The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME XCVIII

BEING FROM JANUARY TO JUNE, 1924, INCLUSIVE.

THE MONEY MARKET.

MONEY requirements for balance-sheet purposes at the end
of the year proved to be larger than the market expected
would be the case. Heavy borrowing from the Bank of
England was consequently necessitated right up to the
turn of the year, the total being estimated at more than
£40,000,000. Since the turn of the year the market has
consequently been flooded with short money, and overnight
loans have been obtainable at nominal rates, $\frac{1}{2}$ per cent.

sometimes being accepted. The coming week will perhaps show the effect of the heavy repayments due to the Bank, coupled with payments for new Treasury bills, but during the past week discount rates have been rather unduly depressed by the cheapness of money. The fine three months' bill rate has not been better than $3\frac{1}{8}$ per cent., while March Treasury bills have been taken by the banks at $2\frac{1}{2}$ per cent. On Thursday longer dates were inclined to harden slightly on the very weak tendency of the American exchange. Yesterday the Treasury Bills went at a slightly lower rate than was anticipated.

	Jan. 4, 1924.	Dec. 28, 1923.	Dec. 21, 1923.	Dec. 14, 1923.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decline of £622,000 in the note circulation, while the coin and bullion increased by £38,600, and the Reserve therefore rose by £660,600. The heavy market borrowing over the year-end was reflected in an increase of £27,893,200 in Other securities (this comparing with £16 millions in the corresponding week of last year), while Government disbursements presumably accounted for an increase of £2,657,500 in Government securities and a fall of £2,247,500 in Public deposits, with the result that Private deposits exhibited the unusual expansion of £33,413,300. The expansion of the liabilities produced a fall of 2.5 in the proportion at 12.3 per cent. There was a reduction in the currency notes circulation of £6,378,300 to £292,691,900, which includes £1,427,900 for notes called in, but not yet cancelled. The fiduciary issue is £241,814,000, or £6,376,900 below the new maximum, which is based on the highest of 1923, and becomes £248,190,900.

THE STOCK MARKETS.

Although the year closed with a slightly more hopeful feeling on the Stock Exchange, the subsequent weakness in American exchange exercised a depressing influence after the New Year holiday. Gilt-edged stocks were generally dull, Indian and Colonial being least affected. Foreign markets were irregular, French bonds showing weakness in sympathy with the decline in the franc's sterling value. Home Rails remained stagnant under unfavourable gilt-edged influences. Little business has been done in industrial shares, and prices have varied to a very slight extent, selling being somewhat in evidence, however, in textiles and tobacco shares. The Kafir market has displayed some amount of activity, and among metals tin has been a bright feature. Rubbers have been neglected, but tea shares have received a certain amount of attention from buyers.

THE COMMODITY MARKETS.

Holiday influences have continued to prevail in most markets, and business has been restricted. In the cotton trade demand in most quarters has been on a limited scale. Wool perhaps is one of the exceptions to the general rule, and our correspondent reports "quite a nice steady turnover in wool, tops, and yarns." Jute took a downward turn, but rubber was steady. Wheat moved upward on dearer freights and better demand. The coal market at Cardiff is quiet, and the same remark applies to the pig-iron market and dealings in manufactured iron and steel. Tin and copper were firmer. There is no marked demand for sugar, but the quotations are firm, while rice is steady. Linseed and linseed oil maintain their position, but the hide market is a shade weaker.

FOREIGN EXCHANGES.

In the foreign exchange market interest during the week has been concentrated on the sharp movements in dollars and French francs. From a closing rate of \$4.34 $\frac{1}{2}$ on the 28th, the dollar at first fell away quietly, ending the year at \$4.32 $\frac{1}{2}$. By the 2nd it had reached \$4.29 $\frac{1}{2}$, but on Thursday there was a sharp drop, and at one time the

rate stood as low as \$4.25 $\frac{1}{2}$. In the afternoon there was a recovery on New York demand, and the rate closed at \$4.28 $\frac{1}{2}$. Yesterday morning it opened from New York at \$4.30, but fell away quickly here on a weak market to \$4.28 $\frac{1}{2}$. No specific explanation has been offered for these movements, which, in the main, are attributable to ungrounded fears of the effects of a Labour Government in this country. At $\frac{1}{2}$ cent. per month above spot, the forward rate is unchanged on the week. The Paris rate, after remaining fairly steady until Wednesday, began then to move up, and at one time on Tuesday reached the new record figure of 87.50. This was followed by a recovery, but yesterday morning the rate was again at 87.50, as compared with 84.65 a week ago. A growing realisation in France itself of the Government's financial difficulties and an increasing pessimism in New York as to the future of the franc account for this movement. Brussels has followed Paris, but more slowly than usual, from 96.55 on the 28th to 98.70 yesterday morning. Forward quotations in Paris were 8 centimes, and in Brussels 4 centimes per month above spot. Italy, as usual lately, has resisted this new wave of depreciation, the lira being quoted yesterday morning at 99 $\frac{1}{2}$, as compared with 100 $\frac{1}{2}$ a week ago. Amsterdam, in sympathy with the dollar, has dropped from 11.41 $\frac{1}{2}$ to 11.35 $\frac{1}{2}$, Stockholm from 16.42 to 16.24 $\frac{1}{2}$, Vienna from 309,500 to 306,000, and Riga from 22.36 to 21.90, while Switzerland has also moved against us from 24.85 $\frac{1}{2}$ to 24.67 $\frac{1}{2}$. Of the other Northern countries, Norway has depreciated further, from 29.47 $\frac{1}{2}$ to 29.92 $\frac{1}{2}$, while Copenhagen has slightly improved from 24.47 to 24.44 $\frac{1}{2}$, and Helsingfors shows a sharp drop from 175 $\frac{1}{2}$ to 173. It should be noted that as from January 1st the gulden has been introduced as sole legal tender in Danzig, to be maintained at a stable ratio of 25 gulden to the £ sterling. Madrid has depreciated again from 33.40 to 33.59 $\frac{1}{2}$. In Central Europe the German mark has weakened a little from 18 billion to 19 $\frac{1}{2}$ billion, probably as the result of the Government's action in issuing renten-mark treasury bills, which would seem to imply a new threat to the stability of the Rentenmark currency. Warsaw, at 27 $\frac{1}{2}$ million, shows a further slight depreciation. Prague has moved against us, from 149 to 148. Bucharest, at 850, is about the same as a week ago. Athens remains nominal at about 210. In the East the rupee has shown little change at about 15 $\frac{1}{2}$ d, but the yen has moved down from 2s 1 $\frac{1}{2}$ d to 2s 1 $\frac{1}{4}$ d. The silver market has been particularly quiet, even for the holiday season, with prices tending very slightly upwards. Hong Kong, at 2s 4d, is unchanged, Shanghai at 3s 3 $\frac{1}{2}$ d is $\frac{1}{2}$ d cheaper. In South America Rio has moved from 5 17-32d to 5 $\frac{1}{8}$ d, Buenos Ayres from 39 $\frac{1}{2}$ d to 40 $\frac{1}{2}$ d, and Montevideo from 43 $\frac{1}{2}$ to 44 $\frac{1}{2}$ d. Valparaiso, on the other hand, has depreciated slightly from 39.80 to 40.30.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the nine days ended December 31st:—

(000's omitted.)			
EXPENDITURE.		REVENUE.	
Supply Services	10,372	From Revenue	10,996
Interest, &c., on Debt	2,013	Amount borrowed	2,804
Sinking Fund	600		
Sundries	891		
Increase in balances	24		
	13,800		13,800

Revenue during the nine days ended December 31st amounted to £10,996,000, as against £11,411,000 in the eight days ended December 31, 1922. Customs yielded £2,015,000, as against £1,426,000, and Property and Income-tax £3,485,000, and Super-tax £670,000, against a combined revenue of £5,557,000 in the corresponding period. The week's operations increased the National Debt by £2,804,000, and caused the following changes:—

(000's omitted.)			
Bank of England Advances ..	1,750	Public Departments ..	4,980
Treasury Bonds	473	National Savings Certificates ..	150
Treasury Bills	3,641	Sundries	110
Telegraph Money	2,150		
	8,014		8,210

The floating debt was increased by £480,000 to £860,452,500.

FINANCIAL YEAR, 1923-24 (April 1 to December 31, 1923).

	£		£
Total Expenditure ..	594,179,083	Raised by Revenue ..	533,285,062
		Net Borrowings	56,834,961
		Decrease in Balances ..	4,059,060
Total	594,179,083	Total	594,179,083

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Ulster Bank, British Overseas Bank, Western Australian Bank, Stoll Picture Theatre (Kingsway), and Stoll Film Company. At the meetings of Stoll Picture Theatre (Kingsway) and Stoll Film Company Sir Oswald Stoll protested against the excessive showing of foreign films by exhibitors.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

BUDGET PROSPECTS AND THE COMING SESSION.

WHATEVER Government may be in power next April, its political fortune will largely be determined by the Budget it produces. The state of the nation's finances are therefore of particular interest, and will be followed in the next three months with more than usual attention. The suggestion has been made that the figures for the financial year will show a deficit, but this assumption is due to the state of the accounts at the moment. Our own view is that the completed accounts are likely to show a surplus. A week or two ago we suggested that this surplus might amount to £40,000,000, but the nine months figures now available suggest that £20,000,000 may be a safer forecast. The situation can best be seen by comparing on the one hand the Budget estimates for the current year with the results achieved to-day, and on the other last year's final figures, with the receipts and expenditure for the first nine months of that year. In the case of revenue, the comparison works out as follows:—

Revenue (in Million £).

	Last Year. (1922-23. Actual.)	Current Year (1923-24) Estimates.	Nine Months' Results.	
			1922-23.	1923-24.
Customs and Excise ..	280	260.8	216.5	204.4
Estate duties	57	52	43.8	41.4
Income & Super Taxes ..	379	319	187.6	163
E.P.D.	2	12	1	..
Other taxes	57.8	57.1	33	36.6
Post Office receipts ..	53.2	52.6	39.4	37.8
Interest	10	12.5	8.3	10.6
Miscellaneous & special receipts	75	52.5	56	39.5
	914	818.5	585.6	533.3

The first point that emerges from this table is that the results achieved to date have not justified the Chancellor's assumption that he would get £12,000,000 from arrears of excess profits duty, and we may, perhaps, write off this item as a loss. Income-tax and super-tax receipts are a little more than their due proportion of the year's total. Moreover, a considerable number of payments were made last July at the rate of 5s in the £, compared with 6s in the previous year, whereas the January payments will be made at 4s 6d, compared with 5s a year ago; it may therefore be expected that the receipts in the ensuing quarter will compare more favourably with last year than those up

to date, and will yield a surplus over the estimate. It is also probable that there will be a surplus under the heading of Customs and Excise, particularly if trade continues to improve in the next three months. Other items are all up to standard, and unless something untoward happens, the year's receipts look as though they would close at £825,000,000 to £830,000,000.

The corresponding table for expenditure shows the following results:—

Expenditure (in Million £).

	Last year (1922-23) Actual.	Current year (1923-24) Estimates.	Nine Month's Results.	
			1922-23.	1923-24.
National Debt—				
Interest	302	310	262 $\frac{1}{2}$	270
Sinking Fund	22	40	16 $\frac{1}{2}$	32
Total	324	350	279	302
Consolidated Fund ..	29 $\frac{1}{2}$	30 $\frac{1}{2}$	14	17 $\frac{1}{2}$
Defence	111	122	79	69
Civil Services	287	252	174 $\frac{1}{2}$	164 $\frac{1}{2}$
Revenue Departments and Post Office	61	62	42 $\frac{1}{2}$	41
Total	812 $\frac{1}{2}$	816 $\frac{1}{2}$	589	594

This table shows that expenditure is already larger than for the corresponding period of last year, but the increase is entirely under the head of debt, the reason for this being that our American debt payments are now included, and that the whole of this for the current 12 months has now been paid. As this amounts to over £30,000,000, and as payments on the home debt for the fourth quarter of last year were only £45,000,000, the figure for debt and sinking fund should square with the estimate. As to the other items, the anticipated increase of £11,000,000 under the heading of Defence shows no sign of materialising. On the contrary, the figure is well below that of last year, and we see no reason for doubting that very substantial savings will be made on the estimate under this head. The Civil Service figures include so many variable items that it is very difficult to forecast with confidence, and the task is complicated by the fact that these figures are the amounts issued from the Treasury and not actual expenditure. It certainly looks as though the estimate may be exceeded under this head, but it should not rise as much as the saving under the heading of Defence. On the whole, we should be disposed to anticipate that expenditure for the year will be at least £10,000,000 below the Budget estimate.

These figures suggest that with proper care and continued economy it should be possible to draw a Budget for next year without involving any increase in taxation. The relevant considerations are that the remissions of taxation made last April, which did not take full effect at once, are expected to cause an additional loss to the revenue in the coming financial year of £23,000,000, which, if our forecast is correct, would put the balance just on the wrong side. The Chancellor will, however, have to take into account that he will also lose under the heading of "Special Receipts," which appear in the present Budget to the extent of £40,000,000. It is almost certain that he will lose £10,000,000 under this head, and he may lose as much as £20,000,000. Leaving out of account, therefore, any possible elasticity in the yield of the income-tax and Customs duties, the Chancellor can probably not count on more than £780,000,000 of revenue against £825,000,000 this year. It should not be an impossible task to confine expenditure within this figure, for though under last year's Finance Act the Sinking Fund will rise to £50,000,000, as against £40,000,000 this year, it ought to be possible to find £35,000,000 of additional economies in the Supply Services, especially since the Supply figures still include certain items of "Special Expenditure" which are the legacy of the war. To do this, however, expenditure will need to be carefully watched, for in these days it is considerably harder to make an economy of £10,000,000 than it was to reduce expenditure by £30,000,000 or £40,000,000 in the extravagant days of two or three years ago.

In setting out these points, we are not, of course, forecasting a Budget, but are indicating the more or less

fixed points of the financial situation which will confront the Chancellor in April. Briefly, it amounts to this—that, taking a conservative view of the probabilities, next year's Budget can be balanced only by continued economy in expenditure. There is no margin available for new kinds of expenditure, unless either the revenue authorities can see their way to forecast an increased yield from existing taxes or additional taxation is imposed.

These figures have a particular bearing on the coming session, if the course of events in the next few weeks should bring the Labour Party into power. In view of the debate last year, and of the importance attached by Labour candidates at the recent Election to the task of relieving the burden of the war debt, it is not to be expected that a Labour Chancellor would tamper with the sinking fund. On the other hand, everything that Mr Ramsay MacDonald has said or written since the Election has made it clear that he realises the practical impossibility of preparing large schemes either for a Capital Levy or for Nationalisation in time to present to the House before the Budget. There is, of course, no prospect in any case of his commanding support for such large schemes in the present House, but the practical difficulty to which we have referred makes it extremely improbable that he will attempt to present them to the House this session. The question of immediate interest, therefore, is what minor changes, if any, he might see his way to embody in the Budget. His party would like to see, and would secure considerable Liberal support for, measures involving the removal of the thrift disqualification in old-age pensions and pensions for widows with dependent children. In the absence of complete returns of the 1921 Census, the cost of the former is still problematical, but might amount to over £15 millions. The cost of widows' pensions depends upon the rate granted. On a fairly generous scale this reform might easily cost a similar sum; but the Budget situation shows that if anything is to be done on these topics this year, they will have to commence on a small scale. Again, the Labour Party would like a readjustment of taxation which would transfer some, at all events, of the tea and sugar duties to direct taxation. It is possible that something might be done to relieve the food duties if the Labour Party are prepared to go back upon Mr Baldwin's undertaking of last April to reduce the corporation tax this year. But no considerable change in our tax system seems at all likely before the Budget, and, in our view, the Labour Party is much more likely to put through something like the Budget which is already in preparation on the quite reasonable ground that it is an interim measure. If our reading of the omens is correct, the Labour Party will follow the precedent of Labour administrations in some of our Dominions and carry on during a first session in as non-contentious a manner as possible, with a view to gaining experience, and presenting their considered programme in their second session. Even the more extreme wing of the Party are likely to recognise the necessity for this amount of moderation, which would have the advantage, from the party point of view, of demonstrating the ability of Labour to carry on the Government.

Such a procedure has some bearing on the hotly debated question of whether a Labour Prime Minister at the head of a minority party would have the right to ask the King to dissolve Parliament. Both views on this question seem to us unsound if carried to an extreme. If the House is composed of a number of minority parties, it clearly cannot be held incumbent upon the King that he must send for all possible Prime Ministers before agreeing to a dissolution. On the other hand, Mr MacDonald himself recognises that a minority party put into power primarily to test the feeling of the House as to whether it can command continued support would not be justified in asking the King for a dissolution. But the position would be very different if a Labour Party had been in office for some time; had secured support for a moderate programme; and was desirous of strengthening its mandate to develop legislation along the lines already begun. In any case, the longer a House has been sitting, the less certainly can it be regarded as reflecting the wishes of the country. It is an illustration of the advantage of our unwritten constitution that every case of this kind should be settled on its merits. The age of a given House of Commons, the

indication from by-elections of the drift of feeling in the country, as well as the wishes of those who voted "no confidence" in the Government, are the chief relevant factors, and we have no doubt that, if the case arises, the King, in accordance with our constitutional traditions, will deal with the question without bias, and with wise and sound judgment.

FRANCE AND CZECHOSLOVAKIA.

AFTER some months of negotiations, a treaty between France and Czechoslovakia seems likely to be concluded in the near future. This news has not received very favourable comment in the British Press, and is not in itself exactly calculated to inspire confidence in this country. Until the exact terms are disclosed it is, of course, difficult to pass a final judgment on the policy which has recently been decided upon between Dr Benes and the Quai d'Orsay. In a letter to the *Times* on Wednesday last, the Czechoslovak Minister in London described the policy of his country as belonging "to the dispensation connected with the League of Nations," and suggested that "a political convention re-affirming respect for the Treaties on which the European order is based" is probably in contemplation. From this angle any fears that might be expressed as to the terms of the proposed new treaty would appear to be much ado about nothing. But even if the possibility of a military alliance be entirely ruled out, the very fact of the apparent necessity for a special political understanding between the two countries at this juncture is not without significance. France is, of course, the greatest military power in the world to-day, and the new Czechoslovak Republic maintains a large standing army, trained by French officers, and commanded by a French general. For these reasons alone this latest phase of Czechoslovak policy deserves more than a passing mention.

Some eighteen months ago Dr Benes, in an interview with a special correspondent of the *Economist*, stated that Czechoslovakia would only enter into an alliance in which the direct identity of interest of all the parties was perfectly clear. The principle of "give and take" was therefore to be rejected as unsafe and unwise. In accordance with this perfectly sound doctrine the various treaties which together constituted the "Little Entente" were directed towards the maintenance of the settlement arrived at in the Treaty of the Trianon, and envisaged the application of sanctions in the event of this being challenged by the Magyars. It was perfectly clear that Czechoslovakia, Jugoslavia, and Roumania had identical interests in the Hungarian question, and the Little Entente was a special agreement with these particular interests in view. On the question of Bessarabia, for example, Czechoslovakia was not committed thereby, nor were any undertakings of assistance entered into between the three parties in the event of an Italo-Serbian conflict. In a word, it was an agreement *ad hoc*, and it is interesting now to recall that in no country did this new policy, when initiated in 1920, receive so unfavourable a reception from the Press, of almost all shades of opinion, as in France. The most favoured client States of our late Ally were then Poland and Hungary, and Czechoslovakia had a serious bone of contention with both of those countries.

Since that time, however, much has happened. During one of the many serious "crises" in Franco-British relations last year, Dr Benes, who had already proved himself to be a regional statesman of the highest order, tried to perform the difficult rôle of a mediator. The West European Press resounded with his praises—but, to all outward appearance, at any rate, nothing further was gained by his efforts. It was, perhaps, significant, how-

ever, that France soon adopted a pro-Czech attitude in the question of Hungarian Reparations; while, a little later, Dr Benes was elected a member of the Council of the League of Nations. At this stage in the proceedings, negotiations commenced between France and Czechoslovakia with a view to the conclusion of a political treaty.

The French view of the proposed new treaty was summarized in the *Times* of December 28th last by its Paris correspondent. The opening sentence is significant. "The new constitution of Europe," we read, "as fixed by the various post-war treaties, must be maintained, even though many of the areas affected do not directly concern France or Czechoslovakia." Nothing, perhaps, could make clearer the essential change which has apparently taken place in the foreign policy of Dr Benes. Whatever else is in doubt, therefore, one thing appears to be reasonably certain. Czechoslovakia is to make its *début* in "high" politics as a partner of France.

This proposed treaty, however, opens up a number of interesting possibilities to which no more than a passing reference can be made in this place. Czechoslovakia, the creation of all the Allies, no less than of its own people, wishes to become a Great Power, and, with this end in view, adopts a policy which will certainly prove distasteful to at least three million of its own nationals, the powerful German minorities of Bohemia, Moravia, and Silesia. It is hinted that both countries must endeavour to prevent the restoration of the Hohenzollerns; while "the co-operation of France and Czechoslovakia in matters concerning the greater European problems must be arranged on a footing of equality." It will be interesting to see, if this forecast is correct, how this "equality" will work in actual practice.

The new Czechoslovak Republic has become in some sense, the centre of the modern Slav world. The Pan-Slav idea is strong and deeply ingrained in the Czech people, and Slav solidarity has been the watchword of many of its leaders for generations past. It is not surprising, therefore, that the Government should follow events in Russia with the greatest attention, and it is worth recalling that President Masaryk is himself the author of one of the best modern books on the Russian people. Of recent years Prague has been the centre for most of the more democratic of the Russian *émigrés*, and now boasts of a Russian, as well as a Ukrainian University, in addition to a number of other Russian educational institutions. The Czechoslovak Government has been generous in its financial grants to these *émigrés*, and has succeeded at the same time in keeping on good terms with the Bolshevik Government. It is at least possible that the proposed new treaty is regarded by France as the opening of a bridge to the East, and it is believed that the policy advocated by M. Herriot, who, though a political opponent, is on the best of terms with M. Poincaré, has been gaining ground recently at the Quai d'Orsay. Whether an understanding between Russia and France is feasible in the immediate future it is at present impossible to say. It would certainly not be the first *volte-face* of M. Poincaré; and, in any case a close understanding with Czechoslovakia might well appear to be a desirable first step in this direction. We imagine, however, that the Soviet Government would have something to say on the matter, while any talk of this kind, or even of a Franco-Czech alliance, must be extremely disturbing to France's faithful ally Poland. These views, which are by no means improbable in themselves, are obtaining a certain amount of publicity, and cannot simply be dismissed as idle gossip. One point, however, is perfectly clear. On the major question of the restoration of Central Europe in general and Germany in particular, Dr Benes seems to have declared himself definitely on the side of France, and it is as well that this should be remembered in financial and other circles in this country.

OUR INDEX NUMBER—A YEAR'S PRICES.

A FURTHER upward movement in commodity wholesale prices has raised our Index Number by a further 39 points, and the total closes the year at 4580, which compares with 4264 at the end of December, 1922, an increase of 316 points, and with 4182, the lowest point of 1923, reached at the end of July. It will be recalled that in November there was a rise of 221 points, caused very largely by speculation in cotton, which drove prices up with a rush. Unfortunately, erroneous conclusions have been drawn in some quarters from this sharp upward movement. We observe that the *New York Journal of Commerce* in its issue of December 11th, in noting the rise in our Index Number, writes that it reflects "the conditions that have prevailed in Great Britain for some time past. There has been a growth of inflationist sentiment and a tendency to relax production, while Government funds have been wasted in unemployment bonuses. As a consequence, money media have been unduly increased, and commodities have been unduly decreased—the result being to invite prices forward." It is further stated that "unfortunately, Great Britain's agitators have succeeded in making larger headway with their bonuses, subsidies, and curtailment of output. The penalty has to be paid by the general consumer in the form of higher prices." The reply to these entirely misleading deductions is to be found in such figures of output as are available, such as coal, iron and steel—which show a steady improvement, and in the fact that an American commodity, namely raw cotton, was responsible for the bulk of the increase shown in the November Index Number.

In the table below we show the changes in the index number by groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	352	616	464	553	2668	116.6
" Dec., 1915	897	446	731	711	848	3634	165.1

" Sept., 1922	873	682	1116	699	818	4189	190.4
" Dec., 1922	861	706	1184	705	807	4264	193.8
" Jan., 1923	860	711	1205	739	808	4324	196.5
" Feb., 1923	847	746	1201	797	810	4402	200.1
" Mar., 1923	824	752	1178	840	797	4392	199.6
" Apr., 1923	858	752	1199	834	797	4440	201.8
" May, 1923	869	772	1166	818	785	4412	200.5
" June, 1923	815	773	1177	773	761	4301	195.5
" July, 1923	819	756	1115	744	746	4182	190.1
" August, 1923	828	762	1119	734	744	4188	190.4
" Sept., 1923	823	782	1214	732	745	4297	195.3
" Oct., 1923	823	777	1220	756	743	4320	196.4
" Nov., 1923	831	797	1393	770	749	4541	206.4
" Dec., 1923	853	815	1382	774	755	4580	208.2

Last month's increase is mostly accounted for by food-stuffs, both primary and subsidiary. Cereals, with the exception of rice, which rose a little, were practically unchanged, but meat prices advanced, partly, no doubt, owing to the spread of foot and mouth disease. In the second group tea fell a little, and there was a slight rise in coffee, but sugar was responsible for the upward movement in the total. In the textile group cotton prices have all reacted from the high levels of the end of November, and silk has dropped by 2s 6d per lb, but these declines have been offset by advances in wool, flax, hemp, and jute.

In the minerals section pig-iron and steel rails remain unaltered, but iron bars have advanced by 10s to £12 10s per ton. Coal is slightly higher, but the minor metals

have reacted after last month's advance. In the miscellaneous section the only changes are slight increases in oilseeds and tallow.

In the next table we set out the changes in each commodity's index number in comparison with that for the year 1922, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	78	— 11	Cotton, A.	193	+ 53	Copper	50	— 3
English	74	— 1	Cotton, B.	167	+ 44			
Flour	72	— 11	Yarn	172	+ 32	Minerals	77	+ 69
Barley	80	+ 6	Cloth	161	+ 32			
Oats	73	— 2	Wool, Eng.	146	+ 23	Baltic timber	103	+ 3
Potatoes	78	+ 3	Do Aust.	129	+ 11	Amer. timber	89	+ 1
Rice	119	+ 16	Silk	145	+ 18	Leather	59	— 17
Beef	83	— 10	Flax	125	— 2	Petroleum	92	— 16
Mutton	95	— 11	Hemp	50	+ 3	Oilseed	75	— 2
Pork	100	— 17	Jute	92	— 29	Tallow	83	+ 5
Cereals & meat	853	— 8	Textiles	1,382	+ 198	Indigo	87	— 26
Tea	141	+ 8	Pig-iron	107	+ 9	Crystals	85	— 4
Coffee	92	+ 2	Steel rails	75	+ 3	Rubber	15	— 1
Sugar, cane	137	+ 7	Iron bars	96	+ 15	Miscellaneous	755	— 52
Sugar, beet	101	+ 1	Coal, steam	136	+ 13			
Butter	101	+ 1	House coal	89	— 3	Total	4,580	+ 316
Tobacco	116	+ 1	Lead	228	+ 18			
			Tin	91	+ 20			
Other foods	815	+ 109						

The principal contributors to the increase in the total are sugar, which rose substantially in the first six months of the year, raw cotton, and cotton yarn and cloth, owing mainly to the spurt in November, and wool. The minerals group shows a substantial increase, which is fairly evenly spread over the list, but steel rails are unchanged on balance, and copper is a little lower, and stands but little above the basis figure. In the primary foodstuffs group movements have been mostly downwards on balance, with the exception of rice and potatoes, the latter having been at an exceptionally low figure at this time last year owing to the bountiful crop in 1922. A large decline is shown in the miscellaneous section, principally as a result of reductions in indigo, petroleum, and leather.

In the comparative table below we set out some actual quotations of a few of the leading commodities, giving the prices at the end of the past three years and at the end of each quarter of 1923:—

	End 1920.	End 1921.	End 1922.	1923.			
				End March.	End June.	End Sept.	End Dec.
Wheat—No. 1, North Man.	102/	55/6	53/6	48/9	49/3	50/	47/
Flour.....per 80 lbs	80/	46/	41/6	39/	39/	37/	36/
Potatoes.....per ton	£5	£7	£3 12/6	£3 10/0	£4	£6	£6 5/0
Sugar—B.W. I. Crystallised, per cwt.	63/	39/3	43/6	54/9	62/6	60/6	65/
Cotton—Middling Amer.	10 27d	11 11d	14 63d	15 18d	16 49d	16 95d	21 28d
Cotton—Yarn, 32's twist, per lb	27d	18d	21d	23d	24d	23d	28d
Wool—Southdown washed.....per lb	20d	17d	24d	24d	24d	27d	28d
Pig Iron—Cleveland G.M.B. No. 3, per ton	225/	100/	91/	127/6	112/6	96/6	100/
Steel Rails—Middlesbrough.....per ton	£25 10/0	£14	£9	£10 10/0	£10 10/0	£9 10/0	£9
Coal—Best Steam	42/	30/	27/	37/6	33/	29/	30/
Tin—Standard per ton	£205 15/	£170 12/6	£182 3/9	£213 5/0	£182 15/	£199 2/6	£232 11/3
Petroleum.....per 8 lbs.	27d	16d	13d	13d	12d	11d	11d
Oilseeds—Linseed and Rape.....per ton	£59 10/0	£39 15/0	£42 5/0	£45	£43 10/0	£41 15/0	£45
Soda Crystals.....per ton	£10	£7 10/0	£5 7/6	£5 2/6	£5 2/6	£5 2/6	£5 2/6

A comparison of latest prices with those of three years ago reveals some interesting changes. Foodstuffs, with the exception of sugar, show a very substantial reduction, raw cotton is very much higher, and wool has risen. Iron, steel, and petroleum show a very heavy decline, and coal is substantially lower, but tin is considerably higher than at any date given in the table. The closing prices of 1923 are mostly higher than they were three months ago, the principal exceptions being wheat and flour and steel rails.

The December advance in prices has raised the increase over the pre-war level from 77.0 per cent. to 78.6 per cent., as may be seen from the following table, in which the index number for the end of July, 1914, is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1922	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
Mar., 1923	143	214	191	181	144	171.2
June "	141	220	191	167	137	167.7
July "	141	215	181	160	135	163.1
August "	143	216	182	158	134	163.3
Sept. "	142	222	197	158	134	167.6
Oct. "	142	220	198	163	134	168.4
Nov. "	144	226	226	166	135	177.0
Dec. "	148	231	225	167	136	178.6

This increase of 78.6 per cent., which is the highest figure of the year 1923, compares with 66.2 per cent. a year ago, 69.6 per cent. at the end of 1921, 130.9 per cent. at the end of 1920, and 225.6 per cent. at the end of March, 1920, the highest point ever reached. The lowest point touched since the Armistice was at the end of July last, when the index number fell to 63.1 per cent. about July, 1914. Primary foodstuffs and the miscellaneous group close the year substantially below the average, the latter being the only group to have fallen during the year. Minerals are well below the high level reached in the spring, following the French occupation of the Ruhr, but have recovered from the low levels of the late summer.

THE DUNLOP INVESTIGATION.

At last the long silence regarding the report of the inspectors on the affairs of the Dunlop Rubber Company has been broken—but only partially broken. Their report, after eighteen months of work, was handed to the company in September, and this week a statement has been issued signed by five directors, namely, Sir Eric Geddes, Sir George Beharrell, Sir Guy Granet, Mr Szarvasy, and Mr Tait, who, in the opinion of the company's counsel, are the only directors "unaffected by the report of the inspectors." The statement of the five directors says:—

The conclusions which the inspectors have come to raise issues of the gravest character, and have engaged the earnest attention of the board. Eminent counsel have been consulted, and upon their advice writs have been issued by the company against the president of the company, Sir Arthur du Cros, and against some of the past and present directors of the company. The company has also issued a writ against Sir Arthur du Cros and Mr James White claiming relief in respect of transactions in which these two defendants are individually and specially concerned. The board, again acting on the advice of counsel, challenged the validity of the service agreement under which Sir Arthur du Cros has been drawing a salary of £12,000 a year free of tax, and a writ has been issued against the company by him asking for a declaration that the agreement is binding upon the company. Mr Alfred du Cros and Mr George du Cros have also instituted actions in respect of their agreements. All three actions are being defended by the company.

Here obviously is a very serious matter indeed, and one in which shareholders surely have an incontestable right to be told the whole truth, or, in other words, to see the inspectors' report itself, which runs to "150 pages of print, foolscap size." But the five directors mentioned do not propose to publish it, but instead ask shareholders "to leave these grave matters in our hands." Whether the shareholders will consent to do so or not will be decided on Tuesday, January 8th, when a resolution will be proposed approving of the "course taken by the board as advised by counsel." The directors' reasons for not publishing the Inspectors' report are set out in the following paragraph:—

Some of the past and present directors, against whom, as a result of the findings in the report, counsel advised that writs should be issued, have made proposals for a settlement. We have encouraged a settlement in all cases, because we consider it in the best interests of the shareholders that—so far as possible—the claims of the company should be adjusted by negotiation rather than by litigation. Settlements would, however, be rendered more difficult if the report were published, and we, therefore, ask you to leave these grave matters in our hands, and as representing that section of the board which is in a position to form an independent

judgment, with the full knowledge of the facts before us, we recommend the shareholders that they should not, at this stage, at any rate, insist upon the publication of the report, although it may be that in the near future it will be necessary for us to return to you for further powers, and for a renewal of your confidence.

From this statement and from the statement of the solicitors to Sir Arthur du Cros and Messrs Alfred and George du Cros it appears that the position of their clients and of Mr White is different from that of the other directors involved, and that it is only with the latter that attempts at negotiation are in progress. Everyone who knows anything of litigation will agree that if a satisfactory settlement can be obtained out of court it is usually preferable to carrying a case into court. If proper and satisfactory out-of-court settlements would be prevented by the publication of the report, that is a consideration to which some weight must be given. But in this particular case a very grave affair has arisen which is obviously going to attract a vast amount of public notice, and profound harm may be done if suspicions (whether justifiable or not) are given room to exist that "hushings up," whitewashing," or "backstairs settlements" are going on. In a case of such prominence we think that Sir Eric Geddes and his colleagues are taking a great responsibility in not publishing the report at once. In any case, a full disclosure, which cannot be long delayed, must ultimately be made both in the public interest and most likely in the long run in that of the company, which, after its huge losses, is now with painful effort slowly being brought back towards better times. The Dunlop case is likely to be a classical one in our commercial history. It is, of course, of importance because of the sums involved. But it is also notable for the fact that it is the first really prominent case in which use has been made by shareholders of a company of the power granted by the Companies Consolidation Act of 1908 to demand the appointment of a committee of inspectors with the right of taking evidence on oath and of demanding the production of documents. It is, we think, highly probable that the report of the inspectors, when it appears, will show more clearly than any other recent incident the necessity for some change in our company law and in the methods of company finance.

SOME NITRATE COMPANIES' RESULTS.

IF it were not for labour troubles in Chile those interested in nitrate production might look back upon the past year, if not with enthusiasm, at least with a measure of satisfaction. The trend of the industry during the past six months can be seen from the following table, which is compiled from figures given by Messrs Aikman (London), Limited:—

	(In Thousands of Tons.)			
	1913-14.	1921-22.	1922-23.	1923-24.
Deliveries in Europe and Egypt for six months ending December 31	490	143	248	281
Deliveries in United States for six months ending December 31	258	161	321	257
Deliveries in other countries for six months ending December 31	45	35	67	88
Shipments to Europe and Egypt for six months ending December 31	1,194	198	491	664
Shipments to United States for six months ending December 31	238	74	430	405
Shipments to other countries for six months ending December 31	46	52	90	75
Production in Chile for six months ending December 31	1,367	456	635	1,028
Visible supply for Europe and Egypt at Dec. 31.	1,098	903	463	551
" " " " " " " "	71	251	195	199
" " " " " " " "	18	19	29	12
Stocks in Chile at December 31.	498	1,449	1,225	881
Total supply in sight at December 31.	1,685	2,622	1,912	1,643

Messrs Aikman comment as follows:—"During the six months the deliveries in Europe and Egypt have shown an increase of 33,000 tons as compared with last year, in the United States a decrease of 64,000 tons, and in Japan and other countries an increase of 21,000 tons.....The reduction in deliveries in the United States for the six months has been caused by the unsettled industrial conditions, but the prospects of consumption next spring for agricultural purposes are favourable, and, judging by the recent large purchases by American dealers from the Producers' Association, this decrease in deliveries is likely to

be quickly made good by increased deliveries after February. The application of nitrate of soda to the cotton crop as a protection against the ravages of the bollweevil has been definitely proved successful, and an increasing use for this crop is therefore probable. In Japan and other countries the steadily increasing demand seems likely to continue."

The position of the industry as viewed through our group of representative companies is, on the whole, satisfactory, for a very distinct improvement is noticeable. Our table, given below, shows net profits, dividends on ordinary and preference shares, amounts placed to reserve, and the carry forward for the past three years. It should be observed that the financial year of companies engaged in nitrate production ends on June 30th; accounts are made up to this date:—

	Amelia.	Lagunas Syndicate.	Liverpool.	London.	Pan de Azucar.	Santa Catalina.
Net profits—1920-21	£ 11,651	£ 15,054	£ 113,843	£ 22,554	£ 29,646	£ 30,879
1921-22	Dr 43,195	Dr 79,556	Dr 12,238	Dr 53,451	Dr 24,061	Dr 4,390
1922-23	5,037	22,496	41,009	53,451	Dr 1,423	11,212
Dividends, Ord. and Pref.—1920-21	13,920	..	51,148	15,000	11,550	15,800
1921-22	3,000	..	15,000	11,756	7,900	7,900
1922-23	3,000	..	32,880	25,000	12,478	11,850
To reserve, &c.—1920-21	..	15,054	..	..	7,144	10,000
1921-22	..	21,689	..	..	..	Dr 5,000
1922-23	..	22,496	6,454	30,000	..	..
Carry forward—1920-21	49,907	..	96,771	20,730	32,088	6,669
1921-22	3,712	..	17,221	17,967	44,353	722
1922-23	5,750	..	18,835	16,418	30,492	84

* This sum was applied to writing off expenditure in connection with increase of capital.

Amelia's gross revenue was £49,787, as against £54,735 in the previous year; this year, however, revenue is swollen by £33,222, being profit on realisation of, and income from, securities deposited with trustees for the debenture-holders. Results, as far as the Amelia's shareholders are concerned, are, therefore, certainly not happy. Lagunas a year ago in its trading profit included a sum of £24,000 reserved for the previous year's estimate of stoppage and reopening expenses. The Liverpool this year had to provide but £23,309 for similar purposes, as against £43,575 for 1922, but "Compensation to Nitrate Pool" absorbed £20,588, as compared with £10,838 in 1922. The London made striking progress. Although the Pan de Azucar made an actual net loss of £1,423 the directors decided to make a distribution from the balance in hand; stoppage and reopening expenses took a substantial part of profits, £14,585 going in this direction. The Santa Catalina shows good results, in spite of the fact that £5,648 went in stopping and restarting.

Our next table shows the principal assets and liabilities over the past three years:—

Name of Company.	Principal Liabilities.				Principal Assets.			
	Share Capital.	Debs. and Loans.	Re-serves.	Creditors.	Properties.	Stocks.	Cash, Bill, and Investments.	Debtors
Amelia—1920-21	£ 206,000	£ ..	£ 183,757	£ 102,747	£ 94,869	£ 275,942	£ 172,288	£ 6,364
1921-22	206,000	..	177,597	119,662	94,869	265,263	135,921	1,063
1922-23	206,000	..	100,795	70,540	94,869	142,473	136,550	1,691
Lagunas Synd. 1920-21	550,000	251,110	98,866	133,419	724,401	163,502	245,994	2,549
1921-22	550,000	233,980	74,781	42,693	700,655	113,661	103,482	7,046
1922-23	550,000	210,090	74,799	26,903	675,978	127,229	117,076	4,291
Liverpool—1920-21	73,069	98,379	383,844	118,275	460,013	231,102	80,263	18,008
1921-22	73,069	188,959	379,056	217,250	569,737	229,035	22,722	23,110
1922-23	232,275	164,057	141,850	83,664	577,978	229,547	29,982	12,560
London—1920-21	200,000	152,123	228,000	28,537	475,373	164,852	4,497	7,411
1921-22	200,000	213,716	212,149	10,125	476,481	164,936	2,810	8,256
1922-23	200,000	129,220	237,518	15,445	504,488	80,208	13,659	46,385
Pan de Azucar—1920-21	110,000	52,146	58,604	23,800	92,371	114,214	121,602	16,492
1921-22	110,000	..	51,312	10,940	92,371	69,820	60,351	2,869
1922-23	110,000	..	43,405	8,920	92,371	29,562	81,037	10,284
Santa Catalina—1920-21	79,000	..	20,000	16,143	42,029	33,289	62,564	649
1921-22	79,000	..	25,000	44,648	29,964	36,048	536	536
1922-23	79,000	..	25,000	5,324	45,646	42,181	38,095	1,609

Properties have been fairly handled by most directors in the balance-sheets. The figures of the Lagunas are written down from £700,655 to £675,978. The Liverpool's oficinas were closed throughout the whole of the financial year, and the London announces additional expenditure on works; stocks on hand of the latter company are down from £103,073 to £31,596, while the Liverpool's stocks of nitrate are given as worth £133,723 as against £162,640 a year ago. There is no change in property values of the Pan de Azucar, but stocks and stores are recorded as

£29,562, as compared with the previous figure of £69,820. The Santa Catalina makes no change in the value of nitrate grounds, which remain at £14,623.

Our final table shows how shareholders have fared, together with movements of shares. Yields are also appended:—

Name and amount of share.	Dividends.				Prices of 1923.		End of 1923.	Present yield.
	1919-20	1920-21	1921-22	1922-23	Highest	Lowest		
Amelia (£10) ..	20	7	nil	nil	..	..	..	..
Lagunas Syndicate (£1) ..	nil	nil	nil	nil	2 1/2	2 1/2	2 1/2	nil
Liverpool (£1) ..	(1) 100	(1) 100	nil	15	2 1/2	1 1/2	2 1/2	4 16 0
London (£1) ..	7 1/2	7 1/2	7 1/2	12 1/2	2 1/2	1 1/2	2 1/2	5 0 0
Pan de Azucar (£1) ..	10 1/2	15	15	15	2 1/2	1 1/2	2 1/2	6 9 0
Santa Catalina (£1) ..	20	20	10	15	1 1/2	1 1/2	1 1/2	8 11 6

(e) Paid on a smaller capital.

(f) Free of income tax.

The outlook is not without redeeming features, and it would not be surprising to find 1924 a better year for nitrate investors. The Producers' Association comes to an end on June 30, 1924, and negotiations are in train for a renewal for a further period. "Alterations in the statutes and the reconciliation of the claims of individual producers to the well-being of the whole may cause a certain amount of discussion, but it is generally thought that the benefits of the present system have proved themselves and will not lightly be relinquished." This is the opinion of a well-known house, and one which will no doubt be generally endorsed by the trade.

BANKERS' CLEARINGS.

THE total amount of bills, cheques, &c., paid at the London Bankers' Clearing House during the year 1923 shows a decline of 1.4 per cent. in comparison with 1922, and of 6.1 per cent. as compared with the record year 1920. The figures, issued with commendable promptitude by the Clearing House on January 1st, together with the usual report and voluminous comparative statistics, read as follows:—

	1922.	1923.	Increase or Decrease.
Town clearing	£ 32,780,635,000	£ 32,270,373,000	- 510,262,000 -1.5
Metropolitan clearing ..	1,574,661,000	1,546,565,000	- 28,096,000 -1.7
Country cheque clearing ..	2,806,165,000	2,810,654,000	+ 4,489,000 +0.1
Grand total	37,161,461,000	36,627,592,000	- 533,869,000 -1.4

The report points out that the decrease in the total reflects not only stagnant trade conditions, but also a curtailment of financial transactions in several directions. For the first three-quarters of 1923 new issues were on a greatly reduced scale as compared with 1922, while the financial operations of the Government have not involved so great a turnover of money as in the previous year. The clearings on Stock Exchange settling days indicate a slightly larger volume of business. The short loan market has been fairly active, and comfortably supplied with money, resort to the Bank of England being less frequent.

By far the largest proportion—namely, 95.5 per cent.—of the decrease in the total occurred in the town clearing. How far the course of trade is reflected in the town figures it is impossible to say, as they are affected by so many large financial transactions, such as Stock Exchange dealings and Government operations in connection with the unfunded debt. The Metropolitan clearing is practically free from the disturbing influences which affect the town clearing figures, and reflects fairly accurately the business of the Metropolis, both wholesale and retail, outside the City of London. There are now 480 banks and branch banks in this clearing, as compared with 310 when the Metropolitan clearing was established in 1907. The country cheque clearing, which shows an increase for the first time since the boom year, 1920, indicates the course of the general trade of England and Wales.

An analysis of the figures, quarter by quarter, shows that there were decreases in the grand total in the first

three quarters of 3.5, 1.7 and 5.4 per cent. respectively, and an increase of 5.2 per cent. in the final quarter. The increase shown in the last three months, coupled with other developments, such as the increase in bank deposits, in commodity prices, and in the volume of currency notes and commercial bills in circulation, confirms the impression, which has been rapidly gaining ground during recent weeks, that trade is very definitely on the mend. Too much importance, however, cannot be attached to the bankers' clearing figures in this respect, for out of an increase of £467 millions in the total in the last quarter the town clearing accounts for £456 millions. This is attributable partly to new issues, which "call for a considerable turnover of money, especially when they are largely oversubscribed." The year 1923 had the distinction of producing the record day's turnover, the total for December 31st last being £236,418,000, or £7,022,000 more than the previous record day, December 31, 1920. The following table shows the variations of monthly totals as compared with 1922:—

	Town.	Metropolitan.	Country.	Total
	%	%	%	%
January	-4.8	+0.6	+2.5	-4.0
February	-2.8	-2.0	-0.02	-2.6
March	-3.8	-6.1	-3.5	-3.9
April	+0.6	+1.3	+5.6	+1.0
May	-7.7	-4.6	-3.0	-7.2
June	+1.3	+0.4	+3.4	+1.4
July	-7.8	-2.6	-2.6	-7.1
August	-6.1	-4.9	-1.2	-5.6
September	-3.2	-5.0	-2.6	-3.2
October	+3.9	+1.4	+4.0	+3.8
November	+7.8	-1.9	-0.1	+6.7
December	+5.9	+2.0	-0.09	+5.2

These figures show very definitely that the last quarter's increase is to a great extent due to the town clearing. Four of the ten provincial clearings show increases in comparison with 1922—namely, Birmingham, 3.4 per cent.; Liverpool, 4 per cent.; Newcastle-on-Tyne, 9.6 per cent.; and Sheffield, 19.1 per cent. Decreases are shown by Bristol, 15.4 per cent.; Hull, 0.1 per cent.; Leeds, 4.7 per cent.; Leicester, 7.5 per cent.; Manchester, 1.8 per cent.; and Nottingham, 6.2 per cent. Only four centres show declines in the last quarter, the largest of which are Bristol, with a drop of 15.4 per cent., and Leicester, with a decline of 7.9 per cent.

The rapid growth in the total of the clearings in recent years may be seen from the following table:—

ANNUAL TOTALS.			
(Million £.)			
1868	3,425	1914	14,665
1873	6,071	1915	13,408
1880	5,794	1916	15,275
1890	7,801	1917	19,121
1900	8,960	1918	21,198
1905	12,288	1919	28,415
1910	14,659	1920	39,019
1911	14,614	1921	34,931
1912	15,962	1922	37,161
1913	16,436	1923	36,628

The New York Clearing House for the twelve months ended November 30th shows an approximate total of £42,476,236,000 (the dollar being taken at 4s for comparison's sake), being a decrease of £1,066,198,000, as compared with the year ended November 30, 1922.

Certain portions of the London statistics have been revised, and very much improved thereby. Owing to the abandonment in August, 1922, of Consols settling days, the column headed "ordinary days, exclusive of fourths of the month, Consols settling days, Stock Exchange settling days, and days following Stock Exchange settling days" has been omitted. The column headed "Fourths of the month" has also been eliminated, as it is no longer any guide to, or affords any indication of, the trade of the country. "The fourth of the month has for many years ceased to be the great maturing date for bills, either inland or foreign; and in some trades, notably the drapery trade, the bill, owing to increased banking facilities and to alterations in the financial customs of the trade, has been almost entirely superseded by the cheque."

THE TRUST MOVEMENT IN GREAT BRITAIN.—III. SOME LEADING EXAMPLES.

IN the conditions sketched in the preceding article, and with the stimulus of the various authoritative reports which have been quoted, the re-organisation of British industry proceeded rapidly. The concentrating effect of the large extensions of iron and steel works made with Government assistance in one form or another is shown by the facts that at the end of the war one-quarter of the steel plants in this country represented more than three-quarters of the total productive capacity, whilst in the case of pig-iron one-fifth of the concerns engaged in its manufacture represented well over one-half of the capacity. The enormous increases of the plants of many armament and ordinary engineering companies are a matter of common knowledge. But the most striking developments have been in the direction of concentration and integration by means of the consolidation of the interests of concerns previously independent.

Thus in 1918 there was formed the United Steel Companies, Limited, which, beginning with the acquisition of the preference and ordinary shares of the Workington Iron and Steel Company, Samuel Fox and Co., Steel, Peech and Tozer, the Frodingham Iron and Steel Company, the Appleby Iron Company, and the Rother Vale Collieries, subsequently acquired all the issued shares of the Distington Hæmatite Iron Company, the Beckermert Mining Company, and the All-Hallows Collieries, all the ordinary shares of Daniel Doncaster and Sons, the Martino Steel and Metal Company, and the United Ship and Bar Mills, a controlling interest in the Sheffield Testing Works, and a holding in the Thomas Smith Stamping Works. There was thus created a company with an issued capital in ordinary and preference shares, debentures and obligations, of some thirteen millions. Similarly Baldwins, Limited, which in 1915 had acquired the Port Talbot Steel Company, acquired in 1918 all the ordinary shares of the Brymbo Steel Company, and the whole share capital of the British Steel Corporation (which in turn holds all the shares in the Briton Ferry Works), has an interest in the Oxfordshire Ironstone Company, and holds all the shares in a number of colliery companies, and, since the end of 1920, practically all the shares in the British Mannesman Tube Company. In 1920 Guest, Keen, and Nettlefold, whose activities cover the production of coal, iron ore, iron and steel, screws, wire, strip rails, sections and ship-plates, obtained controlling interests in the old-established concern of John Lysaght, Limited, manufacturers of black and galvanised sheets, and in Bayliss, Jones and Bayliss, ironmasters and engineers; and John Summers and Sons acquired the greater part of the share capital of the important Shelton Iron, Steel and Coal Company, of Stoke-on-Trent, in order to secure their own supplies of pig-iron. On the north-east coast Dorman, Long and Co. have controlling interests in Bell Brothers (ironmasters and colliery owners), the North-Eastern Steel Company, Sir B. Samuelson and Co., and the Carlton Iron Company. Pease and Partners,

beginning as proprietors of coal and ironstone mines and of limestone quarries, and acquiring in 1911 the control of the Normanby Ironworks, have in recent years obtained control not only of additional colliery undertakings, but also of the Tees Furnaces and the Skinningrove Company (iron and steel), and of the Wilton Fire Brick Company. These and other developments have had the result that a small number of powerful concerns, examples of "horizontal" and "vertical" combination, control an overwhelmingly predominant proportion of the heavy iron and steel trade of the country.

The armament firms have been actively engaged in widening the range of their activities, and acquiring interests in companies which would be useful to them as suppliers of materials or consumers of their semi-finished products. Thus Vickers, Limited, who already held half the ordinary capital of William Beardmore and Co., and all the ordinary shares in the Wolseley Motor Company, and Electrical and Ordnance Accessories, acquired in 1919 practically the whole of the share capital of the Metropolitan Carriage Wagon and Finance Company, and of W. T. Glover and Co., insulated wire manufacturers, and a controlling interest in Vickers-Petters, Limited, formed in that year for a combination of interests in the manufacture and sale of the Petter patent oil engines. Sir W. G. Armstrong, Whitworth and Co. obtained in 1920 control of the Pearson and Knowles Coal and Iron Company (which in turn owns Rylands Brothers and the Partington Steel and Iron Company), and of Armstrong-Siddeley Motors, and later of Armstrong and Main (iron roofing, bridge, and fence makers and engine works), and of Charles Walmsley and Co. (Bury), manufacturers of paper-making machinery. The Birmingham Small Arms Company, Limited, already controlling the Daimler Company, acquired in 1919 the undertaking of William Jessop and Sons, Limited, of Sheffield, and thereby a large interest in J. J. Saville and Co., of the same city, makers of special steels, and have also obtained control of Burton Griffiths and Co., and the Aircraft Manufacturing Company.

In the electrical industries the same process of integration is exemplified by the English Electric Company, Limited, formed in 1918 to acquire controlling interests in the Phoenix Dynamo Manufacturing Company, Dick Kerr and Co., the United Electric Car Company, Willans and Robinson, and the Coventry Ordnance Works; and by the General Electric Company, a concern which has developed enormously in the past decade, has acquired or controls amongst other concerns, Chamberlain and Hookham (meter manufacturers), the Peel-Connor Telephone Works, Fraser and Chalmers, the Osram Lamp Works, and the Leamington Glass Company, and, either directly or through subsidiary companies, is now engaged in almost every branch of the electrical industry.

In the chemical and allied industries, Brunner, Mond, and Co. disposed in 1919 of their interests in two soap-making concerns (William Gossage and Sons and Joseph Crossfield and Sons), but on the other hand they secured, in 1915, almost the whole of the ordinary capital of the Ammonia-Soda Company, and later control of the Castner-Kellner Company, the Buxton Lime Firms, the Maddeley

Coal, Coke, and Brick Company, and Chance and Hunt, Limited. But the most remarkable development along the lines of "vertical" and also of "horizontal" combination has been the case of Lever Brothers, Limited, which at the beginning of the war was the centre and direction of a group of 40 companies, which had increased to 140 by the beginning of 1921. Of these, 39, at that date, manufactured soap—in 18 Lever Brothers had 100 per cent. of the voting power, in 13 they had 50 per cent. or over, in two they had less than 50 per cent., and companies controlled by Lever Brothers had a pecuniary interest, generally a predominant one, in the remaining six. A sub-committee of the Standing Committee on Trusts, appointed under the Profiteering Act, reported in January, 1921, that "although the original business of Lever Brothers was the manufacture of soap and glycerine, the additional undertakings in which the company is now interested include banking, shipping, engineering, mining, building, whaling, seed-crushing, oil-refining, plantations and fisheries, as well as the manufacture of dyes, chemicals, industrial gases, candles, margarine, disinfectants, polishes, perfumery and paper. Some of the companies have been promoted by Lever Brothers, whilst in others they have acquired controlling interest by acquisition of shares."

Turning now to the combination which takes the form of the permanent association under a common financial and commercial control of a number of concerns engaged in the same general line of production—a method of industrial organisation often styled "horizontal combination," and exemplified before the war by several "Associations" in the textile trades, particularly in the finishing branches, and by the Scottish Iron and Steel Company, formed in 1912 to acquire the businesses of some dozen malleable iron and steel manufacturing companies—the most conspicuous instance has been the formation in 1918 of Explosives Trades, Limited, of which the name was subsequently changed to Nobel Industries, Limited. This was a merger, by exchange of shares for those of a holding company whose authorised capital was 20 millions, of 33 concerns engaged in the manufacture of explosives, ammunitions or accessories, and the new combination also acquired, directly or through its subsidiary companies, holdings (mostly sufficient to give control) in 45 other concerns. This undertaking is of especial interest for two reasons. In the first place, like the great armament firms, it has been forced to seek new fields for its activities, and as a sub-committee under the Profiteering Act reported in May, 1921, "although the original business of Nobel Industries, Limited, was the manufacture of explosives and cognate commodities, their activities now include the manufacture of industrial collodions, metals, motor-cycles and accessories and chemicals, as well as metal fancy goods, artificial leather, machinery, nails, stoves and lamps. In certain cases the manufacture of these commodities was promoted by Nobels in substitution for munitions, and in other cases a controlling interest was secured in the companies by the acquisition of shares." And, secondly, the issue of the shares of the holding company was made at a time when the restrictions on capital issues were operative; though the shares were not to be issued for cash, Treasury consent was held to be required, and whilst the Departments of State are understood to have been favourable to the merger, consent was only given on condition of the new company's entering into an agreement with the Board of Trade which contained the following clause:—

If at any time the price at which the company is supplying or is proposing to supply any of its products is in the opinion of the President of the Board of Trade unreasonable, the said President may from time to time fix the maximum price of such product, due regard being had to the cost of manufacture, a reasonable profit to the company, and any other relevant circumstances, and if and so long as the maximum price of any product is so fixed, the price at which the company shall supply that product shall not exceed such maximum price.

We are not aware if any President of the Board of Trade since 1918 has endeavoured to use the power thus given to him. The sub-committee mentioned above were of opinion that if he did so he would find it "entirely ineffective"; nevertheless the precedent thus set deserves careful consideration, and may prove of general importance in the future.

Notes of the Week.

City Men in the Honours List.—The world of business and finance is not quite so prominently represented in the New Year's Honours List as is sometimes the case. But Lord Inchcape receives a step in the peerage, being created a Viscount—an honour most thoroughly earned by his long and laborious public service, first on the Geddes Committee here, and then as chairman of the Indian Retrenchment Committee. Lord Colwyn, a banker, and chairman of the Income-tax Commission, figures among the new Privy Councillors, while a knighthood is conferred upon Mr Arthur Watson, the general manager of the London, Midland, and Scottish Railway. Each of these three have rendered most valuable war service in various spheres. The most piquant item in the list is undoubtedly the barony conferred upon Sir Frederick Banbury. He now accepts the honour, which last year he so dramatically refused when his translation to the House of Lords was planned by Mr Baldwin in order to make way for Mr McKenna as member for the City. Had Sir Frederick taken the honour last summer instead of this winter, and so cleared the way for a Free Trade Chancellor, it seems more than possible that the latest chapter in the country's political history would never have been written.

Irish Free State Finance.—Our Dublin correspondent writes:—The Dublin *Gazette* of January 1, 1924, publishes the usual weekly return of "Receipts into and issues out of the Exchequer" between April 1, 1923 and the latest week end, which in this case is December 29, 1923. Most notable in this return is the sum of £7,400,000—received in respect of the new 5 per Cent. National Loan. Under the terms of the prospectus, although payment in full could be made after allotment, an instalment of 30 per cent. was payable on January 18th, and a further instalment of 35 per cent. on February 22nd next, so that all that was due up to date was £3,000,000. This means that the subscriptions represented solid investment business and a genuine cash demand for the stock. It is announced that the fully-paid and partly-paid stock will receive an official quotation on the Stock Exchange in Dublin and Cork on Monday next. At present the unofficial quotation is 96, or one point above the issue price. Information derived from the Postal Department indicates that the new Post Office Savings Bank established by the Irish Free State a year ago can now claim 100,000 depositors and £2,000,000 of deposits. In this figure is included £137,000 transferred at the outset from the Irish deposits in the British Post Office Savings Bank in Ireland, in which the total Irish deposits at December 31, 1922, amounted to nearly £9,500,000. Doubtless there have been further transfers in the meantime as confidence continued to grow. Additional evidence of thrift is found in the investment of £528,000 in Irish Savings Certificates. The revenue is still coming in well, being upwards of three and a-half millions in front of the corresponding figure for last year. This being the first year that Ireland has collected her own revenue, it naturally follows that Customs receipts are up and Excise receipts are down as contrasted with the period when taxation was collected on joint account and subsequently segregated as between Ireland and Great Britain; under that system the figures were given primarily as "collected," and thereafter, with certain adjustments, as "contributed." The newspapers are somewhat exercised over the fall in excise receipts from £12,591,000 to £7,640,000. One which should know better announces that "until last April all excise payments of Guinness and the distilleries were credited to the Free State account, but now the Free State no longer benefits by the duty on the proportion of their products which are exported to, and consumed in, Great Britain and Northern Ireland." (*Irish Times*, January 2, 1924). Of course, neither Ireland nor the Irish Free State ever benefited by the excise duty collected in Ireland on beer and spirits sent to Great Britain for consumption. The Parliamentary Paper 207 of 1921 giving the British Treasury figures for the year 1920-21 shows Ireland as a whole contributing £15,106,000 in respect of Excise, as against £23,698,000 collected in Ireland—the

beer duty being thus reduced from £14,731,000 to £9,469,000, and the spirits duty from £8,345,000 to £4,707,000. For the same year customs and excise duties collected in Ireland were adjusted down from £30,112,000 to £27,614,000, and the basis of such adjustment is set out in each case. The excise duty was, of course, in each case credited to the country of consumption and not to the country of manufacture. Under the new system there will be no duty derived from Messrs Guinness' exports from Ireland, but there will be no deductions by way of adjustment from the customs and excise receipts as collected. What the adjustment was for the year ending March 31, 1923, has not yet been made available, but following precedent it will have been substantial. It is this factor which renders satisfactory the customs and excise receipts from April 1, 1923, to December 29, 1923, at £13,754,000, as against £14,497,410 for the corresponding period last year under the old system. How the change of system will operate in regard to income-tax, where the adjustment used to be in Ireland's favour, is not yet clear.

France and the Cologne Railways.—The encirclement of the British area of occupation round Cologne by the French, which has been one of the corollaries of the situation in the Ruhr, is successfully exerting its pressure upon the German population under the British ægis. The Rhenish Brown Coal Syndicate, of Cologne, has recently capitulated, and has agreed to pay the coal tax to the French Factory and Mine Control Commission, because the German coal industry in our area found itself cut off by a French cordon from its markets and sources of supply in the unoccupied parts of the Reich. Now the French offensive is being concentrated upon the railways, and if it makes a lodgment here our authority in our own zone will be reduced to a shadow. The issue has now been referred from the local French and British representatives to the Governments themselves. It appears that the local representatives actually arrived at a provisional agreement, though even this involved a considerable encroachment by the French Railway Régie. This, however, was not sufficient to satisfy Paris, and the question has therefore become one of high diplomacy. Whatever Government may be in power in England when decisions on this issue have to be taken, it is to be hoped that a very firm stand will be made. Control of railways in an industrial country means control of strategy, administration, food supply, and life itself. If we surrender to France our control of the railways in our area round Cologne, we surrender our last leverage for asserting our will in regard not only to the Rhineland, but to the future of Germany as a whole, in which vital British interests are at stake. No doubt the present German administration of the Cologne railways is faced with serious difficulties, since there is no form of economic activity for which co-operation on a large scale is so essential as it is for a transport system. This is testified by the concessions which the French Régie itself was willing to make in its recent agreement at Mainz with the railway authorities of unoccupied Germany, in order to secure a unified control of the distribution of rolling-stock as between the occupied and unoccupied territories. *A fortiori*, the little enclave round Cologne, wedged in between the territories occupied by France and France herself, is bound to be embarrassed from this point of view; but it is the British Government's duty and interest to preserve, as far as it possibly can, the independence of the local German railway authorities. That independence (subject only to British military requirements) was part of the original understanding under which the occupation was made, and in our zone we have never seen any reason for a high-handed alteration of this arrangement. When France first occupied the Ruhr, we made over to her a section of railway in a corner of our zone which she declared to be necessary for her new lines of communication. In the recent negotiations between the French and British authorities on the spot, to which the German Railway Administration in our area was a party, certain rights of control throughout our area appear to have been conceded, under pressure, to the Régie—especially in connection with through trains. Paris, however, if reports

are true, demands nothing less than a total surrender. All parties in Great Britain will agree that this is out of the question.

World's Iron and Steel Production.—Promptly upon the close of the year 1923, the "Iron Trade Review," of Cleveland, Ohio, has published its annual estimate of the output of pig-iron and steel ingots and castings in the chief producing countries of the world. Last year's totals will, of course, need revision later on, when more complete information becomes available in the different countries. The English and American figures, for instance, would appear to be based on official information covering 11 months, and estimates for December only, but in the case of, e.g., Germany, the field of possible error is much wider. The respective totals are as follow:—

PIG-IRON—English Tons ('000's omitted).				
	1913.	1921.	1922.	1923.
Great Britain	10,260	2,616	4,902	7,360
United States	30,653	16,506	26,851	39,500
France	5,126	3,308	5,147	5,000
Belgium	2,428	862	1,578	2,118
Luxembourg	..	955	1,650	1,350
Germany	19,000	6,096	8,000	4,000
Czecho-Slovakia	..	532	339	590
Poland	..	640	458	492
Japan	56	200	300	300
Total (including other countries)	77,182	34,700	51,938	64,580

STEEL INGOTS and CASTINGS.				
	1913.	1921.	1922.	1923.
Great Britain	7,664	3,703	5,881	8,480
United States	31,301	19,744	35,603	44,400
France	4,614	3,010	4,464	4,750
Belgium	2,428	780	1,539	2,185
Luxembourg	..	747	1,368	1,117
Germany	18,631	8,700	9,000	5,000
Czecho-Slovakia	..	904	630	738
Poland	..	1,476	930	935
Japan	13	558	500	500
Total (including other countries)	75,019	42,487	63,098	72,573

Pig-iron is recovering less rapidly than steel from the depression of 1921. The world's pig-iron output for 1923 was only 84 per cent. of the pre-war figure, whereas that of steel ingots and castings rose to 97 per cent., and would have surpassed the 1913 total but for the very significant decline in Germany's contribution, caused by dislocation of the economic life of the Ruhr. Much more than half the world's pig-iron and steel is now made in the United States, and, for the most part, goes to satisfy the demand for new construction arising out of the rapid development of American resources. Great Britain produced, in 1923, only 71 per cent. as much pig-iron as in 1913, but in the case of steel the proportion was as high as 110 per cent. It should be pointed out that whereas 1913 has remained a "record" year in the British pig-iron industry, the 1913 steel total was regularly exceeded every year from 1914 to 1920, and the 1923 total is still near one and a-quarter million tons below the war-time "peak" of 9,717,000 tons in 1917. As our existing plant is capable of producing something like 50 per cent. more than before the war, there is evidently much room for improvement in our annual returns. The effect of the Ruhr occupation is seen in the drop in Germany's output to about half its 1922 level. Belgian production is recovering rapidly from the effects of the German occupation and the subsequent slump in the iron trade, and is now within appreciable distance of its pre-war magnitude. France's output remains, as in 1922, close to its 1913 level, the check to production in the earlier months of 1923 being compensated for by increased activity based on more satisfactory fuel supplies in the later months of the year. The iron and steel resources of France are, of course, much greater to-day than in 1913. It cannot be said that 1923 was a good year for the iron and steel trades, except, perhaps, in the United States, and with the restoration of something like normal conditions on the Continent a large amount of expansion, long overdue, will almost certainly be brought about.

Lancashire and Foreign Competition.—Owing to the much smaller shipments of cotton goods from this country compared with pre-war years much interest is being taken in Lancashire in the competition which has to be met in

foreign outlets. Attention is therefore being drawn to the imports by India. In the seven months ended October shipments of grey cotton goods from the United Kingdom were 317,575,000 yards, against 478,337,000 yards in the same period of 1922. On the other hand, the imports from Japan into India were 50,616,000 yards in the seven months of 1923, against 44,814,000 yards in the corresponding period of 1922. These figures show that there is a tendency for Lancashire to lose her trade in grey calicoes. With regard to bleached cloths, the exports to India from the United Kingdom in the seven months ended October were 239,652,000 yards, as compared with 199,904,000 yards in the same period of 1922, the figures for Japan being 1,583,090 yards against 897,000 yards. During the same period exports from the United Kingdom to India of coloured goods were 193,683,000 yards in 1923, as compared with 91,471,000 yards in 1922, the figures for Japan being 10,850,000 yards, against 8,411,000 yards. The competition of Japan in India cannot be ignored, but her trade is still relatively very small compared with the exports from this country.

The Civil War in Mexico.—The Mexican insurgents claim to control ten out of the eighteen States, including the whole of the Tampico oil region and the port of Tuxpam, and to possess a force of 34,500 men, against 16,000 Federals, together with the larger part of the small naval force of the Republic. But their hopes have received a severe set-back through the compliance of President Coolidge with President Obregon's application for the sale to his Government of surplus American arms and munitions—a compliance justified by the U.S. Department of State on the ground that such sales are authorised by statute, that President Obregon's Government having been recognised, a refusal would have virtually cancelled the recognition, and that it is the duty of the United States to assist his Government to restore order. Still, the sale has, not unnaturally, evoked protests even among President Coolidge's supporters, and it is to be the subject of debates in Congress at the earliest possible date. Naturally, also, it has caused misgivings in Central America, where suspicion is always excited by aid from the United States, financial or otherwise, and it is thought to indicate a new departure in the shape of direct intervention in the domestic disputes of the minor States of Spanish America—an apprehension strengthened by the despatch of a United States warship to Amapala to protect the lives and property of American residents in the conflict between the rival claimants to the Presidency. Moreover, it seems probable that the Mexican insurgents do not represent the majority of the electorate, and, in spite of their violent methods, may be the real Constitutionalists. The war news, which apparently is telegraphed to the various towns on the United States frontier and thence to New York—both parties, apparently, being in control of the telegraph lines—indicates that the insurgents have captured important strategic points on the railways connecting the North and Vera Cruz with Mexico City, and are converging on it; and they are stated to demand the deposition of the President, of the remnant of Congress, and of the present judges of the Supreme Court, the cession to them of Mexico City, and a fresh and free election. They also promise to use the export taxes on the oil from the field they control for the service of the foreign debt, as agreed between the Bankers' Committee and President Obregon's Government. The committee announced on Monday that the time for depositing bonds has been extended till January 15th, after which date they will be subject to a charge. The bonds deposited cover interest for the past year, and payment will be made when the bonds can be returned to the depositors, but the preparation of the new coupon sheets must cause delay. So, whichever side wins, the bondholders need not despair.

The Political Struggle in Chile.—The news that a serious conflict is in progress between President Alessandri and the Chilean Congress may have been to some readers unpleasantly reminiscent of the struggle between the governing families and President Balmaceda, which led to the civil war of 1890. We are informed, however, that there is no reason to apprehend any disturbance of

public order, and that holders of Chilean securities have no cause for alarm. The present conflict is being carried on by strictly constitutional methods, and is essentially between the Senate, which is mainly Conservative, and the Chamber of Deputies, in which the Liberals, the President's party, have the majority. The elections to Congress take place in March; the Conservative party alleges that it has cause to apprehend official interference, and, until a Cabinet is appointed which will guarantee freedom of election, the Senate declines to pass certain Bills which should have become law before December 31st. President Alessandri was elected in 1920 by a narrow majority over his Conservative opponent, and after several recounts; he holds office till December, 1925; he has leanings towards Labour, and his party stands for democratic and drastic reform. Still, the chronic bitterness of party feeling has not prevented the Conservatives from agreeing to an income-tax law, a measure long advocated by observers of Chilean finance, but naturally provocative of considerable Conservative opposition. It was to come into force on January 1st. Under it, companies and agricultural enterprises pay 9 per cent. on income, 5½ per cent. to the local authorities and 3½ per cent. to the central government; on interest on deposits and bonds the rate is 4½ per cent.; on commercial profits, 3½ per cent.; on those of mines and dealers in metal, 5 per cent.; on salaries and pensions, 2 per cent.; on professional incomes, 2 per cent., but not less than 30 times the cost of the licence necessary for practising the profession. The tax is expected to produce 60 million pesos annually, and as it falls on all, or nearly all, the members of Congress, it should have a salutary effect in promoting retrenchment in public expenditure. Chile, whose financial record has always stood much higher than that of any other South American State, is now the first among them to attack the urgent problem of direct taxation, and it is to be hoped that her neighbours will follow her example.

First Bank Dividends.—The first of the bank dividends have been announced this week. The following table shows how the final dividends for 1923 and the whole year dividends compare with 1922:—

	Amount of Share.	Paid Up.	Final Divs. Rate % Per Annum.		Whole Year.		Price of Shares.		Present Yield.
			1922.	1923.	1922.	1923.	Jan. 4, 1923.	Jan. 5, 1924.	
Barclays, "A"	4	4	10	10	10	10	74	73	4 8 4
Do "B"	1	1	14	14	14	14	26	26	5 3 3
Dist. Bank	15	3	18	18	18	18	98	98	5 12 9
Midland Bank	12	2	18	18	18	18	98	98	5 12 9

(c) Capital reorganised during 1922.

(b) Includes bonus of 5 per cent., free of income-tax.

Alexanders Discount Company and the Union Discount Company each maintain the distributions at the preceding year's rates, the former placing £30,000 to reserve, raising it to £430,000, as against £80,000 a year ago. The Union Discount set aside £100,000 twelve months ago. The discount houses, however, made abnormal profits in 1922, owing to the fall in money rates, and these exceptional profits were reserved. The final dividend of the National Discount Company gives 10 per cent. for the year, the maximum allowed, on the A shares, while the B shares get 20 per cent., and a bonus of 1s 6d per share. Comparison with the dividends for 1922 is difficult, for the capital was only subdivided into A and B shares during that year, but the 1923 distribution apparently represents an increase of 1 per cent. The only increased dividend so far declared by a bank is that on Williams, Deacon's A shares, which get 13½ per cent., against 13 per cent. a year ago. Profits are £10,000 lower at £327,200, and reserve appropriations are maintained, but the balance forward is reduced by over £6,000. Barclays profits at £1,891,100 show an increase of over £17,000. The contingency allocation is reduced from £250,000 to £200,000, and nothing goes to staff funds, as against £50,000 a year ago. The dividend, however, requires £64,000 more,

and £18,000 is added to the balance carried forward. The Midland Bank profits show a drop of £42,500 at £2,211,000. The reserve fund gets £300,000, as against £500,000 a year ago, and £400,000 goes to premises fund, as against £300,000, leaving £797,100, or £8,000 more, to be carried forward. The profits of the Manchester and Liverpool District Bank have dropped from £465,200 to £428,600. Nothing is put to reserve, but the balance forward is increased from £267,800 to £348,800.

Another Private Bank Absorbed.—It is announced that the Royal Bank of Scotland, subject to the sanction of the Treasury, have arranged to acquire the business of the private banking firm of Messrs Drummond, 49 Charing Cross, London, and will take over their assets and liabilities from January 12, 1924. The assets will include the bank and adjoining freehold buildings. The business will be carried on as a branch of the Royal Bank of Scotland in the well-known premises adjoining Admiralty Arch, which will be known as Drummonds' Branch. The partners of Drummonds Bank, Messrs George, Maldwin, Charles, and Frederick Drummond, will, with the addition of certain representatives of the Royal Bank, act as a local board of directors for the administration of this branch, of which Mr George Drummond will be chairman. Mr W. H. Smith will continue to act as manager. The acquisition of a West-End branch will be a convenience to many customers of the Royal Bank, whose City office in Bishopsgate has hitherto been their only place of business in London. It represents an alliance between one of the oldest of the private banking firms, founded over two centuries ago, and always carried on by members of a distinguished Scottish family, and a Scottish banking institution incorporated by Royal Charter in the year 1727. The latest balance-sheet of Messrs Drummond, dated January 10, 1923, showed a capital of £400,000 and deposits amounting to £3,657,300, whilst the report of the Royal Bank of Scotland, as at October 13th last, showed a capital of £2,000,000, with a rest or reserve fund of £1,565,961—their deposits amounting to £37,880,500.

Life Assurance Results.—The Alliance Assurance Company, which made no bonus distribution to participating life policyholders five years ago, announces that the results of the investigation as at December 31, 1923, will permit of a compound reversionary bonus at the rate of 34 shillings per £100 assured per annum for each of the past five years on Alliance policies effected since January 1, 1894. The pre-war rate of bonus distribution was at the rate of 30 shillings per £100 assured per annum. The Alliance, in its new prospectus, announces that it is prepared, in approved cases, to issue life policies with disability benefits in the event of serious illness. The scheme includes provisions for the waiving of premiums and for the grant of annuities. This step on the part of so important an assurance company indicates that disability benefits combined with life assurance are about to become a standard feature in the development of the business. A small batch of British life offices has issued other figures of new business transacted during last year. The National Mutual has issued 756 policies, assuring £557,523, as compared with 702 policies assuring £548,102 in 1922. The London Life Association's new policies represent £1,625,000, an increase of £55,000 on the previous year's figures. The Equitable Life Assurance Society (the "Old" Equitable) has issued policies for £600,000—about the same amount as in 1922. The new assurances granted by the Atlas are about £2,300,000, or £400,000 less than in 1922, though £430,000 more than in 1921. In 1922 the Atlas company arranged a special staff scheme for Lever Brothers, Limited, which swelled the figures of new business. The net new business of the Equity and Law was £980,087, as compared with £844,877 in 1922, and the Norwich Union Life Office issued 10,388 new policies for £8,045,956, as compared with 9,820 new policies, assuring £7,255,538 in 1922. The Royal Exchange Assurance issued 2,468 new life policies for £1,677,874, an increase of £222,804 over the corresponding figure for 1922.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorized ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Shipping Freight Index.—The recent substantial rise in our Index of Shipping Freight was to some extent checked last month. As a result of considerable conflicting movements in different trades, the shipping freight index figure for December works out at 130.08, or less than one point above the previous month. This figure compares with 136.57 and 156.67 in the corresponding month of 1922 and 1921 respectively. The following table shows the movement of the various main groups constituting the index:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913) ..	100	100	100	100	100	100	100

November "	148.89	124.56	134.22	130.86	130.47	164.69	138.95
January, 1923	132.35	126.47	124.85	120.20	142.14	150.44	132.69
February "	149.60	116.85	123.93	117.83	134.49	144.21	131.15
March "	163.55	124.30	130.43	125.40	125.36	135.31	134.06
April "	142.72	133.38	137.32	133.77	134.06	124.63	134.31
May "	134.91	140.33	143.05	126.99	134.48	120.18	133.27
June "	131.77	111.04	124.56	125.50	133.90	118.84	124.27
July "	132.42	107.20	118.67	122.44	126.10	114.83	120.28
August "	124.79	109.11	114.33	117.70	117.51	115.73	116.53
September "	129.83	112.36	116.28	117.77	118.44	124.63	119.88
October "	133.66	125.46	114.03	119.38	124.40	136.05	125.49
November "	141.24	135.32	114.64	122.68	124.49	137.89	129.38
December "	134.03	132.72	120.09	124.35	125.07	144.21	130.08

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the base period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade	129.35	- 6.08	S. America—outwards ..	97.49	-11.49
Bay—outwards	140.37	- 35.77	Do "homewards ..	142.68	+ 22.38
Do "homewards ..	158.06	+ 8.06	India—outwards	115.50	- 2.10
Mediterranean—outwards ..	126.85	- 4.55	Do "homewards ..	133.19	+ 5.42
Do "homewards ..	120.17	+ 1.12	Far East, &c.	125.07	+ .58
North America	132.72	- 2.60	Australia	144.21	+ 6.32

The salient features of the month have been an all-round weakness in the rates for outward coal cargoes, to which the holidays and a certain congestion reported from some of the coal docks contributed; a sharp recovery in the homeward rates from the Plate; an improved inquiry for tonnage to load ore homewards; and well-sustained freights from the East and Australia. The general outlook for the early part of the New Year is encouraging to shipowners. The relation of the index to the average for 1913 may be seen from the following table:—

(1913 = 100.)					
Month.	1920.	1921.	1922.	1923.	
January	545.42	194.59	131.60	114.05	
February	593.90	164.54	135.76	112.73	
March	588.24	162.17	135.53	115.23	
April	519.40	147.48	129.46	115.45	
May	480.60	158.42	125.12	114.55	
June	463.16	165.73	117.45	106.82	
July	384.43	169.87	114.52	103.39	
August	350.96	170.60	113.16	100.16	
September	360.27	154.47	110.37	103.04	
October	394.80	141.85	114.42	107.86	
November	340.33	136.47	119.43	111.21	
December	240.79	134.66	117.39	111.81	
Mean for year	438.52	158.40	122.02	109.69	

The mean for the year is thus very substantially below that for 1922, but the steady rise in the past four months gives ground for hopes of further improvement.

British Leather in America.—A correspondent writes:—The virility of the British sole leather trade is shown by the fact that, since all kinds of leather have been placed on the free list in the United States, British imports have shown a sensible increase. This is rather remarkable in view of the fact that America is well placed for raw materials and has a very highly organised system of production. Continental countries are also sending sole leather into America, and some alarm is felt amongst the tanning trade at the invasion, especially as little sole leather is being sent to this country. News is now to hand that the U.S. Tariff Board has received many petitions from tanners and sole cutters for protection against the influx of foreign leather, which is quoted at lower prices than the domestic production. The revenue law now in force does not empower the President to change articles from the free list to the dutiable list, or *vice versa*, this being only within the power of Congress. The law, however, contains a provision which empowers the President to raise or lower duties 50 per cent. when, in his opinion, an emergency justifies such action. Opinion, however, in favour of a revision of the tariff on leather is not unanimous, many tanners realising that if leather is again to be taxed, the big packers would at once want a duty on hides and skins. When the tariff came up for revision, it was found impossible to obtain sufficient votes for free hides, unless assurance was given that free leather would be included. The matter cannot be reopened until the installation of a new President in March, 1925, so that American sole leather tanners will probably have to face competition from outside sources until then—and British tanners, judging by the amount of leather sent out this year, will probably take advantage of the fact.

The Trade and Resources of Cuba.—Cuba, long coveted by the United States as a possession, subsequently became a field for American investment, and, according to the Report (coming down to last September) just published by the Overseas Trade Department from the Acting British Consul-General at Havana, the American capital invested in its sugar, tobacco, cattle, mining, railroads, and lesser industries exceeds \$1,000,000,000, and the United States last year supplied two-thirds of its imports and took four-fifths of its export trade. Great Britain came next, but supplied only about 5 per cent. of the imports and took 9.5 per cent. of the exports, but British investments in the island amount to about £14,000,000, chiefly in railroads, with small amounts in sugar and tobacco, and of the fire insurance business in 1920-21 50 per cent. was British. The population, some 3,123,000, had a total foreign trade in 1922 of \$175 per head, and is rich enough to bear a high cost of living, a total debt of nearly \$131,760,000, and a State expenditure estimated for 1923-24 at \$85,000,000, which will leave a Budget surplus of \$6,827,000. The high cost of living, due chiefly to the fact that the island exports what it produces and imports what it consumes, does not deter the winter visitors, for whom special attractions are provided by the authorities, and who this season will probably number nearly 250,000. It has, however, caused a decline of immigration from the British West Indies and Spain, and a consequent shortage of labour on the sugar plantations, and the numerous immigrants from Eastern Europe, who have gone to Cuba because they could not enter the United States, mostly become street hawkers and fruit sellers. Of the chief products sugar—of which Cuba supplies one-fourth of the world's total—reached in 1921-22 the record figure of 4,047,236 tons; last season's crop was some 4,000 tons less, and predictions that it would fall still lower led to wild speculation, followed by great fluctuations in price, and eventually by the "buyers' strike" in the United States against a supposed "corner." Tobacco came next in importance with an export last year of 387,251 bales, nearly 92 million cigars and over 21 million cartons of cigarettes, the cigar export showed a notable recovery from the lowest figure on record. The output of

alcohol exceeded 50 million litres, nearly 150 per cent. more than in 1919; of this 18 million litres was motor spirit—a use in which Cuba is apparently the pioneer. In cattle ranching and dairy farming some \$350 millions are invested; the cattle are largely a mixture descended from leading European breeds. Other important exports are henequen and grape fruit, the latter chiefly from the Isle of Pines. Among minerals, copper, iron ore, and asphalt are largely worked by American companies, and there are great hopes, still unverified, as to petroleum. Coffee, grown by small landowners, is declining, and seeks Government aid. The local industries include paper, soap, perfumes, brewing, cement, and furniture, but they are demanding Protection, and are inadequate to meet the home consumption. Trade has not come up to the hopes entertained last January, possibly owing to the 1 per cent. sales tax they imposed to provide security for an American loan, but the post-war depression is over. Among the imports Great Britain is holding her own in the finer textiles, and has a fair share in the sugar mill machinery trade, and there are good openings for British cutlery, sporting guns, sports goods, pickles, and jams. But British exporters seem to lack confidence, though the British buying of Cuban sugar tends to encourage British exports. British shipping in Cuban ports is still far below the pre-war numbers.

The Indian Opium Trade.—The familiar charge that the Government of India forces opium on its subjects and other countries for the benefit of its own revenue is dealt with effectively by Professor Rushbrook Williams in his Report on the Material and Moral Condition of India (Cmd. 1901). For a century the Indian Government has been controlling a trade which it cannot abolish, and restricting consumption by raising the price of the drug. Recently it has restricted the areas of poppy cultivation, and, by treaties with various Native States, the traffic. The Indian consumption has declined considerably in consequence, and the Government is endeavouring to limit the foreign sale to the amount needed for strictly medical purposes by selling directly to foreign Governments, and forbidding export except under certificates from them. But it cannot control the three other chief producing countries. Turkey and Persia are outside the Opium Convention, and China, for the sake of whose people the Indian Government sacrificed a revenue from the drug of £4,000,000 annually, now produces 70 per cent. of the total output, owing to the inability of the Central Government to keep its engagements. The League of Nations has endeavoured to take steps to get the Indian output limited to what is strictly needed for medical purposes, but in India the drug is used as a popular remedy for certain disorders more extensively than the medical profession regards as necessary, and the Indian representatives on the League defeated the proposals on that ground. This extensive use is apparently justified in some degree by the results, and Indian opinion is so firmly attached to it that further limitation is at present impracticable.

Peter Walker and Robert Cain.—The company of Peter Walker (Warrington) and Robert Cain and Sons, Limited, was formed in September, 1921, to acquire, firstly, the brewery business of Robert Cain and Sons, Limited, which included the share capital of Harding and Parrington, Limited, and, secondly, the ordinary share capital of a brewery company known as Peter Walker and Son (Warrington and Burton), Limited. A prospectus was issued just after the formation of the company, when £2,000,000 7 per cent. first mortgage debentures were offered at 92½ per cent., and 1,500,000 £1 ordinary shares at par. The accounts of this undertaking have been issued during the week, for its financial year ended September 30th last. By a singular coincidence profits are practically the same as those recorded a year ago, being now £542,226, as against £542,035. It must be confessed that these figures are not very large when it is considered that assets amount to £6,535,193. This, however, was a boom-time flotation. The ordinary shares receive a distribution of 9 per cent., as against 10 a year ago, which leaves £25,470 to be carried forward—the latter sum being slightly larger than

the £20,544 brought into the accounts. What has happened to reserves we are not in a position to know. In the balance-sheet the reserve is given as £20,000. Fortunately, however, this is one of the more enlightened undertakings which publish in addition a consolidated balance-sheet. Here total items on the asset side have jumped to £11,963,983, while reserves are given as

£530,000. We are still, however, kept in the dark as to the true state of affairs, for the main item of £10,568,585, representing freeholds, goodwill, and investments, is stated to be less reserves. It is true that an item, "Company formation," £328,489, has been cleared off during the year by the process of allocating accumulative profits of one of the

THE REVENUE.

associated concerns to this purpose, and for this full credit must be given, although "Discount on issue of debentures" at £150,000 still remains on the asset side. The balance-sheet will be found in detail and analysed in another column. We again suggest that the directors should separate the main item in assets into (a) properties, (b) investments, and (c) goodwill.

Premier Diamond.—This company—whose property is situated in the Pretoria district, a long way from the De Beers Consolidated—last year distinguished itself by the payment of 300 per cent. upon its deferred shares. The accounts to October 31st, now issued, show that an even larger distribution could have been made had the directors elected to follow a policy otherwise than conservative. The balance brought in was negligible, the dividends on the preference capital for 1921-22 having been, in effect, provided from this source. The balance carried forward to 1924 figures at £168,100—considerably more than sufficient to furnish another 7s 6d per 2s 6d share. Thanksto the recovery in the demand for the stones, the company was able to increase its rate of operations, securing 477,000 carats, or 177,800 more than in 1921-22. The sales scored a more than corresponding advance, with the result that the revenue account balance amounted to £992,600 in place of only £23,000. The management is still satisfied with the prosecution of development on a very limited scale; hence the blue ground in sight has further shrunk to 35,400,000 loads. This quantity, however, represents many years' work for the plant. With regard to the outlook for the current year, the directors speak in cautious terms. The question was dealt with at some length at the meeting of the De Beers Consolidated, a full report of which has become available during the past week. The chairman emphasised the sensitiveness of the diamond market, and referred to the stabilising influences of the Diamond Syndicate.

Ferreira Deep.—Our mining correspondent writes:—The chief features of operations last year on the part of this Witwatersrand undertaking are reductions in the working costs and in the value of the ore reserves—the one being, of course, favourable and the other unfavourable. Thanks to the reorganisation which followed the labour trouble of 1922, the expense ratio of the past financial period—20s 5d—scored a saving of as much as 7s 5d upon that of the preceding session, and of over 6s as compared with 1920-21. The higher grade ore in the company's original property is, however, becoming exhausted; and the material opened up in the area acquired from the Village Main Reef and that leased from the Village Deep is of lower grade. Hence the value of the ore reserves on September 30th last figures at 6.6 dwts, as against 7.7 dwts two years previously. This is a factor which will be reflected in future returns. The payment for last year of a total of 8½ per cent., together with provision for taxes, &c., entailed a moderate draft upon the carry-forward. This still amounts to nearly £100,000, represented by surplus cash assets. The claim for insurance in connection with the fire which took place at the mine in December, 1921, remains outstanding.

Japanese Trade and Finance.—Cabled advices from Tokyo state that the trade activity which followed the earthquake has subsided by gradual stages. Nevertheless, although no far-reaching reconstruction schemes are as yet under way, general business conditions are still fairly satisfactory. The money market, however, showed a quietness at the end of the year that was out of keeping with usual experience, a reduction in monetary requirements being largely explained by the postponement of settlement of pre-earthquake contracts. On the other hand, the note issue of the Bank of Japan rose at the end of the year to the unprecedented figure of 1,697 million yen, as compared with 1,590 millions at the end of 1922. The great expansion in the note circulation is in part due to the prevalence of cash transactions in the devastated areas. The Central Bank's discounts and advances show a large expansion as compared with the end of 1922, namely, from 580 million yen to 861 million yen.

Housing and Local Rates: A Correction.—In an article last week on the housing question we referred to the plan for assisting the building of new houses by remitting the rates on new dwellings, and transferring an increasing proportion of the burden of local expenditure to the central authority. But it was said in error that this would be a transfer, ultimately amounting to some 9 or 10 millions a year, on this ground alone from a tax amounting to 75 millions. This figure should read 175 millions, which is the appropriate amount raised by local rates in the last completed year. A portion of this represents the rate levied on land, but the bulk of it is levied upon houses.

THE Board of Trade give notice that by agreement between the British and German Governments, the period for lodging claims under Article 296 of the Treaty of Versailles has been extended. British creditors who have claims not hitherto preferred against German nationals which come within the provisions of the aforesaid Article, must forward proofs of claim to the Controller of the British Clearing Office, Cornwall House, Stamford street, London, S.E. 1, by March 31, 1924, which is the final date for notification. The necessary forms can be obtained on application to the Controller.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday next, at 8.30 p.m., at which a paper on "More Milestones of African Civilisation, and Some Problems," will be read by Robert Williams, Esq. The Hon. Sir Arthur Lawley, G.C.S.I., G.C.I.E., K.C.M.G., will preside.

Oversea Correspondence.

UNITED STATES.—CROP YIELDS AND VALUES—COTTON GINNINGS AND CONSUMPTION—STOCK MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 21.

RETURNS to American farmers this year from the various crops, with the single exception of wheat, are higher than they were in either of the two preceding years. The Department of Agriculture's final estimate, published this week, places the total value of the 1923 crops, based on December 1st market prices, at \$8,322,695,000, representing an increase of approximately \$872,000,000, or nearly 12 per cent., over 1922, and about \$2,693,000,000 over 1921. By far the largest return from any one crop was from corn, the December 1st value of that crop, figured at 72.7 cents a bushel, being \$2,222,013,000, an increase of about 16 per cent. over last year, and comparing with the high record value of \$3,920,228,000 for 1917. A year ago the December 1st value per bushel was 65.8 cents, and on that date in 1921 only 42.3 cents. Although prices of wheat were higher on the first of this month than at the corresponding time in 1922 and 1921, the total value of this year's harvest is smaller than in those years because of the lighter yield. The 1923 value of all wheat is given as \$725,501,000, against \$873,412,000, approximately, for last year, and \$754,834,000 for 1921. Among the crops other than corn showing a material increase in value over the two previous years were oats, barley, flaxseed, white potatoes, hay, and cotton. The December 1st price used in computing the farm value of cotton was \$31 a bale, against \$23.80 in 1922 and \$16.20 in 1921, the yield being figured at 10,081,000 bales as finally estimated by the Government. While it is true that in some agricultural sections where there were crop failures or where farms were not properly operated, farmers are more or less in trouble, if not distress, the estimated increase in the value of crops plainly indicates that farm purchasing power is greater than last year, and that the condition of farmers generally is not so deplorable as it has been described by interested parties in Congress and elsewhere.

The Census Bureau's report, showing that cotton

ginned up to December 13th totalled 9,548,805 bales, is taken to indicate that the actual yield will closely approximate the Department of Agriculture's final estimate of 10,081,000 bales. But even if the latter amount be produced, this year's crop plus the carry over will fall far short of actual requirements at the current rate of consumption. Last month American mills used 531,631 bales, as compared with 541,825 in October and 579,190 in November of last year. In the first four months of the present cotton year—August to November, inclusive—American mills have consumed 2,048,912 bales, as against 2,134,351 in the corresponding period of 1922. At that rate, together with the heavy exports, it is evident that the total available supply of American cotton, as now estimated, will be completely exhausted long before the end of the cotton year. Obviously a great deal depends upon the consumption in ensuing months. There was a reduction of 277,000 active spindles in November as compared with October. It is noteworthy, also, that curtailment of cotton goods production in New England is rapidly increasing; it is estimated that, in Fall River mills alone, approximately one million spindles are idle or entering upon an indefinite period of idleness. Meanwhile, manufacturers are steadily lifting prices of all cotton goods for contract deliveries to levels nearer present replacement costs, and buyers, as a rule, are refusing to operate, except in hand-to-mouth fashion, despite the fact that much higher prices than those now current in primary markets for cotton goods are inevitable. Holiday retail trade in textiles and other merchandise has been of record volume, and jobbers expect the substantial distribution of cotton goods will result in considerable replenishing of stocks after the turn of the year. Jobbers and wholesalers, on the other hand, appear to be pretty well supplied with cotton and other textiles. Information received by the National Wholesale Dry Goods Association from wholesalers in various parts of the country indicates that, compared with a year ago, stocks average 10 to 15 per cent. higher. Reports regarding the size of retailers' stocks vary, but available statistics show that eastern stocks of dry goods probably average 10 per cent. greater than a year ago, while figures for western territory point to stocks being on a par, and in some districts slightly lower, compared with last year at this time.

The upward trend of stock market securities was checked this week by aggressive bear drives and liquidation from various sources. Much of the selling pressure was caused by political developments at Washington, especially the efforts of the Radical element, subsequently defeated, to give soldier bonus legislation priority over other measures in Congress. Individuals and firms also converted stocks into cash for holiday or year-end requirements, while many sales were probably for the purpose of recording losses for income-tax returns to be filed next year. Industrials suffered the most extensive decline witnessed in several weeks, and rails also reacted, but to a less extent. After a partial rally the market is steadier, though price fluctuations are irregular and confusing. Barring unforeseen developments, securities markets are expected to be dull until after the turn of the year. The course of prices then will be governed largely by events in Congress and developments in trade and industry. Bond houses expect a more active demand for investment issues will materialise next month.

FRANCE.—SENSATIONAL ELECTIONS—FRANCO-GERMAN PROBLEM—WATER POWER SCHEMES—NEW RENT LAW.

(FROM OUR CORRESPONDENT.)

PARIS, January 2.

THE holiday season has naturally brought a lull in activity in many directions, but not in Parliament. Both Chambers sat until the end of Christmas week, and even then adjourned only until January 8th. Even this brief recess is to be broken by what will probably prove an exceptionally strenuous senatorial election campaign, which will close on Sunday, when one-third of the seats in the Upper House will, in accordance with annual constitutional practice, be filled by the votes of the local deputies and members of the departmental and district

councils and delegates from the municipal bodies. M. Poincaré himself is standing for re-election as one of the senators for the Meuse, and he has left Paris to-day for his constituency.

Of the 116 senatorial seats to be filled, 55 are at present held by members of the Democratic Left group, which consists of Radicals and Socialistic Radicals, the two parties who for so many years before the war controlled both the Chamber and the Senate. The Upper House, as is known, is in this country normally much more inclined to radicalism than is usual with Second Chambers, and therefore exercises a good deal of very real influence when, as at present, a largely Nationalist and Conservative Ministry is in power. This fact, coupled with the circumstance that the General Elections for the Chamber are due next May, renders the coming Senatorial contests of greater importance than usual, as the result of next Sunday's voting is expected to yield some indication as to whether the elections for the popularly elected Chamber will again endorse the foreign policy of the Poincaré Cabinet, or whether dissatisfaction with its internal policy—or, rather, absence of such a policy—will prove sufficiently strong to bring back to power the party which has always found its chief support more in the direction of the Left. Many observers are inclined to the view that, given leaders with more tried experience and authority than MM. Herriot and Painlevé, there would be a great possibility of the coming elections marking a well-defined swing of the pendulum to the Left. In the circumstances, however—and this opinion has been strengthened rather than otherwise by recent developments in the Ruhr and elsewhere—there is now a much more widespread belief than existed six months ago that M. Poincaré's hold on the country is such that there is little likelihood of his defeat.

The crux of the whole Franco-German problem, it is more keenly realised than ever, lies in the circumstance that the coal lies on one side of the common frontier and the iron on the other, and it is on this point, and on all that it means, that French attention is to-day keenly focussed. The renewal from the German side of the proposal that a means should be found for the reparations question to be settled by a large shareholding participation by this country in German industrial concerns is being given a good deal of consideration in many quarters here. At the same time, the movement that has been in progress for many months past in favour of a renewal of economic relations with Russia is also developing in various directions, and in this, also, the possibility of a Labour Government in England is again a factor.

M. Le Trocquer, the Minister of Public Works, who has the advantage of being a practical engineer as well as a politician, is strenuously pushing forward the various great national power schemes, the object of which is primarily to enable this country to avoid the burden of having to purchase from abroad the twenty million tons a year of combustibles which it is unable to secure from its own mines. In a statement just issued he shows that the utilisation of the French waterfalls for the development of electric power is proceeding rapidly. Before the war the total h.p. developed from these sources was

500,000. This has already been increased to 1,400,000 h.p. This he expects before long to increase by another 1,000,000 h.p. from the Rhone, to which a very important scheme is now being applied; by a further 700,000 h.p. from the Rhine and by 500,000 h.p. from the Dordogne. From March next electric traction will be used on the Paris suburban railways south of the Seine, and many of the lines south of the Loire are being equipped for the same purpose. Within 20 years three-quarters of the Midi system will be electrified, together with 3,200 kilometres of the P.L.M., and over 2,500 kilometres of the Orleans system. This will enable a saving of three million tons of foreign coal to be effected in connection with the railways alone, while the development of the use of electrical power for industrial purposes is expected to result in a still greater saving.

After having passed backwards and forwards between the Senate and the Chamber, the new Rent Law became an accomplished fact on December 30th, and came into operation with the beginning of the New Year. The new law divides the country into two regions, the first comprising Paris and fifty kilometres round, all communes with a total population of at least 4,000, and the liberated regions, while Region B comprises rest of France and Algeria. The new law fixes conditions of rentals until January 1, 1926, and is inapplicable to foreigners, in accordance with what is a growing practice in this country. It applies, so far as the fixation of rent is concerned, only to leases or tenancies entered into or renewed between March 31, 1922, and January 1, 1926, and to building constructed before August 1, 1914. The landlord is given power, in Paris and the region surrounding it, to increase the rental by 75 per cent. of the rateable value in 1914, plus a proportion of the fixed charges on the building that have hitherto been borne by the owner. In the rest of the departments the amount of increased rental is to be fixed by departmental committees. Sitting tenants whose agreements expire before January 1, 1926, are given the right to further prolongation of their periods of occupation until that date, with the exception of those whose agreements have already expired, and who have been refused prolongation, but who have been able to remain in their holdings owing to the pending settlement of their legal position. These may apply to the court for successive postponements of ejection down to the limit of July 1, 1924. Holders of unexpired pre-war leases are given the right to prolongation for another two years in the case of dwelling houses and five years in the case of business premises, after the expiration of their leases, subject to prolongation in the case of the former category not extending beyond October 24, 1928, and in the case of the latter category not after October 24, 1934. Both parties have the right to apply to the court in a large number of contingencies.

GERMANY.—POLITICS—FINANCES—CURRENCY—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

BERLIN, January 1.

THE internal political outlook at the beginning of 1924 is better than at any time since the Ruhr invasion. The Marx Cabinet is indeed being assailed by the Socialists, and over the delayed Third Taxation Decree it is in difficulties with the State Governments, but the currency stability has had a remarkable effect in calming tempers, and the unemployment and trade stagnation which have accompanied the stabilisation are ignored except by the classes immediately affected. This makes a strong contrast with the mark collapse period, when, although production flourished and the most numerous classes profited, there was constant fear of a crash. The Cabinet has refused to abolish the state of exceptional security prevailing since last autumn. About improvement of relations with France in the present year not much optimism is felt. This question, the State financial question, and the apparently heavily passive foreign trade balance must be taken into account in forecasting the next few months.

The Rentenmark Treasury bills, by which the Government hopes to get sufficient money until taxes come in,

have not yet been issued. The long-delayed decade reports of the Finance Ministry have at last appeared, bringing results down to December 20th. A rapid increase in revenue, a decline in expenditure, and a decline in deficits are reported, which would be still more gratifying were it not that the revenue in the last ten days term includes heavy receipts from the temporary Rhine-Ruhr levy, of which only one more instalment remains. Owing to the fact that the Rentenmark reform came in the middle of a decade term (on November 15th) five reports have had to be issued since November 10th. The following sums up the reports (in billions of paper marks):—

November 11th-15th.—Revenue from taxation, 535,958; expenditure (including 74,273,141 subsidies to posts and railways), 113,405,477. Addition to floating debt, 128,396,043. With this report floating debt borrowing for deficits ended. The floating debt was left at 191.6 trillion marks.

Later reports appear in a new form. They give receipts, including those from sale of gold loan and of dollar Treasury bills, and divide expenditure only into (1) "General Administration" (which includes mark currency payments arising out of the Peace Treaty), and (2) payments in foreign currency arising out of the Peace Treaty. Instead of, as formerly, receipts and expenditure being balanced by inclusion in the former of floating debt borrowings, deficits, being met out of the Rentenmark credits, are shown at the end. The following are also in billions of marks:—

November 16th-20th.—Revenue 5,740,107, whereof 4,905,783 were realised by sale of gold loan and gold Treasury bills; expenditure, 54,343,869. Deficit, 48,603,762.

November 21st-30th.—Revenue 15,084,787, whereof 4,539,307 from sale of loan, &c.; expenditure, 258,684,323. Deficit, 243,599,536.

December 1st-10th.—Revenue 32,822,609, whereof only 36,572 from sale of loans; expenditure, 179,898,898. Deficit, 147,076,284.

December 11th-20th.—Revenue 42,904,657 (nothing from sale of loans); expenditure, 165,656,592. Deficit, 122,751,935.

On the term November 16th-December 20th.—Revenue 96,552,160, whereof 9,481,662 from sale of loans; expenditure, 658,583,677. Deficit, 562,031,517.

The improvement is best shown by comparing the last preceding decade report (November 1st-10th), wherein less than 1,000th of expenditure was shown to be covered. The 562 trillion paper marks deficit of the whole period of one month and four days is 562 million Rentenmarks (or gold marks); but in addition the Government had to borrow 140 million Rentenmarks for railways and posts, and 25 million Rentenmarks for the Federal Breadstuffs Board. Immediately after the stoppage of Treasury bill discounting at the Reichsbank the payment off of floating debt was begun; before November 30th the Debt had fallen to 96.9 trillion paper marks, and the whole debt has since been paid off at a cost of under 200,000,000 Rentenmarks, or (taking the Rentenmark as a gold mark) £10,000,000. The operation was, of course, merely a formal measure registering an old *de facto* confiscation. Except for the small "gold" or "stable value" loans raised in the past year, and for the new debt of £60,000,000 gold to the Rentenbank, the Republic is now entirely free of internal debt, but it is beginning to borrow again *via* the Rentenmark Treasury bills, and future debts (according to official promise) will not be extinguished by depreciation.

Concerning the gold total at times of borrowing of the debt so wiped out no data are available; but a new official report puts the Treasury Bill borrowings in the financial year 1920 (at exchanges of borrowing dates) at 5,178 million gold marks; 1921, 4,513 million gold marks; 1922, 3,035 million gold marks; and 1923 (first seven months) 5,736 million gold marks. The enormous increase last year in the gold value of borrowings is explained by another new official table showing how revenue dwindled under the paper-mark taxation and gold-mark expenditure system. In the financial year 1920, the average monthly taxation revenue was 270 million gold marks; 1921, 300 million gold marks; 1922, 145 million gold marks; 1923, 50 million gold marks. These are

wholesale-index gold marks, not exchange gold marks.

Currency conditions have greatly improved. The paper mark now plays a small rôle compared with the Rentenmark. The Reichsbank and private banks announce that in future they will deal only in units of a billion paper marks, with two decimals. The effect of this is practically to kill the claim that the Rentenmark and paper mark are different currencies, because the decimals represent pfennigs—2,570,000,000,000 paper marks, for instance, being handled and booked as 2 Rentenmarks 57 Rentenpfennigs. This emphasises the view taken from here that the currency reform is nothing but a kind of denominationalisation. The fact that the security behind the Rentenmark, which is supposed to differentiate it from the paper mark, has so far no legal existence (the compulsory mortgage distribution being delayed) causes no holder of Rentenmark any apprehension; but also the promise of such security gives him no increase of confidence; no preference is any longer shown for the Rentenmark against the paper mark. The real substance in the reform (if any) lies in the limitation of circulation. The Finance Minister, dealing with this point, puts circulation as follows:—

	Million G.m.
Rentenmark notes	1,200
Reichsbank notes	400
Gold loan currency	300
Emergency money	500
	2,400

Reichskassenscheine, Darlehensscheine, and note issues of the four private note banks are omitted, the gold value being insignificant. The pre-war circulation (coins and notes) was about 6,000 million gold marks. The Minister thinks the 2,400 million gold marks not excessive, in view of the much reduced speed of circulation due to stability, and of the sunken buying-power of gold; but on this may be commented that for years German trade went along with currency worth a mere fraction of the 2,400 million gold marks—the value of Reichsbank circulation on November 15th was only 310 million gold marks. The suspicion that, despite official statements, the Rentenmark reform has had an inflationist effect is confirmed by the extraordinarily high prices still prevailing for certain kinds of goods, and by the ability of Germans in modest positions during the past holidays to pay these prices. No former "Catastrophe Boom" Christmas season saw such money-spending by natives as that just past.

The Reichsbank's statements for November 23rd and 30th appeared simultaneously on December 24th. Between November 15th and 30th, circulation, despite the withdrawal of notes corresponding to the repaid Floating Debt, rose from 92,844,720 billions to 400,267,640 billions. The increase was partly due to the exchange crash which continued up to November 20th, partly to issue of notes in payment for emergency money called in. The Bank's holding of 189 trillion marks Treasury bill discounts on November 15th fell by 30th to 97 trillions, while private discounts rose from 39½ trillions to 347 trillions. This last increase is stated officially to have been largely due to an influx of cheques, which are booked together with bills. Paper mark circulation after that (though the returns are not yet out) began to decrease. The Bank's policy is to call in all notes of denominations not exceeding half a billion marks. Semi-officially it is stated that the return for December 15th will show a paper mark circulation of only 258 trillions, and that later weeks will see further declines. Although the future of the Rentenmark experiment must be considered doubtful owing to the still bad finances and the passive trade balance, there is no doubt that the operation has so far been carried out with great skill.

An impending official decree will proclaim free import of a large number of important commodities, including, it is believed, hides and leather, rubber, half-finished material for paper, metals, clockworks, metal ores, mineral oils, coal tar, and certain kinds of machines and textiles. This measure is part of the general liquidation of the foreign trade control system. The livestock census of October 1, 1923, has given the result:—Horned cattle, 16,652,831; pigs, 17,225,855; sheep, 6,094,022; goats, 4,658,607. A rapid increase in the use of motor vehicles is reported. The number of vehicles

of all kinds on July 1, 1923, was 212,961, against 84,628 in 1914, the number of commercial cars rising from 9,071 to 51,789, private cars from 55,000 to 100,829, and motorcycles from 20,557 to 59,409.

ITALY.—THE INTERNATIONAL BALANCE OF PAYMENTS—NEW SAVINGS AND THEIR INVESTMENTS.

(FROM OUR CORRESPONDENT.)

TURIN, December 26.

VERY wild statements have been published from time to time about the international balance of payments between Italy and foreign countries. Fortunately an inquiry by Professor Jannaccone, published in a new edition of "Documents on the Financial and Economic Situation of Italy," presented by the Minister of Finance, Signor De Stefani, to Parliament, gives, for the year 1922, a new estimate of the complete balance of payments (in millions of lire):—

	Credit.	Debit.
Difference between imports and exports of goods ..	..	6,462.4
Difference between imports and exports of gold and money	..	37.7
Difference between sums remitted to Italy and those brought about by emigrants	3,400.0	..
Difference between passive and active freights for the transportation of emigrants and travellers ..	115.6	..
Goods freights due to the Italian mercantile marine	527.0	..
Difference between expenditure of Italian mercantile marine abroad and foreign marine in Italy ..	..	203.1
Difference between sums due and sums credited for international railway services	..	132.3
Difference between sums spent by foreign travellers in Italy and Italians abroad	2,500.0	..
Difference in postal remittances between Italy and foreign countries	274.7	..
Interests on Italian public debt paid abroad	..	115.6
Interest on banking current net accounts	..	140.0
Difference between profits of Italian firms abroad and foreign firms in Italy	30.0	..
War reparations received from Germany (net cost of occupation, control, &c., expenditure)	440.5	..
	7,287.8	7,709.1
Public debt bonds sold in foreign countries, mostly to Italian emigrants	460.0	..
Repayment of public debt bonds, sold and repaid in foreign countries	..	412.8
Purchase of foreign securities	..	12.0
To balance: Italian credit at the end of the year ..	..	231.9
	7,747.8	7,747.8

The balance of payments last year was thus closed very favourably to Italy. It should be added that, while the 412.8 millions of public debt bonds were repaid to foreign Governments, such as Brazil, &c., who, during the war, sold goods to Italian Governments without payment in cash, the 460 million lire of bonds sold in foreign countries cannot be considered as true debts to foreigners, as it is highly probable that they were bought by Italian emigrants, who will reinvest the yearly accruing interests in Italian securities.

The above is an official, i.e., a very prudent, estimate, whose errors, if any, are on the adverse side. A private investigator, Signor Mazzucchelli, author of an interest-

ing booklet, "Dati finanziari italiani," published by the *Credito Italiano*, draws an even more favourable picture for the same year, 1922 (millions of lire):—

	Credit.	Debit.
Difference between imports and exports of goods..	..	5,300
Difference between active and passive freights and other items	300	..
Difference between sums spent by foreign travellers in Italy and Italians abroad	2,500	..
Remittances of Italian emigrants abroad to Italy..	3,600	..
Interest on foreign capital, commissions and profits of foreign firms, maritime insurance, &c.....	..	350
Interests on Italian public debt and others paid abroad	..	300
Interest on Italian securities held mostly by Italians in America	..	200
Interests on Italian capitals invested abroad	500	..
	6,900	6,150
Sale of Italian securities abroad.....	500	..
Difference between Italian investments abroad and foreign investments in Italy.....	..	250
Nationalisation of foreign companies in Italy and repayment of Italian debts to foreign creditors ..	..	1,000
	7,400	7,400

In 1922 we invested in foreign countries or paid debts to foreigners up to 1,250 million lire, while we sold securities or indebted ourselves only to the extent of 500 millions, and such securities were, moreover, sold to Italians living abroad.

Various other interesting figures could be extracted from Signor De Stefani's report, or Mazzucchelli's brochure. Among other things they show that the gold-value of the lira, after touching bottom in 1920, has not varied much in the last three years. This fact was favourable to savings, which can be said to have increased in proportion to the depreciation of the lira. Deposits in saving and other banks were:—

	Millions of Lire.
At June 30, 1914	7,822.7
" 1918	12,587.8
" 1921	27,889.2
" 1922	28,819.1
" 1923	32,334.0

Correspondent accounts—such is the name by which many current deposit accounts are styled in Italy—in banks with more than one million lire capital were :—

	Millions of Lire.
At December 31, 1913	1,053.2
" 1918	6,308.1
" 1921	14,013.2
" 1922	14,746.2

The total of national savings invested in banking deposits, current and correspondent accounts, amounted, according to Signor Mazzucchelli, at December 31, 1922, at 50 milliards lire, and increased to 53 milliards at June 30, 1923. The new savings invested in State bonds, public and private securities, banking deposits, current and correspondent accounts, house building, industries, agricultural improvements, and in various other sundry ways may be estimated in all for 1922 at 12 milliards lire. In 1891 the then director-general of the National Statistical Service, Signor Bodio, estimated the annual increment of the national wealth at 500 millions lire. Even after taking into account the depreciation of the lira, the present 12,000 millions, brought down, for the sake of comparison, to 2,000 millions [gold-1891] lire, compare very favourably with the 500 millions lire which was the figure for that date. It is significant that new savings are being increasingly invested in industrial enterprises. The number and capital of joint-stock companies have increased as follows :—

	Number.	With a Capital of Millions Lire.
1863	379	1,331
1880	581	1,811
1913	2,882	5,170
1920	5,995	17,683
June 30, 1923	7,266	22,706
November 30, 1923	7,683	23,755

The few figures given above may be taken as a good omen for the economic progress of Italy in the New Year.

POLAND.—CABINET CRISIS—FINANCIAL DIFFICULTIES — DANZIG'S MONETARY EXPERIMENT — FOREIGN CAPITAL.

(FROM OUR CORRESPONDENT.)

WARSAW, December 18.

WHEN in May the National Democratic Party, together with the "Piast," formed the new Government, it was clear for every unprejudiced observer that the alliance could not be of long duration. While the peasant members of the "Piast" considered a radical agrarian reform as the principal aim of the new Coalition, the right wing of the National Democracy decided to make the realisation of such a plan impossible. The Government could maintain itself in power only by postponing the discussion of this delicate problem. The peasant masses, however, grew impatient, and the Government was obliged to introduce the Agrarian Reform Bill. Immediately the great rift existing between the two wings of the Coalition became apparent, and fifteen members of the "Piast" passed to the Opposition, forcing Mr Witos to tender his resignation.

The break up of the majority was hastened by Mr Kucharski's disastrous financial policy. At a time when only a very experienced hand could have arrested, or at least lessened, the depreciation of the mark, the Government put at the head of the Treasury a man who was quite unacquainted with financial problems. Since his nomination the whole policy of the Ministry of Finance was characterised by a disconcerting zigzag course. When Mr Kucharski took over his portfolio he nullified all measures of his predecessor, Mr Grabski, who tried to fix all revenues and expenditure of the State on a theoretical gold unit. After several months of hazardous experiments, Mr Kucharski presented to the Diet a budget which was based not on the depreciating paper currency, but on the abandoned gold unit. The whole financial history of the last months is full of such contradictions.

Mr Kucharski leaves the finances of the country in a very critical state. Nothing can be more characteristic of the gravity of the situation than the rapid decline of the mark. At the end of September the English pound was quoted at 1,500,000 Polish marks, at the end of October the quotation reached 8 millions, and now is approaching 30 millions.

According to the returns published by the Ministry of Finance, only 50 per cent. of the expenditure is covered by revenue, while for the remaining half the Government is obliged to resort to the printing press. In other words, for bringing the budget into equilibrium an increase of all taxes by 100 per cent. is necessary. This is in itself a difficult task for the financial administration of the country, which is still in the process of formation, but the problem is still more complicated by the nearly total disappearance of circulating capital.

It is estimated that before the war the total circulation of the territories which form actually the Republic of Poland amounted to two milliard gold francs. The value of the 50,000 milliards which were issued by the Polish National Bank from November, 1918, to the end of November of this year expressed in gold did not exceed at that date 50 million francs. To-day it is probably even smaller. As the monthly expenditure of the State amounts on an average to 100 million francs, a balancing of the Budget under present conditions would require the passing of the total circulation once every fortnight through the hands of the tax-collector. It is evident that such a rapidity of circulation cannot be attained.

The authorities of the Free State of Danzig intended to open in the beginning of next year a bank of issue. The depreciation of the German mark, which was legal tender in Danzig, became so rapid, however, that it was impossible to wait several months for the realisation of a monetary reform. The employees refused wages in a currency which every hour was losing its value, and the whole economic life was threatened by a deadlock. To prevent a severe industrial crisis, the manufacturers made an arrangement with some Danzig banks which, against the deposit of foreign currencies, issued industrial cheques in gold pfennigs, 420 pfennigs were equal to one American dollar; they issued also notes of 210 and 105 pfennigs. The banks were obliged to exchange these notes on presentation against American dollars.

These cheques became very popular, and a monetary reform was accomplished without the intervention of the authorities.

The Government of the Free City, seeing the success of this experiment, followed in the footsteps of the manufacturers, and opened a *Danziger Zentralkasse*, which against the deposit of sterling bills issues guildens (*Schuldverschreibungen auf Inhaber*). (25 guildens are equal to one English pound.) One part of the obtained sterling bills is used by the *Zentralkasse* for investment; the other part is kept for the exchange of the presented paper guildens.

The guildens are eagerly absorbed by the circulation, and hitherto the Zentralkasse has succeeded in maintaining them on a nearly stable level in comparison with the English pound.

Foreign capital is taking a steadily increasing part in the exploiting of Poland's industries. French capitalists are principally interested in the coal industry of Upper Silesia and the oil industry of Galicia. The Vienna banks are giving a very important support to Polish financial institutions. English credits have been granted to the sugar industry and to a leading electrical undertaking. Combined with Vienna financial institutions, two Italian banks—the Banca di Credito Italo-Viennese and the Società di Credito Commerciale—have obtained from the Polish Government important mining concessions in Upper Silesia. The Polish explosive industry is equally maintaining a close contact with similar Italian undertakings. The whole plant of the recently opened factory Nitrat has been supplied by the Società Italiana Prodotti Esplosivi in Milan.

Letters to the Editor.

AN INCOME-TAX ANOMALY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The awkward incidents attributable to income-tax include many cases which those who drafted the Acts and those who made them Law can hardly have foreseen. There are instances demanding the attention of the Chancellor of the Exchequer where the Law works so as to relieve one man from taxation of part of his income and throws the burden on another man, who apparently has no legal redress. May I give an illustration? After a prosperous period a firm has occasion to readjust its division of profits according to a new deed of partnership, and incidentally the partner, having had the largest share hitherto, becomes the recipient of a smaller portion of the profits, and those hitherto receiving the smaller allowance henceforth are entitled to the difference, which increases their shares accordingly. The year following this new arrangement turns out to be a bad one, with a fall in profits, but it has to bear an assessment of income-tax based on the average of the three preceding fat years, with the result, as each partner has to pay tax according to his present share of the total profits, the partner who had received the lion's share of the prosperous three preceding years now finds that, owing to being liable only according to his present allocation of profit, he is escaping payment of income-tax on a large portion of the sum he actually received, and that his partners are legally responsible for the difference.

The Government, rightly enough, assess a firm as a taxable entity, and it is up to the partners to allocate their contributions according to their balance-sheets. I venture to say that most business men would say, "of course, this is always done according to each man's actual receipts from the business," but in the above instance those with the least income are made to pay a big slice of the taxation due on the largest share as received by the former principal partner. If the latter takes advantage of his legal position his partners appear to have no redress against him, because everyone of us is assumed to be familiar with the law of our country, including the Income-Tax Acts, so remarkable for their clarity and simplicity of expression.

In another case, following a prosperous period, a business is sold to a purchaser, who continues it to find his

first year turn out very badly by comparison. Owing to the income of his first year being based on the three years previous figures, he finds himself called on to pay a sum for income-tax altogether beyond the amount suggested by his actual earnings.

The authorities are entitled to say this is not their concern. Doubtless, if the layman was as familiar with the technical traps of the subject as they are, he would protect himself before entering the snare, but the shrewdest, even when advised by reputable solicitors and accountants, often remain unaware of these pitfalls. Is it not the duty of the Inland Revenue Authorities to provide some new regulation enabling an aggrieved subject to obtain redress from those who have escaped payment, which in the ordinary way they would have paid without question?

The matter is difficult to explain in simple language, but many of your readers may know of similar instances, and may perhaps be allowed to describe them in your columns, so that the Chancellor of the Exchequer may see his way to adjust what is now an anomalous and undesirable effect of the law.—Your obedient servant,
"DISGRUNTLED."

London, December 29th, 1923.

PROTECTING THE INVESTOR.

In the annals of British company finance 1923 will be remembered chiefly as a "writing-down" year. Many people who lent too ready an ear to the promoter, four or five years ago, are to-day painfully conscious that every period of trade prosperity witnesses the birth of a number of greatly over-capitalised concerns, which collapse under their own weight with the first gust of depression. The subsequent elimination of capital unrepresented by profit-earning assets is unquestionably a sound economic process, but the shareholder may be forgiven a doubt as to whether the law of the land might not advantageously have protected him against his own rashness by insisting at the outset on some reasonable ratio between capital and earning power, instead of saying, "Let the investor have the material facts," and thereafter leaving him to make, unaided, a judgment which can rarely be reasoned or unbiased. In the United States the promoter has operated on a larger scale and received much more official attention than in Great Britain, and the problem of protecting the investor from himself has exercised the public mind a good deal. The latest edition of Dr Mead's "Corporation Finance"* throws valuable light on the lines along which such State interference in the capital market has developed of late years. Since its first publication in 1910 Dr Mead's work has come to be regarded as the standard text-book on American corporate practice, but the latest issue contains much new matter covering recent far-reaching tendencies in this respect.

The most noteworthy effort to abate the worst evils of "wild-cat" company promotion has been embodied in

* "Corporation Finance." By Edward Sherwood Mead, Ph D. Fifth Edition Revised and Enlarged. D. Appleton and Co., New York and London. 195 net.

York and London. 15s net.

various codes of "Blue Sky Laws," so called because of the reputed habit of the speculative promoter in capitalising the sky above him. Between 1911, when battle was joined by the Kansas Legislature, and 1923, 38 States of the Union enacted Blue Sky Law. These provide penalties of fine or imprisonment whenever stocks or bonds—with certain scheduled exceptions—are offered to the public without the *imprimatur* of the State Banking Department's Commissioner, which is not granted unless the latter is satisfied that the proposition is "equitable" and "promises a fair return." Under an Act of Congress the use of the mails for obtaining money by fraudulent representation was made a criminal offence, and the Federal authorities have provided a vigilant corps of inspectors for the enforcement of the law. The inevitable denunciation of the Blue Sky Laws as "unconstitutional" under the Fourteenth Amendment was silenced by the decision of the Supreme Court early in 1917, when, "to the general surprise," their constitutionality was completely affirmed. Dr Mead's attitude towards this body of law is one of critical approval, though he admits that State banking commissioners may conceivably be open to political influence—a somewhat serious defect to an English mind.

A more subtle attack on over-capitalisation is the American theory of law, that when a receiver for a company is appointed, and creditors are able to prove that stock was issued to vendors at an excessive value, vendors who still retain such stock can be made contributory for the difference between its true value and nominal value. It is notorious that over-capitalisation is brought about most frequently by over-valuation of assets acquired "for consideration other than cash." The most conscientious of men, when called upon to make over property worth £100 for shares in the most promising and conservatively financed new company, will probably ask at least £150, rightly claiming that he is giving a hostage to fortune, and that 50 per cent. is not an excessive insurance premium in view of the nature of the risk. An unscrupulous promoter of a doubtful concern might demand, and obtain, anything up to £500, and the venture would be hopelessly over-capitalised from the start. Whether, however, the American expedient would be successful on this side is an open question. In the first place, the validity of the doctrine under English law is doubtful, and special legislation might be necessary to give effect to it. Secondly, the ascertainment of what was in any particular case an "equitable" and what an "excessive" valuation would be an exceeding difficult and controversial matter. Thirdly, the type of vendor whose activities are to be curbed, usually "unloads" his stock at the earliest opportunity, and no proceedings could be taken against innocent holders for value. The *bonâ-fide* vendor would possibly be intimidated, and unwilling to sell his property for shares at any price. Dr Mead points out that in America the power of issuing stock *without par value* provides an easy means of evasion of liability, though such a course of action is not possible in Great Britain. In any case, a system of "further liability" would need to be combined with a prohibition of the transfer of vendors' shares for a certain period after a company's flotation, and, probably, the grant of power to the receiver or liquidator to trace back the ownership of such shares from present holders for value to their original owners.

Numerous American devices of less revolutionary character for protecting the investor might advantageously be considered in this country. The American corporation is compelled by law to appoint a "treasurer" as well as a chairman ("president") and secretary. This gentleman concentrates his whole-time attention on financial matters, including questions of broad monetary policy, which, in England, are too often the concern of the board in general and no one in particular. Any attempt to reintroduce the American practice by virtue of which "directors.....usually serve without compensation other than a small fee for attending meetings" would meet with a very mixed reception. There is, indeed, a certain amount of force in the contention that English company administration would benefit if directors were given higher fees, and required to give much more unremitting attention to their duties. Holders of preference stock in the United States are often protected by a series

of safeguarding provisions comparatively unknown in this country. Some of the most extreme, such as the assumption of exclusive voting power by preference shareholders when their dividends are in arrear, would not be likely to find favour here, but the adoption of others, such as the limitation on the pledging of the company's personal property as security for loans, and the provision for setting aside a sinking fund for the redemption of preference shares, after all dividends have been paid, would, if adopted, do much to raise many semi-speculative British preference shares to something more nearly approaching investment value. The growing tendency of the American courts to appoint receivers on account of mismanagement before, and not after, a corporation has become insolvent, is another feature offering possibilities of important development. These are a few of the many comparisons suggested by a reading of Dr Mead's work. The general conclusion would appear to be that, while the body of English company law and practice has undergone little change during the last 15 years, that of America has made definite progress in various ways. Although many of the latest developments have not passed beyond the experimental stage, others have certainly earned the right to be considered on their merits by all who desire that the investor, that most indispensable member of the community, should receive every protection society can afford him.

AN INTERNATIONAL BUSINESS VOLUME.

WE are informed that the "International Register of Telegraphic and Trade Addresses,"* just published, contains within the compass of 2,100 pages full details of 70,000 of the principal firms of the world. We can quite believe it. The book is indexed in three main sections, namely, (a) alphabetical list of business firms, with full postal and cable address of each, nature of business and codes used; (b) classified trades list showing the principal firms throughout the world engaged in any given trade; and (c) an international cable address index. The Register has been arranged for easy reference. This book will prove invaluable to manufacturers and merchants, and business houses generally, for from its pages it is possible to find who are likely buyers of goods in any particular country; which firm uses a cable address; which firms in various countries can supply certain products. In addition an ingenious coding system is embodied, making it possible to mention firms, goods, services, &c., in telegrams and cables at low cost.

BOOKS RECEIVED.

Protection in South Africa. By Dr A. J. Bruwer. (London) Walker Bros. (London), Limited, 36 Basinghall street. 10s 6d.
Economics of Overhead Costs. By J. Maurice Clark. (Chicago) University of Chicago Press. \$4.00.
Foreign Affairs: An American Quarterly Review, Vol. II., No. 2. (New York) 25 West 43rd street. \$1.25.
Treasury Bill Discount and Tender Rate Tables. By E. E. Newby and M. Mulcahy. (London) Jones and Brown, Discount Brokers, 17 Gracechurch street.

This book, compiled for the use of bankers and brokers, and most substantially and strongly bound, is primarily intended for calculations in Treasury bills, which are thereby greatly simplified. The tables give the amount of interest on sums of £25,000, £50,000, and £100,000 at rates ranging from 2½ to 5 per cent., for periods from one to 366 days. Interest on any other amounts can be easily obtained by the manipulation of a decimal. The book should prove invaluable in brokers' offices and banks.

People's Year-Book, 1924. (Manchester) Co-operative Press Agency, 118 Corporation street. Cloth 3s, paper 2s.

This annual is a comprehensive compendium of information on the progress of the co-operative movement at home and abroad. It is indispensable to students of the movement, and also includes annual reference books. The 1924 volume is well up to the standard of its predecessors, and contains nearly two score of well-produced illustrations.

STOCK EXCHANGE NEWS.

TICKET. SETTLEMENT DAYS. ACCOUNT.
January 9. | January 10.

The year closed on the Stock Exchange with business on a very restricted scale, but with a slightly more hopeful outlook regarding possibilities in the home political situation and affairs on the Continent. After the customary holiday on New Year's Day, markets at first showed a marked tendency to improvement, but the news of a decline in the New York exchange proved an unsettling influence, which affected the gilt-edged market on Wednesday afternoon, and on Thursday spread to most other sections. Throughout the week gilt-edged stocks have, for the most part, remained quiet to dull, Five per Cent. War Loan being perhaps the most active of the group. Funding Loan and Victory bonds each shed ¼ on Thursday, but India loans and colonial stocks for the most part succeeded in holding their own against prevailing downward tendencies. European securities in the latter part of the week were influenced by unfavourable exchange movements, French bonds being weak. A mild speculative activity in Russian Four and Four and a Half per Cents developed at one time, but quickly subsided. South American bonds were irregular, but Japanese tended to improve in consequence of the weakness in sterling exchange.

Home Railways were at one time inclined to firmness, but were later affected by movements in the gilt-edged market. Foreign Railway stocks attracted little attention. Brazilian rails were assisted by the continued improvement in the milreis, while a certain amount of demand for United Havana caused the price to rise to 80½ on Thursday.

In Industrials business passing has been of small dimensions, the general tone in the New Year being less firm, though price movements, with few exceptions, have been confined within narrow limits. While iron and steel shares show very few changes, textiles have exhibited a certain amount of weakness, while shipping shares on the whole have been featureless. Tobacco shares were sold on Thursday with considerable freedom. Bank and Insurance shares were quiet, the dividends so far announced showing little variation from those of last year, leaving prices unaffected. Among recent issues Daily Mail Trust debentures have been dealt in, the price having varied during the week between ½ discount and ½ premium.

Kaffirs rose appreciably in view of buying orders from the Cape, and a fresh rise in the price of gold. Tin registered a further advance. Little interest has been taken in rubbers, but inquiries for tea shares have been more numerous, and markets have been firm generally.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

BRITISH OVERSEAS BANK, LIMITED.

ALTERATION OF ARTICLES UNANIMOUSLY CONFIRMED.

An extraordinary general meeting of the British Overseas Bank, Limited, was held, on the 4th instant, at the registered office, 33 Gracechurch street, London, to confirm a resolution, passed on December 14, 1923, adopting new Articles of Association.

Mr N. L. Campbell: Gentlemen, in the absence of the Governor, I should like to propose that Mr Gairdner take the chair.

The Hon. Bernard Rollo: I have pleasure in seconding that.

The resolution was unanimously approved, and Mr A. C. D. Gairdner (chairman of the board of directors) took the chair.

The Chairman then called upon the Secretary to read a letter which had been received from the Governor, the Rt. Hon. Viscount Churchill, G.C.V.O.:—

The secretary (Mr A. E. Thorne): The letter from the Rt. Hon. Viscount Churchill to Mr Gairdner, chairman of the board, is as follows:—

"I am extremely sorry that I am prevented from presiding at the extraordinary general meeting of the British Overseas Bank to-morrow, as I have to be in the chair at the Great Western board. I very much regret that this should happen, but it is entirely due to alterations in the dates of meetings of the Great Western board caused by the new railway grouping, of which I was unaware at the time of the fixing of the extraordinary meeting of the British Overseas Bank.

"I am,

"Yours very sincerely,

(Signed) "CHURCHILL."

We have also received apologies for absence from the following members of the council:—Mr L. Currie, Sir Arthur Haworth, and Mr Norman L. Hird.

The Chairman next called upon the secretary to read the notice convening the meeting, and he did so.

To dividend, at December, 1923, for half-year at the rate of 2½ per cent. per annum	53,125	0	0
Less income-tax	11,953	2	6

STANLEY FERGUSON,

R. K. L. GALLOWAY,

A. H. MOODY,

W. M. FULLERTON,

Directors.

M. W. BLACKWOOD, Secretary.

J. W. BLACKWOOD, Chief Accountant.

We have examined the accounts of the bank and the above balance-sheet, and, in accordance with the Companies (Consolidation) Act, 1908, we report that:—

We have obtained all the information and explanations we have required.

We have ascertained the correctness of the cash and bills on hand at the head office and in Dublin, and of the money at call and short notice, and have inspected the securities representing the investments of the bank, and find them to be in order.

We have also examined the above balance-sheet in detail with the books at the head office, and with the certified returns from each branch, and in our opinion it is properly drawn up, so as to exhibit a true and correct view of the state of the bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books.

HARMOD BANNER AND SON, Chartered Accountants.

Ulster Bank, Limited, Belfast, December 13, 1923.

THE RESOLUTION.

The Chairman: Gentlemen, as you are aware from the notice which has just been read, we are meeting to-day to confirm the proceedings at our extraordinary general meeting held on Friday, December 14, 1923, at which a resolution to adopt the new Articles of Association of the company was carried unanimously by the shareholders present at that meeting. It is unnecessary for me to add anything to what the Governor said on that occasion, and I therefore now beg to move, "That the resolution passed at the extraordinary general meeting of the company, held on Friday, December 14, 1923, which reads as follows, be confirmed:—'That the regulations contained in the printed document submitted to this meeting, and signed for identification by the chairman at the meeting, be and the same are hereby adopted as the Articles of Association of the company in lieu of the whole of the existing Articles of Association.'"

I will call upon General Maxwell to second that motion.

Brigadier-General A. Maxwell, C.M.G., D.S.O., seconded the resolution.

SHAREHOLDER'S QUESTION.

Mr E. T. Hargreaves: Mr Chairman, before you put the motion, I should like to ask you one question. It seems to me that you have made a slip in Article 120, if you look at Article 151. In the first place, in Article 120 you give the "A" shareholders a cumulative dividend at the rate of 6 per cent. per annum on the "A" ordinary shares, and when you come to the winding up you say that the surplus is to be applied in paying to the holders of the "A" ordinary shares the amount paid on the "A" ordinary shares held by them respectively. In the circumstances, I think it would be perfectly right that you should put in "and any dividends which have not been paid up to the time of liquidation." It is customary to do so. Mr Brown, I think, holds a different view. His view is that, where preference shares are given a participation in further profits, they ought to

run the risk of losing their dividend. Personally, I think that when you give in one place a cumulative dividend, as you say here, of 6 per cent., you ought to repeat it in the winding up, so that there is no difference between the two Articles. That is the only thing I have to raise. There were other comments which I had on the Articles, but unfortunately I was not able to come here last time or I would have given you the benefit of them. I know you cannot make any alteration now. It would be out of order to do so; I quite admit that.

CHAIRMAN'S REPLY.

The Chairman: I am sure we are greatly interested in what Mr Hargreaves has said, and are indebted to him for the interest which he has taken in the bank. In reply to the point which he has raised, I would only say that the new Articles received very close attention. The words he referred to were in the old Articles. We are always prepared to reconsider such questions in the light of information that comes before us, and if Mr Hargreaves had raised the matter a little earlier it might have been reconsidered. I should like to say that they were adopted originally quite deliberately, and, although it might be possible to improve that point, as we hope to improve everything connected with the bank in time, I do not think that liquidation is a point which we are really contemplating, and I hope it never will be. Anyhow, I am afraid it is too late to do anything now.

Mr Hargreaves: I agree that it is too late to do anything to-day.

The Chairman: If nobody else has any questions to ask, I will put the resolution to the meeting.

The resolution was carried unanimously.

The Chairman thanked the shareholders for their attendance at the meeting, and the proceedings then terminated.

WESTERN AUSTRALIAN BANK.

The one hundred and sixty-fourth half-yearly meeting of shareholders of the Western Australian Bank was held on Wednesday, November 7th, at the Banking House, St George's terrace, Sir E. H. Wittenoom, chairman of directors, presiding.

The chairman, in moving the adoption of the report and balance-sheet, stated that it had to be remembered that they had to deal with more capital than hitherto, and the directors had to take every care to get the best paying avenues for advances. In comparing the various items in the balance-sheet it would be noticed that the net profits were £36,271, being £4,443 more than March, 1923, and £5,995 more than September, 1922, and the amount carried forward, £31,144, was £3,196 more than March, 1923, and £10,045 more than September, 1922. Deposits were £3,318,189, being £323,732 less than March, 1923, and £171,843 more than September, 1922. Advances were £3,597,996, being £317,122 more than March, 1923, and £364,255 more than September, 1922. Balances from other banks were £93,979, being £181,747 less than March, 1923, and £138,386 less than September, 1922. It must not be forgotten that out of 128,000 shares representing new capital, 50,000 were bonus shares, for which no money was paid, so that dividend had to be provided for these 50,000 shares in addition to the others. This had been done, and a dividend of 1s 9d paid all round, giving the old shareholders 21s in place of 20s for their late £10 shares, which they had regularly received hitherto, and in addition it would be observed £31,000 odd had been carried forward. They would readily realise how easy it would have been for the directors to have inflated the position and declared a popular dividend of the same amount as usual, viz., 2s per share, with possibly some reductions in the amount to

be carried forward, which, as it at present stood, was almost equal to the amount necessary to pay a similar dividend.

The directors would give the matter of additional capital careful attention in the near future, as they felt the resources at the disposal of the bank were too limited.

The report and accounts were adopted.

STOLL FILM COMPANY, LIMITED.

PUBLIC'S DEMAND FOR BRITISH PICTURES.

The fifth ordinary general meeting of the Stoll Film Company, Limited, was held at the Stoll Picture Theatre, Kingsway, London, on the 29th ultimo.

Sir Oswald Stoll (chairman of the company), who presided, said:—I rise to move the adoption of the report and accounts, which, I assume, may be taken as read.

There is a large decrease on the credit side of the profit and loss account. The reason is that we have not done so much business. That, in my opinion, is also one of the reasons, apart from depression in trade, why picture theatres in this country during the year have done less business.

AMERICAN FILMS.

Exhibitors apparently prefer to please themselves rather than to please the public, and they utterly disregard public sentiment. Owing to this disregard of public sentiment British pictures, which are this company's main source of business, do not yet appeal as they should to the British exhibitor. British exhibitors are obsessed by American pictures, but the general public are not. The public at large keenly resent having to find £50,000,000 per annum to send to America in payment of war debt. They are becoming more and more averse from paying for American pictures as well.

Including the risk of exchange, which our Government undertook to maintain against the people of this country, we shall probably have to pay in principal and interest well on the way to £3,000,000,000 in settlement of an American debt of £1,000,000,000 for war purchases, the concrete values of which, owing to the high prices charged, did not exceed half of £1,000,000,000.

We are placed in the position of a defeated people, conquered by America, and forced to pay a heavy yearly tribute for many years to come. This is not the fault of the American people. It is the fault of a few people on both sides of the Atlantic playing for position in high finance.

Though our people as a people cannot blame the American people for this settlement, it is foolish on the part of exhibitors to expect our people to take a keener delight than ever in American pictures. Exhibitors in that mental condition seem to require medical advice.

PUBLIC DESIRE FOR BRITISH FILMS.

The British Film League was to change all that. But contrary to expectation, since the British Film League campaign in favour of British pictures for British screens began, the exhibitor has become more shy of British pictures than ever.

If exhibitors persist in forcing the bad and indifferent American films upon the British public whilst this American tribute of nearly £50,000,000 per annum is being paid on such a curious basis, then I fear that their extraordinary policy, together with profitless trade that the tribute is partly the cause of, will close the doors of hundreds of picture theatres in this country before we are very much older.

The British people in ordinary circumstances are sufficiently catholic in taste to wish to see pictures of every nationality, but they never at any time have desired to see them instead of pictures of their own, wherein they can see British life and ideas in a

British atmosphere, and revel in the feeling that there is no place like home.

It is clear that the business of this company, and of others in the same branch of the cinema industry, is suffering at the moment from the fact that the public knows what it wants, but the exhibitors do not know.

CAUSES OF DECLINE IN PROFITS.

There is a reason why I may speak in this way of exhibitors without offence, although numerous intelligent business people are included amongst them.

The reason is this: Exhibitors by the score came into picture theatres in boom times with the idea that to convert a shop, a tram shed, a skating rink, or to erect a new building, in order to fill it with eager crowds of the paying public looking at pictures on a screen, was money for nothing. They did not pretend to know the business or even believe that there was any business to know.

But for that I should have been content with John Stuart Mill's opinion that in this business, as in most other businesses, it is true to say, "there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it."

The cause I have described, though a most important one, is not the sole cause of the fall in our profits. Further causes are an actual loss in fighting the efforts of renters in other countries to keep British pictures out; and also some unavoidable and expensive litigation which will not recur.

We deemed it advisable to make no attempt to carry over any part of these costs, but to let the revenue for the year bear the burden. This course materially helps the current year.

The resolution was seconded by Major B. W. Broad, and carried unanimously. Sir James W. McCraith, the retiring director, was re-elected.

STOLL PICTURE THEATRE (KINGSWAY), LIMITED. ENTERTAINMENT A NECESSARY TONIC.

Presiding at the annual meeting of shareholders of the Stoll Picture Theatre (Kingsway), Limited, held at the theatre on the 29th ultimo, Sir Oswald Stoll (chairman and managing director) said:—I rise to move the adoption of the report and accounts, which I assume may be taken as read.

There has been a reduction in our profits, not due to a falling off in the number of attendances so much as to the lower average price paid per head. In one part of the theatre we have had a greater number of attendances than during the boom year of 1920.

There is no doubt that our business, like other businesses, is suffering from the steady impoverishment of the general public by the depression of trade.

TAXATION'S SHARE LARGER THAN SHAREHOLDERS'.

On top of this depression, even the trade that it is possible to do is done more for the benefit of the Government than for the owners of the business. In the four years that this company, for instance, has been running, the Government, in amounts of taxation paid or payable, has taken £149,612, whilst the preference and ordinary shareholders together have taken only £91,951.

Yet our company is one of the fortunate ones. We read of other companies which have had to write off as much as £300,000 of arrears of fixed charges owing to the closely related causes of bad trade, reduced spending power, and the hopeless outlook for luxury enterprises such as places of entertainment.

In my view the outlook will be very black indeed when the public have too little to spend on places of amusement. They need more frequent doses of tonic of entertainment the harder the times become. So far we have not found that the people cannot afford to come to our theatre. Some few can afford to pay more, whilst a great many can only afford to pay less; but this is not only in keeping with reports about other businesses, it also accords with the extraordinary redistribution of the resources of the country that is going on.

When £360,000,000 per annum for the National Debt is taken from all of the people to be handed over to some of the people, £50,000,000 of it in fact going to none of the people here, but to the people of America, it is natural that the purses of many should become lighter every year.

It is to be hoped that the political parties will soon realise that this lop-sided redistribution cannot go on much longer.

"JUGGERNAUT CAR OF TAXATION."

The crude "Pay, pay, pay" policy, to which the ingenuity of political parties appears to be limited, will not do. The limit of their ingenuity is self-imposed because the politician believes that by increasing the other fellow's burden he will lighten his own.

Consequently, nobody's burden is lightened, and every kind of taxation that all the parties can think of is imposed as the different parties get into power.

The rate of the British entertainment tax is double the American rate, and while the Secretary of the Treasury at Washington is about to procure the abolition of the American tax, our tax looks like running on for ever.

Taxation here has developed into a car of Juggernaut. In India, by police arrangements made under the British Government, sacrifice of life under the car of Juggernaut is practically abolished. But in our own country the Juggernaut car of taxation dragged annually to the Treasury is crushing business to death under its wheels, and the British Government has so far made no arrangements to avert the sacrifice.

THE OUTLOOK.

Whatever happens, however, theatres working under favourable conditions in large centres may hope to remain successful, or even to make further headway as a consequence of weaker places being driven to the wall by their deplorable circumstances.

Our own theatre, I hope and believe, is working under the necessary favourable conditions. The company has not yet made its hoped-for progress. The times are against us. Political uncertainty is a poisonous gas to opportunities for legitimate business. Hence we must continue merely to run our theatre as best we can, well satisfied that it is very popular with large numbers of the general public.

The motion was seconded by Major B. W. Broad, and carried unanimously.

Mr Alexander, a shareholder, who said that he visited the theatre twice weekly, congratulated the board on the admirable management in respect of choice of pictures, musical arrangements, and general comfort of the house.

The retiring director, Major B. W. Broad, was re-elected.

NOTICES.

The Canadian Bank of Commerce, 2 Lombard street, E.C. 3, has received cable advice from its head office in Toronto that the Governor-General in Council on December 31st signed approval of agreement of amalgamation with the Bank of Hamilton, and that the branches of the latter bank opened on 2nd instant as branches of the Canadian Bank of Commerce.

Lloyds Bank, Limited, announce that from January 1st the Eastern department of the bank will be located at 77 Lombard street, E.C. 3. This bank, in consequence of the recent acquisition of the businesses of Messrs Cox and Co. and Messrs Henry S. King and Co. (including Messrs King, King, and Co. and Messrs. King, Hamilton and Co.), has now offices in the principal cities and towns of India, Burmah, and Egypt.

The Banque Anglo-Sud Américaine, Société Anonyme, has been registered in Paris, with a fully-subscribed capital of 30 million francs, of which 20 million francs paid. The directors of the French company will be Mr R. J. Hose, chairman of the Anglo-South American Bank, Limited, London; Mr Eduard Bunge, president of the Société Anonyme Bunge, and of the Banque Générale Belge, Antwerp (also a director of the Anglo-South American Bank, Limited); and Mr W. E. Wells and Mr A. C. E. Kimber, both of whom are general managers of the Anglo-South American Bank, Limited. The French company has been created in order to handle more satisfactorily the extensive business between France and the territory covered by the organisation of the Anglo-South American Bank, Limited, London.

Barclays Bank, Limited, announce that they have opened a new sub-branch at 1 Bucks Head parade, London road, Upper Mitcham, under the management of Mr A. R. Cavill, who is also manager of Mitcham branch. They also announce that they have opened a new sub-branch at 6 Station-terrace, Fochriw, under the management of Mr Wm Scott, who is also manager of Bargoed branch, and a branch at 2 Porkington place, Harlech, Merioneth, under the management of Mr I. Milwyn Morgan. They also announce the opening on Monday next, January 7th, of a new branch at 89 Malden road, N.W. 5, under the management of Mr E. A. Minter. They have converted their sub-branch at Lostwithiel into a full branch, under the management of Mr W. M. Pethybridge, who is also manager of Bodmin branch.

The directors of the Union Discount Company of London, Limited, announce that Mr Thomas Ernest Whelen has been appointed assistant manager in place of Mr E. K. Brown, resigned, and that Mr Edgar Charles Ellen has been appointed an assistant to the manager.

BROKEN HILL SOUTH.—For four weeks ended December 29, 1923, 13,890 tons of crude ore and 6,172 tons of dump slime were treated and produced, 3,840 tons of crude concentrates, assaying 57 per cent. lead and 24 ozs silver per ton; also 3,447 Christmas holidays.							

Reports and Notices.

The Wellcome Foundation, Limited, has recently been registered as a private limited company, with a capital of £1,000,000, to acquire from Mr Henry S. Wellcome the well-known business of Burroughs, Wellcome, and Co., and the various scientific institutions founded and owned by Mr Wellcome, who will be the governing director of the foundation during his life. We understand that the Foundation has been formed entirely for private and family reasons, and that the conduct and management of the business will in no way be interfered with, but will be continued on exactly the same lines as heretofore. The scientific institutions will also continue as in the past under separate scientific direction.

The Union-Castle Company announces the appointment of Mr James McNaught as a joint manager of the company. Mr McNaught was formerly assistant manager, and has had a long and varied business career in the company.

Owing to rebuilding, the City offices of the *Evening Standard*, *Daily Dispatch*, *Evening Chronicle* (Manchester), and *Sunday Chronicle* have been removed to 5 Drapers' gardens, E.C.

The business of H. T. Hanson and Co., discount agents, of Nicholas lane, is to be registered as a private limited company with the same name, and having an authorised capital of £100,000.

Mr Geoffrey Earnest Tritton has been taken into partnership in the firm of Messrs Brighten and Co., of 34 Nicholas lane.

Mr A. W. Bolden, managing director and secretary of the Antofagasta (Chili) and Bolivia Railway Company, Limited, is relinquishing, as from the end of the present month, the office of secretary, and will in future confine his attention to his duties as managing director of the company. Mr A. H. Clinch has been appointed secretary of the company, the appointment to take effect as from January 1, 1924.

Mr Richard Sidney Guinness, deputy-chairman of the London and Scottish Assurance Corporation, Limited, has been elected chairman in succession to the late Sir Vesey Holt.

The Royal Exchange Assurance announces that Sir E. K. Allen, C.B.E., has been appointed a local director attached to its Law Courts branch.

We are informed that negotiations between the Anglo-Argentine Tramways Company, Limited, and the City of Buenos Aires for a revision of fares are still in abeyance, and the Municipal Council has adjourned until after the elections in March.

The Holland-America Line have established their own port office at 35 Oxford street, Southampton.

BANKS.

