rates of increase in the distributive trade of the society to its members have been 8½ and 8½ per cent. at Manchester and Newcastle respectively, that of the South and South Wales has only been 2 per cent. The tea sales of the English and Scottish Co-operative Wholesale Society were 11,579,320 lbs, an increase of 5½ per cent. The lower prices of flour are revealed in the returns of the ten flour and provender mills of the society. These had a turnover of £1,957,790, a decrease of ½ per cent., while the output of 770,993 sacks of flour and 606,949 sacks of offals were increases of ½ and 5 per cent. respectively. Next to flour the society has made most progress in its boot and shoe manufacture and tanning, the output of which was £456,988, an increase of 15½ per cent., while 750,516 pairs of boots were supplied to the retail societies from the works at Leicester, Derby, Leeds, Heckmondwike, Rushden, and Norwich. Another factory has just been opened at Northampton with a capacity for producing 20,000 pairs of boots weekly. There have also been increases of trade in the weaving sheds and the shirt and the clothing factories, but business in the furniture, mantle, and flannel works and the woollen mills has not yet revived. In the C.W.S. Thrift Fund 20,810 employees (about four-sevenths of those eligible to join) have accumulated £1,077,456, which will (should the co-operators engaged in wholesale trade fall into line with the growing practice of superannuation in the retail societies) form the nucleus for possible developments in a co-operative pension scheme.

The International Mercantile Marine.—Our New York correspondent writes:—At the annual meeting of the International Mercantile Marine Company, it was impossible to present a complete report for the year 1923, since final returns had not been received from some of its subsidiary lines. The preliminary report, which was submitted, however, showed that the company sustained further heavy losses, as compared with 1922. The combined statement of the company and subsidiaries estimated a profit for the year of \$3,889,878, after taxes and interest charges, or \$824,999 less than in the previous year. After deducting full depreciation on steamers, there was a deficit of \$1,689,922, as against a deficit of \$1,269,783 in 1922. The consolidated results of operating the International Mercantile Marine Company and its subsidiary companies, namely, the White Star, Red Star, American, Atlantic Transport, and Leyland lines for the year 1923, according to preliminary estimates, compare as follows with actual results for the three preceding years:—

INTERNATIONAL MERCANTILE MARINE AND SUBSIDIARIES.

	1920. Actual.	1921. Actual.	1922. Actual.	1923. Estimated.
Net earnings*..	\$ 17,484,015	\$ 14,069,053	\$ 6,971,130	\$ 6,113,597
Interest on I.M.M. bonds	2,231,680	2,153,725	2,256,253	2,223,719
Profit	15,252,335	11,915,328	4,714,877	3,889,878
Depreciation on steamers	5,346,376	6,117,981	5,984,660	5,573,800
Deficit	\$9,905,959	\$5,797,347	1,269,783	\$1,689,922

* Net earnings, including insurance fund surplus for 1923, after deducting operating and general expenses, taxes, and interest on debenture bonds of subsidiary companies.

† For comparison with previous years, earnings of British companies have been converted at \$4.85 per pound sterling. ‡ Surplus.

From dividends received from its subsidiary companies out of their earnings for 1923, and prior thereto, and from the operation of steamers it owns directly, the International Mercantile Marine Company showed an estimated profit of only \$794,968 for the year 1923, after deducting all expenses, bond interest, taxes, and depreciation on steamers directly owned, that sum representing a decrease of \$2,904,782, as compared with the 1922 profit. The following table gives the estimated results of operations of the parent company for 1923, and actual results for the preceding three years:—

INTERNATIONAL MERCANTILE MARINE CO.

	1920. Actual.	1921. Actual.	1922. Actual.	1923. Estimated.
*Total net earnings	\$ 11,307,442	\$ 8,329,309	\$ 6,354,838	\$ 3,417,521

Balance†.....	9,075,762	6,175,584	4,098,585	1,193,803
Depreciation on steamers directly owned.....	768,479	998,836	398,835	398,835
†Surplus	8,307,283	5,176,748	3,699,750	794,968

* Net of I.M.M. Co., plus dividends from subsidiary companies, after deducting taxes and general expenses.

† Dividends received from foreign subsidiary companies have been converted at market rate of exchange on date received.

In view of the fact that the estimated net income of the company and its subsidiaries for 1923 showed a decrease of only \$825,000, approximately, from that of 1922, it will be seen that last year's deficit of \$1,689,921 was caused principally by charging off nearly \$5,580,000 for depreciation—a very heavy charge since the fleets have been kept in excellent physical condition. It is the company's policy, however, to set aside 4 per cent. annually for depreciation, from which it is apparent that the fleets of the company and its subsidiaries are carried at a total value of \$139,500,000. At the annual meeting, President P. A. S. Franklin was questioned as to what provision the I. M. M. was making on account of the reduction in immigration that is expected to result from the new immigration law recently passed by Congress. He replied that practically all steamers carrying only third-class passengers were being tied up, and that the others would be kept in operation. Before the war immigration on the company's lines, he added, amounted to 1,400,000 persons annually, whereas last year the number was only 350,000, and under the new law, he figured, it would drop to 160,000. The company, he said, "is trying a new venture in the third-class business, however, by running two steamers between Spain and Cuba." First-class passenger traffic, Mr Franklin stated, is now 75 per cent. of pre-war traffic, and the prospect for this year is 80 per cent. of the pre-war figure.

The Roumanian Mining Bill.—When the nationalisation of the sub-soil was enacted under the new Constitution for Greater Roumania, which was promulgated on March 28, 1923, it was laid down that "all concessions and exploitations will have to conform to the regulations that will be defined in a special law." The Mining Bill, which is now before the Roumanian Parliament, is the "special Law" to which the new Constitution referred. It is part and parcel of the nationalistic policies that are driving foreign capital out of Roumania. The oil industry has long been the beast of burden struggling under the load of Governmental control and regulations. The nationalisation of the sub-soil prepared it for the worst. The recent Commercialisation of Industries Act has declared the distribution of oil products within Roumania to be the function of the State. For this the industry is now waiting on the State's proposals. The Mining Bill is the *coup de grace*. As the sub-soil is nationalised, only the State can grant oil concessions, whether or no the lands are State or private property, and the concessions are to be limited to fifty years. The Bill provides, however, that concessions acquired from private owners before the passage of the Act can be held for the remainder of their term, or until 1973, whichever is less, and that renewals of leases can be granted by private owners from time to time till 1973, provided that renewals not contracted for before the passage of the Bill shall be subject to a royalty of 5 per cent. payable to the Government. But as the Bill stands, all existing companies, whatever

the nature of their concessions, must become "Roumanianised" within ten years, that is, 55 per cent. (reduced from 60 per cent.) of the share capital must be held by Roumanian citizens, and two-thirds of the board and the chairman and the auditors must be Roumanians (there are certain concessions in the case of some companies, such as the Steaua Romana), while companies taking out new concessions must be "Roumanianised" immediately. How these provisions can be carried out is not clear. A large company might increase its capital, issue 55 per cent. to the public, and find that only 25 per cent. has been taken up. There is not the capital available in Roumanian hands to effect the desired result. What, then, is the foreign company to do? Perhaps these clauses, which savour of Gilbertian farce, will be modified to permit existing foreign companies to hold their concessions for the remainder of their terms. But it will make very little difference. The Bill enables the Ministry of Industry and Commerce to intervene in almost every detail of administration. In certain circumstances the Ministry can dismiss a company's manager and appoint a new one. If the Bill had been designed merely to provide Government posts for Roumanian citizens, it could not have been better drafted. There are many other objectionable clauses:—Pipe-lines for the conveyance of gas become the exclusive right of the State; Companies must provide a fund for the welfare of their employees, which must be at least 15 per cent. of their net annual profits, &c. Modifications to the Bill may be made, and certain companies may not fare too badly, but as the Shell chairman remarked at his company's meeting: "If all the projected legislation is actually carried into effect, it is difficult to see what attraction there can be for foreign capital in Roumanian investments."

Mexican Debt.—The International Committee of Bankers in connection with the readjustment of debt of the Mexico-United States of Mexico announce to the holders of bonds, notes, and other securities, deposited under the deposit agreement, dated July 1, 1922, that bonds of the following issues, together with cash warrants payable during the five-year period, and other documents, as provided in the deposit agreement, are now ready for return to holders of ticket receipts and/or certificates of deposit bearing the following numbers:—Republic of Mexico 5 per Cent. Consolidated External Gold Loan of 1899 (Deposit Nos. 1 to 3,000). Republic of Mexico 6 per Cent. 10-year Treasury Notes of 1913 (Deposit Nos. 4,001 to 4,995). Republic of Mexico Consolidated 3 per Cent. Internal Debt of 1885 (all deposits made prior to January 16, 1924). United States of Mexico 5 per Cent. Internal Redeemable Bonds of 1895 (all deposits made prior to January 16, 1924). National Railways of Mexico Guaranteed General Mortgage 4 per Cent. 70-year Sinking Fund Redeemable Gold Bonds due October 1, 1977 (all deposits made prior to January 16, 1924). Vera Cruz and Pacific R.R. Co. 1st Mortgage 4½ per Cent. Gold Bonds due July 1, 1934 (all deposits made prior to January 16, 1924). National Railways of Mexico Prior Lien 4½ per Cent. 50-year Sinking Fund Redeemable Gold Bonds due July 1, 1957 (all deposits made prior to January 16, 1924). National Railroad Co. of Mexico Prior Lien 4½ per Cent. Gold Bonds due October 1, 1926 (all deposits made prior to January 16, 1924). National Railroad Co. of Mexico First Consolidated Mortgage 4 per Cent. Gold Bonds due October 1, 1951 (all deposits made prior to January 16, 1924). The Mexican International R.R. Co. 4½ per Cent. Prior Lien Sterling Bonds due September 1, 1947 (all deposits made prior to January 16, 1924). The Mexican International R.R. Co. 1st Consolidated Mortgage 4 per Cent. Gold Bonds due September 1, 1977 (all deposits made prior to January 16, 1924). Pan-American R.R. Co. 1st Mortgage 5 per Cent. Gold Bonds due January 1, 1934 (all deposits made prior to January 16, 1924). Mexican Central Railway Co., Ltd., 5 per Cent. Priority Bonds due July 1, 1939 (all deposits made prior to January 16, 1924). Mexican Central Railway Co., Ltd., 5 per Cent. Equipment Notes and Certificates: (a) First series dated April 1, 1897; (b) second series dated October 2, 1899 (all deposits made prior to January 16, 1924). National Railways of Mexico 6 per Cent. Secured Gold Notes

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

maturing up to January 1, 1917: (a) Series "B" dated April 1, 1914; (b) 3-months Secured dated December 1, 1913; (c) 3-year Secured dated January 1, 1914; (d) Series "C" dated June 1, 1914 (all deposits made prior to January 16, 1924). National Railways of Mexico 6 per Cent. Secured Notes maturing up to July 1, 1916: (a) 2-year due June 1, 1915 (all deposits made prior to January 16, 1924). Tehuantepec National Railway 5 per Cent. Gold Loan due June 30, 1953 (all deposits made prior to January 16, 1924). Tehuantepec National Railway 4½ per Cent. Gold Loan due June 30, 1953 (all deposits made prior to June 16, 1924). Notice will be given from time to time when further bonds of the above-mentioned issues and bonds of other issues deposited are ready for return. The cash warrants maturing up to and including January 1, 1924, will be paid upon presentation at the offices of the respective paying agents. Cash warrants maturing subsequently to January 1, 1924, should not be presented for payment until the committee announces that it has received for the current year one-half of the minimum fund to be provided by the Mexican Government under the terms of the agreement.

Royal Dutch Petroleum.—The report of the management of the Royal Dutch (Petroleum) Company considerably amplifies the remarks made by the Hon Walter Samuel at the meeting of the "Shell" on Tuesday. The crude oil production of the Royal Dutch-Shell group increased last year by 63 per cent., and the following details were given:—

	(In Kilo Tons.)		Per Cent. Increase in 1923.	
	1922.	1923.	%	
Dutch East Indies.....	2,323,792	2,764,451	19	
Sarawak	409,847	567,227	38	
Egypt	172,022	152,830	11	Decrease
Roumania	407,442	414,122	2	
Mexico	2,643,906	4,632,831	75	
Venezuela	350,362	538,869	53	
U.S. (California).....	1,778,732	3,697,586	108	
U.S. (Rest of Continent)	913,242	1,918,115	110	
	8,999,345	14,686,031	63	

The total world production increased by only 19 per cent.; nevertheless the Royal Dutch-Shell proportion of the world total is not more than 11 per cent. On account of declining prices the great increase in production "was coincident with a corresponding increase in profits." There was, however, a slight increase in gross earnings, as the *Economist* pointed out in analysing the Shell accounts. Dividends from subsidiary companies are shown as 84,843,828 fl, as against 79,563,781 fl in 1922. The nominal share holdings have increased by 63,371,361 fl to 645,089,960 fl. It will be remembered that the Shell-Union Corporation issued \$20,000,000 during the year, the greater part of which was taken up by the Royal Dutch and Shell. Participation in miscellaneous companies is also higher at 79,309,644 fl, as against 47,168,468 fl in 1922. Cash is down by 30,941,819 fl at the figure of 57,463,485 fl. The new issue of shares is said not to be for the purpose of enlarging cash resources, but to enable the company to put up 60 per cent. to the Shell 40 per cent. in meeting the anticipated expansion of the business. The dividend on the ordinary shares for the year is 25 per cent., as against 26½ per cent. in 1922. An interim of 10 per cent. has been paid this year.

General Electric Company.—Some progress is recorded in the accounts of the General Electric Company, Limited, for the year ended March 31, 1924. Profits at £835,561 show an increase of £84,075 over those for the previous year. The directors point out that "this improvement is gratifying, although it falls short of what

might justly be expected from the efforts made." The results for the past four years are set out in the following table:—

	1920-21.	1921-22.	1922-23.	1923-24.
Net profit	796,149	566,582	751,486	835,561
Brought forward ..	175,668	348,094	217,024	174,121
Debt interest	971,817	914,676	968,510	1,009,682
Depreciation	8,000	182,431	243,775	241,241
Pension fund	157,915	161,745	182,031	184,044
Preference divs.	17,266	15,283	14,219	13,346
Ordinary dividend ..	229,344	232,594	248,765	252,000
(10%) ..	211,198	105,599	105,599	105,598
(5%) ..	10,146	126,995	143,166	146,402
Carried forward ..	348,094	217,024	174,121	212,452

A 5 per cent. distribution is made on the ordinary capital. Depreciation receives £184,044, a figure very near to that of last year's allocation, which was £182,031, but the amount carried forward is substantially higher at £212,452. The report states that the demand for general electrical commodities has steadily expanded, but the returns in heavy engineering have still been disappointing. This department has suffered from low ruling prices, an irregular flow of incoming orders particularly on the mechanical side, and an insufficient demand for standard products. The export business has not yet regained its normal vitality, though signs of recovery are becoming apparent.

Nigerian Tin Results.—During the past few days several of the annual statements of companies winning tin in Northern Nigeria have made their appearance. The Bisichi made a profit of £30,700, as against a small loss in 1922, but of the earnings nearly one-half was absorbed by the debit balance brought forward and other items. However, the shareholders are to receive a dividend of 6d per 10s share, with the prospect of better things this year. The output of the Ex-Lands was rather less than before, but fetched a higher price. With the final dividend of 5 per cent., making 15 per cent. for the year, an interim dividend of 5 per cent. is payable. In the case of the Keffi Consolidated, a trading profit of £25,100 was as to about one-half written off, and the balance carried forward. There are interesting possibilities of an increase in the production. Each of these companies has a considerable area of proved ground.

St John del Rey.—Our mining correspondent writes:—This wonderful old Brazilian proposition, the deepest gold mine in the world, is able to report an increased profit for the financial year ended February last. A somewhat enhanced tonnage was crushed for a slightly reduced yield, and the gold premium brought in a little less than before; but the effect of these factors in combination was more than offset by a saving of as much as £50,200 in the working expenses, equivalent to 6s per ton. How much of this arose from the continued fall in the rate of exchange is an open question. With the balance dividend of 1s 3d per share, and the bonus of 1s, the distributions on the ordinary shares total 3s, as against 2s 6d for 1922-23; £10,000 is transferred to reserve, and £40,000 to capital works account. For the preceding year the special appropriations totalled £60,000. It appears that the reduction in yield was partly due to the crushing of comparatively low-grade ore obtained in the course of the explorations at Horizon 23. At first some difficulty was experienced in encountering the main lode, but it has since been laid open for a distance of 770 feet, and the assays indicate the mineral to be of good quality. The superintendent's opinion is that the delay in striking the ore body is accounted for by a degree of flattening in excess of that anticipated. If this view is correct, the incident may be regarded as a "bull point." At current price of 20s cum dividend, the yield on the shares is nearly 17 per cent., thus allowing for a fair degree of risk.

The tenth Congress of Chambers of Commerce of the British Empire will meet at the Guildhall on July 1st. Lord Derby will deliver the presidential address, and the Secretary of State for the Colonies will speak.

Oversea Correspondence.

THE LEAGUE OF NATIONS.—THE COUNCIL MEETING—HUNGARY AND AUSTRIA.

(FROM A CORRESPONDENT.)

SWITZERLAND, June 23.

Two important features of the 29th session of the Council of the League of Nations, which concluded last week in Geneva, were those concerning the two financial reconstruction schemes in Austria and in Hungary, to which the Dawes Committee have been indebted for many of the broad lines of their report. The Commissioner-General for Hungary, Mr Jeremiah Smith, of the United States of America, was most optimistic about the work already accomplished in Hungary, and was confident of the successful conclusion of the negotiations for the reconstruction loan of two million sterling. These negotiations, in fact, are virtually complete, thanks largely to the lead by Great Britain and Italy, and it is probable that the whole loan will be raised in Europe. The Hungarian Government has made a real beginning in carrying out administrative reforms and economies. A Bank of Issue has been founded, and the capital subscribed; it will start its operations this month, and this will effectually prevent further inflation. The revenues pledged to secure the loan are now paid into accounts controlled by the Commissioner-General, and they are in excess of the original estimates. There are good harvest prospects, most of the restrictions on exports have been removed, and it is hoped that the restrictions on imports will soon be modified and the negotiation of commercial treaties started. An important reform introduced is the centralisation of all receipts and disbursements in the Central Treasury. By the end of June the number of State officials will have been reduced by more than 3,000. The Council expressed its great satisfaction at the progress made.

The difficulty with the Austrian reconstruction scheme is that in some aspects it has been rather too rapidly successful, mainly in the excess of revenues from taxation over what was anticipated. The Budget has been balanced for some time, but considerably above the figure agreed upon at the beginning. The Austrian Government has asked that this figure—350 million gold francs—on which the Budget equilibrium was based, should be increased to 520 millions, and that any loan surplus not required to meet Budget deficits be used for economic purposes. Close inquiry had been made by the Financial Committee of the League, the Commissioner-General, and other experts into the situation, and it seems generally agreed that the figure of 350 million might be raised, but it is not at all likely that the Austrian figure will be accepted. The League's Financial Committee are proceeding to Austria further to examine the situation. They say the position is not sufficiently clear at present to recommend a definite figure in substitution, and they press strongly for progress with urgent administrative reforms, without which there cannot be confidence in the also point out that the moment is clearly not yet arrived when it can be said safely that the surplus of the loan will not be required for its primary purpose, namely, to meet Budget deficits, but they foreshadow the possibility of the Council considering with due regard to all the interests and rights involved, in what way the surplus, if any, may be used, subject, of course, to the control of the Council resolutions. The Council expressed its appreciation of the results already obtained, and strongly urged the Austrian inquiry should be pursued, and agreed that the Government to pursue energetically further economies. There has been a good deal of nonsense talked—mainly in "tutelage," whereas it is simply a matter of seeing that the scheme is properly carried out.

The Council meeting in general was a success. M. Bourgeois, one of the oldest Council representatives, said publicly that never in any previous session had he seen the spirit of the League so evident. Something of the new importance being attached to the League was indi-

cated by the presence of two Foreign Ministers, M. Benes and M. Hymans, and now that there is the assurance that the Prime Ministers of England and France are to attend the Assembly, long steps are being taken towards a proper regard for the place of the League in the councils of the world.

A satisfactory conclusion was reached on the difficult minority question of expropriated German settlers in Poland. This matter has been before the League for some time, and was first of all referred to the Permanent Court of International Justice, which decided that the settlers had been expropriated against the terms of the Minorities Treaties. The solution of the delicate problem of equitable compensation has been arrived at in agreement with the Polish Government by a Committee of the Council, and approved by the Council itself, whereby a sum of about £100,000 is to be devoted to this purpose. It is the first important minority question which has gone right through the hands of the Council. It is not often realised, however, that a number of these matters are settled by the Council Minorities Committee without resort to the full Council, and there is continuous contact between officials of the League and countries where minorities exist, with the result that time after time points of difference and difficulty are mutually arranged before coming to the Council at all. This is one of the indications of the definite negative value of the League, which is frequently apparent in various directions. For example, the original Council agenda had nine questions from Danzig, but at the time of the Council meeting each one of these differences had been settled, at least provisionally, by mutual arrangement between the Germans and Poles, with the assistance of the League High Commissioner, and they were therefore all withdrawn from the Council agenda.

Another significant point about the Council meeting was the discussion, at the request of the British Government, of the Council's right of investigation into the armaments of Austria, Hungary, and Bulgaria, in accordance with an Article in the three Treaties which is also identical with an Article in the Treaty of Versailles. It was made quite clear by the French representative that the Council's consideration of this matter, and its ultimate conclusions, were equally appropriate to the League's relation to the control of armaments in Germany. The Council's intention is that as soon as military control passes from the Allied Commissions to the League, the League's procedure shall be ready. It is generally accepted that the British Government's step was taken as a kind of preliminary to the League's control of armaments in Germany. M. Benes significantly observed that it was a preparation for a new stage in the treatment of certain important problems of European politics. The Permanent Advisory Commission on Armaments has been asked to draw up a plan of action.

The decision as to what future steps should be taken on the question of naval armaments, arising out of the differences of principle apparent at the Rome Conference, has been left to the Assembly, which will find it a very difficult problem. In connection with the Saar, the Council expressed its appreciation of the fact that the Governing Commission had decided to increase this year the local gendarmerie considerably beyond the figure originally estimated, but postponed to its next session a letter from the German Government asking that a definite date be fixed for the completion of these forces and the withdrawal of French troops.

Professor Einstein, the famous German scientist, was re-elected a member of the Intellectual Commission, having intimated his readiness to serve again. A variety of decisions were taken in connection with Armenian, Greek, and Russian refugees, and reports of various League Committees, and another legal point was referred to the Permanent Court of International Justice in connection with the request of the Conference of Ambassadors to deal with a Serbo-Albanian frontier question, which concerns the allotment of the monastery of San Naoum to Albania. The point is whether this allotment to Albania, in accordance with the Ambassadors Conference delimitation decision, is final, or whether the Council may re-open the matter as requested by the Conference.

The Council was not invited to consider the Treaty

UNITED STATES.—FEDERAL RESERVE RATES OUT—MONEY EASIER—BONDS ACTIVE—POLITICAL DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 17.

As foreshadowed by the continued piling up of surplus funds at this and other central reserve cities, and by the further sharp declines in the open money market, the New York Federal Reserve Bank again lowered its official rediscount rate last week—the second reduction in six weeks. Effective June 12, the rate for all rediscounts and advances was cut from 4 to 3½ per cent. The previous reduction was from 4½ to 4 per cent. on May 1. The new bank rate is the lowest for ordinary commercial paper since the Federal Reserve system was established. Simultaneously with the action taken last week by the New York Bank, the Federal Reserve Bank in Boston marked its rate down a full 1 per cent. from 4½ to 3½ per cent. A day or two later the Chicago and Richmond institutions announced a cut from 4½ to 4 per cent.; both Cleveland and San Francisco had previously reduced their rates one-half of 1 per cent. to 4 per cent. This leaves six of the twelve Federal Reserve Banks that are still maintaining a 4½ per cent. rediscount rate. Some of the latter are expected to make a reduction shortly, especially those in Philadelphia and St. Louis, where the banks' ratio of reserve to note and deposit liabilities is above 83 per cent. In

Dallas, Kansas City, and Minneapolis the reserve ratios are still comparatively low, ranging from about 60 to 66 per cent., and no reduction in the bank rate is expected in those centres until their reserve position becomes stronger. The reductions testify to the increasing plethora of surplus funds, and bring the official discount rates in line with open money market conditions. The heavy increase in gold reserves resulting from the steady importation of gold, together with the lessened activity in trade and industry generally, has released many millions of funds previously employed in business.

The recent reductions in discount rates for bankers' acceptances enable New York banks to compete with those of London in financing international trade, but that situation is probably only temporary. The superabundance of funds seeking employment is indicated by the fact that subscriptions to the recent offering of 2½ per cent. six-months' Treasury certificates of indebtedness totalled \$609,192,500, although the amount of the proposed issue, as announced by the department, was approximately \$150,000,000 only.

The reduction of the New York bank rate was followed by one of the most vigorous upward movements in the history of the bond market. Transactions reached the largest volume of the year, and practically all classes of bonds joined in the upturn. Enormous trading occurred in United States Government issues, which led the rise. Treasury 4½'s established a new high record at 105.18, and all Liberty loan bonds soared to new high levels, excepting the 3½ per cent. tax-exempt Liberties, which, however, reached their previous best price of the year. Although activity centred in such issues, all parts of the list reflected heavy buying, including railroad, industrial and public utility bonds. Securities of electric, gas, hydro-electric and telephone companies, whose earnings have shown remarkable increases in recent months, were purchased in exceptionally large volume at rising prices. Demand, generally, came not only from banks, investment institutions, and corporations, but also from individuals. Even foreign Government bonds, which as a group have shown comparatively little buoyancy this year, became decidedly active and strong. British 5½'s of 1937, despite the heaviness of sterling exchange, advanced last week 2 points to this year's high price, 103½; French Government 8's crossed par for the first time this year, reaching 101, while the French 7½'s established a new top for the year at 97. Bond transactions on the Stock Exchange last week totalled \$123,662,000, par value, as against \$64,984,000 in the previous week, and \$59,438,000 in the corresponding week of 1923. The combined average price of 40 representative bonds at last Saturday's close stood at 90.17, a new high record for this year, and slightly above the 1923 high record.

Exports of merchandise for the month of May were valued at \$336,000,000, according to Department of Commerce returns, or some \$7,000,000 less than the March total. Imports amounted to \$305,000,000, leaving an excess of exports of \$31,000,000, as compared with an import excess of \$56,185,108 in May, 1923. Excepting May, a year ago, when there was a surplus of imports, the excess of exports last month was the smallest for May in many years past. For the eleven months ended with May, merchandise exports were valued at \$4,005,769,628, while imports reached \$3,282,206,631. The export excess for that period, therefore, was \$723,563,197, as against \$176,051,254 for the preceding eleven months, showing an increase of \$547,511,943 in the balance of international trade in favour of this country.

The nomination of President Coolidge and Brig.-Gen. Charles G. Dawes as the Republican candidates for President and Vice-President respectively has made a very favourable impression upon business and financial interests and the public generally, and is largely responsible for the better feeling manifested lately in securities markets, trade, and industry. With the nomination of Democratic candidates at next week's national convention here, the political situation will be more clearly defined. Thus far, talk of the possible formation of a third party has apparently not been taken very seriously, or caused much concern.

FRANCE.—M. HERRIOT'S POLICY—PUBLIC FINANCE—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, June 25.

WHILE neither the formal Ministerial declaration of the new Herriot Cabinet, nor its leader's reply to the questions asked him by M. Bokanowski, during last week's debate on the Government's financial intentions, has entirely dissipated the feeling of uncertainty that has prevailed in French financial, industrial, and commercial circles since the Poincaré Government was overthrown by the Bloc des Gauches, the advent of the new majority has not proved as disturbing as was feared might be the case. It is now becoming clearer every day that, as careful observers began to suspect two or three weeks ago, the Herriot bark will not have anything like the evil effects that were expected would result from the Socialist bite, of which he is often mistakenly thought to be the advocate. The Bourse has successfully withstood the shock of the arrival of an alleged Socialist Government to power, and after hearing the new Premier's declaration of policy, has demonstrated its conviction that, however fearsome some of M. Herriot's election promises may have been, France is in no immediate danger of experiencing either a political or an economic revolution, or even of any serious modification in any direction. Prices have remained steady, and in many compartments—and particularly in that of the public Funds—have even improved.

M. Herriot has made it clear that it is the intention of the new Government to follow the example of its predecessors, and defend the franc at any cost. He has further announced that no fresh expenditure shall be proposed unless it is provided for by a corresponding increase in revenue. The policy of further borrowing has come to an end, and there is no reason to suspect the sincerity of the new Government's intention to maintain a balanced Budget. Whether the present Government will prove sufficiently strong to resist the pressure of certain sections of its rather heterogeneous majority remains to be seen. It is apparent that the Senate, however, as shown by its recent votes, is not inclined to tolerate any recklessness on the part of the Lower House.

In financial circles it is hoped that, in carrying out his expressed intention of taking "an inventory of our finances" before introducing his financial programme, M. Herriot finds means to render the Treasury less liable to those periodical crises that have hitherto repeatedly proved seriously prejudicial to the franc. The danger that lies in the fact that, in spite of the heavy disbursements that must be made on June 30th, the Treasury possesses an available reserve of only 200 millions, is obvious. This appears to be directly due to the unfortunate arrangement by which the State is under the obligation of reducing at the rate of 2,000 millions a year the amount advanced to it by the Bank of France. The fallacy of continuing to attempt to fulfil this obligation while at the same time ignoring the existence of a floating debt of some 70,000 million francs, of which the public may demand the partial repayment at any moment, is too obvious to need comment. What is the use, experts are asking, of reducing the debt to the Bank if it can only be done, as experience has shown to be the fact, by issuing further short-term loans?

The taxation returns for the month of May show that the revenue is continuing to come in remarkably satisfactorily. The total yield from normal and permanent sources of revenue during the month (exclusive of receipts from the outstanding balance on the special tax on war profits and other exceptional resources, and of revenue from the postal, telegraphic, and telephonic department, which is now dealt with under a separate account) was 1,700,659,000f (as compared with 2,196,400,100f in April and 1,960,639,100f in March), or 329,292,700f more than in May, 1923. Normal and permanent sources of revenue have yielded during the five months since the present financial year began a grand total of 9,758,359,200f, or 2,007,662,800f more than during the corresponding period of 1923. Part of this increase of 2,000 millions is due, of course, to the fact that since March 23rd last the greater part of the indirect taxes and the imposts levied in connection with the State monopolies (except in so far as ordinary tobacco is concerned) have been increased by 20 per cent. A portion of the balance of the increase may

be attributed to the rise in the prices of commodities during the past twelve months, which has naturally reflected itself in an increase in the amount derived from *ad valorem* duties. Even after allowing for these two factors, however, there still remains a substantial proportion of the total which can only be attributed to the general increase in production, and to the improvement in economic conditions. The enormous comparative burden of indirect taxation in this country is seen in the fact that out of this increase of over 2,000 millions in the national revenue during the past five months 1,597,132,500f was derived from indirect taxation and monopolies, while only 398,451,300f of it came from direct taxation. For the first time for some months the greater part of the categories of indirect taxation and monopolies failed during May to reach the level expected from them when the Budget was established. This was compensated for, however, by the fact that the much disliked tax on turnover produced 343,417,000f during the month, or over 734 millions more than had been expected from it, thereby leaving the yield for the month from these sources still over 32½ millions above Budget estimates. This unexpectedly high yield from the turnover tax was undoubtedly due to the rise in commodity prices, which also explains why the luxury tax yielded only 1,962,000f during the month, or 912,000f less than had been counted on.

The foreign trade returns, while indicating that the total exchanges for the first five months of the year have resulted in a balance in favour of this country of 1,666,207,000f (as against a deficit of 362½ million francs during the corresponding period of 1923), show that the recent improvement in the franc had very serious effect on both imports and exports during May. The following comparative figures for the first five months of the year show that, while the value of the imports during April and May dropped by about 115 million francs each month, French exports during May were, in round figures, 667 million francs less in value than in April, and nearly 1,000 millions lower than in March:—

1924.	Imports. 1,000 Francs.	Exports. 1,000 Francs.
January	2,887,921	2,699,833
February	3,713,800	3,918,279
March	3,622,604	4,354,695
April	3,292,151	4,027,041
May	3,177,313	3,360,148

The full figures for the five months January-May, divided into the principal categories, are as follows (in francs):—

	First Five Months of		Increase in 1924.
	1923.	1924.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	2,781,658,000	3,367,208,000	+ 585,550,000
Raw materials	7,525,759,000	11,191,726,000	+ 3,665,967,000
Manufactured goods	1,721,799,000	2,134,855,000	+ 413,056,000
Total	12,029,216,000	16,693,789,000	+ 4,664,573,000
Exports—	Francs.	Francs.	Francs.
Foodstuffs	1,234,538,000	1,717,230,000	+ 482,692,000
Raw materials	3,628,448,000	4,943,431,000	+ 1,314,983,000
Manufactured goods	6,144,271,000	10,895,354,000	+ 4,751,083,000
Postal parcels	659,309,000	803,981,000	+ 144,672,000
Total	11,666,566,000	18,359,996,000	+ 6,693,430,000

The figures show that during the period under review imports were 38.8 per cent. more in value than during the corresponding period of 1923, while exports had risen by 57 per cent. The most important increase was in exports of manufactured goods, the value of which was 77 per cent. greater than during the same period last year.

GERMANY.—REPARATIONS—FINANCES AND CURRENCY—INDUSTRY—SHIPPING—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 24.

IN spite of the union apparently attained during the conference between the British and French Prime Ministers, it is believed here in official and party circles that a long time will elapse before Reparations are formally started. By "formally started" is meant the definite acceptance of the Dawes' plan, the putting through of the necessary

German legislation, and the economic evacuation of the Ruhr, if that is really to come. Before the promised July Conference meets three months will have passed since the Dawes Report, which was presented as a complete scheme ready for acceptance or rejection, was published. The Government here could probably carry on indefinitely on the present basis, because although there are great hopes that a Reparation settlement would animate business by bringing foreign capital, it is not certain that the failure of this hope must really bring the disastrous crisis which pessimists predict. If the Allies, on their side, really show some energy, it is probable that German party-political obstacles will be overcome. It is expected that the German National Party, shrinking from the responsibility of rejecting the Dawes' plan in principle, will announce that on this question its members are free, and will thereby at once yield to obvious necessity and save its reputation as a truly national party.

The Finance Ministry's return for the ten-day term—June 1st-10th—shows revenue, 99,652,529 gold marks; expenditure, 97,548,488 gold marks; but as Gold Loan of 4,152,854 gold marks value was redeemed out of revenue, the real surplus was 64½ millions. If the cost of Gold Loan redemption is deducted from expenditure, there has been a surplus of 170 million gold marks since the beginning of the financial year on April 1st. The annual saving in salaries, from the reduction in the number of State employees already reported, is 434 million gold marks, to which must be added an unknown sum saved on cost of premises, materials, heating, &c. The capital and credit question tends to get worse rather than better. The vice-president of the Reichsbank repeats that further Rentenmark credits to industry cannot be given. As regards paper marks, he estimates that, allowing for the Reichsbank's guarantee of the dollar Treasury bills of 1923 and for certain outstanding guarantees dating since the war, the bank has a free gold reserve of only 250 million gold marks out of the 442 million gold marks booked on June 6th. This provides about a 25 per cent. cover for the 954 trillion paper marks of notes then in circulation; and the percentage of cover, says Dr Glase-napp, needs increasing, not reducing. The theory that the Reichsbank gold was in any real sense cover for the paper mark circulation was, of course, abandoned during the later inflation years, but it is again so regarded. The note circulation on June 14th fell to 923,582,982 billion paper marks; and the gold reserve, owing to purchases, increased to 448 million gold marks.

The great question of *Aufwertung*, which, after a bitter controversy, was supposed to be settled by the Third Taxation Decree of last winter, is again up; and is likely to cause difficulties for the Cabinet and for various interested classes. *Aufwertung*, or restoration of secured debts, was by the decree in question declared compulsory to the extent of 15 per cent. of the original gold value; which meant that a mortgage or bond of originally 100,000 gold marks, which under the legal fiction of "a mark is a mark" had fallen to 100,000 paper marks, was to be restored (*aufgewertet*) to 15,000 gold marks. In fact, as the interest on the 15,000 gold marks was to be restored only gradually, the present actuarial value would be only about 8,000 gold marks. The treatment of Federal and State loans was postponed "until Reparations were fully paid," but municipal debts contracted for productive purposes (trams, gas, &c.), of which the debtor city still has the benefit, might be restored to an unstated extent. The Prussian Government is now considering this municipal question. The boom in War Loan quotations of last week was due to rumours that the Federal Government was considering an *Aufwertung* of these claims. No such plan is even thought of. The supposedly settled question of the *Aufwertung* of private claims is, however, again in the melting pot. During the Reichstag elections, parties tried to capture the votes of secured creditors by promising an increase of the 15 per cent. rate, and the People's Party and Freedom Party have submitted motions to the Reichstag in this sense. A 40 per cent. and even a 100 per cent. *Aufwertung* is demanded. One demand is that the lower Courts (*Amtsgerichte*) which determine disputes shall have the right, on grounds of "fairness," to increase the 15 per cent.; at present they can only, on the same grounds, reduce it. It seems certain that the Government will be

compelled to amend the law. There are admittedly many flaws in the present settlement, but it is not impossible to attain any kind of all-round "fairness"; e.g., ordinary unsecured creditors who have been ruined by mark depreciation will in no case get any compensation. The re-opening of the question will result in a prolonged term of insecurity, which will incidentally react unfavourably on Germany's chance of getting foreign private credit. Even now it is (apart from the shortage of capital) impossible to conclude safe mortgages, because the land registers no longer reveal precisely what is the extent of existing State and private claims.

Company finance will also be upset. In the new gold mark balance-sheets, which are slowly appearing, the extinction of bonded debts naturally plays a great rôle. This is probably the chief cause why most companies are able to fix their new gold capital at higher than before the war. The following table, which summarises an analysis of 11 new gold mark balance-sheets made by the *Frankfurter Zeitung*, shows company bonded debts to be only 11 per cent. of the pre-war level:—

	1924 in Per Cent. of 1913.
Land, buildings, and plant	90
Securities and interests	25
Cash and credits	56
Wares	97
Capital	143
Reserves	85
Bonds and mortgages	11
Debts	64

In eight of the eleven companies the new gold capital is bigger than the old; in six land, buildings and plant are valued at higher than the old. The declines in credits and debts may be explained by the present greater prevalence of cash payments, which became the rule during the inflation time. Up to June 20th only 24 companies quoted on the Berlin Bourse had published gold mark balance-sheets. While the nominal paper mark capital of these companies has been reduced to anything from half to 1-100th in order to get the new gold mark capital, the latter is almost in every case higher than before the war. But whereas the pre-war average Bourse quotation was 170, the new average gold quotation is 55½. Some good authorities think that the companies are putting their new gold mark capital much too high. If so, dividends will be small; and as German company law does not allow of the issue of shares under par, difficulty may be met in raising new capital. A revision of the Third Taxation Decree on the *Aufwertung* question would, of course, involve revision of the new balance-sheets.

Bankruptcies are rapidly increasing, and the number of cases of suspended bankruptcy still more rapidly. In Berlin several leading trades report depression. Unemployment in the Rhineland is increasing, but this shows itself mainly in reduced working hours. In all quarters the capital and credit shortage is made responsible for the depression, but it is officially pointed out that the difficulties of industry are in part due to a false understanding of the situation. Prices are still slowly falling. The official wholesale index number for June 17th was 117, against 117.2 a week earlier; the official cost of living index for June 18th was 112, against 113 a week earlier.

Three of the leading shipping concerns, the Hamburg-American, Norddeutsche Lloyd, and Hamburg South-American companies, have issued their reports for 1923. Capitalisations are respectively 285 million marks (180 million 1913), 1,000 million marks (125 million 1913), and 95 million marks (25 million 1913). The balance-sheets and profit and loss accounts show the usual confusion of values of different kinds, the capitals and reserves representing now nominal sums, while receipts and expenditure include indiscriminately "marks" of all values. No dividends are paid. The Hamburg-American Line's net profits were 299,999 billion paper marks; Norddeutsche Lloyd, net profits, 150,240 billion paper marks; Hamburg-South American, net profits, 749,203 billion paper marks. The Hamburg-American's fleet, including ships under construction, is 251 vessels, whereof 78 are sea-going ships, of total tonnage 432,538, against 439 vessels, whereof 194 are sea-going, of total tonnage, 1,360,360, in

1913. The Norddeutsche Lloyd's fleet, including vessels under construction, is 401,963 tons, against 982,951 tons in 1913.

ITALY.—POLITICS AND THE STOCK EXCHANGE FEVER—PLENTY OF MONEY—NEW ISSUES— UNEMPLOYMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

TURIN, June 21.

POLITICAL events have been prominent since the meeting of the new Legislature. As my letters relate to economic affairs, I will only note that the lurid Matteotti affair acted as a check on the frantic upward movement which was going on in Italian Stock Exchanges. If we take as basis 100 the quotations for December, 1918, the Bachi index number of State securities, which was as low as 73.8 in September, 1920, reached 100.2 in January, 1924, 101.3 in February, 103.0 in March, 103.9 in April, and 109.5 in May, 1924. That is a general average; 5 per cent. consols, which at a time in 1920 went as low as 67, touched in early June 102.50.

Yesterday (June 20th) they fell to 98.85. But the wildest fluctuations took place in "variable dividend" shares. Bachi's general index number (basis 100 at December, 1918) touched bottom in April, 1922, at 56.45. At the end of 1922 the index was 72.08; at the end of 1923, 85.67. In 1924 every month, save April, saw a rise to 89.79 in January, 96.18 in February, 101.70 in March, 100.51 in April, 114.34 in May.

The leaders in the upward movement were easily the silk shares, especially artificial silk. At a time, the greatest artificial silk concern, Snia-Viscosa, with a paid capital of 600 millions lire, was capitalised at 1,500 millions lire; the next one in importance, the Soie de Châtillon Company, with a paid capital of 75 millions, at 675 millions lire. Following these spectacular rises, operators multiplied; crowds congregated every day on the floors and outside Stock Exchanges; fortunes were made. Stock Exchange men were all Fascists; no more strikes, social peace, abundant work, State Budget in equilibrium, no more prosecution against capital. Everyone was persuaded that Bourse quotations would rise indefinitely. On this excited state of mind the Matteotti affair acted like a bombshell. Something like a stampede took place. Snia receded from 504 to 400, Châtillon from 900 to 680, Fiat from 754 to 565, Bank of Italy from 1,950 to 1,625. Perhaps nothing more tragic will happen save losses suffered by over-enthusiastic bulls. Money is abundant and is anxiously seeking employment. After many years, during which the State absorbed all available savings, the situation has wholly changed. Public internal debt has decreased from 95,544 millions lire at June 30, 1923, to 93,655 millions at April 30, 1924. No wonder that the market situation was favourable to buoyancy and to new issues. In 1923 new issues of shares by joint stock companies, less decreases of capital or winding-up of companies, amounted to 2,131 million lire. In the first five months of 1924 the figure went up to 1978.8 million lire, against 515.2 in the corresponding months of 1923.

As far as can be guessed by the belated unemployment figures, the industrial situation seems better than a year ago. At February 28, 1923, unemployed were 327,892; they decreased to a minimum of 178,612 at August 31, 1923; seasonably rising to 258,580 at end of December, 1923, to 280,765 at January 31st, and decreasing to 259,360 at February 29, 1924.

Foreign trade in the months from January to April, 1924, compared as follows with the corresponding period of 1922 and 1923 (in millions of lire):—

	1922.	1923.	1924.	Difference 1922 & 1924.	Between 1923 & 1924.
Imports	4,837.7	5,525.5	5,815.8	+ 978.1	+ 290.3
Exports	2,744.4	3,143.5	4,357.8	+ 1,613.4	+ 1,214.3
Excess of imports over exports	2,093.3	2,382.0	1,458.0	- 635.3	- 924.0

The excess of imports is decreasing, thanks principally to more abundant exports, the most notable increases being in silk and artificial silk (from 850.1 million lire in 1923 to 1,077.3 million lire in 1924, fruits and vegetables (249.9

to 373.4), flour, macaroni, pulses, &c. (56.1 to 239.2), milk and cheese (71.8 to 136.4), meat, eggs (59.8 to 146.4), cotton goods (448.8 to 648.8), motor-cars and other vehicles (91.5 to 120.6), wool, &c. (73.0 to 129.8), hides (105.4 to 158.8).

The general trend is towards increasing imports of raw materials, machinery for industry, exports of manufactured goods, increasing at the same time at a more rapid pace.

An index of industrial conditions is the increase in the consumption of electric power.

UNION OF SOUTH AFRICA.—INDUSTRIAL AGRICUL- TURAL DEVELOPMENTS—WHITE POPULATION.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, June 4.

THE May issue of the South African *Journal of Industries* deals almost exclusively with three great questions of material importance to South Africa:—An economic policy for the Union, the dumping of overseas products in South Africa, and the purchase of Government supplies. The editor, in a foreword, says the report of the committee entrusted with these inquiries, and those of the Board of Trade and Industries, are "an orderly and suggestive presentation of authoritative opinions which cannot fail to lead people to a better understanding of some of the needs of our time and the future."

The report on the "Economic Policy for the Union" shows that the decennial rate of increase in the period ending 1921 was only 19, compared with about 43 in each of the previous ten-yearly periods. The forecast is made that in 1971 the European population will number 3,650,000 (as against the 1,519,500 in the 1921 census) and the native population 19,000,000, as against 5,409,000. The calculation is based on the assumption: "If the progression of the last decennium indicates the rate which will prevail in the next fifty years." But the soundness of the argument may well be questioned when we remember that half of the period coincided with the Great War, when the Union was denuded of the youngest and more virile section of its population, and that large numbers of South Africans were killed during the war. Numerical accessions of population by migration have a marked tendency to diminish. Latterly there have been no important fresh discoveries of precious metals. "The lure of great diamond and gold discoveries, which once drew shoals of immigrants to our shores, has ceased to exercise its influence, and the mining immigrant now passes us by." To increase the growth of white population an augmented rate of development of our resources and production is the great need. . . Every practicable step should be taken to supplement existing measures for stimulating and fostering every means which can be directed towards the production and marketing, in the Union and Overseas, South African raw materials, foodstuffs, and semi-manufactured and manufactured articles." For the products of its primary industries, agriculture and mining, South Africa to a great extent looks to a world market, but the same cannot yet be said of our manufacturing industries. Agriculture has in many respects made notable progress. In the exploitation of mineral resources much more remains to be done, and concentrated effort is required to accelerate development. Industries of advantage to the country as a whole should be protected against destruction by unfair competition from other countries. Development of our coal resources, says the report, will possibly yield the cheapest power in the world for railways, mines, and manufactures. . . It is recognised that the question of tariffs is one of great difficulty, and that the balance of advantage has to be weighed in each case. Like all indirect taxation, they raise the cost of living and of production. It is proposed that a board which should be investigatory and advisory, but not executive or administrative, should advise the Government and continue in amplified form the functions of the present Board of Trade and Industries, which in normal circumstances comes to an end this month.

DENMARK.—STEADIER EXCHANGE—PLANS FOR REGULATION — FOREIGN LOAN PROPOSED— TRADE BALANCE—PRICES FALLING

(FROM OUR CORRESPONDENT.)

COPENHAGEN, June 15.

FOR some time the Danish Exchange market has shown a steady tendency, a fact undoubtedly connected with the establishment of the "Valutacentral," and the measures introduced in this connection. However, at the end of the fourth week of May there was some tendency to anxiety in the market, evidently because it was feared that the debates in the Rigsdag on the new Exchange Bill would prove abortive. The board of the Valutacentral, on which a seat is held by one of the managers of the Nationalbank, Mr H. Green, accordingly decided at a meeting, on May 21st, that for the time being, foreign exchange might only be made available, by authorised exchange-dealing banks and bankers, in case of requirements in cover of import debts due. Apart from this, a certificate from the Valutacentral should in each case be required. This rule has hitherto been practised in such a way, that as a rule certificates have not been granted, and at the same time the exchange rates have been maintained at a fairly steady level, which in any case is not higher than when these measures were introduced.

Some days ago it became apparent that the Government Bill of Amendments to the Exchange Act, now in force, could not be carried through the Rigsdag—the purpose of the Bill being to enable the Valutacentral to exercise a control of import. Accordingly the board of the Valutacentral suggested to the Prime Minister that other measures should be proposed. It is suggested that at present measures aiming directly at the improvement of the balance of trade would not be furthered, and the proposal of the Valutacentral therefore concentrated on an endeavour to reduce the amount of currency, the board being of the opinion that the maintenance of the Danish Krone at its present level will hardly be possible through of the existing means of control only. The suggestions made by the Valutacentral are the following:—(1) That an amount of about Kr 50,000,000 be provided in order to reduce the debt of the State to Nationalbanken. This should be effected through an increase of 25 per cent. in the income-tax on incomes of more than Kr 5,000—and a similar increase in the tax on capitals above Kr 50,000—an increase of the sugar duty by 10 ore per kilo, and an increase of the coffee duty by 75 ore. (2) That a foreign loan be contracted by the State, presumably in America, of a suggested amount of \$40,000,000. It is expressly pointed out, however, that a rational economic policy is required as a basis for this measure—a policy which must have the main object of maintaining the balance of the State Budget and redeeming the considerable amount of short bonds maturing during the next few years, without contracting further debts. Regarding the application of the loan it is proposed that \$30,000,000 be made available for redemption of the debt of Den Danske Landmandsbank to the Nationalbank. The Landmandsbank owes to the Nationalbank an amount practically corresponding to the above, and this is fully guaranteed by the State, while a considerable part of the assets of the Landmandsbank have been pledged as security. Gradually, as the proceeds of the loan become available, they should be used to pay off the debt of the Landmandsbank to the Nationalbank, which debt will thus be fully redeemed when the loan has been realised. The remaining \$10,000,000, it is proposed, should be made available solely for measures in Slesvig, as the credit restriction policy commenced some time ago has caused difficulties in Slesvig, where a great shortage of capital is apparent.

It is still too early to say anything of the effects of the step taken by the Valutacentral. The Government bills have been rejected by the Landsting, and the Prime Minister has stated his intention of proposing other measures, but not in the very near future. In political circles, as well as outside the Rigsdag, the Valutacentral Board's plan has created considerable interest, and in any case there is a certain inclination to contract a foreign loan, provided that financial and economic policy make this justifiable. The suggestions of the Valutacentral show that the question of the Krone rate must still be viewed without too much optimism. For some time, however, the position has been viewed in trade and banking circles without misgivings, and the balance of trade is showing some improvement. The excess of imports for the first four months of 1924 amounted to Kr66,000,000, as against Kr152,000,000 for the corresponding period of 1923. The unemployment figures show a strong improvement, the total now being only just over 16,000, against about 23,000 in 1923 and 43,000 in 1922 at the same season. The wholesale price index of the *Finanstidende* for June 1st is 219, against 225 on May 1st and 228 on April 1st. At the beginning of the year the figure was 210, and on June 1, 1923, it was 202. The drop during May is due to sugar and coal.

Letters to the Editor.

ELECTRICITY COMPANIES' RESERVES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of the fact that the two preliminary Bills promoted by the London Electricity Supply Companies have now passed the House of Lords, and will shortly be presented to the House of Commons, you publish this week an interesting table showing the amounts at credit of depreciation, reserve, and sinking fund accounts of the various companies. The proposal is that there is to be an extension of the companies' tenure for another 40 years from the expiration, in 1931, of the present concessions. The conditions include the impractical provision that all the fixed assets held by the companies at the time the new Bills are put into operation are to be handed over free of cost in 1971.

In the meantime, the companies are to be allowed to pay dividends on their existing ordinary shares, and on agreed reserves until 1931, after which date the dividend will be 7 per cent. on both ordinary shares and reserves. The important point is, as you say, the question of depreciation; and the manner and method of this is not agreed. How much of the reserves represents depreciation (expired capital outlay), and how much represents true undistributed profits? No answer to this question is possible in the absence of an agreed sound method of measuring annual depreciation, and this might easily be settled now if the matter was properly tackled.

The subject is of such vast public importance that I desire to draw attention to my memorandum and criticism on the financial proposals of the London County Council on London Electricity Supply, published in the year 1914. The memorandum is printed in full in the fourth edition of my work on Depreciation and Wasting Assets, published by Pitmans, and the following extract may be quoted:—

"If, during the term of possession, the companies have failed to provide adequate sums out of each year's revenue receipts to answer expired capital outlay (depreciation) on the plant, they may have eaten the heart out of the capitals provided by them."

If, as appears to be intended, these bills are put through without incorporating the settlement on right lines of the method of measuring expired capital outlay on these great electrical plants, it can only be because the public authorities are too supine. The companies are, not unnaturally, willing to leave the matter open for future argument, although it should, and could very well, be settled now on fair and sound lines.—Yours, &c., P. D. LEAKE.

K1 Albany, Piccadilly, W. 1, June 23rd, 1924.

Books and Publications.

THE GRAIN TRADE.

MR THORPE'S "Grain Trade Documents" * shows clearly that he has much knowledge and experience which would help those for whose benefit he has been persuaded to reproduce his lectures, that is for those just entering the trade, but his effort to convey the information to the minds of his readers cannot be said to be altogether successful. The style is eminently practical. Actual forms in everyday use are set out, explained, and discussed. There are valuable lists of technical expressions peculiar to the grain trade, including separate lists of Indian and South American expressions. But the style is rather that of the business man who does not give much attention to explaining foundation principles. The author plunges into masses of practical detail, and the feeling of breathlessness is accentuated by the fact that in many places a long paragraph, which should have been broken up, is printed as one sentence, divided only by commas. These defects will hamper "those just entering the trade," and other classes of readers may note other defects. Thus the chapter on "Arbitration" sets out a number of leading law cases, but in most instances fails to give any indication of the date of the decision. Valuable though the work is, it is marred by these imperfections in its composition and production.

One of the most important centres for imports of wheat and other cereals, oil seeds and nuts, is Hull, as we are reminded by this year's issue of the "Port of Hull Annual."† Russia, which before the war used to do great business with Hull, has only just begun again to export a little wheat, though the total imports of cereals at Hull from all exporting countries in 1923 were substantially better than during the two preceding years, amounting to 1,195,393 tons. In the oilseed industry Hull, of course, holds the premier position, taking half the entire U.K. import, and, as the "Annual" shows, handles also a great variety of other kinds of trade.

THE RESOURCES OF ROUMANIA.*

HAVING helped to collect funds in New York for the relief of Roumanian war orphans, Mr de Lignemare received a decoration and an autograph letter of thanks from Queen Marie; and so, when he visited Roumania last year for the first time, he was made welcome, and naturally took roseate views of everything, including the treatment of racial minorities in Transylvania. On this matter his information is totally inaccurate; however, he lays stress on many unquestionable facts: the vast resources of the country in cereals, timber, petroleum, minerals, natural gas, coal, and water power, the progress of the iron and steel industry, and the need for modern methods of cultivation and transport, and for the direction of native labour by organisers from abroad. And he appeals to Americans to take a share in the development, and to eliminate the European intermediaries who now conduct in great part the distribution of its exports, by establishing a direct trade with the United States. Roumanian emigrants, he maintains, would do better at home than in America, and the standard of honesty in Roumanian business is, he assures us, very high. He also lays special stress on the recent recovery in Roumanian public finance. The book is a useful compendium of facts and figures, and may stimulate British capitalists to take their part in developing Roumania.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, July 9. | ACCOUNT, July 10.

The brilliant weather has conspired with foreign politics to curtail still further the volume of Stock Exchange business as compared with what it has been of late. The result of the visit of Monsieur Herriot to the Premier last week at Chequers produced a favourable impression, and brought about rises in French Government and Railway issues. German bonds have enjoyed a mild boom. The strength shown by the gilt-edged market at the beginning of the week underwent a change as apprehensions of a rise in the Bank rate became rather more general, in consequence of the stiffening of money rates that is seasonal to the end of every half-year. At the same time, the huge amounts of new issues recently offered to the public began to make their influence felt upon existing securities, with the result that the War Loan, Funding, Victory, Consols, and other gilt-edged stocks gave way to some extent. Corporation stocks continue to advance in price, and the Sheffield offer of a million pounds 4½ per cent. stock at 96 this week was promptly subscribed.

Underwriting arrangements are to be made in respect of a forthcoming Hungarian loan, and when this issue is out of the

FOREIGN EXCHANGE TRANSACTIONS ARRANGED.

CHIEF FOREIGN BRANCH:

168 Fenchurch Street, London, E.C. 3.

way it is thought that there may be new loans offered by the Argentine, Brazil, Mozambique, and other borrowers. To the movements in French bonds reference has already been made. Mexicans are very flat, because of the diplomatic friction between this country and Mexico. Japanese bonds eased off, on the tense situation which has developed between Japan and the United States.

Home Railway stocks are in a torpid state, the public taking no interest other than that of a purely academic character. The anticipations of the interim dividends are not very exciting. American rails have been put up, Canadians are almost unchanged, Mexican rails have dropped. Argentines make the best showing in the railway group, thanks to the traffics which the principal lines are securing.

With rubber still weak, and with a demand from the East for modification of the Stevenson restriction scheme, it is not to be expected that rubber shares can make any upward headway. There is nothing doing in the market. Amongst oil shares, Shells gave way on the cautious speech made by the chairman at the meeting this week. Active dealings in British Controlled shares of both classes constitute a lively feature in the share list. Royal Dutch weakened, on sales from abroad reported to have been caused by financial difficulties on the part of speculators. Tea shares are a little better. The recent sagging of prices has served to draw attention to the relative attractions of this market to the investor who is out for a big yield on his money, and who does not mind taking risks in order to get it.

Amongst the investment groups, insurance shares stand out with conspicuous strength. Prices have been rising every day. Trust companies' stocks also continue to improve. The banking share market is firm, though prices vary but little. In Textiles, Courtaulds made a meteoric rise yesterday on the bonus declaration, but Patons and Baldwins gave way sharply, on a disappointing dividend, making 12½ per cent., tax free, for the year, whereas another 5 per cent. had been expected by the optimists. General Electrics are slightly easier, on the maintenance of the 5 per cent. dividend. Platt Brothers are heavy on the report showing a decline in the profits, as compared with those of last year, amounting to £363,600. London Electricity Supply shares are strong, with County of London more particularly wanted. Whitehall Electric Investments debenture and preference reacted, on the issue of new stock and shares. Gas stock gave way, one or two blocks coming to market. Shipping shares stagnate.

Breweries are very quiet, and a nominal fall of 26 in the debenture stock of the Indianopolis Company was caused by pressure to sell a little stock. What may be called the British Exhibition issues—i.e., shares in stores, drapery, restaurant, hotel, and other commercial undertakings—have maintained their prices. The cable group is decidedly better, after suffering acute weakness. Last Wednesday's speech at the Eastern Telegraph meeting served to re-assure timid holders. The wireless market is extremely placid. Sound preferences are in constant demand, and new issues can count upon a favourable reception where good stock is offered at a tempting price.

The Kaffir market is recovering from the first unfavourable effects produced by the recent Transvaal elections. Paris rendered support to some of its favourites, Central Mining, for instance, Rand Mines, and a few others; but the real excitement of the market this week has been over East Rands, where a big speculative movement is in progress, the shares being run up and down in mercurial fashion. Chartered are a better market, Rhodesians as a whole reflecting the firmness of these shares. Victoria Falls, however, keep dull, under the dividend disappointment, the 10 per cent. distribution being well under previous anticipation. Diamonds are a trifle better, in consequence of the return of De Beers deferred shares to the dividend list. Canadian mining shares have dwindled for want of public attention, and, although a little interest was taken in Mexican mining shares, this proved insufficient to counteract the slightly dull tendency which crept into the shares of the base-metal companies. The price of tin, the metal, fluctuates so violently that people are still afraid to touch tin shares. Copper shares have hardly moved.

NEW ISSUES.

Sheffield Corporation 4½ per Cent. Redeemable Debenture Stock, 1944-1954.—This is an issue of £1,000,000 stock at 96 per cent. The stock will be redeemed at par on August 1, 1954, but the corporation will have the option of redeeming at par at any time on or after August 1, 1944. The proceeds of the issue will be applied for the repayment of loans, and housing, water works, electric supply, tramways, and other purposes. The stock and dividends thereon will be charged on the city rate and upon the revenues of the corporation, and the present issue will rank *pari passu* with all existing issues of Sheffield Corporation stock. The rateable value of the city of Sheffield now stands at £2,467,943, and the net loan debt at £13,693,555, against which the corporation possesses valuable lands, debts owing on mortgage by other public bodies, and also the water, tramways, electric light and power, markets, and other undertakings, which, so far as are reproductive, represent a capital value of £10,659,068. We are glad to find that those responsible for launching the Sheffield Corporation's loan are appealing to the public by means of a prospectus. An excellent example is set to other corporations, which the event appears to have justified. It is a sound security, and suitable for inclusion in most investment lists.

Auckland Harbour Board 5 per Cent. 1944 Loan.—Issue of £200,000 in debentures at £98 per cent. This loan forms the balance of a total authorised issue of £1,000,000, and constitutes a charge on assets, subject to prior loans amounting to £2,625,000. The proceeds are to be utilised for the purpose of the construction of harbour works defined in the "Auckland Harbour Board Loan and Empowering Act of 1919." Redemption is at par in July, 1944, and a sinking fund of 1 per cent. will be provided. The growth of business at the Port of Auckland is shown by the following figures extracted from the board's published accounts:—

Value of Imports and Exports Dealt With. Tonnage arriving at and Departing from the Port. Net Yearly Revenue of the Board.

1908 .. 7,572,893 .. 3,187,482 .. 101,719

1912 .. 9,780,555 .. 3,841,235 .. 139,235

1916 .. 13,257,563 .. 3,519,438 .. 169,750

1922 .. 22,091,424 .. 3,673,732 .. 256,335

The board are not restricted from increasing the dues charged if they see fit. The loan is free from all New Zealand taxes in the case of holders not domiciled in the Dominion of New Zealand. A good security.

Barcelona Traction, Light, and Power Company, Limited.—Incorporated under Canadian Law.—Issued share capital \$35,933,500. The bond capital is now given as follows:—

7 per cent. prior lien "A" bonds £1,100,000

Consolidated 6½ per cent. prior lien bonds (formerly 6 per cent. prior lien "B" bonds) £2,800,000

8 per cent. secured debentures £1,038,000

5½ per cent. first mortgage bonds £10,500,000

(This total includes the amount required for the conversion of the whole of the 5½ per cent. income bonds, viz., £662,293 5s 11d, and is subject to the option rights, mentioned in the president's letter on the third page of the prospectus.)

7 per cent. 30-year bonds Ptas. 38,914,500

(Against which £2,822,480 5½ per cent. first mortgage bonds are deposited as collateral.)

This is an offer for sale of £2,800,000 consolidated 6½ per cent. prior lien bonds, at 91 per cent. The bonds, which are to be redeemed on or before June 1, 1925, by means of a sinking fund, are subject to first specific and floating charges securing the prior lien "A" bonds of the company, of which £1,100,000 are outstanding. They are secured as a direct obligation, and, with exceptions, constitute a second specific charge on assets, excluding share holdings in Les Tramways de Barcelone. The company is authorised to increase the 6½ per cent. prior lien bonds from £3,000,000 to £5,000,000, subject to retaining ear-marked for the redemption of the prior lien "A" bonds an amount of consolidated 6½ per cent. prior lien bonds of a nominal par value at least 10 per cent. in excess of the par value of the prior lien "A" bonds for the time being outstanding. The right is retained of redemption at 102 per cent. before June 1, 1930, and on or after that date, at par. Revenue available for bond services is given for the past four years. For 1923 it amounted to £706,500. The service of the outstanding £1,100,000 prior lien "A" bonds will call for £83,500 per annum. The annual service of the bonds now offered amounts to £198,531. As before pointed out, the finances of the company form a highly complicated record, and though Barcelona is a storm centre of political life, it must be confessed that other issues quoted on the London Stock Exchange have more than maintained their values.

United Anthracite Collieries, Limited.—Authorised share capital £2,500,000, divided into 1,000,000 7 per cent. cumulative preference and 1,500,000 ordinary shares, all of £1 each. Preference shares are entitled to a return in respect of capital of 22s per share and arrears of fixed dividend in the case of winding up, and provision is made that debentures shall not be created without the consent of preference shareholders, except for the purpose of securing loans from bankers. It is intended to create a special preference dividend equalisation fund of £84,000 by setting aside in each year the sum of £16,800 out of profits, after providing a dividend at the rate of 10 per cent. per annum on the ordinary shares. This is an issue at par of 800,000 ordinary and 800,000 preference shares. The company has been formed to develop four anthracite collieries in the Swansea district. Total surplus assets are estimated at £1,615,179. An independent valuation is submitted. Profits are given from 1917. Apparently the purchase price is £1,500,000, payable in cash, together with £75,000 payable in Hector MacNeal in consideration of services rendered. It would be interesting to have a little table showing the sub-values then placed on assets. Much will depend upon the office expenses, given as £1,510, appear to be moderate. Sir Samuel Hoare is chairman of the company, and the board contains several well-known men in the colliery trade.

Whitehall Electric Investments, Limited.—Authorised share capital 2,500,000 7½ per cent. cumulative preference and 5,000,000 ordinary shares, all of £1 each. There is also £3,500,000 6 per cent. first mortgage debenture stock. All these securities, including the present offer, have been issued. This is an offer for sale of £1,000,000 first mortgage 6 per cent. debenture stock at 94 and 1,000,000 preference shares at March, 1922, to acquire substantial interests in several established electric power, light, and tramway undertakings operating in Chile and Mexico. The electric power, light, and tramway system of Valparaiso and the hydro-electric power and station near Santiago, were acquired last year, and the object of this issue is to provide funds for these and other purchases,

instalments already due having been met by advances from the company's bankers. The debenture stock is redeemable on or before 1949 at par, and constitutes a first specific charge upon securities detailed in the prospectus and a floating charge upon the undertaking and all other assets. It is stated that the interest "receivable" from debentures and bonds is £462,000, "so that both the annual debenture interest payable by the company and the preference dividend are more than covered by the interest receivable from debentures and bonds alone." It will be noticed that the word "receivable" is used. Net income is given for 1923—namely, £530,633. The speculative aspects of these securities must not be overlooked.

British Insulated and Helsby Cables, Limited.—Authorised and issued capital £1,500,000, divided into 500,000 6 per cent. preference and 1,000,000 ordinary shares, all of £1 each. Four and a half per cent. first mortgage debenture stock for £500,000, and 5 per cent. mortgage debenture stock for £200,000, have already been issued and are outstanding. But as both these issues fall due for repayment on January 1st next, in order to provide for their retirement the company is now offering £700,000 of 5 per cent. mortgage debenture stock at 98. Eventually this issue will be a first charge upon assets. Holders of the existing debenture issues will be given the right until June 30th to convert all or part of their present stock on a par basis. Profits are given from 1919. The amount required to pay interest on the new issue is £35,000, and as the lowest annual profits during these years were £271,524, a substantial margin of security is available. A well-secured industrial debenture.