BRITISH AND NORTH EUROPEAN BANK, LIMITED.—The directors in submitting to the shareholders the balance-sheet as at September 30, 1923, with the auditors' report thereon, report a continual increase in the business of the bank, with satisfactory results. The directors also state that a large proportion of the holdings of certain shareholders in this bank have been taken over at par by influential parties and financial institutions, whose co-operation should prove of great value in promoting the further expansion of the bank's business. The directors regret to report the resignation, owing to increasing engagements, of J. H. Stephens, Esq., from the directorate, and have pleasure in reporting that the following gentlemen have been elected to seats on the board:—Mr G. D. Camanski, Mr B. Schwetsoff, subject to confirmation by the shareholders. The total assets are £2,100,784. Cash amounts to £241,996. Bills of exchange £47,999. The investments of the bank, which stand in the balance-sheet at £133,802, relate mainly to holdings in affiliated banks in France, Austria, and Poland, and in the opinion of the directors are taken at a conservative valuation, which in the aggregate is in excess of cost. The market quotations continue to appreciate. Advances are at £673,878. Sundry debtors stand at £75,492. Acceptances are at £900,735. With regard to liabilities, the issued capital is £500,300. Deposits are at £699,749.

WESTERN AUSTRALIAN BANK.—The report for the half-year ended September 24, 1923, shows a net profit of £36,272. The balance brought in from preceding half-year was £27,948, making £64,220 available. The directors have resolved to pay a dividend of 1s 9d per share, free of dividend duty, and to carry forward £31,145. The reserve fund is now £813,000. The paid-up capital is £378,000. Deposits stand at £3,318,189. The total assets are £4,703,176. Bills receivable and all other advances amount to £3,597,997; specie, bullion, and Australian notes, £663,896; public securities are at £125,355.

RUBBER, &c.

BRAUNSTON (MALAY) RUBBER.—The report for the year ended September 30th, shows that the profit on working, after writing off £547 16s 4d for depreciation on buildings, machinery, &c., was £6,977, which, with the amount brought forward from last year, £5,937, makes a total of £12,614; deducting income-tax and corporation profits tax, £505, there remains a balance of £12,109. A dividend of 10 per cent. (less income-tax) is paid on the ordinary shares, amounting to £8,450; the sum of £500 is placed to a fund, and £3,159 is carried forward. The crop harvested for the year amounted to 300,000 lbs, of which, under the compulsory restriction, 285,026 lbs were licensed for export up to September 30th last. The gross average price obtained for the crop sold, viz., 202,468 lbs, was 1s 2 1/2d per lb. The remaining 82,532 lbs, which the company were licensed to export, have been valued in the accounts at 1s 2d per lb gross, and the excess crop

harvested, viz., 14,974 lbs, at cost of production. The "all-in" cost per lb was 9.01d, as compared with 7.90d in the previous season. Export duty, which alone amounts to 1/4d per lb, and the smaller crop harvested under the restriction scheme, account for the increased cost.

LUMUT RUBBER ESTATES.—The net profit for the year ended September 30, 1923, amounts to £32,624, to which is added £40,379 brought in from preceding year, making £73,003. Excess profits duty to September 30, 1920, absorbed £20,501. The ordinary dividend of 15 per cent. for the year absorbs £24,188, leaving £20,814 to carry forward. During the period under review a restricted output of 1,011,557 lbs of rubber was harvested. The exportable allowance, inclusive of the rubber shipped in October, 1922, was 973,577 lbs. The average gross price realised, including the estimated value of the unsold portion of the crop, was 1s 2.94d per lb, against 9.38d per lb in 1921-22. The cost of production free on board at port of shipment, including provision for bonus to staff and export duty, was 5.22d per lb, against 4.62d per lb in 1921-22. The increase is mainly accounted for by the export duty of 2 cents per lb, which came into force on November 1, 1922. The "all-in" cost, including depreciation, transport, and sale charges, London expenses and provision for corporation profits tax, was 7.55d per lb, against 6.61d per lb in 1921-22. The average cost of weeding per acre per annum over the whole planted area was \$2, against \$2.22 last year.

MISCELLANEOUS.

ADELAIDE ELECTRIC SUPPLY.—The following table shows the results for the past five years ended August 31st:—

	1919.	1920.	1921.	1922.	1923.
Gross revenue	£185,908	£238,763	£319,391	£372,466	£439,043
Operating expenses and taxes	99,282	134,876	185,567	215,924	268,602
Net revenue	86,626	103,887	133,824	156,542	170,441

A dividend of 12 per cent. is paid on the ordinary shares, and £38,187 is carried forward against £40,072 brought in. On August 31, 1911, there were 4,810 consumers, and the number has steadily grown until, on August 31, 1923, there was 47,366 consumers.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have continued unfavourable to agriculture, and further rains have delayed field work. It is reported that the wheat acreage in the United Kingdom has been reduced, partially due to adverse seeding conditions, also to the unremunerative prices current. Early plants present a healthy appearance, but late sowings are less satisfactory, being irregular and thin of growth. Native wheat met a generally quiet sale, both here and at provincial markets, but prices showed no material alteration, suitable milling grades ruling from 9s 4d to 9s 8d per 112 lbs, free on rail, with inferior down to 8s. Imported qualities, however, were accorded rather more support, and values hardened in sympathy with higher c.i.f. offers. No. 1 Northern Manitoba quoted at 47s 6d, No. 2 ditto 46s 6d, No. 3 45s, all ex ship per 496 lbs. The floating and forward cargo section presented firmer features, owing to weaker American exchange rates and an improved inquiry on U.K. account. Steamers of No. 1 Northern Manitoba, shipment from Vancouver, December 22 bill of lading, sold at 45s 3d, No. 2 ditto, afloat, 43s 9d to 44s 3d, and Rosafe 64 lbs, January 1-15th, 43s 6d, with 44s obtainable for a similar cargo. Feeding stuffs were also dearer on reserved offers and a fair Continental demand. Of maize, cargoes of Dan-Gal-Foxanian, including a portion of Bessarabian expected ready to load 10th inst., sold at 38s 3d and 38s 9d respectively, also a similar cargo on passage at 38s 3d and 38s 7½d to the Continent, while a steamer of new crop La Plata, April-May, changed hands at 34s 4½d, all per 480 lbs, c.i.f. Flour in steady demand at late rates. London standard straight run quoted 37s 6d, patents 39s 6d to 40s 6d, town households 35s 6d per sack, delivered in. All English country straights 30s 6d to 31s 6d per sack, delivered to London stations. Of imported, Manitoba patents range from 36s to 39s as to sample, and Australian 32s 6d to 33s 6d per 280 lbs, ex store. Barley: English maintained, and malting kinds range from 10s to 14s 6d, with feeders 9s 3d to 9s 6d per 112 lbs, free on rail. Imported firm. Californian quoted 42s to 46s, ex store, Chilean Chevalier 50s to 53s, ex ship, both per 448 lbs. Persian 30s, No. 4 Canadian Western 32s, Danubian 32s, all ex ship, per 400 lbs. Maize again dearer, in sympathy with higher c.i.f. offers. Plate, ex ship, 39s 9d, landed 41s 3d, Gal/Foxanian 38s 6d, Bessarabian 40s, both ex ship to arrive, all per 480 lbs. Oats, English, fully steady at 9s 2d to 10s 6d per 112 lbs, free on rail as to sample. Imported again firmer, with sellers reserved. Plate f.a.q., ex ship, 21s 9d, landed 22s 9d, No. 2 Canadian Western, ex ship, 25s 3d, ditto landed 26s 3d, No. 3 ditto, ex ship, 24s, landed 25s, No. 2 Canadian feed, landed, 23s 9d, all per 320 lbs. Oatmeal in moderate demand at easier rates. London made flaked, also rolled oats, 17s, medium and fine cut 16s 6d, coarse and medium pinhead 16s, ordinary Scottish oatmeal 17s 6d to 18s, and American 16s to 17s per cwt. Millers' offals fully steady. Broad bran quoted 7s 9d, ordinary ditto 7s to 7s 3d, middlings 8s 6d, fine ditto 9s 9d, bags included, ex mill; light oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 12s 9d, free on rail, all per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:-

The purchase price is stated to be between £400,000 and £500,000. The Combine now controls eight anthracite pits. The position in the iron and steel trade is good. Work has been resumed after the holidays, and prices are firm at the minimum figures.

METALS.

Tin ruled firmer on a good demand, combined with higher Eastern advices. Standard, cash, sold from £232 15s to £237 5s, and three months £234 5s to £238 10s. Eastern cables reported sales on the basis of £239, c.i.f. A good inquiry prevailed on Thursday, and prices moved in sellers' favour, though some irregularity was noticeable at times. Standard, cash, sold at £238 10s to £239 to £238 15s, and three months £240 to £239 10s to £240 10s to £239 17s 6d. On the following day the tendency was easier. Standard, cash, sold at £237 to £237 5s to £236, and three months 239 to £238 5s to £237, while finally registered at £237 10s. English ingots quoted at £236 10s to £237 per ton. Copper opened easier on liberal offerings, but subsequently buyers were more in evidence, and a firmer tone ensued. Sales were on a moderate scale, including standard, cash, £60 12s 6d to £61 8s 9d, and three months £61 12s 6d to £62 2s 6d. At Thursday market values, after opening firmer, gave way, closing, however, without material change. Standard, cash, sold at £61 17s 6d to £61 10s, and three months £62 10s to £62 2s 6d. Copper was in quieter demand on Friday, and values the turn in buyers' favour. Cash sold at £61 5s, and three months £62 2s 6d to £61 17s 6d to £61 15s 9d, electros £67 10s to £68, best selected £65 10s to £66 15s, strong sheets £95, wire bars £68 per ton. Lead firm, with an improved demand. Good soft foreign pig, £30 15s to £29 17s 6d, as to position. Spelter firmer, and sparingly offered at £33 10s. Aluminium quiet. Home trade, £115; export, £120. Antimony firm. English specials, £44 10s to £45; foreign, spot, £36 per ton.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Judging from the appearance of the market to-day, it does not look as if the holidays have had much effect on trading conditions. While there is no sign of any great activity, there is quite a nice, steady turnover in wool, tops, and yarns, and prices all round remain exceedingly firm. Users are now showing rather more interest in merinos, and in view of the strength of the raw material position there certainly does not seem to be the slightest prospect of being able to buy on more favourable terms than those now obtainable. All qualities of crossbreds are also moving, and although both in merinos and crossbreds some firms are quoting obviously protective rates, the fact remains that prices show an upward tendency, and are all against the buyer. Spinners are fairly well employed, and some useful orders having been booked during the last few weeks. Another encouraging feature is that much of the cheap stock lots has now been disposed of, and although sales from stock have been made at extremely low prices, for new business spinners are taking a firmer stand, and quoting prices more in harmony with the current high cost of production. There is not much change in the piece goods trade, but the position is more hopeful than for a long time back, and both home and export markets are taking more interest in quotations. Gradually wholesale fabric buyers are beginning to realise that wool cannot continue to soar without having some effect on the cost of cloth, and many are inclined to operate more freely, and put down some bulk orders on forward account. All home-grown wools are in good demand, and as stocks are being absorbed, prices show a distinct upward tendency. By-products and mohair and alpaca are very firm.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The incoming mail from Australia speaks of red-hot markets, with prices in the clouds. A Sydney correspondent informs us that to the end of November out of 310,000 bales offered in Brisbane and Sydney, France and Belgium were credited with taking 250,000 bales, British buyers 24,000 bales, and Japan 20,000 bales, other buyers sharing the 20,000 bales among them. We are certain that during the first half of the current selling season in Australia, the home trade has not purchased anything like half what it did during the previous season, simply because home trade buyers have been able to make so little profit out of merino wool. The new year sales begin in Australia next Monday at Sydney and Hobart, and we are looking forward to recent prices being fully maintained. The outlook for wool is

certainly regarded with every confidence, and we are likely to see a continuance of keen buying. Critical views are expressed by some of those intimately associated with the manufacturing end of the trade respecting the present standing of values. The opinion entertained is that there is not the amount of new business being done at the present time to justify the figures which are being paid for wool. It is impossible to believe, however, that the recent buying has all been purely speculative. Indeed, there is reason to believe that much sound business lies behind what has been done, and we are convinced that the outlook from a raw material standpoint is exceedingly sound and encouraging.

THE COTTON TRADE.

MANCHESTER, January 3.

Holiday influences have continued to prevail throughout the market, and buyers and sellers have been rather slow at getting to work again. Demand in most quarters has been on a limited scale, and purchasers have not been in the mood to give out orders of importance to spinners and manufacturers. Fairly favourable advices are being received from India, and inquiry has been met with in light cloths and grey shirtings, but not much has been done. There seems to be very little hope of activity for China just at present. Scattered sales have occurred for Egypt, the Levant and South America, and fancies continue to attract attention for the United States and the Continent. Home trade goods have been in moderate request. A quiet tone has prevailed in the yarn market, and restricted operations have taken place in American and Egyptian counts at rather irregular rates.

VEGETABLE OILS AND OILSEEDS.

The market for linseed and linseed oil opened firm after the holiday, but business is only within moderate limits. Old Plate linseed oil commands a premium of 50s over December shipment, while new crop offers freely at £17 10s for January-February loading. Crushers, however, are proceeding very cautiously, and are not covering more than their oil commitments. Linseed oil is very scarce on spot and in near positions, and advanced sharply to £43 10s on spot and £42 January per ton naked ex Hull mill. Cottonseed has not been dealt in to any considerable extent, and Black Egyptian shows an easier tendency. The oil product, which of late has been in good demand on Continental account, is quiet. Crude Egyptian, however, maintained a spot value of £42 10s, and soapmakers' grade of refined offers at £43 10s. Other edible oils are about steady and unchanged. The oilcake demand is increasingly affected by the outbreak of cattle disease.

HIDE, LEATHER, AND ALLIED TRADES.

The Bermondsey hide market was a shade weaker in some directions on Thursday, as best ox hides sold from 6 1/2d to 8 1/2d per lb, showing a drop of 1/4d on four classes. Seconds were steady at 6d to 7 1/2d, whilst best cows at 6d showed an advance of 1/4d on last prices. Best calf made from 6d to 12 1/2d, showing no change on last week's values. Wools sold from 6s 10d to 14s each, hogs from 4s to 18s each. The provincial hide market remains firm, with supplies none too plentiful. An improvement is noted in the imported hide market, although the bulk of frigorific trade is being done with the Continent and the United States. Business in dry hides has also improved. All prices advanced at last Paris hide sales owing to strong competition. Latest cables from the U.S.A. report the Chicago position as strong, with best heavy packer hides selling at 14 cents and native cows at 11 cents.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 4.

SUGAR.—The market for refined goods remained in the same state as that previously commented upon, business in a general sense being conducted quietly, but, with only very light quantities to handle, previous quotations were fully maintained. Useful quantities from Czechoslovakia are held up owing to river navigation being impeded by ice. Of British refined, Messrs Tate and Lyle's cubes quoted 6s 6d to 6s 9d; granulated, 6s 7 1/2d to 6s 11 1/2d, as to quality: yellow crystals, 5s 6d to 5s 9d. Supplies of white Java on spot are now virtually exhausted. Medium qualities quoted 5s 9d to 5s 11d. Business resulted in Czech granulated, on spot, at 5s 9d; ditto, January-March, quoted 2s 9s, f.o.b., Hamburg. Dutch and Belgian sugars somewhat nominal in absence of definite offers. Raw refining kinds steady at fully previous rates, and sparingly offered. White terminal market presented quiet and easier features. January quoted 30s; March sold, 28s 1/2d; May, 27s 7 1/2d to 27s 10d; August, 27s 1/2d. English grown granulated, spot, 5s 9s cwt.

COFFEES.—This market remains in a very firm state owing to limited quantities, particularly of suitable grades for home-trade purposes, put out on offer from time to time. Export requirements are only moderate.

COCOA.—Market fully steady on the spot, and a moderate clearance was effected in Trinidad, Grenada, and Accra descriptions. Forward Accra advanced under orders to cover, but assumed a quieter tone later. F.F. quality, February-April, sold, 32s and 31s 9d, f.o.b. terms.

TEA.—The market maintains a firm tone for all suitable liquoring parcels of India, Ceylon, also Java, and which continue to meet a good market, but inferior are inclined to show some irregularity.

RICE.—With shippers reserved in their offers, the market presents steady features, but general trade is conducted quietly. Two Stars, Rangoon, spot, 16s 6d; January-February, sold, 15s 3d. Spanish sparingly offered and firm, and No. 3 for shipment quoted 19s 9d, c.i.f. and i. terms. Carolina sorts meet with moderate support, but trade is somewhat hampered by the high pretensions of sellers. Japanese peas quiet, with larger quantities now on offer. Spot lots, sold, 22s. Rangoon bean quiet, and spot parcels quoted 10s 9d for hand-picked. Madagascar butter beans, new crop, spot, sold, 25s to 26s, as to quality.

SPICE.—Pepper proved a steady market, and forward positions met a fair demand. Fair black Singapore, spot, quoted, 4 1/2d; January-March, steamer, sold, 4 1/2d; Lampong, spot, sold, 4 1/2d; Muntok white, ditto, 7 1/2d; March-May, steamer, L.S., sold, 7 1/2d, c.i.f. and i. Cloves met a very slow market. Zanzibar, spot, 1s 4d to 1s 5d as to sample. Pimento, spot, sold, 2 1/2d per lb. Tapioca market steady, but at the same time quiet. Fair Singapore flake, spot, quoted 3 1/2d; fine Java, 4 1/2d per lb. Fair Penang seed pearl, spot, 3s 6d to 3s 7s. Desiccated coconut, fine cut, spot, 43s; medium, 44s. Ginger very steadily held, but only a small business arises at the moment. Nutmegs and mace held for steady rates.

FRUIT (dried).—The market presented quiet features while largely under holiday influences, but prices generally were at a firm level. Of currants Pyrgos, 1-case, quoted 42s to 43s; bags, 39s; Amalia, 44s to 45s; Patras, 50s; Vostizza, 65s to 72s. Sultanias: Smyrna quoted 51s to 54s; good, 62s to 66s; fine, 80s to 85s; finest, 95s to 100s. Demand for raisins proved very quiet. Valencia, 1-boxes, quoted 50s to 60s; quarters, 52s to 90s. Dates steady at recent level of prices. Figs: Genuine naturals, in bags, quoted 34s to 38s; layers in boxes, 95s to 105s. Evaporated fruits formed a steady market. Californian choice apricots quoted 75s to 76s; fancy, 97s 6d to 110s; old crop peaches: choice, 42s to 43s; extra choice, 46s to 47s per cwt.

CANNED GOODS.—Business was on a limited scale, with purchases made only for actual requirements, but prices steady for all descriptions. Of Sardines, Portuguese quarters quoted 2s 9d to 3s 3d; ditto 12 ozs, 6s to 7s; 18 ozs, 9s 6d to 11s per dozen tins. Lobster steady but trade very dull. Fancy halves, 145s to 150s. Salmon commanded sustained support, while available supplies are on a light scale. 1 lb flat reds, labelled, quoted 45s 6d; ditto, tall, 42s; 1 lb flat, pink, 20s; ditto, tall, 25s 6d, and cases of 96 lbs 29s to 30s per case. Canned fruits received quiet support, but prices manifest a firm tendency. Fair quality Singapore Pines, on spot, 5s 10 1/2d. Californian Apricots, 7s 6d to 11s; ditto Peaches, 8s 6d to 11s. Pears, 12s 6d to 14s. Tomatoes, Spanish, 3s 6d to 6d; Italian ditto, 6s 9d per dozen tins. Canned meats continue to be fairly well supported and prices tend in sellers' favour.

JUTE.—After advancing, sellers more in evidence, and this coupled with a falling off in demand, prices took a downward tone. First grade, December-January, Continent, sold £28 15s to £28; January-February, £29 to £28 10s and £29; February-March, £29 10s to £26 and £29 10s; March-April, £30 15s to £30 and £30. Hessians slow.

THE MONEY MARKET.

DESPITE the very large amount repaid by the market to the Bank of England, lenders did not find any really appreciable increase in the demand for accommodation until Thursday, on which day it was understood that heavy payments on account of taxes were also made to the Bank. It then became possible to obtain up to 2 per cent. for new money, whereas 1½ per cent. had been accepted on the previous day, and early in the week night

HEMP—Manila fully steady, with moderate inquiries. J grade, January-March, quoted £35 10s; K, £28 15s; L, £27 15s; M, £25 15s per ton. African sisal, No. 1, for shipment, quoted £38 10s per ton.

SHELLAC steady, quiet. T.N., spot, 310s; March, 302s 6d; May, 300s per cwt.

COPRA—Reservedly offered and firmer, with business checked in a measure. F.M.S. Straits, October-December, Rotterdam, quoted £30 15s; November-January, sold, £30 15s to £30 7s 6d; December-February, £30 10s to £30; January-March, £30 3s 9d to £29 17s 6d. Ceylon, January-February, quoted £32 5s; Java, ditto, £30 15s. Dutch East Indies, October-December, £30 10s to £30 2s 6d, paid; January-March, buyers, £29 17s 6d. Cebu, December-January buyers, £29 15s; South Sea Islands, ditto, quoted £20 7s 6d. Palm kernels, January-March, Liverpool, sold, £21 2s 6d to £21 per ton.

RUBBER received moderate patronage, and a steady tone governed the market. Standard plantation, crepe and sheet, spot, also January, sold, 1s 2½d and 1s 2½d; February, 1s 2½d to 1s 2½d; March, 1s 2½d to 1s 2½d; April-June, 1s 2½d and 1s 2½d. American standard, white, spot, 11d; and water white, 1s per gallon.

TALLOW—Messrs Colchesters and Woolner write on January 2nd as follows:—The tallow market was firm during the week, and prices averaged rather more than 6d dearer to-day. The best kinds are scarce, and realised the most advance. The stock in London on December 31st, as returned by the wharves, amounted to 12,862 packages, showing a decrease during the month of 5,443 packages. At auction to-day 1,362 casks tallow were offered, and 1,193 were sold. Quotations are:—Australian mutton: Fine, 49s 3d; good to fair, 48s to 45s; dull to dark, 42s 9d to 39s; hard, none. Australian beef: Fine, 46s 3d; good to fair, 45s to 42s; dull to dark, 39s 6d to 37s 9d; sweet, 46s 6d. Present shipment from Australasia: Good mixed, 43s. Present shipment from South America, 42s 9d to 42s. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 39s, net cash, naked, ex works. Country: Frail casks, 39s; home melted, shipping casks, net, f.o.b., good coloured, 41s; fair to dull, 39s 6d to 38s 6d. Bone fat: White, none; pale, none; benzine, 36s; melted stuff, 36s, f.o.b.

money did not command more than $\frac{3}{4}$ per cent. when it could be lent at all. Discounts have shown a slightly firmer tendency as the week has advanced, and fine three months' bills have been done up to $3\frac{3}{8}$ per cent. The demand for Treasury bills has not been active, March maturities being called $3\frac{1}{8}$ per cent., while Aprils are $3\frac{1}{8}$ per cent., so that last week's allotment has not been a profitable one to the allottees.

	Jan. 11, 1924.	Jan. 4, 1924.	Dec. 28, 1923.	Dec. 21, 1923.	Previous Rate and Date Changed.

The Bank return showed a reduction of £1,244,600 in the circulation, which figure also represented the addition to the Reserve, the coin and bullion being practically unchanged. The market's very heavy repayments to the Bank up to Wednesday were reflected in a decline of £31,925,600 in "Other" securities, while Government securities were lower by £4,950,000. The combination of repayments of private and public indebtedness to the Bank caused Private deposits to exhibit a shrinkage of £34,031,500, bringing them to a figure which was £6,575,200 below that of the corresponding date last year, when market borrowings had been smaller and Government borrowings greater, in connection with the end of the year. Owing to the reduction in liabilities the reserve ratio was 4.5 up at 16.8 per cent. While the liabilities are smaller than they were a year ago, the Reserve is also £1,949,600 lower, and the ratio 0.4 per cent. less favourable. There was a further large reduction in currency notes outstanding this week, amounting to £4,911,600. This reduction has brought the amount outstanding down to £287,780,300, which includes £1,427,000 for notes called in but not yet cancelled. The fiduciary issue is £236,903,600, or £11,287,300 below the maximum.

THE STOCK MARKETS.

Stock Exchange markets have again been almost entirely dominated by the political situation. Public nervousness displays itself by holding back from the rather heavy purchases of stock which normally take place at the beginning of a new year. Normal selling, on the other hand, is swollen by a certain amount of liquidation of Government stocks by foreign interests, and, with little resistance in the markets, quotations inevitably sag. The fall spread over all British Government stocks, but prices finished above the worst. In the foreign market the strength of Brazilian stocks, on the arrival of the British mission at Rio, was the chief feature. French bonds moved with the exchange, but a mysterious buying movement sent German 3 per cents up to 25s at one time. Railway stocks have been quiet on strike fears, and in sympathy with gilt-edged tendencies. Rubber shares remain dormant; oil shares improved, with Shells the feature. In the general industrial markets hesitancy and irregularity prevailed. Gold mining shares received only limited support on the strength of the rise in the price of gold, while other mining descriptions, on the whole, were dull.

THE COMMODITY MARKETS.

Irregularity is the key-note of the commodity markets. Fluctuations in raw material rates, and the uncertain political situation have proved adverse factors in the cotton trade. From Bradford it is reported that the rise in wool values has not yet reached "high water mark." Wheat is dearer on account of adverse exchange rates. The sugar market is quiet; coffee is in demand, and certain support is given to tea. The rubber market is dull and featureless. The coal market has been fairly steady, but a slightly weaker tone has been noticeable in the pig-iron market, our Middlesbrough correspondent mentioning that we are again feeling the effect of French and Belgian competition. Iron and steel makers are fairly well employed; our Sheffield correspondent states that conditions continue to improve in most branches of the steel trade. Tin has made a strong upward movement,

but copper finished the week lower on balance. The hide market is firmer, and the bad weather is as good for the boot trade as it is unpleasant for pedestrians.

FOREIGN EXCHANGES.

In the foreign exchange market interest has once more centred on the dollar and French franc exchanges. After closing at \$4.31 on the 4th, the New York rate fell to just below 4.29 on Saturday, and in the early part of the present week fluctuated between these two points. On Thursday, however, there was a distinct tendency to weakness due to Continental purchase of dollars and, later, American sales of sterling, so that on Friday morning the opening quotation was \$4.27 $\frac{1}{2}$. Nervousness regarding the uncertainty of the political situation remains the dominating factor. The forward rate is unchanged at $\frac{1}{2}$ cent per month above spot. The Paris rate continues to fall, in spite of all attempts to support it. From 87.50 on the 4th it fell to 88.30 on the 5th, and, after a recovery to 86.90 on Monday, has continued downwards, with the exception of a brief recovery on Wednesday, when it stood at one time as low as 87.15. The figure of 89.05 yesterday morning is an interesting commentary on the efficacy of the proposed reform of the Bourse and of the long over-due raising of the Bank rate from 5 per cent. to 5 $\frac{1}{2}$ per cent. Such palliatives—and, indeed, even the rumoured control of foreign exchange operations—can have little result in the face of the financial situation and of the lack of confidence in the franc which is beginning to show itself in France. The Brussels rate has followed approximately the same course, though with smaller fluctuations, and after standing at 99.45 last Friday, for the first time touched 100 on Thursday. Yesterday morning the quotation was 100.25. Forward rates in Paris have widened to 13 centimes for one month and 18 centimes for two months above spot, but in Brussels they are slightly narrower at $\frac{3}{4}$ centimes above spot. Italy has moved somewhat surprisingly against us, and stood yesterday at 98 $\frac{1}{2}$, as against 100 a week ago. Amsterdam weakened from 11.38 on the 4th to 11.40 $\frac{1}{2}$ on Wednesday, but recovered again to 11.36 $\frac{1}{2}$. Rumours of a fresh rise in the Dutch Bank rate are not altogether easy to understand, but may be partly responsible for this recovery. Switzerland has not varied greatly from the figure of 24.65, while Madrid has appreciated slightly from 33.59 $\frac{1}{2}$ to 33.55. In Central Europe, Berlin has remained steady at 19 $\frac{1}{2}$ billions, but Warsaw has depreciated from 28 millions to 41 millions, after touching 46 $\frac{1}{2}$ millions on Thursday. Vienna has not varied from last week's quotation of 305,000, but the Budapest rate has risen from 85,000 to 125,000, owing probably to the Finance Minister's frank review of the financial situation and the length of the negotiations for the League of Nations loan. Prague is steady at 147 $\frac{1}{2}$, while Bucharest at 855 is slightly weaker. In view of the political situation in Greece the rise from 210 to 230 in the Athens rate is not remarkable. In North Europe, Christiania was a little weaker during the week, touching 29.83 on Wednesday, but recovered again yesterday morning to 29.75. Similarly Stockholm, after depreciating to 16.31 early in the week, now stands at 16.23. Copenhagen, owing to the use of the Exchange Equalising Fund, remains stabilised around 24.45. Helsingfors, also, is steady at about 173, while Riga remains at approximately 22. In the East the rupee is quoted at 1s 5 1-32d, as against 1s 5 $\frac{1}{2}$ d a week ago, while the yen has again moved down from 2s 1 $\frac{1}{2}$ d to 2s 1d. The silver market has been quiet during the week, partly owing to the disturbance in the American exchange. Prices, however, improved to 34 $\frac{1}{2}$ d on the 5th, but relapsed again to 33 $\frac{1}{2}$ d on the 9th. Hong Kong is $\frac{1}{2}$ d cheaper at 2s 3 $\frac{1}{2}$ d, while Shanghai, after remaining steady at 3s 3 $\frac{1}{2}$ d during the week, stood yesterday at 3s 3d. In South America, Rio has moved steadily against us from 5 $\frac{1}{2}$ d to 6 $\frac{1}{2}$ d. In so far as this is due to sentimental feeling as a result of the arrival of the British Financial Mission, the future course of this exchange needs careful watching, but a better factor is the increased business from America in connection with the new coffee crop. The same movement is also apparent in Buenos Ayres, where the rate is 41 $\frac{1}{2}$ d as against 40 $\frac{1}{2}$ d a week ago, and in Montevideo, which is 2d dearer at 46 $\frac{1}{2}$ d. Valparaiso has also appreciated slightly from 40.30 to 40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the five days ended January 5th:—

(000's omitted.)		RECEIPTS.	£
EXPENDITURE.		From Revenue.....	
Supply Services.....	7,150		13,866
Interest, &c., on Debt.....	3,410		
Sinking Fund.....	276		
Sundries.....	75		
Increase in balances.....	75		
Reduction of Debt.....	2,880		
	13,866		13,866

Revenue for the first five days of January, 1924, amounted to £13,866,000, as against £15,635,923 for six days to January 6, 1923. Customs were greatly reduced at £721,000, against £2,581,000. Excise was £3,304,000, as against £994,000, but Estate Duties were down, being £560,000, against £1,230,000. Income-tax reached £3,011,000, and Super-tax £2,410,000, against a combined total of £7,009,000. Special Receipts were nil, as against £269,000. The Post Office receipts were the same as last year at £1,000,000, and interest on sundry loans reached £1,329,000, against £1,121,574 for the corresponding period. The week's operations reduced the National Debt by £2,880,000, and caused the following changes:—

		(000's omitted.)	
	£		£
Bank of England Advances ..	+ 4,250	Treasury Bills	— 4,142
Sundries	+ 79	Public Departments	— 2,917
		National Savings Certificates	— 150
	+ 4,329		— 7,20

The floating debt was reduced by £2,802,000 to £857,650,500.

FINANCIAL YEAR, 1923-24 (April 1 to January 5, 1924).

£	£
Total Expenditure .. 605,090,314	Raised by Revenue .. 547,150,832
	Net Borrowings..... 53,955,375
	Decrease in Balances 3,984,107
Total 605,090,314	Total 605,090,314

ESTIMATES for YEAR 1923-24.

£	£
Ordinary Expenditure 801,013,000	Ordinary Receipts .. 778,500,000
Special Expenditure.. 15,603,000	Special Receipts.... 40,000,000
Total 816,616,000	Total 818,500,000
	Surplus 1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Australia, British American Tobacco, Bingo Gold Mines, Chargeurs Réunis, and Peter Walker (Warrington). Mr R. J. Alcock, at the meeting of the Royal Bank of Australia, reviewed agricultural and industrial conditions in Australia. Mr A. G. Jeffress, at the meeting of the British American Tobacco Company, reported an increased volume of business. Sir Harmood Banner, M.P., at the meeting of Peter Walker (Warrington) and Robert Cain and Sons, showed confidence in Labour's attitude to the brewing industry.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

ELECTORAL REFORM.

THE political developments of the next few months will make plain to the world whether Great Britain must definitely reconcile herself to at least a three-party system of politics, or whether there is any prospect of returning to our traditional two-party method. For ourselves we have no doubt at all that the idea of two parties in this country is obsolete. It is true that at any given time in every Parliament there are in effect two parties for political purposes, one consisting of those who support the Government in power, and the other of those who are in

opposition. But in many countries of the world these two main divisions are composite, and include more than one party or group. Indeed, America is practically the only important exception. We believe that the system of three or more parties has come to stay, because such a grouping corresponds to genuine and deep-rooted divisions in the public opinion of the country. The attempt to divide Britain into those who wish to stand still and those who wish to go forward is as arbitrary and useless as to divide them into those who believe in revolution and those who do not. A political party is the natural form of expression of a group of people who think alike on general political questions. With the extension of education, and a more widespread knowledge of politics, people have less and less inclination to associate themselves with party organisations with which they are only partially in sympathy, and as they learn to define their outlook better, the tendency to form groups in political life is likely to be strengthened. In any case, it is, to our mind, clear that there are three main trends in this country, namely, those who are little disposed to change, those who desire change, but not in a socialist direction, and those who believe in the ultimate reorganisation of society on socialistic lines.

If this is a sound view of the present and future state of opinion, it seems likely that certainly for some time to come none of these sections will command an absolute majority in the House of Commons, and that Government must be carried on by minority parties. The basis on which such administrations are kept in power by other parties may perhaps lead to some modification in constitutional practice which will be worked out in the next few months. This prospect is looked forward to by many with great misgiving and regret, for it is generally recognised here that a Government is, according to British standards, in a poor way if it cannot rely on the unhesitating support of a majority in the House of Commons. But if the nation has ceased to be divided into two parties it is no good crying over spilt milk, and we must make the best of it. After all the system has some compensation in the fact that the new method will definitely re-establish the power of the House over the executive departments of Government.

But on these new principles it becomes much more necessary than before that the House of Commons should accurately reflect the balance of power among the electorate, and with our present system of voting this is notoriously not the case. It should, therefore, be the first duty of the new House of Commons to revise our voting system in such a way that the element of chance is as far as possible eliminated. The Conservative party is perhaps in a more amenable frame of mind for such a reform than ever before, for it has recently experienced a very considerable loss of seats with a very small turnover of votes, and it must be ever present to the mind of every Conservative member that the chance which gave them a majority in the House last year with a minority of votes might at any time confer the same luck on the Labour party. The Liberal party are painfully conscious that as a result of the last two elections they have been under-represented, and they would hope to do better on any reform of the electoral system. Some members of the Labour party may think that the next trick of the ballot box will be to give them a majority in the House. But it is equally likely at any moment to rob them of seats by a combination of the anti-Labour vote, and this argument is likely to appeal to all except those few enthusiasts who think that the Labour party, as at present organised, is likely to convert an absolute majority of the electorate. But all these arguments are attributing narrow motives to every party. We are optimistic enough to think that the majority of politicians would wish to see the constitution of the House of Commons reflecting the opinion of the country as it really is, and that after the vagaries of recent elections there will be a majority of members in the House anxious and ready to support electoral reform. There are, of course, many alternative systems of voting, including the cumbersome apparatus of the second ballot. But the two proposals which hold the field in this country are

proportional representation and the alternative or transferable vote. As between these two systems, the former, in our opinion, is vastly superior to the latter, and we hope it will become a part of our constitutional procedure. Under the system of the transferable vote, each elector in a three-cornered contest is entitled to mark not only his first, but his second, choice among the candidates. If on the first count no candidate gets a majority, the candidate the lowest on the list is considered out of the running, and his votes are redivided among the first two candidates according to the second preference recorded on them. The system is thus, in effect, a second ballot taken simultaneously with the first, and unless the voters for a particular candidate refuse to make a second choice it means that the candidate elected commands the full or qualified support of a majority of the electors who take the trouble to vote. Thus the system does away with the anomaly of minority members of Parliament. But it is open to two serious objections. In the first place it does not ensure the accurate representation of the electorate, and though it would probably make the House more nearly in proportion to the votes cast for various parties than at present, it is not a very sure method of doing this. Let us suppose, for example, that the votes in the country are divided in the proportion of five Conservatives, four Labour, and three Liberal, and that in a very large number of constituencies the electors are divided in this proportion, and that in all of them there are three-cornered fights. In none of these cases would a Liberal be elected, but the issue between Labour or Conservatives would depend on the bias for the time being of Liberal electors towards the other two parties. These second preference votes are likely to be extremely unstable elements in politics, and the result of the system in such conditions as those suggested would be quite incalculable. The second objection arises out of this very uncertainty. It is urged by those whose opinion is of importance that this system would lead to back-stair bargaining for the second preference vote of other parties, and that each party, instead of endeavouring in a straightforward manner to put forward its own policy, would all the time be angling for the second vote of other sides. The Labour party is particularly conscious of this danger, and many of its leaders are bitterly opposed to it on the ground that it would enable the Liberals and Conservatives behind the scenes to manoeuvre for its undoing.

The system of proportional representation, on the other hand, is a more complicated affair, which ensures that the number of members returned will be roughly in proportion to the number of votes cast. It involves dividing the country into larger constituencies than at present, each returning a number of members—from five to ten would probably be the most suitable number in this country. The elector, under this system also, has to put the candidates in order of his preference, but whereas under the former system the votes of the man at the bottom are redivided, under proportional representation the votes of the man at the top are redivided when he has secured sufficient for election. The working of the system is now fairly well known, and we need not explain it in detail. It means that any party in a five-member constituency which can command more than one-sixth of the electorate is practically certain of getting at least one of its candidates elected. The system of counting is complicated, but for the elector it presents no serious troubles; it is working in several countries, and in particular has been used with success in the elections in Ireland. It is urged against proportional representation that the large constituency makes it difficult for the candidate to have personal contact with his constituents. But the extension of the franchise has already made this personal relationship extremely difficult. Under proportional representation the candidate would have to depend mainly on the appeal of his policy, but would also have the assistance of modern methods of publicity, which are making it possible through the Press and otherwise for a man to become known to a large body of voters without personal canvassing. It is objected that proportional representation would tend to divide the House of Commons into a large number of small groups, seeing that it is supposed to have had this result in Italy. But the analogy is unconvincing, for it overlooks the fact that political parties are

the result of the history, tradition, and public opinion of a country. A number of parties would arise in this country as a result of the system in so far as there is really a variety of parties in the State. Political organisation into parties is not an accident, but has its roots deep-seated in the character of the people.

On the merits, therefore, we have no hesitation as to which kind of electoral reform would be most desirable in this country. We may recall that in 1918, when the question came up for discussion at the time of the extension of the franchise to women, both systems had their supporters. The party managers were in favour of the transferable vote, and the House of Commons substituted it for proportional representation before the Bill went to the Lords. The House of Lords put back proportional representation, but the Commons repeated its insistence on the transferable vote. As the dispute between the two Houses came at the last moment of the session the question was not fought out, and the clauses were omitted from the Bill altogether and left to be dealt with subsequently by means of a scheme to be worked out for 100 constituencies. The plan was never carried out.

It is possible that the subject will again be settled by tactical considerations, for it would only require a very short Bill to introduce the transferable vote, whereas proportional representation would mean a redistribution of constituencies. This would require a considerable amount of Parliamentary time, and the plan may conceivably be abandoned in favour of the transferable vote on the ground that the stability of whatever Government comes in will be too precarious to make it certain that the Bill could be carried through in the coming session of Parliament. We do not think that the view of the House of Lords would be a determining factor in the question to-day, for they are unlikely to challenge the view of a House of Commons fresh from the constituencies on a matter affecting the House of Commons alone. But for the reasons already mentioned we think that the Labour party, if it comes into power, is more likely to find time for a measure of proportional representation than for a Bill for the transferable vote, especially since, for the reasons we mentioned last week, the present session is not likely to be burdened with legislative measures of the first magnitude.

THE ELECTIONS IN FRANCE.

THE re-election to one-third of the seats in the Senate has now taken place, and a general election for the Chamber of Deputies is to follow. Do the results in the Senate throw any light upon the prospects in the Chamber, and are the maximum changes conceivable, in Senate and Chamber together, likely to deflect the course of French policy in Europe?

The Senatorial elections have produced practically no change. The Gauche Démocratique, corresponding to the Bloc des Gauches in the Chamber, retain the small majority which they possessed already. They have actually gained one seat, but so have the extreme Right, while three Independents have made way for two Socialists. The "Republican" groups, which represent the moderate right and the right centre in the dominant Bloc National, have lost one seat only. Substantially, therefore, the position remains as it was before. Elections to the Senate are, of course, deliberately arranged with a view to avoiding mutual influence between them and the elections to the Chamber. The indirect method of electoral colleges, the provision that only one-third of the whole body shall retire at a given time, and even the dates at which these partial elections take place, are all contrived with this object; and it therefore seems unsafe to argue from one set of elections to the other. A distinguishing mark of the Senatorial elections, since the introduction of the present system, has been their comparative stability; and, from this, some observers seem inclined to argue that a small change possesses a relatively great significance. On the other hand, it may be argued that there has seldom been an occasion on which the possibility of a decided shift to the left has been more favoured by

circumstances than in the present instance. The future of France has been staked for nearly a year upon a highly contentious policy, which has not yet brought any tangible benefit to the nation as a whole, and has latterly been accompanied (whatever the causal relation may be) by a sharp fall in the franc. Could the Left have had a better opportunity? They could turn to account even M. Poincaré's most nearly achieved successes, for the economic agreements which are at last being negotiated between French and German industrialists might well be represented as a bonus lavished upon a tiny minority of capitalists out of the taxes and the military service which have been contributed towards the Ruhr policy by the majority of Frenchmen. Even in a body so little subject to oscillation as the Senate, the failure of the Left to gain ground in these circumstances is surely significant, however difficult it may be to translate this into a forecast of the forthcoming elections to the Chamber.

The groups in the Chamber are still more numerous, and the relations between them on the whole more ephemeral, than they are in the Senate, and this adds another factor of uncertainty to the problem. Furthermore, electoral rivalries and ententes do not necessarily reproduce themselves in a new Chamber after the elections are over; and there is no extreme party at either end of the scale which is sufficiently menacing to draw all the rest together in opposition to it. That effect has not even been produced in Great Britain (a country in which a two-party system is traditional) by the actual advent of the Labour Party to power. Still less is it likely to be produced in France, where an unrevolutionary Socialist party remains in obscurity, with no prospect of turning the balance between blocs, not to speak of dominating the Chamber or the country. There is, therefore, no sign of a marked movement on the Left or a sharper cleavage at any given point in the delicately graded gamut of the political scale. The material of French political parties inevitably appears to English eyes as something without form and void, and the only shapes which we, in our ignorance, can distinguish are a comparatively articulate Bloc National—originally organised by M. Millerand, and now officially supporting M. Poincaré—and a somewhat more shadowy Bloc des Gauches. Will the elections to the Chamber result in one of these blocs gaining in numbers and cohesion at the expense of the other, or will some third bloc take to itself substance out of the underlying chaos at the expense of both? And how do the personal position and the public policy of M. Poincaré stand to lose or gain by these alternative possibilities?

In the first place, is the actual machinery of election an important factor? French parliamentary politics are (to our minds) fluid in technique, as well as in the organised expression of opinion, and two electoral methods, known respectively as Scrutin de Liste and Scrutin d'Arrondissement, have been tried at different times, with successive empirical modifications. Under the Scrutin de Liste the constituencies are large; a considerable number of members is returned by each; lists of candidates are presented by the parties to the voters; and the latter may vote for any candidate on any list up to the total number of members that the constituency has to return. This system contains some, but not all, the elements of Proportional Representation; it was in force at the last election, and it has recently been decided that, with certain modifications of detail, it shall be employed again this time. The rival, Scrutin d'Arrondissement, which bears more resemblance to the existing system in Great Britain, is thus out of court, and in France the groups of the left believe that the Scrutin d'Arrondissement would work in their favour, and that the right stand to gain by the maintenance of the Scrutin de Liste. This claim should not be taken too seriously, for a discomfited party is always tempted to discover causes for its ill-success that are unconnected with the state of public opinion; but it is, perhaps, more pertinent to ask: Would the left reverse M. Poincaré's policy if the elections brought them into power, or gave them a deciding voice in policy? Or, to translate this into personal and concrete terms, would M. Herriot, or even M. Caillaux, evacuate the Ruhr if, a few weeks hence, they were to find themselves (an improbable supposition!) in M. Poincaré's shoes? It can be prophesied with some confidence that

the answer would be in the negative, and, as a matter of fact, there are rumours already that, however the election may go, M. Poincaré may find the Bloc des Gauches a less uncomfortable horse to bestride than the Bloc National! Possibly this is no more than an overstrained interpretation of the friendly relations which have never ceased to exist between M. Poincaré and M. Herriot, and it is perhaps more likely that, if M. Poincaré shifts his seat at all, he will carry a large number of his present supporters with him, and will look for support in future to a new Bloc Central, in which the "Republican" groups will co-operate with the Radicals. Such a bloc might conceivably be formed by M. Jonnart, who is known not only as a vigorous "High Commissioner" in Greece during the war, and as a not unsuccessful colonial administrator at a critical time in French North Africa, but more recently as a conciliatory French Ambassador to the Vatican. The clerical question—an internal problem of France—would probably have more to do with the success or failure of any project for the formation of a central bloc than the great questions of European policy which make French politics vital to us, but on which comparatively few Frenchmen appear to disagree with the prevailing policy of M. Poincaré. Personal politics, on the other hand, might be affected by the decomposition of the Bloc National in favour of the Centre, owing to the effect of this upon the position of M. Millerand. The Bloc National was M. Millerand's creation, and its continued existence may seem to him a guarantee that the door is not closed to his re-entry into the front rank of active political leadership. A reconstruction which threatened to close this door for M. Poincaré's convenience might seem to M. Millerand an unfair return for the services which M. Poincaré has received at his hands. M. Millerand is to some extent a disappointed man, who is not gladly suffering effacement, and personal considerations may therefore bring him into the arena. Would he be able to shake M. Poincaré's position if he tried? The personal factor is the most difficult of all for a foreigner to gauge, but the strategical advantages would appear to be decidedly upon M. Poincaré's side. The President is supposed to be above party, and M. Millerand, if he intervened in person, would thus find himself from the outset in a false position. He would be compelled either to act through others (a somewhat equivocal course), or else to resign the Presidency in order to resume his active political career. Would the prospect of success be worth the sacrifice? It is not easy to see what he, or for that matter M. Tardieu, could promise the French nation which M. Poincaré (to give him his due) has not already attempted to perform, or what method of coercing Germany he could suggest which M. Poincaré has left untried. Any programme which he could formulate would be dismissed by large sections of the right as illusory; while, in so far as he succeeded in outbidding M. Poincaré with any plausibility, he would merely attract towards M. Poincaré that support from the left for which M. Poincaré himself, *ex hypothesi*, would be manoeuvring already. It would thus be surprising if M. Poincaré were to find in M. Millerand a formidable adversary, even if he ventured to declare war; and we can only conclude, whether we like it or not, that the President of the Council has little reason to look forward to the election with concern, whether he scan the horizon to the right or to the left of him; while conversely we in Great Britain have little reason to hope that the election will produce any appreciable change in French foreign policy.

THE DOLLAR EXCHANGE.

THERE has been much conjecture about the causes of the decline in the dollar exchange since October. In the spring of this year the £ approached quite near to par, and, in Mr Lloyd George's phrase, "looked the dollar in the face." But as parity came nearer it steadily became more profitable to invest in American securities, and the transfer of funds to the United States checked the upward movement until eventually the ordinary seasonal decline set in. At first it looked as though this setback would stop somewhere about 4.55, and that when the crops had

been moved there might be a renewal of the movement back towards parity which culminated in the spring. But instead of October seeing the lowest point, there has been since that date a marked downward movement, the rates since the beginning of September having been as follows:—

DOLLAR EXCHANGE RATES.			
September 7....	4.52½	\$ to £	November 9.... 4.40½-41
" 14....	4.54½	"	" 16.... 4.32½-32½
" 21....	4.54½	"	" 23.... 4.36½-37½
" 28....	4.55½	"	" 30.... 4.34½-34½
October 5....	4.56½	"	December 7.... 4.36½-36½
" 12....	4.54½	"	" 14.... 4.37½-37½
" 19....	4.52½-53	"	" 21.... 4.36½-36½
" 26....	4.50½-50½	"	" 28.... 4.35½-35½
November 2....	4.46½-46½	"	January 4.... 4.29½-29½

These figures compare with 4.20½-20½ at the end of 1921 and 4.63½-63½ at the end of 1922.

The recent movement has been largely caused by political considerations, but before dealing with them we may give our reasons for this opinion by referring to the economic influences which affect the exchange.

In the first place, the payment of our American debt has nothing to do with the matter. It is true that a half year's interest was paid in Washington on December 1, and that even if the necessary dollars had been purchased regularly through the year, it would mean that something over £2½ millions would have to be converted into dollars every month on this account. But there is no trace anywhere of the British Government having been in the market during the autumn, and there is reason to believe that this interest was acquired many months ago; while as regards future payments, it is extremely unlikely that the Treasury would purchase dollars in the present state of the market. Before the next payment is due there are likely to be much more favourable opportunities, and, in any case, the Treasury has in reserve the right to fund the interest in the early years, which right would no doubt be used if the dollar exchange remained very unfavourable.

In the second place, as between two currencies which have no common link, it is generally accepted that the exchange tends to settle at a point determined by the relative purchasing power of the two currencies, as measured by the level of prices. As compared with June, 1922, American prices gained at first upon British prices, and at one time were very nearly at the same level, a position which would correspond to a par rate of exchange. But in the last few months, as trade has recovered, British prices have begun to go ahead slightly, as readers who have studied our index number will have appreciated. It is difficult to get a strictly comparable series of figures or to decide upon the price index numbers which would give the best indication of the ratio between purchasing power in the two countries. But if we compare the Bureau of Labour index number with our own, it will be found that whereas last December the increase over 1913 was 56 per cent. in America and 58.3 per cent. in Great Britain and 59 per cent. in America in March against 63 per cent. in Great Britain, the figure for America, after dropping during the summer to 50, has only recovered to 53 per cent. above pre-war, while our index number, after a similar set-back to 55½ per cent., has now recovered to 70 per cent. above pre-war—which means that the difference between the price levels has widened. A similar tendency can be observed, though not quite to the same extent, in a comparison of retail prices in the two countries. A word of warning must here be added against confusing cause and effect, for the rise in our index number is to a considerable extent caused by the high prices of American cotton, a price which is exaggerated by the unfavourable exchange. At times like the present, when the exchange is abnormally depreciated by speculative influences, it produces for the time being a high British quotation for goods purchased from America; such temporary and abnormal prices cannot, then, be also used to explain the state of the exchange. But when allowance is made for this fact the level of prices in this country still seems to have risen more than in the United States, through influences affecting the prices of other imported commodities such as tin and sugar and a brisker demand for British products, and in particular for coal and metallurgical products. This difference in price level would explain why the dollar ex-

change should be rather less favourable than it was a year ago. One other point before leaving this question. The par of exchange will be most certainly restored if and when America buys freely from us. But the Fordney tariff is a very high barrier against our goods. American prices must, therefore, rise to a correspondingly higher level before we can sell in the American market. In other words, with Free Trade in Great Britain and the Fordney tariff in America, our normal price level must be one somewhat lower than the normal price level behind the American barrier.

The third consideration is that, in spite of a rise in Bank rate in England last July and the improving trade here, money rates have been more profitable in America than in London. Floating balances have therefore tended to be used in America rather than in England. The transfer of such balances has tended to lower the exchange.

Fourthly, there is the actual trade situation. Taking the period of September, October, and November (since the figures are not yet available to the end of the year), we find that in these three months America had in 1921 an export surplus of \$375,000,000; in 1922, owing to increased imports and exceptional conditions at home, her export surplus dropped to \$140,000,000, but in 1923 it has risen again to \$338,000,000. From these figures it is evident that in the autumn of 1922 there was an unusually small demand for dollars on the part of America's foreign customers on trade account; and this no doubt explains why foreign currencies remained high in comparison with dollars. Looking at the other side of the picture, Great Britain's foreign trade account, on which, of course, there is a surplus of imports, showed for these three months in 1921 an import surplus of £52,000,000, in 1922 our import surplus was only £44 millions, but in 1923 our import surplus rose to £54 millions. These figures again show that, as compared with 1922, we have had to pay an increased amount abroad. These figures relate to the total trade of both countries. No statistics are yet available of the direct trade between America and England, but we have taken out of the monthly returns, and separately compiled, a total of all those articles for which American trade is shown separately, a total which includes the main commodities of commerce between Britain and America. The figures show that in 1921 we owed America on balance for these commodities, and in these same months, £34½ millions, in 1922 £28½ millions, and in 1923 nearly £31 millions. Thus each of these three sets of figures is influenced by an unusually heavy import of raw material into Great Britain during recent months. The reason is that we have to-day more orders to fulfil, and that employers are preparing for an increased output. But in the meantime, and until this import of material is actually turned into exports, the balance of trade is against us.

Thus among the economic factors, the greater value of money in America, the slight rise in price level of Great Britain, and the fact that the trade balance this autumn is less favourable than a year ago, are all reasons why the dollar should have suffered a set-back and be less favourable than this time last year.

There is, however, no doubt that the recent movement has gone farther than would be accounted for on these various grounds. In the last four weeks, in particular, since it has seemed probable that there would be a Labour Government, there has been a very considerable purchase of American securities by shy investors. It may be said at once that, so far, the uneasiness which these movements reflect is financial and not industrial. It is the result of nervousness, and not of anything which is happening in the world's markets. Like all such movements, it is for a while cumulative in its effects, for if the notion gets abroad that securities are going to fall, there will be many who will sell now in the hope of buying back later when the fall has occurred, and the movement will be exaggerated on the Stock Exchange by bear selling. But, like all such movements, it tends to generate its own reaction, for as soon as a substantial drop occurs, stocks begin to look cheap, and as soon as there is any upward movement bear speculators will hurry to cover. It may be added that so far as British Government securities are concerned, if there were any real fear of a capital levy Government stocks would move upward and not downward; for whatever chaos might be produced by

such a measure in other departments of the Stock Exchange, the attempt of the Government to buy up or cancel any substantial proportion of £3,000,000,000 of Government securities would make them extremely scarce.

The truth, however, appears to be that the movement is not a very rational one, but is due to a vague feeling on the part of investors that there may be exceptional heavy taxation now, and a possible capital levy later, and many people are thinking it wise to take time by the forelock, and, in spite of the fact that with the present level of exchange it is highly unprofitable to buy American securities, they are purchasing foreign bearer bonds and depositing them with foreign banks. This procedure is unwise and ill thought out. Not only is it an immediate loss, but it is extremely doubtful whether it will secure the object aimed at. Interest on foreign bonds will only escape income-tax if it is left abroad, and is of little use to the holder unless he goes abroad to enjoy it. In the meantime it is by no means concealed from the eye of the Inland Revenue authority, for every super-tax payer whose return shows a sudden drop in income assessable to super-tax will invite inquiry, and we may trust the revenue officers to discover what has happened.

We have given reasons in recent articles for thinking that the policy of the Labour Party will be a moderate one, and that if it oversteps the line of prudence the Labour Government will fall. We are, moreover, confident that if in 1925 an appeal is made to the electorate, the common sense of Great Britain would see to it that no Government is returned with a mandate to make rash experiments which would prejudice our national well-being. We therefore have no sympathy with the nervousness of the scaremongers, and we believe that the wiser heads in the City are strongly advising their clients in this sense. At the same time, it is not altogether a bad thing that this nervousness has shown itself in a practical form, for it will bring home very clearly to our probable new rulers the extent to which industry depends upon credit, which is only another name for confidence. Mr Ramsay MacDonald and his friends will only conjure back this elusive quality if they prove that their outlook is that of the well-being of the nation as a whole, and not one based on the interest of a class or upon theories worked out to fit the conditions of an imaginary world.

INDUSTRIAL PROFITS.

OUR quarterly analysis of the profits of industrial companies reveals a substantial slackening in the rate of increase in profits. The net profits of over three hundred concerns whose accounts were published during the past quarter showed an increase of 11.4 per cent. over the profits earned by the same companies in their previous financial year, whereas in the third quarter of last year the increase was 65.2 per cent., in the second quarter 22.1 per cent., and in the first quarter 41.4 per cent. During the past three months the profit and loss accounts of 312 industrial companies were analysed in our weekly tables, and these showed net profits, after payment of debenture interest, &c., of £26,043,934, an increase of £2,661,200, or 11.4 per cent. over the previous year. This brings the total number of accounts analysed during 1923 up to 1,351, while net profits have increased by 30.6 per cent., as may be seen from the following summary table:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).						
	Number of Companies.	Reports published in		Increase.		Decrease.
		1922.	1923.	£	%	
First quarter	405	28,489,993	40,276,870	11,786,877	41.4	..
Second quarter	425	31,874,787	38,945,778	7,070,991	22.1	..
Third quarter	209	10,469,118	17,317,482	6,848,364	65.2	..
Fourth quarter	312	25,382,776	26,043,934	2,661,158	11.4	..
	1,351	94,216,674	122,584,064	28,367,390	30.6	..

The relative smallness of the last quarter's increase is partly explained by the fact that in the analysis made twelve months ago the first increase for 18 months was disclosed, whereas in the preceding quarters of 1922 very substantial decreases were recorded. This is, perhaps, brought out more clearly in the table below, which shows the quarterly changes in net profits since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	-1.0	+10.4	+26.9	+3.5	-43.4	+41.4
Second quarter	-5.8	-5.1	+37.8	-8.4	-33.7	+22.1
Third quarter	+12.3	-3.4	+41.9	-42.4	-23.5	+65.2
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+3.9	+11.4

Two years ago, it will be seen, a decrease of no less than 52.9 per cent. was recorded in the final quarter of the year, and the two relatively small increases which have followed still leave profits very substantially below the 1920 figure. A rough calculation shows that for the fourth quarter of the year 1923 the disclosed profits are still over 40 per cent. below the 1920 figure, and are more than 20 per cent. below the 1918 figure. The changes in the profits of the individual groups are shown in the next table:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).						
	Number of Companies.	Reports Published in Quarter Ended Dec. 31.		Increase.		Decrease.
		1922.	1923.	£	%	
Breweries	43	1,586,750	1,756,966	170,216	10.7	..
Hotels, restaurants, &c. ..	7	362,414	385,977	23,563	1.0	..
Iron, coal, and steel	26	1,007,141	2,347,296	1,340,155	130.0	..
Land, mortgage, &c.	27	1,420,173	1,863,180	443,007	31.1	..
Motor and cycle	12	590,126	470,239	..	..	119,887
Nitrate	6	20,469	139,436	118,967	..	20.2
Oil	5	3,600,091	3,049,839	..	..	550,252
Rubber, &c.	74	174,523	844,121	669,598	383.9	..
Shipping	6	1,241,191	1,413,188	177,997	14.3	..
Shops and stores	5	Dr 220,430	129,225	349,655	..	..
Tea	5	65,792	96,208	30,417	46.2	..
Telegraph, &c.	4	830,289	641,002	..	..	189,287
Textiles	7	3,486,343	3,120,552	..	..	365,791
Tramway	4	367,265	391,467	24,202	6.6	..
Trust	11	401,568	76,163	234	..	..
Miscellaneous	70	8,525,234	9,007,669	482,435	5.7	..
	312	23,382,776	26,043,934	2,661,158	11.4	..

The outstanding changes shown in these figures are the increases in the iron, coal and steel and the rubber groups. In the case of the former a decrease of over 65 per cent. was shown in our analysis twelve months ago, but the rubber group was already showing increasing profits. Now "rubber, &c.," records an upward movement of 38.4 per cent. One of the largest decreases is shown by the motor and cycle group, this decline of 20.2 per cent. following a decrease of 13.7 per cent. twelve months ago. The decline during the past quarter in this group is by no means general. The Rover Co., Stepney Tyres and Enfield Cycle show substantial declines, but an improvement is recorded by Joseph Lucas, Humber and J. B. Brooks. The increase in the shops and stores groups follows a decrease of 78 per cent. twelve months ago, but the tea group shows an increase of 46.2. The decline in the telegraph group follows one of similar dimensions in the previous quarter, but twelve months ago an increase of over 37 per cent. was shown.

The next table shows the distribution of profits in each of the past four quarters:—

DISTRIBUTION OF PROFITS.						
	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.		
	£	£	£	£	%	%
First quarter	40,276,870	21,934,234	54.4	9,501,074	23.6	8,241,562
Second quarter	38,945,778	25,038,627	64.3	7,734,685	19.9	6,172,466
Third quarter	17,317,482	9,653,962	55.8	3,039,838	17.5	4,622,682
Fourth quarter	26,043,934	16,422,429	63.1	4,593,984	17.6	5,027,521
	122,584,064	73,049,252	59.5	24,668,581	20.3	24,668,581

Twelve months ago the amount set aside to reserve, including the net amounts by which the balances carried forward were increased, worked out at 15.7 per cent., with which the 19.3 per cent. for the past quarter compares favourably, although it is slightly below the average for the four quarters. The distribution of profits by groups in the past quarter is set out below:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	To Reserve, &c.		
	£	£	£	£	%	%
Breweries	1,756,966	982,281	56.0	382,060	21.8	332,025
Hotels, restaurants, &c. ..	385,977	174,779	47.8	94,989	25.8	96,209
Iron, coal, and steel	2,347,296	836,776	35.6	620,254	26.5	890,266
Land, mortgage, &c.	1,863,180	1,014,707	54.4	296,351	15.9	552,122
Motor and cycle	470,239	320,503	68.0	43,447	9.2	105,289
Nitrate	139,436	94,208	67.5	..	..	45,228
Oil	3,049,839	1,140,524	37.5	875,000	28.8	1,034,315
Rubber, &c.	844,121	682,781	81.0	22,450	2.7	138,690
Shipping	1,413,188	753,008	53.3	338,488	16.6	430,632
Shops and stores	129,225	45,985	35.5	49,204	38.1	34,036
Tea	96,208	66,327	69.1	7,800	7.9	22,282
Telegraph, &c.	641,002	755,258	119.4	..	..	Dr 124,266
Textiles	3,120,552	2,677,158	85.8	402,957	12.9	40,437
Tramways	391,467	244,365	62.4	78,625	20.0	68,477
Trust	401,568	192,166	47.9	116,879	29.1	92,583
Miscellaneous	9,007,669	6,431,003	71.4	1,368,680	15.2	1,207,986
	26,043,934	16,422,429	63.1	4,593,984	17.6	5,027,521

In the matter of reserve appropriations the best showing is made by the iron, coal and steel group, with the oil group a fairly good second; but at the other end of the scale the telegraph and textile groups are in striking contrast. In the case of the telegraph group, however, one company, which reduced its balance forward by £139,000, placed nothing to reserve and paid 15 per cent. on its ordinary shares, is largely responsible for the unfavourable nature of the figures.

Our next table shows the ratio to total ordinary and preference capital of net profits and of the amounts carried to reserve:—

1923.	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve, &c.	
	£	£	%	£	%
First quarter....	406,793,000	40,276,870	9.9	8,841,562	2.2
Second quarter..	396,675,400	38,945,778	9.8	6,172,466	1.6
Third quarter....	195,420,900	17,317,482	8.9	4,623,682	2.4
Fourth quarter..	255,094,800	26,043,934	10.2	5,027,521	2.2
	1,253,984,100	122,584,064	9.8	24,665,231	2.0

The ratio of profits to capital in the final quarter is substantially larger than in the preceding quarter, while the average of 9.8 per cent. compares with an average of 7 per cent. for 1922. In 1921, however, it was 10.3 per cent., and in 1920 15.2 per cent.

The average rates paid on the three classes of capital in the four quarters of each of the past three years are set out below:—

AVERAGE RATES PAID.

	On Debenture Capital.			On Preference Capital.			On Ordinary Capital.		
	1920.	1921.	1922.	1920.	1921.	1922.	1920.	1921.	1922.
1st quarter	4.25	4.45	4.70	5.1	5.0	5.3	11.2	10.3	8.5
2nd quarter	4.25	4.61	5.00	5.0	5.4	5.6	13.7	12.6	8.8
3rd quarter	4.12	4.45	5.21	4.9	5.0	4.5	14.2	9.7	7.6
4th quarter	4.43	4.52	4.83	5.03	5.3	5.1	11.6	7.6	8.6

The higher level of average rates of debenture interest during the past two years is a reflection of the high rates at which debentures and short-term notes were issued during the boom period. The average rates paid on ordinary capital show a wide fluctuation, that for the last quarter being the highest for over two years with the exception of 9.9 per cent. for the second quarter of 1923.

The final table shows the average rate paid in the last quarter of 1923 in each of the groups, together with the ordinary rates recorded a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
	£	%	£	%	£	%	%
Breweries	12,734,740	4.2	6,459,107	5.9	7,905,523	12.4	10.8
Hotels, restaurants, &c.	2,057,913	4.8	1,880,000	5.1	2,192,500	8.0	8.2
Iron, coal, and steel	15,933,467	5.9	13,864,910	4.5	36,835,181	2.3	1.7
Land, mortgages, &c.	10,673,481	4.5	5,931,717	5.0	14,062,829	7.2	5.6

There are only three groups which do not show a higher average rate of ordinary dividend, the most prominent decline being that in the oil group, thanks to the reduction from 20 to 10 per cent. in the Anglo-Persian Oil dividend. The increase in the tea group is striking, and ordinary shareholders in the rubber and nitrate groups have done very much better than last time.

ROUNDING OFF THE IRISH TREATY.

(BY A DUBLIN CORRESPONDENT.)

AMONGST the problems awaiting prompt treatment by the Government, whatever party may be in power, is that of completing the implementation of the Anglo-Irish Treaty. Apart from the adjustment of accounts for the period of change—a matter of little more than departmental routine and not likely to give rise to controversy—there are two most important provisions of the Treaty which have yet to be carried through. They arise under Articles V. and XII. Under Article V. Ireland assumed "liability for the service of the Public Debt of the United Kingdom as of the date hereof and towards the payment of war pensions in such proportion as may be fair and equitable, having regard to any just claims on the part of Ireland by way of set-off or counterclaim," and with a provision for arbitration in default of agreement. The set-off or counterclaim undoubtedly referred to the secular claim of Ireland that she had been grievously overtaxed in contravention of the terms of the Act of Union, and in order to produce contributions to Imperial expenditure. It is a claim which, however opinions may have differed or may still differ, obtained a considerable amount of justification from the Report of a strong Royal Commission in 1894-96, presided over by the late Mr. H. E. C. Childers, an ex-Chancellor of the Exchequer. It is to be hoped that the subject may be dealt with on broad lines and in a spirit of enlightened statesmanship, for the taking of an account on controversial lines from the Parliamentary Union of 1800 or 1817, the date of the amalgamation of the two Exchequers, down to December, 1921, could scarcely be contemplated with equanimity. The subject is somewhat complicated by the secession, temporary or permanent, of Northern Ireland from the Irish Free State with the separate financial arrangements prescribed by the Government of Ireland Act, 1920. This Act, which Northern Ireland embraced as the acceptable reward for its political victory in 1920, assessed Northern Ireland's proportion of an annual contribution by Ireland to Imperial Expenditure at 44 per cent., or nearly £8,000,000 out of a total of £18,000,000. The figure was reduced later to £6,000,000, and though it has been paid in whole or in part it has mostly been returned in the form of subsidies from the Imperial Treasury towards unemployment relief, cost of constabulary, and such like matters. These subsidies, which were paid purely as an act of grace by the Government, cannot well be continued any longer. They are anomalous from the standpoint both of national finances and of constitutional practice, and there are other claims on the British Exchequer which, in virtue of their being based upon civic right rather than upon reliance upon British generosity, will now naturally claim prior satisfaction. But their cessation may cause some embarrassment to Sir James Craig's Government. Northern Ireland may be driven to seek relief from its statutory liability to contribute to Imperial Expenditure in the ratio of its relative taxable capacity*, and to plead that its qualified autonomy leaves it with little more money than will suffice to pay for its own new administration. Now, inasmuch as the "Imperial Expenditure" (defined in the Sixth Schedule to the Act of 1920) covers a much wider area than the service of the public debt and war pensions for which the Irish Free State has assumed its contingent proportionate liability, the position of Northern Ireland would then constitute an *a fortiori* argument for the Irish Free State in seeking to argue its liability down to vanishing point. How deep the argument would cut will be realised when it is remembered that under the Act of Union no taxes and no higher rate of tax were to be imposed on Ireland than those prevailing in Great Britain, and that there were to be "such particular exemptions and abatements as circumstances may appear from time to time to demand," and that as expenditure was indiscriminate upon the two countries, there was no obligation on Ireland to contribute to Imperial expenditure unless, in

* Cf. 13th Geo. V. cap. 2, Sch. I, 3(c) which follows 10 and 11 Geo. V. cap. 67, Sec. 23 (3). "The Joint Exchequer Board in determining the just proportion of Imperial liabilities and expenditure to be contributed by Northern Ireland shall have regard to the relative taxable capacities of Northern Ireland on the one hand and Great Britain and Ireland on the other hand."

LABOUR IN 1923.

(FROM OUR LABOUR CORRESPONDENT.)

POLITICALLY, 1923 has been a great year in the history of British Labour. The 1922 General Election doubled its Parliamentary strength and very much more than doubled its Parliamentary influence. Inspiring, as well as intelligent, leadership, and efficient personnel made of an Opposition, small in numbers, an effective political instrument, on which public attention was focussed throughout the year. The fruits of this work could hardly have been expected to ripen so soon as December last. In many respects the time of the election was highly unfavourable to Labour, and was generally believed, inside the movement, to have been chosen for that reason. In the fourth winter of unemployment, finances were at a low ebb; union membership, as well as its chests, depleted. Nevertheless, the Party secured four and a half million votes, increased its representation by a third—from 144 to 192—easily retained its position as Opposition, and though a minority—and a small minority at that—is now on the eve of forming a Government. The limitations and difficulties of a minority Government are pretty well understood throughout the ranks; miracles are not expected. But the Party hopes to gain in general public confidence whatever it may have to lose in the inevitable disappointment of some of its more ardent and less disciplined supporters consequent on the effort to carry through a national rather than a Party programme. Nothing was more notable at the Albert Hall meeting than the earnest, almost solemn agreement with which Mr MacDonald's emphasis on this—that the Party goes in to do work, and work for the nation rather than itself—was received.

Politically, 1922 and 1923 were years of steady growth along the lines of the new, 1918, Constitution of the Party. The outstanding feature of the redraft accepted by the Party Conference in that year was the opening of membership, hitherto confined to groups, organised in industrial (trade union) or political (the Independent Labour Party, the Fabian Society, the Social Democratic Federation) associations, to individual "workers by hand and brain." It is, since then, in its individual membership section that the Party's advance has been most rapid and marked. The trade unions are still the numerical and financial backbone; but the members of trade unions, mingled with and strengthened by association with persons coming from other walks of life and forms of work, are more and more tending to reorganise themselves in local and divisional Labour Parties. The result of this is seen in the changed type of candidate now being selected and returned by Labour votes. The trade union leader is still there, but the younger trade unionist who goes forward as a candidate is, more and more, an active political, and not merely an effective industrial, worker, organiser and thinker. Moreover, there is a continually increasing infusion, in the ranks of the Parliamentary Party, of men who have come into the Labour movement from conviction rather than from direct experience. Nor are they now regarded with suspicion. No effort, from outside, to sectionalise the Party on "class" lines will work. The Scottish contingent is a case in point. In its origins, its membership is thoroughly "mixed." Nor is it any more aggressively Socialist than the Yorkshire or the London contingent.

Another general point is worthy of notice. The Parliamentary weakness of Labour from 1918 to 1922—weakness not only in numbers, but in leadership—encouraged, and was, to a degree, a cause of, "direct action" propaganda and feeling. Since 1922, this has almost entirely died away. Neither protracted unemployment nor the wage cuts of 1921 and 1922 have revived it. Belief in "direct action," like the membership of the Communist party has fallen away steadily through the last three

fact, her taxation, moderated to her circumstances, provided a surplus over the cost of her domestic administration. The inability of Northern Ireland, with its highly developed industrial system and its frequently-expressed desire to contribute, to pay a six million contribution towards Imperial expenditure would throw a strong retrospective light on the controverted questions of Ireland's capacity in the past to make such contributions. And of course, the secession of Northern Ireland will, *prima facie*, reduce the liability of the Irish Free State under Article V. by some 44 per cent., with a parallel reduction in the figures of the alleged "set-off" or counter-claim. However these complex matters may be decided, it would be well that they should be decided soon. Controversies which are allowed to grow stale are apt to gather further misunderstandings around them, and to develop only towards their own embitterment.

Article XII. of the Treaty is the second and the more urgent matter. It provided that Northern Ireland might secede from the Irish Free State subject to the condition that if it did so a Boundary Commission should be appointed to "determine in accordance with the wishes of the inhabitants, so far as may be compatible with economic and geographic conditions, the boundaries between Northern Ireland and the rest of Ireland." Northern Ireland exercised its option under Article XII. as confirmed and "given the force of law" by 12 Geo. V., cap. 4 (The Irish Free State Agreement Act, 1922), but its Prime Minister, Sir James Craig, demurs in emphatic terms to submitting to the award of the Boundary Commission. Legally and constitutionally, of course, the case does not admit of argument, and the Government will naturally insist upon the Treaty being carried into effect. No other course would be consistent with the honour of Great Britain, for however the jurists may describe the Anglo-Irish Treaty that instrument was negotiated and executed by her principal Ministers of State and was, after full deliberation, ratified and given the force of law by the Imperial Legislature. The new Dominion, which has made great sacrifices to enforce compliance with the Treaty within its own domain, must be given no cause for complaint that that Treaty is more lightly regarded in this country. From the standpoint of ordinary fairness the whole argument which justifies the exclusion of Northern Ireland from the Irish Free State justifies with even greater force the exclusion by a Boundary Commission from Northern Ireland of those border districts in which the local majority claims its right to be re-incorporated in the parent Ireland under the title of the Irish Free State. Nor is it easy to descry what type of statecraft it is which desires to hold captive populations whose eyes are ever turned in longing towards the neighbouring state, and whose repression is so arduous and so extremely costly an undertaking as actually to necessitate subsidies from Great Britain to enable the Budget to be balanced. And this naturally leads to the question why Great Britain should be expected to pay for the repression of districts which the Treaty binds her in honour to liberate.

Mr. Baldwin has, it is said, arranged a conference of British, Irish and Ulster representatives in an endeavour to smooth the way for the Boundary Commission. The intervention of the General Election delayed its meeting, and now possibly it will be held under the auspices of a different Prime Minister. The election itself served to emphasise its importance, since the border counties of Tyrone and Fermanagh (a single constituency) returned by large majorities the two anti-Partition candidates, of whom one—Mr. Cahir Healy, M.P.—is and has been for nearly two years held imprisoned in preventive detention in a prison ship by the Northern Government.

We hope the Conference will be successful in finding a way to carry through to completion the arrangements of the Anglo-Irish Treaty while saving all susceptibilities—there are more ways than one open by which a satisfactory adjustment can apparently be reached, embracing not merely the issues with which this article deals, but the broad policy of the whole settlement. Great Britain will not be niggard of sacrifice in the hope of turning the final page of one chapter of her Irish history, and of opening the record of a more satisfactory era. But the other parties must do their share. If need be, the Anglo-Irish Treaty must be carried out in its entirety, and there must be no more Ulster adventures of the 1913-14 pattern.

years. In so far as it remains, it is the direct product of despair. The Unemployed Workers' Organisation probably contains more Communists than does any other Labour body. The Party has consistently rejected Communist affiliation by increasing majorities.

If long-protracted industrial depression has not smashed the organisation of the workers the reason is that they have seen the hope of rescue somewhere else—through politics. The tendency has been throughout the last twelve months to cast more and more weight on the political side; perhaps to expect from it more than it can give. The candidature of Mr Frank Hodges, the secretary of the Miners' Federation, is only one instance. There is, indeed, in many quarters what amounts to a disbelief in Trade Unionism, or, at any rate, in the present organisation of the Trade Union Movement. One of the ablest and most vigorous (and at the same time politically distinguished) of the younger trade union leaders put this view very frankly some months ago at a Trade Union Conference in London. He said:—"The present position of Trade Unionism, as will be admitted by all who know the facts, is deplorable. To put it bluntly, Trade Unionism is active, conscious of its importance, even bombastic, in times of industrial prosperity. In times of depression, all this disappears. Its spirit depends on the prosperity of industry. If this be so, if it can only function actively in times when trade is good, it is of small value to the workman. Nor is it sufficient, in answer to this, for those who in the past have consistently deprecated and belittled political action, to cast their burdens upon it now."

This same critic, Mr E. Shinwell, M.P., roundly denounced the Plymouth Trade Union Congress (see *New Leader*, September 14, 1923) as "the most hopeless on record"; a "huge waste of time"; and declared that it "merely repeated the deliberations of the Labour Party Conference" three months earlier. His criticism was justified by one salient fact. The big problem before the Congress, and before the industrial movement generally, was co-ordination of the unions. It was in order to secure such co-ordination that the T.U.C. Executive was reconstructed, and the General Council established some two years ago. The "big" debate of this year's Congress ought to have been on the giving to the Council of extended powers. The "big" debate never came off. After a perfunctory half-hour's discussion the proposal to allow the Council to levy affiliated bodies, in proportion to membership, for the support of a union engaged in a dispute, was rejected by a majority of over 1,600,000. Thus the Congress registered the fact that, while the political side of the movement is forging ahead, the trade union side is marking time. There is leadership on the political side, not on the industrial in the big sense. There are individual unions, like the N.U.R., whose position is thoroughly sound, which are steadily and quietly going forward, dealing in their own way with the thorny problem of Craft v. Industrial Unionism, which was at the bottom of the longest trade dispute of the year—that in which the boilermakers were involved—and on occasion generously helping the general effort—witness the N.U.R. grant of £10,000 for the Labour Party's Election Fund. But taking a general survey, one finds no analogue, on the industrial side, to the determined forward drive which Mr MacDonald has brought to the political movement.

Of course, there is this to be said. Economically, the circumstances of the last three years have been adverse in the extreme. Industrially, and notably in relation to wages, Labour has been fighting a losing battle. Moreover, the true story of the year can be given in one word—unemployment. Protracted unemployment is not only a huge financial drain; it is at the same time a huge moral drain. Throughout the year the unions have had to carry a percentage of unemployed members that have never averaged less than 11. The burden on many unions has been twice as heavy, and represents a fifth of their membership. Add to this fact that where-as prices, at the end of the year, were 77 per cent. above the 1914 level, weekly full-time wages were only 70 per cent. above it—and the level of real wages, as Professor Pigou has pointed out, was below that of the late nineties. No further explanation is required of the failure of the "Back to the unions" campaign. On this the figures given at the time of the Trade Union

Congress are eloquent. Comparing 1922 and 1923, the membership of the various great groups was:—

Group of organisations.	No.	1922.	Memberships.	No.	1923.	Memberships.
Agriculture	1	..	70,000	..	1	.. 30,000
Mining and quarrying ..	7	..	839,902	..	7	.. 784,617
Metal, engineering and shipbuilding	42	..	847,274	..	42	.. 706,231
Textile	26	..	544,502	..	26	.. 417,958
Clothing	10	..	170,512	..	10	.. 164,817
Woodworking and furnishing	8	..	89,298	..	7	.. 73,443
Paper, printing, &c.	12	..	168,477	..	13	.. 159,806
Building, decorating, &c.	11	..	396,641	..	10	.. 335,685
Railway service	3	..	464,794	..	3	.. 447,374
Other transport	9	..	407,570	..	8	.. 405,650
Commerce and finance ..	7	..	193,000	..	7	.. 168,650
Public administration ..	9	..	152,692	..	10	.. 183,264
Miscellaneous	19	..	110,976	..	18	.. 89,512
General labour	7	..	673,010	..	5	.. 402,261
		171	.. 5,128,648	..	167	.. 4,369,268

There has thus been a decline of 14.8 per cent., more than half of which was accounted for by the general labour and the metal, engineering, and shipbuilding group (where unemployment has been most severe and protracted), together with a very heavy falling off in agriculture.

Of course, it can be said, and said with truth, that, ever since 1921, the unions have been shedding their temporary war-time accessions in membership. Under the stress of dilution, &c., many of them took in large numbers of persons who were only unionists in the sense that they paid contributions, not in the sense that they were convinced or comprehending members. Their falling away was to be expected, and represents no loss of real fighting strength. The drain of unemployment is another matter. That has been, and is, terrible. Throughout the last two years the unions have been fighting, or trying to fight, on a falling market. 1923 records no such disaster as the collapse of the miners' strikes, but in two cases—that of the building dispute and the Norfolk farm strike—something approaching disaster was only prevented by the interposition of the leader of the Labour party. These, with the jute lock-out in Dundee in the spring, the unofficial Docks strike in the summer, and the protracted boilermakers' lock-out, which dragged on till November, were the principal industrial conflicts of the year, other threatened stoppages being in various ways prevented by the use of arbitration machinery. Behind them all loomed, throughout its course, the great unsettled question of the mines, which requires, and must be given, special treatment in a subsequent article.

If one tries, then, to sum up the history of 1923 from the point of view of labour, one can only say this. It has been a year of widespread distress, privation, and hardship; a year in which the material and mental sufferings of countless men and women have been redeemed and lit by one gleam of hope—the hope inspired by the political progress of the party.

THE RUSSIAN COAL INDUSTRY.—THE DONETZ COALFIELD.

(FROM OUR MOSCOW CORRESPONDENT.)

THE Donetz basin plays a preponderant rôle in the coal industry of Russia—in 1913, for example, of the 37 million tons of coal and anthracite extracted in the whole of the Russian Empire, 25.7 million tons came from the Donetz. During the revolution the coal production fell rapidly to one-sixth of the pre-war production, and it was not until 1921 that the curve of production again showed an upward trend. From 25 million tons extracted in 1917, the quantity of coal extracted fell in 1918 to 9 million tons, in 1919 to 5.7 millions, and in 1920 to 4.5 millions. In 1921 the production rose to 5.5 million tons, this amelioration being due in part to a small increase in the number of miners who were attracted during the famine period, when payment was made on the basis of individual output in foodstuffs specially allocated. In 1922 the shortage of workers was still evident, the numbers of miners falling from 17,825 in January to 5,735 in July; it should, however, be noted that it is customary for a considerable number of the Donetz miners to accept agricultural employment during the summer months. The decrease in

the number of miners was, however, offset by increased productivity, and in 1922 the total production of the basin amounted to 5.2 million tons. The year 1923 commenced inauspiciously, and during the first four months the minimum programme laid down was not executed. But from April the situation improved, largely owing to improved equipment of the mines, the summer months being marked by an increase in production (in May 642,000 tons, June 664,000 tons, as compared with 450,000 tons and 426,000 tons during the corresponding months of 1922), July and August continued at much the same level (602,000 tons in July and 647,000 tons in August). In September and October the curve of production rose appreciably, reaching almost 1 million tons in October, as compared with 428,000 tons in October, 1922. The very low prices of agricultural products on the internal market and the rise and regulation of miners' wages were the principal factors attributing to the better output. The administration of the coalfield was reduced and reorganised during 1923, and a serious attempt made to apply to the exploitation of the mines the features of the new economic policy tending to development on a commercial basis. The Central Administration of the Coal Industry (U.G.K.P.), a State organisation, formerly received its financial support from the State and transferred without consideration of costings, &c., the production to Governmental organisations, railways, &c. Of the 1,250,000 tons actually utilised in October to December, 1922, 684,000 tons were used by the railways and 297,600 tons by the State industrial trusts. At present the Donetz Administration is responsible for its own fixed budget, is provided with working capital, and delivers its production to the State Organisations and to the free market only against payment (the State Organisations, however, receive the coal at less than cost price, the difference being made up by subsidies). The bureaucratic apparatus of the central administration has been considerably reduced, and its relations with the managements of the mines tend to be those of a purely commercial character, the central administration paying the managements for the coal delivered on the basis of estimated forward prices and leaving to the managements liberty as regards their internal organisation. The Central Coal Administration (U.G.K.P.) is dependent directly on the Supreme Council of National Economy.

The mines are divided into 33 administrations, grouping together the mines united for technical and territorial reasons, and 7 regions, the chiefs of each region surveying and controlling the mine administrations and extending to them technical assistance in case of necessity. The furnishing of the basin with machines, &c., depends entirely on the Central Administration, only material found locally being bought directly by the mine managements. The delivery of coal for State consumption and sales in general are arranged by the Central Administrations, the Commercial Section of which has recently replaced the Coal Syndicate now liquidated. Nominations to the various posts in the Central Coal Administration are in the hands of the Supreme Council of National Economy; the posts in the Mines Managements depend on the Central Coal Administration.

The state of the technical equipment of the collieries deteriorated very much during the Revolution. Although production is concentrated in the best managed and equipped mines, to which have been transferred the machines and installations in the abandoned mines, yet the mines in work often lack the technical material necessary to normal working, and recourse is had to expedients which, although often ingenious, are yet always costly and insufficient. A special study of the state of technical equipment of the Donetz permits of two conclusions:—1. The mines are not in a "catastrophic" state, as has often been asserted. They are maintained by current repairs and the relatively small purchases of the Central Coal Administration, which assures a continuance on a much reduced annual production. 2. The difficulties caused by the wear and tear of the machines and the lack of material, although surmounted in some measure by the ability of the expert personnel and workmen, none the less render the work more costly, more exacting, and more dangerous. From these factors result a diminution in productivity and an increase in the selling price of the coal. The production of coke in the Basin has risen in the six

months ending March, 1923, to 87,500 tons, the present production being about 7.6 per cent. of 1915, in which year 4.2 million tons were manufactured.

The reduction of the working day in the collieries from twelve to eight hours for the workers in general and to six hours for the miners and lack of loading facilities have given rise to difficulties in organisation and have made production more costly. Of the total number of 1,800 pits—including the small workings—267 only were worked in 1921-22, giving a gross coal production of 6.8 million tons, of which local consumption amounted to the large figure of 2 million tons. The net output represented 25 per cent. of pre-war. A further important reason which has hindered the Donetz mines managements is the irregularity with which the minimum indispensable financial means for the exploitation of the collieries have been put at their disposal. Often lacking the means to meet current expenses (wages, &c.), drawings have had to be made by the managements on funds set aside for capital expenditure. The wages of the workmen and experts in the Donetz have been quite insufficient and paid with great delay in a steadily depreciating money (wages for January, 1923, for example, were paid 43 per cent. at the end of February and 57 per cent. in March). During last summer a certain improvement was effected in fixing the wages in goods roubles, but this measure had to be renounced as it increased very much the selling price of the coal, and wages were paid in gold roubles (on November 1st the goods rouble was equivalent to 1.61 gold roubles). The Ukrainian review, *Donbass Economy*, No. 30-31, of July 15, 1923, mentions that in the spring of 1922 the monthly wages of a workman were equivalent to the cost of 3 lbs of bread. In June, 1923, the Donetz workman received 7.58 goods roubles, as compared with 12.872 received by a Moscow factory worker and 9.95 in Petrograd. Before the war (1913) the men's wages were:—Moscow, 27.10 gold roubles; Petrograd, 34.70 gold roubles; average of 10 Russian Governments, 22 gold roubles; Donetz Basin, 34.43 gold roubles. The price of Donetz coal in November, 1923, was in Moscow 55 to 75 gold copecks a pood, anthracite 60 to 88 copecks, and coke 95 to 1.3 roubles a pood. The spot cost price of Donetz coal varied from 18 to 27 copecks a pood; the supplementary expenses (transport, handling, taxes) making up the great difference between the local and Moscow prices have made sales difficult. The most serious hindrance, however, to the normal development of the Donetz coal basin is lack of capital.

THE TRUST MOVEMENT IN GREAT BRITAIN—FURTHER ILLUSTRATIONS.—IV.

AN unfortunate example of "horizontal" combination inspired by excessive optimism has been supplied by Sheffield Steel Products, Limited, which was registered at the end of 1918 to acquire the undertakings of some fifteen companies engaged in the manufacture of cutlery and allied commodities such as surgical instruments, pliers, saws, files and edge tools. In October, 1922, an investigation disclosed "such a deficiency that the company has been advised that it cannot continue its business without reconstruction with a view to securing, if possible, necessary further working capital." At the end of 1922 the issued capital of the company was £727,000 in preferred shares, £1,730,000 in ordinary shares, and £1,025,000 in 8 per cent. and 6 per cent. debentures.

Other instances of the same type of combination are Agricultural and General Engineers, Limited, which was registered in June, 1919, and has acquired, through purchase of all or the greater part of the share capital, controlling interests in fourteen companies, the purchase price, in preferred and ordinary shares of the new undertaking, amounting to nearly three million pounds; the Associated Lead Manufacturers, formed at the beginning of 1921 to acquire the control of the six leading British lead manufacturing concerns, all except one being private companies; and the two consolidations formed in the photographic materials trade, the one being British Photographic Industries, Limited, registered in 1915, and holding practically all the share capital of six companies engaged in this line of manufacture, and the other being

Amalgamated Photographic Manufacturers, Limited, formed in 1921 to acquire the businesses of seven companies manufacturing cameras, photographic plates and papers, and binoculars and other optical instruments.

In the English textile industries "horizontal" combination has still made comparatively little progress, except in the finishing trades (bleaching, printing, dyeing), in the cotton and linen thread sections, in the Egyptian section of cotton-spinning (the Fine Cotton Spinners' Association, Limited), and in the jute industry (Jute Industries, Limited, formed in October, 1920, to acquire control of nine concerns engaged in the spinning of jute and the manufacture of jute cloth and carpets).

The incursions of financial interests during the past five years into the cotton spinning industry and their acquisition of control (sometimes at very high prices) over groups of mills, constitutes a break in the Lancashire tradition, the advantages of which are not yet apparent, though the almost unparalleled depression of the industry during the past two years makes it difficult to form any decided opinion.

One of the most remarkable and instructive cases of "horizontal" and other kinds of combination is furnished by the glass bottle industry. The depression of the trade in face of severe continental competition led to the formation in 1907 of the Association of Glass Bottle Manufacturers of Great Britain and Ireland, comprising almost all the makers, with the object of securing minimum prices. When the European patent rights of the Owens bottle-making machine were acquired by the Europaischer Verband der Flaschenfabriken, some 90 per cent. of the members of the Association formed the British Association of Glass Bottle Manufacturers, Limited, which became a shareholder in the Verband and so secured for its constituents the exercise of the patent rights in the United Kingdom, subject to certain restrictions on output—an agreement being made at the same time between the continental and British makers for the prevention of price-cutting. After this formation of (1) a price-fixing combination, and (2) a company to hold certain patent rights, the next stage was an attempt—only partially successful—to bring about a "horizontal" amalgamation by the creation in 1912 of United Glass Bottle Manufacturers, Limited, which acquired six concerns holding together about 50 per cent. of the shares of the British Association (the patent-holding company). Then came the war, and during that period, to quote from the Report issued in 1920 by a Sub-Committee of the Standing Committee on Trusts,

The scarcity and high price of glass bottles and of domestic glassware generally attracted so much popular attention that certain financial interests, entirely unconnected with glass manufacture, conceived the idea of entering the business, and the result is an interesting one as illustrating a phase of Trust organisation which is not only of importance to the investor, but has an intimate bearing on the consumers' position. So many investors were satisfied that large dividends could be earned by manufacturing glass that it was clear that ample capital could be obtained for the purpose of financing such operations.

So in 1919 British Glass Industries, Limited, was formed to acquire and amalgamate five glass-making firms; it also obtained a small interest in another company, stated to be the only one of the group which had any considerable experience of bottle making. Meanwhile, the United Glass Bottle Manufacturers, Limited, were pushing on with their schemes of development, and they were in a very strong competitive position owing to their possession of the patent rights as to the Owens machine and their greater experience in this branch of glass production. But neither party desired a struggle; and before the end of 1919 British Glass Industries, Limited, acquired all the ordinary shares of the United Glass Bottle Manufacturers at £3 10s for every £1 share. In order to carry through this transaction, the former company, whose capital stood at 300,000 £1 shares issued at par, and 300,000 £1 shares issued at £2 10s each, now issued 800,000 £1 shares at £3 10s each, thereby raising their share capital to £1,400,000 and the premiums to £2,450,000; subsequently these premiums were capitalised to the extent of £2,100,000, the shareholders receiving three shares for every two they held—the share capital being thus raised to £3,500,000 out of £5,000,000 authorised.

In the food trades interesting examples of permanent horizontal combinations are the formation in May, 1919, of the British Cocoa and Chocolate Company, Limited, to acquire control of Cadbury Brothers and J. and S. Fry and Sons; and Associated Biscuit Manufacturers, Limited, formed in December, 1921, to acquire all the ordinary share capital of Huntley and Palmers and Peek, Frean and Co. In connection with this second case, we may draw attention to the fact that the Standing Committee on Prices, appointed under the Profiteering Act, investigated prices, costs, and profits in the biscuit industry, and in their report dated July, 1920, pointed out that an examination of the costings of six large biscuit firms disclosed the fact "that in spite of widely varying costs and profits of the different manufacturers' identical prices are being charged by these manufacturers for similar types of biscuits"—a fact which, in their opinion, pointed to some form of agreement or combine among the makers.

But in the food trades the most striking phenomenon is United Dairies, Limited, whose organisation and operations are examined in great detail in the Report on Milk and Milk Products recently issued by the Departmental Committee on Distribution and Prices of Agricultural Produce appointed by the Minister of Agriculture. The United Dairies, Limited, was formed in 1915 to acquire some of the chief London wholesale milk businesses and their country creameries; two years later the company entered the London retail trade, acquiring some of the largest distributing businesses for that purpose. The policy of absorption has been continued, and the issued capital, which was one million pounds in 1915, has been approximately quadrupled. The Departmental Committee, after stating their estimate that the company controlled directly some 65 per cent. of the total milk supply of the metropolis, state that—

The company owns 45 creameries in England and Wales, which have been described as reservoirs for the London trade; a London wholesale milk business; numerous London retail milk businesses: five condensed and malted-milk factories; a retail utensils and machinery business; and a Smithfield provision business for home and imported produce. The company owns its own sawmills, and also its own factories for the manufacture of condensed milk tins. All these different businesses are worked through subsidiary companies, the United Dairies, Limited, operating purely as a holding company.

The Departmental Committee, like previous committees, were impressed by the high standard of efficiency which marked the conduct of the company's operations, and the improvements which they have introduced into the London milk trade. They point out, however, that a combination such as the United Dairies, which handles about one-twelfth of all the milk produced in Great Britain, and controls by far the greater part of the wholesale milk trade and about one-third of the retail trade of London, and is largely interested in the manufacture of milk products, is in a very strong position over against the producer, its smaller competitors in the distributing trade, and the consumer. It can practically dictate terms to the producer, since in some districts at least there is no other distributing channel open to him; it could, by reducing its distributing margin and reducing the retail price of milk, "exterminate the small retailer dealing only in milk, who lives on the edge of the profit margin"—not a really effective competitor, but one whose "continued existence seems to be satisfying to public opinion"; and it "is in a position to place the manufactured goods of its subsidiary companies upon the market at the expense of the consumer of liquid milk and at lower prices than is possible for competitive products of other manufacturers," thereby driving them out of business and depriving the farmers in some districts of any alternative outlet for their milk. And finally, the committee point out that whereas a dividend amounting to 9.36 per cent. on the total issued capital—preferred and ordinary—was paid by the United Dairies, Limited, for the year ended June 30, 1922, their own examination of the accounts for the half-year ended September 30, 1922 (a period "relatively unsatisfactory from a profit-earning standpoint"), showed the total combined profits on milk and other goods earned by the wholesale and retail groups of subsidiary milk businesses to be at the rate of about 13 per cent. per annum on the capital invested therein, including the balance of goodwill and benefit of contracts. In this connection the committee dwell on the difficulty

of determining the true rate of profit earned by an organisation so constituted and operating as the United Dairies, Limited, and the need for legislation which will compel this and similar holding companies to disclose much fuller information than is at present the case—a proposal which, though attractive, obviously presents many difficulties.

Notes of the Week.

Mr MacDonald on His Task.—We are not among those who sneer at the Labour Party's "victory" celebration at the Albert Hall last Tuesday. Victory, in the sense of gaining a clear Parliamentary majority, Labour is probably still far from achieving. But the rise in 17 years from a handful of members of Parliament to the position of a Government elect with 4½ million votes behind it is a notable achievement, which those who have brought it about are perfectly justified in celebrating. Indeed, the best testimony to the achievement is the anxiety which it has caused among those to whom Labour doctrines are *anathema maranatha*. The keynote of Mr Ramsay MacDonald's speech to this assembly was idealism and moderation. Through it were scattered such phrases as "The search for the Holy Grail," "the shield of love and the spear of peace," "We are a party of ideals," he proclaimed; "we have built our finer habitations on the horizon." But Mr MacDonald, though his eye is on the horizon, does not propose "to jump there." "One step enough for me" is his motto, qualified by the condition that one step leads to another. When Mr MacDonald came down again to earth his speech was still singularly devoid of offence to susceptible opponents. Labour is going to take office, if the opportunity arises, not to prepare for a General Election, but to do work. What work? The speech, not being a programme speech, was vague, but interesting in its sketched outline of policy. Peace abroad was in the forefront, and the completion of the structure of the League of Nations and the use of the League "without reserve as the main instrument for securing international justice and thereby creating the conditions of international peace"—a statement which was warmly welcomed by Lord Robert Cecil at the fourth birthday celebration of the League in London. The "pompous folly" of standing aloof from the Russian Government is to be ended; the problem of unemployment is to be considered from the "human point of view"; a great housing effort is to be made, in the course of which, if necessary, "trusts, monopolies, and corners" will be broken down. Ex-service men, widows, and old-age pensioners received laconic mention, and a speech which contained some real eloquence ended, as it began, on the idealistic note. On the whole, the speakers who followed Mr MacDonald did not greatly lower the tone of the meeting. Indeed, Mr Lansbury, with such phrases as "the inferno of capitalism," and Mr Smillie, who talked glibly of the "glorious Russian revolution," seemed rather strikingly out of harmony with the general tone. These appeals to passion, which Mr MacDonald so studiously eschewed, were unfortunately paralleled and outdistanced on the same night at another London political meeting by Sir Frederick Banbury, who, according to reporters, signalled his promotion to the House of Lords by delivering himself of the following passage:—

It has been the practice of the Government when defeated on a main issue to resign, but Mr Ramsay MacDonald might refuse. The Long Parliament was dissolved by Cromwell with the aid of the Coldstream Guards. My son is in the Coldstream Guards, and I should have great pleasure in leading the Coldstream Guards into the House of Commons if Mr MacDonald attempted anything of that sort.

Caricaturists are deriving legitimate humour from the conception of the new baron leading the Guards into the House of Commons. But in reality such grotesque talk ceases to be funny because it is dangerous. If Labour extremists want to gain recruits, we suggest that the most effective method they could employ would be to get Sir Frederick on to their platforms all over the country to repeat this type of nonsense. Meanwhile the City, which so recently he used to represent, has noted with

cautious satisfaction Mr MacDonald's moderate idealism, and the speech seems also to have had a reasonably good reception in Paris.

The Inquiry into the Janina Assassinations.—The alleged text of the final report presented on September 30th last to the Conference of Ambassadors by their Commission of Inquiry into the Janina Murders has recently been published as an appendix to a pamphlet by Mr George Glasgow ("The Janina Murders and the Occupation of Corfu": London, 1923, Anglo-Hellenic League). There is no reason to doubt the accuracy of the document, and its contents are interesting. Its conclusions confirm the interim report of September 22nd (which is embodied in the text). It does not bring any imputation against the Greek authorities of having been the authors or the promoters of the crime; and, while it charges them with negligence in investigation, this negligence is hardly of a culpable character. "The Hellenic judicial inquiry has been conducted with all the despatch made possible by the habitual working methods of the Greek judicial authorities." The definite points established against Greek subjects holding official positions are three: (i.) The Governor-General of Janina, though he knew that the country was unsafe at the time, did not insist upon providing an escort for General Tellini's section of the Boundary Commission, or (alternatively) upon declining responsibility for the possible consequences; (ii.) the materials of the barricade which the murderers had thrown across the road, and which might have offered a clue, were burnt the same evening by the soldiers of the nearest Greek post, though they had no lack of fuel nearer at hand (on the other hand, formal orders for the preservation of these materials had been given by the Greek authorities); (iii.) the Albanian section of the Boundary Commission, which had been travelling immediately ahead of General Tellini, was kept in ignorance of the murders for 24 hours by the Greek attaché, Colonel Botsaris. This last point looks, at first sight, the most suspicious, but Colonel Harenc, the British delegate (an officer whom the writer of this note knows personally, and for whose judgment and knowledge of the Near East he has great respect) was of opinion that Colonel Botsaris's motive was to prevent any possible warning from reaching the inhabitants of villages on the Albanian side of the frontier, in which the murderers might possibly have found refuge. Colonel Harenc based this opinion upon experiences of his own in Anatolia. Moreover, this reticence of the Greek authorities towards their Albanian colleagues was paralleled on the Albanian side. On the fourth day after the murder an inhabitant of one of the very Albanian villages in question deposed to the local Albanian authorities that a band of 13 brigands had visited his village and had admitted their authorship of the crime. The chief of this band was a man of Greek origin, and the only other two members whom the informant was able to identify were both Albanian subjects of Greek origin. The Albanian authorities sent gendarmes and captured one of these two men, while his 12 companions escaped to the Greek side of the frontier, but they did not inform their Greek colleagues of the incident. The Commission reported that they had not arrived at the full truth, though they appeared to be getting near it; they submitted that "to arrive at this result it is indispensable to ensure a complete understanding between the Albanian and Greek Governments"; and they begged their principals, the Conference of Ambassadors, to take active steps to that end. The Ambassadors, however, preferred (as we all know) to conclude the inquiry in another way. Now that this report has been unofficially published, Parliament must insist that the full papers are laid on the table of the House.

Overseas Trade in 1923.—The features of the December foreign trade returns, published yesterday, are a rise of £7½ millions in total imports, and a slight further decline, amounting to £1½ millions, in the case of British exports. Re-exports were on much the same scale as in November. A decline in exports is a seasonal movement in the month which includes the Christmas holidays and the closing days of the year; the gratifying feature of the present

returns is the smallness of the contraction, which in December, 1922, amounted to £7½ millions, and in December, 1921, to £3½ millions. The following tables show the returns for last month, and last year, in comparison with the corresponding periods of 1922:—

MONTH OF DECEMBER.

	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	94,937,721	109,189,790	+14,252,069	+15.1
British exports	58,883,032	64,115,189	+5,232,157	+8.9
Re-exports	8,479,066	10,396,732	+1,917,666	+22.6
Total exports	67,362,098	74,511,921	+7,149,823	+10.6
Excess of imports over total exports	27,575,623	34,677,869	+7,102,246	+25.8

TWELVE MONTHS ended DECEMBER 31.

	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	1,003,098,899	1,098,015,585	+94,916,686	+9.4
British exports	719,507,410	767,328,656	+47,821,246	+6.6
Re-exports	103,694,670	118,572,694	+14,878,024	+10.4
Total exports	823,202,080	885,901,350	+62,699,270	+7.6
Excess of imports over total exports	179,896,819	212,114,235	+32,217,416	+17.9

A comparison between November and December, 1923, reads as follows:—

	November. Million £.	December. Million £.
Imports	101.6	109.2
British exports	65.8	64.1
Re-exports	10.1	10.4
Total exports	75.9	74.5

A striking instance of the manner in which inclusion of our trade with the Irish Free State may vitiate numeral comparisons is provided by the import figure, "Animals, Living, for Food," £2.2 millions in December, 1923, against £.03 millions in December, 1922. Examination of the detailed return shows that the 1923 figure represents almost entirely imports from countries other than the United States and Canada, which sent nothing last year—obviously from the Free State. One might speculate on the question as to how much of the total is made up, not by actual shipments of cattle to this country, but by their being driven over the Northern Irish boundary to market at Belfast or Londonderry. We propose to deal with the full year's figures next week.

The Labour Situation.—The New Year opened with relative tranquillity as the order of the day in the world of Labour. Though there seems no reason to anticipate any very serious dispute in the near future, there are nevertheless two or three questions pending which might develop into rather grave issues if not properly handled. The National Wages Board for the railways reported on December 20th last in favour of the maintenance of the sliding scale. This was, of course, a triumph for the employees, though on other points raised by the companies the report represented, in the main, a compromise between the two conflicting points of view. The report was accepted by the National Union of Railwaymen, though the Associated Society of Locomotive Engineers and Firemen, which represents probably about one-half of all employees in those grades, balloted its members, who decided against acceptance by an overwhelming majority. The main point at issue is in respect of payments to certain drivers and firemen on a mileage basis. Before the reduction of hours from 10 to 8, which was effected in 1919, many of the principal companies had regarded 150 miles as the equivalent of a day's work, and had paid increased wages for excess mileage. With the advent of the new agreement, however, 120 hours had been accepted as the standard. The companies recently demanded the abolition of payments on a mileage basis, and proposed instead an increase of one shilling in the standard daily wage. The Arbitration Board rejected this demand, but held that the fall in daily mileage should not be regarded as a necessary consequence of the reduction in hours, and accordingly found in favour of 150 miles as the equivalent of a day's work. The members of the Associated Society are not

prepared to accept this finding, which they maintain would lead to a reduction of 22s 6d per week in the wages of certain drivers. It is also claimed that certain anomalies should now be done away with. Accordingly the officials of the society regard the findings of the Arbitration Court merely as a basis for further discussion, and hope shortly to resume negotiations with the companies in this sense. The award is not, of course, binding on either party, but it is greatly to be hoped that the machinery of arbitration will not be imperilled by strike action, particularly as the National Union of Railwaymen, which also includes a large number of drivers and firemen in its membership, has accepted the findings of the Court. The claims of rival unions also greatly complicate the position of the dockers, where a guaranteed week is now demanded, together with an increase in daily wages. The Transport and General Workers are asking for a further 2s a day, but they are being outbid by the newly-formed National Amalgamated Stevedores, Lightermen, and Dockers' Union, who demand 2s 6d. This latter union, the origin of which is to be sought in the regrettable dockers' strike of last summer, has not yet been officially recognised by the employers, and is being accused of "poaching" by the older union. Internal dissensions of this kind endanger the whole principle of collective bargaining. Side by side with these possible indications of future trouble, the Miners' Federation has decided to ballot its members on its recommendation to terminate the National Wages Agreement. It is virtually certain that a large majority of the workers will support their officials on this issue, though it is believed that the object of the strike threat is solely the desire to strengthen the hands of the men's representatives in forthcoming negotiations for the amendment of the agreement in its present form. In any case, three months' notice of termination is necessary, and there seems to be much reluctance in many parts of the country to force the pace at this present juncture. It would hardly be appropriate for the advent of a Socialist Government to coincide with strikes and rumours of strikes in the Labour world.

Irish Free State Affairs.—Our Dublin correspondent writes:—The new National Loan found a buoyant market on Monday last. It opened at 97½, or an advance of 2½ per cent. on the issue price, and it closed at 99. At the latter price, after some minor fluctuations, it remained up to midday to-day (Thursday). London was reported to be a buyer. On the Cork Exchange there was no stock offered for sale. Of course, it is not a very large market, but the recorded prices are very satisfactory for the Government. There are naturally many who, wishing for reasons of sentiment to invest, were yet timid at the outset, and who now are anxious to get in even at top price. When the sinking fund of £250,000 per annum, and the investments of the Accountant-General of moneys held by the Court of Chancery begin to have their effect, the price-level will quite possibly exceed par. According to the return of the Registrar-General, just issued, the estimated population of the Irish Free State at the end of the first half-year of 1923 was 3,165,000. The figure for N.E. Ulster at the close of 1922 was 1,284,000. Although these estimates are carefully compiled, it must be remembered that, owing to the rebellion, the usual census was not held in Ireland in 1921, and that consequently the factor of possible error is larger than usual. Of the figures now given, the most interesting feature is an estimated increase in the Free State population of 30,000—due almost entirely to a fall in emigration figures. Emigration was reduced by the great war to about a sixth of the normal figure, and since the war it has not yet reached its former level, largely owing to the effect of the United States immigration laws. The war itself operated to cancel a portion of the increase of population thus caused, for Ireland as a whole suffered a diminution of the excess of births over deaths from 25,000-30,000 to less than 10,000 in 1918. She also lost upwards of 50,000, killed in the war. It is to be presumed that the three-cornered discussions and the Conference arranged by Mr Baldwin to lead up to the Boundary Conference will shortly be resumed, and possibly the Anti-Partition member for Tyrone and Fermanagh may raise at Westminster the question of the

right of his constituents (who gave him and his imprisoned but uncharged colleague a large majority) to be restored to the Irish Free State by virtue of Article XII. of the Treaty. These border districts are loud in complaint of the abolition of proportional representation in local Government elections by the Northern Government, although it had been expressly devised by the Imperial Government in 1920 for their protection.

British and World Shipbuilding.—The Shipbuilding Returns of Lloyd's Register contain a number of features which are more satisfactory than the widespread unemployment in our shipyards would lead the casual observer to expect. For one thing the amount of new construction commenced in British yards in the December quarter was more than double the amount commenced in the previous quarter, being 244,506 tons, against 111,860 tons. Also the figures of total tonnage under construction at the end of 1923 show that Britain's share of current world construction recovered from nearly 50 per cent. a year ago to 57 per cent. to-day. Here is a comparison of tonnage under construction in British and foreign yards respectively at the end of each of the past three years and of 1913, showing the British share in world construction:—

	British. Tons.	Foreign. Tons.	World Total. Tons.	British Share. %
End 1913.....	1,956,600	1,375,000	3,332,000	58.7
" 1921.....	2,640,000	1,817,000	4,457,000	59.0
" 1922.....	1,468,000	1,486,000	2,954,000	49.7
" 1923.....	1,395,000	1,049,000	2,444,000	57.0

In the last year the British figure has fallen a little, but not nearly so much as the foreign total, and the percentage of world construction entrusted to British yards has recovered to within a small distance of the pre-war proportion. But although the United Kingdom has practically regained its pre-war share of world building, the world aggregate of tonnage under construction has fallen from 3,332,000 tons in 1913 to 2,444,000 tons, or by about 26.6 per cent. It is this drop in the world total which explains the major part of the 41 per cent. of unemployment reported in the shipbuilding industry of Great Britain and Northern Ireland; while a further part of it is accounted for by reduced naval construction. Prominent among the items in the list of foreign countries is the drop in the United States figure, which at the end of 1921 was over a million tons, to a paltry 91,500. Germany, with 324,184 tons under construction at the end of 1923, easily heads the list of foreign builders, followed by Italy with 119,663, Holland with 112,811, and France with 110,725. The four chief building areas in the United Kingdom are the Clyde, Newcastle, Belfast, and Sunderland. The returns divide the Clyde into two districts, namely, Glasgow and Greenock. In the former the end of 1923 figure is 326,564 tons, as compared with 286,104 at the end of September, and 382,454 a year ago—a decline on the year, but an improvement in the last quarter. In the latter the end of the year figure of 202,350 tons is well in advance both of the 122,270 tons recorded at the end of 1922, and the 182,740 tons at the end of the September quarter. Belfast, with 171,600 tons under construction at the end of the year, is over 58,000 tons worse off than a year ago, and has suffered a loss of 10,000 tons in the last quarter. On the other hand, Sunderland's total of 139,064 tons is considerably better than at the end either of the previous quarter or of the previous year; and Newcastle, with 247,850, is only 18,000 behind the end of the 1922 figure, and put on 17,500 tons in the last quarter. In the building of tankers the United Kingdom is doing nearly half of the world's work, having 83,646 tons under construction out of a world total of 175,164 tons. The returns afford some data for showing the size of vessels under construction. Of vessels of over 20,000 tons seven are being built in the world, and British yards are building them all. Of vessels from 15,000 to 20,000 tons, 13 are being built, 11 in British yards and 2 in German. Therefore of the 20 largest vessels being built in the world no less than 18 are being built here—a testimony to British predominance in the construction of ocean monsters. Significant in this connection is the construction in a British yard of a 28,000 ton vessel for delivery to Holland. The other class in

STATE EXPRESS

VIRGINIA **555** CIGARETTES

MADE BY HAND, ONE AT A TIME

which British yards predominate is in vessels between 4,000 and 6,000 tons, of which 78 are being built here as against 25 in the rest of the world. The division of tonnage into steamers and motor vessels is worthy of examination. The tonnage of motor vessels now building is 634,027 tons, as against 1,793,579 of steam vessels. The motor tonnage thus equals 35½ per cent. of the steam tonnage, a fact which appears to support the prophecies of the experts that the future is with the Diesel engine. If the progress in this direction continues, British yards would appear to be in a good position to obtain their full share of the work, especially in the case of the longer types of vessels. British yards are at the moment building 5 motor vessels of over 15,000 tons; but from the average size of vessels being constructed abroad it does not appear likely that any other country, with the possible exception of Germany, is building any motor vessels of this size. Altogether, Lloyd's Register's returns suggest that although unemployment is very serious to-day, British yards are well placed to benefit from any growth in the world demand for tonnage.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that the weather throughout December was cold and wet, with occasional hard frosts and some snow in the North. In most districts field work was not practicable on many days in the month owing to the sodden state of the ground, and cultivations and sowings are generally backward. Except where foot-and-mouth disease exists live stock have generally done fairly well, though occasionally sheep have suffered from excessive wet. Owing to the wintry conditions keep has been drawn upon rather heavily, but, though there are local shortages of roots, supplies are generally considered to be sufficient. Hay is deficient on hill farms in Wales and the North. Where sown early, wheat germinated well, though slowly. The young plant made slow growth, but, though backward, on the whole, looks healthy. Oats germinated satisfactorily, and are generally more forward than wheat. The small areas of barley sown look fairly well, and beans, though rather backward owing to slow germination, are usually a healthy and promising plant. Where clamped early, potatoes are keeping fairly well, and rather better than was expected. In many cases, however, they were lifted late and stored in a dirty and wet condition. Labour is in sufficient supply for requirements. In places unemployment has increased to some extent, owing largely to weather conditions, but is mainly confined to casual unskilled workers.

The Food Situation in Germany.—In considering the economic position of Germany at the present day, no factor is quite so serious as that of the food supply. Indeed, recent statistics of production and imports suggest the imminence of possibilities which are by no means pleasant to contemplate. A brief summary of the food position of modern Germany will help to an understanding of the very urgent present problem. In the ten years between 1865 and 1875 Germany ceased to be, on balance, a corn-exporting country, though right down to the war she continued to produce a remarkably large proportion of the cereals required for domestic consumption. By 1914, however, the balance of imports represented a very im-

portant factor in her general food position. Since the war, on the other hand, home production has fallen off to a surprisingly great extent, while imports have been completely inadequate to make good the deficiency. This is due, on the one hand, to the exhausting nature of war cultivation, and the impossibility of obtaining working capital when the national currency is completely disorganised; and on the other, to the lack of purchasing power which results from the present dislocation of the general trade balance. Moreover, the ceded territory in the East formed one of the most important areas of corn surplus in pre-war days. The present position is brought out clearly in the following table, which relates to the area at present included in the German Reich:—

(In Millions of Metric Tons.)*

	1913.	1922.	1923.
Production—			Estimates.
Rye.....	10.0	5.2	7.1
Wheat.....	4.0	1.9	2.9
Imports of wheat and rye (net)....	1.4	1.8	..
Total Bread corn available....	15.4	8.9	..
Production—			
Barley.....	3.0	1.6	2.1
Oats.....	8.6	4.0	5.9
Net imports of barley, oats, maize, etc., on balance.....	4.0	1.4	..
Total Grain-fodder available....	15.6	7.0	..

It will be seen that the actual yield of cereals in 1922 was only about one-half that of the same territory in 1913, while total grain imports were only some 60 per cent. of those of the last pre-war year. The potato crop was much nearer the earlier figure (40 million tons in 1922, as against 44 million tons in 1913), though the great decline in the standard of living is only realised when account is also taken of the production and consumption of meat. In the following table the principal results of live stock census of December 1, 1913, are given side by side with those of December 1, 1922:—

	Live Stock Census. (In Millions.)		Imports. (In Thousands.)	
	1913.	1922.	1913.	1922.
Oxen.....	16.9	15.1	260.7	61.8
Calves.....	1.5	1.2	..	..
Sheep.....	4.9	5.5	23.5	1.3
Pigs.....	22.5	14.6	148.4	101.4

Sheep alone show an increase, though the decline in the numbers of the other animals was accompanied by a noticeable falling-off in the average dead weight. Imports meanwhile have fallen off enormously, and it is estimated that the net result as far as consumption per head is concerned is that there is a reduction to about one-half the pre-war level (26 kg. per annum in 1922, as against 52 kg. in 1913). The reduction in the amount of fodder available is, of course, in large measure responsible for the unsatisfactory live stock position, while the population of the territory comprised in modern Germany has risen considerably in the last decade. Complete statistical returns for the past year are not as yet available, though it is to be feared that the food position in 1923 was considerably worse than in the preceding year. The estimate of the wheat and rye crops are certainly much better than the returns for the preceding year, while imports for the first six months stood at a little over one million tons. The estimates for barley and oats also show signs of improvement, but these figures are still far short of the 1913 standard. The advance over 1922 is mainly due to more favourable climatic conditions. Even so, however, this improvement is not sufficient to compensate for the great falling off in the potato crop last year, the provisional estimates being 31.4 million tons, or a fall of over eight and a-half million tons, as compared with the previous year. The standard of living remains appallingly low, and disease is taking an ever-increasing toll of the population. The situation this winter is indeed critical and prolonged, underfeeding is slowly destroying the very basis of the social order. It is essential that the work of reconstruction should be taken in hand while there is yet time.

* Returns compiled by the Ministry of Food and Agriculture at Berlin.

American Cotton Crop Reports.—During the last few years the Department of Commerce of the United States Government has built up a strong organisation, but recently there has been a demand from cotton users throughout the world for more accurate information with regard to the progress of the crop during the growing months of the season. A little time ago an Advisory Committee on Cotton Crop Reports was appointed, and certain recommendations have now been submitted to the Agricultural Department. At present, from July to November, a crop condition statement is published once a month, but it is now proposed to publish fortnightly reports. It is anticipated that the additional information will result in greater steadiness in prices. It is also suggested that not later than March 15th in each year, farmers' intentions as regards the planting of cotton should be reported, showing the increase or decrease on a percentage basis upon preceding years' acreage. Although the statistical reports on trade sent out by the Department of Commerce of the United States Government are often criticised, the figures are generally reliable and of considerable benefit to traders throughout the world.

The Stock Exchange Position.—Our Stock Exchange correspondent writes:—Members of the Stock Exchange for once do not complain about the quietude which has settled over their business. Brokers are none too anxious to offer advice. Jobbers are far from eager to deal, except in a comparative handful of the most liquid securities. With their books already fairly well loaded, the dealers would prefer in many cases to cease making prices, though they continue to stand up in their places, prepared, so far as business is concerned, to deal in either direction, in spite of the fact that they know the majority of their brokers come in armed with selling orders. If it were not for the system of jobbers which prevails in the London Stock Exchange market, prices would have taken a more abrupt dip than was the case a few days ago. Something of a bear account existed, and no doubt still exists, in a good many markets round the House; the value of a short position stands revealed in the day when the public are mostly sellers. For the bears provide a natural source of demand, which effectively serves to buttress a fall in prices. On its main lines, however, the Stock Exchange markets are disposed gently to sag. The speech of Mr Ramsay MacDonald at the Albert Hall on Tuesday night has been received with mingled favour and caution. The tone of it was regarded as exceptionally moderate, considering the occasion and the source, but some people ask whether Mr MacDonald can speak for the Labour party as a whole, and what authority he has for committing his followers to a policy of sane finance and steady politics. There is always a certain amount of selling which goes on daily throughout Stock Exchange markets. This comes from deceased accounts; from people who require money for trading purposes; from others desirous of making provision for income-tax, and from similar automatic sources of supply. It is met as a rule in January by an equivalent, or a greater amount, of purchasing on the part of people who have kept back money over the turn of the year, with the intention of window-dressing their accounts at the banks, and then of investing the cash during the first week of January with the same degree of regularity as they take out a dog licence. The big corporations can generally be counted upon to absorb substantial blocks of stock during the first week or two of the new year. The selling just mentioned is in evidence in the Stock Exchange; the buying has not materialised. That is the keynote to the position of markets to-day. People are holding back funds which, had political affairs been more normal, would have come to the Stock Exchange as a matter of course. In addition to the ordinary, and what we have called automatic realisations, the fear of a Labour Government has caused a number of people to be nervous to the point of casting overboard their securities, good, indifferent and bad, with the avowed decision to put the money into the bank and to repurchase the stocks and shares at a later date, hoping to do so at cheaper prices. These sellers are not bears, of course, but their transactions have the same effect as bear-selling does. So far, the sales for British account have not been on a scale of any magnitude, although it is declared that foreign holders

of British Government securities have been turning these out in very substantial lines, and taking the money across the Atlantic with a view to placing it into dollar securities. The British investor is holding his hand and a great part of his stock. The fear which confronts the markets of to-day is that next week's events in the House of Commons may deepen uneasiness into apprehension, and lead to a general volume of sales being directed into the Stock Exchange markets. The weakness of the French franc provides another string to the whip with which investment stocks are being chastised. It is not expected in the Stock Exchange that there will be any particular change of front for the next few weeks, during which time events are likely to move rapidly in the House of Commons.

Banking Profits.—We recorded last week some of the earlier dividend declarations of the joint-stock banks, and showed that with few exceptions profits were lower than in 1922. Dividends, however, have been maintained at the previous year's rates, and in the case of Williams, Deacon's, an increase from 13½ to 13¾ per cent. has been made in the dividend on the "A" shares. In the table below we compare profits and dividends for the past three years:—

	1921.		1922.		1923.	
	Profits.	Div.	Profits.	Div.	Profits.	Div.
Bank of Liverpool and Martin's.....	548,528	16	504,802	16	486,966	16
Barclays, "A".....	2,201,652	A 10	1,873,731	A 10	1,891,066	A 10
Do "B".....	..	B 14	..	B 14	..	B 14
Lancashire and Yorkshire.....	243,327	20	236,843	20	240,322	20
Midland.....	2,454,083	18	2,253,492	18	2,210,972	18
Westminster.....	2,167,845	12½	1,888,021	12½	1,804,783	12½
Manch. and County.....	260,953	16½	226,108	16½	190,105	16½
Manch. and L'pool.....	539,275	18½	465,245	18½	428,606	18½
Natl. Prov. and Union.....	2,054,636	16	1,854,190	16	1,791,287	16
Williams, Deacon's.....	365,251	12½	337,175	A 13¾	327,247	A 13¾

There is a slight increase in Barclay's net profit, but the other large banks all record a decrease. The decline in profits since 1920 in the case of the "Big Five" has been very severe, for in 1920 Barclay's profits were £2,927,500, Lloyds £3,237,700, Midland £2,831,900, National Provincial £2,762,500, and Westminster £2,915,700. Fortunately for shareholders, this decline in profits has coincided with a period of rising security values, which has obviated the necessity for writing off large amounts of profits to meet investment depreciation. Were it not for this fact, and that by the rise in security values large hidden reserves have been automatically credited, it is doubtful whether it would have been possible to maintain the substantial rates of dividend which shareholders are receiving. Figures of gross profits, with one or two exceptions, are not published, but it is probable that they have also declined. There may have been some reduction in general expenditure, but the total volume of business as revealed by the clearings has contracted, and although the rise in money rates must have helped profits in the second half of the year, so far as short loans, discounts, and Treasury bills are concerned, the rise in Bank rate probably had but little effect upon the income from advances, the interest on which is mostly arranged to fluctuate with Bank rate, but with a minimum of 5 per cent. The amounts required for writing off "bad and doubtful" debts have probably been a little less in 1923, and the list of appropriations to reserve shows a slight diminution, although in some cases considerably larger amounts have been transferred to premises accounts:—

	Profit.	Investment Depreciation.	Reserve	Staff Premises.	Staff Funds.	Carried Forward.
Barclays.....	1,891,066	..	100,000	100,000	..	+ 18,420
Westminster.....	1,804,783	..	100,000	400,000	..	+ 31,835
Midland.....	2,210,972	..	300,000	400,000	..	+ 8,102
National Provincial and Union.....	1,791,287	..	100,000	100,000	100,000	+ 1,780
Bank of Liverpool & Martin's.....	486,966	..	100,000	..	..	+ 11,143
Lancashire and Yorkshire.....	240,322	..	..	30,000	..	+ 5,990
Manch. and County.....	190,105	..	..	10,000	..	+ 2,649
Manch. and L'pool.....	428,606	..	..	..	..	+ 81,006
Williams, Deacon's.....	327,247	..	50,000	30,000	..	- 6,859

Lloyds figures not being yet available, a full comparison of the allocations of the "Big Five" is not yet possible.

In a final table we show prices and yields on the shares of the banks mentioned above:—

	Amount of Share.	Paid Up.	Final Divs. Rate % per Annum.		Whole Year.		Price of Shares.		Present Yield.
			1922.	1923.	1922.	1923.	Jan. 4, 1923.	Jan. 10, 1924.	
Bank of Liverpool and Martin's.....	20	2½	16	16	16	16	6½	7	5 14 3
Barclays, "A".....	4	4	10	10	10	10	7½	7½	5 3 3
Do "B".....	1	1	14	14	14	14	2½	2½	5 2 0
Lancashire and Yorkshire.....	20	10	21	20	20	20	35	36	5 11 9
Midland.....	15	3	18½	18½	18½	18½	98	93	5 12 9
Do.....	12	2½	18	18	18	18	88	84	5 6 0
National Provincial and Union.....	2½	2½	18	18	18	18	94	91	4 17 9
Westminster Bank.....	25	3	16	16	16	16	104½	104½	6 4 0
Do.....	20	5	16	16	16	16	17½	16½	6 2 0
Williams, Deacon's, "A".....	5	1	12½	12½	12½	12½	2½	2½	5 19 6
Do "B".....	1	1	12½	12½	12½	12½	2½	2½	5 5 0

† A special bonus was also paid free of income tax.

Quotations on the whole show very little change from the levels recorded a year ago, so that with dividends in nearly all cases the same, yields are similar to those obtainable when 1923 year began.

The Dunlop Meeting.—The special meeting of the Dunlop Rubber Company, held on Tuesday, at the request of Sir Eric Geddes and four other directors of the company, passed off according to plan, for the large gathering passed without dissent, though with some abstention, a resolution expressing approval of the action taken by the board as a result of the report of the committee of enquiry. This vote condones withholding the report from publication, and approves the policy of the board in issuing writs against a number of present and former directors, in endeavouring to negotiate settlements with some of them, and in carrying on with what is, in fact, a rump of the board. All that Sir Eric Geddes said about the findings of the committee is contained in the following:—

The summarised finding is that out of the loss of £8,320,000 disclosed in the balance-sheet on August 31, 1921, the committee find that £7,769,000 is accounted for as follows:—

	£
Amounts written off trading and other stocks of the home company, to reduce to market prices at August 31, 1921.....	3,569,154
Loss on rubber sold during the year.....	822,914
Provision for losses of foreign and colonial branches and subsidiary companies.....	1,162,462
Provision for losses in manufacturing subsidiary companies.....	1,762,898
Home company's loss on trading for the year to August 31, 1921, after charging depreciation on fixed assets and all outgoings, including directors' fees, but before providing for depreciation of trading and other stocks.....	452,069
Leaving to be accounted for otherwise.....	7,769,497
	550,509

This sum of £550,509 was set out in detail by the committee, and it has been dealt with by them in the greatest detail in their lengthy report. The report, in accordance with the terms of reference appointing the committee, also deals at great length with the remuneration paid to the board, the service agreements with certain directors, and other officials of the company, and also the circumstances in which the issue of 3,000,000 shares, at a premium of 10s per share, was made in 1920, and an account of all payments made by the company on capital account for a number of years past.

In other words, the committee has had to enquire not only into the reason for colossal trading losses, but also into the more serious question of why the company did not receive the full benefit of the amount that the public were willing to pay for its capital issues, what happened to the balance, and who was responsible for the arrangements made. As Sir Eric Geddes justly observes, "The conclusions which the inspectors have come to on these matters raise issues of the gravest character." Some speakers at the meeting deprecated washing dirty linen in public. But a careful reading of the speeches shows that some of the questions at issue are bound to be discussed in court. In any case, the issues are of such public importance and on such a scale that it is imperative that the report shall be made public. We therefore hope that the negotiations for settlement with certain of the directors will not be unduly delayed, for it would be very bad for the company, as well as against the public

interest, that the facts should emerge piecemeal in judicial proceedings. Sir Eric Geddes was able to give some very reassuring figures as to the recovery of business. After describing the "fierce competition from abroad, due to depreciated currencies.....the colossal mass production from America, the disturbed state of Europe.....rising tariffs, and falling prices for the finished product, and a rise in prices of the principal raw materials, he declared with confidence that "the clouds have cleared, and the floods are subsiding.....In 1923 the sales of motor tyres increased 84 per cent. over the preceding year." Without driving down wages, labour cost has been reduced through increased output, the number of persons required to produce a given number of tyres being to-day about 30 per cent. less than a year ago. The improvement has resulted in a profit on the balance-sheet for 18 months ended December 31st of probably one and a-quarter million pounds. Thus the company is on the up-grade. It cannot be good for it to have this cloud hanging over it. The facts are bound to come out, and the sooner it is over the better.

Discount Companies' Profits.—Alexanders Discount Company and the National Discount Company have issued their reports this week, but the Union Discount Company's report is not available as we go to press. For the two former companies the following figures provide a basis for comparison of 1923 with the two previous years :—

	1921.		1922.		1923.	
	Profits.	Div.	Profits.	Div.	Profits.	Div.
Alexanders Discount..	£ 141,015	17	£ 188,202	20	£ 136,208	20
National Discount ..	165,305	16	190,682	..	108,225	..

We have omitted comparative dividend figures for 1922 and 1923 of the National Discount Company, because a rearrangement of capital vitiates the comparison. Their dividend for 1923 on the "A" shares is 10 per cent., and on the "B" shares a dividend and bonus of 23 per cent. is declared. A preliminary statement issued by the Union Discount Company gives the following figures :—After placing £50,000 to reserve fund (against £100,000 a year ago) and £10,000 to provident fund (against £20,000), a dividend is proposed at the rate of 15 per cent. per annum, less tax, for the latter half of 1923 (making 15 per cent. for the year, the same), and a bonus of 5s per share, free of tax (the same). The amount to be carried forward is £190,180 (against £166,499). Like Alexanders, the Union Discount maintains last year's dividends. The National follows its practice of a year ago in making no allocation to reserve, while Alexanders places to reserve fund £30,000, against £80,000 a year ago. Both companies make slight additions to their carry-forward. Below will be found prices, dividends, and yields on the discount companies' shares :—

DISCOUNT COMPANIES.	Amount of Share.	Paid Up.	Final Divs. Rate % per Annum.		Whole Year.		Price of Shares.		Present Yield.
			1922	1923.	1922.	1923.	Jan. 4, 1923.	Jan. 10, 1924.	
Alexanders Discount	10	5	25b	25b	% 20b	% 20b	14	14½	8 8 d
National Discount, "A"	24	24	10	10	(c) 10	10	44	44	6 15 9
Do "B"	7½	24	30	28	(c) 23	23	7½	8	7 4 0
Union Discount	10	5	25b	25b	20b	20b	16½	16½	6 1 3

(b) Includes bonus of 5 per cent., free of income-tax.
(c) Capital reorganised during 1922.

In the cases both of Alexanders and the Union Discount Company, yields are lower than a year ago. An exact comparison is not attempted in the case of the National Discount Company's shares, for the reason explained above.

The Non-Ferrous Metal Group.—Interesting developments have been taking place this week in the non-ferrous metal group. The copper market has been flat, with values below the worst seen in 1913. The U.K. stocks, at 31,030 tons, compare with 27,268 tons in January, 1923, and in the States there is an unsold surplus of 125,000 to 140,000 tons to be reckoned with. There is a fair domestic demand in America, but export buying lacks vitality. German users are unable to secure all

they want, and seeing that in the five years from January 1, 1919, to December 31, 1923, that country took close on 300,000 tons of American copper, or fully 20 per cent. of the total exports, the absence of this important buyer is making itself felt. On the other side, a lot of price-cutting has been witnessed, and here some forward selling of standard has adversely affected the market, cash falling to £60 10s and three months to £61, with electrolytic £66 15s. Tin, on the other hand, has been very strong. The apparent increase in the visible supply has been without influence, and under good buying forward tin on Thursday was driven up to £247 5s, which is the highest paid on the London market since 1920. The Eastern markets were very strong, with business up to £249, and Straits for January shipment sold through London at £248 c.i.f., New York. The total exports from the Federated Malay States last year amounted to 37,643 tons, against 35,228 tons in 1922. The total supplies for all 1923 were 101,000 tons and deliveries 104,750 tons. Allowing for the surplus still unsold of the Eastern pooled stocks, the world's visible supply brought into 1924 amounted to 40,000 tons, representing a decrease of no less than 11,500 tons on the year. Compared with the final rates of 1923, this commodity has put on a further increase of over £10 per ton, and the outlook is regarded as very favourable. There was a moderate set-back from the best late in the week, but the undertone of the market remains firm, and with moderate Straits shipments foreshadowed over the next month or two, the position is more likely to strengthen further than the reverse. American buyers show marked interest in this commodity, and London prices are well below Eastern parity. Lead, after moving upwards, was inclined to fluctuate owing to the slow demand from consumers, but there is no fear of any serious break in current rates. The imports for last month at about 22,000 tons, making 210,000 for all 1923, were on the full side, but while the outlook in Mexico is so obscure the market is bound to remain very sensitive. Both America and Europe are interested in obtaining lead from Mexican sources, and stocks here at 1,183 tons are very light. Spelter this week has displayed notable strength and activity, with nearby positions well over £34 again. Recent arrivals have been well absorbed by consumers, and while the American exchange is so uncertain the matter of acquiring fresh supplies of zinc from American sources will be difficult. Stocks here are small, not being much over 1,000 tons, and galvanisers will soon be in the market again. There has been some heavy buying seen here this week, and the undertone of the market ruled firm, although there was some fluctuation in the late trade.

Crosse and Blackwell.—At least it will be admitted that the directors of Crosse and Blackwell, Limited, have acted impartially in publishing *in toto* the report of Sir James Stevenson and Mr Goff. This report is a lengthy document, in which one of the most impressive statements is that manufacturing in Branstion to-day "is costing the company 4 per cent. in its turnover more than it would cost to manufacture the Crosse and Blackwell products in London." The directors of the company, commenting upon the report, observe that, "in view of the altered circumstances of trade since 1920, to which full reference is made in that report, the directors, whilst not admitting in their entirety some of the criticisms contained therein, do not dissent from the conclusions arrived at as to—(a) closing the Branstion factory; (b) centralisation of executive management at Soho square; (c) closer amalgamation of manufacture. They regret that the move to Branstion—a step taken at the time after due consideration—has proved unsuccessful. The board are satisfied that the recommendations embody the soundest policy for the company in the face of present trade conditions, and will lead to the quickest recovery. They have accordingly authorised immediate action on the lines recommended. The directors wish to take their shareholders fully into their confidence, and therefore enclose Sir James Stevenson's and Mr Goff's report exactly as submitted to them." The directors, in intimating that a scheme for capital reconstruction will be put forward to shareholders "in the spring or early summer of the year," state that "members of the present board will facilitate any change in the

directorship which may be considered desirable." It will be interesting to watch what sacrifice preference shareholders will be asked to make in the reconstruction scheme.

John Bright and Brothers' Debentures.—Not long ago we remarked at length upon the interlocking company finance revealed in the accounts of Workman, Clark and Co., and the Northumberland Shipbuilding Company. The trustees for the debenture-holders of Workman, Clark and Co. in this matter, it may be recalled, were the British Canadian and General Investment Company, Limited. Another case of interlocking company finance is now brought to public notice, and again the British Canadian and General Investment Company are concerned as trustees. It was only last May that £1,000,000 6 per cent. first mortgage debenture stock in John Bright and Brothers was offered at 98½. The quotation for this stock is now 80½. As an additional attraction, the loan was guaranteed by Crosse and Winkworth Consolidated Mills, Limited. The position of John Bright and Brothers when these debentures were issued was stated to be that after deducting creditors the surplus of liquid assets was £696,947. In a circular now issued the surplus of liquid assets is stated to be £496,609. We are intrigued, however, by the statement that immediately after the debenture issue "the sum of £1,140,972 12s 1d was advanced to Crosse and Winkworth Consolidated Mills, Limited, in connection with the acquisition by that company of the shares in John Bright and Brothers, Limited." This loan has recently been "secured by £200,000 second debentures (part of an issue of £600,000), and £940,000 third debentures (the whole issue) in Crosse and Winkworth Consolidated Mills, Limited." It is perhaps fair to add that the British Canadian and General Investment Company, as trustee, state that "It is, perhaps, hardly necessary to say that we should not have approved of these transactions had we been consulted before they had taken place, and we think that they should never have been entered into. We have taken the opinion of Mr A. C. Clauson, K.C., the best counsel we could obtain upon them, and are advised that we as trustees have no legal ground for taking any action in regard to them." These inter-company financial operations are not to our liking, and we would suggest that though legally there may be no remedy at present some amendment of the law is needed. Incidentally recent events would show that the whole duties of trustees for debenture-holders need to be brought under review. At present there is amongst most people only a vague idea as to the duties of a trustee in such cases. It is obvious that the time has come when these duties should be better outlined by statute.

Mexico Mines.—The current price of this company's shares, writes our mining correspondent, represents a valuation of a round £1,000,000 for the capital, which has for some time past been principally held in France. During the past financial year the shareholders have benefited both from the discovery of exceptionally high-grade ore and from the desirability of turning it into cash with the utmost promptitude. Mainly as a result of these circumstances the profit totalled £304,000, or about two and a-half times the 1922 amount. The dividends, although increased from 7s 6d to 21s 6d per share, absorbed no more than £225,750, thus leaving a substantial sum to be added to the carry forward. Construction work upon the timber property having been completed, the occasion has been taken to write off all expenditure to date, thus placing this important asset on the same plane as the mine plant and buildings. Although a record tonnage was milled, the ore reserves, at 292,700 tons, score an increase of 20,000 tons upon the estimate of 12 months previously, the values being approximately maintained. From the particulars given by the manager, it appears that the indications at several points are of an encouraging nature. On the basis of the dividends of the past five years, the yield on the shares is apparently about 13 per cent.

Failures in 1923.—According to Mr Richard E. Seyd, the number of failures among firms in the United Kingdom during 1923 was the largest for the last 13 years, though in the absence of figures showing the amounts involved it is impossible to say whether the actual losses were greater or less than those of, say, 1922. The following table gives particulars for a number of years :—

	Wholesale Trades.	Professional.	Retail.	Total.
1908.....	925 ..	633 ..	8,004 ..	9,562
1910.....	647 ..	686 ..	7,118 ..	8,451
1913.....	649 ..	668 ..	5,440 ..	6,757
1918.....	64 ..	196 ..	701 ..	988
1919.....	130 ..	268 ..	608 ..	1,006
1920.....	310 ..	356 ..	1,598 ..	2,264
1921.....	1,028 ..	549 ..	3,971 ..	5,548
1922.....	1,246 ..	717 ..	5,627 ..	7,590
1923.....	1,224 ..	739 ..	6,278 ..	8,241

War-time prosperity and rising prices are reflected in the exceedingly small number of failures in 1918, while the cumulative difficulties brought about by the "slump" are responsible for the upward leap made by the figures in 1921, and for their subsequent steady increase. Of the 1923 total, more than three-fourths is composed of failures among retail firms—probably the very small fry—and while wholesale failures were roughly at twice the pre-war level, there is nevertheless a small amount of improvement as compared with 1922. Failures were heaviest in the opening months of the year, with a decided falling-off in the spring and summer, a rapid rise in the early autumn, and a further, though less marked, decline at the end of the year. In the wholesale trades the mortality of 1923 was less than that of 1922 in the London, Lancashire, Yorkshire, and North-Eastern areas, and greater in Birmingham and the Midlands, Scotland, and Ireland. The largest number of failures among wholesale firms occurred in the woollen, silk, &c., trades, where 256 were recorded, next in the list being "merchants," 155, and engineers and metal merchants, 150. Among cotton-spinners and manufacturers, only 14 casualties were recorded. All these figures, however, leave out of account liquidations of limited companies, which during 1922 and 1923 reached the following totals :—

	Voluntarily.	On Account of Liabilities.	Total.
1922	1,361	1,375	2,736
1923	1,270	1,515	2,785

Among the compulsory liquidations in the wholesale trades, the engineering and hardware industries contributed no fewer than 239 out of a total of 858, woollens and silks 91, "merchants" 63, cotton-spinners and manufacturers 44, and warehousemen 42. The increasing number of concerns which adopt the limited company form of organisation in preference to that of the private firm makes comparison with previous years more and more difficult. This applies with especial force to the wholesale trades.

Russian Agriculture.—Our Moscow correspondent writes :—"The total area in the Union ploughed and sown during the autumn of 1923 is estimated on December 31st by the Central Statistical Department (M. Popoff) as follows :—

(In Thousands of Dessiatines.)

Region.	Autumn Sown Area in 1922.	Autumn Sown Area in 1923.	Percentage of 1922.
RSFSR in Europe	16,191·4	16,945·9	104·7
RSFSR in Asia	786·7	Figures not available, but estimated at 5,938·0	100·0
Ukraine Republic.....	6,309·0		94·1
Total for Union, estimated at	23,287·1	23,870·6	101·6

In the "consuming" areas of the RSFSR sowing conditions, as a result of a cold and rainy summer, were unfavourable; in the northern governments the area sown shows a reduction of 11 per cent. over the previous year. In the "producing" areas an increase of 8 per cent. is shown for the Volga-Kama, Oural, and Middle Volga

regions. The lower Volga sowing area shows no increase. In the Ukraine, on October 1st, the conditions were most unfavourable to autumn sowing, owing to excessive dryness, but thanks to the rains that fell during October, the situation improved, and the data available at the beginning of December point to a decrease in the sowing area over the previous year of 6 per cent.

A Suggested Rand Fusion.—Latest mail advices from Johannesburg embody the suggestion that the Knight's Witwatersrand and the Witwatersrand Deep properties, which adjoin, should be amalgamated, following the precedent recently set by the Consolidated Langlaagte and the Langlaagte Estate companies. A little inquiry leads to the conclusion that the project is, at any rate, worthy of serious consideration. The position of the mines in relation to each other is such that they could be operated much more advantageously as one than separately. Especially does this apply to the first-named undertaking, whose life is now becoming short. Moreover, substantial economies would result in connection with stocks of stores and administration expenses.

Transvaal Gold Output in 1923.—Figures of gold output in the Transvaal for the complete year 1923 are now available. In considering the year's marked improvement it must be remembered that the 1922 output was seriously affected by the big strike of miners on the Rand. The output is creeping up to the figures for previous years, but it has a long way to go before it reaches the 1917 level. The following table shows the output for every month since 1917:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January...	782,634	714,182	676,059	670,503	651,593	658,137	764,469
February...	781,321	659,759	636,728	625,330	588,137	539,728	704,970
March...	787,094	656,881	712,379	707,036	671,123	681,382	761,586
April...	742,778	717,000	694,944	686,979	681,382	511,338	743,651
May...	779,385	741,317	724,995	699,041	687,776	628,786	786,564
June...	758,724	727,696	702,379	715,957	678,490	675,697	755,309
July...	757,839	736,199	725,497	736,099	689,555	730,635	754,306
August...	756,658	740,210	706,669	702,063	711,526	752,490	769,371
September...	738,131	708,306	698,558	682,173	691,026	747,089	739,504
October...	751,290	679,764	725,722	662,472	707,825	778,159	793,842
November...	724,839	658,701	677,970	633,737	704,236	764,476	780,639
December...	722,419	641,245	650,191	639,215	681,947	790,712	776,849
Total (12 months)	9,082,212	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	7,798,959

The December output figures at 778,849 ounces of fine gold compare with 780,639 ounces produced in November. In December, 1922, the output was 790,712 ounces. The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1922.	June, 1923.	July, 1923.	Aug., 1923.	Sept., 1923.	Oct., 1923.	Nov., 1923.	Dec., 1923.
Gold mines...	176,834	170,865	166,443	167,800	174,405	177,047	177,674	177,772
Coal mines...	11,001	15,598	16,020	16,186	16,285	16,216	16,946	15,142
Diamond...	1,253	3,063	2,893	3,107	3,134	2,911	2,997	3,239
	189,088	189,526	185,356	186,863	193,765	196,174	196,617	197,160

Within recent months the number of natives employed has shown an increase. There is only a slight advance on the year in the number employed at the gold and diamond mines, but the number at the coal mines shows a notable improvement as compared with this time last year.

THE Board of Trade give notice that the Administrator of Bulgarian Property, Cornwall House, Stamford street, London, S.E. 1, has prescribed February 29, 1924, as the final date for lodging with him proofs of debts by British nationals against Bulgarian nationals, and other claims by British nationals against the Bulgarian Government, the payment of which is charged under Orders in Council upon Bulgarian property, rights and interests within British territories.

Oversea Correspondence.

UNITED STATES.—THE PAST BUSINESS YEAR—PROSPECTS FOR 1924—WAGES—COST OF LIVING.
(FROM OUR CORRESPONDENT.)

NEW YORK, December 28.

ALTHOUGH the past business year was full of irregularities and confusing crosscurrents, prosperity was widely, though not uniformly, diffused, and many classes of wage-earners, probably a vast majority, received higher pay, lived better, and apparently saved more than ever before in the history of the United States. Briefly outlined, the first four or five months witnessed unprecedented industrial expansion. Then came a period of diminishing activity, of waning optimism and gloomy forecasts. But the autumn brought measurable improvement in various directions. Both wholesale and retail trade showed successive increases over the preceding year; the industrial pace steadily quickened, and the year ended with record holiday trade in all sections. Manufacturers, generally, found operations difficult throughout the year. Uncertainty as to the future course of prices, notably of raw materials, together with rising costs of production and marketing, caused serious concern to producers, manufacturers, merchants, and consumers. Such high costs and uncertainties tended to keep down business volume and to check industrial activity. Production and buying, especially in the last half of the year, were confined to immediate or nearby needs, merchandise went quickly into consumption, and there was no heavy accumulation of stocks, generally speaking—all of which brought about exceptionally sound conditions. The year was featured by full employment, with an acute labour shortage in the later months, and with the exception of wheat and cotton growers in some sections, the purchasing power of the public materially increased. Railroads handled a record volume of freight traffic, and enjoyed unprecedented operating revenues. Their operating expense ratios showed some reduction, compared with the previous year, but net profits were less than in years when gross earnings were not so large. Building activities surpassed all records, while in the automobile industry new high levels of production and purchases were established. Despite the tremendous increase in expenditures for automobiles during 1923, deposits in savings banks, both in number and amount, reached a record aggregate.

Export trade slightly exceeded that of 1922; imports for a number of months were larger than exports, but diminished with the slackening of trade during the summer. Money markets ruled comparatively easy throughout the year; the banks transacted a record volume of business with little, if any, evidence of strain.

In recent months sentiment has been more cheerful than it was in the early summer, or even in the autumn, and conservatively optimistic views are expressed in most quarters regarding prospects for the coming year in trade and industry. "There is no disposition, however," as *Bradstreet's* remarks in its forecast for 1924, "to ignore the fact that prices, and, therefore, all costs, including those of labour, are high, and history may be cited to show that high costs have tended to decline as the distance from the war, which swelled those costs, increases. Hence the disposition will be apparently to go forward cautiously, and to keep near the shore as regards buying for the future. In this direction undoubtedly safety lies." On the other hand, the same authority points out, "prospects seem to favour a continuance of the big construction programmes, especially in building and railroad betterment, for which 1923 was notable. Sight must not be lost of the fact that high labour prices have brought in their train big expenditures, which in themselves have constituted a powerful support for general trade and industry." As to the approaching Presidential election, the observation is made that "research does not altogether confirm the popular idea that a Presidential election of and by itself necessarily constitutes a danger to business. There have been some Presidential elections when business was very good, and others when it certainly

was poor. Examination of business history rather reveals other causes as mainly operative in both the good and bad years. Caution and conservatism may be esteemed desirable, but it may be observed that they have both been in evidence for many months past, and no doubt will be found governing most operations in the year to come." "At the present writing," adds *Bradstreet's*, "there does not seem to be much disposition to expect any great change in the fairly even tenor of business as a whole, which throughout the past year ranged from fair to good."

The National Industrial Conference Board finds that between January and October of last year average hourly earnings increased from 50.1 cents to 56 cents, a gain of 11.8 per cent., while average weekly earnings made a gain of 8.2 per cent., from \$25.08 to \$27.14. During the year unemployment increased as high as 4.1 per cent. above the figures for January, but by October the January level was again reached. An increase of 3.8 per cent. in the cost of living during the first ten months of the year, when weighted with the statistical increase in weekly earnings of 8.2 per cent., brought about an actual increase of 3.9 per cent., and 8.5 per cent. in real hourly earnings. Thus the wage-earner, it is contended, was considerably better off at the close of 1923 than he was at the beginning of the year. The sharp increase in weekly earnings advanced "real" weekly earnings to a point 32 per cent. above July, 1914, as compared with 30 per cent. in September. The Board's survey shows that in November, 1923, the cost of living (based on prices of those goods and services which enter into the consumption of families of small and moderate means) averaged 4.4 per cent. higher than it was a year ago, and stood 65.3 per cent. above the July, 1914, level, but 19.2 per cent. below the peak of high prices reached in July, 1920. The November level was the highest reached by the cost of living since May, 1921.

FRANCE.—THE ELECTIONS—THE FALL IN THE FRANCO—THE MATCH MONOPOLY.

(FROM OUR CORRESPONDENT.)

PARIS, January 9.

FOLLOWING the senatorial elections on Sunday and the re-assembly of Parliament on Tuesday, political life has been resumed, and all parties are now eagerly anticipating—as in Great Britain, and largely as the outcome of the situation there—what is expected to be one of the most important Parliamentary sessions this country has known. France, like Great Britain and Germany, has once more come to the parting of the ways, and the whole European situation is once more in the melting pot. The outstanding factors are the reparations problem, the inter-allied debts problem, the Russian problem, the question of the attitude which the new British Cabinet—whether it be Labour, Liberal, or Coalition—will assume towards France and Germany, the possibilities of a "coal and iron" rapprochement between this country and Germany, what influence the interplay of all these will have on the obscure future financial situation of France. The United States factor, although the newspapers from time to time still devote a good deal of space to it, has sunk very much into the background so far as this country is concerned, but it will have to be reckoned with when the inter-allied debt question is directly dealt with. Another factor that has also become much less important is the result of the pending French General Elections, as to which most people here seem to have become more settled in their opinions since the results of last Sunday's senatorial contests became known. If these results afford any reliable data as to what will happen next May, there will be no appreciable change in the complexion of the French Chamber, and the Bloc National may look forward to a new lease of power. At the same time, it cannot be overlooked that, for the first time in history, there are now two Marxian Socialist members of the French Upper House (although it must be borne in mind that, unlike their British comrades, French Socialists are much more inclined to fulfil their mandates by barking than by biting). The only fly in the ointment from the point of view of the supporters of M. Poincaré is that the senatorial

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

electors, whose votes resulted in a verdict of "no change" at last Sunday's contests, were fixed four years ago, and that they voted practically as they would have done then. It is possible that the great mass of the electors who will vote next May under the system of universal suffrage may express a different view.

The renewed attack on the franc, as it is termed here, which fell from 82.53½ to the pound on December 15th to the new low record of 88.32½ on January 5th, has created something like consternation in official quarters here, although it must be confessed the financial and banking world regards the incident with much more equanimity. At the same time, a substantial proportion of the general public have obviously been seized with something approaching panic, and much of the fall has undoubtedly been due not so much to speculation pure and simple, as to the haste with which French holders of francs have rushed to transform their currency into dollars and sterling. The "raid" on the franc, if raid there was (as the Finance Minister insists was the case), was undoubtedly favoured by the circumstance that French commitments abroad, which had to be met by the end of the year, were on this occasion exceptionally large, as was bound to be the case in view of the large increase in imports. The payments that had to be made at the end of the year by the Treasury were also larger than at the end of previous years, while it was notorious that the national coffers were for the time being dangerously depleted. The fact that the last weekly statement of the Bank of France revealed a sudden increase in the note issue of nearly a milliard and a quarter undoubtedly also made a bad impression abroad, although, to be quite frank, it ought not to have done so, seeing that a phenomenon of this kind is by no means abnormal at this period of the year, and that the extra notes will almost certainly, as in past years, be re-absorbed in the near future.

The net result of all this culminated on Saturday with the opening of a somewhat noisy investigation by M. de Lasteyrie into the causes of this fresh fall in the franc.

Judging by his public declarations, the Finance Minister appears to be convinced that the recent "raid" was deliberately organised for political purposes at a gathering of German bankers and financiers from the occupied territory, who met at Frankfurt on November 6th and arranged to throw enormous quantities of francs on the market for the purpose of influencing French policy in regard to Germany. As the outcome of consultations with M. Robineau, Governor of the Bank of France, and other responsible financial authorities, M. de Lasteyrie yesterday, with the approval of the Cabinet, took steps for stricter control over exchange transactions and over telephonic facilities with foreign markets, for drastic revision of the methods by which the official exchange rates of the day are fixed, for the purging of the market of "undesirable" foreign speculators, &c. The agent in Paris of a Dutch bank was arrested on Monday night and expelled the country for making alarmist statements, and other "suspects" are under close surveillance pending investigation. Expert opinion, however, while approving the Minister's well-meant intentions, incline to the view that M. de Lasteyrie's offensive against speculators is rather of the kind of what Sir John Bradbury would describe as "pills for earthquakes" than of serious promise. Professional authorities urge that there are only three effective means for combating speculation in exchange. One would be to raise the discount rate; the second to vote forthwith sufficient new taxation to meet the country's necessities (on the ground that the longer this is postponed the heavier the burden will be felt); thirdly, the organisation of a vast central institution, commercially organised on practical lines, where all genuine exchange transactions, and only non-speculative ones, should be dealt with. At present, in spite of the law that requires every transaction in exchange to be placed on record in registers constantly open to inspection by the authorities, it is probable that these registers show less than one-half of the dealings that actually take place.

A curious sequel to the Finance Minister's campaign is that it has indirectly caused him to announce that he proposes to bring in a Bill during the coming session for the suppression of the State monopoly in matches. The French match monopoly has for many years furnished a striking example of the failure of Etatism in industrial undertakings. The national consumption of matches amounts to 48,000 millions per annum. The five great State match factories, however, are so inadequately fitted with modern plant that, in spite of the constant demand and the certainty of profit, they are unable to furnish more than three-quarters of the output required, even with the help of private industry. Twenty-five per cent. of the matches consumed in France have always to be imported from abroad. The State factories are able to carry out the work of "tipping" the remaining 36 milliards of matches with sulphur and phosphorus, but are impotent as regards the production of the wooden stems, only one-third of the quantity mentioned being produced in the public establishments. The remainder are furnished, as to 50 per cent. by French private industry and as to the balance by purchases from abroad. One reason for this curious state of affairs is that, whereas the French private factories which supply the State are fitted with modern machines, each of which necessitates the employment of a single worker, the plant in the national workshops consists of antiquated models, each of which absorbs the labour of seven individuals. It is understood that the pending Bill will propose the handing over of the monopoly (including the existing factories and plant) to private industry on a concession basis.

The reduction (by Ministerial decree, promulgated last Sunday) of the import duties on foreign wheat and flour, from 14f to 7f per quintal, is generally approved as an urgently necessary measure in view of the fact that, owing to the unreasonably high price of native product, the only alternative would be a further increase in the price of bread. French flour has lately been quoted at 100f per quintal, whereas a few months ago 80 to 85f was admitted to be a remunerative price. The general opinion on the step taken is fairly expressed by the *Temps*, which remarks that the only matter of regret is that the rate of import duty on wheat was not reduced sooner.

GERMANY.—FINANCES—CURRENCY—REICHSBANK—INDUSTRY—PRICES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, January 8.

THE much-debated Third Taxation Decree, dealing primarily with the taxation of rents and the regulation of mortgages, has still not appeared even as a project. The Government seems to have modified its original plan, which was rapidly to raise gold gross rents to pre-war level, and to take in form of a tax the 50 per cent. or so of this gross rent which formerly went as interest on mortgages, at the same time forbidding the restoration of the mortgages to even the smallest fraction of their old gold value. This has not only created a storm among tenants and among mortgagees, but has also raised again the old question of the tax-sovereignty of the Republic over the States, which question the late Herr Erzberger tried to settle by concentrating direct taxes in the Republic's lands, and compensating the States with doles thereout. The States (sometimes also the municipalities), claiming that the allocations from the funds of the Reich are hopelessly insufficient, have of late increasingly violated the State Taxation Law (*Landessteuergesetz*) of 1919, which regulated the question, by imposing local taxes of a kind supposed to be a monopoly of the Republic. Bavaria, in connection with a demand which it made last week for revision of the Weimar Constitution on decentralisation lines, has demanded the renewal of "the distinction between Federal and State taxes, and the restoration of the State financial administrations in the domains of direct and indirect taxation and of customs." In particular, Bavaria is interested in the beer tax. The Federal Government has tendencies of its own in some of these directions; the Finance Minister, for instance, thinks that "the sense of responsibility of the States might be strengthened if they again managed their own revenues."

Negotiations for a compromise are going on with the States. Bavaria is strongly against the plan to expropriate mortgages by declaring them to be definitively mere paper-mark debts. In November the Supreme Court declared in principle that gold mortgages could not be repaid in paper marks. The Federal Government's plan was to cross this decision by a new definite law forbidding recognition of mortgages. Against this project there is a very strong feeling; it is true, reason the objectors, that all public debtors were allowed to repudiate by automatic depreciation, but it is a different thing when the Government steps in to compel private debtors to repudiate their liabilities after the courts have declared that they cannot lawfully repudiate them. The objection is all the stronger, because the Government's aim is to confiscate the repudiated interest for itself. Although vast numbers of mortgages have been paid off there are, particularly in the country between small creditors and small debtors, a great many still in existence, the mortgagees holding on in hopes of getting something, although the sum total of all mortgages in the Republic is to-day not worth one gold pfennig. The controversy will probably end in a compromise. One of several official plans is to allow restoration, up to 10 per cent., of the gold value of mortgages which are in the original hands. The enormous tax yield hoped for from taking half the nation's gross rents and at the same time taking a levy from the disencumbered bond debtors is not likely to be fully realised.

The State finances continue to improve. Against 14,390,000 billion marks in the decade December 1st-10th, and 41,048,000 billions in December 11th-20th, the late decade reported, December 21st-31st, shows 87,544,000 billions. This is a real improvement, because the paper mark did not sink in value in December; in fact, in home buying power and in value to the administration it rose considerably, and this is shown in a drop of expenditure in the three decades from 179,898,900 billions to 165,656,000 billions and 153,732,000 billions. The necessary subsidy out of Rentenmark credits for covering of deficits fell from 147,076,000 billions in the first decade to 64,930,900 billions in the third. Between

November 15th (date of currency reform) and the end of the year the deficits totalled 627 trillion paper marks, and the amount borrowed from the Rentenbank 835 million Rentenmarks.

The financial improvement is partly due to new taxes, but mainly due to the currency stabilisation. About the latter there has been some unfavourable comment in the last week. The Government by its explanations shows a certain nervousness, and the military, who exercise Press censorship, went so far as to threaten the authoritative Socialist statistician Richard Calwer for accusing the Government of continuing the inflation. A favourable sign is that prices of some important commodities have dropped; the Federal Potash Council has decided to revert to pre-war gold prices; and pig-iron, which reached a maximum of 116 gold marks per metric ton, has been cut to (for hematite) 105 gold marks. The Saxon Government by issuing Rentenmark Treasury bills in small denominations (that is practically as new emergency notes) has added to the risk of inflation. Newspapers report a plan for a law restoring some of the Government's power over the Reichsbank, abandoned under the law of May 26, 1922; the proposed law also deprives the Bank president and the directors of their life-long appointment right, and increases the president's authority as against the directors. The Reichsbank's weekly statement for December 7th came out in a new form, giving separately among assets the bank's holding of Rentenmark bills and of Rentenmark advances (Lombarden), and, among liabilities, of the Rentenmark deposits of the State and of private individuals. All these Rentenmark items are booked in paper marks at the fixed exchange of one to one billion. The paper mark note circulation fell during the week by 10½ trillions to 390 trillions, or by about 2½ per cent. This is the first circulation decline since April 23, 1922. The statement shows large increases in holdings of bills and cheques and in advances. The former item rose by 47 trillions to 394 trillions, the latter by 16 to 23 trillions. These increases are very large—they must not be confused with the fictitious but nominally much greater weekly increases of former periods, which were mere expressions of the paper mark's declining value; in the week now in question the mark was stable, and the Bank has, therefore, granted increased real credit. Here, again, is the spectre of private inflation, not yet visible in circulation owing to the fact that the holding of discounted Treasury bills again fell off heavily by 37 trillions to 59 trillions. The last figure is now below a third of the 189 trillions held on November 15th when the reform began. The Reichsbank's Rentenmark business is rapidly growing. The first Rentenbank statement has not yet appeared.*

Business conditions have slightly improved. Apart from the improvement due to slow resumption of work on the Ruhr, there has been a general tendency towards better employment, which is recorded in the Prussian Trade Ministry's monthly report, but is not yet shown in labour statistics. The report states that better working in all domains is one cause of the price-fall. The reports sent in by individual industries are, however, still mostly unfavourable. Money, probably in connection with the heavy tax payments of the first ten days of this month, is scarce, and high rates prevail. A further price-fall is expected. The *Frankfurter Zeitung's* wholesale index for January 3rd shows (basis one in 1914) 1,471,700 millions, against 1,565,200 millions on December 13th, and 1,649,600 millions (highest point reached) on November 29th. As the mark is depreciated to one-billionth, the price-level gold is about 47 per cent. up. The food group shows 1,553,900 millions, textiles and leather 1,868,500 millions, minerals 1,375,600 millions, miscellaneous commodities 1,245,400 millions, manufactured goods 1,406,800 millions. Sold retail, clothing, boots, and finished goods generally have dropped very considerably, and there is something like the old pre-war sharp competition between sellers.

The Bourse was to-day weakish, loans being irregular. The weakness was probably due to dear money. War Loan quoted 109,500,000,000, Fours 575,000,000,000, 3½ per Cents. 525,000,000,000, Threes 1,500,000,000,000, Savings and Premium 290,000,000,000, Prussian Consol. Threes 790,000,000,000.

*Under date January 9th Reuter gives the first Renten-

bank return for the period from November 30th to December 1st, as follows:—

POSITION ON NOVEMBER 30TH. (000's omitted.)	
ASSETS.	Rentenmarks.
Mortgages on agriculture, &c.	3,200,000
Loans to Reich not bearing interest	200,000
Do bearing interest	565,000
Credits at other banks	2,103
LIABILITIES.	
Original stock	2,400,000
Original reserve	800,000
Rentenmark notes in circulation	767,905
POSITION ON DECEMBER 31ST.	
ASSETS.	
Mortgages, &c.	3,200,000
Loans to Reich not bearing interest	200,000
Do bearing interest	1,000,000
Loans to other banknote banks	33,995
Temporarily transferred to Reichsbank and Post Office	220,000
Credits at other banks	11,269
LIABILITIES.	
Stock	2,400,000
Reserve	800,000
Rentenmark notes in circulation	1,242,000
The above figures include credit to Reich 1,200,000,000; to banknote banks, 33,995,000; and clearing banks, 8,004,853: Renten, deeds in circulation, 16,000.]	

AUSTRALIA.—BANK FIGURES—MONEY AND TRADE—WHEAT PROSPECTS—PROTECTIONISTS DISTURBED.

(FROM OUR CORRESPONDENT.)

MELBOURNE, November 27.

THE quarterly average returns to September 30th of bank liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show, as compared with the previous quarter, a decrease of £10,164,312 in deposits and an increase of £9,730,375 in advances. The movements are largely characteristic of the winter months, when rural producing interests require accommodation in the absence of fresh cash receipts. As compared with a year previously, the increase in deposits is £14,631,007, and the increase in advances £25,047,987. Separating the Australian and New Zealand figures, Australia shows an increase of £12,604,912 in deposits and an increase of £25,094,577 in advances, but New Zealand, with an increase of £2,026,095 in deposits, shows a small reduction in advances on the year. The heavy increase in Australian advances is partly the result of unfavourable weather during last summer and part of the autumn, in consequence of which the country districts, especially in New South Wales and Queensland, have had to seek accommodation somewhat freely. Building activity in the towns and expansion of trading as reflected by the increase in Australian imports have also meant a considerable demand for advances. The following is a comparison of the principal totals with those for the previous quarter and the corresponding period last year:—

	September Quarter, 1922.	June Quarter, 1923.	September Quarter, 1923.
Deposits—			
Australia	218,166,098	237,827,126	230,771,010
New Zealand	46,957,703	52,091,994	48,983,798
Total deposits ..	265,123,801	289,919,120	279,754,808
Advances (inc. Govern- ment securities)—			
Australia	185,941,838	202,514,707	211,036,415
New Zealand	48,779,065	47,523,808	48,732,475
Total advances ..	234,720,903	250,038,515	259,768,890
Cash items—			
Coin and bullion (Aust. and N.Z.) ..	27,565,466	27,167,147	27,213,001
Australian notes ..	22,856,735	25,026,558	23,175,604
Legal tender notes of other banks (N.Z. only)	541,806	418,791	249,059
Total cash	50,964,007	52,612,496	50,637,664

While deposits in Australia are expanding, the note issue remains at a fixed level, and as fresh gold is not obtainable for banking purposes, being exportable at a premium, the total cash holdings of the banks in Australia now show a smaller ratio to Australian liabilities than usual.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	September Quarter, 1922. £	June Quarter, 1923. £	September Quarter, 1923. £
Deposits	28,854,556	32,377,574	34,485,267
Savings Bank deposits ..	37,523,001	38,068,002	39,089,440
Discounts, loans, &c.	13,043,516	14,035,678	13,588,845
Government and municipal securities	35,233,595	37,479,846	39,103,392
Coin and bullion	2,330,619	2,646,847	2,698,534
Australian notes	7,344,568	3,750,438	6,105,666

Competition for money continues active on the part of the various State Governments, which are offering $5\frac{1}{2}$ per cent., free of Federal and State income-taxes, for fresh securities for sale over the Treasury counters, and are thus endeavouring to secure as much money as possible before the end of the year, when the issue of tax-free securities is to cease. Between this and the financing of the wool export season, which is running into rather large figures at the present price of wool, there is some degree of stringency in the money market for the moment, and the Stock Exchange is showing weakness, with a decline in Commonwealth Government bonds.

Wheat crop prospects continue favourable, and the outlook is for an exportable surplus of about 7,000,000 quarters for the new year. The market has been influenced by a demand for shipment to Japan, which has purchased about 150,000 tons for early shipment, and this has lately kept Australian prices somewhat firm as regards business for Europe.

Australian Protectionist interests are disturbed at the offer of the British Government to lend money at a reduced rate of interest to Australia subject to the money being expended in Great Britain. Protests have been raised in various States. The Australian Industries Protection League has raised objection on the ground that "to have the moneys expended in such a way as to assist her manufacturers and workpeople is an extremely good piece of business—for Britain," but that "for every pound's worth of material or machinery purchased abroad there will be a pound's worth less bought in Australia." In response to these and other similar complaints, Dr Earle Page, one of the joint leaders of the Bruce-Page Government, has made a statement that in all cases the usual tariff will apply, so that Australian industry will be protected, and the interest concession therefore will apply only to goods that cannot be manufactured in Australia at competitive rates.

SWITZERLAND.—SOME FEATURES OF 1923.

(FROM OUR CORRESPONDENT.)

GENEVA, January 7.

BUSINESS has been very dull in Switzerland last year, and there are no symptoms of improvement ahead; trade and industry did their best in order to recover from the economical crisis, which is particularly acute in Switzerland, and shows no sign of real amelioration. The high value of the Swiss franc prevents foreign customers from purchasing Swiss goods, while countries whose currency is very low on the Swiss market are sending in their products, which, despite heavy Customs taxes, are being sold at a lower price than Swiss goods; moreover, workers' salaries are still high in comparison with other European countries, so that the production cost of Swiss goods is generally higher than that of foreign products; the increase of Customs taxes and import restrictions, which were intended to protect Swiss trade and industry against foreign competition, did not prevent them from being hardly hit, as, in return, several countries—France, Spain, &c.—increased their Customs duties and nearly stopped Swiss exports; this over-protective policy has, in fact, resulted in the closing of some important markets to Swiss exporters, so that it became necessary to grant Government subsidies to certain industries—the watchmaking and embroidery industries, for example—in order to enable them to carry on and to export to countries with a low currency. Swiss industry cannot live without exporting, the Swiss market being far too small to absorb its production.

The trade returns for the first three quarters of 1923 show a gross total of 62 million pounds for imports—an increase of 7.8 million pounds on 1922—and of 49.3 million pounds for exports—a drop of 0.6 million pounds on the corresponding period of 1922. Imports of cereals, seeds, wood, cotton, wool, minerals, iron, and chemicals are on the increase; all exports show a reduction except livestock, wool and cotton goods, ready-made clothing, copper and aluminium ware, and particularly watches, which have increased. The main feature of last year is the recovery of the watchmaking industry, which exported 9,632,084 watches of every description and of a value of 5.4 million pounds, as against 6,903,202 watches, of a value of 4.6 million pounds in 1922. It may be pointed out that nearly 75 per cent. of Swiss exports have been purchased by Great Britain and the Dominions, who have taken the place formerly held by Germany and the United States.

Unemployment has been decreasing since January; at that time 76,143 unemployed were on the registers, while there were only 38,675 at the end of October; since then there has been a new increase, due to the fact that several textile and machinery manufacturers were compelled to reduce their staffs, so that, at the end of November, there were 41,397 unemployed in Switzerland. The recovery in the watchmaking industry partly accounts for the important drop in unemployment, while emigration also contributed to reduce the unemployment figures. Emigration reached unprecedented figures in 1923, as, up to the end of October, 7,371 Swiss left the country, that is, 2,634 more than in the corresponding period of 1922. The worst is that Switzerland is losing through emigration many skilled workers, who found some employment in France, Italy, and Germany, where certain Swiss manufacturers have transported their factories.

According to the recent report of the Swiss Employers' Union, prospects for 1924 are not encouraging, while hat-making, tile, cement drains, oven industries, chemicals, motor car trade, and watchmaking have some contracts which enable them to work for many months. A reduction of working hours and of staffs is contemplated in the chocolate, tobacco, ready-made clothing, fur, and shoe-making industries, as well as in the textiles—the wool and cotton weaving industry being particularly hit by the increase in the price of raw material. Despite the unfavourable economical situation, the Swiss Federal finances are in a better position. The estimated deficit has been reduced by many millions of francs, and the receipts of the Governmental services have increased; this result is due to the fact that the Federal Government has adopted a policy of strong economy, and has curtailed all expenses and reduced the number of officials by many hundreds. Federal Councillor Musy, head of the Finance Department, recently stated that, by pursuing this policy, he would be in a position to balance the budget in 1925. The national debt, however, reached nearly £22 per head of population at the end of 1922, as against £2 in 1913, exclusive of that of the Federal railways.

The accounts of the Federal railways for the first 10 months show a surplus of £3,778,000, compared with a surplus of £1,080,000 last year; the Federal Post Office registers for the same period a surplus of £8,046, as against a deficit of £360,000 in 1922; the telephone and telegraph service registers a surplus of £33,555, compared with a surplus of £23,710 in 1922. Customs duties, which have been again increased, yielded £6,640,000, compared with £5,440,000 last year.

But in spite of the financial position, Swiss business men are rather pessimistic, and fear that 1924 will be worse than 1923.

THE LEAGUE OF NATIONS IN 1923.

(FROM OUR CORRESPONDENT.)

GENEVA, January.

ON January 16th the Hungarian Committee of the League of Nations Council meets in London for the completion of the financial reconstruction scheme for Hungary. At the Council meeting in December the two protocols dealing with political conditions, and embodying the main features of the scheme, were adopted, but signature was left over until negotiations were completed between the

Little Entente Powers and the principal allies on the one hand, and between the Little Entente and Hungary on the other, on certain outstanding questions whose settlement is necessary before the Hungarian scheme can be finally approved, and set in motion. It will be known at the meeting of the Council Committee whether these negotiations have been concluded.

This League task was assumed at the end of 1923, and was a notable conclusion to a League year of fruitful economic and commercial work. It began with the essential stages of the Austrian reconstruction scheme, and at the same meeting at which the preliminaries for the Hungarian scheme were being thrashed out, the Council heard from the lips of Dr Zimmerman, its Commissioner-General in Vienna, the record of the latest progress in Austria. This experiment, which was entirely new in character, has achieved remarkable results, and has included the successful launching of foreign loans unique of their kind. The Hungarian business was therefore approached with a much more confident spirit, and although it contains political difficulties rather more delicate than those in the case of Austria, the main outline of the plan is conceived on the same basis as that for Austria, with this additional interest: that the French are regarding it mainly from the point of view of possible German developments.

These two cases are attracting the close attention of various other States not only inside, but outside Europe also. Interesting comparisons and speculations arise. Here, under the League method of reconstructive help, internationally organised loans are made conditional upon scientific internal reform, and under control which makes sure that the loans are properly applied to purposes of a purely reconstructive kind. The effects are being made plain in Austria, and doubtless they will be made plain in Hungary if and when the plan goes ahead.

The other form of financial assistance which has been occasionally undertaken outside the League is that loans have been made to certain Continental States to be spent in the country lending the money, generally not for constructive purposes, certainly without reform conditions, and involving at the same time serious economic and industrial concessions. Their effect is to make the financial position rather worse than better. What will be the eventual consequences when the States which are content to borrow money in this way see the financial position of States like Austria and Hungary restored on fundamental lines? Will they be disposed to go and do likewise, or will they be tempted to undo what these countries have laboriously established by the resurrection of extravagant claims against them? It may be that that is effectually guarded against; but even if it is not, it may be hoped that by that time there will be more wisdom and moderation, and a greater understanding of economic unity.

Austria and Hungary are certainly the two outstanding League reconstructive efforts of the year. A third effort of a rather different kind has been the scheme for the establishment of a thousand refugees in Greece on a permanent basis, for which the League prepared the ground, appointed an International Committee, and worked out the arrangements to attract foreign money.

In the wider international field the general conference on customs formalities produced agreement upon an important convention which, when put into force, will ease the wheels of international commerce in every direction, and be a practical step in improving conditions and opportunities of foreign trade, not to mention the conveniences foreshadowed for the travelling public.

Another serious contribution of the same kind has been the adoption by a general League Transit Conference of four conventions containing provisions for the simpler and more sensible working of international railway traffic, for the more equitable administration of free ports, and for the transit of electrical energy and hydraulic power from one country to another. In these conventions, as in the Customs Formalities Convention, the endeavour has been to separate these purely technical matters from politics, and to reduce the technicalities to a minimum, and, as far as possible, to a uniform scale in the various countries.

A convention has also been adopted to secure the more

effective operation of arbitration clauses in commercial treaties. A theoretical study by distinguished economists has been concluded on the subject of double taxation, and revenue experts are studying the application of the principles agreed upon. A financial adviser has been appointed to the Albanian Government at that Government's request; the question of unification of legislation relating to bills of exchange and promissory notes has been the subject of study; the Economic Committee of the League is examining certain aspects of the equitable treatment of commerce, and the League has effected an important monetary reform in the Free City of Danzig. All these questions have been, or are being, worked out on a carefully planned scale, and it is only by such methods that general progress can be made. It may not satisfy those who want a new world in one jump, but it produces improvement, where improvement is possible, by the only means with which improvement can be obtained. They are, moreover, the only examples of serious organised international effort to make any progress at all.

This, it must be remembered, is one side only of the League's work. It has made progress all along the line in every subject with which it is concerned, and although it is obviously not yet playing the part in the political field which it was meant to do, and which it ought to do, it has nevertheless settled during the year many delicate questions upon which others have failed, and which has proved to anyone who takes the trouble to study its methods, that there is necessarily a greater chance of securing a settlement by this system than by any other.

Letters to the Editor.

PROFESSOR CASSEL ON PROTECTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The otherwise excellent contribution by Professor Cassel to the *Economist* of December 15th contains a passage which appears open to considerable criticism. He states that the erection of tariff barriers against a country whose currency is undervalued on the international markets must increase the undervaluation of its currency, that is to say, must depress its exchanges still further. But there is surely no justification, whether in theory or experience, for such a supposition. Tariff barriers must bring about restriction of trade in both directions, but there appears to be no reason why such restriction should affect the exchanges in one direction rather than in another.

So long as any commercial or financial transactions take place, however, limited their amount, the rate of exchange should continue to be governed by the relation between the prices of interchangeable goods in the respective countries concerned. Indeed, one hardly expected to meet with an argument in favour of the influence of trade movements on exchanges from the pen of the distinguished author of the theory of purchasing power parities.

He supports the argument by carrying the hypothesis to the extreme, and supposing that imports from the country in question are absolutely prohibited in all other countries, in which case he contends that the international value of its currency would sink to practically nil, because nobody would be able to make much use of it.

In the extreme case supposed there would be no market and no transactions in exchange with the country. No indication of international value would be forthcoming one way or the other. Foreign holders of the currency of the country would certainly not be able to make much use of it, but exactly the same would be true of foreign currencies.

Perhaps Professor Cassel is thinking of the special case of large speculative holdings abroad of the depreciated

currencies of certain countries, which might be thrown on the market in a panic if measures were taken tending to restrict trade with those countries. In this case the exchanges with those countries would be further depressed, but the readjustment between prices and exchanges would be speedily brought about by the rise in price of exportable articles in the countries in question, the effective demand for which would be provided by the extra currency thus released from hoards.

I fear that this question of the relation of international to internal values is becoming something of a bugbear with Professor Cassel, to judge by some of his recent writing. May I suggest, in all diffidence, that he is inclined to attribute to it greater importance than it deserves? The fundamental truth of the theory of purchasing power parities does not depend on the close correspondence of index numbers of prices, which are compiled on different bases in different countries, and may include articles which are not open to free international trade.—Yours faithfully,

L. G. ROUSSIN.

Cairo, December 30th, 1923.

THE FALL IN THE NEW YORK EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your interesting comments on the foreign exchanges in your issue of the 5th inst. you state, with reference to the fall in the New York exchange on London, that "no specific explanation has been offered for these movements." May I offer one, and one that I have repeatedly drawn attention to before, and that is the state of our currency? So long as the currency of this country remains depreciated and debased, so long will the New York rate of exchange on London remain unfavourable. Of course, there are other contributing factors in the situation, but this cause, I venture to state, is the main cause of the adverse exchange. That our currency is depreciated can be proved at any time by comparing the price of an ounce of standard gold in our currency with the Mint price of £3 17s 10½d per ounce. When the market price, as it does to-day, exceeds the Mint price, that is the measure of the depreciation which exists, and the question is, do we or do we not desire to restore our currency to its pre-war parity? If we do—and I imagine most people desire it—then there is only one way to bring this about, and that is to gradually contract the issue of paper money outstanding until parity of exchange has been re-established with America and other gold standard countries. This does not entail a contraction of credit or currency when specie payments have been resumed. On the contrary, a sound currency will lead to an expansion of credit, trade and general prosperity.—I am, Sir, your obedient servant,

D. M. MASON,

Chairman Executive Committee, Sound Currency Association, 115 Cannon street, E.C. 4.

January 5th, 1924.

GREEK POLITICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of December 29th, under the title "A Caliph and a King," you write about the parties and factions in Greece and the return to Athens of M. Venizelos.

I have just arrived from Greece. My impression is that the call to M. Venizelos to return to Greece is far from unanimous. The election held on December 16th did not at all convey the people's will. As the *Times* wrote very rightly in its leader of December 19th, it was the result of a *coup de force* of the governing military clique. Three-quarters of the electors, as a protest abstained from voting in this unequal contest. Those who now call for M. Venizelos are only the moderate section of the one-quarter of electors who actually voted.

Every impartial observer is bound to admit that M. Venizelos is very unpopular in Greece since the war. This must be ascribed to his internal policy during the years 1917-1920. He did not follow then the true spirit of democracy, and ruled the country against the Constitution. This was the cause of his tragic downfall in 1920.

—Yours truly,

(Professor) MARCEL GAUNY.

14 Avenue Juste Olivier, Lausanne, January 6th, 1924.

Books and Publications.

THE ROOTS OF UNEMPLOYMENT.

THE volume of researches into the causes and character of the cyclical movements of trade grows apace. In "The Pre-War Business Cycle,"* Dr Schluter presents a careful analytical narration of the course of business, principally in the United States, but also in the main European countries, in 1907-14. He draws upon a large mass of statistical and other material, and welds it into a well-arranged and well-digested whole. He is naturally concerned to answer the questions why America suffered from depression in 1910-11, while Europe went steadily ahead, and why the tide in America receded sooner than in Europe in 1913. He finds the solution chiefly in a scarcity during the whole period of credit, and of the basis of credit—gold, which seems difficult to reconcile with the rapid rise of prices to which he draws attention. When Dr Schluter, after drawing attention to the rapid growth of savings during the period, adds that "large capital accumulations demanded more credit, for purposes of coining purchasing-power into means of payment," we feel that he is on surer ground as a narrator than as an expositor. But the fact that he cannot be said to have solved all the problems of the trade cycle can scarcely be held to detract from the merits of this useful and well-ordered study. The book seems to contain rather an unnecessary number of trifling misprints.

Dr Schluter attaches importance in his explanations to the disproportionate growth in manufacturing as compared with agricultural production during the years under review. But that would not satisfy Professor Moore, who, in a book as fascinating as a detective story†, pursues his determination to link up the trade cycle with a cycle of weather conditions and crop yields. By the method of harmonic analysis he establishes to his own satisfaction a congruent cycle of eight years in the rainfall of the United States, the yield per acre of the principal crops (reflected inversely in their prices), and the production of coal and iron. For British wheat prices and yield per acre he finds a similar period, congruent with that for the United States. It is a little disconcerting to the layman that from somewhat similar data, and by the same method, Sir William Beveridge should have established to his satisfaction a period for Western Europe not of 8, but of 15.2 years. It is also puzzling that, while Professor Moore's verbal argument leads us to expect that low agricultural prices will be reflected in low general prices, he finds for Sauerbeck's index number an eight-year period whose maxima correspond with wheat-price minima.

But Professor Moore's most startling achievement is the discovery of the culprit. It turns out to be Venus, who every eight years, and at the right dates, comes nearer to getting in a straight line between the sun and the earth than at any intervening moment. The electrical theory of matter is invoked to explain how this occurrence may, by interfering with the solar radiation, generate exceptional rainfall on the earth. We have no space to attempt to cope with Professor Moore's astronomical and physical arguments, but it may be said that, since Venus comes tolerably near to repeating her eight-yearly performance every one and three-fifth years, the four-year upward and downward swings which constitute the alleged eight-year rainfall period seem to remain a little difficult to account for.

Meanwhile, unemployment continues, and the International Association on Unemployment, originally formed in 1910, has been re-assembled in 1923 to study and promote its right treatment. The praiseworthy object of this body is to supplement by voluntary effort, as it has already apparently in the past inspired, the work of the International

Labour Office. Its bulky proceedings contain a number of interesting communications and reports on emigration, insurance, vocational guidance, and unemployment among intellectual workers—the last a very grave problem in those countries which in the pursuit of financial equilibrium, have been obliged to make vast retrenchments in their civil services. The report on emigration comments with justifiable satisfaction on the relaxation in recent months of many of the severe obstacles to the international migration of labour which were imposed under the influence of inflated nationalism at the end of the war. The report on insurance gives interesting information as to the extent to which insurance funds are used in various countries for the purpose of providing work or training, and devotes special attention to the question of how far insurance schemes can be used as a preventive of unemployment. The association has set itself a valuable programme of work for coming years.

POLAND OF TO-DAY.

PROBABLY no single one of the new States recognised by the Treaty of Versailles has so disappointed believers in the new world order as has Poland. Formed out of the wreckage of three great Empires, and faced by almost insoluble problems of reconstruction in every sphere of its national life, Poland seemed the last country in Europe which could afford the luxury of an ambitious foreign policy. Yet Polish statesmen are constantly accused of Imperialistic designs, and it is an undoubted fact that in hardly any quarter of the new Near East can they count with certainty on the friendship of neighbouring countries.

The author of this book,* who was himself for a time Polish Foreign Minister, makes an honest attempt to face unpleasant facts, and even though we cannot agree with all his conclusions, we must perforce admire him for his admirable candour. He takes the present frontiers of the new Poland as final, and hopes on this basis to solve the much-vexed problem of the national minorities. At the same time he makes no attempt to conceal the unpopularity of Polish rule among the Ukrainians, the Germans, and the white Russians. As long as Poland incorporates "a strip running along the Eastern Russian frontier some 200 kilometres wide, with a non-Polish majority," it seems to the Western observer that she cannot but be "the battlefield of nationalistic struggles," which, says our author, she "in no way can be and must not be." It is, perhaps, too much to expect him to draw what we think must appear to be the obvious conclusion.

In his discussion of the agrarian problem, again, he clearly states the causes of rural discontent, but hardly realises to the full the dangers of attempting to maintain a semi-feudal system of land tenure in a country which is surrounded on three sides by neighbours who have recently instituted a very drastic series of changes in this respect. His fundamental proposition that "the accumulation of large areas in single ownership is a necessary condition for preserving agriculture on a high level, from a technical and an economic point of view," may or may not be true. It is, however, quite certain that the unit of ownership itself cannot even be discussed from the economic point of view without considering the unit of cultivation at the same time, and this our author has not even attempted to do.

Count Skrzynski is a Polish Liberal, and his book is offered us as being "propaganda of the truth." To the English reader his nationality may perhaps appear to be more certain than his Liberalism, though it is important to remember that after all everything is relative. The book itself contains much useful economic and general information about the new Poland, and, apart altogether from the light it throws on the Polish point of view, should be welcomed, if only for this reason, as an interesting picture of a comparatively unknown country.

PRIVATE TRUSTESHIP.*

In this little volume the chief disadvantages of private trusteeship are outlined, and a plan to remedy present defects is offered. This takes the form of a "private" company, which will act as "custodian trustee." We are told that "by setting up a private company, empowered to act as trustee, the benefits of incorporation are obtained, with the result that when once the trust funds have been vested in the company the question of divesting them does not arise on the appointment of new trustees," and that although "there may be as many as three or four new appointments of trustees during the life of the trust, no occasion will arise for a transfer of the trust funds from the old to the new trustees." Mr Fulton works out his details of the scheme with considerable thoroughness. A model memorandum and articles of association are given, together with an estimate of the cost of forming "a private custodian trustee company."

STOCK EXCHANGE NEWS.

TICKET. January 23. | ACCOUNT. January 24.

Stock Exchange markets are almost entirely dominated by the political situation. Here and there other influences have supervened to cause price-fluctuations, but by far the greater number of changes this week are directly traceable to the influence of next week's debate in the House of Commons. The public are in a somewhat nervous frame of mind, the effect of which is noticeable in the restraint put upon purchases of stock such as take place, almost invariably, at the beginning of every year. It is said that fairly large lines of British Government stocks continue to come to market from Continental sources, but the fact of the matter is that there is so little public buying to support values that for prices to sag is inevitable in the circumstances. Thursday's rise in the Bank of France rate checked a mild recovery that occurred earlier on that day.

The War Loan has been down to 98½, and Victory Bonds to 80½. Falls have occurred in most of the other British Government securities, the 4 per cent. Tax-compounded War Loan standing out as an exception owing to the impression that the Labour party may substitute heavier income-tax for the threatened capital levy. Prices finish the week above their lowest levels, but the market is not looking for any settled tendency until the outlook becomes more definite. Mystery veils the reason of the rush to buy German Threes, which ran up the price at one time to 25s, from which it fell back later on. Some say that the Dutch were the chief buyers. French bonds, after a show of strength, reacted on the movements in exchange. Brazilians have advanced noticeably, in consequence of the greatly improved status of the milreis, which has come as a useful, if possibly coincidental, sequel to the visit of the British mission to the Brazilian Government. No changes of consequence have occurred in Mexicans.

The Home Railway market came under the influence of the dulness in gilt-edged stocks, and the dividend announcements, which are expected to appear in about a fortnight's time, received little advance attention. Grand Trunk Pacific Debenture has given way, though Canadian Pacifics, together with Eries and various other American railroad shares, stand substantially higher by reason of the strength of the dollar as compared with the pound sterling. Argentine Railway stocks moved up and down in an erratic manner, while Brazilian Rails advanced appreciably in sympathy with the rise in Brazilian Government bonds. Mexican rails are a little easier.

The Rubber market remains dormant. In oil shares, a further rise in Shells testifies to the public confidence felt in the company, and to appreciation of the four or five recent rises in the price of petroleum. Except in Shells and Royal Dutch, however, there is not much animation. The Textile market is quiet, the doubling of the interim dividend on English Sewing Cotton shares being considered as no more than a desire on the part of the directors to equalise the half-yearly payments. In the tobacco market, the recent depression gave way to improvement on bear fidgeting. Thursday's meeting of the British American Tobacco Company assisted the movement. The Crosbe and Blackwell circular, long expected, had already been discounted in the fall which occurred in the company's three classes of shares: the immediate result was to make prices a little lower.

Vague fears of Labour legislation found reflection in declines amongst gas and electric issues, and the weakness of gilt-edged stocks brought about sales of banking and insurance shares. Even the Trust companies' list, usually so robust, has weakened to some extent. The shipping group continues to exhibit a steady front, thanks to the unexpectedly favourable showing made by several of the companies this week in their reports, though prior-charge issues in this market are suffering with other gilt-edged securities. Iron, steel, and similar shares have been monotonously receding 3d to 6d per diem, and companies which were expected to benefit

from the Government unemployment plans, e.g., those in the cement industry amongst others, have lost what adventitious aid this programme at first gained for their shares in the market. Hotel shares, stores, and breweries are exceedingly quiet, the only change in the position being shown by a slight increase in the difficulty of dealing as a seller. The cable group is heavy; wireless shares have also undergone trifling losses.

Kaffirs received a measure of support from the Cape, though the rise in the price of gold, combined with the good dividends recently declared by many of the companies, has failed to attract any noticeable buying from sources nearer home. Rhodesians are in similarly quiet case. The mining market is redeemed from stagnation, however, by rises in various tin shares, this being especially the case with those connected with the Straits companies. West Africans joined in the movement, but the Cornish shares have scarcely participated in the upward tendency. Indian mining shares lean to the dull side, notwithstanding the high price of gold. Base metal issues are mostly better, the Broken Hill group receiving a little attention from speculative investors. De Beers and Rio Tintos depend, as usual, upon the tone prevailing in the Paris market.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	£ 65,000	£ ..	£ ..	£ ..

ISSUES OF THE WEEK—

NATIONAL SAVINGS CERTIFICATES.

NET RECEIPTS INTO THE EXCHEQUER FIVE DAYS ENDED JANUARY 5, 1924.

April 1, 1923, to Jan. 5, 1924, £13,000,000 .. Dr 150,000 .. £ 150,000

To the Public—				
National Smelting Co., £1,500,000				
7% First Mort. Deb. Stk. (red. at 102% by ann. dwgs. 1924-1945), issued at 95% ..	1,500,000	1,485,000	75,000	1,410,000
To Shareholders only—				
J. Lyons and Co., 500,000 unissued 7% Cum. Pref. Shares, £1, at 23s per share	500,000	575,000	200,000	375,000
Var Oil and Coal, £50,000 7% Deb. Stk. (red. at par, 1923-1933), issued at 90% ..	60,000	54,000	6,000	48,000

1920.....	25,243,050			1,036,069,351
1919.....	65,479,168			1,333,381,441

The National Smelting Company, Limited.—The capital consists of 650,000 8 per cent. cumulative participating preference shares of £1 each, 1,000,000 ordinary shares of £1 each, and 1,000,000 deferred shares of 1s each. The ordinary shares have been issued for cash at par, and are fully paid up, while the preference and deferred shares are to be issued in payment of certain assets. Debenture stock is authorised for £1,500,000. This is the first public issue of the New Year, and, unfortunately, it follows the procedure of an "offer for sale," instead of setting a good example by issuing a prospectus complying with consequent conditions. The underwriting undertaking, having agreed to acquire £1,500,000 7 per cent. first mortgage debenture stock of the company, offer the same for sale at 99 per cent. This stock will be secured by a first mortgage upon property and plant and 4,000,000 shares in Burma Corporation, Limited, "now owned or to be acquired by the company," and a first floating charge on remaining property. The stock will be repayable by means of a cumulative sinking fund of 2 per cent. per annum, to be applied annually in the redemption of stock by purchase at or below 102 per cent. (inclusive of expenses of purchase), or by drawings at 102 per cent. The first redemption is to be effected on or before January 1, 1926. Stock not previously redeemed will be repayable at 102 per cent. in 1945. The right is reserved by the company to redeem stock, otherwise than out of the sinking fund, at 103 per cent. on January 1, 1931, or any subsequent interest date, subject to three months' notice. Speculative investors and those who are interested in this branch of this important industry may possibly discover the merits of this issue, but conservative investors will pay special attention to the security offered. It will be noticed that we are merely told "of the total capital expenditure" when properties are mentioned. The practice of offering debentures secured on shares based on current market values we have objected to before in these columns, and we cannot share the enthusiasm of some of our contemporaries, one of which states the margin of the aggregate share values over the amount of issue. It is obvious that these ordinary shares may fluctuate in value from day to day, as a glance backward at share quotations will show.

The Hatfield Gas Company, Limited.—Authorised stock capital £30,000, of which £10,000 has been issued. Loan capital has been authorised for £15,000, and £5,000 has been issued. This is an offer for sale by tender of £6,000 6 per cent. preference stock, the minimum price of issue being £95 per £100, which, taken at this price, yields £6 6s 4d per cent. The net revenue of the undertaking for the year ended September 30, 1923, was £1,385. Interest on debenture stock takes £344, leaving £1,041 available for dividends. The total dividends on the preference stock, including that now being issued will absorb £623; thus a comfortable margin of security is assured. Of course, the issue is small, but it is a good offer in its class.

The Central West Gold Mining Company, Limited.—Registered in the Transvaal Province of the Union of South Africa. Authorised capital £197,500, divided into 790,000 shares of 5s each, all of which have been issued. The company was incorporated in September last, and its object is indicated by its title. Certain properties and assets were acquired from the Far West Rand, Limited, for £112,500, of which £15,000 "is payable in cash." Share options will be given to subscribers of "the cash issue." The option, we learn, can be called at 7s 6d per share, and can be exercised up to December 31, 1925. A commission of £5,000 has been paid for placing shares. These details are taken from an advertisement in the public press in connection with an application for a Stock Exchange quotation.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

THE ROYAL BANK OF AUSTRALIA, LIMITED.

"HIGHLY SATISFACTORY" RESULTS.

CHAIRMAN ON AGRICULTURAL AND TRADE CONDITIONS.

The half-yearly meeting of the Royal Bank of Australia, Limited, was held at Melbourne on October 30th, Mr Randall J. Alcock, J.P., chairman of directors, presiding.

The report and balance-sheet for the half-year ended September 30, 1923, showed that the net profits were £61,643 7s 9d. Dividend at the rate of 10 per cent. per annum absorbs £37,500; the sum of £20,000 is transferred to the reserve fund (making it £540,000); and £4,143 7s 9d is added to the amount carried forward from the previous half-year (making it £36,305 12s 8d).

The Chairman, in moving the adoption of the report and accounts for the half-year ended September 30th, said:—

Trade during the half-year has again been on the quiet side. The state of drought to which I made reference at our last meeting continued till nearly the end of May, when good rains fell in South Australia, Victoria, and in parts of New South Wales. Since then the rainfall for the winter months has been much above the average, especially in Victoria. Unfortunately the delay in the breaking up of the dry spell, together with the subsequent heavy and almost continuous rainfall, interfered seriously with the wheat seeding operations.

RAIN INTERFERES WITH SEEDING.

Particularly was this so in the Wimmera, where the heavier soils became waterlogged to such an extent that they were unworkable—in consequence the area under wheat in that district is much below what farmers intended to sow. The sandier Mallee country, on the contrary, which could be worked in spite of wet weather, has a larger area under wheat. Everything points to an excellent harvest in point of view of yield, and so far as Australia's crop is concerned there appears to be every reason to believe that the market price will not be much below that of last year.

The dairying industry has had a trying year. Towards the end of March the London market experienced a serious slump, prices for butter dropping from over 190s per cwt in January to under 140s in April.

The majority of factories, partly on account of the dry summer promising a good local market during the winter months, and partly on advices foreshadowing the London slump, had begun to store their output, hence the loss was much less than otherwise might have been experienced.

The local market remained firm till the beginning of September, in spite of considerable importations from New Zealand and Queensland. Naturally the drought seriously lessened the output of all factories, besides the dairying stock became poor, and when the wet weather set in, accompanied by a rapid drop in temperature in many districts, a considerable mortality ensued.

Cheese, which is not an important export of Australia, has maintained excellent prices. It is a matter for surprise that more attention is not paid to this product, especially in view of New Zealand's output.

OUTLOOK FOR DAIRY PRODUCE.

The general outlook for dairy produce the present season is distinctly encouraging. The London market has recently been on the up grade, still it is more than likely that by January, when full supplies from this side are coming to hand, prices will again drop. With the large number of unemployed people in Britain the purchasing power of the community is greatly impaired, beside the European working man looks upon butter more as a luxury and less of a necessity than we in Australia do.

WOOL INDUSTRY.

Owing to the unsatisfactory season that was experienced in the early part of the wool-growing year, and to the further reduction in the number of stock shorn, the Australian clip, which last year totalled approximately 1,918,000 bales, is estimated to only be about 1,600,000 bales for the present year (1923-24), a decrease of say 300,000 bales.

Queensland and Northern N.S.W. have probably suffered more severely than other parts in Australia—the returns received to date show a heavy falling off in the weight cut per head of sheep. Victorian and Riverina clips also show marked signs of the adverse season, but not quite to the same extent as Northern New South Wales.

The latest sheep figures for the Commonwealth are for 1913-14 85,096,859, and for 1922-23 76,091,311.

Fortunately the position of raw wool is a strong one statistically, and though of late pessimistic reports have emanated from spinners and manufacturers, particularly from Yorkshire in regard to the state of trade, prices have held well, and in case of crossbreds have shown some improvement.

Trade in Yorkshire is certainly dull, and so far little or no support has been given to the Australian market from that quarter. French and Belgian operators are at present most active, and local mills are steady buyers.

American mills have also been exceptionally busy from the beginning of the year, and as their stocks of raw material are not heavy, good support should be looked for from there during this season.

The German position is, of course, difficult, and whether they can be expected to finance any great quantity of wool at the present high prices remains to be seen.

MUTTON AND BEEF.

The mutton and lamb market remains satisfactory, but the present price of frozen beef continues so abnormally low that, unless altered, will menace the existence of the cattle pastoralist. The Government subsidy and the reduction of freights have not proved of sufficient benefit. Recent legislation, however, in the Argentine will shortly result in the fixing of the price of export beef from that country at a higher figure than recently current. This from the Australian point of view is satisfactory, as it is bound to have a favourable effect on the London price of our beef.

COTTON AND MINING.

Cotton growing is still being encouraged in Queensland, and to some extent in New South Wales. American export diminishes year by year, partly due to her increasing population, and partly because of the ravages of boll weevil.

There is evidence of the approach of a world shortage in this commodity. Nevertheless, in spite of the optimistic reports by experts and others interested, there are factors which militate against its becoming a prominent Australian industry in the near future—so that caution should be the watchword at present.

Mining continues to a great extent in the doldrums—coal instead of becoming cheaper has a tendency to become dearer. We all hope that the Morwell electricity venture, which is nearing its productive stage, will realise expectations, and that all industries will benefit thereby.

IMMIGRATION

The immigration policy of the Federal and State Governments commands general approval, but there seems to be necessity to stress the absolute importance of selecting only the right type of migrants who are mentally and physically sound and capable of adapting themselves to the altered conditions of life they will come to. I am of opinion also that the ownership of some capital by each immigrant desirous of taking up land should be rigidly insisted upon.

The success in London of the recent Victorian Conversion Loan, and of the last Federal Loan, demonstrates that ample money is available there for the future development of Australia, provided it is considered the money is likely to be utilised wisely.

The reduction of postal rates is a step in the right direction. The Postal Department is a public utility, which should always be self-supporting, but not used as a means of indirect taxation.

In reference to the report and balance-sheet, I am sure you all regret the retirement of Mr Thomas Kidd owing to continued ill-health; he has been an auditor of the bank for 32 years, and we all hope for a speedy recovery in his health.

Mr Holmes has assisted Mr Cleveland in the present audit, and will continue until next general meeting, when shareholders will be called upon to elect two auditors in terms of the bank's articles of association.

DIVIDEND.

Your directors recommend that a dividend of 10 per cent. per annum should be paid, that £20,000 should be added to the reserve fund, making that fund £540,000; that the balance of profits, £4,143, should be added to the amount carried forward from last half-year. The amount carried forward will then be £36,305, which I think you will agree with me is highly satisfactory.

Deposits are practically the same as six months ago, although somewhat differently stated. The deposits of the State Savings Bank of Victoria, hitherto held as Government deposits, are now

treated by all banks interested as "other deposits bearing interest."

On the assets side the cash and other available liquid holdings show the substantial sum of over £2,000,000, which shows a strong position against the bank's total indebtedness to the public.

Bank premises stand in the bank's books at the same figure, but, as several times mentioned by me, your directors are of the opinion that the present-day values are in excess of book values.

Bills discounted and other advances are somewhat lower, which is usual at this time. Additional taxation is the reason for the increase in the charges account.

The motion for the adoption of the report and accounts was seconded by Mr T. F. Buxton and carried unanimously.

The proceedings terminated with a cordial vote of thanks to the directors and management, proposed by Mr A. B. Cassidy, seconded by Mr. Joseph Gras-y-Fort.

CHARGEURS REUNIS.

FRENCH STEAM NAVIGATION COMPANY.

At the annual general meeting of the Chargeurs Réunis, held in Paris on December 27th, the results of the financial year ended June 30, 1923, were laid before the shareholders.

The following are the main features of the report:—

Gross receipts figure at (as against 132,000,000 in 1922)	162,720,363.09
Management and operating charges (which include a sum of approximately 5,737,000 applied to depreciation and insurance)	141,380,427.22
Leaving net receipts of	21,339,935.87
Interest charges amount to	9,997,923.70
Leaving profit for the year of	11,342,012.17
Carried forward from 1921-22	22,909.17
Total	11,364,921.34

This has been appropriated as follows:—

For the writing down of the fleet	11,211,141.47
Balance carried forward	153,779.87
	11,364,921.34

Obligations outstanding have been reduced during the year by 2,436,500. Attention was drawn to the large sums allocated to amortisation of the company's assets, amounting in all to nearly 17,000,000, as against 14,431,000 in 1922. This is in conformity with the drastic policy of writing down which the board has consistently pursued, even at the sacrifice of dividends to the shareholders.

The fleet, which at June 30, 1922, comprised 41 big ships and five auxiliary vessels, representing a tonnage of 313,107 deadweight, now numbers 45, with five auxiliary vessels, making in all 349,707 tons deadweight, four large new vessels having been put into service.

The average price per ton, despite the above-mentioned additions, works out at only 450f, as against 413f in 1922.

BUILDING PROGRAMME AND PROSPECTS.

Although further borrowing had been authorised by a previous general meeting of shareholders to permit of the completion of the building programme, the board has come to the conclusion that the world-wide crisis in shipping and the prevailing financial conditions justified a modification of this plan. Accordingly three of the vessels still on the stocks have been sold. For this reason, on June 30th last only three further ships remained for delivery to the fleet of the Chargeurs Réunis. One is actually in commission; the others are being completed at this moment.

As for the results that may be expected in the current financial year, the situation of international politics is too obscure to enable the president at the present time to give any reliable indications. It may be stated, however, that in the past months substantially better results have been obtained than in the same months of the previous year's working. Exports are continually on the increase, and this autumn a promising emigration movement has made itself apparent.

Copies of the company's annual report and balance-sheet, comprising a full account of the president's address to the shareholders, can be obtained on application at the offices of Messrs Erlangers, 8 Crosby square, London, E.C. 3.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED.
INCREASED BUSINESS DESPITE ADVERSE CONDITIONS.

The twenty-first annual general meeting of British-American Tobacco Company, Limited, was held, on the 10th instant, at the offices of the company, Westminster House, 7 Millbank, London, Mr A. G. Jeffress, one of the deputy-chairmen, presiding.

The Chairman said: With your approval we will take the notice convening the meeting and the report of the directors and accounts, which have been circulated, as read, and the secretary will now read the auditor's certificate.

The Secretary (Mr A. M. Rickards, F.C.I.S.) accordingly read the certificate of Sir William Plender, of Messrs. Deloitte, Plender, Griffiths, and Co., chartered accountants, appended to the accounts.

The Chairman: Ladies and gentlemen,—Since our last annual meeting Mr J. B. Duke, under whose able chairmanship the company so greatly prospered, decided to retire from active business and therefore resigned his chairmanship and seat on the board. It is needless to say that the resignation was received with great regret, which I am sure will be shared by you all.

Sir Hugo Cunliffe-Owen, who has been a director since the incorporation of the company and a deputy-chairman since August, 1905, was elected to the vacant chairmanship, and the company and its directors are extremely fortunate in having in their chairman one who is exceptionally well qualified to be the head of such an organisation as yours. He not only commands the loyal co-operation of his colleagues on the board and every employee of the company, but his experience and knowledge is a very valuable asset to all our large and important companies, whose efficient management is an important factor in your company's prosperity. I should mention that the reason Sir Hugo is not in the chair to-day is that he is travelling in the Far East on the business of the company, accompanied by one of your deputy-chairmen, Mr J. D. Gilliam.

The directors have also received with great regret the resignation of Sir Arthur Churchman, Bart., M.P., from the board. Sir Arthur felt that, owing to his Parliamentary duties, he could not adequately attend to the affairs of your company.

This vacancy has been filled by the election of Mr Robert Campbell Harrison, who will come up for re-election at a later stage of the meeting.

BALANCE-SHEET ITEMS.

As you are aware, it is usual at our annual meeting to go through the various items of the balance-sheet and make some comments thereon.

Taking the assets side of the balance-sheet first, you will observe that the item of real estate and buildings at cost, less provision for amortisation of leaseholds, £484,046, shows a decrease of £6,512 as compared with last year.

Plant, machinery, furniture and fittings at cost or under, £521,618, shows a decrease of £7,628. This is mainly accounted for by transfers to subsidiary companies.

Goodwill, trade marks and patents remain at the same figure as last year—namely, £200,000—and in view of the great value of the company's trade marks, the directors consider this item should remain on the balance-sheet even if only at the nominal value of £200,000.

A number of our associated companies have during the past year increased their indebtedness to us, and consequently loans to and current accounts with associated companies, £4,811,858, show an increase of £116,277.

Investments in associated companies show an increase from £15,266,302 to £15,620,374. This is the largest item on the assets side, and shows an increase this year of £354,072. We have made investments during the past year by increasing our holdings in several associated companies.

INCREASED STOCKS OF LEAF.

Stocks of leaf, manufactured goods and materials, at cost and under, now stand at £5,466,395, or an increase of £616,882, represented almost entirely by an increase in stocks of leaf tobacco. The stocks of leaf, manufactured goods, and materials have been carried at cost or under, as in previous years.

Sundry debtors, less provision for doubtful debts and debit balances, now stand at £1,094,710, a reduction of £564,779, represented largely by time loans to financial houses, which matured during the year, and which were not renewed.

Cash at bankers, in transit and at call, £4,247,040, shows a decrease of £248,570. Our accounts are prepared to the end of September, and it is about that time we are in the midst of the leaf-buying season, and require large cash balances. Perhaps I might mention that all of the money is not in London; a large part of it is in America for leaf and factory requirements.

LIABILITIES.

Turning to the liabilities side of the balance-sheet, the issued capital of 4,500,000 preference shares remains the same, but the

issue of ordinary shares is increased from 16,046,070 to 16,071,327, an addition of 25,257 shares. This is due to 257 shares issued to shareholders in respect of belated acceptances of the issue of shares under the resolution of May 10, 1920, and to 25,000 shares issued to certain officials in pursuance of a resolution passed by the shareholders on January 11, 1922.

Creditors and credit balances, £4,644,796, represent a decrease of £517,025 on the figure at which it stood last year.

The item of reserves for buildings, machinery and materials remains at the same figure as last year—namely, £500,000—which your directors consider sufficient.

Premium on ordinary shares issued has increased by £27,653 to £444,967, due to the premiums received on the 25,000 shares issued to the officials previously mentioned, and the sale of certain shares which were surrendered by one of the directors under the terms of the resolution of May 19, 1919, on that director's resignation.

Provision for redemption of coupons now stands at £48,966, or an increase of £521.

Special reserve has increased from £1,256,398 to £1,257,715, an increase of £1,317. As your chairmen have stated in speeches in previous years, this account was created in which to carry profits of a capital nature.

PROFIT AND LOSS ACCOUNT.

This brings me to the last item—namely, profit and loss account. The accounts show a net profit for the year, after deducting all charges and providing for income-tax and corporation profits tax, of £4,494,971, an increase of about £94,000 over the previous year, and, in view of the continued business depression in the fields we cover and the downward tendency of exchange for the year, the directors trust the shareholders will consider the results as very satisfactory.

Last year we carried forward a balance of £4,721,105, out of which we paid a final dividend of 9 per cent., amounting to £1,444,153, which left us with a disposable balance of £3,276,952. During the year some additional coupons have been deposited with us in respect of the shares issuable in pursuance of the extraordinary resolution of the shareholders of May 10, 1920, and we have allotted to shareholders 257 ordinary shares of £1 each, and a sum of £257 is deducted from the balance, leaving £3,276,695. To this must be added the profits for the year, as previously mentioned, £4,494,971, less the preference dividend, amounting to

£225,000 and the four interim dividends paid on the ordinary shares for the year, amounting to £2,568,395, leaving a disposable balance of £4,978,271, out of which the directors recommend the distribution on January 17th of a final dividend (free of British income-tax) on the issued ordinary shares of 9 per cent., amounting to £1,446,425, leaving £3,531,845 to be carried forward, all of which is required in the operations of the company. This final dividend of 9 per cent. will make a total dividend of 25 per cent., free of British income-tax, for the year upon the ordinary shares.

The profit for the year now under review does not include any amount in respect of claim for refund of excess profits duty which was mentioned in your chairman's speech last year, and which has not yet been adjusted.

THE CURRENT YEAR.

I am glad to be able to report that, in face of abnormal business and political conditions prevailing in many countries in which we operate, our total volume of business shows a substantial increase over the previous year, and this increase in volume has been maintained during the first three months of the current year. I should again remind you that your business consists entirely of export and foreign business, and this being the case the shareholders should bear in mind that the profits in sterling are largely dependent upon the rates of exchange, which were very much against us in the year under review as compared with the previous year, and I do not see any indication of a general improvement to-day.

I now formally beg to move the adoption of the report and balance-sheet for the year ended September 30, 1923, including payment on January 17th instant of a final dividend of 9 per cent. upon the issued ordinary shares, free of British income-tax.

I may also mention that the directors have declared for the year 1923-24 an interim dividend of 4 per cent., free of British income-tax, also payable on January 17th, so that the shareholders will receive on that date 13 per cent.

Mr S. J. Gillchrest (one of the deputy-chairmen) seconded the resolution, which was carried unanimously.

The formal business having been transacted, Mr H. Macdonald Hodges proposed that a hearty vote of thanks be accorded to the chairman for his conduct in the chair and to the directors and the staff for their efficient management of the affairs of the company during the past year.

Mr J. P. Stark seconded the resolution, which was carried unanimously.

The Chairman: I thank you on behalf of my colleagues and the staff at the head office, as well as our organisations abroad, who have done so much to produce the results which we have had the pleasure of laying before you.

The proceedings then terminated.

BINGO GOLD MINES, LIMITED.

TRAPPER PROPERTIES TO BE ACQUIRED.

The adjourned second ordinary general meeting of Bingo Gold Mines, Limited, was held, on the 9th instant, at Winchester House, Old Broad street, London, Lord Hardwicke presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said that the ore dump, made up of material brought to the surface in the course of shaft sinking and drifting, was estimated by experts to contain gold to the value of about £30,000, or more than sufficient to cover the total expenditure to date. He had had considerable experience in active mining in many parts of the world, and he had seldom seen or heard of a mine which, in its earlier stages of development, had opened up so well as the Bingo. Instead of a deposit of high-grade ore of limited width, developments at the 200-ft level had proved a body of highly payable ore over a very great width.

HIGH VALUES DISCLOSED.

One of the most remarkable features was the consistently high values over a wide distance in the crosscuts at this level, the north crosscut for 54 ft width averaging \$15.39 for the whole distance, and the south crosscut for 74 ft averaging \$21.55, both crosscuts being still in ore. These results were so extraordinarily good that it was decided to check them by resampling on the opposite side of the crosscuts, when the average of the assays for the whole distance gave the surprisingly good figures of \$21.21 for the north crosscut and \$26.46 for the south. Notwithstanding the exceedingly satisfactory results at the 200-ft level, a cable just received showed that values at the 300-ft level were even better than those on the 200-ft, and values on the 400-ft were actually again better than those on the 300-ft. The cable went on to say: "Mineralisation continues consistent and heavy on all faces, and free gold visible in all drifts." As development proceeded the board realised that the proposition was about to turn out very much bigger than had been expected, and they were compelled to decide that it would be foolish to rush into the erection of a mill till development had proceeded much further, and it had been ascertained exactly what kind of a reduction plant would be best.

TERMS OF ACQUISITION.

The trend of development also showed that it would be imperative to acquire the Trapper properties. When Professor de Lury, the Government expert, made his report on the Bingo properties in 1921, he also made a report on the Trapper Group, on which the company had an option. Instead of being called upon to pay £100,000 in cash and £150,000 in shares, it had been possible to arrange for the acquisition of the Trapper properties by the payment of £75,000 in cash and £112,500 in ordinary shares, with a proviso that the Trapper Syndicate would immediately, on the exercise of the option, subscribe for £70,000 preferred shares for cash at par. It would be seen, therefore, that the new terms were equivalent to a payment of £5,000 in cash, £70,000 in preferred shares, and £112,500 in ordinary shares. The board were thoroughly satisfied with the result of their enterprise to date, and they were most confident that the company had a very great future before it.

MANAGING DIRECTOR'S SPEECH.

Mr J. Myers (managing director), in seconding the motion, stated that the shaft had been sunk to a depth of 415 ft, and samples taken at regular and frequent intervals had consistently given high values. The consulting engineer reported that they had in the Bingo a property which bade fair to compare very favourably with the best gold mines in the country, while the superintendent and resident engineer stated that the main ore body, if it maintained its size and value to depth, would make the Bingo one of the biggest gold mines on the continent. The ore reserves, as indicated by development at the various levels, should run into very high figures. The development demonstrated that the company had a mine of extraordinary richness, and if the property continued to develop as it had done to date the company would play a very important part in increasing the gold output of the Dominion of Canada. He confidently anticipated that the mill would be installed and crushing within 12 months from next May. The area of the property now owned by the company was approximately 70 acres. The Trapper Group comprised close upon 300 acres, and the acquisition of that group would, in his opinion, add tremendously to the value of the company's holdings. In order to acquire these properties it was proposed to increase the capital. Owing to the satisfactory arrangement which had been made, they could not only accomplish their object by increasing the capital only to

the extent of £250,000, but they could at the same time provide additional working capital and reserve out of that amount.

The report and accounts were unanimously adopted, and at an extraordinary general meeting and at subsequent meetings of the preferred and ordinary shareholders the necessary resolutions for the increase of the capital and the exercise of the option on the Trapper Group were unanimously approved.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.

CHAIRMAN'S CONFIDENCE IN THE FUTURE.

The second ordinary annual general meeting of Peter Walker (Warrington) and Robert Cain and Sons, Limited, was held, on the 8th instant, at the Savoy Hotel, London, Sir Harwood Banner, M.P. (chairman of the company), presiding.

The secretary (Mr H. Bosworth, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, after reviewing the accounts, said that the report they presented, he thought, would be considered better than that presented a year ago, and although the dividend recommended was 1 per cent. less, the slight decrease was more than counterbalanced by the allocation to reserve and the increased carry forward. They could have distributed the same dividend as last year, but they had thought it wise to strengthen the resources of the company in view of eventualities. The earnings of the combined concerns totalled £771,814, covering the service of the debenture issues more than three and a-half times. They had passed through another year of depression in trade, but he believed to-day there were signs of improvement and a more healthy outlook generally.

With regard to the future prospects of their great industry, despite all the jeremiads which had been loosed upon them recently, looking back through a long period of business life, his experience had been that things rarely turned out as badly as their first fears suggested when some new condition of affairs arose. He was not one of those who imagined that a Labour Government spelt the ruin of the brewing trade, or that Labour, once in power, would immediately proceed to attack the industry, and bring about an industrial upheaval. Thousands of small investors were interested in this company, and while the directors did their duty with full regard to the necessities of law and order and the comfort of their customers, he did not anticipate any confiscatory or prohibitory legislation. It was gratifying to know that two or three of the stalwarts and front-rank fighting men of the Labour Party had definitely announced that they "are having no truck with Prohibition or Prohibitionists."

He could not imagine a Labour Government doing anything except lightening the repressive burdens and restrictions under which the trade at present worked. From Labour, therefore, the directors looked for reasonable consideration, knowing that no class was more concerned with the question of the supply of good, honest beer to the public at a reasonable price under proper conditions of comfort and convenience. If Protection was dead, it was only logical to hope that with the assembling of the new Parliament the trade might look for the speedy abolition of the fatuous hop control, from which they still suffered. It had long outlived its usefulness, always assuming it had any, and was one of those silly relics of war legislation which should have been interred long ago. In conclusion, the Chairman expressed appreciation of the work done by the combined staffs of the company, and stated that he looked to the future with undiminished confidence.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Jan. 14-Jan. 19 were opened on Jan. 11, 1924, and the total amount applied for was £55,765,000. For bills at three months, dated Monday to Thursday at £99 3s 8d, about 13 per cent., above in full. Friday bills at £99 3s 11d and above in full, and Saturday bills at £99 3s 8d, about 13 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price
1923.				
Nov. 30.....	45,000,000	52,835,000	3 5 2-97	94 10 2
Dec. 7.....	45,000,000	59,635,000	3 4 3-53	94 10 0
Dec. 14.....	35,000,000	52,925,000	3 3 4-52	94 10 0
Dec. 21.....	45,000,000	46,220,000	3 6 11-33	94 10 0
Dec. 28.....	45,000,000	73,030,000	3 4 3	nil
1924.				
Jan. 4.....	35,000,000	52,950,000	3 0 11-61	nil
Jan. 11.....	35,000,000	55,765,000	3 4 9-62	nil

Tenders will be received on Jan. 18, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

SILVER.

Business has not been active during the week. In view of the unsettled condition of markets generally there has been a natural indisposition to open fresh commitments. The trend of silver prices for the last month or so has not encouraged speculative activity, for, although extremely large shipments have been made to the Far East, absorption has taken place on arrival. Hence a waiting attitude is likely to be maintained until the nearness of the Chinese New Year clarifies the situation. The adverse movements of exchange with America has helped to keep prices from serious weakness, although buyers are distinctly shy.

NOTICES.

The Midland Bank announces the opening of new branches at 69 and 71 High street, Sevenoaks, Kent, and 143 High street, Wootton Bassett, Wilts, under the management of Mr Dudley Braithwaite and Mr Alfred T. J. Davies respectively. The office in The Square, Beaminster, Dorset, has been converted into a full branch, under the management of Mr W. C. Swindell. New offices have also been opened at Batley Carr, near Dewsbury, Glan Conway, Denbighshire, and Tintern, near Chepstow.

Messrs B. Newgass and Co. announce that the liquidation of the company is a purely voluntary one, rendered necessary by the death of the late Mr Newgass, and for the purpose of distributing the assets. Mr Harry Kahn, the late chairman of the company, is acting as voluntary liquidator.

The Imperial Bank of Persia announce that they will remove to new premises at 33 to 36 King William street, London Bridge, E.C. 4, on January 14, 1924.

Barclays Bank, Limited, announce that they have opened a new branch at 23 Cornhill parade, Finchley, N. 3, under the management of Mr S. Wildash, also manager of 1 The Broadway, Church End, Finchley branch; and a branch at Marlborough House, Market place, Westbury, Wilts, under the management of Mr J. J. Arathoon (who is also manager of Warminster branch). They have also opened a new branch at 47-49 Newington Butts, S.E. 11, under the management of Mr C. G. Duke.

The National Provincial and Union Bank of England, Limited, have opened a branch in Waterloo Station (adjoining the Memorial Arch) for the convenience of the bank's customers generally, and particularly to meet the requirements of railway travellers. For the special benefit of the latter, the usual London banking hours are being extended, the branch being kept open on ordinary days until 6 p.m., and on Saturdays until 2 p.m.

Lloyds Bank, Limited, announce that a sub-branch of the bank is now open at South Zeal (Cawsand Beacon), under the management of Mr E. Clist, of the Okehampton (Fox's) branch, the hours of business being Tuesdays, 9.30 till 11.30; Fridays, 1 till 2.30. The bank also announce that the following sub-branches have been converted into full branches:—Tredegar street, Risca, under the management of Mr E. R. Thomas, of the Newport, Mon., branch; Glan Teify, Llanybyther, under the management of Mr A. L. Roberts, of the Lampeter branch; 17 Fore street, Lostwithiel, under the management of Mr J. A. S. Strong, of the Fowey branch; and 217 Chillingham road, Newcastle-upon-Tyne, under the management of Mr A. W. Burn, of the Byker and Heaton branch.

depreciation and the disturbed condition of affairs in the Near East, the directors are pleased to report that the operations of the bank continue to show satisfactory expansion. The investments of the bank stand on the books at figures well below the actual market value. The total assets are £5,013,835. Cash stands at £292,339, and money at call at £158,142. Investments total £2,061,531, of which £1,876,471 is invested in securities of or guaranteed by the British Government. With regard to liabilities, the chief item is deposits and current accounts, which totals £2,783,582.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Boisterous weather conditions were experienced over the United Kingdom during the past week, with heavy falls of snow, which, however, afforded good protection to the young wheat plant against frost. English wheat was in lighter supply, and prices tended firmer, at 9s 6d to 10s for suitable milling grades, with inferior ruffing from 8s 3d to 8s 9d per 112 lbs, free on rail. Imported descriptions met with better support, while firmer in sympathy with higher c.i.f. offers. No. 1 Northern Manitoba quoted 48s 9d, No. 2 ditto 47s 9d, No. 3 ditto 46s, and Rosafé, 63½ lbs, 47s 6d, all ex ship per 496 lbs. Very firm conditions prevailed in the floating and forward cargo section, and a fairly large business transpired at generally dearer rates. The chief factors for the upward movement were found in stimulating foreign advices, unfavourable rates of exchange, and a reduction in the French import duty. Sales included No. 1, also No. 2, Northern Manitoba (Vancouver shipment), afloat, at 46s 6d and 45s 4½d respectively, Rosafé 63½ lbs, January 1st-15th, 45s 6d, Australian, January, 46s to 46s 6d, and Azima Black Sea afloat 45s 6d, all per 480 lbs. Maize cargoes were also actively dealt in, and with old crop Lt Plata now practically out of supply, there is a good inquiry for new crop positions at full to firmer rates. Lt Plata, April-May 15th, sold at 33s 6d to 35s 10½d, April-May 34s 7½d, and May-June 34s 3d per 480 lbs. Flour in fair demand, and prices were advanced for town-made. London standard straight run quoted 38s, patents 40s to 41s 6d, town households 36s per sack delivered. All English country straights 30s 6d to 31s 6d per sack delivered to London stations. Of imported, Manitoba patents range from 36s to 39s, and Australian 33s to 35s 6d per 280 lbs ex store. Flour in steady demand at firm prices. London standard straight run quoted at 38s, patents 40s-41s 6d, town households 36s per sack delivered in all English country straights 30s 6d-31s 6d per sack delivered to London stations. Of imported, Manitoba patents range from 36s to 39s, and Australian 33s-35s 6d per 280 lbs ex store. Barley: English firm, and malting kinds range from 10s-15s, with feeding sorts at 9s 6d-10s per 112 lbs free on rail. Imported firm. Californian quoted 43s-47s ex store, Chilean Chevalier 50s-53s ex ship, both 44s 8s. No. 4 Canadian Western 33s 9d, Danubian 33s 6d, both ex ship per 400 lbs. Maize firmer. Plate ex ship 40s 9d, No. 1 40s 3d, Gal/Foxanian 40s 3d, Bessarabian 40s 9d, both ex ship, arrive, all per 480 lbs. Oats: English firm at 9s-10s 6d per 112 lbs free on rail as to sample. Imported dearer. Plate ex ship 12s 6d, 23s 3d, landed 23s 3d, No. 2 Canadian Western ex ship 22s 9d, landed 26s 9d, No. 3 ditto ex ship 24s 6d, landed 28s 6d, No. 2 Canadian feed landed 24s, all per 320 lbs. Oatmeal firm, with a hardening tendency. London-made flaked, also rolled

oats 17s 6d, medium and fine cut 17s, coarse and medium pinhead 17s, ordinary Scottish oatmeal 18s, American 16s-17s per cwt. Millers' offers firm to dearer. Broad bran quoted 8s, ordinary ditto 7s 6d, middlings 9s, fine ditto 10s, bags included, ex mill. Light oats 6s 3d, powdered oat husks 7s 9d, feed oatmeal 9s 3d, ground oats 12s 9d free on rail per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to January 5	143,488	214,878	104,156	397,250
18 weeks to January 5	6,730,283	8,300,706	6,370,493	5,006,558
Average price of English wheat per cwt.	9 4	9 8	10 9	16 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

1923	214,878	179,657	35,301	9 8	9 5	9 9

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 10th, is as follows:—Pig-iron: The return to normal business discloses a slightly weaker tone in the market. The fact is that we are again feeling the effect of French and Belgian competition, especially in neutral markets. No. 3 Cleveland G.M.B. is now quoted 99s per ton, whilst East Coast mixed numbers hematite remains at 102s 6d per ton. Manufactured Iron and Steel:—Makers are fairly well off for orders for some time. Current quotations are:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron Ore: There is no disposition to lower the price of good ores, and the price of best rubio is 25s per ton c.i.f. East Coast ports, but very little new business is passing, as works have fairly good supplies.

Our Sheffield correspondent writes:—Business in the iron and steel trades has not yet got into its stride after the stoppage and stocktaking has interfered with market activity. There has been little buying of foundry pig, but there is a brisk demand for hematite and basic. Conditions continue to improve in most branches of the steel trade, and a good deal of the idle plant has been started since the end of last year. Makers of files and engineering tools of many kinds are booking new orders every day. The railway contracts are bringing a good deal of acceptable work to Sheffield. With the growth of business in the finished lines some modification of the recent severe depression and more satisfactory

prices should follow. Rather better reports of trade with South America and other foreign markets are reported. Prices, although unaltered, are firm. It is said that makers are desirous of keeping their quotations low in order to foster the upward movement of trade. Firms generally have been carrying out substantial economies in their establishment expenses, and should be able to work at a profit henceforward unless wages are forced upward, of which there is some probability in certain directions. Notwithstanding the vast development of road transport, the railway companies find the traffic put on their systems almost more than they can cope with, and there is a crying need of more locomotive and rolling stock. The fuel market continues strong, and prices of house coal have again been advanced. Coke is scarce, and higher prices than the minimum rates are being obtained for prompt delivery. As a number of blast furnaces are about to be put in blast, the next few weeks will see a substantial increase in the demand for coke. Best South Yorkshire steams are firm at 22s per ton at pits, Derbyshires are 18s less, and Blyth steams are quoted at 24s or 24s 6d. Blast furnace coke is quoted variously from 24s to 26s at ovens.

Our Cardiff correspondent writes:—A disquieting situation has been created by the developments of the week in regard to the third shift question. The tippers have once again kicked over the traces, and operations on the night shift have been suspended since Tuesday night. Their leaders had agreed to an armistice until Saturday, January 19th, but their action in doing so was repudiated by the tippers, and the latter are threatening to call out the day shifts if any further efforts are made by the Great Western Railway Company to persuade the night men to resume work. Negotiations are in progress, but a lock-out is regarded as a contingency of the future if a settlement is not agreed to by the workers involving the permanent operation of the third shift. The workers were balloted on Thursday on the question of the service of notice for the termination of the national wages agreement. The figures of the poll are not yet to hand, but they will in all probability show a big majority in favour of the recommendation of the National Executive. The South Wales leaders are once again reviving the demand for unification and a national pool. The

Friday's market the tendency was firmer, while somewhat irregular with regard to forward positions. Cash sold at £244 10s to £244 15s, and three months £245 10s to £246 15s to £246 5s. English ingots quoted at £245 to £246. Copper displayed a good deal of irregularity during the week, while easier on balance. Standard cash opened with business at £61 1s 3d, later advancing to £61 7s 6d, while receding to £60 17s 6d by the middle of the week, and three months fluctuating between £62-£61 12s 6d. At Thursday's market a good demand prevailed, and prices moved in buyers' favour, while somewhat irregular at times. Standard cash sold at £60 10s to £60 7s 6d to £60 10s, and three months £61 to £61 5s to £61 2s 6d. No material change occurred in prices on following day, while liberal trading took place. Cash sold at £60 10s to £60 11s 3d, and three months at £61 5s to £61 1s 3d. Electro's quoted at £66 10s-£67, strong sheets £93, wire bars £67, and best selected £65 15s to £67 per ton. Lead steady, and quoted at £30 12s 6d to £30 2s 6d, as to position. Spelter firmer at £34-£33 11s 3d, according to position. Antimony, English, £44 10s to £45. Aluminium, home, £115; export, £120.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Reports from the colonies seem to indicate that the rise in wool values has not yet reached high-water mark, and as demand is as keen as ever, topmakers in this centre are adopting a frankly protective policy in regard to new business. When the current selling season opened in Australia good 64's topmaking wool was costing about 52d, clean, delivered Bradford; to-day the quotation is about 58d, which brings in the top at about 5s 8d. But the discrepancy between cost and selling price is still apparent, and although some topmakers are quoting about 5s 8d for 64's, it is doubtful if sales can be made at anything above 5s 6d, except in very special circumstances. Marked differences in topmakers' quotations for crossbreds are also noticeable, and it is manifest that many firms are determined to wait for the ideas of users to come more into line with the wool market. Generally speaking, all quotations have been advanced, and this has tended in some measure to restrict the amount of new business. The outlook is regarded with confidence, however, and an advance on London prices is expected at the sale of crossbred wool to be held in Hull to-morrow (Friday). Spinners have booked some fair orders recently, and although it is difficult to make more money the tendency is towards a higher level of values. Machinery is fairly well employed, and some nice orders have been taken on export account. The piece trade does not show much change, but demand on home account is expanding, and more interest is being shown in

Botany coating serges. The bulk of the trade, however, is still being done in crossbred fabrics. Overseas markets are comparatively quiet at present.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Advices this week from Australia clearly indicate that wool still occupies a very sound position. Prices are moving to a still higher level, and as far as one can see there is a well-sustained demand, which seems able to absorb all the wool that is being catalogued. We certainly thought there would be a slight further upward movement when the Sydney sales opened, and although the trade is at the moment without any advice from Hobart, there is certain to be equally as good a demand for the Tasmanian clip which is being marketed this week. Advices from Launceston say that prices are 5 per cent. dearer for merinos and comebacks, and 10 per cent. higher for crossbreds. What a great change has come over the wool supplies of Tasmania compared with 25 years ago. We well remember that time when there was seldom a bale of crossbred grown in the island, but Tasmanian breeders, who were the pioneers in the improvement of the original merino, also set the pace in crossbreds, and to-day some delightfully soft handling wools from 46's to 58's are being grown annually. We are glad that Tasmanian sheep-breeders are not so strongly inclined as those in New Zealand to produce deep 40's wool, and so long as they grow halfbreds and comebacks, the trade will not grumble. At the same time, some of the best and highest class spinning merino wools are grown in Tasmania, and it will be a pity if the work of 100 years is sacrificed by some of the leading merino stud sheep breeders by embarking on the breeding of crossbreds. Tasmanian comebacks have certainly come into their own during recent years, and will continue so to do. Here quality is often the top side of 60's, although they are described as comebacks, and these wools to-day are certainly filling a very useful place.

THE COTTON TRADE.

MANCHESTER, January 10.

Although the market during the past week has been rather unsettled by the fluctuations in raw material rates, and the uncertain political situation, inquiry in some directions has broadened. A substantial part of the demand, however, has been at very low rates, and not much progress has been made in the way of booking contracts of importance. In cloth for India there has been a big inquiry with a very fair turnover in light fabrics. Offers in grey staples have tended to improve, and a few more transactions have been put through. The general trade advices from India are encouraging, but Manchester prices are resisted. Only occasional sales have been mentioned for China, chiefly in fancies. Very little has been done for the Near Eastern outlets. Further buying has taken place in fine goods for the United States. Home trade buyers at the moment are nervous. In American yarns for home use prices have been irregular when tested, and although fair lines have been reported in medium counts, there is a tendency for spinners to lose ground. A moderate turnover has taken place in Egyptian

VEGETABLE OILS AND OILSEEDS.

The feature of the market is the steadiness of linseed oil, which continues scarce on spot, and in near positions about £43 per ton naked, ex Hull mill, being the value for prompt and £41 for January delivery. A fillip has been given to the tone by reported inquiries on American account for March shipment. It is known that the mills on the Eastern seaboard are short of seed, and that the stocks of oil are low, and there also seems to be some anticipation of a reduction of the high tariff on foreign linseed oil in the next month or two.

In the oilseed section Plate linseed is steady, but not much trade is passing at the present level of values. Seed about to be shipped is quoting round £18 5s, and January-February £17 10s. Egyptian cottonseed, after some reaction, is again firm and dearer.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

The market hide position has again taken a firmer tone, as slight advances of from ½d to ¼d were obtained at the Bermondsey auctions on Thursday last. Best ox sold from 6½d to 8½d, seconds making from 6d to 7½d. Cows sold from 6d to 6½d for best, and calf from 6d to 13d. Wools were firm at 7s to 14s 6d, and hogs from 4s 2d to 18s each. The demand for S.A. frigorifics is only moderate here, but both the U.S.A. and the Continent are buying freely at high prices, and stocks at origin are cabled as closely sold up. Argentine ox have sold on a basis of 8½d to the States, cows at 7d c.i.f. Dry hides remain rather dull, and the only sale worth noting has been a deal in dry River Plates at 9d. Cables from New York report the Chicago position as steady, with best heavy steers still offering at 14 cents.

Quite a good business is passing in sole leather, and all weights of bends are coming in for attention. The snowy weather has also led to a good demand from repairers, who have been buyers of wet salted bends 10-12 lbs average from 26d to 36d per lb. Pinned offal is in very short supply, with tanners well booked forward. Rough tanned E.I. kips are again dearer, and quotations from Madras are another 1d up this week.

The shoe trade is improving, most manufacturers reporting a fair volume of trade, this favoured by the bad weather.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 11.

SUGAR.—The market remains in much the same condition as that prevalent for some time past. Trade in general pursues a quiet course, as demand both on grocery and manufacturing account is measured by wants of pressing necessity, but the undertone is one of distinct firmness in face of temporary artificial scarcity. This has mainly been brought about by movement of the Czechoslovakian crop being interrupted owing to frozen rivers, so that the port of Trieste is now more freely patronised for the circulating of their sugar. In addition to this, certain quantities already landed in the United Kingdom market are in strong financial bands, and same are marketed in a very judicious manner. Raw refining kinds remain in small supply, and recent rates are required. British refiners' goods were disposed of to a moderate extent at previous level of prices. Messrs Tate and Lyle's cubes, 62s, 63s; granulated, fine and coarse grain, 60s 7½d; No. 1, 60s 4½d; No. 2, also London and T.L., 60s 1½d; ditto, February, 60s; March, 59s; yellow crystals, 55s 7½d; caster, 60s 9d to 62s 10½d, on spot. Globe granulated, January delivery, London, 59s; ditto,

January, Greenock, 58s. English grown granulated, ex works, Norfolk, 59s 3d. White Java, spot, 57s 9d to 58s; May-June, steamer, 26s 6d, c.f. and i., London. Czech granulated, spot, 58s 9d to 59s; Dutch ditto, 58s 9d to 59s. Shipment parcels of continental sugars largely nominal, as offers are not very definite. Cuban, basis 96 per cent., March, 23s 9d; Peruvian, ditto, February, 24s; March, 23s 9d, c.f. and i., U.K. White terminal market generally steady, but only quiet trading ensued. January, quoted 30s 3d; March, sold, 28s 4½d; May, 27s 1½d; August, 26s 10½d to 27s 3d. Cuban receipts last week, 56,531 tons, against 52,938 same time last year; exports, 36,760, against 40,466; stocks, 41,933, against 49,343; and factories at work total 129, against 84 last year.

COFFEE.—There is still a run on all fine qualities, and market is strong, owing to available quantities being decidedly small. A feature is found in the strength of continental demand, and who appear to be working on empty cupboards as far as concerns mild descriptions. Common grades firm, with a fair inquiry. Futures slow. March, also May, quoted 70s per cwt.

COCOA steady, and spot sales include fine Trinidad at 45s. Accra, F/F quality, for shipment, sold, 29s to 30s 6d and 30s per cwt, l.o.b., and further buyers.

TEA.—63,000 packages Indian offered in auction aroused active support, and prices on balance disclosed a firm tendency. Bulk of offerings just now consists of medium and inferior growths. Pekoe, sold, is 4½d to 1s 7d; broken pekoe, is 4½d to 1s 11½d; pekoe souchong, is 5½d; orange, is 5½d to 1s 9d; broken orange, is 5d to 2s 2d per lb, in bond. China teas remain a quiet market. Of Ceylon, 28,300 packages were submitted to auction, which were well competed for. All the finer qualities realised a slight advance, while common and medium proved fully steady. Pekoe sold, is 4½d to 1s 10½d; orange pekoe, is 7½d to 1s 11½d; broken orange, is 6d to 2s 1d per lb. 8,000 packages Java and Sumatra were auctioned, and met quite a strong demand at full to dearer rates, especially the better liquoring sorts. Pekoe sold, is 3d to 1s 7½d; broken ditto, 11½d to 1s 7½d; pekoe souchong, is 2½d to 1s 4½d; orange pekoe, is 3½d to 1s 7½d; broken orange pekoe, is 2½d to 1s 10d.

RICE.—With reserved offers on the part of Eastern shippers, the market is very steady, with business on a moderate scale. Two Stars Rangoon, spot, 17s; February, 15s 6d; Spanish, No. 3 for shipment, sold 20s; and Italian, ditto, 20s, c.f. and i. London. Only few offers from Carolina come to hand. Rangoon beans, spot, 10s 9d; Japanese peas, spot, 23s; February-March, 22s 4½d cwt. Rangoon beans, spot, 10s 9d.

SPICE.—Pepper was a quiet market, and prices for white proved lower in forward positions. Black Singapore, L.S., February-April, quoted at 4½d; white Muntok, January-March, sold, 6½d; February-April, 7d; March-May, 7½d. Zanzibar cloves, January-March, is 3½d lb. Tapioca steady, quiet. Singapore flake, January-February, Havre, quoted 31s 6d; Penang seed, January-February, London, 30s 3d; Sago flour dull, January-March quoted 15s 6d; desiccated coconut in fair demand; fine cut, spot, 44s; medium,

partly on money and partly on the disturbed state of the exchanges, both Paris and New York rates causing a little uneasiness, though in general the market does not consider that too much importance is to be attached to the fact that the Paris Bank rate is now 2 per cent. above our own. Fine three months' bills have commanded $3\frac{3}{8}$ per cent. towards the end of the week, and the April Treasury bill has been offered at $3\frac{5}{16}$ per cent., but the position has been relieved by some buying of March and April Treasury bills by the India Council.

	Jan. 18, 1923.	Jan. 11, 1924.	Jan. 4, 1924.	Dec. 28, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses/Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	3 $\frac{3}{8}$	3 $\frac{3}{8}$	3 $\frac{3}{8}$	3 $\frac{3}{8}$	..

The Bank return showed a decline of £1,118,300 in the circulation and an addition of £13,200 to the bullion stock, so that the Reserve increased by £1,131,500. The completion of liquidation of the market's year-end borrowing was reflected in a reduction of £7,401,500, but there was an increase of £1,630,000 in Government securities, notwithstanding an addition of £2,171,900 to Public deposits, and the contraction of Private deposits was therefore somewhat less than the repayments at £6,866,900. The Private deposits, however, were £24,300,000 below the amount at which they stood a year ago, and this provides some light on the rapidity of the change from ease to stringency in the short loan market. The reduction in liabilities and increase in Reserve produced an improvement of 1.5 in the ratio, at 18.5 per cent. A further large reduction in currency notes outstanding is shown in the return for the week ended January 16th. The reduction amounts to £5,793,200, bringing the amount outstanding down to £281,987,100, which includes £1,425,100 for notes called in but not yet cancelled. The fiduciary issue is £231,112,000, or £17,078,900 below the maximum.

THE STOCK MARKETS.

The Stock Exchange markets have been mainly governed by the movements in the foreign exchanges this week, the fluctuations in the franc and dollar causing some anxiety to investors. War Loan and Conversion stocks suffered at first, but rallied later. Upon the announcement of a sounder policy of taxation in France, French bonds moved upward. German and Prussian bonds made rapid gains on mysterious buying from the Continent, supported by speculators here. Brazilians went back after their recent advance. The threatened railway strike exerted an unfavourable influence over Home Railway stocks. The rubber share market was firm, in spite of the lack of demand for the raw material. In the oil market buyers of Shells and Royal Dutch were noticeable. Kaffirs were inclined to firmness, owing to the high price for gold.

THE COMMODITY MARKETS.

The threatened railway strike and the disorganisation of the foreign exchanges have not had the adverse effect upon the commodity markets which might have been expected. Considerable business is reported as under negotiation in the cotton trade. A further sharp advance is recorded in wool values. Sugar, coffee, and tea were firm. Wheat at times was inclined to move in sympathy with foreign exchanges, but expectations of increased Argentine shipments caused lower prices. Rubber was quiet. A marked improvement is noticeable in the Cardiff coal market, and our Sheffield correspondent states that the coal market there is "active in all departments." But a "set-back" is reported in the pig-iron market. The steel trade is quiet, and competition from foreign steel is pronounced. Tin moved upward, while copper experienced further demand. The vegetable oil market is firm. Hides advanced.

FOREIGN EXCHANGES.

In the foreign exchange market there has been a week of excited dealings consequent on the demoralisation of the French franc and the further sharp depreciation of sterling on New York. From a closing price of 89.35 on the 11th the Paris rate moved up rapidly, until at one time on Monday it was quoted as high as 98.25. From this figure there followed some recovery as the result of the vigorous campaign in France to stem the present panic and the proposals both for the tightening up of exchange regulations and for increases in taxation. By the 17th the rate was brought again for a time just below 90, but the announcement that the discount rate of the Bank of France had again been raised brought a reaction, and the quotation at the close of business was again up to 91.80, while yesterday morning it was again one franc higher at 92.80. These movements are the expression of lack of confidence in the financial position of the Government, and are discussed in subsequent pages. As usual, the Belgian franc has depreciated in sympathy, but on this occasion the movement has been somewhat more restricted, the rate being quoted yesterday at 102.60, as compared with 100.20 a week ago, having at the highest point on the 16th reached 106.25. Forward rates in Paris have jumped to 30 centimes per month above spot, as compared with 13 centimes a week ago. In Brussels they have narrowed to parity for one and to two centimes above for two months ahead. The Italian rate has again remained remarkably steady, with the same quotation of 97 $\frac{3}{8}$ yesterday as a week ago, having moved during the week within the range of 94 and 99. The New York rate, under the continued influence of the political outlook and heavy Continental purchases of dollars, has again been exceptionally weak. From a closing rate of \$4.28 on the 11th it moved slowly, until on Monday there was a heavy drop to at one time as low as \$4.22 $\frac{1}{2}$. After that there was a slight recovery up to \$4.27 on the 16th, but since then there has again been a reaction, and a further sharp drop yesterday morning to \$4.23 $\frac{1}{2}$. Forward rates have widened a little from $\frac{1}{4}$ last week to $\frac{1}{2}$ cent. per month above spot. So long as the political outlook remains obscure, and so long as feeling on the Continent is in its present panicky state no substantial recovery can be expected. In conformity with the temporary stabilisation of the mark at a fixed ratio with the dollar the Berlin rate has moved somewhat against us. Amsterdam, on the other hand, has depreciated from 11.37 $\frac{1}{2}$ to 11.43 $\frac{1}{2}$, although it is unlikely that this movement can be brought into direct relation with the sudden demand from Holland for German bonds, which are apparently being bought up in the hope of the German Government fixing interest payments on old paper mark loan at some fixed ratio to gold. Vienna has moved from 305,500 to 303,000, but Stockholm, which usually moves with the dollar, has risen from 16.23 to 16.25 $\frac{1}{2}$. On the other hand, Madrid shows a sharp appreciation from 33.53 to 33.25 $\frac{1}{2}$, and Switzerland has also moved against us from 24.66 to 24.50 $\frac{1}{2}$. Among the remaining Northern countries, Christiania has depreciated further from 29.77 $\frac{1}{2}$ to 30.02 $\frac{1}{2}$, while Copenhagen shows a smaller rise from 24.44 to 24.45 $\frac{1}{2}$. Helsingfors is 170 $\frac{1}{2}$, as compared with 172. Riga has followed the dollar from 22.07 $\frac{1}{2}$ to 21.80. In Central Europe, Warsaw, as an exception to its recent collapse, shows a slight improvement, the rate having improved from 46 $\frac{1}{2}$ millions to 41 millions. Prague has moved slightly against us, and Belgrade also shows some improvement, while the Bucharest rate at 860 remains much the same. Athens, as the result of M. Venizelos' activities, shows a marked improvement from 233 $\frac{1}{2}$ to 217 $\frac{1}{2}$. In the East the rupee at 15 5 $\frac{3}{8}$ d is much the same as a week ago. The yen, however, has gone sharply against us from 25 0 $\frac{1}{8}$ d to 25 1 $\frac{1}{2}$ d. The disturbed state of the dollar exchange has restricted dealings on the silver market, and there is a general feeling that, with steadier conditions, silver prices will go somewhat lower. Hong Kong at 25 3 $\frac{3}{4}$ d and Shanghai at 3s 3 $\frac{3}{4}$ d are both somewhat cheaper. In South America, Rio has reacted from 6 13-32d to 5 29-32d, a disappointing movement after its recent rise. Buenos Ayres at 41 $\frac{1}{2}$ d is also slightly lower, and Monte Video has dropped from 46 $\frac{1}{2}$ d to 45d, while Valparaiso has depreciated again from 40 to 41.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 12th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,582	From Revenue	19,911
Interest, &c., on Debt	759		
Sinking Fund	500		
Sundries	751		
Increase in balances	237		
Reduction of Debt	10,082		
	19,911		19,911

Revenue for the week ended January 12, 1924, was slightly lower at £19,910,545, against £20,188,313. Customs receipts were down at £921,000, against £1,924,000, but Excise was higher at £2,742,000, against £1,345,000. Post Office receipts amounted to £1,250,000, against £800,000, while Special Receipts reached £1,400,000, against £558,916. Property and Income-tax yielded £6,088,000 and Super-tax £2,650,000, against a combined total of £11,362,000 for the corresponding period. The week's operations reduced the National Debt by £10,082,000, and caused the following changes:—

	£		£
National Savings Certificates	50	Bank of England Advances ..	4,000
		Public Departments	4,900
		Treasury Bills	1,052
		Sundries	180
	50		10,132

The floating debt was reduced by £9,955,000 to £847,695,500.

FINANCIAL YEAR, 1923-24 (April 1 to January 12, 1924).

	£		£
Total Expenditure ..	614,681,440	Raised by Revenue ..	567,061,377
		Net Borrowings	43,873,375
		Decrease in Balances ..	3,746,688
Total	614,681,440	Total	614,681,440

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Great India Peninsula Railway, Bank of New South Wales, Alexander's Discount and Rio de Janeiro Flour Mills and Granaries. Mr Thomas Buckland at the meeting of the Bank of New South Wales urged the necessity for rigid economy by Government and municipal bodies. At the meeting of Alexander's Discount Company Mr. Colin F. Campbell reviewed money market conditions, and deplored the action of nervous investors in trying to get their capital out of the country. At the meeting of the Rio de Janeiro Flour Mills and Granaries Mr Richard Foster pointed out the improved conditions in Brazil, and expressed his confidence in the future of that country.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

WESTMINSTER AND THE CITY.

A WEEK of political excitement, which began with nervous repercussions in sterling exchange and the security markets, ends with exchange and securities steadier, and with political events taking precisely the course which had been generally anticipated. The life of the Baldwin Government hangs by a thread, and this week's Parliamentary debates remove all shadow of doubt that the thread will be snapped on Monday, or at latest on Tuesday, night. The King's Speech contained no surprises, unless it be considered surprising that a Cabinet,

which knew itself to be on its deathbed, should adumbrate a programme of legislation which would occupy the best years of a young and sturdy Government. For Mr Baldwin to outline a series of measures which he will not be able to introduce may savour to some of farcical make-believe, but it is at least dignified and quite possibly clever from the electoral point of view. We are, however, irresistibly reminded of Captain Hook's soliloquy in "Peter Pan":—"Something impels me now to make my death oration, lest when dying there should be no time for it." On two points of non-controversial foreign affairs the speech contained welcome references, namely, to the Tangier settlement, and to the approach of an agreement with Washington over the rum-running affair and the three-mile limit. That this irritant of Anglo-American relations is about to be removed is first-rate news, and details of the means by which this is to be accomplished will be awaited with great interest. On the election and its result the Speech was commendably frank. Tariffs, as a remedy for unemployment, were suggested to the country and rejected. The Government, therefore, fall back on other plans, such as the extension and amendment of the trade facilities and export credit schemes, and "the proposal of the Imperial Conference for expediting and assisting the execution of certain public enterprises throughout the Empire by the grant of financial aid from public funds, and to an extension of the contributions towards the cost of public utility works, &c." From this the Speech goes on to an elaborate programme of domestic reform—"a conference on agriculture, development of juvenile unemployment centres, removal of thrift disqualification for Old Age Pensions, intensified housing campaign, amendment and consolidation of Factory and Workshop Acts," and so on. The one glaring omission from the speech was any reference to electoral reform, which was a case where, if anywhere, Mr Baldwin might safely have stolen the thunder of other parties. We trust the omission does not mean that the Conservative Party will oppose the measures which will presumably be introduced for making the House of Commons a more accurate picture of the opinion of the electorate.

This programme Mr Lloyd George described as a "re-hash of the Liberal manifesto, or the Labour manifesto without the seasoning," while Mr MacDonald described it as "borrowed or stolen" from other parties. But, as the latter was quick to realise, the enunciation of all these projects by Mr Baldwin's Cabinet opens up for Labour a wide field of legislation, which may apparently be exploited without the expectation of Conservative opposition. Why, it may be asked, if there are so many projects common to several parties, should a Coalition Government not be formed with a definite majority in the House of Commons? The answer is that we have had recent experience of Coalition, and have found out that, in days of peace, when there is a distinct cleavage of view on main issues, Coalition is insincere and unsatisfactory. In our view the time has come when the existence of the three-party system must be squarely faced, and the experiment of a minority Government given a fair chance.

The other political leaders followed Mr Baldwin's example in refraining from springing any surprises on the House of Commons. Mr Lloyd George on Tuesday, and Mr Asquith on Thursday, made it quite clear that they have not departed from the policy enunciated by the latter just after the election; and, while there may be some Liberal abstentions, it is now certain that at least a sufficient number of Liberals will go into the Lobby with the Labour Party to secure Mr Baldwin's defeat. Mr MacDonald, for his part, pursued the most obvious and direct of courses, by deciding that this presumed defeat should take place on a plain and ungarnished motion of "no confidence," and this was moved on Thursday from the Labour benches as an addendum to the Address. The tone of the speech in which the Leader of the Opposition announced this decision was quite unexceptionable in tone,

erring neither on the side of elation nor of diffidence; and, if we except one passage about the fomentation of class hatred, the subject-matter and phraseology was well-considered and responsible. Two passages deserve particular attention. When arguing that the practical working of a minority Government may be "a good exercise for the independent intelligence of hon. members of all parties," Mr MacDonald spoke of Parliament as "a great national institution, which I wish to leave behind us all more powerful, more respected, and with more authority than it has even in our days." This fervent constitutional pronouncement we accept as entirely sincere. The other passage to which we refer is that in which Mr MacDonald dealt with the preference duty proposals, which Mr Baldwin made to the Imperial Conference, and which, as in duty bound, he incorporated in the King's Speech. We discuss this question in a subsequent article in connection with the work of the Imperial Conference, and will here say no more than this, that, in maintaining the sovereign right of the British Parliament to decide such matters, and in promising to give the House of Commons the opportunity of ratifying or rejecting the preference proposals, Mr MacDonald has kept faith with the British electorate, and at the same time observed to the full the pledge which Mr Baldwin gave, and the only pledge he could give, to the Dominion Premiers.

The week ends, as we have said, with signs of returning confidence in the financial world. We venture to hope that the effects of ill-considered panic-mongering have now run their course. To those in whom nervousness is strongest we would commend the words which Sir Eric Geddes addressed to the Federation of British Industries, on Thursday:—"To the members of this Federation, and to every individual in the country I should like to say: This is not a time for party or personal prejudice; it is a time when we must keep our heads and look only to the good of the country." For our part, we have in recent issues given our reasons for believing that Mr MacDonald will pursue a path of moderation, and that if he leaves that path he will quickly cease to be Premier. At the same time we commend to Mr MacDonald and his colleagues Sir Eric Geddes's expression that "the commercial nerves of the world are raw, and Great Britain is the most important international economic nerve centre." When nerves are raw, "words or actions which in normal times would scarcely ripple the surface of confidence, may now cause a storm." Confidence is the basis of the activity and prosperity of the nation. To restore it is the first and not the least delicate task which will test the powers of statesmanship of those who will presumably take over the reins of Government next week.

PREFERENCES AND THE WORK OF THE IMPERIAL CONFERENCE.

We cannot deprecate too strongly the attempt that is being made in some quarters to make out that Great Britain is breaking faith with the Dominions over the preference duty proposals which Mr Baldwin laid before the Imperial Conference. Everyone both here and in the Dominions must know that the Imperial Conference has no power to make its decisions binding upon the British people, unless they are sanctioned by the British Parliament, and we are glad to see that responsible organs in the Dominions are reminding Mr Bruce and Mr Massey of the indisputable and important fact that its decisions are equally subject to the acceptance or rejection of the Dominion Parliaments on their part. Most particularly is this so in the case of proposals involving taxation, as did those of Mr Baldwin. All that the Prime Minister could promise was to submit the proposals to the British Parliament. When he made the proposals Mr Baldwin had a majority. Since then he has been to the country; his tariff plans, of which the new preference duty proposals were an integral part, were rejected by the country, and he now has no majority. But in the King's Speech he specifically proposed to lay the preference plans before the House of Commons; and Mr MacDonald, his suc-

cessor-elect—knowing, though he does, that the present House of Commons will not accept them—has promised that the House shall be given full opportunity of pronouncing upon them. Thus, it is clear, every pledge that was given or could be given to the Dominion Premiers has been fulfilled up to the hilt. The opposite view, namely, that the Dominions can hold Great Britain to the proposals made by its politicians in Conference, and subsequently rejected by the British electorate, becomes all the more grotesque, if we imagine the position to be reversed. "Imagine," as Mr Harold Cox writes in the *Edinburgh Review*, "the Dominions being asked to pay taxes against their will for the benefit of the Mother Country! This was, indeed, exactly the issue that was raised in the American colonies in the eighteenth century..... They responded that they were not going to be taxed without their own consent; they rose in rebellion, and after long and bitter fighting they broke the bonds of Empire." We believe that the true aspect of the affair will be fully grasped in the Dominions; and, indeed, it was well stated by General Smuts himself at the Imperial Conference.

Another erroneous belief, current in some quarters today, is that if the new preference duties are ruled out the whole of the work of the Imperial Economic Conference is thereby rendered abortive. This idea will be dispelled by a study of the official Report of its proceedings, which has just been issued (Cmd. 2009, price 5s).

It is a heavy and bulky volume, not likely to find general perusal. The discussions cover a wider area than the trading preferences, on which public attention has naturally been concentrated. Incidentally, the Report itself is quite explicit on the point that we have just been arguing. In relation to tariff preferences, the report says: "As regards Imperial Preference, H.M. Government intimated that they intended to submit to Parliament the following proposals" (p. 241). Then there follows the familiar list—dried fruit, currants, other dried fruit, other preserved fruits, sugar, tobacco, wine, raw apples, canned salmon and lobster, crayfish and crabs, honey, lime, lemon, and other fruit juices. But the report records discussions on a very large variety of other important though minor issues, to which, in fact, the greater part of its time was devoted, and these recommendations will doubtless be carefully weighed and considered on their merits. In relation to these the ministerial pledges of the late Government are by no means explicit; but whatever they intended, there will now have to be discussion on all of them, definite or indefinite. The most interesting of these minor questions are wireless, the air, workmen's compensation, bills of lading (unification), merchandise marks, and a group of points dealing with what is euphemistically called "financial assistance and co-operation."

Take, first, wireless. In 1919 a scheme for the provision of imperial wireless stations, each of which was to be operated and owned by the Dominion in which it was situated, was submitted, but turned down by the Dominions. The present position, according to Sir L. Worthington Evans' statement to the Conference, is that

As regards Great Britain, the Government have decided, in the first place, to provide themselves a station which will be owned and operated by the Government, and, secondly, to license private companies to conduct services subject to an agreement with the Government as to the division of traffic between the companies and the Government station. We are pressing on with the Government station as quickly as possible. A site near Rugby has been secured. The orders for a considerable portion of the plant have already been placed, and I anticipate that the station will be completed before the end of next year, but we have not yet arrived at a satisfactory division of the services with the Marconi Company. In fact, the Marconi Company having at first accepted a pooling arrangement (as to which Sir L. Worthington Evans admits there were "disadvantages in a pool under which responsibility for the services would be divided") subsequently turned it down. The Government, when he spoke, was prepared "to divide the services on a regional basis"—the Canadian and South African stations being Government-owned, while those for India and Australia should be erected by the Marconi Co. "It is essential," said the then Postmaster-General, "in parting with the monopoly which the Government possesses by statute," that its own station, "to be erected partly for commercial and partly for strategic reasons," should have "enough com-

mercial traffic reserved" for it. It appears to have been on this that the Marconi Co. in September turned down the arrangement they had accepted in July. They then wanted to control the operating of messages. "What they are now asking is that they should have a licence to communicate all over the world, irrespective of any Government station at all. That we cannot agree to. That, you see, is not private enterprise; that is private enterprise excluding Government enterprise altogether, which we have never agreed to."

In view of this situation, of the strong objections expressed from Canada, Australia, New Zealand, and Newfoundland to anything like a private monopoly, and the dislike of both Canada and Australia to the regional scheme, the resolution finally accepted was a colourless one, affirming the importance of establishing an efficient Imperial Wireless Service. The position as between the Government and the Marconi Co. is anything but clear. The whole matter needs to be examined impartially and practically.

The Conference recommended the adoption by the Governments and Courts of the Empire of the rules relating to bills of lading recommended by the Brussels International Conference on Maritime Law. Sir P. Lloyd Greame stated that a Bill to this effect was actually on the stocks. It accepted the principles of the Colwyn Report on the Immunity of State Enterprises, and agreed that the several Parliaments should be asked to pass legislation in that sense. It adopted three resolutions designed to unify the position as regards compensation of non-resident workmen and seamen. It agreed that steps should be taken to promote inter-Imperial trade in pedigree livestock. In this connection Sir R. Sanders stated that the Government proposed to take up the Merchandise Marks Bill and carry it through at once. Minor resolutions dealt with uniformity in commercial statistics—a most desirable improvement.

A much wider door is opened by the resolutions under "Imperial Co-operation and Assistance." The Conference adopted a scheme under which the Imperial Government suggested—

that in order to facilitate the anticipation of work which otherwise would not be taken in hand for some years, they should give a contribution towards the interest charges on loans raised for capital expenditure of this kind by public utility undertakings (viz., communications, power lighting, water, drainage, irrigation, &c.). These undertakings might be under either public or private control or management.

Such schemes must be certified by the Dominion or Central Government concerned to be "in anticipation of normal expenditure." The maximum suggested grant is three-quarters of the interest charge for a period of five years. On this Sir P. Lloyd Greame stated that "early legislation" would be introduced.

In fact, a tolerably long Parliamentary agenda is contained in the recommendations of the Conference, and included in it are many sound, as well as some unsound, proposals which deserve serious consideration. It would be absurd to disregard the Report altogether because one section has been summarily rejected.

THE SLUMP IN THE FRANC.

THE foreign exchange market, already troubled with the weakness of sterling, has had a fresh upset to contend with in the shape of a sensational fall in the value of the franc. The franc celebrated the first meeting of the expert Committee on German finances by falling from 92 to over 98 to the £ in Paris—a unique drop for a single day, which among other records put the franc lower, for the time being, than the lira. This slump, at a time of year when the exchange is usually starting a recovery, reflects a state of anxiety in France which is bordering on panic. For a long time past the views of outside observers who have anticipated that sooner or later the franc must break, unless France either imposed much heavier taxation or came to a speedy understanding with Germany, have met with little agreement in France, where the current opinion has been one of great confidence in the franc not merely in word, but in action. Now that confidence is gone, and for some two or three

weeks Paris has been talking down the franc, in spite of the childish prohibitions of the Finance Ministry. Indeed, the initial efforts made by M. de Lasteyrie to stop the rot had the opposite effect to that which he intended, for they helped to rouse the public to the seriousness of the situation. The unhappy Finance Minister is, therefore, marked out as scapegoat, and it is probable that his place may shortly know him no more. The fall in the franc has been accompanied by a sharp rise of internal prices. For some time past internal prices have kept surprisingly low in relation to the exchange—thanks very largely to France's self-sufficiency. But prices are now on the move, and it is this fact that is making the question one of intense interest not merely to the well-to-do, but to every class throughout the country. This rise of prices is calling for increased currency in circulation, with the result that there has been a marked increase in the figures of the Bank of France, though they would normally fall after the turn of the year. These phenomena are, however, not to be confused with the causes which are a matter of confidence. The underlying facts of the situation are that for a long time past France has been spending more than the Government has been raising by taxation, but that so far the public has filled the gap by advancing the money mainly on short loans at a steadily rising interest. The moment the investor loses his faith in the franc, and really begins to fear that inflation is coming, he will not renew, far less continue to make further advances. When this happens the Government must resort to one or other of the unpleasant alternatives that are available for Governments which have not balanced their budgets. Already, as is described in a later column by our Paris correspondent, the Government is laying strong plans for increasing taxation, and this evidence of determination to meet the position has already caused the franc to steady itself. But with the elections coming on in April, and lasting over a month or more, it appears impossible for anything of a thorough character to be done in the way of taxation until the late summer. Meanwhile, if the public will not renew their loans, the gap must be filled by paper money. In other words, the adverse balance which has been allowed to grow year by year may suddenly be converted into monetary inflation. The amount involved is enormous, and the prospect may well give rise to serious concern. Moreover, in comparison with Germans, the French public is very much alive to monetary questions, and, with the example of other countries before them, is likely to lose no time in passing through the various stages of inflation. We already hear, for example, of rents being fixed on a gold or commodity basis, and there is talk of the use of a gold money of account.

It is important not to exaggerate the extent of the change of opinion. Stock exchange prices do not yet show any marked movements, which shows that the transfer of investments is not yet on a very large scale. But the new feature is that the lack of confidence has spread into the provinces, and, once it has begun, it is difficult to foresee the end. It is possible that the Government might attempt a compulsory funding of its short-term indebtedness; but this would be a desperate remedy, and would finally stop any possibility of future borrowing.

The fact that the movement is so largely psychological means that if the right move were taken the slump might, at all events, be checked even if the movement were not absolutely reversed. The only practical suggestion is that the Bank of France should use part of its very large gold hoard to buy francs. If the moment were well chosen, and action drastic enough, the exchange could undoubtedly be raised, speculators squeezed, and the widespread pessimism possibly checked for the moment. Such action would only be temporary, but it might give another breathing space during which the finances of the country might be improved and an earnest given of a determination to work for a practicable settlement of the reparation question. One thing is certain, and that is that desperate efforts will be made in the near future to check the movement. They have indeed begun; for though French opinion does not go to the heart of the matter and question the fundamental basis of French policy in recent years, it will certainly regard a continued fall in the franc as a sign of the failure of the Government. This unwilling-

ness to look below the surface is illustrated by the fact that almost every one in France draws the quite unreal distinction between M. Poincaré's foreign policy and what is called his domestic policy. The former is approved, but he may be turned out because of the internal situation, though this is clearly the direct result of the former. In any case, there is likely to be a definite move towards the Left as a result of the elections to the Chamber. The recent elections to the Senate, in which the Left was again returned in a large majority, throw no light on the situation in the Chamber for the reasons we elaborated a week ago, and the omens are certainly that there may be a substantial turnover. There is only one thing that could check this drift of opinion, and that would be any action on the part of a British Government tending to develop a breach in the entente, or that could be represented as pro-German. The existence of a Labour Government in England, provided it does not develop an anti-French position, will strengthen and encourage the Left parties in France.

In the meantime the international experts are at work on the problems of German finance and reparation, and we welcome the line that has been taken at the outset by General Dawes, who approaches his task with an open mind and an absence of preconception; a desire to do something practical, and a readiness to understand the point of view of the parties interested.

FOREIGN EXCHANGES IN 1923.

INSTEAD of the quiet recovery for which the market hoped during the period under review, the complete failure to discover a solution for the reparation policy and the forcible entry of France into the Ruhr early last spring has been reflected in the misfortunes of another twelve-month's deterioration. In the case of Germany this has degenerated into complete collapse. With regard to the franc and several other currencies, although measured over the year as a whole the additional depreciation was not much more rapid than during 1922, its acceleration towards the end of the period and a growing lack of confidence provide a gloomy outlook for the coming year.

To take first the little good that is to be found, we have that small group whose currencies have remained on a practically stable ratio with gold or with the dollar. The outstanding example is, of course, that of Austria, the one shining proof as yet of the value of concerted European action, soon, we may hope, to be followed by a similar experiment in the case of Hungary. It should not be forgotten, however, that the position of Vienna is still a delicate one, and that success is not yet finally proved. Again, the new currency of Lithuania, introduced in the autumn of 1922, has been maintained throughout the year on a virtual parity with the dollar. In the same way, still under the active guidance of M. Kalning, in Riga Latvian currency has also remained constant in terms of gold. Until almost the end of the year the same might have been said of the Estonian mark, but recent experience would suggest that an attempt has been made to maintain it at too high an exchange value. Finland's financial position is much more solid, but the possession of considerable foreign balances and favourable trade figures in 1922 has led to the fixing of the exchange value of the mark at too high a rate, and in consequence there has been a swing round this year to a heavy adverse trade balance, and this, combined with a poor harvest, has brought a certain temporary depreciation towards the end of the year. Among other of the new States of Europe, where a vigorous policy of virtue in currency affairs has brought the reward of relative stability, is Czechoslovakia. The krone has moved within narrow limits during the year, and the effects of previous somewhat over-rapid deflation are now gradually wearing themselves out. Jugoslavia, on the other hand, is now in the painful throes of a vigorous deflationist policy, and its Finance Minister deserves the same congratulation as did the late M. Rasín in Czechoslovakia for the energy with which he is carrying through his unpleasant task. As a result, so

far he has achieved an improvement and a relative stabilisation of the dinar. The currencies of Greece and Bulgaria both stand somewhat better than a year ago. Among the older countries of Europe, Sweden alone among the Scandinavian states has remained roughly on a constant ratio with the dollar, but its balance of trade is growing steadily more unfavourable, and it is by no means clear that it will stand the strain indefinitely. Holland, also, although the movement of German funds has caused some peculiar temporary fluctuations, has remained very stable. At the same time there are signs of uneasiness, and an unfortunately growing tendency to prefer dollar to home investments. Although it has depreciated somewhat over the period as a whole, the fall in the yen is much less than might have been expected in view of the terrible disaster of the earthquake. In India an improving trade balance and a cautious and able financial administration have resulted in the rupee remaining at a practically steady ratio with the dollar, and give encouraging promises for the future.

With these the list of relative stable currencies is exhausted, and the rest almost without exception is a record of progressive depreciation. At this point perhaps should first be mentioned two currencies which although they stand at a lower value than a year ago, would seem to have seen the worst, and already show some signs of improvement. The Turkish pound, although it has lost most of the recovery which followed on the signature of the Lausanne Treaty, is now making a hesitating and uncertain move upward, and the Roumanian leu is also improving somewhat from the almost complete collapse in the earlier part of the year. In neither case, however, is there ground as yet for any great optimism. Switzerland ended the year at a less favourable ratio to sterling.

At the same time general trade conditions show a quiet recovery. The Danish rate shows a further depreciation of about 2 kr. as compared with sterling, but an improvement on the extreme depreciation of the middle of the year. The banking crisis would appear to have been overcome, but bad prices for agricultural products are still an unfavourable influence. The recent adoption of the exchange stabilisation scheme gives promise under careful management of a quiet if slow recovery. The record of Norway, with a further depreciation of more than 5 kr. on the year, is again an unfortunate one, and the banking difficulties which came to a head in May brought a period of great anxiety. To a large extent these immediate troubles seem to have been overcome, but the continued depression in shipping and in Norway's staple exports make the outlook unsatisfactory. In Spain, trouble in the Riff, the strained position of national finances and political uncertainty produced a steady falling-off in the value of the peseta, and, so far at least, the change in régime, while it has brought little further depreciation, has done nothing to improve the situation. Political uncertainties and the absence of any ordered plan of economic development have resulted in a further heavy fall in the value of the escudo, and unfortunately there is nothing at present to suggest a change. This same depreciation which is so widespread in Europe has had again serious reactions in South America. In Montevideo the fall in value, measured, at least, in sterling, is smaller, but in Buenos Ayres there has been a sharp decline, as some increase in exports have been more than overbalanced by the heavy burden of foreign obligations, and the outlook remains unsatisfactory. In Rio the rate has fallen even more rapidly, and again difficulties of home finance and the burden of indebtedness more than compensate for any improvement in trade. Substantial hope has been raised by the visit of the British Financial Mission now in Brazil. For the larger part all individual factors to-day are overwhelmed by one common problem. The failure of the victors to deal reasonably with their defeated enemies, and to restore the reign of economic common sense.

* Millions. † Billions.

The history of the mark's collapse can be seen in detail in Table II. By the end of August the mark had ceased to have any meaning as a unit of international exchange. Its later movements until the improvement and provisional stabilisation with the introduction of the "Rentenmark," are of little importance, nor can the present phase give any promise of stability until the reparation question itself is settled. Apart from the rouble, by whose collapse it was preceded, the history of the mark can be paralleled by no currency except that of Poland. Unfortunately hardly any Government has yet been strong enough to readjust its finances to post-war conditions. On this its future depends.

While France, by its actions, has succeeded in completely destroying the mark, it has at the same time during the past year gone far to destroy confidence in its own currency. As the year went on, the difficulties of its financial situation became increasingly clear, and it has become equally clear that pressure upon Germany was no effective substitute for

the neglect to face its own internal problem. For the time being the impetus to trade given by increasing depreciation has disguised the seriousness of the situation, but more recently the increasing difficulty which the Government has found in placing loans on the home market shows that in France itself the situation is at last becoming understood. This realisation is to be welcomed by all friends of France as marking the possibility of a change in method and of resolute tackling of its troubles at their source. This lack of trust in their own currency came at an earlier stage in Belgium, which in August started to run away badly, the movement only being stopped by the announcement of a loan from France. The lesson to the Belgian Government was a salutary one, and since then its weight has been increasingly felt on the side of moderation. Of our three main allies it is only to Italy that we can look with any satisfaction. Depreciation there has continued, but at a very slow rate, and there have been lately increasing signs of stabilisation.

The history of sterling during 1923 has been a disappointing one. During the spring a steady improvement was recorded, which was helped rather than retarded by the conclusion of the arrangements for the repayment of the American debt. In April there was the beginning of a slight retrograde movement accountable for a large part by high money rates in New York. In July the rise in the Bank rate brought some improvement, but the pressure of autumn trade, the uncertain outlook in Europe, and the speculative advantage of the purchase of dollar securities all militated against sterling, and in October irresponsible suggestions of an official policy of inflation frightened holders of sterling in all parts of the world, and caused a rush to convert into dollars. On the top of this the disturbance of an election and the fear of the introduction by the Labour party of a capital levy brought still more pressure, and for the first time sterling felt the same threat of a flight to the dollar under which so many European currencies have suffered. It is unnecessary to point out that the fear of a capital levy, and of other "misdeeds" of a Labour Government are as ill-founded as the now exploded fear of inflation. Time itself will show the groundlessness of these scares. All that can be said is that the closing note of the year is a fitting one for the end of that thoroughly unsatisfactory period.

For the market the year has been one of relatively restricted business. Speculators have become frightened by repeated losses in one currency after another, and the reduction in business has been marked enough to make a considerable contribution to the reduction in the London Clearing House figures for the year.

A YEAR'S OVERSEAS TRADE.

THE Board of Trade returns, just issued, show that the total turnover of British merchandise trade in 1923 was £1,984 millions, which compares with £1,828 millions in 1922. The figure is also higher than that for 1921, namely, £1,897 millions; but 1920, the year of booming trade and high prices, remains the peak year with its total of £3,490 millions. In comparison with the preceding year, 1923, as will be seen from the following table, shows an increase in all items, whereas 1922 was notable for a decrease in imports of £81.6 millions, against an increase of £14 millions in total exports. But in making these comparisons it must be remembered that they are not exact, because, in April last the Irish Free State returns were separated from ours. Prices in the first half of the year were nearer to those of 1922 than those of the second half, especially in regard to such imports as textile raw materials. The summary for last year's value figures for imports, exports, and re-exports compares with 1922 as follows:—

CALENDAR YEAR.				
	1922.	1923.	Increase in 1923.	
	£	£	£	%
Imports.....	1,003,918,124	1,098,015,585	+ 94,916,686	+ 9.5
British exports....	720,496,426	767,328,656	+ 47,821,246	+ 6.8
Re-exports.....	103,777,871	118,572,694	+ 14,878,024	+ 12.6
Total exports.....	824,274,297	885,901,350	+ 62,699,270	+ 7.6
Excess of imports over total exports	179,643,827	212,114,235	+ 32,471,408	+ 18.0

The beginning of 1922 was a period in which the prices of many leading British manufactures were severely cut, but in the year under review it is probable that until the later months the level had been very little altered. A comparison between 1923 and 1922, therefore, is more complete than between that year and its predecessor. The growth of imports by £95 millions coincides with one in exports by £62 millions, and the excess of imports is raised by £33 millions to £212 millions. This latter figure is considerably under the figure for 1921, and, on the whole, is not unfavourable to our trade when it is remembered that foreign borrowings here have been on a fairly large scale in the past year or two. The present figure of £212 millions in our trade balance compares with one of £132 millions just before the war. The distance between those figures is, in view of the difference in the level of prices, not very great. But perhaps it should be pointed out that in the past year a new factor, our initial payments on account of the American Debt, has entered into the calculation. On the whole, we should judge that there has been an actual improvement in our trade balance in the past year. The following table shows how the balance of merchandise trade has moved month by month in the year under review:—

MOVEMENTS OF MERCHANDISE TRADE BALANCE.

Month.	Imports in 1923. Mln. £.	Exports in 1923. Mln. £.	Excess of Imports in 1923. Mln. £.	Excess of Imports in 1922. Mln. £.
January	99.7	76.7	23.0	4.9
February	83.9	67.3	16.6	0.9
March	90.0	70.0	20.0	13.2
April	86.4	75.3	11.1	15.9
May	89.5	83.3	6.2	21.8
June	89.3	73.8	15.5	23.4
First half-year....	538.8	446.4	92.4	80.1
July	76.8	68.3	8.5	13.1
August	88.7	66.3	22.4	15.1
September	83.3	72.0	11.3	8.0
October	99.9	82.5	17.4	16.3
November	101.6	75.9	25.7	20.0
December	109.2	74.5	34.7	27.5
Second half-year ..	559.5	439.5	120.0	100.0
Full year	1,098.3	885.9	212.4	180.1

The slight discrepancy in the totals in this table and the preceding is due to the fact that the official figures give corrected totals in advance of the corrected figures for individual months. As will be seen, the second half of the year saw a considerable increase in the import excess, which grew in the last two months by amounts which do not look quite healthy. An explanation with regard to December may be that there were people who thought that Protection would succeed at the election, and obtained quick supplies where that was possible in the time. It is significant that the growth of the import excess in the last quarter has been coincident with greatly increased prices for raw cotton on the New York market, and that in the same period the sterling-dollar exchange has moved rather markedly against this country.

In the following table we compare the quantities of leading foodstuffs and raw materials imported in 1922 and 1923, and the average value per unit:—

IMPORTS.

	Quantity.		Value per Unit.	
	1922.	1923.	1922.	1923.
Raw cotton	14,319,902	12,925,854	£ 5.96	£ 7.05
Sheep and lambs' wool ..	11,055,244	7,393,448	5.33	6.32
Flax, hemp, and jute	267,974	265,375	40.9	38.06
Rubber	1,430,822	1,795,657	4.39	6.04
Beef	11,754,092	13,860,145	2.49	2.31
Mutton and lamb	5,848,763	5,872,120	3.82	3.97
Wheat	96,379,634	100,929,623	0.612	0.53
Sugar	38,179,387	31,365,963	0.879	1.32
Butter	4,268,561	5,125,297	8.75	8.65
Tea	419,005,357	457,199,253	0.062	0.07
Tobacco	184,856,648	173,881,868	0.101	0.08

The next table gives leading British exports, and it shows general increases except in the textile industry. Here Yorkshire fared better than Lancashire, woollen and worsted tissues showing expansion. The falling off in cotton piece goods and cotton yarns is a noticeable feature

of the table. As will be observed, the textile machinery exports, contrary to the general tendency of engineering figures, are under those of 1922.

EXPORTS.

Locomotives	43	47	32	35
Motor cars and chassis	8	4	3	4

The list as a whole is striking. Perhaps the further expansion of coal exports attracts notice first, last year's high figure having been easily surpassed. The exports of 79,449,000 tons in 1923 compare with 73,400,000 tons in 1913. There is little need to stress what is perhaps the principal cause of the expansion over 1922's figures. The Ruhr expedition has also affected the development in the next three items in the list. In all these, however, as consideration of the details of the destinations of the exports in the official returns shows, there is reason to believe that there have been increases not due to political events. The figures for coal do not include bunker coal, under which head the total for 1923 was 18,158,188 tons, as against 18,259,027 tons in 1922. The official description of this coal is "Coal shipped for the use of steamers engaged in the foreign trade," and the figures therefore throw some light on our progress in the carrying trade. The position is seen in better proportion when it is recalled that bunker coal in 1921 was under 11 million tons, and in 1913 nearly 14 millions. While the iron and steel manufacturers' total in 1922 exceeded that of 1920, that of 1923, as will be seen from the table, is above the previous year's. This is one of the most encouraging features of the table.

The bullion and specie figures for the past three years compare as follows:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1921	£ 49,676,047	£ 59,348,158	£ 10,264,443	£ 12,045,422
1922	£ 34,542,167	£ 44,838,292	£ 10,099,890	£ 13,235,269
1923	£ 43,986,655	£ 57,434,355	£ 9,611,055	£ 11,687,714

In 1923 the surplus of gold exports over imports is £13½ millions, and is greater than in either 1922 or 1921, in both of which years it was under £10 millions. The export to the United States was £33 millions, compared with £26½ millions in 1922 and £55½ millions in 1921. British India took from us £19 millions, against £13 millions in 1922 and only £1½ millions in 1921, an indication, in view of the uses to which gold is put in that country, of growing spending power. France, which took £3.7 millions in 1922, received only £131,697 last year. From the Transvaal gold imports amounted to £37½ millions, compared with £30½ millions in 1922.

AMERICAN DOLLAR SECURITIES.

(BY A CORRESPONDENT.)

THERE can be no question that whatever controversial financial measures may or may not be put into force by a new Government, the idea of a "flight from the £" on the part of resident Britons to avoid the obligations of a duly-enacted law of the country is preposterous. Our legislature would not be likely to permit evasion of any tax that may be placed upon capital, by means of the simple process of transferring it to another country, and in any case the knowledge already possessed by the

Inland Revenue through the medium of individual income-tax returns, would be brought into full play.

Nevertheless, recent events have drawn attention to American securities, and it therefore may be of help to take a short survey of the field for investment in the first-class dollar securities of various Governments and municipalities, as well as the high-grade bonds of the American railroads and other industrial undertakings.

Before proceeding with a review of some of the better-known securities of this class, a reference must be made to the relation between the current price of the American dollar and the purchase of dollar securities, as it affects the would-be investor of sterling funds. The future course of the dollar exchange is not an open book, but one certain fact emerges; at the present time £100 produces for investment in New York only about \$425, a depreciation from the normal of over 14 per cent. Who is to say whether this position will last, go much worse (it touched 3.23 in 1920), or whether a few years, or even months, hence the dollar may not be climbing slowly but surely towards parity—4.8665? However remote this latter contingency may seem to-day, the purchaser of dollar securities has to consider the possibility of a loss on exchange of that part of capital invested which is now represented by this depreciation of 14 per cent. or so. Of course, other events may occur to annul part, or the whole, of any exchange loss, and on the other hand, a fall in the dollar rate to lower levels would correspondingly benefit the buyer of dollar bonds at the present time, but a prospective investor in dollar securities should keep this exchange factor before him, in case its incidence is not fully appreciated.

In the forefront of these dollar securities are the bonds of various Governments, including our own, those of the United States, Canada, and the many European Governments who have raised funds in America in recent years. For the purposes of this article the obligations of the American Government will be omitted, as the yield to be obtained from even the later Liberty loans does not reach 4½ per cent.—nearer 4¼ per cent. is the average. Further, the interest from certain American Government bonds when paid to non-residents is liable to super-tax in that country, although the tax does not become operative until quite a large figure is reached, so in the first instance it is proposed to investigate a few of the fairly numerous class of bonds which are not subject to American income-tax or super-tax when held by those who are neither citizens nor residents of the United States of America.

The following examples have been taken for illustration, as most, if not all, of these issues are quoted in the London financial Press weekly, and in some cases daily.

Security.	Price in \$.	Sterling Cost per \$500 Bond at \$4.25.†	Flat Yield in %.
U.K. of Great Britain, Conv. 5½ % Bonds, 1929†	108	127	5.10
U.K. of Great Britain, 5½ % Gold Bonds, 1937	99½	117	5.50
Dominion of Canada, 5 % Refg. Gold Bonds, 1952	100	117½	5.0
Canadian Pacific Railway, 4 % Cons. Debenture Stock (perpetual)	82	96½	4.90
Kingdom of Denmark, 6 % Gold Bonds, 1942	95	111½	6.30
Kingdom of Norway, 6 % Gold Bonds, 1952	94	110½	6.35
Government of Dutch East Indies, 5½ % Gold Bonds, 1953	90	105½	6.10
Do 6 % Gold Bonds, 1962	95	111½	6.30
City of Copenhagen, 5½ % Gold Bonds, 1944	91½	107½	6.0

* This yield is also the rate per cent. upon the sterling sum when invested; any alteration in the rate of exchange on the day the interest is received from that prevailing when the investment is made increases or decreases the return. In calculating the yields no account has been taken of any appreciation or depreciation towards the capital redemption figure that might accrue; the difference in the case of the longer maturities is trivial and only about ½ per cent. per annum for an 18-year bond like Denmark 6's.

† At any other rate of exchange, simply divide the price quoted by the rate secured, and the result will give the sterling cost of \$1,000—
e.g., \$1,000 United Kingdom 5½'s, 1937, at exchange 4.40—
222½.

‡ These bonds are exchangeable at any time prior to February 1, 1929, for 5 per cent. National War Bonds due February 1, 1929, at

All the above give a return affording some slight compensation for any adverse risk of exchange; the majority of the bonds in this class have no special security hypothecated to them, but they are a full obligation of the respective Governments and municipalities, and, as above mentioned, they are free of American income-tax to non-residents. The type of security is one that is familiar to the investor over here, as, but for the war, most of these issues would have been made in London, where in the old days first-class borrowers were customarily granted all the facilities they needed. There are a number of excellent State and municipal bonds which also give exemption to income-tax to non-residents, but the market for these securities is more restricted, and their quotations are not easily available on this side.

We take next to the consideration of the dollar bond proper—the first charge gold bonds of the great American railroads and the first mortgage bonds of the big industrial undertakings on that side of the water. These securities will be well known to numerous investors over here; it was only the necessity that arose during the war for the repatriation of our American holdings that denuded the London market of its supplies of these bonds.

American income-tax again crops up in this connection, although to the man of moderate means holding these bonds the trouble is not serious, but to many the requirements of another country concerning income-tax, however simple, are not looked upon with favour—the complications of the tax in their own country are more than sufficient. Many of these bonds contain a "tax-free" clause, so the restriction should not be sufficient to cause a lack of interest in their undoubted virtues. One other little drawback before we study a few examples: the "tax-free" clause has certain advantages to the wealthy American citizen, in the nature of exemption to him from the higher scale of tax his wealth imposes; at least that is the contention, although there seems to be some doubt in the matter. Consequently the price of the bonds in some instances reflects the demand from this source.

As in the previous table, most of the bonds mentioned below are quoted periodically in the London financial Press:—

Security.	Price in \$.	Sterling Cost per \$500. (\$4.25).	Flat Yield in %.
RAILROADS.			
Atchafalaya, Topeka, and Santa Fe General Mortgage 4 %, 1995.....	88½	104½	4.50
New York Central R.R., 1st Gold Mortgage 3½ %, 1997	75½	88½	4.60
Pennsylvania R.R., General Mortgage 4½ %, 1965	91½	107½	4.90
Reading Company, General Mortgage 4 %, 1997	90	105½	4.45
Union Pacific R.R., 1st Mortgage 4 %, 1947	92	108½	4.35
OTHERS.			
New York City, 4½ % Stock, 1957....	103½	122	4.35
United States Steel Corporation, Sinking Fund 5%, 1963	103	121½	4.85
New York Telephone Co., 1st Mortgage 4½ %, 1939.....	94	110½	4.75
General Electric Co., 5% Debs., 1952	102	120	4.90
Bethlehem Steel Corporation, 1st and Refunding 5%, 1942	95½	112½	5.25

The footnotes appended to the first table are equally applicable here.

Most of the bonds enumerated in the foregoing table can be called practically "gilt-edged," and those like New York Central Three and a-Halves and Pennsylvania Railroad Four-and-a-Halves—to mention only two—can without hesitation be placed in the strong box without fear of sleepless nights. An opinion often expressed by some of the leading investment authorities in the City of London is that bonds of this type are as good an investment as can be found the whole world over, as an invest-

the rate of £232 12s war bonds for each \$1,000, and as this amount of War Bonds is repayable at maturity for slightly over £244, the facility provides insurance against loss in exchange upon reconversion of the dollars to sterling, the actual rate taken for the operation being 4.30, which approximates to that now current. A fall in exchange below 4.30 can at any time be taken advantage of by sale of the bonds in New York, but an appreciation of sterling above 4.30 would not affect a holder, as until just before maturity the bonds are always convertible into £232 12s war bonds.

ment—disregarding the question of exchange. They are mainly a first charge upon the undertakings—concerns with a paid-up capital running in certain instances into hundreds of millions of dollars, and the service of these obligations is covered very many times over when past earnings are examined.

At the present time investors are being extensively circularised by American bond houses anxious to handle their share of any of the Old World's capital that may be thinking of migrating. Doubtless many of these firms are reputable institutions, but there are others. The development of bond selling in the United States since the war has been immense, and most of the financial houses and bond salesmen over there employ quite an army of "bagmen," or, as we would call them, travellers. These men—and women—are paid by commission, i.e., they receive a percentage of the amount of bonds sold. It follows that the object of these "bagmen" is to dispose of as many bonds from their bag as they are able, and to do this they often suggest to prospective clients that the bonds they have to sell are better than some already possessed by the client; to enable their speciality to be bought they offer to sell the existing holding, the sale of which provides them with a further commission. These resold bonds accumulate at times on the New York market, and whilst they may be quite good in their class, mostly they are of local interest. Investors over here, if contemplating this type of investment for proper reasons, should, in any event, confine themselves to the known issues, and unless they already have facilities for placing their commissions in New York, they should approach the head office of their bank, which is in touch with the best bond houses in that city, or, perhaps, better still, deal through the London house or agent of an American firm which specialises in bond dealing.

A REVENUE FROM BETTING.

ONE of the effects of the Parliamentary dissolution was to extinguish the Select Committee on Betting just at the stage when it was engaged upon its Report. This was a great pity, for it means that we have now merely the torso of a Report with the remainder of the body left incomplete. Still, the volume of evidence which has been issued, together with the draft reports of the chairman and Mr Foot, is of extraordinary interest and value. The price of the Blue Book is unhappily prohibitive (No. 139, price £1 2s 6d net); if it were not so costly, it might be read as eagerly as almost any "best seller" of the publishing season. For here we have in intimate detail a contemporary picture of Great Britain as seen through the eyes of bookmakers, officials of turf societies, and social reformers. We see all classes, more especially, perhaps, the working class, soaked through and through with the gambling instinct, which is one of the most universal and ineradicable of the great human instincts.

The Report of the Committee as a whole got no further than a statement of the legal aspect of betting, a description of betting methods, and a declaration that a tax on betting was "practicable." The Committee at its final meeting under shadow of dissolution declined to accept the view that a tax on betting was also "desirable." For the arguments as to its desirability we have to go to the chairman's draft report, which was under consideration when the Committee came to an end.

Mr Cautley (the chairman) sets forth the conditions of the problem in very clear language. There is legal betting and illegal betting. Men may bet on credit at the offices of bookmakers, provided that they do not go there themselves; they may communicate by letter, telegraph, or telephone, but they must not "resort" at the offices in person. Men may bet at racecourses either on credit or for ready money. But men may not bet for ready money except on racecourses. The law, wholly devoid of principle, receives little support from the public opinion of those (chiefly artisans and clerks) who want to bet for ready money away from racecourses. Hence there has grown up an immense volume of illegal "street betting," which in the large industrial cities is so highly organised that the police are helpless to stop it. The street book-

makers have the sympathy and support of the working-class population. Mr Cautley concludes that ready money betting cannot possibly be put down—the volume of it has increased greatly since the war—and concurs in the view of the Department of Customs and Excise that credit and racecourse betting cannot be taxed if ready money betting be left illegal and unrecognised. For this would be to encourage illegal betting and to discourage legal betting. He, therefore, holds that, while street betting should continue to be banned, ready money betting in registered offices should be permitted. The effect in his view—and in that of the street bookmakers who gave evidence—would be to remove ready money betting from "pitches" and "closes" to the comparative respectability of small local offices. The number of these offices which would be necessary to accommodate the business in industrial cities is startling. A Glasgow street bookmaker—Glasgow goes in as thoroughly for betting as it does for Socialism—reckoned that two offices for every four working-class streets would be enough, though his own evidence suggested that this provision of lawful betting centres would not be nearly sufficient to cope with the demand of backers. The four streets at present occupy the energies of seven bookmakers and agents, who take from their clients in stakes £300 a day!

The original suggestion that betting transactions could stand a tax of 10 per cent. seems quite untenable. Mr Cautley reckons in his Report that credit bookmakers in large offices have such a high rate of expenditure that their net profit is less than 1 per cent. of the turnover in stakes. He gives the average net profit for racecourse bookmakers at less than 2 per cent., and for street bookmakers at more than this, although they pay 5 and even 7½ per cent. commission to agents. Street bookmaking is the most profitable form of the "industry." The rate of tax suggested in the chairman's Report is 2½ per cent. of the stakes (turnover), which he thinks would be treated by bookmakers as an expense in their business, and passed on to backers by a shortening of their betting odds. The bookmakers in their evidence appear to agree that a tax at this rate could be charged, and the street bookmakers especially welcomed a tax if it were accompanied by the registration of "offices" for them in the place of uneasy pitches subject to police raids. The possibility of taxing ready money betting, while leaving it illegal, was ruled out as not to be thought of.

Many ingenious calculations were made in order to arrive at a turnover of betting—that is, the amount annually staked by backers. The chairman puts the figure at 200 millions at least, and possibly much more. An *ad valorem* tax of 2½ per cent. would yield five millions. It is certain, he writes, that a 10 per cent. tax is impossible, though the betting "industry" may prove capable of bearing a tax of 5 per cent. on the amount staked on each bet. He holds that a sure five millions a year from betting taxation is well worth having in these days. He further regards the legalising of ready money betting as "desirable," and as tending to diminish the present evils of illegal street betting. It is unfortunate that the consideration of Mr Cautley's Report was not completed by the Committee. There would have been wide differences of opinion on the policy of recognising betting as a source of revenue, though, one may conclude, general agreement that the Exchequer could easily get five millions a year out of it.

SHIPPING IN 1923.

AMONG the basic industries of this country there is none whose condition at any given time is so difficult to present accurately as that of shipping. It too often escapes attention that the bulk of the tonnage under the British flag and of the capital invested in sea transport is now represented by "liners," i.e., vessels adhering to regular routes and timings, carrying passengers and freight (usually "mixed" cargoes) at stated rates, and having an economic basis broadly comparable to that of railway companies. The operations of these fleets are of considerable obscurity. The rates they charge are, as a whole, unknown to the public; no returns of tonnage carried by them are ever published; their profits are, to a considerable extent, unrevealed.

The balance of the mercantile marine consists of the

so-called "tramps," whose function, corresponding roughly to that of the "casual" balance of dock labour, is to supplement the services of the regular lines in the carriage of bulky, rough cargoes, such as timber or coal, and to cope with seasonal movements of the world's crops. Divertible on demand to any quarter of the globe, the "tramp" vessel is chartered as a unit at rates subject to the higgles of the market, fluctuating daily, and given wide publicity.

The resulting tendency is for the "tramp" to overshadow the "liner" in the public eye, and for data to be used as evidence of the condition of the shipping industry which, failing careful distinction between the two classes of vessel, may give rise to misapprehension. Thus both in examining statistics relevant to the activity of shipping and in comparing the published records of freights, it must be borne in mind that in respect to the important "liner" business the margin of error is great. This fact, unhappily, renders all estimates of the gross earnings of shipping little better than guesswork. In the following table are assembled the available figures indicating the comparative activity of sea transport from British ports:—

TRAFFIC. (In Millions.)				
	1913.	1921.	1922.	1923.
Net tonnage cleared with cargoes:				
British	40.1	24.3	36.8	39.4
Foreign	27.7	12.1	22.9	28.5
Per cent. British	59	67	62	58
Net tonnage entered with cargoes:				
British	32.3	25.1	28.5	31.0
Foreign	16.8	12.0	14.9	18.0
Per cent. British	66	68	66	63
Tons of coal shipped	73.4	24.7	64.2	79.5
Seamen shipped	57	40	48	50

It will be observed that in 1923, as compared with 1922, the total entrances and clearances rose by 12 per cent., or, excluding foreign vessels, by 9 per cent. Thanks in large part to the record export of coal, which exceeded even the 1913 quantity by six million tons, the volume of shipping last year was of practically pre-war dimensions, the share falling to the British flag being well maintained in spite of keen foreign competition and the relative increase in foreign fleets. This encouraging recovery in the employment of ships is confirmed by the traffic returns of the chief ports abroad, and is further corroborated by the fact that in the 12 months ended last July the amount of idle tonnage in the world is estimated to have decreased by 1½ million gross tons—British vessels alone by 600,000 gross tons—there being good prospect that the returns for January, 1924, will show a further reduction. The much smaller improvement in the employment of seamen is to be ascribed mainly to the permanent displacement of stokehold hands through conversions to oil fuel and the introduction of the internal combustion engine.

Unfortunately, it is impossible to say what proportion of the total traffic represents liners. While the Board of Trade returns suggest an undoubted improvement in the volume of goods shipped in 1923, it is unlikely that the total quantity was less than 10 per cent. under 1913 level. There is thus a considerable discrepancy between the volume of traffic and goods, a discrepancy which must be looked for in just those classes of general cargoes for which liners cater. On the strength of private reports it may be surmised that in 1923 liner holds were filled on an average to 80 per cent. of normal capacity as compared with 70 to 75 per cent. in 1922. Passenger traffic, though shrunk in comparison with 1913, similarly improved. In the North Atlantic, traffic in East-bound passengers during the summer was disappointing, but an all-round improvement occurred in the third quarter of the year. On the basis of returns for the first nine months of each year, the monthly average of passengers shipped to and from all countries, excluding traffic to the Continent of Europe, were:—

	1922.	1923.
Outward	21,181	30,894
Inward	15,571	14,422
Total	36,752	45,316

In so far as the market in "tramp" freights reflects the general tendency of shipping business, the past year can be summarised as opening uncertainly, receiving a temporary stimulus from the demand for coal to make good the Ruhr deficiency, lapsing into severe depression which lasted until August, and finally from September onwards registering a marked and steady recovery, freights in December being roughly on a level with the previous January. The following table gives the yearly averages of the index numbers of each of the main trade groups comprised in the *Economist* Index of Shipping Freights:—

AVERAGE 1898-1913 = 100.

	1922.	1923.	Percentage. Rise or Fall.
European Waters	147.84	137.55	— 7
North America	147.00	122.85	— 16.5
South America	138.20	123.51	— 10.5
India	138.44	122.83	— 11
Far East and Pacific	123.43	128.37	+ 4
Australia	156.82	130.58	— 17
Total	141.96	127.61	— 10

From these figures it would appear that the gross revenue per ton carried by "tramp" vessels in 1923 was 10 per cent. lower than in 1922, the corresponding fall between 1921 and 1922 being 23 per cent. The market valuation of new cargo-tonnage, according to returns compiled by "Fairplay," has followed a similar course, standing now at 34 per cent. above the average for 1898-1913, as compared with 47 per cent. a year ago. The average level of whole-cargo freights in 1923 was less than 10 per cent. over the average for 1913—a position sufficient to account for the poor results shown by the majority of the smaller concerns owning purely "tramp" vessels. At the same time, reference to 1913—a boom year for shipping—unduly accentuates the present depression. Thus the figure 127.61, the average of the *Economist* Freight Index for 1923, contrasts with 81.61, the average of the years 1908-10, a corresponding pre-war "slump" period, the percentage rise being 56. The best method of comparison is possibly to compare actual freights with the averages for the five years preceding the war, as under:—

ESTIMATED AVERAGE FREIGHTS.

Route.	Average 1909-13.	1922.	1923.
	s d	s d	s d
Bombay—U.K./Continent	19 11	21 9	25 11
Plate (San Lorenzo)—U.K./Continent	15 6	27 2	22 10½
U.S.A. (Grain)—U.K.	2 5½	3 8½	2 10½
Bilbao (Ore)—Middlesbrough	5 1	7 9	7 8½
Java—U.K./Continent	27 11	31 6	34 9
Australia—U.K.	29 6	44 0	36 6
Coals:—			
South Wales—Port Said	8 3	13 8	10 8½
South Wales—Plate	15 6	14 5	14 4
Round Voyage Plate and Back	31 0	41 7	37 2½
<i>Economist</i> Freight Index	102.25	141.96	127.61

It is to be regretted that no corresponding statistics of "liner" rates are available. In the long run, it may be argued, the various "conferences" which fix "liner" rates are bound to conform to the prices obtainable by "tramps" in the open market. This is not necessarily true in a limited period, and it is probable that the average gross revenue per ton carried by liners in 1923 considerably exceeded 25 per cent. over the average of 1909-13. On the whole, the revenue of shipping in 1923 probably differed little from that in 1922, estimated by the Board of Trade at £140 millions gross, £110 millions net.