Fras. Hinde and Hardy.—Capital £300,000, divided into 175,000 7½ per cent. cumulative preference and 125,000 ordinary shares, all of £1 each. There are no debentures. This is an issue at par of the whole of the above-mentioned capital. The company has been formed to acquire the business of Fras. Hinde and Sons, which was established in 1810 and turned into a company in 1901. The business is occupied with the manufacture of textile fabrics composed of wool, silk, cotton, artificial silk, &c. It is stated that 15,500 preference and 51,400 ordinary shares have already been applied for firm, and will be allotted in full on the terms of the prospectus. Profits are given from 1918 before charging directors' remuneration and depreciation. Net assets are valued at £181,028. The purchase price is £220,000, payable in cash, and made up as follows:—Net assets £181,000, accumulated profits £13,000, and goodwill £26,000. The company is subject to industrial risks, but should render a good account of itself.

Crowborough District Gas and Electricity Company.—Authorised capital £66,000, of which £21,000 remains to be issued. The authorised loan capital is £33,000, of which £18,000 has already been issued and £4,500 is now offered at par. This debenture stock is to be redeemed at par on December 31, 1932. The net revenue of the company is £3,903, and as the interest on the loan capital, including that now offered, will amount to £1,270, the debenture stock can be looked upon as well covered.

Streatham Recreation, Limited.—Authorised capital £40,000, divided into 156,000 8 per cent. participating preference shares of 5s each and 20,000 ordinary shares of 1s each. This is an issue at par of 156,000 8 per cent. participating preference shares. In addition to the fixed rate of dividend, preference shareholders are also entitled to 75 per cent. of remaining profits. The ordinary shares are to be allotted to the vendors. The company has been formed to acquire a hall at Streatham, a suburb of London, and carry on a social club. The technical advisers may possibly make the proposition successful, but a net profit of £15,000 per annum, as estimated, appears to be on the optimistic side.

San Antonio Mining and Smelting Company, Limited.—Authorised capital £50,000, all of which has been issued in shares of 5s each. The company was formed in October, 1922, with the object of acquiring mining properties in the Republic of Colombia. A few other details are given in the Press to comply with Stock Exchange regulations. No mention is made as to a prospectus, but we presume the shares will be marketed eventually for the benefit of the public.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, June 18, 1924, amounted to 953 tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

REPUBLIC OF THE UNITED STATES OF BRAZIL.

FINANCIAL SECTION OF THE PRESIDENTIAL MESSAGE, PRESENTED TO THE NATIONAL CONGRESS ON MAY 3, 1924, BY DR. ARTHUR DA SILVA BERNARDES, PRESIDENT OF THE REPUBLIC.

TREASURY.

FINANCIAL SITUATION.

The financial situation of Brazil, which at the beginning of the quadrennial period was causing serious apprehension on account of the enormous liabilities and the difficulty of dealing therewith, has, I am glad to say, at last entered into a more promising stage.

I do not exaggerate when I say that this is the general opinion. Brazil, thanks to the precautionary measures that have been adopted and to its enormous recuperative powers, is quickly emerging from the dark clouds with which it was surrounded. Every day we see clear proofs which justify the hope of an improvement in the situation, and in this respect it is worth calling attention to the considerable increase in the collection of the federal revenue, the rigorous economies that have been carried out, the improvement in the exchange, and the more favourable level at which Brazilian securities are now quoted.

We were always of the opinion that the work which we had to carry out was two-fold—that is to say, to maintain the economic forces of the nation, which are the primary basis of the welfare of the country, and to restore and put on a stable footing the federal finances.

In order to ensure those economical measures, the Government endeavoured, without loss of time, to carry out a banking organisation by establishing the "Bank of Issue." The economic prosperity of Brazil is obvious. The volume of business arising from agricultural and industrial production and from commercial transactions within the last year has been worthy of note. For those who suffered from the former financial crises as regards ready money, crises which caused such grave financial disasters, it is easy to imagine how great would be the difficulties presented by the lack of the means of circulation, were it not that to-day we have in our midst that great institution ready to attend to the needs of all classes by issuing and taking up its own notes at the right time, in the manner in which it has done. Were we not in possession of such an institution, the national financial situation would have been exposed to long Parliamentary debates in order to obtain a new issue and to the inconveniences of prolonged discussions up to December 31st, the country in the meantime suffering from the disastrous effects of the lack of ready cash. Instead of this, the wealth produced is now in circulation, and business is in full activity everywhere because the adaptability of this great organisation insures the tranquillity of the banks and the development of business, controlling and avoiding any excessive expansion of business by means of the safety-valve peculiar to all issuing banks—in other words, by regulating its rates of rediscount.

As regards the financial restoration, in face of the enormous problem with which we have to deal, we have, by means of an intense and continuous effort, succeeded in limiting the responsibilities of the floating debt after studying one by one all its various liabilities.

Having thus overcome the difficulties of the past, the Government has been able to work in a clearer atmosphere with the assistance of two new factors of the greatest importance, namely, the Fiscal Code (Code of Accounts) and the Central Fiscal Control Office (Chamber of Accounts) of the Republic.

It is only those who have closely followed the Federal Administration who can fully appreciate the disciplinary efficacy of those two new factors in the financial life of Brazil.

THE PREPARATION OF THE BUDGET.

The Government has made an intense effort in order to improve the means of preparing the Budget and putting the same into execution.

As is well known, the project, which had now been submitted within the legal period of time, has already been twice carefully studied by a special Committee of competent officials from all the Government Departments, under the presidency of the Minister of Finance, and in the course of the present year a new plan is going to be adopted for the reformation of our Budgets.

Following the example of England, a committee was formed of men of well-known administrative ability, outside politics, in order to examine all our Government Departments and to propose the

economic "cuts" which they might consider as being practicable. In England, a committee of this kind (Geddes Committee) decided in the first year for a reduction of £60,000,000 sterling, and in the second year for a further £40,000,000 in a Budget of £800,000,000.

We hope that our Committee, which is already at work, will succeed in proposing very appreciable "cuts" or reductions in our Budget, which constitutes one of our greatest pre-occupations.

In this work of financial restoration it is essential that we should have no illusions. Unless we completely reform our Budget procedure, we will never succeed in placing Brazil in a sound financial position based on the equilibrium of the Budget, or, better still, on a surplus of revenue. So long as we maintain, as we have said above, the system, or, rather, the abuse, of sanctions at the end of the Budget, it will be impossible to regularise our public finances. There will always be two Budgets. One, an ostensible one with the expenses and revenue nicely tabulated, the other, a semi-clandestine one, authorising various expenses against which there is no corresponding revenue. If Brazilians wish to put their finances in order, this *régime* can no longer be continued, as we have already said in the foregoing part of our message.

COLLECTION OF THE FEDERAL REVENUES.

From the platform upon which we present ourselves to the electorate, we have had occasion to make the following statement: "The frauds of all kinds, the smuggling, the evading of duties, and short payments have already been calculated by some of our most eminent financiers as exceeding the sum of 150,000 contos de reis (at the exchange of 6d this would be £3,750,000) per annum, and we do not consider this figure at all exaggerated. It would be sufficient if we were only to reduce this leakage in our revenue by eliminating its causes in order to be able to rely upon a much larger revenue even under a reduced taxation."

We now have the pleasure of submitting to the country the proof of our above assertion.

The revenue collected in 1923 was greater by 281,002,980\$82.5 than in 1922.

Innumerable administrative efforts contributed to the obtaining of this result. Among the chief factors that have helped to remedy the great evil of the loss of revenue, and thereby contributed to the improvement of our financial life from the point of view of the Budget, we may mention the following:—The substitution of the management staff in the chief Government Departments by new officials full of faith in the taxation capacities of the country; the well-organised system of accounts, which serves every day to enlighten more and more the administration of headquarters; the Fiscal Code, with its severe provisions; the efficient control in the collection of revenue; the constant vigilance of the Treasury Inspectors in all the Federal Departments; putting an end to the frauds and smuggling, remodelling our bureaucratic procedure, doing away, as far as possible, with the "red tape" methods; greater activity and efficient control by the superior authorities over all the Federal Government Departments.

As we have already pointed out in our previous message, the Financial Department was suffering most lamentable shortages, which are now to be remedied with the greatest effort, as, further on, we will attempt to show.

THE ENGLISH MISSION.

We have special pleasure in referring to the English Mission which stayed in Brazil for two months, and which went back on March 4th last. It was composed of the following members:—Mr Edwin Montagu, Chief of the Mission, a late Minister of State in Britain, illustrious Member of Parliament, and late Financial Secretary of the British Government; Lord Lovat, a noted agricultural landowner, known throughout the British Empire, and a director of important companies; Sir Charles Addis, a director of the Bank of England; Mr Hartley Withers, a noted economist and journalist, author of valuable works on finance; and Mr. W. McLintock, a chartered accountant, deservedly famous in English financial circles.

The Government thought that it would be of real advantage to itself that such highly competent and celebrated persons of the Old World should become thoroughly acquainted with the general

situation of Brazil, and especially with its economical and financial conditions.

In spite of the great economic prosperity which the country happily enjoys, and the increasing development of its sources of wealth, it was disheartening to see that the low rate of exchange and the unfavourable quotations of Brazilian securities continued to foster an unfavourable opinion about ourselves in the foreign markets. Such a state of things could not but impress the Government, because the consolidation of the floating debt, which placed the Treasury in a difficult situation, has rendered it necessary to adopt the extraordinary measure of an appeal to the credit of the country.

It was, therefore, most important that the erroneous impression with regard to Brazil which existed abroad should at once be dispelled.

Hence the idea of a visit of the above illustrious British authorities.

They studied the situation in a systematic, conscientious, and thorough manner, especially as regards our financial organisation and the executive departments of the Treasury. They went carefully into our chief problems of railways, our coal, iron, and mining industries in general, and our more promising areas of cultivation, especially our cotton. With regard to the last named, they prophesied a very prosperous future on account of the very exceptional conditions which prevail in Brazil.

We can confidently state that the impression which the British Mission took away with it with regard to Brazil is a favourable one, and we hope that it will prove of great ultimate advantage to us, throughout European circles, judging from the reports which our visitors will make known.

BANK OF BRAZIL.

This credit institution, the solidity and activity of which becomes more noticeable every day, and places it unquestionably in the first rank of similar institutions, finished its financial year in 1923 under most auspicious conditions, more so than during the previous year. It showed in its balance-sheets of June and December last better results than had ever before been obtained, in spite of the difficulties of the economic and financial situation, the existence of which had been felt in all mercantile transactions and had severely restricted them.

This highly satisfactory state of things may be attributed to a firm and cautious management, to a policy of perseverance, and to the well-directed use of banking credit in all the commercial centres and in the zones of industry and the agricultural regions of the country; also through the constant endeavours to impart to all its branches a proper and fully-informed system of management in all their operations under a first-class technical staff.

We must add, however, that the bank, in spite of its intelligent management, would have lacked the necessary element to attain the objects which it had in view, had their efforts not been seconded by the timely collaboration of the Government, which recognised the necessity of rendering to that establishment all the means to enable it to carry out its double commission of a central credit bank and of an institution that had to control the money market.

Thanks to this assistance, which was, moreover, justified by the services which the bank renders to the Treasury, and which occasioned the recent reform of the bank, the latter thereby became equipped under much better, definite and legitimate conditions than those under which it used to work under its old rediscount section, which had already served its purpose. It met the requirements of our economic development, put into circulation at the same time a currency which is perfectly guaranteed, and which is intended to substitute, in future and gradually, our non-convertible paper money.

All the sections of the bank worked with the greatest regularity, and its branches, both the old ones as well as the new ones, produced highly satisfactory results.

During the fiscal year of 1923 there were 22 new agencies opened, and there are others in course of contemplation. On December 31st there were already 70 branches in existence, and at present they number 74.

The following was the total movement of the operations of the bank and its branches during the said year:—

CHEQUES—GOLD:

Total issue	£11,303,796
Redemption	10,730,123

against £8,169,091 and £8,379,026 respectively in 1922.

BILLS OF EXCHANGE.

This department showed the following turnover in the purchase and sale of bills:—

Bills issued	£40,013,240
Remittances	37,863,317

These figures show the healthy equilibrium of these businesses which were carried out always in order to attend to the legitimate necessities of the market.

These figures also show a decrease in the bill transactions of the bank in 1923, as compared with the preceding financial year, which is perfectly explained by the corresponding decrease in the requirements of the import trade.

"SIGHT" rates fixed by the bank during the said period show the following extreme rates:—

Maximum rate	6 1-64th on January 2nd
Minimum rate	4 21-32nds on November 7th

which give an annual average of 5 43-128ths.

The head office and the agencies effected during the same year, loans which amounted to the total sum of 3,233,176:431\$871 for discounts, re-discounts, and guaranteed current accounts, against 2,463,644:494\$337 in the preceding year.

In the same period the bank and its branches effected transfers and orders of payment for a total sum of Re15,593,312:582\$844, as against 1,187,713:239\$560 in 1922.

The deposits effected by the bank and its branches in accounts at interest, and without interest, at fixed periods, and bills at a premium (which in 1922 amounted to 7,644,178:032\$781, and which up to that time was an unprecedented sum), reached in 1923 a still greater amount—viz., 10,470,722:200\$161. This clearly proves the increasing confidence on the part of the public in that credit establishment.

The net profits for that financial year amounted to 72,834:395\$357, as against 43,979:804\$772 in 1922, and enabled the bank to maintain its previous half-yearly rate of interest of 20 per cent. for the two half-years and to increase the reserve funds to a figure which already exceeds 90 per cent. of the social capital, say, 90,012:063\$310, after having made all the necessary provision for any depreciation in the realisation of its assets.

The clearing of cheques, a service exclusively due to the initiative of the bank, and carried out by it without any extra charge, showed in 1923 a turnover which amounted to 10,924,682:211\$910, as against 8,012,631:059\$193 in 1922.

The shares of the Bank continued to be actively sought after as gilt-edged securities, and their respective quotations in 1923 reached the lowest figure of 300\$000 in April, and the highest of 434\$000 in August, but in the case of large transactions they averaged generally the double of their nominal value.

The rediscount section of the Bank having been closed and balanced, their issuing department was established on June 28, 1923, in accordance with the terms of the contract entered into with the Government. On the third of the following July, the first issue was made of 2,000,000\$000 in bonds of 1,000\$000, printed by the Mint, and intended to be in due time substituted by notes of the bank itself. On December 31st the paper in circulation attained a total of 389,000,000 contos, issued strictly in accordance with the law and fully justified by the requirements of the agricultural, industrial, and commercial developments.

Dr José Maria Whitaker, who had been president of the bank up to December, 1922, having resigned his post, the Government appointed in his place Dr Cincinato Cezar da Silva Braga.

The new president, who contributed greatly to the reform of the bank, and presided at the extraordinary general meeting at which the new statutes were discussed and approved, assumed his important post at the commencement of the year 1923.

Baron de Oliveira Castro, who at the time was the director in charge of the rediscount section, was appointed director of the issuing department.

ISSUES.

On April 24, 1923, a contract was drawn up between the Minister of Finance and the Bank of Brazil for the purpose of transforming this institution into an issuing bank, in accordance with the legislative decree No. 4,735 of January 8th of the same year. This contract was unanimously approved by the general meeting of the shareholders of the bank, held on the 2nd of the following May, and the new reform at once came into force.

According to this contract, the Government disposed of its right for a space of ten years of issuing any paper money under any form whatsoever. During that period such right is invested only in the bank, who will exercise it under the strictest and severest control of the Government. Owing to this reform, the issues of the rediscount section, whose paper money was supplied by the Federal Government, immediately ceased.

The bank was granted a period of six months to enable it to liquidate the above section that had been suppressed. The Government had hoped during that period to be able to carry out a credit operation, either within or outside the country, which would

have enabled it to redeem the Treasury Bills which were then lying in its portfolio. Up to April 23rd last, the Government, not having been able to carry out this operation, decided in the exercise of the authorities granted to it by Art. 2, No. VIII., of the Law No. 4,783, of December 31, 1923, to balance its accounts with the bank by giving it a receipt for the balance arising from the statement of what it had in its portfolio, by cancelling the Treasury Bonds which at the time were in the discount portfolio of the bank. In this manner the Treasury redeemed securities to the value of 399,265:567\$000, plus interest at 2 per cent. per annum on this amount, which interest was due to the Treasury in accordance with the law under which that late section had been created. The notes issued by the said section shall continue in circulation until it is possible to redeem them.

During the months of May and June, 1923, the Bank of Brazil did not issue any notes, meeting out of its own cash resources the banking re-discounts for the general requirements of commerce. On arriving, however, at the second half-year, the time of the agricultural crops, with the improvements and export of same through the country, a much greater amount of capital is required every year, and, therefore, the necessity arises to increase the circulation of money. For this reason the bank commenced its issues in the month of July.

The largest figure which, up to the present, the issue of the bank has attained was in January last with the sum of 439,950 contos de reis. Since then it has constantly decreased until the last days of the month of April ult., when it stood at 377,156 contos.

EXCHANGE.

Dragged down by the highly depressing factors which for a long time past it had been contending with, the exchange reached the disheartening level of 4 21-32d on November 7, 1923.

The withdrawal of the many important elements which should have served to foster the exchange and turn it in our favour, during the recent years brought about this adverse balance in the exchange. As in the export trade in 1920, 1921, and 1922, the absence of bills on the Government's stock of coffee, the political unrest, the ever-increasing deficits, which in 1908 exceeded 76,908:419\$000 and in 1922, 448,951:732\$991; a floating debt of over one million of contos de reis; all this palpably contributed to drag the exchange to its low level.

Luckily, these adverse factors are gradually disappearing.

The balance of exports in 1923 was £22,571,000.

The protectionary measures adopted with regard to coffee and the control exercised over the amounts placed on the market, have improved the quotation of this important article of export and raised its price in gold abroad. It is being sold at present in New York at 19 cents. Everything points to the prospect of coffee being able to yield during 1924 a sum of about £50,000,000. The control of the national finances, the considerable decrease in the deficit for the financial year of 1923 and the probable balancing of the Budget for 1924, the excellent impression which Brazil has produced on various illustrious strangers who have come to visit it, the general confidence in the public administration which is already becoming more noticeable—are so many more factors which have contributed to the improvement of the exchange.

It is not to be wondered at if the rise in the exchange continues to improve every day until it attains the best rate for the country.

It will suffice if we here call attention to the financial episode of the four years tenure of office of Campos Salles during which the exchange was considerably and rapidly improved as soon as the financial position was placed on a normal footing.

To-day we can dispose of much more effective elements to enable us to obtain those results. At the present moment Brazil can count upon much more powerful elements to rehabilitate itself completely from a financial point of view, and everything points to an era in the very near future of the greatest prosperity for the finances of the nation.

PERMANENT PROTECTIVE MEASURES WITH REGARD TO COFFEE.

The coffee situation continues firm. The measures adopted by the Government have ensured that. Had precautionary measures not been taken, controlling the sale and restricting foolish speculations, the position to-day would not have been so solid. Now the warehouses duly control the supply of this product.

The best proof that the control of supply is the fundamental basis of protecting the coffee interests lies in the fact that up to now the prices have constantly kept a satisfactory level. This measure has turned out not only of the greatest advantage to the producers, but also to the purchasers, who, being now free from anxiety of any sudden surprises, are able to calculate their business on a sound basis.

The Government has to contend with no small difficulties in order to maintain its service for the regulation of supplies owing to the cupidity of many who, for the sake of personal gain, have done their best to hamper the Government section.

I am glad to say, however, that owing to the excellent working of the controlling warehouses, all these abuses, complaints, and claims have been done away with.

The regulation for the supply of coffee in the markets has been drawn up, and has been made with the collaboration of the railway companies and all the interested parties, and it will be shortly issued.

VALORISATION OF COFFEE.

As it is a matter of public interest, the stock of coffee, which guarantees the loan of nine millions sterling, was to have been sold, in accordance with the respective contract, in lots of 453 thousand sacks per annum, during a period of ten years. As this arrangement, however, did not suit the interests of Brazil, we obtained from the bankers the immediate liquidation of the stock.

By the contract, which for a period of ten years only allowed the Government to protect the coffee through the intervention of the house entrusted with the liquidation of the stock, those protectionary measures, if they were badly carried out, might result in the net proceeds of the coffee not being sufficient after all to pay for the loan that had been raised. Happily, this liquidation is now finished, having been made under very pleasant conditions, both as regards the high price obtained for the coffee and as to the clever manner in which it was conducted so as not to disturb the sale of a great crop.

The last accounts for the sale of the coffee have not yet fallen due, and for that reason have not been taken into account, consequently the banks have not been able to present definite accounts.

But we can straightaway declare that the loan of 9 millions sterling is already practically wiped out.

The stock of coffee will have produced roughly £14,500,000. With the proceeds of its sale, the Government, through its bankers in London, purchased nearly all the bonds of this loan, there only remaining in circulation a relatively small proportion.

In order to ensure the payment of the coupons and of the redemption of this small outstanding balance of bonds, the Government is gradually purchasing and depositing in the hands of its bankers British 5 per cent. securities, which are being sold as and when it is possible to buy in the bonds in circulation.

Out of the proceeds of the sale of the coffee the sum of £2,050,000 was set aside for the redemption of the loan obtained from the bankers in order to assist the payment of the £4,000,000 promised to the Bank of Brazil, which payment thus became definitely settled.

BUDGET FOR THE LAST THREE YEARS.

The results of the Budget corresponding to the financial years 1921-1922 and 1923 show clearly that the balancing of the Budget constitutes the most serious problem with which the Federal Administration has to deal.

The considerable deficits which resulted in 1921 and 1922 showed a considerable falling off in 1923, thanks to a more efficient programme for collecting the revenues and to a rigorous economy in all the expenses. If the Government did not succeed in attaining the perfect equilibrium of its financial measures, the reason must be sought for in the liquidation of the liabilities previously contracted and in the special credits that had been authorised with regard to which there is no equivalent corresponding revenue. On the other hand, if we admit that some of the items included under expenses represent a genuine disbursement of capital, such as the building of railways and the acquisition of various estates, the deficit for the financial year 1923 is counterbalanced by the corresponding increase in the assets, which represent a considerable improvement in the patrimony of the Union.

If we analyse the latest information obtained with regard to the financial year of 1921, we see a deficit of 432,300:766\$714:—

	Gold.	Paper.
Revenue collected	77,305:009\$961	520,520:005\$171
Expenses incurred	82,605:721\$815	934,030:869\$378
Deficit	5,300:711\$854	414,410:864\$207

If we convert the gold deficit, amounting to 5,300:711\$854 into paper at the average rate of 8d per 1\$000—that is to say, 1\$000 gold equals 3\$375 paper, we get a figure of 17,889:902\$507, which, if added to the paper deficit, the amount of which is 414,410:864\$207, this brings up the total deficit to the above-mentioned sum of 432,300:766\$714.

The collection of the revenue gold, 77,305:009\$961, and paper,

520,520:000\$171, fell considerably below the figure of 108,439:500\$000 gold and 671,154:000\$000 paper which had been estimated for in the Budget.

The results of the financial year for 1922 were also unfavourable.

The revenue calculated was gold, 92,276:321\$000, and paper, 727,673:000\$000, but the amounts respectively collected only reached 75,397:137\$426 gold and 653,475:004\$716 in paper.

The expenses for that financial year amounted to 83,766:602\$447 gold and 1,074,179:793\$262 in paper.

If we make a comparison, we have the following:—

	Gold.	Paper.
Revenue collected	75,397:137\$426	653,475:004\$716
Expenses incurred	83,766:602\$447	1,074,179:793\$262
Deficit	8,369:465\$021	420,704:788\$546

The total deficit amounts to paper 448,951:732\$991. If we convert into paper at the rate of 8d per 1\$000 the gold deficit will amount to 8,369:465\$021.

It gives us great pleasure to mention here the copious information supplied with regard to the financial year of 1923, thanks to the most efficient work carried out by the Central Accountancy Department of the Republic. It is owing to this that the Government has been able to give such ample information with regard to its management.

For the first time, in the actual régime, the Presidential message embraces in its pages the balance-sheet of the revenue and expenses, and of the assets and liabilities of the Republic.

As the first mention of these documents comprises the period from January 1 to December 31, 1923, it will only be after the closing of the accounts of the financial year (April 30th last) that the complete figures will be available. We can, however, state that the alterations arising from the statement of that financial year will be of only little importance as compared with the enormous turnover which that balance-sheet represents.

The economic situation of the public administration, with the exception of the patrimonial goods belonging to the Union—the inventory of which has not yet been completed, because several of the departments attached to the various Ministries have not yet been able to conclude that work—possesses a great significance on account of the state of the public debt and of the assets which it shows.

If we examine the balance-sheet of the revenue and expenses, we will easily see the total of revenue and of the expenses, which shows a surplus in gold and a deficit in paper. The comparison of the revenue with the expenses should be done separately.

	Gold.
Revenue collected	99,937:358\$960
Expenses incurred	92,068:256\$328
Surplus	6,969:102\$632

	Paper.
Revenue collected	743,275:208\$486
Expenses incurred	997,632:162\$532
Deficit	254,356:954\$046

The surplus in gold converted into paper at the average rate of 6d per 1\$000 (1\$000 equals 4\$500 paper), produces 31,360:961\$844. Deducting this amount from the paper deficit of 254,356:954\$046, we arrive at a net deficit of 222,955:992\$ paper in 1923.

The causes of this deficit, although it is only half of what the previous ones were, are easy to show. They can be explained by three items of extraordinary expenditure.

(a) The payment of the expenses for the previous financial year (credits open to the extent of 59,122:965\$134).

(b) Payment of interest of the heavy floating debt (interest at 7 per cent., which comes to over 70 thousand contos).

(c) Payment of the provisional gratification to the officials (credit open to the extent of 75 thousand contos).

Had it not been for these, the Budget for 1923 would have closed almost without any deficit whatever.

Under the heading of "expenses paid," there appears the sums of 8,759:329\$148 in gold and 65,902:503\$248 in paper for the expenses relating to the financial year of 1923, although as a matter of fact they have not yet been paid out, as they are still awaiting for that expense to be duly sanctioned by law.

The estimated bond revenue for the financial year 1923 was 97,586:320\$000 gold and 778,025:000\$000 paper. The amounts collected were 1,451:038\$960 and 743,275:208\$486 paper, or a deficit of 34,749:791\$514. If we convert the gold and deduct the amount short collected in paper, we will see that there is a shortage of 28,220:116\$194 in paper before we can arrive at the full revenue estimated for the financial year of 1923.

As regards the expenses, it is hardly necessary to point out the stringent economies practised by the Government, who availed itself with the greatest care and economy of the legislative powers given to it for incurring additional debts.

It is sufficient to say that, as will be seen by the tables published hereunder, the additional credits which were opened in 1923 for the total sum of 513,762:985\$377 were only partly utilised to the extent of 183,300:547\$628, thereby effecting an economy of 330,462:437\$749.

THE INTERNAL AND EXTERNAL DEBT.

Two items of great importance which stand out in the balance of the assets and liabilities are those which refer to the external funded debt, which represents 1,153,237:189\$454 in gold, which at the par exchange on London is equivalent to £129,739,183 16s. 3d., and which refers to the internal funded debt.

The service for the interest of both these debts is strictly up to date, and the position of same on December 31st last can be seen from the following tables:—

STATEMENT OF THE FOREIGN FUNDED DEBT on the 31st DECEMBER, 1923.

Unfortunately, national economy lost considerably in the matter of the premiums that were collected by the insurance companies, owing to the anomalous situation of a group of foreign companies, who, existing under exceptional rights, have for many years past copiously drained the country of gold, which they have sent out of the country.

Such companies have not got any capital or reserves in Brazil. Their sphere of operation has no limit, and they distribute in the

foreign markets by means of companies that are not authorised to work in Brazil a large proportion of the responsibilities which they assume in our country. By so doing they strangle the development of a national insurance, which cannot compete with such an unequal competition.

This system, which is incompatible with one of the cardinal principles of our political system—namely, that of “equality of everybody before the law,” is about to be done away with.

TABLE SHOWING THE FINANCIAL SITUATION OF THE LAND AND MARITIME INSURANCE COMPANIES ON THE 31st DECEMBER, 1922.

ASSETS.		LIABILITIES.	
Federal Bonds (Internal and External Loans)	41,628:230\$261	Legal reserve	9,968:028\$385

COMMERCIAL BALANCE-SHEET.

The year 1921 was a prosperous one for our foreign trade. The exports attained a total of £73,184,000, equivalent to 3,297:033 contos de reis, while imports show a figure of £50,613,000, or, say, 2,270:437 contos.

We can, therefore, see that in 1923 there was a surplus in our foreign commerce of £22,571,000, or, say, 1,026:596 contos de reis.

This is a very promising result, and clearly shows the economical forces of the country. It shows that the productive forces of Brazil continue to increase as well as the commercial activity of the export trade.

In 1913 the commercial balance-sheet showed a deficit. From 1914 to 1919, the years of the war, we developed in an extraordinary manner our productive capital in order to enable us to serve foreign markets. As a result, we see during the whole of this period the export balances going gradually up from £11,330,000 in 1914, until they reached the exceptional figure of £51,908,000 in 1919. At the conclusion of the war the markets were restricted and the exports fell off a little. 1920 and 1921 closed with a deficit, the imports preponderating. In 1922 the

commercial balance was £19,937,000, which was increased, as already stated, in 1923 to £22,571,000.

The export tonnage has a material and overwhelming proof of our economic vitality. In 1923 we beat the record of our foreign commercial history. We exported 2,230,450 tons, against 2,121,602 in 1922.

Towards these exports animal products contributed with 198,256 tons, against 107,968 in 1922; mineral products with 241,239, against 342,706; and vegetable products with 1,790,655, against 1,670,928 in 1922. The greatest increase was noticed under the heading of vegetable produce of 119,727 tons over and above the figures of the previous year.

Our exports for 1923 show, therefore, a very satisfactory feature.

We must, therefore, take into consideration that out of the 25 principal products, only three of them show a small decrease in their export value (in national currency) in 1923, as compared with the previous year. They are: wool, carnauba wax, and oils.

All the other 22 articles show an increase of value in national currency in the following order:—

Coffee, frozen meats, hides, rubber, lard, sugar, oil-producing

fruits, cocoa, skins, tallow, cotton wool, tobacco, timber, table fruits, maize, dried salt meats, preserved meats, manganese, rice, matte tea, mandioca flour, and beans.

The coffee showed an increase of 1,793,000 bags in 1923. Owing to the increase in price during that year, the increase in national currency was 620,462 contos de reis, and owing to the variations in exchange during 1922 and 1923 the increase of the export value of this product in 1923 corresponded to £2,836,000.

Sugar in 1923 was exported in a much less quantity than during the previous year. Meanwhile, its export value in paper money during that year shows an increase in comparison with 1922 (less 98,936 tons, less £152,000, plus 26,654 contos). These are the consequences in the differences in the exchange and the variations in prices from one year to the other.

The same thing happened with some of the other articles.

The average value per ton of goods shipped was as follows:—In national currency: in 1923, 1,478,000; in 1922, 1,099,000; in 1921, 891,000; in 1920, 834,000.

The average annual value of the £ during the last four years is shown by the tables by the Syndical Chamber of Brokers, and is as follows:—In 1923, 44,651; in 1922, 33,537; in 1921, 28,931; in 1920, 16,887.

The export of coffee was as follows:—

Quantity (bags).	
In 1923	14,466,000
„ 1922	12,673,000
Surplus in 1923	1,793,000
Contos de reis.	
In 1923	2,124,628
„ 1922	1,504,166
Surplus in 1923	620,462
In £s.	
In 1923	47,078,000
„ 1922	44,242,000
Surplus in 1923	2,836,000

The average price f.o.b. of each sack exported was 147,000, as against 119,000 in 1922 and 82,000 in 1921. In pounds and shillings it was respectively £3 5s, against £3 10s and £2 16s.

The instability of the exchange shows its pernicious reaction on the commerce of the country; but in spite of those differences the national work continues to prosper, indefatigable and triumphant, on behalf of the greatness and wealth of Brazil.

The following figures show the movement of foreign trading during the last four years:—

MOVEMENTS OF FOREIGN TRADE.

PUBLIC DEBTS OF THE STATES.

In spite of the autonomy of the states, which is the fundamental basis of the federation in matters of finance, the public credit of the nation, which to all Brazilians should be considered as our greatest wealth, is at times depreciated in the foreign money markets by the unpunctuality of some of the states.

Brazilians cannot close their eyes to this fact. In three consecutive presidential messages the late lamented Mr Rodrigues Alves voiced his anxiety with regard to the difficult situation in which some of the states were gradually placing the credit of Brazil.

Senators and deputies have already on various occasions proposed measures to remedy this, which, however, have always been considered unconstitutional.

As a matter of fact, however, it is becoming every day more and more indispensable that a formula should be discovered to put an end to such a situation on behalf of the credit of the Brazilian nation when we find that constitutional measures cannot be adopted.

Here below we give a table of the internal and external debt owing by the states and by the Federal District.

STATEMENT OF THE EXTERNAL AND INTERNAL FUNDED DEBT OF THE STATES AND FEDERAL DISTRICT.

State and Federal District.	General Total of Debt in Milreis.	External Debt.					Internal Debt.	Per Inhabitant
		In £s Sterling.	In Francs.	In Dollars.	In Florins.	Converted into Milreis-paper (2).

J. LYONS AND CO., LIMITED.

SUCCESSFUL YEAR—SUBSTANTIAL ADDITION TO RESERVE.

ANOTHER RECORD TURNOVER.

COMPANY'S IMPORTANT WORK AT WEMBLEY.

CHAIRMAN'S EFFECTIVE REPLY TO WEMBLEY CRITICISMS.

The thirtieth ordinary general meeting of J. Lyons and Co., Limited, was held, on the 23rd instant, at the Trocadero Restaurant, Piccadilly circus, London, W., Mr Alfred Salmon (one of the managing directors) presiding.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31st last states that:—

	£	s	d
The balance from trading account shows:—	665,376	10	7
A profit of	30,239	6	5
Amount brought forward from last year	£695,615	17	0

From this amount is to be deducted:—

	£	s	d
Dividend on 5 per cent. preference shares paid to November 30, 1923, and proportion provided for period to March 31, 1924	32,353	5	0
Dividend on 7 per cent. preference shares paid to March 31, 1924	101,767	15	2
Dividend on 8 per cent. preference shares paid to March 31, 1924	80,000	0	0
Dividend on the 6 per cent. preferred ordinary shares paid to September 30, 1923, and proportion provided for period to March 31, 1924	24,000	0	0
Interim dividend (2s per share) on the ordinary shares and "A" ordinary shares already paid for the half-year ended September 30, 1923	109,458	0	0
Interim dividend (4.8d per share) on proportional and "B" proportional profit shares already paid for the half-year ended September 30, 1923	19,000	0	0
And the directors propose to deal with the balance as under:—			
To place to reserve (making a total of £850,000)	110,755	9	6
To pay a dividend of 3s per share on the ordinary shares and "A" ordinary shares for the half-year ended March 31, 1924	164,187	0	0
To pay a dividend of 7.2d per share on the proportional and "B" proportional profit shares for the half-year ended March 31, 1924	28,500	0	0
To carry forward to next account	25,594	7	4
.....	£695,615	17	0

The balance of premiums on shares, after deducting expenses, has been added to the reserve, which amounts now to £739,244 10s 6d. The business done has been satisfactory. During the financial year the following establishments have been opened:—

300 Regent street;
299 Kentish Town road;
161 Broadway, Cricklewood;
342 High road, Chiswick;
3-4 Broadway, Acton;
18-20 Powis street, Woolwich;
61-63, High street, Tooting;
295 Euston road;
1 The Broadway, Crouch End;
484-488 Harrow road;
28-30 Sloane square;
51-52 North street, Brighton;
101 Bull street, Birmingham;
15-16 Queen's square, Wolverhampton.
Additional premises have been acquired and will be opened in due course, and negotiations for other depôts are proceeding.
Messrs M. I. Gluckstein and J. Salmon retire from the office of directors, and, being eligible, offer themselves for re-election.
Messrs G. A. Pollard and A. C. Watkins, employee directors, retire, and are eligible for re-election.
Messrs Turquand, Youngs, and Co., the auditors, retire, and are eligible for re-election.

CHAIRMAN'S SPEECH.

The secretary (Mr Geo. W. Booth) having read the notice convening the meeting and the report of the auditors, The Chairman said: Ladies and gentlemen,—The thirtieth year of the company's trading, which was completed on March 31st last, has given us the largest amount of turnover which we have yet seen, a very substantial increase over the previous year.

The profits resulting from it, while very satisfactory, might easily have been better, for the year just past has again been a difficult one; the several strikes, among other things, had a material influence on our earnings, or we should certainly have shown a profit more in keeping with our increased turnover.

The policy of expansion is, however, justified, for the increased business does bring a share of profit, and acts as a set-off to the other disadvantages. The New Corner House in Coventry street is an instance of this, and shows we were right in thinking there was a public need for greater facilities in the neighbourhood for this class of catering, and it has added materially to our earning power.

YEAR'S PROFIT.

Turning to the figures as shown by the profit and loss account and the balance-sheet, I will first deal with those on the front page of the report. The profit shown there is £665,376, against £631,816 last year, an increase of £33,560, sufficient to pay the fixed interest on the new capital and leave a balance for the benefit of the shareholders. To this profit is added the amount brought forward from last year of £30,239. There are the usual distributions to the preferred shareholders, and interim dividends to the ordinary, "A" ordinary and proportional profit shareholders. Out of the balance remaining it is proposed to set aside to reserve a sum of £110,755 9s 6d, the reason for this odd amount being to bring up that account to a round figure of £850,000.

You will remember that on last year's balance-sheet the reserve stood at £500,000. A further £100,000 was then added, and during the year the balance remaining to us on the premium account of the new issue of a million 7 per cent. preference shares, which balance amounted to £139,244 10s 6d, has been added to the account, making a total, as shown on the present balance-sheet, of £739,244 10s 6d, and the figure I have just mentioned of £110,755 9s 6d makes up the sum of £850,000.

When it is remembered that after the provision for the "A" shares issued in the year ended March 31, 1922, the reserve stood at £409,000, you will agree, I am sure, that we are making satisfactory progress in the building up of this account. (Hear, hear.)

The remainder of the profit is available for final dividends to ordinary, "A" ordinary and proportional profit shareholders, and at the rates it is proposed to pay, this absorbs £192,687, leaving a balance to carry forward of £25,594.

BALANCE-SHEET ASSETS.

Looking at the balance-sheet and taking the assets side first, the increase in the first item is as to some £1,200,000 represented by additional buildings, plant and machinery, and as to approximately £500,000 by the amount represented by our shares in subsidiary companies. You have no doubt noticed that we have divided the figure which formerly stood under the heading "Investments in associated companies, &c.," and that the latter figure now stands at £257,000.

This has been done to draw a distinction between what I may call fixed capital and that which is of a liquid character. The companies which we have called "subsidiary" are those which are really run in connection with our own business, and in which the share capital belongs to this company. These shares are in a sense not marketable; that is, we could not market them without losing that control which we think essential, and this capital, although technically in shares, really consists of property in the several companies. The shares in what we call "associated" companies, such as the Strand Hotel, Limited, have a distinct marketable value quite apart from their association with the Lyons Company, and are, therefore, much more liquid assets.

We thought it advisable to make this distinction on our balance-sheet, and so remove any ground for possible misunderstanding in any calculation of the actual available liquid assets of the company.

Stock, you will see, stands at £2,255,000, an increase on last year of £279,000, some of it occasioned by preparation for the Wembley business; but, of course, you will understand, as I have previously said, it is really a quite normal figure, all of an immediately saleable character and very little subject to market fluctuation in view of the short time for which it is held.

NO GOODWILL ITEM.

The goodwill, as previously, is not represented by any figure on the books, although I daresay, if the business were valued as a

going concern, the valuer would probably include in his list of assets a very substantial figure to represent this item. The book debts, which stand at £638,803, are becoming larger, as the company is developing a considerable wholesale trade nowadays, and is not so strictly confined to a cash sale business as it once was, although the ratio of credit to cash transactions is still a very small figure. These have been written down wherever it has been thought necessary, and substantial allowances made for possible bad debts.

The investment account I have already dealt with, and the cash at bankers needs no explanation.

LIABILITIES.

On the other side of the balance-sheet the capital, both authorised and issued, is increased by the million 7 per cent. preference shares created and issued during the year.

The debentures and mortgages have increased by £355,806, and now stand at £1,548,197. In view of the increase in freehold and leasehold properties account, I do not think this calls for further comment.

Trade creditors, &c., at £2,179,000, are £137,000 less than last year. This is merely a normal fluctuation.

The profit and loss account I have sufficiently referred to in dealing with the front page of the report.

While I am dealing with matters affecting the balance-sheet figures, I might mention that, in acknowledgment of the services of the three managing directors, the board has again given them the privilege of applying for 2,000 "A" ordinary shares each at par.

RAILWAY CONTRACT TERMINATED.

During the year we gave notice to determine the contract as managers of the catering department of the London, Chatham and Dover Railway, as we were not satisfied with the premises generally. The refreshment rooms down the line needed a considerable expenditure to bring them up to date. The railway company was not prepared to spend any money on them, for we were bound in honesty to say that in our opinion such expenditure would not be remunerative, and as we did not consider that catering in such premises was consistent with the reputation of our company, we gave notice to the railway company to terminate the contract as at December 31st.

The restaurant at Victoria Station was of modern equipment, and we offered to the full what we felt the premises were worth if we continued as caterers, but we were informed that the railway company had received a much higher offer, and were therefore not prepared to accept ours. We therefore gave up possession of the whole of the premises on December 31st last.

WEMBLEY CRITICISMS.

Most of you are no doubt aware that the company has practically the whole of the catering at the British Empire Exhibition. There are only the Chinese Restaurant and the South African train for which we are not responsible. Certain of the Dominions and Colonies were not included in the contract made with the Exhibition authorities, but the most important have placed the catering for their buildings in our hands.

There has been in the House of Commons a certain amount of, shall I say, uninformed comment by way of question or innuendo which might imply that the Exhibition authorities had made some sort of hole-and-corner arrangement with this company, and it may be of interest if I state how we come to be there.

Those of you who have seen the Exhibition do not need to be told that it is the greatest ever seen in this country—probably in the world—and it is generally admitted that the success of such a venture depends a great deal on the catering, because if the visitor cannot be fed more or less decently he is likely to go away with a very bad impression, however good the Exhibition itself may be. A tired, hungry and thirsty person is not in the best condition for enjoying the most interesting sights. The Exhibition authorities recognised this, and they also recognised that, for a place on such a scale, anticipating such a large influx of visitors, your company was the only one capable of handling the catering in a proper manner. We foresaw the difficulties, which are far greater than anyone not in the trade could realise, and were very reluctant to embark upon the undertaking. We declined to tender, but very considerable pressure was brought to bear on us to enter into negotiation. It was pointed out that this was a national undertaking, and it was suggested that we should not be doing our duty if, as the largest caterers in the kingdom, we did not take a hand in it. We flatly declined to take any part if the catering were let out piecemeal, and subsequently came to terms which we think should be satisfactory to both parties.

COMPETITION AND WAGES.

It has further been hinted that because we have no competition the catering will suffer, but those who say there is no competition overlook entirely the competition of our own reputation. We cannot

afford to be any less popular at Wembley than we are elsewhere. We have to do the Exhibition catering properly, because if we do not it will have a very bad effect on our other trade, and, large as the contract is, it is a mere bagatelle compared with our staple business; it is only a side line. Then there have been comments as to the wages paid to waitresses, but never a reference to the fact that food, uniform, and washing are provided, and that the girls only work five days a week. Now, I do not want to discuss motives, but I will say that not all of the comment is purely philanthropic. I will also say that the girls' earnings are adequate, and the great majority of them will admit it; they make a great deal in tips. But some say we have no right to take that into consideration. We say that special circumstances obtain at the Exhibition, and we are justified in taking them all into consideration. Tipping is ingrained in the English character, and will go on whatever the wages and whatever the charges. If we are to ignore it and pay higher wages, we must charge higher prices, and thus the customer who feels he must tip pays twice, and quite unnecessarily, for I say again the girls' earnings are adequate, and I do not fear any challenge when I state that the catering staff is a satisfied staff.

ACCOMMODATION.

There have been criticisms, too, of the catering accommodation. Now, we cater for all classes, so that every visitor is a possible customer. There are over 20,000 seats to be filled at one time, quite enough to accommodate in the course of a day such a crowd of persons as is rarely seen in one place, and only 140 of these are in that luxurious establishment "Lucullus." We think we are entitled to expect a reasonable amount of common sense from the countless patrons of the Exhibition, for, under the difficult circumstances of such catering, it is impossible that on every occasion, in every place, every person attending the Exhibition shall receive just that attention he or she would desire to receive and we should wish to give. The demands on the space available at Lucullus are so great and the compliments we receive so high that we feel gratified to have been able to show that we can produce in England a standard of culinary art and service to vie with anything of its kind in the world. This is only as it should be in an Exhibition displaying the resources and abilities of the Empire.

WEMBLEY PROFITS WARNING

While I am on this subject I should like to warn you against any exaggerated idea as to the profits likely to accrue to this company. That blessed word "organisation" is being made much use of just now, and one hears, "Oh! with your wonderful organisation you must be serving enormous crowds and making no end of money." Well, I do not want to decry the organisation—it might be worse, and it might be better; but what I do want to point out is that the crowds are not organised and the weather is not organised. A crowd is not always the same size, and the weather is not always good. We must provide for an average day, and when the attendance falls below the average there is a certain amount of waste which cannot be avoided, and when the attendance is above the average we have to make the utmost use of our resources to cope with it at short notice, and this entails increased costs. The greatest Commissariat Officer of whom we have any record met emergencies by calling down "manna" from Heaven. But, unfortunately, those resources are not now available to us.

These great catering undertakings have so many traps and pitfalls that they need very wary handling, and the enormous profits are just as elusive as the great undivided pool of wealth which our Communist friends propose to use for the creation of that millennium for which we are all waiting, more or less patiently, according to our several temperaments.

I do not want to push this to the other extreme, and lead you to suppose that Wembley is likely to produce a loss. Notwithstanding bad weather, very large numbers of people have been attracted to this exhibition. We are gaining experience of their ebb and flow from day to day, and, if the present condition of things continues, I have no hesitation in saying that we shall come out satisfactorily, but I did want to say something to curb any improper valuation of the possibilities.

In view, too, of what I have said in my opening remarks on the subject of Wembley, I feel I ought to say that those who made this great Exhibition deserve our admiration. It is a credit to all concerned, and, although we entered on our part very reluctantly, we are proud to be associated with such a magnificent example of Empire enterprise and industry.

CONTINUED EXPANSION.

Speaking generally of the company's business, its factories, restaurants and tearooms continue to grow in size and in number, and there is every sign of progress generally in all the various branches. We feel that the business is established on thoroughly sound lines, and have no fears in considering its future. I have just said the restaurants grow in number. Perhaps I ought to mention that sometimes they diminish—temporarily. We have just disposed of the Maison Lyons in Regent street (not, of

course, to a caterer). We had a most tempting offer for the premises—an offer which the amount of business we were doing would not justify our refusing. The market value of the premises had, of course, greatly increased since we acquired them. It is not our normal business to deal in properties, but where one has the opportunity of such an enhanced capital, we should scarcely be considered prudent if we declined to deal.

The growth is represented among other acquisitions by the purchase of an additional two acres of land between the Hammersmith road and Brook green adjoining our Cadby Hall factories, for, in spite of the removal of so much of our business to Greenford, we are again crowded at Cadby Hall, where those goods are manufactured which it is essential should, for rapidity of transport, be near the place of their consumption.

HEREDITY IN BUSINESS.

I see that at Wembley—somehow or other Wembley will continue to intrude itself—they are having certain lectures on the effect of hereditary influences in trade, and there is a suggestion that those abilities which go to make a successful commercial man may be transmitted from father to son, and that certain families may inherit particular gifts in this direction. Well, I for one am not inclined to argue to the contrary, and if there be anything in the theory, then this company ought to go on to greater successes, for you have now three generations of two families who have devoted the whole of their energies and such intelligence as they possess to the development of this one branch of commerce—the preparation and distribution of food. With over 30 years' experience and the accumulated knowledge coming therefrom, we ought to be able to carry on that business in a manner which it would be difficult to surpass, and thoroughly justify the name applied to us recently by Mr Max Pemberton—"The House of Achievement."

TRIBUTE TO THE STAFF.

To the staff I must pay a warm tribute for their share in the attainment of the success we have to report. We are happy in the knowledge that a vast proportion of our employees—rank and file as well as those in higher positions—take a pride in giving of their best towards making the company's service to the public so popular. They understand the meaning of "team work," and pull together with us in a manner that excites our admiration and calls for hearty recognition.

THE RESOLUTION.

I have now the pleasure to propose: "That the report of the directors and the balance-sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 2s per share on the issued ordinary and 'A' ordinary share capital of the company and 4.8d per share on the proportional profit and 'B' proportional profit share capital of the company for the half-year ended September 30, 1923, be and are hereby confirmed; and that a dividend be paid for the half-year ended March 31, 1924, of 3s per share on the issued ordinary and 'A' ordinary share capital of the company and 7.2d per share on the proportional profit and 'B' proportional profit share capital of the company."

I will ask a shareholder to be kind enough to second that resolution, and shall then be pleased to answer any questions which shareholders may wish to put.

SHAREHOLDERS' CONGRATULATIONS.

Mr John Balfour said it was a great pleasure to him once again to second the chairman's resolution. This was the thirtieth annual meeting, and he had had the pleasure of performing that duty on 29 occasions out of the 30, which he considered a very good record. He had listened with much interest to what the chairman had said with regard to the British Empire Exhibition, which he had approached from a thoroughly Imperial point of view before dealing with it as a caterer. Certainly, the speech was an excellent one, and showed, among other things, that Mr Salmon had become a master of epigram. He had said that "good catering is vital to enterprise," and that "tipping is ingrained in the British character"—which he was sure shareholders present would agree with him in regarding as not bad epigrams. During the past year he had had the pleasure of visiting the company's works at Greenford, and was particularly struck by the happiness which was so plainly evident among those who were engaged there. Looking back on the remarkable development of the company's business, he was reminded that Dick Whittington, when he first looked over London, said, "What a city to make money in!" The German Field-Marshal von Moltke, in the early days of Queen Victoria's reign, when riding through London in a Royal procession, looked around him and said—or thought—"What a city to sack!" The late General Booth, founder of the Salvation Army, when he saw London, thought "What a city to save!" Some 30 years ago three men met in London—Joseph Lyons, Montague Gluckstein, and Isidore Gluckstein—and as they viewed the City they thought, "What a place to feed!"

Mr E. A. R. White congratulated his fellow-shareholders on the excellent results achieved by the company, and said he was very pleased to hear that the business at Wembley was being conducted on satisfactory lines. The shareholders were very much indebted to the directors and the whole of the staff for their able conduct of the business, and he hoped that every success would continue to attend their efforts.

Sir Edward Smith, in supporting the resolution, said that the company had undertaken a magnificent national work at Wembley. He was glad to hear that they were pressed to undertake it; it was a wonderful tribute to this organisation, and he quite believed that there was no other firm of caterers in this country who could have undertaken it on the same stupendous scale and with the same safety so far as administration was concerned.

A WORLD-WIDE ADVERTISEMENT.

He did not look at the matter merely from the point of view of financial results; he regarded it as the finest world-wide advertisement that J. Lyons and Co. could ever have had. He had been in all kinds of strange places and had seen some strange advertisements, but he had never seen one which could possibly prove so effective as the company's work at Wembley, because people in all parts of the world would say, "Lyons are the people—the only people; they are the people who fed us, kept us good-tempered, and enabled us to get round Wembley."

The resolution was carried unanimously.

Mr M. I. Gluckstein and Mr J. Salmon (directors) were re-elected, as were also Mr G. A. Pollard and Mr A. C. Watkins (employee directors), and Messrs Turquand, Youngs, and Co. were reappointed auditors of the company.

A cordial vote of thanks was passed to the chairman and his colleagues on the board, as well as to the staff.

The Chairman briefly acknowledged the compliment, and announced that the dividend warrants would be posted forthwith.

The proceedings then terminated.

SIALANG RUBBER ESTATES, LIMITED.

CHAIRMAN CONFIDENT OF THE FUTURE.

The fifteenth annual general meeting of this company was held on June 24, at 2, 3, and 4 Idol lane, London, Mr C. Heath Clark, J.P. (the chairman), presiding.

The Chairman, in the course of his speech, said: Last year we were able to record a very substantial reduction in our production costs. For the past year our crop under the voluntary regulation of exports scheme was 124,265 lbs down, but, in spite of this, our estate costs approximately very closely indeed to those of the previous year. On the present basis of output we cannot expect a further reduction in costs. The directors have decided voluntarily to regulate the export of the company's crop for a further twelve months from November 1st last to the same rates as are permissible under the legislation in British Malaya and Ceylon.

The company's three estates are clean and free from weeds throughout. The work of thinning out was systematically continued, as also was the usual routine inspection for and treatment of disease, from all kinds of which our estates fortunately enjoy comparative freedom. The standard of tapping all over is good, bark renewal is satisfactory, and the bark reserve position very good. The immature areas are reported to be in excellent condition, certain areas on our Tebing Tinggi estate being adjudged to be considerably above the average. With a view to facilitating the company's output of sole *crêpe* some additional machinery and extra drying space were provided during the year. Under date April 3, 1924, our visiting agent reports:—"Work is thoroughly up to date in all respects, and general condition of the company's properties quite first-class. A considerably larger crop could be handled with very little increase in expenditure."

The profit on the year's working, after writing off £5,100 as depreciation on mature areas, amounted to £33,741, and the directors recommend a dividend of 10 per cent., less income-tax, leaving £41,469 to carry forward.

I think we may look forward to the future with a good deal of confidence, in spite of the fact that the present market price is depressed. Our properties are in first-class order, and the future possibilities of yield are being very considerably augmented by the restriction placed upon our tapping, and, notwithstanding which, our production costs are low and the quality of our product first-rate. In all essential respects the Sialang Company is in a very strong position to benefit from any revival in the general position of the industry. Having regard to the way in which stocks of rubber all over the world have been, and are being, reduced at the present time, together with the increasing demand, it is difficult to imagine that a very considerable improvement in the market price can be delayed much longer.

The report and accounts were unanimously adopted.

BOOTS PURE DRUG COMPANY, LIMITED.

SATISFACTORY YEAR—INCREASED PROFITS.

SHOP HOURS AND COMPANY'S PUBLIC.

The thirty-sixth annual ordinary general meeting of Boots Pure Drug Company, Limited, was held at Station street, Nottingham, on Wednesday, June 25, Mr John C. Boot, J.P. (vice-chairman) presiding.

Mr A. L. Milne (secretary) having read the notice convening the meeting and the minutes of the previous meeting, Mr J. C. Parsons (Messrs Sharp, Parsons and Co.) read the auditors' report.

The Chairman said:—

Ladies and Gentlemen, As you have been in possession of the directors' report and accounts for some time, I presume we may take them as read. (Agreed.) There are one or two items I should like to comment on briefly.

BALANCE-SHEET—ASSETS.

On the assets side of the balance-sheet you will find that properties are up £22,636, but the expansion of the business is accounted for in the increase in amounts owing by subsidiary companies under the head of debtors. During the past 12 months these companies have opened 32 new shops, besides acquiring many freeholds of existing shops and new properties. As the Drug Company has had funds in hand, these have been employed profitably in loans to the subsidiary companies.

Stocks show a decrease of £105,851, largely reflecting the further decrease in prices.

LIABILITIES.

On the liability side of the balance-sheet there is nothing which calls for special comment. The changes which are shown in the ordinary capital and in the reserve fund were fully dealt with in our last report, and do not call for special mention now.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, we find that the trading profit comes to £781,265, against £752,690 for the previous year.

There are several charges against this trading profit which do not vary very much from the last year, and your directors again recommend the transfer of £20,000 to the general staff pension fund, bringing the total up to £40,000. We already have pension funds in operation for all qualified chemists in the subsidiary companies, and this new fund is for the rest of the staff, but until it has been built up further it is not possible to say exactly how it will operate. After making these charges a net profit is left of £628,619, as against £595,811 last year.

After paying the usual dividends on A, B, and C preference, and on A, B, C, and D preferred ordinary shares and four interim dividends of 9 per cent. each on the ordinary shares, we have a balance of £171,869, which, together with credit balance from 1923 of £138,682, makes an available total of £310,552.

ALLOCATIONS.

Out of this your directors recommend the transfer of £100,000 to the reserve fund. They also recommend that the last interim dividend of 9 per cent. (less tax) be the final one, making 36 per cent. (less tax) for the year on the ordinary shares, thus leaving £210,552 to be carried forward.

The probability of an increase in the interim dividends has been mentioned in the Press. I may state that it is not the present intention of the directors to increase the 9 per cent. interim quarterly dividend, even though the company might be earning more. We should want to wait until the accounts were finally audited at the end of the year before feeling justified in increasing the rate paid, and this would probably be done (if at all) by means of a final dividend. You will, I'm sure, agree, that in view of the still unsettled state of trade, this is the sound and prudent course to take.

THE PAST YEAR.

Turning now from the accounts to the business happenings of the past year, the outstanding event was the visit by H.R.H. the Prince of Wales to the works at Nottingham last August. The hearty welcome accorded by the employees showed how much the honour was appreciated; and the keen interest shown by His Royal Highness in all he saw had a stimulating and encouraging effect upon the whole of our staff.

I am sure the shareholders will be glad to hear that the visit which over 5,000 of our employees paid to Wembley on Saturday last was a brilliant success. All the arrangements were splendidly carried out, and the day passed off without a hitch. I am satisfied that the educational benefit derived from the exhibits and the intense appreciation which has been shown by the staff for this

opportunity of visiting the Exhibition, will amply repay the company for the outlay.

I should here like publicly to state on behalf of the directors and the firm, our deep appreciation of the splendid way in which Messrs Lyons and Co. carried out the catering. I have heard from many members of our staff that the arrangements were as nearly perfect as anything human can be when done on such a large scale.

I am glad to be able to report that we have been busier during the past twelve months, and that short time has been much less than in the previous year.

SUCCESS OF NEW MANCHESTER BRANCH.

Turning to the retail companies controlled by this business, soon after our last annual meeting we opened Boots' largest branch, under the Cotton Exchange in Manchester, and so far this has been an unqualified success. The service we are able to give there is much appreciated, not only by those who live in that city, but also by that great number who are in the habit of shopping in Manchester.

In common with other large retail firms, we have been asked recently by the Ministry of Labour to send a representative to a series of conferences to discuss conditions and hours of work and wages for retail workers, with a view to ascertaining whether it is necessary to set up a Trade Board.

We are only too willing to do all we can to help this or any other Government to take such steps as may be necessary to obtain satisfactory conditions of work in shops—always providing that such legislation is not solely in the interests of the shop worker, but recognises the fact that shops are open for the convenience of, and are kept open solely by, the purchasing public.

PUBLIC AND SHOP HOURS.

The vast majority of our customers are working men and women who of necessity can only do their shopping either when their own work for the day is finished or on their half-holidays, and if shop hours are curtailed to such an extent as to preclude this class of customer from shopping at their leisure, it will mean greatly lessened takings, and one of the consequences would be less money available for wages.

Of course, the supply of medicines greatly complicates this question of shop hours, as people cannot regulate their illnesses to fit in with definite times; prescriptions must be dispensed sometimes during Sundays and holidays.

COMPANY'S IMMENSE DRUG BUSINESS.

You occasionally see statements in the newspapers to the effect that we sell numbers of different articles not usually stocked by a chemist, and that the sale of drugs is a side line with us, but the makers of these statements forget that we have hundreds of small drug shops where we sell nothing but drugs and toilet articles. In fact, we do an immense drug and medicine business, by far the largest of that nature in the world, leaving out altogether such things as fancy articles, stationery, &c. Over 80 per cent. of our total business is exactly of the same nature as that carried on in the best chemists' shops in this country; in addition, we have over fifty surgical departments under fully certificated nurses, and every year we make up several million doctors' prescriptions.

That the public are getting to rely on us more and more, both when they are sick as well as when they are in health, is shown by the fact that last year we had over three million more customers than in the previous year.

BRANCH FOR BENEFIT OF EXHIBITION VISITORS.

Here, perhaps, I may mention that for the benefit of our customers visiting the British Empire Exhibition we have opened a small shop, under the management of a qualified chemist (as are all our chemist departments), at 5 King's gate, Old London Bridge, Wembley on a fatiguing day may be purchased. This is in addition to our exhibit of fine chemicals in the Fine Chemical Section.

Knowing the great interest our many thousands of shareholders take in the works, we have had a small booklet prepared giving a number of illustrations of our different activities. These booklets will be sent to all shareholders with the account of this meeting, and we trust will meet with general appreciation.

With regard to next year's results, I will only say this, that, whether trade is good or bad, your directors are confident that naturally, we hope that trade generally will improve, so that, in common with all other progressive concerns, we may show even better results.

TRIBUTE TO STAFF.

In conclusion, I wish, in no formal way, but very sincerely, on behalf of all the directors, and I'm sure on behalf of the shareholders also, to express our deep appreciation of the splendid work done by every member of the staff, wherever they are serving the company.

After this resolution has been seconded, I shall be very pleased to answer any question arising out of the report or accounts.

I have now much pleasure in moving the adoption of the report and balance-sheet.

Mr J. E. Greenwood: I have very much pleasure in seconding the resolution.

The Chairman: Are there any questions? If not, I will put the resolution.

The Chairman then put the resolution to the meeting, which was carried unanimously.

As a shareholder of 25 years' standing, Mr A. N. Bromley proposed the re-election of Messrs H. R. Gillespie, J. E. Greenwood, H. B. Holthouse, and L. K. Liggett as directors of the company. In some companies, he said, they had what they called figure-heads, who had loud-sounding titles, but in Boots they had workers whose knowledge was thorough.

Mr W. C. Church seconded, and the elections were unanimously approved.

Colonel Frank Braithwaite, C.M.G., D.S.O., of Messrs Foster and Braithwaite, offered the board the congratulations of those he represented in London, and said it gave him great pleasure to propose the re-election of Messrs Sharp, Parsons and Co. as auditors.

Mr O. W. Hind seconded and the appointment was unanimously confirmed.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

A hearty vote of thanks to the chairman and the directors was moved by Mr Thomas Greenwood, of Messrs Gane, Jackson, Jefferys and Freeman, who said their integrity and efficiency was well known, and, in his reply, Mr John Boot declared that, from himself as vice-chairman to the newly-joined office-boy, all worked for the firm and not self-interest. That was the secret of their success.

TAMPLIN AND SON'S BREWERY, BRIGHTON.

CONSIDERABLE INCREASE IN TRADE.

The annual general meeting of Tamplin and Son's Brewery, Brighton, Limited, was held at the registered offices, Brighton. Mr Alexander Miller-Hallett (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said: Last year, in spite of the satisfactory report we were able to place before you, I had to admit a slight falling off in our trade. On this occasion I am glad to be able to say there is a very considerable increase, and that the general character of our trade fully maintains the satisfactory nature which I brought to your notice at our last meeting. It is proposed to maintain the dividend of 1s per share, making, with the 1s paid in December last, 2s per share (equal to 10 per cent.) for the year, together with a bonus of 1s (equal to 5 per cent.), and to place £5,000 to reserve, bringing the same up to £96,000, and carrying forward £26,115 to next year's accounts. The gross profit is £176,220, and, after adding our income for the year from loan interest and transfer fees, the total is £176,824. Working expenses have amounted to £83,526, and, after providing for rents payable less receivable, depreciation, and compensation charges, there is a balance of £69,526, to which has to be added £2,344 for interest on investments and deposits. The balance brought forward from last year was £28,079.

The most interesting item in our report is the completion of the purchase of the Southdown and Grinstead Breweries, and the highly successful issue of capital which was made in order to bring this about. I should like to repeat and emphasise what I said last year, that business, to be really successful, must grow, and that nothing succeeds like success. You will, I feel sure, agree with me that our brewery is carrying on its work with a view to growth, and that all the alterations that we have carried out have been made with a view to possible extension in the future. I regret it is not possible to announce any further reduction in the heavy duties imposed upon our trade.

I would draw your attention to the constant danger with which we are faced in the attempt to introduce drastic legislation attacking our business. I would specially allude to the really iniquitous Bill put forward by the Bishop of Oxford. Unless those who have invested in this huge industry take a real interest in these matters by opposing and influencing their friends to oppose, there is a grave danger that we may wake up some morning and find that a deadly blow has been struck at our trade, which it may be too late to avert. The resolution was carried unanimously.

BARCELONA TRACTION, LIGHT, AND POWER COMPANY, LIMITED.

REORGANISATION OF THE COMPANY'S FINANCES.

At a meeting of the 6 per cent. first mortgage bondholders of the Barcelona Traction, Light, and Power Co., Limited, held at Winchester House, Old Broad street, London, E.C., on Wednesday, the 25th inst., resolutions were passed approving of the proposals put forward by the company and explained in a report issued by the bondholders' committee.

Mr E. R. Peacock (the president of the company and chairman of the bondholders' committee) acted as chairman of the meeting, and explained that he had been appointed to do so by the trustee for the bondholders, the National Trust Co., Limited, of Toronto, who had power to appoint a chairman.

THE OPERATING COMPANIES IN SPAIN.

Speaking to the meeting, as president of the company, Mr Peacock gave a brief history of some of the important events in the development of the operating companies in Spain and the troubles which had come upon the parent company at the outbreak of war. A great deal had been done since 1915 in building up the business in Spain of the operating companies, and the company's credit had steadily improved. He knew of no better investment than the securities of good power companies, and in the United States, where the greatest development of power had taken place, good power securities were put at the head of the list among the investment favourites.

PROSPECTS OF THE COMPANY.

Continuing, he said: The market for power in Barcelona and the surrounding country is one of the best in the world, and there are no power plants anywhere that I consider superior to the chief plants under our control; our difficulties have now been largely overcome, and when the present reorganisation has been carried through, the company may be regarded as being in a sound position. Its prior lien bonds are exceptionally well secured, and are highly regarded by well-informed investors. I should like to say just a few words regarding the business of the operating companies in Spain and what has been done to develop them. Since 1915 a very substantial amount has been invested in the business of the operating companies, mainly from the sale of securities of these companies. In addition, over £2,500,000 has been put into the business out of earnings. Part of this money was provided under the scheme of 1915, by which any surplus earnings were made available for capital expenditure, and part was provided under the heading of "depreciation." It has been our policy to keep the equipment of the companies in a high state of efficiency as part of the operating expenses, and I am convinced that this is the right policy, and that any great operating company such as you control must year by year put back into the business a very substantial portion of its earnings if it is to continue to grow and prosper, and must confine its increases of capital to those required for the larger developments which are called for only at long intervals.

A FAIR SCHEME.

The Chairman then explained the proposals and the reason for putting them forward. He expressed the opinion that, in the circumstances, they were fair, and that they would benefit all classes of securities.

THE PROPOSED SHAREHOLDERS' MEETING.