On the other hand, substantial reductions in the cost of running vessels were made in the past year. Wages of crews were reduced by 10 per cent., and port charges brought down to about 60 per cent. over pre-war scale, while the acceptance of low premiums by underwriters curtailed the charge for insurance to something like pre-war figures. Unhappily, the average cost of bunkers was roughly 70 per cent. above the 1918 level, as compared with 60 per cent. in 1922. The much smaller comparative increase in the cost of fuel and Diesel oils was a factor making for increased attention to the merits of the oil-burner and the motor ship.

The outlook for 1924, given freedom from political catastrophe in Central Europe, is promising. As opposed to expanding volume of cargoes, expansion in tonnage has now virtually come to a standstill, as will be seen from the following world figures:—

Year.	Millions of Gross Tons. Tonnage Launched.	Tonnage Lost or Broken Up.	Balance.
1913	3.30	0.70	+ 2.60
1921	4.30	0.67	+ 3.63
1922	2.50	0.89	+ 1.61
1923	1.60	1.25(a)	+ 0.35 (a)

(a) Estimate.

Much of the tonnage launched in the past two years represents space designed for passengers and bulk oil, so that progress towards equilibrium between general cargoes and carrying capacity is being even more rapidly attained than would appear. The last of the casualties among boom flotations, a round dozen of which are palpably insolvent, has probably not been seen, but the position of 90 per cent. of British ownerships is extremely strong, and the more recently published accounts of the larger concerns suggest that 1923 has already brought a return to sounder conditions. A very small step further in the direction of better demand should place the whole industry once more on a generally profitable basis. It should, however, be remembered by investors that the gods of the seven seas are more and more on the side of the big battalions.

Notes of the Week.

The Expert Committees.—In the course of next week both the international committees of experts appointed by the Reparation Commission should be well into their respective tasks. The committee which is to investigate German assets abroad is to meet next Monday, while the committee whose task is to examine the problems of currency stabilisation and balancing the Budget in Germany assembled at the beginning of this week. Its personnel is as follows:—United States: General C. J. Dawes, Mr O. D. Young. Great Britain: Sir Robert M. Kindersley, Sir Josiah Stamp. France: M. Parmentier, M. Allix. Italy: Dr Alberto Pirelli, Professor Federico Flora. Belgium: Baron Maurice Houtart, M. Emile Francqui. The opening meeting was addressed by M. Barthou, the French delegate on and chairman of the Reparation Commission, whose speech made it clear that the committee was to be allowed a very full scope. "The Treaty of Versailles," he said, "is our charter, as it will be yours, and it is within the framework of that Treaty, under Article 234, that you will pursue your inquiry in full independence and with signal impartiality." "Germany," he added, "is entitled to a just opportunity to be heard, and you will hear her representative in the manner you may think most suitable." The speech further contained a reference to the urgency of the time factor, and a statement that upon a settlement of the reparation problem depended the peace of the whole world. M. Barthou named General Dawes, the American representative, as chairman of the committee, and the latter delivered a singularly outspoken utterance, which, however, seems to have been well received in Paris. It contained pungent references to the obstacles created by "nationalistic demagogues," "national pride," and the "pride and self-interest of different Allied officials." This somewhat flamboyant speech was, however, by no means devoid of recognition of fundamentals. The success of the committee depends, said General Dawes, chiefly upon "whether, in the public mind and conscience of the Allies and of the world, there is an adequate conception of the great disaster which faces each Ally unless common sense is crowned king." It is because the urgency of solution has impressed itself more clearly in some quarters, where it was previously inadequately recognised, that hope runs high that the committees will achieve fruitful work. General Dawes also remarked that the "re-establishment of German productivity is a starting point of European prosperity," and, in speaking of the difficulty of assessing German capacity to pay, said, "Let us first help Germany to get well." These

dicta might not have been so well received in Paris six months ago, even from American lips, as they apparently are to-day. The committee is to begin its task by an attempt to devise a system for stabilising Germany's currency, and Paris messages suggest that its preliminary work will have progressed far enough to enable the committee to visit Berlin at the end of next week. This, if true, is welcome news, for it shows a realisation of speed as the essence of success. Meanwhile Herr Schacht, the new President of the Reichsbank, is to give evidence to the committee in Paris.

Separatism in the Palatinate.—When an organism has been thoroughly poisoned, the result of driving the virus from some parts is often to concentrate it—with multiple effects for evil—in one particular member. The recent history of the Palatinate has been (in brief) as follows:—The "Separatist" gangs which had failed in the north were transferred (apparently by means of French transport facilities) to this southern corner of the occupied territory; and their activities were so ably seconded by the local French Governor, General de Metz (vigorously prompted from Paris), that by December 22nd last the General felt himself able to proclaim a Separatist Government in the Palatinate, and this retrospectively as from November 11th. This "Autonomous Government" proceeded to forward its decrees to the Rhineland High Commission for registration; the Commission registered them on January 2nd, the British member dissenting; and, since this action on the part of the majority would have become valid automatically within ten days (thus involving Great Britain, indirectly, in a recognition of the monstrous state of affairs in the Palatinate), His Majesty's Government, with commendable promptitude, lodged an *aide-memoire* with the Quai d'Orsay, requesting a suspension of registration, and asserting the necessity, from the British point of view, of some preliminary inquiry into the state of affairs in the Palatinate. On January 9th, Herr Heinz, the President of the self-styled Autonomous Government, was assassinated by persons unknown in the dining-room of an hotel at Speyer. The crime was immediately reported by the special correspondent of the *Times*, who happened to be an eye-witness, though the Separatist gang attempted to coerce him by terrorism into telegraphing their version of the story. Incidentally, the British Government and people owe a debt of gratitude to the *Times* for the courageous and effective steps which it has been taking to supply first-hand information regarding the situation, not only in the Occupied Territory, but in the Saar. Meanwhile, the British Government announced their intention of sending Mr Clive, the British Consul-General in Bavaria, to investigate conditions in the Palatinate on their behalf. Being a detached enclave of Bavarian territory, the region belongs officially to Mr Clive's field; and although, from the point of view of the Inter-Allied occupation, it is a "French" and not a "British" zone, the occupation (by treaty) is joint; the division into spheres is a matter of convenience; and in the British sphere round Cologne there have long been numerous French officials, permanently established, and communicating directly with the French representative on the Rhineland High Commission. Being thus unable to place a veto upon Mr Clive's mission, the French had to content themselves with shadowing him. When the attendance of an official from the French Embassy at Munich had been declined, Mr Clive was shadowed by a myrmidon of General de Metz, while M. Tirard retaliated by improvising a French investigation in the Cologne area—a step which the British occupying authorities regard with equanimity. Under the difficult conditions imposed upon him, Mr Clive has now concluded his investigation, and it is to be hoped that his report will be published forthwith. Meanwhile, the French Government have refused to ratify the railway agreement lately reached by the French Régie and the local British authorities regarding through-traffic across the Cologne area, and are demanding that the railway administration in that area be transferred *en bloc* to the Régie—a body which the British Government have never recognised as legal!

The City By-Election.—The translation of Sir Frederick Banbury to the House of Lords has caused a vacancy in the Parliamentary representation of the City of London. The City has become accustomed to see its representatives returned unopposed, but on this occasion there is to be a contest. The Conservative candidate, Sir Vansittart Bowater, is to be opposed by the Liberals, who have secured a strong candidate in the well-known banker, Mr Henry Bell. Mr Bell came to London in 1903 as manager of the City office of Lloyds Bank, of which he became general manager in 1912, and in addition a director in 1918. Simultaneously with his candidature for the vacant City seat is announced Mr Bell's resignation from the general managership, for he has reached the retirement age. This retirement paves the way for his active participation in public politics, for which he is eminently qualified, but Lloyds will not altogether lose the benefit of his experienced service, for it is announced that he will retain his directorship of the bank.

The Threatened Railway Strike.—The result of the ballot of the Associated Society of Locomotive Engineers and Firemen, which marked a definite rejection of the findings of the National Wages Board for the railways, has created a very embarrassing situation in the labour world. In our last number we briefly summarised the points at issue, and expressed the hope that the machinery of arbitration, which has done so much for the railwaymen as a whole, would not be imperilled by precipitate strike action on the part of one section, and that, despite its obvious importance, a relatively small section of the employees. In the past week, however, the situation has shown no definite signs of improvement, and, at the moment of going to press, there still appears to be a grave risk of a strike of the engine-men taking place over the week-end. Mr Bromley, the secretary of the Associated Society, has seen fit to adopt in public, at any rate, a somewhat intransigent attitude, though it is doubtful whether his bellicose enthusiasm is very widely shared among the rank and file of his union. Announcements such as that made on Saturday last, when Mr Bromley spoke bravely of a fight to a finish, and stressed the fact that his society would choose its own time for calling the men out, are not exactly helpful contributions to the points at issue, and the new secret diplomacy is certainly to be deprecated. At the same time, this type of pronouncement makes it hard to retire gracefully from embarrassing situations, and it would certainly have been wiser to have adopted the decisions of the board, which were actually signed by the representatives of the Associated Society themselves, and to have concentrated on a rectification of certain anomalies arising out of these findings. That there are some individuals who would be hard hit by the new proposals cannot, of course, be denied. At the same time it is worth remembering, as has been pointed out by the railway companies, that if forty-eight drivers will lose 22s 6d a week, there are also cases in which drivers now earn "from £5 to as much as £10 a week, or even more." Moreover, "the whole number of enginemmen paid on the mileage system"—and this is the class which is mainly concerned in the dispute—"is only about 3½ per cent. of the footplate staff, and even they are not all working on these duties all the time." However important these cases may be, it can hardly be maintained that the issues at stake justify recourse to extreme measures which would, if successful, do very great harm to the industrial life of the country. We imagine that many of the votes recently cast against acceptance of the arbitration findings indicate a desire for further negotiations rather than for immediate strike action, and there now seems to be no great enthusiasm for the latter course. Mr Henderson, as secretary of the National Joint Council, has been exploring the possibilities of the situation, and Mr J. H. Thomas, whose union accepted the findings of the Board, has also taken a hand, for a strike at this juncture could not but have the most regrettable consequences in the political sphere. Friendly representations from official Labour circles may even yet succeed in securing a strike postponement at the eleventh hour, though at the moment all the signs are unfortunately

to the contrary. If the strike does take place the result will not be a paralysis of transport, though truncated services will cause widespread inconvenience to the public.

Food Distribution and Prices.—The Departmental Committee on the Distribution and Prices of Agricultural Produce have issued their final Report (Cmd. 2008). Appointed in December, 1922, the Committee have carried out the difficult task entrusted to them with exemplary speed. Their four interim reports, each dealing with a group of products, contained a mass of detailed information, much of which was new, and the final Report discusses with conciseness some of the general questions arising out of their inquiries. This final Report (writes an agricultural correspondent) begins with a brief discussion of the rise and fall of prices and costs during and after the war. A table shows the percentage increase in market prices of farm produce, in wholesale commodity prices, in retail food prices, and in the cost of living for each of the years 1915-19, and for each subsequent month up to August last. For over six years the average price of agricultural produce was considerably higher relatively than the cost of living, but in the latter part of 1921 the "slump" came, and for two years the cost of living figures have been relatively higher. The Committee note that wages have fallen to about the same level as the prices realised for farm produce generally (notwithstanding the higher cost of living), but they apparently overlook the fact that a smaller number of men are employed, so that the farmers' labour bill is substantially lower. It is no doubt true that wages have not fallen to the same extent as cereals, or as potatoes in 1922-23, but, on the other hand, the prices of meat and milk have been comparatively high. Assuming that food producers are inadequately remunerated—although in effect limiting that assumption to corn and potato growers—the Committee state that the agencies standing between them and the consumer "remain apparently undisturbed in the enjoyment of their reward." They reach the definite conclusion that "the spread between producers' and consumers' prices is unjustifiably wide," and that "distribution costs are a far heavier burden than society will permanently consent to bear." By this pregnant finding the Committee justify their appointment. It has been reached after very painstaking investigation, in which the distributive agencies have had the fullest opportunity of stating their case and explaining their position. The Committee discuss very fairly and moderately the exceptional, and largely unavoidable, circumstances, arising out of the war, which enabled distributors to make large profits. They point out that both producers and consumers have themselves to blame, in a large degree, for their exploitation. The Report contains many useful suggestions, which if adopted would mitigate, if not altogether abolish, unfair distributive profits. The Committee express the pious opinion that if the present system were carefully examined "by those who are primarily interested in it, whether as producers or distributors," modifications could be introduced which would render it more efficient and less costly. That appears to be a somewhat sanguine view, but, in any case, it ignores the fact that those primarily interested are the consumers. If, as the Committee state, distributive costs are a heavier burden than "society" will consent to bear, what is society going to do about it? It is for a definite answer to this question that the Report will be searched, and it will be searched in vain. The Committee refer to "the system of municipal retail markets existing in many countries abroad," and suggest that they would afford consumers a chance of buying food more cheaply. They refer also to the establishment of retail markets "under municipal auspices." There are, of course, many retail markets throughout the country which may be described as under municipal auspices. It would have been interesting and valuable if the Committee had developed their ideas on this subject. As the Report stands, it is not possible to discover whether the municipal markets they have in mind would, in fact, be a remedy for the excessive distributive costs which they condemn, or, indeed, what is the precise function which local authorities could or should perform in

this connection. It may be perhaps not unfairly surmised that the Committee, in the course of their deliberations, came up against the difficult question of municipal trading, and were unable to agree about it.

The Industrial Investor's Dilemma.—A Stock Exchange correspondent writes:—It is a long time since Stock Exchange markets have been in such a condition as to render members of the House unable to advise their clients definitely and confidently. Three or four years ago, the upward movement in gilt-edged securities was so pronounced as to render it fairly safe for brokers to counsel the investment of money in any securities of first-class character. Even in those days, however, it was recognised that the time might come when improvement in trade, and consequent tightening of money rates, might have the effect of bringing down prices of gilt-edged stocks and of diverting money into industrial channels to an extent that would noticeably affect the yield afforded by Stock Exchange securities. It may be safely said that there is always some uncertain factor which prevents the Stock Exchange agent, or client, from seeing his way so clearly as to ensure his buying the right thing. Therefore, nothing very abnormal can be traced in the present situation, although this is held, generally, to be one of almost unique difficulty in regard to forecasting the manner in which prices of stocks and shares are likely to move in the future. Everyone connected with financial affairs knows that the great body of the public are more than usually sensitive as to the value of their Stock Exchange holdings at the present moment, in view of the possibility of a Labour Government. People from all over the country write to ask whether they should hold this, that, or the other; whether they should sell, whether they should buy, whether it is worth while doing anything at all. When these questions apply, as they frequently do, to shares in the iron, coal, and steel industry, to textiles, to hotel and stores shares, to breweries and similar industrials, the task of the mentor is undoubtedly difficult. He is able to trace the progress of a company over recent years from the fact of his having all the available data at his fingers' ends through books of reference and other means of information. This furnishes a very useful guide in the matter of determining the inherent soundness of a company, but it has no great value so far as determination of the future is concerned. Statistical records do help very considerably, however, in the effort to ascertain the financial status of any concern, and these statistics render a valuable service to the inquirer in showing him whether the company's position is financially strong or otherwise. When it comes to prophesying, however, the angle is changed. Scores of people are asking to-day whether they should invest money in shares of industrial companies engaged in various branches of trade that are now labouring under a cloud of depression. The answer can take only a general shape. If trade conditions throughout the world improve, if shipping and shipbuilding are indeed on the mend, then it is a fair inference to assume that business is beginning to look up. The strands of the industrial fibre are so closely intertwined that, if one is strengthened, all the rest will necessarily benefit. Many, if not most, industrial concerns are suffering from the result of the post-war boom which landed them in difficulties that differed, according to the companies, only in extent. They became left with stock bought at inflated prices. They borrowed money at high rates. They over-traded lavishly; they made no allowance for unexpected cutting-off of their foreign connections through the chaos which fell upon exchanges. They failed to foresee the slump that would follow the post-war boom, or to realise the effect of the abrupt cessation of Government expenditure upon hundreds of war purposes. The majority of industrial companies have probably emerged by now from the worst consequences of such factors as those enumerated. The year before last was that in which they suffered the greatest burden imposed upon them by the necessity for writing-off losses on stock, &c., and the bulk of industrial companies have come through the ordeal, perhaps with clipped wings and subdued capital, but still with sufficient resources of business for them to be able to take advantage of the slight improvement in

trade that many of them have since enjoyed. The holder of industrials, and his name is legion, must decide for himself whether or no it is worth while for him to continue to retain shares in his companies. A modest return on capital in good-class concerns it is reasonable to expect, but in over-capitalised and unwieldy companies the possibility of early resumption of good dividends is none too rosy. The investor is faced with the problem of determining whether he shall regard his industrials as a long lock-up, likely to revive in the course of any pronounced improvement in trade, or whether it will be better to sell the shares now in order that the money may be employed in something else which shall promise an earlier recuperation in capital and an increase of income.

Employment in December.—The employment figures published by the Ministry of Labour show a substantial improvement in December. The trade union percentage at the end of December fell below 10 per cent. for the first time since February, 1921, as will be seen from the following table of monthly movements over a number of years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	11.3
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	11.1
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	11.1
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	11.4
September ..	2.3	1.3	0.5	1.6	2.2	14.8	14.6	11.3
October.....	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	10.9
November...	2.0	1.1	0.5	2.9	3.7	15.9	14.2	10.5
December...	2.6	1.4	1.2	3.2	6.0	16.5	14.0	9.7

* Excluding coal miners.

Among all workers covered by the Unemployment Insurance Acts the percentage unemployed at December 21st was 10.7, as compared with 11.5 at November 26th and 12.6 a year ago. Taking the year over, the trade union percentage has, it will be seen, fallen more markedly than the percentage for all insured workers. Among the principal industries those which showed most improvement in December were pig-iron manufacture, iron and steel manufacture, engineering, shipbuilding, and cotton and wool textiles, so that the improvement was spread over very important areas.

Cost of Living.—The Ministry of Labour's Index number for January remains at 77 per cent. above that of 1914, as last month. A year ago at the same time it was 78, and then fell steadily month by month till July, since when it has again been gradually climbing up and up. Two main items, among those entering into the computations of the Index number, which this month account for most of the upward movement, are coal and cotton. On food alone the January percentage is 75 above pre-war level, the same as in January, 1923, against 76 in December. Included in the commodities taken as representative of the normal necessary expenditure of a working-class family are, besides food, rent, clothing, fuel, and light, with a certain allowance for miscellaneous items.

The Rise in Tin.—Despite the uncertainty which has surrounded the industrial and political position this week, the tin market, writes a market correspondent, has shown extraordinary firmness and activity, and with eager buying for American account values on the London market were driven up to a higher level than anything recorded since the year 1920, when the commodity for a brief period jumped over £400 per ton. In 1913 tin did not rise above £232, and in the following year it fell to £120 late in the year. Last year the best price officially registered for cash was £240 and the closing figure was £234; thus since the beginning of the present year there has been another substantial improvement in the price. During the last four months the value of standard tin has not dropped below the level of £200, and the steady upward movement which has

culminated in the commodity rising to over £250 has been based chiefly on the soundness of the statistical position and the brisk trade demand, there having been very little speculative business associated with the advance. The home stocks this week have been reduced by 539 tons, and now stand at 3,289 tons, which is very small compared with the average pre-war holdings. The Eastern markets early in the week were firm and active, with a large business put through, and American buyers took a line of several hundred tons of Straits tin for January-February shipment at £254 c.i.f., New York. During 1923 the invisible supply, consisting of the tonnage held under the Bandoeng agreement, was reduced from 17,600 tons to about 8,000 tons; thus the final dispersal of this Government surplus is now only a matter of months. The consumption of tin last year in the United States alone amounted to close on 75,000 tons, and it is perfectly obvious that there would have been a very serious shortage had not the Eastern pooled surplus been available for market purposes. Well-informed opinion favours the view that supply even now is not keeping pace with the demand, and that current prices cannot be regarded as excessive bearing in mind the fact that working costs are still heavy and that there is nothing that can be substituted for the metal. The tin-plate mills in the United States are well engaged, with new contracts flowing in, and many of the works are booked up until the half-year, thus ensuring a steady outlet for the commodity for some time to come. The latest returns show that shipments week by week are running to 120,000 boxes or so, while stocks are not much over 200,000 boxes. The Straits shipments of tin during the next few months will not be very large, and ore supplies from other directions promise to fall off again. Thus the statistical position of this particular metal should improve rather than the reverse, but this should not carry the price up to a level at which the use of the commodity becomes difficult. The unsettled state of the Continental and Russian markets has been against the free consumption of tin for some time past, and this is a point to be borne in mind, as any material improvement in this direction will add to the competition for the shrinking supplies. American users, of course, must have the tin they need, and it is significant that the smelting of tin in the United States has now practically ceased. Thus actual metal will be in demand for some time to come, while there may be little in the situation to justify the rosy market forecasts so freely quoted outside.

The Civil War in Mexico.—The Mexican insurgents who have been represented in the American Press as even more favourably disposed to foreign interests in Mexico than President Obregon's Government, have done their best to estrange American and European sympathies by cutting the pipe lines which supply the refineries in the neighbourhood of Tampico, and thereby precluding their embryo Government from fulfilling its promise to provide for the resumption of the service of the External Debt. They also state that they are preparing to blockade the Tampico coast. These measures seem to have been taken in consequence of the refusal of the American oil companies to pay the oil taxes to the representatives of the de la Huertist Government. But the news confirms the fear that there are irresponsible elements among its supporters, whose action it cannot control. The scantiness of the information available and the report that the Federal Government has established a censorship of the wireless stations combine to indicate that the insurgents have completely lost control of the telegraph lines to the United States frontier, over which a fortnight ago they were sending their own bulletins of war news. They have demanded the right to purchase arms in the United States, and have naturally been refused; their private purchases from American firms have been stopped, and, though they may obtain supplies from other sources, they cannot receive them for a considerable time. The Federals, on the other hand, are receiving munitions, including aeroplanes, from the United States Government, and are said to be likely to obtain a loan from American banks. Still, Federal munitions have not unfrequently,

during previous revolutions, passed into insurgent hands, and it seems clear that the struggle will be prolonged. But any attempt to describe its progress or forecast its issue is at present impossible.

The Earthquake in Japan.—On Tuesday morning Yokohama, Tokyo, and the surrounding districts were again the scene of a severe earthquake, but compared with the stupendous disaster of last September, the injuries inflicted are trifling. Property has been relatively little damaged, and the loss of life is small, and was largely the result of panic. Buildings have been destroyed, chiefly in Yokohama, railways interrupted, and trains wrecked; but the effects have been less serious than the first reports indicated, and a message received in London on Thursday indicates that the railways are working again. Shocks were felt as far west as Nagoya, and southwards in Osaka and Kobe, but no damage has been reported from these cities, and though further shocks have been felt they appear not to have been serious. The sufferings of the population of Yokohama and Tokyo, many of whom are living in temporary buildings amid discomfort aggravated by the winter, have no doubt been intensified, but there has been no shock to public confidence in the recuperative powers of Japan. Government and municipal stocks were only slightly affected by the news, and on Thursday were recovering.

America and Flag Discrimination.—Certain administrative changes in the arrangements for running the American Government-owned ships have recently been announced, but an indication of policy is still awaited. Rear-Admiral Palmer, who has been appointed head of the Emergency Fleet Corporation, is reported to have sent to the London office of the United States Shipping Board a radiogram to the effect that his administration stands for the permanency of the American merchant marine, but this message is not at all informative. In this connection it must be borne in mind that there remain, as part of the American law, certain sections of the Merchant Marine Act, 1920, authorising the imposition of charges discriminating against foreign ships, but both President Wilson and President Harding deliberately refrained from giving effect to these provisions. In the meantime an international Convention on Maritime Ports, definitely rejecting flag discrimination (outside of coasting trade) has been signed at Geneva, and the question arises of the attitude of the United States towards this *fait accompli*. American representatives were present as onlookers only at the international gatherings at which the Convention was settled, and the United States is not formally a party. With the exception of the United States, however, the nations of the world have subscribed to a declaration to the effect that there shall be equality of treatment in their ports for all ships, and no discrimination on the ground of nationality. This means for American ships that, at the other end of every international voyage, they will be in ports where the principle of no flag discrimination is operative, subject—and this is what America will have to consider—to the right of withholding equality of treatment from the ships of any State which does not itself grant equality irrespective of nationality. Even countries which adhere to a policy of Protection have now deliberately, and as the result of prolonged communications, extending over years, and culminating in weeks of discussion in conference at Geneva, adopted the policy of equality of treatment for ships of all nationalities in their ports. Transport and communications are matters of separate national as well as international concern. The red tape involved in discrimination on the score of nationality in itself causes delays which, in turn, involve much expense. Again, self-imposed limitation on the opportunity to take advantage of the freight market (which is another way of expressing flag discrimination) hampers advantageous trading. The arguments against flag discrimination go very deep, and the attitude of the United States towards the recently signed convention is an open question of great interest.

Cotton Control Scheme.—There now seems to be a possibility, writes our Manchester correspondent, of a scheme of control being put into operation in the American spinning section of the Lancashire cotton industry. A suggestion of this kind has been discussed in trade circles for many months. A little time ago when the proposal was considered, spinners of Egyptian cotton voted against the idea. Latterly, the question has been considered by the employers and the operatives representing the mills using American cotton. It may be said that out of the 56,000,000 spindles in Lancashire about 40,000,000 are in the American section. A sub-committee has now evolved a scheme which is to be placed before the Joint Committee of employers and trade union officials which was formed in October last by Councillor Cundiff, who was then the Lord Mayor of Manchester. At the moment no details are available, but it is understood that the scheme will provide for restricting the output of yarn according to the state of trade, and the operatives who are thrown out of employment as a result of short-time working will be compensated from a fund created by the payment of levies from those firms that run more than the stipulated amount of machinery. A similar arrangement was in force during the war, when it was necessary for machinery to stand idle owing to the reduced imports of raw cotton into this country. It must be remembered that the scheme which is now to be tried will be on a voluntary basis, and everything depends upon the support given by the employers. The movement will only be a success if there is united action. It is feared there may be some difficulty in getting certain concerns to fall into line. The losses which spinning companies have incurred during the last couple of years are of such a character that some drastic action is undoubtedly necessary in order to relieve the depression.

The Debenture Corporation.—The directors of the Debenture Corporation, Limited, are able to present a better picture this year of the progress of the concern. Gross revenue for the year ended December 31, 1923, amounts to £210,072, as compared with 160,618 a year ago. The following table compares results for a number of years past:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Net profit....	£ 104,390	£ 111,946	£ 116,501	£ 127,037	£ 137,101	£ 116,387	£ 150,688
Prof. dividend	47,083	35,625	35,000	35,000	35,000	36,875	38,625
Ord. dividend	47,078	35,496	41,999	42,000	49,000	55,312	57,937
	(5 %)	(5 %)	(6 %)	(6 %)	(7 %)	(7 1/2 %)	(7 1/2 %)
Income-tax ..	6,697	31,112	28,439	32,370	38,898	8,969	35,366
Foundrs' shrs	3,531	2,052	..	..	15,000	15,000	20,000
Reserve	..	..	..	..	..	..	..
Depreciation ..	..	7,660	11,064	10,955	..	..	..

With the above-mentioned reserve allocation, this item is now brought up to £250,000. In addition, during the year £9,436 has been added to capital reserve, the total of which is given in the balance-sheet as £140,422. We are very glad to find that the directors make the position clearer with reference to the matter of depreciation of securities. They state, "The depreciation referred to in former reports in the high-class 4 per cent. first mortgage debentures held by the corporation amounts to £116,504. All other depreciation is more than offset by appreciation." In the balance-sheet the total of "mortgage debentures on various companies" is given as £1,733,764. This appears to be satisfactory. An analysis of the balance-sheet will be found in our usual column.

The National Mutual's Valuation.—A valuation of assets and liabilities as at December 31st last has been made by the National Mutual Life Assurance Society. The results are highly satisfactory. The total surplus shown was £912,360, of which £29,771 was applied to write down certain assets, £65,000 carried to staff superannuation fund, and £42,486 paid in interim bonuses. The available balance was £775,101, out of which it is proposed to divide £301,570 in bonuses to policyholders and to carry forward £468,531. The reversionary bonus on policies entitled to participate and effected since July, 1896, will be at the rate of £2 2s per cent. per annum on

sums assured and on existing bonuses in respect of the past five years. Five years ago no distribution was made, and at the valuation of 1913 the reversionary bonus was at the rate of £1 16s per cent. per annum. It has been decided to make annual distributions of bonus in future, and the amount carried forward is so large (£468,531)—more than half the total surplus—that the bonuses as now declared should be maintained for some years to come at least. The society's annual report shows that the net rate of interest earned last year was £4 8s 3d per cent., after deducting income-tax. The new business for 1923 exceeded that for the previous year, and the expense ratio was the lowest for the past five years. The funds on December 31st amounted to £3,940,268.

The Royal Exchange Company's "Bachelor Policies."—There is a great deal in a name. The Royal Exchange Assurance Company has produced a new scheme of short-term endowment assurances, convertible into whole life assurances on certain contingencies, christened them "Bachelor Policies," made them convertible on marriage, and instantly achieved well-deserved fame. There is nothing really new about any life assurance scheme, actuaries can do little more than ring the changes on established systems, yet ingenuity in making a scheme attractive is always to be welcomed and encouraged. The Bachelor Policy scheme is designed to meet the needs of the man who not only realises the importance of making insurance provision during the early years of his business life, but who at the same time sees the necessity of the considerably larger insurance which would be required in the event of his marriage. To meet such a case the scheme provides for a definite amount payable on a selected date, and the assured has the option of converting his policy at any time within three months after marriage into a with-profit whole-life contract for double the original sum assured without alteration in premium or further medical examination. When the assured avails himself of this option a guaranteed bonus of £2 10s per cent. per annum is added to the sum assured. As always with a sound insurance scheme, the benefits are "all in the premium." The original premiums under the short-term endowment assurances are inevitably high, high enough to allow of the conversion. For example, a man aged 23 next birthday pays an annual premium of £20 16s for an endowment assurance policy of £500 payable at death or at the end of 19 years. This premium would have purchased with the Royal Exchange a whole-life policy of £1,240 under the tables which discount a bonus of £1 per cent. per annum. If this young man marries, say, at 32, he can convert his endowment assurance policy into a whole-life assurance for £1,250 (£1,000 assured plus £250 bonus), with participation in future profits. He gets what he pays for. But there is this important consideration. As a bachelor of 23 the whole-life policy of £1,240 referred to above, which he might have purchased with his premium of £20 16s, would not have appealed to him, whereas the short-term Bachelor Policy was an attractive investment for himself. The psychological effect of the scheme on young men is its most important feature.

An Insurance Fiasco.—Shortly before the Aircraft Manufacturing Company—that bubble of the war—exploded, the directors got into touch with an insurance broker of the name of Aldridge, whose operations have this week been discussed by the official receiver. Aldridge had acquired control of a small Scotch insurance company, which had little to recommend it except that it was founded before the passing of the Assurance Companies Act, 1909. The name of this company was the United Sickness and Accident General Insurance Company; its paid-up capital was £13,895, and its business before Aldridge's control was practically nil. To this small concern the Aircraft Company undertook to entrust its insurances, which must at one time have been in the neighbourhood of £1,000,000, and in consideration of this promise it was to receive one-third of the capital of the company. This in itself was a sufficiently remarkable deal, but stranger things were to follow. Deciding apparently

that the public was ready to absorb any insurance proposition, Aldridge came to the conclusion that the opportunity was too good to miss, and in 1919 floated a new company, the United General Commercial Insurance Corporation, with a nominal capital of £1,000,000, sold to it the assets and contracts of the United Sickness Company, and offered it for public subscription. The public, exercising a wise discrimination, subscribed only 18,083 shares, leaving the bulk of the issue to be taken up by the underwriters, Aldridge and his friends. Actually the capital does not appear to have been taken up by the underwriters in the sense of the shares being paid for by them, and a most extraordinary bit of manœuvring was started by which the underwriters' liability was apparently discharged. Aldridge got into touch with the City Life Assurance Company, whose directors wanted an extra £160,000 of capital, and offered to supply the capital if all the directors of the City Life resigned and left Aldridge and his friends in control. This they agreed to do, and Aldridge, by way of supplying the promised capital, effected a peculiar arrangement between the shares of the United General and the City Life, in the course of which the underwriters of the United General shares got rid of their liability, the City Life was left in possession of a large block of unsaleable shares, and Aldridge was left in control of two insurance companies instead of one. The net result was that a new company had been started with a subscribed capital of £500,000, and an old company had nominally had its resources replenished by an additional £160,000 of capital, and that the only capital publicly subscribed in cash was less than £20,000 put up in response to the United General prospectus. Both the United General and the City Life are now in liquidation, and the total deficiency of the United General, as estimated by the Official Receiver, is £510,592. If this statement of the Official Receiver is correct, then a company with practically no capital has been able to carry on an insurance business for three years with an accompaniment of the queerest manipulation of shares. There is only one thing to be said about it—that if all this can be done without a breach of the law, the security provided for the public by the Companies Acts and the Assurance Companies Act, 1909, is inadequate and requires drastic reinforcement. It is to be hoped that the last has not been heard of this deplorable affair.

San Francisco Mines.—Recent experience in connection with this company, writes our mining correspondent, affords a fresh exemplification of the fact that anticipation is often better than realisation. In the early autumn optimistic views became current as to the outlook, and the price of the shares was pushed up to nearly 200 per cent. premium. Since then the general tendency has been downwards, until on the posting up in the Stock Exchange last Wednesday of a copy of the report for 1922-23, the shares were momentarily offered at 21s. Of course, general conditions have contributed to the setback, but the change in the immediate prospects of the undertaking itself constitutes the main explanation. In accordance with the programme laid out the capacity of the mill has been increased to 500 tons per day—although at a later date than expected owing to various rearrangements found desirable. But the position of the mine has become such as to induce the manager to recommend that during the current year the daily tonnage should not exceed 400. It appears that on the bottom level, while the ore shoot extends further northward than at preceding levels, to the south it has become narrow and of low grade. In these circumstances, for various reasons, it would be inadvisable to run the mill to full capacity. It should not be overlooked, however, that the ore reserves have been substantially increased by last year's work, now standing at 268,200 tons fully and 97,600 tons partially blocked out. These quantities may be calculated as representing something like three years' supply. Moreover, it is calculated that on the reduced basis of operations the company should earn 4s per share per annum, indicating a yield of nearly 20 per cent. at current market price. As already intimated, the financial position is an exceedingly strong one. The whole of the outstanding

debentures have been converted into shares, and the funds in hand exceed £250,000. With regard to the change in the consulting engineers, upon which some comment has been made, it is unofficially explained that this is due to the expiration of the contract with the former firm, who successfully achieved the purpose for which they were engaged—the discovery of a satisfactory treatment process for the complex ores of the San Francisco mine. An official and more convincing explanation would doubtless be welcomed by the shareholders.

Electrolytic Zinc.—The dividends just announced will prove highly satisfactory to those interested in this Australasian enterprise. In respect of the past half-year 4½ per cent. actual is to be paid upon both the participating preference and the ordinary shares. It may be recalled that the balance of arrears on the former was cleared off rather less than a year ago; a dividend at the minimum rate of 8 per cent. per annum on these, with a maiden distribution of like amount on the ordinary being declared last July. The preference are in the hands of the public; the ordinary were subscribed in blocks by the Mount Lyell and various Broken Hill undertakings. During the financial year ended June 30th last the output of zinc rose from 70 to 115 tons per day, and now exceeds the estimated quantity of 120 tons. A point in the position is the contract lately entered into for the purchase from the British Government of an additional 400,000 tons of Broken Hill zinc concentrates. This will assist the company in supplying the expanding demand, both local and foreign. The upward tendency of the metal is obviously of importance to all interested in its production.

Treaty Compensation Claims.—The Controller of the Clearing Office announces that a third dividend of 2s 6d in the £ will be paid upon all awards of the Mixed Arbitral Tribunal for compensation under paragraph (e) of Article 297 of the Treaty of Versailles. Awards of £50 and under, which have not been already paid, will be paid in full. Claimants who did not participate in the two previous dividends, and whose awards exceed £50, will receive that amount on account and be entitled to the two previous dividends, each of 2s 6d in the £ in addition to the third dividend now declared, making in all 7s 6d in the £ on the balance of their awards. Payable orders will be issued by the Clearing Office on January 31, 1924, to all claimants who have obtained awards up to that date. The dividends upon subsequent awards will be paid on the fortnightly pay-day next after the date of such awards.

UNITED STATES.—GOVERNMENT'S NEW SHIPPING POLICY—RECEIVER FOR STEAMSHIP COMPANY—BOND MATURITIES IN 1924.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 4.

At a conference this week between President Coolidge, the United States Shipping Board and members of various Congressional Committees concerned, the Administration decided to adopt a new policy for operating the Government-owned merchant marine fleet. The operation and control of all vessels comprising that fleet will henceforth be in the hands of the Emergency Fleet Corporation, which will be separated from the Shipping Board. Leigh C. Palmer, a retired Rear-Admiral of the United States Navy, is to be president of the Emergency Fleet Corporation, and will thus become virtually Director of Shipping. Under the new arrangement the United States Shipping Board will become more of a regulatory and advisory agency. The change in policy will be put into effect as soon as possible, and will require no additional legislation immediately, since it can be carried out under a resolution adopted by the Shipping Board shortly after Chairman Lasker took charge of the latter's affairs, and which provided for a separation of the Fleet Corporation from the Board. While the new operating plan is ex-

pected to give more satisfactory results in many ways, the vessels will still be owned by the Government, and the Emergency Fleet Corporation is a Government institution.

American steamship companies generally have been able thus far to pull through the prolonged depression in the shipping industry, although in many instances, doubtless, after a very hard struggle. A notable exception is the New York and Cuba Mail Steamship Company, which owns and operates a fleet of 18 passenger and freight steamers between New York and ports of Cuba and Mexico, and which is one of the oldest and best known lines under the American flag, having been first organised in 1811. In 1907 a new company was formed and incorporated to acquire the stock of the old organisation. Subsequently the company, popularly called the Ward Line, became one of the main subsidiaries of the Atlantic, Gulf, and West Indies Steamship Company, which controls and operates a number of other coastwise services. As the result of an action in equity brought by a small creditor, the New York and Cuba Mail was forced into receivership this week. Its liabilities are given as approximately \$2,000,000, while its assets are said to be well in excess of that amount. It has a capital stock of \$10,000,000, and an outstanding issue of some \$5,000,000 5 per cent. first mortgage bonds. Operations in 1922 resulted in a deficit of nearly \$1,000,000, and for the ten months of last year the deficit amounted to \$1,076,528, due largely to heavy depreciation charges, sinking fund requirements, and considerable floating indebtedness. Unsettled conditions in Mexico also seriously affected its business. The immediate cause of embarrassment was that the company lacked sufficient ready cash to meet obligations due and maturing, and found it necessary to join in the petition for a receivership to conserve its assets and assure the continued operation of its vessels. A plan of reorganisation is expected to be worked out in the near future.

Financing by American corporations last year broke all records. New issues of bonds, notes, and stocks totalled \$3,602,704,000, as against \$3,324,392,000 in 1920, the previous high record. Industrial corporations led in the volume of new financing with an aggregate of \$1,808,559,500, mostly in bonds. Public utility issues reached \$1,214,327,150, also consisting chiefly of bonds, while railroads floated new securities totalling \$579,817,350, of which short-term notes constituted the largest part. The following table, compiled by the Wall Street Journal, shows the amounts of bonds, notes, and stock issued by each class of corporations during 1923:—

	Bonds.	Notes.	Stock.	Total.
Railroad	\$ 165,956,000	\$ 354,720,500	\$ 59,140,850	\$ 579,817,350
Industrial and miscellaneous ..	1,015,252,300	231,452,600	561,464,600	1,808,559,500
Public utility	852,543,500	61,678,000	300,105,650	1,214,327,150
Total	2,033,751,800	648,251,100	920,701,100	3,602,704,000

Bonds and notes of all classes maturing this year, including foreign issues floated in American markets, will amount to much less than in 1923 or 1922; less, in fact, than for several years. Public utility issues falling due in 1924 aggregate \$184,523,850. Railroad obligations come second, reaching \$147,847,370. Industrial maturities account for \$135,088,510, and foreign issues \$124,434,300, making in all \$591,894,030, as compared with total maturities of \$865,681,150 in 1923 and \$1,259,241,590 in 1922. Railroad maturities especially, which must be taken care of during the next 12 months, are exceptionally light in volume compared with recent years. The carriers, therefore, will not find it necessary to do any extensive financing for replacement purposes. The comparatively small amount of corporate refunding necessary in 1924 is expected to have a favourable effect upon interest rates, and will probably facilitate new financing for other requirements.

For the calendar year 1923 there were 19,163 business failures in the United States and Canada, according to *Bradstreet's* records. That total represents a decrease of 14.5 per cent. from the high peak year of 1922 and 4.3 per cent. from the second high record year 1921. As compared with 1920, the total of failures last year more than doubled, while as compared with the low record year 1919 the 1923 total increased about 2½ times. Liabilities

for 1923 decreased from the high peaks of 1922 and 1921, but the total, \$631,294,087, was only 2.8 per cent. below that of 1922, although 16.4 per cent. below the aggregate for 1921, the latter year standing first in amount of liabilities.

FRANCE.—THE FALL OF THE FRANC—REMEDIAL MEASURES—INCREASED TAXATION—REVENUE IN 1923.

(FROM OUR CORRESPONDENT.)

PARIS, January 16.

THE week has been an exciting one, but it has resulted in convincing France that the time has come when it is no longer possible to rely upon borrowing as a means to pay one's debts, and that the only possible way to restore French credit is to impose sufficient new taxation to meet current expenditure. The semi-panic that developed among even French holders of francs after January 5th, when the national unit touched a new low record of 88.32½ and resulted in a widespread rush to sell, reached its climax on Monday, when the fall reached disastrous proportions. Francs dropped to 96.25 to the pound and 22.80 to the dollar, and it became evident that unless drastic measures were taken complete collapse was within measurable distance. The expulsion of a dozen minor exchange gamblers, mostly of Russian or Greek origin, was laughed at even among the Poincaré Government's own supporters, as a means of providing a remedy for the collapse which was threatening, and the same evening, at a hasty informal conference between the Finance Minister and some of his colleagues, it was decided to take the only steps that could possibly prove effective. These proposals were discussed at the Ministerial Council the following morning, and the outcome was the announcement that the Government had decided "to ensure the restoration of the financial situation, to balance the Budget for recoverable expenditure, and to stave off an exchange crisis" by taking steps (1) to repress evasion of taxation; (2) to cut down expenditure on the public services; (3) to adjourn the consideration of all proposals involving fresh expenditure, and (4) to increase all existing taxation by 20 per cent. The meaning of all this, put in plain language, is that the country's responsible leaders now realise that, no matter whether General Elections must take place within the next few weeks or not, the French taxpayer must be called on to pay a substantial amount of additional taxation. It is only fair to say that, judging by the approval with which the Government's decisions have been received by all classes of the community, the French taxpayer is possessed of a much larger amount of fiscal patriotism and common sense than his leaders have hitherto given him credit for. France to-day, in spite of the high cost of living and of high commodity prices, is undoubtedly prosperous, and can certainly bear much higher rate of taxation than has hitherto been imposed. Only the lack of statesmanlike courage on the part of some of her leaders has prevented them from resolutely grasping this nettle long ago. More than one newspaper which is a strenuous supporter of the present Government has during the past 24 hours expressed deep regret that the policy now decided upon was not adopted much earlier.

It is officially announced that, basing its calculations on the fact that the total revenue from all sources in 1923 was 23,495,630,100f, the Government estimates that the increase of all existing taxation by 20 per cent. will produce additional revenue amounting to 4,700 millions. The proposals connected with the repression of fiscal frauds, particularly in connection with the revenue from bearer bonds (which are enormously popular with all classes of the French people, and the nature of which enables the vast bulk of them, it is practically certain, to escape taxation) is expected to yield another 2,000 millions. Ruthless further cutting down of expenditure by the various Government departments is to be effected to the extent of another 1,000 millions. The saving of this amount added to the increased revenue obtained from the sources mentioned will furnish, it is estimated, a total of between 7,000 and 8,000 millions, which is almost exactly the amount required to balance the

Recoverable Budget. The Ordinary Budget, as is known, was balanced last year, and there is every reason to suppose that at least a similar result will be attained this year. The 7 to 8 milliards which an effort is now to be made to secure will enable the interest charges on the money which has had to be borrowed for the restoration of the devastated departments, &c., through Germany's default, to be paid out of current revenue, and will thus enable a further heavy increase in the nation's debt to be avoided. Whether these remedies will prove sufficient to stabilise the franc remains to be seen. The banking and financial world has not yet had time to digest the new proposals, but on the whole, expert opinion has welcomed them with approval.

It is understood that the Bill to legalise the increase of taxation by 20 per cent. is to be passed through the Chambers as speedily as possible. This will be all the more feasible, as an exactly similar proposal was brought forward by M. de Lasteyrie, it will be remembered, early last year, and had advanced so far that, at the moment when it was dropped, the report of M. Bokanowski, the Budget rapporteur, had already been drafted. The pending abolition of the match monopoly, it is officially stated, will take the form of the restitution of this manufacture to private industry and the imposition of a special tax on matches.

The taxation returns for 1923, which are published to-day, show that the total revenue for the year was as follows:—

	Frs.
Yield from Normal and Permanent Taxation—	
Indirect taxation and monopolies	17,148,037,000
Direct taxation (income-tax, &c.)	4,143,252,600
Revenue from State Domains	229,546,700
	21,520,836,300
Yield from Exceptional Resources—	
Special tax on War profits	1,333,520,200
Liquidation of War Stocks	200,364,900
Sundries	440,908,800
	23,495,630,200

The striking difference in the incidence of direct and indirect taxation in England and France respectively is even more apparent than usual from the above figures, which show that considerably less than 20 per cent. of the revenue from these two sources is derived from direct taxation in France, whereas in Great Britain the proportion of direct taxation is enormously greater. The yield from income-tax in this country during 1923 was 3,791,581,200f, or 1,140,838,900f more than in 1922. The outstanding success of the year was the tax on turnover, which yielded well over 3,000 millions, or nearly 166 millions in excess of Budget Estimates, and over 735½ millions more than last year. Posts, telegraphs, and telephones yielded over 60 millions more than was expected, and taxes on securities over 57½ millions more, while the luxury tax was 50 per cent. less than anticipated. Customs produced 166 millions less than was expected, and 1,586,000f less than last year.

GERMANY.—RUHR—FINANCES—CURRENCY—FOREIGN TRADE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 15.

INDUSTRY on the Ruhr is getting to work very slowly. About 60 per cent. of industrial workmen are still receiving public support. The provisional arrangement until the middle of April made with the French Commission for resumption of work was on the assumption that after January 15th negotiations for further regulation of Reparations deliveries would be resumed; the French, apparently content with conditions as they are, have spoken of resuming negotiations about the middle of next month. The German industrial leaders, the Essen Chamber of Commerce, and other competent authorities declare that the present provisional agreement cannot long be maintained. The textiles industry in the newly occupied territory has come to an agreement with the French, under which the industry has export duties reduced to between 0.5 and 2 per cent., instead of the approximate 6 per cent. prevailing so far. The industry undertakes to deliver products demanded on Reparations account, the quantity not to exceed as a rule about 15 per cent. of production of individual concerns. The textiles

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

producers are required to compile and supply statistics to the French. They are still unaware whether they will be compensated for their deliveries by the Federal Government. This agreement shows how the French can utilise their military strength to regulate every detail of German industry and trade in the West.

No report of current finances has appeared since last week; but it is generally assumed that before the end of January revenue will be fully covering expenditure. Federal railways and posts are not included in the Finance Ministry's ten-day reports summarised of late from here. Concerning posts, nothing has been published. Railways have already their own gold mark budget, although general finances up to the end of 1923 were in paper marks. Since November 15th the railways have received no more subsidies out of revenue. Preparations are under way for reforming the whole railway administration on private business principles. Since January 1st all railway operating expenditure has been fully covered; but no cover has been provided for the special expenditure arising from the Ruhr railway disorganisation, and no money at all is available for buildings or extensions. The railway department announces that it will not be able permanently to abstain, as it at present abstains, from purchasing new rolling stock, &c. Any losses suffered through the latest reduction of 8 per cent. of freight rates are expected to be made good by an increase in traffic.

The new currency, and the old paper mark which becomes every day less and less important, continue to hold. The first monthly return of the Rentenbank (published partially in the *Economist* of January 12th) contains among liabilities the item 16,000 Rentenmarks for "Renten mortgage bonds in circulation." This shows that only very few Rentenmarks have been presented for conversion into bonds, and so indicates either that no nervousness is felt as to the Rentenmark notes, or that citizens understand that the Renten mortgage bonds, though drawn in "gold marks," really offer no better security than the notes themselves. The success of the Rentenmark so far is based entirely on its limited circulation; the success seems to confirm the doctrine that a pure paper currency, without any metal or other cover, is practicable, given the limitation. The Rentenmark maintains itself in public confidence by the maintenance of its home buying power. Prices of important commodities in Rentenmarks, or, as it is quite meaninglessly put, in gold marks, have still further fallen, and very high prices are now charged only for commodities and services which have no competitive market—most State charges are still high, so are the prices of newspapers, entertainments, and some other things which were put up sharply in late November when the general price-level was much higher than now, and which have not since been reduced.

Banking congestion has almost ceased. The Banks, which for a long time past were open only until 1 o'clock, will henceforth be opened until 3 o'clock. The banks are now taking Rentenmarks for current accounts on a "valorised" or "stable-value" (*wertbeständig*) basis, that is, undertaking to compensate the depositor for any depreciation of the Rentenmark, as shown by the dollar exchange. Eight per cent. per annum is allowed on such deposits. This business proves profitable, as there has of late been an enormous demand for Rentenmark bank credits, for which the banks charge (including various commissions) as much as 24 per cent., also obliging the borrower to repay on "stable-value" basis. For Renten-

mark credits without the valorisation clause the banks sometimes demand 15 per cent. a month. The paper mark interest rate remains 90 per cent., though there is no difference at all between the value of one Rentenmark and one billion paper marks. The preparation of gold mark balance-sheets by public companies is proceeding. The companies are reducing their capitals by varying ratios, 500,000 to 1, &c. All this work assumes that the stable currency has come to last. The credits of the Darlehnskassen have reached the latest legal limit of 10 trillion paper marks, and it is expected that this time the limit will not be raised, and that the Darlehnskassen, which were created in 1914, in order to grant credits on easier terms than those of the Reichsbank, will be wound up, credit being again centralised.

The prospects of the currency holding firm seem materially improved by the belated official announcement that exports in 1923 (first eleven months) very nearly balanced imports. There have now appeared the October and November volume and value figures, and value figures for the preceding nine months. They show that imports fell very slightly short of exports. The data, it is true, are imperfect, owing to the Ruhr disorganisation; and at best the figures are only valuations, being based for imports merely on volumes and prices, and for exports on the returns of values in foreign currencies. The prices taken as basis in the following table are present prices; another official estimate for January-October only, based on pre-war prices, actually shows exports to exceed imports, i.e., 4,407,373,000 gold marks against 4,094,835,000 gold marks:—

January-November, 1923.

(In Millions of Gold Marks.)

	Imports.	Exports.
Living animals.....	29.31 ..	2.55
Food	1,064.08 ..	121.26
Raw and half-finished material..	3,637.61 ..	660.41
Manufactures	849.39 ..	4,718.86
Gold and silver	8.63 ..	13.50
	5,589.02 ..	5,516.38

In October, imports were 435.70 million gold marks, exports 567.79; in November imports 434.0 and exports 514.87. Average monthly imports in 1913 were 933.88 million gold marks, exports 849.89 million gold marks. Although the 1923 figures are at best only approximate, there is nothing to show that they under or over state one side more than the other; and the official judgment is that "the trade balance in 1923 was hardly passive, that of October and November strongly active." This is a revelation of the highest importance; if the foreign investments in German stocks, bonds and real estate are taken into account, the payment balance was probably active. The permanent stabilisation of the currency is (assuming a reparations postponement) brought into sight.

Business seems to be improving. In the absence of up-to-date unemployment statistics for all branches, may be quoted the figures for the textiles branch, a branch which suffered severely from the autumn, 1923, depression. The number of fully unemployed in the Textiles Workers' Union fell from 82,580 at end of November to 65,402 at end of December, and the number of partly employed from 355,001 to 199,355. Unemployed and partly employed together fell from 73 per cent. of members to about 50 per cent. A great many strikes and lock-outs have resulted from the attempt to restore the ten-hours day. The trades unions are against the recent decree made in this sense, and they have power to make trouble, because the decree enacts that in negotiations between employers and employees for a ten-hours day the unions shall represent the employees.

Hamburg's shipping exceeded that of before the war. Arrivals were 15,685,643 net tons, against 14,440,026 tons in 1913; departures 15,400,923 tons, against 14,585,496 tons. Capital issues for increase of company capitalisations totalled in 1923 209,178 million paper marks, issues of new companies 31,272,539,489 million paper marks, bond issues (not including those of public bodies) 545,300,000 gold marks. The proportion of bonds issued on a stable-value basis (gold, rye, coal, &c.) rose from 47.6 per cent. in February to 99.9 per cent. in September, at which figure it remained till the end of the year.

HOLLAND.—TRADE AND FINANCE—THE EFFECT OF GERMANY'S FINANCIAL POSITION.

(FROM A CORRESPONDENT.)

AMSTERDAM, January 15.

It is not to be denied that at the beginning of 1924 business circles in this country became more optimistic than had been the case for a long time past. This, however, was largely the result of a feeling of relief brought about by the cessation of passive resistance in the Ruhr. For, although Germany as hinterland has lost much of its importance for Holland, nevertheless, as an important part of Central Europe, it still exercises considerable influence upon world trade, and even considered from a purely Dutch point of view, Germany is still so important that every indication of a return to normal conditions in that country is a fact to be eagerly welcomed.

It will be readily understood why especially the cessation of passive resistance in the Ruhr has given rise to a feeling of optimism in this country in regard to the possibilities of a trade revival when it is remembered that during the period between January and November, 1922, the clearances of Rhine craft at the frontier amounted to 9,300,000 tons inwards and 11,600,000 tons outwards. For the period January-October, 1923, the figures were 5,000,000 tons and 7,700,000 tons respectively, which means a substantial decrease. Partly as a result of the struggle in the Ruhr, trade with Germany has also suffered considerably. During the period January-November, 1923, imports from Germany amounted to 453 million guilders as against 562 millions during the corresponding period of 1922. Exports to Germany remained the same, namely, about 158 million guilders. Taking steel and iron alone, the imports from Germany declined from 463,000 to 229,000 tons. During the same period the imports from Great Britain increased from 28,000 to 54,000 tons, while those from Belgium increased from 77,000 to 177,000 tons. Altogether, therefore, there was a decrease of 108,000 tons, which points to a considerably restricted output in the metal industry.

It is true that on the whole the trade figures for the year 1923 cannot be described as unfavourable. The excess of imports over exports during 1923 was not more than 706 million guilders, as against 807 millions in 1922 and 870 millions in 1921. If the invisible income derived from shipping, port and transit dues, business undertakings and investments in foreign countries and the Dutch Colonies, receipts in connection with the Colonial department, and various services and profits are also taken into account, then there will presumably be no deficit in the final balance of the country. This, however, is in the main due to the outlets which Dutch industry has captured in other countries, and does not alter the fact that the German market, formerly so important, has become considerably restricted.

In Holland, therefore, great attention is paid to the course of events in Germany, which is very closely connected with the financial reforms which have already been carried out and are to be further extended in that country. For, up to the present, the depreciation of the German currency has inflicted great harm upon Holland, not only in the domain of trade and industry, but also from a purely financial point of view. This does not refer in the first instance to the direct losses suffered by those who had bought up millions of marks. Much more disastrous were the indirect consequences. This affects also the position of the guilder. In the first place, there are approximately 300 million guilders in the hands of foreigners, mostly Germans (for the most part derived from the sale in this country of paper marks which have now become worthless), all of which makes it impossible to restrict the circulation of paper currency by the Netherlands Bank. In the second place, other German capital which found its way to Holland by other channels has also for a number of years helped the State actually to live beyond its means. Money was readily obtainable for social welfare and various expenditures in connection with the crisis, as a result of which there is now a floating debt of more

than 600 million guilders. It is only quite recently, parallel with the considerable restrictions in State expenditure, that a change has begun to make itself felt in regard to this plethora of foreign capital. In consequence of the return of more stable conditions in that country, very much German money has found its way back to Germany. It is at least partly due to this that the recent issue of 115 million guilders in Treasury notes was only subscribed to the extent of 79 million guilders. During the whole of the year 1923 the amounts offered were always over-subscribed. Partly as the result of the withdrawal of foreign balances, the Netherlands Bank was obliged, on December 12 last, to increase its bank rate from 4 per cent. (at which it had been fixed on July 18, 1922) to 4½ per cent.

In the third place, in consequence of the depreciation of the German currency, there has been a regular invasion of this country by German undertakings. German capital has forced its way into our industrial undertakings, has in fact, in many instances, ousted Dutch concerns. This has been particularly the case in the banking world. Recent statistics have brought to light the fact that in Amsterdam alone there are already fifteen banks the German origin of which can be indisputably proved. In many instances these are purely and simply branches of German banks. And, every day, new commercial undertakings are established with good Dutch names and Dutch directors, but which are in reality German concerns. This influx of German capital and enterprise would not in itself be a bad thing for the commercial life of Holland, but it has assumed dimensions which constitute a grave menace to Dutch interests.

For these reasons the experiment with the Rentenmark is being followed with considerable interest. Should the Germans succeed, by means of this expedient, in establishing a gold currency, it is by no means impossible that very much German capital, &c., will find its way back to Germany, which otherwise might become a danger for this country. In regard to the question of the establishment of a gold currency, however, Dutch opinion is on the whole sceptical. It is true that the revenue in Germany derived from taxes is increasing. In the last six weeks of 1923 Germany's deficit on her expenditure decreased steadily; from a deficit of 30.4 million gold marks per day in the period November 21-30 it decreased first to 18.4 and 13.6, and finally to 10.3 million gold marks per day in the last ten days of 1923. And in Germany it is hoped, by means of these increased taxes and the credit from the "Rentebank" amounting to 1,200 million marks, to carry on until the end of March. But even assuming that this would be the case, it is not yet possible to say what will happen after that date. It is not impossible that the so-called "covering" of the "Rentemärken" will be increased by extending or enhancing the value of the mortgages registered, especially if permission is also obtained to issue the Rentenmarken in the occupied territory. Inflation will then unavoidably come again. It is even possible that this has been already commenced by the action of the Minister of Finance in issuing Rentenmark bonds when the management of the Rentebank refused to grant him an extension of the Rentenmark credit. Apart from this, it is a well-known fact that the present president of the Reichsbank regards the Rentenmark purely as a temporary measure, by means of which Germany must gradually get back to a gold currency, with or without assistance from abroad. Herr Schacht's recent visit to England and Holland was, it is assumed in this country, undertaken for the purpose of endeavouring to obtain foreign assistance. As he himself, however, described this visit later on as being of a strictly private character, it is now generally supposed that his tentative efforts have not been entirely successful, and so opinion in this country has become still more sceptical in regard to the future position of German currency. It is hoped, however, that Germany will ultimately succeed in introducing a really stable currency; and in this connection the decisions of the two Commissions which, under the auspices of the Reparations Commission and in co-operation with the United States, are to institute an inquiry into Germany's financial position, are eagerly looked forward to in this country. For the steady development of world trade and, consequently, of the economic life of Holland will only be possible when the financial position of Germany is on a sound basis.

NORWAY. PROHIBITION TO BE REPEALED?—
FEATURES OF 1923: THE NEW YEAR OUTLOOK.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, January 9.

Those who, at the time of the introduction of prohibition in this country, have been shocked at the final issue of this well-intended measure. It is possible that if the prohibition had been accompanied from the outset by much stronger measures for enforcing it, the result would have been a much more satisfactory one. As it is, however, smuggling has become a pestilence which it seems to be impossible now to overcome while prohibition exists. When the Government—as will be the case in a few days—proposes the cancellation of the Act imposing prohibition, it is not impossible that the Storting will produce a majority for such a proposal. This is the more likely because the Exchequer stands in need of the 30 millions of revenue calculated to accrue if prohibition is stopped.

As the year 1923 recedes into distance, it becomes more possible to appraise its economic features. It cannot be said to reveal very pleasing traits, on the whole. The banks, apart from those that had to seek the shelter of the Administration Act of March, most likely have had a tolerably good year; but out of the year's profits they will have to meet earlier losses. Big dividends cannot, therefore, be expected, the less so since the Bank of Norway has issued a request asking the private banks to show moderation in distributing dividends. The inveterate tendency of the exchange of sterling and dollars to turn against this country, of course, causes difficulties, in as far as it enhances the prices of all the very important necessities of life that must be paid for in those two currencies. Naturally, this state of the exchange to some extent facilitates the export trade, but not nearly sufficiently to make up for the loss. Agriculture, on account of a cold and very wet summer, had an unsatisfactory year. Industry was fairly well occupied, and unemployment was not so large as last year. In most of the big industries prices were, however, much reduced, so that the year's accounts of most factories will not be likely to show any considerable profits. Fisheries, of such enormous importance to the economic life of the country, were fairly good, yielding about 65 million kroner, against 80 millions in 1922 and 55 millions in 1921. Shipping did not have a bright year, though there were decided points of encouragement.

On the threshold of the new year, there seems to be a general hope that, if no unforeseen events occur, better things may be expected, and one thing may be confidently said—the public authorities, of the State as well as of the municipalities, seem at last to have been awakened to the necessity of practising the most rigid economy in order to re-establish the economical financial equilibrium of the country, and if that is thoroughly realised the gain will be inestimable.

Letters to the Editor.

THE ELASTICITY OF THE RUPEE CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The currency of India is, of course, a controlled currency. The total of rupees and notes comprising the circulation is not a fixed quantity, but varies in terms of the powers exercised by the Government under various enactments.

The circulation of India consists of currency notes and the rupee coinage. The total issue of currency notes is, of course, known, and while the total of the rupees in the hands of the public can only be estimated, the increase or decrease in the rupee coins in circulation at any time is seen from the flow of rupees into or out of the Currency Department.

The only way open to the public, as distinguished from the Government, to obtain rupees is to pay in notes to the Currency Office, and *vice versa*, if notes are wanted, rupees must be handed over for them. It follows that, apart from minting, an increase in the rupees in the Paper Currency Reserve means less rupees in circulation, and the plus or minus of rupees in the reserve taken with the plus or minus of the notes in circulation will show the variation in the total circulation caused by a variation of the security other than rupees held against the notes.

Without this brief explanation the interest of the following figures would not perhaps be clear except to those connected with Indian finance.

Taking the past two years 1922 and 1923, the following figures show the variation in the total circulation of notes and rupee coinage in lakhs of rupees:—

	+ Stands for Inc.	— Stands for Dec.
End of Dec., 1921—Taking that as an arbitrary ..	Zero	
" May, 1922—The variation is	— 288	
" Nov., 1922— "	— 10-64	
" May, 1923— "	— 10-56	
" Nov., 1923— "	— 15-42	
" Dec., 1923— "	— 1-42	
" Jan., 1924— "	+ 3-58	

The maximum reduction was established in September, 1923, when the circulation was less by Rs. 16.42 lakhs than at the zero date named above.

But the figures for the period since the end of November, 1923, are in themselves of particular interest, since the Indian Bank rate has been raised from 6 per cent. to 8 per cent. in that time.

The reserve of rupees and silver bullion has fallen from Rs. 95.50 lakhs on November 30th to Rs. 85.17 lakhs on January 7th last, and the actual circulation with the public has increased by Rs. 19 crores in the period.

This has been accomplished by the Currency Department having purchased sterling against currency to the extent of Rs. 11 crores and investing the sterling in British Treasury bills or short bonds, and for the balance of Rs. 8 crores, currency notes to that amount have been issued against bills of exchange, presumably internal bills of exchange, in terms of the Indian Paper Currency Act, 1923.

For the later figures we have to hand only the cabled summary published in the Press, and not the full return.

The demand for currency is, of course, quite normal and seasonal, and may be regarded as a symptom of trade activity. The reserve in gold and rupees or silver bullion alone is 57 per cent. of the note issue after the expansion shown above. The figures are a striking example of the working of a purely artificial and managed currency, since without the elasticity now permitted by the Paper Currency Act there would obviously have been an important stringency in the Indian money markets, and exchange must have fluctuated with some violence in view of the favourable figures of the Indian foreign trade.

The main controlling influence in the exchange, if the currency had been a fixed quantity, would have been in the adjustment of prices in rupees and foreign currency as exchange moved, particularly as regards prices for the nation's exports. By that adjustment of prices commerce becomes a gamble in exchange. One does not forget, of course, that there are other methods by which the Government can deal with a position through the sale of Councils or of "reverse," but it would seem to be through control

of the currency in circulation, rather than by the method of the Babington-Smith Commission involving the dispersing of sterling resources, that the rupee exchange may be fixed, if that is desirable, or its fluctuations modified.—Yours faithfully,
C. S. CLARKE.
January 16th, 1924.

JOHN BRIGHT AND BROS., LIMITED.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We are concerned for a considerable number of debenture holders, some of whom are very influential, in this company. A committee is being formed, and it is proposed to take counsel's opinion, with a view of ascertaining how far the directors of John Bright, Limited, were justified (if at all) in advancing the £1,140,972 to Messrs Crosses and Winkworth, Limited. It would be highly undesirable on our part at the present juncture to express our own views. We have received a number of communications from holders, all in the most indignant terms, stating their belief, when they subscribed, that the proceeds were to be utilised in the business of the company, while in fact a substantial amount, at least, was paid over to another concern. It is, our clients consider, a matter that requires the fullest explanation, and that the trustees of the debenture holders should have uttered, if they were able, considerably more than what they stated in the circular of January 9th.

We should be much obliged to you if you would insert this communication in your next issue.—Yours faithfully,

J. S. BLANCKENSEE AND CO.

Books and Publications.

AMERICAN AGRICULTURAL ORGANISATION.

THIS substantial volume* is the second of a series of "Studies in Economics and Sociology" published by the University of Kentucky. The author, who is Professor of Economics at that University, defines his purpose as the presentation of "a scientific and unbiased analysis of the forms, functions, causes and effects of public and private agricultural organisation in America." In a preliminary chapter he discusses the relation of public to private organisation generally, and remarks that it is characteristic of the Anglo-Saxon race "to conduct many of its social projects through voluntary or private association." This statement, while undeniably true, does not fully express the racial tendency, which has, in fact, deep roots in racial character. It is based on the passion for individual liberty, the instinct of self-government, and the rebellion against automatic authority which are the heritage of the English-speaking peoples. The same spirit which went through long centuries resisted the dictation of Monarchs, which incidentally found expression in the exile of the Pilgrim Fathers and in the War of Independence, manifests itself, under modern conditions, in hatred of bureaucracy and resentment against Government interference. The long and detailed story told by Dr Wiest of the development of agricultural organisation in America and the slow and reluctant recognition of the fact that private effort needed to be supplemented and eventually, in many cases, replaced by public, *i.e.*, by Government, activity, might have been written of this country with little change but that of names.

The book is divided into two parts. The first part describes the establishment of the United States Department of Agriculture. The idea of such a Department was mooted by Sir John Sinclair, then President of the English Board of Agriculture (which did not survive his death), to George Washington, who brought the subject before Congress. A Bill was, in fact, introduced, but made no progress, and the scheme remained in abeyance for 66 years. In 1862 an Act was passed establishing a Department of Agriculture—thus preceding by 27 years similar action by

* "Agricultural Organisation in the United States." By Edward Wiest, M.A., Ph.D. University of Kentucky, 1923. \$3.90.

this country—its chief functions being the collection of statistics and the distribution of seeds. It soon began to widen its scope and extend its activities, at first slowly but afterwards rapidly. The history of its development is interesting, but its growth may be concisely measured by its expenditure. Beginning with a modest appropriation of some £8,000, rising in 30 years to £40,000, the expenditure of the Department reached £4,000,000 in 1915 and £6,000,000 in 1920. In the meantime the States have gradually established Agricultural Departments of their own. The relation of the Federal Government to the States forms a most interesting story. The opportunities for friction are obvious, and the natural difficulties are complicated by the fact that at any stage in the adjustment of relationships the American Constitution may be invoked and the issue referred to the decision of the Supreme Court. It is high testimony to the political instinct and practical sense of the American people that arrangements—not always logical but always workable—have been made, between the Federal Department and the States Departments. The position is somewhat analogous in this country where the relations of the English and Scottish Agricultural Departments with the County Councils are still in need of some adjustment to prevent duplication of effort and expenditure.

The second part of the volume describes the origin and development of the chief agricultural associations. As in this country, the earliest of these were local farmers' clubs and societies. The "agricultural fair," or as we should say "show," naturally arose out of the movement started in England in the latter part of the 18th century by Bakewell, Culey, and others. The "father of the agricultural fair" was Elkanah Watson, who, in 1807, exhibited two merino sheep at Petersfield, Mass., and in 1810 organised the Berkshire Agricultural Society for the purpose of holding fairs.

The most characteristic of American organisations was the Grange, established in 1867. Dr Wiest observes that "it stands pre-eminently in the history of the farmers' movement as an influence towards organising the rural population for its economic, social and political improvement." Its official name was "The Patrons of Husbandry," and it was founded as a secret order, on the lines of Freemasonry, with seven degrees. Women, however, were admitted on an equality with men, and, indeed, a woman was recognised as one of the founders. It is curious to note that six of the seven founders of the organisation were Government clerks, and their activities seem to have been in no way regarded as incompatible with their occupation. The Grange reached its highest summit of success in 1875, when it had 853,000 members. It then rapidly decreased, and 20 years later mustered little more than 100,000. It has, however, recovered, and in 1922 its membership reached 676,000.

In 1887 the Farmers' Alliance was founded, with a somewhat looser organisation. This aimed more directly at political influence, and drifted inevitably into partizan-ship. The result was what Dr Wiest terms its "complete disintegration," and the transformation of an agricultural organisation into a third political party, which had a short-lived success.

In 1902 the Farmers' Union was started, mainly, it would seem, as a result of the "disintegration" of the Farmers' Alliance. It is described as "a virile organisation in the West to-day, and is doing a great deal of good among the farmers." It has a membership of about 140,000.

One of the recent developments of agricultural organisation in the United States is the "extension" movement, which is designed to disseminate the teachings of agricultural science and practice among farmers, and also aims at the improvement of the amenities of rural life. In this excellent work the Federal Department, the State Departments, and the farmers' organisations all co-operate.

Dr Wiest has done his work thoroughly and conscientiously. He has accumulated the historical facts from a wide range of authorities. Only in one small matter where the present reviewer can follow him has he slipped into slight error. He refers to the foundation of the International Statistical Institute in 1885, but erroneously places the first meeting in Rome, whereas, in fact, it was

in London. He appears to think that the International Agricultural Institute, founded 20 years later, is identical with the International Statistical Institute, an entirely separate organisation which has existed for nearly forty years, and held its session, at which the United States was adequately represented, at Brussels last October.

BOURNE'S INSURANCE PUBLICATIONS.

WE have received the new volume of "Bourne's Insurance Directory for 1923-24" (Stone and Cox, Limited, 188-9 Strand, W.C. 2, price 17s 6d net). The latest volume is no less thorough and useful than its many predecessors. It gives not only the analysed figures of new business, revenue, and expenditure of the life offices for the past five years, but also summaries of valuation returns, of bonuses declared, of surrender values, and of premium tables. The tables of premium and annuity rates occupy more than half the book, and are quite invaluable. The directory portion of the book gives the addresses and chief head offices and branch officials of practically every insurance company which does business in the United Kingdom. "Bourne's Handy Assurance Manual for 1923," price 2s 6d (cloth 3s), contains in a condensed form a good deal of the statistical information concerning results, valuations, bonuses, and premium rates which is contained more fully in the "Directory." The manual may be described as a pocket companion to the "Directory," and both books are essential to all those who desire to keep closely in touch with life assurance business.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
January 23. January 24.

In addition to the home political factors, Stock Exchange markets this week have been largely governed by the movements in foreign exchanges. When the franc so nearly ran into three figures on Tuesday, pronounced depression developed in the foreign market, and was reflected to some extent in other parts of the Stock Exchange. Upon a recovery in the French exchange, and a simultaneous improvement in the pound as compared with the dollar, improvement occurred in various parts of the House. Business is impeded by the unsettlement produced by politics and the exchanges, but the tone towards the end of the week became less apprehensive, and investment keeps a sharp look-out for stocks and shares which have fallen in price appreciably since the General Election became mooted, and which appeal by reason of their sound character.

The War Loan and Conversion stocks have been leading the way in the Consol market, both suffering heavy falls during the early part of the week, but rallying noticeably later on. Movements in the Funding Loan have been still more erratic, though on similar lines. More than a score of home county and corporation stocks have given way, and Indian railway issues are again depressed. Heaviness made further inroads into the list of Colonial issues, though on Thursday these last-named, together with a few Home Railway prior-charge stocks, assumed a better appearance.

The features in the foreign market have been the rapid movements in French and in German bonds. Upon the announcement of a sounder policy of taxation in France, French bonds and the exchange rallied simultaneously, but the market is in an extremely tender state. Another rise in the French Bank rate induced reaction. German and Prussian bonds advanced by leaps and bounds upon buying from Holland, which is said, and probably with reason, to be on behalf of German houses which have some inkling of steps that may be taken to rescue German credit from its present parlous plight. Brazilians went back after their recent advance, the milreis declining in a manner that disappointed Brazilian supporters. Mexicans eased off to some extent, on statements that the revolutionaries were becoming more active. Rio Tintos pursued the same erratic path which was marked out for French Government issues. Other foreigners have been sympathetically affected by the movements in French bonds. Austrian banking shares have attracted speculative attention.

The threatened railway strike exerted an unfavourable influence over Home Railway stocks, though, after a general fall, prices plucked up courage, and, on dividend considerations, became a rather better market as bears covered and a few bold buyers picked up stocks. Grand Trunk Pacific debentures gave way several points, but the greater part of the loss was recovered. Brazilian rails kept time with the movements in Brazilian Government bonds. Argentine Railway stocks have been swayed by the contradictory influences of general dullness on the one hand, and, on the other, of the encouraging prospects afforded by traffic and exchange.

Rubber has been down to 1s 2d per lb, but the share market is a shade firmer on the whole. Minor falls occurred in those rubber shares in which Paris takes an interest. In the oil section, the various rises which have occurred lately in the price of crude oil served to bring in buyers of Shells and Royal Dutch, both of which advanced strongly to prices that tempted profit-taking on the part of people who got in considerably lower down. The list, as a whole, is tolerably hard, and the market may be described as firm. Bear purchases accounted for upward reactions in Courtaulds, Tobacco shares, and the few remaining speculative counts left amongst industrials.

Further weakness developed in the groups for cable issues, wireless, cement, iron, coal and steel shares. Hotels and stores shares mostly held their previous prices. The banking market heavy, in consequence of the falls amongst gilt-edged

securities. Scarcely a change has occurred in the shipping list other than a few declines in pre-ordinary stocks which are affected by the tone of the Consol market. Insurance shares have shown more resistance to the prevailing tendency than they have presented of late: the recent fall has been checked, but there is not much fresh buying. Gas and electricity shares are scarcely mentioned, though Tokyo Electric bonds gave way on the news of the latest earthquake. Prices of Industrial preference shares are tolerably well maintained, there having been little selling of such stocks. National Smelting debentures were left with the underwriters to the extent of 75 per cent. The first price of 4 discount brought in buyers, and there was a recovery to 2½ discount. Newspaper shares have been flat.

Kaffirs are little helped, from the point of view of business, by the high price reached in the market for gold. There is so little going on, however, that any demand from the Cape, or offering of stock from Paris, has a pronounced effect. Slightly better prices have been quoted for Chartered, Cam and Motor, and a few Rhodesians, the interest being almost entirely professional. De Beers gave way, on French selling, but finished the week with a more cheerful appearance. Tin has been over £250 per ton, attracting academic attention to shares in the tin-producing companies, and bringing about small improvements in the leading shares of the various groups, West African, Malayan, and Cornish, though the fluctuations have been comparatively slight. Russians are a shade better, on the idea that, if a Labour Government is returned to power, one of its first acts will be to develop trade relations with Russia. Shares in the other mining markets are almost forsaken by the public, and the negligible price-movements on the week show how meagre is the interest now being taken in Mexican, Indian, and miscellaneous mining descriptions. Canadian and silver mining shares enjoyed support from the Dominion, and are better in several cases.

NEW ISSUES.

The Independent Investment Company, Limited.—Authorised share capital £350,000, divided into shares of £10 each, which are now offered at par. The directors are Messrs O. T. Falk, T. J. C. Gifford, and J. M. Keynes. This company has been formed to "carry on the usual business of an investment company, aiming at obtaining a higher return on the capital employed than is open with safety to the individual investor." Probably the most interesting aspect about the undertaking is the composition of the prospectus. We are informed that the company will have "special regard to certain principles of investment which are now well recognised, but have as yet been acted on in only a limited measure. It is now known that fluctuations in the relative values of long-dated and short-dated fixed interest securities and also of fixed interest securities generally and of ordinary shares are all affected by a periodic credit cycle. Changes in the short period rate of interest affect the value of long-dated securities to a greater degree than should strictly be the case, with the result that considerable profits can be made by changing from one class to another at the appropriate phases of the credit cycle. Similar periodic changes also take place in the relative values of money on the one hand and of goods and real property on the other, which are reflected in the relative values of bonds and of

shares, representing, as these do, respectively money claims and property, so that here also the same principle of changing from one class to another at appropriate times can be applied." In conclusion, it is pointed out that "the result of accumulated experience on these matters is to make it clear that the course of events is sufficiently regular to enable those who are in close and constant touch with the financial situation in certain instances to anticipate impending changes in the course of the credit cycle." Two other features in the prospectus also call for attention. The directors have power to borrow only up to 20 per cent. of the subscribed capital, and the borrowing powers on debentures are limited to the amount of subscribed capital. It will be interesting to observe if these two provisions are eventually found to be beneficial. The City will watch the progress of this undertaking with lively interest to see what effect this new movement will have on the policy of other trust companies.

Caribonum, Limited.—Authorised capital £150,000, divided into 50,000 6 per cent. cumulative participating preference and 100,000 ordinary shares, all of £1 each. This is an issue of £200,000 6½ per cent. guaranteed 20-year notes at 96. There are no debentures or debenture stock. It is provided that in 1926 and onwards the company shall apply £5,000, or an amount equal to 10 per cent. of the net profits in the preceding year, in redemption by purchase at or below par or by drawings at par any outstanding notes to be redeemed in 1943. The right is reserved of redemption by drawings at 102 per cent. on six months' notice. The additional capital is being raised, among other purposes, for paying off bank and other liabilities incurred in connection with extensions. In a recent valuation assets were returned at £352,067, and a statement of profits shows an increase from £10,158 in 1913 to £38,391 in 1922. But it should be observed that these figures are arrived at before allocation for depreciation. The company undertakes not to charge assets during the currency of the notes except for the purpose of securing loans from bankers "in the ordinary course of business." If this exception is quite appreciated, it will be seen that noteholders are not far removed from the position of open creditors, with the drawback that their date of claim is postponed. The payment of principal and interest is, however, guaranteed by the Lamson Paragon Supply Company, the principal shareholder of Caribonum, Limited. The balance-sheet of the Lamson Paragon Supply as at January 31st last shows, after deducting all liabilities, except reserves of £50,000 and contingent liabilities £45,712, surplus assets amounting to £782,091; this latter company has no debentures outstanding, and it is pointed out that during the past five years it has distributed dividends to its shareholders amounting, before deduction of tax, to £241,897. These are two progressive undertakings, and, subject to industrial risks, we see no reason why the companies should not carry out their obligations.

Kynaston, Limited.—Authorised capital £50,000, divided into 45,000 8 per cent. cumulative participating preference shares of £1 each and 100,000 ordinary shares of 1s each. The company was formed to acquire the business of Doctor Kynaston's, which is described as "proprietors of medical specialities." Profits are estimated at £36,000 per annum. The purchase consideration is given as £11,000, most of which will probably be in shares. Most investors would probably have felt more sanguine about the undertaking as a business proposition if the promoters had been less sanguine over profits.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

ALEXANDERS DISCOUNT COMPANY,
LIMITED.

SATISFACTORY RESULTS, DESPITE DIFFICULTIES.

DIVIDEND AND BONUS MAINTAINED.

MONETARY CONDITIONS AND PROSPECTS.

The fifty-sixth ordinary general meeting of shareholders of the above company was held on Wednesday, January 16, 1924, at the office of the company, 24 Lombard street, London, E.C., Mr Colin Frederick Campbell, the chairman of the company, presiding.

The secretary (Mr A. K. Bruce) read the notice convening the meeting and the auditors' report.

TRIBUTE TO THE LATE MR PHILIP ALEXANDER.

The Chairman: I assume you will take the report as read, but before passing to the accounts I wish to refer to the loss the company has sustained since we last met, in the death of Mr Philip Alexander, which took place in March.

Mr. Philip Alexander had been a director since January, 1912, and during the whole of that period he took the greatest interest in the affairs of the company, and was always ready to promote its welfare in every possible way.

To fill the vacancy thus caused on the board, the directors invited Mr Eric Gore Browne, D.S.O., who, we are glad to say, accepted our invitation, and you will presently be asked to confirm the appointment. Mr Gore Browne is a managing partner in the highly-esteemed banking house of Messrs Glyn, Mills and Co., and as a practical banker he will bring increased strength to the board. We consider ourselves fortunate to have secured for the company the benefit of his knowledge and advice.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, you will see that the total figures are £22,084,000, compared with £20,739,000 last year and 22,596,000 at the end of 1921, the increase being accounted for as to £510,000 by investments, £20,000 by cash, £321,000 by gross holding of bills, and £490,000 by loans. The latter, which were all against money market securities, were higher than usual, and, being mostly of a temporary nature, have since been largely repaid.

Our net holding of bills at £15,365,000 is smaller than in the last account by £355,000, and the total of commercial bills rediscounted, though still small, has increased to £2,368,000.

Investments, all of which continue to be short-dated, are £510,000 higher than they were a year ago, and now amount to £3,063,000.

PROFIT AND LOSS ACCOUNT.

Coming next to the profit and loss account, the gross profits, including the carry forward, are £403,095, against £459,302 last year. The rebate is maintained at about the same figure, though the net holding of bills is, as I have said, rather less.

Expenses at £40,982 show a reduction of £8,042, and are lower than in any year since 1919, when the business was on a smaller scale. I am sure you will be pleased to hear that we have again recognised the ability and zeal shown by the management and staff by giving them a bonus on their salaries.

THE DIVIDEND.

The dividend that we propose of 15 per cent. is at the same rate as last year, and the bonus of 5s, free of tax, is also the same. The directors think it desirable to adhere to the system of making the return to the shareholders partly by means of a bonus and partly by a dividend, as in a discount business such as ours the profits are bound to fluctuate considerably.

By altering the rate of bonus the directors are able to adjust the total return to the shareholders in accordance with the scale of the profits, without disturbing the dividend. I feel sure the shareholders will be gratified on receiving now the same rate of bonus as in the previous year, seeing that the profits in 1923, as disclosed in the accounts, were less than in 1922.

A further addition of £30,000 is made to the published reserve, which now stands at £430,000, against a paid-up capital of £500,000 ordinary shares, in addition to which there is the preference capital of £100,000.

TRADE IN 1923.

I do not think it necessary to refer to any of the other figures in the accounts, which continue very much as you are accustomed to see them, but you will have observed from the general result that the year 1923 was not as good as the record year of 1922.

A year ago I expressed the hope that we might see a steady improvement in the volume of trade, and at one moment this

seemed probable, but it dwindled again during the summer, and showed no sign of improvement until the late autumn. Then came the news of the General Election, with the result that is well known to you all, so that to-day I cannot say that there is much change for the better, although the reduction of unemployment which is taking place steadily points in that direction.

It is also an encouraging feature to note that throughout the year the proportion of our business concerned with commercial as opposed to Treasury Bills has been slightly higher than it was in 1922.

MONEY MARKET.

Treasury Bills have continued to be our main source of supply, and our bill case to-day largely consists of them. Money has been in moderate supply throughout the year, but the margin between ease and scarcity always seemed to be a small one, and borrowers frequently found themselves temporarily short of funds. The margin between money and bills was rather better than in 1922, the average being 10s 6d, against 6s in that year. I have already drawn your attention to our increased holding of short-dated securities, but we have held them more for the sake of the running profit than for the chance of a rise in capital value, as there has not been at all a brisk demand for these securities such as was experienced in 1921 and 1922, and prices generally may be said to be 1 per cent. lower than they were a year ago. The Bank rate was altered once during the year in July, when the rate was raised from 3 per cent. to 4 per cent., and the average rate for three months, Bank bills was £2 13s per cent., against £2 12s per cent. in the previous year. The figures of the deposits of the clearing banks have continued to shrink; those for November, 1923 (the last available) being £1,670 millions against £1,728 millions for December, 1922, and £1,863 millions for December, 1921.

As a matter of fact the lowest point touched was £1,639 millions in March, so that there has been a small rise during the second half of last year. The contraction on the year accounts for the shortage of money experienced by the discount market to which I have already alluded. On the other hand, the total acceptances of clearing banks have increased during the year from £73 millions to £87 millions, which corresponds with our own experience of a small increase in the supply of commercial bills, and leads one to hope that the lowest point in the depression of trade has been passed.

Taking everything into consideration, I think we are fortunate in having got through a difficult year as well as we have done, and the result is a further testimony to the careful and skilful policy pursued by our manager and those associated with him in the management.

THE FUTURE.

What the future has in store for us I will not attempt to anticipate except that I have every confidence that the common sense of our countrymen will bring us safely through the uncertainties of the immediate future. What concerns us more particularly is that the great position now held by the City of London in all matters relating to banking and finance in the eyes of the world in general should continue unimpaired, and as it is to the Bank of England that we look as the mainspring of the whole finance of the Empire, our duty will be to render such support as we are able to give to the policy outlined from time to time by the Governor of the Bank. If his policy is adequately supported we need not be unduly alarmed, and I see no reason for thinking that in the event of a Labour Party forming a Government it will take any drastic action in finance without first taking counsel in the City from those best qualified to speak.

INVESTORS AND THE DOLLAR EXCHANGE.

It has been regrettable to see the weakness lately of the dollar exchange, due in some measure to nervous investors trying to get their capital out of this country. Not only is such action, in my opinion, rather unpatriotic, but it is also likely to result in ultimate loss to such investors, and to prove futile so long as they retain British domicile.

As regards our own business, if we continue to exercise the care with which it has been managed in the past, I have no fear

that the shareholders will be disappointed with the ultimate results.

I now beg to propose:—

“That the report and accounts be received, adopted, and entered on the minutes, and that dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £100,000 preference capital, and at the rate of 15 per cent. per annum on the £500,000 ordinary capital, both less income-tax, and a bonus of 5s per share on the ordinary shares, free of tax, payable on and after the 17th instant, and that the balance of £32,496 8s 8d be carried forward to next account.”

Sir Austin E. Harris, K.B.E.: I will second that.

The Chairman: If there are no questions, I will put the resolution.

The resolution was put and carried unanimously.

The Chairman: The next resolution is for the election of directors. I beg to move that Sir Austin Edward Harris, K.B.E., be re-elected a director of the company.

Mr R. Ernest Alexander: I will second that.

The resolution was carried unanimously.

The Chairman: I beg to move that the appointment of Mr Eric Gore Browne, D.S.O., as a director of the company be confirmed.

Mr. George C. Alexander: I second that.

The resolution was carried unanimously.

The Chairman: The next resolution comes from the body of the hall.

Mr E. B. Baggallay: I beg to move that Messrs Price, Waterhouse, and Company be re-elected auditors of the company for the ensuing year at the same remuneration as before.

Mr L. J. Moser: I have much pleasure in seconding that.

The resolution was carried unanimously.

The Chairman: That, ladies and gentlemen, completes the business of our meeting to-day.

VOTE OF THANKS TO CHAIRMAN AND BOARD.

Mr John Cross: I should like, Mr Chairman, to move a vote of thanks to you for presiding, and to the board for their services during the past year. It seems to me that the accounts show that the business has been carried on with great care and success, and we are very much indebted to you, gentlemen, and also to the staff for their services.

Mr L. J. Moser: I beg to second that.

The Chairman: On behalf of the directors and myself, and also of the management and staff, I thank you for your kind expressions of approval.

The proceedings then terminated.

BANK OF NEW SOUTH WALES.

BANK'S STEADY PROGRESS—QUESTION OF EXCHANGE.

At the half-yearly meeting of the Bank of New South Wales, held at the Chief Banking House, Sydney, on Friday, November 30, 1923, the Chairman, Mr Thomas Buckland, President of the Bank, in moving the adoption of the report, said:—

Gentlemen, before moving the adoption of the report and balance-sheet, I will compare the figures with those of twelve months ago.

LIABILITIES.

Note circulation in New Zealand is £66,000 higher, and reflects increased accommodation to customers.

Deposits are more by £2,568,000. Part of this is due to payment to customers of their holdings in the Commonwealth Loan due in September last, but the major part is the usual increase looked

for in our business. Deposits bearing interest have been more than maintained.

Bills payable and other items are £500,000 more than last year. Our outstanding drawings on London are £400,000 more, and are an indication that the import business is more active.

Capital and reserve fund stand at £9,800,000, or £336,000 more than before.

ASSETS.

On the assets side you will notice that we have, by a reduction of £3,818,000, brought our London balance to normal figures and increased our cash balance here by £2453,000 in anticipation of an active wool and wheat season. Meantime, our advances to customers have been increased by £4,500,000. The severe drought in Queensland and in the northern parts of New South Wales, and the impossibility to realise on stock, accounts for some part of the increase; the balance is well spread in every State, and also in New Zealand, financing industrial and trading concerns and grazing and farming interests, and with the realisation of our products there should be a reduction in our advances and the usual increase in London funds. You will notice a new item under advances termed “Sugar Advances” £85,000. This is in connection with the sugar pool guaranteed by the Queensland Government, and represents our quota of the pool, but the handling and financing of the crop, valued at over £7,000,000, devolves chiefly upon our constituents, the Colonial Sugar Refining Company, Limited. Bills receivable, which are bracketed with advances, have increased £500,000, which, with the increase in bills payable, is further proof of increased imports.

Premises, after being for many years stationary, have increased £50,000. During the year we have purchased valuable city and suburban properties in Sydney and Melbourne, and have erected new buildings thereon.

Our total figures have increased in the year by £3,500,000, and indicate the steady progress of our institution.

EXCHANGE QUESTION.

The exchange question continues to be abnormal, and to cause us some concern. Money, being the foundation of modern economic civilisation, and exchange rates playing, as they do, such an important part on the movement of commodities, they must be of great interest to the community, but the matter has become so complex that it would be a futile endeavour on my part, or indeed upon the part of the most astute financial authority, to attempt to forecast its operations even in the immediate future. Before the war currencies were based upon a general standard, that is to say, the rates of exchange obtaining between the different countries of the world were more or less stable, the comparatively small variations being governed chiefly by exports and imports, say seasonal requirements, but now political influences have such a very material bearing upon the matter.

Speaking more directly for Australia, I would mention that when currency was on a gold basis and the banks in Australia issued their own notes, the moving of the crops gave us little concern, but with an inconvertible note issue at both ends the adjustment by the Australian banks of surplus balances in London has been very difficult and costly for the last few years, and I feel that some scheme whereby value might be received in London and an equivalent amount in notes issued to the banks in Australia, to relieve such temporary stress, or *vice versa* should the balance veer round the other way, is a matter which should receive the most serious consideration of our note board. Without some such relief and the impossibility of making gold shipments to adjust balances, the rates of exchange between Australia and London cannot be expected to be on the same plane as when currency was on a gold basis.

THE ANGLO-SOUTH AMERICAN BANK,
LIMITED.

Capital and Reserves exceed £13,000,000

BANQUE ANGLO-SUD AMERICAINE, Société Anonyme, PARIS.

Head Office:—62, OLD BROAD STREET, LONDON, E.C.2

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

CONDITIONS IN QUEENSLAND.

Our reports from the several Australian States and New Zealand may be regarded as reasonably normal:—

Queensland is our least favoured State at the present time; the drought in the north and other parts continues with most discouraging results. For some years beef has been a drug on the overseas markets, and prices consequently very low, which was bad enough in itself, but the added disability of droughty conditions makes the position of the cattle man a very unenviable one, and those associated with him cannot, of course, entirely escape his troubles. The drought also seriously affected the cotton production, which is greatly to be regretted, as cotton growing in its present vigorous form may be regarded as a new industry, and likely to perform a prominent part in the progress of the State. The other two great products, viz., wool and sugar, are fairly good.

VICTORIA, SOUTH AUSTRALIA, AND WEST AUSTRALIA.

In Victoria, South Australia, and West Australia both agriculture and grazing may be regarded as good; in fact, the reports from the two latter States are very good indeed. In New Zealand they have had an abnormal amount of rain and floods, which have caused some losses to agriculturists and pastoralists, but not sufficient to make much material difference to the State, which may be regarded as in a prosperous and satisfactory condition, and, furthermore, there is evidence of the New Zealand Government wrestling with and improving the country's financial position.

The northern areas of New South Wales are suffering a good deal from the want of rain, but conditions in the southern division are good throughout. Business in the city and suburbs may be spoken of as fairly good, but it is not so good as it has been in the past, and I feel justified in saying that, while the present outlook cannot be regarded as altogether gloomy, it is hardly as buoyant as it was when I had the pleasure of addressing you six months ago. At that time most of the Government and industrial stocks were greatly in demand at increasing prices. To-day there is a different atmosphere in the money market, whether from the failure of the Federal Conversion Loan, or because all the States are competing one against the other for all the money they can get at ever increasing cost, is hard to say, but the fact remains that the market has lost its buoyancy, and it is difficult to see how this is to be regained and proper confidence restored, until such time as there is evidence of genuine endeavour on the part of our governing bodies to act within their incomes, to endeavour to lessen their obligations instead of ever and always increasing them.

NECESSITY FOR GOVERNMENT AND MUNICIPAL ECONOMY.

The fate of this magnificent Continent of Australia rests more upon the realisation of this fact and genuine effort to arrest the waste than perhaps anything else. Our burden of taxation is already making its weight very pronounced, and operating adversely to enterprise. If Members of our Parliament, and councillors of our municipalities do not understand, or cannot be made to realise the seriousness of this position, but continue to borrow and spend the public money with supreme disregard for the ever-increasing taxation, I wonder what our taxes will amount to in a few years' time, and what will be the fate of this otherwise incomparable country. No estate, or firm, or company can carry on for long if the trustees thereof are without some intelligent comprehension of right and wrong in the matter of expenditure, and what applies to them applies also to a country, although the result may be a little longer delayed.

You will recollect that at our half-yearly meeting of May 30, 1922, a recommendation of your board of directors to apply to Parliament for an additional Act, giving the bank extended powers, was carried unanimously. I have to report, gentlemen, that this new Act has passed both Houses of Parliament, and became law on October 4th last. We are now at work on our deed of settlement, to bring it into harmony with the new Act, and when this is accomplished, a special general meeting of the proprietors will be called to consider the proposed alterations.

I have to advise that the seat on our board until recently occupied by Sir Charles Mackellar having become vacant, the office has been temporarily filled by Mr James Burns on the invitation of the directors, and you will be asked later on to-day to confirm their action by duly electing Mr Burns.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The 148th half-yearly general meeting of the Great Indian Peninsula Railway Company was held, on the 18th instant, at the offices, 48, Copthall Avenue, London.

Sir Charles H. Armstrong, the chairman, in moving the adoption of the report and accounts, said that the gross receipts for the half-year were 64 crores of rupees, or 50½ lacs less than in the

corresponding period of the previous year. The expenditure, on the other hand, was only 4.68 crores, against 5.72 crores in the corresponding six months, a difference of 104 lacs, which increased the net revenue for the half-year by 53½ lacs, an excess of 51.39 per cent. on the corresponding figure for 1922-23. The final result was a deficit of 37.95 lacs, against 84.02 lacs in the corresponding period of the previous year, an improvement of 46.06 lacs. The first six months of the year nearly always showed a deficit, but that as a rule was wiped out in the succeeding six months. He hoped that might be the case during the current year. The last monsoon, generally speaking, was a good one all over India, and in the district served by the railway good crops were now being reached.

The cotton crop, in some parts of the country, was a full one, and, he hoped, would keep the railway busily employed for some time. As other crops were also likely to give a good yield, their rolling stock ought to be fully employed for six months or more, and, at the higher rates of freight now charged, the financial result ought to be satisfactory.

Gross receipts to date, compared with the same period of last year, were, however, over 50 lacs in defect, but the position during the last few weeks had shown signs of improvement, and before March 31st he hoped this deficiency in gross earnings would have been largely reduced. Everything, excepting, perhaps, political conditions, favoured an expanding trade in India.

Passenger traffic for the half-year was less by 1½ millions, and coaching receipts by 4.43 per cent. Receipts from goods had also fallen by 9.48 per cent., but in both respects there were signs of improvement. The electrification of the Harbour branch was proceeding, and the electrification of the main line to Kalyan was also being dealt with, and that work, when completed, would greatly facilitate the movement of suburban traffic. The new transportation department was working satisfactorily, and many economies had resulted. He hoped to be able to announce shortly the completion of the through connection from Itarsi to Nagpur. With decreased working expenses—and a great improvement had been made lately in that direction—the prospects of the line were by no means favourable. The half-yearly guaranteed interest of 1½ per cent. had been paid as usual on December 31st.

The report and accounts were unanimously adopted.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

IMPROVED POSITION OF BRAZIL.

The thirty-eighth ordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 15th instant, at the Institute of Chartered Accountants, London.

Mr Richard Foster, who presided and moved the adoption of the report and accounts, said that the profit from the flour mill was some £23,000 less, due to increased competition, while the cotton mill profit was practically the same as in the previous year. It was proposed to distribute the usual 9d per share final dividend and a bonus of 1s per share, both free of income-tax, carrying forward £75,675, or £15,000 more than a year ago. Considering all things, the work of the past year had been satisfactory. He had inspected all the branches of the company's organisation, both in Brazil and in the River Plate, and was more than satisfied with the result. With regard to the present outlook, they were not in for easy times, but he felt that the company was, as far as was humanly possible, in a good position to face the future. He could not help feeling that Brazil had rounded the corner. The Government was certainly trying its hardest to economise, and by its request to the British Government to appoint a Commission to report on the situation in Brazil, clearly showed its desire to straighten things out. During the last ten years the country had made vast strides, and personally he would like to see a new loan granted by this country, against very tangible security, to relieve the pressure of the debt service and to enable Brazil to pay off some of the short-dated loans granted to her by the United States of America, which, owing to the high rate of interest and amortisation, were very costly to her.

Mr S. C. Sheppard (managing director) seconded the motion. He remarked, with regard to the company's wheat supplies, that they had been able to obtain all their requirements during the past season from the Argentine Republic, though, in order to do this, they had had to look ahead somewhat and to provide for their wheat in advance. So far as the new season was concerned—from January 1st this year—the latest estimates received from Buenos Aires pointed to an available export surplus of fully 4,500,000 tons, so that the company might again hope to be well served from that quarter during the present financial year. The following gratifying telegram had just been received from Rio:—"Business continues good. Factories working full time. Cotton mill extension completed. General conditions here vastly improved and confidence more general."

The motion was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Jan. 21-Jan. 26 were opened on Jan. 18, 1924, and the total amount applied for was £48,420,000. For bills at three months, dated Monday at £99 2s 11d and above in full, and Tuesday to Saturday at £99 3s 1d, about 68 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Dec. 7, 1923.	45,000,000	59,635,000	3 4 3-53	94 10 0
Dec. 14, 1923.	35,000,000	52,925,000	3 3 4-52	94 10 0
Dec. 21, 1923.	45,000,000	46,220,000	3 6 11-33	94 10 0
Dec. 28, 1923.	45,000,000	73,030,000	3 4 3	nil
Jan. 4, 1924.	35,000,000	52,950,000	3 0 11-61	nil
Jan. 11, 1924.	35,000,000	55,765,000	3 4 9-62	nil
Jan. 18, 1924.	35,000,000	48,420,000	3 7 3-72	nil

Tenders will be received on Jan. 25, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

Transfer through paper currency reserve	5,848,000
Total	26,202,000

The total includes £7,000,000 remitted on account of the paper currency reserve.

BULLION.

IMPORTS AND EXPORTS OF GOLD.

Week ended January 16, 1924.

Week ended January 16, 1924.			
Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
British West Africa	1,484	Switzerland	71,700
British South Africa	591,801	Netherlands	220,272
Other countries	1,007	Germany	20,770
		British India	68,400
		Straits Settlements	30,000
		United States of America ..	300,800
		Other countries	252
Total declared value of imports	594,292	Total declared value of exports	711,594

Messrs Samuel Montagu and Co. write on January 16th as follows:—

GOLD.

Indian and Continental demand being on a small scale, the larger proportion of the moderate amount of gold available this week will probably be despatched to New York. The United Kingdom imports and exports of gold during the month of December, 1923, were as follows:—Imports, £2,468,180; exports, £2,940,912.

SILVER.

The political situation at home and abroad has not failed to affect the silver as well as other markets by creating temporary paralysis. Although it is generally considered that the price of silver is high, there is no disposition to open bear speculative positions. One deterrent is the fact that recent attempts to do so have been far from satisfactory, for, as usual in times of political perplexity, the tendency of the peoples in the Far East is to acquire precious metals, the possession of which gives them confidence in times of unrest. The high appreciation of the U.S. dollar is rather a discouragement to American sales here, though U.S. dealers are now more inclined to sell, even though by so doing they do not obtain so good a dollar outturn as they have obtained during the greater part of last year. A clearing up of even one of the political difficulties to which we have alluded would probably tend to bring about easier silver prices in this market. Indian buying orders have been small, and China has both bought and sold.

NOTICES.

Mr P. H. Gardner, acting-manager of the London office, Commercial Bank of Australia, Limited, has been appointed manager as from January 1st.

The Commercial Bank of Australia, Limited, notify that their former receiving office at Mortdale, N.S.W., has now been converted into a branch office, and that a new branch has been opened at Eudunda (South Australia).

Lloyds Bank, Limited, announce that a branch of the bank is now open at 603 Commercial road, E. 14 (Stepney), under the management of Mr W. Goldie. The hours of business will be the usual London banking hours.

Barclays Bank, Limited, announce that they have opened new branches at Colstocks Parade, Meads, Eastbourne, under the management of Mr F. J. Milton (also manager of 37 Terminus road branch), and at 82 High street, Epsom, under the management of Mr C. E. Bond.

LANCASHIRE AND YORKSHIRE BANK, LIMITED.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the December outputs, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs.			Output Month Dec., 1923.	Increase or Decrease on 1922.	Output 12 Months 1923, Except Where Stated in Brackets.	Increase or Decrease on 1922.	Dividends paid in Past 4 Complete Years.

CORNISH KALIN.—Production of china clay for December:—Washed 775 tons, dried 1,285 tons, despatched 890 tons.

MOUNT LYELL.—Four-weekly period ended January 9th:—Smelted Mount Lyell ore 576 tons, North Lyell ore (direct to smelters) 150 tons, concentrates 2,575 tons. The converters produced 445 tons of blister copper, containing copper 441 tons, silver 9,068 ozs, gold 145 ozs. The mill treated 6,775 tons of ore and produced 2,273 tons of concentrates.

MOUNT MORGAN.—Six weeks ended December 25th:—Treated 9,846 tons Mount Morgan ore and 5,711 tons concentrates; produced 585 tons blister copper, containing 579 tons copper and 9,031 ozs gold. Concentrator treated 17,859 tons ore for 7,010 tons of concentrates, containing 347 tons copper and 4,344 ozs gold. In addition to above production, have matte on hand, containing 91 tons copper and 1,080 ozs gold.

THRIFTY MINERALS.—Production of china clay for December:—Washed 700 tons, dried 590 tons, despatched 521 tons.

ZINC CORPORATION.—December:—Lead concentrator treated 14,685 tons of ore, producing 3,347 tons of lead concentrates, assaying 63.5 per cent. lead and 3,908 tons of zinc middlings.

Reports and Notices.

The directors of the Motor Union Insurance Company and the United British Insurance Company have appointed Mr J. W. McDonald, who has been acting as deputy underwriter, marine underwriter to the companies as from January 1, 1924.

against £36,336,515 at September 30, 1922. Customers' bills are at £6,855,966. Bank property is given as £1,233,378, while stamps, stationery, and open policies are at £27,644. The principal liabilities are:—Deposits, £47,097,000, against £50,947,024 at September 30, 1922; capital called up, £2,229,165; reserve fund, £2,803,335; notes in circulation, £660,503; and customers' bills, £6,855,967. The directors have declared an interim dividend of 7s per share, subject to income-tax, out of the profits for the half-year ended September 30, 1923, and warrants will be posted on January 25, 1924.

INSURANCE.

LIFE ASSURANCE RESULTS.—The Scottish Provident Institution announces that the new business for 1923 was £2,476,588 net, as compared with £2,299,665 in 1922. The new assurances issued by the Scottish Amicable amounted to £1,230,382 net, against £1,182,077 for the previous year. During 1923, 4,691 policies were issued by the United Kingdom Provident Institution for £2,147,279, of which £65,000 was reassured, leaving a net business of £2,082,279. The net business shows an increase of £255,972 over the returns of the previous year.

SCOTTISH AUTOMOBILE.—The report for last year shows net premiums of £94,688, and interest receipts, £3,668. The paid loans were £32,109 (33.9 per cent.), and the outstanding loans, £10,644 (11.2 per cent.). The expenses amounted to 36.7 per cent. of the premiums. Provision for unexpired risks was made at 40 per cent. of the premium income. The credit balance at revenue account was £25,819, including £11,257 brought forward. The general reserve has been made up to £10,000, and a dividend for the year provided of 10 per cent., less tax. The investments in British Government securities on December 31st last were valued at £100,305, which was less than their market value.

MISCELLANEOUS.

FREEMAN, HARDY, AND WILLIS.—The net profit for 1923 amounted to £180,428 (against £175,197 for 1922). The sum of £100,661 was brought forward, making the available balance £281,089. The dividend for the year on the ordinary shares is 12½ per cent., less tax (the same), and a bonus of 5 per cent. is again to be paid, free of tax. The amount due to directors and staff is £10,000 (the same); £52,500 is placed to income-tax account (against £40,000); £25,000 is to be distributed as a bonus to employees (against £20,000); and £4,000 is to be granted to charities (against £3,000); and £108,663 is carried forward. Assets total £1,869,036, of which cash amounts to £234,069. Investments stand at £259,669, of which £178,169 is in British Government securities. Stocks stand at £630,798.

MICHAEL NAIRN AND GREENWICH.—The report just issued for the year 1923 shows an improvement on the previous year. Net profits have increased from £173,315 to £200,085, and the ordinary dividend has been raised from 10 per cent. to 12½ per cent. The sum of £15,307 has been written off from the preliminary and fusion expenses account. Assets total £2,185,810, of which £2,024,025 is investments at cost. Cash totals, £20,153, and sundry debtors, £110,833.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of December amounted to 59,667 barrels.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during December amounted to 105,718 barrels, or approximately 15,102 tons, including St Helens Petroleum Company, Limited, 45,856 barrels, equal 6,551 approximate tons; Kern Trinidad Oilfields, Limited, 9,341 barrels, equal 1,334 approximate tons; Kern Romana, Limited, 2,604 barrels, equal 372 approximate tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during December, 14,650 tons; oil purchased during December from other companies, 8,500 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, January 8, 1924, amounted to 949 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have again been very unsettled, with further rainfalls, which has hindered field work, the land being flooded in many low-lying districts. No official estimate of the acreage under wheat is yet available, but private reports point to a slight reduction in most parts of the country. Offerings of native wheat were somewhat restricted, and prices marked a further advance, suitable milling grades ruling at 10s to 10s 3d, with inferior ranging from 8s 6d to 9s 2d per 112 lbs, free on rail. Imported descriptions, after being firmer, closed with a quieter tone. No. 1 Northern Manitoba, arriving, quoted 50s 9d, ditto afloat 50s 3d. No. 2 ditto 49s 3d, No. 3 ditto 47s 9d, and Rosafé, 63½ lbs, 47s 9d, all ex ship, to arrive, per 496 lbs. The floating and forward cargo section displayed quieter features, the demand both on home and Continental account slackening off, consequently early advances were not maintained. Plate descriptions being obtainable on easier terms, owing to favourable crop reports and liberal offers. Sales comprised Azima

Black Sea, February shipment, 45s 6d to 46s, less 2 per cent. Australian, February-March, 47s, part cargoes of ditto, loading, 46s 6d, and a full cargo in similar position at 47s 6d, all per 480 lbs. Flour in good request, and prices of town made were advanced by 1s per sack in sympathy with the recent advance in wheat. London standard straight run quoted 39s, patents 41s to 42s, town households 37s per sack delivered. All English country straights 31s to 32s, delivered to London stations. Imported quiet. Manitoba patents range from 36s to 39s, and Australian 33s to 33s 6d, all per 280 lbs, ex store. Of maize cargoes, European kinds are firmly held, but new crop La Plata more freely offered at a slight decline in prices. Bessarabian arrived sold 41s, and a part cargo of La Plata, May-June, to Bristol Channel, at 34s 6d, July at 33s 10½d, per 480 lbs, while a cargo of Persian barley sold to the same destination at 30s, March-April shipment. Barley: English firm, and malting kinds range from 10s-15s, with feeders 10s-10s 6d per 112 lbs, free on rail. Imported steady. Californian 43s-47s, ex store. Chilean Chevalier 50s-53s, ex ship, both per 448 lbs. No. 4 Canadian Western 35s, Danubian 34s 6d, both ex ship per 400 lbs. Maize: Occasionally rather firmer. Plate, ex ship, 41s 6d, landed 43s. Gal/Foxanian 40s 9d, Bessarabian 41s 6d, both ex ship, to arrive, per 480 lbs. Oats: English steady at 9s 4d-10s 8d per 112 lbs, free on rail as to sample. Imported quieter. Plate, ex ship, f.o.g., 22s 6d, landed 23s 6d, No. 2 Canadian Western, ex ship, 26s, landed 27s, No. 3 ditto, ex ship, 24s 9d, landed 25s 9d, No. 2 Canadian feed, landed, 24s, all per 320 lbs. Oatmeal in fair demand at firmer rates. London-made flaked, also rolled oats 18s, medium and fine cut 17s 6d. Coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 18s, American 17s per cwt. Millers' offalls fully steady. Broad bran quoted 8s 3d, ordinary ditto 7s 6d, middlings 9s 3d, fine ditto 10s, bags included, ex mill. Light oats 6s 3d, powdered oat husks 7s 9d, feed oatmeal 9s 3d, ground oats 12s 9d, free on rail, per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to January 12	Cwts. 254,432	Cwts. 404,181	Cwts. 312,381	Cwts. 280,481

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 17th, is as follows:—Pig-iron: Unsettled politically at home and financially abroad, is causing a "set-back" to the recent recovery in our trade, and buyers are keeping off the market. French pig-iron is again being sent here in considerable quantities, and this means that no more of our blast furnaces can be restarted. There is no further change in quotations, which remain at 99s for Cleveland No. 3 G.M.B. and 102s 6d for mixed numbers E.C. hematite. Manufactured iron and steel: The steel trade is very quiet, and competition with foreign steel is more pronounced. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s. Iron ore.—The rather easier prices of iron ore have brought out a little inquiry. The c.i.f. price of best rubio remains at 24s per ton.

Our Sheffield correspondent writes:—The improvement in the iron and steel branches which manifested itself before Christmas is not being maintained, and conditions have reverted to quietude, much to the disappointment of manufacturers. It is hoped that the reaction is due to transitory causes, such as the political situation and the débâcle of the French currency, but it has resulted in a decline of confidence. Not much encouragement exists to buy raw materials. New business in pig-iron is extremely small, although a satisfactory tonnage is being delivered to contract, and production is barely sufficient. The open-hearth furnaces are working at about the same capacity as before the holidays. Comparatively few billets have been sold this week, and the current quotation is none too strong. Buyers are anticipating as the and Luxembourg competition in semi and finished iron and steel yet benefited appreciably from the great railway programmes of Jarry. Makers of tool and other crucible steel are quiet, orders being irregular and for small parcels. Very little electric steel is

being produced in the city, most of the electric furnaces installed having been idle for several years. Activity is reported at the factories producing farm and garden and excavating tools, with improved business with colonial and foreign markets. Some cutlery and plate makers are moderately busy, and others quiet, but the conditions of these trades are far from healthy, and operations generally are unremunerative. Prices of nickel silver material and stainless steel have been reduced as from the beginning of the year. The coal market is active in all departments, and there is quite a rush for domestic fuel owing to the failure of many householders to get in their winter supplies during the autumn. Sellers have advanced prices 1s 6d per ton following an earlier advance of 2s per ton. Best South Yorkshire steams are still quoted at 22s; other prices unchanged.

CUMBERLAND IRON.

Business in the Cumberland and North Lancashire hematite pig-iron trade is still of limited extent, users being content to buy from hand to mouth, but local and Midland requirements are sufficient to absorb the production of the fourteen furnaces in blast between Workington and Carnforth. It was hoped that by now additional furnaces would have been lighted, but the outlook is not one in which consumers have confidence at the present time, and the result is that they are indisposed to enter into commitments far ahead. The disappointing feature of the situation is that the needs of users in the Clyde district and on the Continent are so small, and it is clear that until there is a broadening of business no expansion of make can be justified. There is, however, no weakening in prices, costs indeed being too high to permit of that, and Bessemer mixed numbers are quoted at £5 15s per ton delivered at Glasgow and Sheffield, and £6 per ton at Birmingham. Low phosphorus iron is in rather sharper request by high-class steel manufacturers in the Sheffield district, and probably if a fifteenth furnace is lighted it will be put on to the smelting of special brands of iron. Ferro-manganese, though it stands at the tempting figure of £17 per ton, f.o.b., is a sluggish trade, neither home nor American users evincing any disposition to give large orders, and spiegel also is dull at £9 per ton. There is little more than a local outlet for the native ore, several of the mines being content with comparatively low outputs. Best sorts of low phosphoric ore are 24s to 26s per ton, and ordinary kinds 18s 6d to 20s 6d per ton. Small parcels of metal are passing to Scotland and Yorkshire. The steel trade is more actively engaged, the mill at Moss Bay at Workington being on sleeper plates this week. Several good orders are on the books, but users are taking delivery slowly, and that accounts for the intermittent operations at the mills. The coal trade is extraordinarily busy, the production being inadequate to meet needs. The Irish market is especially strong, the weekly shipments across Channel being about 11,500 tons, and nearly all this is best round, which commands 27s per ton, f.o.b. The price would be bigger but for the Lancashire and Scotch competition, which though not quite so severe as earlier in the winter, is still formidable enough. Smalls are unprocureable for export, and the parcels of house nuts at 26s being sent to Ireland are very few and far between. Best house is 38s 2d at pit. There is a smart demand for industrial fuel, best steam being 30s and washed steam 29s per ton delivered. Coke is in good demand, and the whole of the output is being taken up by the smelters of ordinary iron in West Cumberland at 25s to 27s per ton, according to carbon content. East Coast coke, of which the weekly supplies are 10,200 tons, is quoted at 42s per ton, delivered.

METALS.

Tin opened firmer, with a good demand, due to higher Eastern advices, combined with liberal buying orders from America. Standard cash sold at £247 10s, and three months, £248 15s to £249 to £248 10s to £249 5s. Eastern cables reported sales on the basis of £251 5s, c.i.f. Values further hardened under sustained inquiries, but subsequently sellers offered more freely, and the improvement was partially lost. By the middle of the week standard cash sold at £250 12s 6d, and three months at £254 to £254 10s to £251. Further sales occurred in the East at £256 5s, c.i.f. The tendency was again in buyers' favour on following day, and a good business transpired, while some irregular movements were noticeable with regard to three months. Cash sold at £248 5s, £248 15s, and three months at £249, £250 5s to £249 15s to £250 2s 6d, £249 10s, to £250. Further sales in the East occurred at £253 10s, c.i.f. At the final market prices ruled firmer. Standard cash sold at £250 to £250 2s 6d, and three months at £250 5s to £251 10s to £251, while finally at £251 10s. English ingots quoted at £250 15s to £251 5s. Copper ruled fully steady at commencement while in good demand. Standard cash sold at £60 7s 6d to £60 11s 3d, and three months £61 to £61 7s 6d. Values were generally maintained, but with buyers and sellers alike somewhat reserved further transactions were on a moderate scale. On Wednesday standard cash sold at £60 15s, and three months £61 5s to £61 10s to £61 8s 9d. The turn easier on Thursday, while in less request. Cash sold at £60 10s to £60 11s 3d, and three months £61 7s 6d to £61 5s. The tendency was rather firmer at final session, standard cash being dealt in at £60 11s 3d to £60 13s 9d, and three months at £61 7s 6d. Electros quoted £65 15s to £67 5s; best selected, £65 15s to £67; strong sheets, £93; wire bars, £67 5s per ton. Lead firmer at £32 1s 3d. Spelter dearer at £35 7s 6d to £34 13s 9d, according to position. Antimony, English, quoted £44 10s to £45. Aluminium, home trade, £115; export, £120.

THE COTTON TRADE.

MANCHESTER, January 17.

The conditions prevailing in the market have not been favourable to activity, there being many disturbing influences. Trade developments have been checked by the uneasiness with regard to the threatened railway strike and the disorganisation of foreign exchange rates. The general inquiry, however, has been extensive, and a considerable business has been under negotiation. An encouraging feature in the cloth section has been a revival of demand for China, especially in white goods, and more contracts have been put through. For India most of the buying has run on light bleaching descriptions and miscellaneous fabrics, bids, as a rule, in grey staples being unworkable. The Near Eastern outlets have given very little support, and unsatisfactory advices are coming through from Egypt. Fine

goods for the United States have been rather quieter, but some fair lines have been booked for the Continent. American yarn quotations have been irregular when tested, and although now and again moderate orders have been reported, the general off-take remains disappointing. Rather restricted operations have occurred in Egyptian spinnings. A steady demand has been met with in the higher counts of yarn for India.

Head Office . . . TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kinkiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A further sharp advance has been recorded in values during the week, and even yet the upward movement does not appear to have reached high-water mark. The market is entirely dominated by the raw material position. The price of wool in the colonies is advancing day by day under keen competition from home trade and foreign buyers, and the fear of a possible shortage in supplies is apparently driving some firms to speculate beyond their actual requirements. At the same time, the outlook is generally regarded as being sound, and everyone seems to have the greatest confidence. Here and there the more cautious members of the trade express the opinion that values are being pushed up too rapidly, but under existing conditions they are as a voice crying in the wilderness—people agree with more or less sincerity, and go on buying wool as if there was hardly a bale in sight. Of course, efforts are being made to bring tops and yarns into line, but it is still impossible to sell and make a price based on current costs. However, quotations for all descriptions of tops have advanced from 1d to 2d per lb on the week, and most firms are now wanting at least 5s 8d for average 64's tops, compared with 5s 4d a month ago. At 46d, 56's average show an advance of 3d in four weeks, and in the same period 46's carded have advanced 2 1/2d to 26d. Better reports are to hand regarding the yarn trade. Spinners have sold some very big weights of crossbreds during the last few weeks, and this section of the trade is well provided with work for some time to come. There is still room for improvement in the botany section, however. Yarn quotations have been advanced in sympathy with tops, and the tendency is towards a still higher level. The piece goods trade is rather more active, and prices are hardening.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Many users of the raw material are seriously concerned about the present movement of values, and are asking whether they have not been rushed up sadly too fast. Since last October there has not been a series of sales at which values have not advanced, and since the middle of November the pace has become more rapid. Wherever wool is exposed for sale prices are pushed higher and higher. The same influence is at work in Australia and New Zealand as in this country. The cry of shortage is being persistently raised, many forecasting a serious deficiency in supplies. We certainly think it is high time these exaggerated features were removed, for a steadier going on would be more advantageous to the whole trade. It is not satisfactory to find that there is nothing in common between spinners and manufacturers, and those engaged in buying and selling the raw material. If any good is to be done with it, all the wool that is now being passed on to users at such high prices will have to be combed, spun and woven, and because of these high prices we foresee a real tug-of-war in the two latter sections of the industry. Wholesale fabric buyers, not only in England, but also in America and elsewhere, are fighting very shy of the prices, named by manufacturers, the latter stating that they make very little impression upon wholesalers. When present values get through into the piece and the knitted fabric, many wholesale buyers will quake with fear. The last serious fall was simply an indication of rebellion on the part of wholesale fabric buyers. The rise in wool was overdone by the mad rush to acquire stocks regardless of cost.

THE TIMBER TRADE.

(BY OUR OWN CORRESPONDENT.)

Merchants owning yards are well supplied, and on this account c.i.f. business has been a little flat lately. We have on more than one occasion written on the influence that Russia would have on the spot market, and the remarks have been justified by the total imports from that country during 1923, amounting to 602,000 loads, nearly double the quantity shipped in 1922 by that country for consumers here, and more than half of the total sent by our largest shipper in 1923—Finland.

With such heavy stocks of timber on the spot, the position of holders cannot be described as quite healthy; competition continues keen, but in London particularly the deliveries from the docks for some months have been considerably larger than a year ago, so though they may not have all gone into direct consumption. It is computed that under present conditions of supply and demand the stocks of deals and battens in docks in London will suffice for over eight months, whereas the f.o.w. shipments should be arriving over four months hence. Merchants, however, though naturally anxious are by no means dismayed—house-building programmes are much more likely to increase rather than diminish, railway work of one kind or another must consume additional quantities of timber, Shipbuilders report a recommencement of orders for cargo carriers, and the furniture and decorative wood demand is much more promising than it has been for years past.

Though heavy stocks of building timbers are at hand, good quality wood is not very heavily stocked; but the large supplies of Russian timber, received last month, with Swedish and other supplies, will help to supplement the joinery wood stocks.

In the free on board market for f.o.w. some Finnish wood has been sold at about last year's opening rates, but importers are not ready to operate on any large scale so early in the year, and whilst the disposal of their present stocks require so much attention in the placing.

There is not much change to report in the hardwood market. The demand is very fair; stocks must be heavy judging by the large

importation, but prices are well maintained, and holdings generally are in good hands. Mahogany logs of fine quality and size are always sure sellers, but imports of these have not been so large of late, which will help to firm values at the forthcoming London and Liverpool auctions.

The enormous quantities of pitwood imported for colliery work in 1923 (3,677,000 loads) is an indication of the booming times enjoyed in the coal industry, and though the imported colliery timber cost us about 2s a load more c.i.f. than in 1922, the increase doubtless has been more than returned by the increased output of coal. We have before commented on the fact that in this branch of the wood trade larger home supplies could be cultivated for use in the pits; it ought to be attractive as the returns are much quicker than tree culture for boards and planks. In the native timber trade proper there is little change; good quality wood can invariably find a responsive market, but for the lower qualities the market is still dull.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides are advancing in price, both in the provinces and in London, as at the Bermondsey sales held on Thursday, best ox sold from 6 1/2d to 8d, an advance of 1 1/2d per lb. Other classes also showed relative advances, 9/16 lbs calf advancing 1 1/2d per lb in the face of a strong demand from tanners. Wools sold from 7s to 18s 6d, and hogs from 4s 2d to 18s each. Tanners appear to have sufficient imported hides for the moment, so that the chief demand for fregorifics is from the Continent. Prices are advancing, and \$43 has been paid for Argentine ox, and \$45 1/2 for Uruguay steers. Saladeros are quiet, but there is a disposition to again buy dry hides and sales of B.A. Americanos are reported to have been made at 9 1/2d. Dry Capes are selling well at prices ranging from 8 1/2d to 9 1/2d. Australians are also sharing in the improved demand. Cables from New York report the Chicago position as firm, with heavy packers selling at 14 cents.

The demand for sole leather remains good, repairers taking quite a fair quantity of medium-salted bends. Stocks are very low in the Liverpool tanneries, and visitors from Bermondsey have found such a scarcity of suitable bends and pinned offal that they have been unable to fill their requirements. Prices therefore remain firm, with tanners holding out for advances where possible.

VEGETABLE OILS AND OILSEEDS.

The market for practically all vegetable oils continues firm, and prices inclined upwards rather than otherwise. Raw linseed oil has again met with a fair demand from home consumers for January delivery, but the export demand is not quite so active, though the possibility of America becoming a buyer again is not lost sight of. Supplies, however, are scarce on spot, which still commands a substantial premium over later positions, and is well held for £44, with something over £40 quoted for February delivery, ex Hull mill. Cotton oils continue in request for shipment to the Continent, and are slightly dearer, crude Egyptian offering at £43 10s, and technical refined at the same figure, ex Hull mill. Rape oil has been a good market, but soya oil is inactive, and underbid by Oriental. Nut oils are in moderate request.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 18th.

SUGAR.—The market continues to show general stability, paucity of supplies being still very pronounced, and which helps to counter-balance any slackness of demand at the moment. With but a limited assortment of competing foreign sugars, British refined enjoys a large share of what trade is stirring, and spot parcels of same were advanced 6d per cwt all round. Messrs Tate and Lyle's cubes, 62s 6d to 63s 6d; crushed, 61s; granulated, fine and coarse grain, 61s 1 1/2d; No. 1, 60s 10 1/2d; No. 2, also London and T.L., 60s 7 1/2d; ditto month forward, also February, 60s 6d; March, 59s 6d; yellow crystals, spot, 56s 1 1/2d; caster ranging from 61s 3d to 63s 4 1/2d as to quality. Of imported, white Java, spot, quoted 58s 3d to 58s 6d; May-June, steamer, 26s 6d; and June-July, 25s 3d, c.f. and i. terms, London.

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

JUTE.—With a better inquiry, a fair business was effected at

CANNED GOODS.—Supplies of sardines in the aggregate are moderate, but good summer fish very scarce. Portuguese quarters dozed 25 2d to 35 3d; ditto, 12-oz, 55 6d to 65 6d; 18-oz, 95 to 105 per dozen. Tins. There is really no inquiry for lobster. Fancy halves, 135 to 135s. Salmon supplies are short, and prices dearer, owing principally to the American rate of exchange. 1 lb flat reds, labelled, quoted 55s; ditto, tall, 43s; half-cases, fine quality, 66s; 1 lb flat pink, 27s; ditto, tall, 26s; cases of 96 3-lb, 29s to 30s per case.

123

deodorised (in barrels), 53s. China-wood firm. Hankow, spot, 48s 6d; December-January, 98s. Cocoonat firm. Ceylon, spot, 48s 6d; January-February, 48s; Cochin, ditto, quoted 60s. Soya firm. Oriental, barrels, December-January, 44s 6d. Cod firm. English, spot, 35s 9d. Groundnuts firm. English, crushed, naked spot, 53s; deodorised, barrels, 61s. Turpentine

TALLOW.—Messrs Colchesters and Woolner write on January 16th as follows:—The tallow market was firm during the week, and prices were 2s dearer to-day for inferior sorts and 6d dearer for other kinds. The limited supply of spot goods offering in the market makes it difficult in some cases to supply buyers' requirements. At auction to-day 679 casks tallow were offered, and 633 were sold. **Quotations are:**—**Australian mutton:** Fine, none; good to fair, 49s 6d to 45s; dull to dark, 43s 3d to 42s; hard, none. **Australian beef:** Fine, 47s; good to fair, 45s 6d to 43s 6d; dull to dark, 43s to 40s 6d; sweet, 47s. **Present shipment from Australasia:** Good mixed, 44s. **Present shipment from South America,** 44s 6d to 43s 6d. The market letter is dearer. **Tallow, 1s; stuff, 1s.** **Town tallow,** 40s 6d per cwt. **Rough fat,** per 8 lbs, 4d; **melted stuff,** 3s 6d per cwt. **Quotations are:**—**Town,** 42s, net cash, naked, ex works. **Country:** **Frail casks,** 42s; **home melted, shipping casks, net, f.o.b.,** good coloured, 44s; **fair to dull,** 42s 6d to 41s 6d. **bone fat:** **White,** none; **pale, none;** **benzine,** 38s; **melted stuff,** 38s, f.o.b.

THE MONEY MARKET.

The railway strike has caused delay to mails, and necessitated the holding of slightly larger floating balances, though it may be doubted if its effects would have produced the degree of tightness which has been felt in the market during the week but for the already small margin of funds upon which it was working, as shown by the previous week's Bank return. The current week's figures

suggest a certain liberation of money to assist the market. Short loans have commanded up to 3 per cent. at times, and 2½ per cent. has been a common rate. The tightness of money, the uncertainties, and the evidence of an increasing supply of commercial paper have all contributed to firmer conditions in the discount market, and fine three months' bills are 3¼-3½ per cent. April Treasury bills, for which payment had to be made in the course of the week, changed hands at 3½ per cent.—practically the allotment rate—and such sales naturally influenced the allotment rate for next week's bills.

	Jan. 25, 1923.	Jan. 11, 1924.	Jan. 4, 1924.	Dec. 28, 1923.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed only a small decline in the circulation, in contrast with the currency notes, and there was a trifling addition to the bullion stock, the reserve being £19,600 higher. There was an addition of a round million to Government securities, and Other securities were £1,832,800 higher, as the result of which market resources were increased, and Private deposits stood £3,134,900 higher, and the ratio of Reserve was 0.4 lower at 17.9 per cent., owing to the expansion of liabilities. The rise in Other securities is not a result of money market borrowing, and the fact that Government securities should also have risen when taxes are flowing in suggests that special influences may have been at work to produce the movements, with their corollary of large market balances. There was a further decline in currency notes outstanding in the return for the week ended January 23rd. The reduction amounted to £3,073,600, bringing the amount outstanding down to £278,913,500, which includes £1,423,600 for notes called in, but not yet cancelled. The fiduciary issue is £228,039,900, or £20,151,000 below the maximum.

THE STOCK MARKETS.

Until the announcement of the composition of the new Labour Cabinet business on the Stock Exchange was almost stagnant, but thereafter business became very brisk. Buying orders poured in from the public, who had been holding their hand, and the change in tone revealed an unexpectedly large bear account. Gilt-edged stocks have moved up, and the railway strike appears to have had absolutely no effect upon the home railway section, where prices are all substantially higher on the week. The gamble in German and Prussian has subsided, but Brazilian and some other foreign Government bonds advanced. Industrials as a whole have been quiet, but where a bear account exists there has been a sharp rise in prices. Rubber and oil shares are better, while the Kaffir market has been supported by buying from the Cape.

THE COMMODITY MARKETS.

The railway strike is making its effect felt in British industrial centres. At Cardiff there is much disorganisation, and little business has been transacted; prices have not been raised. In the pig-iron market there is little change in quotations; the most serious consideration is a possible interruption of fuel supply to blast furnaces. The prospects for steel are fairly good. In Sheffield our correspondent points out that the strike is disorganising local industry. Tin again moved upward, while copper was firm and in good demand. The hide market is firmer all round, owing to transport difficulties. Wheat has been in demand and prices have hardened. The sugar market is rather quiet, but tea is in good demand. The tone of the cotton market has been more hopeful. Conditions in the wool trade are mainly concerned with the raw material; in recent sales it is found that wool has lost none of its strength since the close of the December

auctions. Jute is easier. Business done in rubber was only moderate, but prices showed no change.

FOREIGN EXCHANGES.

ALTHOUGH this week conditions in the foreign exchange market have been somewhat less feverish, confidence remains shaken, and there is a continued tendency for foreign balances to slip away to New York. From \$4.24½ on the 18th the dollar rate fell away sharply as the result of the strike to as low as \$4.20½ on Monday, but the announcement of the new Government brought an improvement up to \$4.23½ on Tuesday. Since then there have been fluctuations, roughly, between the above limits, with a rather bearish tendency from the other side, and the rate appeared rather weak with yesterday morning's quotation of \$4.22½. Forward quotations have narrowed again slightly to ½ cent per month above spot. Up to now the Paris rate has reflected no very great confidence in the Government's proposed financial measures, but for the time being at least the actual collapse appears to have been stayed. It will be interesting to see next week the effect of the new Bourse regulations just announced. On the 18th the rate closed at 92.95, but on the 21st it was again at one time up to 96.70. After this there was a spasmodic recovery down to 91.90 on Wednesday, but a further reaction has taken place, and the rate of 94 quoted yesterday morning showed no signs of immediate recovery. Brussels has moved more or less in sympathy, being quoted yesterday at 104½, as compared with 102 a week ago. The lira has again remained remarkably steady as compared with sterling, showing hardly any deviation during the week from the rate of 97½, although yesterday morning it was slightly below that figure. Among neutral exchanges, Amsterdam moved down at the beginning of the period from 11.41 to rather under 11.40, and yesterday was quoted at 11.39½. So far, the increase in the Dutch bank rate has had no effect on the quotation. Switzerland has moved from 24.51 to 24.47½, and Madrid from 33.31 to 33.29½, after closing on Tuesday as low as 33.19. The Scandinavian centres, however, have moved in our favour, Stockholm from 16.28½ to 16.32½, Christiania from 29.95 to 30.65½, and Copenhagen, where the strain of keeping the rate at its recent level appears to have been too great, has jumped from 24.46 to 26.00½. In Central Europe, Berlin shows no change at 18 billions, but Vienna, following the dollar, after having moved against us down to 297,500, stands at 302,000, as compared with 303,000 a week ago. Prague has dropped from 146 to 145½, and Bucharest from 860 to 850. In the East, the rupee at 15 5 9-32d is about 1-32d dearer, but the yen has depreciated sharply from 25 1 27-32d to 25 1 18d. The silver market has been very quiet, with some demand from China. Both Hongkong and Shanghai have moved against us. In South America, Rio has appreciated ½d to 6½d, but Buenos Ayres has fallen away slightly to 42d. Monte Video is ½d dearer at 45½d, while Valparaiso, after being cheaper, stands at 41.10 pesos, the same as last week.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 19th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,910	From Revenue	25,177
Interest, &c., on Debt	568		
Sinking Fund	250		
Sundries	3,533		
Increase in balances	234		
Reduction of Debt	11,582		
	25,177		25,177

Revenue for the week ending January 19th was slightly lower than last year at £25,176,400, against £25,362,700. Customs produced only £861,000, against £1,864,000, while Excise was slightly higher at £8,684,000, against £8,319,000. Special Receipts yielded £1,001,400, against nil, but Property and Income-tax was lower at £8,266,000, and Super-tax £2,090,000, against a combined total of £11,247,000 for the corresponding period. The week's operations reduced the National Debt by £11,582,000, and caused the following changes:—

	£	Bank of England Advances ..	£
National Savings Certificates ..	+ 50	Public Departments	- 13,400
Treasury Bills	+ 3,046		
Sundries	+ 122		
	+ 3,218		- 15,400

The floating debt was reduced by £11,780,000 to £835,915,500.

FINANCIAL YEAR, 1923-24 (April 1 to January 19, 1924).

	£		£
Total Expenditure ..	628,042,166	Raised by Revenue ..	592,237,783
		Net Borrowings	32,291,375
		Decrease in Balances ..	3,513,008
Total	628,042,166	Total	628,042,166

ESTIMATES for YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,600	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Midland Bank, Barclays Bank, Westminster Bank, Manchester and Liverpool District Banking Company, Ionian Bank, National Discount Company, Provincial Bank of Ireland, Australian Pastoral Company, and E. W. Tarry and Co. The speeches of the Joint Stock Bank chairmen are dealt with under "Notes of the Week." At the Ionian Bank meeting, Sir John Stavridi criticised strongly the revolutionary Government's taxation policy. At the Australian Pastoral meeting, Mr Francis A. Keating forecast a shortage of wool in 1924. Sir J. F. Flannery at the meeting of E. W. Tarry and Co. protested strongly against the tax on turnover in South Africa. At the Provincial Bank of Ireland meeting Mr Richard D. Trotter announced improved conditions in Ireland.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade price movements, currency, and production of the leading commercial countries of the world. Its contents include a statistical article, by Sir Henry Rew, on the position of agriculture, and a review of some aspects of Russia's foreign trade.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

LABOUR TAKES THE HELM.

POLITICAL history has been made this week, and made, for once in a way, precisely according to general expectation. On Monday night the Labour Party's "no confidence" amendment to the Address was passed by a majority of 72. On Tuesday Mr Baldwin's Government resigned, and Mr Ramsay MacDonald, accepting the King's invitation to form a Labour Government, became Prime Minister of Great Britain. The closing scene in the House of Commons savoured of anti-climax, for all sense of uncertainty had been banished after Mr Asquith had re-stated the Liberal position last week. Up to the last moment the most violent of anti-Labour enthusiasts professed to believe that an effective squad of Liberals would vote with Mr Baldwin. But, in fact, the figure of ten to which this Liberal detachment dwindled, was as large as any unbiased observer expected. The remainder entered the Labour lobby almost to a man. So for the first time in English history a Socialist Government takes office. The fact that power will only be associated with office in so far as the Government programme does not outrage the views of the other two Parties, provides the country with the best possible safeguard against wild experiment, but it need not deprive Mr MacDonald and his colleagues of legitimate pride in the unprecedented success of their efforts, which have brought a new Party from obscurity to office in the course of seventeen years.

The final day of debate, which did not rise to the level set in the previous week, was chiefly remarkable for the farewell speech of the outgoing Premier, who, after some good-humoured banter at the expense of his opponents, proceeded to develop an economic theory so amazing that we rub our eyes and wonder if for once the faithful Hansard can be inaccurate. The doctrine which Mr Baldwin enunciated amounts to this, that the "effort" to export enough to buy our food and raw materials and such manufactured goods as we import, and also to meet the interest on our debt to America is too great a strain on the country, and that, therefore, we should seriously consider whether it is not desirable to restrict our exports. But, lest we should run any risk of misrepresenting Mr Baldwin, we quote the salient passage *in extenso*:—

We have in this country to pay not only for food and raw material, but also for a large quantity of manufactured goods, while we export our manufactured goods, and over and above all that we have now to find some £30,000,000 or more a year in payment of our debt interest to America, which has to be found out of increased exports. That is putting a tremendous strain on the country. The question has come into my mind, whether it may not be possible that the effort to provide this mass of exports at the present day may not be beyond our strength as an industrial nation, and may not lead to the forcing out of exports at prices which cannot pay either the manufacturer or the working man. If it be true that we are getting to that state, it makes it all the more necessary to examine most carefully whether we are not entering on an economic stage where certain restriction of exports is necessary, both for the exchanges and for the welfare of this country. I think that is a field which is very well worth the investigation of all those who devote expert attention to it. (Hon. Members: "Imports!") No, exports. I hope hon. members will not jump to the conclusion that I am trying to trick them in any way. I do want them to realise that this is a point of substance, and anyone who may be called to great office will have to deal with these matters. This is a position, the House must remember, that has never occurred before. We are in the same position the Germans would be forced into if they had refused normal work. It is going to be an extraordinarily difficult question for all the industrial countries of the world.

No wonder bewildered M.P.s called out "imports." If Mr Baldwin had said "imports," he would merely have been repeating the protectionist fallacy of which we heard so much during the General Election. But the advocacy of a restriction of exports and a curtailment of international trade as a cure for the ills of industrial nations in general and Britain in particular causes the wildest of protectionist theories to fade into insignificance. Mr Baldwin may, in fact, be likened to a doctor who says to his patient: "You must not breathe more than you can help. It puts too much strain upon your lungs." There are those who fear that Mr MacDonald and his colleagues will upset the country by the production of false economic doctrines. They will be hard put to it to find any doctrine more astounding than that which the retiring Premier has mooted. Incidentally, we fail to find any meaning in the penultimate sentence quoted above. At that we will leave Mr Baldwin, hoping that perhaps some explanation may be forthcoming that will throw illumination upon an otherwise unintelligible pronouncement.

Meanwhile the new Government has been promptly formed, and has got into harness at once. In his selection of Ministers Mr MacDonald, while making only one surprise appointment, has shown considerable sagacity. He has, in fact, scored an initial success with the announcement of his Cabinet, the judicious mixture of the intelligentsia with the Trade Union element—even the Clyde section is represented—has satisfied his party, while the infusion, into a mainly untried Cabinet, of men of varied experience and high standing, such as Lord Chelmsford, Lord Haldane, Lord Parmoor, and Sir Sidney Olivier, has gone some way towards restoring the confidence of the more timorous sections of the public. Additional interest is added to the Ministry (though not to the Cabinet) by the inclusion, for the first time in British history, of a woman—a distinction for which Miss Bondfield, though a new member of Parliament, is well qualified by work and experience outside. The net result of Mr MacDonald's work is a Ministry which is not lacking in brains, distinction, or weight, and is one to which the country as a whole is prepared to give a fair chance. Among the indications which support that view is the recovery of the security markets. Visibly impressed by the composition of the Cabinet, steadied by the rebukes to scaremongers

uttered by leading bankers, and assisted by the need of "bears" to cover, the Stock Exchange has enjoyed a sustained rally. The nervousness of the home investor has passed, and brokers report buying orders of all descriptions to be pouring in. Prophecies of immediate ruin, where heard, fall on deaf ears at home; and although foreign interests are still removing money sufficiently to depress the sterling-dollar exchange, it may be hoped that the return of confidence at home will steadily communicate itself to foreign centres as the new Government settles down to work. Much, of course, depends upon the spirit in which that work is attacked. The test will not be long in coming. For, as we show in a later column, the affair of the Palatinate and its effect on the relations between Britain and France, call for the immediate exercise of firm statesmanship. Already, too, the new Cabinet is preparing plans for dealing with unemployment. Looking farther ahead we may discover a wide field of useful work which the King's Speech and the debate on the Address encourage us to hope may be regarded as non-controversial; while the steps which Mr Macdonald contemplates for linking foreign policy more closely with the League of Nations will be eagerly awaited by all parties. At the moment the sea into which the Labour barque is launched is difficult, if not stormy. Unless and until we see the national interests, which the barque carries on board, being steered towards dangerous reefs, we shall watch the task of navigation unperturbed and without any desire for factious criticism. That we believe is the spirit in which the country will watch the new adventure in British politics.

THE PALATINATE AND COLOGNE.

On Friday of last week, the Franco-Belgian Railway Régie in the German occupied territories declared what amounts to a formal blockade of the British zone round Cologne. On Monday last the Under-Secretary of State for Foreign Affairs read in the House of Commons a preliminary telegram from Mr Clive, the British Consul-General at Munich, summarising the results of his five-days' inquiry in the Palatinate. These two events together mark a considerable increase in the gravity of the situation which has arisen between Great Britain and France, and the new Government may find during the next few weeks that this question overshadows all others with which they have to deal.

The railway blockade—serious though it is—is the less serious incident of the two, partly because the avowal of it had long been preceded by action (so that it may not add greatly to the already acute difficulties of the local British authorities), and partly because the Government at Paris have already begun to explain the Régie's action away—an obvious step towards agreeing to its cancellation. It will be remembered that, for some time past, negotiations have been proceeding between the Régie and the German Railway Managements in the Cologne Area, in which the local British authorities participated in virtue of their control. The subject of these negotiations was the regulation of through traffic, and an agreement embodying substantial concessions to the Régie had actually been reached, when it was rendered abortive by the intervention of the French Government itself. Paris took the negotiations out of the Régie's hands, and refused to sanction the arrangements that had been made. The blockade since declared by the Régie was obviously the next move in the game, and it is therefore somewhat strange to find the French Government now declaring that this move has been made on the Régie's initiative and without its own knowledge. This, however, may be passed over, so long as the "competent authorities," whoever they may be, recognise that they have gone too far and revise their policy accordingly. The official explanation of the blockade is that it is necessitated by congestion of traffic on the line connecting the two French areas on either side of the British area, and that it will be removed as a matter of course as soon as this technical difficulty has been overcome. It is desirable that that consumma-

tion should not be delayed, for, as it is, the Régie is allowing nothing to enter the British area except military transports, foodstuffs, and raw materials, and nothing to leave it except certain quantities of brown coal, which the French and Belgians need for their own convenience. This blockade is altogether a false step. Every politically educated Frenchman must realise that the issues between his country and ours cannot be settled by this kind of pressure. Such action cannot affect our general policy or our power of carrying it into effect. It can only produce exasperation, and so make the atmosphere even more unfavourable than it is already for the settlement which France and Great Britain must, sooner or later, reach on the momentous questions which at present divide them.

Mr Clive's report is a more serious matter, for it more than confirms the worst reports that have been brought latterly from the Palatinate by private witnesses and investigators. "The overwhelming mass of the population are opposed to autonomous government." "This government could never have come into existence without French support, and would immediately be driven out if French support were withdrawn." "On the admission of Bley, the nominal head of the Government, 75 per cent. of the Separatists came from outside the Palatinate. These unquestionably include a large element of ex-criminals and men entirely inexperienced in Government." M. Poincaré was prophetic when he remarked, last Friday, in the French Chamber, that "There could be no doubt that the British inquirer had been struck by the declarations of the Palatinate autonomists!" He also thought it worth while to say that "the Palatinate movement was the spontaneous work of native elements of the population, and had been started for local reasons," and that "the French Government confined itself to the application of the Treaty of Versailles, and had never had, and never would have, the intention of going outside the limits which it had to observe."

A curious commentary upon M. Poincaré's asseverations is afforded by some of the circumstances which attended Mr Clive's mission. He was assiduously accompanied by a French official, from whose attentions he appears only to have escaped for one hour out of his five days' stay in the Palatinate. Where Moroccan sentries had been guarding buildings occupied by the Separatists until a few hours before his arrival, no sentries were on duty when he reached the spot. Where there had been Separatist "komitajys" armed with revolvers, and even rifles (in spite of the Rhineland Commission's veto upon the bearing of arms), there were pickets of unarmed boys. These petty deceptions, half ludicrous and wholly inefficacious and demeaning from the point of view of their authors, are quite unworthy of a great civilised Western nation. They are the familiar devices of Near Eastern Governments whenever they are caught in the act of inciting nominally spontaneous brigands (for that is all that the Separatists are) to do work which these Governments wish to get done but are ashamed to carry out openly in their own name. When chicanery invented in the Balkans and Asia Minor is applied in the heart of the civilised West, we begin to realise how insecure our civilisation has become during the last ten years.

Nor do the French content themselves with subterfuges. They have established a positive reign of terror which is also without parallel except in regions east of the Adriatic. It is already hinted that inhabitants of the Palatinate who have explained their feelings to Mr Clive too frankly are to be called to account. British newspaper correspondents report the elaborate precautions which respectable Germans are forced to take in order to communicate with them without being detected by spies in the employment of the Separatists and of France. But the most eloquent testimony to the terror which has been inspired in the German population is afforded by the fact that, even in the British area round Cologne, almost the entire local German Press, in reporting Mr Clive's telegram, has felt it prudent to omit his finding that French support alone has made Separatism possible. The Germans can no longer assert their elementary rights as members of a modern civilised society, but it is the British Government's duty to defend these rights for the sake of British interests and of Europe's salvation.

THE MINERS' BALLOT.

(FROM OUR LABOUR CORRESPONDENT.)

WHEN the railway strike has been settled, it will be necessary for careful attention to be given to the danger which is threatening of an even more serious dispute. Early in January the executive of the Miners' Federation of Great Britain took a ballot of their members on the question, Should notice be handed in to the owners giving three months' notice of termination of the national wages agreement, arrived at in 1921, after the great stoppage of that year? The result, announced on January 17th, showed an overwhelming majority against the agreement. Formal notice has, consequently, been handed in. It appears, therefore, that unless, either by direct negotiation between the parties or by the interposition of Parliament, some solution is reached within the next three months there will, in April, be a national strike in the coalfields.

As to the fact that the miners hate the agreement, or, rather, its results upon their wages, the figures leave no doubt at all. In the summer of last year, Mr Hodges could say that the smaller districts—Kent, Bristol, Somerset, Forest of Dean, Cumberland, and North Wales—had never voted for the termination of the agreement, although most of them were in a worse position than, for instance, Lancashire, which had again and again pressed for its rejection. This time there is a majority for termination in every district. Yorkshire is the only area where the majority is less than two to one; in most the divergence is far wider. Lancashire cast 53,000 votes against the agreement to 3,000 for; Scotland, 69,000 to 12,000; South Wales, 129,000 to 14,000; Northumberland, 23,000 to 8,000; Durham, 73,000 to 22,000; Yorkshire, 75,000 to 50,000. The total vote for rejection was 510,303 out of 624,861—i.e., over 81 per cent. The fact that juveniles were excluded and that only a small proportion of enginemasters are eligible to vote probably accounts for most of the difference between the total vote cast and the membership of the Federation—754,060 in June, 1923; although it is true that in the report it is stated that the falling-off in membership, marked as between 1922 (810,060) and 1923, had been arrested, and new members were coming in, or old ones returning as employment improved. Anyhow, there can be no question that the vote is a correct indication of the fact that the miners as a body are profoundly dissatisfied with the condition of things in their industry, and with good cause.

This statement, however, does not carry us far. It could have been made at any time since the agreement was concluded, as at the time of its conclusion. It is by no means easy, even now, to say what proportion of thinking miners object to the principle of the agreement, as distinct from its results. It has been the policy of the executive to stand by the principle, while striving to secure modifications—the principle, that is, of national as against local wage arrangements, and of some ratio between wages and profits. Therefore, it must not be assumed that the fact that the miners have voted to terminate the agreement as it stands means any more than that they can no longer tolerate the way in which, in its present form, it works.

They accepted the minimum as laid down in July, 1921, in a spirit of dour realism; the men knew, as well as their leaders, that there was nothing else to do. Their resources were exhausted; to fight on was only to fare worse in the end. The sudden abolition of control in March, 1921, had forced upon the Federation an issue which it had to challenge, but on which the circumstances made victory impossible. It had failed the year before to rouse the opinion of the country on nationalisation; the political campaign had fallen flat. The fight for the national pool was lost almost before it was begun, and finally abandoned in the House of Commons on April 14th. The collapse of the Triple Alliance was the dramatic outward sign of what had really occurred long before. Therefore, in July, 1921, there was nothing to be done but set teeth and prepare to gather resources for a new struggle later on. If now they have got to the point of denouncing it, it is because their efforts to raise the minimum by other means have failed. The period between July, 1921, when the national agreement was signed, and the present day is occupied by a continuous series of these efforts. Throughout 1922 the mining industry was in the trough of depression. The Miners' Conference at Blackpool in that year decided that the time was not "opportune" for considering the termination of the agreement. The executive was, instead, instructed to discuss with the owners various specific points, and, in particular, to try to get the district minimum raised above the 1914 average by a figure at least equal to the rise in the cost of living. The owners, in reply to this, stated that they were considering applying for a reduction in the minimum; at the same time, they threw out hints, since frequently repeated, about the necessity of going back on the policy of the seven hours day. The miners then turned to the Government. Mr Bonar Law having admitted to their deputation that the wage position was "horribly bad," the Parliamentary Labour party in the House of Commons (December, 1922) demanded an enquiry. This was refused; the miners were told to wait till "trade improved." Under the increased demand created by the Ruhr invasion, trade did improve, but neither increased output, nor advancing prices and profits, brought any relief to most of the districts—many of them, indeed, had mounting deficits to work off before they could even achieve a level position. At a conference with the owners in April, 1923, the Federation reiterated the claim for a district minimum equal to the cost of living; the owners on their part maintained that the only way in which the workers could secure a higher wage was by accepting a longer working day. Thereupon the demand for the termination of the agreement again became a live issue; at a special delegate Conference in May action on this was, however, postponed, and discussion adjourned to the annual Conference since the Leader of the Opposition had secured from the Government a pledge to expedite proceedings on the Coal Mines Minimum Wage Amendment Bill. When the Conference met in July the second reading had been taken, and lost by 76 votes. Nevertheless the delegates, after spending most of their time in discussing the agreement, finally decided not to take a vote upon it, but to instruct the executive

once more to endeavour, through the National Board, to secure a revision of the ratio of wages and profits, a revision of the existing minimum, and fuller information, on the auditors' schedules, as to "other costs." At meetings with the owners, in August, October, and November, the miners' spokesmen, notably Mr Hodges and Mr Walsh, laid stress on two sets of facts. In the first place, in many districts men were on the minimum or below it, and the minimum was itself too low in relation to the actual cost of living to afford the full-time workers a living wage. Figures published by the Ministry of Labour showed that, in the autumn of 1923, whereas the cost of living index stood at 173, and gradually rose to 177, miners' wages averaged over all districts stood around about 165, and in many were much below that. In the second, owners' profits had risen so markedly that, in the words of Mr Walsh, "we cannot accept the statement that there is not the money in the industry either to give a better minimum to the workman, or to enable you to carry the ratio upon which this agreement is founded." Mr Hodges carried this point of view a stage further. He urged not only that profits were unduly high in relation to wages, but that it "is better now that prices are higher than they were when we came to you last year to fix a higher minimum than we had last year, in order effectively to stave off a reduction in price, which is practically inevitable if primary costs of production are what they were last year. It seems to me that this is an opportune point when a new minimum should be created, so that you will have an effective check against the diminution when prices begin to fall rapidly." Behind this specific argument, this specific suggestion, he expressed a view which summed up the general case of the miners, when he said:—

Who can deny but that a 40 per cent. minimum is a just and right minimum? Not one of you. Your whole point is: Is it within the ability of the industry to pay it? Judged by past figures, you say. No. I say, judged by past figures and by past practice, it will never be possible to have a living wage in this industry unless you approach the problem from an entirely new angle, and if you are prepared to start with giving a living wage for the men, that fact would make for a higher quality of prosperity in the industry than can possibly be the case if we start out on a 20 per cent. minimum. It not only means a good thing for the industry, but it means a good thing for the country for the workmen in the mining industry to have a 40 per cent. minimum.

On the variation of the ratio, and the raising of the minimum, the negotiations, interrupted by the Election, broke down. Hence the ballot and its result.

LANCASHIRE COTTON TRADE IN 1923.

(BY OUR MANCHESTER CORRESPONDENT.)

COTTON spinners and manufacturers in Lancashire have experienced another year of severe depression. The boom which followed the Armistice reached its height in the spring of 1920. The downward movement in prices, and the serious depreciation in the value of stocks brought difficulties of a pronounced character, and since then there has not been any revival, the business available being insufficient to meet the requirements of producers. The past year, however, had some favourable features, a prominent development being the improvement in the finer end of the industry. Producers of Egyptian yarns gained ground, and increased activity also showed itself in fancy cloths of various kinds. Wretched conditions continued to prevail for spinners of coarse yarns, and demand was very poor in the commoner styles of piece goods, especially grey staples. During the latter part of the year there was a marked rise in values as a result of the striking advance in raw cotton rates. Numerous cases of financial difficulties were reported. Probably more failures took place than in any previous year in the history of the trade. There were fears now and again of a financial panic, but such a thing did not happen, and probably on the whole the worst in this connection is over. Many spinning mills, however, are still feeling the effect of money stringency. It is satisfactory to be able to record that during the year no labour trouble of any kind took place.

On January 2, 1923, the quotation for Fully Middling American cotton on the spot in Liverpool was 15.40d. By the 25th the price had advanced to 16.63d, but there was a drop to 15.83d on February 8. A rise occurred, and 16.86d was posted on March 8. There was another decline to 14.90d on the 29th. After a sharp recovery to 16.34d on April 10 wide fluctuations took place, the tendency of prices being easier, the figure of 14.18d being registered on May 11. A stronger feeling prevailed, the quotation on June 12 being 17.28d. Prices then favoured buyers, and on August 1 13.40d was posted, this being the lowest price of the year. A marked advance was experienced in August to 15.18d on the 31st, and the upward movement was continued, 17.33d being posted on September 29 and 17.48d on October 31. The tone was stronger than ever in November, the highest price of the year, 21.99d, being quoted on the 29th. A striking decline occurred early in December to 18.59d on the 11th, and after many ups and downs the quotation on the 29th was 21.06d. The general position of raw cotton supplies and consumption commanded more attention than ever. According to some authorities the day has passed when the United States is in a position to supply Lancashire with raw cotton at an economic price. That is to say, rates are so dear that it is becoming a question whether spinners and manufacturers can pay the figures required and sell manufactured goods freely to customers abroad. For the season 1922-23 the American crop was 11,248,000 bales, but the actual growth was only 10,300,000 bales. The consumption during the twelve months was estimated at 12,600,000 bales, and stocks throughout the world were reduced to about 2,500,000 bales. Users of raw cotton in Lancashire last spring were hopeful of a much larger yield. For one thing, the area under cultivation in the United States was a record. The weather during the growing season was unfavourable, and it is probable that the crop, including linters, will not be more than 10,700,000 bales. Owing to the scarcity of supplies and high prices, there is every likelihood of the consumption being considerably reduced, and it may not be more than 11,600,000 bales.

On January 2, 1923, the quotation for Fully Good Fair Sakellaridis Egyptian cotton on the spot in Liverpool was 17.80d. Changes in prices during the early months of the year were not important, but 15.40d was posted on May 11 and 15.25d on July 30. By the end of September the price had advanced to 18.65d. There was another rise in November to 26.95d on the 29th, and the year closed with the figure at 24.50d. Fortunately for Lancashire the Egyptian crop for last season was larger than for nearly ten years back, the growth being given as 6,684,000 cantars. The Alexandria Produce Association has estimated the crop for the current season at 5,960,000 cantars. Quite an interesting development with regard to the use of raw cotton in Lancashire during the year was the larger purchases by spinners of what are known as outside growths. In addition to freer buying of Egyptian qualities quite a big business was done in Peruvian cotton. There was also a tendency to consume on a larger scale the higher grades of Indian cotton. More projects for growing cotton in different parts of the British Dominions were started, and important work was done by the Empire Cotton Growing Corporation. Attention has recently been drawn to the favourable prospects in Brazil, and there is every likelihood of increasing quantities being grown there during the next few years.

The sales of piece goods from month to month were unsatisfactory. It was necessary for all manufacturers to allow looms to stand idle, and numerous cases were mentioned of weaving sheds being closed down for an indefinite period. Unemployment was rampant, and probably taking the twelve months as a whole, the production was not more than about 70 per cent. of the full capacity of the machinery. A year ago there was a buying movement of some importance, and manufacturers booked orders on a very fair scale. The demand, however, was not of long duration. Business throughout the summer was of a very limited character, but in the autumn the rising tendency of prices stimulated demand, and the turnover during October and November was much larger than on any previous occasion during the year. Manufacturers, agents

and merchants were enabled to liquidate stocks, and numerous firms obtained very welcome relief. Buying for India during the year was very irregular. The position abroad, however, gradually improved. That great country has had the advantage of three good Monsoons. Cotton cloths, however, are three times dearer than in pre-war days, while the earning capacity of the people of India is only slightly larger than in 1913. A favourable development was the steady reduction of stocks in the bazaars, and dealers in Calcutta, Bombay, Madras and Karachi have comparatively small supplies on hand, while in the up-country districts the stocks are of limited dimensions. The China market did not give healthy support. Developments in demand were checked by the unfavourable political situation throughout the Far East. Stocks of goods, however, were steadily reduced. Operations for the minor outlets of the Far East such as Java, Singapore and the Straits Settlements were rather irregular. A feature of the year was the increasing demand for the United States. Quite a big business was done in fine cloths, there being active buying in warp satins, poplins, brocades and similar goods. It may be said that shipments to America of cloth in 1923 were over 175,000,000 square yards, against less than 96,000,000 square yards in the previous year. Demand was fairly encouraging for Egypt, but buying for the Near East was patchy. There was no general flow of orders for the outlets of Central and South America. Considering the unsettled conditions in Europe the trade done cannot be called unsatisfactory. It was not a favourable year for the home trade. The consumption of goods was adversely affected by the large amount of unemployment in the leading industries.

The following is a comparative table of cotton cloth exports for the pre-war year and the last four years:—

	Yards.	£
1913	7,075,252,000	97,775,855
	Square Yards.	
1920	4,435,405,000	315,717,631
1921	2,902,288,900	137,132,298
1922	4,181,176,300	142,415,686
1923	4,141,303,700	138,354,135

It will be noticed that although foreign customers are spending considerably more on Lancashire cotton goods than in 1913 the quantity exported is decidedly smaller, and it may be pointed out that the average price per yard in 1913 was 3.32d, against 8.02d in 1923.

The following is a list of cloth quotations on particular dates:—

	32-inch Printers, 116 Yards, 16 by 16, 32's & 50's.	36-inch Shirtings, 76 Yards, 19 by 19, 32's & 40's.	38-inch Shirtings, 38 Yards, 18 by 16, 10 Lbs.	39-inch Shirtings, 37½ Yards, 16 by 15, 8½ Lbs.
1923.	s d	s d	s d	s d
January 5 ..	31 3	33 9	18 6	17 0
February 2 ..	31 6	34 6	19 0	17 3
March 2	32 0	35 6	18 9	17 9

28 39 9	42 9	22 6	20 7½	

Spinners of American yarns experienced another very unsatisfactory year. For nine months there was organised curtailment of output to the extent of 50 per cent. The smaller supplies were quite equal to the requirements of users, and it was exceedingly difficult for sellers to secure prices which did not mean a definite loss. It may be mentioned that out of the 56,000,000 spindles in Lancashire 40,000,000 are in the American section. Several companies that were sold and retooled during the boom on a higher capital basis felt the depression very severely, and in a few cases finances had to be reorganised. During the last few months numerous mills have made calls upon the shareholders. In November trade revived somewhat, and production was increased to about 75 per cent. of the full capacity of the mills. Since then, however, demand has fallen off, and recently spinners have not been able to sell the increased output, with the result that stocks have begun again to accumulate in first hands. There

was an agitation for the control of the industry, especially in the American spinning section, but so far no workable scheme has been evolved. In the finer end of the spinning industry, that is to say, the Egyptian section, there was a steady trade improvement during the year. Demand tended to broaden, and several months ago nearly all the mills in Bolton and district began to run full time. The better state of affairs was maintained, and most of the companies engaged in this department are now making profits. This development was due to the distinct improvement in the turnover in fancy cloths of various kinds. The general offtake in yarns suitable for shipping was disappointing. The falling off in trade was very largely due to the decline in the takings of Continental countries. On certain occasions India bought fairly well.

An analysis of the stocktaking results of 287 spinning companies during 1923 shows that the directors of 201 concerns were unable to pay any dividend to the ordinary shareholders. These companies have a paid-up ordinary share capital of about £44,000,000. The average dividend was 2.27 per cent., against 3.73 per cent. in 1922.

The following comparative table gives the shipments of yarn for the pre-war year and the last four years:—

	Lbs.	£.
1913	210,099,000	15,006,291
1920	147,432,400	47,585,814
1921	145,894,900	23,924,879
1922	201,220,800	26,436,489
1923	145,019,500	21,011,911

The following is a list of cotton and yarn quotations on particular dates during the year:—

1923.	Cotton. Fully Mid American.	American Yarns.			Cotton. F.G. Fair Sakellaridis Egyptian.	Egyptian Yarn. 60's Twist.
		32's Twist.	40's Weft.	50's Weft.		
January 5	d 15.11	d 21	d 20½	d 23½	d 17.50	d 28

December 28 ..	21.17	28½	28½	31	24.30	38

The wages agreement between the employers and the workpeople, which was in operation at the beginning of 1923, provided for no further alteration in list rates before May. When that time came the operatives proposed that the agreement should be extended for twelve months without any change. Several joint conferences took place, and a fresh arrangement was come to which provided for rates of wages to be unaltered until January 25, 1924. The employers will then be at liberty to take whatever action they think fit on giving one month's notice, but the trade unions will not be allowed to make an application for a general advance in wages before September 25, 1924. After that date both sides will be at liberty to take whatever action they think fit on giving one month's notice.

The outstanding feature in the industry at the beginning of 1924 is the high level of values as a result of raw material scarcity and dear prices in Liverpool and New York. The most encouraging factor is that stocks of manufactured goods, not only in this country but throughout the world, are comparatively low. Throughout last year buying was of a hand-to-mouth character, and in many quarters there was a tendency to adopt a "short" policy. The restriction of production by stopping machinery kept down supplies. There are now distinct indications of dealers abroad being compelled to operate more freely. It is feared, however, that with American cotton at about 20d per lb, against less than 7d per lb in pre-war days, it will be very difficult for Lancashire manufacturers to do a really big trade. There is ground for believing, however, that the worst of the depression is over, and employers and operatives should be able to look forward to more profitable trade and increased employment within the next few months.

MINING IN NORTHERN ONTARIO.

(BY OUR OTTAWA CORRESPONDENT.)

THE prosperity of the pulp and paper industry in Canada has been a great economic buttress for the Dominion during a period when its basic industry, agriculture, was facing serious depression, but it is now securing a very substantial and welcome reinforcement from the mining camps of Northern Ontario, whose activities create a great deal of business for Toronto and other Ontario cities. Toronto, indeed, is their chief base of supplies, being connected directly with them by the Temiskaming and Northern Ontario Railway (colloquially the T. and N.O.), which is owned by the Provincial Government of Ontario, and runs northward 500 miles to Cochrane.

The mines of Northern Ontario are in the outer part of the great area of pre-Cambrian formation, which, beginning at the river St Lawrence, near Brockville, runs through the heart of Ontario along the north shores of Lakes Superior and Huron right to the eastern boundary of Manitoba, and includes more than half the total area of the province. The hard ancient pre-Cambrian crust of the earth, called Keewatin rock, was left exposed in the wake of the glaciers which cut the face of Canada into ribbons and left the marks of their paths in the shape of innumerable rivers and lakes. The Keewatin rock having been fractured and brecciated by volcanic action, cracks and fissures were formed in it, and into these the interior waters of the earth, containing gold, silver, and other minerals, were forced. It is the deposition of the mineral contents of these waters in the fissures of the Keewatin rock which accounts for the rich mineral discoveries in Northern Ontario. From the earliest settlement of Ontario there had been tales of great mineral wealth in the north, but the energies of the first settlers were concentrated upon agriculture, lumbering, and urban industry. In 1883, during the construction of the C.P.R., nickel was discovered at Sudbury. The claims there were first staked and worked for copper, and it took three years to discover that their ores contained more nickel than copper. Silver was first discovered at Cobalt in 1893, but development was slow, and in 1898 the total value of Ontario's silver production was only \$51,960. By 1905 the value of the Cobalt discoveries had been realised, and in that year the province produced 2,473,452 ounces of silver, valued at \$1,372,887. Production steadily expanded till it reached its peak in 1911, with 31,507,880 ounces, valued at \$15,953,895. Thereafter a gradual decline set in, although the high prices of the war years brought to the province in 1918 \$17,415,882 for about the same number of ounces of silver. In 1921 the silver output of Ontario had fallen to 8,412,059 ounces, valued at \$5,497,160, but in 1922 it rose by over two million ounces, and the returns for the first half of 1923 forecast a total production of over ten million ounces. The great silver mines of Cobalt were the Larose, Nipissing, McKinley-Darragh, Kerr Lake, and Crown Reserve, and the camp up to date has produced roughly 300 million ounces of silver, and yielded dividends over 100 million dollars in value.

A few years ago the current impression was that silver mining in Ontario was a lost cause, and a steady exodus of population gave confirmation to the view that Cobalt was dead. But now there has come a revision of this judgment. In many areas certain proof has been secured that underneath the Cobalt, which was supposed to have been worked out, there are very valuable deposits of silver. The new stimulus up to date has chiefly come from the South Lorrain region, where the properties of the Mining Corporation of Canada and the Keeley mine are giving remarkable yields. The Mining Corporation, in which British capital is substantially interested, had a number of unfortunate ventures in Canada and elsewhere, but its luck has now changed, and many of its operations in Northern Ontario are to-day full of promise.

But despite this revival of hope in the silver camps, it is rather upon gold that Ontarians are now placing their faith. Within the province there are already two well-established gold-mining camps, known as Porcupine and

Kirkland Lake. In the former is situated the Hollinger mine, which is to-day one of the largest single producers of gold in the world. Up to the end of 1922 it had yielded gold valued at over 60 million dollars, and given its shareholders almost 20 million dollars in dividends. It has lately acquired some valuable adjacent properties, and its general manager has predicted that it will yield gold worth 450 million dollars before its possibilities are exhausted. In the same camp are two other extremely profitable and well-managed mines, Dome and McIntyre, which, if each much smaller than Hollinger, are giving very satisfactory results to their shareholders. In the other gold camp, Kirkland Lake, the largest mines are the Lake Shore, the Wright-Hargreaves, and the Tough-Oakes/Burnside. In addition to these major mines there are innumerable other little companies with properties in various stages of development. The near future may see at least two new mines, the Vipond and the Nighthawk, producing gold on a substantial scale, and others will no doubt follow. The progress of gold mining in Ontario can best be gauged from the following figures:—

Year.	Oz.	Value.
1901	14,293 ..	244,443
1911	2,185 ..	42,637
1912	102,278 ..	2,114,086
1913	220,837 ..	4,558,518
1915	411,588 ..	8,501,391
1916	497,833 ..	10,339,259
1917	429,893 ..	8,698,735
1918	411,878 ..	8,502,480
1919	505,964 ..	10,451,709
1920	565,283 ..	11,686,043
1921	707,509 ..	14,624,085
1922	999,848 ..	20,668,692
1923 (first six months)	418,113 ..	8,643,162

It will be noted that the returns for the first half of 1923 presage a decline for the whole year from the 1922 figures, but the decreased yield is due solely to an unfortunate shortage of power which seriously hampered the operations of all the Porcupine mines in the early months of 1923. It has now been remedied, and the production of the second half of the year may make up the deficit.

The average recovery by the leading mines per ton of ore milled is over \$11 by the evidence of the following figures:—

	1921.	Six Months, 1922.	1923.
Hollinger	8.46 ..	8.23 ..	7.08
Dome	6.80 ..	11.38 ..	11.80
McIntyre	10.68 ..	9.84 ..	9.05
Teck-Hughes	9.37 ..	14.48 ..	30.00
Lake Shore	22.24 ..	19.44 ..	26.10
Wright-Hargreaves	13.00 ..	11.53 ..	9.95

It is frankly impossible to give any estimate of the extent of this zone of mineralisation, and its depth is equally problematical. Some of the well-known mines are getting fine yields at a depth of 3,000 feet, and the Hollinger management has been considering the purchase of ten-ton hoists capable of going to 4,000 feet. Geologists declare that the problems of the Northern Ontario field are unsurpassed in interest. Time and again veins have disappeared or petered out, but in mines like Dome the management has ceased to worry over such contingencies, for they have simply cast around with the certain knowledge that they would pick up new bodies of ore, which they almost invariably did.

Heretofore Northern Ontario has relied mainly upon Canada and America for the capital it badly needs for development work. Some British money went into Cobalt, but the proportion to the total was small. The figures of the Dominion Bureau of Statistics show that in 1921, out of a total value of \$769,256,108 par value of stocks and bonds of mining enterprises in Canada of all kinds, including coal and iron, Canadians owned 415,445,196 dollars' worth, or 54 per cent.; Americans owned \$233,379,473, or 31 per cent. British investors held \$101,166,073, and of this amount over 43 million dollars was invested in the nickel mines, a large part of it by the Mond interests. Of a total of about 170 million dollars invested in gold mining in Canada, British investors up to 1921 had only furnished some 4 million dollars, as against more than 51 million dollars furnished by Americans. But during the past two years British capital has begun to

take a more lively interest in Northern Ontario. The mineral field of Northern Ontario projects over into the adjacent province of Quebec, and there what is known as the Rouyn field has attracted a great rush of prospectors this past summer. The Quebec Government are cutting roads into the new fields in its territory, and only when they are completed will real development be possible.

AUSTRALASIAN LAND COMPANIES.

THE remarkable results portrayed below in our review of companies representing the Australasian agricultural and pastoral industries will probably not come as a surprise to those people who have followed the trend of Australasian produce markets during the past 12 months. Considered from the climatic aspect, the year was not as good as it might have been. It was only in June that rain fell sufficiently to be of value to crops and pasture. Thus during the greater part of the year under review a dry time was experienced. In some parts of New South Wales and Queensland the rainfall was not in sufficient volume to relieve the situation. The course of the wool market has been favourable, and prices have been maintained at a high level. There was little improvement in prices of livestock; better prices were obtained for sheep, but cattle still experiences a poor demand.

Speaking at the annual meeting of Dalgety and Co. in November last, the chairman, the Hon. Edmund W. Parker, in summing up the position of wool, said that "The result had been that, although the total sales in the Colonial markets during the past season were reduced by no less than 284,858 bales, the actual money return showed an increase of more than £12,500,000 over 1921-22." But, he continued, the "Australian wheat harvest was one of the disappointments of the past year, both as to quantity and price. The surplus available for export was reduced by the dry season to about 1,500,000 tons, as compared with 2,500,000 tons in the preceding year, and unfortunately prices were materially lower."

An interesting sidelight is thrown on a question which has apparently exercised the mind of not a few people for some time past. We refer to immigration and land settlement in Australia. Mr R. H. Caird, chairman of the Australian Mercantile Land and Finance Co., Limited, in November, pointed out that this company had already done something in that direction, for in recent years they had cut up and disposed of, in small areas, no less than five distinct freehold properties, aggregating 191,368 acres. Great areas of Australia were peculiarly suitable for the production of fine wool, and though he admitted the necessity of increasing the rural population, he would rather see experiments in closer settlement made in districts where perhaps the best use was not being made of the land than in areas eminently suitable for the production of Australia's premier product, fine merino wool, for which there was a world-wide market.

In the following table, earnings of nine of the most important companies interested in land and produce for the past four years are compared, together with rates per cent. of distribution on ordinary capital. Profits are struck after deducting loan interest:—

Company.	Profits.							
	1919-20.	Ord. Div. Rate.	1920-21.	Ord. Div. Rate.	1921-22.	Ord. Div. Rate.	1922-23.	Ord. Div. Rate.
Australian Agricultural	55,648	7%	41,614	6%	46,287	7%	95,702	6%
Aust. Estates & Mort.	49,134	5%	48,289	5%	71,847	5%	93,643	5%
Aust. Merc. Land & Co.	79,287	12½%	Dr 32,725	10%	189,255	10%	203,253	12½%

* Free of income-tax.

This is a striking picture of progress. If figures of profits, given above, are compared with our table of capital employed in these companies, it will appear strange, perhaps, that such substantial dividends can be declared, but these profits are usually shown after amounts required for Australian and British taxes are deducted.

Dalgety and Co.'s accounts give some idea of the proportion of profits which goes in payment of taxes. This company shows a revenue of £920,977 for the year ended June 30, 1923; working expenses absorbed £380,190, and debenture interest £114,228, while Australian and English taxes swallowed £172,397, leaving £254,162 for net profits. New Zealand and Australian Land displays, perhaps, the most remarkable change-over in our list. To recover from a debit of £88,936 two years ago to a profit of £246,198 last year is a very commendable performance. The figures of the Australian Agricultural and Scottish-Australian Investment call for notice, but Dalgety's accounts are the most reliable guide to the year's conditions. The Australian Mercantile continues to make rapid headway following its policy of expansion in Melbourne. The Australian Pastoral, as a progressive concern, also deserves notice; here we observe that gross earnings for its past year amounted to £286,945, from which rents, rates and taxes absorbed £63,857. A year ago the comparative figures were £262,773 and £72,866.

Our next table shows comparative figures of principal assets and liabilities for the past three years:—

Name and Year.	Principal Liabilities.			Principal Assets.			
	Total Capital.	Reserves.	Creditors.	Cash & Investments.	Debtors.	Land, &c.	Stores and Stocks.

† Freehold premises, furniture, plant, &c., at cost.

It is obvious that most balance-sheets are in a liquid state. Indeed, if it were not for the notoriously precarious nature of pastoral farming an epidemic of "melon splitting" might be caused by the demands of thoughtless stock and shareholders. It has been explained by the Governor of the Australian Agricultural Company on several occasions at the annual meetings that the true value of assets shown in the balance-sheet is not revealed. In the item "Estates and properties account, £272,930," are included estates, the unimproved values of which fixed by the Government for taxation purposes has been stated to be £797,707, and the improved values are considered to be substantially greater. The Australian Mercantile has one rather large composite item, which is placed under "land," &c. This is "loans on land, stations, stock, and other securities, fixed deposits with bankers, and properties owned by the company." It would be interesting to know why "fixed deposits with bankers" are not included at least under investments, although some might be inclined to place it under cash at bankers. A few years ago the balance-sheet of the New Zealand and Australian Land Company showed bank overdrafts and temporary loans, less cash at bank and in hand at £38,703. This item has now vanished, but sundry creditors have increased from £312,937 to £399,736. The New Zealand Loan and Mercantile Agency, as denoted by its title, is mainly a financial undertaking, and the item shown under "lands, &c.," consists of advances against wool and produce. This year the New South Wales Land has nothing to show under stores and stocks. It will be noticed that the undertak-

ing has reduced its capital; this is owing to debentures having been reduced from £150,000 to £93,440.

Pastoralists are not inclined to allow the Queensland Land Act of 1920 to be forgotten. The case for the Australian pastoralist was succinctly put by the chairman of the Australian Mercantile Land and Finance at its annual meeting. He said that when "a pastoralist took a lease from the Government, the terms of which contract were defined by the Act, he had a right to expect that those terms would not be varied during the currency of the lease by a subsequent Act. For a Government to introduce legislation to vary such terms could only be defined as breach of contract. The Queensland Premier had stated that it would be tremendously difficult if, as the result of an agitation in London, the Government were forced to pay 1 per cent. more on loans falling due, as this would mean a heavy burden on the State. He (the speaker) quite agreed with Mr Theodore that the position was difficult, but the remedy was in his hands. All he had to do was to right the wrong, and to make it plain to the world that Queensland recognised the sanctity of a contract. It was a pity to see a new country making slow progress simply for want of capital, which would be available in plenty if investors could be assured that contracts once made with the Government could be relied on, and would not be broken by fresh legislation during their currency." Perhaps Mr Theodore may give his point of view when he pays London his next visit.

As will be seen from our final table, quotations for stocks and shares reflect the happier prevailing conditions. Based on current prices, some generous yields are still obtainable, and it must be remembered that these yields are in most cases free of tax:—

	Am't	Paid Up.	Price July 30, 1914.	Price End of 1923.	Price Jan. 24, 1924.	Yield.
Australian Agricultural	5	5	83	52	6	15 8 3
Australian Estates and Mortgage	Stock	100	88½	59	71½	15 8 7
Australian Mercantile Land, &c.	25	5	77	7	81	17 11 6
Australian Pastoral	Stock	100	112½	87½	100½	16 19 3
Dalgety and Co.	20	5	7	10½	12½	16 3 0
New South Wales Land and Agency	5	5	42	24	41	10 11 9
New Zealand and Australian Land	Stock	100	211	143	138½	14 6 9
New Zealand Loan and Mercantile	Stock	100	96	73½	81	14 18 9
Scottish Australian Investment	Stock	100	110½	130½	156½	19 11 9

* Price of old stock.

† Free of income-tax.

The price of 88½ in July, 1914, shown for the stock of the Australian Estates and Mortgage Company was before the increase of capital in 1919, so that the quotations for the stock in 1921 and 1922 are not comparable with those for 1914. The outlook is distinctly bright. The wool market continues strong, and as the accumulation resulting from the war has now been mostly absorbed, and there is a diminishing quantity of new wool available, the prospect for good prices in the future is a reasonable premise.

THE TRUST MOVEMENT IN GREAT BRITAIN—PRICE CONTROL.—V.

PASSING now to terminable combinations which do not involve any direct interdependence of financial interests, these are found to be very numerous in practically all branches of industry (including the agricultural industries) and of trade.

Putting aside organisations of employers formed to deal with questions of wages and conditions of labour, they range from great bodies like the National Federation of Iron and Steel Manufacturers, the Association of British Chemical Manufacturers, the Federation of Master Cotton Spinners' Associations, the Allied Association of Bleachers, Dyers, Printers, and Finishers, the United Tanners' Federation, and a number of important organisations representative of various branches of the distributing trades, down to associations having only a very few members, though representing the whole production of the individual commodities which form the subject matter of the combinations, and to small groups of producers or distributors organised upon the basis of locality. Their objects are very diverse. Some, as for example the first three associations mentioned above, are concerned with the promotion of the general interests of their industry, by the collection of trade and technical information, con-

sideration of legislative proposals likely to affect the particular trade, joint consideration of transport problems, and common action (though this has so far not been frequent) as to supplies of raw materials—all of these being matters in which well-organised and comprehensive associations can obviously be of great value. They are not concerned directly with the regulation of prices or output, which forms the sole reason for the existence of many of the others. The facts that the formal statements of objects and the rules of the majority of these combinations are not available to the general public, and that even when so available they are not necessarily a clear indication of the real activities of the organisation, make it impossible to determine what proportion of them have price-fixing, whether directly or by regulation of output, as one of their objects, but there can be no doubt that the proportion is very substantial. The Report on the work of the Central Committee under the Profiteering Acts, issued in 1921, referred to certain inquiries undertaken on its behalf by the Board of Trade, and stated that of 1,853 associations circularised by that Department, 446 admitted that they exercised some form of price control, 115 asserted that they did not control prices, and the position of 1,292 was doubtful. We are not aware if the position as to this last group has been cleared up, or if the inquiry conducted by the Board of Trade, under the powers conferred by the Profiteering Acts, was continued after those Acts ceased to operate, since nothing more as to the results of the inquiry has been published. But a considerable amount of information as to the nature and operations of individual combinations is to be found in the published Reports of the Departmental Committee on Trusts appointed by the Ministry of Reconstruction in February, 1918, and of the numerous Committees and Sub-Committees under the Profiteering Acts, 1919-20. A brief review of some representative bodies thus officially investigated may serve to show their variety of form and action.

The sub-committee which investigated the electrical cable industry found that it was dominated by the Cable Makers' Association, whose output was about 90 per cent. of the total production of the country. It is registered as a trade union, and, therefore, may not exercise price-regulating functions, but the members do agree standard prices of specified qualities and grades of cables, maximum discounts, and bonuses for purchasers exclusively from members of the association. It has been active since its formation in 1899 in promoting standardisation and raising the quality of the British product, and the sub-committee, after referring to the long-continued success of this branch of the electrical industry—an exception to the general history—remarked that "there is no doubt that this prosperity was largely created by the Cable Makers' Association, which, by its organisation and research, initiated and has since maintained a high standard of quality, thus securing the confidence of buyers both in this country and abroad."

An equally favourable judgment was passed by another sub-committee on the Bedstead Makers' Federation, an association comprising some two-thirds of the makers of metal bedsteads and wood bedstead fittings, and formed in 1912 avowedly to put an end to price-cutting. Each constituent concern is assigned a percentage of the total output based on its pre-federation sales, pays into a pool each month a proportion of the value of its sales above the assigned percentage of the aggregate sales of all the members, and similarly draws from the pool a corresponding proportion of the amount by which its sales fall below its quota. The sub-committee reported (February, 1920) that there was no evidence to suggest that the manufacturers had sought to raise prices unduly, and they endorsed statements as to the considerable progress made by the federation in standardising products, promoting the installation of modern machinery and economy of production, and unifying the purchase of materials.

The findings of a third Sub-Committee which investigated the trade in light castings were more critical. They found (February, 1921) that there existed a trade combination, the National Light Castings Association, formed in 1911, which covered 95 per cent. of the output, that it had a pooling arrangement which penalised any member who increased his output and rewarded any member who reduced it—an arrangement which they regarded as tend-

ing to restrict output and retard improvement in efficiency, and to be contrary to public interest; that a trade combination—the Builders' Merchants' Central Committee—representing almost the whole distributing trade in light castings worked in close relation with the association, and determined with it minimum retail prices; and that "by a system of deferred rebates, conditional upon exclusive dealing and strict conformity to the price list, the association binds to itself almost the whole of the distributing trade, re-inforces its control over prices, and makes it difficult for any existing or would-be competitor outside the association to market his goods." The Sub-Committee recognised that efforts had been made by the association to promote efficiency and lower production costs, but thought that these activities did not adequately balance the restrictive effect of the association, and that there was "no guarantee that the results of improved efficiency would reach the public in the form of lower prices."

The electric lamp industry furnishes an example of a trade combination possessing a quasi-monopoly based upon the ownership of patent rights. The Tungsten Lamp Association was formed about 1913, and its membership consisted in 1920, when a Sub-Committee under the Profiteering Acts reported, of ten companies representing about 90 per cent. of the total British output, fixing retail prices, giving agreed discounts to factors and retailers, and regulating output. The association was found to be dominated by three concerns, the General Electric Company, which had acquired the British rights in the original Austrian Tungsten Filament patents, and subsequently in other patents, the British Thomson-Houston Company (in which the General Electric Company of America—quite distinct from the British company of the same name—has a controlling financial interest), which acquired the British rights in the American patents covering the drawn Tungsten Filament and Half-Watt lamps, and Siemens Brothers. The Sub-Committee further found that these imposed onerous conditions upon other firms in the association—for example, a limitation of output upon licensees (which the Sub-Committee regarded as contrary to the best interests of the industry and of the consumers) and a stipulation that the validity of their patents should not be questioned; and that makers outside the association produced and sold to the trade lamps of comparable quality at a lower price, but owing to the standard price policy adopted by the association, non-association lamps were being sold to the public at the same price as association lamps, "the advantage on the lower-priced lamps going wholly to distributors."

It is impossible within our present narrow limits to give instances of all the various kinds of price-fixing associations, but in view of the importance of a reduction in building costs, the findings of various sub-committees in respect of the chief building materials may be briefly summarised. As regards bricks, it was found that there were many local associations—the chief being the Pressed Brick Manufacturers' Association (working the Fletton fields, near Peterborough) and the Stock Brickmakers' Association (Kent and Essex)—and formed, among other purposes, to maintain prices at a profitable level; but the Sub-Committee reported that there was no evidence that such fixation of prices was detrimental to the consumer, or that there were any arrangements between associations, and that, though several associations of builders' merchants existed which fixed minimum prices, there was no evidence to show that undue advantage had been taken of this. In the case of slates, though the North Wales Slate Quarries' Association, formed in 1917, comprises the great bulk of the slate manufacturers in this country, it was found not to exercise any definite control over prices, nor was there any very effective general regulation of prices by the slate merchants. As regards cement, it is well known that the industry is completely dominated by two concerns, the Amalgamated Portland Cement Manufacturers, Limited, and the British Portland Cement Manufacturers, Limited—each being itself an amalgamation of a number of previously independent undertakings—which have interlocking directorates and produce about three-quarters of the total United Kingdom output; they are combined with other producers in the Cement Makers' Federation (representing about 90 per cent. of the production), which fixes minimum prices for sales to mer-

chants for home consumption, and also their retail prices. The Sub-Committee, whilst making various criticisms on the trade practices adopted by the federation, as likely in a normal period to operate against the interests of consumers, did not regard the increase in prices made during and after the war as unreasonable, in view of the great increase in cost of manufacture, and they commented on the improvements made in organisation and plant. The National Light Castings Association, whose output of grates, stoves, mantels, baths, and rain-water pipes is, of course, very important in this connection, has already been described; its action in advancing prices in the early part of last year seems to have been the cause, in combination with some temporary increases in the price of bricks, of a first step by the State in the direction of the supervision of prices in normal times. In April of last year the Ministry of Health and the Board of Trade appointed a committee "to survey the prices of building materials and to receive and consider complaints in respect thereof, and to report from time to time to the Minister of Health and the President of the Board of Trade as to the facts, and in particular as to the extent to which in any case the price appears to be unduly high by reason of the operation of any trade combination, trust, or agreement."

Notes of the Week.

The Railway Strike.—Numerous peace moves energetically pursued by Labour leaders, to whom, of course, the strike is a serious embarrassment at the moment of Labour's assumption of office, have failed to remove the deadlock in the railway dispute, and as we go to press there are no hopeful signs of settlement on the horizon. From every aspect from which it can be viewed, the affair is entirely deplorable. The issues at stake are such as in no way justify a national upset. The grievance—if grievance there be—in any case affects a very few men. The biggest of the two trade unions concerned accepted as fair and advantageous the wage award of the board on which the men were fully represented. The points on which the other union takes its stand are such as could be adjusted (if the case for adjustment has any reason behind it) by round-table conferences, after the award had been accepted in broad principle. Whether or not the railway managers had done everything in their power to guide matters in that direction, no one perhaps knows but themselves, but Mr Bromley has failed to convince us that they did not. Nor has he produced any evidence to shake Mr Thomas's pronouncement that the award was, on the whole, a fair one. And that the strike was unjustifiable. Unfortunately, the country looks like having to pay dearly for the intransigent policy of Mr Bromley and his union. Traffic is not paralysed, and on many lines the companies' efforts to maintain a reasonable passenger service have been highly creditable and successful. But a serious blow has been struck at both domestic and foreign trade just at the moment when signs of progressive recovery were growing steadily brighter. The first serious effects have already been seen in the closing down of mines and iron and steel works. Should the strike last another week, the economic effects will have become very serious. We hope, however, that the combined force of the responsible Labour leaders, which appears to be working unitedly on the side of sanity and settlement, will prove strong enough to bring to an end, before the national interests have taken grave harm, a strike which should never have taken place.

The Bank Speeches.—Three important speeches have been made this week by chairmen of the great banks to their shareholders. Mr McKenna's address to the Midland Bank shareholders yesterday was devoted very largely to questions of monetary policy, and we hope to refer to it in more detail next week. Mr Walter Leaf, Chairman of the Westminster Bank, devoted a large part of his remarks to an examination of the trade position, both at home and abroad. So far as home trade is concerned, Mr Leaf was optimistic. "The reports which we receive at this time from our managers," he said, "though per-

haps it would be going a little too far to call them exhilarating, are on the whole quite comforting..... Not, of course, that the prospect is uniformly rosy. There are several very important industries in which, unfortunately, it cannot be said that the corner has been turned. But in the majority of our reports from all over the country we hear, in one form or another, that the outlook is considered good, and that the New Year is opening with confidence and hope. One cannot but feel that what the old physiologists called the *vis medicatrix naturæ* has been at work; the tendency of wounds to heal is asserting itself." Mr Leaf reminded his audience, however, that these indications are still unfulfilled promises as yet, and that it is vain to talk about prosperity with Europe in its present condition. But France is realising that though the occupation of the Ruhr has ended technically in a victory, economically nothing has been gained by it, and France is financially the worse for having relied on mere force. "One thing is certain, that reparations paid by Germany can come through one channel alone—through an excess of German exports over imports." Mr Leaf quoted the effects of the Fordney Tariff as an illustration of the way in which international payments are made in goods. During the first nine months of 1923 exports from the United States to Great Britain fell off by more than £16 millions as compared with the corresponding period of 1922, while our exports to the United States increased by over £10 millions, the balance of trade moving nearly £27 millions in favour of this country in the nine months. "Naturally, this cannot be the actual result of the tariff; it proves that there are opposite influences which overcome the obstacles put in the way of imports from abroad. There can be little doubt that this influence is to be found in the remittances which Great Britain is making to the United States for the payment of the debt. So long as the United States require payment from us, so long must they take it in the form of our goods. And in the meantime, the Fordney Tariff has naturally increased prices and put up the cost of production in the United States, and has thereby hindered their power of competition with us in neutral markets. So that the tariff has been by no means an unmixed misfortune to British trade; and it offers an instructive example of the futility of political measures which try to counteract the irresistible tendencies of economic law." Mr F. C. Goodenough, at Barclays' meeting, had nothing to say about the Fordney Tariff, but laid stress upon the gain to British credit and British prestige owing to the funding of our debt to America. He also put forward an estimate that for the past year the amount of our invisible exports will have been maintained at the 1922 level, and that a surplus of some £100 millions will have been available for loans to the Dominions and foreign countries, which will serve to reopen foreign markets and help our trade. Mr Goodenough added: "With our growing population and the present unemployment, everything should be done to promote our visible exports now as well as for the future, and foster every opportunity that may present itself for improving the industrial conditions of the country." Both Mr Leaf and Mr Goodenough were emphatic in their condemnation of the "flight from the pound." Mr Goodenough gave it as his "decided opinion that British credit stands firmer to-day than at any time since the war, and that, as to the intrinsic value of the pound, there can be no doubt." Mr Leaf characterised any pressure to sell British and buy American securities as "not merely unpatriotic, but in my opinion very foolish. I have heard an expert opinion from America which asserts that it will be easy to lose in American investments quite as much as in any capital levy." The reports of these three speeches are printed in *extenso* in later pages.

Progress of the Expert Committees.—From the meagre information that emerges it appears that both the Committees of Experts, now sitting in Paris, are pressing on with their work in business-like style and at a good pace. The *Monetary Committee*, which is considering the stabilisation of German currency, has, it is stated, worked through the immense mass of statistical and other data which had been prepared for it. It has also interviewed Herr Schacht, the President of the Reichsbank, and is reported to have agreed in principle on the creation of a new German Bank

which will issue gold notes. This Committee is to pursue its investigations in Berlin next week. The second Committee, to which is entrusted the investigation of German assets abroad, began its work last Monday, and it has already progressed so far that it will be able also to proceed to Germany shortly. This Committee, like its counterpart, was welcomed at its opening session by M. Barthou, the chairman of the Reparations Commission, who at the conclusion of his address invited Mr McKenna to assume the chairmanship of the Committee. Mr McKenna's colleagues are Mr H. M. Robinson (United States), M. Laurent Athalin (France), Dr Marie Albert (Italy), and M. Albert E. Janssen (Belgium). Mr McKenna, in an initial speech, endorsed the striking remarks made by General Dawes at the opening of the first Committee, which were discussed in these columns last week. This—the Second Committee as it is called—has this week taken the evidence of two German witnesses in Herr Bergmann and Herr Meyer. Satisfaction is shown in Paris at the determination with which the Committees are attacking their respective tasks; but here and there we detect a warning note in the French Press that, after all, the conclusions of these Committees will not bind the Reparation Commission, to whom they may or may not be acceptable. Nevertheless, the general atmosphere appears to be such that there is a general disposition to give the experts a fair chance.

The Egyptian Elections.—The independence of Egypt has been inaugurated formally by the accrediting of Egyptian diplomatic missions to foreign Governments, including the Court of St James's, and, almost at the same moment, Saad Pasha Zaghlul has come into power with an even more overwhelming majority than had been expected. The two-storeyed system of election has not discernibly modified the result, nor do the various influences of the Crown, of officialdom, or of the landed interest appear to have made any impression upon the organised electoral campaign of Zaghlul Pasha's party. The absence of an opposition is notoriously demoralising to any constitutional Government, and perhaps especially so in cases where all concerned are new to the game. In this case, however, the very extremeness of the result may effect its own cure. There is no external danger to prevent the Zaghlulists from dividing against themselves, and the most sincere well-wishers of Egypt may look forward to such a prospect with satisfaction, for it would be a healthy symptom in Egyptian political life. This portentous unanimity is simply an expression of that negativity which has marked Egyptian politics since the Armistice, and for which (it must be admitted) the British Government is largely responsible through its unprofitable procrastination in taking the proper course. The wish to throw off the British protectorate and to enjoy national independence has been the driving force which has started Egypt on her new political career; but that motive must soon become obsolete because it is substantially satisfied, and as soon as the Egyptian nation grapples with the positive tasks of constructive politics, it will assuredly become healthily divided on questions of policy, as every genuinely self-governing nation always has done and always will do. It is important, however, for English people to bear in mind that the satisfaction of the Egyptian desire for independence, while already substantial, is not yet complete. The four vital questions of the future political status of the Sudan, the safeguarding of British Imperial Communications, and the protection of foreign residents and native minorities, have still to be settled by negotiation between the Governments of Egypt and Great Britain. The minorities question should present little difficulty, for the Copts, possessing no kinsmen beyond the borders of Egypt, feel no temptation to secede from that country. On the question of the Capitulations, again, no great difficulty is to be anticipated. Egypt will doubtless profit by the precedents which Turkey has recently won for all Oriental States at Lausanne; but the question has never been so acute in Egypt as it used to be in the Ottoman Empire, and Egyptian statesmen are aware that they cannot afford to enter into a simultaneous controversy with the British Empire and with the non-British foreign residents in their midst. As regards the

question of the Suez Canal zone, the Egyptian Government is perhaps fortunate in having to deal with a Labour Government in England, which may be expected to reduce its requirements to the minimum compatible with the safety of the Empire. The difficult question will be the Sudan.

The League's Plan for Hungary.—The League's Hungarian Committee, which concluded its London meeting this week and to which the League Council had delegated full powers, has, by a unanimous vote, transmitted the League's plan for the financial reconstruction of Hungary to the Reparation Commission, at whose request the scheme was prepared and from whom one or two decisions are required on matters within its particular competence before the work can be put into operation. The scheme comprises two Protocols—one covering political conditions and the other detailing the machinery of the scheme—and the Report of the League's Financial Committee (which also sat in London while the Hungarian Committee was in session). The two main decisions required from the Reparation Commission are the raising of the liens on Hungarian assets so that security may be provided for an international loan, and the approval of the suggestions of the Financial Committee on the maximum figure of reparations which Hungary should be called upon to pay within the period of repayment of the loan. The Financial Committee unanimously expressed its view in Paris, and strongly reiterated it in London, that the maximum sum in reparations and other Treaty charges such as restitution, expenses of armies of occupation, commissions, &c., which Hungary could reasonably be called upon to pay during the 20 years' period of the loan, should not exceed an average of £400,000 annually, i.e., 1s per head of population, and that, during the first five years following the 2½ years' reconstruction period, the figure should be substantially less. Hungary should be dispensed from all treaty payments during the period of reconstruction, with the exception of the continuance of the delivery of coal which is being supplied and the charge for which is already in the Budget. The Committee considers that the execution of the whole plan of reform, which in many respects is similar to the Austrian reconstruction scheme, should offer a sound basis for the issue of the loan of £10,000,000, designed to cover the deficit in the reconstruction period ending June 30, 1926. There are some other questions to be finally settled outside the ambit of the League scheme before it goes definitely forward. These include negotiations on various questions between Hungary and the Little Entente Powers, which have greatly progressed during the London meeting, and also negotiations between the Little Entente Powers and the principal Allies on the obligations of the Little Entente regarding Liberation Bonds, ceded property, &c. It is not anticipated that these negotiations will be obstacles, and in view of the very definite assertion of the Financial Committee on Hungary's capacity to pay reparations, and of the further fact that the Powers represented on the Reparation Commission are the same Powers as are represented on the Hungarian Committee of the League, there ought to be little delay in taking the necessary decisions. The covering letter to the Reparation Commission, unanimously agreed to by the Hungarian Committee, emphasised the necessity for rapid consideration of the League's scheme, which becomes operative as soon as the first Protocol has been signed by the respective Governments and the requisite decisions taken by the Reparation Commission. A delegation of the League will then proceed to Budapest to collaborate with the Hungarian Government in the first measures required under the scheme, in particular, the drawing up of a detailed programme of Budget reform and the establishment of an independent Bank of Issue. The scheme has somewhat wider significance than the Austrian scheme from the fact that it has been generally regarded as a small scale model of the kind of settlement which might be ultimately adopted for Germany. So far as the League is concerned, therefore, the plan is detailed and complete, except for the signature of the Protocols, which awaits events outside the League.

The Death of Lenin.—The death of Lenin removes one of the most powerful and quite the most baleful of the outstanding figures of modern history. No Apostle, no missionary, no founder of a religious order, has ever been more reckless of his personal comfort or advantage, or more thoroughly devoted to the service of a cause and the realisation of a creed. No leader of invading hordes of barbarians, no ancient or modern conqueror or tyrant, has ever deliberately inflicted so much suffering or brought about such stupendous ruin. Selfless devotion, inherited from a deeply religious ancestry, has always characterised the atheistic Russian revolutionists; but Lenin, who drifted into their ranks like many of his fellow-students, and was perhaps kept there by his brother's execution, escaped their usual fate, and rose to leadership by his concentration, his will-power, and his ability in training an order of missionaries of revolution. Living, like most of the leaders of the fraternity, in exile, he gave himself up to Marxist and Nihilist propaganda, and to the sapping of the whole edifice of Tsarist and capitalist Russia. He succeeded because the Russian people was really a congeries of divergent elements, already going to pieces under Western political theorising and economic practice, and dazed by the collapse of its administrative framework under the strain set up by the war. The Germans, in their desperation, gave him his chance; he took it, and succeeded only because he and his associates alone had definite aims. Under democratic forms they set up an oligarchy of which he was the all but autocratic chief. Careless of popular suffering and present misery, they completed the wrecking of the whole Russian social and economic structure, not to make the people happier, but to hasten what they regarded as an inevitable development on the lines laid down by Karl Marx. Practically they destroyed the whole system of production and transport that they had set out to transform; they made grandiose plans of electrification, but sent Russia back meanwhile to a mediæval economy, with a lower middle-class of rich peasants and small masters and traders, and an upper middle-class of wealthy and unscrupulous speculators and profiteers. Then Lenin sacrificed theory to opportunism, and scared his disciples by proposing to compromise with foreign capital. Whether the proposals will materialise depends largely on the effect of his death. For nearly three years his disablement had weakened his actual influence, but his name and memory are still potent as a check against the disruptive strain set up among his followers by resentment against autocratic rule, and by their fear of temporising with foreign capitalists.

Stock Exchange and the Labour Cabinet.—Sweeping rises occurred in practically all the markets of the Stock Exchange on the day of the announcement of the new Labour Cabinet. The rises, writes our Stock Exchange correspondent, were not confined to those speculative descriptions in which it was known that a bear account existed, though the prices of these jumped with the rest. The advance included all the stocks in the Consol market, the Home Railway, industrial, oil, rubber, and other important sections of the House. It caused sympathetic advances in a good many mining shares. The whole of the Stock Exchange became infected with the extraordinary change of conditions, and members, brokers and jobbers alike, admitted to one another their amazement at the unexpected state of affairs. Had the recovery been due merely to bear purchases less astonishment would have been felt, but brokers for the first time this year found that orders to buy were coming in thick and fast. It is always possible to tell in the House when markets are busy, and on Wednesday the evidence of public buying proclaimed its presence unmistakably. The pneumatic telegraph tubes were banging incessantly all day. Brokers and their clerks went hurrying across the House in a manner which, to the practised eye, meant real business. The telephone boxes, of which a fresh supply has recently been opened in the House, were in continual use. Above all, the ordinary hum of every-day business became changed into a quicker and more eager buzz. Nor were the buying orders small. People came in with substantial amounts of money, and the cheerful factors which had lain either dormant or hidden since the General Election became mooted, sprang suddenly into prominence. The

bears, moreover, played a very conspicuous part in developing the upward march of prices. That stock was scarce round many parts of the markets had already become obvious, though how scarce it needed an imperative public demand to prove. This demand arose from Wednesday morning onwards, and the violence of the rise which it caused became denounced by a good many on-lookers as being unjustifiable and partly artificial. It was noticed, however, that operators who refused to be up-lifted by the buoyancy were equally unwilling to sell bears of stock in such a bullish market. Indeed, the opinion became voiced that bear selling is likely to be a dangerous process until such time as that when humdrum legislation sets in, and people begin to regard, with lurking qualms of uneasiness, the prospects for the next Budget. Stock Exchange men are disposed to view the immediate outlook as being one that carries no particular reason in it for wild enthusiasm in regard to rising prices, though brokers and jobbers both admit, and readily, that prices were put down too sharply on the Labour successes at the polls, and that some such recovery as is now being carried out is not unreasonable, however little its swiftness of advent may have been expected. The composition of the Labour Cabinet is deemed to be sounder than men anticipated; Labour may be said to have scored a point in its opening round by the display of a nice discrimination, to ministerial appointments, of men who are not likely to trifle with the principles of good government.

Panel Doctors' Award.—It will be remembered that in December an awkward deadlock, which appeared to threaten a "strike" by panel doctors, was resolved by an agreement by the Ministry of Health on the one hand and the doctors on the other to accept the award of a specially appointed court of inquiry. The doctors claimed a capitation fee of not less than 9s 6d; the approved societies suggested 7s 3d as the appropriate figure, while the then Minister of Health offered the doctors 8s 6d a year for a period of five years. The court of inquiry has fixed upon the figure of 9s for the calendar year 1924, and it is to be hoped that this compromise means that we have heard the last of the dispute for at least eleven months. It would also seem highly desirable that terms for a subsequent period should be discussed well in advance, so that affairs may not again be allowed to drift at the last minute into a deadlock like that which occurred in December.

Wages and Prices in Ireland.—Our Dublin correspondent writes:—Proof of the stabilisation, on the political side, of the new system in the Irish Free State can be seen in the extent to which discussion is now centred on such matters as wage levels, price levels, fiscal policy, and national finance. Recently, Mr Cosgrave, President of the Executive Council, has announced that the Government will spend £2,000,000 on road restoration and improvement between the present date and March 31, 1925. The scheme is being put into operation, and will be finally authorised by the coming Finance Act in or about March next. The money will be advanced to local authorities, subject to a condition as to wages—no wages for unskilled labour on road work are to exceed (a) 50s per week in Dublin, Cork and (probably) Waterford, (b) 45s in other urban areas, and (c) unskilled agricultural labour rates, approximately, in country districts. The Dublin Corporation, which is paying 64s per week for unskilled labour, after a strong resistance since November, has now submitted, and presumably the Government will also prevail everywhere else, for although labour is resentful, the unemployed are naturally grateful and the public approves. There is also a large housing scheme just produced, which will employ labour and provide some very badly needed houses. But of any tangible or practical step to control prices or check profiteering no hope has been held out. After a long debate, the Minister of Commerce has announced that there will be careful and tentative efforts in the next Budget for the encouragement of home industries by tariff protection. The obvious comment on this is that no tariff experiments can possibly have a fair chance until the existing prices problem has been tackled successfully. The "rings" and combines that exploit the public will most assuredly reap extra profit out of any duties

remitted, and load their prices by more than the amount of any duty imposed. A healthier condition of the distributing businesses which intervene between the wholesaler and the consumer is a condition *sine qua non* for the success of any tariff experiments. It is gathered that the direction of the experiments will be towards readjustments relieving articles such as tea and sugar in some measure, and levying an equivalent revenue from boots, clothes, and such-like other articles as might be produced, or produced in greater quantities than now, in Ireland. But nothing is likely to be attempted which would imperil the amount of the existing revenue or give reasonable cause for an increase in the cost of living.

British Oil Interests.—What is the English oil industry? This question is presumed to be answered in a German pamphlet* by Dr Sydney Jessen, compiled from the appropriate text-books. It contains a table of "English Petroleum Companies" showing 52 companies as connected with the Royal Dutch-Shell group, 76, as connected with the Anglo-Persian, and 177 "others." The Royal Dutch-Shell list is not nearly complete; the Anglo-Persian list is too large, containing companies so obviously independent as the Agwi Petroleum Corporation, Lobitos Oilfields, Limited, Anglo-Ecuadorian Oilfields, Limited, Trinidad Leaseholds, Limited, British Equatorial Oil Company, Colombian Oilfields, Limited, &c., while the miscellaneous list contains even some purely American concerns, such as the Sinclair Consolidated Oil Corporation, the Pan-American, the Mexican Petroleum, and California Petroleum Corporation. Such a table is very misleading. Dr Sydney Jessen makes the mistake of supposing that where companies have a director or directors common to each other, they must be connected or in some way interlocked. He forgets that being a company director is still a promising profession in this country. Because, say, Lord Drogheda is a director of Benzol and By-Products, Limited, and is also a director of the Anglo-French Middle East Development Corporation, which claims Lord Inchcape as chairman, who is also a (Government) director of the Anglo-Persian Oil Company, therefore the Benzol and By-Products, Limited, is classified as one of the producing units of the Anglo-Persian group. Which is absurd. It is equally absurd to link up the Royal Dutch-Shell group with the Anglo-Persian, because on the one side the unfortunate United British Oilfields of Trinidad has on its board three directors of the Burmah Oil Co. or Anglo-Persian and three directors of the Asiatic Petroleum Co., and because on the other side the Anglo-Persian controls the British Oil Bunkering Company, which has director A common to another company which has director B common to another company, which is controlled by the Royal Dutch. Incidentally, the British Oil Bunkering Company looks imposing in a reference-book but has long since been a dead letter. Dr Jessen makes the common mistake of treating the Royal Dutch Petroleum Company as English. Certainly, if one travelled round the world calling at all the Royal Dutch-Shell foreign stations, one would meet only with the English gentlemen from the Universities, and return impressed with the anglicisation of this great oil trust. But it is merely a coincidence, or rather the sequence of the general commercial policy that it pays to appoint Englishmen to foreign commands. The Royal Dutch is Dutch, although Sir Henri Deterding lives in England. Dr Jessen's charts would be more accurate if the bid which was made for the Government's Anglo-Persian oil shares had been accepted. We understand that the bid was made in the name of the Burmah Oil Company which had agreed, in the event of its acceptance, to fuse its interests with those of the Royal Dutch Petroleum and Shell Transport and Trading Company. Incidentally, this proposal would have greatly strengthened the position of the Anglo-Persian which is building up a huge marketing organisation on one source of supply—an unsound procedure in the oil business. It is to be hoped that the new Government will see the commercial as well as the political wisdom in accepting the Burmah Oil Company's proposal.

* Die Weltinteressen der englischen Petroleumindustrie von Dr. Sydney Jessen. Finanzverlag Berlin, Ca. 1921.

The Discount Companies.—In the absence of the annual report of Lloyds Bank, which has not yet appeared, we are obliged to defer our usual analysis of the joint-stock bank balance-sheets until next week. The reports of the three discount houses, however, are now available, and in the table below we give a comparison of the main items on the balance-sheets for December 31, 1922 and 1923:—

	1922.						
	Capital and Reserves	Loans and Deposits	Bills Rediscounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£1,000,000	£17,756,879	£1,692,619	£471,141	£302,219	£2,553,308	£17,412,608
National	1,346,665	21,852,474	16,911,235	644,119	1,465,118	3,138,439	35,497,409
Union	2,200,000	31,139,416	6,795,272	1,274,375	230,940	4,819,974	37,484,422
	4,546,665	73,748,769	25,399,126	2,389,635	1,998,277	10,511,721	90,394,439

	1923.						
	Capital and Reserves	Loans and Deposits	Bills Rediscounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£1,030,000	£18,393,625	£2,368,861	£492,591	£794,087	£3,063,587	£17,733,836
National	1,346,665	23,333,715	16,673,991	667,985	1,886,469	2,138,452	37,363,756
Union	2,250,000	36,345,007	8,694,704	1,293,887	569,859	5,088,622	41,208,473
	4,626,665	78,072,347	27,737,556	2,454,463	3,250,415	10,290,661	96,306,065

The net profits of these companies for 1923 showed a substantial reduction in comparison with 1922—Alexanders from £188,200 to £136,200, the National's from £190,700 to £108,200, and the Union's from £316,600 to £249,000. There is an appreciable increase, it will be seen, in "the book" as compared with this time last year. Investments show a slight falling off in the aggregate, thanks to a decline of a million in those of the National, but loans are substantially higher in each case, although the aggregate is still considerably below the total of two years ago. Cash shows a small all-round increase. At the meeting of the National Discount Company on Monday the chairman, the Hon Sydney Peel, D.S.O., gave some interesting figures relating to the volume of bills discounted. "Bill discounting," he said, "is, of course, our principal business, and it may interest you to hear that the amount of bills actually discounted by us in one year has, this past year, for the first time, passed the £100,000,000. There are, I dare say, very few shareholders who are aware that we have kept records ever since 1856. The figures were very different in those days. By 1886 we had reached a total of bills discounted of £1,000,000,000. We passed £2,000,000,000 by the end of 1909, and this last year we have discounted since the beginning, in 1856, over £3,000,000,000 of bills." At the meeting of Alexanders Discount Company, Mr Colin F. Campbell, the chairman, in referring to the substantial increase in that company's loans, mentioned that they were all against money-market securities. They were higher than usual, and, being mostly of a temporary nature, have since been largely repaid. Mr Campbell also said that throughout the year the proportion of the company's business concerned with commercial as opposed to Treasury bills has been slightly higher than it was in 1922. "Treasury bills," he added, "have continued to be our main source of supply, and our bill case to-day largely consists of them. Money has been in moderate supply throughout the year, but the margin between ease and scarcity always seemed to be a small one, and borrowers frequently found themselves temporarily short of funds. The margin between money and bills was rather better than in 1922, the average being 10s 6d, against 6s in that year. I have already drawn your attention to our increased holding of short-dated securities, but we have held them more for the sake of the running profit than for the chance of a rise in capital value, as there has not been at all a brisk demand for these securities such as was experienced in 1921 and 1922, and prices generally may be said to be 1 per cent. lower than they were a year ago."

"General Average" Problems.—The report of the Liverpool Underwriters' Association, which is to be submitted to the annual meeting of that body on Monday, refers among other matters to the proposed code of General Average which has been circulated by the International Law Association with a view to a discussion on the subject at the next conference of the International Law Association at Stockholm in September. The principle of

general average, in connection with carriage by sea, is simple, namely, that sacrifices for the common benefit are replaceable by a general contribution, but its application is a matter of much complexity. With large and varied cargoes under modern conditions, the working out of a general average statement is a laborious, lengthy, and, as the Liverpool Underwriters remark, sometimes a heavily expensive business. Members of the profession of average adjuster are concerned with highly technical questions governed, so far as the existing York-Antwerp rules of General Average extend, by the provisions of that code. These rules of practice are admittedly, after many years of experience, in need of revision as well as addition. They are international in their application, and the questions which have arisen are as to the scope of a new international code and the form in which it should be cast. Considerable support is given to the view that definitions of principle should be introduced into the code in addition to the rules concerned with questions of practice. A sounder basis of international uniformity would thereby, it is thought, be ensured. The draft proposed code put forward by the International Law Association has, however, been criticised a good deal. There is the possible alternative of working from the basis of the existing York-Antwerp rules. In order that commercial and shipping interests may be provided for in the most satisfactory way, some public discussion of the matter may be desirable to prepare the ground for the intended international conference later in the year. In this discussion the average adjusters as experts may help, but the problems are broader than can be settled by them alone.

Insurance Companies' Shares.—In their customary review of the insurance share market, Messrs Maclean and Henderson (of Stirling) point out that insurance shares have increased enormously in value during the last 18 months. The previous high record was in 1920, but that level was surpassed in the course of last year. It is of interest to note that of recent years, when failures such as those of the City Equitable group, and the City Life Assurance Company might have been expected to give an impression of insecurity the credit of the best insurance offices stood higher than ever in their history. The small public which follows insurance shares knows very well the difference between established companies and mushrooms. It is policyholders rather than shareholders who are misled into trusting insurance companies of no standing. We have often pointed out that the dividends paid by the good and progressive insurance offices are always based upon the interest earned by their funds. As those funds continually increase, so do the net interest earnings available for dividend payments. The results spread over a long period are astonishing. The Commercial Union, for example, is a little more than 60 years old. The original shares—which have been divided and subdivided, and paid up out of reserves—if existing now, would be worth 74 times as much as their first cost in 1861, and the dividends paid upon them would be 250 per cent. This immense appreciation is due to the simple fact that original paid up capital was no more than £250,000, and that all the millions of funds which now earn interest have been laboriously piled up during 62 years. It is this possibility of an insurance office becoming a source of great wealth to its original proprietors which brings so many new ones into existence. Most of them do not realise the hopes of their projectors.

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED
ALL INSURANCE
EXCEPT MARINE
Head Office
10, FLEET ST. LONDON E.C.4
ESTABLISHED 1836 General Manager W. A. WORKMAN, F.I.A.

Indemnity Mutual Marine Assurance Company.—The first of the marine insurance company reports to be issued is that of the Indemnity Mutual, which shows that the 1922 underwriting account was closed with a surplus of £72,516, which compares with £32,121 for 1921. The premiums on this account were £941,830, the first year's claims £248,605, the second year's claims £385,590, and the amount carried to suspense to close the account £200,000. The expenses were £35,119. The receipts from interest, less income-tax and corporation tax, were £107,869, and the amount paid in dividends £113,691. The paid-up capital a year ago was £201,000 (owned by the Northern Assurance Company), and this has been increased to £1,005,000, and made fully paid by means of reserves, and by taking £354,000 from profit and loss. The dividend and bonus remain unaltered at 25s a share, less tax. The underwriting account of 1923 shows premiums of £845,289, against £941,830 for 1922, first year's settlements £272,159, against £248,605, and expenses £33,995 against £35,119.

The Deep Sea Fisheries.—The weight of wet fish landed at the ports of Great Britain from the deep-sea fisheries in 1923 was rather less than in 1922, as was also the estimated value or the amount realised first-hand, though, in the case of the English and Welsh ports there was some appreciation in value; this, however, did not off-set the lesser sum realised at Scotch ports. The following are the totals as furnished by the returns of the Ministry of Agriculture and Fisheries:—

	1922.	1923.	1922.	1923.
	Cwts.	Cwts.	£	£
England and Wales....	12,158,508	11,514,021	13,817,830	13,871,701
Scotland	5,591,278	5,417,528	3,966,211	3,408,470
	17,749,786	16,931,549	17,784,041	17,280,171
Landed by foreign-owned vessels	799,336	1,241,600	824,294	1,087,317
	18,549,124	18,173,149	18,608,335	18,367,488

In addition to the foregoing, the shellfish landed in England and Wales had a value in 1922 of £473,477, and last year of £422,296. The value of the total catches (British and foreign) was thus getting well on to 19 million sterling—a fair indication of the magnitude of the industry on our coasts. Details of the landings at English and Welsh ports show that the proportions of the various kinds of fish remained about the same. Among demersal fish, cod and haddocks, as usual, led the way with 2,044,594 cwts and 2,036,639 cwts respectively, plaice with 697,137 cwts and hake 679,768 cwts following. Prime fish, such as soles, brill, and turbot, were again comparatively small catches, as were also halibut. Herrings, at 3,933,045 cwts, were an improvement of 356,226 cwts on the previous year, while the average sum realised was better, viz., 8s per cwt, against 7s per cwt in 1922. The average of all the wet fish landed in England and Wales was 24s per cwt, comparing with 22s 8½d in 1922 and 27s 8½d in 1921; and in Scotland 13s 2½d per cwt, against 14s in 1922 and 18s 10½d in 1921. Excluding herrings, the average for England and Wales was 30s 6d per cwt, against a fraction under 28s in the previous year. It will be noted that there was last year an increase of 50 per cent. in the fish landed in Great Britain by foreign-owned vessels, the value of the fish thus brought to our markets exceeding a million sterling. There is reason to believe that a large proportion of this was sold from foreign trawlers at Scottish ports, and that it had the effect of depreciating the market. Apart from the landings from the deep-sea fisheries, there were considerable imports of wet fish into this country from abroad, these last year having a weight of 1,369,698 cwts and a value of £2,261,078, against 929,057 cwts and £1,401,861 value in 1922. About 50 per cent. of the weight consists of fresh herrings, &c., imported from Norway, and used by the curing industry at Hull and other ports.

Argentine Finance and Trade.—The vast actual and potential wealth of Argentina protects her against the effects of economic delusions and unsound finance. Budget deficits since 1913 aggregate 1,000 million pesos, and, according to the Report (to September, 1923) of the Commercial Secretary to the British Legation at Buenos Aires, just published by the Overseas Trade Department, the floating debt, officially estimated at 740,282,455 pesos at the close of 1922, is really about equal to the 1,295 million pesos of the consolidated internal and foreign debt. President Alvear's Government, in its first year of office, proposed the consolidation of the floating debt, and measures to balance the Budget for 1923, with drastic reforms on new lines in 1924, but Congress merely sanctioned a foreign loan of 150 million pesos, of which the issue has only begun this year. Argentine methods of accounting preclude exact statements of revenue and expenditure; for 1923 the revenue was approximately 638 million pesos, of which 36 per cent. was from Customs and about 6 per cent. from direct taxes; expenditure was nearly 647 million pesos, of which over 100 million went on army and navy, and 125 million on the service of the Public Debt. The regularity of amortisation is noted as an important factor in Argentine credit. The provinces and municipalities also spend heavily, and financial reforms, including an income-tax, are planned. The currency is sound, and backed by an adequate gold reserve; the fall in exchange (from 70d in 1921 to 39d last August) is ascribed primarily to the remittances requisite for debt service. The fall is not unpopular with the producing classes, but seriously concerns importers, especially from North America. Banking business was dull during the year; commercial failures exceeded the average, but trade is improving, and "liberal credit to old connections and restricted credit to new ones" is recommended to-day. The cattle industry is recovering, but has been passed by agriculture, the prosperity of which is far more advantageous to railway traffic. But the trade improvement may be hampered by the projected increase of import duties, which has popular favour through the delusion that the stationary prices of the staple exports are caused, not by the decreased demand in Europe, but by the exporters' refusal to pay more; and the exporting firms are mostly foreign. And as Argentina is liable yearly for at least £40 millions of "invisible imports" for dividends and interest on foreign investments in the country, and immigrants' remittances, a favourable balance of at least that amount is required to effect equilibrium of exchange. For 1922, however, the adverse balance is estimated at £2,659,000. British imports appear to be regaining their pre-war position, and the premium on the dollar hampers North American trade. Home manufactures, however, are increasing, owing to the impulse given by the war. Railway traffics are promising, but the work of extension has passed to the State, and is carried out at a loss. Labour troubles are suspended, and there is no unemployment, in spite of a large increase in immigration. The cost of living in the capital is swelled by high rentals, and is about 86 per cent. above pre-war level.

North African Trade.—British consular reports on Algeria, Tunis, and Tripoli, just published in one cover by the Overseas Trade Department, show that the post-war depression has been intensified in the two last-named countries by internal disturbances, and in all three by bad harvests, but that in Algeria recovery has begun. There the three worst harvests for half a century have been followed by a yield of cereals double that of 1922; the vintage of that year in the Department of Oran was good; business, in spite of one serious failure through over-speculation and of a permanent shortage of ready capital, has not been bad; and, though there was a heavy deficit on the railways, the Budgets show an increasing surplus. Unemployment has ceased through the attraction of higher wages in France, and the improved crops should greatly stimulate the demand for foreign goods. The vintage of 1923 was promising, but the wine is faced with Spanish competition and a surplus stock in France; what cannot be exported may be converted into alcohol. Of the other exports esparto and iron ore have increased, the latter after a severe fall in 1921; the whole of the

former and much of the latter is taken by Great Britain. Mining seems to be increasing, and there are hopes of petroleum. The export of cork—one-sixth of the world's total—must suffer through the lessened demand in Japan. Of the imports coal increased, and was all British; so did iron and steel, mostly from France and Belgium. There should be an opening for British agricultural and viticultural implements, and for chemicals for use in the vineyards. British textiles are shut out by the fall in the franc, but exporters generally are advised to watch for its recovery, and give closer study to the local business methods and credit facilities. Algerian imports largely exceed exports; in Tunisia the disparity is greater. French investments in the latter country (and probably in both) help to adjust the balance, together with the tourist traffic, which, however, is small in Tunisia. Over half the Tunisian trade is with France and Algeria. Italy comes next, with Great Britain third. British textiles still lead, in spite of the adverse exchange. Interesting accounts are given of the tunny fishery, the fish being mostly canned and consumed in Italy, and of the indigenous pottery, leather, and carpets, of which the supply is necessarily limited. Though exports in 1922 declined in general, those of sponges, dates, and especially phosphates, increased. In Tripoli 1922 was a bad year, 1923 slightly better, and no improvement is likely till the interior has quieted down. Imports in 1922 were valued at £985,190, exports at £145,260; presumably the difference is accounted for chiefly by the expenditure of the Italian Government. The imports from Great Britain are mainly textiles and tea, but the market for British cotton yarn and thread has been nearly all lost through high prices and the adverse exchange, and will be further barred by a new duty; the outlook for tea is unfavourable, and for British soap likewise. The Government is building an esplanade and mole at Tripoli, and the municipality a hotel, and efforts are being made to promote the plantation of orchards and of trees on the sand dunes. But it will take many years to make Tripoli a profitable colony.

The Finances of Guatemala.—The Central American States (writes a correspondent), in common with practically all European countries, have suffered from depreciated currencies; but, while this must be noted, it is surprising that greater economic demoralisation should not have ensued. But while the fall in the Latin American exchange rate has been nothing like so appalling as that which has taken place in some countries of Europe, the decline has been sufficiently serious greatly to affect trade and the maintenance of successful commercial relations abroad. With the exception of Panamá, and, perhaps, in a lesser degree Cuba, the adverse trade balances have reduced actual business almost entirely to transactions on a cash basis. With a view to remedying the position in Guatemala, the Government has endeavoured to devise a scheme whereby it would be able to stabilise the exchange value of the peso. This has been forced upon them by the inability to obtain a loan for even so small an amount as \$500,000 (£100,000) from any one of the six leading local banks, or from any financial institution in the United States. The Government has recently instituted a Caja Reguladora, whose functions are to stabilise the exchange value of the Guatemalan peso. With this view, there will shortly be issued, in denominations ranging from \$50 to \$1,000, bonds aggregating an amount of \$500,000, which will be sold on the market at a discount of 20 per cent. of the face or maturity value. By Presidential decree these bonds can be used in the payment of the additional export tax on coffee of \$0.50 per quintal, or are redeemable at maturity upon presentation. In spite of the disinclination that exists in Guatemala, as in all Central American States (especially among the Indian population), to accept paper instead of coin, it is hoped that little difficulty will be experienced in effecting the sale or acceptance of these bonds. So far as mercantile circles are concerned, there can be no objection, as all exporters of coffee will be able to use the bonds in payment of their additional duty on coffee exports. Thus, if an exporter desires to make shipments of, say, 10,000 quintals of coffee during the current season, he has only to purchase bonds with a face value of \$5,000 for \$4,000, and apply the bonds in payment of

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.

1-4, GREAT TOWER STREET - - LONDON, E.C.3.

export duties at the rate of \$0.50 for each quintal. This duty, collected in gold, on coffee exports will be handed to the Regulating Office, which, in turn, will employ the money thus received for the purchase and sale of foreign drafts and for the redemption or amortisation of the bonds. It is anticipated that during the current season the coffee exports will reach between 800,000 and 1,000,000 quintals, and thus the bonds would be redeemable at the end of the coffee shipping season about June 1, 1924.

Fresh Capital for Kaffirs.—Our mining correspondent writes:—Following upon a fairly sharp upward movement in the price of the shares, two well-known Witwatersrand gold mining companies have this week put forward schemes for the raising of further resources. One is the Robinson Deep, whose capital now comprises 500,000 "A" or preference shares of 1s each and 781,807 "B" shares of £1 each. The first-named shares, which constituted the purchase consideration for certain of the assets, were entitled to fixed preferential dividends on a sliding scale, commencing at 8s per annum and decreasing to 5 per cent. per annum. After the first year—1916—the dividends became irregular, until at the end of 1922 the arrears amounted to 21s. Since then the due interest has been met, with something on account of the past, with the result that at the moment the arrears stand at 14s, allowing for the payment of 6s shortly due. Within the past month or so much discussion has centred around the prospects for the "B" shares, and the date when dividends were likely to commence. The new issue decided upon brings a fresh factor into the situation. It is to take the shape of the offer of 100,000 shares at 30s, under guarantee of the New Consolidated Gold Fields. To clear off all the arrears on the "A" shares, and provide the dividends due on account of the current year, would call for £425,000, while £35,700 will be required for the first drawing of debentures—together £460,700. Towards this something like £150,000 will be provided by the new issue. The company's operating profits are at the rate of about £500,000 per annum. Hence it would look as though the "B" shares should receive a small initial dividend in respect of the second half of 1924, with large distributions to follow. If the earnings of 1925 prove equal to the current rate, the surplus available after providing for the dividend on the "A" shares would represent between 30 and 40 per cent. As mentioned in a recent Note, the mine of the Simmer and Jack Company is approaching exhaustion. In these circumstances, the company has acquired an additional 540 claims adjoining the southern boundary. This ground, it is estimated, will extend the life to 17 or 18 years. To enable the transaction to be carried through, £250,000 will be wanted. A new company is to be formed, present members to receive one fully-paid 2s 6d share for each share now held, and to be offered 2,000,000 shares at par under guarantee.

The Civil War in Mexico.—Insurgent successes are reported on the Western front, and efforts at mediation are being made by the Mexican Senate, but interest at present centres on the attitude of the United States Government. It is supporting President Obregon, as logically it must, though its attitude is attacked by Democrats in the Senate, and can hardly be approved by the independent Republicans of the Middle West. It has sent ships to protect the interest of its citizens at Tampico, of which the insurgent blockade is now suspended, and for the same reason has allowed the transit of Mexican Federal troops through Arizona and Texas from Sonora to El Paso, and it has warned the insurgents that it will take action if Mexican harbours are mined. Its definitive intervention is therefore becoming more likely; the prob-

lem is whether the reason given will be the interest of its own citizens in the restoration of order, as in Cuba in 1898, or its duty under the current version of the Monroe doctrine as the guardian of order and welfare in the other Republics of America. The insurgents' seizure of the oilfields seems likely to make the first reason adequate.

A PUBLIC lecture on "Business Forecasting" will be given by David Heron, D.Sc., M.A., at University College, London, on Friday, February 8th, at 5.30 p.m. Admission free, without ticket.

THE University of London announces that on account of the railway strike, Professor Foxwell's course of lectures on "Money and the Exchanges" has been deferred from Thursday, January 24th, until Thursday, January 31st. The first lecture of the course will be on Thursday, January 31, 1924, at 6.15 p.m., at the School of Oriental Studies, Finsbury circus.

UNITED STATES.—INDUSTRIAL ACTIVITY—MONEY EASIER—HEAVY DEMAND FOR BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 11.

DURING the past week or two indications have multiplied that industrial operations in numerous lines are being continued at the same satisfactory pace noted in December, with a quickening of activity in some directions. There is little, if any, evidence of the hesitation usually witnessed immediately after the turn of the year, especially in basic industries. With the notable exception of cotton goods and wool goods, mills in New England, which are still curtailing production, industry generally is active. Steel trade, in particular, is expanding, as is evidenced by the United States Steel Corporation's report showing a gain of 76,755 tons in unfilled orders during December, the first increase reported at the end of any month since last March, and comparing with a decrease of 304,241 in November. On December 31 the corporation's unfinished business amounted to 4,445,339 tons, not including between 500,000 and 750,000 tons of tin plate under contract and other business which, though placed, will not be reported until specifications are actually received. Railroads, automobile, implement, railway equipment, and other manufacturers are buying steel freely, and indications point to a further increase in the Steel Corporation's unfilled orders this month. Several thousand additional men have been employed since the first of the year at leading automobile manufacturing centres, and instances of increasing activity in other industries could be cited.

Throughout the country, financial and business interests and the public generally are closely watching developments in Congress, bearing on the Administration's tax-reduction programme. This week's events in that connection have been distinctly encouraging. The Republican caucus in the House of Representatives decided to sidetrack the soldier-bonus Bill, and give priority to the tax-reduction Bill embodying Secretary Mellon's proposals and advocated by the Administration. The caucus urged the House Ways and Means Committee to report the Bill to the House not later than February 11. In view of this development, the outlook for enacting the tax Bill is considered brighter than heretofore. The soldier bloc in the House, which tried to advance the bonus measure ahead of the tax Bill, was defeated by 109 to 87.

That wholesale prices of commodities became fairly well stabilised last year, notwithstanding some wide fluctuations in a few articles, is further evidenced by the general steadiness of such prices during December. Bradstreet's index number for January 1, namely, \$13.2710, shows a small decrease, 1.2 per cent., from December 1, 1923. The greater part of the decline last month occurred in the food group, chiefly in eggs, which were adversely affected by the unseasonably warm weather. Eight groups of commodities declined, while four advanced and one remained unchanged. The January 1 index number

marks a decline of 3.1 per cent. from January 1 a year ago. The advance from January 1, 1923, to the peak of the year, \$13.9332 on March 1, was 1.6 per cent.; from that point it dropped by August 1 to \$12.8201, or 7.1 per cent., and then rose to \$13.4358 on December 1, or 4.8 per cent. Compared with that of June 1, 1921, the present number is 25 per cent. higher, but it is 36.3 per cent. below that of February 1, 1920, the peak of all time, while the rise from August 1, 1914, is 52.5 per cent.

Money markets here are quiet, and under increased accumulation of loanable funds, rates have declined this week. Call money, after holding at 5 and 6 per cent. over the year end, and for a while at the beginning of this year, has dropped 3½ per cent., the lowest level reached since last September. Demand from brokers for stock market purposes is unusually light, despite exceptionally active trading, due to the fact that the public is not operating to any extent in stocks. Of greater significance and importance is the easier trend of time money rates, which have declined ¼ of 1 per cent. to 4½ bid, and 5 per cent. offered for all maturities on Stock Exchange collateral. Several factors have contributed to the lower tendency, such as the redeposit of heavy January 1st disbursements, the paying off of loans by interior borrowers, cessation of agricultural demands, and liquidation of old loans as a result of high prices realised for crops, liquidation of many business loans at the end of the year, increased lending by corporations and manufacturers to secure employment of funds temporarily idle, the influx of holiday gold, and foreign remittances to the United States. This week's Federal Reserve bank statements plainly show why money rates have declined. The combined ratio of reserves to note and deposit liabilities, for the entire Federal Reserve system, rose during the past week nearly 5 points to 78.4 per cent., the highest level reached in any year since the war, excepting 1922, while the New York Federal Reserve Bank's ratio jumped more than 11 points to 85.9 per cent., which compares with 76.5 per cent. at this time a year ago. If open market money rates work much lower, it seems likely that the Federal Reserve rediscount rate will be reduced, although opinion regarding such action is divided at present.

Exceptional activity is shown by the bond market. Under heavy investment demand, trading has reached the largest volume in many months, and prices, particularly of railroad and Liberty bonds, have advanced sharply.

FRANCE.—NEW FINANCIAL MEASURES—CARNET DE COUPONS—MATCH MONOPOLY—PRICES—YIELD ON GOVERNMENT BONDS.

(FROM OUR CORRESPONDENT.)

PARIS, January 23.

IN spite of the scepticism that was at first manifested, M. Poincaré has shown that he is just as earnest in his determination to bring into operation the long series of financial reforms which has been proposed for the purpose of re-establishing the financial situation, as he has been in enforcing his policy in the Ruhr. He announced a few days ago that the Government intends to pass into law on or before February 1 the whole of the financial projects before the country, and even more than those originally announced, and little doubt is felt but that the promise will be fulfilled. The Chamber is already at work in earnest on the Bill to strengthen the existing regulations concerning dealings in exchange, and to repress speculation in the franc; the Bill to authorise (1) the payment of bonuses to taxpayers who liquidate their obligations to the State within a month after their demands are received, and (2) the infliction of penalties, in the form of an increase of 10 per cent., on those who are in arrears; the Bill to bring about economies amounting to 1,000 millions in the expenditure of the various Government departments; and the Bill instituting machinery to enable the Treasury to repress and penalise tax evasion, and to collect taxation from the holders of securities which now escape the fiscal net.

So far, there has been no sign of any substantial opposition to any of the proposals, with the exception of the latter, to which reference may be made later. The

Finance Commission of the Chamber has already unanimously adopted the proposal to increase all existing taxes by 20 per cent., with the sole exceptions of those on salt and sugar, and so far as can be seen from present indications, the country, as I predicted last week, is prepared to accept this increase as an inevitable although exasperating necessity. The new taxes, however, have not yet actually come into force, and it remains to be seen what effect they will have on the electors. There were rumours at first that M. Poincaré, for obvious reasons, contemplated rushing the elections through early in March, instead of on the normal date two months later. The Premier has made it clear, since the new financial proposals were announced, that there is no foundation for this statement, and that, win or lose, he intends to go to the country in May and not before.

The one failure that has been experienced by the Finance Minister is in regard to the proposal for the institution of the "carnet de coupons" for bearer bonds. It will be recalled that a year ago the adoption of this idea was strongly urged by the Finance Commission, but was rejected by the Chamber, in accordance with M. de Lasteyrie's own wish. Under pressure of events, however, the Finance Minister is now a convert to the project, and has developed it in the form of a Bill. The Finance Commission, nevertheless, is convinced that it is useless to insist on such a proposal, in view of the rooted opposition of the taxpayer to what he regards as inquisitorial methods, and has drastically modified the project. Instead of each bondholder being required to present a special personal register, in which all his bonds are officially declared, before he can cash a single coupon the Commission recommends that bankers cashing coupons must furnish the Treasury every month with a list of the persons to whom they have made interest payments in this form. It is not clear whether this list will set forth the actual addresses of the persons receiving the money, but possibly it will not, on the theory that, by having merely to give their names, interested parties will become more or less accustomed to comply with some sort of regulation, and that it will then be comparatively easy to attain the object in view by means of further legislation.

In addition to the measures set forth already, proposals are also being considered by the Finance Commission for increases in postal and telegraph rates (although ordinary letters are to remain as at present), and for the replacement of the present telephone subscription rates, giving right to unlimited calls, by a message rate tariff. Other measures include one to terminate the facility to pay the tax on war profits in Rentes, to institute a system of payment of the tax on turnover in one fixed lump sum per annum in the cases of all businesses with a turnover of less than 300,000f a year, and for the suppression of the match monopoly. The manufacture of matches, the Finance Commission recommends, shall be thrown open to private industry, but a duty shall be imposed by means of stamped labels on each box manufactured, after the style adopted for the collection of the tax on candles and playing cards. Common sulphur matches will pay 1,000f per million, "safeties" 3,200f, and wax matches 3,500f. The State factories will be ceded to firms or companies which are exclusively French, and the present personnel will be dismissed with equitable indemnities. M. de Lasteyrie declared that the match monopoly at present yields a revenue of about 50,000,000f a year, and that he anticipates the new system of taxation proposed will produce 80,000,000f per annum.

The index figures of wholesale prices for November (which have hitherto usually been issued during the month following that to which they refer), were published only last week. The complete figures, as compared with those of the previous month, are as follows:—

Categories.	End of November. (Provisional.)	End of October. (Corrected.)
General index figure.....	45	452
Foodstuffs (ensemble)....	20	404
Vegetable foods.....	8	358
Animal foods.....	8	414
Sugar, coffee, cocoa....	4	487
Raw materials (ensemble)	25	494
Minerals and metals..	7	461
Textiles.....	6	592
Various.....	12	456

These index figures are now calculated on a base of 100 in 1914, instead of being, as hitherto, on the prices current in the period 1901-10. The figure for November reveals a rise in commodity prices of 23 points on the month, whereas the October figure showed a fall of 3½ points in comparison with September. The November rise is officially attributed to the renewed fall in the franc, which dropped from 76.115 to the pound and 16.965 to the dollar on October 31st to 80.46 and 18.63 respectively on November 28th. The further falls to 86.735 and 19.965 by December 31st, to say nothing of the recent catastrophic, although perhaps only temporary, drop to 96.25 and 22.80 on Monday, will, of course, be inevitably followed by still greater rises in the index figures for December and January. The most marked rises in the November figures, it will be seen, were in sugar, coffee and cocoa (39 points), and textiles (53 points), for all of which France is dependent on foreign supplies. Retail prices in Paris of 13 common necessities of life during November showed an average increase of 255 per cent., calculated on a base of 100 in 1914, as compared with an increase of 249 per cent. in October, 239 per cent. in September, and 205 per cent. at the end of 1922.

The present situation of the market in French Government Funds will be gathered from the following figures (which I have received from a banking source), showing the present yield from ten of the principal securities, based on last Thursday's quotations:—

	Price on January 17.	Yield.
Rente 5 %, 1915.....	71.00	7.15
" 4 %, 1917.....	59.60	6.77
" 4 %, 1918.....	58.70	6.83
" 5 %, 1920 (redeemable) ..	84.25	6.024*
" 6 %, 1920.....	82.20	7.37
6 % Treasury Bonds, 1922, redeemable at par September 25, 1925.....	480.00	9.74
6 % Treasury Bonds, 1923, redeemable at par December 8, 1925	475.50	9.56
6 % Treasury Bonds, 1923, redeemable at par, May 20, 1926	470.50	9.41
6 % Crédit National, 1922, redeemable at 507.50 on February 1, 1927	467.00	9.10
6 % Crédit National, 1922, redeemable at par, July 1, 1925.....	482.00	8.85

* Excluding redemption premium. † Including redemption premium.

It is reported that the new issue of Crédit National 6 per cent. 500f bonds, which are offered at 480f, and are redeemable in fifty years (with periodical drawings and important premiums), is being satisfactorily absorbed. Similar reports are in circulation as to the new issue by the Société du Gaz de Paris of 638,297 bonds of 500f each, bearing interest at 6 per cent., free of all present and future taxation, including transfer charges. These bonds, which are guaranteed by the City of Paris, are issued at 482.50, as from December 17th last, and are redeemable at par in forty years, by annual drawings, as from October 15, 1929.

GERMANY.—POLITICS—FINANCES—CURRENCY—BOURSE—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 22.

THE internal political situation is unchanged, and the tendencies towards financial and industrial improvement continue. Speculations as to the effect of the fall of the Baldwin Ministry mostly agree in thinking that a Labour Cabinet would not prove revolutionary, either in home economic matters or in foreign affairs. On the former matter such speculations are largely based on Germany's own experience in the first post-war years, when Ministries predominantly Socialist, and backed by a strong semi-revolutionary Socialist movement in the cities, accomplished no vital changes at all in the question of capitalism and property, and even failed to put through a tax system severe upon the propertied classes. No doubt is felt that an English Labour Cabinet would wish to make things easier for Germany; but a certain scepticism as to the practicability of this is felt; so that a Labour Ministry is not expected either to strengthen materially

the proletarian movement or radically to change—at any rate at first—the international aspect of Europe.

The important development in Federal finance is the achievement of a surplus in the first ten-day period of January. This, after the complete disappearance of revenue in the autumn, is a remarkable event, even if the following qualifications must be made. Firstly, Railways and Posts deficits are no longer booked in expenditure. The railways are apparently (no statistics are published) still covering their operating expenditure. Both the Railways and Posts Ministries are considering the contraction of loans on the security of mortgages on their real property. The railways loan is expected to be 100,000,000 gold marks, at 6 per cent, possibly to be raised to 300,000,000 gold marks. The security on the face of it is ample, owing to the disappearance of the entire Railways Debt. Economies in Posts are being at last really put through, by the discharge of 26 per cent. of higher, 30 per cent. of intermediate, and 20 per cent. of lower officials. The Third Taxation Decree still delays. The latest plan is to postpone the difficult questions of mark mortgages and mark debts by giving the Government power to regulate the whole question later, the intention being to permit the "Aufwertung" (raising of the gold value) on such debts when the creditor demands it, and when also it is compatible with the economic condition of the debtor. This would mean regulation of individual cases by arbitration or conciliation courts as in Austria. The project further provides for taxation away of gains through the currency depreciation—this necessarily means only traceable gains, such as those from extinction of mortgages, bonds, &c., with paper mark payments. Finally the decree is expected to regulate the financial relations of the Republic and the States, to simplify the taxation procedure, and to provide for collaboration by the municipalities in the assessing of Federal taxes.

The currency situation still looks favourable. The paper-mark-rentenmark currency—such a unit it must now be considered—seems to be entirely divorced from the foreign exchanges, and, short of new inflation, of which there is no sign, its home value ought not to decline. Cost of living again fell, by 1.8 per cent., in the week ending the 14th inst., and the wholesale index on the 15th (basis 100 in 1913-14) was 119.8, against 119.7 a week earlier. Although the steel and iron prices announced by producers have not fallen any further, there is such great competition among dealers to sell that extremely low rates are being quoted. General opinion is that sharp international competition will continue. Official statistics confirming earlier reports from here that the great rise in gold prices last year was due to the sudden adoption of gold-mark calculation are published. This general adoption took place in August; before then gold-mark calculation was mainly practised by a few big producing branches; after that the day-to-day price everywhere was reckoned in gold, though paid in paper. The official index in question, which is for the more important kinds of machinery and equipment, furniture and clothing, shows that, whereas between January and July the index number (basis 100 in 1913) rose only from 65 and 88, in August, the first gold mark month, it jumped suddenly to 125, rising thereafter relatively slowly to 201 in November, and falling to 182 in December. Although this gold mark price-rise precipitated the present unemployment crisis, it is generally considered that, now that prices have somewhat fallen, and are not markedly different from those of stable-exchange countries, an undesirable abnormality has ceased. It is further held that if the reformed currency depreciates for any reason, a return to low gold prices will be prevented by the fact that gold calculation, as in August, will be returned to as the easiest means of safeguarding sellers against loss.

The Reichsbank statement for December 22nd shows an increase in circulation by 60 trillion paper marks to 474½ trillion paper marks, due mainly to purchases of foreign currencies, and to exchange for rentenmarks. Private discounts declined by 51½ trillions to 319.7 trillions, while the item Treasury bill discounts entirely disappeared, all this debt having been paid off at a cost of under 200,000,000 rentenmarks borrowed from the Rentenbank. The bank holds as assets

195,000,000 rentenmarks of book value 195 trillion paper marks. Rentenmark deposits are still small. There are large increases in advances both in paper marks and rentenmarks, which, together with the decline in private discounts, are explained by the transfer of credit to a "stable-value" basis. The bank no longer lends any money without this kind of guarantee against loss to itself from possible depreciation. Outstanding Darlehns advances totalled 9.9 trillion paper marks. The conversion of company balance-sheets to a gold mark basis continues. Where the capital of a company exceeds its net assets the decree permits three methods of regulation, which may be adopted in combination. First, the creation of a capital depreciation account, which must be worked off within three years; secondly, assessment of shareholders or issue of new shares; thirdly, reduction of capital. The last may be effected by reduction of the nominal value of shares, reduction of the number of shares, or amortisation of certain shares or classes of shares.

Despite clear official statements that the "Aufwertung" of public debts will not even be thought of, the leading home loans last week more than doubled their values, rising from a total value of 4.4 billions to 9.53 billions. Financial newspapers declare that a main source of the buying is England, in connection with a similar movement in London. Yesterday and to-day these securities were weak, but for no known reason many municipal bonds were firm. Money is relatively plentiful, but a rate of one-eighth of 1 per cent. per day for day money, though very low compared with the rates of up to 40 per cent. per day of last autumn, is so high that it must be taken to consist mainly on a premium for risk of depreciation. For long terms no one will lend any kind of home currency except on the condition of compensation for possible depreciation. Loans to-day quoted in milliards:—War Loans 101, Fours 490, 3½ per Cent. 410, Threes 1,150, Prussian Threes 625.

Industry seems to be slowly improving. Concerning the foreign trade balance, the Ministry of Industry considers that the figures given last week fairly well represent facts, and that the passive balance in all 1923 did not exceed 100,000,000 gold marks. Opinions differ as to whether the improvement, which was largely due in the late part of the year to the official throttling of the exchange market, will continue in 1924.

CANADA.—GOVERNMENT AND TARIFF REDUCTION FARMERS AND PROTECTION—BUSINESS CONDITIONS—BANKING AFFAIRS.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 14.

POLITICAL pourparlers have been going on here during the past week between Premier King and representatives of the different schools of Progressive thought in the western provinces. The present Government came into power on a platform providing for the reduction of duties, particularly on the implements of production and the food and shelter of the people. Up to the present, this platform has been carried out only to a small degree; but the fact that the Government has had only a bare majority in the House, and numbers a good many strong protectionists among its followers, has been advanced as a reason for its failure fully to complement its pledges.

The two most powerful figures in the King cabinet have been Hon. W. S. Fielding, Minister of Finance, and Sir Lomer Gouin, Minister of Justice, both of whom are avowed protectionists. It has been generally understood that the lower tariff element in the Government has been unable to make headway against the influences represented by the two members above named. Now, by a singular coincidence, both are removed from the cabinet councils. Sir Lomer Gouin has resigned because of ill-health, and Mr Fielding is so ill that it is not anticipated that he will ever again be able actively to fulfil his Parliamentary duties.

The Prime Minister must reconstruct his cabinet, and he has seized the first opportunity to open negotiations with the western low-tariff advocates. What will be the result of the negotiations is unknown at the time of writing;

probably there will be no extensive reconstruction until the course of Mr Fielding's illness is determined; but it seems certain that Hon. T. A. Crerar, former leader of the Progressive party, and Hon. C. A. Dunning, Premier of Saskatchewan, will enter the Government in the near future. That they will not do so unless some drastic reductions are made in the tariff is certain. In the conferences which have just been held between them and the Prime Minister, they specified as the conditions on which they would enter the Government the following: the putting of some ten or twelve items of agricultural implements on the free list; reductions in cotton goods, kitchenware, and some other commodities of general use; and, generally, that the framing of the tariff should be done from the viewpoint of revenue rather than of the maintenance of the protective principle.

It is interesting to note that the Canadian Council of Agriculture, which is the central advisory body of the agrarian interests, has recently met and revised its platform. When the Farmers' Platform was laid down in 1918, it called for broad and substantial reductions in customs tariffs, 50 per cent. British preference and free trade in five years, reciprocity with the United States, all foodstuffs as well as implements and building materials, on the free list, &c. In its revised platform it condemns the principle of protection, advocates a tariff based solely on the needs of the public revenue, the immediate abolition of the tariff on the implements of production, a substantial increase in the British preference, and a reciprocal trade arrangement with the United States. It will be noted that the demands for an immediate and all-around reduction of the tariff, eventual free trade with Great Britain and the admission of foodstuffs to the free list have been dropped. Mr Crerar is now understood to be willing to advocate a thorough examination of the whole tariff structure to determine just what the policy of the united Liberal and Progressive parties should be, if that union is effected.

Opinions of commercial and banking experts differ as to the outlook for business in Canada during the coming year. Some of the bankers such as Sir Herbert Holt, president of the Royal Bank, seem distinctly hopeful, expressing the belief that the past year marked the final adjustments of the period of depression. Industrial leaders express a belief that business will be at least as good as last year. The improved statements of railroad earnings each month is a hopeful factor, although it is largely due to the movement of the greatest crop in Canada's history. The crop has had a very healthful influence in the west, which always reacts more quickly to conditions than any other part of the Dominion. The *Manitoba Free Press* states that nearly \$400,000,000 has been "set in motion through the industry of the farmers of the Prairie Provinces," and there are eight months of the crop year still to run and many millions of bushels of grains still to be marketed. There has been a marked lessening of the indebtedness of farmers to banks, mortgage companies, and tradesmen. There seems to be a pronounced revival in British Columbia, where the lumber industry has done well, and there has been a great impetus given to shipping by the flow of prairie grain westward through Vancouver and the Panama Canal. Press dispatches noted a total of 36 large ships awaiting cargo in Vancouver harbour on one day recently. In Halifax, too, there has been a pronounced increase in shipping, a greater number of Atlantic liners calling there regularly this season than ever before. This is attributed largely to the extension of the British preference to goods entering by Canadian ports. Business conditions in the Maritime Provinces generally, however, have not been good.

Insolvency statistics for the past year showed a smaller commercial mortality. The decrease in the number of failures slightly exceeded 12 per cent., and the reduction in liabilities was about 16 per cent. There was a total of 3,247 failures for \$65,810,382, compared with 3,695 for \$78,068,959 in 1922. The betterment as to number of insolvencies was confined to the manufacturing and trading divisions, the decrease in the former being 7.6 per cent. and in the latter 14.6 per cent.

The Home Bank failure is still re-echoing in Canadian financial circles. One result has been to give an impetus to the demand of the Progressive and some other forces in Parliament and in the country for a different system of

bank audit and inspection. The Quebec Government recently assisted in a bank amalgamation in that province by guaranteeing the bonds of the amalgamated institutions to the extent of \$15,000,000, and will appoint an auditor to report at stated intervals as to the condition of the institution which the Government is backing. Sir Clifford Sifton proposes independent audits of all Canadian banks by a central board, which would also serve as a bank of rediscount in times of stress and emergency. Sir Thomas White, former Minister of Finance, has issued a statement in which he says that he had no reason to anticipate that the bank, with an important and growing business, expanding deposits, and the country in a time of prosperity, would not be able to take care of any marginal losses which it might sustain on any of the accounts which had been brought to the attention of the department of finance.

Meanwhile a number of shareholders have retained counsel with the idea of fighting in the courts the efforts of the liquidators to collect under the double liability clause before it has been shown that there is such a deficiency of assets as to make the call necessary. The whole Home Bank case will serve to strengthen the demands which will certainly be made at the coming session for some change in the Canadian banking system, particularly with regard to the safety of small depositors.

UNION OF SOUTH AFRICA.—RAND DIVIDENDS: PRE-WAR STANDARDS BEATEN!—IMPROVED RAILWAY SERVICES.

(FROM OUR CORRESPONDENT.)

December 26.

THE dividends declared by Rand mining companies for the year just completed make excellent showing, the total being £8,414,500. This is better than the pre-war years 1913 and 1914—war was, of course, declared in August of the latter year, but the Rand industry was unaffected for

several months—when the aggregates were £8,205,200 and £8,073,400 respectively. The current year's total was just beaten in 1908, when the recovery per ton was $\frac{1}{2}$ dwt higher than it is at present, and when an ample supply of native labour enabled working costs to be brought down to 18s a ton. But the best year of all was 1909, when Rand dividends reached their zenith of £9,310,750. That year benefited from magnitude of tonnage, just over 24 millions, and low working costs, 17s a ton; but the recovery grade was not so good as in 1908, being 6.8 dwts, or very much the same as it is to-day. The dividends in 1910, at £8,876,100, also exceeded those declared for the year just completed, the tonnage being just upon 25 millions, the recovery practically the same as to-day, and working costs averaging 17s 6d.

The feature of recent years has been the growth in dividends paid by the Far East Rand group of mines. In the year's list the New Modderfontein has convincing pre-eminence with a distribution of £1,400,000, a figure only exceeded in its history by $2\frac{1}{2}$ per cent. on the capital in 1920, when the currency price of gold was remarkably high. This notification is 40 per cent. higher, representing £560,000, than the next best, Government Areas. The answer to the question which is the Rand's leading mine depends upon the characteristic chosen. Modder is the largest dividend-payer, Government Areas the biggest profit-maker, but both are excelled in point of tonnage by the Crown Mines, also a handsome dividend-payer, and by the Randfontein Central, which has not cheered the hearts of its shareholders by a dividend warrant since June, 1915. Yet it has spent many millions in working costs and capital expenditure, to the great benefit of the Rand mining and commercial community. Viewed over the last few years, the distributions of ten or a dozen of the Rand's principal mines have evinced remarkable regularity. Though we still speak of the "mining risks," this has been reduced to narrow limits in the case of these mines, with their large proportions of their market capitalisation actually in sight in developed tonnage blocked out for eventual stopping.

The South African railways have recently greatly improved the services between the principal towns of the Union—Johannesburg, Capetown, Pretoria, Kimberley, Bloemfontein, and Maritzburg, by instituting a bi-weekly express service, running in connection with the mail steamers of the Union Castle Company. It is now possible to leave Capetown Docks four or five hours after the steamer berths on Monday, be in Kimberley in time for breakfast on Tuesday, and have tea at the Rand Club or the Carlton Hotel. A running time of 30 hours for the 960 miles, with a rise of a mile to the Rand plateau to boot, over a single line with some sharp curves and heavy gradients, must as a locomotive performance compare favourably with anything outside America, Britain, or France. It is said that it is the fastest Empire train for the distance, but I have not checked the claim with the C.P.R. schedules, or those of the Melbourne-Sydney express. Durban and Bloemfontein are reached by putting off a saloon or so at Kimberley, the train running east through Bethlehem and Harrismith down the Van Reenan Pass of the Drakensberg, and joining the Rand Natal line at Ladysmith. It is now possible to be in Durban 48 hours after leaving Capetown, or a few hours after the mail steamer by which you may have travelled from England has cast off from Table Bay Docks, and which does not reach Port Natal until Saturday. Capetown has for years been only "a fortnight and a week-end" from England; we can now say the same as regards London and Johannesburg, if we add the word "long." Railway travel is comfortable, not expensive when distances are remembered, while the orthodox three meals a day only cost 8s 6d in the Administration's well-equipped dining-cars. As to safety, "It is gratifying to record," to quote from the report of Sir William Hoy, general manager of the Union's 11,000 miles system, "that during the year there was almost an entire absence of casualties to passengers as the result of train accidents. Although over 61½ million persons travelled by rail, not a single fatality occurred, and only one non-European passenger suffered injury."

DENMARK.—RISE IN BANK RATE—TRADE CONDITIONS—OUTLOOK FOR 1924.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, January 21.

LAST Wednesday the Nationalbank increased its rate of discount from 6 per cent. to 7 per cent. The rate had remained unchanged since May 1, 1923, when, owing to the exchange condition, it was increased from 5 per cent. to 6 per cent. On the present occasion the Nationalbank has likewise explained the step taken by referring to the exchange situation, and it is added that it is naturally the intention to support the Exchange Equalising Fund in maintaining the international value of the Danish krone. The increase was not unexpected. From various quarters it had been strongly urged that banking measures should be employed to support the work of the Equalising Fund. In the joint report by the recent Exchange Conference it was stated that the five leading banks had agreed to participate in the fund "on the presumption that the efforts to improve the value of the krone are supported by public measures." Further, the conference consider it necessary that through their credit-giving and discount policy the banks should support the fund to the greatest possible extent, while during the negotiations it was pointed out that a decrease of consumption might be attained by means of an increase of the bank rate, through the pressure placed on trade. It is considered obvious by many that this pressure cannot be avoided, and consequently the increase of the Bank rate has created some dissatisfaction in trade circles. At the same time it is appreciated that the action of the Nationalbank is based on a valuation of the general economic situation and the state of the money market. The increase of the Bank rate had been largely discounted on the security market, which has been weak for some considerable time.

The numerous "surveys" published since the New Year have generally shown a rather optimistic tone, without expressing too great expectations. A very comprehensive review was published by the Statistical Department shortly after the close of the Old Year, in which it is stated that during the year the economic conditions in Denmark have been steadily progressive, and that there appears to be reason to expect a continuation of this progress. The 1923 crops were good, and the exports of agricultural produce have reached the maximum quantity. Industry has enjoyed increasing employment, and the shipping trade generally shows satisfactory profits. On the other hand, bacon production, which is so important, has shown a heavy decrease of net profits, while the increase of industrial employment has still left 32,000 unemployed at the end of the year. (Subsequently this figure has increased somewhat.) This undoubtedly shows that in the various trades there is still an excess of workers left from the war, while presumably some industrial concerns are still experiencing difficulty in reaching a profitable level because they have not yet been able to write off sufficiently on the extensions of plant effected during the boom. Similar conditions affect the farms purchased during the years when prices were high, while the present high prices of landed estates make it difficult for young farmers to start on their own. Add to this the exchange situation. The fall of the krone and the rise of prices necessitate great caution, in view of the uncertainty of future movements.

Elsewhere in the report the Department states that the deficit of the balance of trade for 1923 has affected the financial balance so much, as has been the case, is presumably mostly due to the fact that no loans have been contracted abroad, and that during the decline of the value of the krone the trade has not dared to draw on foreign credit to any great extent, fearing to have to repay loans at higher rates than those at which they were contracted. But this made it very difficult to satisfy the increasing demand for exchange to cover the purchase of foreign produce and articles of consumption. While in 1922 about Kr 80,000,000 might still be counted upon as being available out of the National Loan of 1921, no National Loan has been contracted abroad since then, and it has therefore been necessary to cover the deficit on the financial balance by means of short-time credits and the

export of bonds. During the year the banks have increased their foreign debts by Kr 70,000,000, which amount has accordingly been available to cover the demand for foreign exchange. Further, the National Bank has sold gold for about Kr 30,000,000, and bonds—presumably for about Kr 75,000,000—have been exported. But if a calculation is based on a deficit on the balance of trade amounting to Kr 360,000,000, and an expenditure of Kr 65,000,000 for interest, the amount to be covered is Kr 425,000,000, and the above sums aggregate Kr 175,000,000 only. Of the remaining Kr 250,000,000, an amount of Kr 100,000,000 may presumably have been covered by that part of the net profits of the shipping trade, which has been drawn home, and the remaining Kr 150,000,000 must either have been paid by profits on transit goods, on various undertakings abroad, by the consumption of private firm's credit balances abroad, or is still unpaid.

Letters to the Editor.

PRICES AND EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I was very much interested in the article on "The Dollar Exchange" in your issue of January 12th, especially that portion which referred to the relationship between the index numbers and the rate of exchange. Professor Cassel's theorem, that exchange rates tend to fluctuate about a parity which is determined by the relationship between the internal values of the respective currencies, has one main corollary, viz., that if the internal value of a currency is altered, by inflation or deflation, sooner or later the external value will change proportionately. This is now accepted by most people, but the converse, which appears to me to be also true, seems to be in danger of neglect.

If, owing to the existence of pessimistic feeling amongst exchange speculators, the external value of a currency is driven downwards, the price of imported goods immediately rises. Should this new price-level be supported by consumers within the country, the internal value of the currency will remain upon a lower level; in other words, the purchasing power par will be brought down to coincide with the lower external value. This will certainly happen if additional currency is issued to enable purchasers to pay the higher prices. But it may happen without such additional issues. Rising prices tend to create boom conditions, and there is plenty of evidence to show that for some time a boom may be carried on without any additional currency, being financed merely by an increase in the rate of turnover, though there are limits to the velocity of circulation of a currency.

In the case of the mark, as your German correspondent has on more than one occasion pointed out, the successive breaks in the dollar exchange came first, the internal price rise second, and the issue of currency last. In France during the last 15 months events have followed exactly the same sequence, except that until quite recently no additional notes were issued. There is much to be said for the French official view that speculation is the cause of the fall in the value of the franc, internally as well as externally. Is it not also possible that the speculative fall in the value of the pound, beginning as it did with a rumour of internal inflation, may bring about that very inflation, despite ourselves? The French have so far refused to inflate, and the recent raising of Bank rate, inadequate as it is, suggests that they hope to maintain that attitude. If they do so, resolutely, the bears will inevitably be squeezed, and a rise in the value of the franc will follow. But France has no unemployed to consider. Our problem is more difficult.—Yours faithfully,

A. E. FEAVEARYEAR, M.Sc.(Econ.), London.

AN INCOME-TAX ANOMALY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the letter from "Disgruntled" in respect to an income-tax anomaly which appeared in your issue of January 5, 1924, I quite concur that there appears to be no legal redress in the case where a partner who has received the large profits in past years readjusts the division of profits with the view of escaping payment of income-tax on a large portion of the sum received in the past.

May I, however, mention that where there is succession to a business and the profits fall short, the revenue will usually permit a claim for "specific cause" under the Income-Tax Act, 1918, rules applicable to Schedule D, Cases 1 and 2, Rule 11, and Miscellaneous Rules applicable to Schedule D 3 (3).—Yours faithfully,

J. HOPKINS.

Books and Publications.

SOUTH AFRICAN TARIFF HISTORY.*

THE vast agricultural and mineral resources of South Africa have delayed her industrial development, but the conjunction of abundant raw material with cheap fuel and plenty of unskilled labour ensures its coming when her gold mines are worked out. It was greatly promoted during the world-war through the shortage of manufactured goods from America and Europe, and now there are flourishing manufactures of leather goods, dynamite, cement, furniture, soap, brushes, and various other articles totalling in 1917 over £60 millions in value, and produced in about 6,000 factories with some 134,000 workers. Manufacturing interests, therefore, call for Protection for these infant industries, and preparation has been made for it both by the high duties necessary to provide war revenue and by the provisions of the Customs Union, renewed periodically since 1903. Mr Bruwer's book, written in America as a thesis for the Ph.D. Degree of Pennsylvania University, is a dispassionate review of the case for Protection and Imperial Preference, preceded by a careful presentation of South African tariff history from the period of full British control and mercantilist policy through that of tariff autonomy (and inter-colonial friction) to the Customs legislation of the Union of South Africa. Though American libraries are poor in the official literature of his country, he has collected a vast amount of material, and his book should be of considerable value to students of contemporary economics. Free Traders will find in it much to confirm their view that inter-Imperial preference tends towards inter-colonial friction, and British preference towards the closing of foreign markets to colonial produce, and towards disruption rather than union. And, as a patriotic South African, he insists on the right of his country to develop her own industries even by Protection, regardless of the convenience of the Mother Country and of the social dangers of industrialisation; though he is quite aware that the protected infant industries never regard themselves as able to walk alone.

HOLLAND IN THE WAR.*

HOLLAND, impoverished by Napoleon and kept back in her recovery by the circumstances attending the severance of Belgium, enjoyed from 1850 onwards a prosperity modified eventually through the financial strain of the prolonged rebellion in Achin and the need of increased expenditure, chiefly on education, at home. Wealth was very unequally distributed, poverty extensive and often extreme. Budget deficits had accumulated, and, as the war was expected to be short, the Government proposed at first to meet the "crisis expenditure" by loans, increas-

* "War Finances in the Netherlands up to 1918." By M. J. Van der Flier, LL.D. (Carnegie Endowment for International Peace). Oxford: Clarendon Press. (London) Humphrey Milford. 1923.

ing taxation only so far as needed for their service. This policy, severely criticised from the first, was abandoned in 1915. Thereafter the war taxation rapidly grew heavier. For 1914-19 the "crisis expenditure," which the Government strove to determine to the fraction of a guilder, exceeded 1,135 million guilders, the normal expenditure 1,855 millions—a total of nearly £250 millions for a population of some 6,600,000. Mr Van der Flier gives full accounts, backed by masses of figures, of the main features of the war years—the emergency measures of August and September, 1914, some of them only legalised after their enforcement; the war loans and taxes: the branches of war expenditure, including nearly £3,000,000 spent on the refugees; the mechanism of export through a monopolist company, whose profits were expended otherwise than in relief of the taxpayer: the effect on various industries: the distress among the working and lower middle classes; and the few incidental benefits, notably the stimulus to unemployment insurance, with others that are doubtful. But he concludes that the war has led to lasting impoverishment, and, except for the rich, to a lower standard of living, and that it must intensify the opposition to "Capitalism": though it is through thrift and increased production that recovery will be attained. The book, however, only comes down to 1919: another monograph will deal with the post-war years. Still, like the other volumes of this admirable series, it is a really valuable contribution to demography and the history of public finance.

THE CITY'S CASH ACCOUNT.*

THE annual accounts of the Corporation of London are known as "The City's Cash Account," because, according to ancient custom, they include only cash and investments; the values of freehold, leasehold, and other properties of the City's estate and of the Bridge House estates are excluded. As a consequence, the balance-sheets of the several estates—including markets—show an excess of liabilities over assets of upwards of £5 millions. This, however, need not in any way disturb public confidence in the prudence and business ability of the many generations of City Fathers, in view of the fact that more than £800,000 for rent, tolls, &c., is received annually from the excluded properties. Obviously, therefore, these possess great value.

The general revenue account of the City's estate, which includes only a portion of the properties, shows a credit balance of £57,263 for the year ended March 31, 1923, and, in accordance with precedent, this balance is carried forward. The City's revenues are expended mainly in the expenses of civil government, administration of justice, open spaces, City schools, markets, charitable grants, and other charges, besides, of course, the payment of annual interest and sinking fund provisions, and last, and by no means least, rates and taxes.

The loans outstanding at March 31, 1923, amounted to £10,502,774, with sinking fund investments £978,259, against £10,792,729 and £1,913,254 a year ago. It is satisfactory to note that the rates of interest payable on the loans issued or renewed during the year again show a downward tendency. A loss of about £65,000 is disclosed on the realisation of sinking fund investments. If it became customary to issue loans repayable by annual drawings these losses would be avoided. The housing and town planning accounts show capital outlay to date of £718,935 on sites, buildings, and roads, and—also on assets side—£460,379, balance of expenses of raising loan and conversion of bonds into stock. The loans raised for the housing enterprise are secured on the General Rate of the City of London. It is interesting to note that the Foreign Cattle Market has been occupied by the War Office since August 4, 1914, at an annual rent of £10,000.

An appendix to this volume contains the Poor Rate and General Rate accounts. The Poor Rate was 7s 8d in the £—against 4s 11½d four years ago—and produced £2,429,173, about one-third of which amount went to the London County Council for education, and £934,000 to the City of London Poor Law Guardians—a matter of

* The Accounts of the Corporation of London for the year ending March 31, 1923, as rendered by the Chamberlain of London Treasurer.

surprise in view of the City's small resident population. The General Rate was at 3s 8d in the £—against 1s 10½d four years ago—and produced £1,174,516, utilised as to £316,985 for the City Police, and £185,517 for Water Board deficiency. The proportion of empty property in the City exempted from rates—which two years ago was as low as about .5 per cent.—has now increased to nearly 1.5 per cent.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
February 6. February 7.

THE present week is said in the Stock Exchange to have included the quietest day and the busiest day so far experienced this year. On Tuesday business was particularly stagnant, but on Wednesday, following the announcement of the Labour Cabinet's composition, activity developed in most of the markets round the Stock Exchange. Very substantial rises have occurred this week, the public coming in big buyers of stocks and shares, while at the same time the change in tone served to reveal an unexpectedly large bear account. Taken together, the two factors had an important effect in raising prices violently. The railway strike as a market element has been ignored. In spite of the difficulty which men experienced in getting to their business and home again, the action of the locomotive men exercised surprisingly little influence over the City.

The Stock Exchange and its clients are alike astonished to find that the Labour Cabinet is a good deal more workmanlike than they expected would be the case. None of the appointments suggest anything in the shape of frenzied legislation or finance. Money which had been held back since the beginning of the year, and which was left on deposit at the banks instead of coming into the usual Stock Exchange channels, has turned towards the latter, and markets, none too well supplied with stock, have been taken by surprise at the persistence of the demand for all classes of stocks and shares.

Conversion Loan had been heavily sold by the bear party, whose efforts to repurchase the stock led to an unusually rapid series of fluctuations. The War Loan moved more sedately, but on similar lines, while material recoveries in Funding and Victory bonds showed that the hand of the short brigade had been busy with these stocks also. It is not the bear only, however, who is buying. Home Railway pre-ordinary stocks have suddenly come into demand, and this must be mainly for the account of trustees, to whom gilt-edged security and a modest yield are the main desiderata. Colonial issues have not noticeably moved, but the India Government group is better.

Last week's mad gamble in Germans and Prussians has completely subsided, prices dropping as quickly as they rose. French bonds are not quite so volatile as usual, interest in foreign exchanges having been superseded by the greater attention paid to home politics. Brazilians have improved, and advances occurred in a good many foreign Government bonds.

Home Railway stocks advanced in a fashion almost meteoric. Great Westerns and North Westerns proved the two favourite investment stocks, but Metropolitan, shown to be in short supply at the carry-over, went up with a bound. The company's dividend is due to be announced next Thursday. Grand Trunk Pacific has found supporters again. Brazilian Railway stocks are better. Argentine Rails commanded a good deal of support, while Brazilian Tractions went up in sympathy with Brazilian bonds. Many American and Canadian dollar securities show rises on the week.

It may be that industrials have been less animated than some of the other markets, but in such shares as those where a bear account exists the change-over from depression to strength became very marked. For instance, the prices of Courtaulds and Tobacco shares rose with a rush, the Imperial Tobacco dividend helping to stiffen the market in the last-named shares.

The rubber list is a shade harder, owing to the somewhat sketchy hopes that the Dutch interests may join in the scheme for restriction of rubber output. The oil market, though below the best prices, shows pronounced strength; bears have been badly mauled. There is, moreover, a little public buying of oil shares, optimism being quickened by the recent rises in the price of petroleum. Anglo-Persians dropped away on contradicted rumours of a note issue. Textiles are better, and in practically all the sections of the industrial market advances are shown. Banking shares remain quiet, but the insurance group and shipping issues are distinctly harder. People are buying breweries and hotel shares, a few carefully selected iron and steel descriptions, and gas stocks, although the dividends on Gas Light and Coke and South Metropolitan ordinary did not come up to the highest expectations.

Good-class preference shares, paying about 6 per cent. on the money, are once more in active request. Tata debentures, after a drop to 70, rallied to 78, on a statement from the company printing out that the profits were being maintained; but Indian securities as a whole, despite a rally amongst India Government stocks, continue depressed, in consequence of the rise of the Socialist element in India coinciding with the advent of a Labour Party to power at home. The fear has probably been overcome, but prices are very heavy.

The Kafir market came in for renewed support from the Cape, where buying of Robinson Deep "B" and Simmer and Jack shares heralded a proposed new issue in the first case, and a reorganisation in that of Simmer and Jack. The rise in the price of gold brings in a few buyers of Kaffirs, who are attracted by the yields offered at present prices. De Beers and Rio Tintos, after a sharp fall, regained most of their losses. In Rhodesians, there is little going on. Tin, the metal, is substantially higher, and a few West Africans, Malaysians, and Cornish shares have scored moderate gains. Canadian silver shares developed renewed activity, with buying orders coming from the Dominion, and another source of support for the mining markets has been a steady stream of purchases, from the Colony, for Broken Hill shares, most of which are better on the week. Russians are also harder, on political considerations.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	£ ..	£ 2,615,750 ..	£ ..	£ ..
ISSUES OF THE WEEK—				
NATIONAL SAVINGS CERTIFICATES.

TEA	RUBBER	PRODUCE
GENERAL	HARDWARE	TEXTILES
	EASTERN	MERCHANTS.

The Globe Worsteds Company, Limited.—Nominal and issued share capital £120,000. This is an offer for sale of £600,000 6½ per cent. first mortgage debenture stock at 97½ per cent. Principal and interest are guaranteed by Illingworth, Morris, and Co., Limited, the holders of the whole share capital. The stock will be repayable not later than December 31, 1938. A cumulative sinking fund of 1 per cent., commencing in 1926, will be applied in redeeming the stock by purchase at or under 103 per cent., or by drawings at 103 per cent. up to June, 1930, and after at par. Rights are reserved for redemption on these terms upon three months' notice. The stock will be secured by a specific first charge over the Globe Mills, Slaithwaite (owned freehold by the company) and by a floating charge. In view of recent events, we think that the promoters would have been well advised to make this issue by means of a prospectus instead of an "offer for sale." Fixed assets available, we presume, for the specific pledge are valued at £561,366. We gather from this document that the company owns the total issued share capital of James Tankard, Limited, (which owns freehold the Hind Street Dye Works, Bradford). Average profits for the past six years of the Globe Worsteds, James Tankard, and Greenwood Dyeing companies are given. Interest on the stock requires £39,000 per annum, and sinking fund £6,000. The net assets of Illingworth, Morris, and Co. are stated to exceed £1,000,000. We assume that investors will consider this "offer for sale" quite satisfactory; indeed, in view of the prestige of the auditors they may hail it with pleasure. For our part, we should want more data to convince us that this kind of inter-company finance was necessary.

Bradbury, Wilkinson, and Co., Limited.—Authorised share capital £400,000, divided into 200,000 6 per cent. tax free cumulative participating preference and 200,000 ordinary shares, all of £1 each. The company was incorporated in January, 1890, to take over the existing printing business with the same title. It is curious to find that this undertaking reverted from a public company to a private company and back again to a public company in the course of its progress. From a statement which appears in the Press to comply with Stock Exchange regulations, we notice that "175,000 of the preference shares have been issued and are fully paid, with the exception of the £14,360 payable by instalments.....125,000 having been subscribed by the directors and their friends and employees of the company at par, and 50,000 shares have been subscribed by the British Trusts Association, Limited, at par (less a commission of 3d per share) under contract with the company contained in letters dated January 1, 1924, and January 2, 1924. All expenses of and incidental to the issue of the preference shares, including the cost of advertising this notice, are payable by the company." The undertaking is well known for the excellence of its products, but the information published is insufficient to gauge the value of its shares.

The Kensington and Knightsbridge Electric Lighting Company and the Notting Hill Electric Lighting Company, Limited.—This is an announcement in the Press relating to the issue of £100,000 5½ per cent. debentures, 1926, being part of an authorised issue of £150,000. By the Kensington and Notting Hill Electric Lighting Companies Act of 1899 the above companies were authorised to acquire a freehold site at Hammersmith, and to erect a joint generating station. They have jointly created £200,000 first debenture stock, of which £193,244 is outstanding, and £50,000 second debenture stock, of which £25,000 has been issued. The second debenture stock will be repaid out of the proceeds of the debentures below mentioned, and the trust deed securing the same discharged. The companies have also jointly created £150,000 of 5½ per cent. debentures in bearer debentures of £1,000 each, of which £100,000 have been placed by Messrs Rowe and Pitman at par. These joint debentures constitute a joint and several obligation of the two companies, and are secured as a floating charge upon the joint generating station, subject to the above-mentioned issues of joint debenture stock and to the existing debenture issues of each of the two companies. The debentures provide that so long as any of the debentures are outstanding no other joint debentures will be issued ranking *pari passu* with or in priority to the £150,000 of joint debentures. The debentures are repayable at par on April 15, 1926. An excellent investment in its class.

through their large holdings of Treasury bills and of Government bonds due to mature at early dates, from which to meet all legitimate requirements.

FOREIGN TRADE.

It will be seen from the Board of Trade figures that during the past year our imports from abroad amounted to £1,098 millions, and, against this, our exports, exclusive of invisible exports, were £886 millions. The Board of Trade estimate of invisible exports for the year 1922, that is to say, earnings through interest on foreign investments, shipping freights (which include not only freights earned in carrying goods to and from this country, but also in other foreign trade), banking and insurance commissions, and so forth, was £325 millions, after allowing for a payment of £25 millions for the service of our American debt. It is probable that for the past year the amount of our invisible exports will have been maintained, and that a surplus of some £100 millions will have been available for loans by this country to the Dominions and other parts of the British Empire, and to foreign countries, for purposes of reconstruction and for development, both of which will serve to reopen foreign markets and help our trade.

It will be seen, therefore, how vital is the importance of maintaining our invisible exports, both as a source of income, and also as helping in the restoration of foreign markets which will benefit our visible exports.

With our growing population and the present unemployment, everything should be done to promote our visible exports now as well as for the future, and foster every opportunity that may present itself for improving the industrial conditions of the country.

THE AMERICAN DEBT.

Besides the payment for imported foodstuffs, raw material and manufactured articles, which were normal before the war, we have now to provide also for the interest on our debt to America.

One of the principal events in the year has been the funding of this debt. No one who has visited America can fail to realise the gain to British credit and British prestige owing to that settlement, or the loss that would have been incurred by both if our liability had been questioned or had been met in any other way. There may be differences of opinion in regard to the actual terms, but in my opinion, whatever modification there might have been, if any were possible, it could not have been very great. Moreover, the adherence by Great Britain to the principle of the honourable fulfilment of contracts, in which lies the greatest guarantee for peace, is of world-wide importance.

The total annual provision that will be required for the next ten years to meet the debt will amount, at current rates of exchange, to the sum of approximately £37 millions per annum. This is roughly the equivalent of an income-tax of 9d. in the £, calculated upon incomes falling within the ranges of taxation as they exist to-day. This calculation will give some idea of the amount of the burden which we have undertaken, but the actual payment or transfer of this large sum to America—or to some other country on American account—can only be made through earnings from trade, or through invisible exports, that is to say, those other sources of income to which I have already referred.

The annual charge will be lightened somewhat should there be an appreciation in the exchange value of the £. On the other hand, with the recent fall, the charge has lately increased. The real burden of the debt, however, is measured by the volume of goods or services needed to discharge it, and the amount of the burden will, therefore, fluctuate with variations in dollar prices, as the debt is payable in dollars.

Even under the most favourable conditions, the payment of the debt will prove to be a great problem, but there are two outstanding factors which will help towards the payment, namely, the high standing of British credit, and a probable upward movement in gold prices, that is to say, the level of prices in America.

To maintain our high standard of credit, in face of this added foreign liability, it is clearly desirable that we should increase our favourable balance of external trade by an amount equivalent to the annual charge involved by payments to America. The alternative to an increased surplus of exports, both visible and invisible, would be a reduction in the amount we can lend abroad, and any reduction would retard recovery in trade.

ELASTICITY WITHOUT INFLATION.

The payment of our debt to America will, as I have said, necessitate exports of one kind or another to that country or to some other, in order that payment may be made, either directly to America or elsewhere on American account, and we can realise how important it is that both our costs of production should be on such a level as will enable our visible exports to increase, and

also that our money rates should be such that invisible exports should not be in any way diminished through the prevalence for any length of time of relatively higher rates than those which exist for the time being in America. As the demand for loans increases here, higher rates may be necessary, but at the present time there is only a small margin between the level of money rates in London and in New York, which would be available in case of need. It would seem, however, that industry here would not receive any real check if somewhat higher rates should become necessary, whilst on the other hand, investment values here might fall to some extent, and the cost of Government borrowing would be increased. However that may be, Government borrowing may become necessary to replace Treasury bills which the banks might wish to realise, and so long as this were the result of trade expansion through a genuine revival of purchasing power, there would appear to be little harm in such an operation, but then there might be a difficulty as regards the elasticity of our currency.

Beyond the present available unissued balance of currency notes there is now a greater stock of gold in the Bank of England, and Bank of England notes could be used as a backing to further amounts of currency notes should they be needed, and it is possible, therefore, that the limit laid down by the Cunliffe Committee can be kept, although the actual margin available to-day is comparatively small and does not afford very great elasticity. If any amendment of the existing currency restrictions should at any time be needed in order to give greater elasticity, it could only be such as would continue to impose strict limitations so as to preclude any possibility of lack of control or of inflation.

PRICE FLUCTUATIONS IN AMERICA.

During the last year gold has continued to flow to America, and credit has expanded there, and although in May last there was a substantial fall in prices as the result of the efforts of the administration and the banks to check the great rise which was rapidly taking place, yet the rise in prices in America has during the past two years been in the ratio of 18 per cent. as compared with a 5 per cent. rise in this country. Since September last a fresh rise in prices is taking place there.

The published figures of gold held in America at the commencement of November amounted to 4,168 million dollars, this being an increase of 266 million dollars over the amount held a year previously. Part of this gold has passed directly into the hands of the banks, and has enabled them to allow expansion of credit proportionately with this addition to their liquid resources. The Federal Reserve notes in circulation show actually a reduction of about 74 million dollars, as compared with the previous year, but the use of gold certificates as currency has increased. The gold and gold certificates in circulation show an increase of 235 million dollars, and this accounts for the ability of the banks, with their increased cash resources, to allow credit to expand without any apparent effect one way or the other on the Federal Reserve gold ratio.

CREDIT POLICY.

Looking at the relative level of prices in America, and in this country, the real question is whether our policy should be that of allowing credit to expand as trade demands increase, even though that might involve fresh borrowing by the Government and some greater elasticity in currency, should that be found to be necessary, with the safeguard against undue expansion of higher rates to be applied as a corrective, if occasion should arise. The need for this country to remain on a lower level than America, so far as discount rates are concerned, has been generally accepted in the past, and there would seem to be room at the present time to allow expansion of credit without raising rates to a higher level than those prevailing in New York, at the same time maintaining a reasonable check through rates in the recognised way.

Higher rates would, of course, check undue speculation, and at one time during the year the position on the Stock Exchange suggested that speculation was assuming undesirable proportions; but, on the other hand, there seems no reason to fear that industrial improvement would be checked by somewhat higher rates.

It would seem that unless there should be a need for higher rates to check undue speculation, this safeguard should be principally applied in order to preserve the relative level of prices which exists as between America and ourselves to-day, and which appears at the present time to allow us to compete fairly with America in foreign trade.

I feel that by these measures we should attain some degree of stability of currency in relation to commodities, and establish favourable conditions for both external and internal trade.

To sum up my views on the currency question, I feel that our aim should be to maintain as nearly as possible the existing equilibrium between currency and commodities, although always

we should keep in mind our ultimate aim, which is a return to a gold standard. Recognising that this is our objective, we must admit that before it can be achieved there must either be a further fall in prices in this country or an advance in prices in America. The latter of these alternatives is so evidently a possibility that from this point of view alone we should be justified in avoiding action designed to force down prices in this country, with all the attendant uncertainties and inconveniences, until the tendency in America is more clearly defined.

DRASTIC MEASURES UNDESIRABLE.

Having reached the conclusion that under the conditions existing at the moment it is desirable to avoid, as far as is possible, drastic measures to secure further progress towards our ultimate aim, we have still to consider the steps it would be desirable to take in the not unlikely event of the fiduciary limit to the currency issue being reached.

I think it must be admitted that it would be undesirable, in fact impossible, to lay down in advance any hard and fast rule.

The conditions prevailing at the time the limit is threatened must be allowed to influence the decision arrived at, but it is possible to suggest a general outline of what the policy should be. The fiduciary limit is likely to be reached only if there is a continuous and an increasing demand for credit, and if our aim is to preserve a reasonable stability, the action taken must depend upon the nature of that insistent demand. If it is the reflection of a genuine expansion of trading activity, it may be regarded as a healthy sign, and no undue limitation would be justified. If, on the other hand, it is due to a speculative development, it would be against the real interests of trade to allow it to continue. We must not sacrifice the position we have gained as a result of the sound financial policy pursued since the Armistice, and any tendency towards inflation must be kept in check, even if abnormally high discount rates become necessary.

There are well understood signs which indicate with sufficient clearness the nature of the influence behind an increasing demand for credit.

If with the larger volume of trade the price-level remains stationary or declines, or even if prices advance but still do not rise more rapidly here than in America, there will be little cause for apprehension; but an unjustifiable rise in prices accompanied probably by an increasing disposition to withhold stocks of goods from the market would be a sign that inflation was proceeding, and even at the risk of temporarily prejudicing production the interest rate must be used to check inflation.

DISCOUNT POLICY AND DOLLAR EXCHANGE.

There remains the question as to how far we should permit our discount policy to be influenced by the dollar exchange. It must be remembered that for some time past the purchasing value of the pound has been more stable than the purchasing value of the dollar, and, having regard to this, it would certainly be unwise to allow our policy to be affected by every movement in the rate which may occur, irrespective of the influence which may be the cause of it. Within recent months we have seen a considerable fall in the New York rate, but this fall should not be allowed to create alarm. There is always a heavy trade demand for dollars in the autumn and early winter, and the supply of dollars has been affected by the necessity of providing for the instalment on the British debt to America. This is part of the price we pay for the benefits which accrue from our recognition of contractual obligations. The exchange was affected also not only by our own dollar requirements, but also by large purchases from the Continent and perhaps, to some extent, by certain mischievous and foolish rumours as to the possibility of a departure from the paths of sound finance which deserve, and should receive, no credence. Apart from these factors, we may perhaps have made investments abroad to an extent which is rather in excess of what we could afford, and thus have used up certain foreign liquid assets which are normally used for adjustment of exchange through arbitrage operations. Since 1920 we have balanced our Budget, and we have repaid over £200 millions of foreign debt, besides effecting considerable reductions in internal debt. During the past two years we have kept our prices at a very stable level, and, although there has been a slight increase within the last few months, this increase has in some part occurred in commodities which are influenced by American rather than by British conditions.

It is my decided opinion that British credit stands firmer to-day than at any time since the war, and that, as to the intrinsic value of the pound, there can be no doubt.

THE SAFEGUARDING OF INDUSTRIES ACT.

In what other ways is it possible to increase our surplus balance of trade? In the first place, by improving our credit and the value of the £ in every possible way, and by doing nothing that

can injure either and then by making use of our credit to the fullest justifiable extent, in financing the requirements of other countries, and in the reconstruction of Europe and the re-opening of markets.

Experience in the past has shown that under a system of free imports, our overseas trade has progressively expanded, and a relatively cheap money market has served to establish our position as the centre of finance.

The system of free trade and cheap production has appeared to be best suited to the requirements of this country under normal world conditions, but at the present time there has been great difficulty because of the exchanges.

It is with the object of meeting these difficulties that the Safeguarding of Industries Act was put into force, and remains operative to-day. It affords a certain amount of protection to meet the special conditions which exist for the time being.

It seems to me that although the system of free trade is under normal conditions undoubtedly the best suited for the requirements of this country, and that our object should be to return to that system as and when conditions enable us to do so, yet the return should be gradual and conducted only with the greatest skill and care.

Just as in the matter of inflation and deflation it is undesirable that either policy should be actively pursued, although very gradual deflation and a return to a free gold market should be our principal objective, so, also, as between free trade and protection the former should be aimed at, but by such gradual stages as will enable us to avoid violent fluctuations in the conditions of home trade.

During the last few months, there have been signs of a definite improvement in trade, and unemployment has declined. This improvement can best be maintained and encouraged by stability which will produce the confidence that is one of the fundamental necessities for good trade.

No great changes are required, but the power to make use of the Safeguarding of Industries Act as a remedial measure, if the need to do so should arise, is, in the existing condition of the exchanges, a very valuable aid. At the same time, confidence, which is one of the chief requisites for trade, is more likely to grow without changes and with the feeling that none is likely to take place, except in case of absolute necessity.

UNEMPLOYMENT.

There is, however, the grave question of unemployment, which is common to all countries when times are bad, and for which up till now, no remedy has been discovered which is economically entirely sound. One thing is clear, that the nearest approach to an absolutely sound principle must be that of carrying out works of utility, and preferably, of course, of a directly or indirectly productive character, so as to provide work for the able unemployed in return for the means of subsistence which is afforded to them.

Looking at the requirements of modern traffic and modern industry, there would appear to be ample scope for works of public utility character, but much greater organisation and control is required than exists to-day in order to ensure that only those who cannot obtain work for which they are suited, obtain the dole.

There is great danger of unemployment developing into a habit under too easy conditions under which support is obtainable. On the other hand, it should be understood that deserving cases will always receive some form of help. Now that the situation following on the return from the war is becoming more normal, there is room for the complete reorganisation of the present scheme on lines which will be just, but sounder than those now prevailing.

Any attempt to solve the problem of unemployment by schemes involving inflation, would cause a rise in prices, and would ultimately lead to a loss of foreign trade and renewed depression.

CAPITAL LEVY.

Besides our debt to America, there is also our internal debt, which amounts to over £6,700 millions, as compared with about £710 millions before the war. Some people have held the view that it would be better to attempt to cancel a substantial portion of this debt by appropriating individual wealth for the purpose, and with the object of reducing national liabilities both as regards principal and annual interest. Such a plan, even if it were practicable on a scale which would be worthy of consideration, would entail violent deflation, and, having regard to the position which British credit holds in the economic organisation of the world, would have a world-wide effect. This would be the case, even if a scheme were adopted which would spread the operation over a period of years, or if it were to take the form of a substantial increase in taxation.

RESULTS ON EXCHANGES AND CREDIT.

Any apprehension that such a plan was contemplated would, judging from what took place in similar circumstances in Switzerland, lead to large withdrawals of money from this country, to be placed, for sake of greater safety, elsewhere. Such transfers would involve a loss of earning power, and would adversely affect exchanges and the stability of British credit.

At the present time there is no greater surplus of credit here than could readily be employed for productive purposes, bringing a return of profit greater than the cost to ourselves of a corresponding amount of our National Debt. Nor is there any excess in the volume of currency beyond what is actually needed, and though necessarily there have been fluctuations, its value has during the last two years been approaching towards gold parity.

There is, therefore, no analogy between the conditions which exist here and those which obtained in other countries where something of the kind has taken place, and no economic advantage would accrue to this country by taking such a step. Whatever may have been the discussions upon the subject in the past, I feel that the validity of these arguments is now recognised, and that we may assume that there is no fear of capital being in jeopardy through measures of confiscation.

TAXATION.

As regards taxation, it is instructive and interesting to note the letter dated November 10 last, addressed by Mr Mellon, Secretary to the United States Treasury, to the acting Chairman of the Committee on Ways and Means in that country, in which there is laid down as a governing principle for the people of America that the exercise of economy is the real road to prosperity, and that reduction in the surtaxes should produce more revenue for the State than can be gained by maintaining taxation at a level which destroys productive enterprise and development.

My Lords, Ladies and Gentlemen,—It has been through the stability of British credit that we have built up our great position. The whole world is looking towards this country in the hope and belief that here, at all events, will be found the stability both of values and of credit, which the world so greatly needs. I am confident that, by adhering to the sound principles which have guided us in the past, British credit will assure for us and for the rest of the world the means towards recovery to better times.

I now beg to move "That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1923, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares, and 14 per cent. per annum on the 'B' and 'C' shares, less income-tax, making, with the interim dividend paid on August 1st last, 10 per cent. for the year on the 'A' shares and 14 per cent. for the year on the 'B' and 'C' shares, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31st last."

SIR HERBERT HAMBLING'S SPEECH.

Sir Herbert Hambling (the deputy-chairman).—My Lords, Ladies, and Gentlemen,—Before formally seconding the resolution I should like to congratulate the chairman on his address. He has given us a very wide survey of conditions, and his speech will repay careful reading. As to the American Debt, I think this question is now somewhat ancient history, but I am sure the settlement effected by Mr Baldwin was a fair and proper one. It is useless jobbing back—we had a debt to pay, we signed our name to a bill, a huge sum of money was running at 5 per cent., and it was appropriate and right and honest to settle it in the way we did. The whole question is now, as I have said, ancient history, and we had much better bury it and come to things that affect us in the present. The chairman expressed his opinion of the stability of British credit. This question is important. There is no doubt in my mind that for some time past there has been, in the Press and perhaps among certain politicians, a tendency to alarm investors. I do not think that well-informed people are alarmed, but among the ill-informed there is a measure of anxiety. I am confident that British credit stands first in the world.

You have only to observe what has been done since the Armistice. Within two years of the Armistice we balanced our Budget, and we have made large reductions in the National Debt. Even in the last financial year, when it is generally admitted that trade was as bad as it could be, we realised a surplus of £100 millions.

BRITISH STABILITY.

Take the currency position as another example. At the height of the boom the total of currency and Bank of England notes to-

gether, after allowing for the amount of Bank of England notes held in the currency reserve, was approximately £488 millions. Gold holdings at that time were £150 millions—a ratio of 30 per cent. to the total currency. At the end of December last, when the highest circulation was reached for the year, currency notes and Bank of England notes together amounted to £422½ millions and gold holdings to £153 millions, a ratio of 36 per cent. Well, ladies and gentlemen, it is amazing after the unparalleled things we have done in finance during the past few years—only a few of which I have mentioned—it is amazing that people should imagine they can get better security by investing in other countries. To me it really is amazing that people should even consider selling their good British pounds to invest them, for argument sake, say, in dollar securities. People doing this deliberately pay an insurance premium for a risk which, in my opinion, does not exist, a premium which at the present rate of exchange may amount to 14 per cent. I am going to prophesy that those timorous people who are forsaking British securities for the sake of investing their money abroad, with the mistaken idea that they will obtain greater security—and there are people so investing their money—I am going to prophesy that they will crawl back in a few years with a very substantial loss in their investments, and, personally, I shall have little sympathy with them. Ladies and gentlemen, I do not wish to take up your time, but, as a banker of 40 years' experience—and I can see here friends whom I have known for 40 years—I do want to emphasise that, in my opinion, those who take their money from England and think that they are going to get better security in some other part of the world are wrong, and that those who do it will bitterly repent it and make a loss, for, if there is one thing certain in this uncertain world, it is that sterling will get back to pre-war parity.

SHAREHOLDERS' SUPPORT.

Mr Frederick Tomkinson said he was so much impressed with the excellence of the chairman's speech and the good, sound reasoning that it contained, and also with the admirable speech of the deputy-chairman, Sir Herbert Hambling, that he desired to express, not only on his own behalf, but also on behalf of friends who were shareholders, their high appreciation of those speeches. With regard to what Sir Herbert had just mentioned with great force, it was within his own personal knowledge that a certain number of people were actually taking their money out of British securities and putting it into dollar securities. When his advice had been asked he had condemned that procedure, and he was really grateful to Sir Herbert for emphasising so clearly the error which those people were committing. He wished also to express his satisfaction with the result of the bank's working during the past year, and his appreciation of the services of all those who had contributed thereto. It had been pointed out that the number of branches of Barclays Bank was so great that some people wondered whether they were all paying. Personally he imagined they were, but perhaps the chairman would say something to the meeting on the subject.

The Chairman, in reply, said that the bank had opened a great many new branches lately. It was always necessary to look ahead, and as districts developed or trade shifted to another centre they opened branches in those districts. It went without saying that a branch when it was opened did not immediately pay, but he thought he could assure the shareholders that within a recognised time all the branches brought in a fairly good return for the money laid out upon them.

MANAGEMENT CONGRATULATED.

Mr Enoch Hill (Halifax) said that as a country shareholder of the bank he wished to echo the words expressed by Sir Herbert Hambling in appreciation of the chairman's speech. He was in complete agreement with every word that the chairman had said, and was very glad indeed that he had struck such a very high note as to the importance of contributing to and supporting the very high standard of British credit. He was also very glad to hear Sir Herbert Hambling confirm the view of the chairman that it was wise as well as just to recognise the debt to our American friends. It was most important that the British nation should recognise its moral obligations without the slightest pressure, and that it should in this way set an example to other nations of the world, which would lead to a recovery of the conditions of peace and prosperity which they all hoped for and looked forward to. As a shareholder he would also like to say that he appreciated very much indeed the management of the business of this bank by the gentlemen who constituted the board of directors and those associated with them. As a man who had very great financial responsibilities, and whose duty it was in his private life to invest very considerable sums of money annually on behalf of others and to realise those investments, he knew something of the difficulties which had to be confronted in such matters, and

which had been confronted by the manager of this bank, and surmounted in the interests of the shareholders. It was exceedingly satisfactory that in a year of very great difficulty the shareholders were to receive the same dividend as in previous years, which had been more favourable to the bank, and that, in addition, the directors were able to carry forward £18,000 more than they did at the corresponding date last year. The chairman's speech was a very valuable contribution to that movement, which was so important to the country that we should face all difficulties with composure and with confidence, and they could do that on the experience and on the assurance of such a leader in finance as their chairman.

The Chairman said that the directors much appreciated the remarks of Mr Hill, who was a man of great experience in the control of one of the largest financial institutions in the North of England.

The resolution was then put to the meeting, and carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman next moved: "That Mr Cosmo Bevan, Sir William Carruthers, Messrs Frederick George Hugh Clayton, John Woodrow Cross, Ernest Ralph Dodsworth, Robert Grant, jun., John Edward Mounsey, Sir William Edgar Nicholls, Colonel the Right Hon. Lord Rochdale, Mr John Hayes Simonds, and Sir Harold Edward Snagge, K.B.E., the retiring directors, be re-elected directors of the company."

Sir Herbert Hambling seconded the motion, which was unanimously agreed to.

Messrs Kemp, Chatteris, Nichols, Sendell, and Co., and Messrs Price, Waterhouse, and Co., chartered accountants, were re-appointed auditors to the company, on the motion of Mr E. T. Hargraves, seconded by Sir Rowland G. Blades, Bt., M.P.

VOTE OF THANKS TO GENERAL MANAGERS AND STAFF.

The Chairman said that before the proceedings concluded he wished to move a very hearty vote of thanks to the general managers and to all the members of the staff of the bank for their services during the year which had just passed. The directors felt that they had received from the staff the most loyal assistance and help, and that the excellent condition of the bank was very largely owing to those factors. He had, therefore, very much pleasure in moving the following resolution:—"That the cordial appreciation and thanks of the shareholders be given to the general managers, the assistant general managers, the secretary, and the whole of the staff of the bank for their excellent services during the past year."

Sir Herbert Hambling, in seconding the proposition, said he was sure the shareholders would agree with him that the loyal, energetic, and excellent staff of Barclays Bank at least deserved a resolution of this character.

The vote was unanimously accorded.

Mr W. Favill Tuke (one of the general managers) said that, on behalf of his colleagues and himself and the whole staff, he begged to thank the shareholders for the cordial way in which they had adopted the resolution. They appreciated very much the kind words in which the chairman and deputy-chairman had proposed and seconded the vote of thanks, and he felt sure that the staff would be encouraged by this acknowledgment of their efforts. He wished to add one word to what had already been said about Sir William Carruthers, and that was that they all wished him many years of happiness in his retirement.