He said that a shareholders' meeting for increasing the preference share capital and cutting the ordinary share capital in two, which formed part of the scheme, would be held as quickly as possible, but owing to the strike of the Canadian postal staff it had not been possible to issue the notices convening the meeting.

The Chairman paid a tribute to his colleagues on the board and the bondholders' committee and to the legal advisers of the company and to the management of the operating companies in Spain.

After answering questions, the resolutions were put and carried unanimously.

A meeting of the income bondholders was subsequently held, at which the resolutions were also approved.

BLEACHERS' ASSOCIATION, LIMITED.**A SUCCESSFUL YEAR'S WORKING.****THE STAFF PENSION SCHEME.**

The twenty-fifth ordinary general meeting of the Bleachers' Association, Limited, was held in the Memorial Hall, Albert square, Manchester, on Friday, June 20, 1924, Col. Sir Alan J. Sykes, Bart. (the chairman) presiding.

The secretary (Mr R. H. Eccles, F.C.I.S.) read the notice calling the meeting and the minutes of the 24th ordinary general meeting.

The report of the auditors was read by the secretary.

The report and balance-sheet were taken as read.

The Chairman said:—Ladies and gentlemen, I have much pleasure in submitting to you the twenty-fourth annual report of Bleachers' Association, Limited, covering the accounts for the period ending March 31, 1924.

But before proceeding to deal with the accounts, I regret to have to announce the death of one of our directors, Mr. G. Marshall Blackwood, during the period under review. Mr. Blackwood was closely connected with three of our Scottish branches, and although he had only been a director for about three years, he was a most regular attendant at our meetings, and we shall greatly miss his advice and support, especially in connection with our Scottish yarn branches.

We have also lost, by death, one who was an active member of the Formation Committee, which brought our company into being in 1900, and who was one of our original directors, and who, although he resigned his directorship some little time ago, owing to pressure of business affairs, continued to help our concern till the last. I allude to the late Mr. G. Norris Midwood. By his death we have lost a friend impossible to replace, and the Manchester business world is the poorer by the death of one who was universally known for his upright dealing and his public spirit in working for the good of all those with whom he came in contact.

I will refer to just one other matter before commencing the accounts. I feel quite certain that all of you would like to join me in offering our most hearty congratulations to our colleague, Sir William Clare Lees. I feel sure that we all congratulate him upon the honour which has been conferred upon him by His Majesty the King. I can assure you that it is an honour of which we of the Bleachers' Association are justly proud, as we know that the recipient of it has, by sheer hard work, perseverance, and outstanding ability, thoroughly earned it.

RESULTS OF THE YEAR.

And now turning to the accounts, you will notice these have been sent to you drawn up in the form to which you have been accustomed in previous years, and I feel sure you will feel gratified that notwithstanding the difficult times through which the cotton trade has passed in the period under review, your directors are able to place before you results very much the same as a year ago. You will notice that, after charging £379,328 for repairs and maintenance, as against £410,499 a year ago, and after making the usual deductions, including estimated amounts for income-tax, corporation profits tax, special repairs, and other contingencies, and charging the same amount as last year for depreciation and debenture interest, there remains a net profit of £795,378, which, with the balance brought forward from last year, gives an available balance of £1,157,090. This compares with our available balance last year of £1,147,870.

RESERVE AND DIVIDEND.

Out of this balance, after paying the preference dividends, the directors recommend that a sum of £125,000—the same as last year—be placed to the general reserve fund; that a sum of £50,000 be again placed to the superannuation fund (which fund I shall allude to later), and that a final dividend of 15 per cent. (actual) be paid, making 20 per cent. for the year, being the same dividend as we paid a year ago. These deductions will leave a balance to be carried forward of £371,885, which is slightly in excess of the amount brought into the accounts.

SUPERANNUATION FUND.

As regards the superannuation fund, you will notice that the transfer now recommended will bring the total up to £250,000. This fund is entirely separate from our staff pension fund. The staff pension fund, as its name indicates, is confined to members of the staff and is a contributory fund to which both the staff and the company contribute, and provides them with pensions on a recognised scheme. The superannuation fund is applied for the benefit of all the employees of the company who may require assistance through infirmity or age, and whose cases are ineligible for, or are not fully dealt with by, the staff pension fund. This fund is administered by the directors. By means of it they are able to deal sympathetically with all deserving cases amongst their employees that may be brought to their notice. This amount of £50,000, together with the amount you have previously voted to

the superannuation fund, making a total of £250,000, remains invested in the business of the company, and the interest which is credited to it is used for the benefit of the employees.

We have at the present time 247 employees who are receiving pensions through this fund, which exhausts the present income of the fund, and, as the number of pensioners is increasing, your directors have thought it advisable to recommend this further transfer of £50,000. When this transfer has been made there will be additional income available, which will enable further pensions to be granted.

The pensions granted by the superannuation fund are very highly appreciated by those to whom they are given, and the directors feel sure that you will approve this additional transfer, and so help to increase the usefulness of this fund.

Last year I went fully into the details of our staff pension fund, so it is unnecessary to say more about it this year than that it is now in regular working order, and is very much appreciated by the members of our staff.

THRIFT FUND FOR FEMALE EMPLOYEES.

We found, however, that our staff pension fund was not sufficiently comprehensive, inasmuch as it dealt only with the male members of our staff, and the female members were not included. There were obvious difficulties in including both males and females in a pension fund. At the same time, we felt that it was only right that, in as far as it were possible, something should also be done for our female staff, and so during the year under discussion we have started what we call a "Thrift Fund" for females on our office staffs. Like the pension fund, this is a contributory scheme, both the association and the members contributing, but the benefits are of a different nature. In this case there is no question of a pension. The rules provide that any member retiring for legitimate reasons from the service of the association, or dying while in the service, is entitled to receive the whole of the monies standing to such member's account, including the contributions made by the association and all income and interest credited to such account. By this means, should a girl after being with us for a few years retire, say, for the purpose of getting married, she has a nice little nest-egg on which to start housekeeping, and, similarly, if she should wish to leave off working when she reaches the age of 45, she has a similar right to withdraw all that is credited to her, and I am glad to say this scheme has been gratefully received by our female staff, and it has rounded off our staff pension scheme.

NEW OFFICES.

Another scheme we have launched during the last year is the building of new offices for housing our central office staff. For this purpose we bought a plot of land at Blackfriars Bridge, with frontages to the River Irwell, Blackfriars street, and Parsonage, and we are now engaged in putting up a modern building. As this building will be in a conspicuous position, we determined to put up a building which will be a credit both to ourselves and the City of Manchester. We are accordingly constructing it of Portland stone, and you will find in your seats a little booklet giving a picture of the building and setting out the accommodation available. It is our intention to occupy the top storeys, and to let out the bottom storeys as offices. We calculate we shall have the most modern offices in Manchester, and they will also be some of the best lighted. We have already, although the building will not be completed till next year, let part of the ground floor to a leading Manchester bank, so that intending tenants will find a bank in their building. In addition to that, we shall have a large room for holding meetings, which will be available not only for our tenants, but for other businesses requiring rooms for their annual meetings, and I hope it will be possible for us to hold our next annual meeting in that room. I am glad to say that we anticipate that this building will prove a good investment, and I hope you will take away the booklet on the seats and show it to any of your friends who may be requiring offices.

WELFARE WORK.

I should like to say a word as to what we are doing on the welfare side of our business. I have told you at previous meetings that we were encouraging the laying down of bowling greens at our various works, and we were providing funds for the purpose of laying out the greens and for making suitable pavilion accommodation. We have now got some 14 bowling greens made or in process of formation at our various branches, but in addition to this we are also providing funds for laying out tennis courts, so that our female employees, equally with the men, may share in our recreation schemes, and we find that this action of ours is very much appreciated.

LOYAL CO-OPERATION OF THE EMPLOYEES.

When I addressed you a year ago, I was able to refer to the very cordial relations existing between the managing directors and our workpeople during the year, and it is a matter of much

satisfaction to me to be able to tell you that the same good relations have continued during the year covered by the accounts.

In this connection, I wish to express, on your behalf, to the managing directors and central office staff, and to the managers, staff, and men of all our branches, and I include our engineering and transport branches, our hearty appreciation of their hard work and loyal co-operation, without which an association such as ours cannot hope to succeed. We appreciate the fact that all of them have so co-operated, and we hereby tender them our hearty thanks.

GENERAL POSITION.

In conclusion, I will add one word about the general position of our company.

We have now been established 24 years, and I am glad to say that the accounts that we have had before us to-day show a very satisfactory year's working, but during these 24 years we have had to go through lean times, and the average dividend paid on our ordinary shares since the formation of the company only amounts to just over 6½ per cent.

FUTURE PROSPECTS.

As to our future prospects, I hesitate to prophesy. As I said last year, our trade is dependent on the world's markets, and these in turn are largely influenced by the unstable political conditions abroad. Should these conditions improve and general trade become better, I can assure you that we are well equipped for getting our full share of it. Our experience of the last year has shown us that we have fairly held our own with our competitors, whether those competitors are operating in this country or on the Continent, and with the improvements that we are continually making in our works we may reasonably anticipate not only retaining our full share of any trade that may be going, but of attracting even a fuller share.

It was moved by the Chairman, seconded by Mr A. K. Davies, and resolved, "That the report of the directors and the statement of accounts to March 31, 1924, be and they are hereby approved, and the shareholders hereby declare a dividend at the rate of 5½ per cent. per annum on the preference shares to March 31, 1924, and at the rate of 15 per cent. per annum (actual) on the ordinary shares for the half-year ending March 31, 1924, making with the interim dividend at the rate of 5 per cent. (actual) paid in December, 1923, 20 per cent. on the ordinary shares for the year."

RE-ELECTION OF RETIRING DIRECTORS.

It was moved by Mr A. L. Arnold, seconded by Mr J. E. Plant, and resolved, "That the following be and they are hereby re-elected directors of the association:—Arthur K. Davies, John J. Kirkpatrick, Andrew McNab, John R. Ragdale, Alister Reid, John W. Simpson, John W. Slater, Sir Alan J. Sykes, Bart., John T. Taylor."

APPOINTMENT OF AUDITOR.

It was moved by Mr P. M. Crompton, seconded by Mr P. B. Brown, and resolved, "That Messrs Jones, Crewdson and Youatt and Messrs. P. and J. Kevan be and they are hereby appointed joint auditors of the association at a fee of £200 per annum, in addition to the amounts paid by subsidiary companies."

A vote of thanks to the chairman was moved by Mr D. Q. Henriques and seconded by Mr J. Watson.

**EBBW VALE STEEL, IRON, AND COAL COMPANY, LIMITED
CHAIRMAN ON NATIONALISATION PROPOSALS.**

The fifty-seventh ordinary general meeting of the Ebbw Vale Steel, Iron, and Coal Company, Limited, was held, on the 24th instant, at the Cannon street Hotel, London, Sir Frederick Mills, Bart. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: I find myself fortunate enough to be able to report a satisfactory year's trading, showing a profit, which, but for the troubles of the previous three or four years, would have enabled us to recommend a reasonable dividend on the share capital of the company. The year's work has on this occasion been characterised by a good coal market, accompanied by a bad one in steel, and in particular by industrial peace in the area operated by the company and its associates, coupled with comparative industrial peace in our own markets—conditions which spell prosperity. The net profit for the year is £305,421, which, with the amount brought in of £69,131, gives a total of £374,552 available for disposal. The directors recommend that £100,000 be placed to the general reserve account, thus replacing a like amount taken from it two years ago, that the preference dividend, amounting to £84,000 for the year ended March, 1923, be paid, and that £190,552 be carried to the accounts of the current year. The shareholders will observe that this sum embraces sufficient to cover the preference dividend for the year under review.

(Incorporated under laws of State of New York), and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

COAL AND STEEL.

Last year, in reviewing the position, I was compelled to lay stress on our lack of success, and to lay the bulk of it at the doors of labour. Fortunately on this occasion I am glad to report that, on the whole, peace has reigned at Ebbw Vale and its subsidiaries. This is reflected in the increased output of our principal commodities, and you may like to know that the output of coal for the whole group reached the substantial figure of 4,770,315 tons, the largest since the introduction of the seven-hours' day.

There was a strong demand for coal and coke in the spring and summer of last year, but towards the end of it, and since, it has been with difficulty the pits have been kept going. In like manner the demand for pig-iron and steel was good in the spring and summer of last year, due principally to the occupation of the Ruhr Valley by the French, but the political disturbances, both at home and on the Continent, commencing in the autumn and continuing to this present time, have had a depressing effect on that industry, and prices have become unremunerative for pig-iron and for heavy steel.

The importation of Continental iron and steel has increased to more than the pre-war figure, and is now about 200,000 tons a month. This steel is produced at the point of origin under conditions, both as to wages and hours of work, inferior to those obtaining in this country, and, moreover, pays nothing to represent the charges which fall on the home manufacture in respect of Imperial, local, and social obligations.

NATIONALISATION PROPOSALS.

I regret I cannot see that sufficient confidence has been gained in the world of finance to justify a hope that international trade is mending; on the contrary, political thought is taking a strange line of country. There is a large body of public men, honest enough I daresay, but I venture to think misguided, who say that the nationalisation of certain key industries—notably coal—will be for the public benefit. Your board does not share their views. We are clearly of opinion that if the coal industry is placed under bureaucratic control, all incentive to keep the cost down will be lost, and the price of coal must either rise by leaps and bounds, or coal-mining be subsidised by the State. In either case the cost to the community at large will be stupendous.

Coal, and cheap coal, is of the first importance to all the other industries. In the opinion of most industrialists the price of coal is already too high, and how any sane person can imagine the cost, and therefore the price, can be mended by taking the conduct of the problems and intricacies associated with coal mining out of the hands of men trained to deal with them, and placing them in the hands of a set of visionaries and amateurs, passes my comprehension.

An important point which seems to have been overlooked by the authors of the scheme of nationalising the coal mines is, that practically all the blast furnaces and heavy steelworks are physically attached to the collieries associated with them.

Are these amateurs going to set the clock back and segregate the iron and steel works from the collieries, or are they going to add the problems and intricacies of iron and steel making to their responsibilities in the matter of coal mining?

I do not see any sign of immediate improvement, but I see no harm in hoping for the best, and in trying to do our best in the circumstances in which we find ourselves, in the certain hope that if we all do so we shall the sooner regain the prosperity we once enjoyed.

The resolution was carried.

JOHN BROWN AND COMPANY, LIMITED. IMPROVED RESULTS—FUTURE PROSPECTS.

The annual meeting of John Brown and Co., Limited, was held, on the 24th instant, at Sheffield, Mr Bernard Firth presiding in the absence of Lord Aberconway.

The Chairman, in moving the adoption of the report and accounts, first referred to the death of Viscount Pirrie, a director of the company, and a vote of sympathy was passed to the widow, the shareholders standing as a mark of respect.

Continuing, he said that the directors felt sure that the results of the year's working would be read with pleasure. As intimated in the report, the conducting of the business during the last financial year had been by no means easy, and as regarded profit in the manufacturing sections, almost an impossibility. At the Atlas Works the number and volume of orders had certainly been larger, but by no means equal to keeping their plant, even of pre-war dimensions, in full operation, and still less the improved and enlarged plant inaugurated since the close of the war.

For this improved volume of trade their thanks were largely due to the home railways, who had found a considerable amount of work for the iron and steel industry of the country, and Messrs John Brown and Co. had had their fair share of it by making up arrears of maintenance, which were bound to have been somewhat

neglected during the war period. In spite of foreign competition, which, under exceptional rates of exchange and working conditions abroad, made it possible for supplies to be obtained from abroad at much lower prices—in spite of that, the railway managements had preferred to place the bulk of their orders in this country.

Happily, in this district employers had been spared in the last 12 months any serious trouble arising from labour disputes, and to this fact and the general appreciation on the part of the workmen of the situation the results obtained, such as they were, were largely due.

SHIPBUILDING.

The shipbuilding industry in Great Britain at the present time was passing through a very trying ordeal. While the total volume of shipbuilding construction in progress amounted to one-half of what it was in 1914, the volume of naval ship work was only one-sixth, and he need hardly tell them how severely this hit a company such as John Brown, not only at Clydebank, but still more at the works in Sheffield. As a result of this shortage the prices ruling were such that no profit was included in them.

The firm had suffered from the seven months' dispute with the ironworkers, which practically paralysed all the shipyard work from the end of April to the beginning of last December.

In regard to the collieries, the men had worked well, and possibly at no time had the colliers' earnings in this district been better than was the case in the past year. In regard to Brown's Collieries, the output had been larger than in any of the past seven years, the demand there being largely due to export. It was only right, however, to bear in mind that the extensive exportation which they went through a short time ago was not likely to continue.

In regard to future trade, serious competition might be expected, not only from Germany and France as they settled down to regular work, but also from America, and an increase in the cost of production of coal in this country would mean reduction in the quantity exported.

RESULT OF YEAR'S OPERATIONS.

The result of the operations for the year was much the same on the whole as for the previous year, and this had only been possible by accepting orders which, with a moderate share of standing charges, left in many cases no profit whatever, but the policy of the board was to find employment for as many departments and men as possible. In the meantime, in the hopes of better times coming, the plant was being maintained with the same object, so that they could hope for the coming of better times, and they would be able to deal with any requirements which might come forward. The year's profits had been considerably assisted by the earnings of the subsidiary companies in which they were interested. Without them the dividend now proposed would not have been possible.

With regard to the current year, he was not proposing to make any prophecies. Times were not looking too rosy, neither here nor abroad, but they were often told in the Press that trade was improving, that trade was in effect good, but he could not agree at all times with what they read. No doubt, if the situation on the Continent were cleared up some certainty in foreign relations might be expected. There was little doubt that there was a considerable amount of work still to be placed in the engineering line, if only confidence could once more be thoroughly restored, but, as they all knew, the troubles they had met with from time to time—labour troubles and one thing and another—had destroyed much confidence with friends who ought to be their customers.

The report and balance-sheet were adopted.

EASTERN TELEGRAPH COMPANY, LIMITED. NEW PATENT WIRELESS COMPETITION.

The annual meeting of the Eastern Telegraph Company, Limited, was held, on the 24th instant, at Electra House, Moorgate, London, Sir John Denison-Pender, G.B.E., K.C.M.G., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The accounts now before you show a net reduction in gross revenue of about £437,000, against which, I am pleased to say, there has been the substantial reduction in the working expenses of £396,000, so that the net profit is only £41,000 less than the preceding year—a result which, in view of all the circumstances, I think you will deem satisfactory, for while we are still paying the same dividend as paid for the preceding four years, we have been able to make a contribution of £300,000 to the general reserve fund and to carry forward to next year's account £521,423. Regarding this decrease of £437,000 in the company's revenue, a certain amount of this may be attributed to the reopening of the Indo-European Telegraph Company's overland route to India, and the remainder to trade depression spread over the whole of the company's system. It is, I think, most gratifying to find that the substantial decrease in working expenses is reflected in practically

every item in the company's revenue account; the larger amount, however, is due to the withdrawal of allowances temporarily granted to the staff on account of the economic conditions arising out of the war, and here I may say that this has been loyally accepted throughout the service.

EXPENDITURE ON NEW CABLES.

The £300,000 which has been allocated to the general reserve fund out of the profits of the year has been charged out on the other side of the general reserve fund account in respect of expenditure on new cables, &c., held in suspense, to which I referred at some length at our last meeting, but you will see by reference to the balance-sheet that there still remains about £1,350,000 to be dealt with in future years. I must remind you that we have, in conjunction with the Eastern Extension Company, incurred the heavy expenditure of about 5½ millions since the termination of the war on account of a new line of cables to the East, and on important renewals to our existing sections to improve our service generally, of which sum this company only applied to its stockholders for £1,000,000. It has again not been necessary to make any addition this year to the amount set aside in the past for investment fluctuation, as this account shows a surplus of £372,000.

Last year I referred to the fact that, owing to the excellent margin of capacity for traffic, we were reducing the number of our repairing ships with a view to economy. During the year the cable-ship "Electra" was sold for breaking up, and the cableship "Britannia" was placed out of commission, and is now being used at Zanzibar as a hulk in the place of shore tanks for the storage of stock cable; both these ships were 38 years old. Our new cable-ship, the "Mirror," was placed in commission in the Red Sea during the year, having been built on approved modern lines, with oil fuel, &c., by the eminent firm of John Brown and Co., of Clydebank. You will, therefore, see that we have reduced the fleet by one ship in the hope of effecting economies without impairing efficiency, the full result of which, however, cannot be reflected in the current year, as the "Electra" was not sold until November.

DAILY LETTER TELEGRAMS.

On September 1st a new service of reduced rate telegrams was introduced, known as daily letter telegrams. These messages are accepted on any weekday, and are charged for at one-quarter of the ordinary rate, delivery being effected after 48 hours from the time of handing in. So far as we are able to judge up to the present, they have had little adverse effect on the full-rate and deferred traffic. The time in transmission is now, I am glad to say, back to the pre-war standard, and in many cases considerably improved since that time, and we are sparing no effort to effect an even greater improvement over the high degree of efficiency which had been reached prior to August, 1914.

As a proof of the efficiency of the service, it will be within your knowledge that on the occasion of the opening of the Wembley Exhibition his Majesty the King sent a message round the world which was transmitted outward over the lines of the Imperial and Pacific British route to Australia, and homeward by the Eastern Associated companies, a total of 31,560 miles, in 80 seconds, 17,000 miles of which were over the cables of these companies. The result of the Derby transmitted by these companies beat all previous records by reaching India, South Africa, and South America in 15 seconds, Hong Kong in 30 seconds, and Australia in 60 seconds, 15 seconds, I think, that our service is second to none. Special arrangements were, of course, made for the transmission of these messages, which, in common with all other messages, were dealt with by automatic apparatus throughout, except at the two extremities, where, obviously, human agencies were involved.

OPERATIONS IN TURKEY CEASE.

I regret to inform you that we have recently found it necessary to cease operations in Turkey. A dispute has arisen over a sum of over £100,000 due for terminal rates at Smyrna during the hostilities between Turkey and Greece, and the amount is claimed by both parties. We have repeatedly conveyed our desire to pay over this sum, which has been provided for in our accounts, immediately to the rightful party to be settled by international arbitration. Neither country has agreed to this course, though the matter has been pressed through the diplomatic channels. Turkey is proceeding against us in her country for the recovery of this amount, and Greece threatens to take similar action. Turkey has, however, closed our offices in her territory, and we have, therefore, had no alternative but reluctantly to terminate the engagement of the Turkish staff and withdraw from the country. I do not think, however, you need feel perturbed, as the present profit derived from the Turkish traffic, after paying expenses, does not materially affect our revenue either one way or the other, although, on sentimental grounds, we, of course, regret that associations which have been so cordial during practically the whole of the company's history should have been terminated, whether temporarily or permanently, through no fault of this company.

You are doubtless aware that the South American traffic of the Western Telegraph Company is partially dealt with by this company, and for some time past messages to and from this destination

General Manager and Secretary:—HUGH LEWIS.

exchanged with Paris and Northern France have been subject to considerable delay on the French land lines, thus placing the Associated companies at a disadvantage when competing for South American traffic. This company, therefore, opened negotiations with France for obtaining a special wire between Paris and London, which up to the present has been refused. Representations have been made in the proper quarter, and we feel very strongly that as special wires are accorded by the British Post Office to the French cable company competing in this country for South American traffic, corresponding facilities should be granted to a British company in France. We are, however, still pressing for this facility. Direct communication was established between our main instrument room in London and Emden, in Germany, on February 12th of this year. This cable will temporarily take the place of the cable communication formerly existing between Emden and our station at Vigo, in the North of Spain, and again places the company in direct communication for German cable traffic on to our system.

NEW PATENT AND THE POST OFFICE.

During the past year the Associated Companies acquired the rights of a patent for super-imposing another means of communication on the existing cables. This new invention of super-imposing enables us to send an additional message at the same time in one direction, so that you have on one copper wire two messages going one way and one message coming the other way at the same time, thus providing a third channel on an existing cable with small additional expense. As you are doubtless aware, your company rents from the Post Office seven underground wires between London and Cornwall, for which we pay over £17,000 per annum, and we naturally assumed that the use of this invention on the existing wires leased from the Post Office would be permitted by them without additional charge. We have received, however, an intimation from the Post Office that they will have to make an additional charge based on the standard rates of rental. Correspondence has taken place with the Post Office on this subject, and we have no doubt that in the course of negotiations this matter will be settled to our mutual satisfaction.

We have a direct tri-core cable route of our own between London and Belgium, and one of these conductors could be utilised for direct working with Holland, with a considerable benefit to ourselves and to the telegraphing public. The Netherlands Government are quite agreeable to the use of this route for Dutch traffic exchanged with all parts of the Eastern Associated Companies' system, but I regret to say that the Post Office debar us from transmitting this traffic over our own line, although we have offered to pay them a special rate. Consequently we have been forced to use the land-line route via Marseilles, where our cables land, through France to Holland.

WIRELESS COMPETITION.

For some years past, at these meetings, it seems to have been expected that I should make some statement concerning wireless. Nothing has transpired since last we met to alter in any way the opinions which I have previously expressed. There is little doubt that though wireless has demonstrated its great practical value in very many different ways, it still remains true that the submarine cable, with its world-wide privacy of transmission and freedom from atmospheric disturbances, is the most reliable, swift, and secret method of international communication. I can only state with confidence that the Associated Cable Companies to-day are more highly efficient in every way than during any other period in their history, and the efficiency of to-day must in future years continue to improve as it always has in comparison with the past.

The report and accounts were carried.

GREAT INDIAN PENINSULA RAILWAY COMPANY, LIMITED. **MATERIALLY IMPROVED RESULTS.**

The 149th half-yearly general meeting of the Great Indian Peninsula Railway Company was held, on the 27th instant, at 48 Copthall avenue, London wall, London, Sir Chas. H. Armstrong (chairman of the company) presiding.

The secretary (Mr R. H. Walpole) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that the position of the railway had improved very materially, and surplus profits had been earned. Gross earnings, it was true, were 20½ lacs, or 1.36 per cent. less than in 1922-23, but, on the other hand, expenditure had declined by 132 lacs, or 11.73 per cent., and that had resulted in net earnings of about 490 lacs, as against 378 lacs a year ago, an improvement of 111½ lacs, or 29.54 per cent. Gross earnings a year ago of just over 15 crores had been a record, and, although they had not earned quite as much during the past year, they were over a crore ahead of 1921-22, and 6½ crores better than 10 years ago. The steady growth of traffic during the past decade was very encouraging, and, although increased receipts of the past two years were due, in some measure, to higher rates and fares, there could be little doubt that traffic was steadily increasing, and, if trade conditions were favourable, it would continue to increase. After taking into account the interest charges on debentures and advances and loans from the Secretary of State, there was a profit of a little over 89 lacs, of which the company's share for distribution was one-twentieth. They proposed to pay a dividend of ½ per cent., in addition to the 1½ per cent. guaranteed for the six months, which made a total dividend for the year of 3½ per cent. Out of surplus profits they were carrying forward a balance of over £10,000, as their contract with the Secretary of State ended a year hence, and certain expenses and adjustments might have to be provided for in their final account.

PASSENGERS CARRIED.

They had not carried as many passengers during the past year as they did in 1922-23. The decline in numbers of 1½ millions, or 3.3 per cent., was spread over all classes, but had been particularly heavy in the first class and second class. Passenger traffic had been affected undoubtedly by trade depression, and the effect was greater in the first and second classes. The total number of passengers carried during the year was 39½ millions, against nearly 41 millions in the previous year, and their total receipts from coaching traffic were less by 11½ lacs. The falling off in passenger traffic had occurred almost entirely in the first six months of the year, the figures for the last six months showing only a slight decline. The improvement had continued since the year ended, and, if there was again a good monsoon, he looked for a steady increase in numbers as the year progressed.

The heavy decline in expenditure was the result of a very exhaustive inquiry into the working of all departments, which had enabled them to effect many economies. The decrease was mainly due to changes and reductions in the staff, to the cessation of various allowances, to economy in the use of stores, and to less expenditure on many things. One of the most important factors of that reduced expenditure had been the successful working of the new transportation and commercial departments.

THE CURRENT YEAR.

As regarded the current year, all he could say at present was that for the first two and a-half months they were ahead of last year's traffic by 26 lacs of rupees. The future depended to a very great extent on the monsoon, which set in quietly in Western India about 10 days ago. If good harvests were again reaped, trade ought to improve, and if so, traffic might continue to expand. An increased export trade was, however, largely dependent on more settled conditions in Europe and improved exchanges, which did not seem very likely at present. Stocks of imported articles were running down, and, as supplies must be kept up, a steady trade in most things was likely if the monsoon gave good rain all over the country. The import trade of the country must, however, to some extent be affected by the high Customs tariff which now prevailed. India, although a rich country collectively, was relatively poor individually, and, if the cost of necessary articles was unduly enhanced and the cost of living thereby increased, the general trade of the country, both import and export, must suffer. In some directions India was now drifting to extreme protection, and the Tariff Bill, lately passed, giving excessive protection to the steel industry, was bound to have an injurious effect on the general development of the country. The railway could not expect to benefit from changes of that character, which would affect the cost of construction and repairs, besides limiting, in all probability, the volume of the traffic which it would have to carry.

The report and accounts were unanimously adopted.

CONSOLIDATED LONDON PROPERTIES, LIMITED. **IMPROVED FINANCIAL POSITION.**

MR PODMORE'S CRITICISMS OF PROPERTY LEGISLATION.

The ordinary annual general meeting of the Consolidated London Properties, Limited, was held, on the 26th instant, at the Cannon street Hotel, London.

Mr J. H. Podmore (chairman and managing director) presided. The secretary (Mr J. H. White) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—In the revenue account gross rentals show an increase of £10,901. The greater part of this is the result of reletting St. Stephen's House, and was anticipated in my remarks last year. Cost of upkeep, which in 1923 showed a reduction of £6,444 over the previous year, is up £3,135, and the balance of rents is £8,312 more than last year. Dividends on investments, which is a net figure, income-tax being deducted, are up £1,394.

May I here refer to Press criticisms on these accounts? They say nothing is added to the reserve fund. The fund to which they refer is completed, £40,000 being the sum required by the trust deed. The statements ignore our other funds. Actually, we have increased the allocations to reserve.

APPROACHING REVALUATION.

The approaching quinquennial revaluation will disclose what is necessary for the Temple Chambers reserve consequent upon the Corporation of London's Reclaimed Land Act, 1920. Our capital loss is the greater because any new revenue is subject to income-tax while the rate liability is not. We have, therefore, to provide a gross income substantially in excess of the extra burden of rates. We also make a substantial addition to the contingency reserve before showing the final balance, because we know that it is only by care that we can hope to maintain the proposed dividend.

The casual critic may think our prospects go beyond this, but I would warn the shareholders that the greatest care is necessary if we are to maintain our past 15 years' record of a justifiable dividend with prospects of improvement. We are paying the largest dividend which, in our opinion, the actual position justifies. We are rapidly approaching the highest point of our earning capacity. There are still some empties at St. Stephen's House, and gross rents may again go up this year, but 1925 will bring the end of this quinquennium, introducing the new rateable liability of Temple Chambers, and probably a return to the pre-war conditions; *id est*, rates, instead of falling year by year, will have reached the lowest level and follow previous experiences of a gradual rise. These are points which suggest the greatest difficulty in the approaching revaluation, which will decide the actual prospects for another five years. We propose to pay a final dividend this year of 6 per cent., making 10 per cent., as against 8 per cent. last year, and carry forward £10,777 16s 5d, an increase of £4,200 2s.

RECENT LEGISLATION.

At the recent meeting of the City and West-End Properties I spoke at some length on the subject of the Rents Act, the new Rating Bill, and the Rating of Land Values. I will try not to repeat myself.

The *Financial News*, commenting on the meeting, said: "If it is true that the road to the infernal regions is paved with good intentions, it is also often the case that a legislative measure, prompted with the genuine idea of bringing about reform, produces exactly the opposite result in practice." Take the Rents Act: it was introduced to prevent profiteering in rents and to assure a reasonable rent being demanded and paid. Let me quote two cases. A 21-years lease expired in 1913; the tenant was ill and called on the landlord, pleading for a renewal at a reduced rent. When the lease was first agreed rates were 5s in the £. The landlord asked for an addition to cover increased rates, but was told that the tenant could not pay the then rent. A short agreement was arranged in the spirit of philanthropy. The old man became a tenant under the Act and died; the executors were offered a large premium for possession and accepted. Another case: a lease expired and the tenant called upon the landlord for a temporary renewal. The landlord refused, having an offer of £90 per annum over a period of years. The tenant then offered £120 for one year, and it was accepted. This Act then operates and says the rent is not £90, but £120.

Because the landlord in the one case was considerate he is penalised under the Act, and in the other case future tenants are invited to pay on the basis of what was never considered a rental value, and the tenant seeking accommodation is in both cases induced to pay more than could reasonably be asked or paid—the one by way of premium and the other as rent—while the landlord in neither case gets a true rental value. I suggest that,

excepting weekly or monthly tenancies, it would be difficult to find any "standard rent" which was a true rental value if the premises had been let on lease at inclusive rents. Certainly, so far as flats are concerned, the Act ignored altogether the basis on which rent is calculated.

NEW RATING BILL AND FLAT OWNERS.

As to the new Rating Bill, I wonder how many people realise that, as drafted, the owners of flat properties were deprived of all control over their rateable liability? The words in the old Act, "Expenses necessary to maintain the hereditament in a state to command the rent," are taken out of the Act with the declared intention to "abandon maintenance allowances as such," and flat properties put into a special class where, gross value being fixed, the rateable liability is to be determined by a committee largely composed of the spending authorities, who are told to have "regard to" the deductions "customarily allowed" and the "desirability of securing uniformity of deduction." I have fought so many cases that I can picture the position of the appellant when confronted with a statement that "regard" had been taken to these two points and the decision arrived at was final. The appellant would realise that an appeal was a farce, the rateable liability being entirely at the control of the spending authorities, with no law to prevent a valuation bringing ruin in its train.

I know the officers in charge of the Bill had not realised what the Bill did for flat properties, because, when I went to Whitehall to discuss it, they said so, and it is the more extraordinary that critics are content to object to the clause in the Bill without directly stating the grave consequences which would result.

The authors of the new Rating Bill have deliberately or accidentally proposed legislation which would take the ground from under our feet, but I hope and believe it is not too late to get amendments which will give justice to flat properties, and enable us to keep in a healthy condition those properties which lay golden eggs for local authorities and bring comfort to all crowded districts like London.

LAND VALUATION BILL.

I will only refer to the Land Valuation Bill by repeating previous comments. The proposal, so far as I understand it, would in no way carry out the objects of the author, but, if legislation is required, and it is just to give compulsory rights for the purchase of title rent charges, why not give the same for ground rent charges? It would be a great encouragement to those who wish to build and are discouraged by the leasehold rights which finally deprive the building owner of his property.

In conclusion, may I congratulate the shareholders on this the twenty-fifth report and statement of accounts, and repeat that the improved position of the company is not so much demonstrated by the increased balance of the revenue account as by the reduction in debenture liability and on the increase in those investments, which, with a 4s 6d income-tax, produce £3,962, as against the position, say, 15 years ago, when the debenture liability was upwards of £150,000 more, and the investments, with a tax of 1s, produced £788.

When considering the increased dividend you must appreciate the fact that the completion of the reserve fund necessarily enabled it to be doubled. If you take the 4 per cent. paid for the year 1913-14, double it, and allow for the increased funds available from income on investments, you will see that the 10 per cent. is what we may reasonably expect to pay and to maintain.

The motion was seconded by Mr William Warren, and carried unanimously.

The formal business was duly transacted, and, to mark the "silver wedding" of the company, a sum was voted for division among the directors and staff.

Approval was unanimously given to a resolution for the establishment of a staff superannuation fund.

HUDSON'S BAY COMPANY. **IMPROVED RESULTS AND PROSPECTS.**

A general court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 25th instant, at Cannon street Hotel, London.

Sir Robert M. Kindersley, C.B.E. (the governor), said that in the profit and loss account the profits of furs, salesshops, and Winnipeg head office had been combined in one item, and amounted to £292,164, compared with £283,796 last year. Receipts from interest on instalments and rents, less taxes and collection expenses, were reduced from £110,655 to £94,755, while interest received on loans and investments had increased from £9,495 to £15,280. In the land account the total taxes amounted to £251,621, against £255,736 last year, a reduction of, roughly, £4,000. The land accounts included only 10 months' receipts, the alteration having been made in order to bring the stores and land accounts into line, but taxes for the period of 12 months had been paid and included. Cash received from sales was £215,546, against £267,896, due to

depressed conditions. The net result was a loss on the land account of £24,710, and this they proposed to carry forward, as it was really due to the adjustment of the receipts to 10 months instead of 12. There would be a credit balance carried forward on trading account of £98,350. In the balance-sheet the funds and reserves had increased from £1,064,885 to £1,108,182. The profit and loss balance amounted to £310,417, against £328,440, and adding £110,849 brought forward, there was an available total of £421,267. The directors recommend a final dividend of 5 per cent. and a bonus of 5 per cent., making a total distribution from trade of 20 per cent.

FUR TRADE.

With regard to the fur trade, the total collections had been somewhat smaller, chiefly owing to climatic conditions and increased competition. On the other hand, taking the year as a whole, the prices realised were slightly better than those of the previous year. Their Fur Trade Commissioner was of opinion that all indications pointed to a smaller collection during the present year, partly because of the periodic diminution in fur-bearing animals, which observation had shown occurred in cycles of about seven years, and partly because of the greater activities of the itinerant trader. The directors were informed that during the present year the Council of the North-West Territories, in conformity with all other provinces of Canada, would impose a tax on the export of furs. The company had recently taken an opportunity of acquiring, on favourable terms, the entire assets and interests of Messrs Lamson, Limited, who had a number of fur-trading posts in the Mackenzie River district, and of the Alberta and Arctic Transportation Company, who operated a transport service on the Mackenzie River.

LAND DEPARTMENT.

With regard to the land department, while the results were again disappointing, the directors were able to report a slight improvement in sales effected. The total acreage sold during the 10 months covered by the report was 27,374, at an average price of £2 16s 11d per acre, which compared with 24,976 acres sold during the preceding 12 months at an average price of £3 0s 3d per acre. The prospects of the land department appeared to be somewhat more encouraging than they were a year ago, and although they were a long way from normal conditions, it seemed reasonable to anticipate continued improvement. Townsite sales during the 10 months amounted to £6,190, as compared with £15,893 for the preceding 12 months. The taxes on townsites were £47,212, as compared with £51,808. He was pleased to state that the Federal Government had disallowed the Mineral Taxation Act imposed in Alberta. In doing so they had taken a wise step, which should tend materially to improve the prospects for investment and enterprise in the Western Provinces. Signs were not wanting to encourage the belief that the increasing and insistent demand for economy and retrenchment would lead to a change in the policy of Federal and Provincial legislatures with regard to land taxation. On January 31st last the unsold lands in the company's possession amounted to 2,862,412, as compared with 2,804,517 acres on March 31, 1923. Instalments of principal and interest to be received on sales amounted to £3,030,289, as compared with £3,605,651. As to the question of grants from the Dominion Government of further lands which the directors regarded as being still due to the company under the terms of the deed of surrender, they had had several conferences with the authorities at Ottawa, and negotiations were still proceeding.

The indications of a more active policy in regard to immigration on the part of the Canadian Government, to which he referred a year ago, had materialised. This change of policy must have a favourable effect, not only on the sales of the company's lands, but also on the business done in their salesshops. All the figures reaching the directors, both in regard to the land and the stores, pointed to some improvement in the current year. The basis of recovery, however, could not be permanent until the affairs of Europe were settled.

The report and accounts were unanimously adopted.

EASTERN EXTENSION AUSTRALASIA AND CHINA **TELEGRAPH COMPANY, LIMITED.** **DECREASED WORKING EXPENSES.**

The annual general meeting of this company was held, on the 26th inst., at Electra House, London, Sir John Denison-Pender, G.B.E., K.C.M.G., presiding.

The Chairman referred at the outset to the great loss the company had suffered by the death, after a short illness, of Sir Albert J. Leppoc Cappel. As a director, he had, he said, always taken a very keen interest in the company's affairs, and the board deeply regretted that his charming personality and great business knowledge would no longer be present with them in their deliberations.

Continuing, the Chairman said: It is true that, as compared with 1922, gross revenue shows a decrease of £166,705, but this is not as great as was anticipated at the beginning of the year under review. There has, however, been a sensible decrease in working

expenses, mainly in cable expended on repairs, and in relief from the items of expenditure mentioned in my speech of last year; the net decrease amounting to £90,285. The balance we have to deal with, including the carry forward from 1922, amounts to £1,062,244. From this sum £250,000 has been placed to the general reserve fund, £400,000 paid in dividends, and £412,244 has been carried forward.

EXPENDITURE ON NEW CABLES.

I would draw attention to the fact that since 1913 we have laid 7,200 miles of new cable, namely, the Singapore-Hong Kong, Colombo-Penang (original and duplicate), Madras-Singapore, and Singapore-Batavia (duplicate) sections, at a total cost of £2,158,370. We have acquired new offices at Adelaide, Melbourne, and Sydney; quarters for staff at several stations, costing £528,387, and this has been done by augmenting the capital only to the extent of one million pounds, the balance having been met from revenue. The time having come to part with our cable steamer *Recorder*, after 40 years of excellent service to the company, your directors have made provision in these accounts for her replacement by placing to the maintenance ships' reserve fund the sum of £100,000, which will be approximately the cost of the oil-fuel vessel now being built by Messrs Alexander Stephen and Sons, Glasgow. This vessel is expected to leave England for Singapore towards the close of this year.

It is pleasing to note a reduction of £33,863 in the expenditure on partial duplication and renewals of cables, which indicates that the arrears of such work have now been practically cleared off. All our cables are in good order, and interruptions during the past year have been comparatively few. I may here mention that on 23 occasions of interruptions the maximum time taken in effecting repairs was 6 days 22 hours. On one other occasion it was 11 days 4 hours, the position of the interruption being 1,560 miles from the repairing steamer's home port, Singapore. I think you will agree with me that the greatest credit is reflected on all concerned. These interruptions, however, caused no delay in the transmission of our traffic.

GENERAL RESERVE FUND DEBIT

You will also notice that the sum of £75,717 has been debited to the general reserve fund as a capital loss on the abandonment of the Hong Kong-Haiphong cable. I would explain that this cable was laid in 1884 with the object of providing a duplicate means of communication between Hong Kong and Cape St. James, there being a French Government cable between the latter place and Haiphong. The Hong Kong-Haiphong Section (consisting of 107 nauts of new and 374 nauts of re-served cable) was laid through the Hainan Straits, which proved to be a most unhealthy spot for a submarine cable. "Fish-hook" and "Teredo" faults were ever recurrent, entailing frequent repair work. Having now three means of communication between Singapore and Hong Kong, namely, one direct, one via Labuan, and one via Cape St. James, your directors decided to abandon the Haiphong connection, which has always been costly in maintenance. The complete duplication of our Singapore-Batavia Section has not yet been effected; only a distance of seven miles for the shore end at Batavia remains to be completed, for which landing rights are still being awaited from the Netherlands Indian Government.

The Eastern Associated Telegraph Companies have undertaken to participate in the Guarantee Fund of the British Empire Exhibition (1924) to the extent of £5,000. It has not been usual to specify in our accounts donations and subscriptions made year by year to charitable institutions and otherwise, but in this case, the sum being considerable, we consider you should be informed. As you are no doubt aware, many of the large commercial companies, firms, and individuals have joined a guarantee for this great Exhibition.

The Hon. George Peel seconded the motion, which was unanimously agreed to.

BANK OF ADELAIDE.

The fifty-eighth annual meeting was held at the head office, Adelaide, on May 7, 1924. The chairman, Mr Arthur Waterhouse, presided.

The Chairman said that the balance of profit and loss account shows an increase of £28,324, largely due to the employment of the fresh capital supplied by the shareholders in 1922. Deposits increased £290,248, notwithstanding the repayment of Government funds previously held. The increase was mainly due to receipt of proceeds of wheat, wool, and other products. On the credit side liquid assets have changed somewhat in detail, but the net result is an increase of £95,223. The total at date of balance-sheet was £3,315,369, which represents 10s 1d in the £, or 50.5 per cent. of the total liabilities of the bank to the public—being practically the same as last year.

Bills receivable and all other advances show an increase of

£207,244, due to new business and the increased requirements of the business. Owing to the general demand for farming land, a number of advances which were considered doubtful have during the year been cleared up or placed on a satisfactory footing, and it gives me pleasure to tell you that the business of the bank is on a very sound and satisfactory basis. Our branches in Melbourne, Sydney, and Perth are most valuable adjuncts to the bank, both in profits earned, in service rendered, and in extending our business connections.

The market for this season's wool clip has been very strong, and the prices obtained phenomenal. On the statistical position it seems as if, for some time to come, the demand will exceed the supply, and, therefore, high prices may be expected to continue. The wheat market has improved, and the outlook at present is more favourable. As, however, exporting countries overseas have large surpluses estimated at from 250,000,000 to 400,000,000 bushels to carry over to next year, and as Russia is likely to again become a large exporter in the near future, farmers should not too confidently look for a high price for wheat next year.

The report and accounts were adopted.

WESTERN AUSTRALIAN BANK.

The one hundred and sixty-fifth half-yearly meeting of the Western Australian Bank was held, on May 7th, at the Banking House, St George's terrace, Sir E. H. Wittenoom, chairman of directors, presiding.

The Chairman stated that it must not be overlooked that the bank had had to deal with more capital than previously, and also provide dividends on the 50,000 bonus shares given to shareholders last year, on which no money was paid up, so that, under such circumstances, to be able to declare a bonus of 2½ per cent., as well as a dividend of 17½ per cent., could not be considered otherwise than gratifying. In addition to this, an amount greater than last half-year had been carried forward. The net profits, after making all the usual provisions, amounted to £39,195, being £4,924 more than in September last, and £7,347 more than in March, 1923, and the amount carried forward, £32,540, being £1,396 more than in September, and £4,592 more than in March, 1923. Deposits were £3,551,500, being £233,311 more than in September last, and £90,421 less than in March, 1923.

The pastoral industry was in anything but a satisfactory position. Rain was badly wanted (in some localities more than others), but particularly in those where large numbers of lambs were expected. Fortunately for those who had them, the prices obtained for both fat sheep and cattle were remarkably good; so much so that the retail price of meat was abnormally high. Wool continued to be in good demand, and the various sales held during the last season had been most satisfactory, whilst the prospects for the future left little to be desired.

Rain was now needed for the agricultural industry, and it was unusual to find it so late as the present date. The present harvest resulted in nearly 20,000,000 bushels of wheat, giving an average of almost 12 bushels per acre. In addition, a good acreage was planted with oats and hay, with satisfactory results.

The report and accounts were adopted.

UNION CORPORATION, LIMITED.
GOOD RESULTS—RECORD PROFIT.

The ordinary general meeting of the Union Corporation, Limited, was held at Johannesburg on May 30th, Mr P. M. Anderson presiding.

The Chairman said that the year 1923, whether looked at from the point of view of the net profit made or the value of the assets after deducting liabilities, constituted a record. As compared with the previous year, the gross profit, after allowing for writings off, commissions and bonuses, advanced from £284,412 to £336,416, the expenses fell from £42,288 to £35,117, and the net profit rose from £242,124 to £301,299, or by 24 per cent. After increasing the year's dividend from 3s to 4s, requiring £280,000, they carried forward £81,296, as against £79,996 brought into the account.

If they would refer to the balance-sheet and allow for the additional £20,000 since transferred from profits, they would see that they had £222,376 on ordinary reserve account and the exploration reserve account of £10,000, which, added to the "carry forward," made a total of £313,672, equivalent to 36 per cent. of the capital. The share and debenture holdings had increased by £132,573 during the year to £1,241,245, mainly as the result of the increased interest in the San Francisco Mines of Mexico, Limited, in which they had now an important holding. During the year there was market value of these holdings showed as compared with the prices at which they stand in the books.

The past year's operations of the two gold-producing companies on the Far Eastern section of the Witwatersrand in which the corporation was very largely interested were most gratifying in every respect. The settled labour conditions which obtained during

the period enabled the managements and the men to give undivided attention to their work. This state of affairs resulted in an all-round improvement in output and operating costs.

MODDERFONTEIN DEEP LEVELS.

The Modderfontein Deep Levels crushed 525,000 tons, which was a record for the mine; and the profit earned, apart from the premium on gold, was substantially greater than in any previous year. Working costs per ton milled were 17s 5d, which was an improvement of 4s 7d compared with 1921. The reduction of 1s 7d last year was more than sufficient to offset the fall in the gold premium and a fractional decrease in the yield per ton milled. The gross profit of £828,945 was £135,831 greater than for the previous year, and the dividend of 140 per cent. was 20 per cent. higher, while the credit balance of the appropriation account carried forward was increased to £135,872.

GEDULD PROPRIETARY.

The improved results achieved by the Geduld Proprietary Mines were mainly due to the successful working of the enlarged reduction plant, which permitted of a scale of operations well over 50 per cent. greater than in the previous year, the tonnage milled being 722,500 tons, as against 460,700 tons. Working expenses averaged 19s 4d per ton milled, which was 1s 1d and 4s 3d less than in 1922 and 1921 respectively. The net result was that the accounts showed a gross profit of £486,201, or £163,576 more than in 1922. The dividend distribution for the year was nearly 70 per cent. greater than for 1922, and the amount carried forward in the appropriation account was increased by £33,716 to £151,936.

A further extension of the reduction plant to a capacity of 75,000 tons per month was in hand, and was expected to be completed about the end of the current year.

SAN FRANCISCO MINES OF MEXICO.

The operating profits of the San Francisco Mines of Mexico, Limited, showed a further substantial improvement, and they had no doubt that when the results for the financial year to September 30th next were known they would show a large advance on those for the past year, and enable a substantially higher dividend to be declared. Metal prices were favourable, and though the enlargement in the scale of work had not been as speedy as they had hoped, the metallurgical practice, on which a great deal depended, had quite recently shown a marked advance. The size of the property had been augmented by the acquisition of claims on the continuance of the main vein at both ends, thus adding to the future resources of the mine, and development was proceeding satisfactorily.

The report and accounts were adopted, and Earl Buxton, P.C., G.C.M.G., Sir Robert S. Horne, P.C., G.B.E., K.C., M.P., and Mr Joseph Temperley were re-elected directors.

GUEST, KEEN AND NETTLEFOLDS, LIMITED.
THE CHAIRMAN ON COLONIAL PREFERENCE.

The ordinary general meeting of Guest, Keen, and Nettlefolds, Limited, was held, on the 27th instant, at Birmingham, Mr Edward Steer (the chairman and managing director) presiding.

In proposing the adoption of the report and the payment of a dividend on the ordinary shares at the rate of 10 per cent. per annum, free of tax, the Chairman said the most important event during the year had been the purchase by the company of practically the whole of the ordinary shares in the South Wales colliery undertakings of D. Davis and Sons, Limited, and Consolidated Cambrian, Limited; they also owned Cambrian Buildings. In the opinion of the directors, the terms upon which the amalgamations had been carried out were fair and reasonable, and they looked forward to satisfactory results from this combination and extension of their coal interests.

FATE OF THE NATIONALISATION BILL.

What the coal trade wanted most of all was an assured peace and lower costs to face competition in the foreign markets. The Nationalisation of the Mines and Minerals Bill, a private Member's Bill, but recommended by the Government, to establish control of the coal mines and miners' wages, recently met its well-deserved fate in the House of Commons. The coal trade of this country had been built up by the courage and energy of private enterprise, and there was not an atom of proof that it would be to the interests of consumers or taxpayers, or of the miners themselves, if the mines were owned and run by the State. On the contrary, Nationalisation would mean higher costs all round inevitably, resulting in the loss of a good proportion of our export trade, and the already overtaxed taxpayer would be left to make up any loss which might accrue in working.

It was gratifying to know that the question of Nationalisation was dead for the life of the present party. Referring to the company's finished manufactures, he said they had come to the important decision to establish a screw factory in Australia, the necessary land having been acquired for that purpose. He reminded the shareholders that the colonies were bent on fostering home

manufactures as far as possible, and that this could only be done by the imposition of import duties on manufactured articles.

The directors had no misgivings as to the results of the company's policy. During the past 12 months trade had had an up-and-down tendency, with more than the usual number of strikes and rumours of strikes, and there was no doubt that the lack of stability had seriously operated against the regular course of business so vitally necessary to the country, and which alone would reduce the large amount of unemployment still existing. Their financial year opened under favourable conditions so far as the coal trade was concerned. The greatly reduced output from the Ruhr mines consequent upon the French occupation caused Germany, France, and Belgium to be short of coal, and they turned to this country for supplies, with the result that the demand for steam coal was in excess of supply, and high prices ruled for the time, but later in the year prices came down to an unremunerative figure. Unfortunately, the first three months of 1924 were a record of disturbances and stoppages. In January the railway strike nearly paralysed transport, and caused some loss of output. In February the dockers' strike caused diversion of tonnage, but in spite of those hindrances, the fear of a colliers' strike in April brought about a heavy demand for coal and increased prices, which lasted up till the middle of that month. The fear of a strike had now passed, but it had had the usual effect on the coal trade. Stocks at home and abroad had been filled up, the latter with the assistance of American coal, and they all knew how much easier it was to drive trade away to competitors than to recover it again. The iron and steel industry, in which Germany was so largely interested, had but slightly improved during the year.

THE FUTURE.

Conditions were still so unstable that he would not attempt to forecast their trade during the present year. Fortunately, they were not dependent on one industry, and in that fact the strength of their position lay. Their most important overseas customers were our own Colonies and Dependencies, and the preference they gave helped to shelter and sustain British trade from the competition of other industrial nations. They meant to hold their own in those markets where the preferences accorded to internal manufacturers did not preclude the possibility of successful competition. Our policy should be to encourage the Dominions to continue, and perhaps to extend, their preferential treatment for British goods, and in his opinion it was greatly to be regretted that a more favourable attitude was not adopted by the Government towards the Imperial economic preference resolutions with a view to maintaining and strengthening the ties between us.

The motion was seconded by Mr N. Seymour Berry, and carried unanimously.

MORTGAGE COMPANY OF EGYPT, LIMITED.
STRENGTHENED FINANCIAL POSITION.

The sixteenth ordinary general meeting of the Mortgage Company of Egypt, Limited, was held, on the 24th instant, at 6-7 King William street, London.

Colonel the Hon. Sidney Peel, D.S.O. (chairman of the London Committee), presided, and, after expressing regret at the death of Sir Henry Babington Smith, said: Our net revenue is slightly less than that of last year; on the other hand, our profits are £4,000 or £5,000 higher, mainly owing to a diminution in the amount to be paid for corporation profits tax. We recommend a distribution of 12 per cent. on the ordinary shares, an allocation

KANSALLIS-OSAKE-PANKKI

of £20,000 to the special reserve, which brings it up to £128,800, and we carry forward an increased amount.

Our balance-sheet, taken as a whole, discloses a rather stronger position than last year, but there is a certain shrinkage in the figures. The total amount which we have secured by first mortgage, including instalments in arrear and interest accrued but not due, is about £70,000 less than last year. On the other hand, property acquired by foreclosure has increased by about £100,000. This may seem a large increase, but it has really not much significance. It is, of course, no part of our policy to hold land, but we have no reason to part with the land we have been forced to acquire except on reasonable terms. During the past year there has been no activity in land transactions, and buyers have been very cautious; but land has always been, and, no doubt, always will be, the principal field for investment in Egypt, and we do not anticipate any real difficulty in disposing of our holding.

There is only one other feature in the balance-sheet to which I need call attention. We have cancelled, after repurchase, just over £775,000 of our debentures; the book profit on these transactions, amounting to nearly £64,000, has hitherto been shown as debenture redemption reserve. As there is no need to retain this account, we have transferred £40,000 to general reserve, bringing it up to the very satisfactory figure of £250,000, equal to our paid-up capital, and the remainder to special reserve, which will then stand, as I have said, after this year's allocation at £128,800.

The general commercial prospects in Egypt appear to be good. The cotton crop for 1923-24 will very nearly reach the figure of 6,500,000 cantars, which is well up to a satisfactory average.

The report and accounts were unanimously adopted.

SPRINGS MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

INCREASED PROFIT—DECREASED WORKING COSTS.

The fifteenth ordinary general meeting of shareholders was held in Johannesburg on May 26, 1924.

The chairman (Mr F. R. Lynch), in moving the adoption of the report and accounts, said:

The tonnage crushed during 1923 was 648,600; working profit, on standard value, amounted to £548,936, and the net gold premium received was £72,901, or a total working profit of £621,837. The yield during the year averaged 39s 5.08d per ton, standard value, as compared with 39s 4.12d per ton for the comparable period of 1922. Working costs were 22s 5.96d, as against 22s 11.26d, and working profit 16s 11.12d, as against 16s 4.86d.

In the consulting engineer's report you will note the effect of the gold premium on our profits. In 1920 the standard working profit amounted to £166,984, and the gold premium to £275,631, or a total of £442,615, whilst in 1923 the standard profit amounted to £548,936 and the gold premium to only £72,901, or a total of £621,837. In other words, although the gold premium received in 1920 exceeded that of 1923 by more than £200,000, our total profit showed an increase of £183,349. The premium value per ounce in 1920 was 26s 5.8d, whilst in 1923 it had fallen to 4s 9.7d per ounce. In past years the benefit we derived from the gold premium was, of course, considerable, but it is an interesting reflection that the amount received during last year was equal to less than 5 per cent. on the issued share capital of the company.

The yield per ton milled, namely, 39s 5d, is the highest since 1918. The ore stoped from the reserve was about half a dwt higher than the average value, but, on the other hand, the ore developed during the year was also of higher value than the reserve, so that at the end of the year the estimated value of the reserve disclosed an improved grade, while the reserve tonnage itself had been increased by 109,135 tons. Working costs at 22s 5.96d show a further welcome reduction, but, as operations were to some extent hampered by work in connection with the increase in the reduction plant and the necessity of preparing the mine for dealing with an increased tonnage, the improvement was naturally somewhat less than might otherwise have been expected. We are now in a position to supply the plant fully, and working costs are having the very closest attention of the technical staff.

The development footage accomplished during 1923 totalled 20,761 feet, not quite as high a footage as in some previous years, but still sufficient to enable an increase in the ore reserve to be recorded. The total tonnage developed during the year is estimated at 775,600, so that after allowing for the tonnage crushed and certain readjustments in the old ore reserve, the reserve was increased by 109,135 tons to 3,255,352 tons, the value being 8.91 dwts over 58.91 inches.

The revenue for the year exceeded expenditure by £621,371,

which, after adding £45,904 carried forward from 1922, and a reserve of £27,000 set aside for reorganisation of plant but not required for that purpose, increased the total available credit to £994,275. Against this the following appropriations were made:—Union Government and Transvaal Provincial Council taxation, £68,218; Government participation in profits under the mineral lease, £129,155; stores depreciation, £13,771; dividends Nos. 8 and 9 of 12½ per cent. and 17½ per cent. respectively, £438,981; leaving an unappropriated balance of £44,149 to be carried forward to the current year.

Taken as a whole, the outlook for the year is very promising indeed, and should our anticipations prove correct, the results will be reflected in the year's dividend distributions.

The report and accounts were carried unanimously.

BRAKPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

RECORD PROFIT—FAVOURABLE PROSPECTS.

The twenty-first ordinary general meeting of shareholders was held in Johannesburg on May 26, 1924.

The Chairman (Mr F. R. Lynch), in moving the adoption of the report and accounts, said: After deducting certain outgoings, such as donations, &c., and allowing for sundry revenue, the net revenue for the year amounted to £607,843. If we add the balance of £41,426 standing to the credit of appropriation account at the end of 1922, we arrive at the total available credit—namely, £649,269. Against this sum, the following appropriations were made:—Government taxes, £72,319; Government participation in profits, £79,209; funds set aside for reconditioning plant and machinery, £20,342; dividends Nos. 22 and 23, equal to 42½ per cent., £433,500; leaving an unappropriated balance of £43,899 to be carried forward to the current year.

The profit earned in 1923 constitutes a record in the life of the mine, and is all the more noticeable when one realises that the amounts received from premium on gold in 1920 and 1921 were £343,072 and £265,339 respectively, as compared with £74,718 in last year. These figures are most significant, as they show how much less dependent we now are upon the gold premium than we were in recent years.

Turning now to the technical reports, you will notice that the tonnage milled was 786,100 tons, and that for the last four months of the year we reached approximately the maximum capacity of the reduction plant. The yield per ton at 34s 8d standard value, although rather below the grade treated in 1922, exceeded our expectations, the estimate for the year having been from 32s to 34s per ton. The consulting engineer points out that tonnage requirements, and the fact that some of the higher-grade areas were more immediately available for stoping, resulted in a certain amount of overmining during the year, but, notwithstanding this, the value of the payable ore reserve, as re-estimated at the end of the year, is only slightly decreased by 25 inch-dwts. Working costs, at 21s 5d per ton milled, are 6½d per ton lower than the average for the second half of 1922. The forecast of a further reduction for this year, suggested in the consulting engineer's report, is already an accomplished fact, as, with a tonnage of 76,000 for March, the working costs were returned at 20s 2½d, and a further reduction is confidently expected when the plant additions now in course of erection are completed.

The development footage accomplished for the year totalled 26,625 feet, of which 16,945 feet were on reef, and 16,760 feet were sampled. Of the footage sampled, 9,440 feet, equal to 56.3 per cent., were classed as payable, the average value being 13.82 dwts over 44.83 inches, equal to 620 inch-dwts. The large development footage accomplished is reflected in the ore reserve, which at the end of the year was estimated at 2,552,830 tons, or an increase of 93,550 tons, the value being 8 dwts over 68.93 inches, or 551 inch-dwts.

The report issued to shareholders last April gives details of the operating results for the first quarter of the current year. The monthly tonnages for January, February, and March were 75,000, 70,500, and 76,000 tons respectively, the figures for January and March far exceeding any previous records for the mine. The average working costs for the quarter were returned at 20s 7.94d per ton milled, as compared with an average of 21s 5d for 1923. The average yield for the quarter was 32s 10.64d, which conforms with the expectation of yield indicated by your consulting engineer.

I think shareholders will agree that the results of operations during 1923 have proved very satisfactory. As to the prospects for the current year, given a continuance of favourable conditions, the results for the year 1924 should be even better than those of the past year.

The report and accounts were carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from June 30-July 5 were opened on June 27, 1924, and the total amount applied for was £59,625,000. For bills at three months dated Monday to Friday at £99 4s od, about 31 per cent., and above in full. Saturday at £99 4s 3d, above in full. The amounts allotted were as follows:—In bills at 3 months, £34,145,000; in bonds £855,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.				
May 23.....	35,000,000	62,435,000	3 1 6-3	94 14 6
May 30.....	40,000,000	64,880,000	2 19 4-72	94 13 2-4

SILVER.

Prices have been disposed to sag, owing chiefly to the reluctance of buyers rather than pressure to sell. There has, in fact, been a slight decline each day since the 18th inst., the fall amounting to 1/4d. The news of the considerable increase in the Shanghai stock, particulars of which are given below, caused some profit-taking on the part of local bull operators, and this accentuated the easiness which was apparent. Indian bazaar rates are well below parity, and business in that quarter is not active just now, although the monsoon appears to be pursuing a favourable course. America has been usually a seller. Continental inquiry is still fitful.

NOTICES.

We are informed that the Union Bank of Scotland, Limited, are shortly to open a branch in the London, Midland, and Scottish Railway Company's big new sports hotel at Glen-eagles, Perthshire.

Barclays Bank, Limited, announce that they have opened a new branch at 168 High street, Burton-on-Trent, under the management of Mr F. J. Addison.

The Bank of New Zealand announces that Mr J. H. Upton has retired from the board, and that Mr Oliver Nicholson and Mr R. W. Gibbs have been elected members of the board.

The Midland Bank announces the opening of a new branch at 123 Market street, Farnworth, Lancs., under the management of Mr H. L. Greenhouse.

A. W. J. Donaldson, representative, National Bank of Commerce in New York, is moving to-day to new offices at 2 and 3 Crosby square, Bishopsgate, London, E.C. 3. Telephone numbers will remain London Wall 4720, 4721, 4722, and the telegraphic address, "Natcomer, Phone, London."

Reports and Notices.

The offices of the *Investors' Review* are now at 30 Fleet street, London, E.C. 4. Telephone: Central 5048.

The Equitable Life Assurance Society will move on July 1st to its new offices at 19 Coleman street, London, E.C. 2, which will thereafter be its registered address.

Gillett Brothers Discount Company, Limited, inform us that the address of their new offices is 27 Clements lane, Lombard street, London, E.C. 4, and the telephone number will be Central 200, as heretofore.

At an extraordinary meeting of the Luipaards Vlei Estate and Gold Mining Company, held on Wednesday last, a resolution was adopted authorising the directors to create and issue £40,000 6 per cent. second debentures, convertible at the option of the holders at any time prior to June 30, 1927, into shares of 4s each, at the rate of five shares for each £1 secured by the debentures.

sion in 1923. This condition began to improve during the later months, and since January 1 has shown marked improvement. The foreign trade for January and February, 1923, showed a favourable balance of \$5,100,000. This balance has now increased, and in January and February, 1924, was \$7,682,000. The value of sugar shipments in February surpassed any month of 1923. The relations of the company with the public and the Government and city officials remain cordial. The company is pleased to express its appreciation of the loyalty of its employees.

MEXICAN PETROLEUM.—The consolidated accounts of Mexican Petroleum Company and owned companies as at December 31, 1923, shows profit from operations \$18,011,518, less interest and amortisation charges (net) \$331,707, depreciation and depletion \$5,441,523, and Federal taxes \$1,150,000, leaving a net profit of \$11,088,287. The surplus at December 31, 1922, was \$43,754,108, after adding \$1,500,000 from reserve for contingencies, less loss on investments in stocks, &c., \$91,951, and net profit \$11,088,287. The sum available was \$54,934,347. Dividends on preferred stock absorbed \$960,000, on common stock \$7,316,380, leaving a consolidated surplus of \$46,657,967.

PAN AMERICAN PETROLEUM.—The consolidated net profit of Pan American Petroleum and Transport Company for 1923, after provision has been made for interest charges, depreciation, depletion and taxes, was \$20,352,387, a shrinkage of \$11,223,549 compared with 1922. Inventories for 1923 amount to \$20,473,197, as compared with \$10,713,945 for 1922, and the entire current assets, inclusive of loans to and deposit with Mexican Government, amount to \$46,117,160, compared with \$53,946,115. The quantity of oil taken from lands during year is approximately 40,000,000 barrels, or about 110,000 barrels per day. Dividends were paid in cash to stockholders of \$8 per share (16 per cent.) on outstanding capital stock. In addition, a stock dividend of 20 per cent. was paid in class "B" common stock to all stockholders of record December 30, 1922, the amount involved being \$21,232,000. The report adds that, taking into consideration the unusual conditions and problems that prevailed in the oil industry in general, it is gratifying to be able to report an actual realised net profit, after all charges, equivalent to the rate of dividend which the directors felt justified in maintaining throughout the year 1923—namely, \$8 per share (16 per cent. per annum). The directors, however, deemed it in the company's interests to reduce the dividend rate for the first quarter of 1924 to \$1 per share, equivalent to a rate of 8 per cent. per annum.

BURTON AND HORNSEY.—The balance-sheet, made up to March 31, 1924, shows that the balance of profit and loss account, after providing for all outstanding liabilities, amounts to £85,809, from which deduct depreciation on buildings, £12,650; depreciation on plant and machinery, £38,317; interest on debentures, £25,500, leaving a balance of £9,342, to which add the balance brought forward from last year £70,274, making available £79,616. The stocks of materials and the finished stock of machinery have been taken at cost price or under, buildings, plant, and machinery have been maintained out of revenue, and ample provision has been made for doubtful debts. The past financial year has again been far from normal, and although the year's trading has shown signs of improvement, the adverse world conditions have restricted the volume of business which it has been possible to obtain. The directors regret that they are unable to recommend the payment of a dividend on the ordinary shares for the past year, but with regard to the 5 per cent. and 6 per cent. preference shares, as the dividends on same are cumulative, they have decided to reduce the liability by making payment on July 1, 1924, of the dividends, less income-tax, on the said preference shares for the 18 months ended December 31, 1922. The balance-sheet shows total assets £3,675,712. Cash and bills receivable stand at £377,260. Investments in other companies at cost stand at £509,790. Stocks stand at £1,229,088. Debtors stand at £336,101. With regard to liabilities, creditors stand at £291,591. There is a capital reserve account of £200,000, and general reserve is £100,000.

WARING AND GILLOW.—Better times have been experienced by this well-known undertaking. The profit for year ended January 31, 1924, has increased from £103,712 to £127,346. The sum of £68,629 was brought in to the accounts. The directors recommend that preference dividend for year to January 31, 1924, be approved, leaving £120,976 to be carried forward, subject to adjustment of outstanding taxation.

WHITEHALL ELECTRIC INVESTMENTS.—The gross income has risen from £538,764 for the year ended March 31, 1923, to £611,801 for year ended March 31, 1924. The preference dividend absorbs £112,500. The ordinary dividend is 2½ per cent., absorbing £125,000, leaving £132,665, which amount has been applied in reduction of the discount on debenture stock. The company, by the purchase of the whole of the debenture and share capital of two Chilean companies, has acquired the electric power, light and tramway systems of Valparaiso, and the hydro-electric power station at La Florida, near Santiago.

WOLSELEY MOTORS.—The directors report for the year ended September 30, 1923, that provision has been made in the accounts for all trading expenses, and repairs and maintenance have been charged to revenue, together with depreciation of buildings, plant and machinery where necessary. The trading profit, arrived at by taking the stock and work in progress at or below works cost, amounts to £91,687. The directors felt, however, that, having regard to the keen competition existing in the motor trade, it was imperative in the interest of the company to write down the stock and to write off a substantial proportion of the expenditure on dies and tools. After making provision for these purposes, the payment of the interest on the debenture stock and other charges, the result shows a net loss for the year of £327,263. To this loss is added the debit balance of £108,822 brought forward, making a debit balance of £436,085 to be carried forward to next year.

(a) Less tax. (b) Company reconstructed. (c) They have also decided to incorporate the preference shares of 12 to 30 millions by creating eight millions of 5 per cent. cumulative preference shares of £1 each, and to distribute these shares as fully paid among the registered shareholders at the rate of two preference shares in respect of every three existing shares.

CANADIAN CAR AND FOUNDRY.—Dividend of 3½ per cent. on the preference stock, payable on July 10th, being 12 per cent. on account of arrears and 12 per cent. for this quarter to June 30th. A further dividend of 3½ per cent. on the preference stock has also been declared, payable on October 10th, being 12 per cent. on account of arrears and 12 per cent. for the quarter ending September 30th.

RUBBER.

FEDERATED (SELANGOR).—The profit for the year ended March 31, 1924, was £2,662, to which must be added the balance brought forward from last year, £4,052, leaving to be dealt with the sum of £6,714. The directors recommend a dividend of 2½ per cent. (less tax) for the year, absorbing £2,640, and that the sum of £4,074 be carried forward to next year, subject to corporation profits tax for 1923-24. The rubber crop, which in the previous year amounted to 301,768 lbs, was reduced, owing to a full year's working of the restriction of exports, to 206,753 lbs. The amount licensed to be exported during the year was 210,755 lbs; less licences, used for balance of previous year's crop, 42,940 lbs, 167,815 lbs; leaving an excess of 38,938 lbs, which has been taken into the accounts at cost price. Of the amount licensed to be exported during the year—viz., 210,755 lbs—there has been sold to date 161,335 lbs at a net average price of 13.34d per lb; the remaining 49,420 lbs have been estimated in the accounts at the current market price. The standard production has now been fixed at 352,040 lbs, an increase of 7,513 lbs on the previous figure. The restriction of exports resulted in an increased cost per lb—viz., 8.66d, f.o.b., as compared with 5.54d in the previous year. The visiting agent reports that the tapping is up to the usual standard, and that the estate has been well and economically managed. The quality of manufacture continues to be excellent. Mr H. K. Rutherford, who had been chairman of the board since the inception of the company, tendered his resignation as from March 31, 1924, which the board has accepted with regret. At the invitation of the directors, Mr G. H. Masefield has joined the board, and, in accordance with the articles of association, he now retires from office; being eligible, he offers himself for re-election.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of warmth and sunshine has materially improved agricultural prospects in this country, and all vegetation is making rapid growth. On heavy lands wheat is somewhat thin and patchy, but generally satisfactory, and with favourable weather conditions an average yield is anticipated, though slightly below last year owing to reduced acreage. Spring oats present a healthy appear-

ance, while winter sown are just coming into ear. A very firm tone governed the market, especially for breadstuffs, and prices were again on a higher level, in view of the position of imported wheat. Native varieties are very sparingly offered, and prices nominally at about 12s for best quality per 112 lbs free on rail. Imported descriptions are firmer, with Canadian qualities in small supply. The situation, however, is somewhat unsettled owing to fluctuating crop reports from various exporting countries, and, as usual at this period of the year, same exercises a dominating influence upon the course of prices. No. 1 Northern Manitoba quoted 54s, No. 3 ditto 51s, Barusso 63s 49s, and Australian 51s 6d, all ex ship, per 496 lbs. In the floating and forward cargo section holders continue to adopt an attitude of reserve, and with a lack of second-hand offers a firm tone ensued. Steamers of choice white Karachi August changed hands at 47s 10d, July 48s 6d, Australian afloat 48s 6d, No. 2 Northern Manitoba arrived 48s 6d per 480 lbs. Flour in good demand and prices further hardened in sympathy with the wheat position. London standard straight run quoted 41s, patents 43s to 44s, town whites 41s per sack delivered in. Of imported, Canadian patents range from 38s to 40s, and Australian 36s to 36s 6d per 280 lbs, ex store. Maize cargoes, after a period of depression, experienced a better inquiry, which imparted a steadier tone. Steamers of Plate on passage changed hands at 32s 1½d, July-August 32s 6d, and October 33s per 480 lbs. Barley: English quiet, and quoted at 11s 3d-12s 6d per 112 lbs free on rail. Imported firm. Californian, 49s-55s; Chilean, brewing, 49s 6d-51s per 448 lbs, ex ship. No. 3 Canadian Western, ex ship, 33s 6d; Karachi, ex ship, 33s 3d; ditto landed, 34s 6d; Plate, ex ship, 32s 9d; ditto landed, 34s 3d; Russian landed, 34s 3d, all per 400 lbs. Oats: Plate quiet but Canadian firm. Plate f.a.q. ex ship 21s 3d, ditto landed 22s 3d, No. 2 Canadian Western 25s ex ship, ditto landed 26s 6d, No. 2 Canadian feed landed 24s 6d per 320 lbs. English quoted at 9s 6d-11s per 112 lbs free on rail. Maize easier, Plate, ex ship 34s-33s 3d as to position, ditto landed 37s, No. 2 white flat African 38s 6d landed per 480 lbs. Millers' offers firm, with a good demand for bran. Broad bran quoted at 6s 9d-7s 3d, ditto digestive 7s 6d, ordinary 6s 3d, middlings 8s 9d, ditto fine 10s, bags included, ex mill; light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 11s 9d per cwt, free on rail. Oatmeal quiet. London made, flaked 17s, rolled oats 16s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d to 18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated June 26th, is as follows:—Pig-iron: The pig-iron market is, for the moment, distinctly in buyers' favour, and prices are inclined to weaken further. What we lack is export demand. No. 3 Cleveland G.M.B. is 89s, and East Coast hematite mixed numbers 97s per ton. Manufactured Iron and Steel: The slackness in shipbuilding is reflected in the steel rolling mills, where orders are very badly needed. Current quotations are:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: There is very little demand for iron ore, but prices of good imported ores seem to have reached the bottom prices. Best Bilbao Rubio is nominally 23s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Activity at the local iron and steel works is being greatly interfered with by stocktaking operations and the usual overhauling of machinery which is carried out at the end of each financial year. Several large establishments have been set down completely, and many others are partially stopped. Apart from these special conditions, business is extremely quiet in pig-iron, billets, and rolled mild steel of all descriptions. Australia and New Zealand continue to be Sheffield's best customers for finished steel products in the overseas markets, but demand from foreign sources is steadily expanding. Trade with Canada, except in cutlery and plate, does not progress very much, owing to the Americanising of the Dominion in industrial matters and the development of home industries. British railway companies have placed the bulk of their orders for steel material in this country, in spite of the more tempting prices offered by Continental makers possessing the advantages of deflated exchanges. A few railway orders have gone to the Continent, but the volume of this business is negligible. Conditions in plate and cutlery remain much the same as we have reported previously. There are large contracts about, which usually fall to the lowest quotations, and not much of it can be secured by the large and old-established houses. The coal market continues to lose ground, owing to the reduced requirements of the Continent, and there is a danger of Continental competition developing in our best overseas markets. Iron and steel makers are confidently anticipating cheaper fuel in their next contracts. Prices continue to tend downwards. The warm weather has brought the demand for house coal down to meagre proportions. Current prices per ton at pits are:—Best hand-picked branch, 34s; Barnsley best silktones, 28s; Yorkshire hards, 23s; Derbyshire do., 21s 6d; nutty slacks, 12s; smalls, 8s to 9s.

Our Glasgow correspondent writes:—The demand for pig-iron shows little improvement. Exports last week were somewhat better, but home consumers continue to confine their purchases to immediate requirements. Shipments for the week ending June 21st amounted to 922 tons. Prices have fallen slightly for some grades. In manufactured iron and steel the position is not improving. Orders for steel plates and sections for shipbuilders are not coming forward in sufficient quantities to keep works going at nearly full capacity, and export business is quiet. Makers of light steel bars are securing some business at the recently reduced level of prices, and sheet manufacturers are experiencing a fairly steady demand from overseas, especially for the lighter gauges. Galvanised corrugated sheets continue in active request, and are, apparently, for the time being the one bright spot in the steel trade. Two months ago these could be bought on a basis of £16 10s per ton, and prompt delivery given. Makers are now unwilling to accept £18 per ton for September delivery, which is the soonest some works are prepared to offer. New shipbuilding contracts reported this week include one torpedo-boat destroyer to be built by Messrs. Yarrow and Co., Limited, Scotstoun, and a steamer of about 5,800 tons dead weight carrying capacity from Messrs. Napier and Miller, Old Kilpatrick. Structural firms are well booked, but complain that a considerable portion of the work on hand had to be taken at prices which show no margin of profit. A contract has been secured (subject to the approval of the Northern Government) by Sir Wm. Arrol and Co., Limited, of Glasgow, for a steel swing bridge over the Newry Canal at Newry, Ireland.

Our Cardiff correspondent writes:—There has been no material change this week in the position of the Cardiff coal market. For the superior Admiralty large qualities prices have been firmly maintained up to 29s.; for other qualities the market has not been so strong, and colliery salesmen have experienced some difficulty in maintaining their agreed prices. A relatively larger supply of these coals is in the hands of middlemen under contract engagements, and exporters in control of free supplies are competing for the restricted volume of current business at lower prices than those quoted direct. Still, the quantity of free merchant coal is far below normal, and the tendency to concentrate sales in the hands of colliery groups possessing their own agencies is on the increase. The market prices are receiving support from the reduced output of the coalfield, for during the week employment was irregular at many of the pits.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 27s 6d to 28s.; best drys, 25s to 26s 6d; Black Veins, 26s 6d to 27s 6d; Western Valleys, 26s to 26s 6d; Eastern Valleys, 24s to 26s; best bunker smalls, 18s to 18s 6d; ordinary cargo smalls, 16s to 17s; coking smalls, 18s 6d to 19s; anthracite Big Vein large, 50s to 52s 6d; machine-made cobbles, 60s to 62s 6d; French nuts, 57s 6d to 60s; stove nuts, 50s to 52s 6d; rubbly culm, 15s to 15s 6d; coke, for export, 57s 6d to 60s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 28s to 29s 6d; pithead, ex ship, 25s to 26s 6d.

Business in the tinplate trade is active, and prices are firm either at, or a little over, the minimum figures. Continental dealings are expanding, and Italy, France, Switzerland, Spain and Holland have been buyers, but during the past week, or so, orders on South American account have been larger than usual.

METALS.

Tin commenced with a firm tone on liberal buying orders, combined with higher Eastern cables, though part of the advance was subsequently lost, most noticeable in near positions. Standard cash sold at £222 15s to £223 15s, spot £221 10s to £222, and three months £220 10s to £221 10s to £221 10s to £222 7s 6d to £222 2s 6d. Eastern cables reported sale on the basis of £223 c.i.f. At Thursday's session prices moved in an upward direction, standard cash being dealt in at £223 15s to £223 10s to £224 10s, and three months £224 to £223 15s to £224 15s to £224 10s. Further sales transpired in the East on the basis of £223 15s, c.i.f. A firmer tendency ensued at the close, with business confined to distant positions. Standard cash quoted at £224 12s 6d to £224 15s, and three months sold at £225 to £225 10s to £224 12s 6d to £225, while finally registered at £224 15s. English ingots quoted at £227 to £228. Copper generally easier on some pressure to sell, though offerings were fairly well absorbed. Cash sold at £60 12s 6d to £60 13s 6d, and three months £61 17s 6d to £62 to £61 11s 3d. Market closed dearer, with trading on an active scale. Standard cash sold at £60 17s 6d to £61 7s 6d, and three months £61 15s to £62 5s. Electrolytic 65 15s to £66, best selected £64 10s to £65 15s, strong sheets £92, and wire bars £66 per ton. Lead easier and quoted at £32 2s 6d to £29 12s 6d, as to position. Spelter firmer at £32 5s to £31 13s 9d, according to position. Aluminium home trade £125, export £130. Antimony, English, quoted at £49 10s to £52 10s.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business this week has again been confined within very narrow limits, and it is evident that users are determined to exercise the greatest caution in adding to their commitments. Demand for tops, yarns, and pieces is poor, and a somewhat similar state of affairs prevails in the United States and on the Continent. The all-absorbing question at the moment, therefore, is: Can wool values be maintained? The Colonial wool sales in London next week will afford the best answer to this question, and in the circumstances the trade is awaiting with more than ordinary interest the verdict of the sale room. It seems certain, however, that unless good competition is forthcoming from the Continent, values will show a decline as compared with those ruling at the close of the last series. Quotations for tops and yarns are still mainly nominal, but where business is put through prices are strongly in favour of the buyer. One hears of as low as 4s 9d being taken for good 60's tops, but transactions of this kind are in the nature of forced sales, and should not be taken as a true indication of the market. Good business could be done in warp 64's tops at about 5s 9d, but the larger topmakers are not willing to make the necessary sacrifice. All carded and prepared tops in medium and low qualities show an easier tendency on the week, but in all sections there is really insufficient business to test values. Quotations for yarns are irregular, and stocks continue to accumulate. The position in the yarn trade, indeed, is becoming serious. A moderate amount of new business is passing in piece goods, but wholesale fabric buyers are constantly looking for concessions. English wools show a hardening tendency in sympathy with the trend of values at the country fairs, but there is very little business passing here.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Interest is now beginning to be centred in Coleman street Wool Exchange, London, where the fourth series of sales will begin next Tuesday. The list of wools available for sale is returned at practically 129,000 bales, this total including about 100,750 bales of Australian and 9,250 South African, the balance being South American and sundries. It seems to everyone that there is quite sufficient wool available to satisfy all requirements, and we hope that the series will be an improvement on the last. The bulk of

the offerings will comprise crossbreds, and considerable doubt exists as to what sort of a reception these will meet with. It is regrettable that the interval has been so disappointingly slow, totally unforeseen factors having been at work. Early in the year everything seemed to indicate a prosperous summer season, with developing consumption in crossbreds. The result of the recent French elections, together with the big efforts other Continental countries are making to stabilise exchanges have, however, combined to deal a severe blow to the Colonial wool trade. Germany's financial position is, perhaps, the most important of the influences now operating. It has been said by those who should know that the issue of rentenmarks is only about one-sixth of the amount actually needed to conduct adequately the home trade of Germany, and provide sufficient sterling to buy the quantity of raw material needed. Although further facilities are now granted to purchase sterling, other powerful factors are operating to prevent the accomplishment of this end. In the meantime, one does not know what is going to be Germany's attitude towards the buying of Colonial wool, which is known to be wanted in big volume by topmakers, spinners, and manufacturers in that country. No doubt the whole aspect of affairs would have been very different and far more propitious if finance had not been so crippled as has been seen during the past two months. Things have become undoubtedly worse, and it is the large business which at present is held up between Bradford spinners and German merchants which is the principal cause of the set-back experienced by crossbreds. This fact makes the outlook for the forthcoming auctions somewhat clouded. The partial stoppage of Bradford's export trade in wool, tops and yarns means the curtailment of the buying power of Bradford firms, who would by this time have been getting through the bulk of their direct imports. Instead of that, there are still big weights of wool to be seen on the railway sidings around Bradford, which is all indicative of lessened consumption, and this is finding an echo in the increasing number of wool sorters and combing operatives who are on short time or out of work altogether. However, we have known times when a series of sales which opened with anything but an inviting prospect have shown a development of competition and a strengthening of prices, the result being that things have shown a great improvement before the finish.

MANCHESTER, June 26.

The larger inquiry in the market experienced last week has been maintained, and in certain quarters an increased business has been done. The freer buying is rather significant in view of the fact that most operators believe in lower prices, but the requirements of some merchants are becoming urgent, and it has evidently been absolutely necessary to give out orders to manufacturers so as to secure adequate deliveries. The feature of interest has been the extensive buying in light fabrics such as dhooties and jaconets for India, and one leading shipping house has bought heavily. Although more trade has been done for India in other goods, the sales have not been important. Exporters to China have given increased support in white shirtings, some fairly substantial transactions being reported. Business has broadened for several minor outlets in a variety of cloths. In medium and fine numbers of American yarns encouraging contracts have been arranged, and many spinners have obtained relief. More activity has also shown itself in Egyptian yarns.

THE TIMBER MARKET.

(BY OUR OWN CORRESPONDENT.)

The demand for building woods is fairly steady, but prices to consumers are finely cut, competition being so keen for orders on the market that timber is often sold at less than replacement values. A greatly increased call for wood, therefore, must necessarily tend to a decided firmness in the market, both on the spot and for free on board futures. It is the sluggish demand on the spot market (that is, in comparison with stocks and those bought and shortly to be delivered) that has been the cause of the decline in the free on board market, and importers are still holding their hands for autumn purchases, because they are not confident that f.o.b. rates have yet touched bottom. In Canadian softwoods the imports have shown a satisfactory increase of recent weeks, but a decline as compared with the first five months of 1923; the European woods are in price matters more favourable in the Lancashire districts, where Canadian spruce has been, and still is, to a less extent favoured, and it is hoped that the trade lost by the Canadian shippers will soon be regained by good organisation, logging, and converting. In the pitchpine market of the United States there is a weakness in values occasioned by the falling off of the domestic demand, which is reflected on this side, and it might be added here that this is also to some extent the case with regard to the shipments of American hardwoods for the furniture trade, of which very large quantities of many descriptions—oak, ash, poplar, mahogany, &c.—in boards and planks are shipped to this market. In other sawn hardwoods increasing supplies of boards and planks are coming in from the British East Indies, Canada, and "other countries," and also increased numbers of logs from the last two named, compared with last year. Mahogany logs are the best market of all woods; stocks in first hands are small, and the market is likely to remain firm for some time. In the pitwood section of the trade imports have been lighter, particularly from Sweden and France, the fall in the shipments from the former being due to the late opening of navigation. In the native wood market the demand for other than best quality wood is meagre, the lower prices of foreign imports increasing the competition in the selling of home-grown woods.

VEGETABLE OILS AND OILSEEDS.

Market conditions all round have been much more active. Linseed oil has continued in good demand, and is again dearer, oil for prompt delivery having advanced to £39 10s naked ex Hull mill, with American inquiries still circulating. Cotton oils have revived, crude Egyptian moving up to £39 5s and soapmakers' grade of refined to £40 ex Hull mill.

In the oilseed section a large trade has been done in Plate linseed, up to £18 15s having been paid for seed on passage and for shipment, since when values have hardened to £19 for May-June and June-July. The firmness has been assisted by the reduction of 118,000 tons in the official estimate of the yield. The new figure of 1,488,000 tons is still 179,000 tons in excess of the final official estimate last year. The exportable surplus of Plate seed remaining for shipment this season is, therefore, reduced to £442,000 tons, against 275,000 tons actually shipped from Argentina during the latter half of last year, when, as will be remembered, there was a real shortage of seed, and oil stocks became exhausted. Unless the estimate undergoes a favourable revision later, existing supplies, together with 211,000 tons expected yet to come from India, are not considered more than sufficient to meet world requirements between now and the arrival of the new crops. London has been a good buyer of Calcutta at £20 5s to £20 10s for shipment. New crop Egyptian cottonseed is now offering freely, shippers' ideas for black being £12 September loading and £11 15s October.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Business was very flat at the auctions held in Bermondsey on Thursday last, as four out of the five classes of best ox hides were withdrawn in the absence of suitable bids. One class of light ox sold at 7½d, whilst seconds made from 5½d to 7½d, two classes of light showing a fractional advance of ½d. Best cows sold from 6½d to 6½d, and seconds from 5½d to 6d. Calf also shared in the quietude, best selling from 6½d to 15½d, showing in three classes falls of ½d to ½d. All wool and lamb skins were withdrawn from sale, and no official prices issued. The imported hide market is quiet, with a firmer tone in regorifics, which seems difficult to account for in view of the plentiful supplies at origin. Business has been done at 6½d for Argentine ox, 5½d for cows, and 7½d for Montevideo ox, but as killings in the River Plate are heavy, less money would probably be accepted. Dry hides are a listless market, and prices show a weaker tone. This week's cables from New York report the Chicago position as weak, with best heavy packers offering now at 12½ cents, and native cows at 10½ cents.

The sole leather section has fallen a shade quieter this week, as manufacturers do not seem inclined to buy leather until they know how the winter trade is likely to pan out. Cheap dry hide sole is still the best seller, although quite a fair business has been done of late in wet salted bends with repairers. Prices are steady, but there is a talk of cuts in price where big business is concerned.

Upper leathers are selling slowly, and some anxiety is again apparent at the influx of German chrome calf and side leathers at very low prices. Curriers are not well off for orders, as the prices of rough kips in Madras are still high, whilst it is almost impossible to get remunerative prices for dressed semi-chrome kips or waxed leathers. Coloured kid has fallen away in demand to nothing, and black kid is now only selling in a small way. The boot trade remains good in all centres.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 27.

SUGAR.—A hardening tendency was observable in all directions in face of sustained inquiries on actual consumptive account. Of British makes, Messrs. Tate and Lyle's cubes, also crushed, advanced 9d per cwt, with all other kinds also forward, granulated 6d. Cubes now quoted 42s 3d to 43s 3d; crushed, 40s 9d; nibs, 43s 3d; granulated, 40s 1½d; fine, also coarse grain, 39s 4½d; No. 1, 39s 1½d; No. 2, also London and T.L., 38s 10½d; ditto. Imported kinds dearer. White Java, spot, sold 35s 3d to 35s 6d; May-June, steamer, quoted 23s 3d; June-July, 21s 9d; July-August, 21s 6d c.f. and i. London. Czech granulated, spot, sold, 37s; ditto, June shipment, quoted 25s 6d; November-December, 20s 9d, f.o.b., Hamburg. Dutch granulated, spot, done 36s 6d to 37s, with shipment parcels quoted 25s to 25s 6d prompt f.o.b. terms, as to quality, American granulated, spot, 37s 6d; June, steamer, 25s 9d, c.f. and i. U.K. Cuban basis 96 per cent, June-July, quoted 19s 6d c.f. and i. U.K. White Terminal market was accorded fair support and a firmer tone predominated. August delivery sold, 23s 1½d to 23s 10½d; October, 21s 6d to 21s 9d; December, 20s 3d to 20s 6d; March, 20s 4½d to 20s 7½d.

COFFEE.—With a steady demand from the home trade, there was a fair amount of business doing during the week, and general tone of market proved very steady. Offerings in auction consisted chiefly of Costa Rica descriptions, and of which bold sales were, 113s to 137s 6d. Kenya bold realised 110s to 126s, with East India ditto 140s 6d.

COCOA.—Only a small amount of business was carried through on the spot at prices showing no material alteration. Accra, June-August, F/F grade, sold, 29s 3d; and October-December, 32s cwt, f.o.b. terms.

TEA.—About 35,300 packages Indian were submitted to auction during the week, and with brisk competition for all qualities, rates advanced ½d to ¾d per lb. Pekoe sold, 1s 3½d to 1s 6½d; broken orange pekoe, 1s 6½d to 2s 3½d. Ceylon sales of 30,300 packages proceeded on similar lines as Indian. Common and medium kinds were actively competed for. Pekoe sold, 1s 4½d to 1s 10½d; broken orange, 1s 6½d to 2s 0½d. With regard to new season's China, a fair business resulted in Keemuns, to arrive, up to 2s 6d per lb, landed terms in bond, while old sea-on's teas for price on the spot engaged fair patronage. 7,000 packages Java and Sumatra sold readily at ¾d to ¾d lb advance. Pekoe, 1s 2d to 1s 4½d; broken ditto, 10d to 1s 4½d; pekoe souchong, 1s 0½d to 1s 3½d; orange, 1s 3½d to 1s 4d; broken orange, 1s 1½d to 1s 4½d per lb in bond.

RICE.—The market at the moment is generally dull, but shippers adhere to steady asking prices as available quantities are small. Two Stars, spot, 15s; afloat, 14s 6d. S.O. double bags shipment to Cuba held for 15s 4½d, c.f. and i. terms. Japanese peas steady. Spot, 21s 3d; September-October, 20s 1½d per cwt.

SPICES.—Pepper remained quietly steady. Black Singapore, June-August, L.S., quoted 44d; Lampong, August-October, sellers, 42d; October-December, buyers, 42d. Muntok, August-October, 7½d. Zanzibar cloves, spot, 1s per lb. Tapioca generally quiet. Fair Singapore, flake, spot, 3½d; fine Bendorejo, 4½d per lb. Singapore flake, June-July, Havre, quoted, 27s 6d; Penang seed, June-August, London, sold, 21s. Sago flour dull. June sellers, 14s 6d; July, 14s 3d; August, 14s 1½d, to Liverpool. Desiccated coconut steady. Fine cut, spot, 37s 6d; medium, 38s 6d; halves, August-September, sold, 37s; September-October, buyers, 37s 9d per cwt. Ginger quiet, at late rates.

JUTE.—Sellers again adopted marked reserve, which tended to curtail business, and increased stability ensued. Cables record active operations on the part of local mills in new crop. First grade, June-July, continent, quoted £28 5s; new crop, August, £28 15s; August-September, sold, £27 12s 6d to £27 15s; September-October, buyers, £27 10s ton. Hessians firm. 10-oz, July-September, sold, 32s 3d; 8-oz, ditto, 24s 1½d per 100 yards. Twills firm, with a fair demand for B quality.

HEMP.—Consumptive demand is maintained for Manila qualities, and general tone of market is very steady, while assisted by light stocks in the U.K. and also locally. 1 grade, July-September, quoted £40; K, £36; L, £35; M, £31 10s; G, £45 10s; streaky threes, £47; ditto, twos, £53. New Zealand quiet, but steady. H.P.S., June-August, £37. African sisal: No. 1 Tanganyika, June-August, £45; Kenya, ditto, £44, c.f. and i. Italian, new crop, October-November, £83, c. and f., U.K.

SHELLAC.—Market steady. Fair T.N., spot, 275s; August, 260s; October, 260s cwt.

COPRA.—Market again harder on reserve of sellers and strength shown in American centres for all fats. Meantime, steady absorption ensues on the part of crushers. F.M.S. Straits, March-May, Rotterdam, quoted £29 15s; April-June, sold, £29 7s 6d to £29 8s 9d; May-July, £29 2s 6d to £29 5s; June-August, £29. Dutch East Indies, March-May, quoted £30; April-June, £29 5s; May-July, sold, £28 18s 9d; June-August, £28 16s 3d. South Sea, June-July, £28 2s 6d; Java ditto, £29 5s; F.M. Straits, June-July, Marseilles, £27 1s. Palm kernels firm. April-June, Liverpool, don't, £21; May-July, £20 8s 9d; June-August, £20 7s 6d ton.

RUBBER was accorded better support, and a firm tone predominated. Spot standard plantation, also July, sold, 10½d; July-September, 10½d; October-December, 11d; January-March, 11½d. To New York, standard estate sheet, July-August, sold, 10½d per lb, c.f. and i. terms. Wild quiet, but steady.

EGG PRODUCTS.—Market steady at recent rates, but general trade quiet.

ESSENTIALS.—Menthol, spot, 52s 6d; June-July, 45s. Japanese peppermint oil, spot, 14s 6d; forward, 13s 6d; anised, spot, 2s 4d; refined camphor, spot, 2s 10d; crude, 2s 8d per lb.

FRUIT (Dried).—With no extension in demand, business progressed quietly for most descriptions. Currants: Pyrgos, ½ bags quoted 41s; ½ cases, 46s; Amalia, 48s; Patras, 50s; Gulph, 52s; Panariti, 56s; Vostizza, 63s to 65s; Australian, new crop, ½ cases, 60s. Raisins: Valenc a, ½ boxes, 38s to 40s; Cape, new crop, 40s to 44s. Sultanias: Greek, ½ cases, 52s; Smyrna, boxes, 56s to 70s; Cape, sun-dried, 46s; ditto, sulphured, 55s. Figs: Genuine natural in bags, good, 36s; fine, 38s. There is only a small business doing in dates at prices showing no particular alteration. Evaporated fruits received but quiet attention. Californian apricots, standards quoted 72s to 76s; choice, 85s; peaches, choice, 48s; extra ditto, 50s; fancy, 58s;

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JANUARY 26, 1924.

No. 8.

apple-rings, 70s to 74s per cwt. Plums: Bosnian, 3 cases, 85/90, quoted 30s; 72/77, at 34s; Oregon, 30/40, quoted 68s to 70s; 35/45, at 53s; and 40/50, at 48s cwt.

CANNED GOODS.—A moderate demand was experienced, and a steady tone characterised the market. Of sardines, fairly liberal arrivals continue to come to hand from Portugal, and 1/2-flats are quoted 3s 6d; clubs, 3s 6d to 4s; 12 oz, 5s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobster firmly held, and fancy halves quoted 143s. Crayfish, 72s. Salmon, 1 lb flat reds, labelled, quoted 53s; ditto, tall, 44s 6d; 1 lb tall pink, 26s to 26s 6d; and cases of 96 1/2-lbs, 27s to 29s per case. Canned fruits—There has been quite a good amount of business done by speculators, and who have purchased goods in bond. Packers' ideas of 1924 prices are very much higher than the duty-paid prices current at the moment. In some instances, the c.i.f. rates (in bond) are 2s 3d per dozen tins higher than the duty-paid prices of spot stocks. Singapore and Hawaiian pines are barely steady. Singapore pines, 48 1/2 lbs, cubes, quoted, best quality, 6s 9d to 7s; ditto, 24 1/2 lbs, 11s to 11s 6d; slices, 48 1/2 lbs, 6s 3d; Hawaiian slices, 24 1/2 lbs, 14s 9d to 16s 6d. Californian apricots, 2 1/2 lbs, 8s 6d to 11s 6d; 1 1/2 lbs, 5s 3d to 5s 6d. Pears, 2 1/2 lbs, 14s to 16s; 1 1/2 lbs, 8s 6d. Peaches, 2 1/2 lbs, 9s 6d to 11s 6d; 1 1/2 lbs, 6s 3d to 6s 6d. Fruit salad, 2 1/2 lbs, 20s; 1 1/2 lbs, 10s 3d. Italian tomatoes, 7s per dozen tins. Canned meats—There was a better call with regard to beef at steady prices. A good inquiry continues for tongues, especially Danish, as quality of same is much appreciated in its particular circle. Condensed milk—Quite a good volume of business has been carried through, operators buying goods and leaving same in bond until after July 1st.

OILSEEDS.—Linseed firmer, with a good demand. Calcutta, afloat, £20 12s 6d; April-May, £20 12s 6d; May-June, £21 13s 9d; June-July, £20 13s 9d; bold Bombay, May-June, £21 5s. Plate, afloat, sold, £18 17s 6d; April-May, £18 17s 6d; May-June and June-July, £19 2s 6d. Rape seed firmer on reserved offerings. Toria, June-July, £18 2s 6d; Jamba, ditto, £14 10s; and real bold Ferozepore, ditto, £17 15s. Cotton-seed firm, but quiet. Egyptian, black, July, £13 7s 6d; September, sold, £12. Sakellariadis, £12 5s. Bombay, June-July, £10 7s 6d. Gingly seed firm. Chinese, June-July, £26 5s. Ground-nuts dull. Coromandel, machine-dried, June-July, £22 15s; Chinese, decorticated, f.a.q., ditto, £21 10s; bold Bombay, ditto, £22 5s. Soya beans firmer. Manchurian, afloat, £11 17s 6d; June-July, £11 15s. Castor seed firmer. Bombay, June-July, £27; Cawnpore, June-July, £25 5s per ton.

OILS.—Linseed firm, with a good demand. Spot, net, naked, 41s; June, 40s; July-August, 39s 9d; September-December, 38s 6d. Rape quiet. Crude, spot, 45s; refined, 48s. Castor-oil steady. First pressure, spot, quoted 62s; second pressure, 60s; and

pharmaceutical, 67s per cwt, Hull, with London 2s per cwt extra. Cotton steady. Crude Egyptian, spot, 39s 6d; Bombay, 37s 6d; common edible, 46s; deodorised 48s. Chinawood easier. Hankow, spot (barrels), 69s; June-July, 64s. Coconut firm. Ceylon, spot, 46s 6d; June-July, 43s 6d; Cochin, ditto, nominally 57s. Soya firm. Oriental, barrels, June-July, 41s 6d; bulk, 37s 3d. Cod steady. English, spot, 35s 6d to 36s 6d. Groundnuts quiet. English, crushed, naked, spot, 45s; deodorised, barrels, 53s. Turpentine quiet and easier. American, spot, 65s; July-December, 65s 9d. Rosin quiet, but pale grades firm. American, grade B, 13s 3d; G, 14s; WG, 17s; WW, 21s 6d per cwt. French WW, 17s 6d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on June 25th as follows:—The tallow market was quietly steady during the week, and prices were unchanged to-day. There has been more business doing than is apparent from the quantity catalogued and sold at the auctions. At auction to-day 640 casks tallow were offered, and 277 were sold. Quotations are:—Australian mutton: Fine, 44s 6d; good to fair, 44s to 42s 6d; dull to dark, 39s to 37s 6d; hard, 44s 6d. Australian beef: Fine, 45s; good to fair, 44s to 41s 6d; dull to dark, 38s 6d to 37s 6d; sweet, none. Present shipment from Australasia: Good mixed, nominal. Present shipment from South America, 42s 6d to 40s. The market letter is unchanged. Town tallow, 39s 6d per cwt., Rough fat, per 8 lbs, 34d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country: Frail casks, 39s; home melted, shipping casks, net, f.o.b., good coloured, 40s; fair to dull, 39s to 38s. Bone fat: White, none; pale, none; benzine, 35s; melted stuff, 34s 6d, f.o.b.

METROPOLITAN CATTLE.—JUNE 26.

Market closed owing to Foot and Mouth disease restrictions.
British Beasts, per stone of 8 lbs to sink the offal. Sheep, per stone.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 1.

A brief examination of the figures of production shows that at the present rate of output this scarcity will probably continue. Before the war the consumption of coal was annually increasing by about 5,000,000 tons. Since the termination of war conditions, production has been slowly improving, and this year's production of about 278,493,400 tons is within some 9,000,000 tons of the production of 1913, which was 287,411,000 tons. But it must be remembered that if there had been no war and the industries of this country had continued in their normal course of development, the national consumption of coal would have been some 50,000,000 tons more than in 1913. Obviously, therefore, when our industries revive, the present output will not be sufficient to meet the demand. There are now, happily, signs of a recovery in industry; consequently, when a period of cold weather causes a greater demand for household, there is a shortage of coal, and that state of affairs will continue until

the present rate of production, something less than 6,000,000 tons a week, is considerably increased. But, for the moment, the working of all these normal factors is upset by the railway strike, which has greatly hampered exports, restricted the opportunities of moving coal away from the pits, and accordingly curtailed production. The immediate future, therefore, depends on the duration of the strike.

Iron and Steel.—The iron and steel production figures just issued by the National Federation of Iron and Steel Manufacturers put pig-iron production for 1923 at 7,438,500 tons, and steel production at 8,488,900 tons. This is an improvement of 50 per cent. and 44 per cent. respectively over 1922. A considerable improvement also took place in the exports of iron and steel, which at 4,320,000 tons were nearly 1,000,000 tons more than in 1922. The disappointing feature of the year, Continued on page 8.

SOME STATISTICS OF RUSSIAN EXPORTS.

(BY A CORRESPONDENT.)

FOR the financial year ending September 30, 1923, Russia's exports and imports valued at present prices were as follows:—

(In Million Gold Roubles.)			
Quarter.	Exports.	Imports.	
October-December, 1922	52.0	52.4	
January-March, 1923	31.5	28.7	
April-July, 1923	49.4	50.7	
July-September, 1923	77.7	55.7	
	210.6	187.5	

Thus, as a result of insisting that imports should not exceed exports in value, a favourable balance of 23,000,000 gold roubles has been achieved on the year. The following quantities and present values of the principal export commodities sent abroad during the year (excluding exports from the Caucasus) may be compared with corresponding figures for 1921-22:—

(In 1,000 Poods and 1,000 Gold Roubles.)					
Commodity.	1921-22.		1922-23.		
	Quantity.	Value.	Quantity.	Value.	
Cereals	87 ..	8 ..	46,374 ..	39,330 ..	
Timber	30,921 ..	12,464 ..	56,477 ..	22,056 ..	
Flax	1,754 ..	9,149 ..	2,111 ..	10,972 ..	
Hemp	465 ..	1,649 ..	537 ..	3,335 ..	
Horsehair	72 ..	1,602 ..	150 ..	2,856 ..	
Oil	3,189 ..	10,107 ..	5,146 ..	10,504 ..	
Manganese ore	1,696 ..	328 ..	2,587 ..	517 ..	
Scrap iron	2,189 ..	4,135 ..	4,557 ..	4,156 ..	

Prices of flax and hemp have risen during the year two to three times, according to grade. Under these influences flax and hemp cultivation are being rapidly restored. In regard to oil, if the Caucasian exports of 14,700,000 poods are included, a total of 19,846,000 poods for the year will be obtained. It is made up as follows:—

	1921-22.	1922-23.
Kerosene	3,611,000 ..	11,480,000 ..
Benzene	2,660,000 ..	2,488,000 ..
Lubricating oils	2,237,000 ..	3,577,000 ..
Naphtha and mazout	13,000 ..	2,301,000 ..
	8,521,000 ..	19,846,000 ..

Thus last year's export represents nearly 36 per cent. of the 55,500,000 poods of oil exported in 1913. In addition to this, the latest information announces that 3,000,000 poods of mazout have been sold to France, while negotiations are said to be proceeding satisfactorily with foreign interests for the sale of 6,000,000 poods of Grozny paraffin. It is a striking evidence of the changed conditions in Europe that Russian exports of rye are already in excess of the average exported annually for the five years preceding the war. Statistics are already available showing that from August 15th to December 31, 1923, the total amount of cereals exported from Russia was over 99,000,000 poods. Of this, rye represented 50,000,000 poods, whereas 37,000,000 poods was the average annual export for the quinquennium 1908-12. Wheat exported during the same 4½ months period

totalled only 23,700,000 poods, or little more than 10 per cent. of the quantity of wheat exported before the war, while the 8,460,000 poods of barley similarly exported amounted to only 4 per cent. pre-war, and oats at 3,015,000 to 4.6. Offals at 5,960,000 poods represented 15.4 per cent. of pre-war export. Opinions as to quality vary, some of the grain having been excellent and some very indifferent. It is significant that overhead charges swallow up 60 per cent. of the selling price of rye abroad, according to Soviet official figures, although in actual practice it is believed that overhead charges are far greater still, and it is common knowledge that in face of this situation the Soviet grain-collecting organisations have been paying the peasants unduly low prices. So discouraging has this practice been to the peasantry that it is advanced as one of the reasons for the diminished sowing of winter crops last autumn. As regards timber, the Northern, Petrograd, Dvina, and other timber trusts are said to have exported, during 1923, 170,000 standards, while the mixed companies—Russo-English and Russo-Dutch—are credited with 16,000 and 2,000 standards respectively. Thus the total export of timber from White Sea ports for 1923 is put at 208,000 standards, or about 50 per cent. of the record 1913 year, comparing with 36,000 and 103,000 standards in 1921 and 1922 respectively. Here again overhead charges are officially estimated at 60 per cent. of the foreign selling-price, but articles in the Soviet Press during recent months suggest that the situation is much worse, while the Finance Commissariat is constantly complaining that the working of timber at a loss is a constant source of disappointment for the Treasury. It is difficult to resist the conclusion that there is scarcely one of the Soviet State trading organisations which is making real commercial profit at the present time. British timber importers also complain that the Soviet trading organisations abroad not infrequently undersell the market in a way in which no ordinary, commercially run firm could afford to do, thus placing the trade in a state of constant instability. It is also said that the grading and packing of timber on vessels leaves much to be desired. The present political crisis in Moscow is already revealing tendencies towards making foreign trade freer and entrenching upon the Government monopoly. Whatever may be its outcome, nothing can be more certain than an impoverished country like Russia cannot go on much longer losing heavily as a result of an incompetent State administration of trade—whether internal or foreign—and that the foreign credits which the Soviet Government seeks to secure for Russia will never materialise as long as the traders of other countries are unable to ship Russian goods at Russian ports, and market them abroad independently of any State-controlled agencies for the disposal of her exports abroad.

SOME STATISTICS OF AGRICULTURE.

By SIR HENRY REW.

THE Election Manifesto of the Labour Party, signed by Mr Ramsay MacDonald and other leaders, two of whom are now in the Cabinet, declared that "Agriculture, as the largest and most essential of the nation's industries, calls for special measures to restore its prosperity and to give the land workers a living wage. The Labour policy is one that will develop agriculture and raise the standard of rural life." In his speech in the House of Commons on Monday last the present Prime Minister especially referred to the urgency of considering the position of agriculture. It may, accordingly, be assumed that the new Government intend to formulate without delay an agricultural policy, and to press forward measures to give effect to it. In their attempt to do so they can rely, at any rate, on the sympathetic interest of all parties. The Coalition Government and the Conservative Government tried unsuccessfully to solve the problem, and if the Labour Government can succeed they will establish a claim to the gratitude of the nation.

At this juncture it may be opportune to draw attention to some of the salient facts which lie at the root of the rural problem. There is no lack of discussion of the subject, but for the most part it tends to concentrate on superficial or temporary aspects. Very naturally those who are engaged in agriculture, whether as landlords, farmers, or labourers, are engrossed with their immediate troubles and want instant relief. These deserve and demand attention, but a constructive policy for rural England requires a wider vision. The most pregnant fact to be considered is the steady shrinkage of the agricultural area. During the last 30 years two million acres in Great Britain have been withdrawn from agriculture, and have been absorbed by the towns. This would be serious enough if the population were—as in France—stationary, but during the same period it has increased by ten millions. In other words, whereas in 1891 there were 999 acres of agricultural land for every 1,000 of the population—i.e., one acre per head—in 1921 there were only 722 acres per 1,000. If the same tendencies continue unchecked, there will be in 1951 only 545 acres of agricultural land per 1,000 of population.

In dealing with this problem it is well to remember that the extent of land, suitable for agriculture, not at present put to economic use, is small. According to statistics published by the International Agricultural Institute, 84.7 per cent. of the total area of Great Britain is put to productive use. No doubt some addition might be made by reclamation, but, broadly speaking, the country is at present farmed, more or less satisfactorily, up to the economic margin of cultivation. The only way, therefore, by which production and employment can be maintained, even at its present level, in this country, is to adopt such a policy as will ensure that all agricultural land shall be put to its fullest economic use.

A few figures summarise the agricultural history of the past ten years, taking the returns for June, 1914, 1918 and 1923 respectively:—

	1914.	1918.	1923.
	1,000 Acres.	1,000 Acres.	1,000 Acres.
Arable land	10,998 ..	12,399 ..	11,181 ..
Wheat	1,807 ..	2,557 ..	1,740 ..
Barley	1,505 ..	1,501 ..	1,327 ..
Oats	1,930 ..	2,780 ..	1,977 ..
Potatoes	461 ..	634 ..	467 ..
	1,000's.	1,000's.	1,000's.
Cattle	5,878 ..	6,200 ..	5,823 ..
Sheep	17,280 ..	16,475 ..	13,835 ..
Pigs	2,481 ..	1,697 ..	2,612 ..

The gain of nearly 1½ million acres of arable land obtained by compulsory measures during the war has gradually been lost, as was, indeed, inevitable when compulsion was withdrawn. For a time high prices and, later, the hope of direct assistance from the State retarded the natural tendency. It may be anticipated that the failure of the latest attempt to maintain the arable area by artificial means will have the psychological effect of inducing a number of farmers to reduce still further the land under

the plough, but this may be regarded as a temporary phase, and farming will very soon settle down on an economic basis.

In this connection it is significant to note that the Agricultural Tribunal, in their second report, expressed the view that the total arable area in Great Britain "is not likely to fall below 12,000,000 acres," i.e., if no artificial means are adopted to maintain it. The present area (including Scotland) is 14½ million acres. The prediction may be hazarded that it will take many years to reduce the present arable area by 2½ million acres. Year by year the use of arable land for stock-keeping and for other purposes than that of growing corn for direct sale is extending, and even were cereals to become, in themselves, wholly unprofitable, it does not follow that the plough would disappear.

In addition to the details of crops and stock for each county, this publication includes some interesting statistics of the number and size of agricultural holdings, and of labour employed on the land in England and Wales. The total number of holdings in 1923 was 411,673, a reduction of 3,042 from the previous year. This is a natural consequence of the shrinkage of the agricultural area, though there is some slight indication of a tendency to throw smaller holdings together. The number of holdings of not more than 50 acres, generally known as small holdings, decreased by 2,942, and those of more than 100 acres by 220. On the other hand, there was a slight increase, by 120, of holdings between 50 and 100 acres.

The return of the number of workers employed in agriculture in June last is as follows:—

REGULAR WORKERS.	
Males—	
21 years and over	426,925
Under 21 years	138,898
Women and girls	59,477
CASUAL WORKERS.	
Males—	
21 years and over	79,099
Under 21 years	24,390
Women and girls	42,998

Corresponding statistics were obtained in June, 1921, and the changes in the two years are interesting. There has been a reduction of 97,000, or 11 per cent., in the total number of persons employed. A comparison of casual workers is, however, subject to error, as the numbers employed on a given day in each year may be affected by seasonal conditions. Taking regular workers alone, the reduction in two years was 60,000, or 9 per cent. The figures, it should be noted, include not only wage-earners in the ordinary sense, but also the sons and daughters and relatives (other than wife) of the farmer. Bearing this fact in mind, it is significant that the average number of regular workers (male and female) employed per 1,000 acres of farmed land in England and Wales is only 24. The maximum in any one county is 44, in Kent, where hops and fruit account for a comparatively high labour staff. In Norfolk, a county in which three-fourths of the farmed land is under arable cultivation, the number of regular workers per 1,000 acres is no more than 31. The number of regular workers discharged in Norfolk since June, 1921, was 3,337.

These figures of the flight—or, more precisely, the expulsion—of the labourers from the land have received too little attention, but they are vitally significant. Landowners and farmers are articulate, and, indeed, vociferous, but the farm workers are dumb, and their troubles are not head-lined in the popular Press. During the past two years, no doubt, financial difficulties have compelled many owners to sell their estates and many occupiers to give up their farms. But though individuals suffer, the interests of the State are unaffected so long as others take their place. It is notorious that there is no difficulty in finding purchasers for estates and occupiers for farms. But the discharge of agricultural labourers means not only hardship, and sometimes tragedy, for individuals, but irreparable loss to the community.

PRODUCTION. (Thousands of Metric Tons.)

No. 10.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 2.

however, was the low price level, which throughout the year averaged 47 per cent. over 1913, compared with 59 per cent. for commodity prices generally. The outlook for 1924 seems more favourable; prospects for shipbuilding are brighter, which should cause an increased demand for iron and steel, while the orders placed by the railway companies have given a much-needed stimulus to the industry. In America the industrial and commercial prosperity of 1923 has been attributed to the policy of expansion initiated by the railway companies, and it has been estimated that the demands of the railroads and allied concerns were responsible for 31 per cent. of the output of iron and steel in the United States in 1923. While the demands for British railways cannot reach this proportion, it is to be hoped that, as in America, the stimulus given to the industry by the railway orders will gather momentum, and lead to much better conditions in 1924. It is impossible yet to say what effect the strike of the enginemmen will have upon the industry, but already a few furnaces have had to be damped down. The materials consumed by the iron and steel works are of such bulk that it is obviously impossible to accumulate stocks sufficient to carry them through a long strike, and should the strike last more than a comparatively few days the whole industry will be brought practically to a standstill.

Cotton.—During the latter half of December trade was of limited dimensions, partly as a result of the fluctuations in raw cotton rates, and partly owing to the Christmas holidays having a disturbing influence. Since the turn of the year, writes our Manchester correspondent, inquiry has broadened, and a considerable trade has been under negotiation. Although in one way and another more orders have been booked in certain styles of cloth, a large part of the demand has been at impracticable rates, and buyers have been slow in raising limits. India has given increased support in light fabrics, but only occasional contracts have been arranged in grey staples. Inquiry on a fuller scale has recently been met with for China, and more orders have been booked in white shirtings. Advances from Shanghai are distinctly better. Cables and letters from Egypt are unsatisfactory. Less demand is now showing itself for the United States, but fancies continue to attract attention for the Continent. Spinners of American yarns have tended to lose ground, and, owing to production being larger than the deliveries, stocks are increasing in first hands. It remains to be seen whether the proposed control scheme will be accepted by the trade. A rather restricted business has been done in Egyptian yarns, and producers are not doing quite so well as a month ago.

Wool.—The position of wool to-day, writes our Bradford correspondent, is rather a startling one. During 1923 prices appreciated very rapidly, particularly for medium and low crossbreds. Merinos appreciated practically 15 per cent., good new Zealand halfbreds (50-56's quality) 15 per cent., medium crossbreds about 33 per cent., and coarse crossbreds about 62 per cent. Since the close of the December series of sales, merinos have appreciated a further 10 per cent., and practically all classes of crossbreds 15 to 20 per cent. Wherever the raw material is exposed for sale there is a crowd of buyers eager to absorb all offerings, and undoubtedly considerable speculation has been already seen. Medium and coarse crossbreds have appreciated most because they were by far the cheapest, being much below an economic basis. Merinos are well over 100 per cent. dearer than in July, 1914, and before long it is thought that 50's and below will be at a level in harmony with their actual worth. No doubt the cry of shortage which has been persistently raised has had its effect upon the trade, and the latest statement of Sir Arthur Goldfinch, chairman of the London directors of B.A.W.R.A., has added fuel to the fire. He has exerted a "bull" influence for a long time, and repeats his previous assertion to the effect that, judged in the light of the absorptions of the trade during the past two or three years, the world's supply of wool is much below present consumption. It is a fact that since the end of 1920 the trade has absorbed practically 2½ million bales of old Australian wool, accumulated during the war years, and with that huge stock out of the way the trade is now faced with only the clips that are being grown. Statistically, the wool position is a remarkable one, and anything like a normal consumption on the Continent would certainly mean a very serious shortage. Sir Arthur Goldfinch has produced some most illuminating figures, which, on the whole, can be accepted as fairly accurate; but it is difficult for the members of the trade who have had a lifetime's practical knowledge to believe that B.A.W.R.A.'s surplus, although distributed to the trade, has been consumed. Stocks of merinos in the hands of the home trade are certainly below normal, but stocks of crossbreds are up to normal. The textile industry of the West Riding is by no means busy, and all the activity so far has been amongst those handling the raw material. Margins are exceedingly small—in fact, the price of yarns and pieces does not harmonise in the least with the cost of wool.

Shipping.—As regards outward freights, the rates of last month are barely held, the demand for tonnage being quieter. There is a likelihood of a very serious hold-up owing to the railway strike. In homeward freights a general improvement is reported. From South America there is a big demand, with a

marked rise in rates. Rates from the East and the Pacific are very firm, and a recovery is noted on the Australian route. **Other Trades.**—Manufacturers in the hardware trades report improvement in home demand, but cutlery makers find business irregular. In pottery, a reduction in prices is expected to lead to better demand. Business is slow in drapery and clothing. The paper-making industry, as a whole, is slightly better. In the leather and boot and shoe trades a steady expansion is in progress. Nottingham reports at last a definite improvement in employment in the lace trade. In heavy chemicals the position is maintained in a fairly healthy state.

UNITED STATES OF AMERICA.

In the United States, the satisfactory volume of industrial and trade activity is being well maintained, on the whole. Cotton goods and wool goods mills in New England are an exception, and there production is being curtailed. In other directions a quickening of activity is noted, especially in the steel trade. The United States Steel Corporation's report showed a gain of 76,755 tons in unfilled orders in December, the first increase since March last. Indications point to further increases in the demand for steel. *Bradstreets* sums up the outlook for 1924 by saying:—"There does not seem to be much disposition to expect any great change in the fairly even tenor of business as a whole, which throughout the past year has been from fair to good."

EUROPE.

Largely as the result of stabilisation of prices, trade and production in Germany are improving, and a sharp decrease in unemployment is reported. Labour disputes of a serious nature have, however, been produced by the attempt to restore the 10 hours' working day, while high production costs remain a serious obstacle. In the Ruhr, industry is getting back to work very slowly. Heavy taxes imposed by the French, and the uncertainty as to whether the Federal Government will reimburse Ruhr producers, add to the natural difficulties. The textile industries have recently come to a more favourable agreement with the French. Ruhr coal output is now reported to be about 50 per cent. of normal, but about 75 per cent. of the iron works are still idle.

In France the rise in prices has not, generally speaking, proceeded so fast as the depreciation in currency, so that the French exporter enjoys a temporary advantage. In the engineering and steel trades manufacturers' order-books are not very satisfactory; but the lace trade has improved, and in the wool trade Roubaix is very active, other centres not being so well placed. Holland remains very much under the influence of German conditions.

Italy's progress continues, and her export trade is increasing. Her improved position has been illustrated by the fact that the lira has remained firm, and has not followed, as so often in the past, the depreciation of the franc. A more normal situation has been restored at Fiume. There is no improvement to record in the rather unsatisfactory trade position in Norway, but it is hoped that the adoption of sounder lines of financial policy may lead to better conditions later on. In Denmark there is a tendency for unemployment to increase. Trade improvement in Austria continues, and Hungary derives new hope from the League plans.

BRITISH EMPIRE.

While no definite improvement has taken place in Canada, signs of a strong reserve of purchasing power are reported, from which some hopeful deductions are drawn. In the Union of South Africa the general improvement in economic conditions recently reported is continuing, though it is, in the main, due to seasonal factors. The Transvaal gold output in 1923 was 7,798,959 ounces, as compared with 7,020,110 ounces in the previous year, when, of course, the Rand strike seriously interfered with production. The most favourable news from within the British Empire comes from India, where recovery is in progress sufficiently strongly to reflect itself here. In Australia and New Zealand, conditions generally are decidedly better than a year ago. In three Australian States—Victoria, South Australia, and West Australia—both agriculture and grazing are the subject of exceptionally good reports.

ARGENTINA.

Both yield and quality of the wheat and linseed harvest promise to be exceptionally good, and the exportable surplus of the two crops are estimated at 4,800,000 tons and 1,750,000 tons respectively. The greatly increased import duties which have come into force will hamper some British exports.

CHINA AND JAPAN.

Rumours of new earthquake disasters in Japan 10 days ago happily proved to be greatly exaggerated. Although no far-reaching plans for reconstruction have as yet been worked out, demand for necessary materials is increasing, and the diversion of shipping to the Pacific has had a favourable effect on the freight market. The resiliency of Chinese trade proceeds, in spite of political obstacles,

We resumed last June the publication of a *Monthly Statistical Supplement*, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations*,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1923. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

As a very broad survey of the trade situation this month, it may be said that while the results achieved, as revealed by statistics, show little change, there has been an appreciable weakening in sentiment during the last four weeks. The insurance figures of unemployment at the end of February dropped to 10.7 per cent., as compared with 11.9 per cent. at the end of January, but the latter figure was due to the railway strike, and the February percentage does no more than bring the proportion back to that of December last. A favourable factor in the employment situation is that the Trade Union percentage, which mainly represents skilled men, chiefly in the metallurgical trades, which failed to show the effect of the strike a month ago because of the date on which the returns were made, has had a still further fall to 8.6 per cent. at the end of February, mainly owing to the substantial improvement which has taken place for some months past in the engineering trade. Seeing that this industry with the allied trades of shipbuilding and iron and steel production have had far the heaviest unemployment of the big trades, the present recovery is significant. The general situation, however, shows no very definite signs of improvement, and this in itself is disappointing to the business world, which has been looking for a steady advance this spring. Indeed, during the last four weeks we have detected signs of hesitation, and in some quarters a lag which has shown itself not so much in actual statistics indicative of production, as in such sensitive barometers of opinion as the prices of industrial securities. These fell during the period of Stock Exchange nervousness, which followed the General Election in December and January. After the formation of the Labour Government in the middle of the latter month they improved steadily, and the index number of the *Bankers' Magazine*, which refers to the third week of February, shows a marked rise. But since that date there has been a sagging tendency from causes which seem to be economic and not political. One of these, and perhaps the most important, is the fear of a coal strike in April. There has been something like a rush, a little late in the day, to be numbered among the Wise Virgins, and some sharp price movements have occurred. This has introduced an element of uncertainty into the whole of the metallurgical trades as to price quotations, with the inevitable result of checking the market. Unrest is also reported from a number of other quarters, and while this has been in some cases averted, the business world finds the prospect of constant increases of wages, or alternatively repeated interruptions of business equally unpalatable. Another disturbing feature has been the very abnormal movements of the franc, which aroused some suspicion as to whether European currencies were going to be as stable as the financial world had begun to assume. The net result is that while production is well maintained on the whole, and, indeed, in many branches, factories have work for months to come, many trade reports refer

to some slackening in the booking of future orders to follow on the work in hand. Coal production is at a very high level, the steel output is almost a record for February, but pig-iron shows only a slightly increased daily output as compared with January. The February exports of British goods show a substantial increase as compared with a year ago, and the figures in detail for particular trades are encouraging. Woollen tissues, for example, are at nearly double the rate of February, 1922, and show an increase of 25 per cent. over 1923. Exports of cotton piece goods for the last three Februaries amounted to 252, 342, and 397 million square yards respectively, while in the case of iron and steel products, where Continental and particularly Belgian competition is once again quite an important factor, the exports were 330,000 tons, against 223,000 tons in February, 1922, and 317,000 tons last year. The increasing volume of trade has been accompanied by an increase in the advances of the London clearing banks, but the change has made no pronounced disturbance in money conditions generally, or in the note circulation, which has only shown a very small variation in recent weeks.

Outside the factors which we have mentioned as being responsible for some hesitation in this country, conditions abroad remain favourable, or have actually improved. In the United States prosperity continues unabated. Indeed, the factor which suggests that it may continue for some time is the absence of speculative buying or production, and the fact that, though output is so colossal, consumption has kept in step, for there has been no undue accumulation of stocks. Hand-to-mouth business may be difficult for the business world, but a situation where output is being put into stocks almost certainly contains the seeds of an early depression. Canadian reports are more optimistic; Australia has been selling her wool crop at great advantage to herself; there is no change of importance in India or the Far-Eastern trade; in South America, Chile and the Argentine both have prospects of a satisfactory year. In Europe the depreciation of the Belgian and French francs produced a temporary export bonus, which upset prices, and led to a certain amount of shipment to this country, particularly of pig-iron and steel billets from Belgium. The depreciation has not lasted long enough, nor has France been able to secure sufficient material for a similar movement to occur in the case of French woollens. The tourist centres of France, Italy, and Switzerland have had a prosperous season. Italian industries are doing well, and Scandinavian and Baltic trade is fairly good, with prospects of a brisk season in timber and wood pulp. Central Europe is not making much headway, and in Poland industry is in a state of depression, as the result of high costs and fiscal and currency difficulties.

The following notes on conditions in various trades and countries call attention to some of the most striking tendencies:—

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 17.

HOME INDUSTRIES.

Iron and Steel.—With orders placed early in the year approaching completion, the iron and steel industries have entered on a quieter period, both buyers and sellers showing a tendency to hold aloof, pending a definite outcome of the negotiations between coal owners and workers. Fuel prices at present hold the key to the situation. Labour conditions are not altogether satisfactory in the iron trade itself, some amount of dissatisfaction existing, notably in the unskilled and semi-skilled branches, with regard to present wage rates. Pig-iron prices have fallen in Cleveland and Scotland, though the Midlands have so far put up a greater resistance. The hematite trade is quiet, foreign demands being low, and business of hand-to-mouth character. Foreign competition, especially Belgian, is noticeable in the steel trade.

Coal.—The rush to secure early deliveries of coal, and the consequent firmness in all markets, seem to show that domestic and industrial consumers have been slow to replenish stock during recent months, the prospects of serious labour troubles in the industry having been disregarded or underestimated. Throughout the country, collieries report full or rapidly filling order-books, and prices have moved sharply upwards. A shortage of rolling-stock is naturally complained of in certain areas. The Hamburg strike has interrupted the flow of Continental trade via that port. Loading congestion in South Wales continues, the list of waiting steamers being, if anything, longer than before.

Engineering.—The omens, on the whole, are favourable, though high home metal prices and unrest in the labour world are limiting factors. Railway and other "unemployment relief" orders are having an appreciable effect. The motor-car industry continues to receive large orders. Machine-tool makers are rather quiet, the demand for small tools being rather better. Locomotive building is more active. Improvement in ship-building is slow, but numerous Clyde establishments have orders for internal combustion marine engines. The electrical industry maintains a satisfactory volume of business. Throughout the engineering trades, however, a reduction in working costs, especially fuel costs, is felt to be eminently desirable if overseas trade is to be increased. Unfortunately, the trend of wages is upward in most branches at the present time.

Hardware.—Business, on the whole, is restricted, but not unpromising, a slight seasonal quickening being noticeable in the agricultural implement branch. The cutlery trade is quiet.

Cotton.—Our Manchester correspondent writes:—Although business during the month has been rather irregular, there has been a tendency for spinners and manufacturers to improve their position. This has been very largely due to the adoption of organised short time in the mills spinning American cotton, it being decided on February 23rd to restrict production for three months by working the factories only 26½ hours per week, instead of the usual 48. Spinners of Egyptian yarns have maintained their position. Without many big contracts being reported, steady buying has taken place from week to week. Some producers of the superior qualities in the finer counts are extending their engagements. A feature of the month has been the increased turnover in printing cloths, and more looms are running in Burnley and district than for a long time back.

Woollen and Worsted Trades.—A halt was called last month in the rise of wool prices, and a certain amount of reaction took place, chiefly in the finer grades. Topmakers and spinners, however, put up a strong and successful resistance to downward tendencies. The world's wool supplies are changing hands this year with unusual rapidity. Home trade in woollens has improved, overtime being worked in some parts of the West Riding, with forward business much in evidence. Worsteds manufacturing is more unsatisfactory, and short time is being resorted to. Foreign trade has opened the year in promising style, January exports of woollen and worsted tissues being the largest since 1920. The hosiery trade is firm, orders for spring and autumn delivery being received in satisfactory volume.

Boots and Shoes.—Leather manufacturers are fairly busy, the regular weekly consumption of sole and upper leathers being on substantial lines. The demand for boots and shoes has improved, several factories having order-books covering a number of weeks ahead. The higher grades of shoes are more in demand, and orders are said to be less of a hand-to-mouth character than of late.

Chemicals.—After the set-back of the dockers' strike, foreign trade has been making up lost ground. Business is steady, though not exciting, and the prevailing feeling moderately hopeful. The demand for increased wages, however, has introduced an element of uncertainty into future prospects.

Shipping.—Conditions in February were again more satisfactory, the Economist's freight Index Number rising from 17 to nearly 24 per cent. above the 1913 level. This is the highest figure for nearly two years. A gratifying feature was the recovery of rates in European waters, and generally in outward coal freights. The River Plate continues to be a source of strength, but markets are at present dominated by uncer-

tainty regarding the outcome of negotiations in the coal industry.

UNITED STATES OF AMERICA.

Prosperity continues, and the volume of trade is expanding, but the policy of buyers in placing orders for only short periods ahead has become more noticeable, and is the subject of much comment. The January daily output of steel was the largest since August last, and the February pig-iron figures show a gain in that section also. Building permits this year have constituted a "record," and freight-car loadings are higher than at this time last year. More satisfactory conditions in wheat areas are reflected in reports of increased sales by seed merchants. The New England cotton industry continues to curtail production, and woollen buyers are cautious. Generally speaking, the seasonal lull in trade has disappeared with the turn of the year, and the situation wears a healthy aspect.

THE BRITISH EMPIRE.

Canadian reports are more optimistic, though the improvement in sentiment appears to outrun that in volume of trade. The flour-milling and pulp industries are at present most flourishing. The rains which fell early in the year greatly relieved the situation in parts of Australia. The second half of the Australian wool-selling season has been characterised by exceptionally strong demand, and high prices—American demand being particularly in evidence. Wool arrivals in the first half of the season totalled 1,451,195 bales, against 1,556,019 in the corresponding months of 1922-23, a decline of 104,824 bales. The prices of all New Zealand's products are at a satisfactory level (with the exception of beef), and prosperous conditions are indicated by brisk activity in the building trade, and, regrettably, by increased imports of luxury goods. South Africa continues to make headway. India's trade-balance for the 10 months ended January 31, 1924, was favourable to the extent of Rs. 50.34 lakhs, against Rs. 50.34 lakhs during the same months of 1922-23. Her imports of cotton yarns and piece goods have, however, fallen off slightly as compared with the previous period. A labour dispute in Bombay mills has interrupted production. The tightness of money is illustrated by the raising of the Imperial Bank's rate to 9 per cent. last month, against 4 per cent. at the beginning of the crop-moving season six months ago.