VOTE OF THANKS TO DIRECTORS.

Sir Donald Horsfall, Bt., proposed a hearty vote of thanks to the chairman, the deputy-chairman, and the directors for all they had done for the shareholders during the past year. He wished particularly to thank the chairman for the courteous manner in which he had conducted the proceedings, and also for his eloquent address, which he was sure would be read with great interest by people all over the country.

Mr C. Heath Clark seconded the motion, which was cordially adopted.

The Chairman, speaking on behalf of his colleagues and himself, said he begged to tender the shareholders their very sincere thanks for the resolution which had just been passed. He could assure them that the directors devoted all their best endeavours towards the success of this great institution. The past had been a year not without considerable difficulties and anxieties, but they felt confident that the bank was in a first-rate condition, and they looked forward with confidence to the future.

The proceedings then terminated.

NATIONAL DISCOUNT COMPANY, LIMITED.

"TRANQUIL AND PROSPEROUS YEAR."

The ordinary annual general meeting of the National Discount Company, Limited, was held, on the 18th instant, at the Cannon street Hotel, London, Colonel the Hon. Sidney Peel, D.S.O. (the chairman), presiding.

The secretary (Mr Charles H. Gough) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—"We find ourselves in the position of being able to recommend to you an increase of 1 per cent. in the distribution to the 'B' shareholders on their paid-up capital. This is due to the care which your directors have taken in the past to conserve your resources, and to make provision, as far as possible, for the dangers and difficulties of these times—a policy which I need hardly say we shall continue to pursue."

The profit and loss account shows, as you will see, a gross profit of £692,853; that is less than last year by about £31,000. There is some compensation for this in other directions. We have, on the other side, a distinct drop in our expenses, partly due to the allocation made last year to the pension fund, which at the present time is sufficient to meet the calls now being made upon it. After making all necessary provision, we carry forward a little more than last year.

RECORD BILLS DISCOUNTED.

Our balance-sheet, as on December 31st last, is an interesting one. The figures show no falling off, but rather a certain increase on those of last year. It is true that our investments show a drop of about £1,000,000. That is not a feature which you will be disposed to criticise in times like these. But, on the other hand, bills discounted show an increase of over £1,800,000, and loans are also greater. Bill discounting is, of course, our principal business, and it may interest you to hear that the amount of bills actually discounted by us in one year has, last year, reached the highest total we have ever had—namely, over £100,000,000. There are, I dare say, very few shareholders who are aware that we have kept records ever since 1856, when the company began business. The figures were very different in those days. By 1886 we had reached a total of bills discounted of £1,000,000,000. We passed £2,000,000,000 by the end of 1909, and this last year we have exceeded the total since the beginning, in 1856, of over £3,000,000,000.

If you call to mind that, in these days, the number and importance of firms and companies engaged in the business of discounting bills are much greater than they were even 14 years ago, you will get some idea of the immensity of the trade, finance, and commerce of this country. I will merely remark that I hope that our law-makers, of whatever party, will proceed with very great caution in dealing with these vast interests.

I return to the details of the year. Instead of the four changes in Bank of England rate—all decreases at the rate of ¼ per cent.—in 1922, we had a single increase in the rate from 3 to 4 per cent. on July 5th. This, of course, is a fact of great importance to the money market. Without that increase in rate our profits would naturally have been a good deal more. The larger your portfolio of bills the more you lose by a rise in the Bank rate. Let me give figures to illustrate this in the present case.

The average rate of discount for three months' fine bills during three months preceding July 5th was a little over ½ per cent. The official deposit rates were 1 and 1½ per cent.; on July 5th they were raised to 2 and 2½ per cent. It is true the bill rate rose at the same time, but that did not apply to bills already discounted. In fact, a rise in the Bank rate, when money market rates respond to it, as they usually do, means that a number of bills discounted are being held, not only without profit, but with actual loss. Of course, over a long period these fluctuations compensate themselves, but when, as in the present case, you get a single increase of Bank rate in a year, you get all the loss without the compensation. Otherwise, the course of discount and money rates has been remarkably stable during the year.

THE FUTURE.

I will not attempt to foretell the course of the year we are now entering. Taking a purely business outlook, the prospects are good; trade appears to be reviving once more—though we have too often been deceived by false dawns in that respect—and this company is in a position to take advantage of favourable conditions. But Government finance, public expenditure, and taxation are vital factors in our prosperity as a nation, and the future is doubtful. At any rate, we have ourselves had what I may call a tranquil and prosperous year, and I would remind you that that tranquillity and prosperity is the result of much hard work and hard thinking of an untroubled kind on the part of our manager, Mr Wade, and his assistants. In fact, the whole staff has once more deserved your commendation during the year.

The resolution was carried unanimously, and votes of thanks to the chairman and directors, and to the manager and staff of the company terminated the proceedings.

WESTMINSTER BANK LIMITED.

MR WALTER LEAF ON FINANCIAL AND INDUSTRIAL CONDITIONS AND PROSPECTS.

"CONFIDENCE AND HOPE FOR THE COMING YEAR."

GERMANY AND REPARATIONS PROBLEM.

POLITICAL SITUATION—WARNING TO INVESTORS.

The annual ordinary general meeting of the Westminster Bank Limited, was held, on Thursday, the 24th inst., at the head office, 41 Lothbury, London, Mr Walter Leaf (the chairman) presiding. The secretary (Mr F. Mytton) read the notice convening the meeting and the report of the auditors.

CHAIRMAN'S SPEECH.

The Chairman, who was received with applause, said: Ladies and Gentlemen,—It is a matter of satisfaction that, after several years of great depression, we should be able to meet you to-day with a definite feeling of confidence and hope for the coming year. We can, indeed, not speak of 1923 as a year of prosperity. The first nine months of it were spent mainly in marking time; we had to be content if we could say that we were not losing ground. But so much at least was true; we were not losing ground. It was clear that money was being made, and was being saved; for issues of new capital were rapidly absorbed. Great Britain has again taken her place as a lending nation, and the London market is the best for a foreign borrower. Foreign and colonial loans issued during the year amounted to over £130 millions; and it is these overseas loans which form the best foundation for the expansion of our export trade. Sterling borrowed here has to be taken abroad, directly or indirectly, in the shape of goods. It is, therefore, natural that there should have been during the year a considerable expansion of our exports, from £823 millions to £886 millions. That our imports should have risen to an even greater extent, from £1,003 millions to £1,098 millions, while at the same time we were lending so freely abroad, is conclusive evidence of a very satisfactory growth in our invisible exports, the services of various sorts which we render to other countries, and the return of profits from our overseas investments.

GENERAL TRADE PROSPECTS.

Though the effect of this revival on trade activity has shown itself rather tardily, yet the evidence of the last quarter of the year is fairly unanimous in speaking of better conditions and hopeful prospects. The reports which we receive at this time from our managers, though perhaps it would be going a little too far to call them exhilarating, are on the whole quite comforting. The number of unemployed, the gloomy background of all our thoughts for nearly three years, has shown a decrease which is steady, if slow; and though the depth of winter has thrown many out of work, as always happens, yet the decrease continued up to the middle of December at a rate which, if continued, would have brought us back to normal conditions by the summer months.

Not, of course, that the prospect is uniformly rosy. There are several very important industries in which, unfortunately, it cannot be said that the corner has been turned. But in the majority of our reports from all over the country we hear, in one form or another, that the outlook is considered good, and that the new year is opening with confidence and hope. One cannot but feel that what the old physiologists called the *vis medicatrix naturæ* has been at work; the tendency of wounds to heal is asserting itself. The process of convalescence, after so grave a disorder of the whole body politic, must be slow; but it is there, and we cannot help it by impatience. It shows itself, I think, in various ways—in the determination to face the position, to work hard, to work in unity, to prove that the British nation has not lost its skill nor its grit.

LABOUR DISPUTES.

There have, indeed, been retarding forces at work. Much delay in the recovery was due to the wholly inexcusable dockers' strike, and even more positive harm to that of the boilermakers, which not only intensified unemployment in the shipbuilding trade, already hard enough hit, but had a disastrous influence on all allied industries. Indeed, the recovery in the iron and steel and engineering industries is, in some of our reports, dated from the settlement of that seven months' struggle. And it cannot be too strongly stated that any real advance during the coming year is conditional on the absence of serious labour disputes. The outlook in this respect is by no means clear of anxiety, and is the darkest spot on the horizon.

IRON AND STEEL.

Let me run very briefly through the reports of which I have spoken to you. The best hopes come from the great iron and steel industries, and the allied engineering trades. The year 1923 has been one of largely increased output; the production of pig-iron rose from 4,902,300 tons in 1922 to 7,438,500, and of steel ingots and castings from 5,880,600 to 8,488,900, this last being largely in excess of pre-war figures. We hear on every hand that the prospects for 1924 are good, thanks to the large orders which have been placed by the railways. Even shipbuilding, lately in such deep depression, shows signs of a revival; fresh keels have been laid down on the Clyde; from Barrow we hear that unemployment has been reduced by a half during 1923, and that the large yards there have now orders in hand which bid fair to absorb the whole surplus before long. But it has been a bad year for shipping, and the prospect is none too good. It is true that Newcastle reports that tonnage now idle is only half as much as a year ago; but that is presumably due to large coal exports to the Continent, and we hear of little or no improvement from Liverpool and Cardiff.

COAL.

The coal trade has again been active, and the prospects are good. Last year was fairly satisfactory all round, foreign markets being recaptured, though profits were not large. Subject always to the absence of labour troubles, the outlook is most hopeful. Any marked increase in the home trade would put a severe strain on the mines, as the output is at its maximum and in full demand.

CHEMICALS.

In the home section of the heavy chemical trade, although the volume of business transacted during 1923 was greater than in 1922, the promise with which the past year opened was not fulfilled to the extent anticipated. In the foreign section, a steady improvement was recorded, the exports showing a satisfactory increase over those of the previous year. It is considered that the prospects of the foreign trade in heavy chemicals for 1924 are, generally speaking, favourable.

LEATHER.

In the leather trade reports are less favourable, and there are complaints of foreign dumping. It appears, however, that the exports of boots and shoes during 1923, though showing a large increase in quantity over those for 1922, are still below the number exported in 1913.

TEXTILES.

In textiles, the wool trade reports a patchy business in piece goods, owing to competition and keen price-cutting, but there are prospects of a steady improvement in most sections, and a gradual extension of trade, with a tendency to higher prices, owing to shortage of raw material. In the clothing trade the prospects are better than at any time during the last two years, and orders are being placed by retailers in advance of present requirements, in anticipation of an early rise in prices. Hosiery has hardly maintained the comparative prosperity of which I spoke a year ago. But, on the whole, the outlook for 1924 is considered promising, and unemployment is diminishing week by week.

COTTON.

The cotton industry is, unfortunately, still in a state of depression. Political unrest alike in India and China is in the way of any recovery, and the great rise in the price of the raw material, owing to the shortage in the American cotton crop, has made it impossible to produce the lower description of goods at a price which will bring them within the modest resources of the Oriental peasant. Unfortunately, it looks as though the American shortage were likely to continue, and the outlook for the industry is an anxious one, at least until other sources of supply can be found. The quest is being eagerly pushed, and the resources of the British Empire will, it is hoped, be soon expanded to an extent which will render us less dependent on the United States. In the meantime, however, it is to be feared that a large number of spinners of the lower counts are running their mills at a somewhat serious loss, and the prospects cannot be described as hopeful.

LACE TRADE.

The depression in the Nottingham lace trade also continues. The complaint here is of French competition, and is generally ascribed to the fall in the franc. It must be pointed out, however, that the mere lowness of the unit of currency does not in itself act as a stimulus to export; that comes only when the exchange value of the currency has fallen below its purchasing value at home; in other words, when the rise of prices due to the fall in the currency has not overtaken the fall in exchange. It is difficult to say at the moment whether French prices have risen to the same extent as the franc has fallen—probably not. There will, therefore, be a certain margin in favour of the French exporter. I have seen it publicly stated that the British manufacturer has been handicapped, not merely by exchange, but by superior enterprise, better design, and more adaptability on the part of his Continental competitor. I can hardly believe that this is so, but I fear it is true that whereas the export of lace goods to the United States as between England and France used to be in the proportion of 50 to 50, it is now said that Calais claims about 80 as against Nottingham's 20.

AGRICULTURE.

Let us now turn to the great industry of agriculture. Forecast here is rendered especially difficult by the severe outbreak of foot-and-mouth disease. Even in counties where the plague is comparatively light, the necessary restrictions have interfered most seriously with the internal economy of the farmer's business. But after making allowance for this, our reports, though varying markedly in different districts, generally agree in saying that, in grazing and dairying at least, farmers did not do so badly in 1923; even arable land seems to have covered expenses as a rule, though low prices counteracted the benefit of what was in many districts an abundant crop.

Here are some extracts referring to the south-west, where the cattle plague has not yet appeared—"Dairy farmers have no reason for complaint." "Farmers in the district have done very fairly well in 1923; the outlook for 1924 is considered good, as they consider that fall in values has now reached bottom." From the Midlands we get such reports as these—"Wheat and barley, while better than a year ago, still provide an inadequate return." "Corn crops were good, but a big yield was offset by low prices." "Prices were steadier during 1923 than for some years past. . . . 1923 was not so disastrous as 1922; farmers are possibly unduly pessimistic as to the outlook. . . . Sheep were profitable throughout 1923, and promise so to continue."

From Yorkshire we hear of the tendency, noticeable all over the country, to convert land from arable to grazing. It is pointed out that this policy is attended with considerable risk, owing to the high cost of stock, feeding charges, and interest on borrowed capital. "Sheep flocks are still short of pre-war strength, and prices are likely to remain firm for some time." It is interesting to hear that there is a large demand for moderate sized farms of 200 to 400 acres, and numerous applicants for larger holdings.

From Lancashire we are told that the price of land has been maintained. "The land here (round Wigan) is mostly arable, and farmers are benefiting from the tendency in other parts of the country to put land to grass." And from Cumberland we hear that farmers are holding their own, and, except for the disease, the outlook is fairly good.

IRELAND.

We get a similar note of hope from Ireland, too. The unhappy troubles seem at last to have come to an end; and the floating of the Irish loan of £10 millions without the assistance of the Irish banks—though it would doubtless have been given had it been needed—is an event of good omen. So long as the country keeps its present temper, there seems to be nothing in the way of a return to prosperity. Our affiliated institution, the Ulster Bank, has had a very successful year, in spite of anxieties; we hear from Belfast that there is a strong feeling of confidence; it is generally believed that the linen trade has turned the corner; stocks are reduced, exports to the United States have not been killed by the Fordney Tariff, and it is a curious fact that, owing to the high price of American cotton, linen fabrics are in some cases actually cheaper than cotton.

THE CONTINENTAL POSITION.

We must not, however, forget that these indications, fairly unanimous though they are, are still only promises; the fulfilment is not yet. It is vain to talk about prosperity while the number of unemployed, though steadily diminishing, still stands at over a million. It is vain to talk about prosperity while the shadow of a veiled war still hangs over Central Europe. Yet even here there is just a gleam of hope. It is something that the nations should have combined to see what can be done to lighten the burden. Our best wishes go with the new committees appointed to advise

the Reparations Commission. If they can find some way out of the maze, they will deserve the thanks of mankind. What that way may be, I cannot guess.

GERMANY.

The position in Germany looks to me well-nigh desperate. The rake's progress of inflation, though carried on longer than I had thought possible, has at length been pulled up short, with the result which we had all foreseen as inevitable. The unemployed in Germany on December 1st numbered, I am told, 3,450,000—two millions of them in the occupied districts, mainly the Ruhr, the rest of them throughout Germany. Taking into account those who are on short time, as well as the actually unemployed, I am informed that some 40 per cent. of the German workmen are partly or wholly dependent upon State doles for existence. The industrial collapse is complete. The new currency, the Rentenmark, appears to be no more than the Reichsmark under a new disguise. It is nominally based, as was the original French Assignat during the Revolution, on a mortgage of State lands. The value of it has been maintained, during its brief existence, only by prohibiting any dealings in it for purposes of exchange; as soon as it is thrown open to sale and purchase it will, to all appearance, follow its predecessor the Reichsmark, unless some means can be devised to stop the collapse. At the moment, Germany is confined, for purchases abroad, to such balances as she may already have secured in foreign currencies. What the amount of these may be is an interesting problem, and perhaps insoluble; it was estimated some two years ago by Mr McKenna at £200 millions. One may hazard a conjecture that it must be considerably less to-day, as it is hard to see how Germany can have secured her raw materials during the last two years when her imports have largely exceeded her exports, and the sale of paper marks has come to an end, except by drafts upon this accumulated balance. But that is a question which one is well content to leave to the experts who are now engaged upon it.

REPARATIONS.

Nor do I propose to enter on the general question of reparations. There appears to be a slowly growing conviction in France that, though the occupation of the Ruhr has ended technically in a victory, economically nothing has been gained by it; and that France is financially the worse for having relied on mere force. It is something that the realities of the situation should at length be asserting themselves, that it is at least recognised that there is something which needs frank discussion; that it is not enough to demand payment without fully exploring the means by which payment can be effected.

One thing is certain; that reparations paid by Germany can come through one channel alone—through an excess of German exports over imports. It is only by taking German goods that we can receive German payments. And in order to enable Germany to produce this surplus German industry must first be allowed to re-establish itself. Not only must the factories work full time, but as a preliminary condition Germany must be enabled to import not only the foodstuffs which she needs that her workmen may live and work efficiently, but the raw materials which are essential to any work at all in some of her chief industries. And when this has been done, we must be prepared to accept German goods on an unheard-of scale, mostly in direct competition with our own. The prospect is one which we cannot contemplate without anxiety. For those who are anxious to study it in detail, I should like to recommend a remarkable work entitled "Germany's Capacity to Pay," a notably impartial piece of research drawn up from an independent position by two American economists, Messrs Moulton and McGuire, under the auspices of the Institute of Economics.

GENERAL CONCLUSIONS.

The close argument in that work is not easy to refute; and the general conclusions are, shortly, that "large reparation payments can be made only provided the German standard of living is held down to the minimum of subsistence, or at least to the minimum below which social revolt becomes inevitable. The will to produce must, of course, be preserved; some opportunity for gain must be permitted. Implied in this is a driving down of wages and production costs below the level of the world at large, in order that Germany may persistently undersell competitors in world markets. This is the only possible way whereby any substantial exportable surplus can be procured. Whether it is a way that would please and prove profitable to the rest of the world constitutes another story" (p. 245). Messrs Moulton and McGuire, after an exhaustive analysis, calculate that, if Germany is to pay anything like the sums stipulated by the last agreement, she must raise her exports of merchandise to 14 milliard gold marks, £700 millions, as compared with about 10 milliard gold marks, £500 millions, in 1913. There were complaints enough of German competition in 1913; it is not easy to contemplate with equanimity the prospect of the increase of her competitive world trade by 40 per cent. over

the best year she had ever known. In 1922 German exports were about three milliard gold marks, £150 millions. That amount must be multiplied by 4½ if Germany is to pay.

THE FORDNEY TARIFF.

It happens that we have before us at this moment an excellent illustration of the way in which international payments are made in goods. It will be within the memory of all of you that, some two years ago, the United States passed what is known as the Fordney Tariff—a very high tariff, designed with the especial intent of excluding foreign goods, and in the belief that other countries could not dispense with the products of the United States. Now, how has the Fordney Tariff worked? I have before me the figures of trade between the United States and Great Britain for the first nine months of 1923, and I compare them with the first nine months of 1922. You will suppose—or at least the authors of the tariff certainly supposed—that there will be a great falling off in the exports from Great Britain to the United States, while the exports from the United States to Great Britain will be maintained. Well, what are the facts? The exports from the United States to Great Britain have in that period fallen off by more than £16 millions, while the exports from Great Britain to the United States have increased by over £10 millions. The balance of trade in those nine months has moved nearly £27 millions in favour of this country. Surely this must give Mr. Fordney serious matter for consideration.

INFLUENCE OF DEBT PAYMENT.

Naturally, this cannot be the actual result of the tariff; it proves that there are opposite influences which overcome the obstacles put in the way of imports from abroad. There can be little doubt that this influence is to be found in the remittances which Great Britain is making to the United States for the payment of the debt. So long as the United States require payment from us, so long must they take it in the form of our goods. And in the meantime the Fordney tariff has naturally increased prices and put up the cost of production in the United States, and has thereby hindered their power of competition with us in neutral markets. So that the tariff has been by no means an unmixed misfortune to British trade, and it offers an instructive example of the futility of political measures which try to counteract the irresistible tendencies of economic law.

THE POLITICAL SITUATION.

We have had some experience of this at home quite recently. The gradual signs of a return to normal trade conditions were not enough to satisfy the impatient spirits, who thought that the natural processes of healing had better be interrupted in order to try the effect of various violent prescriptions, each of which was warranted to relieve the present distress, at what future cost it did not seem to concern their supporters. First came the suggestion of deliberate inflation to the tune of £100 millions. This was disowned with fair promptitude, but not before it had done great harm; foreign capital had taken fright, the value of sterling fell in the world markets. It had hardly begun to recover when there came the next prescription of protection, and with it the General Election, to put before a large part of the electorate the awkward question, "Which do you dislike most, protection or a capital levy?"

You know the result. The political situation is piquant and interesting; but for the business man not wholly unsatisfactory. Business wants to be let alone; we had enough of Government interference during the war, and we have no desire to be made the subjects of rash experiments in economics, whether they take the form of deliberate inflation, protection, or capital levy. And from the fear of such experiments the election has delivered us, probably for a good many years to come. Government, it seems, will be in the near future a matter not of rash legislation, but of administration carried on under constant and jealous observation, and subject to short shrift if it oversteps the limits of justice and sanity.

NERVOUS INVESTORS.

That is not a prospect to inspire any serious alarm for the present. There is undoubtedly a feeling of uneasiness abroad—there has been a certain amount of selling of sterling investments in order to buy dollars. This has shown itself in the fall in the New York exchange; the fall which began with the talk about inflation has not been recovered as it should have been, and the £ sterling stands at a value in dollars which is considerably below its real purchasing power. In other words, the £ is depreciated not by any undue balance of trade, but for political and sentimental reasons.

This ought not to be. Any pressure to sell British and buy American securities is not merely unpatriotic, but in my opinion very foolish. I have heard an expert opinion from America which asserts that it will be easy to lose in American investments quite as much as in any capital levy. And it may still be within your recollection that shortly before the war there was an active movement for investment in Continental securities, with the idea of

evading income-tax—dishonestly, of course. Those who adopted this course burnt their fingers badly, and deserved to do so; they may fairly be held up as a warning to those who are contemplating a similar course now. But however unpatriotic and unwise these weak-kneed folk may be, how infinitely more unpatriotic and unwise would it be to feed the anti-British Press in America with panic-mongering, and deliberately to damage the credit and reputation of the country in quarters where such attacks on Britain are cherished and magnified, and spread broadcast over the American Continent? There is, as a matter of fact, no panic at present; there is a certain nervousness among the ranks of amateur investors; but it is the duty of those who are in positions of responsibility to look calmly at the facts, apart from any prejudices of personal or political disappointment and resentment. Such a dispassionate view, I am sure, leads to no counsels of despair. It seems to me that the convalescence of the country, after the fever of the war and the disastrous destruction which it involved, is proceeding with all the steadiness for which we can reasonably hope; "the patient is doing as well as can be expected," and the need of the day is, as before, for patience, work, and peace.

TRIBUTE TO LATE MR JOHN ANNAN BRYCE.

Of the internal affairs of the bank during the year, I need say little. But I must say a word of regret for our colleague, Mr John Annan Bryce, who was taken from us at an advanced age, but still almost to the last full of vigour and active in our work. To a robust energy of mind, recalling that of his distinguished brother, he added true artistic feeling which, combined with a knowledge of architecture rare in a layman, made him an ideal chairman of our Premises Committee. In that position he worked hard to ensure that in building new branches we should endeavour to make them worthy of their surroundings and of the parent bank, and to this end he spared neither time nor labour.

NEW PREMISES.

He did not live to see the completion of the first section of our new buildings here or in Threadneedle street. Both will be ready for occupation, we hope, by the summer; and we shall then be ready to start on the next sections in both cases. This will be our last general meeting in this room, and next year we shall have to provide other accommodation for you. One cannot but feel a certain sentimental regret at leaving the scene of our annual meetings for over three-quarters of a century, with its memories, too, of the now historical period when, day after day in the early part of the great war, the representatives of all the British banks used to meet here to discuss the new financial policy required by the war, and to draw closer the bonds of national co-operation which carried us through those troublous times. But we have to put sentiment aside. The need for rebuilding is urgent. We are now committed to the large scheme, and it is in view of the near approach of the maximum of expense that we have again found it advisable to set aside a large sum, £300,000, to our rebuilding fund.

NO VIOLENT FLUCTUATIONS.

In the other items of the balance-sheet before you there is little needing particular attention. The year has not been one of any violent fluctuations or startling events for the banker. The rise in the Bank rate in July has been the most prominent event, and that did little to ruffle the surface of the stream. Rates of interest have still remained at a figure where they cannot be regarded as any serious hindrance to commerce. Our deposits, like those of our competitors, dropped to a certain extent during the first part of the year. They have since recovered somewhat, apparently a sign of a more rapid circulation of money.

I may conclude by reminding you that as this is our last meeting in the old room, so it is our first meeting under our new name. The step which we took in March last has, I think, been a matter of universal congratulation, and has certainly won the sincere approbation of those of our friendly competitors who were, like us, burdened with top-heavy titles. And I have had the satisfaction of assuring myself during a recent visit to the United States, that from New York to San Francisco, and from New Orleans to Chicago, the name of the Westminster Bank is already as familiar and as highly esteemed as it is on this side of the Atlantic.

Ladies and Gentlemen,—I now beg to move: "That the report be received and adopted."

Sir Montagu Cornish Turner (one of the deputy-chairmen) seconded the resolution, which was carried unanimously.

FORMAL BUSINESS.

On the motion of Sir Montagu Cornish Turner, seconded by Mr Cecil F. Parr, the retiring directors (Mr C. Algernon Campbell, Mr O. C. Magniac, Mr C. J. Cater Scott, Sir William Hicking, Mr E. Banbury, and Sir Arthur Stanley) were re-elected.

Messrs Turquand, Youngs and Co., Messrs Kemp, Chatteris, Nichols, Sendell and Co., Messrs Price, Waterhouse and Co., and

Messrs Stead, Taylor and Stead were reappointed auditors of the bank for the current year on the proposition of Mr W. H. Skeel, seconded by Mr E. S. Metcalfe.

Mr A. Gordon Bird proposed: "That the thanks of the meeting be presented to the board of directors for the able manner in which they have conducted the affairs of the bank." In doing so he remarked that the directors were to be congratulated upon the way in which they had guided the bank through bad years and good years, and particularly during the difficult period covered by the past 10 years.

Mr Frederick Tomkinson seconded the proposition, which, was supported by Mr W. G. Haill and passed unanimously.

VOTE OF THANKS TO STAFF.

The Chairman briefly thanked the shareholders on behalf of his colleagues and himself, and then moved: "That the thanks of the meeting be presented to the officers of the bank for their zealous and able services during the past year." He paid a warm tribute to the services of the staff, and said that Mr Rae had been a tower of strength to the directors.

The vote was seconded by Mr William Baynes, and unanimously accorded.

MR JOHN RAE'S REPLY.

Mr John Rae (chief general manager), who was received with applause, said: It is my privilege to reply to the vote of thanks which has been passed, and, on behalf of the staff, I desire to thank you, Mr Chairman, for the generous terms in which you submitted it, and to the large assemblage of shareholders present I wish to express our appreciation of the cordiality of their response. It is a matter of personal gratification to me to have the whole-hearted and able co-operation day by day of my colleagues in the general management, and of my other friends who control the various administrative departments of the head office. And I am pleased to think that in all the sections of our wide service the same spirit of friendly co-operation and helpfulness is present for the well-being of the bank, and, I trust, in ever-increasing measure, for the convenience of its valued customers.

A hearty vote of thanks to Mr Walter Leaf for his able and courteous conduct in the chair concluded the proceedings.

MIDLAND BANK LIMITED.

SATISFACTORY RESULTS OF YEAR'S WORKING.

RIGHT HON. R. McKENNA ON MONETARY POLICY.

MONETARY INFLATION AND PRODUCTIVE CREDITS.

BANK OF ENGLAND'S EXCLUSIVE RIGHT OF NOTE ISSUE ADVOCATED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The ordinary general meeting of the shareholders of the Midland Bank Limited was held at the Cannon street Hotel, London, E.C. 4, on Friday, January 25, 1924, for the purpose of receiving the report and balance-sheet, declaring a dividend, electing directors and auditors, and transacting other ordinary business.

CHAIRMAN'S SPEECH.

The chairman (the Right Hon. R. McKenna) said:

My Lords, Ladies, and Gentlemen,—

It is more than three years since the returns of unemployment first showed a distressing increase. We are accustomed to the cyclical movement in which good and bad trade follow each other in regular succession, but the duration and intensity of the present period of depression are unprecedented in modern experience. The excessive number of unemployed has been the avowed cause of a premature General Election, and the three great parties in the State have all laid stress upon the need for dealing with unemployment as a principal part of their policy. No subject is of greater importance or more worth careful study, and I propose now, with your permission, to say something upon it before I deal with the work of the bank during the past year.

It is unnecessary to dwell upon those causes of bad trade with which we are all familiar. The destruction of accustomed markets through the economic breakdown of a large part of Europe, political disturbance or uncertainty at home and abroad, violent changes from one type of demand to another at the close of a great war, the drain upon the essential supply of capital by overburdensome taxation—all these are conditions gravely injurious to trade, and so long as they persist cannot fail to retard our full recovery. If I do not refer to them now, it is not because I ignore their significance, but because of the limited time at my disposal. The particular influence on trade upon which I propose to speak is that of monetary policy, a matter which I believe to be of much greater importance than is generally recognised, and which certainly merits close examination.

MONETARY POLICY DEFINED.

What is meant by monetary policy? Before I answer this question, let me define the sense in which I shall use the word money. I understand by it all currency in circulation among the public and all bank deposits drawable by cheque. Usually when we speak of anyone having so much money we include the value of his land, securities, and other property. It is a convenient form of expression, but it is not a strict use of the term. The meaning I am giving to it is confined to what is immediately spendable by the owner, and does not cover the saleable value of property. In this sense it is limited to the total of bank balances, both on current and deposit account, together with the total of currency in active circulation.

To define monetary policy in few words, I should say that it is the policy which concerns itself with regulating the quantity of money. As I shall show later, it is controlled by the Bank of

England, but the action or requirements of the Government may seriously affect it. If we are to follow the working of a monetary policy, and form a judgment upon its merits, we must know first how additional money comes into being and how money already created ceases to exist; and, secondly, we must understand what are the consequences of a variation in the amount of money outstanding in the different circumstances which may attend the change.

HOW MONEY IS CREATED.

Under the system which prevails in our country, there is only one method by which we can add to or diminish the aggregate amount of our money. Gold coin is no longer minted, and additional paper currency is not issued, except to meet the demands of the public. When the public require more currency, they draw it from the banks, and deposits are reduced as currency in circulation is increased. The amount of money in existence varies only with the action of the banks in increasing or diminishing deposits. We know how this is effected. Every bank loan and every bank purchase of securities creates a deposit, and every repayment of a bank loan and every bank sale destroys one.

MONEY INCAPABLE OF MIGRATION.

People often talk of money going abroad or of foreign money coming here, but, as a fact, when gold is not in use, money is incapable of migration. The title to money may change. An individual may sell his sterling to an American for dollars, but the American will then own the sterling in England and the Englishman dollars in the United States. If there is pressure to sell sterling the exchange value of the £ will be lowered, and temporarily the burden of British payments in America will be increased. But the change of ownership does not remove the money, which necessarily remains, and can only be expended where it was created. No exchange transaction, no purchase or sale of securities, no import of foreign goods or export of our own can take money out of the country or bring it here. Those who wish to be meticulous may say that British travellers sometimes carry currency notes, and change them in foreign countries, but the total of such transactions is too trifling to be taken into account. Bank loans and their repayment, bank purchases, and sales are in substance the sole causes of variation in the amount of our money.

THE OWERS EXERCISED WITHIN STRICT LIMITS.

While banks have this power of creating money, it will be found that they exercise it only within the strict limits of sound banking policy. Anyone who studies the monthly statements of the London clearing banks will see that these banks keep a reserve of cash fairly constant in relation to the amount of their deposits. If banks increased their loans and investments, the result would be to increase the aggregate amount of their deposits, but to add nothing to their cash resources. The proportion of cash to deposits would be reduced, and, in the judgment of those responsible for the

management of the banks, would be less than sound banking principles dictated. Thus a limit is placed on a bank's power of lending by the amount of its cash, and so long as the canons of conservative banking are conformed to, additional loans can only be made if this cash is increased. Banks lend or invest up to the full amount permitted by their cash resources, but they do not go beyond that point.

HOW BANK CASH IS CREATED.

If what I have said so far is accepted, it follows that any variation in the amount of money in the country is conditional upon a variation in the aggregate amount of cash held by the banks. The next problem to consider, then, is the method by which this cash is increased or diminished. There are only two ways of adding to or reducing the cash resources of the banks. The first arises from the action of the public. If less currency is required in circulation, and the surplus is paid into the banks, their cash resources are increased, and conversely, if more currency is required in circulation and larger amounts are withdrawn from the banks, their cash resources are reduced. There are daily fluctuations in the cash held by the banks due to this cause, but the variation on this account is of minor importance. Over longer periods of time, if trade is improving or declining, or if inflation or deflation is in active operation, the difference in the amount of currency required by the public may be considerable, and the consequent reaction on the cash resources of the banks will be of first-rate importance. I shall deal with this subject later on, but for the moment it is sufficient to note that the currency requirements of the public are the first cause of variation in the amount of cash held by the banks.

LOANS OR PURCHASE BY BANK OF ENGLAND.

The second and principal cause of movement is action by the Bank of England. We have already seen that every loan or investment by a bank creates a deposit, but a loan or purchase by the Bank of England has a further effect. It creates bank cash, or, in other words, adds to the bank's cash resources. Let me explain how this happens. Suppose the Bank of England invests a million in War Loan. The seller receives a draft for £1,000,000 and pays it into his own bank, which will consequently increase its balance with the Bank of England by that amount. Actually a million of bank cash will have been created which will become the basis of new bank loans. The repayment of a Bank of England loan or a sale of securities by that bank has the opposite effect. It cancels so much bank cash and forces the banks, unless they abandon their established ratio of cash to deposits, to call in loans or sell investments. The Bank of England may make loans or enforce repayment by modifying or increasing the severity of its terms. It may buy gold or sell gold; it may buy securities or sell securities. Every transaction of this kind leads to a variation in the amount of money in the country, and by this means exercises a powerful influence on trade.

MEANING AND IMPORTANCE OF MONETARY POLICY.

We can appreciate now the meaning and importance of monetary policy. Money, except the customary minimum which we carry in our pockets, is never left idle; it is always pressing for use. If there is more of it, trade is stimulated; if the amount is reduced, trade is depressed. One man may tell you to increase it indefinitely and keep trade booming. But if you do, prices will soar indefinitely. You will first suffer innumerable social evils, and finally the extreme depreciation of your currency will gravely impair your power to trade. Someone else may urge you to reduce the amount of money, and bring down prices to the pre-war level or to such other arbitrary level as he happens to think the right one. Yes, and trade will remain depressed and the unemployed will be with you all the time. Moreover, the burden of the National Debt with the higher value of money will become intolerable, and no Chancellor of the Exchequer will be able to balance his Budget. Inflation and deflation, the whirlpool and the rocks, lie on either side of us, and if we are to avoid shipwreck the controllers of our monetary policy must steer a middle course.

I should have hesitated to discuss a matter which lies in the province of the Bank of England, were it not that I share to the full the high respect and admiration for that institution which are felt not only in the City of London, but throughout the world. I disavow any thought of criticism; I am simply endeavouring to explain. The prudent policy of the Bank of England has been for scores of years the backbone of the credit structure of this country. No institution has ever been conducted over a long period of time with a more unselfish regard for the true interest of the public or with a stronger desire to maintain the highest principles of sound finance. But the Bank of England is not entirely a free agent, although the independence of the central bank of issue should as far as possible always be preserved. It

is less independent to-day than before the war. It is no longer the principal authority for the issue of paper currency. It is bound to conform to the requirements of the Government, and these requirements have expanded enormously with the growth of the debt and of national expenditure. The monetary policy which the Bank of England might wish to pursue may be overruled by Government necessities. All I can do, or wish to do, is to lay before you the considerations which must be present to the minds of those responsible for framing the policy.

TRADE REVIVAL DEPENDENT ON BROAD CASH BASIS.

I think it will be generally accepted that if the price-level be unchanged, an increase in the volume of trade will require an increase in the volume of bank credit and currency, that is to say, of money. The proposition stated in these general terms is, of course, subject to qualifications, none of which, however, really affect its essential truth. It takes no account, for instance, of a possible increase in the private credit given between traders, or of a quicker turnover which would enable the existing bank credit to do more work. The latter is, indeed, a factor of some importance, as if the banks sold part of their investments, and lent the proceeds to trade, turnover would certainly be accelerated. But in present circumstances I do not think it can be disputed that a considerable improvement in trade must take place before we are likely to have any great change in the rate of turnover or any noticeable increase in private credit, and we may therefore take the proposition as it stands without dwelling further on its qualifications.

Let me repeat my statement. If the price-level be unchanged an increase in the volume of trade will require an increase in the volume of money. You will observe that I say "if the price-level be unchanged," a condition which makes the proposition really a truism. For if trade improves, and more goods are produced, prices will fall, unless there is an increase in money. Purchasers with the same amount of money will be competing for a larger supply of commodities, and these conditions must inevitably bring about a drop in prices. It follows that when trade is improving and the unemployed are being absorbed into industry, if the price-level is to remain stable monetary policy should be directed to an increase in the supply of money.

AN ILLUSTRATION.

We can take an illustration from current events. Large orders have been given recently by the railway companies with the express intention of finding more employment. The firms which have taken these orders will require more credit from the banks for the purpose of paying wages and buying raw materials. If the banks are to give this credit and at the same time maintain their recognised cash standards, one of two things must happen: either their cash resources must be enlarged, or they must restrict their grants of credit in other directions. But if other borrowers for industrial purposes have their credits cut down, their capacity to trade will be reduced, and we shall lose in employment in their trades what we gain in employment on the railway orders. If there is to be an increase in the total of employment, the banks must obtain additional cash resources, and this can only be effected by the Bank of England letting out more money.

GREATER PRODUCTION ESSENTIAL CONDITION.

The essential condition to justify an addition to the supply of money is that a greater volume of goods should be in course of production. If more workpeople are employed more goods will be produced, and we have, therefore, in the movement of the figures of the unemployed one of the indications which should direct our policy. We must be careful, however, to recognise that the unemployed returns include a certain number of unemployable, and that when we get down to this residuum an additional supply of money will not be accompanied by an increase of production. The only result will be higher prices, and a true condition of inflation will arise. Shortly stated, the argument is as follows:—When national output is below productive capacity, the policy should be to let money out; when production is at a maximum, the outflow of money should be checked, and, if inflationary symptoms have appeared, money should be withdrawn.

We must remember that, however unpropitious trade conditions may be, human energy and enterprise are constantly striving for new markets, more effective organisation, easier and cheaper processes of production. Amongst an active and progressive people trade is always trying to recover, and it will get its way even in the most unpromising conditions if it be allowed free play. But no trade can stand up against a continued decline in the purchasing power of the public. Less money means lower prices or less production, or both, and orders will be withheld so long as there is an expectation that prices will fall. We have deliberately to make up our minds as to what we want. If we mean to get rid of unemployment we must have more money in existence to take

up the increased production; if we mean to reduce our present amount of money we shall not escape continued unemployment.

Ups and downs in trade we are bound to have, but wise monetary policy can always prevent the cyclical movement from going to extremes. The speculative excesses of an inflationary boom and the cruel impoverishment of a prolonged slump can both be avoided. They are not necessary evils to which we must submit as things without understandable or preventable cause. They may at least be mitigated, as, indeed, we can see from our own experience. Although we suffered from booms and slumps before the war, we never had them in the extravagant degree we have since endured. There existed in pre-war days a check which, though fortuitous and inadequate, sufficed at least to prevent the worst excesses. That check we have now lost. It arose from our monetary system, but it came to an end on the passing of the gold standard and the introduction of the Treasury note.

GOLD AS PRE-WAR BASIS OF CREDIT.

When we examine the actual working of our pre-war monetary system, we discover that the operations necessary for the maintenance of the gold standard had an effect extending far beyond the sphere of sound currency. The wider results may be regarded as a by-product, but the fact remains that these operations were a principal element in regulating the cash resources of the banks. I have already explained that an expansion of bank credit is an essential accompaniment of sustained trade revival; and, further, that additional bank credit requires an increased cash basis which can only be furnished by a loan or purchase by the Bank of England. Before the war gold was constantly flowing into London, and if it was tendered at a fixed price to the Bank of England that institution was compelled to buy it. Here we had a purchase by the Bank of England creating additional bank cash, and enabling the banks to make additional loans. The purchase was not made with this object in view; it was part of the working of the system with London as the world's free market for gold. But its effect nevertheless was what I have described. It is unnecessary now to discuss the measures adopted by the Bank of England to accelerate or retard the flow of gold. For our present purposes it is sufficient to observe that gold was, in fact, constantly coming into the country, and was bought by the Bank of England. The flow of gold into London provided a potential reserve which was always available as a basis for the creation of additional credit for trade purposes.

GOLD NO LONGER FUNCTIONS.

A particular feature in the working of the pre-war system stimulated the demand of the Bank of England for gold at the time when its purchase was most essential for trade expansion. If conditions were such that more currency was required in circulation, the Bank of England was compelled to buy gold in order to maintain its reserve with the necessary consequence of increasing the cash resources of the banks. But mark what happens to-day. Take the conditions as we actually know them. Trade has been bad for a long time, but signs of improvement have begun to show themselves. Bank advances have increased, with the inevitable result that there has been a demand by the public for more currency. We have already seen, however, that when additional currency goes into circulation, the cash resources of the banks are reduced and their power to lend is diminished. No gold is now bought, as formerly, by the Bank of England, and unless that institution makes additional loans or investments, there is an automatic throttle on the expansion of bank credit, and the trade revival must be brought to a standstill.

In present circumstances, therefore, it is only by wise action on the part of the Bank of England that the restriction on trade revival can be removed. The increase in bank deposits during recent months shows that monetary policy has been directed to creating the additional money necessary to carry a larger volume of production. Although external conditions have shown no amelioration, trade has been improving, and had this policy not been adopted, the growth of deposits would soon have been arrested for want of a sufficient cash basis, and the revival would have been checked. In existing conditions, conscious policy is necessary to achieve the results formerly produced by the machinery of our currency control.

BANK OF ENGLAND AND RIGHT OF NOTE ISSUE.

In the working of our credit system it would simplify matters if the right of note issue in England were again placed exclusively in the hands of the Bank of England, and for my part I would gladly see this done. I would go further and extend the monopoly to cover the whole of the United Kingdom, though I know this would raise the question of compensation to the Scottish and Irish banks, which now issue their own notes. The amount and conditions of what is called the fiduciary issue would have to be settled, and there might be a difference of opinion as to whether this sum should be fixed or should vary with the amount of gold

held in the issue department of the Bank of England. A competent committee, however, could be trusted to come to a right conclusion on this important point. In other respects I see no reason for thinking that the change would present any very serious difficulty. The reasons which existed in 1914 for issuing currency notes instead of extending the Bank of England's right of issue have no longer any weight, and we are not now concerned to determine whether those reasons were good or bad.

MONETARY INFLATION AND PRODUCTIVE CREDITS DISTINGUISHED

Before I conclude this part of my address let me make one further observation. Many people look upon any increase in the amount of money as inflation. They fail to observe the distinction between the different kinds of bank loans which create additional money and denounce them all in one sweeping judgment. When a Government shrinks from raising sufficient revenue by taxation to cover its current expenditure and makes good the deficiency by borrowing from banks, I agree that inflation of this kind deserves unqualified condemnation. It leads to a depreciation of the currency, and I need not dwell upon the social and commercial evils that must befall a nation in these circumstances. But a bank loan to a manufacturer or merchant, as the result of which more goods are brought into existence and placed upon the market, is on a different footing. In the first case the loan remains outstanding after the proceeds have been spent; in the second, when the goods have been produced and sold, the money received for them is available for repayment of the bank loan, or, to use a common phrase, the loan is self-liquidating. There is a distinct limit, however, to the justifiable creation even of productive credits. As soon as there is sufficient money to carry the full volume of production of which the nation is capable, no more should be created and the repayment of past loans should balance the extension of new ones. I hesitate to apply the term inflation to additional trade loans of this nature because of the evil associations of the word; but whatever name we give to this expansion of credit, it is indispensable to the proper functioning of our commercial system, and is imperatively needed when trade is depressed and unemployment general.

OUR OWN BANK.

I turn now to the story of the progress of our own bank. The past year has been eventful. In the first place we have made a most desirable alteration in our title, a change which has been generally approved by shareholders and customers. There is every prospect that our present short and distinctive name will assist us in the further expansion of our business.

Next, our connections with associated banks have undergone alterations as a result of two important developments, one of which is not yet completed. In view of the establishment of the Irish Free State as a self-governing dominion, the Belfast Banking Company resolved to dispose of the portion of their business which was carried on in that area. As you know, it is not the policy of the Midland Bank to own branches in territory outside the United Kingdom, and the managements of both banks were unanimously of opinion that there should be no departure from this policy in the present instance. A transfer was accordingly effected under which the twenty branches of the Belfast Banking Company situate in the Free State, together with the staff attached to them, were taken over by the Royal Bank of Ireland. It is not without regret that the Belfast Bank severed their connection with a valued and highly respected clientele, but they were happy to know that, in placing the affairs of their former customers in the hands of the Royal Bank of Ireland, they entrusted them to an institution worthy of the fullest confidence.

NORTH OF SCOTLAND BANK.

The second important development is the acquisition of a controlling interest in the North of Scotland Bank, Limited, particulars of which were announced last month. The transaction involves an exchange of shares, and already we have received offers which will result in our holding over 95 per cent. of the capital of the Scottish institution. By this fusion of interests we shall extend our influence over the northern part of Scotland, where the other Scottish Bank with which we are affiliated, the Clydesdale Bank, conducts but a small part of its operations. I think you will agree that this step will add materially to the facilities which we can offer our customers.

The North of Scotland Bank has a paid-up capital of £652,000, a published reserve of £800,000, undivided profits of £92,879, deposits of £20,528,331, and over 150 offices. After an investigation of the accounts we are satisfied that the terms of the arrangement between us are mutually advantageous, and that the transactions will be profitable to us. As a result of the new coalition we shall, in conjunction with our subsidiaries, be operating nearly 2,200 offices, all of which are situated in Great Britain and Northern Ireland. I believe this constitutes the most extended system of branches in the United Kingdom.

BALANCE-SHEET ITEMS.

Passing from this summary of events of domestic importance, I now turn to our balance-sheet, which has been circulated with the directors' annual report, and calls for brief mention before I conclude my address.

The amounts of our paid-up capital and reserve fund are unaltered as compared with a year ago. There will shortly be an increase in both items when the exchange of shares as between ourselves and the shareholders of the North of Scotland Bank is complete. The paid-up capital will then be increased by about £1,000,000.

CURRENT DEPOSITS AND OTHER ACCOUNTS.

In the course of twelve months current, deposit and other accounts have increased by nearly 6 millions to £360,267,723. The year 1923 started with prospects of some revival in trade, which unhappily were quickly doomed to extinction. In the autumn, however, business began again to improve, and, as I think you will agree, our own figures indicate that trade is now on a wider basis. I do not venture to prophesy, but I can say that if there is no interference with methods and systems built up on the accumulated experience of generations, we may look for a quite considerable expansion.

ACCEPTANCES AND ENGAGEMENTS.

The impression that trade is improving is confirmed at first sight by the notable increase in our acceptances and engagements on account of customers, but here I must warn you against a hasty conclusion. Our acceptances and engagements now stand at £36,552,607 as compared with £25,862,341 at the end of 1922, but the greater part of this increase is due to a rise in engagements resulting from the growing volume of business in forward exchange. In these days of widely fluctuating foreign exchanges it is greatly to the advantage of a trader to fix in advance his liability on account of commitments in a foreign currency, and the expansion in this branch of our operations reflects the growing familiarity of business men with the facilities which are offered to them. Perhaps I should add that the contingent liability of the bank in respect of these forward dealings is very much less than might be supposed. As it is our invariable custom to protect ourselves against loss by a compensating purchase or sale, it is necessary for bookkeeping purposes to include under our engagements two entries in respect of a single transaction. For example, if we sell dollars for delivery a month hence we immediately cover ourselves by purchasing forward dollars, and our books will show on the one side the bank's liability to deliver dollars, plus the bank's liability to pay for the dollars bought. On the assets side appear the compensating items, our customer's obligation to take up the dollars and the third party's obligation to deliver them. The actual increase in the acceptances, representing an improvement in the volume of foreign trade, amounts to £2,844,453.

ASSETS.

Turning to the assets side of the balance sheet coin, bank and currency notes and balances with the Bank of England amount to £54,298,126, giving a ratio of cash to deposits of just over 15 per cent. I have told you on previous occasions that it is our settled practice to maintain consistently a cash ratio of 15 per cent. to our deposit liabilities. In an institution such as ours it is impossible to strike a balance at the end of each day's business, but we have for many years drawn up a weekly statement complete in all particulars. The monthly average figures supplied by these statements are furnished regularly to the London Bankers' Clearing House and published in the Press. You have probably seen them from time to time, and you may have noticed that our cash ratio is invariably about 15 per cent. As a matter of fact, the weekly statements over the whole of last year show an average ratio of 15.04 per cent.

BALANCES WITH AND CHEQUES IN COURSE OF COLLECTION.

The next item, balances with and cheques in course of collection on other banks, stands at £14,959,762, or nearly 1½ millions higher than in 1922. These become cash in from one to three days.

MONEY AT CALL AND SHORT NOTICE.

Money at call and short notice is nearly one million lower at £16,187,565. The decline, however, is greater in investments, which are 13½ millions down on the year. Consideration of the next two items at once makes it clear that the funds released from investment have been utilised for the most part to finance industry.

BILLS DISCOUNTED.

Bills discounted have risen by over 12 millions to £58,418,748. The greater part of this increase, about 10 millions, has been in fine trade bills. Treasury Bills are a little higher on balance, and now amount to just under 9½ millions. I give this figure as there

is considerable speculation as to the exact whereabouts of the 650 millions of Treasury Bills outstanding, though our holding may not be indicative of the amount held by banks generally. In addition to the noteworthy increase in trade bills our advances to customers and other accounts have risen by nearly 6½ millions to a total of £188,737,732. The present figure, which does not represent the highest that has appeared in our published balance-sheets, shows that we are, as you know, essentially a traders' bank. We feel it incumbent upon us to assist our trading customers to the full limit of banking prudence.

INVESTMENTS IN AFFILIATIONS.

Investments in affiliations, though at present unchanged from last year, will be increased by the purchase price of the North of Scotland Bank shares, less part of the premium on our shares which we are issuing in exchange. The balance-sheets of our affiliated banks, circulated with our own report, may well give satisfaction to those responsible for the management of these institutions. In the case of the Belfast Banking Company there is a reduction of 2½ millions in deposits, due largely to the transfer I have already mentioned. A new item introduced in consequence of this transaction is the special account amounting to £100,000. This sum represents a part of the purchase price of the branches sold to the Royal Bank of Ireland, and the intention is to apply it to the payment of a portion of the uncalled capital of the Belfast Banking Company.

THE CLYDESDALE BANK.

The deposits of the Clydesdale Bank, in common with those of other Scottish Banks, have fallen somewhat during the year. They now stand at £31,319,196. Trade accommodation has been in no way curtailed, the reduction in deposits being balanced in the main by a compensating fall in investments. Advances have increased slightly and bills discounted are practically unchanged. It is proposed to increase the capital of the bank by £100,000 by the issue to present shareholders of 10,000 shares of £10 each, fully paid, ranking *pari passu* with the existing shares, and to apply £100,000 from the reserve fund in payment of the new issue.

EXECUTOR AND TRUSTEE COMPANY.

The balance-sheet of the Executor and Trustee Company shows that the business of this important adjunct of the bank continues to expand.

BANK PREMISES.

Bank premises stand at the higher figure of £5,492,249. The opening of new branches and rebuilding and other improvements increase the total cost, but our policy of making appropriations from profits to bank premises redemption fund ensures that the balance-sheet figure is well below actual market value.

PROFIT AND LOSS ACCOUNT.

If you will now turn to the profit and loss account you will see that our net profit is £2,210,972, a reduction of about £43,000 on the previous year. The figure has been arrived at after making every possible allowance which the most prudent and penetrating scrutiny of our accounts could dictate. Together with the amount brought forward from the previous year, we have a total of £2,999,939 for appropriation, of which the dividend, at the usual rate of 18 per cent., less tax for the year, will absorb £1,502,870.

ALLOCATIONS.

Out of the balance £300,000 has been transferred to reserve for future contingencies, a sum less by £200,000 than the amount devoted to this fund out of the 1922 profits. Inasmuch as we find ourselves on what we may well hope is the threshold of improving trade, and in view of the great strength of our position, it is felt that there is now no occasion to make provision for contingencies on the same scale as was made in the four preceding years. On the other hand, it has been decided to increase by £100,000 the amount transferred to bank premises redemption fund, and £400,000 has been allocated to that purpose. This leaves a slightly increased balance of £797,069 to be carried forward into the current year.

TRIBUTE TO MANAGING DIRECTORS AND STAFF.

I should be lacking in recognition of the obligation of my office as chairman if I failed to perform what is always to me a most agreeable duty. I am indeed fortunate in being able to combine with that duty an expression of personal esteem for the manner in which the staff of the bank have assisted our managing directors, Mr Hyde and Mr Woolley, in producing what must be to you, as it is to me, a most satisfactory result of the year's working. With conspicuous managerial ability supported by the loyal and unremitting services of a competent staff, such a result is less a matter for surprise than for sincere gratitude to those who have achieved it. We have a staff of whom we are proud.

THE FUTURE.

In conclusion, it is not perhaps too much to say that the indications are that we are nearing the end of a most trying period. I have already remarked that the recent depression has been unprecedented in its length and severity. But I am hopeful that we are now on the way to recovery. We have been travelling along a difficult path over a country which to a considerable extent is unmapped, but I trust that our recent experience will equip us better to meet the difficulties we have still to face. Unfortunately we cannot yet claim that peace in its fulness has been restored to a war-stricken world. But the signs are not unpropitious, and inspired by the memory of difficulties overcome in the past I look forward with confidence to the future.

The Chairman then moved the adoption of the report. This was seconded by Mr W. G. Bradshaw (deputy-chairman), and was carried unanimously.

The motion declaring payable a dividend at the rate of 18 per cent. per annum was seconded by Mr W. G. Bradshaw (deputy-chairman).

The Right Hon. Lord Carnock, G.C.B., and the Right Hon. Lord Airedale, retiring directors, were re-elected, as also were the auditors, Messrs Whinney, Smith and Whinney.

Mr J. A. Aiton, of Derby, proposed that the thanks of the meeting be presented to the chairman and board of directors for their careful attention to the interests of the bank. The resolution was seconded by the Hon. S. F. Ormsby-Gore.

THANKS TO MANAGING DIRECTORS, GENERAL MANAGERS, BRANCH MANAGERS AND STAFF.

Mr W. G. Bradshaw (deputy-chairman), in moving the thanks of the meeting to the managing directors, general managers, branch managers, and all other officers of the bank for their continued devotion to their duties, said:—

I have had the privilege of moving this resolution almost every year for the last thirty years, and in consequence find it difficult to say anything fresh on the subject. On the other hand, I have no temptation to look upon it as a merely formal motion, for I find that my regard and admiration for the ability and devotion of the staff of the Midland Bank increases with the passing years and the opportunities which come to me of seeing their work.

Our energetic and devoted staff have taken full advantage of the admirable system of training instituted by the late Sir Edward Holden, and since continued and developed by our managing directors, the late Mr Murray, whose memory we all regard with pride and affection, and Mr Hyde and Mr Woolley. We have as a result a trained body of bankers unsurpassed, and, I venture to think, unequalled anywhere for sound knowledge, foresight, prudence, enterprise and resourcefulness.

DEPARTMENT FOR STAFF MATTERS.

Within the last few years our chairman and the managing directors have inaugurated a most successful staff department which deals with all matters connected with the personnel of the bank, supplies the managing directors with the facts concerning every man's ability, conduct and experience, and ensures, in a manner which would otherwise be impossible in the case of a staff so large as ours, that no man's claims or merits can be overlooked. This department has afforded our officers and clerks spread over the length and breadth of the country much satisfaction and given them complete confidence in the management of the bank. The staff association continues to work smoothly and efficiently, and forms a valuable connecting link between the staff and the management.

STAFF'S ESPRIT DE CORPS.

Esprit de corps has always been a notable characteristic of the members of the Midland Bank staff, and I do not exaggerate when I say that for loyal and enthusiastic service our personnel, both at the head office and the branches, is unexcelled. You have already expressed yourselves as gratified with the results of the past year. Slack trade and industrial depression made 1923 an onerous and trying time for all concerned in banking operations. The favourable position submitted to you to-day could not have been attained without the strenuous efforts and devoted work of all ranks of the service, from the highest to the lowest. We owe our grateful thanks in larger measure than ever first to our managing directors, Mr Hyde and Mr Woolley, upon whom the mantle of Sir Edward Holden has fallen in full and abundant measure. They have inherited his expert knowledge, his prudence and foresight, and the remarkable combination of enterprise and caution which characterised him, and they have developed and adapted these qualities to the exacting requirements of post-war banking. We owe our acknowledgments also in like manner to the general managers and all the members of the staff, whose exertions and ability have contributed to the prosperity and success of our bank.

The name of our chairman does not, strictly speaking, fall within the terms of this resolution, but I may, perhaps, be allowed to say that his conspicuous talents, his firm grasp, and illuminating exposition of financial principles, his unsurpassed business ability, and his generous sympathy with all with whom he comes into contact in the bank have inspired and given strength and encouragement to those over whom he presides.

We are proud of our chairman, and thankful that the bank has been fortunate enough to retain his services. Long may we keep him at the head of the bank.

Col. W. F. Wyley seconded the resolution, which was carried with acclamation.

MANAGING DIRECTOR'S REPLY.

Mr Frederick Hyde (joint managing director), in reply, said:—

It is my privilege on behalf of the staff to thank you for your vote of thanks, and for the very generous terms in which it has been submitted.

The good results we have been able to place before you to-day have been obtained by the united efforts of over 11,000 men and women all working together with a common object, the conscientious discharge of duty, and the determination to uphold the great traditions of the institution with which we are all proud to be associated.

Your appreciation of our efforts will provide an added incentive to us all to continue to do our best in the interests of the bank.

The proceedings terminated with a vote of thanks to the chairman, proposed by Mr. James Fairbairn, and seconded by Mr. W. Scoles.

PROVINCIAL BANK OF IRELAND, LIMITED.**CONDITIONS IN IRELAND—IMPROVED OUTLOOK.**

The annual general meeting of the Provincial Bank of Ireland, Limited, was held on the 23rd inst., at 8 Throgmorton avenue, London.

Mr Richard D. Trotter, who presided, said that the net results for the half-year ended December 31, 1923, showed a profit of £61,084, as against £62,917 for the corresponding period of 1922, and after providing for a dividend of 10½ per cent., free of income-tax, which involved a slightly larger payment than the rate distributed twelve months ago, £25,000 had been added to the bank's reserves, and £7,500 had been applied to reducing bank premises account. On the working of the year 1923, £50,000 in all had been allocated to reserves and £15,000 to bank premises. The profit and loss account afforded satisfactory reading, indicating, as it did, that the earning power of the bank had been well maintained, and its position had been materially strengthened. Deposits had fallen on the year by £1,175,467 and circulation by £204,712, while cash and investments were lower by £1,114,427 and advances by £260,377. The liquid assets of the bank continued to be maintained at the satisfactory ratio which had been a feature of their accounts for many years. The market value of their investments at the present time showed a surplus over the book cost, and a substantial proportion of the holdings consisted of short-dated securities of a marketable nature.

The gratifying response to the issue of the Irish Free State loan had supplied most encouraging evidence of a growing spirit of confidence in the stability of the Irish Free State and its Government, and that feeling would be carried further when due importance was attached to the assurances of the President and his responsible Ministers of their intention to regulate effectively State expenditure and income until the National Budget was balanced. The Government had shown itself strong, firm and sympathetic, with the result that the majority of the people were with them and the law was respected by most of the citizens. The courts were functioning, and debts which at one time appeared doubtful were now being paid and most obligations met in a satisfactory manner. It spoke well for the future stability of the nation that the national loan now stood in excess of its issue price. The improved credit of the Free State and the growing strength of Mr Cosgrave's Government encouraged the hope that, when any future loan had to be issued, it would meet with an equally satisfactory response, and, furthermore, the employment of capital would be stimulated. The period under review had been a difficult one for traders and farmers. Generally speaking, however, the improved conditions in the Free State and settled conditions in Northern Ireland gave reason for the hope that Ireland, as a whole, was moving towards a prosperous future.

The report was unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

THE MANCHESTER & LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

SIR CHRISTOPHER NEEDHAM'S TRADE REVIEW.

FAVOURABLE OUTLOOK FOR CURRENT YEAR.

NECESSITY OF EUROPEAN SETTLEMENT.

NEED FOR STABILITY IN FOREIGN EXCHANGES.

The annual meeting of the shareholders was held at the head office, Spring gardens, Manchester, on January 25, 1924, the chairman, Sir Christopher T. Needham, presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said:

I assume that you will take the directors' report as read.

THE DIRECTORATE.

As you will have seen from the report, Mr H. J. Coulston, who has been a director since 1919, has felt compelled to resign his seat on the board owing to indifferent health, and we are, therefore, losing his services as a director from the Lancaster district. Sir Drummond Fraser is, I regret, not with us to-day. He has been resident for some time in the South of England, and he does not seek re-election as a director. The board two years ago acknowledged the valuable services rendered by Sir Drummond Fraser as managing director, and I wish to avail myself of this opportunity to express again our appreciation of the value of the work done by him for the bank.

You will have seen from the report that Sir William Peter Rylands has been appointed a member of the board. I am certain he will be able to give good service to the bank, and I have no doubt that you will approve the appointment. I would like to recall to you that his father, Mr Peter Rylands, M.P., was a director of the bank from 1866 to 1887.

UNEMPLOYMENT.

In reviewing the trade of the country as a whole, it seems clear that during the year 1923 we made some progress towards more satisfactory conditions, and that we are emerging from the depth of one of the most serious depressions that the country has ever experienced. The statistics with regard to unemployment are less unfavourable than they were a year ago, and although the number of unemployed still to be reabsorbed into industry is grievously large, it is three-quarters of a million less than the peak figure of June, 1921. The number of unemployed registered at the end of December was over a million and a-quarter, which roughly represents the increase in the number of workpeople available for employment now as compared with the number before the war. An index of trade activity is to be found in the railway returns, and for the year 1923 it is estimated that the total tonnage carried by the standard gauge railways of Great Britain was about 344 millions, as compared with 303 millions during 1922. There has also clearly been a growth of road motor traffic during the past year, so that it is certain that the increase in total weight of commodities moved throughout the country during the last year was considerable. Taking 1913 as a standard year, the 1923 railway tonnage is about 93 per cent.

[HOME AND OVERSEAS TRADE.

The total of our overseas trade has been larger, and it would appear that our domestic trade has been well maintained in volume. It is not possible to obtain accurate figures with reference to our domestic trade, for we are unfortunately without reliable data. We have a great deal of information concerning our import and export trades, and knowing as we do the vital importance to the country of the value of our export trade in providing us with food, raw materials, and other imports, we are too apt to fix our eyes almost solely upon it as a measure of our progress. But though the figures of the home trade are undoubtedly greater than those of our overseas trade, we have no precise information to guide us. We know the statistics of the coal, iron, and steel trades, and we have much information about cotton and wool, but there is very little accurate data available of other important trades. There are no details of the stocks on hand at any moment of any important commodity, and there is little indication of the volume of retail trade. I know that organisations representing various trades make their own trade investigations, but these results are not made public. The last census of production was taken in 1907, and I hope that it will not be long before another is taken, so that we may have fuller information of the trade of the country.

COAL, IRON AND STEEL INDUSTRIES.

The coal, pig-iron, and steel industries showed marked improvement. The output of coal, which almost reached maximum figures, was 280 million tons. The number of unemployed in this particular trade fell to 2.6 per cent., the lowest percentage of unemployment in any of our great industries. The production of pig-iron, amounting to 7,438,500 tons, showed a gain of 2,536,200 tons over that of 1922, but it was still only 72 per cent. of the 1913 production. On the other hand, the increased production of 2,600,000 tons of steel over that of 1922 represented a gain of 10 per cent. over the figure for 1913. But even this larger tonnage did not keep the steel works running full time, and in many cases the financial results were unsatisfactory. There is still much unemployment in the iron trade. It will be remembered that the requirements of the war forced us to make larger extensions of plant, and brought larger numbers of workers into the various fields of the iron and steel trade. We, therefore, require much more business to occupy the now existing plant, and to re-absorb the workers. At the present time the trade has better orders than it had a year ago. There has been a valuable impetus given to the iron and steel trade as a result of the development schemes of the railway companies and various public bodies. It is pleasing to note that shipbuilding is gradually reviving.

THE COTTON TRADE.

The cotton trade has unfortunately experienced another year of great difficulty, particularly in that section of the trade using American cotton. For the third year in succession there has been a short crop of cotton, with the inevitable result of high and rapidly fluctuating prices. During the greater part of the year the mills were working short time. There was, however, an improvement in the Egyptian spinning section, and during the latter half of the year the mills engaged on fine yarns worked full hours with profitable results. The firms engaged in the finishing processes, although not fully employed, were also able to secure satisfactory financial returns. The cotton export trade statistics indicate the extent of our diminished trade. We exported last year 4,141 million square yards of cloth and 145 million pounds of yarn. These quantities show a diminution of 45 per cent. and 30 per cent. respectively, as compared with the quantities exported in 1913, and they indicate the extent of under employment and unemployment in the cotton trade during 1923. Although the values have been high, the quantities exported have been comparatively small, and this fact reminds us of one of the difficulties which Lancashire has had to meet.

EXPORTS TO INDIA.

As regards our cotton export trade to India, when we remember that while the Indian cultivator has been obtaining for his produce—food grains, oil seeds, fibres, hides, skins, &c.—about 30 per cent. to 40 per cent. more than pre-war, he has had to pay at the same time about 170 per cent. in excess of the pre-war price for cotton textiles, it is not surprising that India's orders for cotton goods have been reduced in volume. India has had three good monsoons, with correspondingly good crops. Her public finances are carefully looked after and, in spite of the losses due to the slump of 1920-1921, she is much stronger commercially and financially than before the war. The trade balance is in her favour, the rupee has advanced considerably, and as a whole she has increased her buying power. But we have to remember that the millions of individual units who make up the buying power have great capacity for "doing without" cotton textiles when prices are too dear.

INCREASING EMPIRE-GROWN COTTON.

In considering the cotton trade as a whole, the danger of being too dependent on American supplies of cotton must be realised by all. The British Cotton Growing Association has done, and is still doing, excellent work, but it is clear from its operations and from other experience that to increase the supply of cotton adequately from additional sources will take time. A feature of the past year is the Act of Parliament levying compulsorily, but with the goodwill of the cotton trade, 6d per bale for the purpose

of increasing Empire-grown cotton. To solve the problem of increased cotton supplies for the Lancashire mills will require not only the best efforts of those who are engaged in the trade, but also the research work of our ablest scientists. It will also involve much capital, and the exercise of much patience. It is worth noting that India has made a levy of 4 annas a bale, and that she is working through the Indian Central Cotton Committee to improve the staple of her cotton and to extend its growth. It is thought that Brazil is a country from which an increased production of suitable staple can be expected, but wherever the cotton is grown it should be welcomed by Lancashire. We are living in a highly competitive world. The war gave an impetus in many countries to the tendency to industrialisation, and to the desire to supply their needs from their own resources. If England is to maintain her position in the cotton textile trade, and, indeed, in other trades, she will need all the advantages which skilled scientific research can give her.

THE NEED OF A EUROPEAN SETTLEMENT.

The question of reparations still remains unsettled, though a settlement is vital for the restoration in Europe of that confidence without which our trade and commerce must still move haltingly. It is therefore with increased hope that we welcome the appointment by the Reparation Commission of the two Committees of Experts, on which there are serving American, Belgian, British, French, and Italian representatives. Although the terms of reference unfortunately do not cover the whole field, the findings of the Committees on methods of stabilising German currency, balancing the German budget, and on the question of exported German capital can hardly fail to be a valuable contribution to the problem of European settlement. The French have had a year's experience of the Ruhr at great expense and disappointment to themselves. There now seems to be reliable evidence that the pressure of realities is being felt, and this should make a settlement of the reparation question less difficult. When this is accomplished international confidence will revive and loans on an important scale will be possible. We witnessed in the Austrian loan of last year what can be done by agreement and confidence. With confidence re-established England will once more be called upon for financial assistance, and this should result in an increased overseas trade.

A MORE FAVOURABLE OUTLOOK.

The outlook generally is not without some favourable signs for this year. Although it is not possible to speak confidently of the European situation, including that of Russia, there still seems to be ground for thinking there is a growing tendency to "settle down." There were good crops in various parts of the world, which should have a beneficial reaction, and if we have industrial peace it should be within our power to obtain a progressive share of any increase in world trade.

FOREIGN EXCHANGES.

Whatever indication there may be of improvements in this or that quarter, it becomes increasingly evident that we cannot attain to a position which can be regarded as satisfactory in the absence of at least some measure of stability in the foreign exchanges. Some attention has been given of late to the proposal enunciated by a brilliant group of economists which aims at the stabilisation of prices through the raising or lowering of the rates charged for money. The objections and practical difficulties to anything of the kind are at once apparent, and in any case there is to-day, so far as the trade conditions of the world are concerned, no place for experiments, and there is in my view clearly no alternative but to get back to the pre-war basis of foreign trade—that is to say, to get back to gold as the ultimate means of discharge of international trade obligations. To attain to this end it is, of course, imperative that the nations concerned should cease to multiply their currency, a procedure which in its results makes a return to a gold standard utterly impossible. An antecedent condition is the balancing of budgets, but if we consider the course of events in Austria—not so long ago in a financial condition apparently little short of desperate—we have some ground for hope that a determined attempt to achieve financial equilibrium may result in stability being attained even in the case of those nations whose currency, in relation to sterling, is reckoned in hundreds of thousands or millions.

A FIVE YEARS' RETROSPECT.

A retrospect of the five years which have elapsed since the Armistice following the war gives a sense of disappointment—of disillusionment. We have been inclined too readily to assume that peace would restore to us the industrial and economic conditions which we had come to regard not only as essential to our well being but as natural, forgetful of the fact that the war and the events following the war threw out of gear the delicate mechanism evolved through the course of years upon which our complex in-

BUT DOES IT PAY?

This is the title of a new leaflet of particular interest to all Business Men, demonstrating as it does the Investment Value of "GLOBE" Life Assurance Policies.

A copy will be sent by return of post upon your request.

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

dustrial system is based. The chaotic conditions in which we consequently find ourselves to-day have been productive, naturally enough, of discontent, which we find reflected in a desire in certain quarters to adopt remedies of heroic nature the consequences of which do not seem to have been fully considered. In truth, there is no short cut to a return to national and industrial prosperity. The problem of employing fully our increased population and of maintaining the desired standard of life is a very big one. We cannot control world events which have so intimate a connection with our trade, but to the solution of the problem we can contribute hard work, efficiency of production, and a recognition of the fact that capital and labour have identical interests and must act together in the closest co-operation. As to the effects of the important change of Government which has taken place this week, I would only say that, in my view, judgment should wait upon events.

THE ACCOUNTS.

Turning to the accounts which are in your hands, you will observe that the year ending December last showed a profit of £428,606; this is after making ample provision for all bad and doubtful debts. The corresponding figure for 1922 is £465,245, but the profit is, of course, larger for 1923, for the reason that before showing the profit for that year we have deducted the bonus paid to the staff, instead of taking it, as on previous occasions, from the amount brought forward. The board consider that any bonus to the staff should be included in expenses, and we propose so to consider it in future accounts.

INCREASED CARRY FORWARD.

We make no appropriations apart from the dividend, with the result that we increase our carry forward from £267,833 to £348,839. It may be asked why we have increased our carry-forward to such a figure instead of making an appropriation to published reserve. On this point I may say that the board are unanimous in their view that having regard to the unsettled state of trade in this country, it is desirable to maintain a strong position in relation to the amount brought forward rather than to reduce that amount by any specific appropriation. We are confident that this course will have the approval of the general body of shareholders.

CURRENT AND DEPOSIT ACCOUNTS.

In common with other banks, our current and deposit accounts show a drop from the previous year—the difference in our own case being some £2,000,000. The tendency has been for a general reduction in bank deposits, owing to the reducing amount of the Government floating debt. Whether the Budget conditions will allow of any very material reduction of Government obligations in the course of the present year is to my mind doubtful.

Our acceptances, standing at upwards of £3,000,000, compare with £1,600,000 a year ago; this is mainly owing to the greater extent of our acceptances for the cotton trade.

VALUE OF THE BANK'S PROPERTIES.

With regard to the bank property item—namely, £500,000—I and my predecessors have already alluded to the fact that this does not represent by a very long way the actual value of the properties belonging to this bank. I may say that we are constantly adding to and improving our properties. We are engaged now in the rebuilding of our London office, and we propose to add to our bank property item in the balance-sheet the cost of this rebuilding, together with the cost of any material purchases and

bank alterations which we may undertake in the future. The item as it stands at present is, in fact, far smaller in relation to capital and to deposits than that of any other bank.

NEW LONDON OFFICE.

On the subject of our London property, I may say that by the end of June we hope that our new building in Cornhill will be completed. It will give us not only very extended accommodation for our own London business, which is always growing, but will also provide in the upper floors office accommodation from which we hope to obtain a rental which will give us a fair return on the total cost of building. Our building itself will be a very handsome one, having regard to the ground at our disposal, and I hope that any shareholder who may be interested will take an opportunity after June next of calling at our London office to view the premises.

CHANGE OF NAME.

The last matter I have to mention is the proposal to change the name of the bank to District Bank, Limited. This proposal will be the subject of an extraordinary general meeting to be held at the conclusion of the present meeting.

The Chairman then moved the adoption of the report and balance-sheet. This was seconded and carried.

The retiring directors were re-elected, and the auditors, Messrs. Halliday, Pearson, and Co., were reappointed.

After the usual votes of thanks the meeting terminated.

IONIAN BANK, LIMITED.

FINANCIAL MEASURES UNDER NEW GOVERNMENT.

The ordinary general meeting of the proprietors of Ionian Bank, Limited, was held on the 22nd instant, at the offices of the company, Basilston House, Moorgate, London.

Sir John Stavridi, who presided, in the course of moving the adoption of the report, said: Since our last meeting the sanction of the Court of Chancery has been obtained to our new memorandum and articles of association, and we are now working under a constitution as up-to-date as any in existence. During the period under review peace between Turkey on the one hand and Greece and the Allies on the other has, at last, been signed at Lausanne on July 24, 1923. So far as Greece is concerned, she has been at

war for the last eleven years, and, although the Treaty is still unratified, no one will welcome peace more than her people do. For us Greece is one of our important fields of activities, and we hope and trust that this time of peace will be anxiously seized upon by those in authority to begin, without a moment's delay, the reforms, political, financial and social, of which the country stands in such dire need.

I can assure you, gentlemen, that your directors saw the year 1923 pass out of sight with a sense of relief. It has been for Greece one long nightmare of revolution, counter-revolution, civil war and financial chaos, and we feel convinced that, whatever the future may have in store for that long-suffering nation, nothing can well be worse than the year 1923. To have come through all these trials and tribulations without serious loss and to be able to maintain our dividend and add materially to our reserves is a source of real satisfaction.

UN SOUND TAXATION.

Shortly after the commencement of the financial year under review the Revolutionary Government came into power. At first its administration of the country was conducted on conservative lines. During the last six months, however, this policy changed, and the Government brought forward four undigested measures of taxation which have caused grave prejudice to the country and destroyed the prestige of the Government. These measures were: (1) Increased taxation of limited companies; (2) Confiscation of the gold funds deposited with the banks; (3) Capital levy; and (4) Taxation of business turnover. The first three were actually put into force after some more or less serious modifications of the original proposals; the fate of the fourth, however, remains still undecided, but I trust that for the sake of the welfare of the commerce and industry of the country it will be finally abandoned.

Under the Revolutionary Government the finances of Greece have gone from bad to worse. It had been hoped that, on the advent of peace with Turkey, the military expenditure would be cut down to the absolute minimum. So far from this being done, it would appear, from the Budget forecast for the year 1923-24, that the military expenditure accounts for two-thirds of the extraordinary expenditure of the State. The only hope of salvation for the country is the drastic reduction of this item, and it is to be hoped that the new Government which has just been formed will take the matter in hand without fear and without delay. Even if to-day a stop were put to the army expenditure, there would be

a long uphill struggle before Greece could repair her finances, and if this is not done the position is bound to become extremely serious, for the annual Budget deficit is growing at an accentuated pace. The financial measures which were adopted in order to balance the Budgets of 1921-22 and 1922-23 cannot be repeated. Greece cannot stand another forced loan, nor can she stand another doubling of the income-tax. Such financial measures are emergency measures, and justifiable only during war time. And even if it were possible to borrow in order to meet the 1923-24 deficit, such a step could not be regarded as a solution of the problem. The country cannot afford her present rate of extraordinary expenditure, nor to borrow in order to meet such expenditure.

TAXABLE CAPACITY OF THE COUNTRY.

As to the taxable capacity of the country, it is difficult to speak. The revenue returns certainly display extraordinary elasticity. The actual revenue receipts for the year 1922-23 show an ordinary or taxation revenue of drs 1,593,964,924, as against drs 920,000,000 for the preceding year, or an increase of nearly 60 per cent. in a single year. With regard to the drachma exchange, as things are at the moment this question turns entirely upon public finance. If the exchanges were not being manipulated, and if Greece could cut off completely her extraordinary Budget, and so prevent the necessity of forced issue of paper, and thereby the depreciation of the drachma, the problem of the exchange would be comparatively simple. Greece has to meet two exchange demands. Firstly, on the service of her debt borrowed in gold. Secondly, for the needs of her commerce. The service of her gold debt is by no means a formidable item. The total interest payable in gold hardly exceeds £24 millions. If, as I sincerely hope, Greece can remain at peace and enjoy the fruits of a strong and stable Government, whose aim should be reconciliation and retrenchment, I see no reason to despair of the future of the country.

Mr Charles S. S. Guthrie seconded the motion, which was unanimously agreed to without discussion.

AUSTRALIAN PASTORAL COMPANY, LIMITED.

WORLD SHORTAGE OF WOOL.

The ordinary general meeting of the Australian Pastoral Co., Limited, was held on the 22nd instant, at Cannon Street Hotel, London, Mr Francis A. Keating (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said these showed a substantial improvement over those of the previous year, and enabled the board not only to recommend an increased final dividend, but also to add £20,000 to their reserves and carry forward a considerably increased sum. The reserves and carry forward a considerably increased sum. The main cause of the increased profit was the higher price realised for their wool. The wool clip, although in number of bales almost exactly the same as in the previous year—6,817 bales, as against 6,880—had realised over £7 a bale more than the previous clip—£33 9s a bale as compared with £25 18s—which meant an increase in revenue of nearly £60,000. There was every probability that the present favourable price of wool would continue for a long time to come. Indeed, something like a veritable wool famine confronted the world in the near future. During the last two years the shortage in supply had been made good from the large stock of 2,600,000 bales which was in the hands of the British Government at the end of the war, and was transferred to Bawra for sale. That stock was now nearly exhausted, and the market would then have only the current production to look to. It appeared certain that the world's supply of wool in 1924 would be nearly 20 per cent. short of the quantity which the world consumed in 1923, and that shortage was likely to become greater as years went on.

REASON OF REDUCTION.

The reason of that progressive reduction lay in the fact that everywhere, as population and settlement increased and facilities of transport improved, it appeared to be an established principle that sheep-breeding decreased and various forms of mixed farming took its place. In Australia the result of the breaking up of large grazing estates and the growth of small holdings was not only a gradual diminution in the total number of sheep, but a still greater proportionate diminution in the growth of merino wool, of which, owing to the peculiar suitability of its pastures and climate, Australia had in the past enjoyed almost a monopoly, and a very valuable monopoly.

It seemed as if before very long wool might afford an interesting demonstration of the truth of the Malthusian theory, that the world's supply of natural products necessary to man would fail to keep pace with the growth of its population. The only serious competitor with wool for clothing purposes was cotton, and the tendency of cotton also at present was towards diminishing quantity and higher prices, while among the Western nations it was very doubtful whether, where wool was at all obtainable, cotton

would ever take its place or displace the preference for wool, which was based both on custom and hygiene. They might look forward with confidence to high prices for all the wool they produced for many years to come.

LAND ACTS AMENDMENT ACT.

The nature of the issue between the Queensland Government and the pastoral lessees of the Crown in that State was now pretty well known. Briefly, it was as follows. Like other pastoral lessees in Queensland, they held their leaseholds from the Crown for fixed periods on conditions embodied in Land Acts, and the leases specifically stated that they were issued subject to the provisions of these Land Acts. In 1915, however, the Ryan Government in Queensland, having come to the conclusion that the restriction of rents was too favourable to the pastoral lessees, entered upon a campaign to remove this proviso, and in 1920 the Land Acts Amendment Act, commonly known as the Repudiation Act, was passed, which took away from the pastoral lessees, without compensation, and in face of their continuous protests, the limitation on increases of rent which they had previously enjoyed. This was made retrospective as far back as 1914, so that they had to pay large sums as arrears. Up to the present this company had had to pay in increased rents and arrears since 1920 over £50,000 more than the maximum they could have been called upon to pay under the leases. Their annual rents were now between £5,000 and £6,000 a year higher than they could have been under the leases, and when the next reappraisements were made there might be a further and indefinite rise in those rentals, the extent of which they could not forecast.

This was a plain unbiassed statement of fact, and if it did not disclose a breach of contract legalised by Act of Parliament, he did not know what a breach of contract was. That they should accept it in silence was surely more than could be expected of them. Mr Theodore, the Queensland Premier, was now on his way to this country, and his view was that whatever their feeling might be as to the hardship they suffered in consequence of the Repudiation Act, they ought to suffer in silence because Queensland was obliged to make certain financial arrangements in connection with maturing loans. Mr Theodore misjudged the British character if he imagined that thousands of British shareholders in Anglo-Australian companies would submit in silence to what they regarded as a great wrong merely because he had the power to inflict still further injury upon them if they continued to protest. The report and accounts were adopted.

E. W. TARRY AND CO., LIMITED. IMPROVED YEAR'S TRADE.

The annual general meeting of E. W. Tarry and Co., Limited, was held on the 22nd instant at the Cannon Street Hotel, London, Sir J. Fortescue Flannery, Bart. (the chairman), presiding.

The Secretary (Mr W. B. Allison) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that a year ago he had a very disappointing story to tell the shareholders, following the strike, the attempted revolution in South Africa and the dislocation of trade, which was the inevitable consequence. Not only he himself but other shareholders then expressed the fullest confidence in the ultimate renewal of the prosperity of the old-established business of E. W. Tarry and Co., and the report and balance-sheet now submitted showed that the revival during the twelve months under review was satisfactory. The result of the trading of the company for

SILVER.

During the early part of the week under review the market was overshadowed by the political situation, and business was much restricted. Indian operators have, on the whole, been disposed rather to sell than to buy, whilst the appreciation of the dollar has hindered sales from America. Support came from China by way of orders for forward delivery, and there has been some bear covering. As a result, the decided, though by no means heavy, inquiry on a poorly supplied market tended to bring about higher prices. Now that the political situation is clearer, the dollar exchange has moved in favour of this country. This caused to-day a setback in the quotations. We understand that 49,800,000 ounces were purchased under the provisions of the Pittman Act by the United States Government during 1923. The Bureau of the United States Mint, with the co-operation of the United States Geological Survey, have made a preliminary estimate of the refinery production of silver in the United States during the calendar year 1923 as 72,611,200 ounces, valued at \$59,541,184, an increase over 1922 of 16,371,200 ounces—over 29 per cent. This output has been exceeded only in the years 1915 and 1916, that during the former year—74,961,075 ounces—being the record for the United States. Utah's silver output of over 20,000,000 ounces, nearly 28 per cent. of the whole, is the record production of any single State for any year.

Reports and Notices.

The British Oak Insurance Co., Limited, announces that it has not been and is not connected in any way whatsoever with the British Oak House Purchase and Insurance Corporation, Limited, which latter company appears in the list of companies dissolved or struck off the register during the years 1922 and 1923.

Messrs R. Nivison and Co. announce that for reasons of health Mr. Horace Hubert Scott has retired from the firm.

At the half-yearly meeting of the managers of the Associated Scottish Life Offices, Mr R. Hill Stewart, general manager and actuary of the Caledonian Insurance Company, was elected chairman, in place of Mr W. Hutton, whose term of office has expired. Mr A. G. R. Brown, assistant secretary of the Life Association of Scotland, was appointed honorary secretary.

G. Street and Co., Limited, the well-known financial and general advertising agents, are removing from their City office, 30 Cornhill, on January 28th, to new premises at No. 6 Gracechurch street, E.C. 3 (Cornhill end).

At a general meeting of the Life Offices' Association held on January 21, 1924, Mr A. Digby Besant, B.A., general manager and actuary of the Clerical, Medical, and General Life Assurance Society, was re-elected chairman, and Mr H. M. Trouncer, M.A., actuary and manager of the London Life Association, Limited, was re-elected deputy-chairman.

New life business for 1923 completed by the London and Scottish Assurance Corporation, Limited, amounted to £1,474,232 in sums assured, the premiums thereon being £67,776, as compared with £1,224,050 sums assured and £66,000 premiums for 1922.

Lord Inchcape and Sir Charles Addis have been elected vice presidents of the

The new life business of the General Life Assurance Company for 1923 amounted to £507,182. The corresponding figure for 1922 was £491,308.

BANKS.

CHASE NATIONAL BANK.—The report for the year 1923 shows profits of \$4,849,476, or 24 per cent. on the capital of the bank, after deducting all expenses and making full provision for all bad and doubtful debts and providing for reserve for taxes. Dividends of 16 per cent. on the \$20 millions capital, amounting to \$3,200,000, were paid to shareholders. The balance-sheet shows a liquid position, cash and balances due from banks amounting at December 31st last to \$145,878,115, and United States Government securities to \$77,372,129. Loans and discounts, amounting to \$243,195,590, include commercial discounts, "street" loans, and customers' loans, both time and demand. Deposits figured at \$437,467,181. The bank continues to serve as New York correspondent some 3,000 banks located outside of the city. The proportion of deposits due to banks is about 25 per cent. of the total. In September, 1914, at the time of the establishment of the Federal Reserve Bank, the proportion was 66 per cent. of the total.

FARMERS' LOAN AND TRUST COMPANY.—Balance-sheet, December 31, 1923:—

MISCELLANEOUS.

CANADIAN GENERAL ELECTRIC.—Holders of common shares or of share certificates accompanied by deeds of transfer are notified that the said shares may be converted into one common share of \$50 and one 7 per cent. preference share of \$50 for each common share of \$100. Certificates should be lodged with the registrars on or before February 9, 1924. The new shares will be issued as of February 15, 1924. Common shares not converted will be re-divided on February 15, 1924, into two shares of \$50 each for each share of \$100. Forms for lodging certificates may be obtained from the registrars, the Canadian Bank of Commerce, 2 Lombard street. E.C. 3.

LEHMAN'S, LIMITED.—We have received the 28th annual report to be submitted to the shareholders on February 7. The dividend for the year is 6 per cent. on the preference, and 12½ per cent. on the ordinary shares. £500 is given to the staff. The general reserve fund stands at £35,000, and the capital reserve fund at £100,000. £10,163 is carried forward to the next account. There is the usual item in the balance-sheet—"Trade creditors, nil."

LASTER AND CO.—The 35th annual report to November 30, 1923, shows that after providing for income-tax and corporation profits tax, the profit for the year amounts to £249,494, to which must be added the balance brought forward from last year, £189,979, making together £439,473. After deducting all preferential charges, and the interim dividend on ordinary shares, £76,125, there remains a balance of £363,348. The directors recommend that there be paid to ordinary shareholders a dividend of 5 per cent. and a bonus of 4 per cent., less income-tax, making with the interim dividend paid last July 10 per cent. for the year, £106,875, so that there be transferred to employees' benefit fund £5,000, to reserve account £50,000, and that the balance of £201,473 be carried forward to next year. The directors regret to announce the death of their late esteemed colleague, Mr Harold Cooperthwaite.

who, as a director for the last sixteen years, has rendered valuable service to the company. They have since elected Mr R. W. Hornshaw to a seat on the board, and his election will be submitted to the general meeting for confirmation.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Further heavy rains during the week rendered field operations almost impossible, but recent frosts have improved working conditions, except on heavy lands. Winter wheat is showing through slowly, but generally presents a healthy appearance, while early sowings are favourably commented upon. English wheat is sparingly offered owing to the railway strike, and with a good demand prices are mostly dearer, suitable milling grades ruling from 10s 2d to 10s 6d, with occasionally more for choice samples, while inferior rules at 8s 9d to 9s 3d per 112 lbs. Imported descriptions were firmly held with sustained inquiries for spot parcels. No. 1 Northern Manitoba quoted 50s 9d, No. 2 ditto 49s 9d, No. 3 ditto 48s, and Rosafe 63½ lbs 48s, all ex ship per 496 lbs. A steady tone prevailed in the floating and forward cargo section, but business was on a moderate scale. Steamers of No. 3 Northern Manitoba-Vancouver shipment February sold at 45s 6d, No. 1 ditto January 47s 9d, and Rosafe 63½ lbs shipping or shipped at 44s 9d, while a good demand existed for Canadian and Australian parcels at full rates. Maize cargoes were quiet and easier owing to freer offerings of new crop La Plata, but European kinds steadily held on scanty offerings. A cargo of Dan-Gal-Foxanian arrived at Falmouth changed hands at 41s 6d per 480 lbs. Flour continues in fair support at full recent rates. London standard straight run quoted 39s, patents 41s to 42s town households 37s per sack delivered in. All English country straights 30s 6d to 31s 6d per sack on rail at London stations. Imported steady. Manitoba patents range from 36s to 39s, and Australian 33s to 35s 6d per 280 lbs ex store. Barley, English, firm, and malting kinds range from 10s 6d to 15s, and feeders 10s to 10s 6d per 112 lbs. Imported firm, but inactive. Californian 44s to 50s ex store, Chilean brewing 42s to 46s, ex ship per 448 lbs, No. 4 Canadian Western 35s 3d ex ship, 36s 6d landed, and Algerian-Tunisian ex ship 33s 6d, all per 400 lbs. Maize firm to dearer, especially for landed parcels. Plate ex ship 41s 6d, ditto landed 43s 6d, Bessarabian ex ship 41s 9d, ditto landed 43s 6d, all per 480 lbs. Oats, English, quietly steady. English ranges from 9s 4d to 10s 8d per 112 lbs. Imported quiet and barely steady in view of large Plate shipments and forward weakness. Plate f.a.q. ex ship 22s 6d, ditto landed 23s 6d, No. 2 Canadian Western ex ship 26s 3d, landed 27s 3d, No. 3 ditto ex ship 25s, landed 26s, No. 2 Canadian feed landed 24s 3d per 320 lbs. Millers' offals quiet, and tendency easier. Broad bran quoted 8s to 8s 3d, ordinary ditto 7s 6d to 7s 9d, middlings 9s 3d, fine ditto 10s, bags included ex mill. Light oats 6s 3d, powdered oat husks 8s 3d, feed oatmeal 9s 3d, ground oats 12s 9d, flour on rail, all per cwt. Oatmeal in fair demand at late rates. London made, flaked, also rolled oats 18s, medium also fine cut 17s 6d, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 18s, and American 16s 6d to 17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21 :—

IRON, STEEL, AND COAL

Our Middlesbro' correspondent's report, dated January 24th, is as follows:—Pig-iron: The strike on the railways is unsettling business for the time being, the most serious consideration being a possible interruption of the fuel supply to blast furnaces. There is little change in pig-iron quotations. No. 3 Cleveland G.M.B. is still quoted 99s per ton and mixed numbers East Coast hematite 102s 6d per ton. Manufactured iron and steel: The prospects for 1922 are fairly good. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Business is quiet, and is likely to continue so as long as the unsettlement continues. Best Bilbao Rubio 245 per ton ex ship Tees.

Our Sheffield correspondent writes:—The railway strike is disorganising local industry, many departments having closed down through the failure of their coal supplies, as the majority of the works possess no facilities for stocking fuel. In the lighter branches where operations are continuing very little finished goods can be despatched, and the remainder are being put in stock. Apart from this and other disturbing influences the trade outlook continues to improve, and increasing business is reported in all the tool sections, including fair bookings from overseas sources. The file, hacksaw, and engineers' small tool branches, while still comparatively slack, are busier to-day than for several years past. Competition is, however, still keen, and the instances of steel firms earning profit are rare. There is no change in iron and steel prices, but recent quotations are being held, although large contracts for semi material are not coming in satisfactorily. Reports from Belgium indicate a weaker position of trade there. The position of the French franc precludes business between Sheffield and France in respect of high-grade steels. Rather more work is on hand at the steel foundries. The cutlery trade is disturbed by a strike of grinders, which is holding up production and delivery of table knives. The year in this industry has started fairly well. Electro plate and silver manufacturers are quiet in hollow ware, but there is a fair amount of work in spoons and forks. The strike has seriously interrupted the export of coal and coke to the Continent, besides cutting off home supplies. There is a shortage of house coal and a brisk demand, which is being met by road transport. Prices of this fuel have been again advanced. Quotations for manufacturing fuel remain as given last week.

Our Cardiff correspondent writes:—The South Wales coal market has been completely disorganised this week. The strike of the railway locomotive men and firemen appears to have hit the mining and the metallurgical industries in South Wales more

severely than it has others. Two factors are responsible for this. One is the action of a number of the N.U.R. members in with-

drawing their labour in sympathy with the members of the A.S.I.E. and F., but the principal cause has been the deprivel of the collieries of transport facilities to the ports. There are no stocking grounds in the coalfield. Storage accommodation is limited to dock, railway, and colliery sidings, and although there are approximately between 130,000 and 140,000 wagons in use in the coalfield, the greater part of these were loaded when the strike began, and the available empties were very quickly absorbed. Moreover, the Great Western Railway Co. gave preference to traffic connected with the movement of foodstuffs and passengers. Employment at the docks was intermittent, and the week's figures will probably show a decrease of at least from 40 per cent. to 50 per cent. in the volume of trade. Under these conditions very little business has been transacted, and prices, while firmer, have not been raised. The approximate current quotations are as follows:—Best Admiralties, 29s to 29s 6d; second Admiralties, 28s 6d to 29s; best dries, 27s to 27s 6d; black veins, 28s to 29s 6d; Western Valleys, 27s 6d to 28s; Eastern Valleys, 26 to 27s 6d; best bunker smalls, 22s to 22s 6d; ordinary cargo smalls, 19s to 21s; coking smalls, 22s 6d to 23s; anthracite big vein large, 39s to 42s 6d; machine-made cobbles, 48s to 52s 6d; French nuts, 51s 6d to 52s 6d; rubble culm, 13s 6d to 14s; inland blast furnace coke at ovens, 30s to 35s; coke for export, 45s to 55s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 28s 6d to 29s. Business in the steel and tinplate markets was also very restricted, and the shortage of engine power led to the damping down of several steel furnaces and the suspension of operations at a number of the tinplate works. Prices were nominally unchanged.

METALS.

Tin exhibited very firm features at opening, values being marked up about 40s from last week's close, in view of higher Eastern cables, smaller stocks, and a good general demand. Later, however, considerable irregularity was noticeable, but dealings were on a liberal scale, including standard cash at £252 5s-£251 5s, £252 5s., and £251 10s, with three months' fluctuating between £253 10s-£251 10s, up to £255 5s and £252 17s 6d. Advances from the East reported sales at £257 5s to £254 5s, c.i.f. terms. At the closing market values gave way, though a fair business passed. Cash, early February, sold £250 12s 6d, and three months £249 10s-£252 15s. English ingots, £251 10s to £252. Copper commenced firmer on higher American cables, reserved sellers, and a fair demand. A further improvement took place during the week, though prices were subject to slight irregularity, due to freer offerings, which, however, were well absorbed. Standard, cash, changed hands at £61 to £62 8s 9d, and three months £61 15s to £63 8s 9d. Electro, £68 5s to £68 15s. Wire bars, £68 15s. Copper barely steady, with dealings confined to early February at £62 7s 6d, and three months £63 7s 6d, £63 5s, and £63 6s 3d. Best selected, £67-£68 5s; strong sheets, £95. Lead irregular, with a fair inquiry at £32 to £31 12s 6d for good, soft foreign pig, as to position, with English quoted at £33 5s. Spelter easier at £35 12s 6d to £34 10s, as to position. Aluminium quiet. Home trade £115, and export £120. Quicksilver quiet, and spot quoted at £9 15s to £9 17s 6d per bottle.

MANCHESTER, January 24.

Despite some unfavourable influences, the tone of the market this week has been more hopeful. A considerable inquiry has been dealt with, and in certain quarters the turnover shows an improvement. Business has been helped by the greater stability and hardening movement in raw cotton rates. An extensive demand has come through in piece goods for India, and further encouraging contracts have been placed, especially in light fabrics. Rather more orders have also been given out in grey staples. Buying for China has been irregular, but bleaching descriptions have again moved off in very fair lines. Steady buying has taken place for Singapore and the Straits Settlements. The offtake for the Near East remains disappointing. Finishing cloths continue to attract more attention for the Continent and South America. American yarn quotations have been firmer, with a rather better turnover. There has been some improvement in the total sales in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—On account of bad light on Wednesday there was no sale in Coleman Street that day, but the good demand for wool on the opening night of the series showed quite clearly that the raw material position has lost none of its strength since the close of the December auctions. The course of trade at Hull and Liverpool in the interval had prepared buyers for a strong market, and the advances recorded are quite in keeping with what were expected. It is significant, however, that wool in the colonies is still above the London parity, and the general opinion seems to be that values will be maintained for the remainder of the season. Bradford topmakers had already discounted the advance in London prices, and quotations to-day are steadier than for some weeks past. In some cases topmakers are not prepared to consider business under current replacement costs, and their quotations are manifestly protective, for it is still an outstanding anomaly in the trade that neither in tops nor in yarns are selling prices in harmony with the cost of wool. However, a nice steady business is being done, and firms in the fortunate position of having stocks of tops made from wool bought some time ago are generally prepared to sell when they can see a profit on their raw material purchases. Cross-breeds continue to move freely, but prices in the primary markets are well above the ideas of Bradford users. This is especially noticeable in the case of B.A. cross-breeds, which are now even higher than New Zealand wools. Most spinners are fairly well employed, though the position in the botany section still leaves something to be desired. Some firms report difficulty in obtaining particulars against recent orders, apparently the result of speculative buying. Yarn quotations are very firm, with a hardening tendency. There is rather more doing in the piece goods trade, but manufacturers and merchants are finding increasing difficulty in passing on the increased cost of production.

NATIONAL PROVIDENT INSTITUTION

The Results for the Year 1923 show INCREASES in the Business transacted, the Premium Income received, and the Rate of Interest realised on Investments, and a DECREASE in the amount paid for Claims by Death.

Full particulars of the Office and the Policies it issues can be obtained from:—

48 Gracechurch Street, E.C.3.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The first series of London sales for this year commenced last Tuesday. Something like 170,000 bales are available, and a good series is expected. The railway strike somewhat affected the attendance on the opening day, but a very good spirit was in evidence, and a brisk sale ensued. The trade generally expected to see a 10 per cent. advance in merinos, but undoubtedly the slump in the franc was to a large extent responsible for the improvement, being no more than 5 to 7 1/2 per cent. French buyers frankly admitted having lower limits than they expected, and naturally they are trying to buy wool to come in at no more clean scoured than it would have cost a fortnight ago before the slump in the currency. However, the home trade was very strongly in evidence, the good straight topmaking wools appreciating the most. Short, fine Continental style wools only advanced 5 per cent. for the reason already given. Among the cross-breeds there was the same home trade onslaught that was witnessed at Liverpool and Hull, but there was less appreciation than many expected. Fine cross-breeds advanced to and medium and coarse cross-breeds to 15 per cent., these figures comparing with the advance which took place at Liverpool last week. It is satisfactory that buyers have not lost their head. There is absolutely no necessity for cross-breeds to advance any further, the real need being for trade in yarns and pieces to improve.

VEGETABLE OILS AND OILSEEDS.

Linseed oil has continued a very firm market, and prices have further advanced for oil on spot and in near positions, which are still at a good premium over later delivery. Oil for immediate delivery is very scarce, but with recent arrivals of seed and considerable quantities afloat the pressure will soon be relieved. Spot oil has advanced to £44 per ton naked ex Hull mill, and is nearly £4 more than that quoted for February. A good business is reported on account of home consumers up to April. Cotton oils have been more active, with a good inquiry for crude Egyptian, which is firmly held for £43 10s, while for soapmakers' grade of refined £44 is quoted. English soya bean oil is scarce and firm.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is again firmer all round, and owing to the transport difficulties caused by the railway strike, supplies have been below normal this week. Best ox sold from 6 1/2d to 8 1/2d at Thursday's Bermondsey auctions—an advance of 1/2d on last prices. Seconds were firm at 6 1/2d to 7 1/2d, two classes advancing 1/2d. Best cows brought 6 1/2d, and seconds 6 1/2d to 6 1/2d. Calfskins also shared in the advance, 6 1/2d being paid for heavy weights up to 13 1/2d for lights, two classes advancing 1/2d per lb, and 7 1/2 lbs a penny. Wools sold from 7s 6d to 15s each, and hogs from 4s 6d to 18s each. Large sales of overseas hides have been made on American and Continental account, British tanners abstaining from the rising hide market as much as possible. U.S.A. tanners have paid from 9d to 9 1/2d for Argentine and Uruguayan ox, whilst the Continent has paid as high as 10 1/2d for Fray Bentos frigorificos. Dry hides are active, with prices advancing. This week's cables from New York report the Chicago position as strong, with 14 1/2 cents being paid for native steers. Tanning materials are also a strong market, partially owing to the good demand from the Continent.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 25th.

SUGAR.—This market remained generally slow, with demand both on grocery and manufacturing account measured by wants on immediate necessity, but with only a small weight of supplies of offer, prices maintain a steady level. Messrs Tate and Lyle's cubes, 63s to 64s; granulated, 61s 1/2d to 61s 7/4d, as to quality; February delivery, 61s; March, 60s; yellow crystals, spot, 56s 7/4d. White Java, spot, 58s 3d to 58s 6d; May-June, steamer, 59s to 59s 6d. 25s 6d. Czecho granulated, spot, 59s 6d; Dutch ditto, 59s to 59s 6d. Raw refining kinds firm and offered with reserve. White Terminal market steady, quiet. January, sold, 30s 9d; March, 28s 7/4d to 29s 3d; May, 27s 9d to 28s 3d; August, 27s 3d to 27s 9d cwt.

COFFEE.—The market remains very firm for all mild descriptions, which are in small supply and wanted. Costa Rica kinds fully 5s per cwt dearer on the week. Jamaica, bold sizes of mountain-grown, sold, 170s to 174s; peas, 172s; Costa Rica, bold, 146s to 164s 6d; peas, up to 163s; Nairobi, bold, sold up to 139s 6d; Uganda, ditto, 128s 6d.

COCOA.—Market steady on spot, and 1,500 bags, summer Ariba, sold, 85s to 90s; Accra, F/F quality, February-April, sold, 31s 6d to 32s 3d, f.o.b. terms.

TEA.—58,300 packages Indian were submitted to auction this week, and with a brisk demand for the finer liquoring descriptions, these and fetched steady prices, but medium and common teas tended in buyers' favour. 19,250 packages Ceylon cleared readily at full to dearer rates for the finer parcels, while inferior teas commanded Java full values. China teas remain slow of sale. 3,500 packages Java and Sumatra offered in auction met a strong demand at full to occasionally dearer rates for all suitable parcels. Pekoe, sold, 1s 3 1/2d to 1s 5 1/2d; broken ditto, 1s 1 1/2d to 1s 8 1/2d; orange pekoe, 1s 5 1/2d to 1s 6 1/2d; broken orange pekoe, 1s 2 1/2d to 1s 5 1/2d; with fine and finest from 2s 0 1/2d to 2s 6 1/2d; pekoe souchong, 1s 3 1/2d to 1s 4 1/2d per lb, in bond.

RICE.—Eastern grain fully steady, and shippers offer sparingly. Two Stars Rangoon, spot, 16s 9d to 17s; Spanish, for shipment, 20s 6d, c.f. an. l. London. Japanese peas, spot, 2s 9d per cwt.

SPICE.—Pepper steadily held, but there was not much response from buyers. Black Singapore, February-April, L.S., quoted 48d. Lampong ditto, 4 1/2d; Muntok, January-March, 6 1/2d; February-April, 7d; March-May, 7 1/2d. Zanzibar cloves, January-March, 1s 2d. Pimento, spot, 2 1/2d per lb. Tapioca steadily held, but demand is rather quiet. Sago flour, January-March, 16s 3d. Desiccated coconut, fine cut, spot, 45s 3d; medium, 47s 3d per cwt.

JUTE.—With depressing cable advices to hand from Calcutta, the market developed a quiet and easier state of affairs. First grade, January-February, Continent, quoted £26 7s 6d; February-March value, £26 15s; March-April, sold, £27 2s 6d to £26 17s 6d and £27 2s 6d per ton. Hessians and twills dull. 10-oz Hessians, February-March, 28s 9d; 8-oz ditto, 22s 9d per 100 yards. A twill, February-March, 87s; B ditto, 77s; sugars, 87s 6d; flour, 91s per 100 bags.

HEMP.—Manila held steadily, but buyers were not frequent. J grade, January-March, quoted £34 10s; K, £26 15s; L, £15 15s; and M, £24 ton. New Zealand, also African Sisal, quiet, unaltered.

SHELLAC in quiet request. T.N., March, 267s 6d; May, 265s cwt.

COPRA.—A fair business was carried through, but general tone of the market was again unsettled. F.M.S., Straits, January named steamer to Rotterdam, sold, £32; November-January quoted £31 7s 6d; December-February sold, £31 5s to £30 15s; January-March, £30 17s 6d to £30 7s 6d; February-April, £30 10s to £30. Dutch East Indies, December-January done £31 12s 6d; December-February, £31 5s, £30 10s; January-March, £30 16s 3d, £30 3s 9d. Java, January-February, Antwerp, £31 10s; Ceylon, January-February, quoted £34 10s; Cebu, ditto, £31 5s; South Sea Islands, ditto, £30 10s; ditto, Plantation, steamer named, sold, £31 10s. Palm kernels, February-April, Liverpool, sold, £21 7s 6d to £21 10s and £21 5s ton.

RUBBER.—There was no new feature to note in this market, business being on a moderate scale, at prices showing no essential change. Standard plantation crepe and sheet, spot, also February delivery, sold, 1s 2d; March, 1s 2 1/2d; April-June, 1s 2 1/2d to 1s 2 3/4d; July-September, 1s 2 1/2d to 1s 2 3/4d. To New York, standard estate sheet, February-March, buyers, 1s 2 1/2d per lb, c.f. and i. terms, with business done at a fraction over this figure. Wild descriptions quiet, unaltered.

FRUIT (Dried).—The market continues very firm, owing to outside demands and generally short stocks. Of curran's, Australian, quoted 53s; Pyrgos, 4 cases, 43s; Amalia, 46s; Patras, 50s; Vastizza, 58s to 70s. Sultanias: Smyrna, quoted 62s to 66s; fine, 80s to 85s; finest, 95s to 100s; Australian, 56s. Valencia raisins, 4-boxes, 50s; quarters, 60s to 80s. Dates quiet but steady, at late prices. Hallowee, spot, 26s; Khredrowie, 19s; Siar, 15s 6d. Figs, genuine natural, in bags, 34s to 38s. Evaporated fruits: With regard to apricots, pears, and peaches, all low grades have now been cleared, and only fine parcels are available. Californian extra choice apricots, 95s; fancy, 102s; apple rings, 75s to 80s; French plums, 4 cases, 50/95, quoted 36s; 81/86, at 41s; 72/77, 47s; Oregon, 40/50, at 58s per cwt.

CANNED GOODS.—The market displayed general steadiness, and a good demand was experienced for most lines. Of sardines, Portuguese, 4 cases quoted 2s 9d to 3s 3d; ditto, 12-oz, 5s 6d to 6s 6d; 18-oz, 9s to 11s per dozen tins. Lobster quiet, and prices again weaker. Fancy halves quoted 130s to 135s. Salmon, 1 lb flat reds, labelled, 55s; ditto, tall, 43s; cases of 96 1/2-lb, fine quality, 66s; 1 lb flat pink, 27s; ditto, tall, 26s; and cases of 96 1/2-lbs 23s to 30s per case. Canned fruits continue to meet a good reception, and a steady tone governed the market. Singapore pines (48) 1 1/2 lbs, spot, 6s 1/2d; Hawaiian slices, 2 1/2 lbs, 10s to 16s 6d; Californian apricots, 8s to 11s; ditto peaches, 9s 6d to 13s; pears, 12s 6d to 15s; Australian apricots, 2 1/2 lbs, 8s 6d; ditto peaches, 8s 9d; tomatoes, Italian, 6s 9d per dozen tins. Canned meats steady, with only moderate quantities on offer.

OILSEEDS.—Linseed in good demand and prices firm. Indian: Bombay, afloat, quoted £24; small Bombay, ditto, £23 5s; Calcutta, afloat, £23 5s; December-January, £22 5s; April-May, £19 10s. Plate, December-January, sold up to £19; January-February, £17 17s 6d to £18 5s; April-May, £18 to £18 5s. Rapeseed quieter. Toria, December-January, £20 5s; January-February, sold, £19 15s; February-March, £19 5s; and Jamba, January-February, £15 5s. Cottonseed steadier. Egyptian black, January, £13 15s. Sakellaridis, sold, £12 8s 9d to £12 10s, Hull. Bombay, January-February, £10 12s 6d; February-March, £10

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE MIDLAND BANK LIMITED.

In accordance with the provisions of Sub-section 2 of Section 113 of the Companies (Consolidation) Act, 1908, we report as follows:- We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Bank and Currency Notes and Balances with the Bank of England, Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland, and Bills Discounted, and have verified the correctness of the Money at Call and Short Notice. We have also verified the Securities representing the Investments of the Bank, and having obtained all the information and explanations we have required, we are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

WHINNEY, SMITH & WHINNEY, CHARTERED ACCOUNTANTS, Auditors.

THE MONEY MARKET.

ALTHOUGH tightness of funds in the short-loan market can no longer be attributed to the railway strike, there has been but little relaxation, owing, no doubt, to the incidence of the end of the month and heavy payments on revenue account. On Friday, with the turn of the month, conditions became easier, but until then 3 per cent. had been a common rate for fresh day-to-day loans, with renewals running at 2½-3 per cent. The discount market

has been very quiet, though the tendency has grown easier as the week progressed on expectations of more plentiful funds in the loan market after the turn of the month. Three months' fine bills, from being quoted at a very firm $3\frac{3}{8}$ per cent., became quite easy at that rate on Thursday, while after the Treasury bill allotment of Friday they were not better than $3\frac{5}{8}$. The banks have not been keen buyers of short-dated Treasury bills, and this fact has contributed to the firmness.

	Feb. 1, 1924.	Jan. 25, 1924.	Jan. 11, 1924.	Jan. 4, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{5}{8}$	$3\frac{7}{8}$	$3\frac{7}{8}$	$3\frac{7}{8}$	..

The Bank return showed the large increase in the circulation on the week of £1,390,400, presumably in preparation for the end of the month, and with the bullion only £2,900 higher, the Reserve was £1,387,500 lower. Repayments to the Bank were reflected in declines of £1,520,000 in Government securities and of £1,639,200 in Other securities, while Public deposits rose by £2,636,700, tax collections evidently having exceeded disbursements and repayments, and Private deposits suffered a contraction of £7,140,200. In spite of the reduction in liabilities, the ratio of Reserve was 0.4 lower at 17.5 per cent. Currency notes outstanding were increased this week by £990,100 to £279,903,600, which includes £1,422,900 for notes called in, but not yet cancelled. The fiduciary issue is £229,030,800, or £19,160,100 below the maximum.

THE STOCK MARKETS.

In many directions, and for most of the time, the stock markets have enjoyed this week a repetition of the happy experience of last week, when activity and the upward movement of prices were resumed in such striking fashion. There has been some profit taking, and the effect of the bear covering has been removed, but the influx of public support for investment securities prevented these factors from bringing about reaction. Movements in the gilt-edged markets were mostly upwards. In the foreign market French bonds threw off some of their depression, while the gambling in German and Russian bonds quietened down. Colonial stocks were firmer, in spite of the new Rhodesian issue. Home Rails rose on the strike settlement, but fell back on fears of dock and other disputes, while Argentine Rails spurted. Oil shares scored sharp early advances that were not held. Industrial markets generally were cheerful. Rubber shares remain quiet, if a trifle firmer, and in the mining sections Kaffirs enjoyed a strong demand from the Cape for favourite issues.

THE COMMODITY MARKETS.

With the settlement of the strike, conditions were soon practically normal on the Cardiff coal market; for prompt shipment supplies are scarce and prices have hardened. There is an easier demand for pig-iron on account of prospective labour trouble and foreign competition. Business in steel is quiet, but works are still fairly well supplied with orders. Tin again registered an improvement, but copper declined. Wheat prices are unchanged, but the market is very firm. Vegetable oils have advanced. Rubber was fairly steady, and a moderate amount of business done is reported. The sugar market was firm, and prices advanced. Tea and coffee were in demand. Although the recent increased activity in the cotton trade has somewhat lessened, the general tone of the market is good. The course of the wool trade continues to be governed by the extraordinary strength of the world's wool markets; under keen competition, the price of the raw material is steadily moving upward. The hide market continues firm.

FOREIGN EXCHANGES.

For the greater part of the week the foreign exchange market has continued in a hesitating mood, but the last few days have shown the beginnings of a return of confidence, encouraged partly by a more sober view of the activities of the Labour Government and by increasing optimism, not as yet justified by concrete results, as to the activities of the expert committees in Berlin. From a closing rate of \$4.22 $\frac{1}{2}$ on the 25th, the dollar sagged again a little on Saturday, but moved up to as high as \$4.27 $\frac{1}{2}$ on the 29th. A small reaction on Wednesday was followed by a sharp recovery late on Thursday to a closing price of \$4.29, and yesterday morning the rate was again higher at \$4.30 $\frac{1}{2}$. Although it is hardly to be expected that sterling will continue to recover at this rate without occasional reactions, there should be nothing in the way of a further improvement apart from some new political factor. Forward rates at $\frac{1}{2}$ cent per month above spot remain the same as last week. The Paris rate, which closed at 94.05 on the 25th, and reached 94.50 on the following day, has since then at times been down as low as 91.40, but has not quite kept pace with the last recovery in sterling, and stood yesterday morning at 92.15. The new measures of taxation are still being discussed, and in the meantime the latest return of the Bank of France shows an increase both in note circulation and in advances to the Government. Brussels has moved from 104.25 to 104.05, after being as high as 104.80. Forward rates in Paris are now 18 centimes per month above spot, in Brussels they are 6 centimes per month below. The lira, after its long steadiness, was weak, and has moved up during the week from 97.50 to 98 $\frac{3}{4}$. Berlin, as usual lately, has remained steady at 18,000 milliard, the optimism as to the work of the expert committees not being allowed to influence the rate. Among neutral currencies, Amsterdam, in sympathy with the dollar, has moved up sharply, from 11.39 $\frac{1}{2}$ to 11.48 $\frac{1}{2}$, and Switzerland has also gone in our favour, from 24.51 $\frac{1}{2}$ to 24.79 $\frac{1}{2}$, while Madrid has risen from 33.31 to 33.59 $\frac{1}{2}$. In Scandinavia, Stockholm, after moving sharply against us for some unexplained reason to as low as 16.20, has now reacted to 16.39 $\frac{1}{2}$, as compared with 16.31 $\frac{1}{2}$ a week ago, while Denmark, which has still not settled its stabilisation plans, has moved up from 26.02 $\frac{1}{2}$ to 26.42 $\frac{1}{2}$, and Christiania from 30.70 to 31.63 $\frac{1}{2}$. Helsingfors, at 171, has moved in our favour, and Riga has followed the dollar to 21.90. In Eastern Europe, Warsaw, where plans for the bank of issue are being pushed forward rapidly, shows this week actually a small improvement to 39 millions. Vienna, with the dollar, has gone in our favour, from 300,500 to 303,000, while Prague has also risen from 146 to 148 $\frac{1}{2}$. Bucharest, at 840, shows a further slight appreciation, but Athens has reacted sharply on the news of M. Venizelos' illness. In the East the rupee is cheaper at 1s 5 5-32d, as compared with 1s 5 15-64d a week ago, and the yen at 2s 1 $\frac{1}{2}$ d is also about $\frac{1}{2}$ d cheaper. Silver has fallen somewhat with the improvement in sterling, and business has been very quiet. At 2s 3 $\frac{1}{2}$ d Hong Kong is $\frac{1}{2}$ d cheaper, and Shanghai has fallen from 3s 4 $\frac{1}{2}$ d to 3s 3d. In South America Rio has improved from 6 $\frac{1}{2}$ d to 6 $\frac{3}{4}$ d, but Buenos Ayres has reacted from 42d to 41 $\frac{1}{2}$ d, and Monte Video is 1d cheaper at 44d. Valparaiso, after some depreciation, stands at 40.80 pesos, as compared with 40.90 a week ago.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 26th:—

EXPENDITURE.		RECAPIT.	
	£		£
Supply Services	6,291	From Revenue	18,438
Interest, &c., on Debt	806	Decrease in balances	2
Sinking Fund	500		
Road Fund	786		
Sundries	709		
Reduction of Debt	9,348		
	18,440		18,440

Revenue was lower for the week ending January 26th at £18,438,000, against £19,461,900 last year. Customs receipts were practically level at £2,675,000, against £2,677,000, but Excise was £619,000 higher at £1,744,000. Estate Duties reached only £850,000, against £1,730,000. Property and Income-tax yielded £8,328,000, and Super-tax £1,830,000, against a com-

bined total of £10,174,000. Post Office receipts were up £250,000 at £1,250,000, and Special Receipts were nil, against £388,000. The week's operations reduced the National Debt by £9,348,000, and caused the following changes:—

(000's omitted.)	
Treasury Bills	+ 132
Sundries	+ 70
	+ 202
Public Departments	— 9,550
	— 9,550

The floating debt was reduced by £9,375,000 to £826,540,500.

FINANCIAL YEAR, 1923-24 (April 1 to January 26, 1924).

£		£	
Total Expenditure ..	637,133,674	Raised by Revenue ..	610,675,783

Total	637,133,674	Total	637,133,674

ESTIMATES FOR YEAR 1923-24.

£		£	
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages will be found the reports of the following companies:—National Provincial and Union Bank of England, Bank of Liverpool and Martins, Williams Deacon's Bank, Union Discount Company of London, National Mutual Life Assurance Society, Metropolitan Trust and Mortgage Company of the River Plate. The bank meetings are referred to on other pages. At the National Mutual meeting Mr J. M. Keynes, C.B., dealing with the quinquennial, announced a record surplus of 28.8 per cent. of the liabilities. Mr James Anderson at the Mortgage Company of the River Plate meeting said that despite adverse circumstances the dividend of 15 per cent. was maintained. Mr Robert Fleming at the Metropolitan Trust meeting dealt lucidly with the considerations affecting the question of dividends of a trust company.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

SOME LESSONS OF THE STRIKE.

THE settlement of the railway strike, which was effected in the early hours of Tuesday morning, came just in time to prevent the rapidly increasing dislocation of business from reaching a stage where it would have entailed a prolonged check to the trade recovery, which has recently been in steady, if slow, progress. A perusal of the settlement terms (which we set out in a later column) is sufficient to confirm the opinion, which we expressed last week, that of all the big strikes of recent years this was the most foolish and unjustifiable. In other big strikes, involving a hold-up of the nation, the men, whether right or wrong, have fought for an important matter of principle, and their victory or defeat closely touched the lives of millions. But in the case of the strike which closed in the early hours of this week no important principle was involved, the actual number of men seriously affected by the settlement terms was almost ridiculously small, and the adjustments were such as could surely have been reached by conference. That the whole country should be plunged into dislocation by a dispute on such comparatively trivial issues is inexcusable. To view the strike from another aspect, it has revealed once more in an acute form the jealousy and the clash of interest between the craft unions and the unskilled unions, the existence of which so frequently obstructs conciliation and from time to time threatens to split the Labour movement.

Unfortunately the relief caused by the railway strike

settlement is tempered by anxiety over the approach of other labour disputes, each of which threatens a serious national hold-up. The dockers, who have been harbouring discontent and biding their time since their strike fiasco of the summer, threaten a national strike in all the ports early in February unless certain large demands are granted. These demands include decasualisation of dock labour and wage advances, ranging from 2s to 2s 6d per day. Then the coal miners have by an overwhelming ballot given notice to terminate the present agreement in April. In the coal dispute, as our Labour correspondent fully explained last week, a principle is at stake, as it is in the dock dispute. But when it comes to the question of solid support for a strike by the rank and file it is usually the question of wages which becomes the dominant factor. We do not propose at this juncture to discuss the merits of either case, except to emphasise our opinion that to abandon the main principles of publicity and profit-sharing under which the mines are at present worked would be a great disaster. But it is exceedingly important, with these strike threats approaching, that employed and employers alike should firmly grasp in their minds the fundamental facts about the present economic condition of the country, which govern the fortunes of both. The main fact is that the trade expansion which has been proceeding for several months, and will continue if industrial peace is preserved, has so far been achieved without inflation of currency and credit, without any serious rise in prices, and without the creation of any artificial conditions which lead to future trouble. It is obviously to the interest of every section of the nation that this gradual return to prosperity should proceed, as it has begun, steadily on an even keel, without the jolts and jars that, for instance, accompanied the boom of 1920. It is perfectly natural that the workers, when they see better times returning, should be on the *qui vive* to obtain in the shape of wage increases their proper share of the improved earnings of trade and industry. But it is also of first importance that they should not allow their natural and proper aspirations to outstrip in pace the actual trade improvement, or take an exaggerated view of that improvement, because the wish is father to the thought. In pre-war days, whenever trade improvement was making slow and steady headway, as it is to-day, the subject of full-dress negotiations between employers and employed used to be whether an industry could stand very modest increases in wage scales. The boom years have produced, unfortunately, a different psychology. In the Labour mind the picture of gradual wage advance in consonance with slow economic progress has given way to that of jumping prices and soaring wages, which came to a climax in 1920. But the conditions of unstable boom are just what this country does not want to renew. The hope for the progressive return of prosperity lies in the steady continuance of that expansion of which we have spoken. If wages and prices are to rise by leaps and bounds, then the improvement will be based upon unstable foundations. These reflections are forced particularly upon us by the size of increase in wages demanded by the dockers, which whatever may be the merits of the particular case, certainly smacks of the 1920 atmosphere.

But we would add at once that it is not only the workers who have to adapt their ideas to actual conditions. This task is equally binding upon employers. What is sauce for the goose is sauce for the gander. If workers are to exercise that restraint in their demands which is necessary if progress on an even keel is to be maintained, employers equally must rid themselves of the idea that the swollen profits of 1920 can, or should, be repeated. The statistics of industrial profits which we published in our issue of January 12th show that British industry taken as a whole has returned to the stage where a reasonable return is earned by capital. Any increase in that return must come, like increases of wages, out of the common fund which, given industrial peace, a slow return of activity will provide; but with both sides, with Capital as with Labour, there must be resignation to a slow and gradual increase in their respective shares, otherwise the now steady progress will turn into a series of jolts and jars, and end, almost inevitably, in back-sliding.

One other point about the Labour position that must be taken into account is the psychological effect upon the wage-earning community of the accession to office of the first Labour Government. It is perhaps inevitable that trade unionists should be led to hope that, with a Government in power containing their most prominent leaders, their demands will be launched under favourable auspices. This feeling may easily contribute towards raising such demands beyond the level at which they would otherwise have given satisfaction. This psychology, though natural, is, we believe, quite mistaken. We see no reason for thinking that Mr MacDonald and his colleagues will use their influence to obtain undue concessions to those who attempt to hold up the life of the country by unreasonable demands or on trivial issues. Indeed, their attitude towards the railway strike suggests the contrary, and the eager work of the Government's trade union element, first to prevent and then to curtail that strike, is a reminder of the immense blow which the new Government stands to suffer politically if its *régime* is initiated with a series of strikes, which would hold up the nation's economic life and check the progress of recovery, which can only be maintained if all sections of the community will concentrate their minds on the necessity of hard work and a moderate return, and limit their ideas of the pace of betterment to the level of economic fact and expediency.

FRANCE AND BRITAIN.

WHEN Mr Bonar Law came into power some 15 months ago, hopes of a settlement between England, France and Germany ran high. The new Prime Minister seemed to be free from the taint of suspicion which attached to every action of his predecessor, and for a short time a new atmosphere was created more favourable to mutual understanding. These hopes were common to both England and France. Unhappily, they were doomed to speedy disappointment, and the solidity of French opinion after January on the Ruhr question was, in part at all events, due to the reaction from these high hopes. It would seem at first sight that with a Labour Government in power in England the prospects of a better understanding can hardly have been improved; for the policy of France and of M. Poincaré in particular have been the subject of the severest criticism during the recent election from Labour platforms all over the country. Much water has, however, flowed under the bridges since a year ago, and it is a fact that the new *régime* in England coincides with the revival of something like the same hopes that were entertained at the end of 1922. It is not very easy to analyse the reasons for this feeling, or to find any more solid foundations than that the wish is father to the thought. But whether it is the retirement of certain British statesmen who have aroused distrust; the sitting of the Expert Committees, of whose work in some quarters the most optimistic, and we fear exaggerated, hopes are held in Paris, or, what is perhaps the most important influence, the logic of events, the fact remains that the next phase of the eternal problem is being actively discussed, and that the desire of France for the moment is to see if there is not some other way than that which leads to her isolation.

In examining the position the question of first importance is the internal situation across the Channel. In the first place there seems very little doubt that beneath the surface of public life there is a fairly strong drift of opinion towards the Left—a drift indicated by the results of certain recent by-elections. It would be incorrect to assume that this tendency indicates any weakening of M. Poincaré's personal position, or a definite change of view towards his foreign policy. In the eyes of France as a whole M. Poincaré has stood between her and a strong and threatening Germany when her Allies had fallen away from her. To take up a position of fundamental opposition to him is still regarded as a defeatist attitude, and as yet there is very slight sign of public doubt as to whether M. Poincaré's line is that which will give France her greatest security. The drift to the Left is rather to be explained by

internal politics. The opinion of Frenchmen towards social, economic and political questions in general has moved forward like that of other countries both before and since the war. But the Parliament elected four years ago has been one of the most extremely conservative of modern times. On a number of questions political feeling is keenly aroused. On the Catholic question, for example, the Government has allowed the law to be evaded by permitting the return of a number of Catholic communities. It is said that the schools in France are being neglected, and it is undoubtedly the case that the teachers are badly paid and are drifting fast into the Socialist camp; while recently working-class opinion has been aroused by the movement to abolish the eight-hour day. Symptoms of this internal conflict are more apparent than at any time since the war to the casual visitor to Paris, who will see on the hoardings propaganda posters such as that which depicts a perspiring and exasperated gentleman with a livid green face and a telephone received to his ear, and declaring that "one telephone by the sweat of one's brow because the telephone service is run by the State." On these and many other questions the ashes of old controversy are beginning to kindle. The drift to the Left has not been unobserved by M. Poincaré, who has endeavoured to maintain his personal position by carefully refraining from committing himself on all such issues. But the Republican bloc, which regards him as their greatest electoral asset in the coming fight, have been equally anxious to get him to commit himself to the internal policy of the Right.

It is in these circumstances that a new excitement has been added to the internal political conflict by the slump in the French exchange, which is universally spoken of as "the attack upon the franc," even though it is well understood that, in fact, the distrust is internal, and that the recent sales which have caused the continued weakening have chiefly come from Paris. The slump has unquestionably shaken opinion very much. It was thought that as soon as Germany surrendered, French policy would be vindicated, and the country would be on the highway to re-establishing its financial situation. The shock of finding that this was not the case has been so great that the country has accepted a tax reform programme, which imposes a really heavy burden upon the country. It is no light thing five years after the end of the war for any Government in any country suddenly to impose an all-round 20 per cent. increase in taxation. France has never been a lightly taxed country, and though recently she has borne a smaller tax burden than ourselves, the position will be changed if the present fiscal programme is carried into effect. It can be well understood that, coming at the end of what was claimed to be a successful issue of the Ruhr occupation, such an event has dwarfed all other subjects of interest. M. Poincaré has had to pay a high price for his taxes, for last Sunday the Republican bloc extorted from him, as the price of its support, the undertaking that he and the Government machinery would support them at the forthcoming Election. Bureaucracy can exercise in France a very great deal of pressure, and this pledge may modify somewhat the results of the Election. But M. Poincaré is not yet quite certain of his taxes, for there is a certain resistance in the Senate on the point that he desires to be empowered to impose them by administrative decrees. In the Senate the Radicals hold a majority. Their influence has always been exercised against what they may consider to be undemocratic power in the hands of the Government, or of an individual Minister. For example, even during the occupation of the Ruhr they showed surprising independence by refusing the request of the Government to take out of the ordinary Courts the trial of certain Communists accused of unpatriotic intrigue in the occupied area. The whole position, therefore, remains very obscure, except for one clear consideration, and that is that in the present temper of France the strongest card with which M. Poincaré could go to the electorate would be the ability to say that there was a real prospect of reaching an understanding with Great Britain.

Thus while France is not, and is unlikely to become, contrite and repentant, and with no outstanding leader who seems likely to displace M. Poincaré, she is anxious to remove misunderstanding and is ready to

listen to British views. In these circumstances, what chance is there of an agreement or of reconciling our policies? On this question we hold most strongly that no progress can be made piecemeal, but that if our new Government is ready to explore the opportunities at all, it must consider how to deal with the fourfold aspects of the question—namely, reparations and the German Budget, inter-Allied debts, security, and the Ruhr. We still hold, in spite of all appearances to the contrary, that it is the third of these which matters most to France, and that if the fear of a strong military Germany were removed, the first of the four problems, at all events, would not be difficult to solve. Indeed, the attitude of great numbers of Frenchmen towards the Separatist Movement has unquestionably arisen from the desire to see a barrier between France and Germany. On this question there is no doubt that France, generally, to-day would be fully satisfied with a demilitarised Rhineland State as an autonomous province within the Reich. We need not discuss whether this represents a change of opinion. It is sufficient to know that for the last two months or so the voices of those who have thought of annexation or of a completely independent State, have been silent. There may be differing ideas as to the meaning of autonomy, and even if we assume this to mean a State with the same powers as Bavaria and Saxony, we are not on quite firm ground, for at this very moment the relations of these States to the Central Government cannot be regarded as by any means fixed. The status of the Rhineland and the Ruhr, however, must inevitably be very shortly raised by the Committee of Experts, for they cannot draft a Budget, even for next year, without defining the financial powers of the Reich over these territories. The essential feature, however, of this idea is one which is likely to commend itself to the Labour Party—namely, the demilitarisation of this area—and we are disposed to think that the suggestion to entrust the League of Nations with the task of seeing that this demilitarisation is carried out, would not now be altogether unacceptable in France.

As regards reparations, we have said that we think that an agreement is not impossible, though we have no space here to deal with this question. But there is one assurance which must be made if there is to be any progress, and that is that if reparations are to be assessed really and impartially on the basis of Germany's ability to pay—and the Ruhr occupation has, at all events, made it clear to every Frenchman that they cannot get a quart out of a pint pot—Britain must somehow succeed in persuading France that she will join her in seeing that these sums are paid, and not make the settlement an excuse for further whittling down of the Allied claim. In this connection there are undoubtedly some in this country who think that France's recent actions have been so unjustifiable that they regard her as having frittered away her moral claim to reparations altogether. If this view is held by the majority of the Cabinet, it is useless to talk of a speedy settlement of Europe. The first step for the new Government is to make its position clear in this matter. The question of the Allied debts is also more difficult, because of the change in feeling towards France. But here again we are sure that Britain's final offer has yet to be made.

There remains, however, the most difficult of all the questions—that of the occupation of the Ruhr. We cannot pretend to say whether, or at what moment, or in what form, France would be willing to accept what M. Herriot speaks of as "alternative guarantees" to that of the Ruhr. For our part, we do not interpret too literally M. Poincaré's oft-repeated assertion that France will only leave the Ruhr in proportion as the actual reparations are paid by Germany. There is no shadow of doubt, for example—to take an extreme and impractical suggestion—that France would leave the Ruhr to-morrow if Great Britain would "underwrite" her reparation claim. The problem is whether there is any other practical guarantee which might be acceptable to France. In the present temper of French opinion it is at all events worth exploring. There is, however, one point which may be taken for granted, and it is one which the Labour Government must carefully weigh. This country believes that France went into the Ruhr without any justification under the

Treaty of Versailles. In other words, it was an act of aggression. There are those who think that, holding this view, we should as a matter of principle, refuse to make any approach to France until she has left the Ruhr or the legality of her position has been decided in an international court. On our reading of French opinion this is the one step which would make agreement quite impossible. If the Labour Government challenges this issue and demands that it should be taken to arbitration, it will undoubtedly swing back French opinion strongly to the Right, and install in France for another four years a Chamber elected on an anti-British programme.

THE BANK BALANCE-SHEETS.

WITH the publication of the report of Lloyds Bank the list of the reports of the principal English joint-stock banks for 1923 is now complete. In a previous issue (January 12th, p. 53) we summarised the net profits and dividends as shown by the preliminary statements, and showed that while there had been, with few exceptions, a further decline in net profits, dividends had been maintained at the previous rates. The full reports add little information on the profits question. Barclays alone of the "Big Five" banks shows gross profits and expenses, a praiseworthy example which the other great banks refuse to emulate; its gross profits declined by £475,000, but expenses were reduced by £492,400. The other banks have evidently not been so successful as Barclays in curtailing expenditure, since they show declines in net profits as against Barclays' small increase. While on the subject we may perhaps be forgiven for once more entering our plea for more informative profit and loss accounts and more uniformity in the case of some of the smaller banks in the treatment of income-tax.

Turning to the balance-sheets, we find that the changes shown as compared with those of December 31, 1922, are much as have been indicated by the monthly statements of weekly average balances. In the table below we summarise the main items of the balance-sheets of 13 English joint-stock banks at December 31, 1922 and 1923:—

	(Million £'s.)							
	Capital and Reserves.		Acceptances and Indorsements.		Deposits (Inc. Undivided Profits, &c.).		Total Liabilities.	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
Barclays	23.8	23.8	5.5	7.8	303.2	301.5	332.5	333.1

* Includes money at call.

Capital and reserves are practically unchanged, and the ratio of these items to deposit liabilities is slightly higher at 6.94 per cent., as compared with 6.88 per cent. a year ago, 6.4 per cent. two years ago, and the low record of 5.5 per cent. at the end of 1919. Acceptances show a substantial increase. According to the monthly figures

of the clearing banks this increase has taken place in the last four months of the year. Normally the movement in the total of acceptances is taken as a fairly reliable index of the state of foreign trade, but at the meeting of the Midland Bank Mr McKenna uttered a warning against such a conclusion at the present time. In the case of the Midland Bank the item is entitled "Acceptances and Engagements on Account of Customers," and shows an increase of nearly £10 millions. According to Mr McKenna, the greater part of this increase is due to a rise in engagements resulting from the growing volume of business in forward exchanges. "In these days of widely fluctuating foreign exchanges it is greatly to the advantage of a trader to fix in advance his liability on account of commitments in a foreign currency, and the expansion in this branch of our operations reflects the growing familiarity of business men with the facilities which are offered to them. Perhaps I should add that the contingent liability of the bank in respect of these forward dealings is very much less than might be supposed. As it is our invariable custom to protect ourselves against loss by a compensating purchase or sale, it is necessary for bookkeeping purposes to include under our engagements two entries in respect of a single transaction. For example, if we sell dollars for delivery a month hence we immediately cover ourselves by purchasing forward dollars, and our books will show on the one side the bank's liability to deliver dollars, plus the bank's liability to pay for the dollars bought." Mr McKenna added that the actual increase in the acceptances, representing an improvement in the volume of trade, amounts to £2,844,500 for the Midland Bank. Deposits are a little lower in the aggregate. The smallness of the decline in the aggregate is partly due to Lloyds figures, which have risen by £10 millions. This is accounted for by the absorption in February last of Cox and Co., whose deposits were in the neighbourhood of £16 millions. The decline is not general, and is very small in comparison with that recorded in the previous year, when there was a drop in the total from £1,957.7 millions to £1,817.2 millions. The evidence of the monthly figures, confirmed by chairmen's speeches, is to the effect that there was an increase in the last few months of the year.

Cash in hand and with the Bank of England, balances with other banks, and cheques in course of collection, shows a very slight reduction, but the ratio to deposit liabilities at 16.57 per cent. compares with 16.62 per cent. a year ago. Money at call is also slightly lower than it was twelve months ago. Investments in the aggregate show a fairly substantial decline, but the size of the reduction is due more to the figures of one or two individual banks than to a general large downward movement. According to the monthly figures, both investments and bills discounted, which include British Government Treasury bills, declined heavily in the first quarter of the year, but the latter recovered substantially by the half-year, investments moving up more slowly. On the question of discounts Mr McKenna gave some interesting figures. The Midland Bank's bills discounted increased by over £12 millions, and of this about £10 millions, he stated, has been in fine trade bills. He also mentioned that Treasury bills were a little higher on balance, and now amount to just under £9½ millions. "I give this figure as there is considerable speculation as to the exact whereabouts of the £650 millions of Treasury bills outstanding, though our holding may not be indicative of the amount held by the banks generally." Loans and advances show an all-round increase on the year. Mr Goodenough at Barclays' meeting said that this was "due no doubt to some extent to a slightly greater demand for trade purposes." Mr McKenna claimed that the increase of £6½ millions in the Midland Bank's advances showed that "we are, as you know, essentially a traders' bank. We feel it incumbent upon us to assist our trading customers to the full limit of banking prudence." A feature of many of the balance-sheets is the increase in the premises accounts. This is no doubt due to the fact that renovations and rebuilding, hitherto postponed owing to high costs, have lately been undertaken. In the case of the Westminster Bank, a large rebuilding scheme in the City has been undertaken. Lloyds Bank report states that £500,000, part of the profit on sale of investments, has been applied in reduction of bank

premises account. The latter, however, stands £60,000 higher than it did twelve months ago.

We show in the next table how the various items in the balance-sheets have fluctuated during the year. This gives the aggregate figures of the nine English clearing banks which publish monthly figures, at the end of 1922 and 1923, together with the weekly averages for four separate months:—

	(Million £'s.)				
	Dec. 31, 1922.	March, 1923.	June, 1923.	Sept., 1923.	Dec. 31, 1923.
Capital and reserves.....	116.1	116.2	116.3	116.3	116.4
Acceptances.....	73.0	73.0	73.8	72.7	86.1
Deposits (incl. undiv. profits, &c.)	1,687.8	1,596.4	1,637.7	1,609.6	1,673.1
Total liabilities.....	1,876.9	1,792.5	1,827.8	1,798.6	1,885.5
Coin, notes, balance at bank, and cheques in course of collection	279.9	232.3	240.7	232.2	254.2
Money at call.....	107.5	104.4	113.3	109.5	111.3
Investments.....	383.7	357.4	355.5	361.2	363.8
Discounts.....	278.9	250.4	270.8	260.4	276.3
Loans and advances.....	728.1	741.6	748.9	744.3	756.5
Cover for accept., premises, &c.	98.8	106.4	100.6	100.0	123.4
Total assets.....	1,876.9	1,792.5	1,827.8	1,798.6	1,885.5

The deposits of these nine clearing banks reached their highest point at the end of 1921, with a total of £1,988½ millions. Total deposits in the United Kingdom of all banks at the same date touched £2,527 millions. The movement in total bank deposits since 1913 may be seen from the following table, the figures in which are taken from our annual banking numbers, with the exception of those for 1923, which include an estimate for those banks whose reports have not yet appeared:—

	DEPOSITS AT DECEMBER 31st. (Million £'s.)							
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
English.....	809.4	1,365.3	1,583.4	1,874.2	1,961.5	1,974.9	1,834.0	1,821.9*
Scottish.....	125.9	196.5	221.1	259.6	275.2	291.1	287.8	246.1*
Irish.....	70.7	99.3	131.6	152.2	200.4	212.9	209.8	201.7
Private.....	27.1	44.7	51.3	56.2	50.9	48.3	50.9	52.4*
	1,033.1	1,705.8	1,988.4	2,356.2	2,492.0	2,527.2	2,382.5	2,322.1*

* Partly estimated.

For the sake of continuity in the table we have included the deposits of all the Irish banks, which cannot rightly be longer included in the category of United Kingdom banks. The substantial decline in the total of the deposits of the private banks is due to the absorption of Cox and Co. and Holt and Co. by Lloyds and Glyn, Mills respectively.

We cannot let the occasion pass without referring to one welcome feature of the past year—namely, the removal of the cumbersome bank titles which were an outcome of the amalgamations of the past few years. The good example was set by the London County Westminster and Parrs Bank, which at the beginning of the year shortened its name to Westminster Bank, and was followed a few months ago by the London Joint City and Midland Bank, Limited, now known as Midland Bank, Limited. At Thursday's meeting of the National Provincial and Union Bank of England, Sir Harry Goschen said that the directors recommended a shortening of the title to National Provincial Bank, but it was proposed that certain branches should be known, as heretofore, as the National Provincial Bank, Limited, Union Bank Branch, or Smith's Bank Branch, &c., as sentiment or expediency might dictate. Shareholders of the Manchester and Liverpool District Banking Company have also agreed to the shortening of the name to District Bank, Limited, and there are now only a few titles left upon which the pruning knife might be used with advantage.

THE IRISH BOUNDARY QUESTION: A DUBLIN VIEW.

IN view of the meetings now proceeding in London to discuss the question of the boundary between Northern Ireland and the Irish Free State, we print below a review of the problem by a Dublin correspondent, who writes as follows:—

The completion of the Anglo-Irish Treaty, as has been seen, involves the execution of Articles V. and XII., which, though dealing with quite distinct subject matters, are yet

curiously linked together. The former provides for a financial adjustment between Great Britain and Ireland, both prospective and retrospective. The latter provides, in the events that have happened, for a revision of the boundary line between the Irish Free State and Northern Ireland. The former presents no difficulty, save its voluminous complexity, which a little statesmanlike breadth of handling may well dispose of. The latter is rendered difficult because of the loudly proclaimed determination of North-East Ulster not to permit it. That some revision of the existing boundary is needed can be denied by nobody—it is a line defining two distinct areas for all administrative as well as national purposes, and it is a wholly unscientific line which in many cases divides a farmer's house from his yard or his barn or his cow-house, and in some instances is alleged to run through the house itself which is thus situated in two separate States—the Irish Free State, on the one hand, and Great British, plus Northern Ireland, on the other, with the frontier running somewhere through its middle. But Sir James Craig's objection is founded on the provision that the new boundary is to be determined "in accordance with the wishes of the inhabitants so far as may be compatible with economic and geographic conditions." A determination on these lines may both directly and indirectly affect the financial adjustment. Directly, because any variation of the Irish Free State area will effect quantitatively a proportionate increase or abatement of its liability and of its set-off. Indirectly, because if the statesmanlike breadth of handling which we most earnestly bespeak for the financial readjustment be forthcoming, it might well find occasion to embrace within the purview of a single settlement the boundary issue as well, and also the completion of the great policy, embodied in the Treaty, of founding Anglo-Irish peace upon temperate and businesslike agreement. And if Great Britain deems it of signal importance for her own welfare that prosperity issuing from peace should reign in the western island and govern its dealings with herself, how much more, and with how compelling a force, must the same consideration weigh with the Irishman from both North and South. For Great Britain it is but an item—a most important item—in the situation, but for the others it is their all that is at stake.

It would be worse than idle to ignore the difficulties. Northern Ireland justly prides itself upon the order that has been restored in its area, and after the millions spent, inclusive of British millions, upon regular and special constabulary in an organisation so widespread, it is said, as to touch, actually or contingently, practically all the able-bodied men of the Majority party, local riots could not well nor decently become a factor to be reckoned with. But there can be no question but that the award of the Boundary Commission, which we shall make no attempt to forecast, might prove extremely embarrassing to Northern Ireland—regarded as a political organism—and extremely unpopular amongst its dominant majority. Very considerable areas might be shorn away from the already not too extensive hinterland lying behind Belfast. And the Boundary Commission must be set up—it is already well overdue—under the terms of Article XII., of which Northern Ireland took advantage in voting itself out of the Irish Free State. And to the Treaty itself all parties in the State are committed.

It would be well if the discussion of this crucial issue could be given a wider scope. All people of goodwill in Great Britain—and more particularly, we are confident, the new Government—most earnestly desire to see the whole question disposed of amicably, without leaving the seeds of *irredentism* or the desire for *revanche*. In the Lloyd George-Craig correspondence before the Treaty and in the Collins-Craig correspondence after the Treaty, and in the Treaty itself, can be found the materials from which a settlement might be constructed which would satisfy all legitimate interests and soothe all natural susceptibilities. Most people realise that Northern Ireland occupies a somewhat anomalous position, but few realise how restricted it is constitutionally. It has its rights and privileges under the Act of 1920, which were the rights and privileges of one of two subordinate constituent States loosely linked by a Council of Ireland which received at once some

honourable if rather minor functions, but which was designed to be the nucleus of an ultimate all-Ireland Parliament. Upon this Council of Ireland was to be devolved sooner or later a large measure of the powers reserved by the Act to the Imperial Parliament, which was to remain the supreme or suzerain Parliament, collecting the principal taxes and satisfying therefrom its own claims for a contribution to Imperial expenditure. Northern Ireland accepted the position so created, whereas Southern Ireland ultimately won Dominion status, and also under Article XIII. of the Treaty secured the right to nominate the Southern Ireland representation on the Council of Ireland in the event of Northern Ireland separating from it. The net result is that Northern Ireland cannot receive any further powers or any aggrandisement of its status save by the consent and goodwill of the Irish Free State. Such, in compressed form, is the combined effect, in the events which have happened, of the Act of 1920 and the Treaty, which was modified by the Consequential Provisions Act of 1922, holding up the active functions of the Council of Ireland for five years. But if the events had happened otherwise—if Northern Ireland had not separated from the Irish Free State, it would still under Article XIV. have retained all its powers and privileges under the Act of 1920—guaranteed by Great Britain's signature to the Treaty—with the Free State Parliament, in which it would have received due representation, exercising the powers theretofore exercised by the Imperial Parliament, and, most important of all, there was to be no Boundary Commission. Northern Ireland would have retained the whole of its six counties. There was, too, in Article XV. elaborate provision for negotiations, before Northern Ireland's exercise of its option to separate, for all sorts of safeguards as to patronage, revenue, minorities, fiscal and financial policy, local militias and defence forces, and the agreements arrived at were to have had the same force as if they were embodied in the Treaty.

There can be little doubt but that out of these provisions could be fashioned a comprehensive settlement which Great Britain would do her best to aid with her good offices and with a large-handed treatment of outstanding claims. Patience and long views as to essential interests will be necessary. In the meantime, there are two quotations from the Lloyd George-Craig (pre-Treaty) correspondence which are as true to-day as when they were written. Writing of Northern Ireland's financial position on November 10, 1921, the Prime Minister of Great Britain said: "It is the essence of a Dominion status that the contribution of a Dominion towards Imperial charges is voluntary, like those of the Dominions. If Northern Ireland were part of the Irish State its contribution would be voluntary like those of the Dominions. But, on the other hand, if Southern Ireland became a Dominion, while Northern Ireland remained part of the United Kingdom, with the essential corollary of representation in the Imperial Parliament, it is clear that the people of Northern Ireland would have to bear their proportionate share of all Imperial burdens, such as the Army, Navy, and other Imperial services in common with the taxpayers of the United Kingdom. The members for Northern Ireland at Westminster would otherwise be voting for policies in Parliament in the expense of which they would not share....." To-day Northern Ireland is paying such proportionate share, but is largely getting it back again in subsidies which can hardly be continued. Again, he wrote on November 14, 1921, in regard to Sir James Craig's claim that Northern Ireland should also be created

a Dominion with the full six county area :—"Your proposal would stereotype a frontier based neither upon natural features nor broad geographical considerations by giving it the character of an international boundary. Partition on these lines the majority of the Irish people will never accept, nor could we conscientiously attempt to enforce it." This is the case in reason for the Boundary Commission, even if the Treaty did not require it.

IRON AND STEEL IN 1923.

We have it on the authority of Pope that "man never is but always to be blest." However true this may be of mankind in general, it seems at any rate to apply to the condition of the iron and steel industry. After two disastrous years, 1923 opened with considerable promise, and yet it departed, as far as the steel trade was concerned, unwept, and although it did not go unsung, the songs were mainly in a minor key. Yet when the figures of production and of export are considered, the reason for taking such a depressing view of the industry is not apparent, for production of pig-iron and of steel was nearly 50 per cent. higher than in 1922, and the production of steel was higher by some 12 per cent. than in 1913, while exports were 22 per cent. higher than in 1922, and nearly 90 per cent. of the exports in 1913. We give below the monthly figures of production and export as compiled by the National Federation of Iron and Steel Manufacturers compared with the years 1922 and 1913 :—

PRODUCTION OF PIG IRON AND STEEL—IMPORTS AND EXPORTS.