EUROPE.

Ruhr coal production, according to the *Moniteur Belge*, in occupied districts, exclusive of mines under French administration, was 7.0 million metric tons in January, 1923, sank to less than 1.0 million tons in August last, and has steadily increased from 1.3 million tons in November to 6.3 millions last month. The continued high prices of German industrial products tend to discourage exports, and the trade balance has become unfavourable once more. French iron and steel production has reached its highest level since the Armistice, but, if the output of the recovered portion of Lorraine be deducted, the returns for January were 17 per cent. and 10 per cent. respectively behind the monthly average for 1913. The textiles trades are moderately active at present, but exchange fluctuations are damaging to business. Belgian coal markets are firm, and iron and steel prices are moving upwards, delivery being in some cases unobtainable before June. The Swiss hotel industry is doing very well, the watch trade moderately well, and most others not at all well. The Italian situation remains satisfactory, engineering showing signs of improvement. Holland has again become an iron and steel producer, the new Royal Dutch Blast Furnaces and Steel Factory Company having an annual capacity of 150,000 tons of pig-iron. Scandinavian timber and wood-pulp markets remain active. Fiscal difficulties, with increased wage and overhead costs, have brought about a period of severe depression in Poland, particularly in the textile and timber trades, but recent indications are more favourable. The Spanish situation remains dull. Conditions in Czechoslovakia are referred to elsewhere in this Supplement. Turkish business remains quiet on the whole, but the prevailing sentiment is slightly more optimistic.

SOUTH AMERICA.

Shipments of Argentine wheat and linseed are coming forward on a large scale. Moderate rains have greatly benefited crops recently, and maize, in particular, is in good condition. Chilean nitrate sales have improved. Brazilian conditions are steady, the internal situation being much more satisfactory than was the case, say, six months ago. The trade balance remains favourable.

JAPAN.

The Japanese Press expresses uneasiness over the country's foreign trade position. Last year's exports showed a decline of 12 per cent., and imports an increase of 5 per cent., as compared with 1922, itself an unsatisfactory year. The silk market has been disappointing, American demand having fallen off, though a revival is looked for. Trade with China has also been below normal, but may tend to improve now that personal relations are slightly more satisfactory.

CZECHOSLOVAKIA'S ECONOMIC SITUATION.

By DR KAREL ENGLIS (former Minister of Finance of the Czechoslovak Republic).

THE exceptional economic and financial situation of Czechoslovakia is due to the fact that the natural wealth of the country is exploited by a very industrious, intelligent and enterprising population, that the country has no reparations to pay, and that the new political democracy, prompted by the desire for a strong State, has had the courage to face the task of restoring order in the public finances. The well-developed industries of the country, which, in consequence of the change of régime, are largely dependent upon the export trade, have shown their ability to compete with foreign countries, and the trade balance is on the credit side. As early as 1921 the State finances produced a balanced Budget—apart from the special investment items (electrification schemes, building of railways, &c.). The inflation of bank notes was restricted from the beginning, and the Czechoslovak crown was not involved in the collapse suffered by the currencies of the neighbouring States of Central Europe.

This exceptional situation encouraged the Government in 1922 to undertake a process of deflation. The extensive loan floated in England, together with the concentration of capital withdrawn from countries with a collapsing currency, raised the value of the crown from 6 centimes (Swiss) in December, 1921, to 19 centimes in September, 1922, while, after a few unimportant fluctuations, it finally became stabilised at one-sixth of its pre-war value. This process was naturally not achieved without a severe economic, monetary, and financial crisis. The decline in the value of stocks and investments, set against money credits, which were unaffected by deflation, brought about the collapse of many undertakings, while others, on account of falling prices, lost interest in the manufacture of fresh supplies. The trade with foreign countries was seriously impaired, while the cost of production did not adapt itself to the increased exchange rate of the currency, and, in consequence, export figures showed a decline in the percentage of finished articles, together with a rise in the percentage of raw materials and half-finished products. The financial losses of industrial undertakings reacted on the banks, and in this crisis three banks succumbed. While Government revenue declined, the State was unable to reduce its Budget with corresponding rapidity, and was therefore also unable to effect an immediate reduction in railway rates, taxes, &c. Moreover, it was harassed by the problem of unemployment, which had become very severe during the deflation crisis. Currency circulation was slow in adapting itself, because the circulation covered by commercial agreements not only counteracted trade and monetary stagnation, but even increased at first, while the fixed circulation, representing the State debt, is only by degrees being reduced by the tax on property, which is slowly accruing in the State Exchequer for that purpose.

The present condition of affairs can be described as the final stage of the deflation crisis. The large reserves of the Banking Office, which forms part of the Ministry of Finance (as an institute of issue) have made it possible to stabilise the exchange rate of the crown. Belief in the success of stabilisation is beginning to assert itself, and on all sides there are obvious signs of an improvement in the economic situation. We are not now referring to the transitory improvement which ensued in the iron and other industries as a result of the Ruhr occupation and the subsequent collapse of Germany, nor, for instance, to the present large production of coal, which has attained pre-war dimensions, but to the fact that exports generally are becoming brisk and unemployment is continually on the decline. The problem is now primarily one of government finance.

The termination of the industrial crisis, so far as it has arisen from deflation, depends upon the restoration of the old relationships between the various index-numbers, and, accordingly upon a proper adjustment between the

prices of industrial and agricultural products, between the level of prices at home and abroad, and between economic and financial index-numbers as a whole. The first relationship was disturbed by the fact that, when deflation took place, there was a free untaxed import of corn, while the customs co-efficients for industrial products made conditions all the more precarious as the exchange value of the crown increased. In consequence industries working for the home market, which was slow in adapting itself completely to the enhanced value of the crown, were not so much affected by the crisis as was agriculture, and more particularly the export trade. As the agricultural crisis has reduced the internal purchasing power for industry, the customs co-efficients are gradually being lowered and the system of import prohibitions is being done away with by the introduction of a series of commercial agreements. Taxes on corn imports were not introduced, but their place was taken by a system of import licences, and in this way corn prices improved.

The relationship between the level of prices at home and on the world-market is also being gradually adjusted. The index figure of prices is still nine times that before the war, i.e., 50 per cent. higher than the index figure of exchange rates, but even in States with a gold currency the level of prices is also about 50 per cent. higher than before the war. From this it is, of course, obvious that deflation has not increased the competitive ability of the country, and the introduction of economies in the various branches of production is urgently needed.

The final link in the chain is, therefore, adaptation on the part of the State. The State and the various official organisations comprised in it, with all the rates and taxes which they levy, form a very important factor in the cost of production, and if the latter is to be reduced proportionately to the appreciation of the currency, this factor must also adapt itself to the new conditions. The difficulty experienced by the State and its component official organisations in reducing its Budget proportionately, is due primarily to the burden of internal debts which have not been diminished by deflation, and to the difficulty of reducing the wages of State employees. The rigidity of the State factor in the cost of production renders private adaptation difficult.

This, of course, was fully understood, and this year the State has submitted a Budget reduced to 17 milliards (apart from the investment items), and it subsequently reduced the tax on coal and the transport tax, as well as the tax on property which, after the process of deflation, became unbearably heavy. Of course, the quota taxes (assessed as a percentage on prices, &c.) adapted themselves of their own accord, and this applies particularly to the tax on turnover. This process of deflation in the State finances is not yet completed, but it must be carried out in its entirety in order that the deflation crisis may disappear once and for all. The economic organism of the State is well on the way to complete recovery, and it is a testimony to the unusual inner strength of Czechoslovak industry and of the financial system of the country that the process of deflation has been overcome without disaster.

It should not be forgotten that Czechoslovak industry has to defend its existence under the pressure of advanced social claims, with an eight hours working day. Parliament is now discussing a Bill for the social insurance of workmen, which, together with the previous sickness and accident insurance, will be supplemented by insurance against disablement and old age.

The favourable economic portents are confirmed by the fact that political conditions are firmly consolidated in an all-national coalition, which has stood a trying test in the economic crisis recently terminated. The internal credit of the State is becoming firmer, as may be seen in the rising quotations for State securities, while every step towards the consolidation of Europe, and particularly of Russia, is, of course, enormously important to Czechoslovakia.

INDIAN TRADE IN 1923.

THE review of the trade of India in the calendar year 1923, published by the Department of Statistics, furnishes a comparative study of the direction and value of the total trade in private merchandise and treasure during the past decade. The total foreign trade of British India in the year under review attained the figure of Rs. 636 crores, against Rs. 588 crores in the preceding year, and Rs. 400 crores in 1914.

The import of foreign merchandise amounted to Rs. 227 crores, as against Rs. 242 crores; the exports to Rs. 327½ crores, as against Rs. 278½ crores; and the re-exports to Rs. 14 crores, as compared with Rs. 15 crores in 1922.

The imports fell by Rs. 15 crores, or 6 per cent., and re-exports by Rs. 1 crore, or 8 per cent., while exports rose by Rs. 49 crores, or 18 per cent.

The chief features of the import trade were the expansion by Rs. 2.26 crores in the value of sugar; the marked increase in cotton piece goods by nearly Rs. 7½ crores, and a heavy decline of Rs. 4.70 crores in wheat. Among exports, raw cotton rose by Rs. 22.22 crores, hides and skins by only Rs. 2 crores; rice fell by Rs. 2.20 crores, and cotton twist and yarn by over Rs. 2 crores. The direction of trade showed an increase in the share of the United Kingdom in exports and a decrease in imports, taking the figures of the previous year for comparison.

Japan recovered her trade in India, recording an increase of more than a crore in imports and nearly Rs. 7 crores in exports.

There was a decline of nearly Rs. 2 crores in imports, and a rise of about Rs. 5 crores in exports in the trade between the United States and India.

Imports of treasure, private and Government, increased by Rs. 15 crores to Rs. 65 crores. Gold bullion rose by Rs. 9 crores to Rs. 30 crores, while sovereigns and other gold coins were valued at Rs. 10 crores, practically the same as in the preceding year. Imports of silver increased

by Rs. 4 to Rs. 23 crores, currency notes which are being recorded from April, 1922, were imported to the face value of nearly Rs. 2 crores in the calendar year 1923, against Rs. 75.00 lakhs in the nine months ending December, 1922. Exports of treasure also increased by Rs. 1 crore to Rs. 4 crores.

India's visible balance of trade in the calendar year 1923, as compared with the preceding two years, is shown in the following table. The figures are arrived at by combining the balances of transactions in (a) private merchandise, (b) treasure (private account), and (c) remittances of funds. In these balances *plus* (+) signifies net export and *minus* (−) net import.

	1921.	1922.	1923.
Exports of Indian merchandise (private)	Rs. (lakhs) + 2,14.01	Rs. (lakhs) + 2,78.56	Rs. (lakhs) + 3,27.48
Re-exports of Foreign merchandise (private)	+ 13.01	+ 15.35	+ 14.06
Imports of Foreign merchandise (private)	− 2,78.19	− 2,35.52	− 2,17.55
Balance of trade in merchandise (private)	− 51.17	+ 58.39	+ 1,23.99
Gold (private)	+ 19.56	− 30.11	− 39.21
Silver (private)	− 14.60	− 16.31	− 19.82
Currency notes (private)	..	50½	1.01
Balance of transactions in treasure (private)	+ 4.96	− 46.92	− 60.04
Council bills & telegraphic transfers paid in India	..	..	15.57
Sterling transfers on London sold in India	..	..	..
Transfers of Government securities	+ 1.42	+ 2.67	+ 21
Interest drafts on India in respect of Government of India securities	− 23	− 35	− 44
Balance of remittance of funds	+ 1.19	+ 2.32	− 15.80
Total visible balance of trade	− 45.02	+ 13.79	+ 48.15

MONTHLY BULLETIN OF STATISTICS

— ISSUED by the LEAGUE OF NATIONS —

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE
AUSTRALIA
AUSTRIA
BELGIUM
BULGARIA
BRAZIL
CANADA

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, APRIL 26, 1924.

No. 11.

We resumed last June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 19 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE nervousness as to the trade situation which we noted a month ago has disappeared, and given place to a tone of renewed confidence. Such optimism is the natural result of the continual booking of orders and the steady absorption of workpeople into employment, a process which has reduced the numbers on the unemployment insurance register by 240,000 since the beginning of the year. This rate of improvement is considerably more rapid than can be accounted for by the ordinary seasonal changes, and it is significant that the improvement is even more marked in the index afforded by the percentage of trade unionists unemployed, a test which particularly applies to the skilled workers in our main industries, especially those associated with the metallurgical group. The improvement is taking place without any sharp rise of prices. Our wholesale index number, mainly depending upon raw materials, is, if anything, slightly lower, while retail prices have fallen appreciably, mainly as a result of the seasonal cheapening of certain articles of food. Wages are tending slightly upward, there being an appreciable balance of increases as compared with decreases during the month of March.

Output of coal, iron and steel reached very high figures in March, showing substantial improvement even in pig-iron. Weekly traffic receipts on the main railways also show a gratifying increase since the beginning of the year. The one series of statistics which does not yet reflect the improvement is the foreign trade returns. The actual volume of exports of the chief trades in March even showed a decline as compared with February. The figures for a particular month are to some extent fortuitous, but if the records for March have any significance, they confirm the opinion of which we took note a month ago, that an unusually large portion of the work upon which industry was engaged during March arose out of home orders, which had been considerably stimulated by the action of the railway companies, and by the operation of "Trade Facilities" and other Government measures. It is gratifying to record that the weaving towns of Lancashire are beginning to show signs of appreciable improvement. Shipbuilding, however, remains thoroughly depressed.

The outlook has, of course, been favourably affected by the report of the Reparation experts, and the general approval of their proposal, but the improvement which we have recorded cannot be traced to this source, because it occurred before these reports were published, or even completed.

The increased turnover of trade has been financed without any expansion of bank deposits, which, at about the level of March, 1923, are substantially less than in January or February of this year. Bank clearings, however, in London and generally in the provinces, show a very considerable increase in the last three months, thus indicating a more rapid turnover of money. The improvement in trade is not yet reflected in any marked change in the stock markets. Since Christmas there has been a very slight appreciation in industrial securities, but the change is not sufficient to be significant.

There is no appreciable change in the situation outside Europe. In the United States the available indices show that production is even larger than at this time last year. All industries have not equally benefited, and the forthcoming Presidential election is said to be casting a slight shadow over trade. The Canadian situation has not been quite so good as in the United States, but shows signs of improvement. In Australia the question is being asked whether too much capital has not been locked up in permanent forms. At the same time, the country is doing very well with the sale of its harvest. South Africa and India continue to improve. The Argentine and Chile are enjoying better conditions than a year ago.

In Europe, French trade, after an abnormal burst of activity during the period of depreciation of the franc, has been feeling the pinch of the new level in foreign exchange. In Germany a slow improvement has to be recorded, while the outlook in Northern and Central Europe is, on the whole, better than at the beginning of the year, the stagnant conditions obtaining in Austria constituting an exception to this general trend. In the Far East demands arising out of reconstruction are to some extent straining the Japanese financial system. In China, conditions are rather better, though permanent recovery still waits upon the return of political stability.

HOME INDUSTRIES.

Iron and Steel.—This group of industries seems to be emerging successfully from the discouraging conditions reported a month ago. Pig-iron output in March was the highest since June, 1923 (though eight fewer blast furnaces were in operation on April 1st than on March 1st), while steel production was the highest since September, 1920. Foreign trade, however, fell off, owing to Continental exchange disturbances. The more hopeful labour position in the coal trade has been reflected in a marked stiffening in iron and steel prices, despite the small volume of demand which traditionally accompanies Easter Holiday conditions. At Cleveland prices were lately disturbed by speculative influences, but in the Midlands values are more than maintained. Increased fuel costs have, however, reduced the margin of profit. The hematite market remains in a quiet way. Midland marked bar mills have lately secured substantial orders, and semi-finished and finished steel makers report much less pressure from foreign competitors. Welsh tinplate trade has had fewer orders, but most works are booked up to the end of June. Particulars have become available of the

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 25.

formation of an agency for centralising world sales of Welsh tinplates, embracing a number of manufacturers responsible for about 60 per cent. of the total output.

Coal.—Although prospects of a strike have receded considerably, and demand is below "panic" levels, order books remain congested, and pressure on collieries for maximum production is generally heavy. In South Wales, however, conditions have been more irregular. Quieter conditions may now be expected pending a final settlement of wage questions.

Engineering.—The short-lived and partial lock-out in certain sections of ship-building, caused by the "irregular" strike at Southampton, has had a somewhat serious psychological effect, inquiries for new construction having considerably fallen away, in view of the uncertainty which surrounds the probable future course of labour costs in the industry. Locomotive firms in Scotland and Lancashire have secured important orders from British railways. A Clyde firm has obtained a contract for ten "Pacific" engines for Australia. Mechanical engineering is steadily improving, but the textile machinery section is rather more quiet. The touring-car section of the motor industry is still very active. Orders for electrical plant, both domestic and foreign, have lately come forward in encouraging fashion. A brisk trade has been done in wireless sets during the last few weeks, sales effected by a large representative concern having been, on an average, from 50 to 100 per cent. above the level of last year.

Hardware and Cutlery.—In spite of many unfavourable features, the position has appreciably improved in the last month or two. A seasonal demand for many varieties of hardware, at the end of March, has declined over the holidays, but for cutlery both home and foreign inquiries remain on a substantial scale.

Cotton.—Our Manchester correspondent reports:—The improved conditions in the Lancashire cotton industry mentioned a month ago have been well maintained. Demand in most sections has continued more active, and, owing to orders being booked on a freer scale, producers are presenting a much stiffer front to their customers. The organised short-time movement in the mills spinning American cotton has brought about firmer conditions, and is likely to be continued until the end of September. Factories are now running 26½ hours per week, instead of the usual 48 hours. Spinners of Egyptian yarns have experienced a healthy off-take during the past month, especially in the higher qualities of combed descriptions, and the mills in Bolton and district remain busier. A feature of the month has been the distinct rise in raw cotton values, there being an advance of 2d a pound in American cotton and over 1d a pound in Egyptian qualities. The stronger feeling has been due to the larger demand for the article and fears of a scarcity of supplies before the end of this season. Manufacturers of piece goods have continued to report a big inquiry. Extensive buying has taken place for India, especially in light fabrics and fancies. There are now signs of the higher rates checking business somewhat, but dealers on the other side have not yet satisfied their requirements, and demand is persistent. In Lancashire weaving towns unemployment is being reduced, and many firms are in a position to run more looms than for a long time back.

Woollen and Worsted Trades.—The shortage of raw material still exercises a dominating influence on prices. Arrivals of wool have been light, re-exports heavy, and net amounts retained below the normal level for this time of the year. Foreign demand for the cheaper qualities of tops and yarns has been another outstanding feature. The West Riding woollen manufacturing industry continues to expand, but the worsted trade is less favourably situated. A demand for increased wages has been put forward in both industries. Easter seasonal trade in clothing has been fairly good, and drapery manufacturers report increased orders from retailers, especially from the South of England.

Boots and Shoes.—The position here is quite good. Apart from the usual pressure before Easter, orders for early summer are coming forward steadily, though more markedly in the "fine" sections than in "heavy" grades.

Chemicals.—Conditions in the chemical industry as a whole are steady, with forward business not greatly in evidence. An improved volume of trade in cotton goods has reacted favourably on certain branches of the chemical trade. An agreement arrived at between the Dyestuffs Corporation and German houses has been the subject of some criticism, but seems certainly to secure definite advantages from the Corporation's point of view.

Building Trades.—Recent wage demands will, if granted, tend to add appreciably to an already heavy burden. On the other hand, the possibility of an arrangement with the authorities, covering an extensive building programme for some years ahead is a favourable factor. The Building Exhibition at Olympia has been noteworthy chiefly for the technical progress revealed in almost every branch.

Shipping.—Freights are generally steady, interest being centred chiefly on the River Plate, where chartering for loading to the

end of June has been unusually heavy. Outward coal cargoes have been greatly in evidence. Mediterranean trade is of fair dimensions, but in Far Eastern waters shipping is finding employment less readily.

UNITED STATES OF AMERICA.

Pig-iron output in March was 1.7 per cent. below March, 1923, but the average daily production of steel during the month constituted a record in the industry. Trade indices in general show that American industry is further advanced than at this time last year, and, indeed, the volume of goods moving into consumption is probably greater than at any time in the country's history. Building operations have been on a large scale, and the railways are placing substantial contracts for equipment. The textile trades and industries subsidiary to agriculture are lagging behind the rest, and coming election influences may prove disturbing to business generally. But the present rate of output, high as it is, does not seem greatly out of proportion to America's legitimate requirements, and, with conservatism in buying and finance still much in evidence, there does not appear to be any reason to anticipate any serious downward tendency in the next few weeks.

BRITISH EMPIRE.

Though Canadian conditions showed little superficial change in March, the general tone is slightly better. The volume of payments on account of mortgage indebtedness has lately been of gratifying proportions, though commercial obligations are being but slowly liquidated. In Australia the underlying tone in commerce and industry is one of caution, the Government's intentions regarding future loan commitments causing some amount of public apprehension. It is felt that in Australia, as a whole, too much capital has been locked up in commodity purchases and land speculation, and a larger proportion of liquid working capital is required. Indian markets have been mainly firm, cotton goods continuing to move steadily. Labour troubles in Bombay have largely come to an end. South Africa continues slowly to improve. The building and allied trades are active, and agricultural prospects have been brightened by a good rainfall and the disappearance of the locust menace.

SOUTH AMERICA.

Threshing of wheat and linseed has been practically completed in Argentina, and, following recent heavy falls of rain, agricultural areas generally are in good condition. The maize crop, now in progress of picking, is expected to be in excess of last year's. Chilean conditions are fairly steady, with a volume of trade rather higher than at this time last year. Brazilian coffee prices have fallen, and stocks of this commodity have lately increased, though in the case of cotton and sugar greater firmness has been shown.

EUROPE.

The continued appreciation in the franc's exchange value, though a bull point for M. Poincaré in the coming elections, is causing uneasiness in French commercial circles. The fall to 120 came at a time when industrial stocks were low in many cases, and with the prospect of a further fall various contracts were made which proved very embarrassing with the franc between 65 and 70. The period of depreciation was one of much activity in French trade, exports exceeding imports in February. Metallurgical production continues active, though less so than a week or two ago, but in textile markets a quieter tendency is observable. In Belgian trade a more reserved attitude has been noticeable. German industry still suffers from lack of adequate credit facilities, but employment figures for unoccupied territory point to a slow improvement in general conditions. At the Leipzig Fair German purchases were most in evidence, and foreign buying confined within narrow limits. The Italian elections passed off according to plan, and had but a slight influence on trade. The cotton and wool industries remain busy, but recent movements in the French exchange have had a disturbing effect on the silk industry. In Scandinavian countries the results of the first quarter of this year show a definite improvement on 1923, and in Central Europe the general tone is, on the whole, better; but in Austria conditions of stagnation remain, and have been accentuated by a recent collapse in Stock Exchange values.

FAR EAST.

Moderately satisfactory conditions in China during March were reflected in increased purchases of piece-goods and shipments to the interior. Given some measure of political stability, the much-overdue economic rehabilitation of China would not, probably, be long delayed. Japanese trade is dull, quiet conditions prevailing in the money market. Transactions in silk have been somewhat disappointing. Recent downward movements in yen exchange may be attributed to the material and moral effect of Japan's adverse trade balance, and inflation at home arising out of reconstructional demands on the Government's resources.

SOME STATISTICS OF OUR WHEAT SUPPLIES.

GREAT BRITAIN has an area of only 1.4 acres per inhabitant, against 18 acres per inhabitant in the United States and 3½ acres even in France. Appreciation of this carries with it the recognition of the fact that, whatever efforts at increased agricultural production may be forthcoming, Great Britain must, in view of its restricted agricultural area, depend primarily on overseas sources for supplies of foodstuffs. In this article we propose to examine briefly the position as regard our supplies of wheat and the sources from which it is derived. We may begin with some figures showing the annual average of home-grown crops and of imports from colonial and foreign sources for the ten years 1905-14, for the war years 1915-18, and for the post-war period 1919-23:—

WHEAT SUPPLIES OF THE UNITED KINGDOM.

Annual Average.	(In Millions of Cwts.)		Estimated Total Home Production.
	Imports from Foreign Countries.	Imports from within the Empire.	
Pre-war period (1905-14) ..	68.4 ..	47.8 ..	116.2 ..
War period (1915-18) ..	69.9 ..	35.9 ..	105.8 ..
Post-war period (1919-23) ..	63.4 ..	44.9 ..	108.3 ..

In reality, the relation of home-grown supplies actually available for consumption to those obtained from abroad is even less than is shown by the above table. The Royal Commission on Food Supplies in Time of War (Cd. 2,643) estimated in 1905 that to obtain the amount of the home crop available for human consumption a deduction of from 15 to 20 per cent. has to be made from the total crop "for grain unfit for milling or required for seed and other farming purposes." If we take the percentage of reduction on this score at 17, we get the following figures of the supplies of wheat grown at home and imported for the three periods named:—

Annual Average.	(In Millions of Cwts.)		Per Cent. of Total Supplies.
	Imports.	Home-grown Supply.	
1905-14 ..	116.2 ..	26.4 ..	81.5 ..
1915-18 ..	105.8 ..	32.3 ..	76.6 ..
1919-23 ..	108.3 ..	28.0 ..	79.4 ..

Even under the stress of the war years we were only able to grow for ourselves as much as 23.4 per cent. of our wheat supplies on the average. In one year, 1918,

we managed, under the stimulus of the submarine campaign and an intensive ploughing campaign, to reap a total crop of 49.8 million cwts. Deducting from that the 17 per cent. explained above, we get for that year a supply for the mills of 41.3 million cwts; but the effort was uneconomic, and only made possible by the grave national emergency, and in 1919 the United Kingdom crop fell back to a total of 37.1 million cwts, or, deducting 17 per cent., an actual supply for food purposes of 30.8 million cwts. Another important point to be noticed about the first table printed above is the effect of the war on our sources of wheat imports. The shipping scarcity compelled us to rely more upon the nearer sources and to take less from the more distant exporting countries. This meant a decline in our takings from such distant sources as India and Australia, which were offset by a growth in shipments from the United States.

We may now proceed to examine a little more closely the contributions over the whole period since the beginning of the present century of the principal countries who have provided us with our imported wheat. Details are given in the table at the bottom of the page.

The feature of this table is the comparative steadiness (except in wholly abnormal years) of the total amount imported, and the very wide fluctuations in the quantities derived from particular sources. Apart from the abnormal drop in the war years (when strict rationing reduced national consumption and home production was artificially stimulated) and the great rise in the equally abnormal re-stocking year of 1920, the total of our wheat imports has been remarkably steady. The figure of 12 per cent. would cover the extreme variations. But when we come to examine the chief individual sources, there is a very different story to tell. The obliteration of Russia as a source of supply is due to causes which are familiar. But it may surprise some people to find how very wide are the fluctuations in the case of all the other individual sources, even the United States. In the cases of Argentina, as well as Australia and India (to whose war figures we have already referred), the fluctuations are enormous. The normal story, then, of our wheat supply is one of steady requirements, met in widely varying proportions from a multiplicity of sources. When harvests fail in one country or another, we regularly succeed in recouping ourselves from countries where climatic conditions have been more favourable.

SOURCES OF SUPPLY OF WHEAT IMPORTED INTO GREAT BRITAIN, 1900 TO 1923 (in Million Cwts.)

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE	DANZIG	JAPAN	PORTUGAL
AUSTRALIA	DENMARK	JUGO-SLAVIA	ROUMANIA
AUSTRIA	DUTCH EAST INDIES	LATVIA	RUSSIA
BELGIUM	EGYPT	LITHUANIA	SIAM
BOLIVIA	EQUADOR	LUXEMBURG	SOUTH AFRICA
BULGARIA	ESTHONIA	NETHERLANDS	SPAIN
BRAZIL	FINLAND	NEW ZEALAND	SWEDEN
CANADA	FRANCE	NORWAY	SWITZERLAND
CHILI	GERMANY	PALESTINE	UNITED KINGDOM
CHINA	GREECE	PARAGUAY	UNITED STATES
COLOMBIA	HUNGARY	PERU	URUGUAY
CUBA	INDIA	POLAND	VENEZUELA
CZECHOSLAVAKIA	ITALY		

OBTAINABLE FROM ANY BOOKSELLER OR FROM

The official publishers **CONSTABLE & CO. LTD.** 10 & 12 Orange Street W.C.2

PRICE 1/6 PER ISSUE.

ANNUAL SUBSCRIPTION 18/- NET

LONDON & CAMBRIDGE ECONOMIC SERVICE

ISSUED IN CO-OPERATION WITH THE HARVARD UNIVERSITY COMMITTEE ON ECONOMIC RESEARCH

EXECUTIVE COMMITTEE.

SIR W. H. BEVERIDGE, K.C.B. (Chairman)	London School of Economics.
PROFESSOR A. L. BOWLEY, Sc.D., F.R.S.	London School of Economics.
MR. J. M. KEYNES, C.B.	Economics Department of University of Cambridge.
MR. D. H. ROBERTSON	Economics Department of University of Cambridge.
MR. H. J. SPRATT	Central Council for Economic Information.
MR. C. TENNYSON, C.M.G.	Federation of British Industries.

SIR CHARLES ADDIS, K.C.M.G. (Hon. Treasurer).

MONTHLY BULLETIN.—Issued on the 23rd of each month, with Supplement issued on the 7th of the following month. The Bulletin contains charts, tables and comments dealing with the trade position in the United Kingdom and in America (by cable from the Harvard Service), with special analyses relating to matters of current interest.

The Supplement contains charts, tables and comments dealing with France, Germany and Italy, communicated by correspondents in those countries, and also the latest British figures of security and commodity prices, discount rates, employment, etc. A periodical communication from Austria will also be included.

Special Quarterly Numbers of the Bulletin, issued in January, April, July and October, give complete series of the monthly index numbers from 1919, viz.: security prices, banking statistics, wholesale and retail prices, wages, imports, exports, production, transport and employment, and summarise the data for the previous quarter.

The February, May, August and November numbers analyse the distribution of exports among countries.

SPECIAL MEMORANDA:

- Issued in 1928.
- I. Tariff Changes in Relation to British Trade By T. E. GREGORY.
 - II. Stocks of Staple Commodities By J. M. KEYNES and R. B. LEWIS.
 - III. Shipping and Shipbuilding By D. H. ROBERTSON.
 - IV. Harvest Results and Prospects By R. B. FORRESTER.

It is intended to produce sequels to I., II. and IV. annually, or half-yearly.

The above Memoranda are now available for the general public at 5/- per copy.

To be issued in 1924.

- Business Movements in Britain and the United States, 1890-1913 By M. TAPPAN.
- Relative Changes in Price and other Index Numbers By A. L. BOWLEY.
- Measurement of Employment and Production By J. W. F. ROWE.
- The Coal Industry By A. J. SARGENT.
- Seasonal Variations in Finance, Prices and Industry By A. L. BOWLEY.
- The Iron and Steel Trades By D. H. ROBERTSON.
- Classification and Definition of Trade Statistics in Various Countries.

Subscription Rates:

(1) London and Cambridge Service, one copy	12 Months' Subscription.
" " " " two copies	26 0 0
" " " " three copies	41 0 0
(2) Harvard Economic Service:	215 0 0
Reduced rate for subscribers to (1)	214 0 0

Specimen copies of current numbers and further information can be obtained from Secretary:
LONDON & CAMBRIDGE ECONOMIC SERVICE, Houghton Street, Aldwych, W.C.2.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, MAY 24, 1924.

No. 12.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

Most of the trade statistics for the month of April are a little more difficult of interpretation than usual, owing to the fact that Easter fell in April this year and in March a year ago. This naturally has caused the comparison to look unfavourable. But apart from this there is ground for thinking that since March there has been some slackening of activity. It is true that the momentum of

It is worth noting that the present slight uncertainty follows very closely the precedent of 1923, when business swung along with vigour until the middle of April, but then experienced a drift back which lasted until the end of July.

The slightly less assured tone in this country is

perhaps a reflection of conditions overseas. The United States reports are markedly less buoyant. Belgium is experiencing a quite definite falling in activity, and in Europe generally business conditions are somewhat in a state of general suspense. Holland, Sweden, and Switzerland may perhaps be mentioned as exceptions, all these countries having passed through the same sort of difficulties as Great Britain in connection with their high rate of exchange. Speculators in Vienna and Germany have not yet liquidated the loss incurred by the recent rise of the franc, but these troubles have not spread very far into the economic organisation of these countries, though they have affected the price of industrial shares. In South America recovery continues, but progress is steady rather than rapid.

Among the larger communities of the British Empire, Canada is experiencing

very uneven conditions, and in Australia the note of caution continues to be sounded. New Zealand and South Africa send favourable reports, and India, after a comparatively good season, can await with fair confidence the monsoon which will do so much towards deciding her fortunes for another year.

HOME INDUSTRIES.

Iron and Steel.—Conditions have lately been somewhat unsettled. Production fell off as regards both iron and steel during April, though the reduction was less severe than a cursory glance at the figures would indicate, owing to the incidence of the Easter holidays. The closing down of eight blast furnaces during March did not attain its full statistical effect until April. The market for pig-iron is affected by uncertainty as to future

HOME TRADE STATISTICS—APRIL, 1924.

	MARCH.	APRIL.	Compared with APRIL, 1923.
UNEMPLOYMENT— (State Insurance %)	9.9	9.7	— 1.7

and many industries—for example, building in all its branches—have absorbed their reserve of labour. Industrial securities which, as the table on this page shows, hardened slightly between the middle of March and the middle of April, have weakened to some extent since the Bankers' Magazine made its calculation. Commodity prices are slightly lower, and retail prices have dropped appreciably owing to the remissions of taxation in the Budget. This is a factor which will influence many classes of wages in the so-called "sheltered trades," which have come to be regarded as a sort of fixed charge upon industry. There is no sign of increasing stringency in credit conditions, though bank advances have substantially increased as compared with this time last year.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 33.

coke prices, the general feeling, however, being against any increase, and regarding a small reduction as not altogether impossible. Demand for pig-iron is quieter, but deliveries against running contracts are sufficient to absorb output on the present scale, and the undertone of the market is not unhealthy. Steel prices are generally maintained, and the industry is moderately active. Continental competition is rather less keen, the range of prices showing a slight advantage to the foreign producer, which is, however, more than offset by the latter's inability to give any undertaking as regards date of delivery. The heavy iron and steel import figures for April represent, to a considerable extent, the fulfilment of orders placed several weeks earlier.

Coal.—Demand has fallen away considerably, export markets in particular being affected by uncertainty regarding the outcome of the trimmers' and tippers' dispute. The virtual settlement of the miners' wages question without recourse to a strike is, of course, an extremely gratifying development, but was probably hastened by a feeling on both sides that the outlook for the industry had clouded over slightly during the last few weeks. French output is increasing, and Germany, even now making rapid strides in the Italian coal trade, would be a still more formidable competitor on the Continent if the burden of the M.I.C.U.M. contracts were removed. English pit order books are filled only for a few weeks ahead, producers of gas coal being the best situated in this respect. In general, production is down to summer level, but seems to have descended with greater rapidity than many people expected.

Engineering.—The prevailing uncertainty in the iron and steel trades is reflected in engineering. There is little inclination to look far ahead, and labour questions are by no means all disposed of. Orders are difficult to come by in the shipbuilding branch. The tonnage of new vessels launched on the Tyne in the first four months of 1924 aggregated 83,700 tons gross, against 61,100 in the corresponding period of 1923. The removal of the McKenna duties has caused a temporary slackening of activity in the motor-car industry, the tendency of buyers being to hold off in the hope of a fall in prices. Electrical engineers continue to obtain new orders on a not unsatisfactory scale, and are busily engaged completing several substantial contracts made some time ago. In the Midlands conditions are quiet, but not depressed. The machine tool industry reports a fair number of inquiries. According to Sir Allan Smith, the order books of certain firms representing 65 per cent. of the "employing power" of the Engineering Employers' Federation showed the following state of affairs as at April 1st last:—Total value of orders, £65,540,591, of which about £50,000,000 emanated from "home" sources, and £16,000,000 was for export. Of the total wages accounted for about £30,000,000, indirect wages for a little more than £9,000,000, "overhead charges" just over £13,000,000. Allowing 1½ per cent. on turnover for remuneration to partners, managing directors, &c., the ratio of "profit" worked out at 0.3 per cent.

Hardware and Cutlery.—The cutlery industry continues to work on quiet lines. Hardware is progressing rather more favourably, orders for export showing a slight tendency to increase. The outlook for the tool trade has improved since the surplus of war-time production was finally liquidated.

Cotton.—Our Manchester correspondent writes:—The trade done by cotton spinners and manufacturers in Lancashire during the past month has not been so encouraging as in the previous month. It is not unusual, however, for May to be a quiet period. Much uncertainty exists as to future raw cotton supplies and prices, and buyers have been more disposed to adopt a cautious policy. The undercurrent of inquiry has been fairly healthy, but merchants have hesitated to commit themselves to contracts of importance. Advice relating to the new cotton crop in the United States are rather mixed, as the plants are somewhat backward as a result of adverse weather in the belt, and the growth seems to be making a rather poor start. There is plenty of time, however, for a recovery, and Lancashire is hoping for lower values in the raw material. There has been a falling off in the demand for Egyptian spinnings, but rates are well held. Although inquiry for piece goods has been fairly well maintained, the turnover recently has tapered off. Shippers to India have given fair support in light fabrics, some substantial transactions being mentioned for Madras and Karachi in jaconets, but grey staples, such as shirtings, have been slow of sale. During the past month no further expansion of production is reported from weaving districts.

Woolen and Worsted Trades.—The sale of the last "Bawra" bale closes the history of the world's largest deal in wool supplies, which proved an extremely profitable speculation in "futures" for the British Government and the Australasian pastoralists concerned. High prices have recently checked demand at the wool auctions, and during the last week or so a very slight reaction in prices has been witnessed. April was a month of comparative quiescence for spinners and manufacturers, who have been working off contracts previously ob-

tained, and are chary of accepting new offers unless buyers are willing to advance prices to compensate for increased raw material costs. The late appreciation of the franc has somewhat diminished the force of Continental competition. The bulk of the business passing continues to be in medium and low crossbred varieties. The worsted industry still lags behind, but the last few months have witnessed a steady, though slow, improvement in this section.

Boots and Shoes.—Conditions are easier in the leather trades, a slight uncertainty attaching to the immediate outlook. Demand for boots and shoes was brisk up to the Easter holidays, but has since fallen off to some extent, the rise in values having been slightly overdone.

Pottery.—Although employment continues slack, the volume of trade is slowly expanding, especially on the export side, the trade returns showing an increase in shipments during April of 10 per cent., as compared with March, despite the occurrence of the Easter holidays.

Building Trades.—The building trades were fairly active during April, with a brisk demand for the services of skilled workers. The outlook has since been clouded, however, by prospects of serious labour troubles.

Shipping.—The recent improvement in freights received a setback in April, the *Economist's* Index Number falling to 17 per cent. above 1913, as compared with 22 per cent. in March, chiefly owing to a lessened demand for tramp tonnage on "earthquake" account in Far Eastern waters. Some activity has since developed, the River Plate being the chief centre of demand, with the St Lawrence a good second. In the latter case, however, the market has been overstocked with tonnage, and the level of June loading figures shows a marked decline—an example of the essential instability of freights while vast reserves of unemployed tonnage exist up and down the world.

UNITED STATES OF AMERICA.

American trade is definitely less active. During April more than forty furnaces went out of blast, pig-iron production falling 6 per cent. below the March level, and steel production no less than 23 per cent. The *Mechanics' and Metals' National Bank* states that an undercurrent of business caution is reflected in restrained forward buying, in slowly receding commodity prices, and in unsettled security markets. In certain quarters, furthermore, it has become customary to declare that certain large basic industries have reached a point where curtailment of production is necessary unless demand is to be outrun. Thus, April returns in the soft coal, automobile, cotton and wool textile industries, as well as in iron and steel, show a noteworthy decrease as compared with this time last year. Among depressing influences may be cited political unsettlement, the unfavourable reaction which Soldiers Bonus legislation is likely to exercise on prospects of tax reduction, and unrest among the agricultural community (winter wheat production is estimated at 25,000,000 bushels below last year). What may be only a temporary phase of economic readjustment should not, however, be stressed unduly. Production is still at a high level, substantial profits are being made, no large speculative stocks are outstanding, mail order business continued to expand during April, building activity, outside New York, remains active, and the banking situation is sound, credit for every legitimate need being obtainable at moderate rates.

(Continued on page 40.)

INDIA'S FOREIGN TRADE.

(Continued from page 35.)

Steel is the first industry to feel the Protectionist axe, but no prominent export to India will escape ugly gashes; some, perhaps, and at no distant date, will disappear from the list of Indian imports. Any political concessions to India must, and will, in present conditions, only accentuate and accelerate this tendency, inasmuch as in the Legislative Assembly the triple alliance formed between the Executive, the industrialists, and the Swarajists is so powerful as to preclude effective opposition. Steel, as we have suggested, heads the procession to the Indian fiscal guillotine, but reprieves will be few and grudging, and those who (to continue the analogy) escape the knife will do so only to find themselves ensconced in a Bastille quite adequate to remove the freedom of movement and enterprise they have hitherto enjoyed. At a later date there will not improbably be a reaction in favour of lower duties as the only guarantee of a moderate level of prices. But in that respect India should be left unhampered to garner her own experience and to draw therefrom her own conclusions, and to shape her own policy. Interference in India's fiscal policy from Whitehall is no longer either practicable or desirable.

INDIA'S FOREIGN TRADE IN 1923-24.

(FROM A CORRESPONDENT.)

INDIA'S visible balance of trade during the 12 months, April to March, 1921-22, 1922-23, and 1923-24, is shown in the following table. The figures are arrived at by combining the balances of transactions in (a) private merchandise, (b) treasure (private account), and (c) remittances of funds. In these balances plus (+) signifies net export, and minus (−) net import:—

	Twelve Months, April to March.		
	1921-22.	1922-23.	1923-24.
	Rs. (Lakhs.)	Rs. (Lakhs.)	Rs. (Lakhs.)
Exports of Indian merchandise (private) ..	+ 2,31.38	+ 2,99.16	+ 3,48.60
Re-exports of foreign merchandise (private) ..	+ 14.06	+ 15.16	+ 13.07
Imports of foreign merchandise (private) ..	− 2,66.34	− 2,24.31	− 2,17.05
Balance of trade in merchandise (private) ..	20.90	+ 90.01	+ 1,44.62
Gold (private) ..	+ 2.79	− 41.18	− 29.19
Silver (private) ..	− 14.95	− 18.17	− 18.38
Currency notes (private) ..	..	91	1.08
Balance of transactions in treasure (private) ..	− 12.16	− 60.26	− 48.65
Council bills, purchases of sterling and other Government remittances to the United Kingdom ..	..	7.06	33.39
Sterling transfers on London sold in India ..	..	..	..
Transfers of Government securities ..	+ 1.53	+ 2.62	.. 35
Interest drafts on India in respect of Government of India securities ..	− 27	35	44
Balance of remittances of funds ..	+ 1.26	− 4.79	− 34.18
Total visible balance of trade ..	31.80	+ 24.96	+ 61.77

As the trade figures indicate, India in 1923-24 made a remarkable recovery, limited, on the import side only, by the high prices of piece goods, and on the export side by the restricted purchasing power of Europe arising from depreciated exchanges. The import and export of gold and silver compared as follows with the preceding year:—

	April to March.		Increase (+) or Decrease (−) in 1923-24 Compared with 1922-23.	Per Cent.
	1922-23.	1923-24.		
	Rs. (Lakhs.)	Rs. (Lakhs.)	Rs. (Lakhs.)	
Gold, imported ..	41.31	29.25	− 12.06	− 29
„ exported ..	13	6	− 7	− 54
Silver, imported ..	20.71	21.78	+ 1.07	+ 5
„ exported ..	2.54	3.40	+ 86	+ 34

In the result, it appears that there was a favourable balance, amounting to Rs. 61.77 lakhs, as against Rs. 24.96 lakhs in the preceding year. For the first time sterling purchases in India from the Exchange banks and firms, and payments in India to local bodies, &c., against proceeds of sterling loans floated by them in London and taken over by the Secretary of State, have been taken into account in arriving at the balance of trade.

Concerning the direction of trade, it is noteworthy that the share of the United Kingdom in imports fell from 60.2 per cent. in 1922-23 to 57.8 per cent. in 1923-24, but rose in exports from 22.0 per cent. to 24.9 per cent. The share of His Majesty's Dominions and other British Possessions fell from 7.0 per cent. to 6.8 per cent. under imports, and from 17.2 to 13.2 per cent. under exports. The shares of Germany, Japan, and the United States in imports showed very few fluctuations, and were 5.2, 6.0, and 6.01 per cent. respectively in 1923-24. Japan increased her share of the export trade from 13.4 to 14.4 per cent., while the share of the United States declined from 11.5 to 9.6 per cent., and of Germany from 7.5 to 6.6 per cent. The tonnage entered into and cleared from ports in British India was 6,738,000 and 8,006,000 respectively, as compared with 6,522,000 and 7,444,000 in 1922-23. Perhaps the export section that revealed the greatest relative prosperity was raw cotton, the financing of which, owing to high prices, forced the banks to provide accommodation for an additional 35 crores of rupees.

The total exports of Indian merchandise showed an increase of Rs. 49 crores, or 16 per cent., but re-exports

decreased by Rs. 2 crores, or 14 per cent. The grand total of the foreign trade was Rs. 5.89 crores, as against Rs. 5.47 crores in the previous year. Imports of treasure (private and Government) decreased by Rs. 10.38 lakhs to Rs. 53.20 lakhs. Gold bullion fell by Rs. 8.75 lakhs to Rs. 21.20 lakhs, sovereigns and other British gold coin by Rs. 3.27 lakhs to Rs. 7.12 lakhs, and other coined gold by Rs. 6 lakhs to Rs. 93 lakhs. On the other hand, the value of silver imported increased by Rs. 1.16 lakhs to Rs. 22.10 lakhs, and that of currency notes by Rs. 54 lakhs to Rs. 1.85 lakhs. Exports of treasure also increased by Rs. 65 lakhs to Rs. 3.67 lakhs.

The recurrence during the busy season of a 9 per cent. bank rate in India indicates clearly that, notwithstanding the formation of the Imperial Bank of India, and the liberal advances made to that institution from official funds, the problem of moving the crops without creating an abnormal situation in the money markets has not yet been solved. While fluctuations are, of course, inevitable, 9 per cent. is considered excessive and susceptible of prevention if the Government of India are really anxious to assist. An advance of 12 crores to the Imperial Bank was sanctioned, and taken full advantage of, but proved inadequate. Accordingly a revised scheme is under consideration for utilisation next year.

India's foreign trade in the official year ended March 31, 1924, ends a fiscal epoch. With the imposition of the high duties upon steel which will be submitted to, and will undoubtedly be adopted by the Indian Legislative Assembly, this month, India—now fiscally independent—will indicate both her power and her determination to enter upon the era of High Protection, which her industrialists, supported by virtually the whole of the present Indian electorate, believe will mark the real beginning of the country's industrial development. We say specifically "the present Indian electorate" because admittedly the present narrow franchise does not assure proportionate representation, especially to the vast majority of the agricultural population, whose economic interests will nevertheless be vitally affected by the fundamental changes in fiscal policy now being inaugurated. Indeed, in accepting the recommendations of the Fiscal Commission on behalf of the Government of India, the Member for Commerce and Industry was candid enough to inform the Legislative Assembly that, had the agricultural population possessed proportionate representation in that body, the Viceroy and his colleagues would have been forced to adhere to the fiscal policy pursued with so much advantage to that section of the population for the past 50 years. It is possible, in fact probable, that history will date the real abdication of the British Raj from this declaration. In the light of this confession, the claim of the Civil Service to be the trustees of the interests of the "inarticulate masses" loses much of its old force; indeed, unless Sir Charles Innes misrepresented the views of his official colleagues, the claim is no longer maintained. Be that as it may, it is perfectly clear that, in imposing protective duties aimed primarily at British manufactures, the British Executive, and the Indian *intelligentsia*, are working in close co-operation, and will not consider their task complete until the Indian tariff wall is as high as, say, the tariff wall of the United States of America. For if Indian critics have any complaint to make concerning the operations of the Indian Tariff Board, it is that it is failing to go either as fast or as far as the urgent needs of industrial development require. Instead of "discriminating Protection," applied after due inquiry into the circumstances of each industry in turn—an inquiry, it is complained, that in the case of steel occupied nine months—an immediate and general tariff is being advocated, leaving the process of "discrimination," so strongly recommended by the Fiscal Commission, to be applied at a later date. Fortunately, the Government of India are unlikely to surrender to this unreasonable demand.

THE STATE OF TRADE AT HOME AND ABROAD - Continued from page 34.

BRITISH EMPIRE.

The Canadian situation remains uneven, and, on the whole, disappointing, though the Government's declaration of its fiscal policy may put at rest some of the uncertainty which affected both the agricultural and manufacturing outlook. The flow of immigrants into the country is gaining force, but, unfortunately, the exodus over the United States border remains a serious factor to be reckoned with. In Australia the underlying tone in commerce and industry remains one of caution. The demand for wool continues exceptional. Australian wool exports in the ten months ended April 30th amounted to 1,611,000 bales, and those of New Zealand to 553,000 bales, a decrease of 544,000 and 11,000 respectively as compared with the corresponding period last year. Seasonal conditions in New Zealand were affected by the abnormal dryness of the late spring and early summer, which caused a shortage of grain crops. The outlook, however, is sufficiently encouraging. Further tax reductions are in prospect, and building activity is brisk. India's trade situation continues to be satisfactory as a whole, the anxious period before the monsoon being now close at hand. Reports from South Africa continue to reflect rising business confidence, the "bull" points in the situation being thus summed up by the Standard Bank: prosperity in the gold mines, strong wool markets, a bumper maize crop last year, good late rains, and the disappearance of the locusts. On the other hand, wholesale dealers report that business is somewhat restricted, while insolvencies—a legacy of past mistakes—are still large numerically.

SOUTH AMERICA.

Argentine conditions continue satisfactory. Wheat and linseed exports are on a large scale, railway takings are above normal, and unemployment good. Banking business is, however, somewhat restricted, and a strike organised early this month as a protest against a new pensions law, though lasting one day only, unfavourably affected the general commercial outlook. Chilean recovery continues, production of nitrate being reported as reaching 18,268,000 metric quintals in the ten months ended April 30th, against 11,942,000 metric quintals in the corresponding period 1922-23, and 7,431,000 metric quintals in 1921-22. The Brazilian situation is steady as a whole, coffee quotations having lately shown a slight advance. Conditions in Peru also show slight change.

EUROPE.

The French fuel situation is at the moment better than it has been for some long time, thanks to the rapid strides made in restoring "devastated" Nord mines and the regularity of arrivals of Ruhr supplies, which have so far been unaffected by labour troubles in that area. Metallurgical markets are quiet at present, with a downward tendency in prices. Silk markets are more active, but business at Roubaix and Tourcoing is of a "hand-to-mouth" character. The pace of Belgian trade has definitely slackened during the past month, even the glass industry having taken steps to restrain production, while business in the iron and steel markets is quiet. The failure of a large metallurgical concern, though not unforeseen, has introduced an element of nervousness into German markets, while the liquidation on April 30th of liabilities in French francs also involved certain interests in some amount of difficulty. The new Gold Discount Bank is limiting its activities as far as possible to the finance of industries working for export. Switzerland reports a welcome improvement, evidenced by a fall in unemployment figures. Italian business proceeded on normal lines during April, though some interruption was caused by the national elections and the Easter-holidays. Spanish conditions show but slight improvement. In both Holland and Sweden, however, a brighter outlook characterises business generally. Finnish timber markets continue to exhibit the weakness typical of the period preceding the resumption of shipments. Currency and budgetary reforms have been conducive to greater confidence in Poland, and in Hungary a much more hopeful feeling obtains. A sensational slump on the Vienna Stock Exchange has involved a number of firms in financial difficulties, and public confidence has been shaken.

FAR EAST.

Chinese trade is almost as lifeless as ever. A certain amount of overbuying, indulged in during a recent period of activity in the wool market, has caused some nervousness to be felt in one or two ports. The recent elections in Japan have had little effect on the internal trade situation of that country, business remaining inactive, particularly in the rice and cotton markets. The monetary situation is easier, partly owing to reduced demands for accommodation for settling import bills, and the disbursement, since the beginning of May, of part of the Government's subsidy to the fire insurance companies.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JUNE 28, 1924.

No. 13.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE home trade situation shows little change compared with a month ago. The elements of uncertainty noted in the last Supplement are still in operation, and there is a general feeling of disappointment that so little headway is being made. It is true that unemployment continued to fall until the end of May, and many centres are really very busy; but the labour returns for the first fortnight of June are slightly worse at a time when there ought to be a seasonal improvement. On the other hand, if the course of trade this year is compared with that of 1923, there is room for encouragement in the fact that the summer months of last year witnessed a definite setback. This year, up to the present, the worst that can be said is that we are more or less standing still, both buyers and sellers showing a disposition to wait and see. The poor law returns show that about 125,000 fewer people are drawing outdoor relief than at this time last year, and as the wages bill continues to rise and the cost of living to fall the lot of the wage earner is slowly improving.

The chief feature of last month's trading returns was a heavy rise in total imports, which quite obscured the modest increase in the value of our exports. As far as enhanced purchases of raw materials accounted for a fair share of the increase the omen is favourable, but comparison with last year reveals that average import prices of certain essential materials have increased much more rapidly than the export prices of corresponding finished products. A narrowing of profit margins, such as is indicated, suggests that the limit of sacrifice may probably not yet have been reached in some of the "unsheltered" trades, and certainly does not point to the existence of any large surplus out of which further wage demands can be met.

In the money market a slight contraction in available supplies of cash and in bank advances was recorded last month, but bank deposits were slightly higher. Decreased velocity of monetary circulation seems to be indicated by a decline in London Clearing figures, despite unusual

activity in the new issue market. Security prices have remained fairly steady. No reasonably sound business is experiencing difficulty in obtaining financial accommodation, and there is reason to believe that the present volume of trade is insufficient to absorb a good deal of the new capital coming forward for investment.

The setback experienced by the coal export trade has to some extent affected production and employment. Iron and steel output in May more than fulfilled expectation, but makers find it difficult to obtain new orders just now, and increased metallurgical production on the Continent makes the question of foreign competition more formidable. Engineering, however, is holding its ground. Unemployment has sunk to very small proportions in the motor car industry, and even shipbuilding is at long last showing signs of revival. While the volume of inquiries for cotton goods is encouraging, Lancashire merchants and manufacturers are inclined to adopt a waiting policy, and Bradford is similarly disposed pending a settlement of political questions on the Continent. Shipping freights have fallen rather markedly in the last two months, and may continue to show a seasonal decline until the usual autumnal demand sets in.

Abroad, the most striking features are the trade rescission in the United States, where political factors are tending to accentuate the difficulties of adjusting production to current demands; satisfactory reports from many South American countries, a revival of the metallurgical industries of France and Luxembourg, and a serious "famine" of floating capital in Germany. As regards the various members of the British Commonwealth, Canadian reports are slightly more optimistic, Australia is looking forward to a good season for wool and wheat, the Indian monetary situation is easier, but South African trade has been disturbed by influences arising out of the general election.

The following notes on conditions in various trades and

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE	DANZIG	JAPAN	PORTUGAL
AUSTRALIA	DENMARK	JUGO-SLAVIA	ROUMANIA
AUSTRIA	DUTCH EAST INDIES	LATVIA	RUSSIA

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 41.

countries call attention to some of the most striking tendencies :—

HOME INDUSTRIES.

Iron and Steel.—Quiet conditions characterise the pig-iron market. To some extent the Whitsuntide holidays must be held responsible for the falling off in the volume of new orders, while political uncertainty has affected demand from European sources. No large stocks are at present held anywhere, but unless demand takes a turn for the better, there may be a slackening in the rate of production if the accumulation of surplus pig-iron at the works is to be avoided. Foreign competition has become more prominent in the last week or two, chiefly in the Middlesbrough district. In the Midlands the outlook is rather better. Steel shows the same characteristics as pig iron, but to a less degree, makers having larger orders on hand. New contracts, however, are none too easy to secure. The Barrow Steelworks have re-opened after a three-months' suspension. After a long run of prosperity, the tinplate trade has encountered less favourable conditions, and a reduction of price has been necessary. Galvanised sheets are an exception to the prevailing tendency, makers being booked up for some weeks at higher prices than those recently prevailing. Iron and steel production in May showed some improvement on the previous month, when the returns were affected by the Easter holidays. The returns of overseas trade show unusually heavy imports last month, chiefly of semi-finished products.

Coal.—A correspondent states :—"There has been little activity to report in the coal industry. The continued depression has been responsible for irregular working at the pits throughout the country, and several collieries which depend mainly on export trade have been forced to work short time. This state of affairs has naturally been reflected in decreased production. Amongst the factors contributing to the lull in the export trade are the settlement of the labour trouble in the German mines, the continued increase in the production of the French, Polish, and Czecho-Slovakian coalfields, combined, of course, with the adverse exchanges. There has also been increased competition from the United States in both the Canadian and South American markets. The seasonal decline in the consumption of household coals has had marked effects in the home market, but it is possible that the reduction in prices which has been announced may help to ease matters somewhat in this direction."

Engineering.—Generally speaking, the engineering trades have, with one or two exceptions, succeeded in holding most of the ground won so laboriously during the last few months, though possibly the placing of contracts for public works at home, rather than any recrudescence of foreign demand, is chiefly responsible. British firms have lately secured orders for 80 locomotives for India, their prices being higher than those of several foreign competitors, but their promised dates of delivery earlier. Shipbuilding is better. Work will shortly be begun on a fairly large number of contracts placed on the Clyde; Sunderland shipbuilders are also receiving a more encouraging number of inquiries. The motor trade remains busy. Cycle makers report a brisk summer trade, with the prospect of continued activity during some months to come.

Hardware and Cutlery.—Conditions show little change on the whole, though in the hardware trades some improvement in the employment situation has taken place. Business is subject to seasonal influences, competition is keen, but the volume of orders is not unsatisfactory.

Cotton.—Our Manchester correspondent writes :—"The demand for cotton yarn and cloth has continued quieter, and business to some extent has been interfered with by the Whitsuntide holidays. In most quarters buyers have adopted a policy of marking time. There has not been any distinct change in values, but the opinion is gaining ground that lower prices are likely to prevail towards the end of the summer, and in the circumstances merchants and dealers have limited their commitments. Great interest has been taken in the reports relating to the new cotton crop in the United States. After unfavourable conditions, there has been a distinct improvement, and the plants are making much better progress. In view of the importance of a plentiful supply of long staple cotton for Lancashire, the healthy advices as to the new growth in Egypt have given satisfaction, and there is a possibility of the crop being of record dimensions. Shippers of cloth to outlets abroad have not been in the mood to place orders with manufacturers with any freedom, and buying has been from hand to mouth. A slight improvement has shown itself in the home trade section, but compared with a month ago some cloth manufacturers are running fewer looms. The general demand in yarn made from American cotton has continued slower, and spinners have experienced much difficulty in preventing loss of ground. The mills are still running only 26½ hours per week, instead of the usual 48."

Woolen and Worsted Trades.—The burst of activity in the market for wool during the first few months of the present year has come to a halt. Prices have fallen, though not to a large extent, sellers being confident that the present lull is due to

ephemeral outside influences, and will be short-lived. The British wool crop, now being sheared, is expected to be of good quality, but deficient quantity. Manufacturers continue to work on narrow margins, this feature having become more marked than ever during recent weeks. The cheaper grades of cloth find buyers most readily, Dewsbury "shoddy" production showing a marked increase. Political uncertainty in Germany has affected Bradford to some extent. The clothing trades experienced an expected rush of orders for the Whitsun holidays, though business has since been quieter.

Linen.—While the Ulster flax crop is short, owing to the cold weather experienced, reports from the French and Belgian fields are encouraging. Belfast and Fifehire manufacturers are doing only a moderate amount of business, but in the Barnsley district some improvement has been registered, foreign demand being in evidence.

Chemicals.—Most branches of the industry are working on quiet lines, as is not unusual at this time of the year. The market for most acids has displayed more strength recently, but has to meet strong foreign competition.

Boots and Shoes.—With Whitsun and summer requirements mostly filled, the leather trades have been quieter lately. Despite unfavourable weather, the majority of manufacturers were kept moderately busy up to the last few days before the holiday break, but business has since been irregular.

Pottery.—The slow improvement noted last month continues, orders being rather more plentiful, but mainly concerned with the cheaper wares.

Shipping.—The gradual fall in freight levels which commenced in the early part of the year has been rather more prominent during the last two months, the average level, as shown by *The Economist's* Index, being 14 per cent. above 1913 during May, as compared with nearly 24 per cent. in February. A reduction in the demand for coal and ore transport in European waters, a continuance of quiet conditions in the Far East, and, at the end of last month, a slight check in grain futures from the River Plate, have been mainly responsible for the course taken by freights in the last few weeks. A seasonal reduction is to be anticipated during the next month or two.

UNITED STATES OF AMERICA.

Trade has fallen back from the advanced positions it occupied in the spring of 1923, and all but regained three or four months ago, but the retreat is being conducted in orderly fashion with, so far, a minimum of loss. Steel ingot production has been put at about 60 per cent. of capacity, and the automobile industry, while still doing a large business, has slackened its output, the Ford company a few weeks ago being reported as having cut its daily production from 7,200 to 6,000 cars. Pig-iron production fell off during May to a greater extent than was expected, the total of 2,615,000 tons (contrasting with 3,233,000 tons in April), being the lowest monthly figure since September, 1922. On the other hand, further curtailment of production in the textile trades was probably less than earlier reports seemed to indicate. Wholesale trade is quieter; prices have fallen slowly but steadily during every month of the present year, and now stand 8 per cent. below the level of a year ago. Mail-order business during May was returned as 19 per cent. below April, though sales for the five months of 1923 exceed those of the same period last year by 5 per cent. Grain sowings have been hindered by low temperatures in the West. Conditions in the money market remain easy. While admitting that the situation has falsified many of the optimistic forecasts of the early part of the year, qualified observers display no alarm. The "boom" dangers present in 1920 are non-existent in the present case, which apparently represents an adjustment of business to current needs, somewhat accentuated by political factors, such as the coming Presidential elections and Congressional struggles over the Soldiers' Bonus and Revenue Bills.

BRITISH EMPIRE.

Conditions in Canada during May showed much the same features as in April. Business was fair, and prices rose slightly, but unseasonable conditions in the agricultural districts were reflected in a certain amount of nervousness among the trading community as a whole, orders for any but short periods ahead being conspicuously absent. The trend of employment is not altogether unsatisfactory, the seasonal decline in the labour requirements of such industries as lumbering being counterbalanced by increased demand from mining districts. The omens point to a continuance of general activity in Australia, the 1924-25 season being expected to show an increase in wool and wheat production, and, possibly, in that of dairy products. As far as present prosperity in certain constructional trades is dependent on the overseas borrowing policy of the Commonwealth and State Governments, however, reports of current activity need discounting to some extent. Premature expectations of a good season in New Zealand have led to heavy imports into that country, an agitation for further remissions of taxation, and some discontent on the part of organised labour, which pre-

(Continued on page 48.)

THE POSITION OF AGRICULTURE IN GERMANY.

By DR. C. VON DIETZE.

SOME of the chief differences between the present agricultural production in Germany and that of pre-war days may be seen from the following table :—

ACREAGE under CROPS and GRASS in GERMANY.

	1913.*			1923.			Incr'se and Decr'se.		
	1,000 Ha.	% of Arable Land.	% of Total Acreage.	1,000 Ha.	% of Arable Land.	% of Total Acreage.	1,000 Ha.	% of Arable Land.	% of Total Acreage.
Cereals	12,638	58.8	..	10,617	53.0	..	-2,021	-5.8	..

Total	29,211	..	100.0	28,075	..	100.0	-1,136	..	..

* Present territory of Germany.

Although in 1923 most of the direct consequences of the war and the post-war grain policy had been overcome, the total acreage was still 3.9 per cent. smaller than in 1913, and the proportion of arable land had also been diminished. The various crops on the arable land show characteristic changes. Cereals have dropped substantially, while roots, fodder crops and bare fallow have been extended. These changes spring from two different causes. Firstly, the German farmer tried to make good to a certain extent for the loss of feeding stuffs and other products (hemp, flax, rape) imported in pre-war days from foreign countries, especially from Russia. Secondly, those crops have been favoured which require less labour, especially on large farms which used to employ a great number of Polish workmen. These facts account for the reduction of acreage under cereals, potatoes, and beet roots,* i.e., under the most important foodstuffs.

It is impossible to give exact figures of the agricultural yields, as the statistics are not quite reliable in this respect. It may be taken as granted, however, that in 1923 the yields per ha were, as a whole, still at least 5 per cent., probably more, under the level of pre-war years, although they were much higher than in any year since 1915. Consequently the agricultural output shows an even greater decrease than the acreage under crops.

The diminished capacity production becomes apparent also from the figures of live stock. In December, 1922, there was a decrease of cattle by 12 per cent., pigs 35 per cent., horses 4 per cent., compared with the same month in 1913. The reduction of pigs is especially deplorable, as in pre-war days the consumption of pork amounted to about 60 per cent. of the whole meat consumption. Only sheep and goats show an increase (12 per cent. and 31 per cent.) compared with 1913, but they are of small importance.

Of still greater influence is the relation of the prices which the farmer gets for his produce, and those which he has to pay for implements, feeding stuffs, fertilizers, &c. When in December, 1922, the depreciation of the currency had come to an end, the prices of cereals and potatoes were under the standard of 1913. Milk and fat cattle fetched prices which were a little higher than in pre-war days, but coals, machinery, building materials, and feeding stuffs were on an average about 50 per cent. dearer than in 1913, fertilizers alone not being much dearer than in those days.

Lastly, this relation of prices is due to the impoverishment of the German population, which is reflected in an

* The table does not give figures for beet roots and potatoes apart from other roots. The augmentation is confined to turnips, swedes, and mangolds, and exceeds the decrease of potatoes and beet roots.

enormous decrease of food stuff consumption. Besides, the economic policy of the State, especially the still existing restrictions on exports, agricultural products, and the import of Russian rye, which the Soviet Government, as a matter of propaganda, sold at very low prices, have had some influence. Germany has no longer any tariff on corn and other agricultural products. But the situation is widely different from that in Great Britain. The most important agricultural products, especially cereals, are at the present date considerably cheaper in Germany than in Great Britain. The German farmer is compelled to sell his produce at prices which sometimes do not even cover his expenses. When the depreciation of the currency was stopped he had no money in hand, and simultaneously he had to pay very high taxes. In 1924, in the Prussian province of Saxony, the present laws make the owner of a farm of 30 ha (= 75 acres) pay taxes and rates from 20 to 118 marks to the ha (9s to 50s to the acre), according to the quality of the soil;† the owner of a farm of 500 ha (= 1,250 acres) as much as from 23 to 132 marks to the ha (= 10s to 55s to the acre), i.e., under the prevailing conditions much more than the whole net profit. Credit can be obtained only to a quite insufficient degree, and the debtor has to pay up to 15 or 20 per cent. a year. Thus the farmer has to sell his produce at very low prices in order to pay his expenses and taxes. Only during the last weeks of May have corn prices begun to go up again, a development which is bound to continue, as foreign corn must be imported before the harvesting of the next crop.

The situation of German agriculture is as serious as it has ever been for about a century. It can only be overcome if the whole economic life of Germany is able to regain its strength, and also if the buying power of the neighbouring countries trading with Germany recovers. Otherwise the pressure which is exercised by the suffering agricultural districts in overseas countries will be felt severely in Germany. If this evil is not eradicated, no other means can bring effective help, certainly not the re-adoption of a protectionist policy, which has recently been winning friends rapidly.

The other problems of German agriculture are of far less importance. Nevertheless, some of them are of great interest, and deserve to be mentioned. As to the agricultural labour question, the loss of Polish labourers is the most prominent feature. Their number amounted to about 400,000 in pre-war days, while to-day it has fallen to hardly more than 100,000. The increased employment of German labourers could not fully compensate for this decline. Since 1919 the trade unions of agricultural labourers have achieved a great importance. To-day the wages and other conditions of employment are generally fixed by agreements between their representatives and the organisations of agricultural employers. In connection with this development the old habit of giving the permanent workman a share in the quantities of corn harvested and threshed on the farm has almost disappeared, even in the eastern parts of Germany, where it was still in force up to 1918. Agricultural strikes have broken out frequently since 1919. Most of them were stimulated by political leaders. So far they have never been widespread.

The relations between landlords and tenants, which, however, are of subordinate importance in Germany, have been completely upset by the depreciation of the currency. Since 1920 notice to quit can be given to the smaller tenants (up to 25 acres) only with the assent of a special court. This measure has been proved to be a failure under these circumstances, as no landlord would let his land to a small tenant. The restriction has already been abolished for all agreements hitherto concluded. As regards the future, a general reform of the tenant law is being discussed, for which English legislation may serve as a model in many respects.

† In Germany over 90 per cent. of the farmers are occupying owners.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 42.

capitated a strike on the national railway system. Easier monetary conditions in India have been duly followed by a further fall in Bank rate. While in the Punjab the unusual rain is hindering crop movement, fairly favourable conditions are reported from the jute districts, and in Burma the end of a strike of dock labourers has released large rice stocks for export. Up-country demand for cotton goods is slack—a usual feature of conditions at this time of the year. Improvement in South Africa has been somewhat obscured by election uncertainties. Rand gold production in May reached an exceptionally high level.

SOUTH AMERICA.

Argentine trade activity continues, though an undertone of nervousness is observable. Picking and shelling of the maize crop is in progress, and amounts available for export in the next few months are likely to be considerable. Financial conditions in Chile are quiet, but the trade balance shows an appreciable improvement, imports having declined and exports increased as compared with this time last year, though the falling off in imports has affected Customs duties unfavourably. Mexican trade recovery is handicapped by a continuance of disturbance in some areas, and by labour troubles. In Brazil, coffee and cotton markets are firm, but the demand for sugar has fallen away.

EUROPE.

With fuel supplies maintained on an adequate scale, French metallurgical production has increased, and recent exchange movements have, on the whole, been favourable to the export trade. The textile trades are irregular, Roubaix and Tourcoing being fairly busy, while the tendency in cotton markets is downward, and buyers are tending to hold off in the silk trade. In unoccupied Germany the maintenance of stable monetary values is causing considerable difficulty to many firms, who sunk all available resources in goods and fixed capital during the inflationary era, and now lack adequate liquid resources. The Ruhr miners' strike has been settled for the time being, and the M.I.C.U.M. agreements temporarily extended, but the resumption of anything resembling normal conditions waits

upon the application of the experts' recommendations. In Belgium the coal trade remains dull, and the iron and steel industries are quiet, competition from Germany, Lorraine, and Luxembourg being much in evidence. The glass industry shows partial recovery, but remains below the level of three months ago. Swiss conditions are described as "tranquil." Security prices have declined to some extent. The tourist season, however, has opened in promising style. Dutch progress seems to have slowed down, and the present disturbed political situation in Italy may have unfavourable reactions on the trade situation, which, at the end of last month, was reported on in eminently favourable terms. The general tone of business in Norway has improved since the settlement of the protracted iron-workers' strike, which had culminated in a lock-out embracing nearly 60,000 workers in numerous trades. Both in Sweden and Denmark exchange fluctuations are a handicap to trade improvement. Swedish timber markets are quiet, though rather more active than at this time last year. The iron industry reports much difficulty in obtaining new orders. Harvest prospects in Finland are generally favourable, though in some districts the setting of potatoes has been delayed by rains. Exports of wood-pulp and cellulose are improving, the May figure for the latter constituting a record in the history of the trade. In Central Europe no great change is to be reported. Employment improved in Austria during May, and though conditions are still far from satisfactory in many respects, the economic crisis has passed its worst point. Confidence is slowly reasserting itself among traders, who, as a class, suffered less in the recent troubles than the more speculative members of the financial community.

JAPAN.

Monetary conditions have been easier during recent weeks, and the outstanding loans of the Bank of Japan have reached the lowest figure for some considerable time. This season's crop of cocoons has been delayed by bad weather, and ruling prices are low. The trade balance is improving. May imports totalled 223 million yen, as compared with 201 million yen in May, 1923, exports rising to 176 million yen, as compared with 114 million yen for the same month last year. Reconstruction in Tokio is progressing favourably, temporary houses and business premises providing accommodation to an extent of 80 per cent. of that available before the earthquake.

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

THE ECONOMIST BUDGET
SUPPLEMENT.

WHATEVER Government may be in power, the Budget is certain to occupy the centre of the political stage for many years to come. The burden of taxation upon industry on the one hand, and the demand for expenditure in what may be called the social services on the other, are conflicting interests which lay down the inevitable lines of future controversy. It is not, however, our purpose to prophesy. The following pages are rather designed to present to our readers in a convenient form sufficient of the leading facts and figures to give a general picture of our financial position.

THE 1923-24 ACCOUNTS.

The completed accounts for the financial year ended March 31, 1924, showed a surplus of £48,329,000, revenue amounting to £837,169,000, and expenditure to £788,840,000. Mr Baldwin's Budget estimate of April last was for a surplus of £1,884,000, revenue being expected to drop by £95½ millions, of which £61½ millions would be automatic, and £34 millions on account of tax concessions. He also anticipated an increase of £5 millions in expenditure, but supplementary estimates added £17½ millions to this figure, and if estimates had been exactly realised there would have been a deficit of £11½ millions. Both estimates proved to be wide of the mark, revenue being £18,669,000 higher, and expenditure £41,088,000 lower. The directions in which the estimates were falsified may be seen from the following table, which compares the actual figures with the final estimates for 1923-24:—

		(000's omitted.)	
Revenue.		Expenditure.	
1923-24.	Above (+) or Below (–) Estimates.	1923-24.	Above (+) or Below (–) Estimates.
Customs	119,958 + 3,058	National Debt Services	307,309 – 2,691
Excise	147,970 + 4,120	Sinking Fund	40,000 ..
Motor Duties	14,691 + 1,441	Payments for N. Ireland	347,309 – 2,691
Estate Duties	57,800 + 5,800	Road Fund	3,967 + 967
Stamps	21,570 + 1,570	Local Taxation Accts.	14,090 + 1,440
Land Tax, &c.	2,760 – 240	Land Settlement	13,662 + 3,314
Income Tax	269,331 + 8,331	Other Cons. F. Services	1,209 – 291
Super Tax	60,640 + 2,640	Other Cons. F. Services	2,803 – 169
E.P.D.	nil – 12,000	Total Cons. F. Services	383,040 + 2,570
Corporation Profits Tax	23,340 + 3,340	Army, Navy, & Air Force	105,800 – 16,445
Post Office	52,800 + 200	Civil Services	239,366 – 25,384
Crown Lands	920 + 20	Post Office and Revenue	60,634 – 1,829
Interest on loans	12,607 + 107	Departments	405,800 43,658
Miscellaneous receipts	15,931 + 3,481	Supply Services	405,800 43,658
Ordinary	36,801 – 3,199	Total	788,840 – 41,088
Special		Surplus	48,329 + 59,757
			837,169 + 18,669

The surplus of £48 millions has automatically gone to redemption of debt. During the past financial year £97,649,000 of debt was redeemed, including £52½ millions in War Bonds, and £27½ millions in Treasury bills. New debt, including Treasury bonds for £32½ millions, was created to the extent of £49 millions, and the net result was a reduction of £187,000 in the Exchequer balances. These changes are summarised in the table below:—

		(000's omitted.)	
RECEIPTS.		EXPENDITURE.	
£		£	
Revenue Surplus	48,329	War Bonds Repaid	52,764
Treasury Bond Sales	32,658	Other Debt Repaid	9,256

Reduction in Balances	187		
	97,649		97,649

In each of the past four financial years a substantial surplus has been disclosed, these amounting in the aggregate to £426 millions. A comparison of each year's results since 1909-10 reads as follows:—

		(000's omitted.)	
		Revenue.	Expenditure.
		£	£
1909-10	131,696	157,945	26,249
1910-11	203,851	171,996	31,855
1911-12	185,090	178,150	16,940
1912-13	188,802	188,622	180
1913-14	198,243	197,493	750
1914-15	226,694	450,473	333,779
1915-16	336,767	1,559,158	1,222,391
1916-17	573,428	2,198,113	1,524,685
1917-18	707,235	2,696,221	1,988,936
1918-19	889,021	2,579,301	1,690,280
1919-20	1,339,571	1,665,773	326,208
1920-21	1,425,985	1,195,428	230,557
1921-22	1,124,880	1,079,187	45,693
1922-23	914,012	812,497	101,515
1923-24	837,169	788,840	48,329

* Includes sinking fund of about £5 millions. † Includes sinking fund of about £25 millions. ‡ Includes sinking fund of £40 millions. § Includes sinking fund of £52 millions.

The deficit shown for the first year in the table was the result of the holding up of Mr Lloyd George's Budget by the House of Lords. The amounts taken out of revenue for sinking funds and depreciation on War Loan in 1920-21 and 1921-22 were about £52 millions, the depreciation fund being £40.9 millions in 1920-21, and £38.7 millions in 1921-22. With the recovery in the market price of 5 per cent. War Loan, the amount required fell to £11.2 millions in 1922-23. Sir Robert Horne, in making a reduction in the income-tax in his Budget for 1922-23, decided to suspend the sinking fund allowances, but when the accounts were closed all sinking funds were restored, so that the surplus on the basis of the Budget for that year was over £126 millions. In the past year there was a payment of £40 millions to the new sinking fund of 1923.

This is to be raised to £45 millions for the current year, and to £50 millions in succeeding years. Out of the £40 millions, repayment of principal of the American debt will have absorbed about £5 millions, Sinking Fund on Victory Bonds, Funding Loan and Conversion Loan about £18 millions, Funding Loan and Victory bonds transferred for death duties about £7½ millions, and silver repayments to the United States £6½ millions, or a total of about £37 millions. But what the precise figures have been it is impossible to ascertain from the accounts so far published.

Interest payments to America probably took a further £30 millions of revenue, though this amount and that for amortisation depends on the price at which the Treasury bought its dollars.

THE REVENUE SITUATION.

Revenue for the year 1923-24 amounted to £837,169,300, or £76,843,200 less than in 1922-23. The principal changes were as follows:—

(000's omitted.)			
INCREASES.	£	DECREASES.	£
Motor Duties	2,370	Customs	3,085
Death Duties	929	Excise	9,305
Corporation Profits Tax ..	4,363	Stamps	652
Interest on Loans	2,591	Income and Super-tax ..	49,074
		E.P.D.	2,004
		Post Office	400
		Miscellaneous, Ord.	8,160
		Special	14,216

Mr Baldwin, in his Budget twelve months ago, estimated for a decline in revenue of £95½ millions, of which £61½ millions represented an expected automatic decline in yield, and £34 millions the cost of reductions in taxation. The estimates proved rather wide of the mark in nearly all items, and in most cases were well below the actual receipts. In the table below we compare the actual receipts of the past two financial years with the estimates for each year:—

REVENUE. (000's omitted.)		1922-23.		1923-24.	
		Estimate.	Actual.	Estimate.	Actual.
Customs	£	112,250	123,043	116,900	119,958
Excise	£	160,750	157,275	143,850	147,970
Motor Vehicle Duties	£	10,600	12,321	13,250	14,691
Estate, &c., Duties	£	48,000	56,871	52,000	57,800
Stamps	£	18,250	22,222	20,000	21,570
Land Tax, House Duty, and Mineral Rights Duty	£	3,000	2,980	3,000	2,760
Property and Income-tax	£	329,000	379,045	261,000	269,331
Super-tax	£	27,800	2,004	12,000	nil
Excess Profits Duties, &c.	£	19,750	18,977	20,000	23,340
Corporation Profits Tax	£	54,625	34,150	52,600	32,840
Postal Service	£	5,625	5,500	5,570	5,570
Telegraph Service	£	13,550	13,550	14,390	14,390
Crown Lands	£	750	900	900	920
Interest on Sundry Loans	£	14,000	10,016	12,500	12,607
Miscellaneous—					
Ordinary Receipts	£	22,000	24,140	12,500	15,981
Special Receipts	£	90,000	51,018	40,000	36,801
		910,775	914,012	818,500	837,169

The results for 1922-23 proved nearer the estimate than those of the past year, but income and super-tax were very much underestimated in that year, whereas special receipts did not produce much more than half the anticipated amount, and Excess Profits Duty yielded only £2 millions instead of the expected £28 millions. In the past year E.P.D. produced nothing at all, whereas income-tax and super-tax made good the deficiency, while surpluses in most other items made good the loss of special receipts.

Customs and Excise.—Up-to-date figures analysing revenue items are not yet available, but it is possible to indicate the sort of relative importance of various duties and yields now and before the war. Interesting comparative figures are obtained if we place together the actual receipts from the main items of customs and excise in 1922-23 and before the war.

These we show below, together with the rates of duty in force then and now:—

Revenue from—	In Millions of £.		Rates of Duty.	
	1913-14.	1922-23.	Now.	Pre-War.
Spirits	24.0	53.6	Import duty from 75/4 to 122/5 per gallon Excise duty from 72/6 to 74/ per gallon	From 15/1 to 24/1 per gallon 14/9 per gallon
Beer	13.7	92.3	Excise duty 100/ per barrel	7/9 per barrel
Wine	1.2	3.1	8d per lb (reduced from 1/ on May 15, 1922)	5d per lb
Tea	6.5	11.6	From 12/4 to 25/8 per cwt	From 10d to 1/10 per cwt.
Sugar, &c.	3.3	40.2	From 8/2½ to 15/7 per lb	From 3/8 to 7/ per lb
Tobacco	18.3	53.4		

The beer duty is about 13 times as heavy as before the war, and the yield to the Exchequer about seven times as large. Proportionately the rise in the yield of the sugar duty is the most striking. Among duties imposed since the war began, the entertainment tax produced in 1922-23 £9.6 millions. The yield of the protective duties under the Safeguarding of Industries Act, and of the so-called McKenna duties made in 1922-23 the following exiguous contribution:—

	1922-23.
McKenna Duties	£ 2,428,400
Key Industry Duties	335,700
Depreciated Currency Duty	231,400
	2,995,500

In 1922-23 motor-vehicle duties brought in £12.3 millions.

Excess Profits Duty.—In the last report of the Inland Revenue Commissioners, referring to the state of affairs at March 31, 1922, it was stated that the total amount of E.P.D. arrears still to be collected was £292 millions. Against this have to be set, of course, the amounts still to be claimed as "refunds." Somerset House at the time of the last Budget was still optimistic enough to budget for a balance of £12 millions on the credit side for 1923-24, but nothing was received by the Exchequer. Whether this will affect the forecast for the coming year remains to be seen.

It will be interesting to see what Mr Snowden has to say of the amounts still outstanding and his hopes of actual collections. The total net receipts by the Treasury of Excess Profits Duty (including Munitions Levy) have been as follows:—

	£		£
1915-16.....	187,846	1920-21.....	218,099,128
1916-17.....	141,614,932	1921-22.....	29,670,692
1917-18.....	223,116,090	1922-23.....	2,004,000
1918-19.....	283,976,861	1923-24.....	nil
1919-20.....	289,208,046		

This gives a total of just under £1,188 millions.

Income-tax.—Income-tax receipts in 1923-24 exceeded the Budget estimate by over £8 millions, and super-tax receipts were £2½ millions more. These differences are comparatively small in view of the size of the figures. The following table shows the amounts collected in income-tax from 1913-14 onwards, together with the normal rates for each year:—

	Million £	Normal Rate of Tax in the £
1913-14	43.9	1 2
1914-15	59.4	1 8
1915-16	112.4	3 0
1916-17	186.5	5 0
1917-18	214.9	5 0
1918-19	257.7	6 0
1919-20	317.0	6 0
1920-21	340.7	6 0
1921-22	334.9	6 0
1922-23	314.8	5 0
1923-24	269.3	4 6

A statement recently made by the Financial Secretary to the Treasury shows that the estimated net produce of each penny of the income-tax (excluding super-tax) is as follows:—1922-23 (United Kingdom), £4,820,000; 1923-24 (Great Britain and Northern Ireland), £4,850,000. In 1913-14 it was £3,108,810. Those in Great Britain and Northern Ireland with incomes above the exemption limit in 1923-24 are estimated at 4,700,000, of whom only 2,500,000 are actually paying. The remainder obtain relief owing to personal allowances, deductions, &c.

Super-tax.—Before the war super-tax started with incomes over £5,000 per annum, but by successive changes this limit has been reduced to £2,000, and whereas the initial charge on the first £500 over £3,000 was 6d in the £, the initial charge on the first £500 over £2,000 is now 1s 6d. The rate now rises to 6s in the £ on incomes over £30,000, whereas in 1913-14 the 6d flat rate ran all through. The number of persons assessed to super-tax and the amount collected since 1913-14 are as follows:—

	Number.	Million £.
1913-14	13,937	3.3
1914-15	29,996	10.1
1915-16	29,299	16.8
1916-17	31,985	19.1
1917-18	35,564	23.3
1918-19	47,869	35.6
1919-20	54,475	42.4
1920-21	77,000	55.7
1921-22	90,000	61.4
1922-23	..	64.2
1923-24	..	60.6

Death Duties.—Accuracy in estimating under this head is, of course, impossible. Last year the estimate was within £6 millions of the receipts. In the preceding year the discrepancy was slightly larger. Since pre-war days the rates of the death duties have been considerably increased. Up to £5,000 the estate duty remains as before at 3 per cent. But thereafter the increase over the pre-war rate begins and rises steeply to 15 per cent. (against 10 per cent.) on estates of £110,000 to £130,000, and to a maximum of 40 per cent. (against 15 per cent.) on estates over £2,000,000. Total receipts from death duties rose from £27.4 millions in 1913-14 to £52.2 millions in 1921-22, £56.9 millions in 1922-23, and £57.8 millions in 1923-24. The latest report of the Commissioners of Inland Revenue gives an analysis of the capital value of the estates assessed. Of a total gross capital value assessed in 1921-22 of £461 millions, nearly £315 millions represented estates of less than £100,000. In the gross total British Government securities issued since 1914 figure at £56 millions, other Government and municipal securities at £30.6 millions, stocks and shares in joint stock companies at £121.2 millions, house property and business premises at £74.1 millions, cash at £36.3 millions, land at £36.3 millions.

Corporation Profits Tax.—Estimates and receipts under this head in the past two years have not shown a great difference. The tax was imposed by the Finance Act of 1920, and in 1920-21 the amount payable was £2,751,000, the taxable profits on which it was levied being £55,590,400. The amount payable in 1921-22 was £26,068,400 on taxable profits of £526,418,400. Until the last Budget the tax was charged at the rate of 1s in the £ on profits accruing on and after January 1, 1920, but provision was made for excluding the first £500 of annual profit from the charge, and for a limitation of the total duty payable to 2s in the £ on the profit remaining after payment of any interest and dividends at a fixed rate on any debenture or preference capital, &c. In Mr Baldwin's Budget last year the rate was reduced from 1s to 6d in the £ in respect of profits arising after June 30, 1923, a concession which did not affect last year's revenue, but is expected to cost the Exchequer £12½ millions in a full year.

Stamp Duties.—Details of the stamp duties collected in the past year are not yet available, but the following table from the Inland Revenue Commissioners' Report, already referred to, gives the main sources from which the receipts were obtained in 1921-22 and 1913-14:—

	1913-14.	1921-22.
Land and Property	£ 1,878,900	£ 4,180,100
Stocks, Shares, &c.	3,124,700	4,525,000
Company Duty	697,500	2,141,500
Cheques and Bills	2,322,000	4,286,400
Receipts	668,700	2,239,800
Total (incl. misc.)	9,648,200	18,991,000

Other Revenue.—Apart from a decline of £240,000 in land tax, house duty, and mineral rights duty, the only other item to fall short of the Budget estimate was Special Receipts, the actual decline in which exceeded the Budget estimate by £3,199,000. The two largest contributors under this heading in 1922-23 were the Dis-

posals and Liquidation Commission, which paid to the Exchequer £16,780,000 for the sale of surplus Government property, and £10 millions for the sale of raw material, and the Treasury, which accounted for £14½ millions. In the latter amount were included £6 millions for repayments connected with advances in respect of pre-mortgage bills, £1,388,400 of salvaged gold from the s.s. "Laurentic," £4½ millions for receipts under the German Reparation (Recovery) Act, 1921, and £2,300,000 received in cash from the Reparation Commission. How the reduction in the 1923-24 Special Receipts has come about we shall not know until the publication of the Finance Accounts in a few months' time. At the same time, it is obvious that the sale of war assets cannot continue indefinitely.

A comparison of the actual revenue of the past three years and of 1913-14 reads as follows:—

	REVENUE. (000's omitted.)			
	1913-14.	1921-22.	1922-23.	1923-24.
Customs	£ 35,450	£ 130,052	£ 123,043	£ 119,958
Excise	39,590	194,291	157,275	147,970

Interest on Sundry Loans	..	..	..	..
Miscellaneous—				
Ordinary Receipts	2,304	26,334	24,140	15,981
Special Receipts	..	170,806	51,018	36,801
	198,243	1,124,880	914,012	837,169

Revenue Prospects.—The estimate of next year's revenue remains a secret until the Chancellor's Budget speech. There are, however, certain known factors, on which he will have to work. In the first place the tax remissions made last year, but which did not take full effect, are expected to reduce revenue by a further £13½ millions in the current year, made up of a loss of £7 millions in income-tax, £2½ millions from corporation tax, to be followed by a loss of £10 millions next year, Customs and Excise £3½ millions, and reduced Post Office rates half a million. These reductions would bring revenue to £824 millions if yield otherwise remained unchanged. But will that be the case? Special receipts are certain to fall perhaps to the tune of £20 millions. On the other hand, the yield of 1d in the £ of income-tax already shows sign of recovery. It is likely further to improve as trade revives. On the other hand, the arrears which accumulated in 1921 have apparently been largely reduced, and these payments have probably swollen the figures of 1923. Customs and Excise will also revive, but not rapidly. The revenue from these comes overwhelmingly from articles of common consumption. The yield from these does not drop much in bad times. It equally does not rise much in good. But in these, as in other items, such as stamps, motor duty, &c., the Chancellor may argue—and it would be difficult to deny him—that the estimates of the last two years, except as regards E.P.D., have been unduly guarded, and that revenue is likely to show increasing elasticity. On the other hand, labour troubles and economic difficulties abroad might equally justify a conservative view of the prospects. In other words, a case could no doubt be made for any figure between £810 and £840 millions on the existing basis of taxation. This compares with expenditure as estimated below at £785 millions.

EXPENDITURE.

The Departmental estimates of expenditure for the year 1924-25 show a reduction of £44 millions in comparison with the estimates for the past year, but are only £362,000 below the actual expenditure for the past year. In 1923-24 the expenditure on the fighting services was

£105,800,000, as against an estimate of £122,245,000—a saving of over £16 millions. For the current year the estimate is £115,563,000, or £10 millions more than last year's expenditure—a figure which looks unduly high. The Civil Service Estimates are down £37 millions below last year's estimate. But they are only £12 millions below last year's actual expenditure. In the table below we compare the actual expenditure in the years 1913-14, 1921-22, and 1922-23, and the estimates for 1923-24, and 1924-25, the detailed figures for last year not being yet available:—

	EXPENDITURE. (000's omitted.)				
	Total Issues in Year.			Estimates.	
	1913-14.	1921-22.	1922-23.	1923-24.	1924-25.

Fighting Services.—The estimates for the fighting services show an increase of £38 millions, or less than 50 per cent. in comparison with the actual expenditure of 1913-14. This does not appear unreasonable in view of the fact that the Air Force, which is now down for nearly £15 millions, did not have a separate existence before the war. It has to be remembered, however, that in 1913-14 the competition in naval armaments was at its height, and the amount spent on the Navy in that year was exceptionally high.

The Navy estimates of effective services for 1924-25 are £47,824,400, which compares with £43,332,400 in 1913-14, the numbers of men being 100,500 and 146,000 respectively. The following table compares the principal items in the Navy estimates for the two years:—

	1913-14.	1924-25.
Wages, &c.....	£ 8,399,200	£ 14,245,000
Victualling and clothing	2,930,000	4,258,000
Shipbuilding, repairs, &c.	22,141,000	18,263,000
Naval armaments	4,396,000	3,975,000
Works, buildings, &c.	3,448,000	3,080,000

If allowance is made for the rise in wages and prices the current year's estimates on the surface make a not unsatisfactory showing. But the fact, of course, is that the item of £43½ millions before the war was largely on account of new construction, whereas the current figures provide for very few new ships, though they are to cost a great deal. The non-effective services, mainly pensions and gratuities, have increased from £2,976,900 to £7,975,600. In the Army estimates the increase in the comparable item is from £3,939,000 to £7,834,000. War pensions are carried in the Ministry of Pensions Vote, and the large increase shown in this item in the Navy Estimate is to be accounted for by the reduction in the active personnel.

Civil Services.—When we turn to the Civil Service estimates, we find a very much larger increase over the pre-war figure than is consonant with the rise in prices. The total has risen from £54 millions to £227½ millions. Before a true comparison can be made, however, there are one or two items, entirely the result of the war, which must be eliminated from the latter figure. The first is £67 millions for war pensions. This, of course, automatically diminishes with the passage of time, and the figure is already £26 millions lower than it was four years ago. Other items which have to be deducted are £8 millions for unclassified services (which include £3½ millions for compensation (Ireland) and £2½ millions for relief of unemployment), £5½ millions for Middle Eastern Services, and £14 millions for the Ministry of Labour. If these deductions are made, the total becomes £132½ millions, and this shows an increase of £78½ millions, or 146 per cent. over the actual expenditure of 1913-14, little more than one-half of which can be directly attributed to the increase in prices.

Education.—Two years ago it was estimated that the total expenditure on education in Great Britain would exceed £103 millions, of which the taxes would provide £60½ millions, and the balance would come from the rates. It is not yet possible to give up-to-date information on expenditure from the rates, but the current year's estimates enable a comparison to be made of the portion falling on the taxes. The figures for England and Wales are as follows:—

	(000's omitted.)			
	1913-14 (actual).	1922-3.	1923-4.	1924-5.
England and Wales—				
Elementary Education.....	11,597	36,724	33,069	32,564
Higher Education	2,015	9,765	7,313	6,995
Do (ex-officers and men) ..	..	1,090	326	68
Teachers' pensions	176	1,920	2,400	3,467
Museums, &c.	162	211	194	199
Administration & inspection	439	900	791	817

The first and chief item in this list depends on (a) the number of children to be educated and (b) the cost per head. As regards numbers, the average number in attendance was 5,381,000. In 1923-4 the figure was expected to be 5,150,000, a fall due to the low birth-rate of recent years. Thus, taking recent five-year periods, the births amount to:—

1908-12	4,505,000
1913-17	4,029,000
1918-22	3,942,000

In 1925 the children born in 1911 will be leaving school. Those in 1920 will be coming in. The improvement in infant hygiene has increased the survival rate and the number of school places required will not fall as much as these figures. But there is a reduction which is likely to continue. As regards cost per child, the figures are as follows:—

	1913-4	1920-1	1921-2	1922-3	1923-4 (Est.)
Salaries of teachers.....	s d 60 10 155 1	s d 160 9 164 4	s d 163 1	s d 11 4 11 11	s d 11 10 11 8
Loan charges	4 9 9 10	11 1 10 2	10 5	3 6 11 4	15 0 11 1
Administration	..	..	..	..	..
Special services (medical service, meals, special schools, &c.)	3 6 11 4	15 0 11 1	11 9	16 1 40 10	35 9 30 1
Other expenditure (rent, rates, establishment, apparatus, &c.) ..	..	..	..	..	..
	96 6 229	0 234	5 227	6 228	9

The change in the first line is due almost entirely to rates of pay, for the number of children per teacher has only fallen from 32.9 in 1913-14 to 31.2 in 1923-24. The cost of administration is still near the maximum, while teachers' salaries are 150 per cent. over the pre-war level. But the standard of pay for teachers has hitherto been unduly low. The chief economy in this heavy expenditure is to be looked for in the other items, which, if we exclude loan charges, have risen from 24s 4d per head to 54s.

Post Office and Revenue Departments.—The Revenue Departments and Post Office together spent £60,634,000 last year, or nearly £2 millions less than was estimated. For the current year these Departments

are down for £62,302,000. In the table below we give some comparative figures relating to the expenditure of the Post Office and revenue Departments:—

		Post Office.		Cost of Revenue Collection (Customs, Excise, and Inland Revenue).
		Inland Letter Rate.	Receipts. Expenditure.	
1913-14	1d per 4 oz	£ 30,800,000	£ 24,607,000	£ 4,483,000
1919-20	1½d per 2 oz	44,150,000	48,064,000	9,422,000
1920-21	2d ..	49,500,000	53,678,000	11,259,000
1921-22	2d ..	56,400,000	65,977,000	14,190,000
1922-23	1½d ..	53,200,000	49,857,000	11,317,000
1923-24	1½d ..	52,800,000	Est. 50,872,000	Est. 11,591,000
1924-25	1½d ..	..	Est. 51,081,000	Est. 11,221,000

To take the Post Office first, we find that while the receipts have increased by 72 per cent. between March 31, 1914, and March 31, 1924, expenditure has risen by 107 per cent. in the same period. In 1921-22 there was an abnormal increase in expenditure to just under £66 millions, compared with which the £51 millions asked for for the current year appears fairly reasonable. At the same time, some explanation should be forthcoming for an increase over the 1913-14 figure of 107 per cent. Still more unsatisfactory is the estimate of £11½ millions for the cost of collecting revenue, which required less than £4½ millions in the pre-war year. It is true that there are a certain number of taxes and duties which were not in force before the war, but there is surely room for further economy here.

Budget Forecast.—The following table compares the estimates for this year with such figures of actual expenditure in 1923 as are available, together with last year's estimates, and the actual expenditure for 1922-23:—

	EXPENDITURE. (000's omitted.)			
	1922-23. Actual.	1923-24. Estimate.	1924-25. Estimate.	1924-25. Estimate.
CONSOLIDATED FUND SERVICES.				
National Debt Services, Interest, &c.	302,237	310,000	307,309	(305,000)
Sinking Fund	21,753	40,000	40,000	45,000
Total National Debt Services	323,990	350,000	347,309	(350,000)
Payments for Northern Ireland	3,323	3,000	3,967	..
Road Fund	11,772	12,650	14,090	..
Payments to Local Taxation	..	..	..	..
Accounts, &c.	10,471	10,345	13,662	..
Land Settlement	1,236	1,500	1,209	..
Other Consolidated Fund Services	2,705	2,972	2,803	..
Total Consolidated Fund Services	353,497	380,470	383,040	(380,000)
SUPPLY SERVICES.				
Army (including Ordnance Factories)	45,400	52,000	..	45,000
Navy	56,200	58,000	105,800	55,800
Air Force	9,400	12,245	..	14,763
Civil Services	286,826	264,750	239,366	227,573
Customs and Excise and Inland Revenue Departments	11,317	11,591	..	(11,221)
Post Office Services	49,857	50,872	60,634	51,081
Total Supply Services	459,000	449,458	405,800	405,438
Total	812,497	829,928	788,840	(785,000)

With the increase of £5 millions in the sinking fund already provided, it is not likely that there will be much reduction in the consolidated fund services.

THE NATIONAL DEBT.

The interest payable on the National Debt figures so largely in the Budget that it is worth detailed examination. At the outset, we encounter the difficulty of saying what the debt amounts to, for in many cases—such as that of Consols, which stand at 57 to-day—there is a wide difference between market and nominal value. The nominal value of the Debt, excluding various capital liabilities, against which there are specific assets, was

a little less than £7,750 millions at the date of the last available return. The amount of interest paid on and the market valuation of the various items of the Debt are as follows:—

	(000's omitted.)			
	Rate of Interest.	Amount Outstanding Mar., 1923.	Interest paid in year ending Mar., 1923.	Market Valuations.
	%	£	£	£
Funded Debt	2½	314,220	7,867	172,821
Conversion Loan	3½	683,619	13,040	512,950
Terminable Annuities ..	..	13,681	491	7,388
War Stock	3½	62,745	2,196	60,237
Do	4½	12,804	576	12,420
Do	5	2,030,440	96,106	2,071,048
Do	4	64,932	2,646	65,581
National War Bonds ..	..	953,131	55,759	948,287
Funding Loan	4	400,447	16,097	354,395
Victory Bonds	4	353,921	14,196	326,376
Treasury Bonds	..	411,016	24,100	419,236
Exchequer Bonds	..	150,280	9,104	163,805
Savings Certificates ..	..	353,842	5,348	327,304
Other Debt	..	1,159,404	31,585	1,151,000
Treasury Bills	..	616,010	16,222	609,850
Temporary Advances ..	..	193,897	1,923	193,897

The market valuation figures give a total of £7,396½ millions, against a nominal total of £7,742 millions, exclusive of Other Capital Liabilities. Our figures do not pretend to any great degree of accuracy. For the purpose of arriving at a total, we have taken the American and other foreign debt at its nominal value, and National Savings Certificates at 18s 6d.

The American debt is, however, worth less than this nominal value. In his Note to M. Poincaré of August last, Lord Curzon put the value of our obligation to the American Government on a 5 per cent. basis at 14.2 milliard gold marks, or say £775 millions (paper). This is £180 million less than the nominal amount, and the adjustment would bring the market value figure to a little over £7,200 millions. Interest on this total amounts to £299 millions—a rate of interest of 4.2 per cent. Since March a year ago, £88 millions have been paid off, bringing the total market value down accordingly.

Both nominal and market value have varied considerably in recent years, the latter largely as the result of trade conditions and the yield on capital generally; the former in consequence of the efforts of the Treasury first to fund the very heavy volume of debt maturing shortly after the war, then to get rid of the incubus of an enormous floating debt, and finally to convert maturing and other debt on to a cheaper interest basis. The accompanying table shows the annual fluctuations in the nominal value of the various items of the National Debt since March 31, 1914. The figures, with the exception of those in the final column, which we ourselves have compiled from the weekly statements of public income and expenditure, are taken from the annual Finance Accounts. It will be observed that since March 31, 1921, the total has increased. This increase is due to alterations in the composition of the Debt. In 1921-22, for example, it will be seen that 3½ per cent. Conversion Loan appears to a nominal total of £266 millions. This took the place of National War Bonds, with a nominal value of £164 millions, the Conversion Loan having been issued in the first place at £100 Conversion Loan for £61½ to £63½ of 5 per cent. War Bonds 1922-1927. During that year there was also a large reduction in the total of Treasury bills outstanding, and their place was taken by Treasury bonds. The increase of £96 millions in the nominal total in 1922-23 was due to various causes. The capitalisation of arrears of interest on the debt to the United States Government added £108 millions, but as there were other payments of external debt, there was only a net increase during the year of £70 millions. The floating debt was reduced by £211 millions, but there was an increase of £240 millions in other internal debt. On conversion into 3½ per cent. Conversion Loan and 5 and 4 per cent. War Loan, &c., there was a net increase of £327 millions nominal, and there were cash redemptions of £87 millions. During the past financial year there has been a reduction of £46 millions in the total debt. The floating

debt has declined by £35½ millions, external debt by £6 millions, and National War Bonds have been redeemed to the extent of £50 millions. Treasury Bonds and National Savings Certificates have expanded by £33 millions and £12 millions respectively.

Sinking Funds, &c.—These nominal charges conceal the real benefit which has accrued through debt repayment out of revenue. These repayments have been made in two ways:—(a) By means of certain charges upon revenue made under definite statute. These include what was known before the war as the "New Sinking Fund" of 1875, which provided a fixed sum for meeting the debt charged, and laid down that any balance over interest and the cost of management should be devoted to debt repayment. Thus in 1913 out of £24 millions set aside, £19 millions was interest and management and £5 millions was used for repayment of principal. There have since been added provisions relating to particular securities. Thus the War Loan and Conversion Loan have depreciation funds, the Victory Bonds and Funding Loan are steadily redeemable by annual drawings, certain securities may be surrendered as payment for death duties, and provision made out of other revenue to meet what would otherwise be a deficit in the yield of the death duties, and finally, the American debt now carries an annual amortisation fund.

(b) Under what is known as the "Old Sinking Fund" any casual surplus is used for debt redemption. This provision covers the case of the large surpluses realised on recent budgets.

The current situation as regards the permanent sinking funds is as follows:—

Section 32 of the Finance Act, 1923, repeals the provisions contained in the Sinking Fund Act, 1875, and any subsequent amending provision, and provides for a Sinking Fund in 1923-24 of £40 millions; in 1924-25 of £45 millions; and in subsequent years, unless and until Parliament otherwise determines, £50 millions. These sums are to be applied within nine months after the date of the issue thereof to the redemption of any description of debt charged on the Consolidated Fund other than advances made by the Bank of England or the Bank of Ireland, or loans raised to meet Ways and Means.

War Loan Depreciation Fund.—Section 32 of the Finance Act, 1917, provides that there be paid to the fund in respect of each month under the direction of the Treasury a sum equal to one-eighth of 1 per cent. of the total nominal value of the stock and bonds of the 4 and 5 per cent. War Loans. The moneys standing to the credit of the fund shall be applied by the National Debt Commissioners in the purchase of the stock or bonds whenever the market price is below the respective issue prices, viz., £100 and £95. Any sums standing to the

credit of the Fund and not required for the immediate purchase of the stock or bonds may be invested by the Commissioners in Treasury bills or in advances to the Treasury.

Up to March 31, 1923, £152.8 millions had been issued from the Consolidated Fund, and £1.4 millions had been received from investments; £115.2 millions had been applied in the purchase of £156.7 millions Five per cent. War Loan, and £2.2 millions Four per cent. War Loan, leaving a balance of £10 millions.

In the case of the Four per cent. Funding Loan and Four per cent. Victory Bonds a sum is set aside half-yearly equal to 2½ per cent. on the nominal amount originally created, to be applied, after payment of interest, in the case of Funding Loan to purchase for cancellation if at or under par, and in the case of Victory Bonds for annual drawings at par (including bonds surrendered for death duties). Up to March 31, 1923, £8.6 millions of Funding Loan and £5.6 millions of Victory Bonds had been redeemed.

A half-yearly Sinking Fund of 1 per cent. of the amount of the loan outstanding is attached to the 3½ per cent. Conversion Loan, provided the average daily price of the stock during the half-year has been below 90. It is to be applied in purchase of the loan in the market for cancellation.

The greater part of debt redemption has, however, been achieved by reducing the floating debt. The following table shows the annual fluctuations in the floating debt since 1913-14. Ways and Means advances having been sub-divided into those from the Bank of England and from public departments since 1920 only. At the end of each financial year it will be observed there have been no advances from the Bank of England, but in the intervening periods this item has shown considerable fluctuation. At December 31, 1922 and 1923, the amounts were £16,500,000 and £1,750,000 respectively:—

FLOATING DEBT. (000's omitted.)

* Includes debt to American Government.

Future policy as to debt redemption and conversion to lower rates of interest depends to some extent on the dates of maturity. Early dates may prove a great help if conditions happen to be favourable, but they may equally put the Government in difficulties if interest rates are very high. On the whole, however, it is a great advantage that large quantities of debt, as the following table shows, mature within the next few years:—

DEBT MATURING YEAR BY YEAR (APPROXIMATE TOTALS).
(000's omitted.)

N.B.—The amounts shown for National War Bonds are the nominal totals, and do not include premiums. National Savings Certificates are shown at issue price, exclusive of accrued interest. External debt is shown at par of exchange. Loans marked * are being repaid by specific statutory Sinking Funds.

In answer to a question in the House of Commons last week, it was stated that the total war debts from Allies outstanding on March 31, 1924, was £2,001 millions, this figure comparing with the £1,914 millions shown above. The Chancellor of the Exchequer explained that interest is being received at present in cash from the Belgian Congo, and on a part of the loan to Greece. In the other cases it is added each year to the principal of the debt due. Thus the amount due from France now stands at £623 millions, from Russia at £722 millions, and from Italy £553 millions.

The Nation's Income and the National Debt.—It may serve to put the debt problem in perspective if we compare it with the nation's annual income. This, to-day, amounts to about £4,000 millions—which means that the National Debt is equivalent to a little less than two years' purchase of our annual income. The debt left by the Napoleonic Wars was £791 millions. The nation's income in 1817 was about £400 millions—which gives a very similar ratio to that of the present day.

SOME INTERNATIONAL COMPARISONS.

For purposes of comparison we give some figures of the budgets of certain other countries. Exact comparison of national budgets is extremely difficult. The League of Nations has, however, made a special attempt to recast the budgets of its members in standard form. The first effort at comparison was made at the Brussels Financial Conference. The figures then given showed that of 35 nations, four had a surplus. These were U.S.A., United Kingdom, India, and Peru. Ten—mainly neutral countries—were covering from 75 per cent. to 100 per cent. of their expenditure, nine were covering from 50 per cent. to 75 per cent., and twelve—including most of our war Allies—were covering less than 50 per cent. The position has improved since then. The latest League of Nations return shows the following state of affairs:—

(In Millions.)

Country.	Year.	Currency.	Total Revenue.	Total Expenditure.	Percentage of Revenue to Expenditure.	Corresponding Percentage in Previous Year.
(Assuming no Reparation Payments.)						
United States	1923-4	\$	3,361.8	2,835.7	115	101
Great Britain	1923-4	£	818.5	776.6	105	115
Australia	1923-4	£	61.9	61.9	100	101

Belgium	1923	Francs	4,302.1	8,337	52	47
France	1922	Francs	22,381	50,020	45	50
(Assuming Reparations Payments.)						
France	1922	Francs	22,381	26,936	83	..
..	1923	Francs	23,038	23,402	98	..
Belgium	1923	Francs	5,942	8,337	71	..
Italy	1923-4	Lira	15,565.6	18,181	86	..

* Later figures are given on another page.

Figures for Australia and India have been inserted, as shown in our records. Figures subsequently received, which are not necessarily compiled on the same basis as that adopted by the League of Nations, include the following:—The 1924 Budget presented by Germany to the Reparations experts provided for revenue 5,254 million gold marks, and expenditure of 5,712 gold marks, of which 742 gold marks were provided for engagements under the Peace Treaty. The Belgian Budget for 1924 revealed total receipts of 6,687 million francs, against total payments of 8,332 millions francs, 80 per cent. of expenditure thus being covered. Denmark estimates

revenue for 1924-5 at 429 million kroner, and expenditure at 443 million kroner. France's ordinary Budget covering the year 1924 provided for receipts amounting to 23,950 million francs, and outgoings of 23,382 millions, while the Budget of Recoverable Expenditure would probably have shown a debit of 11,727 million francs; but M. Poincaré's recent proposals completely altered the potentialities of the situation by providing for an all-round increase of taxation by 20 per cent. and a series of cuts in expenditure. Russia's 1923-4 estimates still show a considerable adverse balance, revenue being put at 1,276 million chervontzi, against expenditure of 1,708 millions. The United States Budget for 1924-5 shows a surplus of 12 per cent., receipts being 3,694 million dollars and outgoings 3,298 million dollars.

Comparative Burden of Taxation.—In 1920 an attempt was made, in connection with the Brussels Conference, to estimate the proportion between Government revenue and national income in some of the most important countries of the world. All such figures are based on very rough estimates since the war, since the movement of prices and lack of good statistics of output or income leave a very wide margin for error. The results, however, which are here shown in comparison with the pre-war figures, seem roughly to conform to the changed conditions of the various countries mentioned:—

Country.	Percentage of Government Revenue to Total Income. Pre-War. 1919-20.	%
United States	2	10
Australia	7	8
United Kingdom	8	24
France	12	14
Canada	9	10
Germany	5	15
Italy	13	14
Japan	22	11

At the present time, the United Kingdom is probably paying about 18 per cent. of its national income in taxation, France 16 per cent. (rising to 20 per cent. if M. Poincaré's taxation proposals are fully enforced), while Germany's tax burden has recently been put by the German Finance Minister at 25 to 27 per cent., exclusive of Reparation payments. This last figure, however, cannot be accepted without evidence. It can only have been true at the moment when production dropped to its minimum before Christmas, and the proportion will certainly rise as Germany's output recovers. Moreover, if stabilisation continues, it will soon become possible to estimate Germany's national income with some approach to accuracy. But the fact that Dr Luther put Germany's income at 25 milliard gold marks (which equals, say, 16 milliard at pre-war prices, or say £800 millions) serves to remind us of the need for caution in accepting comparisons of taxation per head as a guide to the burden of taxation. The individual employer may be as rich or richer than before the war. But the mass of the German nation is immensely poorer, and has a greatly reduced taxable capacity. An estimate that can be checked of Germany's national income is an urgent necessity.

The figure for France also serves to modify the easy assumption that because—like all largely agricultural countries—she takes ill to direct taxation, she therefore bears a light taxation. The ratio to average income nearly equals, and will soon exceed, our own. But it is mostly paid by indirect taxes.

MARKING TIME IN LOMBARD STREET.

VERY little happened last year to inspire and encourage monetary students in the task of devising appropriate theories to account for interesting events. It was a very humdrum period in Lombard Street, diversified only by fresh proof of the narrowness of the available margin, by the skilful development of a system by which the market can, in the interests of its demand for the weekly batch of Treasury bills, be helped round a corner without borrowing from the Bank of England, and by one rise in Bank rate, which was understood to have been dictated more by a desire to check the exuberance of speculators in securities, than by the conditions of the international or local money market. In fact, the money market, like many other financial institutions, has been waiting for the return of real peace in Europe to show how well or ill it is equipped to deal with the big problems that reviving trade activity will bring with it. So far it has had nothing to do but provide for a slight and slow improvement in trade, which it has been able to do very comfortably, thanks to diminished activity in financial operations, as witnessed by the much smaller total of capital issues in the past year—271½ millions, as compared with 573½ millions in 1922—and the large decrease in the town clearings, shown in the annual statement of the Bankers' Clearing House.

A study of the past year's monetary figures is, indeed, chiefly interesting owing to the awkward lack of support that they give to accepted monetary theory. It is generally presumed that prices can be persuaded to fall, or be kept from rising, by raising Bank rate, and the advance that was made last July was criticised at the time as likely to depress prices, check trade, and increase unemployment. None of these things happened. The *Economist* Index Number was at its lowest in July, the month in which Bank rate was raised, when it touched 4182, and it ended the year at 4580, as compared with 4264 for December, 1922. It would, of course, be absurd to lay much stress on this isolated instance of the refusal of fact to respond to theory. But it is interesting in view of the general tendency to allow the doctrines of currency "management" to be assumed as practically possible, when, in fact, experience shows that discount policy is only one among many influences in the economic world, that it is far from being in present day conditions a delicate or sure mechanism of control, and, indeed, that it is only in certain conditions that it can exercise an immediate mastery over the situation.

Another theory which the facts of the past year have tactlessly refused to endorse is the one which accuses the Government of producing unemployment by reducing Treasury bills. During the year the volume of outstanding Treasury bills declined by £67 millions, and yet, as has already been recorded, there was a quiet improvement in trade, and the absorption of unemployed workers into industry made steady progress. As we ventured to point out, when it was first argued that the repayment of Treasury bills held by the banks necessarily meant a reduction in deposits, and therefore of purchasing power in the hands of the public, there is really no such necessity. When it happens, this process reduces the discounts or investments, under whichever heading they include their Treasury bills, of the banks affected. But as the amount of their cash holding is unchanged, they are left with a higher proportion of cash to liabilities, and can, therefore, restore the amount of their deposits, and so of the purchasing power in the hands of the public, by increasing their

holding of commercial bills, or by expanding their advances to customers, if expanding trade causes a demand for credit, taking the place of the credit cancelled by the Government. In other words, such deflation as has happened has been due, not to any deliberate policy carried out by the Treasury, but to slackness of trade, chiefly due to the disturbed state of international politics. This contention seems to be borne out by the experience of the period under review, which has been marked by an appreciable increase in loans and advances; this increase also seems to point to greater trade activity, though it must always be remembered that, since this item includes advances for carrying securities, one has to apply the customary caution, that dogs any attempt at drawing inferences from banking figures, in basing conclusions on it.

This increase in advances can only be traced from the monthly figures of the London clearing banks, since, owing to the defective information supplied by other banks, we have to include discounts with advances in our aggregate balance-sheet, and the two together show a small decrease on the year. The monthly figures show a rise of 24 millions in the advances between December, 1922 and 1923, and it is gratifying to note that a further 30 millions has been added during the first quarter of the current year. The acceptance item also marked a considerable increase in 1923, supporting the reports from some of the discount houses of a considerable improvement in the volume of commercial bills coming forward, and on the whole the banking figures seem to show—for what they are worth as a trade barometer—that the country's production has struggled vigorously and with some success against the effects of strikes and political disturbance. Perhaps, however, the most interesting monetary events of last year, and of the first quarter of the present one, were in the field of foreign exchange, and consisted in the rise in the dollar value of sterling, following the conclusion by Mr Baldwin and the Governor of the Bank of England, of arrangements under which we undertook to meet the interest on our debt to the United States, the sharp reaction that took place in the autumn, owing to fears of inflation followed by fears of a Labour Government, and the headlong fall in the franc last March, followed by an even more sensational recovery. The paradoxical rise in sterling, on our assumption, or practical recognition, of what was thought by many to be a terribly onerous debt, was only another example of the material value of prestige in financial matters. An equally striking example of the same fact was provided by the subsequent reaction, due to the mere fear, first that the late Government was going to mend unemployment by inflation—though Mr Baldwin very promptly and plainly denied any such intention—and afterwards that the new Government might, by threats of confiscation and otherwise, play ducks and drakes with British credit. This reaction, however, also had the satisfactory effect of demonstrating once more the hidden reserves of financial strength with which this country is endowed. For in spite of all that was done by responsible bankers and brokers to stop the movement, the actual amount of sterling transferred into dollars and dollar securities was very great, so great as to astonish those who had to handle it, by the smallness of the effect that this transfer had upon the price of sterling, which was severe pressure to which it was subjected. A similar tribute to the solidity of our financial foundation was flight from the franc, when enormous masses of securities with an international market were sold here from Paris and were absorbed with a readiness and composure that astonished the brokers who transacted the business.

THE BANK ACCOUNTS OF THE UNITED KINGDOM.

THE amalgamation process among banks which has been a feature of the banking history of the past twenty years has still continued during the past year, but is inevitably approaching completion. Since our first Banking Number was published, more than 40 years ago, there have been striking developments in banking in this country. At the beginning of the present century the balance-sheets of some 90 English banks were analysed. By 1913 the number had dropped by the process of amalgamation to 43, and it has now fallen to 19. Last year one joint stock bank, the London and Liverpool Bank of Commerce, was absorbed, while four of the private banks have lost their separate entity, Cox and Co. having been absorbed by Lloyds Bank, Messrs Drummond by the Royal Bank of Scotland, Grindlay and Co. by the National Provincial Bank, and Holt and Co. by Glyn, Mills, Currie, and Co. These changes have to be taken into consideration in reading the comparative tables which we print below. The constitution of the Irish Free State as one of the Dominions also adds a new complication to our historical tables. For purposes of comparison we have eliminated the figures of the six Irish banks whose activities are mostly centred in the Irish Free State, referring to their figures in another article, and have retained under the heading of United Kingdom banks the three banks operating in Northern Ireland, namely, the Belfast Banking Company, the Northern Banking Company, and the Ulster Bank.

Since 1900 the deposits of the English joint stock banks have risen from £587 millions to £1,822 millions, the bulk of the increase having occurred since the beginning of the war. During the same period the paid-up capital of these banks has only increased from £61 millions to £72 millions, while reserve funds have risen from £35½ millions to £57 millions. There has thus been a large decline in the ratio of capital and reserves to deposit liabilities, this figure having dropped from 13.4 per cent. in 1900 to 7.1 per cent. in 1923. The latter, however, compares favourably with the low point of 5.7 per cent. recorded in 1919. During the past four years bank directors have apparently realised the importance of increasing this ratio, and small additions to capital have been made.

In the table below we show the capital and reserves of English, Scottish, and Irish banks and of the private banks at the end of 1922 and of 1923:—

CAPITAL AND RESERVES.				
	1922.	1923.	Inc. or Dec.	
	£	£	£	%
English joint-stock (Capital..)	72,477,400	72,033,000	— 444,400	— 0.6
English private (Capital and reserves)	58,695,100	56,971,400	+ 276,300	+ 0.5
Scottish (Capital	3,813,400	2,816,442	— 997,000	— 26.1
Scottish (Reserves	10,077,000	10,077,000	—	—
Northern Irish (Capital	9,653,700	10,391,000	+ 737,300	+ 7.6
Northern Irish (Reserves)	1,600,000	1,600,000	—	—
	1,850,000	2,150,000	+ 300,000	+ 16.2
	156,066,600	156,038,800	— 27,800	— 0.02

The absorption of the London and Liverpool Bank of Commerce by the British Overseas Bank, which is not included among the English joint stock banks, accounts for the decline in the capital of the English joint stock banks. The paid-up capital of the London and Liverpool Bank was £600,000, and there have been small increases in the capital of the other banks totalling £156,000. Since the close of the year, it may be mentioned, there have been some further small increases in the paid-up capital of the English banks. The disappearance of four private banks is the reason for the

drop of nearly one million in the capital and reserves of the private banks. The reserves of the Scottish and Irish banks show a very much larger proportionate increase than those of the English banks. This is to a certain extent a matter of accountancy, but as will be seen from a later article, the profits of the English banks declined while those of the Scottish and Irish banks increased. The English banks maintained their dividends, but made smaller definite allocations to reserves in view of the substantial nature of the "hidden reserves" created by the rise in security values during recent years. The English banks, it may be added, wrote large amounts off premises accounts, but these do not figure in the reserve funds. The deposits of the English banks declined by 0.6 per cent. in comparison with 1922. This compares with a drop of 7.1 per cent. twelve months ago, and 0.7 per cent. at the end of 1921. The decline of 7.7 per cent. in deposits shown by the Scottish banks compares with 8.0 per cent. a year ago. The reduction of 2.5 per cent. in the total deposits compares with a decline of 6.5 per cent. twelve months ago:—

CURRENT AND DEPOSIT ACCOUNTS.

	1922.	% of Assets	1923.	% of Assets	Inc. or Dec.	
	£	%	£	%	£	%
English joint-stock..	1,833,971,200	89.0	1,822,067,100	68.1	— 11,904,100	— 0.6
Private.....	50,955,700	91.2	33,486,300	86.2	— 17,470,400	— 34.2
Scottish.....	267,799,700	83.2	247,226,600	82.6	— 20,573,100	— 7.7
Northern Irish.....	56,686,600	86.4	51,961,800	84.7	— 4,724,800	— 8.3
	2,209,404,200	88.4	2,154,740,800	87.2	— 54,663,400	— 2.5

The reduction shown in the ratio of deposits to total liabilities is partly accounted for by the very large increase in the total of acceptances, those of the English banks having increased from £85,686,600 to £111,490,400. Two years ago the total was £74,166,000. The acceptances of the Scottish banks at £4,321,300 show a drop of £650,000.

Very little change is shown in note circulations. The English banks show a total of £165,400, as against £170,000 a year ago, but these are notes in the Isle of Man or Guernsey. The total for the Scottish banks is £22,106,500, as against £23,320,700 a year ago, and for the three Northern Irish banks £5,015,800 against £4,989,000.

Cash in hand and at the Bank of England, cheques in course of collection, balances with other banks, and money at call and short notice, taken together, show a decline of 3.2 per cent. in 1923; this follows decreases of 5.8 and 3.5 per cent. in 1922 and 1921 respectively:—

CASH IN HAND AND AT BANK OF ENGLAND, AND MONEY AT CALL AND SHORT NOTICE.

	1922.	% of Assets	1923.	% of Assets	Inc. or Dec.	
	£	%	£	%	£	%
English joint-stock banks.....	423,091,700	20.6	413,531,700	20.0	— 9,560,000	— 2.3
Private banks.....	8,593,000	15.4	3,185,600	8.2	— 5,407,400	— 62.9
Scottish banks.....	63,814,200	19.8	64,015,300	21.4	+ 201,000	+ 0.3
Northern Irish banks.....	8,173,600	12.5	6,857,200	11.2	— 1,316,400	— 16.1
	503,672,500	20.1	487,589,800	19.7	— 16,082,700	— 3.2

The Scottish banks are an exception, with a slight increase in these items, but twelve months ago a decline of over 9 per cent. was recorded by the Scottish banks, some of whose accounts, it may be mentioned, relate to a later date than December 31st last. The figures of the English banks are, of course, slightly affected by the absorption of the private banks, and to that extent the declines in this and other tables are minimised. Some of the banks still continue to show cash in hand and money at call and short notice as one entry, but in the case of the English banks those holding 95½ per cent. of the total make a distinction in the two items. From the table below it will be seen that last year there was practically no change in the cash in hand held by these banks, while money at call fell by nearly £7 millions:—

ENGLISH BANKS (EXCLUDING BANK OF ENGLAND).

Year, December 31.	Total Cash in Hand and Money at Call and Notice.	Cash in Hand and Money at Call where Shown Separately.				Per Cent. of (1).	Per Cent. of (2).
		(1) Together.	(2) Per Cent. of (1).	(3) Cash in Hand and Money at Call and Notice.	(4) Per Cent. of (2).		
1908.	£	£	89.2	£	53.1	81.034,000	46.9
1913.	£	£	90.5	£	54.4	97,282,500	45.6
1914.	£	£	90.8	£	57.5	81,202,200	32.5
1915.	£	£	91.2	£	72.4	58,394,200	27.6
1916.	£	£	93.0	£	72.2	95,456,100	27.8
1917.	£	£	94.1	£	59.0	165,536,300	41.0
1918.	£	£	94.5	£	59.4	184,565,500	40.6
1919.	£	£	94.8	£	74.7	109,374,700	25.3
1920.	£	£	95.6	£	71.0	124,168,400	29.0
1921.	£	£	94.1	£	73.4	109,393,800	26.6
1922.	£	£	95.0	£	71.9	113,058,300	28.1
1923.	£	£	95.5	£	73.2	106,095,600	26.8

The general total shows a continuous fall since 1918, but last year's drop of £9½ millions is the smallest since that date. The ratio of cash in hand to total cash and money at call, in the case of the banks showing the items separately, was at the end of 1923 at almost the highest figure in any year in the table, having only been exceeded at the end of 1921. The proportion of cash in hand held nowadays contrasts strikingly with the pre-war figures, when nearly one-half of the total was money at call and short notice.

Investments show a decline of 7.2 per cent., as may be seen from the table below. A year ago there was an increase of 15.1 per cent. :-

INVESTMENTS.

	1922.	% of Assets	1923.	% of Assets	Inc. or Dec.	%
English joint-stock banks	424,413,200	18.2	404,392,000	19.5	- 20,021,200	- 4.7
Private banks	11,524,700	20.6	5,159,700	13.3	- 6,365,000	- 55.4
Scottish banks	126,024,700	39.3	112,137,800	37.5	- 13,886,900	- 11.0
Northern Irish banks	23,221,500	35.4	21,263,100	34.7	- 1,958,400	- 8.4
	585,184,100	23.4	542,952,600	21.9	- 42,231,500	- 7.2

Three of the English banks fail to distinguish British Government securities from other investments. The total of British Government stocks held by the English banks which show them separately has declined from £361 millions to £340 millions. British Government securities held by the Scottish banks, all of which make the distinction, have dropped from £119½ millions to £104 millions, while those of the three Northern Irish banks at £19½ millions show a decrease of £2 millions. Figures of discounts and advances are disturbed by the inclusion with the former, in many cases, of Treasury bills. Taking the two items together, there was practically no change in the total last year :-

DISCOUNTS AND ADVANCES.

	1922.	% of Assets	1923.	% of Assets	Inc. or Dec.	%
English joint-stock banks	1,102,642,800	53.6	1,116,866,200	54.0	+ 14,223,400	+ 1.3
Private banks	33,361,800	59.7	27,756,100	71.4	- 5,605,700	- 16.6
Scottish banks	122,366,100	38.1	114,277,300	38.1	- 8,088,800	- 6.6
Northern Irish banks	33,572,200	51.2	32,449,900	52.9	- 1,122,300	- 3.3
	1,291,882,900	51.5	1,291,349,500	52.3	- 533,400	- 0.1

IRISH FREE STATE BANKS.

We have explained in a previous article that our statistics of United Kingdom banks do not include the figures of the banks whose main field of operation is in the Irish Free State, but which have hitherto been included with the English and Scottish banks. The six banks omitted are the Bank of Ireland, the Hibernian, the Munster and Leinster, the National, the Provincial, and the Royal Bank of Ireland. Now that Ireland is a self-governing Dominion, we propose in future to transfer detailed analysis of the accounts of these banks to our

The English banks show an increase of 1.3 per cent. in the total. This is due to a substantial increase in advances, for bills discounted declined substantially, as may be seen from the following :-

ENGLISH JOINT STOCK BANKS.

	1922.	1923.	Inc. or Dec.
Discounts	301,313,300	281,522,000	- 19,791,300
Advances	801,329,500	835,344,200	+ 34,014,700
Total	1,102,642,800	1,116,866,200	+ 14,223,400

It is not possible correctly to ascertain the amount of Treasury bills held by the banks, but it seems probable that the decline of nearly £20 millions in bills discounted is to a considerable extent due to the non-renewal of Treasury bill holdings. The total of Treasury bills outstanding at December 31st last was £860 millions, the reduction during the year amounting to £80 millions. In 1922 there was a reduction of £144 millions in the discounts of the English banks, while advances also declined by £33 millions. Last year advances increased by a similar figure. Since the end of the year, according to the monthly figures of the Clearing banks, there has been a further substantial increase in advances, the quarter's expansion in the case of the nine English banks amounting to nearly £30 millions. During this period discounts have declined by over £50 millions.

In the large summary table of the individual balance-sheets given on a later page, we include, for considerations of space, cover for acceptances with premises and sundries. If cover for acceptances be deducted, premises and sundries amount to £28½ millions, or 22.4 of capital and reserves for the English banks, to £4½ millions, or 22.5 per cent. for the Scottish banks, and to £517,700, or 13.8 per cent. for the three Irish banks.

We conclude with a table showing the aggregate liabilities and assets of the banks of the United Kingdom, excluding the Bank of England, whose figures are summarised in the following pages. The 1913 figures include the figures of all the Irish banks, but those of the Irish Free State have been omitted in the figures for 1922 and 1923 :-

LIABILITIES.—(000's omitted.)

	1913.	1922.	1923.	Inc. or Dec.
Capital and reserves	114,076	156,167	156,039	+ 128
Undivided profits	6,453	8,219	8,491	+ 272
Deposits	1,032,986	2,209,403	2,154,741	- 54,662
Acceptances	67,534	91,922	116,053	+ 24,131
Notes, drafts, &c.	24,984	33,802	34,071	+ 269
	1,246,033	2,499,513	2,469,395	- 30,118

ASSETS.—(000's omitted.)

	1913.	1922.	1923.	Inc. or Dec.
Cash in hand and money at call and notice	293,576	503,673	487,590	- 16,083
Investments	191,041	585,184	542,953	- 42,231
Discounts and advances	682,986	1,291,883	1,291,349	- 534
Premises and cover for acceptances	78,450	118,773	147,503	+ 28,730
	1,246,033	2,499,513	2,469,395	- 30,118

The decline of £30 millions in total resources compares with a decrease of over £152 millions recorded twelve months ago.

SIX FREE STATE BANKS.

	1922.	1923.	Inc. or Dec.
Paid-up capital	6,009,231	6,109,231	+ 100,000
Reserve	4,320,000	4,920,000	+ 600,000
Undivided profits	581,321	700,044	+ 118,723
Notes	12,331,962	11,688,059	- 643,903
Acceptances	217,729	184,000	- 33,729
Miscellaneous items	51,725	24,544	- 27,181
Deposits	153,090,522	149,694,582	- 3,395,940
	176,602,490	173,320,460	- 3,282,030
Cash in hand	14,866,330	15,781,661	+ 915,331
Money at call & notice	8,794,020	11,410,080	+ 2,616,060
Brit. Govt. Securities	67,302,512	62,867,378	- 4,435,134
Other Securities	12,495,294	10,920,226	- 1,575,068
Bills Discounted	12,610,654	8,809,423	- 3,801,231
Loans and Advances	58,371,570	61,075,851	+ 2,704,281
Sundries and Cover for Acceptances	2,162,110	2,455,841	+ 293,731
	176,602,490	173,320,460	- 3,282,030

The increase in paid-up capital of £100,000 was made by the Munster and Leinster Bank, but each of the banks made additions to reserve funds. The decline of over £3 millions in deposits, or 2.2 per cent., is much smaller, it will be observed, than the decrease in deposits recorded by the three banks of Northern Ireland,

which fell by £4½ millions, or 8.3 per cent. The deposits of the Bank of Ireland have increased from £41,026,100 to £43,790,300, and those of the Royal Bank of Ireland from £4,793,200 to £7,626,000. The latter increase is due to the acquisition from the Belfast Banking Company in August last of the twenty-two branches hitherto carried on by that bank in the Free State area. In making this arrangement the Belfast Banking Company was merely pursuing the same policy as the Midland Bank Limited, with which it is affiliated, namely, not to open or retain branches in any dominion, colony, or foreign country. The decline of over half a million in the notes in circulation contrasts with a slight increase in the circulation of the three Northern banks.

On the credit side the heavy decline in investments and bills discounted has been partly offset by increases in cash in hand and money at call and in advances. Taken as a whole, the figures show very much the same tendencies as those of the United Kingdom banks, which, in brief, are a contraction in deposits, and an increase in advances which has been made possible by reducing investment holdings and bills discounted, the latter, of course, including Treasury bills.

BANKING PROFITS.