	Furnaces in Blast at End of Month.	Production.		Imports of Iron and Steel.	Exports of Iron and Steel.
		Pig Iron.	Steel Ingots and Castings		
		Tons.	Tons.	Tons.	Tons.
1923—					
January	183	567,900	634,100	128,800	353,400
February	189	543,400	707,100	122,700	317,600
March	202	633,600	802,500	111,000	368,100

* Average throughout the year.

It will be seen that the year divides into three periods—a period of expanding production from January to May, of declining production from June to September, followed by a very slow recovery from October to the end of the year. The reason for the increasing production from January to May, as is well known, was the dislocation occasioned by the French occupation of the Ruhr. This reduced the production of iron and steel in France, Germany, and Luxemburg, because of its effect on the fuel situation and transferred a certain demand for iron and steel to this country. By May, therefore, more blast furnaces were in operation in Great Britain than since the coal stoppage of 1921, and they were producing at a rate of 8½ million tons per year; steel works were producing at a rate of nearly 10 million tons per annum, while exports were at a higher rate than they had been since 1913. By the end of May the French iron and steel industry was beginning to recover from the worst effects of the occupation, for the policy of seizing Ruhr stocks and supplementing them by an increased home production and increased imports was becoming successful. French production, therefore, has been steadily rising since May, until at the end of the year her production both of pig-iron and of steel was at a higher rate than before the war, while,

aided by the depreciated franc, her exports were also increasing, and the demand from Great Britain consequently fell off. Towards the end of the year the demand for reconstruction from Japan, the settlement of the boiler-makers' strike, and the orders from the railways caused production again slowly to expand.

While the occupation of the Ruhr stimulated the demand for iron and steel in this country, in the earlier months of the year this advance was counterbalanced by the effect of the occupation on the price of raw fuel. Deprived of Ruhr coke, France, Belgium, and Germany turned to this country for supplies, and the exports of metallurgical coke, which in 1922 had been 1,600,000 tons, amounted in 1923 to 2,746,000 tons. The price of coke to the home consumer consequently rose, and Durham blast furnace coke, which had been 26s at the beginning of the year, stood at the end of May at 41s 6d, and even this figure was less than coke makers were obtaining for exported coke. A necessary accompaniment of the rise in fuel prices was a rise in iron and steel prices. Cleveland pig-iron No. 3 rose from 92s per ton in January to 127s 6d in March; East Coast hematite (mixed numbers) from £4 13s 6d per ton to £6 7s 6d; soft billets from £6 12s 6d to £10; sheet and tinplate bars from £7 10s to £10; rails from £8 15s to £10 10s. Expressed in the Board of Trade Index Number, iron and steel prices which in December, 1922, were 31 per cent. above 1913, rose by April to 60 per cent. above 1913, fell again by October to 42.7 per cent., and then slowly rose in the last two months of the year. Average prices throughout the year were 47 per cent. above 1913, compared with 37 per cent. in 1922, but prices in 1922 were unremunerative, and the rise which took place in 1923 was not sufficient to counterbalance the rise in the cost of coke. It is to this fact that the disappointment of 1923 is due, for even during the temporary boom owing to the Ruhr occupation prices were never quite at the level of commodity prices generally, while the average for the year was only 47 per cent. above 1913, compared with 59 per cent. for all commodities.

The reason for the disappointing prices is the fact that in spite of the handicaps under which the Continent was working the import of Continental material was never entirely checked, and owing to the depreciated currencies the imports were sufficient to keep British prices down to an unremunerative level. Except for the price factor there would have been no need to import a single ton of steel during the year, for the steel making capacity of the country was extended by approximately 50 per cent. during the war, but, in fact, imports of iron and steel averaged 110,000 tons monthly throughout the year, 60 per cent. of which came from Belgium.

Exports, as has been stated, were on a tonnage basis approximately 90 per cent. of those in 1913, and it will be seen from the following table that in some lines exports have exceeded those of that year, notably in tinplates, black plates, and sheets, plates and sheets of ½-inch thickness and upwards, steel bars and hoops, and strips :—

	1913.	1922.	1923.
	Tons.	Tons.	Tons.
Pig-iron and ferro alloys	1,124,181	793,763	894,298
Iron bars, rods, angles, &c.	141,452	31,403	43,615
Steel bars, rods, angles, &c.	251,059	221,109	354,144
Hoops and strips	45,708	48,281	71,619
Plates and sheets not under ½ in. .	126,380	85,462	193,789
Black plates and sheets under ½ in. .	139,927	224,836	338,978
Galvanised sheets	762,075	513,110	602,390
Tin, terne and other coated plates. .	494,497	449,273	552,338
Rails	506,585	258,987	306,904
Railway material	267,254	218,370	186,537
Tubes, pipes and fittings, cast and wrought	399,608	162,476	242,200
Wire	60,532	54,500	78,596
Wire manufactures	55,739	34,677	52,572
Total, including other items ..	4,969,224	3,397,185	4,319,571

One of the adverse results of the occupation of the Ruhr, as has been seen, was its effect on the price of fuel, but even more serious was its reaction on the international commercial situation generally, in that it prevented the long-awaited revival of confidence which would have resulted in an increased interchange of commodities. The

shipbuilding industry of this country, therefore, did not make the recovery that had been hoped for, and shipping tonnage commenced in 1923 amounted only to 953,000 tons, compared with 2,400,000 tons in 1920. Engineering, too, another big consumer of the products of the iron and steel industry, was also severely hit, and the percentage of unemployed in the engineering trades was very high throughout the year.

In spite of many disappointments the trade is looking forward with more hope to 1924. The shipbuilding returns for the last quarter of 1923 showed a marked improvement on the previous quarter, and it is expected that the first quarter of 1924 will show a still further improvement. There was less idle tonnage at the end of 1923 than at October 1st; the employment figures showed a steady improvement, while the orders placed by the railway companies and local authorities in the interests of employment have given a very welcome stimulus to the industry. In this connection it is interesting to note that the industrial and commercial prosperity of the United States in 1923 has been attributed by many to the policy of expansion initiated by the railroads. It has been estimated that the railroads and allied concerns consumed approximately 31 per cent. of the output of iron and steel in the United States in 1923, as compared with 18 per cent. in the previous year. Clearly the demands of the British railways cannot reach this proportion, but it is hoped that, as in America, the effect of the railway orders will be to lead to bigger demands from other directions. Although feeling in the industry with regard to 1924 is fairly hopeful, there are many adverse factors which must not be overlooked. It is clear from a survey of the conditions obtaining in other iron and steel-producing countries that Great Britain will be faced with very severe competition in the coming year. While the steel-producing capacity of Belgium is but a fourth of that of this country, she is, in fact, one of our greatest competitors, for Belgium depends to an even greater extent than does Great Britain on export trade, and in competition with Great Britain is favourably situated by reason of her low labour costs and the modern plant which has taken the place of the plant destroyed during the war. If Belgium succeeds in obtaining more cheap coal supplies from the Ruhr and in modifying the eight-hour day as she is endeavouring to do, she may prove an even more formidable competitor than in the past. Germany, too, although handicapped by having to supply so much reparations coal to France and Belgium, is seeking to counterbalance this handicap by imposing a longer working day and lower wages, while France has not only obtained the magnificently equipped works of Lorraine, but has rebuilt the works in the devastated regions in a much more efficient way than previously.

America for some time past has been too much concerned with meeting the home demand to pay very much attention to export, but it is recognised in America that the 50 per cent. increase in capacity resulting from the war cannot in normal circumstances be kept running on home demand alone, and although America's home demands in 1924 seem likely to approach the level of 1923, sooner or later Great Britain will have to meet the force of American competition in the overseas markets.

The situation, therefore, is one that calls for constant vigilance on the part of the manufacturers of this country, and it is only by the most strenuous efforts on the part of all concerned that Great Britain can hope to retain in 1924 the position she attained by so much sacrifice in 1923 of being the second largest producer of iron and steel in the world, and the world's greatest exporter of iron and steel.

LAND AND PROPERTY IN 1923.

LOOKED at from practically every standpoint, the year 1923 witnessed a distinct improvement as far as land and property was concerned. It has not only proved a year of increased transactions (as far as official returns are concerned), but property values have become more stabilised. A year ago the position was difficult to both buyers and sellers alike. Would-be sellers could not be brought to believe that the period

of boom values was over, while on the other hand prospective buyers were afraid to venture in view of the fact that building costs were artificial, prices being maintained by combinations of manufacturers and importers of building materials.

Unfortunately, this year there is a break in the customary figures formerly compiled by the *Estate Exchange*. These statistics were formerly grouped under three headings, namely: (1) Sales of property during the year at the headquarters of the property market; (2) auction sales in other places, which are registered with the Estate Exchange; and (3) sales by private treaty of which the parties interested consent to publish details. As has been pointed out before these figures give but a limited view of the statistical picture, for while some auctioneers are inclined to preserve a discreet silence as to their sales, others, on the other hand, may possibly include in sales properties which were merely submitted to the public, but bought in. In private sales the position is even more uncertain, being so many interests at work which often prevent the correct sale price from leaking out.

In order that our readers should be able to trace past movements in the property market we reproduce, in the first place, our table from last year's review. This shows a comparative summary of sales from 1912 :—

COMPARATIVE SUMMARY OF SALES.
(000's omitted.)

	1912.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
	£	£	£	£	£	£	£	£	£	£	£
Mart	2,554	2,346	1,866	804	929	1,546	2,299	6,251	5,655	3,030	3,042
Other sales ..	4,698	4,039	3,462	1,824	2,917	5,546	7,148	9,234	7,581	3,378	3,322
Private	1,837	2,189	1,357	1,942	1,232	1,435	1,935	6,057	5,040	4,451	4,073
	9,089	8,574	6,685	3,570	5,108	8,527	11,382	21,542	18,276	10,859	10,437

The statistics now issued are in the following form :—

STATEMENT showing the RESULTS OF SALES BY AUCTION at the MART and WINCHESTER HOUSE during 1923.

	1922.	1923.	1923.
	£	£	£
The Mart	2,616,052 ..	3,273,983 ..	Increase 657,931
Winchester House ..	425,720 ..	380,776 ..	Decrease 44,944

3,041,772 .. 3,654,759 .. Net increase 612,987

It may be explained that Winchester House in 1923 continued to be a favourite resort for property buyers and auctioneers. In 1922 the figures for the Mart and Winchester House were combined under one heading. We understand that other returns given in the previous official statistics will not be ready for some months to come. Taking the bare figures now offered us, sales at the two central institutions in town totalled £3,654,759, against £3,041,772 for 1922. This reveals a very gratifying increase. We confess, however, that the absence of the table formerly published, giving sales month by month and quarter by quarter, is very much to be deplored.

Sound freehold and long leasehold properties have realised good prices for investment purposes. In the West-End of London the rents for business premises have ruled high. A steady increase is to be found in the values of large houses in the West-End of London and important thoroughfares. The conversion of these houses to flats is a policy which continues to find favour, converters having found it profitable when the work is efficiently undertaken. Suburban houses continue to be in request, while small country villas realise prices about equal to present-day building costs.

With reference to agricultural land, writing in their annual review, Messrs Knight, Frank and Rutley report that "farms with a good proportion of grass land, and a prospect of reasonably early possession, have realised satisfactory figures, but where the area is largely arable, sales have not been effected so readily, owing to the low prices of corn coupled with the high cost of production. Small holdings have sold particularly well. Accommodation land adjoining towns and villages has frequently made high prices." They add that "the majority of farms which we have sold have been bought by sitting tenants and by farmers for occupation, for there are practically no farms to let in any part of the country." This appears to be a statement in striking contrast to the contention that agriculture is a decaying industry. This

well-known firm of estate agents incidentally point out that "in the case of many estates, the crucial difficulty is that of finding a buyer for the mansion. Until this is sold, a certain area of the surrounding land has to be reserved for the preservation of the residential amenities." They maintain, however, that "our experience under such circumstances is that when an owner has been prepared to accept what may seem an inadequate sum for the mansion, the surrounding lands, thus liberated for sale, usually make prices which compensate for the apparently low figure obtained for the house. The vendor also saves the expense of maintaining a probably empty mansion and grounds, which tend to deteriorate quickly."

Regarded purely from the investment aspect, Messrs Hampton and Son, Limited, in their annual review, state that "the demand for first-class investments secured on good blocks of well-let freehold and long leasehold City and West-End property continues to hold good, particularly in the case of well-secured freehold ground rents which are still much sought after by trustees and buyers of gilt-edged investments." This firm points out that "business in suburban shop property has considerably improved, investors realising that there are good propositions in the better suburbs as well as in the centre of the Metropolis." We are told that "the day of the speculative builder, in the pre-war sense, is again coming as middle-class houses can now be erected to show a good profit," although "business is, of course, restricted to building for immediate sale for occupation." In conclusion, it is stated that "large funds for mortgage investments are available, and, provided the security is a good one, money is obtainable on much more favourable terms than has been the case in recent years."

One thing emerges quite clearly from a welter of discussion and property sales, and that is that the operations of the Rent Restriction Act effectually check the supply of housing. Meanwhile a few sales of occupied suburban villas and weekly property are effected with difficulty. It is obvious, however, that the heavy hand of official rent control has rendered this description of property an investment to be carefully ignored by the great body of investors. The result is that this kind of property is slowly drifting into the hands of professional speculators. And the change is not one which will please tenants eventually.

A FRENCH VIEW OF THE FRANCO.

(BY A PARIS CORRESPONDENT.)

THE fall of the franc is no new phenomenon. Since May, 1922, it has continued without interruption. Just as during the war the disappointment of every hope of peace was followed by a decline in the exchange of each of the belligerents, so during the last two years the failure of every attempt to produce a Reparations settlement has been succeeded by a fresh depreciation of the franc. In May, 1922, the failure of the Bankers' Conference made the price of the dollar in Paris rise from 11 francs to 12.19 francs, at a time of year when the seasonal situation usually makes the dollar quotation fall. The same happened in January, 1923, with the entry into the Ruhr. The dollar, which is normally at its lowest at this time, fell to 14.98 francs (against 12.25 in January, 1922), to rise in August to 18.25. A short respite in September followed the cessation of passive resistance, and the dollar descended to 15.92 francs, but this was only a flash in the pan. Once more the hope of an agreement vanished, and the dollar rose in November to 18 francs, exceeded 20 francs in December, and in January reached the panic figure of 22.50.

The most noteworthy feature of the present exchange crisis is that, without question, it has started from Paris. Previous falls have, on the contrary, started abroad as a result of distrust of the political results of M. Poincaré's policy. In London and in New York the holders of francs argue that every setback to the hope of a settlement of the problem of Reparations made the financial situation of France more precarious. The indifference with which the French Chamber and French Government

seem to accept the existence of an extraordinary budget amounting to about 20 milliards, based only upon borrowing, confirms these foreign holders in their uncertainty. American, Dutch, English, and other exporters were less and less prepared to leave the proceeds of their sales on deposit in Paris in view of the uncertainty of the future. Instead of advancing the money in France, they tended to withdraw the proceeds of their sales at the earliest possible moment.

At what moment did this distrust spread from foreign countries to Paris itself? A definite reply is naturally not possible. All that can be said with certainty is that throughout 1923 the spectacle of the uninterrupted fall of the franc induced an increasing number of French exporters or French holders of foreign coupons to leave their money abroad. These fears were accentuated when the dollar reached the exceptional figure of 18 francs in August, for this figure was reached just before autumn when purchases of cotton, wool, and cereals in America and Australia always tend to depreciate foreign exchanges in Paris. Nevertheless, many importers still kept out of the market, always hoping that an arrangement—announced by the Government every day as being imminent—would shortly occur and produce an improvement in the exchange. Indeed, certain careful bankers took steps to protect themselves against the danger of a sharp rise of the franc, which they felt sure would occur as soon as ever Germany yielded. But when it appeared that the cessation of passive resistance brought no change in the political situation, the hope of any such improvement vanished and the demand for foreign securities and currency came forward with the more precipitance just because there had been this previous reserve. But they came upon a market in which, as we have said, there had for some time been a scarcity of sellers. The dollar, which was at 17.54 at the beginning of November, rose to 18.58 at the beginning of December, 19.92 on January 2nd, and 22.50 on January 14th. The pound sterling reached 78.16 at the beginning of November, 85 at the beginning of January, and 98 on January 14th. It was at the latter date that the general public began to get restless. Up to that point only business people had appreciated what was going on. But thereafter the whole public began to get scared. While the exchange dealers were providing themselves with foreign exchange at whatever price they could, the banks from the beginning of January were inundated by orders from the public to exchange their investments with fixed interest against dividend investments of foreign securities. The price of the dollar and of the £ became one of the daily preoccupations of everyone, and the fear of a more general rise in the cost of living spread throughout the country.

In deciding forthwith to take drastic measures and in demanding from his majority, on the eve of the election, the authority to impose an increase of taxation, which this majority had always hoped to put off on to the shoulders of the new Parliament, M. Poincaré made a sound decision and acted courageously. It is nevertheless clear that he did not himself foresee the effect of his own foreign policy upon the exchange, and that it needed the events which have actually occurred to make him realise the connection between the two. This may seem strange, but it is undoubtedly the case.

But thinking people also see farther than the incidents of January. They are beginning to envisage as a whole the foreign policy which France has pursued for the last two years; the gradual isolation of France, the disproportion between the political steps which have been taken and the economic results which have been obtained. They realise that it is this whole policy which must be changed if we are to put the franc in a position to resist any further pressure that may arise. One of the leading journalists of France—an avowed but independent supporter of M. Poincaré—has put this idea very clearly in a recent article of the *Journal des Débats*: "If the franc is falling," he wrote on January 16th, "it is partly because we have not given to the world—that is to say to foreign holders of French francs, who can at any time throw their holdings on to the market—the impression that we are pursuing a practical policy based upon a true understanding of the realities of the position. France has 40 million inhabitants, and her birth rate is tending to decline. She

cannot govern the world, but it is open to her to adopt a policy which will inspire the confidence of the world."

The issue could not be better put. Will M. Poincaré, who has shown after a long inertia that he knows how to act promptly in the face of a financial crisis, be equally alive to the need of transforming his too juridical and unyielding diplomacy into one which is more supple and realistic? That is the secret of to-morrow. This only is certain, namely, that in order to stabilise the franc, foreign holders must be reassured not only as to the present, but still more as to the future. To this end the first condition is a policy which, while defending the legitimate rights of France, will succeed at the same time in inspiring confidence throughout the world. Such a policy is undoubtedly within our reach.

Notes of the Week.

Railway Strike Settlement Terms.—The terms of settlement of the railway strike are prefaced by a preamble in which the managers state that, although they never contended that the award of the National Wages Board was obligatory, yet in all the circumstances they were justified in giving effect to it. In adopting that attitude, it should incidentally be remembered, they had the support of Mr Thomas and the N.U.R., and indeed of everyone except Mr Bromley and his union. As regards possible hardships which the award might involve in special cases, the companies agreed to certain alleviations, as shown in the following terms, which for purposes of record we reproduce below:—

(a) BASIS OF PAYMENT FOR MILEAGE WORKING.

From the date of the operation of the decision 130 miles shall equal one day's pay.

From the beginning of the first pay week in July, 1924, 140 miles shall equal one day's pay.

From the beginning of the first pay week in January, 1925, 150 miles shall equal one day's pay, unless, in the interval, it is agreed otherwise at a meeting to be convened for the purpose.

Payment for mileage in excess of the stipulated equivalent for a day's pay to be at the rate of one hour's pay for every 15 miles.

(b) CLASSIFICATION OF DRIVERS ON SHUNTING, &c., DUTIES.

For the purpose of carrying out the provisions of Clause 2, Part (iii.) of the summary of the board's decisions relating to engine-men, it is agreed that, if an engine driver in the shunting class in receipt of the maximum of 14s per day, and before he is promoted to main line working, is required to work main line trains for an aggregate period of 313 days, either consecutively or intermittently, and is thereafter put back to shunting, or other duties in that class, he shall not be reduced in rate below 15s per day; provided that the maximum rate of 14s shall apply to any shunting, &c., duties performed during the qualifying period of 313 days, when worked intermittently.

(3) The railway companies reaffirm their undertaking that there shall be no dismissals arising out of the application of the decision.

(4) The Associated Society of Locomotive Engineers and Firemen undertake to bring the strike of their members to an end forthwith.

(5) All the men involved in the present dispute who present themselves for work within a reasonable time to be reinstated by the companies at the earliest practicable moment without prejudice to their seniority position.

(6) It is a condition of the settlement that all railwaymen shall work together amicably, and we hereby agree to use every endeavour to secure this being done. Any proved breach of this condition will be a case for disciplinary action by the railway companies under Clause 72 of the Report of the Royal Commission upon the Conciliation Scheme.

The best comment on the whole affair is the note appended by the managers to the statement of the settlement terms. It reads as follows:—"On behalf of the railway companies, it may be pointed out that the offer made on January 19th to the Associated Society of Locomotive Engineers and Firemen before the strike commenced gave in essence all they have now received."

Bankers on Trade.—Three more important bank meetings have been held this week at which the chairmen have devoted a large portion of their addresses to a review of the trade situation. Those of Mr W. R. Glazebrook and Captain G. P. Dewhurst, at the meetings of the Bank of Liverpool and Martins and Williams, Deacon's Bank respectively, were naturally devoted to a considerable

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000

Paid Up Capital ... 1,050,000

Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

extent to a survey of the position of the cotton trade. Captain Dewhurst described the present situation in the cotton trade, owing to the partial failure of the American crop, as, if anything, worse than it was twelve months ago, and suggested that no relief by way of supplies can be expected before next autumn. Both he and Mr Glazebrook pressed for further efforts for expanding the production of cotton in the Empire. The latter, while refusing to attempt a forecast for the current year, referred to the distinct hope aroused by the rapid recovery which Austria is making commercially and financially as a result of the reforms inaugurated under the auspices of the League of Nations. "The experiment on similar lines about to be made in the case of Hungary appears to have good prospects of achieving equal success. Other countries are watching these experiments, and it is perhaps not too much to hope that we have here the small beginnings which will lead to a return to sound financial principles by the larger European countries." Sir Harry Goschen at the meeting of the National Provincial and Union Bank was less pessimistic about the cotton trade, in which he thought there had been some change for the better during the year.

Our Index Number.—A further increase in wholesale prices, to which the railway strike has partly contributed, is recorded by our Index Number for the end of January, the total having risen by 82 points to 4662. The bulk of this increase has taken place in foodstuffs; a very substantial advance has occurred in potatoes, thanks almost entirely to the holding up of transport facilities. Other movements have been on a smaller scale, but mostly in an upward direction. The following table shows the changes in the five groups and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	352	616	484	553	2564	116.6
" Dec., 1915	897	446	731	711	848	3634	165.2
" Dec., 1917	1286	686	1684	839	1348	5543	252.0
" Dec., 1918	1289	782	1848	908	1380	5807	264.0
" Nov., 1919	1508	914	2074	1246	1708	6856	311.6

In addition to the increase in the price of potatoes, all cereals are higher on balance, but there was a small decline in meat prices. Among subsidiary foodstuffs tea was slightly higher, and there was a sharp advance in coffee, the latter having been going on throughout the month owing to a scarcity of supplies and a growing demand, especially from the Continent. In the textile group cotton prices have eased further, silk has fallen, and there were small declines in hemp and jute, but wool prices were higher, and flax, which has shown a strong upward ten-

dency, closes substantially higher on balance. In the minerals section, coal and the minor metals were a little higher, but iron prices were lowered. The principal changes in the miscellaneous section were advances in the quotations for oils and oilseeds. The table below sets out the changes in each commodity's index number in comparison with that for the end of December, the figure 50 representing in each case the average price during the basic period, 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	84½	+ 6½	Cotton, A	178½	— 14½	Copper	51½	+ 1
English	77½	+ 3½	Cotton, E	161	— 6½	Minerals	789	+ 15
Flour	76	+ 4	Yarn	160½	— 12			
Barley	86½	+ 6	Cloth	154	— 7			
Oats	77½	+ 4½	Wool, Eng.	136½	+ 7	Baltic timber	103½	— 3
Potatoes	125	+ 47	Do Aus.	138	— 7½	Amer. timber	89	— 3
Rice	118½	— 2	Silk	134½	+ 9½	Leather	59½	+ 3
Beef	81½	— 6	Flax	49½	— 4	Petroleum	92	+ 2
Mutton	89	— 6½	Hemp	88	— 4½	Oils	77	+ 5
Pork	93½	+ 5½	Jute	— 33½	— 33½	Oilseed	88	+ 7
						Tallow	75	— 3
Cereals & meat	909½	+ 56½	Textiles	1,349	— 1½	Crystals	85½	— 3
Tea	148	+ 6½	Pig-iron	105	— 1½	Rubber	124	— 3
Coffee	116	+ 24	Steel rails	72	— 4	Miscellaneous	769	+ 14
Sugar, cane	232½	— 1	Iron bars	95	+ 4½			
Sugar, beet	132	— 1	Coal, steam	141	+ 3	Total	4,662	+ 82
Butter	100½	— 1	House coal	132½	+ 5			
Tobacco	116½	+ 30	Lead	135	+ 7			
Other foods	845½	+ 30	Tin	98	+ 7			

Last month's changes raise the increase in the total index number over the level prevailing in July, 1914, from 78.6 to 81.8 per cent., as may be seen from the figures below:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1922	159	180	180	164	168	169.6
June, 1923	174	193	184	149	160	171.1

Jan., 1924	157	241	219	170	139	181.8

The January total is the highest recorded since September, 1921. Primary foodstuffs are at the highest point since July, 1922, but minerals are not up to the level of May last.

France and the Little Entente.—On January 25th the much-talked-of treaty between France and Czechoslovakia was signed in Paris, and published two days later. The document, although it emphasises the attachment of the two contracting parties to the League of Nations, on the face of it seems harmless enough. The two governments bind themselves to consult one another on such questions of foreign policy as might endanger their security or threaten the arrangements established by the treaties of which the two governments are signatories. This first article gives, in fact, the key to the whole treaty. The *status quo* is to be maintained, and "reciprocal guarantees of security against possible aggression" are felt to be indispensable. Special reference is made to the necessity for maintaining the independence of Austria, for excluding the Hapsburgs from the throne of Hungary, and for adopting a common attitude in the event of any attempt being made to restore the Hohenzollern dynasty in Germany. It is this latter clause, together with the general reciprocal guarantee, which marks the importance of the departure embodied in the new treaty from the policy hitherto adopted by the Czechoslovak Foreign Minister. At this present moment, moreover, the opinion very widely held in this country is that France herself, since the Ruhr adventure, at any rate, has adopted a policy which is a very serious challenge to the rule of law aimed at in the Covenant of the League; and an alliance with France at this juncture seems at least to imply that M. Poincaré's thesis is not altogether disapproved of in ruling circles in Prague. Moreover, an insistence on past treaties—and the Reparations question looms large in this connection—sounds strangely at a time when the need for bringing some at

least of their clauses more nearly into harmony with the possibilities of the European situation is being more and more realised. One thing, at any rate, is clear. This new treaty, as we suggested in our issue of January 5th last, embodies something more than the principle of identity of interest between the contracting parties which has hitherto been the guiding principle of Dr. Benes' foreign policy. At the same time, the undertaking that both parties shall submit disputes which cannot otherwise be settled to the Permanent Court of International Justice, or to some agreed form of arbitration is a very welcome feature. It is important to note that the Roumanian Government has recently declined the loan of 100 million francs for the same purpose, which had already received the sanction of the French Chamber, but which was held up by the Senate. It seems that the Roumanian Government is unwilling to allow the country to be used as a dumping ground for surplus French war material of doubtful value, and the whole incident tends to show that Roumania, at least, is anxious to pursue an independent policy as between the two Western Powers. It is much to be regretted that Dr. Benes has seen fit to depart from this standpoint, for his action has certainly circumscribed the sphere of usefulness of the Little Entente, which, especially after the fortunate solution of Italo-Yugoslav differences, might have played a most important rôle as mediator between the Powers in the interests of European reconstruction.

Italy and Yugoslavia.—Two separate agreements have been signed by Italy and Yugoslavia—one concerning Fiume and the other regarding the general relations of the two countries in the field of international affairs. The free city of Fiume (originally conceived as a kind of Adriatic equivalent to Danzig) has succumbed to partition. This is hardly to be regretted, for the people of Fiume had neither a separate nationhood nor a wish to develop it. As the commercial inhabitants of a port, they depended for their livelihood upon economic union with some hinterland; and since the break-up of Austria-Hungary, their natural hinterland in the Danube Basin has been cut off without compensation hitherto in the shape of an artificial hinterland in Italy. The long occupation of the town by a free company of *Arditi* added further to the townsmen's burdens; and, therefore, compared with her recent case, Fiume proper stands to gain by annexation to Italy, although Italy herself may find Fiume (divorced from Fiume's hinterland) a charge and not an asset in the financial sense. The whole hinterland is now the commercial prize of the Delta and Porto Barros, a stone's throw away, which are annexed to Yugoslavia. The line of partition is as awkward from the practical point of view as that which was recently driven across Upper Silesia; but in this case, as in the other, the authors of the arrangement would probably contend that ultimate success depends, not upon the local topography, but upon the psychological relations of two great nations with one another. If the Fiume Agreement really removes the tension between the Italian and the Yugoslav peoples, and enables them to deal with questions of common interest in an amicable and reasonable manner, no insuperable economic barrier need be involved in the new political boundary. Indeed, its very awkwardness may lead, all the more quickly, towards its being surmounted in the economic sphere. Italy will desire to secure trade for Fiume, Yugoslavia to secure facilities for a greater volume of trade than Porto Barros and the Delta can handle. Given mutual goodwill, it will be strange if these factors do not soon restore Fiume at least to that level of prosperity which she enjoyed while port and hinterland were united, politically as well as economically, under the Hapsburg flag. The Fiume Agreement has been accompanied by a "Pact of Friendship and Co-operation." In principle this is particularly welcome, since the trouble between Italy and Yugoslavia has been a serious cause of unrest and uncertainty in Europe ever since the Armistice. Its removal benefits the rest of Europe, as well as two countries directly concerned, and in making friends they have not only promoted their own interests, but have shown themselves "good Europeans." Incidentally, we shall expect our new Government to clear up the far less serious, but still unfortunate, points of difference outstanding be-

tween Italy and Great Britain. We differ regarding the Dodecanese and Jubaland. In regard to the former, we conceive that the Foreign Office is in the right, but we cannot reasonably champion the principle of nationality at Italy's expense unless, at the same time, we show generosity in honouring, at our own expense, a pledge which we gave to Italy as far back as the Treaty of London in 1915, in virtue of which Italy intervened in the War. Under that treaty, we promised her territorial compensation in Africa in the event of Germany's African colonies passing out of her hands into those of Great Britain and France. We have not sought to claim that we are absolved from that pledge by the introduction of the mandatory system. Therefore do not let us be niggardly in carrying it into effect. We, and the world, have more to gain by a renewal of the old cordiality between Italians and Englishmen than is at stake in a triangular piece of desert in an uninviting zone of Africa, across which our Somali tribesmen happen to trek twice a year. Economic and political boundaries may not be easy to adjust in East Africa, any more than at Fiume, but, here again, the key to a solution lies in the restoration of goodwill between the nations at home.

Statistics of Reparations and Inter-Allied Debts.*—We have received a series of tables upon the subject of reparations, inter-Allied debts, and the wealth of the world's chief creditor and debtor countries, from Italy, which affords a remarkable example of misapplied energy. The purpose of these statistics is an extremely laudable one, namely, to set out in simple form both in aggregate and as totals per head, the wealth of the chief countries, the extent to which that wealth is modified by war debts, inter-Allied debts, and the payment of reparations on various plans. The series culminates with a number of graphs showing the status of each country on various hypotheses. But the whole structure is depreciated by the basic assumption as to national wealth. Thus, in the case of the United States, Signor Alberti takes into account the estimated increase of 100 per cent. in the national wealth of America since the outbreak of war. For the countries of Europe, however, he takes a number of pre-war estimates without alteration, except that from the French, Belgian, and Italian figures there is deducted what is alleged to be a value of the war damage. This is bad enough, for to deduct war damage, estimated at post-war prices, from a pre-war estimate of the national income is clearly wrong. It makes nonsense of the whole calculation when he begins to compare present obligations with these pre-war estimates of wealth. It is true that the figures are all converted into dollars, but they are post-war dollars, and comparisons could only properly be made after revising the estimates of wealth to allow for the depreciation in the value of gold (the rise in prices in dollars). We might add that, just as in the case of the United States, the estimates of wealth have increased as a result, partly of rising prices and partly of an actual increase in physical wealth, so that there is a further element of wealth in Europe of actual physical increase, particularly in the way of factories, machinery, &c. For example, in the case of France, if the temporary or permanent destruction of mines is to be taken into account as a debit, the new mines and increased output stimulated during the war must be reckoned as a credit. The danger which the reader runs by accepting figures of national wealth for which no adequate explanation is given may be illustrated by comparing Signor Alberti's figures with a series recently put forward in a memorandum on the World's Wealth and Public Investments, contained in Moody's Government and Municipal Rating Book of 1923:—

NATIONAL WEALTH PER HEAD (including Government Debt).

	Alberti. Dollars.	Moody. Dollars.
U.S.A.	3,600	2,648
United Kingdom	1,550	2,333
France	1,480†	1,879
Italy	686	766
Belgium	1,337	1,346
Germany	966	1,365

† Figure allows for new provinces on assumption that wealth per head is equal to that in old.

* Tables relating to Reparations and to Inter-Allied War Accounting Entries. By Mario Alberti. Associazione Bancaria Italiana, Milan.

It is obvious that when Italy's inter-Allied debt of 105 dollars per head is under consideration it makes considerable difference which of the two figures in the above table represents the true fact. The Moody publication is almost as sparing of information as to how the calculations are arrived at as that of Signor Alberti, but the idea underlying both of them is quite sound, though in the end these questions of inter-Allied indebtedness must be solved with the help of a knowledge of what each country possesses and can afford to pay. We shall have a further occasion to go into this question more fully. We may, however, add that whatever figures are taken it is quite evident that it would be both impracticable and unreasonable to expect Italy to pay 20s in the £ on the very heavy debt which she owes to England and the United States. For Italy, even more than for France, her inter-Allied indebtedness is the key to her attitude on the whole reparations situation. Even if reparations were paid in full it would cover rather less than three-fourths of Italy's debt to her former Allies.

National Savings.—The seventh annual report of the National Savings Committee, covering the financial year 1922-23, states that during the twelve months ended March 31, 1923, the number of Savings Certificates sold was 49,593,813, of a cash value of £39,675,050. In comparing the sales with the figures for the preceding year, which amounted to 120,427,738 Certificates, of a cash value of £93,331,498, it is to be remembered that the period included the abnormal sales during January to March, 1922, the three months immediately preceding the increase in the price of Savings Certificates from 15s 6d to 16s. When compared with the figures for 1920-21 (53,156,062 Certificates of a cash value of £41,195,948), it will be seen that the reduction in sales is small. The reduction in 1922-23 is accounted for by the decline following the heavy purchases of January-March, 1922. During the latter part of the year under review the sales increased considerably, and reached a level of 1,250,000 Certificates per week. The total number of Certificates sold up to March 31, 1923, was 625,194,405, of a cash value of £485,765,509, and the amount repaid (excluding interest) £131,923,978, representing 27 per cent. of the total invested. The total expenditure of the National Savings Committee during the financial year (apart from the value of the services rendered by other Departments, estimated at £19,660) was £77,345 (0.2 per cent. of the total sales), against £83,512 in 1921-22. Expenses of press advertising, £59,837, were defrayed from moneys applicable to the expense of issues of Government securities. It is satisfactory to note that "bad debts," in the shape of losses by Savings Associations, amounted to only £149, a tribute to the efficiency with which the finances of some 18,500 associations were administered. Perhaps the most satisfactory feature of the Report is the continued progress recorded in the organisation of the savings movement throughout the country. Valuable assistance is being rendered by local authorities, and the fact that 2,287 new associations were formed during the year under review appears to bear out the Committee's conviction that "the organisation can depend for its further expansion upon a large measure of the voluntary service on which it is based. In accordance with the recommendations of the Montagu Committee, steps are being taken to consider methods of co-operation as regards propaganda, &c., with the Post Office and Trustee Savings Banks.

Great Britain and Mexico.—According to an announcement, apparently on official authority, in Wednesday's *Times*, Señor Nieto, the Mexican Minister in Sweden, is at present visiting England in order to obtain British recognition for President Obregon's Government, and the British Foreign Office is prepared to resume negotiations at the point at which they were suspended last September on the question of the establishment by Mexico of a Commission to deal with the question of compensation to British subjects for losses suffered during the revolutionary period since 1910. The negotiations, we believe, were then broken off in consequence of the Mexican refusal to recognise claims for damage under the provision of the Carranzist Constitution relative to the rights of property

in oil and in certain lands; but, as the United States Government has received satisfactory assurances that this clause is not retroactive, this difficulty should not be insuperable. Even under Carranzist rule there was a movement in the City of London in favour of recognition. No doubt there is a feeling at present that it may be advisable to await the issue of the present conflict in Mexico, but the United States has committed itself irrevocably to the support of President Obregon, and, whatever the case for the de la Huertists at the outset of the struggle, their seizure of the oilfields and interruption of the pipe lines has clearly put them in the wrong. President Obregon's representatives contend that British recognition would ensure the final collapse of the rising. At any rate, it might facilitate mediation and open the way to peace.

The Position in China.—The approach of the Chinese New Year, the customary date for the settlement of all outstanding debts, finds the Peking Government in a position which, judged by Western standards, is desperate. According to a telegram published in the *Times* last Wednesday from its Peking correspondent, the Finance Minister is endeavouring to raise a loan from the native banks of \$12,000,000, wherewith to pay the police of the capital and a small sum on account of arrears of official salaries; but the Customs and salt surpluses, which are practically the only security available, are pledged for years ahead. But China came through similar crises in 1921 and 1922, and in the best-informed quarters in the City of London the situation is regarded as less alarming than on either of these occasions. Confidence is felt in the new Cabinet, which is making a serious effort to grapple with the financial problem, and has invited the co-operation of European financial advisers resident in China. It is true that the imposition of the so-called Customs surtax of 2½ per cent., which would probably have been sanctioned by the Conference agreed to in 1921 at Washington, has been blocked by the refusal of France to ratify the agreement, in consequence of the objection of the Chinese Parliament to the projected payment in gold francs of the French share of the Boxer indemnity, and that this refusal must postpone indefinitely the consolidation of the floating debt, an operation which would greatly relieve the difficulties of the Peking Government. Brigandage and disorder continue in the provinces, and several more foreigners have recently been held for ransom or murdered; but the solution of the problem of pacification lies in finance. Inasmuch as it is at last being seriously dealt with, and as the country has obtained an effective government, there are grounds for hope that China, after all, will emerge from her difficulties without breaking up.

Stock Exchange Conditions.—Our Stock Exchange correspondent writes:—Stock Exchange markets have spent a fortnight of wild price movements and lively agitation in all parts of the House. From the day that the announcement was made of the composition of the Labour Government Cabinet, a strong upward movement set in. Substantial purchases of stock did really take place in the gilt-edged market, in Home Rails, and a few of the other departments; the House found itself suddenly called upon to deal with a volume of business surprising in its extent at a time when the railway strike was in full swing and a Labour Cabinet barely lodged in its new quarters. No doubt a good deal of the money which streamed into the markets has been released from banking accounts that were built up at the end of December, partly with the intention of window-dressing, partly because the owners preferred to keep their resources liquid rather than to buy stocks and shares at a time of political flux. The Labour Government made a neater job of its Cabinet than anyone thought it would be able to do, and the obvious recognition of this fact by the investing public, who began to send inquiries for Stock Exchange securities of all kinds, acted as a signal of alarm to the bears, whose account throughout the House has turned out to be of proportions far more considerable than was known. That a great deal of the trading emanated from professional sources, the Stock Exchange eye can see from the fact of the denominations of the orders. The public deals, as a rule, in smaller amounts.

Professional and private business, however, ran simultaneously, and members have been almost too busy to find time to discuss the prospects for the immediate future. Settlement of the railway strike on Monday was followed by a sharp burst of further advances in Home Railway stocks. The strength lasted for just half-an-hour, and was sapped by a bout of profit-taking on the part of those who, expecting that there would be some such rise when the dispute had become composed, promptly took their profits. On the other hand, the restlessness which some think is bound to be kept alive while the Labour Party is in power, may induce caution on the part of the investor who puts stability in the forefront of his demand for security, and, if investment stocks fall out of favour, experience shows that the result favours a certain liveliness in speculation. The question is asked, moreover, as to whether the violent rise of the past ten days has not reached a level at which the ordinary public will hesitate to maintain such interest in investment as would mean a continuance of brisk Stock Exchange business. Some men think that markets have nearly arrived at a point where something of a blind alley may be within sight, so far as activity is concerned, except amongst speculative stocks and shares that will always command a following amongst those who gamble in the markets. There is a good deal to be said in favour of the latter view, and although the accumulation of money, going on as it does incessantly, can be counted upon to provide a bread-and-butter business amongst purely investment stocks and shares, the outlook for a steady maintenance of general animation is not assured. It seems curious, but it is none the less the fact, that the supply of stock round the House, and especially in those markets given over to investment securities, should be surprisingly small. From which the argument can be drawn that newcomers, offering sound stock at reasonable prices, can count upon a welcome from investors.

London Electricity Supply.—The appearance of the two Bills—London Electricity Supply, No. 1 and No. 2—is consequent upon certain negotiations between the London electric supply companies and the London County Council. These negotiations in their turn were consequential upon the decision of the Court of Appeal on July 27th that the draft Order of the Electricity Commission constituting the London and Home Counties Electricity District and establishing a Joint Electricity Authority was *ultra vires* in certain provisions. The Electricity Commissioners in the draft Order mentioned had set out a scheme, both technical and administrative, for the reorganisation of the electricity supply of Greater London. So far as the County of London was concerned, the reorganisation in regard to the area supplied by the companies and the area supplied by the municipal undertakings was to be left in the hands of a representative committee of each body respectively, the two bodies being given a large amount of independence in regard to the Joint Electricity authority proposed to be constituted. It was in connection with this part of the Order that the draft Order was declared to be *ultra vires*. Following the deadlock thus created, the Special Electricity Committee of the London County Council reported on July 31st to the full Council that they had met the representatives of the companies with a view to seeing whether agreement could be come to with the companies in regard to concrete proposals for such modification of the draft scheme of the Electricity Commissioners as would meet the legal objections which had been raised. The committee reported that they had come to a provisional agreement with the representatives of the London companies. The "heads of agreement" arrived at were duly set out in the report, and were briefly as follows:—Provided that a satisfactory sliding scale of prices and dividends could be agreed, the London companies to be empowered to amalgamate and to have an extension of tenure of the whole of their undertakings to 1971, at which date the undertakings were to be transferred to the Joint Electricity Authority on certain terms set out. Further, the companies to have financial and administrative independence, subject only to the control of the Joint Electricity Authority in regard to technical development, capital expenditure which would ultimately

be repayable by the Authority, and certain other matters. Under the London Electric Supply Act, 1908, the London County Council has option of purchase over the whole of the London companies in 1931. Also, under the Electric Lighting (Clauses) Act, 1899, companies are prohibited from amalgamating their undertakings. Further legislation was therefore necessary to give effect to the heads of agreement arrived at with the L.C.C., and the Electricity Supply Bills No. 1 and No. 2 were drafted to this end. The Bills provide powers for the companies to amalgamate their undertakings as a whole or in groups or by way of parts of undertakings; in fact, all possible alternatives in the way of amalgamation are provided for, so as to give the utmost range of flexibility to work in with the comprehensive technical scheme which still awaits final formulation by the Electricity Commissioners. The Bills provide for the rights of purchase exercisable by the L.C.C. under the Act of 1908 to be transferred to the Joint Authority, and for an extension of tenure of the London companies from 1931 to 1971, and for the assets to be transferred to the Joint Electricity Authority at this latter date on the following terms:—The assets in use when the Joint Electricity Authority is constituted to be transferred free of cost to the Joint Electricity Authority, the value of the physical assets being liquidated by a sinking fund by or before 1971. The assets provided by the companies and coming into use after the setting up of the Joint Electricity Authority to be transferred on payment of capital expenditure less depreciation, which is to be also provided by a sinking fund. Provision is also made for a sliding scale to regulate the profits of the London companies, and to secure reduction in rates to consumers, the same to operate for the period of the extension, namely, 1931 to 1971.

The Trade of Indo-China.—French Indo-China consisting of the colony of Cochinchina and the Protectorates of Cambodia, Laos, Annam, and Tonkin, has long ceased to be a disturbing factor in French domestic and foreign policy. It is at present important, judging from the Report from H.B.M. Consul-General and the British Vice-Consul at Saigon, just issued by the Overseas Trade Department, chiefly as a market for French manufactures, which are protected from foreign competition by a high preferential tariff. Moreover, the frequent alterations of the "coefficients" of the rates for foreign imports are apt to turn what promised to be a profit on an import transaction into a loss. Of the 561 million francs' worth of imports last year, 211 millions were French, 195 millions represented goods produced in the Far East—entering largely through Hong Kong—and the remaining 155 millions those from the rest of the world. But the importations through Hong Kong, despite the tariff, are increasing, though their ultimate sources cannot be fully specified. The only British imports mentioned in the Report are thread and iron; in rice milling machinery Great Britain is overtaking Germany, her sole competitor. The exports for 1922 were valued at 840 million francs, as against 1026.5 million francs in 1921, the decrease being mainly in rice, of which the export in 1921 was exceptionally large; the crop for the current year is moderate. Of the chief exports, most of the rice went to Eastern countries and the European Continent, but Great Britain took part of the broken rice and rice flour, while the bulk of the rubber and pepper and all the maize and copra went to France; of the timber, 90 per cent. was teak for British India, and two-thirds of the fishery products went to Singapore. Almost all the cotton, hides, and skins went to unspecified destinations through Hong Kong. Recent commercial difficulties have weeded out the newer and weaker importing firms; silver and, therefore, sterling exchange, have remained fairly steady; but exporters in Great Britain are warned that the Customs duties, though expressed in francs, are paid in piastres, the relation of the two currencies being officially regulated and variable, and the actual exchange on London is between piastres and sterling. Naturally there is little direct communication with Great Britain, though the Blue Funnel liners call at Saigon on the homeward voyage. The local and coastal communication by steamers, in some cases heavily subsidised, is unsatisfactory, except between Saigon and Hong Kong,

and even the French mail service might be more regular. The railways appear to be much better managed, notably the line to Yunnanfu, giving access to Southern China. The country has a network of good roads and much motor traffic. The ports of Saigon and Haiphong are being improved, and wireless and telephony are extending. The country is admirably situated for traffic with its neighbours, but it offers little opportunity for European traders other than French.

Purchases of Russian Chervontsy Abroad.—During the last few months, writes a correspondent, the purchasing of Russian chervontsy—the bank-notes issued by the Russian State Bank—has been increasingly active. Whereas in July, 1923, only three of the State Bank's foreign correspondents were buying chervontsy, notwithstanding the sale of them abroad for purposes of popularisation at somewhat lower prices to those at which they were quoted in Moscow, by December 31st banks had begun to buy, the position being as follows:—

	Chervontsy Purchased.	Total Foreign Transfers Expressed in Chervontsy
July	34,500	572,400
August	154,000	838,700
September	207,750	903,000
October	510,203	720,000
November	942,436	1,836,000
December	976,608	2,350,000
Total	2,825,997	7,220,100

Of these 2,826,000 chervontsy bought abroad 2,384,000 were purchased by British banks, including 1,700,000 by Lloyds Bank, according to the Russian State Bank's returns. This reflects the fact that the bulk of Russia's foreign trade is done with or through this country. German buyings of the bank-notes during the same six months' period only amounted to 30,000, Estonian to 117,500, American to 105,000, and Swedish to 65,000. When it is borne in mind that during 1922 and the first half of 1923—owing to the depreciation of the rouble—transfers to Russia were almost exclusively made payable in actual foreign bank-notes in Russia, with consequent large circulation of foreign currency within the country—involving loss of interest on the whole mass of bank-notes, introduction of forged foreign bank-notes and the unproductive locking up of part of the liquid capital of the country—the new Russian currency will be acknowledged to have rendered valuable services already.

Guernsey Bank Absorbed.—At Thursday's meeting of the National Provincial and Union Bank of England, Sir Harry Goschen announced that an agreement has been concluded, subject to the sanction of the Treasury, for the amalgamation of the Guernsey Banking Company, Limited, with the National Provincial and Union Bank of England, Limited, to take effect as from January 1st last. The basis of the fusion, which will be submitted for the approval of the shareholders of the Guernsey Banking Company, Limited, in due course, is that for each £50 (£10 paid) share of that company, two National Provincial and Union Bank of England, Limited, £5 fully paid shares, plus £18 (nominal) inscribed 5 per cent. War Loan, 1929-47, will be given in exchange. The present directors of the Guernsey Banking Company, Limited, will be constituted a local board, and the manager, sub-manager, and the whole of the staff will be taken over by the National Provincial Bank. The Guernsey Banking Company, Limited, was established in 1827. It has a paid up capital of £50,000, consisting of 5,000 shares of £50 each (£10 paid), reserve funds of £85,000, and deposits (as at December 31, 1923) amounting to £665,000. In addition to the chief office at 29 High street, Guernsey, there are branch offices in the island at St Sampson's and St Peter-in-the-Wood, and there is also an agency at Alderney.

Gas Light and Coke Results.—We have often remarked that gas and water companies stand in a class quite by themselves. Changes are slowly being effected in the methods of presenting accounts, but some rules apparently are difficult to leave behind. These thoughts come to our

mind as we read that on the ordinary stock of the Gas Light and Coke Company for the first six months of the year a dividend at the rate of £5 4s per cent. per annum was paid, while on the last six months of the year the directors recommend a dividend at the rate of £5 6s 8d per cent. Thus the bemused stockholder is left to work out for himself the earning power of the stock, unless some friend attempts to assist in the problem. In the following table we show how this big undertaking has fared over a number of years. The ratio of expenses to revenue is practically at a standstill:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Gross revenue	7,029,550	7,740,844	9,854,028	12,790,821	11,232,360	10,110,354	9,523,580
Expenses	6,000,370	6,690,745	9,008,164	11,877,286	10,134,881	8,590,169	8,144,770
	(85 %)	(86 %)	(91 %)	(93 %)	(90 %)	(85 %)	(85 %)
Net revenue	1,029,180	1,050,099	845,864	913,535	1,097,479	1,520,185	1,378,810
Res., int., sinking fund, pf. div., &c.	520,880	436,862	417,668	421,939	519,102	591,700	526,710
Balance	508,300	613,237	428,196	491,576	578,377	928,485	852,100
Ordinary dividend	608,765	483,531	488,969	488,970	750,618	853,039	899,160
Rate per cent.	£3/14/8	£2/19/4	£3/0/0	£3/0/0	£4/13/4	£5/4/0	£5 %
Carried forward	100,465	129,700	56,773	2,627	182,241	99,998	17,069

The figures given above are approximate. It could be wished that directors of these public utility undertakings would show a little more sympathy towards the investing public. We appreciate that accounts must be shown according to certain regulations laid down, but there is no reason why stockholders could not have an additional table for themselves. The report informs us that the selling price of the company's gas was reduced from 10d per therm (4s 2d per 1,000 cubic feet) to 9.2d per therm (3s 10d per 1,000 cubic feet) from the reading of the meter indices for the March quarter, 1923, and was further reduced to 8.6d per therm (3s 7d per 1,000 cubic feet) from the reading of the meter indices for the June quarter, 1923, a reduction of 14 per cent. during the year. It is also pointed out that the sale of gas shows an increase of 5 per cent. There has been an addition for the year to the company's consumers of 11,290, and an increase of 67,253 in the number of gas stoves sold and let out on hire. We also observe with interest that the London County Council gave notice in August of their intention to apply to the Board of Trade for a revision of the company's standard price, under Sub-section 3 of Section 1 of the Gas Regulation Act, 1920. The Board of Trade held a public inquiry into the matter on November 14th last, and issued an Order, dated December 22, 1923, reducing the company's standard price as from December 31, 1923, from 15.2d to 11d per therm.

Mexican Eagle Oil.—Two documents have come to hand this week which concern the Mexican Eagle Oil Company. The first is a statement issued by the London financial agents of the company. This points out that "the accounts for the fiscal year ended on December 31, 1923, will be issued in June next. Having regard to the estimated results of the year's trading and to the necessity of conserving the cash resources of the company, the directors decided not to pay any interim dividend on December 31, 1923, on the 8 per cent. participating preferred ordinary shares or on the ordinary shares in respect of the year ending on that date," and add that "further considerable economies in working costs have been effected during the year, but although the average cost of purchased crude oil has been slightly lower than in 1922, the continued decline in retail prices of white oil products during 1923 materially affected the company's trading results. The trading operations of the company during the period under review were also considerably dependent upon purchased and imported crude. The policy of maintaining the company's refineries in this way has proved to be a commercial proposition and is being continued." Reference is made to the "serious losses sustained by the company during the last three years as a result of the undue depression in the tank-steamer freight market." The second document is a letter from the Eagle Oil Transport Company, Limited. This points out that "for some time past the Mexican Eagle Oil Company, the charterers of the whole of the company's vessels, who have acquired the whole of the ordinary shares in this company, have been in communication with us with regard

to a revision of the terms of their chartering agreement. They have submitted to us statements which show that these terms have proved very onerous in consequence of the severe fall in late years in tank-steamer freight rates, and that, in fact, they have sustained very heavy losses thereby." The letter goes on to inform us that the directors have entered into arrangements for suspending until further notice the terms of the original contract, but it is stated that "the new charter rates will not only enable your ships to be written down within a few years to a figure more in line with pre-war values, but will fully cover the note interest, and an 8 per cent. dividend on the preference shares."

R. E. Jones, Limited.—In their annual report for the year ended October 31, 1923, the directors of R. E. Jones, Limited, state that profits for twelve months amounted to £43,740. Various reserve allocations have been made out of this sum, but the balance-sheet still records an adverse balance of £188,857. The auditors' report is a lengthy statement, which must be read in conjunction with the proposals of the directors for a reorganisation of the company. The directors point out that "in connection with this scheme arrangements have been made for a revaluation of the properties of the company and its subsidiaries. It is suggested that the difference between the new valuation and the balance-sheet values, together with the balance standing at the debit of profit and loss account should be written off, and the share capital written down to correspond. If the suggested scheme is adopted, the company should be in a position to resume immediately the payment of dividends. The directors will convene an extraordinary general meeting to consider and approve the suggested scheme at a convenient date." This is something in a definite direction, but while reconstruction is taking place we would suggest that a composite balance-sheet should be given, which would tell shareholders exactly what assets they possess. It is not sufficient to inform shareholders that investments in subsidiary companies have been written down by this or that sum. The point which must be made clear is: What do those investments represent? The balance-sheet and the report have only just been placed in our hands, hence the belated appearance of our remarks.

France and Calfskin Export.—A correspondent writes:—Bermondsey has been perturbed this week by the news that the French Government have issued a decree prohibiting the export of hides and skins. Some cabled reports included leather made from them also, but this does not seem to be as yet very clear. It is, however, unlikely that the French Government would interfere with the export of leather, which is on a large scale with this country in both upper and sole leather. The prohibition on calfskins has already affected the home article, as light skins advanced in Bermondsey this week by 2½d per lb, and the provincial markets will follow suit. The prohibition is the outcome of an agitation which has been on foot for some time in France, shoe manufacturers' organisations taking the view that the high prices of hides and skins was brought about by the active bidding of foreign buyers—American especially. Germany has for some time prohibited the export of calfskins, and as both this country and France are veal-eating nations, it means that important sources of supply of raw skins are cut off from the rest of the world. "Paris squares" have long been regarded as the standard of excellence in calfskins, and it will be interesting to see what this class of raw material brings at the monthly sales in progress now that export is prohibited.

A PUBLIC lecture on "Business Forecasting" will be given by David Heron, D.Sc., M.A. (chairman of the Board of Studies in Statistics, University of London, and secretary, London Guarantee and Accident Company, Limited) at University College, Gower street, W.C., on Friday, February 8th, at 5.30 p.m. The chair will be taken by Professor Karl Pearson, LL.D., F.R.S.

Oversea Correspondence.

UNITED STATES.—FOREIGN TRADE BALANCE FOR 1923 — RAILROAD EARNINGS — COTTON CONSUMPTION AND COTTON GOODS — ARGENTINE BONDS OFFERED — MONEY AND BANKING SITUATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 18.

FOREIGN trade returns prepared by the Department of Commerce show that there was another heavy increase in exports during December, the total value amounting to \$425,000,000, the largest for any month since February, 1921. Imports last month were valued at \$285,000,000, so that exports exceeded imports by \$140,000,000, the biggest monthly trade balance in favour of this country since the export figure began to pass that of imports last July. The marked increase in the value of exports in December, as in October and November, was due largely to the high price of cotton which figured extensively in commodity shipments. For the calendar year 1923 the Department's preliminary returns show a foreign trade balance, so far as the value of merchandise and commodities is concerned, of \$375,948,917, as against \$719,030,636 for 1922. The value of exports last year was \$4,164,831,132, and that of imports \$3,788,882,215. December imports of gold, amounting to \$32,641,226, were larger than the average of several months preceding, and brought the total inflow of gold for the year up to \$322,715,812, as compared with \$275,169,785 in 1922 and \$691,248,297 in 1921. Exports of gold in 1923 reached only \$28,643,417. Silver imports last month totalled \$8,172,301, and exports \$9,521,083; for the entire year silver imports aggregated \$74,453,530, and exports \$72,468,789.

According to the Census Bureau, cotton, foreign and domestic, consumed by American mills in December, totalled 461,560 bales of lint and 40,892 of linters, as against 531,631 of lint and 48,069 of linters in November, and 527,945 of lint and 49,143 of linters in December, 1922. For the five completed months of the present cotton year American spinners' takings amounted to 2,520,373 bales, as against 2,661,274 in the corresponding period of the preceding year. Cotton consumption by American spinners for the 12 months of the calendar year 1923 totalled 6,512,975 bales, representing an increase of 7 per cent. over the year 1922, of 20.4 per cent. over 1921, and of 11.5 per cent. over 1920. For the first five months of the current cotton year exports of the staple were 3,331,155 bales, against 2,906,782 in the same months of the previous cotton year. December's exports were 845,581 bales, as compared with 770,002 in November and 607,853 in December of 1922. The consumption of cotton last month was the smallest of any month of the present cotton season. The sharp falling off apparently reflects the extensive curtailment of production of cotton goods last month, especially in New England centres, and unless demand for cottons improves there is likely to be a further decrease in consumption in this and following months. Thus far in the new year trade in cotton goods, both finished and unfinished, has been very slow, except in certain seasonal lines.

While gross earnings of railroads for November fell considerably below those for October—the peak month of last year—the total of \$531,507,756 showed an increase of \$7,899,877, or 1.5 per cent. over November, 1922. The decrease from October was due to the seasonal falling off in the volume of freight traffic. Practically all of the November increase in gross over the corresponding month of 1922 was reflected in net operating revenue, which aggregated \$124,925,816, a gain of \$7,162,451, or 6.1 per cent., because operating expenses of \$406,581,940 were only \$737,426 greater than in November of 1922. After taxes, rents, and other charges the carriers reported net operating income of \$86,130,774, or \$2,908,126 more than for November, 1922. For the 11 months of last year the Class I. railroads made a remarkable exhibit. Operating revenue totalled \$5,862,172,788, an increase of \$755,335,137 over

the same period in 1922, and with the exception of 1920, when gross earnings for that full year reached \$6,225,417,245, the operating revenues for 11 months of 1923 exceeded the total for several calendar years past. Operating expenses for the period, namely, \$4,555,779,171, were \$503,189,925 greater than for the 11 months of 1922, due largely to the higher wages paid and the greater expenditures involved in handling the bigger volume of traffic. Net operating income for the 11 months amounted to \$907,675,809, a gain of \$209,832,701.

A nation-wide group of bankers offered to American investors this week \$40,000,000 Argentine Government external sinking fund 6 per cent. gold bonds of 1923, Series A, due September 1, 1957. The bonds were priced to subscribers at 96½ to yield 6½ per cent. to maturity. The offering, which is the first large foreign issue to be floated in the United States this year, has thus far met with a good response. The proceeds, it is understood, will be used to refund part of the \$55,000,000 six months 6 per cent. Argentine notes maturing March 1st, leaving the balance to be taken care of later. The bond market generally continues active and strong under a broad investment demand, the trading this week having been featured by heavy purchases of railroad bonds especially.

Apart from a temporary firming of call loan rates on the Stock Exchange incident to the January 15th disturbances, the money market continues steady though rather quiet. Funds are in abundant supply at 4½ per cent. for the shorter periods and at 5 per cent. for longer maturities, most of the borrowing being for 30 to 90 days at the lower rate. The banking situation shows further improvement, the Federal Reserve system's ratio of reserves to note and deposit liabilities having advanced during the past week to 80.1 per cent., or nearly the highest point reached last year, which in turn was the highest recorded since 1917. An outstanding feature of this week's statement is the further reduction of some \$62,000,000 in Federal Reserve note circulation, bringing the total down to \$2,084,320,000, the smallest amount in actual circulation at any time since 1918.

FRANCE.—THE FRANCO AND NEW TAXES—INFLATED CLAIMS FOR WAR LOSSES—FOREIGN TRADE—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, January 30.

The strenuous effort which is now being made to place the national finances on a better footing is the direct outcome of the recent serious renewed fall in the franc and the consequent increase in the cost of living. The whole situation is admirably summed up by M. Maurice Bokanowski, the rapporteur Général of the Finance Commission of the Chamber, in his report on the new financial proposals: "In order to reduce the cost of living, it is necessary to solve the exchange problem, and in order to solve this problem we must get rid of the deficit." In other words, the Budget of Recoverable Expenditure (which it has so far been found impossible to recover from Germany) must be met out of France's own resources from taxation, and must no longer be allowed to continue as an ever-growing charge upon the credit of the country. It has now been recognised here—as it has long ago been in other countries—that the only way to meet the cost of reconstituting the devastated area is not by further borrowing and an inevitable increase of interest charges, but for the taxpayers to provide the rest of the money required to meet interest and pension charges, at least, as and when it is wanted, and that the only means of ensuring this course being taken is to impose additional taxes. This has long been realised by the business men of the country, but not by the politicians, who have shown themselves, characteristically enough, more and more pusillanimous in this regard as the date of the General Elections has come nearer.

A resolution passed by the Strasburg Chamber of Commerce some time ago is illuminating in this respect. After insisting that the economic position of France in no way justifies the fall in the franc, the resolution insisted that, while the Government must persist in its

policy of firmness with regard to Germany, "it is necessary that France shall balance, without further delay, not only its ordinary Budget, which it has now done, but also its extraordinary Budget, or Budget of Recoverable expenditure, and that this should be done, not by means of loans but by fresh taxation, which should be levied on the whole of the taxpayers without exception, in accordance with their contributive strength." This resolution is typical of many others that have been forwarded to the Government by the best brains in the country, and the fact explains why, in spite of a large number of deputies who are fearful of losing their seats at the coming elections, the great mass of the nation is solidly behind the Government in regard to the step it is now taking to right the financial situation. Every day since the new proposals were introduced is confirming the opinion I expressed a few weeks ago that the Government has under-valued the fiscal patriotism of the country. The fact that M. Poincaré, by sheer power of his authority over the Chamber, was able last Saturday to override all opposition and secure the closure of the general discussion of the new proposals, not only without having to pose the question of a vote of confidence, but without even a division, is further proof of this.

The discussion of the new financial proposals has unfortunately been marred by the outburst of extremely serious scandals in regard to the manner in which claims for damages for war losses have in many cases been inflated on an incredible scale. Circumstantial reports affecting the honour of many of the largest industrial concerns in the devastated regions have been in circulation for months past, and it has been openly stated that 75 per cent. of the more important firms are affected. The claims originally put in, in 1919 and 1920, it is alleged, were in many cases subsequently inflated to 25, 50, and in some cases to 100 times the original amounts. This has been largely due, it is insisted, to the fact that the law creating the machinery for the payment of war losses permitted of the intervention of purely professional organisations for the purpose of assisting *sinistrés* to make up their claims. This in itself was a harmless and undoubtedly useful proviso, but it unfortunately also gave these organisations the right to payment at the rate of 3 per cent. of the amount of the claim eventually accorded. Some of these agencies, in spite of a comparatively small capital, are alleged to have made profits amounting to "many millions" of francs by deliberately inflating original claims to unheard of figures. The preliminary assessment of war losses, again, was carried out by district commissions, composed of purely local people, who could scarcely be expected not to "be kind to their friends," particularly when the phrase that "the Germans will have to pay it" had become an ingrained tradition. A leading Paris newspaper recently estimated, on good authority, that if the inflated claims were revised the State would be able to recover the colossal sum of "at least 20 milliards of francs" from people who have received more than they are justly entitled to, or who are awaiting payments that have already been authorised.

The French foreign trade returns, which are now available for the whole of the past year, disclose that, during the twelve months, the adverse balance against this country has been reduced by about 370,000,000f, as compared with that existing at the end of 1922, and is now 2,183 millions, on a total volume of trade valued at 63,064,070,000f, or slightly over 4 per cent. of the whole. The pre-war deficit was about 15 per cent. The principal figures (in francs), as compared with those for 1922 and 1913, are as follows:—

	1913.	1922.	1923.
Imports—	Francs.	Francs.	Francs.
Foodstuffs	1,817,579,000	5,833,087,000	7,478,917,000
Raw materials	4,945,732,000	14,044,485,000	20,781,890,000
Manufactured goods ..	1,650,021,000	4,051,956,000	4,353,753,000
Totals	8,421,332,000	23,930,328,000	32,614,560,000
Exports—	Francs.	Francs.	Francs.
Foodstuffs	838,890,000	1,882,047,000	3,189,250,000
Raw materials	1,858,091,000	5,807,200,000	9,348,056,000
Manufactured goods ..	3,617,046,000	12,271,586,000	16,232,406,000
Postal parcels	586,182,000	1,418,142,000	1,660,990,000
Totals	6,880,217,000	21,378,943,000	30,431,510,000

The figures show that during the year imports increased in value by 36 per cent., while the exports rose by 42 per cent. The most striking growth was in the export of manufactured goods, which increased by 3,960,820,000f during the year, or nearly 33 per cent., while imports of manufactured goods rose by only 301,797,000f, or only about 7½ per cent. The enormous extent to which this increase in value was due to the rates of exchange current during the past year may be gathered from the following figures setting forth the weights of exports and imports, in metric tons, during 1922 and 1923 respectively:—

	(In Metric Tons.)	1922.	1923.
Imports—			
Foodstuffs	5,090,515	..	5,715,099
Raw materials	44,666,722	..	47,706,810
Manufactured goods	1,660,964	..	1,499,922
Totals	51,418,201	..	54,921,837
Exports—			
Foodstuffs	947,447	..	1,311,927
Raw materials	19,083,400	..	20,403,402
Manufactured goods	2,583,986	..	3,042,037
Postal packets	28,024	..	32,014
Totals	22,642,857	..	24,789,020

The imports of coal and coke from Great Britain during the year had a value of 3,644,794,000f, and amounted to 30,672,847 tons, as compared with an expenditure of 2,397,763,000f in 1922, when the quantity imported was 28,987,108 tons. In other words, during the past year, owing to the high rate of exchange, the French paid over 50 per cent. more in cash for an increase of less than 6 per cent. in quantity.

The index figures of wholesale prices for the last month in the year have now been issued by the *Statistique Générale*, and are as follows (based on 100 as representing wholesale prices in July, 1914):—

Categories.	End of December. (Provisional.)	End of November. (Corrected.)
General index figure.....	45	468
Foodstuffs (ensemble)	20	422
Vegetable foods.....	8	375
Animal foods.....	8	437
Sugar, coffee, cocoa	4	493
Raw materials (ensemble) ..	25	509
Minerals and metals ..	7	477
Textiles	6	613
Various	12	466

The figure for retail prices in Paris at the end of December (based on 100 as representing the prices of the corresponding articles in July, 1914) is returned as 365, as compared with 355 in November.

GERMANY.—GOLD BANK—FINANCES—PRICES AND WAGES—BOURSE—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, January 29.

THE prospects of the foundation of a gold-note bank are considered good; though doubt exists as to the functions of such a bank other than as a bank of issue. Dr Schacht speaks of the bank as "an absolute necessity for business," but it is, nevertheless, not clear whether the bank would exercise private credit functions, as does the Reichsbank, or whether it would merely grant credit to the State. As the Rentenmark, successful though it has been so far, is declared by all, including Dr Schacht, who at first opposed it, to be merely a provisional solution, a bank from which the State could obtain occasional credit seems necessary. The Reichsbank, with a circulation which is no longer in law backed by the gold reserve, cannot again become the credit-giver. The arrival of the first expert commission under General Dawes takes place to-day. The public view of its work is more favourable than that of any of the past innumerable commissions. The psychological effect of the stabilised currency accounts for this optimism; the international public and experts, it is believed, have been impressed. Although no figures are obtainable, it seems that very large sums of foreign money are again entering Germany in the shape of credits to industry and investments in securities.

The Third Taxation Decree is now prepared, but not yet published. The difference between the Finance Minis-

try, which wanted to prohibit even the partial restoring of depreciated secured debts (this in the interest of the State, which was to take all the private profits therefrom) and the Ministry of Justice, which accepted the Reichsgericht's decision that mortgages must be partially restored, seems to have ended in a compromise. According to newspaper reports mortgages are to be restored by up to 10 per cent., in exceptional cases 25 per cent., of their original gold value. Newspapers declare that only part of the inflation gains of debtors (between 7 and 12 per cent.) will be expropriated; and that as it is impossible to go into individual cases, this may be achieved by an all-round tax on Increment of Capital, the increment naturally being measured in gold marks. The banks and industry demand a reduction of the Bourse Transactions Tax, by abolishing the supplements imposed to meet the special conditions of the inflation period. The Finance Minister, Dr Luther, has expressed himself optimistically as to the balancing of the Budget, if the cost of the army of occupation, the mark-currency outlay on Versailles Treaty fulfilment, and naturally Reparations payments are omitted. A complete settlement of the question raised by the demands of certain States for restoration of their taxation sovereignty cannot be thought of now, said Dr Luther. The Prussian Finance Ministry puts Prussia's expenditure in the current financial year at 2,128 million gold marks, and revenue at 1,580 million gold marks, this after the recent doubling of the State Land Tax.

Prices continue to decline, and thereby to fortify the new currency. In the week ending January 22nd the wholesale index fell a further 3.4 per cent., in the week ending January 21st the cost of living fell 2.7 per cent. At home, business competition to sell is very severe. Iron and steel dealers have enormous stocks of material on hand, with which they are underselling the producers. Bar-iron, the official price of which late last year was 195 gold marks per metric ton, has been sold as low as 125 gold marks. As a result of such competition there is talk of renewing the cartels and syndicates in the great industries which have of late been moribund or actually dead. The steel producers last week held a meeting at Hagen, and issued "recommendations" not to sell below the following prices (in gold marks per metric ton):—Bars 150, construction forms 127, universal iron 140, bands 165, thick sheets (over 5 mill.) 150, thin sheets (under 1 mill.) 185, wire rods 160. These recommendations do not bind any producer or dealer. The Pig-Iron Syndicate is being attacked for not cutting its prices. The report that the Government has decided to abolish or reduce pig-iron import duties in order to encourage import from England and so help the native manufacturing consumers is denied. The Syndicate gives the following figures in justification of its attitude: present pig prices are, according to quality and selling district, from 17 to 32 per cent. above those of 1913, whereas home and foreign ores are 50 to 75 per cent. higher, coke 110 per cent. higher, and railway rates 100 to 150 per cent. higher. Various industrial interests have petitioned the Government to reduce rail rates still more, the proposed reduction for some kinds of goods being 20 per cent. All iron and steel producers affirm that under the compulsion of need of cash, they are selling below production cost. Shortage of working capital everywhere exists. In order to raise money, Krupps are reported to have parted with 12 million marks nominal of Mannesmann Tube shares; and the Harpener Iron and Steel Company to have parted with a large parcel of shares in the Westphalia Coal Company.

Wages are on the whole stable, but there have been a few cuts since gold prices reached their highest point two months ago. The price drop has, however, been much greater, and the real wage has of late considerably increased. The "Berliner Tageblatt" publishes an analysis to show that at least in some branches wages are now at about peace level. Most of the wage indexes are unreliable because they ignore the compulsory supplements to wages for wives and children, which rise to a considerable sum; thus in the transport branch where a married workman gets only 50 gold pf an hour a married man with six children gets 76 gold pf. The average wage of a group of male skilled workers in December was 68.9 gold pf, against 69 gold pf before the war. As the gold cost of living is now again (owing mainly to the rent re-

strictions) only a fraction above that of 1913, it seems that the real wage is not very unsatisfactory. The present social trouble is, therefore, not so much low wages as unemployment. Here things continue to improve. In the week ending January 26th the number of fully unemployed in occupied territory fell by an estimated 20,000, of partly unemployed by 60,000; while in unoccupied territory the number of fully unemployed fell by 60,000, of partly unemployed by 25,000.

Money is extraordinarily plentiful. The rate for day money fell last week as low as ½ per mille per day. The Prussian State Bank (Seehandlung) has reduced its rates for credits from 24 and 18 per cent. a year to 7 and 6 per cent.; and the Reichsbank has been meeting to consider the 90 per cent. rate, which, if the present assumption that the paper mark will remain stable is correct, is much too high. The banks have enormous paper mark deposits, with which they do not know what to do. It is suggested, incidentally, that they might now return to the pre-war practice of publishing balance-sheets every two months. The Vienna banks have long past published statements of deposits once a month; and even the new Russian private banks are more liberal with publicity than the German. The Reichsbank's clearings in 1923 totalled 2,371,637,845,850 milliard marks, against 6,367,752 million marks in 1922. Only in one month, March (here, as the result of the temporarily successful support of the mark) did clearings go back. In 1913 clearings totalled 119,310 millions. The bank's statement for December 31st for the first time shows private discounts in Rentenmarks, alongside private paper mark discounts. This means that a separate bill discount and cheque business is at last being done in Rentenmarks. Circulation rose by 21 trillions to 496 trillions.

Last week witnessed a heavy drop in the average price of bonds, which had doubled their prices the week before. This is due to the again-repeated official declaration that depreciated federal and State loans will not be restored by even a fraction. The home loan index on the 25th was 4.67, against 9.53 on the 18th. Loans were again weaker to-day with the exception of War Loan, which, however, later receded. To-day stocks were fairly firm, weakening a little towards the close. There was a demand for mining, electrical, chemical and certain textile stocks, but machine and potash stocks were still, and shipping stocks irregular. Quotations were (in milliards):—War Loan 180, Fours 595, 3½ per Cents. 505, Threes 1,125, Colonial Fours 2,300, Prussian Threes Consols 820. Rye, coal and other commodities bonds, which enjoyed a boom last summer, have of late badly fallen off.

The Ruhr Coal Cartel, which replaces the dissolved Rhenish-Westphalian Coal Syndicate, is organised as a public company, with a capital of 7,500 milliard marks, divided into 25,000 shares of 300,000,000 marks each. The business year runs from April to March. The new company, like the old Syndicate, has concluded contracts with the mine-owners. The coal business is still unsatisfactory. Ruhr coal has been driven from the German coast, from Holland and even from districts verging on the Ruhr. Many mines, especially those on the south side of the coalfields, have not yet resumed production. A large parcel of stock in the Silesian Laurahutte is reported to

have passed from the Viennese Bosel into the hands of a Dutch financial group, led by the Rotterdamsche Bank-vereeniging. The Otto Wolff concern of Cologne, which works with the Phoenix and van der Zypen companies, has given notice to terminate its agreement with Soviet Russia. This agreement, come to in October, 1922, provided for the creation of a Russo-German company, to which Wolff should give a credit of £750,000, in addition to giving a credit of £500,000 to the Russian Government. Both credits were to be in wares. In exchange Wolff got semi-monopolistic export and import rights, and the right of opening branch works or offices in Russia. The breach is connected with the undertaking to grant credit to the Soviet Government. The Russian Trade Mission here reports that the Russo-German company in question in the first year did business for 6,000,000 gold roubles, and made a profit of 1,200,000 gold roubles, or 400 per cent. on capital.

BELGIUM.—THE FALL OF THE FRANC — THE CAUSES—REMEDIAL MEASURES.

(FROM OUR CORRESPONDENT.)

BRUSSELS, January 21.

ONCE more the question of exchange is the burning one in Belgium as in France. Why are measures not taken to stop this unjustifiable rise in the pound sterling? asks the public (but it does not indicate who it is who ought to take the measures or which measures), and why is speculation not put down? and why are the arbitrageurs of certain banks allowed to work with 29 or 30 telephones, having at least one receiver always on each ear? This cannot be allowed, say the newspapers, especially as these people realise enormous profits in selling in Amsterdam what they previously bought in Paris or in London, or perhaps *vice versa*. As there is now very little sensational news from Germany to fill up their columns, vehement articles now appear in the daily papers inciting the public against the banks, who are accused of being the cause of all the harm owing to their speculations; it being sometimes stated that regular campaigns are studied in Germany in order to organise an "offensive against the franc." According to some this is done with the assistance of Dutch, English and American financiers. All these false rumours create a dangerous atmosphere, and under the pretext of informing the public they at certain times leave it in a state of bewilderment. It is far from me to say that no influence has been brought to bear on the franc for political reasons. But it is not there that the true causes of the depreciation of the Belgian franc are to be found, the principal reasons for which are in the first place the Budgets, which are always in deficit. It is partly to be accounted for by the insolvency of Germany, and partly on account of excessive expenditure. It must, however, be noted that Belgium is not getting into a worse state, and that she is making meritorious efforts from the point of view of increasing taxation, but not enough yet in cutting down expenses. One could not very well expect Belgium, partly destroyed as she was in 1918, immediately to make the same financial effort as England. But the State is in the habit of drawing up its budget in a way that no business man would have done, since, first of all, it estimates its expenditure and then borrows the deficit if the budget does not balance. Another essential cause is the continued deficit in the commercial balance, which is no longer made good by the foreign bonds, which before the war were held by Belgians or by the revenues of numerous companies operating in Russia, Austria, and the Balkans. There is also no longer the foreign capital which used to take refuge in Belgium, in order to avoid the taxes which were in force in certain countries, but which were non-existent in Belgium.

A rise in the bank rate is among the great measures which Monsieur de Lasteyrie thinks he has discovered for stopping the rise of foreign currencies in France. If this measure can still sometimes have an influence in those countries where the exchanges are more or less at gold par, it can have none whatever in the countries with abnormal rates. The Belgian exporter brings back only a part of his foreign currencies. It means on his part a

lack of confidence in the money of his own country, and by acting in this manner, counting on receiving an extra profit, he is quite indifferent as to whether he pays his bankers 1 per cent. more or less per annum when he borrows the necessary francs in order to carry on his business. As regards speculation, a small increase in interest charges will certainly not stop it, since the fluctuations in the quotations sometimes amount to 5 per cent. in one day. Furthermore, it is in the countries having the greatest depreciation in their currencies where the discount rate is highest, and the foreigner quickly jumps to the conclusion that the fact of continually raising the discount rate in a country indicates that the position of that country is going from bad to worse, and that, therefore, its currency is not worth buying. We must not forget that in the case of Belgium the price of the franc is expressed in foreign currency abroad, to a large extent, in more or less direct proportion to the amount of confidence inspired by the prospects of recovery of the country, and a rise in the bank rate does not help to reassure people. I have heard people asking, even in Belgium, if it is possible that the situation is so bad in France that the Banque de France has had to raise its discount rate twice in one week.

After numerous meetings of bankers, presidents of Chambers of Commerce and others, and after M. de Lasteyrie's declaration that the French Government would adopt strong measures to stop the depreciation of the franc, Brussels awaited with a certain amount of curiosity further complementary details; for Brussels has been much less moved by the recent rise of foreign exchanges which in reality was not so severe here as in Paris because of the depreciation of the French franc in our markets. But the net result of a week of consultations is that in France one or two Dutch and one Russian Arbitragists have been expelled from the Paris Bourse, and the following measures which have been announced to-day:— (1) Suppression of taxation frauds; (2) economies in public administrations; (3) no fresh expenditure; (4) fresh taxation. This is what should have been put into practice a long time ago.

In Belgium we need the assistance of foreign speculators because we have annually to sell large amounts of francs to cover the deficit between our receipts and payments of foreign currencies. Therefore, how can we expect holders of sterling, florins or other currencies, to purchase francs unless they can hope to make a profit by so doing. Why should they accept 90 francs in exchange for £1 unless they anticipate being able to repurchase later at 80 or 70 francs per £. Why should the British manufacturer sell his goods in Belgium in Belgium francs if not in the hope of receiving later on more sterling for his franc receipts and unless he has confidence in the franc? On the contrary, the speculator who still holds francs which he has acquired under conditions such as these, and who sees the franc depreciating more and more, will rather prefer to sell them now, cut his loss and buy back at 100 francs the sterling which he sold at 70 and 80 francs, and in the end will still buy the Belgian francs which, in spite of everything, Belgium must sell. After all, all the Americans, English and others who have bought francs since 1918 must certainly have lost money, and it is not right to accuse speculation to such a great extent when, on unfavourable news, of which to a large extent we are the cause, these francs are thrown on the market.

In the Belgian Parliament the question has also been raised by a certain member who challenged the Premier, M. Theunis, on the measures that the Government intend adopting to stop the rise of the exchange. M. Theunis replied that although the question of foreign exchange was by no means new, it had taken a quite different aspect in Belgium since the war, for as a result of the exchange against Belgian francs of the marks left in Belgium by the Germans, the franc became inconvertible into gold and could no longer maintain itself at a fixed level, but followed the law of supply and demand. That, he said, was the chief and most important cause of the depreciation of the franc, but not the only one. There are others: stocks of raw materials had to be replenished, machines and provisions had to be bought, and during

five years the nation had made a very big effort for the reconstruction of the country. Another cause against our currency is that speculators quickly got rid of their paper, in which they had lost confidence. Nothing can be done against that. The only new step taken here to reinforce the control of exchange operations is to forbid the lending of Belgian francs against foreign currencies or foreign stock not quoted on the Brussels market.

AUSTRALIAN PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, December 22, 1923.

THE public accounts of the Commonwealth and the six States for the year ended June 30, 1923, show, on the whole, a better result than for the preceding year, as there was a net surplus of revenue over expenditure of £1,305,544, against a net deficit of £2,634,506 for 1921-22. The figures are summarised as follows:—

	Revenue.	Ordinary Expenditure	Loan Expenditure	Debt June 30, 1923
	£	£	£	£
New South Wales...	36,145,944	35,342,436	10,359,159	187,879,491
Victoria	21,298,210	20,932,703	8,764,306	118,562,029
Queensland.....	12,599,403	12,784,382	3,701,750	88,005,001
South Australia...	8,431,700	8,426,517	3,480,280	62,496,585
Western Australia...	7,207,492	7,612,856	3,898,299	58,943,677
Tasmania	2,174,061	2,472,522	1,153,645	22,439,176
Six States	87,856,810	87,571,416	30,848,439	538,325,959
Commonwealth ..	55,520,221*	54,500,071*	5,890,465	410,996,316
Total 1922-23...	143,377,031	142,071,487	36,738,904	949,322,275†
" 1921-22...	140,839,560	143,474,066	38,995,743	..

* Commonwealth figures are shown after deducting £9,200,414 from each side as allowance for duplications arising out of transactions with States.

† Deducting £63,530,084 for duplications, the net total debt is £885,792,191, against £860,534,046 at June 30, 1922.

The surplus of £1,305,544 for 1922-23 is the net result of surpluses shown by New South Wales (largely due to special reasons), Victoria, South Australia, and the Commonwealth, and deficits shown by Queensland, Western Australia, and Tasmania. The Commonwealth Government surplus was mainly the result of heavy imports, based upon external borrowing, the Customs revenue being thereby swollen to the extent of several millions. A reason for the improvement in the States' position has been the more favourable earnings of the railways. Setting working expenses (included in ordinary expenditure above) against gross earnings (included in total revenue), the net earnings of the Government railways of the six States for 1922-23 amounted to £11,036,752, against £9,203,583 for 1921-22 and £7,400,049 for 1920-21, these figures being the cash figures of the Treasuries as distinguished from the working figures of the Railway Departments, which show, as usual, slightly different totals. The improvement in net railway earnings has been most marked in New South Wales, where with gross earnings about the same as for 1921-22, there has been an appreciable saving in expenses. In Victoria the gross railway revenue has increased by over half a million, and working expenses by only about £160,000. In most of the States the net railway earnings provide for the greater portion of the interest on the railway debt, but Queensland is a notable exception, the railway debt interest for that State being over £2,100,000, while the net railway earnings are only about one-third of that amount, leaving nearly 1½ millions to be paid out of taxation.

The total taxation collected by the Commonwealth and six States for 1922-23 was £68,475,716, against £67,361,729 for 1921-22 and £70,318,921 for 1920-21. The 1922-23 total of £68,475,716 included £22,597,306 from Customs, against £17,328,310 for 1921-22, and £10,274,823 from Excise, against £10,302,049. Although the total taxation has not altered much during the last three years, it shows an increase of about 54 per cent. since 1918-19, when it was £44,305,501, while in view of the present tendency of the interest on public debt to grow somewhat rapidly, the outlook for the direct taxpayer is being viewed with some concern, especially as the revenue from Customs depends partly upon the maintenance of

1-4, GREAT TOWER STREET - LONDON, E.C.3.

imports on a high scale, which in turn depends partly upon the rate of external borrowings.

The growth of the debts during the last few years has been the result partly of post-war and repatriation expenditure, and partly of a rather liberal public works expenditure. The total loan expenditure for 1922-23 was £36,738,904, against £38,995,743 for 1921-22, and £54,136,130 for 1920-21, the reduction since 1920-21 being due to the slackening in repatriation outlay. Looking ahead, the estimate presented to the Conference of Commonwealth and State Ministers, held at Melbourne last May, showed a probable loan expenditure of 45 millions for 1923-24, and for each of the three following financial years, without taking into account the conversion loans that will also require to be raised. The increase in the annual interest is proceeding in somewhat greater ratio than the increase in the principal of the debts, owing to the higher rates of interest now requiring to be paid on conversion loans. During 1924, for example, the three States of New South Wales, Queensland, and South Australia have loans maturing in London for a total of about 31 millions, originally issued at 3½ to 4 per cent. The total debts of the Commonwealth and States at June 30, 1923, after allowing for duplications, amounted to £885,792,191, against £860,534,046 at June 30, 1922; and the interest paid for 1922-23 was £41,347,401, against £38,508,677 for 1921-22, and £35,120,370 for 1920-21. Thus at an interval of two years the growth in interest paid was nearly 6½ millions.

The estimates of the Commonwealth and the six States for 1923-24 shows total revenue £143,903,522 and expenditure £144,123,260, these being net figures after deducting an allowance for duplications.

ARGENTINA.—GOOD HARVESTS—BUDGET—DEBT—PROTECTIVE DUTIES—TRADE AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, December 24.

IN Argentina the year-end synchronises with the opening of the export season, and it now seems reasonably safe to say that only a most unexpected and unnatural series of catastrophes can diminish what promises to be the heaviest harvest of wheat and linseed ever gathered in this Republic. Yield and quality are alike exceptional in both cases, and it is not unduly optimistic to place the exportable surplus of wheat at 4,800,000 tons, and the linseed at 1,750,000 tons. Converted into money, and added to the proceeds of the wool clip, which is estimated at 280,000 to 300,000 bales, these quantities should once more place the balance of Argentine trade on the right side of the account, which the final figures for 1922 failed to do. These figures have just been published by the National Statistical Department, and show imports as \$689,645,000 gold, with exports \$676,008,000 gold, the difference of thirteen million contrasting favourably with the seventy-eight million gold against Argentina in 1921. These are returns based on the estimated "real" values of merchandise, not on the customs tariff variation, but at the same time it should be remembered that they do not include the "invisible imports," which are both heavy and constant, as is well shown by the inclusion of \$125,000,000 paper in the 1923 Budget for the service of the public debt.

For at long last the 1923 Budget has been passed. Like the harvest, it is the heaviest ever known, expenditure—cash and bonds—amounting to the sum of \$635,000,000 paper. Additional customs dues, and a tax of 10 per cent. on outward first-class passages, are the only fresh sources of revenue, both items being estimated and in many quarters thought inadequate to yield the funds re-

quired to balance accounts. This, indeed, is the publicly expressed belief of Dr Molina, Minister of Finance, who has stated that he is preparing a detailed account of the country's financial position, and who has already persuaded President Alvear to convene a special meeting of the Cabinet for the purpose of effecting economies in the Budget as passed by Congress, reducing expenditure by \$100,000,000 paper. As none of the ministries show any wish to cut down their own appropriations, it is improbable that any serious economies will be actually effected, and the prospect for the official finances during 1924 is dark. Interviewed by *La Nación*, Dr Molina very frankly said that the Budget, as passed, was bound to result in a heavy deficit. Extreme optimism characterised the estimated yield from various taxes; expenditure had been sanctioned for which the corresponding sources of revenue had not been voted; and the only hope lay in the elimination of everything not absolutely indispensable. By May, added Dr Molina, it should be possible to replace the existing Budget by a perfectly balanced Budget containing "a fundamental reform of the system of taxation." Pressed as to the exact meaning of this phrase, he replied, "I feel that we must go straight for the income-tax, and to that end I shall apply all my energies." The importance of this pronouncement, bearing in mind the source from whence it comes, needs no emphasis here. It ought, however, to be pointed out that the 1923 Budget has been passed with the novel proviso that it also covers 1924, until such time as a new Budget for that year has been duly sanctioned. Given the same dilatoriness and obstruction that has marked Argentine parliamentary procedure this year, it may well be that Dr Molina's well-meant and patriotic efforts to inaugurate true fiscal economy will have no better fate than those of his predecessor in what is to-day the most thankless portfolio in President Alvear's Cabinet.

There are, nevertheless, signs that the best opinion in Argentina is taking alarm at the course which national indebtedness runs. Indeed, as the figures just out abundantly show, the sums involved are such as to lift the whole matter of re-arrangement of Argentina's obligations both at home and abroad above the plane of party politics. Issued by the National Statistical Department, the following data are unquestionably correct:—

	Consolidated Paper. \$	Unconsolidated Paper. \$
National obligations....	1,294,886,000	892,824,000
Provincial ".....	483,383,000	..
Municipal ".....	171,922,000	..

These figures make up a total of \$2,842,000,000 paper, to which must be added the unconsolidated debts of the provincial and municipal treasuries, not given in detail but estimated at over \$150,000,000 paper, thus bringing the total up to more or less three thousand million dollars paper, say, £215,000,000 sterling at current rates of exchange. It is a great sum, and the details embodied in Report No. 6 of the Department named above are collated and analysed at length for the first time. Interesting to a degree, they cannot be further dealt with here, but one may observe that even now the total is not complete. For unless one is greatly in error, the short-dated renewable obligations of the State railways and the similar type of bill issued by the Province of Buenos Aires, in connection with the extension of its Meridiano V. system, do not come into the calculation, any more than do the further sums which Congress will be asked to sanction next session, \$350,000,000 paper for the State lines, and \$300,000,000 paper for naval and military additions and renewals. Is it to be wondered at if the opinion in favour of calling a halt to expenditure on this scale grows daily, bumper crop prospects notwithstanding?

Meanwhile private financial conditions show signs of becoming somewhat less easy in the near future. Banks, while not putting up their rates to borrowers, are carrying very strong financial positions, and scrutinising all new loan business with particular attention. Failing the customary statement of the deposits, advances, and cash in hand corresponding to each bank, usually published towards the 20th of each month for the previous month-end, but held back by the Ministry of Finance for both October and November, the observer is at sea, though

a study of the Banco de la Nación's balance-sheet for November shows that this institution has rendered financial assistance, in the shape of rediscount, to other banks to a total of some 41 million dollars in the month. It is expected that this state of tension will continue throughout January of the New Year, to either break or relax after the first fortnight of February. Rates vary between 5 and 7 per cent. per annum for all single name advances, with 5½ per cent. for lists of good commercial bills carrying a first-class endorsement. Demand cannot be called heavy or insistent; indeed, the general state of the local money market is such that one may say that it is in a better condition to face any sudden stringency than at any period since the close of the war. The National Government can still renew its short-date bills at 3½ per cent. per annum, but these operations are so patently outside the regular course of business, hinging, as they do, on the rediscount facilities which the Banco de la Nación provides, that they cannot be treated as if they were in any way a true indication of the tone of this market.

The new import duties having been anticipated for at least six months, it follows that the actual passing of the law has little immediate effect on business. It has, however, strengthened the convictions of those who believe that Argentina should work for reduction of import dues and Free Trade as its ideal, and the result of the elections in Great Britain has been closely watched. Protection in Argentina spells monopoly and dear living in every line which has hitherto been kept completely free from external competition. Sugar is the most glaring case in point, the whole republic having to support the dozen or so big sugar interests in Tucuman and Jujuy, who, though they contribute the bulk of the provincial revenues and also favour the authorities with frequent loans, do so at the expense of the consuming public all over the country. Argentina is not a first-class sugar-growing country, even in the far north. Cane was planted and sugar milled in the days of the Viceroy, when transport was difficult and production for local use quite warrantable. To-day Brazil and Cuba could supply Argentina year in and year out with all the sugar she needs at 25 to 40 per cent. less cost, c.i.f. Buenos Aires, than the Tucuman producer will do, protected as he is. And given the immense sugar yield of 1923-24 all over the world it is not improbable that importers here will be able to buy foreign sugar at a price that will leave them a profit on local sales, high protection notwithstanding. Is it necessary to add that the sugar interests foresaw this, and strove hard to have yet another 25 per cent. clapped on the existing duties, or that, though temporarily in abeyance, it may even now be brought into force next year by a special Government decree? Cereal prices show export wheat a shade easier at \$12.70 Arg. paper per 100 kilos, though \$13.20 has been registered for new crop for local consumption. In the futures market \$11 is the current quotation for February-March shipment. Linseed for January shipment is firm at \$20.20 Arg. paper per 100 kilos, with February quoted \$19.75. Argentina to-day produces 50 per cent. of the world's linseed, and of the total world export of the seed she supplies 75 per cent., her own consumption being under 200,000 tons. Maize is at \$9.90 Arg. paper per 100 kilos for January shipment. Conditions are favourable for the new crop. In the local wool market the firmness mentioned last month has been well maintained, buying of Rivers wool being now conducted as regards important lots by tender. \$30 Arg. paper per 10 kilos remains the top price for fine wools, but both medium and fine crossbreds have appreciated to as high as \$25, the extreme figure, with Southern wools ranging between \$15 and \$24 for crossbreds in general. American buyers are showing more interest, but the bulk of the wool now being shipped goes to the Continent. For week ending December 20th returns showed 2,714 bales to Antwerp, 2,373 Dunkirk, U.S.A. 1,877, U.K.I. 506, Hamburg 917, Havre 145, other ports 265. Exchange is firmer at 40½d sight drawing on London, and \$137.50 New York. Continental currencies have also moved in favour of Argentina, French francs being 14.35 to the dollar gold, Belgian francs 16.15, Italian lire 16.82, and pesetas 5.60. Freight rates are firmer at 21s prompt, San Lorenzo range to U.K./Continent, while a boat was fixed for February at 25s, same range, though 23s and

24s are current fixtures for March-April, and \$5.25 gold has been booked for an April charter Rosario/New York. Berth rates have risen in even greater proportion, being 15s grain to U.K./Continent, and 19s Scandinavian ports.

Letters to the Editor.

THE CREATION OF BANK CASH.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am sure that I shall be voicing the feelings of many students of economics in expressing thanks to the chairman of the Midland Bank for his lucid explanation of the process by which bank cash is created, but is not the picture he has drawn of the effect of loans or purchases by the Bank of England a little incomplete? May I venture to quote this portion of the address? Mr McKenna is reported to have said, "Suppose the Bank of England invests a million in War Loan. The seller receives a draft for £1,000,000 and pays it into his own bank, which will consequently increase its balance with the Bank of England by that amount. Actually a million of bank cash will have been created, which will become the basis of new bank loans." Oddly enough, we are enabled to paint this picture in further detail by the Bank of England returns for the week ending January 23, 1924. The transaction referred to by Mr McKenna has actually happened. Since January 16th the Bank of England has invested a million in Government securities. Presumably the seller paid the draft of £1,000,000 into his own bank, which increased its balance with the Bank of England by that amount, for the item "Other deposits" in the Bank return records a very substantial increase. The total deposits are £2,801,742 above January 16th. There is, however, no substantial change on the other side of the account. Therefore, the per cent. of reserve to liabilities falls. The actual fall is from 18½ per cent. to 18 per cent. Of this fall more than one-third is due to the increase in Government securities by £1,000,000. Therefore, I think it is fair to conclude that an operation such as that described by Mr McKenna would reduce the ratio by roughly ½ per cent.

We are now in another field of thought, and that is the relation that the Bank of England ratio bears to the economic welfare of the country, and in this connection I would suggest one or two considerations. Compared with the equivalent week in 1923 the ratio has dropped from 20 per cent. to 18 per cent. Not a large difference truly, but still of some economic import, having regard to the general low position of the ratio.

Of course, no argument can be based on the relative levels of the ratio in two individual weeks, but I am writing this with the diagrams of the whole years 1922 and 1923 before me, and the general impression conveyed is that 1923, as a whole, shows rather more inclination towards a downward tendency than 1922, a condition which may have some bearing on the weakness of sterling and the gradual rise in the price of gold. These are, however, wider questions. My present object is to establish the position that the process described by Mr McKenna is only capable of very limited application.—Faithfully yours,

OWEN FLEMING.

Toys Hill, Brasted, Sevenoaks.
January 26th, 1924.

Books and Publications.

RECENT ECONOMIC LITERATURE—A TWO MONTHS' SURVEY.

THE trail of the General Election—which accounts for the fact that this survey is seriously in arrears—is over a large part of the periodical and pamphlet literature of the last two months. It is a part which may now, happily, be left to lie; it helped to do its work, in preventing any stampede of the nation's mind by eleventh-hour assertions and promises. Most of us are now glad to put it up on that rather dusty shelf whence "Fiscal Fallacies," "Free Trade v. Protection," and other ammunition of

the kind were so unexpectedly taken down again two months ago.

It is not, however, by any such ephemeral output that the economic publishing of the period under review is fairly to be judged. There are, as a matter of fact, an unusual number of books of lasting interest. Mr. Keynes, with that shrewd journalistic instinct that he has always shown in selecting his date of publication, postponed his *Tract on Monetary Reform* (Macmillan, 7s 6d) until after the Election. Candidates may regret that they had not got it by them during the Election—but they forget that, lucid as is his argument, it does require at least some degree of quiet of mind to follow it. This book was reviewed in the *Economist* of December 15th; it need only be mentioned here as the economic "event" of the month.

Certainly none of the other numerous works on one or other aspect of the monetary problem have anything like the readability of this "tract." *The Problem of the Rupee*, by B. K. Ambedkar (P. S. King, 15s), is partly historical, partly an argument for a return to the gold standard. It is a clear and ably written work, accepted by London University as a thesis for the degree of Master of Science. Dr Cannan contributes a preface. M. Charles Rist, in *La Déflation en pratique* (Marcel Giard, Paris, 15f), does not dig excessively deep, but does show the anxiety with which economically educated Frenchmen are regarding what Mr Keynes calls the "finances of Humpty-Dumpty." A new edition of Mr W. F. Spalding's excellent work on *Bankers' Credits* (Pitman, 10s 6d) is to be warmly welcomed, as is the fourth edition of Dr J. T. Holdsworth's *Money and Banking* (Appleton, 15s). It is a pity that transatlantic economists have developed so unattractive a terminology; it makes books like Mr Ludwell Moore's *Generating Economic Cycles* (Macmillan Co., New York, 12s) and Professor Schluter's *The Pre-War Business Cycle* (Columbia University Studies in Political Science, Vol. CXII. No. 1, 8s) much harder to read than they ought to be. Dr Schluter's argument may be open to question, but his book is very useful as a well-arranged survey of a large number of important facts, brought together in a clear and coherent way. Professor Moore has carried further the adventurous researches of the late Professor Jevons; he refers responsibility for cyclical trade fluctuations to the planet Venus. This seems an extreme case of the fallacy "Cherchez la femme."

Three useful books, each with a bearing on current political and economic problems—the line between them is increasingly hard to draw—are Mr Elliot Jones' *The Trust Problem in the United States* (Macmillan Co., New York, 14s), Mr W. E. Sennett's *Railway Amalgamation in Great Britain* (*The Railway Gazette*, 15s), and *Labour Turnover in Industry*, by Messrs P. F. Brissenden and E. Frankel (Macmillan, 10s). The "problem" in the United States is largely one of the practical evasion of the Sherman Law, as, for instance, by Standard Oil.

Oil is responsible for two singularly interesting volumes—*The Oil Trusts and Anglo-American Relations*, by Messrs E. H. Davenport and S. R. Cooke (Macmillan, 7s 6d), and *The World Struggle for Oil*, translated by C. Leonard Leese from the French of M. de la Trameyre (Allen and Unwin, 8s 6d). Messrs Davenport and Cooke are all for the open door, and hotly opposed to any Governmental participation in oil; the most interesting parts of their book, which is a very interesting one, deal, however, with the economic rather than the political history, and, above all, with the future of oil. They scorn the idea of an approaching shortage; the world's resources are, in fact, hardly scratched: "the right price brings out the oil."

Sir Westcott Abell's *The Ship and her Work* (Gee, 7s 6d) is mainly descriptive; *Shipping*, prepared by the Labour Research Department, and published by Labour Publishing Company (2s 6d), is, of course, mainly propagandist. In the same way Mr Gerard Collier's *Economic Justice* (Allen and Unwin, 7s 6d) and Mr H. W. B. Joseph's careful analytic study of *The Labour Theory of Value in Karl Marx* (Oxford University Press, 4s 6d), may be regarded as balancing each other; to read one after the other is certainly a salutary intellectual exercise. *The Referendum*, by the editor of the *Spectator* (T. Fisher

Unwin, 3s 6d) is, of course, an earnest plea for what Mr. St. Loé Strachey prefers to call the Poll of the People. The point which he meets least successfully is what might be called the psychology of the Anti; the fact that it is dangerously easy to mobilise an unintelligent opposition to almost anything.

Literature on co-operation is collecting at a surprisingly rapid rate, and M. Bernard Lavergne's *Les Co-opératives de Consommation en France* (Armand Colin, Paris, 5f) is a useful addition to it.

One of the most stimulating contributions to economic discussion is contained in the December issue of the *Economic Journal*, where Sir William Beveridge's much-quoted address to Section "F" of the British Association, on "Population and Unemployment," is followed by a very pungent rejoinder from Mr. J. M. Keynes. The "impartial" reader on this topic is probably non-existent; he might, however, be created by a careful perusal of these two contributions.

Among works of reference, there may be mentioned Lloyds List, *Review of Shipping, Shipbuilding, and Commerce for 1923*, which contains a series of special articles by well-known writers; *Rubber Facts and Figures*, and *Tea, Facts and Figures* (both published by Messrs F. C. Mathieson, of Copthall avenue, at 2s); and the invaluable *Bankers' Almanac and Year-Book, 1923-24*, edited by Mr. Thomas Skinner, and published by Waterlows at 42s.

THE INDUSTRIES OF SWEDEN.*

THE leading industries of Sweden have grown up naturally out of her wealth in iron ore and timber, and their development has been aided by the inventive genius of her inhabitants and, in recent years, by the electricity obtained from her vast resources in water power and by the high level of popular education. This massive and handsome volume, issued by the General Export Association of Sweden in connection with the Gothenburg Tercentenary Exhibition of 1923, is intended to promote her export trade. There are histories by various writers of the leading branches of manufacture—iron and steel, machinery and tools, electric appliances, timber and woodwork, paper and pulp, and chemicals, including fertilisers and explosives, with sections on banking and shipping, followed by illustrated descriptions of most of the principal factories and their products, showing, amongst a multitude of other articles, locomotives, steamships, Diesel engines, scientific instruments, and all sorts of ingenious machines. The book closes with a full index of exporting firms, and the factories are marked on a map. Designed as a business guide, it is also a valuable contribution to industrial history. The iron trade is traced from its beginnings, probably about 500 B.C., through its stage as a "seasonal" industry worked with charcoal and by water-power, to its concentration in large establishments using modern processes and appliances adopted from abroad, of which the latest is the electric furnace of to-day. A limited number of copies of the book are obtainable from the Swedish Consulate in London by "bona fide inquirers," and it should be useful to all users of the many kinds of goods in the production of which Sweden excels.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 6.	February 7.

Stock Exchange markets have repeated in many directions the excitement and the tendency of the previous week, when, upon the announcement of the Labour Cabinet, activity was lashed into life and prices were advanced in a fashion somewhat startling. Members of the House are beginning to complain, with serio-comic emphasis, that everything nowadays moves in a direction contrary from that which might have been expected. Instead of the anticipated flood of profit-taking, there has been a further influx of support to the purely investment sections, and the scarcity of supply revealed by the unlooked-for demand has had the effect of forcing up prices still further. This applies more particularly to such securities as those in which no particularly free market exists, but which are held in high repute by the investor pure and simple. Once more the difficulty is to find reasonably-priced stock with which to satisfy the demand of those who are now unloading money which they had previously held up, rather than invest it at low prices during the time of political upheaval.

Movements in the gilt-edged markets are mostly upwards. The War Loan and Conversion attract a good deal of speculation as well as investment, and the fluctuations in the prices of these two are fairly representative of the general trend prevailing at any particular hour. The sentiment changes with remarkable rapidity. The foreign political outlook is considered a little less alarming, but the flame of gambling which took place in German and Russian bonds was quickly quenched by the subsidence of interest. Home Corporation and County stocks are better, especially the 3 per cent. and the 6 per cent. issues; prior-charge Home Rails have all hardened, and there is a firmer tone about Colonials, in spite of the new issue of Rhodesia Fives, and the talk of possible newcomers in the near future.

French bonds threw off a good deal of their recent depression, though the immediate outlook in France, notwithstanding the taxation proposals, is deemed to be obscure. Russians are lower on the week, Mexicans have given way, and in Brazilians there is less doing.

Settlement of the railway strike caused an abrupt rise in most of the leading stocks in the home railway market, though the bullishness was short-lived, owing to the fears aroused by the possibility of a dockers' strike and the further apprehension of disturbance arising in the coal-mining industry. Argentine railways have spurred, in consequence of the excellent traffics. Brazilians keep firm, and foreign railway stocks as a whole

DISCOUNT CORPORATION OF NEW YORK

This Corporation discounts and resells Bankers' Acceptances and approved Bank endorsed Trade Acceptances, deals in United States Treasury Certificates of Indebtedness and Notes, and receives funds repayable on demand or at fixed maturity against the security of Bankers' Acceptances, or Government Obligations.

Statement of Condition, December 31, 1923.

Forward rates and special offerings on request

are a good market, shortage of stock coinciding with a certain amount of public inquiry for foreign securities that offer reasonable returns on the money.

The rubber market is a little harder, though business remains as quiet as ever. Amongst oil shares, the further rise in the price of crude oil caused sharp advances in Royal Dutch, Shells and some of the leading oil descriptions. Reaction followed, but the market is regaining a shadow of its old popularity, and interest is reviving in its outlook. Hudsons Bays have been a strong feature, rising steadily during the week. A complete change has come over the aspect of banking and insurance shares. Prices, instead of being insipid and depressed, rallied strongly in both groups, on a modicum of buying and a cessation of the previously attempted realisations. The shipping market is also firmer, with the fixed-interest stocks more especially sought after. Textiles are a little better, though the market did not derive the expected benefit from the hope that a possible resumption of trade with Russia will bring substantial accession of orders to the textile trade.

The strongest market in the industrial area is that for tea shares, where business has broadened considerably, and where the incessant support from the public is, fortunately, countered by supplies of shares offered on behalf of previous buyers, who can now take very handsome profits and are not averse from doing so. The iron and steel market has responded to the more cheerful conditions prevailing elsewhere. Gas stocks are strong, and the electricity supply market received a fresh fillip of strength from the declaration of a dividend, making 15 per cent. for the year on Westminster ordinary, an improvement of 3 per cent. on last year's distribution. Cable stocks have recovered most of their recent falls. Amongst wireless shares, Marconis hesitate, owing to the uncertainty felt in regard to the expected interim dividend, and Radios weakened, on selling from New York.

The Kaffir Circus has been enlivened by vigorous Cape buying of East Rands, and a few of the other South African favourites. The British public are not doing much business in this market, the speculative brigade taking greater interest in the shares of the Canadian silver companies, now popular by reason of the profits which some of the concerns are declared to be making. The high price of tin fails to attract any particular attention to the markets for tin-mining shares, although various Malaysians have been marked up. Indians show a tendency to droop. A little animation sprang up in Russians. Diamonds have been better, on vague statements that the trade in the stones shows improvement, and, amongst copper shares, the daily fluctuations have depended almost entirely upon the movements in the French rate of exchange.

Stock Exchange shares, the price of which revolved for many weeks around 98, have risen to 102 on the near approach of the end of the Stock Exchange financial year and hopes of a good dividend.

NEW ISSUES.

1918

Southern Rhodesia 5 per Cent. Inscribed Stock, 1934-1949.—Issue of £3,000,000 stock at 98 per cent. The

loan is charged upon the revenues of South Rhodesia. This

country comprises the territories formerly administered by the

British South Africa (Chartered) Company under the title of

Southern Rhodesia. Accompanying the prospectus is an excel-

lent statement giving the latest figures with regard to im-

ports and exports, and particulars of the Colony's general

assets. If not previously redeemed, the stock will be re-

deemed at par on September 1, 1949, but the Government of

the Colony reserve to themselves the right to redeem the

stock at par on September 1, 1934, or on any half-yearly

interest date, on three months' notice. The loan is issued

under a special Act—the Southern Rhodesian Loans Act, 1923,

which provides "that a separate sinking fund of not less than

one-half per cent. per annum shall be established in respect of every issue made under that Act, which fund in the case of an issue made in the United Kingdom is to be invested in any bonds or stock of the Colony which are trustee investments within the meaning of the Trustee Act, 1893, or in any of the Parliamentary stocks or public funds or Government securities of the United Kingdom, or in any securities the principal and interest of which are for the time being guaranteed by the Government of the United Kingdom." A sinking fund of 1 per cent. per annum, payable from January 1, 1926, has been established in respect of this issue. The usual clause is inserted in the prospectus to the effect that the British Treasury is not directly or indirectly responsible for repayment. The proceeds of the present issue will be used to repay to the Home Treasury an amount of £2,000,000, which has been paid to the Chartered Company, to repay an amount of £300,000 advanced to the Colony from the Imperial Exchequer, and also for the general purposes of the Colony. The loan is a trustee security, and worthy of the conservative investor's attention.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

NATIONAL PROVINCIAL AND UNION BANK OF ENGLAND, LIMITED.

SIR HARRY GOSCHEN ON FINANCIAL AND TRADE CONDITIONS.

INFLATION AND DEFLATION RUMOURS AND THEIR EFFECTS.

REVIEW OF CHIEF INDUSTRIES.

GUERNSEY BANKING COMPANY AGREEMENT.

CHANGE OF TITLE APPROVED.

The annual general meeting of shareholders of the National Provincial Bank of England, Limited, was held, on the 31st ultimo, at the Cannon street Hotel, London, E.C.

Sir Harry Goschen, K.B.E., presided.

The notice convening the meeting and the report of the auditors were read by Sir Alfred Lewis (joint general manager).

CHAIRMAN'S SPEECH.

The Chairman said,—Ladies and gentlemen, before I ask you to turn your attention to the accounts of the bank for the past year, I should like to refer to two or three events of interest in what I might term the domestic affairs of the bank, some of which are briefly referred to in our report.

Among these the first that will occur to us is the proposal to change the name of the bank, and I need hardly inform you that our recommendation has not been arrived at without the most anxious and careful consideration. We have felt that the present title of the bank, with the associations it recalls of the highest traditions of both London and country banking, was one not lightly to be discarded. On the other hand, the representations made to us, both by our clients and friends, to the effect that our title was too long and cumbersome for present-day use, were of so weighty a character that we could not but realise some change was inevitable. We have considered the many suggestions which have been put before us, especially those which had the object of retaining in the new title reference to some of our constituent parts, but it was found impossible to devise any appropriate name which would meet all our wishes in this respect and at the same time be sufficiently concise.

After looking at the question from every point of view, we have unanimously decided to recommend the shareholders that the bank should in future be known as the "National Provincial Bank, Limited," and a resolution to this effect will be laid before the shareholders at the extraordinary general meeting to be held later on to-day.

We do not desire, however, to lose sight entirely of the long and honourable associations connected with our present name, and it is our intention that certain of our branches shall be known as heretofore, as the National Provincial Bank, Limited, Union Bank Branch, or Smith's Bank Branch, &c., as sentiment or expediency may dictate.

ACQUISITION OF MESSRS GRINDLAY AND CO.

As you may have seen in the report, we have been fortunate in acquiring as from January 1, 1924, the old-established business of Messrs Grindlay and Co., East India Army agents and bankers.

This firm, which has had a long and honourable career, was originally established in 1828 by Captain Grindlay, a retired Indian officer, as an agency for "facilitating passages to and from India," with premises in Birch Lane. So successful was this business, that in 1839 it was transformed into the East India Army Agency, trading under the name of Grindlay, Christian, and Matthews, who were prepared to transact business of every description with India and the Colonies.

In 1860 the head office was transferred to Parliament street, which has been its home since that date, and it was there the foundations were laid of the prosperous banking business which now is affiliated with our institution.

We are fortunate in retaining the experienced services of the existing partners as directors and managers of the limited company which has now taken the place of the old firm, and we propose that the business should be carried on in exactly the same way as before. It is not the intention of Grindlays in any way to embark in Indian commercial business, or to deal in exchange, but it is hoped to maintain and to develop the existing business of private bankers and Army agents to its full extent, and you will be interested to learn that with this object in view the directors

have lately decided, with our full approval, to open a branch at Lahore. We have every reason to hope that the acquisition of the business of Messrs Grindlay and Co. will prove of considerable value to this bank.

NEW BRANCHES.

We have opened 28 new branches during the past year, and since the date of the report a branch of the bank has been opened in Waterloo Station. This is a new experiment, but one, we think, that will prove of convenience to our customers, especially to those who, when proceeding or returning from abroad, may need facilities for converting their money into the currency they require.

CONVERSION OF SHARES.

Those shareholders who were present at last year's meeting will remember we were then requested to consider whether a suggestion to convert our £25 and £20 shares into a single unit was a practical proposition. Indeed, a shareholder was kind enough to offer to provide us with a scheme for this purpose. This plan, together with various other schemes of a similar nature, was duly received and considered by us in conjunction with the best expert advice, but the legal and other difficulties disclosed by the detailed examination of any plan submitted to us in comparison with the small advantages to be gained by any such conversion preclude the directors from advising the shareholders to make any change, at all events, for the present.

BANK OFFICERS AND ELECTION WORK.

There is one matter connected with our internal arrangements which I should not have referred to to-day, as it is quite outside the purview of a general meeting, were it not that certain communications to the Press may have created an entirely inaccurate impression of the real facts.

Shortly before the General Election, the directors and general managers received a circular letter from an organisation which is not recognised by this or any clearing bank as representing their staffs, protesting against one of our rules to the effect that officers of the bank are forbidden to take any prominent part in election work, but should content themselves with recording their vote; the letter further implied that a circular had just been issued by us with the object of calling attention to this rule. We did not consider this letter required any answer.

The real facts are:—The rule in question is one of the original rules of the bank, and no objection has ever been taken to it by any member of our staff or by our own Staff Association. I should be inclined to think it had often proved a great convenience. The circular in question was issued in consequence of one of our officers stating he was not aware of certain educational advantages and rewards open to members of the staff as set out in our rules, and as he appeared to think these were not generally known or understood, it was thought well to call the attention of all officers to the necessity of making themselves acquainted with the rules of the bank.

VIEWS OF STAFF ASSOCIATION.

I may add that within the last few days I have had the advantage of discussing the matter with the representatives of our own Staff Association, and find that, generally speaking, they regard the rule as one of the ordinary regulations of the bank; that it was common, they believed, in a written or unwritten form to all the great banks, and there was no wish to repudiate an agreement to which they had freely subscribed when entering the service.

They further informed us that the rule had not attracted the special attention of the staff, but that the correspondence in the Press had naturally formed a topic of conversation. Only one district committee had so far formally discussed the matter, and they had passed a resolution recommending the retention of the rule in its present form.

We have, however, asked the committee of the Staff Association

to discuss the matter with their members, and if, after having talked it over, they wish to make a recommendation to us that some modification should take place in the wording of the rule to bring it more into accordance with modern ideas, such a suggestion on their part would be considered sympathetically by the board.

I am glad of this opportunity of expressing our appreciation of the useful services our Staff Association render to the bank. We are in regular and constant touch with their representatives, and the frank and free discussion with them of all matters affecting the conditions of service and well-being of our men has been of the greatest help in maintaining the willing efficiency of our service, on which the success of the bank so largely depends.

AGREEMENT TO ACQUIRE GUERNSEY BANKING COMPANY.

I am glad to be able to give you to-day the first public information of a further extension of our business. We have entered into a provisional agreement to acquire, subject to Treasury consent, the business of the Guernsey Banking Company on what we believe to be satisfactory and equitable terms.

The Guernsey Banking Company, which was established as far back as 1827, has had a successful career, and among its directorate are included some of the most prominent personages of the island. It is our intention that the business should be carried on in the same way as before, but as a branch of the National Provincial Bank, and we are fortunate in being able to retain the services of the existing board of directors, who will in future function as a local board of this bank. We shall thus retain the advantage of their influence and experience. The business is a thoroughly sound one, and will prove, we believe, a valuable acquisition to the bank, not only on account of the profits which we may expect to receive from the existing business, but also on account of the collateral advantages it will afford us. Branches in Guernsey will enable us to consolidate and extend our large connection in the South of England, and enable us to provide our customers, and especially those connected with the trade of the island, with improved facilities for the conduct of their business in that direction.

BALANCE-SHEET ITEMS.

Turning, if I may, to the balance-sheet, our figures show comparatively little change from those laid before you at our last meeting.

There is no change in either the capital or reserve, and the figure at which the current, deposit, and other accounts now appear—£263,786,000—is substantially the same as in last year's account. The next item—liabilities for acceptances, endorsements, engagements, &c.—shows an increase of nearly £3,000,000 over last year's figures.

On the assets side of the balance-sheet, coin, Bank of England and currency notes in the United Kingdom, and balances with the Bank of England—£32,252,246 15s 11d—is somewhat lower than last year. Our balances with and cheques in course of collection on other banks in the United Kingdom and Ireland, and cheques, drafts, &c., amount to £8,554,502 8s 6d.

Money at call and short notice—£15,872,367 18s 1d—shows an increase of two millions on last year's figures, while the figure for bills discounted—£40,843,930 11s 10d, including Treasury bills—is five millions less than the amount at which this item appeared in the previous balance-sheet.

Investments, which still include a very considerable proportion of short-dated securities, amount to £51,540,182 2s 11d, about a million less than last year. There is practically no change in the total of £2,648,750 at which our shares in other banking institutions appear in the balance-sheet.

ADVANCES TO CUSTOMERS.

Our advances to customers and other accounts, £127,074,515 2s 3d, show an increase of 5½ millions over last year's figures, and indicate, we hope, some revival of trade demands.

Bank premises, £4,242,731 3s 3d, again show a slight increase on the figure at which they stood last year, accounted for by the addition of our various new branches.

Liability of customers for acceptances, endorsements, and engagements is merely a *per contra* entry, and appears at the same figure on the other side of the account.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows an available balance of £2,723,261 6s 6d, including £931,974 11s 2d brought forward from last year. The interim dividend paid in July last absorbed £744,753 5s 8d of this amount, and the dividend we have just declared, which is payable to-morrow, will absorb a similar sum.

Of the balance remaining, we have transferred £100,000 to the pension fund, £100,000 to bank premises account, and £100,000 to contingencies account, leaving £933,754 15s 2d, a slightly increased balance, to be carried forward to the new account.

MESSRS COUTTS AND CO.'S FIGURES.

The balance-sheet of Messrs Coutts and Co. is, as usual, attached to that of this bank. Their current, deposit, and other accounts, &c., which stand now at £16,705,946 10s 10d, show a small reduction as compared with last year. On the other hand, coin, Bank of England and currency notes in the United Kingdom, and balances with the Bank of England amount to £1,982,632 15s 2d, a slightly lower figure than in the previous balance-sheet.

Money at call and short notice and investments, bills discounted, &c., all show a small reduction, while advances to customers, &c., show an increase of over a million sterling.

We are glad again to congratulate Messrs Coutts and Co. on their satisfactory balance-sheet; it is gratifying to find that the favourable anticipations we entertained when we acquired this business have been more than justified.

TRIBUTE TO STAFF.

I am sure you would wish to join with the directors in expressing the high appreciation we feel of the great care and ability which the general managers, managers, and staff have devoted to the interests of the bank during the past year, owing to which we are in a position to-day to put the foregoing results before you.

Our French subsidiary continues to make satisfactory progress, and you need have no fear that it has sustained any loss in consequence of the fall that has taken place in the value of the franc, for, as I have previously explained, as the assets and liabilities of the bank are in the same currency, no loss can arise on this account, and the variation in the exchange would only affect the amount to be remitted to London on account of profits. The capital is invested in sterling securities, and is therefore not affected by fluctuations in the French exchange.

PAST YEAR'S TRADE.

Looking back on the year that is past, I cannot think that anyone would describe 1923 as a good year, but I hardly think it deserves all the hard things that have been said about it. It seems to me that it should rather be described as a disappointing year. At various times and in more than one direction we have had indications of an improvement in trade, which have raised our hopes, but from one cause or another our anticipations have not been realised, and there has been a relapse to the dull conditions with which we are only too familiar.

Although we cannot record any sensational movement in our national finances since the consolidation of the American debt, we have moved in the right direction. At the end of the year our external debt stood at £1,135,000,000, showing a decrease on the year of £23,000,000, and during the nine months ending December last £82,000,000 of National War Bonds have been converted into longer-dated securities.

We cannot expect, nor do I wish to see, a too rapid reduction in our fiduciary currency, but we continue to move on sound lines. The percentage of bullion held against the total notes issued by the Bank of England and the Treasury has risen to 38.5 per cent., as compared with 37.62 per cent. in the previous year, and our improved credit was during the year reflected in the American exchange which at one time was quoted at 4.72, the highest point it has reached since the restrictions on transactions in American dollars were removed.

AGRICULTURAL INDUSTRY.

It is a matter for regret that our oldest industry, agriculture, still remains in a state of depression from which it can hardly emerge without some assistance. It has, I think, been clearly demonstrated that banking facilities alone cannot provide an adequate remedy; we must look elsewhere for this; but I think I may say the banks have done, and will continue to do, all they properly can to make things easy for the farmer.

SHIPPING.

During the greater part of the year there has been no improvement to record in the shipping situation, and owners have been faced with the problem not only of how to employ their tonnage profitably, but how they are even to cover their running expenses. In addition to this, they have had to take into consideration the heavy fall in capital values, the natural result of unprofitable trade. There are, however, some signs of an improved outlook, and prospects of a better demand for tonnage seem brighter than for some time past.

The depression in the shipping trade has not been without its influence on the shipbuilding industry, which shows the lowest figures for some years.

During 1923 only 227 ships were launched, with a gross tonnage of 648,801—400,000 tons less than in 1922, and 1,400,000 less than in 1920—a depressing record when one considers the British yards have a constructional capacity of 3,000,000 tons per annum. The

last quarter of the year, however, shows some improvement in the total tonnage under construction.

STEEL AND IRON TRADE.

The steel and iron trade, I am glad to say, presents a brighter picture. Two hundred and four furnaces are reported to be in blast as compared with 169 at the end of 1922, and the output for 1923 exceeds 7,000,000 tons of pig-iron and 8,000,000 tons of steel, as compared with 5,000,000 and 6,000,000 tons respectively in 1922.

In the light and manufactured steel section there has also been a steady improvement, which has been especially noticeable both in the home and export trade during the last three months of the year. The increased number of cable orders from various parts of the world for goods for immediate consumption is also a gratifying feature.

The competition from sale of war stocks which had been written down to extremely low prices is now practically eliminated, and the German competition, which had been very serious, has to a great extent disappeared. It would almost seem as if buyers had begun to realise that the cost of production cannot be further reduced, and if manufacturers push their export business with energy, there is no reason, provided conditions remain stable, that there should not be a steady improvement in 1924. The trade as a whole has done much during the past year to perfect their plant and processes, and generally to improve their organisation.

COTTON.

The condition of the cotton trade is, I am sorry to say, still unsatisfactory, but I think that during the year there has been some change for the better. Trade with India is in a healthier condition, tentative inquiries for goods seem to be coming forward from China, and business with South America also has somewhat improved; but competition, especially in that part of the world, is keener than ever. I am afraid that our competitors on the Continent have, perhaps, made greater strides than our exporters in this country. Longer hours of work and wages paid in a depreciated currency have no doubt assisted our European competitors to produce their goods at a lower cost than we can, and the lower expenses applicable to shipments from Continental ports have accentuated the handicap our manufacturers have had to bear. Indeed, I believe that in consequence of these lower shipping charges many Transatlantic buyers are placing their requirements in Belgium and Germany, and requests are even being made to merchants in this country to send all goods forward *via* Holland and Belgium, as their customers find the expenses, even taking into consideration the transshipment on the Continent and the higher insurance, are lower than those incurred in shipping from home ports.

HEALTHIER MARKETS.

The financial position in the South American countries is not so stringent. Remittances are coming forward with greater regularity, and the number of failures recorded among firms engaged in the import trade in those parts was fewer during the last year than in 1922. Markets generally are in a healthier position, and were it not for the uncertainty that everyone feels as to the maintenance of cotton prices at the present high level the prospects for better trade in the current year would seem more favourable.

WOOL.

As far as the wool textile trade is concerned, manufacturers look back on an unsatisfactory year. The prices of raw material have continued to rise, and the heavy cost of production has not been reflected in the selling price. Competition from the Continent has been (for the same reason as has prevailed in the cotton trade) difficult to meet, and there has been much depression in the home spinning trade. Business in tops has been of a "hand-to-mouth" description, the far lower cost of combing on the Continent preventing much activity in this branch of the industry.

Altogether taking a general survey of the trade of this country, I think we may say there has been some, though very slow, progress towards better conditions. The unemployment figures, due perhaps largely to the remedial measures introduced by the Government, have fallen from 1,485,800 at the end of 1922 to 1,250,100 on December 31st last.

The situation abroad also shows improvement. The treaty at last happily concluded with Turkey may, I trust, result in a speedy revival of our trade with the Near East.

AUSTRIA'S IMPROVED POSITION.

During the past year, largely owing to the influence and assistance of this country, the position of Austria has undergone a marked change for the better. Her exchange has been practically stabilised, and the external loan guaranteed by signatories of the League of Nations, together with the internal economies she has been able to effect, has at all events given her a chance of re-organising her financial position. Indeed, in almost every direc-

tion we see efforts being made by our neighbours in Europe to set their house in order. Germany, however, still remains a dark spot, but even there the new committees formed by the Reparation Commission, among whose members are included representative Americans, afford us some grounds for hope that the long-deferred settlement is not outside the bounds of practical politics.

FOREIGN COMPETITION IN INDUSTRY AND FINANCE.

But while it is a matter of satisfaction that in almost every country on the Continent there is some revival of industrial activity, we cannot shut our eyes to the fact that the energies of these countries are increasingly being directed to the production of articles formerly imported from this country; that they are becoming largely self-supplying and even keen competitors of this country, and that the more active these industries become, so their competition increases.

It is not only in manufactured goods that we find our position assailed, for our financial supremacy and the position of the pound sterling as a unit of international settlement are keenly disputed.

We find endeavours from abroad are now constantly being made to arrange for the payments of invoices in currencies other than sterling, and that demands for credits in dollars and guilders to finance the movement of commodities are becoming more frequent.

INFLATION RUMOURS AND THEIR EFFECT.

It is perhaps natural that other countries wish to attract to their market some of the finance and discount transactions hitherto concentrated in London. We must expect this competition, and be prepared to meet it, but we can only do so if our national finances and currency are in a sound position. A man who has something to sell naturally wishes to be paid in a stable currency. Since the war we have done much towards reinstating the pound sterling in its old position by the re-establishment of our national credit, but credit is a tender plant, and we have seen in the depreciation of the pound sterling, as expressed in the fall of the American exchange from the highest point it touched, 4.72, to its present level, how the suspicion of any manipulation of the national finances, or the mere mention of inflation, even in irresponsible quarters, has affected our national credit. I cannot help thinking there has been lately far too much irresponsible discussion as to the comparative advantages of inflation and deflation. Discussions of this kind can only breed suspicion in the minds of our neighbours as to whether we shall adopt either of these courses, and, if so, which. I think we had better let matters take their natural course, but of one thing I am sure, a policy of deliberate inflation would not only make it impossible for us to maintain even our present financial position, but it would destroy for many years, if not for all time, any confidence our neighbours might feel in the stability of the pound sterling as a unit for the settlement of international obligations.

ECONOMY AND HARD WORK ESSENTIAL.

I shall not attempt to make any forecast of what the course of our trade may be during the current year. The political situation is so dominant a factor at the present moment that it would be difficult to discuss the future without touching on the political problems that confront us more closely than would perhaps be proper at a meeting of this kind, but this I think I may say, I am still convinced that it is no good tinkering with our national finances in the hope of restoring the well-being of this country by artificial means. Dull and irksome though it may be, we must still follow the paths of economy and hard work, and, above all, we must not barter the sound financial birthright we have received for a mess of pottage of a simulated and transient prosperity.

I now beg to move "That the report and accounts as presented be adopted."

Mr M. O. FitzGerald seconded the resolution, which, after some congratulatory remarks from Mr John Hedges and Mr Frederick Tomkinson, was carried unanimously.

The retiring directors were re-elected and the auditors re-appointed, and a vote of thanks was accorded to the directors, general managers, branch managers, and other officers of the bank for their efficient management and services.

EXTRAORDINARY GENERAL MEETING—CHANGE OF TITLE.

An extraordinary general meeting was then held for the purpose of submitting resolutions changing the name of the company to "National Provincial Bank, Limited," and altering the provisions of the memorandum of association.

The Chairman formally moved:—"That the name of the company be changed to 'National Provincial Bank, Limited.'"

Sir Felix Schuster, Bt., in seconding the resolution, said he must confess to a great feeling of regret that the name of the Union Bank, which had occupied an honourable position in the City of London and elsewhere for 87 years, should be eliminated

from the title of one of the leading banks of the country, and he thought this feeling would be shared by a good many of the old shareholders and constituents of the Union Bank. He could not have brought himself to agree to the board's unanimous recommendation had he not been convinced that it was for the good of the institution generally that the change should take place. After all, what was there in a name, seeing they were now one institution, as long as there was the same will and power to carry on the bank and to maintain the credit which under its old names it had acquired? He was quite sure that the bank under its new name would not only maintain but increase the position which it had acquired amongst the leading institutions not only in the City of London but all over the world.

The resolution was unanimously agreed to.

The Chairman said he might mention that the provisional

approval of the Board of Trade had been obtained for the change, which would take place about February 15. The share certificates at present in the hands of shareholders need not be exchanged for new certificates bearing the new name; and, further, he thought all the shareholders and customers of the bank would like to know that the existing cheque books might still be used until new ones were issued.

The resolution providing for certain alterations in the memorandum of association of the company in order to bring it up to modern requirements was also passed unanimously, and the Chairman announced that a meeting to confirm the two resolutions now adopted would be held at the offices of the bank, 15 Bishopsgate, E.C., on February 15, at 12 o'clock noon.

A hearty vote of thanks to Sir Harry Goschen for presiding concluded the proceedings.

BANK OF LIVERPOOL AND MARTINS LIMITED.

MR W. R. GLAZEBROOK'S REVIEW OF TRADE AND FINANCE IN 1923.

TRADE OUTLOOK AT HOME AND ABROAD.

LARGE BUILDING PROGRAMME.

The ninety-third annual meeting of shareholders of the Bank of Liverpool and Martins, Limited, was held at Liverpool on the 29th ult., Mr W. R. Glazebrook, the chairman, presiding over a large attendance.

In moving the adoption of the report and accounts for the year 1923, the Chairman said: Gentlemen,—I beg to move that the report of the directors now submitted, and already printed and distributed amongst the proprietors, be adopted. I presume you will allow me to take the report as read.

TRIBUTE TO MR NORMAN AND MR COCKS.

The report before you refers briefly to the loss the bank has sustained during the past year by the death of Mr Edward Norman and Mr E. L. Somers Cocks. Mr Norman was a director of Martins Bank Limited for many years, and was chairman of that bank at the time of the amalgamation with the Bank of Liverpool. He then became chairman of the London board of the combined banks, and continued to occupy that position until his death in February, 1923. Mr Cocks was a partner in the old-established banking firm of Cocks, Biddulph and Co., and when that institution amalgamated with this bank in December, 1919, he became a director of our London board and senior manager of the business with which he had been so long and so honourably associated, and which was continued as a branch of this bank. Both Mr Norman and Mr Cocks had large experience and wide influence, and rendered valuable service. We deeply regret their loss.

RESIGNATION OF SIR JAMES HOPE SIMPSON.

The report also refers to the resignation, for reasons of health, of Sir James Hope Simpson from the position of general manager of the bank. Sir James' health had been unsatisfactory for a considerable time, but we all hoped that a long rest and careful medical treatment would result in his being able to resume his duties in the bank. This hope, however, was not fulfilled, for in September last he found it necessary, under medical advice, to relinquish his duties as general manager. His resignation was received with profound regret not only by the directors and the staff, but also by customers and by a wide circle of friends.

It is not necessary for me to speak about the prominent position which Sir James occupied in the public and business life of this city, or about the services which he rendered to the country during the war and the troublesome years which followed it; but I desire to refer in a special way to the great work he has done for this bank. In the 20 years during which he occupied the position of general manager the bank has made great strides, and, by amalgamation with other banks and the opening of branches in different districts, has largely extended its sphere of operations. As an indication of the extent of the progress made, I need only quote the following figures:—In 1903, when Sir James became general manager, the total assets were slightly over £13,000,000, and the number of branches was 82. In the report before you the total assets are over £76,000,000, and the number of branches 355. The directors recognise that this development and the high position which the bank occupies amongst the financial institutions of the country are due in a large measure to Sir James' ability and able guidance, and I would like, on behalf of the board, and, if you will allow me, on behalf also of this meeting, to express to him our gratitude for the great services he has rendered. You will also, I am sure, join with me in wishing him improved health, and many years in which to enjoy his retirement.

It is gratifying to the directors to know that as Sir James con-

tinues to be a director on the general board and on the London board, they will still be able to consult him whenever occasion arises, and obtain the benefit of his views.

NEW GENERAL MANAGER.

Mr T. Fisher Caldwell has been appointed general manager in succession to Sir James Hope Simpson. Mr Caldwell has had a long and varied banking experience in this bank and in other banks. He came to us in 1903, and since then has occupied various positions of responsibility, including that of superintendent of branches, and since 1919 assistant general manager. The directors had every confidence in appointing him to the important position vacated by Sir James. Mr Caldwell has also been given a seat on the London board.

At this point, with your permission, I shall read a letter which I have received from Sir James Hope Simpson. It is as follows: "Dear Mr Glazebrook,—

"I am very sorry indeed that the present state of my health will prevent me from attending the annual meeting of the bank on 29th instant, and I beg that you will kindly convey my apologies to the shareholders.

"Had I been present I should have sought your permission to say a few words to the shareholders, firstly to congratulate them on the results of the year, and the figures of the balance-sheet, and, secondly, to pay my tribute to my successor, Mr Caldwell, whose appointment to the position of general manager gave me the greatest satisfaction and pleasure. Having worked for 20 years with Mr Caldwell, in close daily contact, I can say with confidence that on the ground of character, ability, and banking experience, he is eminently fitted to be the chief executive officer of the bank, and that the interests of shareholders and customers alike could not be in better hands. I hope he will have many years of successful management.

"With kindest regards to yourself and my colleagues on the board.

"I am, yours sincerely,

"(Sgd.) J. HOPE SIMPSON."

The chairmanship of the London board, made vacant by the death of Mr Norman, has been filled by the appointment of Mr Robert M. Holland Martin, and the Hon. Thomas H. F. Egerton has been elected a member of that board to succeed the late Mr Cocks.

CATTLE TRADE BANK, LIMITED.

The business of the Cattle Trade Bank Limited was acquired as from July 1st last on satisfactory terms. The business carried on by that bank was—as its name implies—principally connected with transactions arising out of the purchase and sale of cattle, but it had also developed an ordinary banking business which we believe is capable of further extension. The acquisition of this business should prove a useful and profitable adjunct to the bank.

During the year 20 branches and sub-branches have been opened and sites for other offices have been acquired, including sites at Southampton and Bournemouth, in which towns we hope to open shortly.

YEAR'S PROFITS.

The profits for the year, after deducting general expenses and making all usual provisions, amount to £486,965 7s 7d, which is £17,837 1s 2d less than the profits of the previous year. The reduction is accounted for chiefly by the earning of profits having

been adversely affected by low money rates, and by less satisfactory conditions of trade in some of the districts in which our branches operate. These results are obtained after ample provision has been made for every account about the safety of which there appears to be any reason for doubt.

ALLOCATIONS.

The figures I have named, added to the sum of £126,099 6s 8d brought forward from the 1922 account, make a disposable balance of £613,064 14s 3d. Out of this sum the directors have allocated £100,000 to the bank's reserve fund, making the amount of that fund £1,600,000, and £375,822 8s to the payment of the usual dividends, leaving the sum of £137,242 6s 3d to be carried forward to next account.

May I now ask you to be kind enough to refer to the balance-sheet which was issued with the directors' report.

BALANCE-SHEET—LIABILITIES.

On the liabilities side you will observe that the amount due on current, deposit, and other accounts is less by about £3,800,000 than the corresponding amount last year. A reduction in deposits is a feature observable in the balance-sheets recently issued of most of the banks, and in the case of this bank it is due to a large extent to withdrawals from customers' accounts for trade purposes.

The next item—bank's acceptances—shows a slight increase.

ASSETS.

On the assets side the item "Cash in hand and balances with the Bank of England," is slightly lower than a year ago, but represents about the same percentage of the liabilities owing to the reduction in deposits. The three first items on this side of the balance-sheet represent money readily available, and if we take them together the ratio to deposits is 23.7 per cent.

Investments show a reduction of over two millions, accounted for by sales during the year. A profit realised on these sales has not been brought into the profits of the year, but has been utilised to further strengthen the internal position. I feel sure you will agree that this course is a wise one, and that while times are so unsettled it is the right policy of your directors to continue to build up the reserves of the bank.

Bills of exchange are less by about half a million, and advances to customers more by over a million than they were a year ago.

Bank premises appear in the balance-sheet at £1,484,081. These are substantially written down, and their actual value is largely in excess of the amount at which they stand in the books.

LARGE BUILDING PROGRAMME.

Owing to the suspension of building operations during the war and the years immediately following the war, various schemes for enlarging and improving our branch premises, and for the building of new premises, had necessarily to be postponed, and the consequence is that we have now an unusually large programme before us. This includes the erection of a new head office building on the site of Brown's Buildings and African House in Water street, to which reference was made in the directors' report to the shareholders last year. We have intimated our intention to exercise the option which we secured for the purchase of these buildings. We also propose to erect an important building in Leeds, where our business at present is carried on in leased premises, and have secured a site in a central position. It is our intention, when these premises are completed, to transfer the administration of the branches in our Halifax district to Leeds, as we find that that town will be more central for the purpose.

MONETARY CONDITIONS DURING PAST YEAR.

Monetary conditions during the past year did not present any striking features. There has been one change only in the Bank rate during the year, viz., on July 5, when the rate was raised from 3 per cent., at which it had stood since July, 1922, to 4 per cent. This rise coincided with the weakening in the Sterling Exchange in New York, and it was generally understood that the fall in the value of sterling had been accentuated by American borrowing in this country at the very low rates that were obtainable with a 3 per cent. bank rate. As in the case of other post-war years, the money market presented a somewhat artificial aspect, the value of money being almost, if not quite, dependent on public expenditure and revenue. When taxes were going into the Bank of England there were times of great stringency, and when the Government was making disbursements there were times when money was practically unobtainable. The rates of discount moved within very narrow limits, the periods of higher rates again coinciding with heavy taxation demands, and the lower rate with periods of Government disbursements.

FOREIGN EXCHANGES.

The foreign exchanges have remained in a very unsettled condition, and the alarming depreciation of the chief Continental

currencies has made it extremely difficult for manufacturers in this country to obtain buyers for their goods in European centres. The German mark has become valueless for all practical purposes, and the Polish mark almost so. Both French and Belgian currencies closed the year at about their lowest point, and since then have further greatly depreciated. The value of sterling in America has fallen heavily since February, when the rate reached 4.72, the highest point recorded since the rate was "unpegged," and at the end of December the quotation was no better than 4.33 to the £, having at one time touched 4.25. In the new year it has reached an even lower quotation. While a certain amount of the depreciation can be accounted for by the seasonal purchases financed through London of cotton, grain, and other American products by various European countries, other features which have contributed to the fall in the value of sterling have been the transfer to New York by Continental countries of balances in London, owing largely to unfounded talk of inflation of our currency, the withdrawal of American balances in London, and the sale of American holdings of British securities, due to the demand for money to finance trade requirements in America, and also, it is believed, to a feeling of uncertainty as to political developments in this country.

The depreciation in the value of the £ in terms of dollars is a serious consideration because of the heavy percentage it adds to the cost of this country's necessary purchases from America and to our payments in respect of war debt. As an illustration, goods purchased in America which would have cost £1,000 at the highest rate of exchange during the past year would have cost £1,109 at the lowest rate.

TRADE CONDITIONS.

During the year under review trade conditions improved, but the extent of the improvement was disappointing, and the hopes which were entertained at the beginning of the year were not fulfilled. The Board of Trade returns show a considerable expansion in overseas trade, viz., an increase in imports amounting to nearly 9½ per cent., and an increase in exports of 7½ per cent., as compared with the previous year. A welcome reduction in the number of the unemployed also provides evidence of improvement. It has, however, to be borne in mind that to some extent the reduction in unemployment is due to the operation of the Trade Facilities Act, which enabled extensive works to be commenced which would otherwise have been delayed for a considerable time. Engineering and other schemes undertaken with the assistance provided by the Act took time to mature; preliminary formalities had to be gone through, plans and drawings had to be made and tenders obtained before work could be started. Much of this work is now, however, in hand, and more is in process of being placed. There is, therefore, good hope that from this source alone further reductions will be made in the ranks of the unemployed.

COTTON INDUSTRY.

Some of our principal trades have again passed through a period of great depression—notably the cotton trade, which, with its numerous allied industries, is of paramount importance to Lancashire. The cause of the depression which affected 1921 and 1922 continued to operate during 1923. Social and political unrest, lack of world purchasing power, adverse foreign exchanges and depreciated currencies all combined to aggravate the position. In addition, the year was one of considerable difficulty for the importation of raw cotton from the United States. Short supplies, as a result of American crop failures, caused not only violent daily fluctuations but wide variations over longer periods. At the end of August, when the new crop of cotton began to arrive, the price of American cotton in Liverpool was 14.93d per lb, and by the end of November the price had advanced to 21.64d per lb. At the end of the year it was a penny per lb lower, but frequent days of excited markets and violent fluctuations of over a penny per lb brought actual business nearly to a standstill. The deliveries to spinners amounted to 630,000 bales from August 1st to the end of the year, against 1,147,000 bales in 1919, which was the last period of good trade in the cotton industry, and 1,516,000 bales in 1913, the last pre-war year. At the beginning of 1913 the Liverpool and Manchester stock of American cotton was 1,241,000 bales, and in 1914 741,000 bales, but this year, as against these pre-war years, the stock was only 478,000 bales. These figures speak for themselves, and taken in conjunction with the fact that the total exports of cotton manufactures have fallen from £401,000,000—the high point of 1920—to £177,000,000 in 1923, give a striking indication of the present state of Lancashire's cotton industry.

Owing to the partial failure of the American crop, Egyptian cotton also experienced wide fluctuations, and prices ranged between 14.15d per lb in May and 26.55d per lb in November. The mills spinning Egyptian cotton have, however, had a profitable year.

FOREIGN COMPETITION.

It is instructive to note that while in 1913 America, France, India, Japan, and China had an aggregate spindleage of 13 per cent. below that of the United Kingdom, they have now a preponderance over it of about 9 per cent. A great many of these spindles are engaged on coarse counts, giving a relatively large production of yarn for coarser materials, which are, under present conditions, satisfying the need of impoverished peoples to an increasing extent. As soon as conditions in foreign countries begin to ameliorate there will inevitably be a steadier and increasing demand for the production of finer goods, in which this country excels, and it is significant to note that our exports of fancy cloths and specialities to the American Continent have shown a considerable increase despite the Fordney Tariffs.

It is of the greatest importance that increased sources of supplies of raw cotton should be opened up, so that those engaged in this industry may not be dependent on the success or failure of the American crop. It is satisfactory to know that efforts are being made to increase the production of Empire-grown cotton.

Other branches of the cotton trade, such as bleaching, dyeing, and finishing, continue to make good profits.

WOOL INDUSTRY.

The other great textile industry, viz., the wool textile industry, has had a satisfactory year, although the expectations held at the beginning of the year were not realised to the extent anticipated. The French occupation of the Ruhr and the collapse of the German mark, together with the continued depreciation in other European currencies, hindered development of the industry in this country. These circumstances, however, did not curtail operations by our Belgian and French competitors, who, as a result of their lower conversion costs and depreciated currencies, have been able to sell yarns and pieces at considerably lower prices than British producers.

Raw material has been the dominating feature, and at the close of the year there was a strong tone and firm prices in all markets, both in this country, and at the sources of supply. The outstanding feature has been the remarkable increase in the demand for crossbred wools, which had been practically neglected since the slump in 1920.

At the close of the year there was a considerable improvement in the demand for yarns, and there is also more encouraging news with regard to the piece goods trade. Both on home and export account more business is being done, principally in fabrics made from crossbred wools, and the year closed with looms in the Bradford district better employed than at any time during the past twelve months. The present year opened with great confidence, and a general disposition to take a cheerful view of the prospects for 1924.

Having reviewed the state of the two great textile industries which are of prime importance to Lancashire and Yorkshire respectively, I shall now refer, but in a very brief way, to a few of the other great trades in which many of our customers are interested.

COAL.

The coal trade has been one of the few bright spots in British industry during the year. The activity in this trade was due to a large extent to unusual conditions, viz., the French occupation of the Ruhr, which brought about an abnormal demand for British coal. During the first ten months of 1923 coal exports from the United Kingdom reached a record total of 67 million tons, and of this quantity over 14 million tons went to France, and 11½ million tons to Germany, as against 9½ million tons and 6 million tons respectively in 1922. It is satisfactory to be able to record that the output of coal for 1923 exceeded that of 1913, which is regarded as a record year.

The prospect for 1924 appears to be good so far as demand is concerned, but the achievements of 1923 were secured in a large measure by freedom from strikes and disputes, and the outlook for 1924 is marred by the notice given by miners to terminate the present wages agreement.

IRON AND STEEL.

In the iron and steel industries the acute depression in the shipbuilding industry, emphasised by the boilermakers' dispute, seriously affected demand. The latter part of the year, however, brought improvement. With the announcement of various Government schemes and the placing of large contracts on behalf of the railways and others, coupled with the termination of the boilermakers' strike, the prospects at the beginning of the new year are distinctly good, and the latest production and export figures are encouraging. The future prosperity of these trades must depend to a large extent upon cheap fuel, as otherwise those engaged in the trades in this country will not be able to hold their own against foreign competition.

SHIPPING.

In shipping the state of depression which existed in the previous two years continued in 1923, and the value of tonnage suffered further depreciation. This is a natural consequence of the present unsatisfactory condition of international commerce, and of the large increase in the amount of tonnage available as compared with pre-war years. Less tonnage, however, is laid up idle than was the case a year ago, and a considerable number of old vessels have been sold for breaking-up purposes.

The depression in shipping was reflected in the shipbuilding and engineering industry, which has passed through one of the worst periods in its history. The outlook for 1924 is reported to be better.

Textile machinists have again had a not unprofitable year, the tonnage exported being little short of the preceding twelve months.

GRAIN TRADE.

With regard to the grain trade, international supplies of wheat during the year have been large, and as a consequence prices steadily declined until the last few months of the year, when there was an upward reaction mainly due to very large quantities being taken by the Orient and other non-European importers, and to the competition by Continental countries being much greater than was anticipated. Trading has been of moderate volume, and the results not very satisfactory. Flour-milling also has been unremunerative.

TIMBER.

In the timber trade there was distinct improvement in 1923 as compared with the previous years, and prices generally during the year were maintained. The proposed building programme of the railway companies and the more healthy signs in the shipbuilding industry have increased interest in the particular woods used, and the new year has brought more tangible promise than has been evident for the past three years.

FARMING.

The past year was one of difficulty and disappointment from the farmers' point of view, and it closed with the worst outbreak of foot-and-mouth disease which the country has known for more than a generation. The compensation granted by the Government has been paid promptly, and on a scale which is not ungenerous, but the loss of income to the farmer during the period that he is closed down, and until he is permitted, or is able, to restock must be a great strain on his resources. Generally speaking, farmers have had an unsatisfactory year, but it is pleasing to note an indication of optimism regarding the future in the fact that in some districts, particularly in the north, there is a demand for farms at higher rents, and that the price of land and farms generally continues good.

THE FUTURE.