FROM the profit-earning point of view, the year 1923 was no more favourable than the preceding year. The clearing figures indicated a decline in the total volume of business, and although towards the end of the year there were signs of some recovery in the figures, the revival of trade was not of sufficient dimensions to have any marked effect. Moreover, the average level of money rates was still lower than in 1922, in spite of the fact that Bank rate was raised from 3 to 4 per cent. in July. The low level of money rates, however, can have had but little effect upon the chief source of income of the banks, namely, interest on loans and advances, since this is mostly at a certain rate above Bank rate, with a minimum of 5 per cent. On the other hand, bankers have only had to pay £1 9s 9d per cent. on time deposits, as against £1 13s 10d per cent. in the previous year, while the average Treasury bill allotment rate for the year was about 2s per cent. higher than that of the previous year, a factor which has probably gone some way towards compensating for the fact that short loans to the market earned about 9s 3d per cent. less than in 1922. The following tables show average money rates, and the margins between them over a series of years :-

	Average Bank Rate.	Average Market Rate (3 months).	Average Short Loan Rate.	Average Deposit Rate.
1913	£ s d 4 15 5	£ s d 4 7 5	£ s d 3 15 10	£ s d 3 5 3
1914	4 0 9	2 17 7	2 4 3	2 2 4
1918	5 0 0	3 11 9	3 5 6	3 1 3
1919	5 3 0	3 18 10	3 9 7	3 3 10
1920	6 14 4	6 7 11	5 3 7	4 14 4
1921	6 2 4	5 4 3	4 12 8	4 2 4
1922	3 13 10	2 13 0	2 5 11	1 13 10
1923	3 9 9	2 14 1	1 16 8	1 9 9

	Bank Rate and Market Rate.	Deposit Rate and Market Rate.	Deposit Rate and Short Loan Rate.
1913	£ s d 0 8 0	£ s d 1 2 2	£ s d 0 10 7
1914	1 3 2	0 15 3	0 1 11
1918	1 9 3	0 10 6	0 4 3
1919	1 4 2	0 15 0	0 5 9
1920	0 6 5	1 12 7	0 9 3
1921	0 18 1	1 1 11	0 10 4
1922	1 0 10	0 19 2	0 12 1
1923	0 15 8	1 4 4	0 6 11

There are, of course, other factors besides money rates, which affect the profit and loss accounts of the banks. A very potent influence during the past decade has been the movement of security values. During 1923 the

Index Number of the market value of fixed interest bearing securities compiled by the *Bankers' Magazine*, declined from 112.4 to 111.2, but this decline was very small in comparison with the substantial rise which took place in the two preceding years. After several years of very heavy writing off for depreciation, the recovery in the value of securities automatically created substantial hidden reserves, and last year's small decline called for no special allocations for investment depreciation. Unfortunately, very few of the banks publish figures of gross profits and expenditure. Barclays alone of the "big five" continues to set a good example in this respect, and for last year recorded a decline of £475,000 in gross profits, and a reduction of £492,400 in expenses, thus securing a small increase in net profits. So far as the English banks are concerned, this increase in net profits is rather exceptional. In the aggregate the net profits of the English banks declined from £12,028,300 to £11,690,540, this being the lowest figure since 1917, as may be seen from the following tables :-

* Three banks of Northern Ireland.

On another page the net profits and appropriations for 1922 of the individual banks included in the above tables are set out. The high water mark in the profits of the English joint stock banks was reached in 1920, but in the following year there was a very severe decline. Dividends, however, were mostly maintained at the same high level which as also formed the basis for the distributions of 1922 and 1923. The proportion of profits distributed to shareholders has consequently jumped from 49 to 79 per cent. This, however, has only been possible owing to the fact that in the years of declining profits no allocations have had to be made to meet investment depreciation, whereas in 1920 no less than £4,930,000 was set aside out of profits for this purpose. Other appropriations have also dwindled during the last two years, the amount going to general reserve funds in 1923 being less than a million, as against over £3 millions two years ago. The amount written off premises accounts has not declined so much, and in 1923 actually exceeded the aggregate reserve

allocation. High prices in previous years, no doubt, delayed repairs, renewal and reconstruction work, and the arrears are probably only now being overtaken. The banks, however, have always adopted a conservative policy in the valuation of premises, and probably have a further substantial hidden reserve in this item.

The steady increase in the profits of the Scottish banks, which has been in progress since the first year given in the table, was continued in 1923. At the same time, the ratio to total resources has substantially increased, although this figure is still considerably below the pre-war average. There has been a further increase in the proportion of profits distributed to shareholders, but here again this percentage is well below the figures for 1916 and the preceding years. Reserve and other allocations, on the other hand, are on a much higher scale than before the war.

The table of Irish banks, it will be seen, gives the figures of the three banks operating in Northern Ireland for 1922 and 1923, those of the Free State banks being referred to elsewhere. The three northern Irish banks show an increase of nearly £8,000 in net profits, and a substantial advance in the ratio of profits to total resources. The percentage of profits distributed, though slightly higher than in 1922, is still commendably small and appreciably below the percentage shown by all the Irish banks in preceding years. The reserve allocations were slightly higher, but less was allocated to premises and staff funds, and the balances carried forward were increased by £15,900.

Whether bank profits can be maintained during the current year depends in great measure upon the rapidity with which trade revives. It does not appear likely that profits will suffer any severe setback unless labour troubles so dislocate commercial and industrial conditions as to crush the life out of the trade recovery now in its infancy.

GERMAN BANKING.

(FROM OUR BERLIN CORRESPONDENT.)

NONE of the leading "D" banks, and with one exception no other banks of first-rate importance, have yet published their reports for 1923. The lack of balance-sheets and profit and loss accounts, however, causes no difficulty in summing up recent banking tendencies. Owing to the currency conditions of last year, accounts drawn in "marks" of enormously different value at different dates cannot show real conditions. Sufficient

illustration is the fact that whereas Reichsbank clearings in January, 1923, totalled a mere 3,828 milliard "marks," in December they totalled 1,604,384,176,482 milliard "marks." Without elaborate analyses, taking into account the progressive currency depreciation, the figures of annual reports would prove nothing.

In the absence of figures, recent banking conditions are very plain. The great post-war banking boom has come to an end. New foundations have ceased. The smaller mushroom banks, founded merely to exploit exchange abnormalities, have largely been wound up, a few have perished in less respectable ways, and many are in a shaky condition. In the past two months there have been continued rumours, some justified by actual collapses, of banking difficulties. To some extent these difficulties are the outcome of franc exchange bear commitments; in most cases they are due to the fact that banks, started merely with the aim of transacting exchange operations, are now entirely without sources of profit, and that, their capital being very small, the mere cost of administration brought them into difficulties as soon as the sources of profit dried up. In the last few days from Hamburg, Essen, Duesseldorf, and other important centres have come reports of banking difficulties, and such cases seem bound to multiply in the near future. Of critical conditions in the great banks nothing is heard, but in the second part of last year these banks had to face very serious difficulties, the chief of which was the decline in real value of deposits, while the real demand for credit became ever greater. The reason for both the dwindling of deposits and the increased credit strain is obvious; no customer who could avoid it would keep a rapidly depreciating mark credit balance, while every customer who could manage it hastened to get loans and advances which, having used them to acquire real values, he repaid with a fraction of the original gold value. The banks retorted by charging enormous interest rates. For allowing very moderate interest on deposits they excused themselves with the plea that deposits of late played an insignificant rôle in providing money for credit; the banks were, as a rule, lending their own money, and the only way to "retain substance" was to levy such high interest rates as would cover the depreciation risk. Hence until the currency stabilisation produced new conditions, "the maintenance of substance" was the catchword of banks.

Although stabilisation checked the movement towards the end, 1923 was a boom banking year, apparently the last such year. The increase as compared with 1922 in capitalisations was moderate. In raising additional paper-mark capital which, while burdening the bank's future, dwindled to almost nothing before it was subscribed, there was no attraction. Against 218 capital increases in 1922, 1923 witnessed 278; but owing to the mark depreciation, the sum raised, 64,399 million marks, was worth much less than the 12,142 millions raised in 1922. But as against 77 new banks (share companies only) founded in 1922, 1923 saw 380 foundations. The number of foundations of credit banks or deposit banks with general banking functions was 104, of which 35 were in Berlin. The remainder were banks with specialised spheres of operations. Many were agricultural, being founded to meet the credit need of farmers, or to move crops, most giving credit only on "stable value" (werthbestaendig) basis, often in rye units. In addition were founded many trades union banks, according to foreign pattern. Here the non-Socialistic trades unions took the lead. Six officials' banks were started; and finally, towards the end of the year, appeared 19 "firm mark" banks, dealing in marks measured in units of commodities or gold. The tendency towards banking fusions and concentrations continued, the leaders being the mortgage banks. The thirteen banks united in the Arbeitsgemeinschaft süd-deutscher Hypothekenbanken came to an agreement for collaboration with the Gemeinschaftsgruppe deutscher Hypothekenbanken, a larger, all-German combination. One section of this, the group of the Prussian Central-Bodep-Credit A.G., remained outside. The question whether banking fusions are subject to the restrictions imposed by Dr Stresemann's Cartels-Law of November

last is before the courts. Reorganisation of mortgage bank groupings is motivated by the revival in this class of business. Before 1923, the mortgage banks had become mere skeletons, their only securities being paper mark claims of practically no value. Since then it has been made legal to mortgage property for gold marks, and the 15 per cent. restoration of old mortgages enacted this year has to some extent restored the value of the earlier securities.

Bankers generally, in particular the big commercial and credit banks, are still in a state of conflict with their customers. The customers, often forced to get credit at any cost, complain of the high rates of interest and of the various fees and commissions, classed as "Provision," which raise the effective interest rate still higher. As much as 90 per cent. is still being charged for loans, while 15 per cent. is the latest highest rate granted on deposits on notice of withdrawal. Banks have been charging compound interest from day to day, and this, with an already high simple interest rate, swelled charges to abnormal heights. A provisional decision of the Berlin Courts forbidding this practice was annulled on appeal by the Provincial Courts. In another case lately before the Courts a bank by charging 13 per cent. per day compound interest raised a small debt in a short time to 5,000 billion paper marks, and the debtor, on asking for an explanation, got one, together with a statement that during the days that had passed since his inquiry the debt had further swollen to 10,000 billions. In this case the original "debt" merely arose through a delay in clearing a cheque paid in to the client's credit. Representative commercial and industrial organisations protested against these practices, with all the more reason because the banks had already begun (as they now invariably do) to give credit only on "valorised" conditions, i.e., binding the debtor to compensate them for possible losses through further mark depreciation, while as a rule the banks did not compensate their depositors for losses suffered from the same cause. The Government intervened, and in some cases proceedings were taken under the usury laws; but an official statement of last month rejects the demand for fixing of interest rates, stating that these must be regulated automatically by the relations of supply and demand.

The banks' general line of defence has been indicated above. Before the war loans were made out of deposits; were this still the case the depositor, not the bank, would lose from depreciation; nowadays (i.e., before the currency stabilisation), loans are made out of the banks' "substance," while the former depositors protect their "substance" by putting their marks into stocks, wares, or real estate. The banks suffered heavy losses through managing nominally large transactions which in reality often represented mere fractions of a gold pfennig. Hence, banks ceased to compete for custom, required small customers to close their accounts, and even (e.g., Darmstadt und National Bank) closed down many of their branches. The fact that he had reduced his list of customers often counted to a bank manager's credit. A report to the Central Banking Association of October, 1923, stated that from 60 to 90 per cent. of all banking transactions were for sums below the limit of profit, and that between ½ and ¾ of banking employees were engaged on such profitless transactions.

These conditions must be considered to have now ceased. Both in theory and in practice (a good example is Austria) currency stabilisation leads to a growth in the real value of deposits. While the banks' defence of past practices therefore seems to be partly valid, it is impossible to explain the present high rates for "valorised" (therefore riskless) credits except on the assumption that the banks, exploiting the extreme credit need, are trying to get back their old losses. In general, however, it would seem that the "substance" of the big banks has really diminished since 1913. The joint capitals of the four "D" banks shrank from 780,000,000 gold marks in 1913 to 4,100,000,000 paper marks; and the bourse quotation value of the shares from 1,480,000,000 gold marks to 370,000,000 gold

marks. Undoubtedly the large profits reaped by the borrowing classes in the five inflation years were partly made at the expense of the banks. But the potential earning capacity of the banks is undiminished. The coming compulsory gold mark balance-sheets will throw further light on conditions.

The partial restoration of banking secrecy in March, 1923, was expected to foster deposits. Owing to the ever more rapid mark depreciation, this result was not attained. The weakness of the banks, whose main assets are goodwill and premises as against industry, has led to a reversal of the pre-war system of control of industry by banking. After the rise of the late Herr Stinnes to power in the Fuerstenberg banking concern, the Aniline Syndicate laid hands on the Deutsche Laenderbank; and the Hoesch heavy industry corporation has gained, through an intermediary, influence upon a Hamburg banking house. The buying up of bank shares by industrial groups has become ever more common. This tendency is not relished by small manufacturers and merchants, who in the old days complained that the big banks favoured big industry, and who now

fear that the resources and organisations of the big banks will be controlled and monopolised by big industry.

The Berliner Handels-Gesellschaft, the only important bank that has published a report for 1923, has declared a dividend of 10 rentenmarks per 1,000 mark shares. Gross profits in 1923 were 3,396,579 billion paper marks, net profits 1,218,860 billion marks, which is about £60,000 gold. The profit and loss account is regarded as, in view of the bad conditions last year, very satisfactory. For 1922 a 200 mark dividend was paid, which at date of declaration had a gold value of only 11 pfennigs. The Darmstadt, Deutsche, Dresdner and Disconto Banks and Mendelssohn's have all this year got into touch with international groups with the aim of helping to finance German import and export trade. This, like the English assistance given to Dr Schacht's new Gold Discount Bank, must be considered as an outcome of the so far successfully maintained currency stabilisation. Should the stability continue, banking will return to normal conditions, probably after the sacrifice of a good many of the smaller and weaker members.

BANK SHARES.

THERE was probably never a time when the private investor found it more difficult than he finds it to-day to make up his mind to a definite investment policy, or the broker found greater difficulty in getting suitable investments for his client. With most areas of the world in a disturbed, unsettled state, with the future of trade, money and politics uncertain, with Government securities yielding about 5 per cent. for five years, and considerably less on longer securities, and second-class securities yielding about the same as war loan or rather less, where is the investor to find the path of safety? Industrials, good industrials at any rate, are all high in price, and there are very few markets in which obvious bargains or even reasonable purchases are to be discovered for the searching. In these circumstances the investor may perhaps find himself able to look further afield than usual, and devote his attention to markets which hitherto he has neglected. Nowhere will he be likely to discover cheap stocks or shares, but he may find some advantage by taking to securities which have usually been looked upon as rather a speciality. With this consideration in mind, we may approach the question of bank shares as an investment, not expecting to find sensational yields in such a peaceful market, but with the thought that some perplexed investor who is not afraid of uncalled liability may guide himself to a reasonably good investment.

The customary peace of the bank share market has not been disturbed in the past year, and among British and Irish bank shares, at any rate, there are no startling changes to record. Dividends have been well maintained, and there would appear to be nothing in the future of British banking to prevent a general maintenance or improvement of the banks' prosperity. The average price of the shares has altered but little, and our calculation of the bank share index number shows only a small change from the position of twelve months ago. In the following table we give the average price of British and Irish shares since 1909, together with the price of Consols as a comparative guide:—

At April 30 to 1923.	Average Price of Bank Shares.					Price of Consols	% of 1909.
	English	% of 1909.	Scottish	% of 1909.	Irish	% of 1909.	
1909.....	322	100	354	100	282	100	100
1910.....	316	98	369	101	279	99	91

1924.....	299	93	258	71	186	66	55

† March 31, 1924.

Apart from shares like Barclays, which have no uncalled liability, the yield at present runs from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent., and is on the whole rather higher than that of a year ago. On the shares of the National Provincial, which have rather a heavy liability, it is possible to get a yield of rather more than 6 per cent., and on Lloyds, with £4 per share uncalled, a yield of over $5\frac{1}{2}$ per cent. is obtainable, while the return on Barclays and the fully-paid Midland is considerably less. In allowing for the risk of uncalled liability, it must be remembered that the important point is not what is the amount uncalled as compared with the par value, but what is the amount uncalled as compared with the market price. A liability of £16 per share is much less serious for a buyer who is paying £16 for each share than for a

buyer who is paying par. Although it is necessary to bear in mind these considerations about uncalled liability, investors may, on the other hand, feel that a call on any of these shares of the big banks is a very remote contingency. On the whole this table of yields deserves the attention of the discriminating investor, who will not find it easy to get really good securities with prospects of advancement yielding him a better return than those we set out above.

In the next table we include Scottish shares, and show the dividends, prices, and yields obtainable in this market:—

Banks.	Share.		End of April, 1923.			End of March, 1924.		
	Am't.	Paid Up.	Div. Inc. Bonus.	Price.	Yield.	Div. Inc. Bonus.	Price.	Yield.
Bank of Scotland ..	£ 150	100	16	16	10	16	16	10
British Liners ..	Stock 100	100	294	294	9	294	294	9
Commercial of Scot. land ..	20	5	16	14	11	16	14	11
Do ..	1	1	10	2	0	10	2	0
National of Scot. land ..	500	110	16	295	19	16	285	19
North of Scotland ..	20	4	17	13	3	17	13	3
Royal Bank of Scot. land ..	Stock 100	100	13	254	5	13	286	5
Union Bank of Scot. land ..	50	10	18	31	15	18	35	15

As usual, the yield on these Scottish shares is distinctly lower than the corresponding yield on the English securities, though the uncalled liability is scarcely less

considerable. Bank shares are a popular security with the careful Scottish investor, but at present levels they are not likely to attract the attention of the mere Englishman. Our last table deals with Irish banks:—

Banks.	Share.		End of April, 1923.			End of March, 1924.		
	Am't.	Paid Up.	Div. Inc. Bonus.	Price.	Yield.	Div. Inc. Bonus.	Price.	Yield.
Bank of Ireland ..	Stock 100	100	15	23	6	15	260	6
Hibernian ..	20	5	15	19	7	15	19	7
Munster & Leinster ..	5	2	20	7	5	20	7	5
National Bank ..	50	10	12	18	6	12	19	6
Northern Banking ..	10	2	17	5	6	17	5	6
Provincial of Ire. land ..	100	12	13	22	7	13	22	7
Royal of Ireland ..	50	10	10	11	8	10	13	8

* 5% paid free of income-tax.

† Free of income-tax.

There is nothing to show that the recent troubled history of Ireland has disturbed the confidence of Irish investors or endangered the stability of the banks, but the rather lower level of yields at the present time is perhaps due to the improvement in Irish politics and the greater stability of the country. These shares must be regarded as the speciality of the Irish investor, and the untutored Londoner naturally does not turn towards them when he is looking for an investment market.

SOME STATISTICS RELATING TO RECENT MONETARY HISTORY.

In view of discussions which have taken place, and that are likely to continue, on the various phases of our monetary history and policy since the Armistice, we have collected for the convenience of our readers a series of figures bearing upon these problems. The first two columns in the following table show the surplus or deficit quarter by quarter of Government receipts in comparison with the expenditure. To this we have added the amounts collected under the excess profits duty, since it is sometimes argued that the large collection on this account was a serious factor in the twelve months following the turn of the tide in April, 1920, in reducing the funds available for financing industry in the most difficult period of the slump. Under the heading of Floating Debt, the figures for Ways and Means Advances are not available until the second quarter of 1919. Under the heading of Banks, we have given for some years past the figures in detail of the deposits of the Bank of England, but in the following table we have separated out the figures of Other Deposits. This table gives some indication of the reserves held by the other banks of the country, but not an exact one, since this item includes other elements besides the banks' balances. As regards the deposits of the joint-stock banks, our readers are aware that the monthly statement of the clearing banks has only been issued since the beginning of 1921, and does not cover the critical period of 1920. The ratio of cash

reserves on a different basis to that of the table (*i.e.*, including as cash "balances with and cheques in course of collection on other banks in the United Kingdom") can be ascertained for the whole period from the half-yearly balance-sheets. The ratio was 17.1 in December, 1913, 17.1 in December, 1918, 16.2 in June, 1920, 15.5 in December, 1920, and 16.9 in December, 1923. "Window-dressing" is more pronounced in these figures than in the "average weekly balances" in the table. The legal tender of the country is given by a total of the two columns in the table, but the figures, of course, include the reserve of notes held by banks of all kinds, and do not only represent the money in the hands of the public. As regards capital issues, we have given a separate total for the amounts of money raised on the London money market chiefly for British industry. The figure excludes Government borrowings and municipal borrowings, (which included a considerable sum in 1920 and 1921 for housing), borrowings of foreign Governments, foreign corporations, and foreign enterprises of all kinds. A full analysis of these items over a period of years was given in a recent number of the *Economist*. Statistics of the movements of prices are contained in monthly articles of the *Economist*, and figures for the various classes of money rates are given elsewhere in this number.

BANK OF ENGLAND.

The Bank of England received its first charter in 1694. Its capital is now £14,553,000, in fully-paid stock, which is a "trustee" security. For each year from 1904 to 1913 the dividend was 9 per cent., paid in equal instalments, free of income-tax, in April and October. From April, 1914, the dividend has been at the rate of 10 per cent. per annum, less income-tax. The price of the stock on April 30, 1924, was 248½, giving a yield of £4 16s 6d per cent. The

authorised note issue against securities is now £19,750,000, having been increased by £1,300,000 in February, 1923, in accordance with an Order in Council. The Government Debt of £11,015,100 forms part of the security. All notes issued in excess of this amount must be covered by an equal amount of gold, except in so far as the Currency and Bank Notes Act, 1914, abrogates the provision of the Bank Act, 1844, in this connection.

IRISH FREE STATE BANKS.

BANK OF IRELAND.

The net profits for the year ended December 31, 1923, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amount to £549,620, to which must be added a sum of £51,723 brought forward from December, 1922, making a total of £601,343. Out of this total the proprietors, at a general court held at the Bank of Ireland on July 20, 1923, declared an interim dividend of £7 per cent., less income-tax, absorbing £145,385. The governors and directors, having transferred £200,000 to the rest, now recommend that a final dividend of £7 per cent., and a bonus of £2 per cent., be declared for the year ended December 31, 1923, both less income-tax, which will absorb £186,923, making, together with the dividend paid on August 1, 1923, a distribution, including bonus, of £16 per cent. for the year 1923, leaving a surplus of £69,935 to be carried forward.

BALANCE-SHEET—December 31, 1923.

LIABILITIES.	£	ASSETS.	£
Capital paid up	2,769,231	Cash at head office, branches, and Bank of England	5,225,774

HIBERNIAN BANK, LIMITED.

After providing for rebate on bills, interest on deposits, and bad and doubtful debts and contingencies, the net profits for the half-year amount to £55,833; to which has to be added balance of undivided profits from last account, £12,731—£68,564. The directors have transferred to the reserve fund the sum of £12,109, and they recommend that the balance be applied as follows, viz.:—In payment of a dividend for the half-year at the rate of 11 per cent. per annum (subject to deduction of income-tax), £27,500; in reduction of bank expenses account, £5,000; to next account, £23,955—£68,564. A special profit of £37,890 has been realised on sale of investments. The amount has been added to the reserve fund, which now stands at £525,000.

BALANCE-SHEET—December 31, 1923.

MUNSTER AND LEINSTER BANK, LIMITED.

The profits of the bank for the half-year ended December 31, 1923, after deducting expenses, providing for interest on deposits, rebate on bills, and for all bad and doubtful debts, amount to £97,743; to which has to be added the balance from the last account, £15,236, making a total of £112,979. The directors recommend the payment of a dividend for the half-year at the rate of 20 per cent. per annum, £50,000, less income-tax at 5s in the £, £12,500—£37,500; and after transferring to reserve fund £50,000 and applying in reduction of premises account £10,000, there will remain to be carried to next account £45,479—£112,979.

BALANCE SHEET—December 31, 1923.

LIABILITIES.	£	ASSETS.	£
Capital—250,000 shares of £5 each, £2 paid	500,000	Cash on hand at Bank of England, and with other bankers	2,403,654

	28,770,784		28,770,784

NATIONAL BANK, LIMITED.

The profit and loss account for the half-year ended December 31, 1923, including £28,437 brought forward from June 30 last, shows a balance of £213,926 available for distribution. As the amount of income-tax for which the bank is liable has not yet been determined, the board have decided to continue to pay the dividend free of income-tax, and have accordingly declared a dividend at the rate of 10 per cent. per annum, or 10s per share (£10 paid) payable free of income-tax. (N.B.—This is equivalent to an increase of over 1 per cent. per annum on the dividend paid 12 months ago, which was at the rate of 12 per cent. per annum, less tax.) The dividend absorbs £75,000, leaving a balance of £138,926 to be dealt with. Of this sum the directors have transferred £60,000 to income-tax and contingencies account, £25,000 to the reserve fund, and £25,000 in reduction of bank premises account. £28,926 has been carried forward to profit and loss new account.

BALANCE-SHEET—December 31, 1923.

The West End Branch has been specially fitted with Safe Deposits for the use of Customers. This Office buys and sells Foreign Exchange and Securities.

BANK OF ADELAIDE.

The balance of profit and loss for the year ended March 26, 1923, including the balance brought forward from previous year (£22,312 5s 9d), amounts to £117,201; out of which an interim dividend at the rate of 10 per cent. per annum was paid in November last, £31,250; leaving available, £85,951; from which it is proposed to pay a dividend at the rate of 10 per cent. per annum on the old shares, £31,250; and at the rate of 10 per cent. per annum, calculated to March 26, 1923, on the instalments paid on the new issue shares from the respective dates on which such amounts were payable, £5,000; to transfer to reserve fund (making it £720,000), £20,000—£56,250; leaving a balance to be carried forward of £29,701. The 50,000 new shares, the issue of which was authorised by the shareholders on October 9, 1922, were offered to the shareholders at £6 per share (£5 being capital and £1 premium). The shares have all been taken up and paid for, and the £5 per share—£250,000—has been added to the bank's capital, making it £875,000, and the premium of £1 per share—£50,000—has been credited to the reserve fund, making it £700,000.

BALANCE-SHEET—March 26, 1923.

NATIONAL BANK OF NEW ZEALAND, LIMITED.

The report for the year ended March 31, 1923, shows that the net profit, after paying a bonus to the staff of £13,600, providing for bad and doubtful debts, and including £142,121 brought forward from the previous year, amounts to £370,868. The interim dividend at the rate of 12 per cent. per annum, paid in January, absorbed £72,700. The sum of £20,000 has been placed to premises account, leaving now available for distribution £278,167, which the directors proposed to allocate as follows:—In payment of a dividend at the rate of 12 per cent. per annum for the half-year ended March 31 last, £75,000; in payment of a bonus of 2 per cent. £25,000 (both free of income-tax)—£100,000; to reserve fund (which will then stand at £1,260,000), £10,000; to pension and gratuity funds, £22,600; balance to be carried forward, £145,567—£278,167.

THE FIFTH AVENUE BANK
OF NEW YORK*An Uptown Institution.*

THE uptown section of New York invariably claims much of the visitor's time, whether it be his business, social or recreational activities that take him there.

Situated in the heart of this busy and diversified section is the Fifth Avenue Bank. Within easy distance are the largest and best hotels, theatres, shops, restaurants and office buildings. And from here transit lines radiate to all sections of the city and suburbs.

Visitors to New York are invited to make this their banking headquarters.

A well-organized Foreign Department is prepared to serve you.

A General International Banking Business conducted at all Branches of the Bank.

The report for the year ended December 31st last shows a net profit, after providing for all bad and doubtful debts, of £1,004,908, inclusive of £222,201 brought forward from

The report presented at the meeting on March 26th is as follows:—The net profits for the year ending December 31, 1923, after providing for contingencies and including the balance brought forward from the last account, amount to £153,348. An interim dividend at the rate of 4s a share was paid in October, absorbing £40,000, and the directors now recommend a final dividend of 5s a share, less income-tax at 3s 9d in the £ (after allowing for relief in respect of Indian taxation). They propose to add £20,000 to the reserve fund, which will then stand at £340,000, and to write £10,000 off premises account, leaving a balance of £33,348 to be carried forward to the next account.

IMPERIAL BANK OF INDIA.

The report for the half-year ended December 31, 1923, shows that the net profits of the bank for the half-year amounted to Rs. 49,13,332, which, with Rs. 19,07,826 brought forward from the half-year ended June 30, 1923, made a total of Rs. 68,21,158. This sum the governors of the bank disposed of as follows:—In payment of a dividend to the shareholders at the rate of 16 per cent. per

Forward exchange contracts outstanding for purchase and sale of bills and telegraphic transfers, £18,966,844. The rupee assets and liabilities included in the above are converted at 1s 4d per rupee.

PROFIT AND LOSS ACCOUNT.

Dr.	£	Cr.	£
Expenses of management at head office, branches, and agencies ..	270,118	Balance from December 31, 1922 ..	152,105
Ad interim dividend of 8 per cent. on 30,000 "A" shares and 30,000 "B" shares and 60,000 "C" shares ..	84,000	Gross profit for the year ending December 31, 1923, after providing for bad and doubtful debts and bonus to the staff ..	528,824
Amount transferred to reserve fund ..	50,000		
Amount transferred to officers' pension fund ..	15,000		
Amount written off freehold banking premises ..	20,000		
Balance	241,811		
	680,929		680,929

The net profits for the year ended December 31, 1923, after providing for bad and doubtful debts, and including £152,105 brought forward from last account, amount to £410,811. From this sum has to be deducted £84,000, being the interim dividend of 8 per cent., less income-tax, on

the "A," "B," and "C" shares paid in September last. The directors have added £50,000 to the reserve fund (raising it to £1,250,000), £15,000 to the officers' pension fund, and written £20,000 off freehold banking premises. They now recommend a final dividend on the "A," "B," and "C" shares of 8 per cent., less income-tax (making 16 per cent. for the year), leaving a balance of £157,811 to be carried forward.

NATIONAL BANK OF INDIA, LIMITED.

The report for the year ended December 31st last states that the net profits for the year, after providing for all bad and doubtful debts, amount to £534,799, and, adding £159,256 brought forward, the available total is £694,055. An ad interim dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 19th last, amounting to £200,000. The directors recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £2,750,000. They propose to write £20,000 off house property account, and to add £25,000 to the officers' pension fund, leaving a balance of £199,055 to be carried forward.

BALANCE-SHEET—December 31, 1923.

Dr.	£	Cr.	£
Interim dividend of 5s per share paid, free of income-tax, June 1, 1923	30,000	Balance brought forward from August 31, 1922	52,732
Balance, proposed to be dealt with as follows:—Dividend of 10s per share, free of income-tax, to be paid December 1st, making with the interim dividend 15 per cent. for the year, £60,000; staff provident fund, £7,334; balance carried forward, £49,090	116,424	Gross profits for the year ending August 31, 1923, after making full provision for all bad and doubtful debts and taxation, £417,698; less expenses in London and at the branches, £324,006	93,692
	146,424		146,424

The report for the year ended August 31st last states that the gross profits for the year, after making full provision for all bad and doubtful debts and taxation, are £417,698, and deducting the expenses, amounting to £324,006, there remains a balance of £93,692 net profit for the year. To this amount must be added £52,732, the balance carried forward on August 31, 1922, making £146,424, which the directors propose shall be dealt with in the following manner:—Contribution to staff provident fund, £7,334; interim dividend of 5s per share paid, free of income-tax, June 1st, £30,000; dividend of 10s per share, free of income-

tax, to be paid on December 1st, making with interim dividend 15 per cent. for the year, £60,000; balance carried forward, £49,090—£146,424.

The report presented to the meeting, held on March 18th, states that the balance shown by the profit and loss account for the year 1923 amounts to £47,049; deducting the additional remuneration of the directors in accordance with the articles of association, viz., £2,352—£44,697—and adding the undivided balance carried forward from 1922, £26,689, a total profit of £71,386 becomes available for allocation. The directors recommend, as last year, the distribution of a

dividend of 4 per cent., free of income-tax, absorbing £40,000, and that the balance of £31,386 be carried forward to new account—£71,386.

ing a balance of £128,782, which has been appropriated as follows:—In payment of a dividend on the "A" ordinary shares at the rate of 6 per cent. per annum (less income-tax) for the half-year ended October 31, 1923, which, together with income-tax thereon, amounts to £30,000; to reserve fund against shareholding interests in foreign banks, £15,000; to reduction of premises account, £10,000; to furniture account, £5,000; leaving a net balance to be carried forward to next year of £68,782—£128,782.

BRITISH TRADE CORPORATION.

The profit and loss account for the year ended December 31, 1923, shows a profit of £74,387, of which £25,000 has been transferred to reserve against shareholding interests in subsidiary companies and other investments, leaving a balance of £49,387. The directors recommend the payment thereof of the fixed dividend of 6 per cent. per annum upon the "A" shares, amounting to £38,906, leaving £10,481 to be carried forward. A reserve fund has been created to provide for shareholding interests in subsidiary companies and other investments. This fund, which has been credited with the balance of £39,412, shown to the credit of profit and loss account for the year ended December 31, 1922, and with the £25,000 above referred to, amounts to £325,000.

HONG KONG AND SHANGHAI BANKING CORPORATION.

The report to the meeting held at Hong Kong on February 23rd states that the net profits for the year ended December 31, 1923, including \$3,350,212 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$16,583,873. The directors recommend the transfer of \$1,000,000 from the profit and loss account to credit of the silver reserve, which will then stand at \$25,500,000. They

also recommend writing off bank premises account the sum of \$1,000,000. After making these transfers, deducting the interim dividend of £3 per share, paid on August 7th last, viz., £480,000 at 2s 3d equals \$4,266,666, and remuneration to directors, there remains for appropriation \$10,267,206, out of which the directors recommend the payment of a final dividend of £3 sterling per share, viz., £480,000, and a bonus of £2 sterling per share, viz., £320,000, amounting in all to £800,000, which at 2s 3d, the rate of the day, will absorb \$6,887,892. The balance, \$3,379,314, to be carried to new profit and loss account. The sterling equivalents of the assets and liabilities are shown at 2s 3d, the rate ruling on the last day of the year.

BALANCE-SHEET—December 31, 1923.

BANKING DEPARTMENT

Current Accounts are opened for Shareholders and Customers or Friends introduced by them. Interest at the rate of 2½ per cent. per annum, credited annually, is allowed upon the minimum monthly balance, provided it is not under £20. No commission charged for keeping Accounts, but the opening lodgment must not be less than £20, nor the minimum balance less than £10.

Money is received on Deposit in sums of £1 up to £500 subject to seven days' notice of withdrawal. Amounts over £500 are received on special terms as to notice. Interest is allowed from date of deposit to date upon which withdrawal notice expires, and is credited or paid half-yearly, viz., 30th June and 31st December.

The Directors reserve to themselves the power to return Deposits or change the rate of Interest.

Country and Foreign Drafts, Dividends, Coupons, Annuities, Pensions, etc., received and placed to credit. Drafts, Circular Notes and Letters of Credit issued.

American and Canadian Express cheques cashed and Foreign money exchanged.

Head Office—BROMPTON ROAD LONDON SW1

	36,400,000

* By authority of the Egyptian Government these Treasury bills are deposited in lieu of gold (See Journal Official of October 30, 1916).

The report presented at the meeting held in Cairo on March 19th is as follows:—The gross profit for the year

ending December 31, 1923, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for bad and doubtful debts, amounts to £902,452. After deducting from this sum, for directors' fees, £11,750; for current expenses, £303,014—£374,764, there remains £527,688. In conforming with article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000; after this statutory distribution there remains, £407,688; adding to this the balance brought forward from last year, £183,014, the amount available is £590,702. The directors consider it prudent to allocate to special reserve for contingencies a sum of £75,000, which leaves £515,702. From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb £330,000, and leave a balance to be carried forward of £185,702. The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share. An interim dividend of 8s having been paid on September 3, 1923, the balance remaining to be distributed will be £1 2s per share.

The report states that, after deduction of expenses and taxes and making provision for bad and doubtful debts,

&c., the net profit for the year ended December 31, 1923, amounts to £430,681. The board propose to allocate to pension fund, £20,000; to pay a dividend of 5 per cent. on the paid-up capital (according to Art. 36 of the articles of association), £240,000—£260,000; leaving a balance of £170,681; less statutory participation of directors, £17,068; the remainder, £153,613, together with the amount carried forward from last year, £40,261—£193,874—is at the disposal of the general meeting, and the board propose to pay a further dividend of 3 per cent. (making in all 8 per cent. for the year 1923), which will absorb £144,000, and to carry forward £49,874.

YOKOHAMA SPECIE BANK, LIMITED.

The report for the half-year ended June 30, 1923, states that the net profit, after providing for all bad and doubtful debts, rebate on bills, &c., shows 15,108,236 yen, inclusive of 5,015,825 yen brought forward from last account. The directors propose that 4,000,000 yen be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb 6,000,000 yen. The balance, 5,108,236 yen, will be carried forward to the credit of next account.

ORGANIZATION.

The Nippon Kwangyo Ginko is a joint stock bank established under a Special Law of the Japanese Imperial Government for the purpose of making advances at moderate rates of interest and for long periods in order to promote the improvement and development of agriculture, industrial enterprises, railways, buildings and building sites, as well as public works undertaken by the authorities of prefectures, counties, cities, towns, villages and other public bodies recognised by law.

The Nippon Kwangyo Ginko in virtue of the law of April, 1921, is intended to consolidate the 46 Agricultural and Industrial Banks, which were established under the law of 1896 in every prefecture of Japan, for the similar purposes to those of the Nippon Kwangyo Ginko, and have been allowed to place to reserve the whole dividends due on the shares held by the authorities of the prefectures, who are the largest shareholders in each case.

By January, 1923, nineteen such banks came under the control of the Nippon Kwangyo Ginko, and these banks are carrying on business as branches of the Bank.

PRIVILEGES.

The chief privileges of the Nippon Kwangyo Ginko, granted by the Japanese Imperial Government and the local governments, are as follows:—

The Nippon Kwangyo Ginko is authorised by a Special Law of the Japanese Imperial Government to issue bonds called Kwangyo Saiken, up to an amount not exceeding 15 times the paid-up capital, provided that the total issue of such bonds shall not exceed the combined aggregate amount of loans redeemable, whether by annual instalments or a single pay-

ment, and of the bonds issued by the Agricultural and Industrial Banks and actually taken over by the Nippon Kwangyo Ginko.

The Kwangyo Saiken are treated by the Japanese Imperial Government and local governments on the same footing as national loan bonds, as that some part of the postal savings and the funds of public bodies are invested in the Kwangyo Saiken, and about 8,500 post offices as well as the municipal offices of prefectures, counties, cities, etc., are employed in conducting the issuing business of the Bank.

STABILITY.

About seventy per cent. of the aggregate amount of loans made by the Nippon Kwangyo Ginko is redeemable in annual instalments against the security of immovable property, and every loan is less than two-thirds of the value of the security which is based on a moderate estimate of expert valuers, and about thirty per cent. is redeemable in annual instalments or in a single payment advanced without security to the authorities of prefectures, counties, cities, towns, villages and other public bodies recognised by law.

BOARD OF MANAGEMENT.

The Governor and the Deputy-Governor are appointed by the Government.

The Joint Managing Directors and Directors are also appointed by the Government from among candidates, who have been elected at a general meeting of shareholders.

GOVERNMENT SUPERVISION.

The Minister of Finance supervises the general business transaction of the Nippon Kwangyo Ginko.

Making
a Name

Because he would not associate himself with anything that was not of the very best within his power to produce, Josiah Wedgwood made a name that will ever stand for high achievement in his own great realm of ceramics.

Wedgwood ware stands for quality as well as individuality. Its many imitations are only so many tributes to unrivalled excellencies.

The name Chatwood is similarly associated with quality—in connection with treasure security, Safes and Strongrooms—and for the same reason—that nothing but the best has ever been good enough for them to father.

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."

This, The Chatwood Tradition, is a governing policy of the firm.

THE
CHATWOOD
SAFE

Since 1858

The Chatwood Safe Book, containing full details of the security achieved and offered, also expresses in some measure the high ideals of the firm. A postcard brings a copy gratis.

Banking business of every description transacted. Current Accounts are kept in conformity with the practice of London Bankers' interest being allowed on minimum monthly balances of £100 and upwards at the rate of 2 per cent. per annum, and credited to the accounts half-yearly, on the 30th of June and 31st of December. Deposits received in sums of not less than £10. No charge is made for keeping an Account where a remunerative balance is maintained. Every information can be obtained on application to the Manager.

THIRD IMPRESSION, WITH ADDITIONAL CHAPTER AND STATISTICS.

An INTRODUCTION to the STUDY of PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7s. 6d. net.

The Economic Review—"His excellent and clear little book ought to be in the hands of every student of social conditions."

The Practical Engineer—"This book should be valuable to the student of monetary values & prices, especially of the nineteenth century."

The Economic Journal—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the fascinating but complicated 'study of prices.' That is, perhaps, the most crucial of present popular economic questions, and it must always occupy a prominent place in the scientific discussions of professional economists."

BANCA COMMERCIALE TRIESTINA.

Head Office: Trieste.

Branches: Rome, Turin, Fiume, Trento, Rovereto, Gorizia.

Agencies throughout Italy's new Provinces.

Directors' Report submitted to the Sixty-fifth Ordinary General Meeting, 9th April, 1924.

Capital raised to 100,000,000 Lires.

The Directors have submitted to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December last.

These show a net profit of Lit.6,203,361.40, on the basis of which a dividend of Lit.40 for each share, corresponding to a rate of Eight per cent. per annum, will be paid.

The Bank has had another successful year, profits being actually larger than in 1922.

Owing to the improvement of general business of the Bank, and according to more favourable commercial and industrial conditions of Italy's new provinces, of which the Banca Commerciale Triestina represents the most important Banking Institution, the Chairman was able to announce a new capital issue of Lit.25,000,000, so that the total capital of the Bank will be raised to Lit.100,000,000, fully paid.

The new Shares, which will rank for Dividend from January 1st, 1924, have all been offered to the Shareholders at Lit.550, plus interest from January 1st, 1924.

**The Investor's Monthly Manual**

ESTABLISHED 1864.

THE MOST COMPLETE PERIODICAL RECORD in existence of the
 dealings, throughout the United Kingdom, in every description of stocks and shares.

Over 4,000 securities are dealt with each month, showing recent dividends and
 yields at latest prices. The *Manual* also contains a valuable summary of Profit
 and Loss Accounts each month.

IT IS ABSOLUTELY FREE FROM ANY CONNECTION WITH ANY
 FINANCIAL HOUSE OR SPECULATIVE AGENCY.

Annual Subscription - £1.1.0

HALF-YEARLY DOUBLE NUMBER

To be published on JULY 2nd

POST FREE - - - - 2s. 3d.

The Double Number will give, in addition to the usual information, the highest
 and lowest prices of all stocks and shares for 1920, 1921, 1922 and 1923, and for the
 first six months of 1924; the latest quotations for 1924, a tabulated chronicle of the
 half-year's events, the names of the markets where each security is chiefly dealt in ;
 Comparative figures of net profits, after payment of Debenture interest, are shown
 for a large number of leading industrial concerns, besides memoranda relating to
 the financial position of Foreign and Colonial Governments, to Railways, etc., the
 addresses of the various companies, with the names of the Chairmen and Secretaries,
 or Managers.

TO ADVERTISERS

The *Manual* will be found specially suitable for advertising Debentures of every
 kind, prospectuses of limited liability companies, and investments of all descriptions;
 and for giving publicity to the announcements of banking, insurance and other
 companies, publishers and auctioneers. Its importance to the general advertiser can
 hardly be over-estimated.

The above number has a **LARGE ADDITIONAL CIRCULATION**, and being
 greatly used as a work of reference, it affords an excellent opportunity for giving a
PERMANENT PUBLICITY for advertisements.

Orders, to ensure insertion, should reach the Office on or before Monday,
 June 30th, 1924.

The McKenna Report	6		

The publication of the Experts' Reports, followed closely by the General Elections in France and Germany, without any doubt means that the Reparation problem is about to enter upon an entirely new phase. The question is one of such fundamental difficulty, and the Nations of Europe have been so often disappointed, that we dare not put our hopes too high. At the same time, there is every reason to think that the conditions are at this moment more favourable for a settlement than at any time since the Armistice. We have therefore thought it a suitable moment to present to our readers a summary of the Experts' Reports, which will undoubtedly form the financial basis of a settlement, and to accompany it by an historical summary of the whole question, which we think may prove useful for purposes of reference.

THE DAWES REPORT.

Before we proceed to summarise or discuss the actual plans proposed there are certain general considerations to which attention should be called. In the first place, the Report only covers a part of the field. Not only does it leave out all the political aspects of the problem, but the Experts were restricted even on economic matters. M. Poincaré, for instance, refused to allow them to reconsider the problem of Germany's total obligation. The plan they put up is therefore limited to a definite scheme for the next five years. We are disposed to think, however, that this very limitation is itself one of the reasons why it has made unanimity possible, and accounts for its friendly reception. It would clearly be extremely difficult to name now the total sum which Germany will ultimately pay. On the other hand, to leave the future entirely vague has most serious drawbacks which would mean the frequent reopening of the question at intervals, and would lead to confused uncertainty. The Experts have, therefore, invented an index of prosperity, and proposed that at the end of five years the amount to be paid by Germany shall vary in accordance with this index. This is not a new device, but no one has hitherto agreed upon the proper index, still less upon the basis figure of annual payments to which this index should apply. The plan now proposed gives an element of elasticity to the future payment of Reparations, while at the same time ensuring that they will not impose an impossible burden upon the debtor. We have quoted this feature of the scheme here because it illustrates the chief merit of the Report, which is that it lays down on the strongest possible authority a number of economic principles which must be the dominating factors in the problem. While, therefore, the Report does not produce a completely finished plan, its enunciation of principles will eliminate in the future those illusory and untenable propositions which have hitherto clouded the issue. Thus while the experts in name confine their recommendations within the limits imposed by M. Poincaré, their principles have, in fact, settled the whole amount of Reparations.

THE RUHR OCCUPATION.—An even stricter limit was imposed in regard to the occupation of the Ruhr. But here again the Report gives some very clear indications. Political guarantees and penalties, they say, if needed to ensure the execution of the plan, are outside their jurisdiction, as are also questions of military occupation. "It is, however, our duty to point out clearly that our forecasts are based on the assumption that economic activity will be unhampered and unaffected by any foreign organisation other than the controls herein provided. Consequently, our plan is based upon the assumption that existing measures, in so far as they hamper that activity, will be withdrawn or sufficiently modified so soon as Germany has put into execution the plan recommended, and that they will not be re-imposed except in the case of flagrant failure to fulfil the conditions accepted by common agreement. In case of such failure it is plainly for the creditor Governments, acting with the consciousness of joint trusteeship for the financial interests of themselves and of others who will have advanced money upon the lines of the plan, then to determine the nature of sanctions to be applied and the method of their rapid and effective application." They add, however, that if the system in the occupied territories is modified their scheme must be safeguarded by adequate productive securities, which are elaborated in the Report. The Committee excuse themselves for introducing this question of control by pointing out that they could not invent a working scheme under which Germany would pay anything at all, and that they could see no way of ensuring permanent stability in the budget or the restoration of Germany's credit abroad and at home so long as the present system existed; and they, therefore, postulate that the economic unity of Germany.

Copies of this Supplement may be obtained separately from "The Economist" Office, 3 Arundel street, Strand. Price 6d.

many must be restored if their Report is to be carried out. This conclusion is thus expressed in the form of a hypothesis, but in effect it is a political decision of the first magnitude.

OTHER PROBLEMS.—But if the Report is limited in relation to the German problem, it is even more important to recognise that it leaves out of account the cognate economic problems which arise in other countries; for example, it does not deal at all with the very difficult question of the capacity of all other countries to receive reparations without undue disturbance of their economic life. It also fails to deal with the vexed question of the distribution of reparation receipts, or the problem of the inter-Allied debts. It is quite conceivable that the first and third of these problems will require to be dealt with by another Expert Committee before we can hope to get a complete settlement of the whole issue. After all, the question of the debt raises precisely the same type of problem as does the question of the payment; that of the capacity to receive raises economic issues that are not covered by any of the considerations advanced by the Experts.

COMPARISON WITH AUSTRIAN AND HUNGARIAN SCHEMES.—The Report is also noteworthy in that it departs from the two previous efforts at European economic settlement—i.e., the reconstruction schemes of the League of Nations in Austria and in Hungary. At the outset it differs from these in the fact that reconstruction of these two countries has been assumed to require the total, or very nearly total, suspension of Reparations payment for a long period of years. The Allies have agreed that the new Austria cannot be expected to become a reasonably self-supporting nation or put her finances in order if she has to pay anything in the way of external debt. The reconstruction scheme for Hungary imposes what may be called a "peppercorn" reparations payment amounting only to 1s per head of the population per year. The Dawes scheme for Germany, on the other hand, imposes upon Germany a normal charge equivalent to 41s per head.

There is, however, a much more striking difference in the fact that the Austrian and Hungarian schemes assume that it is necessary to put a Foreign Commissioner in such a position of authority that he is able to control the whole public finances of these countries. The Reparations Experts, on the other hand, have not considered it practicable to place the whole finances of such a country as Germany in the hands of a foreigner. They have, indeed, hesitated to propose what would have been a great inroad upon the sovereignty of a nation of 60 millions, which has been, and will probably remain, the most important economic Power on the continent of Europe. They have therefore exercised great ingenuity in devising schemes which will determine in advance the financial policy of Germany, which will enable Foreign Commissions of various countries to watch and ensure the carrying out of the scheme, and will moreover make it to Germany's interest to carry out her work. The sceptic may think that this plan relies too much upon the goodwill of Germany, but behind the scheme there remain the rights conferred by the Treaty of Versailles, which permits the Allies to take whatever further economic or financial steps may be necessary to enforce their claims.

PROSPECTS OF ACCEPTANCE.—Finally, apart from the merits of the Report, there are certain factors that make it probable that the Report will be accepted. On the side of Germany the outstanding factor is that during the autumn of 1923 that country experienced such disastrous consequences from unchecked inflation and its economic life received so serious a blow (which came perilously near to breaking up the organised society of the whole nation, including industrialists and financialists, who had benefited from inflation in its earlier stages), that it has determined at all costs to escape so serious a disaster again if escape is possible. The Report offers them a hope of doing this, for it automatically brings the payment of reparations within tolerable limits. Similarly, on the side of France, her people have in the last six months faced the stark and disquieting facts of her financial position, which imperatively called for a serious increase in the burden of taxation, and has led to a realisation by the French nation that it must get what substance it can out

of these reparation plans, and not sacrifice everything for the pursuit of a shadow.

SUMMARY OF THE SCHEME.

The experts were invited "to consider the means of balancing the Budget and the measures to be taken to stabilise the currency" of Germany. But the dominating feature of the German Budget is her obligation to the Allies under the Treaty of Versailles. The experts, therefore, "have been concerned with the practical means of recovering this debt, not with the imposition of penalties; and the guarantees which we propose are economic, and not political."

If the present situation of Germany represented her potential capacity, the development of a Budget which would include Reparations would be hopeless. "But Germany's growing and industrious population; her great technical skill; the wealth of her material resources; the development of her agriculture on progressive lines; her eminence in industrial science; all these factors enable us to be hopeful with regard to her future production." Moreover, since 1919 Germany's plant and equipment has been improved. The railways are in better condition, telephone and telegraphic communication modernised, canals and harbours developed, and industrial plant brought to the point at which it is "adapted in many industries to produce a greater output than before the war."

The Report opens with a plan for a new bank of issue by means of which it is hoped to control and stabilise the currency. The recommendations under this head will be found in a succeeding section. Stabilisation is a necessary preliminary to balancing the Budget. But in the long run it can only be maintained as the result of an equilibrium in the State finances. The Experts put this point in the forefront, as their whole Report necessarily takes currency stability for granted.

Germany's Capacity to Pay.

The Report recognises the twofold character of the problem—namely, the internal question—that is to say, how much can be raised and set aside in Germany for the Allies without imperilling Germany's financial position—and secondly, how much can be transferred to Germany's creditors abroad. The Report deals very completely with the first question, both from the theoretical point of view and from that of practical difficulty; the second is lightly treated, and to a certain extent shelved. Specific machinery is, however, proposed for carrying out the plan from both points of view, and for instituting definite forms of control, which are intended to be sufficient to safeguard the interests of the Allies.

The Internal Problem.

The Committee accept in principle the doctrine laid down in the Treaty of Versailles, that the German people should bear at least as heavy a burden of taxation as that borne by any of the Allied peoples. The fact that Germany has wiped out her debt by inflation renders it practical and just to impose a heavier burden than would otherwise have been possible. It is true that the extinction of the debt has been at the expense of her taxpayers, but, on the other hand, a large proportion of the richest taxpayers have obtained the relief without themselves bearing a proportionate cost, and they are a proper object for increased taxation. The Report gets near to a definition of "commensurate" burden by estimating the *per capita* charge in relation to *per capita* wealth or income. But before this principle is established there should be deducted a minimum subsistence allowance from the *per capita* income. It would, however, be wrong to deduct a fixed minimum; for this must obviously vary between countries of different climates, different stages of economic development, and different customs. Indeed, as a rough working assumption, such a minimum may be regarded as itself varying in proportion to the *per capita* income of different countries. These considerations produce a sufficiently complex formula; but the calculation is rendered still more uncertain by the inadequacy of statistics of national income and the technical difficulty of comparing the total taxation, both national and local, of

various countries. Finally, taxation levied for transfer to people out of the country is a burden of a different kind from taxation levied to transfer to other people in the same country, since in the latter case the funds are expended to provide profits and a stimulus to internal trade and production at home. For these reasons the Experts do not reduce their calculations under this head to precise figures, but content themselves with the declaration that the doctrine of "commensurate" burden, when Germany is fully restored to economic prosperity; "would more than justify all the practical conclusions we have set down."

The Sources of Payments.

The Experts do not, however, propose to put the whole of the burden of Reparations upon the German Budget. The financial system of the country has been so demoralised, that it will take time before the tax machinery is again working satisfactorily. On the other hand, old mortgage charges on Germany's industrial and transport systems have been eliminated just as completely as the German internal debt, and there is clearly room to reimpose some permanent form of debt upon these undertakings. A railway or industrial charge would have the advantages of almost immediately releasing considerable sums without overburdening the financial machine, and, secondly, of producing a form of security which may subsequently be passed into private hands, and whose capital value may be realised in the interests of the Allied creditors. Such charges are a burden upon Germany just as much as if the sums were levied by the German Government in taxes, but there are special conditions in Germany which make burdens imposed in this way less onerous and easier to collect. The Experts, therefore, propose to build up an annual payment (a) from the ordinary Budget (b) by means of railway bonds and the transport tax, and (c) from industrial debentures. From neither source do they expect that much could be forthcoming in the current financial year, and they therefore propose that a loan of £40 millions should be raised for Germany this year, by means of which deliveries in kind may continue and the Bank of Issue be floated. A combination of these methods enables them to forecast Reparations in accordance with the following table for the next five years:—

	(In Million Gold Marks.)				
	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.
Railway bonds	200	595	550	660	660
Transport tax	nil	nil	290	290	290
Industrial debentures...	nil	125	250	300	300
Sale of railway shares ..	nil	500	nil	nil	nil
Foreign loan	800	nil	nil	nil	nil
Budget contribution ..	nil	nil	110	500	1,250
Total	1,000	1,220	1,200	1,750	2,500

The figure for the fifth year is to become the standard payment subject to a "prosperity index" referred to in more detail below. These figures are to include all Treaty charges, that is to say, to cover in addition to Reparations the costs of armies of occupation, expenses of control commissions, clearing house charges, &c.

Budget Charges.

The draft budget for the current year, as presented to the Experts by the German Government, just balances. If there is delay in restoring a normal administrative system there may be a deficit; but the Experts think that there may possibly be a saving on the large item entered for unemployment relief. Even if, however, there is a deficit it would not be so serious as to endanger the stability of the currency. Moreover, they are of opinion that arrangements now made under the stabilised currency system would fully mature next year, and they have no doubt that for these two years together a balance can be struck. During these two years the Experts, in effect, recommend a moratorium from Reparations burdens on the budget.

Comment is, however, made in considerable detail on the German budget system. The method of direct taxation during the currency depreciation of the last four or five years notoriously broke down, and the well-to-do escaped any serious imposition of income-tax—"we have put it as

a matter for the serious consideration of the German Government whether they should not, facing even the admitted administrative difficulties, review the assessments of recent years in the case of these particular classes of taxpayers and re-assess their liability upon a gold basis." The German Government have found it impossible to take 1923 as a basis of assessment for 1924, and have been driven to the temporary expedient of charging up to 25 per cent. with the intention of re-scheming and re-assessing the income-tax proper in 1925. "These expedients do not reassure us upon the general question as to the taxation of the wealthy classes, and, in our judgment, if they desire the Allies and their own working classes to realise their good faith in this matter, the German Government should publish at an early date their definite intentions with regard to the scales of income taxation that are to be applied during 1925-26 to the actual profits of 1924-25 for the final adjustment of the fiscal year 1924-25." Under the current year's budget system, 1,344 million gold marks are expected from the income-tax, of which 480 millions are assessed upon wages.

Again the Experts are concerned with the relation of the Reich to the States. After the war, finance was centralised and much of the taxation is now repaid to the States and Communes over whose expenditure the Central Government has little control. The actual expenditure of the Reich is little more than one-third of the total Federal and State expenditure and the State or Communal budgets might be prospering at the same time as the Reich budget is in difficulties. The Experts emphasise that this hole in the budget must be plugged by putting these internal relations on a sound and permanent footing.

The report does not attempt to lay down rigid rules about the German budget or to bring the fiscal system into line with that of other countries. Each nation builds up its finances as a result of history, tradition, and its special economic circumstances. At the same time, a number of recommendations are put forward. The Committee do not propose that tobacco should become a State monopoly entirely, but that its sale should be in the hands of the State through authorised agents, and an elaborate scheme is drawn up for this purpose. The rates of indirect taxation seem to the Committee to be low and capable of increase, but the turnover tax is regarded as a barrier to trade development. Taxes on motor transport, they find, should be raised, while the yield of the death duties is far too small when judged by almost any standard. All these suggestions are, however, recommendations only to the German Government, and are not proposed as a necessary part of the scheme to be imposed upon Germany.

Assigned Revenues and Their Control.

While thus rejecting detailed control of all Germany's revenue and expenditure—which would make the controlling authority responsible for all financial troubles, and might be made a pretext for them—the Experts devise security for these budget payments by an arrangement under which certain revenues would be assigned to and paid into the account of the Allies. These revenues will be the taxes on Customs, alcohol, tobacco, beer, and sugar, whose yield (exclusive of Customs) is estimated by the German officials in 1928 to reach 1,700 million gold marks, but by the technical advisers to the Committee to reach in that year 2,146 million gold marks. Including Customs, these revenues will yield, even on the lowest estimate, a surplus of 1,150 millions over the payments to be made from the budget to the Allies. The whole of such surpluses over the Allied claim will, of course, be automatically paid back to Germany, whose interest, therefore, it will be to make these taxes yield as high a sum as possible. In 1926-27 and in 1927-28 the Committee suggest that to some extent the yield of these revenues should govern the amount to be paid to the Allies out of the budget. But the idea of using the yield of these taxes as an index of ability to pay is purely a passing and temporary phase applicable to these two years only. Apart from these two years, taxes are purely collateral, and not a measure of the amount to be paid. These assigned revenues will be supervised and paid into the account of a Commissioner with sub-Commissioners for each of the five controlled revenues. It would be his

business to impose such methods of independent audit as he might think fit. He would not assume responsibility for detailed administration, but would have the duty of seeing that the administration was efficient and the accounting system honest and accurate. He would not, therefore, be obliged to insist on the exact tariffs or assume responsibility for direction of the administrative staff; but the degree of control would become more active if the need were apparent, and, if the revenues were in danger of becoming insufficient, it would be his duty to take measures to increase their productivity. He would have the right (though he would not necessarily exercise it) to be consulted before administrative changes were made, and would have access to all books and the right to insist upon a higher standard of administrative efficiency. The Experts are very anxious to avoid interference in the details of Germany's tariff policy, and suggest that the Commissioner and his advisers should proceed by way of recommendation to the German Government; but they add that the main lines on which the control should work must finally be settled by the countries interested.

The Railway Scheme.

With the assistance of Sir William Acworth and M. Lerve, the Experts conducted a fairly exhaustive inquiry into the present condition of the German railways and evolved a scheme for their future status which is not the least important of their proposals. The Experts consider that the difficulties under which the railway administration at present suffers are largely of the Germans' own making. The system is enormously overstaffed, and, since the war, very extravagant capital expenditure has been indulged in. On the other hand, the railways are unencumbered with old debts, since the depreciation of the mark extinguished their prior charges. Before the war these prior charges absorbed half the gross profits (of approximately 1,000,000,000 gold marks) and the Experts are of the opinion that, under proper management and unified control, the railways could earn a fair dividend upon their present capital value, which they estimate to be 26,000,000,000 gold marks. They hold that this dividend could be provided by the more economical administration of the railways themselves, and would not necessarily imply an increase either of fares or of the cost of goods transported by rail. The inquiry, however, gave the impression that the official administration, which has always been more concerned with meeting the demands of public opinion than of making a financial profit, would not be capable of putting through the drastic reforms that are needed, and that the full measure of improvement cannot be expected so long as the railways remain in the control of the Government. It is therefore proposed that the German railways be converted into a joint-stock company, in the management of which Germany's creditors will be represented.

The first charge on the new undertaking shall be the service of **first mortgage bonds**, issued without payment and for the purpose of reparation to a Trustee appointed by the Reparation Commission. The total of such bonds is to be 11,000,000,000 gold marks, with interest at 3 per cent. for the first financial year of the company, at 4 per cent. plus a bonus of 25,000,000 gold marks for the second year, at 5 per cent. for the third year and thereafter, with a sinking fund to come into operation at the end of the fourth year. The service of the bonds is to be assured by the following payments:—

	Amount. Gold Marks.
First year	350,000,000
Second year	465,000,000
Third year	550,000,000
Fourth year, and after	660,000,000

These annual payments may, in fact, be exceeded by the German Government and the company, provided that the necessary authorisation is forthcoming from the Reparation Commission, which shall first consult the Transfer Committee.

Irrespective of the transport tax, which was first instituted during the war, and which is this year estimated to yield 227,000,000 gold marks, the Experts estimate that

the net revenue of the railways, after allowing for an adequate reserve, will be as follows in the next few years:—

	Amount. Gold Marks.
First year	400,000,000
Second year	550,000,000
Third and fourth years	700-750,000,000
Thereafter	800,000,000

These figures represent what are believed to be very conservative estimates of the dividend-earning capacity of the German railway system.

In addition to the 11,000,000,000 gold marks of bonds, the new railway company is to have 2,000,000,000 gold marks of preference shares. The remainder of its capital cost (13,000,000,000 gold marks) is to be represented by common stock, which will be held by the German Government. Of the preference shares, 1½ milliards are to be sold by the company to private persons to provide funds for the repayment of existing indebtedness and to meet future capital expenditure, while the proceeds of the sale of the balance of the preference shares, and of any of the ordinary shares which may so be disposed of, are to go to the German Government.

The new railway company is to be managed by a board of eighteen directors, of whom nine will be chosen by the German Government and the private owners of preference shares, while the other nine will be named by the Trustee of the bonds. Of these latter, five may be Germans. It is thus contemplated that fourteen members of the Board, together with the general manager of the railways, will be Germans.

The German Government will have such control over the tariffs, &c., of the railways as may be necessary to prevent discrimination and to protect the public. Subject to this, the railway company will be free to conduct its business in such manner as it may think proper, though a **Railway Commissioner** is to be appointed to represent the interests of the bondholders. It shall be his duty to receive reports and returns and generally to see that the interests of the bondholders are not menaced. He would also have power to stop expenditure which he considered unjustifiable, or to order any increase in existing tariffs which he considered reasonable. Moreover, in the event of default, the Commissioner, as the representative of the Allies, would be entitled to enter into full control.

Industrial Debentures.

It is proposed to impose first mortgage bonds to the extent of five milliard gold marks bearing 5 per cent. interest and 1 per cent. sinking fund on German industry. In the offer of June, 1923, by the German Government a similar proposal was made, but covering business, industry, banking, trade, traffic, and agriculture. The Committee do not propose to include agriculture in this mortgage and leave it to the German Government to decide the method of equalising the burden fairly on German industry. They think that if the Government desire to equalise the burden in respect of those who escape the present mortgage, it can be done through the ordinary taxation system of the Budget. In view of the present shortage of liquid capital in Germany, the Committee propose that the interest on these debentures be waived entirely during the first year, that during the second year it should be 2½ per cent., during the third year 5 per cent., and thereafter 5 per cent., plus the 1 per cent. sinking fund. The bonds are to be delivered by the German Government to a **Trustee** appointed by the Reparations Commission. The Trustee may dispose of them in whole or in part from time to time; the debtor may make proposals for their redemption, and the Committee recommends that the Trustee be empowered to give preference to such proposals, and especially to redemption schemes which can be effected in foreign currency. The German Government is to guarantee the interest and sinking fund, and in the event of default the coupons may be presented to be cashed by the Commissioner of Controlled Revenues, who shall cash them out of the surplus funds which he would otherwise pay over to the German Government. The bonds are free of German taxation, unless held by German nationals. An Organisation Committee of two Germans, two Allied representatives, and a neutral are to work out the scheme.

The Index of Prosperity.

The standard annual payment of Germany is to increase if German prosperity increases, as measured by the extent to which the following index exceeds the average of the base years:—"For the purpose of computing the index, the following statistics shall be employed:—

- The total of German exports and imports taken together;
- the total of Budget receipts and expenditure taken together, including those of the States of Prussia, Saxony, and Bavaria (after deducting from both sides the amount of the Peace Treaty payment included in the year);
- railroad traffic as measured by the statistics of the weight carried;
- the total money value of the consumption of sugar, tobacco, beer, and alcohol within Germany (measured by the prices actually paid by the consumer);
- total population of Germany (computed from the last available census data, vital statistics, and emigration records);
- the consumption of coal (and lignite reduced to coal equivalent) *per capita*.

"The Index Base.—In computing the base, the average statistics for the three years 1927, 1928, and 1929 shall be taken for (b) Budget receipts and expenditure, for (e) population, for (f) coal consumption *per capita*, and for the six years 1912 and 1913, 1926, 1927, 1928, and 1929 for the other categories (after appropriate adjustments for the difference in population and the altered gold values for the three earlier years comparable with the three later years in this respect). The percentage change for each of these six groups, compared with the base, shall be separately computed, and an arithmetical average of the six percentage results taken as the index."

The index is to be applied to the payment of 2,500 millions except that for the five years 1929-30 to 1933-34 it shall apply only to 1,250 millions, *i.e.*, the Budget share of the total payment. In the event of the index producing a deficiency, the basis payment shall continue, but any subsequent supplementary payment which the index would otherwise produce will not be paid until the deficiency previously indicated by the index has been made good. Any dispute arising in connection with this index is to be referred to the Finance Section of the League of Nations. Either Germany or the Reparations Commission is to have the right to apply for a modification of the whole schedule of the payments if the general purchasing power of gold varies by not less than 10 per cent. of its value in 1928.