I have endeavoured to review briefly the conditions which have prevailed during the past year in some of the principal trades with which we come into contact in our different districts. In former years it has been customary, and usually possible, following a review of this kind, to give some indication of the prospects for the coming year. To-day, with the uncertain outlook at home and the continued chaotic conditions abroad, it would be rash to attempt a forecast. There is, however, one feature in a most intricate and difficult position which to me stands out pre-eminently, and that is that there can be no great and permanent improvement in trade until there is stability in exchanges, which will enable us to export freely. A distinct hope that events are moving in this direction is aroused by the rapid recovery which Austria is making commercially and financially as the result of the reforms inaugurated under the auspices of the League of Nations. Out of a state of chaos and despair the country is becoming prosperous, and its people industrious and hopeful; its currency is becoming stabilised, and the expectation that the national Budget would be made to balance in 1924 seems possible of realisation. The experiment on similar lines about to be made in the case of Hungary appears to have good prospects of achieving equal success.

Other countries are watching these experiments, and it is, perhaps, not too much to hope that we have here the small beginnings which will lead to a return to sound financial principles by the larger European countries. Good results may also be looked for from the labours of the committees now sitting in Paris to investigate the financial condition and resources of Germany.

DEBT TO AMERICA.

The outstanding feature in national finance during the past year has been the funding of our huge war debt to America. There is no doubt that the prompt settlement of this matter, although placing an enormous additional burden on an already overtaxed people, has had a beneficial effect not only in increasing the friendly relations

which exist between the two nations, but also in greatly enhancing the credit of this country.

Had all European countries which were crippled by the war made the same efforts to rehabilitate themselves as this country has done, and as heavy sacrifices to meet their obligations, I feel sure the difficulties which still confront us, and which retard the re-establishment of international amity and world trade, would have long since disappeared.

Before concluding, I desire to express the directors' appreciation of the loyal and efficient services rendered by the staff. Their good work during the year has largely contributed to the results we are able to place before you to-day.

Mr Robert M. Holland-Martin, one of the deputy-chairmen and chairman of the London board, in seconding the adoption of the report, paid a very high tribute to the work of Sir James Hope Simpson, not only on behalf of this bank, but of banking generally. His opinions were always sought by London bankers on financial affairs and by the Treasury, especially during the difficult war years.

The motion was carried.

WILLIAMS DEACON'S BANK, LIMITED.

CAPTAIN DEWHURST ON INDUSTRIAL CONDITIONS OF THE PAST YEAR.

CONDITIONS IN THE COTTON INDUSTRY.

NEW BRANCHES IN LIVERPOOL AND NORTH WALES.

The annual meeting of the shareholders of Williams Deacon's Bank, Limited, was held, on Thursday, January 31st, in the Board Room, Mosley street, Manchester, Captain Gerard Powys Dewhurst (the chairman) presiding.

The secretary (Mr E. A. Williams) read the notice convening the meeting and the auditors' report.

CHAIRMAN'S SPEECH.

The Chairman, in moving the adoption of the directors' report and statement of accounts, said:—

Ladies and Gentlemen,

With reference to the report in your hands, I should like first to comment on the paragraph with regard to our Charing Cross premises. As you know, next to our registered office in Birch Lane, Charing Cross branch is quite the most important we have in London, and in Cockspur street, where it is situated, we have built up a most valuable West End connection, and we have naturally been much concerned at the prospect of either a costly building programme, or removal to another locality. We may, therefore, consider ourselves extremely fortunate in having secured practically ready-made premises in the same neighbourhood, consisting of a first-rate building which, with its extra space and improved accommodation, will enable us to deal more adequately with our growing West End business.

HEAD OFFICE EXTENSIONS.

Then, with regard to our head office here, you will remember our purchase some three years ago of the adjacent premises, which gave us possession of the island block from York street to Spring gardens. We have now to report the completion of the first part of our programme of extension, and I trust the result of our scheme so far, downstairs, has met with your approval. As a consequence, now that we have ample room for extension under one roof, we have finally disposed of the property we bought in King street some time ago. We trust shareholders will take an opportunity of examining our War Memorial, also completed this year, in the entrance hall here.

With regard to bank premises generally, we still find building costs a heavy item in our outgoings, and for that reason we have allocated the same amount as last year out of profits in reduction of this account, but our extension policy of the last few years has, I think, been fairly justified in the number of new accounts opened and new business brought through them, which again this year have shown a most satisfactory increase. A most interesting feature of last year's programme was the opening of new branches at Liverpool and on the North Wales Coast, where we have long felt the need of direct representation.

AMPLE PROVISION FOR CONTINGENCIES.

With regard to the diminution of the net profits of the bank during the past twelve months, I think, looking at the trade of the country generally, and the reduction in exports shown in the staple industry of this country, this can hardly be a matter of surprise to any of us, especially if you appreciate how strictly we provide for any accounts in our books of a doubtful nature and prepare ahead, as far as possible, for any contingency that may arise, before declaring our net profits.

On the motion of Mr E. C. Thin, seconded by Mr J. E. Gordon, Sir Aubrey Brocklebank, Bart., Mr Walter Lees, Mr T. Henry Morris, C.B.E., and Mr J. Arthur Slingsby were reappointed directors of the bank.

Mr T. Fisher Caldwell, general manager, responding to a vote of thanks to the directors, committee of management, general manager and other officers for their services during the year, passed on the motion of Mr J. E. Tinne, seconded by Mr R. T. Cunningham, said it was encouraging to know that after a year's work their efforts were appreciated by the shareholders. It would be regarded with as great satisfaction by the staff as it was by the directors and himself. The outstanding event of the year, so far as the personnel of the staff was concerned, had been the retirement of Sir James Hope Simpson, the relationship with whom was such as was usually not found in business affairs. For himself, Mr Fisher Caldwell thanked the directors for the support and assistance given him, and the staff for their efficient co-operation, which relieved the management of a great deal of its burden.

The meeting terminated with a cordial vote of thanks to the chairman.

BALANCE-SHEET LIABILITIES.

So far with regard to the report, and turning now to the balance-sheet, on the liability side you will notice our capital remains unchanged, while we have made, as last year, an addition of £50,000 to our general reserve fund, bringing the figure of this account up to £1,200,000. Our deposits at £34,372,000 show a decrease of 3½ million, as compared with the figures of the previous twelve months, a comparison which is rather misleading, as our deposits at the end of the previous year were temporarily somewhat exceptional. This shrinkage in deposits may be said to be a feature of most bank returns this year, reflecting the steady deflation which, whilst making for a sound national monetary position, may have been brought about rather more quickly than trading requirements warranted, and also, we must regretfully admit, reflecting the depletion of the savings of so many of our depositors through unemployment, taxation, and loss of income from dividends.

ACCEPTANCES.

On the other hand, our liabilities for acceptances show the substantial increase of £2,353,000 on those of 1922. This is mainly brought about by our growing share in the movement of the raw cotton and sugar crops, especially in the increased direct imports of cotton to Manchester, whilst the higher price of cotton also causes a natural increase in the amounts of our acceptances.

ASSETS.

Turning to the assets side of the sheet, our cash and balances with other banks are both reduced by £377,000 and £289,000 respectively, while money at call and short notice shows an increase of £285,000.

At £1,840,000, bills discounted have been reduced by nearly 50 per cent. compared with the corresponding figure of last year, largely accounted for by our decreased purchases of Treasury bills.

Our investments as compared with the previous 12 months are reduced by over a million, as a result of the realisation of Government bonds of early maturity.

These last two items obviously reflect the contraction in deposits previously referred to.

Advances to customers, at £19,243,000, represent a slight decrease of some £80,000 on the figures of the previous year.

Bank premises, to which account I have already referred, show an increase in our books of £40,000. This, of course, is after crediting the account with £30,000 out of this year's profits.

PROFIT AND LOSS ACCOUNT.

Passing on now to our figures of profit and loss, you will see our net profit, after making the usual provisions, gives us a total of £327,247, as compared with £337,175, a decrease of £9,928, or about 3 per cent. This, after transferring £50,000 to the general reserve fund and £30,000 to bank premises account, enables us to pay a dividend at the rate of 13½ per cent. on our "A" shares,

and 12½ per cent. on our "B" shares, and to carry forward to next year's account a balance of £36,461, which is £6,659 less than we brought in.

TRADE OF PAST YEAR—COAL.

Taking a look back at the trade of the past year, I am afraid we can find few, if any, signs of improvement on its predecessor. The coal trade has, however, fairly maintained its position, its export figures showing up satisfactorily.

IRON AND STEEL TRADE.

With regard to the iron and steel trade, with which we are closely connected, the figures of production for both pig iron and steel show a considerable expansion this year, the last three months' totals being especially noticeable. As a consequence, we see a welcome diminution in the unemployment figures for those industries, but I fear that, in spite of larger output, prices have left little profit to the makers.

ENGINEERING TRADE.

The engineering trade as a whole can hardly be said to have made much headway during the 12 months, and makers of textile machinery in particular report an almost complete cessation of orders.

COTTON.

With regard to the cotton trade, where the outstanding feature has been the partial failure of the American crop, and the consequent certainty that there can be no relief by way of supplies before next autumn, the position, I am afraid, is, if anything, worse than it was when we last met here, except, perhaps, in the Egyptian section, which has been fairly engaged during the last six months. On the other hand, for spinners of American yarns, in spite of an organised restriction in output for more than half the year, the position with regard to orders and margins is again deplorable, and stocks at the mills have only been cleared by the help of the rise in the raw material. With regard to cloth, a very considerable proportion of the looms in Lancashire are now idle, and unemployment is, I am sorry to say, more prevalent than ever amongst the weavers.

Inquiry for piece goods from abroad has, to say the least of it, been only intermittent, and has never through the year responded adequately to the rise in American cotton, in spite of the fact that stocks in our two principal Eastern markets are admittedly low. The Board of Trade returns emphasise this point, showing a decrease in value and quantity of our exports of cotton piece goods, coupled with an increase in the price we have had to pay for our raw cotton.

SCHEME FOR COTTON CONTROL BOARD.

So critical has the position become in the American spinning section that an attempt is being made to revive in some measure the scheme of a Cotton Control Board, based on voluntary levies and co-operation with sanction of or even legislative powers granted by Government. The scheme is still under discussion, but it seems now to have gained more support than former proposals. The basic idea is to prevent excessive production, which, by the law of supply and demand, might cause sales to be made at an actual loss. Whilst agreeing that excessive spinning to stock is to be avoided, it is well that we should guard against any artificial price fixation or restriction of output for the purpose of unduly forcing up prices—a suicidal policy indeed. After all is said and done the ultimate and deciding factor in all trade is the ability and willingness of buyers to take and pay for our goods. Unless our overseas customers desire to buy, and have the means to pay for, our goods, we cannot keep our industries running. And

obviously, if purchasing power is low, then any rise in cost of production and price will tend to restrict further the volume of orders, already so inadequate. Let any form of control and restriction be most carefully weighed up in the light of our power to compete in foreign markets.

EFFICIENCY AND ECONOMY OF PRODUCTION NEEDED.

As a preliminary to trade prosperity, we need efficiency and economy of production. Adversity has its uses, and in the past two years our users and converters of raw materials have undoubtedly done wonders in reducing costs and improving methods of production, and that without undue pressure upon wages, but I fear that in the later processes of manufacture, and in costs of transport and distribution, there has not been shown the same willingness to share the burdens of bad trade, and that reduction of profit ratio which might often have turned the scale, and made it possible to obtain and carry through contracts.

Given closer co-operation and a spirit of give and take, I feel sure we can still beat the world. But I think you will also agree that before any real trade prosperity can be re-established we must have more settled conditions on the Continent, reparations finally agreed, and exchanges stabilised, and here, too, distinct progress may be claimed.

ENCOURAGING FEATURES.

The settlement of our debt to America was unanimously welcomed in this country, not only because it was the only honourable and businesslike course to pursue, but because of the excellent lead it gave to the rest of Europe.

A further encouraging feature may be noted in the successful placing, through the good offices of the League of Nations, of an Austrian loan in Europe and America, and if the Hungarian Loan, under the same auspices, meets with equal success, we can feel a long step forward has been taken in the restoration of European credit. In this connection our best wishes for success in their deliberations go with the recently appointed Committee now sitting in Paris.

LANCASHIRE'S NEED.

What Lancashire needs is more cotton, and that drawn from as wide an area of the world as possible, and I can't help thinking if individual spinners would supplement the admirable efforts the Government are making through the Empire Cotton Growing Corporation to bring more land under cotton cultivation, and to encourage its growth within the British Empire wherever practicable, and would also themselves take a direct interest in this vital matter, we should sooner be in a position to sell our production abroad at a price the consumer can afford to pay.

I submit that it is along these lines, and not by way of restricted output or arbitrary fixing of prices, that the trade can hope to win back its position.

I have now pleasure in proposing "that the report and accounts now presented be received and approved, and be entered on the minutes of this meeting."

Mr B. G. Wood seconded the motion, which was put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr Herbert W. Arnold then moved, and Major Murray Marsden seconded, the re-election of Sir Kenneth Irwin Crossley, Bart., and Mr Percy Ashworth as directors of the company, which was agreed to.

Colonel S. L. Mandleberg moved, and Mr P. C. D. Blake seconded the election of Messrs Ashworth, Mosley and Co., chartered accountants, as auditors of the company for the year 1924, and it was carried unanimously.

VOTE OF THANKS TO CHAIRMAN.

Mr B. G. Wood, deputy-chairman, then took the chair, when, upon the motion of Sir William Barton, seconded by Mr Ralph Morton, "the best thanks of the meeting were tendered to the chairman for his conduct in the chair."

The motion was carried with acclamation, and the Chairman having briefly responded, the meeting terminated.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY. RECORD QUINQUENNIAL SURPLUS.

The ninety-fourth annual general meeting of the National Mutual Life Assurance Society was held, on the 30th ultimo, at the Society's House, 39, King street, London.

Mr J. M. Keynes, C.B. (the chairman), presided, and in moving the adoption of the report and accounts, having dealt with the figures for the past year, said: The revaluation of the society's assets shows a total appreciation of £72,200 on the year, of which £28,300 has accrued on Stock Exchange securities. Throughout almost the whole year your board have been pursuing what can be best described as a waiting policy. Underlying conditions have been strongly in favour of a marked revival of trade, and last spring it looked as though these were asserting themselves. Political conditions, particularly abroad, but more recently at home also, have, however, operated in the opposite direction. In face of such conflicting tendencies, it has been difficult to see one's way clearly. We have regarded the avoidance of loss on the society's investments as our first object; and, as things have turned out, your board's hesitation to take a decided view has been justified by the facts. It will be seen in the report that approximately half of our Stock Exchange investments are British Government securities. It is interesting to recall that ten years ago this society held no British Government securities. The net result of the year, all sources of profit being taken into account, is an addition of £143,000 to our surplus, a highly satisfactory figure.

RESULT OF QUINQUENNIAL.

I now come to the results of the quinquennium as a whole. I am in the fortunate position of being able to announce to you one of the largest surpluses (in proportion to liabilities) in the history of life assurance, namely, £912,360, being 28.8 per cent. of our liabilities—a sum far exceeding anything in the previous history of the society, and I believe far larger than any surplus which has been previously shown by an office of the size of the "National Mutual." Deducting the surplus brought in, namely, £184,668, the profit of the quinquennium amounts to £727,692, equivalent to a net return on the mean fund (in addition to 3 per cent., the valuation rate of interest) of £4 12s 6d per cent. annum, so that during the past five years our aggregate earnings, after paying all expenses, have been at the rate of £7 12s 6d per cent. per annum, free of tax.

In dealing with this unusually large sum, your board have considered, in the first place, whether there were any special provisions or writing down to effect which it would be proper to take advantage of this opportunity. The result is shown in the actuary's report. We have appropriated a sum of £65,000 to form a fund which will cover present and prospective liabilities in respect of staff pensions. We have further effected special writings down, beyond those required by the valuation, to the amount of £29,771. A further sum of about £42,500 has also come out of the surplus of the quinquennium and been paid away in interim bonuses to those policies which became claims during the last five years. After deducting these various sums there remains an available balance of £775,101.

The proper and prudent disposal of this surplus has been the subject of much anxious thought and discussion between the board and their actuary. Their final conclusion is expressed in the valuation report.

The rate of reversionary bonus on "National Mutual" policies will be at the rate of 42s per cent. per annum compound, that is to say, calculated on sums assured and bonuses existing at the end of 1923. The usual adjustment for differences of premium on the policies dated prior to the amalgamation will be made. The interim bonus on policies which may become claims before December 31st next will be at the full rate now declared, if a whole year's premium has become due and been paid during the year and prior to death or maturity.

DISTRIBUTION OF SURPLUS.

The existence of an unusually large surplus, such as we have on this occasion, is bound to give rise to difficult questions of distribution policy—how to assess the just claims of the present policy-holders against the interests of the society as a permanent institution, older than the existing members yet with longer prospects of life; and how best to combine the advantages of continuity and regularity with the rapid fluctuations of the modern world. Such considerations, amongst others, have weighed with

us in reaching the decision, which will probably commend itself to all of you, that, in future, distributions of surplus shall be made to the policy-holders annually instead of at five-year intervals as in the past. Not only will this arrangement give members the satisfaction of receiving a definite bonus every year, but it will afford an opportunity for more frequent stock-taking and for closer and more continuous examination of all the conditions which should be considered in determining the problems of a distribution of surplus.

At any rate, carrying forward an undistributed surplus equal to about 15 per cent. of our liabilities, we are in a position of unexampled strength to meet the ups and downs of the next few years. These figures entitle me to emphasise again the opportunities which our institution offers for the management of the savings of its members, and to urge each of you to increase his stake in so well-secured a property by taking out additional endowment or other policies up to the full capacity of your incomes.

The report and accounts were unanimously agreed to, and the formal business transacted.

UNION DISCOUNT COMPANY OF LONDON, LIMITED. SATISFACTORY YEAR'S RESULTS. DIVIDEND AND BONUS MAINTAINED. CAUSE OF FALL IN DOLLAR EXCHANGE.

The sixty-sixth ordinary general meeting of shareholders of the Union Discount Company of London, Limited, was held, on the 24th ultimo, at the Cannon street Hotel, London, E.C.

Mr Arthur Louis Allen presided. The secretary (Mr W. B. Hobbs) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and Gentlemen,—Before commencing the business of the meeting, with your permission, I will refer to a letter I have received from Mr Nugent, in which he expresses his regret that he is unable to be present to-day because he is in the South of France, by his doctor's orders, and also his desire that I should convey to you his warm appreciation of the honour you have conferred upon him in presenting him with his portrait, which he will always regard as a delightful memento of his long and happy association with the Union Discount Company.

We will now pass to the business of the meeting, and you will doubtless allow me to take the report as read. (Agreed.)

THE BANK RATE.

The year under review, without being up to the high-water mark of 1922, has not been unfavourable to the banks and discount houses, although for the latter half of it they have been working on a rise in the Bank of England rate—a condition of things that cannot help but be less remunerative to employers of money.

On January 1st last year the Bank of England rate stood at 3 per cent., at which figure it remained until July 5th, when it was raised to 4 per cent. For a time uneasiness prevailed in certain quarters that it meant a further move up to 5 per cent. in the near future, though there were never any adequate grounds for such uneasiness, as events proved, and it is not unreasonable to anticipate that for some little time to come we may see the present level maintained, more especially as the inflow of taxation during the last quarter of the financial year tends to keep outside rates more closely up to the Bank of England rate.

Without any violent fluctuations, the supply of credit has been fairly constant throughout the year, and the demand has been sufficiently met by the supply.

BILLS AND REVIVAL IN TRADE.

Bills have come forward steadily, the stream gradually increasing as the year drew to a close, a sure sign of a beginning of a revival in trade, a condition of things that will certainly grow if only the community can feel assured of a quiet time, both politically and socially.

Owing to uncertainty on this point, the market in short-time bonds, in which both bankers and discount brokers deal, has displayed considerable firmness at enhanced prices, thus reducing the yield, the tendency being in times of uncertainty to buy a security with an early redemption rather than a long-dated one, with a risk of loss of capital. In our own case, I am glad to say that all securities in our balance-sheet have a very short time to run, at the end of which we can either take cash or renew them for a further short period, as may appear most expedient.

"PANICMONGERS" AND THE DOLLAR EXCHANGE.

Fortune, for good or evil, has just placed in power in this country a Socialist Government, and the financial uneasiness that has manifested itself for some time past at the bare possibility of such an eventuality is still in evidence. I would like to say in this regard that the credit of this country has taken generations to build up, and, as a result, whenever there has been any trouble in any part of the world money and securities have always been

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000

OFFICES IN ARGENTINA, CHILE, URUGUAY, PERU, MEXICO AND SPAIN.

Represented in U.S.A. by the

ANGLO-SOUTH AMERICAN TRUST COMPANY, NEW YORK,

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

sent here at once in large amounts, as the one place where they were considered to be safe.

The reverse operation has, however, been going on for some time, and foreign balances held in London have been called in large amounts for transmission to other centres, and it is this primarily, and not the selling of securities and transmission of the resultant cash abroad by "panicmongers" here, to use the term recently employed in this connection, that has brought about the fall in the dollar exchange, as, in addition to cash already lying here, the money market in London is largely used by other countries as their clearing house.

It is difficult to make an estimate of the proportions of the two movements, but it would probably not be unfair to say that the shillings and pence are sent by the "panicmongers," and the pounds by the foreigner and his associates here.

DIVIDEND AND BONUS.

The Chairman, after dealing in detail with the changes in the various items of the balance-sheet as compared with the figures of the previous year, moved the following resolution:—"That the report of the directors and statement of accounts for the year ending December 31, 1923, be received and adopted; that £50,000 be placed to the reserve fund, and £10,000 to the provident fund; that a dividend at the rate of 15 per cent. per annum for the financial half-year, less income-tax, making 15 per cent. for the year, with a bonus of 5s per share, free of income-tax, be declared, payable on and after the 26th instant."

This motion was seconded by the Hon. Sir William Henry Goschen, K.B.E., and after some remarks by Mr E. A. R. White and Mr G. A. Christian, was carried unanimously.

Resolutions that the Hon. Sir W. H. Goschen and Mr Laurence Currie be re-elected directors of the company, and that Sir William Plender, Bart., and Mr A. Turquand Young be reappointed auditors, were carried unanimously.

VOTE OF THANKS TO MANAGERS AND STAFF.

The Chairman:—"It is now my pleasure, ladies and gentlemen, to move a most cordial vote of thanks to the managers and the staff. You will, I am sure, be as satisfied as your directors with the extremely good showing under the able management of Mr. Wyse and his staff."

The motion was carried unanimously.

Mr Robert Callender Wyse:—"Mr Chairman, ladies and gentlemen, I thank you very much for your kind remarks about our work during the year. We have done our best, and shall continue doing so. I shall have great pleasure in acquainting my colleagues with the appreciation that you have shown."

The proceedings then terminated.

METROPOLITAN TRUST COMPANY, LIMITED. CONTINUED IMPROVEMENT IN REVENUE AND CAPITAL VALUE. REMAINDER OF CAPITAL TO BE ISSUED.

The twenty-sixth ordinary general meeting of the Metropolitan Trust Company, Limited, was held, on January 29th, at the company's offices, Gresham House, Old Broad Street, London, Mr Robert Fleming (the chairman) presiding.

The secretary (Mr H. Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The report of the year shows continued improvement in revenue and capital value. We have seized such opportunities as offered to make what we deemed to be judicious exchanges, but the character of our list has not undergone much change either in the class of investment—that is, whether bonds, preferred stock, or ordinary stock—or in the geographical distribution of same.

I will confine myself to a very brief reference to the terms of the report.

Inflation, deflation, rates of exchange, politics—home and foreign—have been expatiated on lately by the chairmen of the big banks, so that this course will be welcome to you.

As you see, our net revenue, after expenses, taxes, and debenture interest, is £80,661, against £72,490 in the previous year, and we have made the dividend 16 per cent., our year's net income being 20.4 per cent. on the ordinary stock.

The considerations affecting the question of dividend on the stock of a trust company are not those which arise in the case of a bank or commercial or industrial company. There is no question of maintaining our credit, since we owe no one anything unless on debenture stock. Depreciation, too, is a matter for the consideration of the board of each of the companies whose bonds or shares we own.

VALUATION OF SECURITIES.

As to depreciation on the securities we hold, we are far from the danger line, for against our share and debenture capital of £1,000,000 we hold securities valued at £2,315,000 of bonds and stocks, this value showing an improvement of £57,000 as compared with a year ago, when we were some £8,000 less than book cost.

At January 1st, this year, the market value was £49,000 above book cost.

During the year we realised through sales of securities a profit of £22,512, and, adopting our usual course, this sum has been placed to contingent account in reduction of our total book value.

As to the security for the continuance of our revenue, we have had 25 years of experience, and our mortality table is pretty well established, though, of course, the percentage of risk involved in 306 securities is higher than on an infinitely greater number of human lives.

QUESTION OF DIVIDEND.

I see no reason for not distributing with reasonable liberality what we earn, except that I should much dislike the idea of getting on to a plane of dividends so high as not to exclude either the probability of having to come down from it or the possibility of further raising it.

If you say, "You have made 20 per cent.; why not pay out something more than 16 per cent.?" I answer: First, world conditions are by no means settled yet, and it is wise not to disregard this present very abnormal state of things. Secondly, we have quite a number of short investments, bearing high rates of interest, which in all probability will carry lower rates before many years.

The then Chancellor of the Exchequer, in October last at Birmingham, after referring to the £350,000,000 which we now pay annually on our National Debt, used these words:—

"Now, after a certain interval of time, a year or two, a considerable part of that debt will begin to mature, and if the atmosphere is favourable at the time, and it is possible to reborrow at substantially lower rates, then, indeed, we may see some satisfactory economies in our national expenditure."

Mr Chamberlain may have been somewhat optimistic in his anticipation, and totally unanticipated things have taken place since then; but while in the general interest we must all hope that the tendency will be in that direction, we will, of course, strive to neutralise its effect upon ourselves.

The third point is exchange on New York. This may improve, and reduce somewhat our United States revenue in pounds sterling, but this is not now an important item.

Considering all these things, we have fixed, with your approval, the dividend at 16 per cent., and at the moment we see no reason why it should not be maintained.

ISSUE OF REMAINING CAPITAL.

You know that our authorised capital is £1,000,000, and our issued capital £800,000, so that without much trouble or expense we can round off the issued capital, making it a million. We propose to do this by an issue to the shareholders of the remaining £200,000. This issue will be, as before, in £10 shares in the first instance, to be later converted into equal amounts of 4½ per cent. preferred and ordinary stock, after which it will be identical with the present stocks. The issue will be direct to the shareholders without any underwriting, so that any advantage through the price of issue—which will necessarily be at a little less than the market price—will go to the shareholders. The circular offering the new shares will be issued this evening.

THE RESOLUTION.

I beg to move: "That the report and accounts, as presented, be and they are hereby received, approved, and adopted, and that a dividend of £9 per cent. on the ordinary stock, less income-tax, making with the interim dividend 16 per cent. for the year ended January 1, 1924, be and the same is hereby declared."

Mr Henry A. Vernet seconded the resolution, which was carried unanimously.

Mr Vernet next moved the re-election of Mr Robert Fleming as a director of the company.

The Right Hon. Viscount St Davids seconded the motion, which was unanimously agreed to.

Messrs Deloitte, Plender, Griffiths and Co. were reappointed auditors of the company for the current year.

On the proposition of Dr G. T. Moody, who congratulated the directors upon the report and upon the decision to issue the balance of the share capital, a cordial vote of thanks was passed to the chairman and his colleagues.

The proceedings then terminated.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED. LOAN CONDITIONS IN THE ARGENTINE.

The thirty-seventh ordinary general meeting of the Mortgage Company of the River Plate, Limited, was held, on the 31st ult., at 52 Moorgate, London.

Mr James Anderson, who presided, said that the year under review had not been a favourable one for the company's business, the revenue having been lower than had been the case for many years past. There had been little demand for loans, and it was, therefore, difficult to keep their money profitably employed. As a

consequence of the small demand and the large amount of money on offer, rates of interest were low, and when the company came to remit income to London, they suffered an exceptionally heavy loss on exchange. The combined effect of these adverse circumstances had been to reduce the gross income from £125,051 in 1922 to £113,176 in 1923. As a partial set-off to this reduction there was a decrease of £4,352 in the expenses of management, directors' remuneration, income-tax, and corporation profits tax, all of which were dependent on income, so that the actual reduction in the net profits amounted to only £7,523. The profits for the year, £63,843, were sufficient to enable the payment of the usual dividend of 15 per cent. on the ordinary shares, and to add £6,343 to the balance of undivided profits carried forward. This result had only been attained by the aid of the large reserve fund accumulated in more prosperous years.

In a new country like the Argentine, which was always calling for money for the development of its vast resources, the time might come when the present accumulation of local capital would find employment to better advantage than in the purchase of Cédulas, and in that event the stream of applications for loans would again be turned on to the foreign mortgage companies like themselves, which lent in gold. Looking back on the history of the company, the shareholders had had good reason to be satisfied with the results obtained. The business had been uniformly successful, the losses during the period of 37 years being practically nil. The dividends on the ordinary shares had been regular and progressive, the average over the whole period being about 13 per cent. The report and accounts were unanimously adopted.

RATES OF EXCHANGE.

London on	
-----------	--

Messrs Samuel Montagu and Co. write on January 30th as follows:—

GOLD.

A fair amount of gold came on offer, of which a moderate proportion was taken, mostly for India. We give below figures relating to Indian trade (private account) for the month of December last:—

		(In Lacs of Rupees.)	
		Net Exports.	Net Imports.
Merchandise	3,094	1,542	1,552
Gold	1	100	99
Silver	150	101	49
Total net exports, 1,502.			

SILVER.

The market has been uncertain in tendency. Owing to the lesser appreciation of the U.S. dollar, silver has been more easily obtained from America. There has not been much business transacted, however, Indian buying for the settlement steamer this week having been practically completed some weeks in advance. China has not shown any activity and no Continental sales of consequence have been made.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Jan. 7.	Jan. 15.	Jan. 22.
Notes in circulation	18,697	18,516	18,471
Silver coin and bullion in India	8,517	8,336	8,288
Silver coin and bullion out of India			
Gold coin and bullion in India	2,232	2,232	2,232
Gold coin and bullion out of India			
Securities (Indian Government)	5,748	5,748	5,751
Securities (British Government)	1,400	1,400	1,400
Bills of exchange	800	800	800

No silver coinage was reported during the week ending 22nd inst. The stock in Shanghai on the 26th inst. consisted of about 26,100,000 ounces in sycee and 35,000,000 dollars (no holding of silver bars reported), as compared with about 25,900,000 ounces in sycee, 34,000,000 dollars, and 470 silver bars on the 19th inst.

Outstanding with public	Rs. 21,58,90,000	Rs. 2,43,45,000
In paper currency reserve	Rs. 49,65,00,000	Rs. 49,65,00,000

Total Rs. 71,23,90,000 Rs. 52,08,45,000
India Office, January 30, 1924.

The sale of Treasury bills in India will be discontinued with effect from Monday, January 28, 1924.

INDIA COUNCIL BILLS AND TRANSFERS.

The following is a summary of applications and allotments for India Council bills and transfers in London on Tuesday, January 29, 1924:—

	Rate.	Applica- tions.	Allot- ments.	%
Imm. T.T.	1 5 1/2	10,00,000	nil	..
		10,00,000		

Next week 50 lacs will be offered.

NOTICES.

At an extraordinary meeting of the shareholders of the Manchester and Liverpool District Banking Company, Limited, held after the annual meeting, the change of the bank's name to District Bank, Limited, was approved, and a confirmatory meeting will be held on February 12th.

It is announced that the Amsterdamsche Bank and the Twentsche Bank have formed a new bank in Amsterdam, to be called the Internationale Bank in Amsterdam, for the transaction of international business. The paid-up capital of the bank amounts to 10,000,000 guilders (about £875,000). The Stockholm Enskilda Bank, Stockholm, and the Darmstädter and National Bank, Berlin, are also associated with the formation of the new bank. The London correspondents will be Messrs Lazard Brothers and Co., Limited, and Lloyds Bank,

Limited, who, together with the Whitehall Trust, Limited, have also taken an interest in the bank.

Lloyds Bank, Limited, announce that the Manchester office of the Colonial and foreign department has now been transferred to new premises at 18 Mosley street, Manchester, where every description of banking and exchange business will be undertaken.

The directors of Barclays Bank, Limited, have decided to establish a local board for Leeds and district. The board will consist of the following members, viz.:—Colonel Charles William Ernest Duncombe, C.B.E., J.P. (chairman); Mr Robert Armitage, J.P., Mr Enoch Hill, J.P., Sir Charles Henry Wilson, Kt., LL.D., M.P. They also announce the opening of a new branch at 177 Jamaica road, Bermondsey, S.E. 16, under the management of Mr C. A. Rowling.

Viscount Chelmsford, G.S.C.I., having joined the Government as First Lord of the Admiralty, has resigned his seat on the board of the Bank of Australasia.

Reports and Notices.

We are informed that Mr Frank W. Tyler, who was for twenty years on the head office staff of the British Law Insurance Company, Limited, and more recently has had successful managerial experience in the capacity of general manager of the Drapers' and General Insurance Company, Limited, has been appointed general manager of the Lancashire and Cheshire Insurance Corporation, Limited.

Sir Wm. Joynson-Hicks, Bart., who has rejoined the board of the London and Scottish Assurance Corporation, Limited, has been elected deputy-chairman.

The Standard Bank of South Africa, Limited, 10 Clements lane, E.C., announce the numbers of certain debentures of the Kimberley Borough Council Electric Lighting 4 per Cent. Loan of 1899, drawn for repayment on March 30th.

Mr J. H. Stephens, F.C.A., has been elected chairman of Meux's Brewery Company, Limited, and the Right Hon. Lord Tweedmouth deputy-chairman.

We are informed that Sir Charles B. Gordon, G.B.E., vice-president of the Bank of Montreal, president of Dominion Textile Company, president Penman's, Limited, director of Royal Trust Company, has been appointed chairman of the Canadian advisory board of the National City Company, Limited, Canada, in place of the late Lord Shaughnessy.

BANKS.

DISCOUNT CORPORATION OF NEW YORK.—The report for the year 1923 shows that, after making provision for taxes, the net profits of the year were \$414,859, which compares with \$548,428 for 1922. Dividends at the rate of 6 per cent. amounting to \$300,000 were declared during the year, leaving \$114,859 to be added to the undivided profits, which now stand at \$1,372,913. The capital and surplus is \$6 millions. The report states that the volume of business transacted in bankers' acceptances during the year was slightly less than that of 1922, but the transactions in United States Treasury Certificates and Notes exceeded that of any previous year.

DOMINION BANK (CANADA).—The annual statement of the Dominion Bank, published on January 25th, at Toronto, for the year ending December 31, 1923, shows profits of \$1,129,369.

GOTEBORGS BANK.—The profits for 1923 are 9,315,805 kr. The amount at the disposal of the shareholders is 6,770,424 kr. The board of directors propose a dividend of 25 kr. per share, or 10 per cent., 4,375,000 kr.

SKANDINAVISKA KREDITAKTIEBOLAGET.—The net profits of the Skandinaviska Kreditaktiebolaget for the year 1923 amount—after writing off on stocks Kr 745,531.51, and on debts Kr 12,257,793.31—to Kr 9,734,663.40, to which has to be added Kr 2,922,875.81 brought forward from 1922, making a total of Kr 12,657,539.21. The board of directors propose to distribute the same dividend as last year, viz., Kr 15—per share (10.56 per cent.), requiring Kr 9,210,000—and to write off Kr 384,712.22 on bank premises, leaving a balance of Kr 3,062,826.99 to be carried forward.

UNION BANK OF CANADA.—The 50th annual statement to November 30, 1923, shows a net profit for the year of \$1,033,432. The balance at credit of account November 30, 1922, was \$483,175, but this amount was reduced to \$51,265, owing to \$331,910 being transferred to contingent reserve account June 9, 1923. The amount available is thus \$1,184,697, which is dealt with as follows:—A dividend of 9 per cent. for the year on the capital stock, absorbing \$720,000. The sum of \$10,000 goes to officers' pension fund. War tax on bank-note circulation and reserve for income-tax absorbs \$137,622, and \$317,075 is carried forward.

INSURANCE.

SUN LIFE.—The report for last year shows that 12,806 new assurances were issued for £5,574,015 at annual premiums of £226,868, and single premiums of £25,969. The new assurances for 1922 were £5,067,338. The net premium income was £1,704,268, as compared with £1,578,468, and the commission and expenses amounted to 18.8 per cent. of the premiums, against 19.47 per cent. The life assurance fund increased by £894,407 to £13,388,533, and earned interest at the rate of £4 15s 8d per cent. after deducting income-tax.

MISCELLANEOUS.

BRITISH INVESTMENT TRUST.—The accounts of the company for the year ending January 1, 1924, just issued, show that the revenue for the year, after providing for interest on temporary loans, income-tax, expenses of management, &c., is £250,812. Deducting therefrom interest on debenture stock and debentures for the year, less income-tax £65,606, there remains a balance of £185,206. Preferred stock dividend absorbed £46,125, leaving £139,081. The deferred stock dividend is 17 per cent., absorbing £24,550, making surplus revenue for the year £114,531. Add balance brought forward from last year, £184,318. Amount carried forward to next year, £298,849. A valuation of the investments, made in the usual way, shows that the market value on January 1, 1924, is slightly in excess of the book value of

£5,468,532. At January 1, 1924, the number of investments was 343, and the directors are to be commended on showing in the report how they are distributed.

LIEBIG'S EXTRACT OF MEAT.—The report and accounts for the year ended August 31, 1923, reveal a net profit of £228,819, to which is added £258,738 brought in from preceding year, making £487,557 available. Preference dividend absorbed £50,000, and ordinary dividend at 15 per cent., free of income-tax, absorbed £180,000, leaving £275,557 to carry forward. The balance-sheet will be found fully analysed in our usual column.

LISTER AND CO.—The 35th annual report to November 30, 1923, shows that after providing for income-tax and corporation profits tax, the profit for the year amounts to £249,494, to which must be added the balance brought forward from last year, £189,979, making together £439,473. After deducting all preferential charges, and the interim dividend on ordinary shares, £76,125, there remains a balance of £363,348. The directors recommend that there be paid to ordinary shareholders a dividend of 5 per cent. and a bonus of 2½ per cent., less income-tax, making with the interim dividend paid last July 10 per cent. for the year, £106,875, that there be transferred to employees' benefit fund £5,000, to reserve account £50,000, and that the balance of £201,473 be carried forward to next year. The directors regret to announce the death of their late esteemed colleague, Mr Harold Copperthwaite, who, as a director for the last sixteen years, has rendered valuable service to the company. They have since elected Mr R. W. Hornshaw to a seat on the board, and his election will be submitted to the general meeting for confirmation.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With more open weather conditions during the past week, field work was resumed, except on heavy land, which is still too heavy for the plough. There are considerable arrears to be made good, as farm work has been delayed by continual rains over most part of the country. Offerings of native wheat, both here and at provincial markets, were on a reduced scale, partly due to transport difficulties, and also more reserve shown by farmers, in view of the firmness of imported varieties. Prices consequently tend in an upward direction, suitable milling grades ruling at 10s 3d to 10s 9d, with inferior 8s 9d to 9s 3d, free on rail, per 112 lbs. Imported descriptions continue very firm, with a hardening tendency, due to scanty offerings and higher c.i.f. rates. No. 1 Northern Manitoba quoted at 51s 6d, No. 2 ditto 50s 6d, No. 3 ditto 48s 6d, and Rosafé 63½ lbs 48s 9d, all ex ship to arrive, per 496 lbs. Firm conditions prevailed in the floating and forward cargo section, following upon dearer rates for freightage, adverse American exchange, combined with a better demand. Steamers of white Pacific, February, sold at 48s 3d, Australian loading 46s 4½d, Rosafé 64 lbs loading 45s 6d, Barusso ditto 44s 1½d, and Baril ditto 44s 4½d per 480 lbs. Maize cargoes also firm, with a fair demand. Steamers of new crop La Plata, April-May, sold, 35s to 35s 3d, and Bessarabian on passage 43s 9d per 480 lbs. Flour steady. London standard straight run quoted 39s, patents 41s-42s, town householders 37s per sack delivered. All English country straights 30s 6d-31s 6d, free on rail at London stations. Imported firm. Manitoba patents range from 30s 6d-39s 6d as to quality, and Australian 33s-35s 6d per 280 lbs ex store. Barley firm, but quiet. English malting ranges from 10s 6d-15s, feeders 10s-10s 6d per 112 lbs, free on rail. Imported, Californian 44s-50s ex store, Chilean brewing 42s-46s ex ship, both per 448 lbs. No. 4 Canadian Western ex ship 35s, landed 36s 3d, Algerian-Tunisian in former position 33s 6d, all per 400 lbs. Maize dearer, and sparingly offered. Plate ex ship 43s, landed 44s 6d per 480 lbs. Oats steady, but quiet. English ranges from 9s 4d-10s 8d per 112 lbs, free on rail. Imported quiet, and tendency easier. Plate f.a.q. (new crop) ex ship 21s 3d, old crop landed 23s 3d, No. 2 Canadian Western ex ship 26s 3d, landed 27s 3d, No. 3 ditto ex ship 25s, landed 26s, No. 2 Canadian feed landed 24s 3d, all per 320 lbs. Millers' offals quiet. Broad bran quoted 8s, ordinary 7s 6d, middlings 9s, fine ditto 10s, bags included, ex mill, light oats 6s 3d, powdered oat husks 8s 3d, feed oatmeal 9s 9d, ground oats 12s 9d, free on rail, all per cwt. Algerian steady, with a moderate demand. London made flaked also rolled oats 18s, medium and fine cuts 17s 6d, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 18s, American 16s 6d-17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 31st, is as follows:—Pig-iron: An easier demand for pig-iron is the result of actual and prospective labour disturbances, and foreign competition. Although nominally No. 3 Cleveland is 99s per ton, some makers are quite prepared to shade this price in the face of any genuine business. East Coast mixed numbers hematite are 6d. lower at 102s per ton. Manufactured iron and steel: Business in steel is quiet, and works are still fairly well supplied with orders. Steel ship plates, £10 5s.; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Deliveries of iron ore have been good lately, but, with the uncertain outlook for pig-iron, there is not much forward buying. Best rubio is nominally quoted 24s per ton c.i.f. Tees.

Our Sheffield correspondent writes :—The railway strike caused a partial stoppage at a number of the large steelworks by cutting off supplies of fuel, but the trouble ended just in time to save local industry from consequences that must have been disastrous. As regards the finished trade, production was cut down, but did not cease. Conditions in the pig-iron and crude-steel departments are quiet, even making allowances for the strike, and the recent upward movement seems to have been arrested. Buying and selling have been on a restricted scale, and prices of billets are rather weaker. Continental competition is responsible to some extent for the absence of business. Foreign billets and pig-iron can now be brought from the Continent at substantially lower prices than are charged at home, yet it is notorious that the current quota-

tions for British material are unremunerative, and a good deal of steel is being produced at a loss. The position of steel productions of many kinds of the better qualities continues to improve, and as regards shop tools British makers are benefiting by the decline of imports from Germany. The present demand for files, saws, hacksaws, twist drills, screwing tackle, &c., is a safe indication of increased work in the engineering branches, and the overseas markets are also doing better.

Our Cardiff correspondent writes:—On the Cardiff coal market business was almost entirely suspended on Monday and Tuesday, but with the settlement of the railway strike the position rapidly improved, and conditions were nearly normal towards the end of the week. The loss of output in consequence of the very restricted railway service between the collieries and the ports during the eight days of the strike was considerable, and the colliery companies are, therefore, heavily in arrears in the delivery of contract coal. For prompt shipment supplies are thus very scarce, and prices have hardened appreciably. Apparently, very little business has been diverted. The docks are congested with tonnage, and the demand for coal is likely to continue in excess of the supply for some weeks ahead. Best Admiralties have been ruling up to 29s 6d, with an upward tendency, and the price movements of other coals have been in sympathy. The Americans, however, are watchful for the competitive opportunities that are created by advances in South Wales and other British coals. The Egyptian State Railways are in the market for 200,000 tons. The tenders will not be decided until next week, but it is not only known that the United States are competing for this order, but feared that the prices and other conditions which they have specified may quite likely lead to the diversion of a part, if not of the whole, order to America. During 1921 Egypt imported rather heavily from the States, but American coals were ousted during 1922, and the Egyptian State Railway contract last year was entirely placed in this country. The third shift dispute remains unsettled, and although the employers have expressed their readiness to refer the issue to arbitration, the tipplers have not yet acquiesced in the suggestion of the Industrial Court.

The approximate current quotations are as follows:—Best Admiralties 20s to 26 6d; second Admiralties, 28 6d to 29s; best drys, 27s to 27s. 6d; Black Veins, 28s to 28s 6d; Western Valleys, 27s 6d to 28s; Eastern Valleys, 26s to 27s 6d; best bunker smalls, 22s to 22s 6d; ordinary cargo smalls, 19s to 21s; coking smalls, 22s 6d to 23s; anthracite Big Vein large, 39s to 42s 6d; machine-made coals, 48s to 52s 6d; French nuts, 51s 6d to 52s 6d; rubbly culm, 13s 6d to 14s; coke for export, 45s to 55s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 28s 6d to 29s.

In the iron and steel trade business has been disorganised by the railway strike, and shipments during the past fortnight have been considerably below the average. Last week some of the mills had to suspend operations owing to the breakdown of transport facilities. Minimum prices, however, are being maintained, and the outlook remains good.

METALS.

Tin commenced with an easier tendency, while in good demand, the chief interest being shown in forward positions. Standard cash sold at £249 to £249 10s, and three months £250 to £249 10s to £250 15s to £250. Eastern cables reported sales on the basis of £252 10s c.i.f. The downward movement continued, while some irregularity was noticeable with regard to forward positions, though a partial recovery took place by the middle of the week, standard cash being dealt in at £248 to £249, and three months £249 10s to £249 to £249 17s 6d to £249 15s. Further sales transpired in the East at £251 15s c.i.f. Prices advanced sharply at Thursday's session, while a good demand prevailed. Cash sold at £250 to £249 15s to £254, while finally registered at £253 10s, and three months £251 to £250 10s to £253 15s to £253 10s. On the following day prices fell away, but active trading ensued. Cash quoted at £251 to £251 5s, and three months £253 to £252 10s to £253, while finally at £251. Eastern cables reported sales at £255 c.i.f. English ingots quoted at £251 15s to £252 5s. Copper: Market exhibited weaker features, and a steady decline took place in prices on selling pressure. Offers, however, were fairly well absorbed, and sales included standard cash at £62 5s to £61 13s 6d, three months £63 5s to £62 7s 6d, and later at £62 10s. The tendency was again easier on Thursday, while a fair business resulted, including standard cash at £61 7s 6d, and three months at £62 5s to £62 2s 6d. The downward movement was continued at final market with dealings on a large scale. Cash sold at £61, and three months £61 12s to £61 16s 3d to £61 15s. Electros £66 10s to £66 15s, best selected £65 5s to £66 10s, strong sheets, £95, wire bars, £66 15s. Lead steady at £32 to £31 12s 6d, as to position. Spelter firm at £35 to £34 5s, according to position. Aluminium: Home trade £115, export £120. Antimony: English, £49 10s to £50.

THE COTTON TRADE.

MANCHESTER, January 31.

At the end of last week there was increased activity in the market, and in certain quarters more business was done than for some time back. During the last few days demand has tapered off, and leading buyers appear to have satisfied their more important wants for the time being. The general tone of the market, however, continues healthier. A considerable inquiry has been experienced in piece goods for India, and a fair turnover has taken place in light cloths and miscellaneous fabrics, but sellers of grey staples have found progress rather slow. Further buying has occurred in white goods for China, but some advices from the other side are not quite so encouraging. Useful lines have been

booked for South America and the Continent, but the Near East remains disappointing. American yarn quotations have been firmer as a result of the recent improvement in the turnover, but demand has fallen off somewhat. There has not been any general activity in Egyptian spinnings. Fine yarns continue to be purchased in moderate quantities for India.

London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

April, 40s 6d; May-August, 38s 9d. Rape firmer. Crude spot, 48s; refined, 51s. Castor-oil quiet. First pressure, spot, quoted 59s; second pressure, 58s; and pharmaceutical, 64s per cwt. Hull, with London 2s cwt extra. Cotton firm. Crude Egyptian, spot, 45s; Bombay, 43s 6d; common edible, 50s; deodorised (in barrels), 53s. China-wood steady. Hankow, spot (barrels), 95s; January-February, 102s. Coconut quiet. Ceylon, spot, 49s 6d; February-March, 49s; Cochin, ditto, quoted 60s. Soya firm. Oriental, barrels, January-February, 46s. Cod firm. English, spot, 36s 6d. Groundnuts firm. English, crushed, naked, spot, 53s; deodorised, barrels, 61s. Turpentine firmer, but irregular. American, spot, 80s 3d; February-April, 80s 9d. Rosin, common, easier. American, grade B, 13s 6d; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 17s 6d; WW, 19s per cwt. French WW, 17s per cwt. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon.

SUGAR.—The firm tone apparent in this market for some time past became more pronounced, a further advance in price being registered in all directions under the influence of stimulating cables from America and general scarcity of the article. Of British refined Messrs Tate and Lyle's raised quotations 6d per cwt for all spot parcels, and forward, 6d to 1s 6d granulated. Cubes now quoted 63s 6d to 64s 6d; crushed, 62s; granulated, fine and coarse grain, 62s 1½d; No. 1, 61s 10½d; No. 2, also London and T.L., 61s 7½d; ditto February, also March, 61s 6d; yellow crystals, spot, 57s 1½d. Imported sugars firmer, with only very small quantities on offer. White Java, spot, 58s 7½d to 58s 9d; ditto, May-June, steamer, sold, 58s; June-July, 26s 10½d, c.f. and i. terms, London. Of Dutch granulated, J, spot, sold, 60s. Czecho granulated, spot, 60s 3d; ditto, January-March, sold, 31s 3d; March-April, 31s 6d, f.o.b., Hamburg. Belgian granulated, ready for shipment, 32s, f.o.b., Antwerp. All raw refining kinds offered sparingly, and held for higher prices. Cuban, basis 96 per cent. March, quoted, 27s 9d; Brazilian, basis 80 per cent. shipping, 25s 6d, c.f. and i. terms, U.K. White Terminal market again disclosed marked activity, and prices further advanced. January delivery, sold, 32s to 31s 9d; March, 31s 3d, 31s 9d to 31s 6d; May, 30s 3d to 30s 9d, 30s 3d; August, 20s 1½d to 29s, 29s 9d, 20s 3d; October-December, 25s 4½d to 25s 6d per cwt.

COFFEE.—The market remains very firm for all the finer qualities, and prices on the week are again dearer owing to smallness of supplies. Nairobi bold sizes sold, 111s to 144s; Kilimanjaro, 105s to 128s 6d; Costa Rica bold, 164s to 176s.

COCOA.—Market steady, with a moderate spot demand. Accra firmer forward, and F/F quality, February-April, sold, 33s; March-May, 33s 6d. f.o.b. terms.

TEA.—Indian sales totalled 58,482 packages, and all the better liquoring descriptions were well competed for at fully recent rates, but inferior disclosed slight weakness where quality marked any falling off. Broken orange pekoe sold, 53 5/8d to 23 3/4d. Ceylon auctions of 16,600 packages presented similar features as the Indian auctions. Broken orange pekoe sold, 53 7/8d to 23 3/4d per lb in bond. 1,800 packages Java and Sumatra sold readily at full to dearer rates.

RICE.—Market fully steady, with certain reserve shown on the part of shippers, but business proceeds rather quietly. Two stars Rangoon, spot, 16s 6d; February-March, 15s 6d. Spanish for shipment, 20s, c.f. and i., London. Japanese peas, spot, 23s; January-February, 21s 6d cwt.

SPICES.—A quiet tone characterised the pepper market, and prices in forward positions moved against the seller. Black Singapore, February-April, L.S., quoted 48d; Lampong, ditto, 47d. Muntok, January-March, 63d; February-April, 64d, and March-May, 77d. Zanzibar cloves, January-March, 1s 18d per lb. Tapioca steady, unaltered on spot; forward steady, and Singapore-January-March, to Havre, sold, 32s 6d; February-April, sellers, 32s 3d. *Sago* flour, January-March, sellers, 15s 10d. Desiccated coconut quiet. Spot, fine cut, 45s; medium, 47s; halves, March-April, 43s 6d cwt.

JUTE.—With buyers reserved and sellers more in evidence, a quiet and easier tone governed this market. First grade, January-February, Continent, sold, £23 10s to £25 5s; February-March, £23 17s 6d to £26; March-April, £26 10s to £26 7s 6d and £26 10s; and April-May, £26 17s 6d to £27 ton. Hessians steady. 10-oz, February-March, quoted 29s 3d; 8-oz, ditto, 22s 6d per 100 yards. Twills mostly unaltered.

HEMP.—Only a small business transpired in Manila descriptions, but with some reserve on the part of sellers prices were fully steady. J grade, January-March, quoted £35 10s; K, February-April, sold, £27 10s; L, ditto, at £26 10s; and M, quoted £24 15s ton. African sisal steady, unaltered. Indian hemp very firm.

SHELLAC.—Market quiet. T.N., March, 272s 6d; May, sold, 268s.

COPRA.—General course of trade proceeded quietly, but with sellers equally reserved, a fairly steady tone predominated. F.M.S. Straits, November-January, Rotterdam, quoted £30 10s; December-February, sold, £30 5s; January-March, £30 6s 3d to £29 15s; February-April, sellers, £29 15s. Dutch East Indies, January-March, quoted

Markets generally continue to have a firm tone, and are characterised by fair activity. Linseed oil has been in good demand, principally from home consumers, and with supplies still meagre and in sympathy with dear seed, prices have further advanced to £47 for prompt oil, with £42 10s quoted for February delivery, ex Hull mill. Cotton oils, also, have been in good request, particularly crude Bombay and soapmakers' grade of refined, current values for crude Egyptian being £45, technical £45, and common edible refined £48 per ton naked, ex Hull mill.

The hide market was again very firm at Thursday's Bermondsey auctions, best ox selling from 6½d to 8½d per lb, and seconds from 6¼d to 7½d, where sold. Cows were firmer at 6¼d to 6½d for best, advancing ½d to ¾d. Calf sharply advanced in the light classes, probably due to the news to hand that the French Government had prohibited the export of hides and skins. Prices varied from 5½d to 16d for best, the 8 lb and under class advancing by 2½d above last week's prices. Wools were very firm at 75 8d to 15s each, and hogs from 9s 9d to 10s each. The demand for sheep pelts and wool is good, hence the high prices of skins. The high prices of South American hides is checking business with this country, although large parcels have again been sold on Continental and American account. As high as 10½d has been paid by Continental buyers for Hervidero ox, Argentine frigorific steers making 9½d in the States. The Chicago market is cabled as advancing, with heavy packers making 14½c.

Trade in leather has resumed its normal activity since the strike was settled, and large deliveries of bends have gone to the shoe centres. Repairers have also been buyers of medium weights of wet salted bends at firm prices. Tanners are strong holders of leather, and the tone generally suggests higher prices for sole and rough leather in the near future. Upper leathers are improv-

Member of Federal Reserve System.

RUBBER.—Opened very slowly but became steadier, and a moderate amount of business was effected. Standard plantation crepe and sheet, spot, also February, sold, is 1½d to is 2d, is 1½d a d is 1½d; March, is 2d to is 2½d; April-June, is 2½d to is 2½d; July-September, is 2½d to is 2½d. To New York, standard estate sheet, February-March, quoted is 2½d per lb, cf. and i. terms.

FRUIT.—Dried market ruled steady but demand showed a falling off owing to railway strike. Australian currants quoted 56s; Pyrgos, 5 cases, 46s; Amalia, 50s; Patras, 52s; and Vostizza, 70s to 75s. Valencia raisins, 4-boxes, 50s; 4-cases, 60s to 80s; Australian, 50s. Dates cleared to an active Continental demand at rising prices. Genuine natural figs, in bags, quoted 38s to 40s. Evaporated fruits—California apricots, fancy, quoted 110s; apple rings, 75s to 80s; French plums, 4-cases, 90/95, quoted 36s; 80/81, at 41s; 72/77, 47s; and Oregon, 40/50, at 58s cwt.

CANNED GOODS met with moderate support, and prices showed little or no change in most directions. 6 features that make DUNLOP

the finest
CORD TYRE
in the world

DUNLOP
CORD TYRES
are made in
beaded-edge
and straight-side
types for the
equipment of all
cars, British and
foreign.

1. The Dunlop method of multiple-ply Cord construction reduces internal friction and prolongs the life of the tyre.
2. The exceptional quantity of toughened rubber on the tread, combined with the disposition of the material, make for greater durability and less possibility of puncture.
3. The Dunlop Cord tread provides ample security against skidding; and, unlike other tyres, its grip on the road improves with wear.
4. The Dunlop Cord tread and casing are admirably "balanced" so that the whole tyre wears uniformly.
5. The Dunlop Cord is silent and clean running.
6. It adds distinction to any car.

These features combine to make Dunlop Cords the longest-mileage and most economical tyres — and they are British-made in every detail.

Be sure your Tyres are British

Get Dunlop and be satisfied

money was concerned, on nearly every day of the week, and but for some "special" buying of Treasury bills, doubtless to take the place of the War Bonds, the market would probably have had to borrow from the Bank. Last week's Treasury bills have not been saleable at a profit to allottees, and the three months' Bank bill rate has been forced up to a minimum of $3\frac{1}{2}$ per cent. That more comfortable conditions are expected to prevail when the revenue collections are less important, however, is indicated by the fact that longer-dated paper has not hardened proportionately, the six months' bill being taken at about $3\frac{3}{8}$ per cent.

	Feb. 8, 1924.	Feb. 1, 1924.	Jan. 25, 1924.	Jan. 11, 1924.	Previous Rate and Date Changed.

Market rate (3 months' bills)	$3\frac{3}{8}$	$3\frac{3}{8}$	$3\frac{3}{8}$	$3\frac{3}{8}$	..

The Bank return showed a return of notes from circulation to an amount of £652,800, after the expansion of more than twice that sum in the previous week, and with a further small addition to the bullion, the Reserve was increased by £654,900. Repayments to the Bank have continued on both Government and private account, as reflected in declines of £1,625,000 in Government securities and of £504,300 in Other securities, while on the other side Public deposits were £447,100 lower, and Private deposits were down by £1,091,600. Hence the movements were remarkably small, in view of the fact that about £28,000,000 was disbursed by the Government during the week in respect of interest and maturing National War bonds, and the Bank's Proportion was 0.7 higher at 18.2 per cent. But it may be noted that the Reserve is some £2,500,000 below the figure at which it stood a year ago. There was a reduction of £58,900 in currency notes outstanding this week to £279,844,800, which includes £1,421,700 for notes called in but not yet cancelled. The fiduciary issue is £228,973,100, or £19,217,800 below the maximum.

THE STOCK MARKETS.

Stock Exchange markets, after three weeks of briskly rising prices, have come to a point at which there is a decided tendency for prices to halt. Tighter money and expectations of heavy new issues in the near future have caused reaction in gilt-edged stocks and Home Railway prior charges. Reports of the new Japanese loan speak of 6 per cents. at 92, the amount being £60 millions, of which half will be issued here and half in the United States. Foreign bonds have been active, but Home Rails have been inclined to react in sympathy with the Consol market, and on fears of further strikes. Rubbers have shown some improvement, while the oil market has been the most active section, the public buying heavily on the rise in petrol. Prices, however, have reacted on profit-taking. Banking, insurance, and shipping shares have been in demand; interest in the mining market has been centred in the Canadian silver group.

THE COMMODITY MARKETS.

An upward movement in prices can be discerned in the commodity markets. Business on the Cardiff coal market has been fairly active during the week, and prices have been firm. Makers of pig-iron reduced prices in face of foreign competition. Steel works are fairly active, but new business is not plentiful. Non-ferrous metals were higher, with tin, as usual, leading the way. Sugar prices have advanced all round; American interests dominate the situation owing to the extremely slow movement of European beet crops. Wheat continues to experience an active market, and prices went forward. In the cotton trade, while inquiry has been fairly extensive, buyers are not inclined to place contracts of importance. A steady trade in wool is reported by our Bradford correspondent; the high price of wool, on the one hand and "the unwill-

lingness of users to pay prices based on the cost of the raw material" on the other, creates a difficult situation. The hide market remains firm, and oilseeds improved. Other details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market business has been relatively quiet, the chief feature being the strength of sterling at its new level. From \$4.32 on the 1st the rate rose to just over \$4.35 at one time on Saturday last, and though it has not been able to maintain this figure, having moved between it and \$4.30, it has become quietly firmer towards the end of the week, standing yesterday morning at \$4.32 $\frac{1}{2}$. Forward rates have narrowed very slightly to about $\frac{1}{2}$ cent per month above spot. On the whole, the feeling of confidence continues, and there would seem no reason for the time why sterling should not continue quietly to improve. From 92 on the 1st, the Paris rate has been steadier than of late, but, on the whole, shows an upward tendency, the further increase in note circulation, the debate in the Chamber on the new financial measures, and a less optimistic attitude towards the probable findings of the Reparation Committee not being calculated to increase confidence. By yesterday morning, the rate had again reached 93.35. During the same period the Belgian franc has moved from 104.5 to 105.55. In Paris, forward quotations have widened again by 4 centimes to 22 centimes per month above spot. In Brussels they have moved from 6 to 1 centime per month below. Italy has been steadier again, having on the week improved from 99 $\frac{1}{2}$ to 98 $\frac{1}{2}$. The German mark, after being stationary as before during the whole week at 18 billion, rose suddenly on Friday morning to as high as 21. At the time of writing no explanation for this movement has yet appeared. Among neutral currencies, Amsterdam, after being higher, ends the week at 11.50 $\frac{1}{2}$, the same rate as on the 1st, while Switzerland is also little changed at 24.80. Madrid has continued to depreciate, and stands at 33.74 $\frac{1}{2}$, as compared with 33.66 $\frac{1}{2}$ a week ago. In Scandinavia, Stockholm has moved in our favour from 16.37 $\frac{1}{2}$ to 16.45 $\frac{1}{2}$, and Christiania from 30.92 $\frac{1}{2}$ to 32.15 $\frac{1}{2}$. Copenhagen, however, shows an improvement from 26.51 $\frac{1}{2}$ to 26.45 $\frac{1}{2}$, after moving somewhat erratically above and below this figure. Helsingfors, after its recent improvement, has moved up again from 171 $\frac{1}{2}$ to 172 $\frac{1}{2}$. In Central Europe Vienna has reflected the general improvement in sterling by moving from 303,500 to 308,000, and Warsaw shows a slight improvement at 37 million marks. Prague has moved against us from 149 $\frac{1}{2}$ to 148 $\frac{1}{2}$, while Bucharest is steady at 845. In the East the rupee has depreciated rather sharply from 15 $\frac{5}{8}$ d to 14 $\frac{1}{8}$ d, while the yen has moved from 25 $\frac{1}{8}$ d to 25 $\frac{1}{16}$ d, after dropping sharply and then recovering earlier in the week. With the beginning of the Chinese New Year the silver market has been very quiet, with slightly falling prices. Hong Kong is $\frac{1}{4}$ d cheaper at 2s 3 $\frac{3}{4}$ d. In South America, Rio shows a distinct improvement at 6 21-32d, as compared with 6 13-32d a week ago, and Buenos Ayres has also moved up from 41 $\frac{1}{8}$ d to 42 $\frac{1}{8}$ d. Montevideo, on the other hand, has depreciated slightly from 44d to 43 $\frac{1}{2}$ d, and Valparaiso from 40.80 to 41.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 2nd:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	5,551	From Revenue	20,862
Interest, &c., on Debt	8,768		
Sinking Fund	1,000		
Sundries	298		
Reduction of Debt	5,228		
Increase in balances	17		
	20,862		20,862

Revenue is lower for the week ending February 2nd at £20,862,000, compared with last year at £23,108,000. Customs receipts reached £2,327,000, against £1,759,000, Excise being only £18,000 higher at £987,000. Property and Income-tax yielded £11,108,000, and Super-tax £1,630,000, against a combined total of £15,698,000. Post Office receipts were £250,000 higher at £1,500,000. Ordinary receipts yielded £500,668,

against nil, while Special receipts were lower at £1,066,000, against £1,800,000. The week's operations reduced the National Debt by £5,228,000, and caused the following changes:—

(000's omitted.)			
	£		£
Bank of England	+ 4,750	Treasury Bills	3,588
Public Departments	+ 12,250	Saving Certificates	200
Sundries	+ 331	Telegraph Money	400
		Exchequer Bonds	25
		National War Bonds	18,346
	+ 17,331		— 22,559

The floating debt was increased by £13,420,000 to £839,960,500.

FINANCIAL YEAR, 1923-24 (April 1 to February 2, 1924).

£		£	
Total Expenditure ..	652,750,885	Raised by Revenue ..	631,537,877
		Net Borrowings	17,715,098
		Decrease in Balances ..	3,497,910
Total	652,750,885	Total	652,750,885

ESTIMATES FOR YEAR 1923-24.

£		£	
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Lloyds Bank, Gas Light and Coke Company, Sterling Trust, Power Securities Corporation, and Apex (Trinidad) Oilfields. The speech of Mr Beaumont Pease at the meeting of Lloyds Bank is referred to under "Notes of the Week." Mr D. Milne Watson, at the meeting of the Gas Light and Coke Company, announced a record sale of gas. Mr George Balfour, at the meeting of Power Securities Corporation, claimed that since its inception in 1922 the company had already justified its existence. At the meeting of the Sterling Trust, Baron Emile B. d'Erlanger reported a satisfactory increase in their returns from American railway holdings. Mr Walter MacLachlan, at the meeting of the Apex (Trinidad) Oilfields, stated that everything pointed to the upward tendency of prices being maintained.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

NEW MEN AND OLD TASKS.

In his farewell speech in the House of Commons on the night that his Government fell, Mr Baldwin said: "If we are defeated to-night, we leave for our successors no outstanding problems"—a statement which he qualified by three exceptions, namely, reparations, Anglo-French relations, and unemployment. Those, in all conscience, are three large enough exceptions to satisfy the ambitions of any incoming Government. But the activities of various Ministers during their fortnight of initiation into their respective departments already make it quite clear that, before the session which opens on Tuesday is very old, a very much longer list of "outstanding" problems will engage the attention both of Ministers and the House of Commons. To take Mr Baldwin's three exceptions first, Mr MacDonald has made a good start by striking the right note in a personal letter to M. Poincaré. We discussed at some length last week the main aspects of the problem of Anglo-French relations, and indicated the essential points of what we regard as the proper method of approaching it. We do not propose to cover that ground again, except to repeat the warning that the new Government should avoid any action likely to drive French opinion to the Right before the impending general elec-

tion. It is to be hoped that recognition of this necessity will guide Mr MacDonald in his efforts to translate into action his expressed determination that Great Britain should forsake her recent attitude of impotent spectator of Continental developments. On the whole, Paris appears to be adopting a non-committal attitude towards the prospects of the line of action of the new British Government, and there are reasons for thinking that the atmosphere is decidedly more favourable for a wise attempt at settlement of the outstanding differences between the two countries than when Mr Bonar Law tried and failed a year ago. Even the unfortunate Lloyd George "interview" seems to have been turned to good account by Mr MacDonald's prompt repudiation. As regards unemployment, the silence that surrounds the Government's plans at least suggests that there is to be no hasty leap into ill-considered or grandiose schemes.

Of other problems, which Mr Baldwin did not include in his list of exceptions, many are already attaining a new prominence, such, for instance, as the recognition of Soviet Russia, housing policy, and the Irish boundary question. Accompanying the Note of recognition to Moscow was an invitation to the Soviet Government to send representatives to London to "conclude definite practical agreements on a variety of matters." Until this conference has taken place, it is impossible to say whether concrete results will follow. But as evidence of the ramifications of effect of action of this kind, it may be mentioned that Signor Mussolini has strongly criticised Mr MacDonald for stealing a march on Italy, while Mexico, seeing Moscow "recognised," demands recognition as a condition of the resumption of the negotiations which broke down in the autumn. The Irish boundary question is another difficult legacy, to attempt the solution of which the new Premier has summoned a conference, which has already been sitting for a week in London. Housing, again, is a problem on which the Cabinet is apparently designing a big offensive. This by itself is a tolerably formidable list. But over the whole political situation hangs the menace of a great transport strike, which, as our Labour correspondent points out in a subsequent article, threatens more serious danger to the Government than any outside forces. Amid such a welter of problems, it is easy to forget that finance and the preparation of the Budget are the heavy tasks of the session, in connection with which the new Chancellor, Mr Philip Snowden, is credited with various projects; that the problem of agriculture is bound to rear its head; that, among other questions of first-rate importance, that of the preference offers made by Mr Baldwin at the recent Imperial Conference will be submitted to the judgment of the House of Commons; and that storm-clouds, like that of Mr Wheatley's Poplar decision, are floating about the horizon.

This rich crop of first-rate questions (to mention no others) would, even under political conditions to which we have been accustomed, vest the immediate Parliamentary future with exceptional interest. As it is, that interest is, of course, increased ten-fold, for the two reasons that a Labour Government is in office for the first time, and that a new experiment is to be made in the rule of a minority Government in a House where no Party has a majority. Since, as we believe, the three-Party system has come to stay, the early working of this experiment is fraught with profound importance. How smooth or rough the working of the new system will be, it serves no purpose to prophesy. It will presumably reveal difficulties and drawbacks. But, on the other hand, some important advantages are certain. The prestige of the Commons as against that of the Cabinet will of necessity be reasserted—a welcome and overdue return to the old constitutional balance; and this readjustment of power will lend to the proceedings of the House a greater reality and a greatly enhanced importance in the public eye. The position inside the House itself will severely test the tact and ability of Mr MacDonald and his colleagues. But in approaching the task they have several strong assets. One is the very clear desire of the country that they should be given a fair chance, free from any kind of purely political obstruction. A second is the known unwillingness of all parties for another appeal to the country, and the absence of desire for another disturbing change of horses in the near future. A third is the absence of the

past blunders, promises, and assertions of administrative policy which the other Parties have to face. A clean office slate is an invaluable Parliamentary asset; and another, which Mr. MacDonald will also possess, is that of a Treasury Bench that may well prove itself to be above the average in debating power. With such assets, and in an atmosphere of not unfriendly public expectancy, the first Labour Government will face its delicate Parliamentary task under far more favourable auspices than appeared possible a few weeks ago.

WOODROW WILSON.

THERE is nothing perfunctory about the sympathy which the people of Britain extend to the people of the United States on the death of ex-President Wilson. It springs from sincere emotion; for Britain and all Europe is still living in the dark shadow cast by the tragedy of his fall from dizzy heights of world influence. The news of his passing brings vividly to the mind of the British citizen the memory of those historic moments, when Mr Wilson stirred to their depths the great elemental feelings of war-stressed human hearts; first, hope, faith, conscience, belief in the triumph of justice and the establishment of righteous peace—and then the bitterness of catastrophic disappointment. The picture of Woodrow Wilson which is impressed upon the mind of the average British man and woman is that of the man who in the darkest days brought a cup of salvation to their very lips, only to allow it to be dashed to the ground as dramatically as in Milton's masque the poisoned cup of Comus was at the last second dashed from the lips of the Lady. Some will recall, no doubt, the irritation and the impatience with which his neutrality policy was watched by nations, who in the struggle and passion of war could not grasp the niceties of the American political position, and seized with scorn upon such phrases as "too proud to fight." But more universal is the memory of the stirring oratory with which he eventually threw down the gauntlet to Germany, and brought his country united and ardent into the struggle. The promise of unstinted support of men and material gave certainty to the struggling belief in victory for the Allied cause; but even more vital was the personal service which the ex-President himself performed in rallying to the Allies the moral support of the world. It was he who in 1917 impressed upon the neutral nations, with a success which British and French statesmen could not hope to achieve, the picture of the war as a struggle of right against might. It was he who with classic phrase, backed by the authority of recent re-election as the mouthpiece of America, lifted the struggle on to a higher plane, and defined in terms that appealed to the conscience of the world the peace for which America and the Allies were fighting. And when the war drew to its close, the hopes of mankind were concentrated on the achievement of a "Wilson peace." This phrase, on everyone's lips in those days, proclaims the predominance of the man.

The "fourteen points," the "five conditions," and the plans for a League of Nations having been laid down, accepted and acclaimed, Mr Wilson himself went to Paris to play the chief part in working out his new charter of peace. And here tragedy began. It is easy now to see that by the time the President embarked upon the *George Washington* to cross the Atlantic his failure was almost certain. In the Europe to which he came war-passion had given birth to *idées fixes*, which, if conducive to efficiency in war conduct, were obviously obstructive to liberal efforts for the restoration of real peace. There was a lassitude, too, which prevented Europe from throwing off these *idées fixes* sufficiently to embrace in practice Mr Wilson's saving ideals. The European field was cultivated to produce as its harvest a peace of bitterness and revenge; the wheat, which other statesmen went to Paris to grow, was President Wilson's tares.

Meanwhile the President, while, ill-equipped and ill-prepared, he fought his losing battle in the Council of Four, had left behind him a neglected field in America; and since, at the date of the Armistice, America was only

a novice in the war, she was still in the high tide of that passion which in England and France and Italy and Germany had begun already to ebb as early as 1915. Even before the United States became a belligerent, it is improbable that the majority of her citizens understood, and still less probable that they agreed with, their President's international policy. In any nation, however enlightened or however free from temptation, the idealist's following is usually small. But as soon as America became involved in the fighting, the divergence of view between President and people grew rapidly wider. The American President, being an exceptional man, saw America's intervention in the war as a miraculous opportunity for alleviating the immemorial ills of the human race. The American people, in their average normality, reacted as every great nation always does react to the first phase of a great war (and the first phase was all that America had tasted before the Armistice cut her experience short). They were stampeded, as other countries had been, by passion, and from the moment that they suspected their leader of guiding them whither they would not go, they yielded with little thought of the consequences to the herd-instinct which bade them bear him down and trample upon him for his presumption.

The President's quarrel with his countrymen paralysed him in his struggle with the forces of darkness in Europe; but, of course, in this quarrel, the fault, as everyone knows, was to a considerable extent on Wilson's side, for the evil as well as the noble inspirations of the war had by this time forced an entrance into his soul. One of the most sinister effects of war is the concentration of abnormally great power in abnormally few hands, and few men are strong enough to stand the strain of this unearned investiture with omnipotence. Wilson himself was not left unscathed by it, and it may well be the judgment of history that the most formidable of his three enemies was, after all, himself. His self-defeat went hand in hand with his defeat by external obstacles and opponents. As the conference wore on, he became more unapproachable, more autocratic, more unable to distinguish between his policy and his personal feelings—in short, more inhuman and therefore more incapable of dealing with his fellow-men. By that time the Devil's anxieties were really over, for the issue of Wilson's battle was no longer in doubt. Having failed to achieve peace without victory, he soon became a stalking-horse for his European colleagues in their less unsuccessful endeavours to achieve victory without peace.

Many no doubt in America and a few on this side of the Atlantic will remember minor, but striking, episodes in his meteoric career; the Governorship of New Jersey, his fearless conduct whereof brought him as a protagonist on the larger political stage; his policy of revision of the tariff in the direction of Free Trade; his much criticised Mexico policy; his smoothing out of the friction aroused by Panama Canal controversies; his fight for cleaner political and business life, and the revision of the financial system of America as represented by the establishment of the Federal Reserve system. But to the historian all else will necessarily be eclipsed by his domination of world politics in one of the crises of history. In this week, as we stand by his graveside, let us believe that the healing lapse of time and the pathos of his later days will gradually expunge the bitter recollections of the failure and brighten the memory of a grand flash of a courageous idealism across the face of a darkened world. Let us believe, too, that the driving force of Mr Wilson's work for world peace and justice outlives his failure and death, and will continue, though unseen, to inspire the efforts of all who work to make the world a safer and a better place.

LABOUR AND THE THREATENED DOCK STRIKE.

(BY OUR LABOUR CORRESPONDENT.)

AFTER a fortnight in office, it is pretty clear that it is not from without that danger threatens the Labour Government, so much as from within. The City is hopeful: business is friendly, the Press is almost fatuously affable. Everywhere, apprehension has given place to confidence. The month during which Mr Baldwin hung on to office,

whatever be the objections to his conduct on other scores, at least enabled the nerves of the country to be quietened, and the prospect of Labour in power to lose its terrors. Such evidence as has, so far, been afforded of the methods of the Government, has been thoroughly reassuring. A Ministry of hard work is in the saddle, and a Prime Minister of courage and good sense. There are substantial signs of reviving trade. The day may be in sight when ordinary folk will speak of the Government with respect, instead of with the contempt which was becoming habitual.

At the same time, it is admitted, inside the movement as well as outside, that the whole of this fair prospect may be blasted, not by the reactionaries, but by the workers whom the Government, in the first instance, represents. The votes of four million trade unionists put them in office; the action of less than a million of these may easily upset them. The locomotive strike, actually launched when they took over, was bad enough; a dock strike would be infinitely worse. The price of the former was paid, in the main, by other workers—notably by the miners—the price of the second, if it came off, would be incalculable. It would then be no question of retarding the recovery of trade, and causing temporary inconvenience. In saying this, it is not forgotten that it requires two parties to make a strike, and that responsibility must be divided between employers and employed. But, in the present case, the issue for the workers as a whole, and for each section of them, is much bigger than that of the immediate wages conditions of any section. There is involved, in their patience or impatience, the whole prospect not only of this Government, but of Labour government; and, here and now, the question whether confidence in it, assuredly now present and growing daily, is to be gradually translated into terms of definite economic revival. Therefore if the dockers, or any other body of workers, say, in effect, that "grievances must precede supply," they will kill the goose that might lay golden eggs for them and their comrades in other industries. They have got to decide whether, having achieved, as part of an organised movement, a tremendous measure of political success, they are going to give the political method a chance, to give it time to be tried in action; or, at a time when industrial action can hardly assist, but may destroy all that has been won politically, to revert to the industrial method. It is an incident of political success that it, for the time being, deprives the industrial side of the limelight. However strong the arguments for a strike, in ordinary times, they do not apply now, against the overwhelming importance of giving Labour's first Government a chance. Just because it is a Labour Government the appeal must be addressed to the workers rather than to the employers.

This argument applies even if it is admitted that the dockers have grievances—and no one who knows their conditions will deny that. It remains true, even if the whole of their case is admitted to be both just and relevant. To one particular part of their demand—that for a guaranteed week—it applies with particular force. There is a Bill already drafted, and to be introduced to this Parliament, with that object in view. The measure is one certain to excite a large degree of sympathy, even outside the Party. Surely it is worth their while to wait and see what can be done by those means. True, the guaranteed week is only part of their present demand, and no measure short of decasualisation will remove all their genuine grievances. But on the other specific issues it seems possible that the negotiations now going on will effect a temporary settlement. The men ask to have the daily minimum raised by 2s (i.e., to have the minimum daily wage at large ports 12s, and at small 11s, instead of, as at present, 10s and 9s respectively), with a proportionate increase for workers on piecework; and to have the differential rates (above the minimum) revised.

Conditions of employment in the industry for which the Transport and General Workers' Union, in the main, claims to speak—the stevedores' case is a little different—have, since 1920, been governed by the report of the

court of inquiry presided over by Lord Shaw. Lord Shaw's committee recommended the establishment of a 44-hour week, a standard minimum wage, based on a half-day instead of an hourly rate, with certain rates of differential pay above that minimum, and, in addition, certain measures of decasualisation. So far as hours and wages went, the report was accepted for the industry, in which the Port of London Authority is the most important but by no means the sole employer. The original minimum rates were fixed at a time when the cost of living index stood very high; in 1920, of course, it reached a peak of 275. By the end of 1922 the index had fallen nearly 100 points. In September of that year a revision was accepted by the Transport and General Workers' Union. Included in the revised agreement was an understanding that, if and when the cost of living figure moved down 10 points, a shilling should come off wages. Since 1922, the men have, under this arrangement, lost 2s., the second shilling being taken off last summer, when the index stood at 169. But although Mr. Bevin has used the fact that the cost of living figure has, since, gone up again by 8 points, and in January stood at 177, the union leaders do not want a sliding scale—after the experience of the unofficial strike of last summer it would be strange if they did. The delegate conference which drew up the present claim decided that any future agreement should have no reference to the cost of living figure. In this they voiced a growing feeling throughout the movement against tying wages to the index.

The unions' demands were presented to the employers on January 16th. Without any discussion, Lord Devonport rejected them, out of hand. The Transport Union retorted by threatening to call their men out on February 16th. On January 30th, the National Council of Port Labour Employers (Lord Devonport being then on his way to South Africa) agreed to a further conference with the union, or rather unions, since several other minor ones are involved. It is, to say the least, regrettable that this reasonable attitude was not taken up in the first instance. The contemptuous rejection of the men's demands by Lord Devonport has roused deep feeling throughout the Labour ranks, precipitated the undertaking, given by Mr Cramp on behalf of the N.U.R., to stand by sympathetically, i.e., to refuse to handle goods, and incurred, for the employers generally, a large share of responsibility for evil consequences that may come. Now, discussions are going on, of which the tone is reported to be hopeful. But, at the same time, the sands are running out. It is true that there remains, even if these discussions fail, the possibility of mediation by the General Council of the Trades Union Congress, which, in the end, proved successful in the locomotive strike. But they will, at best, have to come in at the eleventh hour, and the eleventh hour is more dangerous with a loosely organised body of workers than with one so skilled and disciplined as the A.S.L.E. and F.

As to the issue, it does not seem as though, with good will on both sides, it ought to be insoluble. The men's grievances are real enough; moreover, the burden of unemployment has, for years, been heavy on dockland. In December there were still 22.5 per cent. of insurable workers in the canal, river, harbour and dock service on the unemployed registers. It is true that this figure is a little better than that for November—24.5 per cent.—but it is gloomy enough. Housing and general living conditions are miserable, the conditions of work hard and demoralising. The workers feel, not without justice, that they have been asked to bear more than their share of the burden of the slump. They know that shippers did extraordinarily well out of the war; they believe that their profits are still much higher than they will admit. Although the leaders may denounce the sliding scale, the average docker feels that it is too bad that he should suffer a reduction when prices, so he is told—he does not feel it—go down, and yet recover nothing when they go up again. He is sick of being told to "wait till trade revives." He is utterly sceptical when it is suggested that any rise in his wages will send up the cost to the consumer, including himself. Profits could very well bear a 2s rise for him. So he believes. As to wages, a five-day week is uncommon, a three-day common.

THE PRICE OF NEW CAPITAL.

IN the *Economist* of December 29th last we set out our own figures of the amount of new capital applications in the London market in 1923, and analysed both the purposes for which the borrowings were transacted and the countries for which the proceeds were destined. We propose now to turn to another aspect of the new capital market, and to show the forms in which the new capital was raised and the average rates of interest offered on the classes of securities for which a definite percentage of yield is calculable. An analysis of the classes of public issues in London in the years 1913, 1920, 1921, 1922, and 1923 reads as follows:—

PUBLIC ISSUES OF CAPITAL IN LONDON.

	Year 1913.	Year 1920.	Year 1921.	Year 1922.	Year 1923.
Debtentures, bonds, &c.	£ 139,920,400	£ 154,184,300	£ 347,517,400	£ 526,730,900	£ 232,402,800
Preference stocks and shares. .	22,955,600	78,235,100	21,045,300	30,807,800	15,777,800
Ordinary stocks and shares. . .	33,661,300	155,130,200	20,415,500	16,136,500	23,212,600
Total	196,537,300	367,549,600	388,978,200	573,675,200	271,393,200

Loans by Governments and municipalities at home and abroad in 1923 amounted to £178.1 millions, as against £462 millions in 1922 (the reduction being accounted for by a large decrease in British Government borrowings), leaving £93.3 millions for other purposes, as compared with £111.5 millions in 1922. If the Government and municipal borrowings be deducted, then the remaining total raised in the form of debentures, stocks, or bonds was £54.3 millions last year, as compared with £64.2 millions in 1922. There was also, as will be seen above, a striking decline in preference issues, but some increase in offerings of ordinary shares. The next table shows the form in which various classes of borrowers raised their capital:—

NATURE OF CAPITAL OFFERED ON THE LONDON MONEY MARKET.

Turning to the rates which borrowers had to pay for their money, we find that the decline, which was so marked in 1922, continued in 1923. Taking Government and municipal stocks and company debentures together, the average rate paid on this entire group was 5.52 per cent. last year, as compared with 5.78 per cent. in 1922. In order to analyse this movement the more clearly, we show first the rates paid by the three classes of Government borrowers in the past two years. Before turning to these and other details, it should be mentioned that all rates of interest are shown "less tax," the rates on "free-of-tax" securities having been converted to the

comparable figure. Profit on redemption is allowed for where necessary:—

Average yield	4.77%	5.59%	5.3%	5.66%	5.06%

† Represents borrowing at over 6%. (a) This total of £52,437,000 represents £26,279,000 on behalf of Colonial Governments, at an average yield of 4.15%, and £26,158,000 on behalf of Foreign Governments, at an average yield of 5.31%.

With regard to the borrowings by the British Government, £58,846,000 represents various Treasury Bond borrowings. Borrowings by National Savings Certificates represent the rest of the total. The rate of interest on Certificates was reduced during the year 1923, with the result that £5,500,000 was borrowed at a cheaper rate than the remaining £13,190,000. In 1922 the average yield on National Savings Certificates was 7.4 per cent., less tax, but in 1923 the average yield on these Certificates was reduced to 6.5 per cent., less tax. In arriving at the less-tax yield for 1923 on National Savings Certificates, we have taken the two tax-free yields of £4 19s 6d and £4 2s 9d respectively, and then added one-third on to each yield for the tax at 5s in the £. The heavier borrowings by Colonial Governments were achieved at a rate more than ½ per cent. below the 1922 average, while foreign Governments benefited even more from rate reduction. The following table shows average rates on borrowings in London by home, colonial, and foreign municipalities, and railways, borrowed in the past two years:—

	Amount Borrowed in Years		Average Yield.	
	1922.	1923.	1922.	1923.
	£	£	%	%
British Municipalities	5,555,300	nil	5.74	..
Colonial Municipalities	7,023,600	4,740,700	5.88	5.45
Foreign Municipalities	7,087,500	nil	6.78	..
British Railways	6,522,900	5,849,400	4.95	4.75
Colonial Railways	nil	1,199,700	..	4.95
Foreign Railways	14,722,200	5,483,000	6.92	6.00

No British municipality came into the London market as a borrower in 1923, but it is worthy of note that in 1920 the average rate paid for money borrowed by British municipalities was 6.24 per cent. and 6.22 per cent. in 1921, but dropped to 5.74 per cent. in 1922. The average rate paid by industrial borrowers who offered debentures fell in 1923 by the comparatively small amount of just under one-third per cent. Details are appended:—

INDUSTRIAL AND COMMERCIAL BONDS, DEBENTURES, &c.

Average yields	6.5%	6.09%	6.72%	6.4%

† Represents capital yielding over 6 per cent.

In spite of the large decline of the last two years, it will be seen that the average yield offered on new debenture issues

was nearly 1 per cent. higher than in 1913. With regard to the average rate of interest paid for preference stock and share issues during 1923, a lower average rate was paid, amounting, as it did, to 6.59 per cent., which compares with 7.17 per cent. in 1922, 8.39 per cent. in 1921, 8.09 per cent. in 1920, and 5.74 per cent. in 1913.

The final table gives the average Bank rate, the average three months' bill rate, and the rates paid on industrial debentures and on all Government borrowings in 1913, 1920, 1921, 1922, and 1923:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate on Issues of Industrial Debentures.	Average Rate Paid by all Government Borrowers.
	%	%	%	%
1913	4 15 5	4 7 5	5.5	4.77
1920	6 16 4	6 7 11	7.92	6.05
1921	6 2 4	5 4 3	8.09	6.49
1922	3 13 10	2 13 0	6.72	5.65
1923	3 9 9	2 14 1	6.4	5.34

The decline exhibited in the last two columns is slightly greater, proportionately, than the fall in average Bank rate. Some explanation of this is provided by the fact that the greatest rush of new issues occurred in the early part of the year, before the Bank rate was raised in July to 4 per cent.

SUGAR IN 1923.

THE course of the sugar market during 1923 was very erratic, and at times some very astonishing factors thrust themselves forward and upset all calculations; but, taking things on the whole, it may be stated that the undertone was remarkably firm. The total imports into this country for the 12 months ended December 31, 1923, were 1,568,298 tons, against 1,908,969 tons in 1922 and 1,283,000 tons in 1921. The apparent home consumption in the same period was 1,470,347 tons, which compares with 1,604,533 tons in the year 1922 and 1,388,900 tons in 1921. The stocks of all sugar at the end of last year totalled 166,700 tons, against 302,850 tons on December 31, 1922, and 171,200 tons on the same date in 1921. The imports were thus on a smaller scale, and the consumption showed a moderate falling off, this being obviously due to the high price level attained by the commodity at certain periods of the year; but the most striking fact about the statistics is the shrinkage in the stocks to a little over half what they were at the end of 1922.

Price fluctuations throughout the year were exceedingly wide, and proved a source of great embarrassment both to refiners and trade users. In the first five months of the year the markets all over the world, following the lead of the United States, moved up very sharply. The peak of the rise was reached in May, when Tate's and Lyle's cubes touched 71s 6d per cwt, and American granulated on the spot rose to 65s 6d, while prompt delivery among the "ring" futures went up to about 37s, thus commanding a premium of over 8s per cwt, compared with contracts for delivery over the closing months of the year. At the close of 1922 conditions as regards supplies were very favourable to the trade, there being ample stocks in the country, and not a few people here held very conservative views respecting the future course of the commodity. They were rather inclined to overlook the fact that the Cuban industry began its season a year ago with practically no surplus in stock, in striking contrast to former years. The early forecasts of the last Cuban crop still held good, and a yield of about four million tons was confidently looked for; but, as time went on, the delay in harvesting the crop gave rise to many uneasy feelings among refiners, especially in the United States, and this finally brought about the rush to buy late in January and in the month of February. The market was suddenly called upon to face a very heavy demand for sugar of all kinds, and across the Atlantic the speculative element did not fail to take advantage of the situation. These powerful factors could not be ignored, and about this time

it was given out that the Cuban crop would fall fully 400,000 tons below expectations, and that the world's consumptive demands were expanding. The latter was true enough, this being the outcome of the relatively low prices ruling for the commodity in the previous year when the huge Cuban surplus had to be marketed after being carried over from the end of 1921. The American consumption in 1922 increased considerably, and the takings of this country also assumed much larger dimensions, especially in the earlier months of the year, and this was continued well into 1923. Thus the market was caught between the big Cuban deficit and the increased trade requirements, and it soon began to be realised that all supplies could easily be taken care of, and that a substantial upward adjustment in values would have to be made. This, however, was somewhat overdone, and a sharp falling off in the demand ensued. The deliveries into consumption were made at an appreciably attenuated rate, especially over the summer months, and in a very depressed market all prices relapsed to a relatively low level. During the worst period witnessed in August, Tate's and Lyle's cubes were selling at about 57s 6d per cwt, and American granulated on the spot went at 53s, with dealings in white sugar futures down to about 21s for prompt delivery, distant positions fluctuating to below 20s. The premium on the prompt delivery subsequently disappeared altogether for a period, but the depressing tactics were overdone, just as the previous bull efforts were, and very large quantities of Java sugar which arrived towards the end of the summer months, largely held on speculative account, made holders show a big loss on their contracts, much of this sugar having been forced out at a time when the lack of confidence on the part of buyers in the stability of the market was very pronounced. Low prices had to be accepted for a lot of this sugar, but later on an active demand from the Continent sprang up, and a large portion of the Java surplus was sent to the European ports, France, North European countries, and Scandinavia being the more prominent takers. This paved the way for a revival, and with the bulk of the cheap Java sugar and also the Cuban crop out of the way, shrewd observers could see the road clear for an upward reaction and a restoration of confidence. In the latter part of the year various new factors had to be taken into account, not the least being the rapid decrease in reserve stocks everywhere, and very disappointing Continental beet sugar crops. This was finally translated into a substantial advance during the last quarter of the year, prices moving within measurable distance of the best touched during the early part of 1923. Compared with final rates of 1922, the closing values of sugar futures in 1923 displayed a rise of about 8s to 6s per cwt, according to position, and there is no doubt that the sugar position generally will be dominated by the scarcity of supplies for some time to come.

The replenishment of stocks in the first quarter of 1924 will depend largely upon the Cuban crop. The harvesting of this has been delayed, and no material quantity can be available for refiners until the latter part of February. The unrest among the dock labourers, &c., in this country may complicate matters, and obviously delays to shipping must be expected if the dispute continued for any length of time. The stocks of raw sugar at the principal U.K. ports at the present time are not much over 40,000 tons, against 120,000 tons a year ago; thus both consumers and refiners may have to face a very intricate problem before the position rights itself again. Contrary to expectations, Continental refined sugar, more especially Czecho-Slovakian, has been coming to this country only in small quantities, owing partly to re-purchases and also to delays in transit, *via* Hamburg. It is estimated that the European beet crops for 1923-24 will yield no more than 4,500,000 tons. European consumption should call for 6,400,000 tons at the least, thus supplies of the commodity will have to be imported to make good the deficiency. American estimates put the world's production for the present season at 18,600,000 tons, against 18,000,000 tons in the previous season. The last Java crop amounted to 1,730,000 tons, and the next, which will be harvested about May, may not give much more, so that the figures given may be accepted as approximately correct. The Cuban crop should turn out about the same as last

year, and give 3,500,000 to 3,600,000 tons. It is not easy to gauge consumptive needs in these disturbed times, but based on population the world's requirements over the next year should call for 19,000,000 to 19,500,000 tons, unless there is an unexpected shrinkage in the demand owing to the high price. Thus conditions in 1924 may move closely to those prevailing in 1923; in any case, it is difficult to see how any weakening in the general position of the commodity can come about. In the United States the demand looks like increasing again, and there the cost of the commodity counts for very little. British refiners will have to compete with the American buyers for the Cuban supplies, and up to March or April at any rate a period of stringency will have to be faced. The statistical position of the commodity all over the world is exceptionally good from the producer's point of view, but eventually, of course, the high-selling price will stimulate the output and thus the position will gradually come right again. But there is bound to be a lot of changes in a very sensitive market before that takes place.

THE CONDITIONS OF TRANSPORT IN SOVIET RUSSIA.

(BY A CORRESPONDENT.)

THE data which have been recently published concerning the state of Soviet transport, and of railways in particular, in 1922-23, show a considerable improvement in the management of the railways as compared with the preceding years of the Soviet administration. In the first place, the general amount of work performed by the railway system has increased. This refers both to goods and to passenger traffic. The total number of pood-versts made by goods of various descriptions amounted in 1920-21 to 18.9 per cent. of that of 1913; in 1921-22 it was 21.15 per cent., whereas in 1922-23 it had risen to 29 per cent. The number of passenger-versts was 47.3 per cent. in 1922-23, as against 33.7 per cent. in the previous year. There are also technical signs of a further economy in railway management. Parallel with this increase of useful work performed by the railway network, the number of carriages run has been decreasing. Whereas in 1920-21 it was 65.6 per cent. of the 1913 total, it was 60.2 per cent. in the following year, and in 1922-23 it fell further to 54.7 per cent. The expenditure of fuel for 100 engine-versts has also decreased; in 1921-22 it amounted to 171 per cent. of that of 1913, and in 1922-23 to 136 per cent. Lastly, the financial conditions of transport also show a gradual improvement. Thus, in the last operative year the proportion of expenditure of the entire transport system (including railways, waterways, and roads) defrayed out of revenue, and the deficit left to be covered by the State changed as follows (in million pre-war roubles according to the goods index-number):—

	Revenue.	Same in Per-centage to Expenditure.	Deficit Covered by Dotation.	Same in Per-centage to Expenditure.
	Million Rouble s.	%	Million Roubles.	%
4th quarter, 1922	45.1	60.5	29.4	39.5
1st " 1923	80.7	65.2	43.0	34.8
2nd " 1923	92.9	75.9	29.4	27.1
3rd " 1923	88.8	78.6	24.2	21.4
Total.....	307.5	71.1	126.0	28.9

If we consider the railways alone, their revenue in the same year amounted to 295 million pre-war roubles, whereas the deficit covered by the State grant equalled 86 million roubles, i.e., 22.5 per cent. of the expenditure.

Yet, notwithstanding the above-mentioned improvement, transport conditions are still very difficult. Although the general work performed by the railways has increased, it still does not exceed 30 and 50 per cent. of the pre-war level for goods and passengers respectively. Similarly, in spite of the technical improvements in management, 55 per cent. of the number of trucks used in pre-war times are required now for goods traffic which amounts to only 29 per cent. of pre-war, and the expendi-

ture of fuel for a unit of useful work is still 36 per cent. greater. Finally, the financial deficit of 22.5 per cent. is also rather distressing, particularly in view of the fact that the fares are on the whole somewhat higher than before the war, and that the permanent way is being neglected for the sake of economy, thus even exposing the travellers to some danger.

The present expenditure of metal for maintenance is one-fifth of pre-war. In the current year it is proposed to devote, on the average, 58 poods of rails and 20 poods of tie-rods for each verst, as against the pre-war annual expenditure of 300 and 109 poods respectively; and this in spite of the fact that in the period 1915-1923 12,000 versts of rails were removed and new material substituted in their place. According to some specialists' calculations, in order to preserve the safety of communications in the coming two years it will be necessary to remove and exchange annually 1,200 versts of rails, while in the current year it is proposed to remove only 630 versts ("Econ. Life," December 16, 1923). As to the sleepers, more than 40 per cent. of them are rotten, and should have been replaced by new ones!

The explanation of the fact that, in spite of the high tariff and of the extreme economy of materials, the railways still show a considerable deficit, is to be sought in the following conditions:—(1) General ill-management, (2) insufficient loading of transport, and (3) high cost of metals and fuel. The first circumstance requires no explanation, as it is an inevitable consequence of Soviet "State capitalism" in all its manifestations. As to the insufficient loading of transport, it is clear that the huge mechanism of Russian railways, performing 29 per cent. of its pre-war work, has to work to a considerable extent "in vain," and carry a large burden of "dead" expenditure which leads to a deficit. The insufficient loading is also to some extent due to the small volume of production and the diminished turnover of goods in the country, but I am inclined to think that even so the volume of transport might have been larger were it not for the high costs, which are quite unbearable for the sender of goods, with his diminished paying capacity; thus, e.g., the industrial production increased in 1922-23 as against 1921-22 by almost 100 per cent., whereas the average daily number of loaded trucks increased not more than by 20 per cent. (The agricultural production increased by not less than 20 per cent.) The Soviet Press is right in pointing out that because of the high cost of railway transport, road transport is being widely developed side by side with it. Certainly, by reducing the fares it would be possible to achieve an increase in the traffic of goods, and, in the long run, to reduce the deficit. But it is necessary first to pass through a period of increased deficit owing to the reduced tariff, and this would be possible only on the condition of a considerable influx of money from outside, which is hardly likely to occur. It is a vicious circle, typical not only of Soviet transport, but of the whole of Soviet State industry. To it is due in part also the second cause of the transport deficit, the high cost of metals and fuel. The cost of production of metals, judging by the recently published data, considerably exceeds the pre-war level. The only possible way out lies through the improvement in the organisation of production, as well as its development by outside capital, with a simultaneous reduction in prices. It hardly needs to be pointed out that both the improvement in the organisation of production and the influx of capital from abroad presuppose a radical transformation of the whole economic structure of modern Russia.

THE TRUST MOVEMENT IN GREAT BRITAIN. VI.—GENERAL CONSIDERATIONS.

THE advocates of concentration and combination—and the second is only a less complete form of the first—are accustomed to dwell on the advantages in respect of efficiency and economy of production and distribution which are derivable from the promotion of standardisation of output and specialisation of works, the establishment of uniform costings systems, the interchange of information, the combined research, the collective buying of raw materials, and the joint marketing which are thereby facilitated. That such advantages are so derivable is beyond question; but, despite some very striking in-

stances, the fact that they have been generally so derived is still far from established, and the cases in which efforts have been made along the lines indicated are very few in comparison with the very large numbers of consolidations and combinations in existence.

As regards concentrations, it is now generally recognised that, just as for any particular piece of plant there is a minimum scale of output below which working is uneconomic, but there is also at any given stage of technical development a point beyond which an increase of the plant unit brings no corresponding increase in efficiency, so the mere adding of new units to a group does not necessarily enhance efficiency or cheapen cost of production, especially as the larger the undertaking the greater the requirement of managerial and directing skill. And as regards combinations, it is fairly obvious that the pursuit of the objects mentioned calls for an amount of unified direction and co-ordinated action which—human nature in business being what it is—will only infrequently be attained in combinations other than "permanent." Further, in order to bring about at any particular time a concentration or combination of a sufficiently comprehensive character—and this applies in some measure to a scheme of integration also—experience shows that undertakings may be acquired at prices much in excess of their real value, with resultant overcapitalisation and arrangements come to in respect of directorates which do not make for efficient administration, and these two things together may completely or largely offset the theoretical advantages of the new régime.

But as a generalisation, it may be said that none of these advantages has occupied the foremost place in the minds of those who have brought about permanent combinations—and probably the majority of terminable ones; their primary consideration has been the enhancement of profits by the elimination of competition so far as is practicable—or expedient, for some of the most powerful combines have thought it well to allow some outsiders to continue their operations. And the more a combination, whatever its form, becomes co-extensive with an industry, the more likely is it to keep to itself the whole of the enhanced profits resulting from the elimination of competition and from such reduction in costs as may result from the fact of combination. No doubt it will refrain from pushing its prices beyond what the market will bear, but it may deliberately choose a policy of restricting output and maintaining prices rather than of increasing output and reducing prices. In the case of a combination not involving unified financial and administrative control, and including undertakings of very diverse efficiencies, prices are unavoidably fixed at a level which will provide what is regarded as a sufficient profit for the least efficient, and cases are not lacking in which the effect of such combinations has been to prolong the existence of concerns otherwise quite incapable of maintaining themselves. So that the consuming public, whilst not objecting—and it cannot reasonably object—to the efforts of an industry to put itself upon a profit-making basis which shall so far as possible be durable, may fairly ask for some security that this will be accompanied by an increase in efficiency, and that the consumer may share in fair proportion in the resultant benefits.

For more than a generation the policy of the United States has been to repress combinations of every kind. But the attempts made there, though long continued—the Sherman Law "to protect trade and commerce against unlawful restraints and monopolies" was enacted in 1890—and strengthened from time to time, has so far proved singularly ineffective. The first effect of the original Act, as judicially interpreted, was to encourage consolidations or permanent combinations (generally by means of holding companies), as contrasted with terminable combinations which regulated prices or output. When later the decision of the Supreme Court in the Northern Securities case (1904) "condemned the device of the holding company for the purpose of procuring a common control of competing interests," the consequences were a growth of "gentlemen's agreements" on the one hand and of consolidations on the other. The investigatory activities of the Bureau of Corporations, established in 1903, led to proceedings against two great "mergers"—the Standard Oil Company and the American Tobacco Company—and judicial orders for their dissolution, but in the work on "Trust

Laws and Unfair Competition," by the Commissioner of Corporations, which was issued by the Department of Commerce in 1915, it is admitted that in the first of these cases "the general opinion is that this dissolution is effective neither in theory nor in fact," whilst "the tobacco company dissolution has been criticised in the same way as the oil company dissolution, but probably with less force." Proceedings against the United States Steel Corporation and the United States Shoe Machinery Company resulted in both cases in decisions adverse to the Government, though the dominant position of the one and the practical monopoly of the other could not be seriously disputed. The Webb-Pomerene Act of 1917 excluded from the scope of the existing anti-trust legislation associations entered into for the sole purpose of engaging in export trade, and any agreement made or act done in the course of export trade by such associations, provided such agreement or act is not in restraint of trade within the United States. So, whilst combination in respect of domestic trade is illegal and contrary to the public interest, combination in respect of export trade is to be encouraged. The Balfour of Burleigh Committee was more logical in recognising that it is not practicable to encourage combination in one direction only.

That Committee, believing as it did that the growth of trade combinations was not only inevitable but was actually desirable, disliking State regulation, and realising, in the light of American experience, that it would probably be ineffective, yet realised also that the British public would be content to allow the advocates of the various forms of industrial organisation surveyed in these articles to attempt to prove their claims only if there were some means of bringing their proceedings under critical review; and resolved, therefore, to rely on publicity as the main safeguard against abuse of power by monopolistic or quasi-monopolistic concentrations or combinations, whether permanent or terminable. Accordingly they recommended that some means should be devised for securing to the State adequate information as to the existence of combinations, and provision made for official investigation in some cases. They also suggested that agreements forming the bases of terminable combinations should be enforceable at law if registered with a Government department. This latter suggestion seems to have found little favour, but the main proposal has received a large volume of support, though it has not yet been accepted by any of the Governments which have held office since 1917. The Departmental Committee on Trusts, in their Report of April, 1919, said:—

We are unanimously of the opinion that it would be desirable to institute in the United Kingdom machinery for the investigation of the operation of monopolies, trusts, and combines, similar to the commissions and tribunals created for that purpose in the United States of America and British Colonies [a reference to the American Bureau of Corporations (1903) and Federal Trade Commission (1914) and the Canadian Combines Investigation Act of 1910, which gives purely investigatory powers].....We are satisfied that trade associations and combines are rapidly increasing in this country, and may within no distant period exercise a paramount control over all important branches of British trade.

We are satisfied that considerable mistrust with regard to their activities exists in the public mind, and that the effect of such mistrust may be equally hurtful to the political and social stability of the State whether or not the public mistrust and resentment be in fact well founded. We consider that it is desirable that means should be provided whereby the fullest information as to the activities of trade associations may be made available to the public and complaints may be promptly and thoroughly investigated, so that doubts and suspicions may be dispelled, or, on the other hand, the true facts ascertained as to evils for which a remedy is required. We believe that it will be found necessary ultimately to establish machinery for promptly and effectively dealing with such abuses as the tribunal on investigation may discover.

The committee accordingly recommended that the Board of Trade should be charged with collecting information as to the nature and extent of trusts and combinations and reporting annually thereon, and also with preliminary inquiry into complaints as to their operation; should a *prima-facie* case be made out in any instance, the complaint should be referred to a specially constituted and independent tribunal for investigation and public report.

The Profiteering Act, 1919, passed somewhat hastily to allay growing public irritation at high prices, gave the Board of Trade powers, *inter alia*, "to investigate prices, costs, and profits at all stages," and to receive and inves-

tigate complaints as to unreasonable profits, and also contained the following section:—

3. Without prejudice to the generality of the powers under this Act, the Board of Trade shall obtain from all available sources information as to the nature, extent, and development of trusts, companies, firms, combinations, agreements, and arrangements connected with mining, manufactures, trade, commerce, finance, or transport, having for their purpose or effect the regulation of the prices or output of commodities or services produced or rendered in the United Kingdom or imported into the United Kingdom, or the delimitation of markets in respect thereof, or the regulation of transport rates and services, in so far as they tend to the creation of monopolies or to the restraint of trade, and the Board of Trade shall, for the purposes of this section, utilise the powers of investigation and of appointing committees conferred upon them by this Act.

Under the powers so conferred, a large number of inquiries of a more or less searching kind were made by sub-committees of the central committee set up under the Act into branches of trade and industry believed to be dominated by monopolistic or quasi-monopolistic "combinations," and the effect of these upon prices and profits; and their reports were published. These contain, as will have been seen from the references to them in previous articles, a large amount of valuable information; their publication undoubtedly had upon the whole a good effect upon public opinion in dispelling many misapprehensions and drawing attention to the potential advantages of concentration and combination in industry—to which, on the whole, they were decidedly favourable—whilst at the same time, by criticising some proceedings of "combinations" which appeared to have resulted from too narrow an outlook, and compelling their authors at least to attempt a defence, they certainly acted as a useful safeguard of the public interest. It is noteworthy that practically all the sub-committees urged in their reports that the proposals of the Departmental Committee on Trusts should be given permanent legislative effect; but so far that course has not been taken, though there have been from time to time vague statements that successive Governments had the matter under consideration. We cannot but regard this as unfortunate. Whilst we have no desire to see a return to Governmental control of trade and industry, and recognise both the disturbing effect of a constant menace of inquiry and the need for caution in the publication of details as to individual businesses (and there is a danger that investigatory powers entrusted even to a Government Department may be abused), we nevertheless think that the Committee on Trusts were right in their opinion, quoted above, as to the social and political reactions of the development of combinations unless some means is provided whereby the community may be enabled to form for itself, or to obtain from an independent authority, a balanced judgment as to their operations and their effect upon the general economic well-being.

Notes of the Week.

Mr Wheatley and Poplar.—An early opportunity will doubtless be taken in the House of Commons to raise a debate upon the decision of the new Minister of Health, Mr Wheatley, with regard to the excess Poor Law Relief payments made by the Poplar Guardians. Mr Wheatley has promised to rescind the order making the Guardians liable to a surcharge equal to the amount by which they have exceeded the legal maximum of distribution, which apparently amounts to £100,000. To pass the sponge over the Poplar offence may in itself be a comparatively small matter, but as a precedent its implications are extensive and serious. Obviously neither Poplar nor any other borough can expect to be specially favoured. The same regulations must run in Poplar as in all other necessitous areas. At the moment the position would appear to be that Mr Wheatley has, in effect, invited Guardians all over the country to develop any degree of generosity they like with impunity. That way lies chaos, and obviously the affair calls for immediate consideration by the Cabinet, without whose authority, we believe, Mr Wheatley took his Poplar decision. In its own interest, as well as that of the nation, the Cabinet would be well advised to come to and announce an immediate decision, for the first public action of the Clyde representative of Mr MacDonald's Government has created

a widespread sense of uneasiness, which, if not quickly dispelled, will almost certainly give rise to developments in Parliament which the new Premier must be most anxious to avoid. Mr MacDonald, we believe, is a stout supporter of Cabinet responsibility, and we look to him, therefore, to lose no time in meting out appropriate treatment to the first instance of a serious indiscretion by one of his colleagues.

Anglo-Persian Control.—The decision of the Labour Government not to sell the Treasury holding in the Anglo-Persian Oil Company has been followed by an important statement from the Burmah Oil Company, and the sharp rise in the price of petrol of 4½d per gallon. These two events should cause some modification of the popular (but ignorant) attitude on this oil question. It has been assumed, as the Burmah Oil statement declared, that the sale of the Government's holding would throw the control of the Anglo-Persian into foreign hands, and jeopardise the Admiralty contract for fuel oil. In reality, the consequences of the proposal made by the Burmah Oil Company would have been exactly the opposite. The scheme was to sell the Government's shares to the Burmah Oil and then to introduce the Burmah Oil, as a third shareholder, into the Royal Dutch-Shell group. The effect of this inclusion of the Burmah Oil, enlarged by the Anglo-Persian interest, would have been to give to the two British companies—Shell and Burmah Oil—an assured and permanent majority in the group. This disposes of the nonsense that has been talked of the British Government bartering a national oil asset for foreign gold. So far from the Burmah Oil, and with it the Anglo-Persian, becoming foreign-controlled, the present Dutch-controlled Royal Dutch-Shell group would have been converted into a new group in which British interests would be in a clear majority. Obviously the Admiralty would have been far better off, seeing that this new British-controlled group would stand behind the Navy's contract for liquid oil, and the Government itself would be the better off by having freed itself "from the international embarrassment resulting from its large financial interest in a competitive international trade." Nor should it be forgotten that it would have secured a price for its shares far in advance of the market valuation. The sudden rise in the price of petrol, concurrent with this lucid statement issued by the Burmah Oil Company, finally disposes of that equally absurd conception that the sale of the Government's holding jeopardises the consumer's interest. The Anglo-Persian is part and parcel of the "oil ring," and the Government's shareholding in no wise prevents the Anglo-Persian from agreeing with the other oil companies to advance the price of petrol. As the Burmah Oil statement implied, the duplication by the Anglo-Persian of the capital facilities for oil distribution, in competition with the other oil companies, results in the enhancement of the price of oil, not in its diminution. These arguments are unanswerable. The Labour Government's decision no doubt arises from its susceptibility to the feelings of the rank and file, and to the general suspicion of the oil trusts which were bidding for the Anglo-Persian control. But sooner or later the fact must be faced that Governments are national while oil is international. There seems to be no escape from this logic but by way of the Burmah Oil Company's proposal.

The U.S. Oil Scandal.—The "oil scandal" in the United States, writes a correspondent, is taken much more seriously than is generally supposed on this side. It might conceivably lead to the splitting of both Republican and Democratic parties, and to the formation of a third party uncontaminated by the influence of oil. The "scandal" arises from the leasing of the Government-owned oil lands which had been authorised in the closing years of the Wilson Administration. Two of these areas—the Elk Hill reserve in California and the Teapot Dome reserve in Wyoming—were leased by Mr Fall when Secretary of the Interior under the late President Harding's Administration, without public bidding—the first to the Doheny interests (Pan American Petroleum and Transport Company), the second to the Sinclair interests. The allegations are that Mr Fall was bribed. Mr Archibald Roosevelt, the youngest son of

the late President, who resigned from the board of the Sinclair Consolidated because of his "suspensions," voluntarily testified that he had been informed by Mr Harry Sinclair's secretary of a payment of 68,000 dollars to Mr Fall's ranch in New Mexico. This allegation has been denied by Mr Sinclair's secretary, while Mr Sinclair himself cannot be questioned as he is in Europe, and, according to his secretary, has removed his private papers from his office to his home. Next, Mr Doheny has frankly admitted that he loaned Mr Fall, an old friend of his, 100,000 dollars in November, 1921, on his promissory note, to enable him to purchase his ranch in New Mexico. Mr Doheny cut off his own signature from the note and sent it to his wife. It had, he said, nothing to do with the leasing of the Elk Hill reserve. The sensation which these allegations have caused had, naturally, been exploited by the Democrats, but suddenly the Democratic Party itself became involved in the "scandal." Mr Doheny testified that he had paid a legal retainer to Mr William McAdoo, now leading contestant for the Democratic nomination, because his influence at Washington might be helpful in Mexican oil affairs. Further, Mr Doheny testified, Mr George Creel, publicity agent for the Wilson Administration, had received 5,000 dollars "to head off the granting of oil leases to Republicans after the change of Administration," and Mr Thomas Gregory had been retained by Mr Doheny's and other oil companies, after relinquishing the post of Attorney-General under Mr Wilson. A somewhat Gilbertian situation arises from the fact that Mr Gregory had been chosen by President Coolidge to act as special counsel for the Government in the prosecutions to come. President Coolidge is under no illusions as to the seriousness of the affair, and can be confidently expected to pursue these prosecutions with the utmost vigour.

Cost of the Railway Dispute.—It is impossible to make any numerical estimate of the loss to industry and the inconvenience to the general public brought about by the recent railway dispute. A few indications can, however, be given of the extent of the burden imposed on the community and on some of the parties chiefly concerned. In the week ended January 28th last the number of registered unemployed persons rose by 69,000 in consequence of the temporary discharge or suspension of workpeople on account of the dispute. The noticeable enhancement of the price of various commodities at the end of last month, again, was mainly, though not entirely, the result of the holding up of supplies, or the fear that supplies would be interrupted. In the case of potatoes, for instance, the rise was as much as 30 per cent., "King Edwards" being quoted in Southwark on January 14th at £9 to £9 10s per ton, and on January 30th at £12 to £13 10s per ton. From the returns of traffic receipts it is possible to make a rough guess at the cost of the strike to the railway companies:—

RAILWAY TRAFFIC RECEIPTS.
(Thousand £'s.)

	3 weeks to Jan. 20. Average.			Week ended Jan. 27.			Week ended Feb. 3.		
	Pas- senger	Goods	Total	Pas- senger	Goods	Total	Pas- senger	Goods	Total
Great Western	218	334	552	113	139	252	178	290	468
London & N. Eastern ..	357	658	1,015	187	362	549	289	590	879
London, Mid. & Scottish	503	847	1,350	304	608	912	431	856	1,287
Southern	273	108	381	158	59	217	212	85	301
Total	1,351	1,947	3,298	762	1,168	1,930	1,110	1,825	2,935

† Returns to Jan. 19th, Jan. 26th, and Feb. 2nd respectively.

The strike of engine-men lasted from January 21st to 29th, and would therefore affect the figures for the whole of the week ended January 27th, and for two out of the seven days ended February 3rd. The gross decline in receipts for each of the respective weeks, on the basis of the table above, works out as follows:—

	Week Ended Jan. 27.		Week Ended Feb. 3.		Fortnight Ended Feb. 3.	
	Amount of Loss.	%	Amount of Loss.	%	Amount of Loss.	%
Great Western	Thous. £ 300	54.4	Thous. £ 84	15.2	Thous. £ 384	34.8
London and North-Eastern ..	468	46.0	136	13.4	602	29.7
London, Midland, and Scottish	439	32.4	65	4.7	501	18.5
Southern	164	43.0	80	21.0	244	32.0
Total	1,369	41.4	363	11.1	1,731	26.2

STATE EXPRESS

VIRGINIA **555** CIGARETTES

MADE BY HAND, ONE AT A TIME.

Thus the falling-off in receipts would appear to have been about £1½ millions, or 25 per cent. of the average for the three pre-strike weeks. This is a gross figure, from which fall to be deducted various amounts, such as the normal weekly wages of locomotive men who failed to report for duty, and savings on running expenses owing to the curtailment of services. It should also be remembered that, while much of the decline in passenger receipts represents a dead loss to the companies, a large amount of goods traffic held up during the dispute would subsequently be moved, and may help to swell the totals for the next week or two. The total net loss to the companies may therefore be put at something from £1,000,000 to £1,500,000, which is, on the whole, a good deal less than might have been expected.

M. Venizelos Retires.—M. Venizelos has failed in his gallant attempt to heal the breach, or, rather, the many breaches, in the political life of Greece, but this failure is not so much his misfortune as his country's. M. Venizelos may console himself by remembering that he only re-entered Greek politics unwillingly, and without any personal ambitions. He returned to Athens, a few weeks ago, in patriotic deference to the pressing demands which had been addressed him by a very large section of his fellow-countrymen (by almost all of them, in fact, except the extreme Royalists and the extreme Republicans). True, the situation has been too much for him; but it was his physique which gave way, and which enforced his immediate resignation (under doctor's orders), before he had been in harness sufficiently long for his statesmanship to be pronounced, on this occasion, either a success or a failure. That verdict may now be left in suspense; and if, as seems probable, we have just witnessed the last act in M. Venizelos's active political career, we must pass judgment, if at all, in the light of his career as a whole. His work in Greece itself (after his brilliant apprenticeship in the politics of his native island of Crete) began, in 1910, with a successful reconciliation of parties, after a period of dissension and weakness in the internal politics of Greece which anticipated, on a smaller scale, the situation during the last ten years. Possibly his greatest, though not his most conspicuous, achievements were those accomplished between his first accession to power and the outbreak of the First Balkan War in the autumn of 1912. During that short space of time he effected an almost magical transformation in Greek political and social life. The old political tradition, with its personal allegiances, its "spoils" and its "rotativism," was temporarily thrust into the background in favour of constructive policies for national ends. The economic prosperity of Greece was greatly increased, with a corresponding improvement in the Government's finances. The brigands were brought to terms in the provinces which they still infested, and there was a thorough reorganisation of the army and navy, which was justified by the victories of the following years. This constructive work would have done honour to any statesman in any country, and it is M. Venizelos's misfortune that he will not be remembered chiefly in this connection. With the beginning of the Balkan War in 1912, Greece was drawn into the whirlpool in which she has since been tossed and buffeted, like many stronger and more experienced European States; and, from that moment onwards, M. Venizelos was no longer a free agent. The intrusion of an overwhelming external factor in the shape of the war does not, of course, absolve

M. Venizelos from responsibility. Undoubtedly, he is more responsible, and his Greek political opponents less responsible, for the present unhappy state of their common country than is usually believed in the Entente countries; but for that, also, it would be ungenerous at this moment to take him to task. His own countrymen, at least, would do well to call a truce in that internecine warfare which, for the last ten years, has been raging round M. Venizelos's name. If they must contend with one another, it is better to disagree with less heat and on more impersonal issues. The choice between monarchy and republicanism is momentous, and the Greek nation has not yet begun to make it on lines that will lead to an appeasement of the feud. The first requisite is the taking of a plebiscite under conditions so indisputably fair that the minority (whichever Party that may prove to be) shall have no excuse for refusing to abide by the result.

Mr Beaumont Pease on Monetary Policy.—At the last of the "big five" bank meetings, on Wednesday, Mr Beaumont Pease, chairman of Lloyds Bank, delivered an address, the main feature of which was a reference to monetary policy. After some good-humoured banter directed at Mr J. M. Keynes and his monetary theories (how, he asked, are bankers to carry out these theories if, as Mr Keynes suggests, they do not understand them?), Mr Pease proclaimed himself strongly in favour of a return to the gold standard. "I am hopeful," he said, "that we may gradually get back to our old gold standard, which, in spite of some defects and difficulties, has, as a matter of fact, worked well in the past, and still seems to me to offer better prospects in the future than any alternative." Speaking of the trade outlook, Mr Pease endorsed the views expressed by other bankers as regards trade improvement. He said: "Trade returns, export and import figures, the report of the London Bankers' Clearing House for the last quarter of the year, renewed signs of awakening demand, the trade reports from various centres which I have not included in my address, but which will be circulated separately, all contribute to the hope that better times are in store, and I gladly add my voice to what already has been said by the chairmen of other banks on this more optimistic note." Having struck this note of confidence, Mr Pease added a plea for caution in banking policy. Another point in the speech was the loyal support which he gave to the new Government, so long as they are "mindful of the interests of the whole body politic."

Irish Free State Finance.—The current number of the *Gazette*, writes our Dublin correspondent, containing the usual weekly statement of total receipts into the Exchequer, and of total issues thereout, shows that revenue is coming in well, and affords a promise of a year's revenue considerably better than was anticipated officially at the opening of the financial year. This return, when compared with the recently issued "Finance Accounts of Saorstát Eireann, for the Financial Year 1922-23," gives some indications of the state of what might roughly be termed the capital account of the Government. Revenue receipts to February 2, 1924, amount to £25,660,826, apart from balance to credit of revenue account on April 1st last of £197,112. There are still 68 days to be accounted for in the current financial year, so that, at an equal rate of incoming, the revenue for the year may reach £31,500,000. For last year the total revenue receipts, according to the above-mentioned return, were £27,863,030. This was not the true revenue of the Free State, but had to be adjusted downward in Great Britain's favour. This year's returns, on the other hand, represent actual Free State revenue which will not be subject to any such adjustment. This is made clear by the following paragraph from the Prefatory Note of the return above referred to, which is worth quoting verbatim. It contains certain corrections of figures which were issued earlier, and which were either estimates, or which have been readjusted after discussion between the British and Irish financial authorities. The system and its main features and effects are, of course, familiar to readers of the *Economist*. The paragraph reads as follows:—"In

considering the revenue figures shown in these accounts, it should be borne in mind that during the year to which they relate the severance of the fiscal system of Saorstát Eireann from that of Great Britain had not yet been effected. Consequently, it happened to a considerable extent that revenue was collected in one country which was properly attributable to the other. The accounts deal generally with revenue collected in Saorstát Eireann, without allowing for the adjustment that is necessary on the ground mentioned. A partial measure of adjustment is effected by the inclusion in Account No. VIII. (Income-tax and Super-tax) of a sum of £1,250,000, transferred from the British Exchequer, but this is offset by the transfer from the Exchequer of Saorstát Eireann of an equivalent amount to the British Board of Customs and Excise (Account No. XXII.). According to the claim made by the British Government the further adjustments necessary involve a net payment of £1,443,461 to the British Exchequer." Thus the increased revenue receipts of 1923-4 will be subject to no such readjustment downwards, and mean a very much improved revenue position. The estimated revenue for 1923-4, according to official figures published some months ago, was only £26,096,930. The *Gazette* shows a balance in the Exchequer on February 2, 1924, of £6,753,965, inclusive of moneys raised by borrowing. The recent return shows "Capital liabilities of Saorstát Eireann at March 31, 1923, resulting from net borrowings," &c., at £2,531,000; comprised of Irish Free State bills created, £2,081,000; Ways and Means Advances outstanding, £385,500; and money raised under the Telegraph Acts, £64,500. The *Gazette* shows "Money raised by creation of debt" from April 1, 1923, to February 2, 1924, at £12,606,000 under similar heads, but including the new 5 per cent. National Loan. From these, however, repayments on capital account must be deducted—they are shown on the other side of the account, and amount to £778,000. Of course, both on revenue and capital account issues from the Exchequer have been heavier this year, but almost entirely from non-recurrent causes.

Flag Discrimination.—The Chamber of Shipping of the United Kingdom has now declared its approval of the Ports Convention, by which the maritime States recently adopted the principle of according equality of treatment to ships in ports; the Convention being equivalent to an international agreement to discountenance practices involving flag discrimination. As already indicated in a previous reference to the matter (*Economist*, January 19th, page 95), the United States, though unofficially represented at the conference at Geneva at which the Convention was adopted, is not formally a party, and the Convention does not apply to coasting trade, the definition and determination of the position of which remain for discussion at some future time. Even in its present form, however, the Convention, if faithfully carried out, will (as the report adopted at a meeting yesterday by the Council of the Chamber of Shipping suggests) "stem the rising tide of flag discrimination and establish as a general rule the policy of a free sea." Undoubtedly the fact that practically all countries, other than the United States, have agreed to give equality of treatment, subject to the principle of reciprocity, is notable as showing the trend of opinion in favour of freedom of communications and transport, and the active interest of the Chamber of Shipping in the progress of this movement indicates that British shipowners intend that, if possible, the Convention shall be made effective. A good deal of persistence will be required, however, to "stem the rising tide." Although considerable effect was produced by the resolution of the recent Imperial Economic Conference emphasising the fact that it has been the established practice of the Governments of the British Empire to make no discrimination between the flags of shipping using their ports, it would appear that Australia barely escapes the charge of ignoring this principle, which, as laid down, covers coasting trade. Only a few days ago the chairman of the Glasgow Shipowners' Association called attention to the circumstance that Australia at present discriminates between her own shipping and other shipping of the British Empire by limiting her coasting trade to vessels purely Australian. France has

been an offender in regard to flag discrimination, and even now (though the French representatives at Geneva supported the adoption of the Convention) there is a "Flag Campaign" across the Channel intended to force the mercantile community to give preference to French steamers. One hopeful sign is that the support given at Geneva included that of protectionist countries, and, moreover, it is noteworthy that Lord Kysant (who, the other day, referred to Free Trade as an "impossible ideal") is one of the signatories to the Chamber of Shipping report warmly commending the Geneva convention. The plain business grounds for condemning flag discrimination are indeed very strong, and there is sound sense in the suggestion of the Chamber of Shipping "that maritime countries who intend to keep the seas free for international trade should act together, and retaliate together against every act of flag discrimination." Discriminatory practices based on national distinctions are a serious menace to commerce, and the opportunity of common action to make the Ports Convention effective should not be allowed to pass.

The Balance of Trade.—The Board of Trade has issued its estimate of invisible exports for the year 1923, the only change in comparison with that of 1922 being in respect of net income from overseas investments, which is reduced from £175 to £150 millions. The official figures are as follows:—

(In million £.)

	1907.	1910.	1913.	1920.	1922.	1923.
Excess of imports of merchandise and bullion	142	159	158	343	170	203
Net income from overseas investments	160	187	210	200	175	150
Net national shipping income	85	90	94	340	110	110
Commissions	25	25	25	40	30	30
Other services	10	10	10	15	10	10
Total "invisible exports" on balance	280	312	339	595	325	300
Available for investment overseas	138	157	181	252	155	97
New overseas issues on London market in year	91	207	198	53	135	136
New overseas issues on London market in following year	142	166	159	116	136	...

Net income from overseas investments in 1922 was put at £175 millions, after allowing for £25 millions paid on account of the debt to the American Government. In 1923 about £50 millions have been paid for interest on and principal of that debt, including payments in respect of the "Pittman silver." It is pointed out that probably the whole of the overseas issues on the London market during the year was not taken up by British investors; but, on the other hand, at some periods of the year there was considerable purchasing of American and other securities on British account, though it cannot be said whether this was permanent or temporary investment. The balance available for overseas investment, it is stated, includes not only the amount actually invested, but also any sales to overseas countries on long credit outstanding at the end of the year, so far as such credits exceed the corresponding amounts of a year earlier.

Stock Exchange Activities.—A Stock Exchange correspondent writes:—"The Stock Exchange is too busy to do more than canvass in a casual manner the prospect as it appears at present for their markets under the new Government. Nevertheless, an intense curiosity waits upon the opening of the Parliamentary session next week. Brokers and jobbers find that they have so much to do in a good many markets of the House that their concern is mainly to get through the work of the day. Conditions are rendered none the less easy by the influenza epidemic, and the advent of the Stock Exchange New Year, at the end of next month, which calls for a certain amount of attention in the way of settling-up innumerable details. The volume of business which, in the ordinary way, would have come in January, but which was checked by the political uncertainty prevailing at that time, is now in full flow. It is stimulated by the greater willingness on the part of the public to invest their money, feeling, as they do, that the new Cabinet is not likely to attempt anything sensational or drastic in the way of legislation, at any rate for some time to come. Forecasts of the Budget prophesy that Mr Philip Snow-

den, Chancellor of the Exchequer, will discreetly leave Capital Levy alone in his first effort, and will content himself with making a small addition to the income-tax, under cover of necessities that arise out of unemployment and housing problems. The increase in national trade, to which so many references have been made at bank and other recent meetings, is not sufficiently marked at present for it to absorb any such large amounts of capital as would render it necessary for money to be withdrawn from existing securities. People see this, and, rather than leave their money on deposit at the banks, they are eager to take sound stock on a five to six per cent. basis of yield wherever it is offered, though showing a certain amount of discrimination in their selections. The amount of stock on offer contracts weekly; prices steadily mount, in consequence. It is once more becoming difficult to obtain first-rate preference shares in industrial concerns that pay a round 6 per cent. on the money. Anything over this rate of interest is coming to be regarded as inferring a certain amount of speculation in the security from which a higher return can be drawn. If the income-tax is to be increased, the broad tendency, as shown by experience, will be to encourage speculation at the expense of investment pure and simple. The argument, fallacious enough but very popular in favour of speculation, is that on profits which are made out of dealing in stocks and shares, no income-tax is payable, whereas a heavy income-tax, in days of high costs of living, renders it impossible for the ordinary person to rest content with the yield obtainable from 5 per cent. gross. There is, however, no indication at present in the Stock Exchange of investment being ousted by speculation, for both are showing a robust tendency, and the activity in oil shares due to successive American rises in the price of petrol redirects attention to that market in a manner which the public find irresistible. Mining shares would probably be more popular than they are were it not for the fact that the high prices of gold and tin appear to act as a red lamp in the eyes of the ordinary mining operators who have seen how quickly the price of these metals can fall after a long and substantial advance has taken place. The cautiously cheerful talk about national trade improvement, already mentioned, is leading to advances in the shares of industrial companies dealing with iron, coal, shipping, textile and road-making, while the hope of Russia re-entering the arena of important customers is responsible to some extent for the rises in tea shares. The public are also buying banking and insurance shares, the difficulty in these two markets being to obtain the stock that is demanded, for there is little about, and holders are not disposed to part with good shares even at the advanced prices.

Shipping Freight Index.—The upward movement in our index of shipping freights, which came nearly to a halt in December, was renewed last month with accelerated progress. The index figure for January, 136.25, represents a rise of 4.75 per cent. on the month, and restores the level of freights to that of December, 1922, i.e., before the occupation of the Ruhr. The movements of the component parts of the index are shown in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	629.89	757.52	744.81	587.02	712.16	690.95
December.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
July, 1923.....	132.42	107.20	118.67	122.44	126.10	114.83	120.28
August.....	124.79	109.11	114.33	117.70	117.51	115.73	116.53
September.....	129.83	112.36	116.28	117.77	118.44	124.63	119.88
October.....	133.66	125.46	114.03	119.38	124.40	136.05	125.49
November.....	141.24	135.32	114.64	122.68	124.49	137.89	129.38
December.....	134.03	132.72	120.09	124.35	125.07	144.21	130.08
January, 1924.....	130.69	137.49	128.33	124.88	139.45	156.68	136.25

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100

representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade.....	123.47	- 5.88	S. America—outwards ..	93.61	- 3.88
Bay—outwards	139.45	- 0.52	homewards ..	163.04	+ 20.36
homewards ..	154.84	- 3.22	India—outwards	109.98	- 6.02
Mediterranean—outwards ..	123.87	- 2.98	homewards ..	140.29	+ 7.10
homewards ..	119.05	- 1.12	Far East, &c.	139.45	+ 14.38
North America	137.49	+ 4.71	Australia	156.68	- 12.47

A further fall in outward rates occurred in January, to which the railway strike contributed. In particular, abnormally low figures were accepted for carriage of coals to the Plate, prospective rates for early sailings homeward in that trade being high enough to attract tonnage even in ballast. The comparative levels of outward and homeward freights are now markedly discrepant. Thus the average of the homeward indices is roughly 146, in contrast to 111 for outward coal. The economic reason for this divergence is not obvious, nor is it safe to assume that these figures represent a permanent post-war readjustment of trade. The month was signalised by insistent demand for grain-tonnage from the Argentine at rising prices. Grain chartering from Australia also was effected at better figures, and the entry of Burmah rice-shippers into the market assisted matters generally in the East. Trade in routes nearer home was disappointing. Apart from the weakness in coal freights already mentioned, demand for vessels homeward from the Mediterranean and Bay scarcely equalled supply. It is, perhaps, a matter of conjecture whether the considerable amount of tramp tonnage recently recommissioned is not beginning to overweight the market. Should this be so (it is by no means certain) the next groups to be affected, after European Waters, would, in accordance with past behaviour of our index, be North and South America. The relation of the index to the average for 1913 may be seen from the following table:—

	(1913 = 100.)			
Month.	1921.	1922.	1923.	1924.
January	194.59	131.60	114.05	117.11
February	164.54	135.76	112.73	..
March	162.17	135.53	115.23	..
April	147.48	129.46	115.45	..
May	158.42	125.12	114.55	..
June	165.73	117.45	106.82	..
July	169.87	114.52	103.39	..
August	170.60	113.16	100.16	..
September	154.47	110.37	103.04	..
October	141.85	114.42	107.86	..
November	136.47	119.43	111.21	..
December	134.66	117.39	111.81	..
Mean for year	158.40	122.02	109.69	..

The January figure is well above the mean for last year, and not far below that for 1922.

Trade Union Figures and Funds.—The statistical summary of the Chief Registrar of Friendly Societies showing the operations of registered trade unions for the years 1912-22 (H.M. Stationery Office, 6d net) contains much interesting material. It shows that the trade union movement reached the peak of its prosperity as regards both membership and funds at the top of the trade boom, namely, in 1920. Trade union membership at the end of 1912 was 2,561,885, the number of unions being 607. Membership rose steadily until a total of 6,981,750 was recorded at the end of 1920, since when there has been a marked falling off, the total dwindling to 5,506,490 at the end of 1921 and to 4,559,167 at the end of 1922. Funds show a similar movement, though the payment of dispute and other benefits has made for more irregularity. At the end of 1912 total funds were £5,622,348. By the end of 1920 the total had increased to £15,974,799. The coal stoppage of 1921 reduced the total to £10,950,118 at the end of that year, and by the end of 1922 a further slight fall to £10,008,064. The following table shows the changes in the funds of some of the principal unions:—

	Beginning of—		End of
	1921.	1922.	1922.
Mining, &c.	1,330,478	11,166	533,585
Metals, &c.	6,107,751	4,184,955	2,582,494
Textiles	1,464,876	958,839	1,133,083
Papermaking, printing, &c.	373,215	353,705	424,970
Building, &c.	1,063,715	584,340	776,654
Transport	2,644,500	2,139,962	2,308,578
Clothing	448,381	408,624	428,912

The amount spent by the mining and quarrying group in dispute benefit in 1921 was £1,981,614, and by the metal group in 1922 £446,506. The total amount spent by all unions in unemployment, travelling, and emigration benefit in 1922 was £8,654,247, as against £15,149,636 in 1921, and on dispute benefit £1,133,085 in 1922, against £3,426,696 in 1921. Income from members was £8,865,344 in 1922, against £11,314,400 in 1921, while allowances from the Ministry of Labour were £5,448,721 in 1922 and £7,831,797 in 1921.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that January was very wet, and unfavourable for agriculture generally, but conditions improved towards the end of the month. Large areas of low-lying land were flooded, whilst heavy land was waterlogged. Autumn-sown crops made very little progress, and in some cases show signs of damage. Much dry fodder had to be fed to live stock to keep them in condition. Ploughing is backward in all parts of the country as a result of the wet weather. During January cultivation was practically at a standstill except on the lightest lands, although in some northern districts and in the south-west, fair progress was made during the latter half of the month. In other parts of the country the land dried to some extent towards the end of the month, but heavy land was still too wet to work. Winter corn has made little progress during January, and is generally backward. Winter oats have withstood the bad weather rather better than wheat, and are generally fairly promising, though white varieties were damaged by the frosts. Winter barley is very variable, and many plants are rather thin and weak, especially the later sown. Beans are a good, strong plant as a rule, but in some districts in the eastern counties the seed has lain rather long in the ground and germination is not very satisfactory. In spite of the wet weather ewes have kept healthy, and are generally in good lambing condition. There is a little fluke in some districts, but, considering the wet summer, ewes have kept very free from this disease. Lambing prospects are everywhere satisfactory, and where lambing has commenced the fall so far has been up to average. The lambs have come strong and have done fairly well, as the ewes are giving a good supply of milk. There have been comparatively few losses, except in isolated cases. In most districts there appear to be rather more breeding ewes than last year. Owing to the unfavourable weather conditions, there has not been much demand for casual labour, and consequently there has been rather more unemployment amongst this class of worker.

Imports of Cattle.—There were 61,949 live cattle imported in 1923, being 12,394 more than in 1922. All of them came from North America, but whereas the number from the United States decreased by 13,063, the number from Canada increased by 15,822. The animated discussion about "opening the ports" for the admission of Canadian cattle, the screaming agitation in the Press, the introduction of the subject as a political issue at a bye-election, and the consequent defeat of a Minister, all now appear rather overdone in the light of the cold facts. The ports were opened in April last, and the net result is that altogether 27,665 cattle described as stores were received up to the end of the year. Indeed, as none were received during January, this figure represents the imports for ten months. As a matter of fact, about 40 per cent. of the cattle consigned as stores were found to be fat, and were killed on landing, so that the number of stores actually entering the country was only about 15,000. Those, including the Royal Commissioners, who predicted an importation of 200,000 annually, as well as those who predicted a reduction in the price of beef as the result, will apparently have to wait a long time for the fulfilment of their prophecies. Agricultural affairs, however, have always been fecund in the production of false prophets. Students of the trade returns have scarcely as yet become familiar with the classification of goods coming from Southern Ireland as imports instead of home products. Fortunately, in the case of shipments of live stock, returns are issued in which the exports from Ireland as a whole are given. It is thus still possible readily to com-

pare the present returns with those of previous years. The following were the imports of cattle from Ireland in the last three years, compared with those in 1913:—

	Fat Cattle.	Other Cattle.	Total.
1913	354,953	754,668	1,109,621
1921	377,080	391,411	768,491
1922	421,493	558,046	979,539
1923	284,308	529,174	813,482

The reduction last year as compared with 1922 was partly attributable to the dislocation of trade caused by the dockers' strike in Ireland and to the restrictions on the movement of cattle in Great Britain consequent on the outbreaks of foot and mouth disease. It is notable that the falling off was much greater in the case of fat cattle than in that of "other cattle," which are mainly stores.

The Underground Dividends.—The dividend announcements made this week by the Underground Electric Railways group were much in accordance with market expectations. The following table sets out the rates in comparison with those of the previous year:—

	Final Dividends. Rate % per Annum.		Dividend for Whole Year. Per Cent.		To Reserve	Carried Forward.	
	1922.	1923.	1922.	1923.	1923.	1922.	1923.
Central London (Def. Stock) ..	4 1/2	4 1/2	4 1/2	4 1/2	£ 49,000	74,411	94,728
London Electric (£10)	4 1/2	4 1/2	4 1/2	4 1/2	£ 65,000	73,842	111,357
City and South London	4 1/2	4 1/2	4 1/2	4 1/2	£ 36,000	27,864	28,783
London General Omnibus	9 1/2	9 1/2	9 1/2	9 1/2	£ 375,000	71,942	64,641
Met. District, Ord.	5	5	5	5	£ 65,000	77,075	84,068
Do 5% and Pref.	6 1/2	6 1/2	6 1/2	6 1/2	£ ..	47,799	95,620

¹ Paid free of income-tax.

The dividends for the full year paid by the three tube railways show no change at 4 per cent. each, but substantial increases are made in the amounts carried forward by the Central London and the London Electric. Chief interest has been centred on the Metropolitan District, whose total distribution is 1/2 per cent. higher at 3 1/2 per cent., a small addition being made at the same time to the carry forward. The London General Omnibus pays 9 per cent. for the year, as against 8 1/2 per cent. for 1922, both free of income-tax. The 6 per cent. Underground Electric Income bonds receive the full 6 per cent. free of income-tax for the first time since 1916, and the balance forward is very substantially increased.

The Outlook for Non-Ferrous Metals.—The non-ferrous group of metals this week has shown conspicuous activity and strength. Statistically the position is very sound. The latest returns show that copper stocks in this country are down to about 30,000 tons, mostly rough copper, tin supplies have been reduced to 2,850 tons, zinc stocks stand at 1,088 tons, and there is now only 300 tons of pig-lead in the public warehouses. In view of the Government schemes for building houses and in other directions, these supplies are exceedingly small, and with users everywhere only lightly covered, firm markets are likely to continue. Copper has been rather uncertain, but began to harden up again late in the week, while tin was very strong, with a large business done in both cash and forward at over £260. Cash and nearby positions showed marked firmness, and transactions were carried out at fully £3 premium on the more distant dates, £264, and even more, being paid where warrants were wanted. Compared with the final values for last year, this commodity shows an average gain on the year of close on £30 per ton. There is not much tin on offer; America has been a very eager buyer, and the Eastern markets after the Chinese New Year holidays were firm, with sales at over £260. The increase of over 2,500 tons in the visible supply for January has been ignored. Lead has again been working forward, and supplies are decidedly short. Business has been done in current month at over £33 per ton, and there is now a backwardation of over 20s per ton. Zinc has been firm, but not especially active. Nearby positions have been sold at well over £35, and with users only lightly covered the outlook favours better markets. Antimony continues very strong, with English quoted at £55. The market for Chinese regulus continues to advance, and rates now range from £42 upwards. The feeling in regard to non-ferrous metals is now much better than it has been for a long time past,

and expectations that the demand from consumers will expand considerably over the next few months seem to be based on quite sound reasoning.

Cotton Trade Control Scheme.—Our Manchester correspondent writes:—Important developments have taken place this week in connection with the proposed control scheme in the American spinning section of the cotton industry. The original suggestion was that the whole of the industry should be controlled, but the weaving branch and spinners of Egyptian yarns refused to entertain the idea. Latterly attention has been centred on a scheme to be confined to the spinning mills using American cotton. There has seemed to be a chance of something being done, but the movement has met with a setback owing to the decision of cloth manufacturers to oppose certain items in the scheme. The draft proposals formulated by the Cundiff Committee of employers and trade union officials provides for an application to be made for a grant of £250,000 to spinners of American yarns from the Cotton Trade War Memorial Fund. Weaving employers object to this suggestion, and they have also decided to oppose the Government's sanction of basic prices for yarn. Everything at the moment is in the melting pot, but it is expected that important decisions will be reached at a further meeting of the Cundiff Committee to be held on Monday next. If the suggested scheme should receive the support of the Government it will mean that one section of the industry will be protected and spinners will not be allowed to sell yarn below certain prices fixed by the Control Board. It is held that a policy of this kind would be a distinct hardship to cloth manufacturers, and it is estimated that in order to stop losses there would have to be an increase in yarn quotations of 3d a pound. This would result in prices for cloth being raised 10 per cent. Naturally makers are realising that in the circumstances it would be more difficult than ever to secure orders, as already foreign trade is being restricted by the high level of values. It remains to be seen whether spinners of American yarns will endeavour to work the scheme on a voluntary basis, but it is feared that if this is attempted there will be sufficient firms outside the movement to prevent success.

More Rand Financing.—It may be recalled that the Modder East, a Far Eastern undertaking whose experience has so far proved most disappointing, has for some time past followed the policy of opening up only the more promising sections of the mine and of crushing ore above the average of the reserves for the purpose of providing funds for repayment of the debentures. Mainly as a result of the latter proceeding, only £100,000 of bonds were outstanding on December 31st. Developments having recently proved more encouraging, the directors propose to put the concern on its feet by a financial reorganisation. In place of crushing at the Apex Mill of the New Kleinfontein Company—which naturally enhances the costs—the company is to erect a modern reduction plant of 50,000 tons monthly capacity, and to carry out an extended development programme. To provide the necessary funds an issue of £465,465 6 1/2 per cent. debentures will be made; out of which the balance of the existing issue is to be redeemed. As regards the share capital, the members will be given two new shares in exchange for every five now held, the ex-enemy shares being annulled; during four years from date of issue the debentures will be convertible into shares at par. The project has not been favourably received in the market, although—as pointed out in a "Note" some time ago—a drastic scaling down of the capital would have to be faced sooner or later.

French Statistics.—Our Paris correspondent writes:—Students who follow French statistics should be warned against two possible sources of error which may cause a good deal of confusion both now and in the future. In comparing official figures concerning French imports and exports for the past year, striking discrepancies will be noted between figures published from time to time in the *Journal Officiel* during 1923, and similar figures issued by the Ministry of Finance more recently. The differences are largely due to fresh methods of valuation

of exports having been adopted recently, which have had, incidentally, the effect of reducing the amount of the apparent adverse balance against France. In the more recently issued official figures, the earlier comparative returns appear to have been adjusted to the new system, which may account for the striking discrepancies between figures recently published by certain leading English newspapers and those now officially announced by the French Government. A similar discrepancy exists in regard to the French index figures. These are now based on 100 as representing prices in July, 1914, whereas down to November last the base was 100 for the period 1901-1910. All figures must be read in the light of these important modifications (which, of course, render exact comparisons impossible, but which, in the circumstances, must be accepted).

Empire Cotton.—At a time when Lancashire's difficulties are probably more severe than at any previous period in its history, the decision of the Empire Cotton Growing Association to publish a quarterly record of its activities will commend itself to all students of industrial affairs. The initial number of the new review* contains an outline of the events leading to the establishment of the corporation, by Royal Charter, in 1921, and also, *inter alia*, a description of the work of the Imperial College of Tropical Agriculture by Sir Francis Watts, articles on cotton growing in Tanganyika, and some excellent statistics compiled by Prof. J. A. Todd. The genesis of the present corporation can be traced back to 1902, when the British Cotton Growing Association was formed at the instance of the Manchester and other Lancashire Chambers of Commerce, and leading West African merchants of Liverpool. Although its efforts had so far borne fruit that by 1921 165,000 bales of cotton were produced by territories which exported little or none in 1902, it was felt that development on anything like an adequate scale required some form of public assistance. In 1917 the President of the Board of Trade set up a committee representative of both Government departments and the trade, the outcome of the Committee's exhaustive inquiry being the setting up of the present corporation as an information and spending department without Treasury control, but under the direction of its Finance Committee. The corporation's income is derived in part from a capital contribution of nearly one million pounds by the Government, and an obligatory levy on all spinners of sixpence per standard bale of cotton purchased in this country. The potentialities of the corporation's work are, of course, immense. As far as we can ascertain, Uganda produced, in 1922-23, .5 per cent. of the world's cotton, Nigeria .08, Tanganyika .04 per cent., and South Africa and Australia each .01 per cent. As the editor of the *Review* points out, however, the value of the work initiated can only be judged after some years have elapsed. All agricultural departments and cotton experiment stations have been asked to assist by sending reports of results obtained from each kind of seed, the nature of the soil, and climatic conditions, together with statistics of acreage, yield, and ginning output. It is intended to include in the journal an authoritative record of all current statistical data on cotton cultivation in its broadest sense, special attention being paid to legislation bearing on the subject, and other cognate matters.

The League of Empire Public Economy will hold a public meeting in the Essex Hall at 4.15 p.m. on Monday, February 11th. The speakers will include Earl Beauchamp and Sir Donald Maclean.

The Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, February 12, 1924, at 8.30 p.m., at which a paper on "Group Settlement in Western Australia" (with lantern illustrations) will be read by the Hon. H. P. Colebatch, C.M.G., Agent-General for Western Australia. The Right Hon. Sir William Ellison-Macartney, K.C.M.G., will preside.

UNITED STATES.—SENATE INVESTIGATION INTO OIL LAND LEASES—MONEY EASIER BOND MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 25.

INTEREST has centred very largely this week in the United States Senate Committee's investigation into the naval reserve oil land leases made some time ago by a former Secretary of the Interior to two of the largest oil companies in this country, namely, the Pan-American Petroleum Company and the Sinclair Consolidated Oil Company. The testimony, which contained sensational disclosures, and which has probably been cabled to your side in some detail, has created in the public mind here a bad impression, to say the least, and indications are that strong efforts will be made in Congress to cancel the leases. Such action would have a far-reaching effect, and would prove a serious matter to both companies, although more so to the Pan-American than to the Sinclair interests. The lease to the Pan-American Petroleum Company was made in December, 1922, for a term of 20 years, or so long as production proved profitable, and covered what is known as Naval Reserve No. 1 in California, comprising more than 30,000 acres. Testimony submitted to the Senate Committee showed that the Pan-American Company has already spent \$22,000,000 in developing the property, and that it will have expended \$48,000,000 within a year, directly or indirectly, in connection with that reserve; the company, furthermore, has been basing its future largely upon that lease, the Committee was told, especially in view of the lessened production of light oil in its Mexican fields. It is quite evident, therefore, that abrogation of its Californian lease would be a serious development for the Pan-American Company and holders of its securities. Cancellation of the