Transfer Committee.

All payments to be made under the scheme are to be made to the account of the Agent for Reparations Payments in the Bank of Issue, but transfer of these payments may not be made except under the direction of a **Transfer Committee** composed of six members, the Agent of the Reparations Commission as chairman, and five other members qualified in foreign exchange questions. They shall consist of an American, French, English, Italian, and Belgian member appointed by the Reparations Commission, in consultation with the member of the same nationality sitting upon the general board of the bank. The Committee shall act in consultation with the President and Commissioner of the Bank. The Committee is to use its funds to pay for Reparations in kind or for conversion under the Reparation Recovery Act, and to convert the remainder of its surplus into foreign currency so far as the foreign exchange market permits without threatening the stability of the German currency. If transfers cannot be so made the Committee shall invest in bonds or other loans in Germany to the extent that this in credit exceeds the sum which the Bank will keep on deposit. The purchases in kind made by the Committee shall only be used in the countries receiving them for internal requirements, including the requirements for colonies and dependencies. They may only be re-exported by the unanimous agreement of the Committee and the German Government. The Committee may, however, transfer marks to private individuals for the purpose

of making purchases in Germany of a permanent kind and out of the classes of property to be contained in a schedule agreed upon by the Committee and the German Government. "In arriving at such agreement the German Government shall be required to have due regard to the necessity for making maximum payment to its creditors, but it shall also be entitled to have regard to maintaining its control of its own internal economy." The German Government and the Bank shall undertake to facilitate in every reasonable way the working of the Committee in transferring funds, including such steps as will aid in the control of foreign exchanges. In this connection the Committee shall call the attention of the President of the Bank to the situation if it appears that the Bank's discount rate is not in relation to the necessity of making important transfers. If the sums which the Committee are unable to transfer abroad reach five milliards of gold marks—whether in the form of deposits or investments—the payment for Treaty charges shall be reduced to the amount which it is able to transfer. The Committee may even suspend these charges before the accumulation reaches five milliards, if two-thirds of its members are of opinion that its accumulation is becoming a menace to the economic or fiscal situation in Germany. In the event of concerted efforts by the German Government or by a group of individuals, to prevent transfers, the Committee may increase its balance to an unlimited amount or employ it in the purchase of any kind of property in Germany.

It is extremely difficult to foresee how these provisions will operate. The payment of Reparations involves the transfer of goods abroad. The problem is to devise means, therefore, which will create a surplus of exports larger than would otherwise be the case. This may be done in a number of ways.

If the exchange is maintained at a depreciated level so as to create a difference between the internal and external purchasing power of German currency, and if that difference is maintained by extremely heavy taxation or by other direct means calculated to reduce the internal circulation of purchasing power in Germany, there will be a tendency for Germany's productive forces to be directed to meeting export rather than home needs, and the low level of real wages will enable Germany to export in competition with other countries.

The same result might be partially obtained by a drastic control of imports. Imports may also be checked if means are found for getting hold of the foreign exchange created by Germany's ordinary commercial exports, securing this foreign exchange for the purpose of the Transfer Committee, and preventing its use as a means of financing imports into Germany.

Finally, if Reparations in kind are taken to a large extent, there will be fewer commercial exports available for creating foreign exchange through which imports may be imported.

The provisions of the Bank of Issue, described in the following section, rule out the policy of constant depreciation of the exchange. The Experts, however, contemplate that by co-operation with the Bank some control over foreign exchange will be acquired by the Transfer Committee, and they also rely to a considerable extent on continued payments in kind. The task of the Transfer Committee will, of course, be made much easier if, as a result of stabilisation, the world shows a disposition to invest large sums in Germany. If this process continues over a long period of years it will solve the Committee's task, for it would mean that private investors would take over the funds in Germany which the Committee has to dispose of.

The Bank of Issue.

The Experts propose the establishment of a new Bank of Issue in Germany to create a unified and stable currency. This is regarded as necessary for the rehabilitation of Germany's finances, the balancing of her budget, and the restoration of her foreign credit.

The new **Bank of Issue** shall be a private corporation, and its charter shall be for 50 years. Its paid-up capital is to be 400,000,000 gold marks, of which one quarter will represent the assets of the Reichsbank, while the balance shall be offered for subscription in Germany and abroad. The administration of the Bank shall be vested in a

managing board, under the chairmanship of a President, all of whom shall be of German nationality. Side by side with this managing board there is to be another board called the **general board**, which will consist of seven Germans and seven foreigners, one each of the following nationalities:—British, French, Italian, Belgian, American, Dutch, Swiss. This general board is to be given broad powers in such matters of bank organisation and operation as might affect the interests of creditor nations. One of the foreign members of the general board will be known as the **Commissioner**, and he will be responsible for seeing that there is no infringement of the provision relative to the issue of notes and the maintenance of the bank's reserves. As decisions of the general board are to require a majority vote of 10 of the 14 members, the co-operation of both German and Foreign members will be necessary for any action that may be taken.

The plan lays down in some detail the discount and loan policy which is to be pursued. In particular, the Bank shall make no loans of any kind directly or indirectly to the German Reich or to any German governmental unit, and the deposit accounts and current accounts of the Government in the Bank shall never show a debit balance. In addition, the Bank may not buy or sell merchandise, produce, real estate or shares of other corporations for its own account. The managing board is, however, authorised to make advances from time to time to the Reich up to the limit of 100,000,000 gold marks, though such advances shall in no case be for a longer period than three months. In return for these facilities the Reich and its Treasury shall conduct all their domestic and foreign banking business through the medium of the Bank. Similarly, the managing board is also empowered to grant advances to the Post Office and the Railways, provided that the total amount outstanding to the Post Office and the Railways together shall never exceed 200,000,000 gold marks. The Bank is also to receive on deposit sums paid for Reparations, though the maximum amount thus held on deposit shall at no time exceed 2,000,000,000 gold marks.

The Bank is to have the exclusive right of issuing and circulating bank notes in Germany during the period of its charter, and special conditions are prescribed for the gradual withdrawal of the notes of the Rentenbank from circulation. The new bank notes will be issued against the normal legal reserve of at least 33½ per cent. of the total amount of its notes outstanding. They will be unlimited legal tender, unless otherwise specifically provided by contract, for all debts public and private, and shall be receivable in unlimited quantities for all taxes and other Government dues in Germany.

Of the net profits of the Bank, 20 per cent. shall be transferred annually to surplus or reserve until the Bank's actual net paid-up capital and surplus shall amount to 12 per cent. of its average liabilities on circulating notes on the 15th day of the six preceding months. When this ratio is maintained, a sum shall be assigned to the payment of dividends sufficient to pay 8 per cent. per annum on the Bank's shares. The balance of the net profits shall then be divided as to one half to the shareholders in dividends or to a special fund to be used for the maintenance of a uniform dividend policy, and as to the balance to the Government as a franchise tax for the Bank's exclusive privilege of issuing circulating bank notes.

The dividends of the Bank and other income derived from its capital shares owned by foreigners residing abroad shall be exempt from all German income-tax present and future. Moreover, the Bank, in consideration of the percentage of profits accruing to the Government, shall not be subject to any corporation tax or business tax levied in Germany by the Reich or States, or other governmental unit.

External Loan.

The scheme provides for floating a foreign loan of 800 millions in the first year. In the main it is to provide means of floating the Bank of Issue. The deposit of this sum in the Bank will furnish a substantial part of its gold reserves and enlarge the basis of its currency issues. The Experts cannot say what other charges under the Treaty must be met in the first year, but they are anxious that the Allies should write these down to a minimum

figure. They lay down the rule that of the one milliard gold marks to be provided by the loan, plus the first payment of interest on the railway bonds, 800 million gold marks should be spent in Germany either in the provision of Bank reserves or to finance essential deliveries in kind and other Treaty payments, such as meeting the requirements of the armies of occupation. The service of this first loan is to be deducted from the subsequent annuities. The Committee's plan provides that for the second year deliveries in kind and the cost of the armies of occupation should be financed up to 1¼ milliards of gold marks by sums raised in Germany itself.

The Problem of Control.

The committee rejects the idea of foreign control of the whole of Germany's financial system, and have endeavoured to reduce interference to the minimum required to give the Allies necessary security. The mechanism of control may be summarised as follows:—Commissioner of the Bank of Issue; Commissioner of Railways; Commissioner of Controlled Revenues, with sub-commissioners for each section; Commissioner of Industrial Debentures; Agent for the Receipt of Reparation Payments, who will act between the Commissioner of the Reparation Commission and co-ordinate their activities on its behalf.

The scheme also requires the appointment of a Trustee, who will administer the railway and industrial bonds and be responsible to the Reparation Commission for these and other securities, or use them to secure new securities, which he may issue himself.

The plan involves the appointment of an Organising Committee for drawing up the statutes of the Bank of Issue; the general board of the Bank of Issue, of which half the members are foreign, though presided over by the president, who must be a German; the Railway Organisation Committee; the Railway Board, half appointed by the shareholders and half by the Trustee on behalf of the Allied creditors; the Organisation Committee for floating the industrial debenture scheme; and, finally, the consultative and advisory committee to the Commissioner of Controlled Revenues.

Thus the whole system is radically different from the League of Nations scheme in Austria and in Hungary, in which cases a single representative of the creditor countries was appointed. The present plan is carefully designed to safeguard the sovereignty of Germany, and to obviate the necessity of any Allied officer controlling German administration. The Committee, however, recognise that this forbearance cannot continue in case of default of the plan itself.

THE MCKENNA REPORT.

German Assets Abroad.

The McKenna Committee, which endeavoured to estimate Germany's foreign assets, refrained from preceding their enquiry by an examination of the books and finances of business men in those countries in which German capital is believed to be invested. This would have involved the disclosing of transactions entered into under implied conditions of secrecy, and in any case the Committee think that it would have been ineffective. They, therefore, attempted to estimate the total of German capital abroad at the outbreak of war and, by a process of tracing the changes in subsequent years, arrived at a figure of the present holding.

As regards German assets in 1914, the Committee was able to state the results of a census made by the German Government in August, 1916, and, from the results of this enquiry, together with the comments upon other estimates which put the figure somewhere between 20 and 35 milliards of gold marks, the Committee came to the conclusion that they could accept a total of 28 milliards of gold marks as their standard figure.

During the war Germany, whose resources were too busily engaged to be available for export, and who took every opportunity of enlarging her imports, had an adverse balance amounting to 15.2 milliard gold marks. This figure included sums paid by Germany to her allies to enable them to pay for imports. Secondly, Germany's pre-war assets were reduced by depreciation and by liquidation and sequestration measures taken by the Allied

Governments; the Committee puts this item at 16.1 milliards. In addition to this depreciation occurring in neutral countries, they think that, against this may, perhaps, be offset the accumulation of interest which could not be brought home. Against these losses must be set the sale of gold which realised one milliard, and the sale of securities, which is also estimated to have realised one milliard; while a much larger item is in respect of profits in occupied territories, in exports which the Government did not pay for, in the sequestration of securities, or foreign currencies seized in return for coal, which they exported to neutral countries from Belgium. These various deductions reduced the value of Germany's foreign holdings to something like five milliards.

As regards the subsequent period, the Committee found it necessary to revise the foreign trade figures published by the German Government, and to recast them year by year. Cash payments made to the Allies under the Treaty, plus the surplus of imports, amount to between 9 and 10 milliard gold marks. The Committee estimate that Germany benefited from the sale of mark balances abroad by from 7 to 8 milliards, in addition to which actual mark notes sold amounted to between 600 and 700 millions. These last two items are worthless, and represent the losses which foreigners have incurred through speculation in German currency.

Gold sold since the Armistice amounts to 1½ milliards,

and German real property and securities to another 1½ milliards. Other credit items are the expenditure by foreigners in Germany in excess of the amount spent by German travellers abroad, the expenditure of foreign currency by the members of armies of occupation, earnings on German investments abroad, remittances from Germans residing abroad, earnings of shipping and insurance, &c. But there is a debit balance in respect of foreign currencies moving into Germany, which the Committee estimate at 1.2 milliard marks. The net result is that the Committee puts the balance at not less than 5.7 and not more than 7.8 milliard gold marks, and they think that a figure mid-way between these two probably represents the total.

The Committee can suggest no way by which these balances can be secured or controlled. In their opinion, to prevent the exodus of capital from Germany and to encourage its return, it is necessary to eradicate the cause of its outward movement. Inflation must stop, and Germans with capital abroad feel that they will not suffer by bringing it home. They think legislation controlling this question cannot be entirely repealed until the country's finances are more stable, but they propose that, pending normal conditions, an amnesty should be granted for a limited time from the penalties imposed by existing enactments, and that special terms should be offered to the holders of Government loans in foreign currencies.

HISTORY OF THE REPARATIONS QUESTION.

I. THE ARMISTICE.

On November 5, 1918, the Allied Governments, in a note sent to the President of the United States, declared their willingness to make peace with Germany on the terms laid down in the President's Address to Congress on January 8th of the same year and in accordance with the principles of settlement enunciated in his subsequent addresses. They made it clear, however, that while there were to be "no annexations, no contributions, and no punitive damages," the restoration of the invaded territories was a very definite provision, about the implications of which no doubt ought to be allowed to exist. "By it they understand that compensation will be made by Germany for all damage done to the civilian population of the Allies, and to their property by the aggression of Germany by land, by sea, and from the air." Upon this basis an Armistice was signed between the principal allied and associated Powers and Germany, on November 11, 1918.

II. THE TREATY OF VERSAILLES.

The section of the Treaty of Versailles which deals with the subject of Reparations (Part VIII.) begins by declaring Germany responsible for all the consequences of her aggression in 1914. Article 231 runs as follows:—

"The Allied and Associated Governments affirm, and Germany accepts, the responsibility of Germany and her Allies for causing all the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war imposed upon them by the aggression of Germany and her Allies.

At the same time, it was recognised (in Article 232) that Germany would be quite unable "to make complete reparation for all such loss and damage," and, therefore, Germany undertook to "make compensation for all damage done to the civilian population of the Allied and Associated Powers, and to their property" during the war. By Annex I. (Sec. 5 and 7) to this part of the Treaty it was, however, laid down that *war pensions and allowances* made by the Governments of the Allied and Associated Powers to the dependents of mobilised persons during the period of hostilities are to be considered as "damage done to the civilian population."

Germany further undertook to "make reimbursement of all sums which Belgium has borrowed from the Allied and Associated Governments up to November 11, 1918, together with interest at 5 per cent. per annum thereon." This was a consequence of her violation of the Treaty of 1839 by marching into Belgium in 1914.

THE ASSESSMENT OF THE REPARATIONS TOTAL.—The amount of the damage for which Germany undertook to make reparation was not fixed by the Treaty, but was left to be determined by the Reparation Commission.

Delegates to this Commission were to be nominated by the United States, Great Britain, France, Italy, Japan, Belgium, and the Serb-Croat-Slovene State. The first four of these Powers have the right to be represented at all times. The Japanese delegate has the right to sit when Japanese interests are concerned, and the Serb delegate when matters relating to Austria-Hungary and Bulgaria are under discussion. Otherwise the Belgian delegate constitutes the fifth member. Unanimity is necessary for an important number of specified matters; in all other cases, however, a majority vote is sufficient.

It was provided, however, that the assessment of this Commission must be concluded and notified to the German Government by May 1, 1921, at the latest. A schedule of payments was to be drawn up concurrently, "prescribing the time and manner for securing and discharging the entire obligation within a period of 30 years from that date."

The difficulty of deciding once and for all upon a schedule of payments spread over so long a period led to the insertion of a further article (No. 234) which stipulated that the Reparation Commission should "from time to time consider the resources and capacity of Germany, and should have discretion to extend the date or to modify the form of payments." At the same time, no part of these obligations may be cancelled "except with the specific authority of the several Governments represented upon the Commission." The Commission is required, if the German Government so desire, periodically to hear evidence and argument on the part of Germany on any question connected with her capacity to pay. In this connection the German system of taxation must be examined both in order to see that the sums required for reparation purposes are a prior charge to those required for the service of any domestic loan, and further, in order "to satisfy itself that in general the German system of taxation is fully as heavy proportionately as that of any of the Powers represented on the Commission."

"In order to enable the Allied and Associated Powers to proceed at once to the restoration of their industrial and economic life," Germany undertook to pay the sum of 20,000,000,000 gold marks (approximately one thousand million pounds sterling) before May 1, 1921, in a manner to be decided upon by the Reparation Commission. The expenses of the Allied armies of occupation were to be a first charge against this total, while the balance, after deducting such supplies of food and raw material as might be judged essential to enable Germany to meet her obliga-

tions, should be reckoned to her credit on Reparations account.

DELIVERIES IN KIND.—The total of reparations due need not all be paid in cash. In fact, in accordance with Annexes IV. to VII. of this part of the Treaty, certain payments are to be made in kind. Section I of Annex IV. reads as follows:—

The Allied and Associated Powers require, and Germany undertakes, that in part satisfaction of her obligations expressed in the present part she will, as hereinafter provided, devote her economic resources directly to the physical restoration of the invaded areas of the Allied and Associated Powers to the extent that these Powers may determine.

Under this section demands for animals, machinery and equipment, or for reconstruction materials, may be filed with the Reparation Commission, which, in adjudging such claims, shall ensure that the making of these deliveries shall not so disorganise the industrial life of Germany "as to affect adversely the ability of Germany to perform the other acts of reparation stipulated for." To the Commission is also assigned the task of determining the value of deliveries of this kind.

COAL.—Germany further accorded certain options for the delivery of coal and derivatives of coal to France (Annex V. s. 2), Belgium (V. 3), and Italy (V. 4); the prices to be paid therefor being the German pit-head price, plus the freight to the respective frontiers, or, in the case of sea delivery, the German f.o.b. price, provided that in no case should such price exceed the British pit-head price for export, or the British f.o.b. price respectively. All these options are to be exercised through the intermediary of the Reparation Commission, as also are those for the delivery of dyestuffs and drugs laid down in Annex VI. Finally, certain specified submarine cables are to be handed over, their value being calculated on the basis of the original cost less a suitable allowance for depreciation.

III. FROM THE TREATY TO THE REPARATION COMMISSION'S ASSESSMENT.

On January 10, 1920, the Treaty of Versailles came into force by ratification. Nearly 16 months were still to elapse, however, before the Reparation Commission's assessment was due, and speculation was rife as to the total that would ultimately be fixed upon. At the Conference of San Remo, in April, Mr Lloyd George carried a decision summoning the German representatives to a conference to be held in Spa in the following month "for the discussion of the practical application of the Reparation Clauses." At the preparatory meeting at Hythe, in May, a proposition for a sliding scale of payments to be made by Germany was referred to a committee of experts, but there was agreement only on the need for postponing the Spa Conference for a month. This process was repeated again in June, when definite figures began to be mentioned on a sliding scale basis. (Boulogne conversation.)

The Spa Conference, which met in July, really avoided the main issue of Reparations, though a decision was arrived at as to how German payments should be divided when received. The proportions were to be as follows:—

	%
France	52
British Empire	22
Italy	10
Belgium	8
Japan	0.75
Portugal	0.75

The remaining 6½ per cent. of the total was reserved for Yugoslavia, Greece, Roumania, and the other Powers not signatories of the Spa Agreement. The priority of Belgium to the extent of £100,000,000 sterling was confirmed, and the repayment of Allied advances to that country (about £300 millions sterling) was to rank immediately after that sum.

BRUSSELS CONFERENCE, DECEMBER, 1920.—For some months the Reparations question remained in suspense until at last a Conference of Experts, both Allied and German, met at Brussels in December. This was perhaps the first serious effort at a solution, though the proposals for an average annual payment incorporated the sum decided upon at Boulogne as the minimum, i.e.,

£150,000,000. This was to run for five years, though spread out in such a manner that for the first two years less, and for the last two years more, would be due. The consideration of later payments was postponed to a later date, and a considerable proportion of the annuities was to be paid in goods. Moreover, the annual expenses of the Allied armies of occupation were limited to £12,000,000 sterling, while Germany for her part was to undertake to put her finances in order, and to consent to Allied control over her customs in case of default. But these proposals failed to win the necessary support among the politicians, and the year 1921 opened without any settlement having been reached.

PARIS CONFERENCE, JANUARY, 1921.—In January, 1921, an Inter-Allied Conference was held in Paris, and proceeded to fix Germany's liabilities on lines very different from those suggested by the experts at Brussels. The annuities demanded over 42 years totalled £11,300 millions, though there has been some controversy as to the present value of this figure. Mr Lloyd George has claimed that it did not represent more than £2,500 millions, but the latter figure (which is calculated on a 6 per cent. basis), even if correct, takes no account of the 12 per cent. levy on German exports, which was also decided upon at the same time. Mr J. M. Keynes has estimated the present value of the annuities at £3,500 (also on a 6 per cent. basis); while an allowance for the export duties brings the total up to at least £4,000 millions. (Letters to the *Times* of June 13 and 14, 1923.)

On March 1st Dr Simons, on behalf of the German Government, made a counter-proposal in London. Calculating the present value of the annuities under the Paris scheme at 8 per cent. interest, he arrived at the figure of £2,500 million. From this he deducted £1,000 million as the alleged value of Germany's deliveries to date, and offered £1,500 million as the utmost that Germany could pay. This offer was described as completely inadequate, and was summarily rejected by the Allies. Sanctions were threatened in the event of a refusal of the Paris terms by Germany, and Düsseldorf, Duisberg and Ruhrort were, in fact, occupied by the Allies a few days later. This action was clearly not justified, as the Paris terms themselves merely represented an anticipation of the findings of the Reparation Commission, which were not issued until two months later. Moreover, these findings showed very different results from those anticipated by the Allies, and, in any case, the £1,000 millions expressly stipulated for in the Treaty were not due until May 1st.

IV.—THE LONDON CONFERENCE, MAY, 1921.

THE REPARATION COMMISSION'S ASSESSMENT.—A conference was held in London early in May to consider what steps should be taken in the event of German default, and the Reparation Commission hurriedly published its assessment of the damage caused by Germany to the civilian population of the Allies. This was fixed at £6,600 millions, which, together with £300 millions due in respect of the Belgian debt, made a total of £6,900 millions. It is perhaps worth emphasising that this merely represented a statement of Germany's liabilities, and had no reference to her capacity of payment. A schedule of payments was, however, also drawn up and accepted by the Allies, while a threat of occupying the Ruhr led to Germany's signature of an agreement on this basis in London (May 12th).

A, B, AND C BONDS.—The total of 132 milliard gold marks (£6,600 millions sterling) on reparations account proper was to be met by the issue of three series of bonds in the following manner:—

Series A of 12 milliards by July 1, 1921.

Series B of 38 milliards on November 1, 1921.

Series C of 82 milliards when the schedule of payments provides the necessary funds for the service of these bonds.

The bonds were to bear interest at 5 per cent., with a further 1 per cent. sinking fund.

LONDON SCHEDULE.—The scheme of payments which was then drawn up provided for a fixed annuity of 2 milliard gold marks, together with a variable annuity of 26 per cent. levied on German exports. The odd 1 per cent. of this latter was ear-marked to provide interest

on the unissued balance of the bonds due at the rate of 5 per cent. up to 1926, and at 5 per cent. thereafter. Finally, any balance outstanding from the 2 milliards and the 25 per cent. export levy, after meeting the service of the bonds outstanding, was to go to form a sinking fund. For the ensuing year 1 milliard gold marks was due within 25 days of the signing of the Agreement, and a schedule agreed upon for the payment of the balance.

What this schedule would amount to in cash can hardly even be guessed, as this depends on various assumptions as to Germany's export trade. Mr. Keynes, in "A Revision of the Treaty," assumed exports of 10 milliards—which is double the actual figure of 1920—and thus arrived at an annual payment of 4.6 milliards of gold marks. We may add that, on a 6 per cent. basis the Reparation Commission's Assessment of April, 1921, would represent an annuity of 8.28 milliards.

COMMITTEE OF GUARANTEES.—A special Committee of Guarantees was established to see that the German Government fulfilled its obligations, and that reparations should, in fact, be a first charge on the revenues of the country. This body also undertook the supervision of the levy, of 26 per cent. on German Customs, and made two visits to Berlin to inquire into the actual working of the Agreement. Deliveries in kind did not prove equal to anticipations, and large balances threatened to fall due in cash. In October the Committee of Guarantees made a fairly detailed report to the Reparation Commission on the position of German finances. The weakness of the Government and the resultant dislocation of the system of taxation and currency were carefully considered, as well as the possible consequences of currency depreciation on the purchase of foreign bills. The result of these investigations was that two definite proposals were made.

"The Committee of Guarantees considers that the main object, and one which must be attained if a practical programme is to be established, should be the stabilisation of the mark, the intrinsic value of which is of less importance than actual stabilisation."

"The Committee of Guarantees is of opinion that, in order to meet her obligations, Germany should not only draw on her revenue, but should also agree to sacrifice a portion of her capital. Such a procedure would naturally be of a complicated nature, and would necessitate financial organisation."

Neither of these measures could be carried through in a few weeks, and the Committee therefore called the attention of the Reparation Commission to the possibility that Germany would declare herself unable to meet the next payments laid down in the London Schedule.

THE SEPTEMBER CASH PAYMENT.—Soon after this report was made, the need for a moratorium was being openly canvassed, and the Reparations question entered once again upon a new phase. This was due in no small measure to the disastrous consequences of the first cash payment under this scheme, which was made in September, upon the mark exchange. To obtain the necessary funds, the German Government had negotiated with a number of foreign (neutral) banks in August, and had succeeded in borrowing the money against three months drafts on the German Treasury, which were negotiated by the German banks. The downward movement in the exchange—which had been relatively stable hitherto—compelled the foreign bankers to realise their mark holdings, with results that are brought out in the following table:—

GERMAN EXCHANGE ON LONDON. (Average of Weekly Rates. Marks to the £.)			
January, 1921	224	July, 1921	279
February "	236	August "	305
March "	243	September "	399
April "	250	October "	577
May "	246	November "	1,020
June "	257	December "	799

During this period the mark, as will be seen, at one time touched over 1,000 to the £, and the real collapse of German currency, which had been relatively stable in the first half of the year, came during these months as a direct consequence of this first—and last—cash payment under the London Agreement.

V.—MORATORIUM PROPOSALS AND GERMANY'S DEFAULT.

CANNES.—In January, 1922, an attempt was made at Cannes to reconcile the two conflicting views on Reparations which were represented by Great Britain and France respectively. At the same time, the proposal for a general conference, to include German representatives, was mooted. To meet the demand for security, which seemed to be the basis of the French case, a pact of guarantee against aggression was offered by Great Britain, but this failed to achieve the desired end, and the fall of M. Briand made confusion worse confounded. Before the conference broke up, however, a stop-gap arrangement was hastily decided upon through the medium of the Reparation Commission, which had been summoned to Cannes for the purpose. The London Schedule was provisionally postponed, and the German Government had to pay 31 million gold marks in cash every ten days pending a final settlement. (Decision of January 13th.)

NEW SCHEDULE FOR 1922.—The Reparation Commission on March 21st imposed a modified schedule for 1922. The payment of a total of 720 million gold marks in cash and 1,450 million gold marks in kind for the year was to be made in monthly instalments. In return for this concession (for under the original London Agreement over 3 milliards were due), the German Government undertook, amongst other things, to reform its finances.

GENOA.—The Genoa Conference opened in April, and the assembled statesmen began their gigantic task of organising the reconstruction of Europe. But their terms of reference excluded reparations, war debts, and disarmament.

MORATORIUM DISCUSSIONS.—Meanwhile the long tangle of proposal and counter-proposal on the closely related questions of a moratorium and of Allied supervision of German finances, continued without any definite conclusion being reached. According to the terms of the partial moratorium granted in March, the German Government was under an obligation to satisfy the Reparation Commission by May 31st, that it had taken the necessary steps to balance its Budget, and to float internal and external loans, as also to declare its willingness to submit to some degree of supervision ("controle") by the Allies over its finances. It appeared as though a complete deadlock would be reached by the end of May, and there was much talk of France "regaining her liberty of action," a formula held to imply that the occupation of the Ruhr was in contemplation. The German Government undertook to impose the additional taxation (60 milliard of paper marks), which was demanded by the Allies as a *sine qua non* of a continued moratorium, and this was in fact granted at the end of May.

BANKERS' COMMITTEE.—Meanwhile the German claim that a foreign loan was essential to further reparation payments was being considered by an international Committee of Bankers sitting in Paris. This Committee, which was appointed by the Reparation Commission, and contained amongst other members Mr J. P. Morgan (America), and Dr. Vissering (Holland), almost immediately inquired whether they were competent to consider the question of Germany's total indebtedness. The Reparation Commission decided in the affirmative by a majority of three to one. In June, however, when the bankers published their report, it was stated, in effect, that nothing could be done to float a German loan unless the total sum due by Germany under the London Agreement was revised, and for this the unanimous vote required from the Reparation Commission under the terms of the Treaty was not forthcoming. The committee was unwilling to make proposals in respect of a topic on which they had not been invited to report by France, the country principally interested. A significant feature of this report was that it recorded and recognised the force of the disinclination of France to write down its claims against Germany so long as her obligation to repay her inter-Allied debts in full remained.

In the following months the slump in the Mark continued rapidly, and German default, even on the limited schedule of payments drawn up in March, became increasingly evident. Again, the cession of Upper Silesia in

the second half of June had further disturbed the German coal balance, and had begun to exercise an adverse influence on deliveries in kind, though its full effects were not felt until the end of the year.

THE BALFOUR NOTE.—Meanwhile the problem of inter-Allied indebtedness raised by the Bankers' Committee was receiving increased attention, and certainly made an Anglo-French understanding on the major issue of reparations more difficult to achieve, though the opinion spread during July that Great Britain contemplated making a substantial concession in the matter. In France suggestions were discussed, and were believed to be under favourable consideration by the Government, for re-assessing Reparations in connection with the reduction of the Inter-Allied debts.

A conference was called for August 4th, to consider the increasingly serious German situation. Chances of an agreement, however, had already been seriously jeopardised by the publication of the Balfour Note earlier in the same week. This was addressed to France and the other Continental debtors of this country, and declared that Great Britain was prepared "if such a policy formed part of a satisfactory international settlement to remit all the debts due to Great Britain by our Allies in respect of loans, or by Germany, in respect of Reparations." It went on to say that "if our undoubted obligations as a debtor are to be enforced, our not less undoubted rights as a creditor cannot be left wholly in abeyance.....The policy favoured by His Majesty is, as I have already observed, that of surrendering their share of German reparations, and writing off through one great transaction the whole body of inter-Allied indebtedness." In effect, therefore, Great Britain made a surrender of her claims upon her debtors conditional upon the surrender by the United States of an equivalent claim on this country.

This policy naturally brought a solution no nearer, as an American surrender of claims on Britain was not in the least likely to be made. The note, moreover, met with a very unfavourable reception from our Continental debtors, who have always been unwilling to be reminded of their obligations, and from the American public, who appear to have feared that the readiness of this country to face its debts was being called in question.

LONDON CONFERENCE, AUGUST, 1922.—At the London Conference the question of Germany's total liabilities receded into the background, and discussion centred on the important question of "productive guarantees." There was, however, a very wide divergence of opinion on this point also, and no solution was arrived at. A further meeting in Paris proved equally sterile, and the whole question was once again referred back to the Reparation Commission.

German payments had continued to be made down to July in accordance with the March Agreement. At the end of August the Commission refused Germany's demand for a moratorium in respect of the remaining cash payments. As, however, all the outstanding amounts to be paid in cash for 1922 were due to Belgium in respect of her priority claims, the French delegate raised no objection to the Belgian proposal that the total should be paid by means of Treasury bills due in six months' time. This was accepted by the Commission, and in effect, therefore, a moratorium was accorded to Germany in respect of cash payments for the rest of the year, though payments in kind were to continue on the basis agreed upon in March.

THE BRADBURY PLAN.—In October, Sir John Bradbury, the British delegate to the Reparation Commission, brought forward a plan for a moratorium. Its main features were:—

- (1) A complete moratorium of two or possibly four years, to enable German credit to be placed on a sound basis.
- (2) The stabilisation of the mark by the Reichsbank, the gold reserves to be available for this purpose under the supervision of a Mixed Commission.
- (3) The reorganisation of the Reparation Commission, whose seat should be moved to Berlin, to permit of a more complete supervision of German finances.

The proposal to grant Germany a complete moratorium in respect of cash payments and a partial moratorium in respect of deliveries in kind in return for a closer super-

vision of the German finances, did not appeal to France, and the plan failed to materialise. In the absence of a moratorium, a similar fate befell the plans for the stabilisation of the German exchange put forward in November by a number of international experts who met in Berlin at the invitation of the German Government.

VI. LONDON AND PARIS CONFERENCES, CHRISTMAS, 1922.

LONDON CONFERENCE, DECEMBER, 1922.—The temporary moratorium arranged in September was due to expire at the end of the year, and there was much talk from the French side of a Conference to be held in Brussels in December to arrive at a final settlement. It was believed that Mr Bonar Law, the new British Prime Minister, would prove more tractable than his predecessor had been, and the preliminary Conference of London opened early in December under what appeared to be unusually favourable auspices. The Prime Minister stated his readiness to modify the policy of the Balfour Note provided a final agreement could be achieved on all the questions outstanding. But the Conference soon stood adjourned with nothing settled save that the meeting at Brussels with the German delegates was not to be held after all.

The year closed with a reiteration by certain New York bankers that a loan to Germany was out of the question under existing circumstances, though Mr Baldwin's visit to the United States, together with the existence of a decidedly less strained atmosphere among the principal Allies, seemed to hold out a promise of better things to come.

PARIS CONFERENCE, JANUARY, 1923.—The first week of the New Year (1923), however, cleared the air in a manner effective to the point of brutality. The Paris Conference opened with the tabling of British, French and Italian plans, and lasted three days. The method to be followed in the treatment of Germany was the real stumbling-block, and French determination to have recourse to a forcible occupation of more German territory really rendered all discussion superfluous. Despite the cavalier treatment it received at the hands of our Ally, it is, however, not without interest briefly to summarise the main outline of the Bonar Law scheme:—

THE BONAR LAW SCHEME.

The British proposals for dealing with the Reparations question provided for a revision of the total of payments to be effected by Germany, for a close supervision of German finances by an international body in return for these concessions, and for the settlement of the closely connected problem of inter-Allied debts.

I.—PAYMENTS TO BE MADE ON REPARATION ACCOUNT.

The existing A, B and C bonds were to be cancelled, and in their place Germany was to deliver new bonds, divided into two series as follows:—

(a) **First Series Bonds** to the amount of 50 milliard gold marks to be issued forthwith, repayable at par on December 31, 1924, and bearing interest at 5 per cent. Interest payments were, however, to be suspended in their entirety for the first four years (i.e., until January 1, 1927), and to the extent of 1 per cent. for the four years ending January 1, 1931.

This would mean an annual payment of 2 milliard gold marks from 1927 to 1930 inclusive, and of 2½ milliard gold marks thereafter.

(b) **Second Series Bonds** to the amount of 17.31 milliard gold marks (being the amount of the deferred interest on the bonds of the First Series compounded at 5 per cent. to April 1, 1933), or such lesser amount as should be decided upon by the Arbitral Tribunal (v. post), to be issued on April 1, 1933, repayable at par on March 31, 1965, and bearing interest at 5 per cent. per annum. All interest to be payable half-yearly.

It will be seen that this scheme proposed a moratorium of four years; though, in the event of the Supervising Council (v. post) deciding unanimously, at any time before January 1, 1927, that the condition of German finances would allow of cash payments being commenced before the expiration of this period, Germany would undertake to pay such sums as the Council should decide in 1925 and 1926, provided only that they do not exceed 2 milliard gold marks annually. Such payments would be applied to reduce the aggregate liability of Germany as laid down in this scheme.

As the Treaty obligations to make deliveries in kind were to continue, but should in no case exceed in value the payments prescribed above, it would appear that the proposed moratorium should apply to deliveries in kind no less than to cash payments.

An **Arbitral Tribunal** was to be appointed upon application by the German Government, to be made not later than October 1, 1932, to consist of one person nominated by the Reparation Commission, one person nominated by the German Government, and a third, in the absence of agreement between the two, by the President of the United States. If Germany should prove before April 1, 1933, that the payments required to meet the interest charges upon the second series of bonds exceed her capacity, her obligation to issue such bonds should be cancelled in whole, or in part, as the Tribunal might decide.

Redemption of the Bonds might be effected by Germany, according to a prescribed scale, which allowed for an 8 per cent. basis at the start, gradually falling to a 5 per cent. basis at the end of the 32-year period. (v. *Economist* of January 6, 1923, p. 7).

II. SUPERVISION OF GERMANY.

As it was clearly realised that the mere fixing of Germany's liabilities at a figure which, in the opinion of the British Government, it was within her capacity to pay, would not alone solve the intricacies of the problem, the British scheme envisaged a very definite measure of international control over German finances.

(1) In the first place, Germany was to undertake to stabilise the mark, in accordance with the recommendations made by the Majority Report of the foreign experts consulted upon this question in the preceding November, and to restore Budget equilibrium within prescribed time limits.

(2) Germany was further to accept the supervision of a **Foreign Finance Council** to be set up in Berlin. This Council was to consist of persons appointed by Great Britain, France, Belgium, and Italy, with two other members of American and neutral European nationality respectively. The German Finance Minister was to be *ex-officio* chairman, but without a vote, except in the case of equality of votes. He was to be required by law to act on the Council's advice in regard to all matters affecting:—

- (1) Currency legislation.
- (2) The Budget, fiscal legislation, and public expenditure.
- (3) General Treasury administration.
- (4) Financial prohibitions, &c.

German administration was to be left in German hands as far as possible, but the Council was to enjoy very wide powers and also wide discretion as to the manner in which they should be used.

(3) In the event of her failing to satisfy the Council that the prescribed conditions are being observed, or failing to discharge her obligations as now revised, Germany undertakes to submit to any measures which the Allied Powers may unanimously decide to be necessary.

III. INTER-ALLIED DEBTS.

As part of a general settlement, Great Britain would be prepared to make considerable sacrifices in the question of Inter-Allied debts.

Deposits of gold held by her as security for loans made to France and Italy during the war would be applied forthwith towards the repayment of these loans.

The French share of the German bonds applicable to the repayment of Belgian war debt to be transferred to Great Britain as satisfaction for an equal amount of the French debt to her. 1½ milliards of the First Series bonds described above to be transferred by Italy to Great Britain in discharge of an amount of the Italian debt to Great Britain equal to the face value of the bonds.

The balance of the French and Italian debts to Great Britain to be written off and all counter-claims abandoned.

The Italian debt to France to be written off.

The **First Series Bonds** (up to 80 per cent., the balance being retained by the Reparations Commission as a reserve) to be distributed according to the Spa percentages.

The **Second Series Bonds** to be distributed to Belgium, Japan, &c., according to their respective Spa Agreement percentages; the aggregate percentages of Great Britain, France, Italy, and any other Power which may accept the proposals for dealing with inter-Allied debts defined in this scheme to be distributed among those countries in proportion to the amounts of their respective debts to the United States.

This British plan, whatever its defects may have been—and it was made clear that it did not necessarily represent Britain's last word upon every detail—would at least have provided a more realistic basis for discussion than any previous scheme. The fundamental principle was that pledges ("gages") should only be taken in the last resort, and that a workable scheme

should be drawn up and tried before recourse was had to force. The French Government, however, did not take the question of Inter-Allied debts *au sérieux*, and complicated the issue by a rather curious definition of "security" which played quite as important a rôle as did the desire for productive pledges in determining the occupation of the Ruhr, which following on January 11, 1923.

VII. THE OCCUPATION OF THE RUHR.

The ostensible motive for this action was provided by the decision arrived at on January 9, 1923, by a majority vote of the Reparations Commission, according to which the coal deliveries made by Germany to France in the course of the year 1922 constituted a **voluntary default** in the sense of §17 of Annex II. of Part. VIII. of the Treaty of Versailles. The Notes communicated by the French and Belgian Governments to the German Government on January 10 referred to this decision of the Reparation Commission, as also to the earlier decision of December 22, 1922, which declared the voluntary default of Germany in respect of deliveries of wood during 1922, and announced that, in consequence, a joint mission of control would be sent to the Ruhr. This mission, which actually went on the following day, was composed of French and Belgian engineers, with whom Italian engineers also participated. It was accompanied by such troops as were regarded as essential to guarantee the safety of its members.

The legality of this proceeding was exceedingly doubtful, as the vote of the Reparations Commission was not unanimous. The British view was that unanimity was essential for the declaration of voluntary default; and that, in addition, the clause of the Treaty upon which reliance was placed did not warrant independent action by the several Allied Powers. The action of the French and the Belgians led to a gradual process of detachment on the part of the British, while the American army of occupation was soon afterwards withdrawn from Coblenz.

The attempted "invisible occupation" proved quite inadequate in face of passive resistance on the part of the German population, aided, no doubt, by the Government of the Reich. It, therefore, soon gave place to a military occupation in the grand manner, and a complete deadlock was reached.

The British Government meanwhile became a helpless spectator awaiting the outcome of events. The Foreign Secretary, however, pointed out the desirability of some effort being made by the German Government to state its views, and to publish the terms it would be prepared to accept. As a result of this, the Government of the Reich sent an identical note to the principal Allies on May 2nd.

German Note of May 2, 1923.—This document may conveniently be considered under three main headings.

I. **TOTAL PAYMENTS.**—(1) Germany's total payments, in cash and in kind, should be fixed at 30 milliard gold marks. This sum would be met by the issue of loans on the international market in instalments of

20 milliards gold marks up to July 1, 1927
5 do do do 1929
5 do do do 1931

Subscriptions for the first instalment should be invited forthwith; the interest on the loan up to July 1, 1927, to be paid out of the sum realised by the loan, which would be under the control of the Reparation Commission; while, in so far as it was not possible to raise the first 20 milliards in the required time, interest of 5 per cent. and a sinking fund of 1 per cent. would nevertheless be paid as from July 1, 1927, onwards.

(2) If the second and third instalments are not raised within the given time-limits, an impartial International Commission shall decide "whether, when and how the rest is to be raised."

This Commission shall be either the syndicate that issues the first loan or a committee of international business men, or, alternatively, an Arbitral Tribunal consisting of one representative each of the Reparation Commission and the German Government, with a chairman appointed, in default of agreement, by the President of the United States.

(3) Pending final arrangements, deliveries in kind are to continue as heretofore.

(4) If it is considered that the total payments suggested do not represent the utmost limit, the German

Government proposes to submit the whole reparations problem to an International Commission uninfluenced by political considerations.

II. GUARANTEES.—“In accordance with agreements to be arrived at, the German Government are prepared to devise suitable measures, including legislation, in order that the whole German national resources should participate in guaranteeing the service of the loan.”

The stabilisation of the mark and the balancing of the budget, however, make it necessary that “high-handed seizure of pledges and sanctions should cease in future and that the administrative unity throughout Germany should be restored at an early date.”

III. SECURITY.—Germany is prepared “to conclude any agreement to ensure peace based on reciprocity,” and proposes an Arbitration Treaty with France. “The first essential leading up to negotiations must be that the *status quo ante* be restored within the shortest space of time.”

This Note, which, despite many unsatisfactory features, and notably the studied vagueness of the references to guarantees and the inadequacy of the capital sum offered—not to mention the assumption that such vast sums could be borrowed on the international market—did at least accept the principle of reference to an impartial commission. It was, however, summarily rejected by the French Government on May 3rd. The Belgian reply was identical to that of France, while the replies received from Great Britain, Italy, and Japan also considered the German proposals unacceptable. On June 7th, therefore, a second German Note was addressed in identical terms to the principal Allied and Associated Governments.

German Note of June 7, 1923.—The German Government maintain their estimate of the total Germany can pay, but stress their previous proposal to refer the whole question to an impartial international tribunal, and to accept its decisions as to the amount and the method of payment. They also state their willingness to supply this Commission with any information it may desire, by throwing open to inspection all their financial records, &c.

“Should loans on a great scale prove impracticable for a time, they are ready to substitute a scheme of annuities.” With regard to special guarantees, the German Government proposes to issue obligations up to 10 milliard gold marks at 5 per cent. as a direct first charge on the Federal Railway System; to raise a further 10 milliard gold marks as a first mortgage on all real estate in the country, whether industrial, municipal, agricultural, or forest; and, further, to pledge as security for the yearly payments the Customs duties on luxuries, the Excise duties on tobacco, beer, wine and sugar, and the receipts of the spirits monopoly.

It will be seen that the question of specific guarantees is here brought prominently forward, while the Note further insists upon the necessity for direct consultation. “The guarantees can only be worked out in detail with the collaboration of those whom they are intended to serve. For the solution of all these questions, oral discussion is essential. Germany acknowledges her liability to make reparation. The German Government repeat their request that a conference be summoned to agree upon how they may best discharge this obligation.”

Upon receipt of this Note, the British Government reopened negotiations with the other Allies with a view to the drafting of a joint reply. France, in particular, put forward certain rather vague conditions upon which she declared she would be guided in entering upon a discussion of the German plans, but insisted, above all, that passive resistance must cease in the Ruhr before this discussion was opened. The British Government thereupon sent a questionnaire dealing with these conditions, which certainly needed some elucidation. What, in particular, was meant by the phrase that passive resistance must cease? Did this refer simply to movements financed from Berlin, or were spontaneous local movements also included? Moreover, what inducements were to be held out to Germany if she yielded upon this point? How long would the occupation continue in that event? and in what form? Unless there was clearness on these points, the British Government could not contemplate “approaching the German Government in some way on the subject

of passive resistance.” (Note of June 13th, Cmd. 1943, p. 6). Further, objection was taken to the French (or any) proposal that, “whatever happens, France’s share of the value represented by the A and B bonds shall remain intact.”

The Cabinet crisis in Belgium delayed matters considerably, though when the French Government replied in a Note of July 6th it was made quite clear that no general amnesty was to be expected in the Ruhr in the event of passive resistance ceasing; while, as to Reparations, they declared that they abided by the Treaty and had no proposals to make.

British Proposals for a Final Settlement, July 20, 1923.—On July 20th the British Government sent an identical Note to the French, Italian, Belgian and Japanese Governments, which stated that H.M. Government were of opinion that the latest German proposals marked a sufficient advance “to justify careful consideration with a view to the return of a collective reply.” They forwarded therefore a draft reply for the consideration of the various Governments in accordance with the British plan, which was resumed in six heads:—

1. The German Government to undertake to abandon the policy of passive resistance.
2. Steps to be taken upon the cessation of passive resistance for the resumption of the civil administration of the Ruhr, and to provide for the progressive evacuation of those areas.
3. A body of impartial experts to be set up, charged with the duty of advising the Allied Governments and the Reparation Commission respectively as to Germany’s capacity to pay, and as to the mode of payment to be prescribed. The co-operation of an American expert to be sought, and arrangements to be made for German experts to be consulted and heard.
4. The same body, or a body similarly constituted, to be asked to advise the Reparation Commission as to the economic surties and guarantees to be pledged by Germany to the Allies.
5. Inter-Allied discussions to be opened with as little delay as possible, whether by conference or otherwise, for the purpose of elaborating a comprehensive plan of a general and final financial settlement.
6. So soon as the economic surties and guarantees which Germany will have pledged to the Allies have been put into effective operation, the occupation of all German territory outside the limits laid down in the Treaty of Versailles to come to an end.

The British draft of a reply to the German Note of June 7th suggested that passive resistance should cease in the Ruhr; and while not acceding to the German proposal for an International Commission in the precise form in which it was made, suggested that a revision of the total liability in accordance with Germany’s capacity to pay could be made within the framework of the Versailles Treaty and added that a final solution was dependent in large measure upon the acceptance by the German Government of some form of international control over the financial administration of Germany.

Though these proposals represented certain very important concessions to the French point of view, the French reply of July 30th was a very decided *non possumus*. No international body was needed, as the Reparation Commission, “which should only be guided by justice, equity and good faith,” gives greater guarantees of impartiality than any other body possibly could. This somewhat naïve contention is followed by an assertion that a final financial settlement has already been made, and that the French and Belgian Governments will only evacuate the Ruhr in proportion as effective payments are made by Germany. Moreover, the Ruhr undertaking is certain of success, and the disorganisation of Germany is due entirely to a deliberate policy of bad faith, whether by passive resistance in the Ruhr, or by the “maddest financial policy—renversant tous les principes d’économie politique, consacrés par l’expérience.”

The Italian and Japanese Governments, on the other hand, were in general accord with the British policy, and the intransigence of the French led to Lord Curzon’s Note of August 11, 1923, in which the opposition between the French and British points of view was more apparent than ever.

VIII. THE CURZON NOTE OF AUGUST 11, 1923.

After commenting upon the fact that France and Belgium alike had completely ignored the British draft of July 20th, of a joint Allied reply to the German proposals of June 7th, the British Government insists on the absolute necessity of establishing Germany’s capacity to pay:—

What is the maximum she can pay is a question of supreme importance to all her creditors. It is a question of establishing a fact, on the ascertainment of which any practical arrangements or combinations for obtaining payment to the fullest extent possible must be based. The British Government accordingly proposed to take steps to ascertain this important fact. Belgium replies that she will not consent unless a corresponding advantage is obtained by herself and by France.

Lord Curzon protests against the ascertainment of Germany’s capacity being made the occasion of bargaining between the Allies.

DISTRIBUTION OF REPARATIONS PAYMENTS.

The claim to priority for the restoration of the devastated areas is also rejected, and Britain’s war losses are briefly recited:—

Sunk ships and cargoes rotting at the bottom of the sea may not shock the eye like the ruined villages of France and Belgium. But they are equally material damage caused by German aggression, and represent equally heavy losses of national wealth.

The suggested priority implies, in fact, an alteration of the Spa percentages in favour of France and Belgium, and Lord Curzon insists that “the principle of a percentage division is not affected by a change in the total to which the percentages apply.” Moreover, Great Britain alone among the Allies is meeting the service of her debt to the United States, although she has been deprived of foreign securities to the value of from seven to eight hundred millions, which were used to finance purchases of war material abroad. Under these circumstances—

it would be inequitable, and it is impossible, to ask the British taxpayer, already much more heavily burdened than his French and Belgian Allies, to make further sacrifices by modifying the Spa percentages for the benefit of France and Belgium.

GERMANY’S CAPACITY TO PAY.

—M. Poincaré fails to see why “an estimate made to-day by experts, whoever they may be, should be more exact than that made in 1921.” It should be clearly remembered, however, that the—

Reparation Commission’s finding of 132 milliards of gold marks was a simple estimate of the amount of the damages for which compensation was claimable under the Treaty, without any regard to the question of Germany’s capacity to pay them.

Moreover, such concessions as had been granted in respect of the schedule of payments—and these enormously reduced the present value of the total fixed upon—were not “the outcome of anything that could be described as an expert inquiry into Germany’s capacity to pay.” Experience had shown how very wide of the mark earlier estimates had been.

AN IMPARTIAL INQUIRY.

The Reparation Commission is obliged, under the Treaty, to have regard to the resources and capacity of Germany, and the French and Belgian Governments alike insist on the special qualifications of the Commission to carry out the necessary inquiries itself. To this Lord Curzon gives a very straight answer:—

In the absence of an American representative (as originally contemplated), France and Belgium are in a position, with the aid of the casting vote of the French chairman, to carry any resolution over the heads of the British and Italian representatives, and it is notorious that, in these circumstances, the Commission has become in practice an instrument of Franco-Belgian policy alone.

The constitution of the proposed expert commission should be as comprehensive as possible. It should contain nominees of the Powers entitled to reparations, of the United States, of Powers which took no part in the late war, and of Germany herself. Great Britain would, however, be pleased to consider any alternative proposal which the French Government might like to make; and, while preferring that the several Governments should bind themselves in advance to recommend the acceptance of the findings of the experts to the Reparation Commission, would be content that the functions of the experts should be advisory only.

THE OCCUPATION OF THE RUHR.

The British Government has never concealed its view that “the Franco-Belgian action in occupying the Ruhr, quite apart from the question of expediency, was not a sanction authorised by the Treaty itself.” It would, however, be quite willing that this, or any other difference

respecting the legal interpretation of vital provisions of the Treaty, should automatically be referred to the International Court of Justice at the Hague or other suitable arbitration.

It was clearly incumbent upon Lord Curzon to endeavour to reconcile this view with the fact that on two former occasions, Great Britain had joined in presenting ultimatums threatening such occupation, and that she actually participated in the occupation of Düsseldorf, Duisburg, and Ruhrort in March, 1921. The note, which devotes several paragraphs to this point, argues that these actions were never claimed to be in pursuance of the Reparation Clauses of the Treaty, but represented a threat of further occupation of Germany, “just as they might have threatened her with a renewal of war, for her failure to perform her Treaty obligations, some of which had no connection whatever with Reparations. Moreover, the Treaty would not have stipulated for the reoccupation of the left bank of the Rhine in the event of German default, “if the Allies had already an unlimited right to occupy any German territory under another clause of the Treaty.”

The French argument that the occupation of the Ruhr was undertaken in order to create the will to pay is countered by the statement that the will to pay is useless without the power. The British view is that this power to pay is

likely to be rapidly diminished, and in the end extinguished altogether, by a continuation of the occupation with its stranglehold on the most important centre of the most productive and the most highly and delicately organised of German industries.

German policy in 1871 provides no parallel, as occupation of certain districts of France was expressly stipulated for in the Preliminaries of Peace. Moreover, French payments then were but one thirty-third of those now demanded of Germany, and credit facilities were obtainable abroad.

Germany has, on the other hand, suffered from a complete inability to obtain foreign loans, arising to a large extent from the long period which elapsed before her reparation liabilities were defined, and the world-wide uncertainty as to her ability to discharge them.

The British Government regrets that “nothing tangible is suggested which would hold out any hope of the occupation being brought to an end, even when the avowed object of breaking Germany’s will to resist has been attained.” To maintain the occupation indefinitely would be to disturb international peace and the good understanding upon which peace depends in the sense of Art. 11 of the Covenant of the League of Nations.

INTER-ALLIED DEBTS.

Great Britain adheres to her policy of “limiting her total claim against her Allied debtors and Germany together to the amount necessary to cover the British debt to the United States,” which, on a 5 per cent. basis, represents a present value of 14.2 milliards of gold marks. The Allies, however, should first agree upon—the maximum sum which they can reasonably hope to recover from Germany. When such an agreement has been arrived at, H.M. Government will be prepared (provided that the settlement is such as to make the German obligation a reasonably good asset) to write down, with due regard to the different circumstances of the respective debtors, the Allied debts owing to them, to an amount representing the difference between the British share of the revised German obligation and the British debt of 14.2 milliards to the U.S. Government.

Payment might even be accepted in the form of the new German obligations.

The Note protests against any distinction being made between debt owing from one Government to another, and debt owing by that Government to the private citizens of the other. The carrying out of the redemption of the French Treasury bills held by Great Britain remains “an obligation which cannot honourably be repudiated.”

French Reply of August 20th.—M. Poincaré, in his reply to the British Note, asserted that the French Government stood for the strict execution of the Treaty, as otherwise “the whole foundation of the new Europe would be overthrown. The French action in the Ruhr was undertaken in accordance with the terms of the Treaty, and a long series of precedents are cited in order to prove that the British Government itself had previously

held this view. Faced by British inconsistency on the one hand, the French met with passive resistance from the German Government on the other. This was clearly illegal under the Treaty, for what, after all, did the occupation of the Ruhr amount to?

C'était, en un mot, un arrangement amiable, une collaboration pacifique que nous offrions très sincèrement à l'Allemagne en entrant dans la Ruhr.

But Germany refused to regard it as such, and undertook a resistance which was more expensive to her than the fulfilment of her Treaty obligations. All annexionist aspirations are rigorously denied; but France remains adamant on the question of withdrawal.

Nous sommes tout disposés, lorsque la résistance aura cessé, à transformer progressivement le caractère de l'occupation et à assurer, d'accord avec les alliés, le contrôle des gages détenus. Mais nous n'évacuerons pas la Ruhr contre de nouvelles promesses, et ce sont des paiements que nous voulons.

There can be no question of referring the Ruhr dispute to the International Court of Justice:

Nous n'avons qu'à invoquer l'opinion précédemment émise par le Gouvernement britannique lui-même.

As to German capacity to pay, no compromise can be considered for a moment. After all, the essential question is that of German will to pay. Moreover, the Reparation Commission is the proper body to which all such questions should be referred.

Finally, the repayment of Inter-Allied debts is dependent upon payment of Reparation by Germany.

Tout en reconnaissant notre dette, tout en ne songeant pas à la laisser impayée, nous sommes donc forcés de dire que nous ne pouvons la payer qu'après avoir reçu ce que nous doit l'Allemagne.

This note of M. Poincaré's made it sufficiently apparent that a complete deadlock had been reached, although the **Belgian Reply of August 27th** was in some ways more promising. It dealt very effectively with the real nature of Belgian priority as a sort of first mortgage, in reply to Lord Curzon's argument that it had "operated to give Belgium an increasingly disproportionate share of actual receipts up to date." On the question of the Ruhr occupation, however, it contained a significant passage:—

The Belgian Government, therefore, could not admit that the intention should be imputed to it, even indirectly, of prolonging this occupation indefinitely, if not in perpetuity, or of refusing to examine the suggestion of the British Government relative to the putting into operation in Germany, under an inter-Allied supervision, of certain productive pledges, since the Belgian Government has received no precise information with regard to them, is ignorant of the nature and possible yield of those pledges, and sees itself compelled, in default of agreement between all the Allies on that point, to maintain the sole guarantee which it has taken.

It suggested, however, that the time had come for "amicable and discreet conversations between the Allies."

On September 19th, Mr Baldwin and M. Poincaré actually met in Paris, and the conversation seems to have been at least "amicable," for it was announced, in an official communiqué, that

they were happy to establish a common agreement of views and to discover that on no question was there any difference of purpose or divergence of principle which might impair the co-operation of the two countries.

In reality, however, an agreement on the fundamental questions was as far off as ever, though the Corfu crisis had shown the weakness of divided counsels in handling European problems, and the need for an entente was being widely canvassed.

The End of Passive Resistance.

The German Government, meanwhile, was faced with all the consequences of a really disastrous fall in the mark exchange, and was attempting to prepare the way for a new bank of issue, and a readjustment of taxation. Moreover, the Separatist movement in the Rhineland was, thanks to French support, at this moment becoming something of a menace to German unity. Under these conditions, Dr Stresemann, the German Chancellor, announced that Government assistance could no longer be given to finance passive resistance in the Ruhr. In reply, M. Poincaré himself adopted a passive attitude, waiting for deeds, not words: while the economic and financial confusion of Germany grew steadily worse confounded.

On October 23rd, General Smuts, who was in London

at the time, spoke out strongly against the policy of the French Government, and declared that Europe was back in August, 1914. "It is again the scrap of paper. Once more a great instrument of European settlement has been broken."

IX. THE EXPERT COMMITTEES.

At this juncture there were signs that the United States Government were alive to the needs of a European settlement. As early as December, 1922, Secretary Hughes had suggested in a speech at Newhaven that a conference should be held, with American participation, on Germany's capacity to pay. After a speech by Mr Baldwin, in which he put forward the alternatives of a conference of Governments or an inquiry under the Reparation Commission, pourparlers were opened between the British and American Governments.

This time, however, M. Poincaré accepted—though under certain rather far-reaching conditions. It must be a conference of experts, not principals: it must be appointed by, and held under the auspices of, the Reparation Commission: only the *present* capacity of Germany to pay is to be examined: and there must be no reopening of the question of Germany's total liability of 132 milliard gold marks. The result of these limitations was that President Coolidge was not prepared to take an official part in the conference, but stated that he would have no objection to Americans serving on the Commission in their private capacity if invited to do so.

Meanwhile, however, an atmosphere more favourable to the proposed conference was rapidly being formed. Italy and Belgium alike rallied to the British draft invitation to the United States Government, and M. Poincaré himself suggested a rather liberal interpretation of what he meant by *present* capacity ("réparations actuelles"). Under these circumstances the Reparation Commission, on November 30th, voted unanimously for the appointment of two committees, on which Allied and Associated Powers exclusively were to be represented, in order to deal respectively with the Budget and currency problem in Germany, and with the export of German capital. The terms of reference were thus quite wide, and the fact of American participation—even though unofficial—greatly increased the hopes of a settlement. The two committees were appointed in December, and actually began operations towards the end of January. They were composed

First Committee.

(BUDGET AND CURRENCY.)

Chairman: General Dawes (U.S.A.).

Members: Mr O. D. Young (U.S.A.), Sir R. Kindersley and Sir J. Stamp (Great Britain), M. Parmentier and M. Allix (France), Dr A. Pirelli and Professor F. Flora (Italy), Baron M. Houtart and M. E. Francqui (Belgium).

Second Committee.

(GERMAN ASSETS ABROAD.)

Chairman: Mr R. McKenna (Great Britain).

Members: Mr H. M. Robinson (U.S.A.), M. L. Atthalin (France), Dr M. Albert (Italy), M. A. E. Janssen (Belgium).

Within a little more than two months the Experts completed their arduous task, and on April 9th last the publication of their Report inaugurated a new period in the history of the Reparations question.

THE MARK EXCHANGE.

PAYMENTS MADE BY GERMANY.

latest complete and detailed statement of accounts issued by the Reparations Commission is that which brings the accounts between Germany and the Allies up to the end of 1922,* that is, just before the Ruhr occupation. Germany's debt may be divided into (a) obligations in connection with the Occupation, Control Commissions, &c., plus money lent to Germany under the Spa Agreement for additional food for Ruhr miners, and (b) the debt fixed in 1921. The charges against Germany under (a) amount to 336,000,000 gold marks, and the receipts to 2,624,000,000, leaving a deficit of 912,000,000. The assessments under (b) are 132,000 million gold marks, plus 624 million gold marks in respect of the Allies' loans to Belgium, but the value of State property in ceded territory amounting to 2,554 million gold marks is regarded as a set-off against the capital of the debt, and reduces the total to 135,070,000,000 gold marks.

Putting the two sets of accounts together, we find that Germany had paid up to the end of 1922:—

	Millions of Gold Marks.	Million £ (Gold).
In cash	1,817½	90.9
" kind	3,556	177.8
" State property in ceded territory	2,554	127.7
	7,927½	396.4

In addition Germany had contributed to the local expenses of the Armies of Occupation in paper marks, or services (billeting, use of barracks, &c.), a sum which is equivalent to between 1,600 and 2,000 million gold marks. This makes a total of nearly 10,000 million gold marks in all. The accounts also mention the payment by Germany of 3,836 million gold marks in respect of food and raw material supplied by the Allies to Germany in 1919. But as this is a *purchase* by Germany of necessities it should not be added to the German payments. If, however, we are trying to estimate the burden on Germany's finances, we should add the sum paid to the Clearing House for *debts*, which amount to 620 million gold marks.

An analysis of the deliveries in kind and of the property in ceded territory is as follows:—

VALUE OF DELIVERIES IN KIND.

(In Millions of Gold Marks.)

Reparation Recovery Act	183
Ship	707
Inland water craft	29

* Statement of Germany's Obligations under the Heading of Reparations, &c., at December 31, 1922. Stationery Office. Price 2s.

The cost—other than that met by payments in paper marks—of the Armies of Occupation (excluding that of the U.S.A., the cost of which is 1,072 million gold marks) and other charges for control, commissions, &c., amounts to 2,840 million gold marks, of which all but 400 millions is for the armies. This leaves 4,000 million gold marks for Reparation, which was distributed among the Allies as follows:—

WHAT THE ALLIES HAVE RECEIVED.

(In Millions of Gold Marks.)

	Kind (including Reparation Recovery Act).	Cash.	Property in Ceded Territory.	Total Distributed to Allies.	Repayment of Coal Advances of Occupation, &c.	Net Receipts.
Great Britain	512	637	302½	1,449½	1,036½	113
France	1,345	142	302	1,789	1,500	289
Italy	242½	½	..	243	35½	207½
Japan	9	..	59	68	..	67
Belgium	643½	1,075½	..	1,719	264	1,455½
Poland	14½	..	1,776	1,790½	nil	1,790½
Greece	11	..	..	11	..	11
Roumania ..	10	..	..	10	..	10
S. C. Slovene	150	½	..	150½	..	150½
Czechoslovak	15	..	6	21	..	21
Portugal	4½	..	..	4½	..	4½
Total ..	2,957	1,855½	2,144	6,956½	2,840½	4,116½

Thus France's expenditure on the Army of Occupation is not quite met by her receipts in cash and kind, her net profit being entirely in respect of the Saar mines. Great Britain has a net surplus, thanks to the Reparation Recovery Act, but there is, of course, room for great difference of opinion as to whether this alleged British surplus is paid by Germany at all or whether it is not rather money found by the British consumer of German goods.* Belgium shows a large surplus through cash receipts under her priority rights, and Poland comes best of all out of the whole business, as she has no excuse for charging her military expenditure against Germany.

This leaves 980 million gold marks undistributed—this figure representing the value of property ceded to Danzig, and also the difference in value between the total value of goods or property credited to Germany and the value reckoned in making the allocation to the Allies. Thus the Saar is regarded as worth 400 millions from Germany's point of view, but 300 millions to France. Similarly, the ships are credited to Germany at 707 millions, but only 316 millions when allocated to the Allies. These book-keeping transactions are only of importance as affecting the sharing of the spoils among the Allies.

The half-yearly statements have since been issued by the Reparation Commission, showing that at June 30, 1923, Germany had made total payments amounting to 8,213,670,000 gold marks, of which 2,718,888,000 gold marks was in Suspense Accounts. At December 31st last the total had risen to 8,411,399,000 gold marks, of which 2,719,093,000 gold marks was in Suspense Accounts. The December 31st total included 2,613,611,000 gold marks for the repayment of the cost of the armies of occupation and the control commissions (without taking into account the 1,071,805,000 gold marks which is the estimated cost of the United States Army of Occupation), in repaying the advances made to Germany for purchase of coal after the Armistice and other charges distinct from Reparations. Out of the amount which has actually been distributed among the Allies, France has received 1,804,192,000 gold marks (143,995,000 gold marks in cash, 1,358,155,000 gold marks in kind, and 302,042,000 gold marks in ceded property). Out of this total, however, the amount actually applicable to Reparation payments down to the end of 1923 was only 189,777,000 gold marks, the balance (including the repayment of 1,373,496,000 gold marks in respect of the cost of the army of occupation) having been disposed of in other directions.

* The rate of levy on German imports was reduced at the end of February from 20 to 5 per cent., the German Government having refused for several months to reimburse German exporters in respect of this levy.

The amounts distributed to the various Allied Powers during 1923 were as follows:—

	Gold Marks.
France	13,389,000
Belgium	12,760,000
Great Britain	168,358,000
Italy	155,138,000
Serbia	111,815,000
Roumania	28,770,000
Czechoslovakia	1,963,000
Greece	9,551,000
Poland	415,000
Portugal	10,440,000
Japan	390,000
	507,989,000

The amount actually paid by Germany during the year was 470,913,000 gold marks (of which 462,480,000 gold marks was in kind and the rest in cash). The difference between this total and the total distributed was due to the fact that 37,076,000 gold marks was taken from the accounts previously in suspense.
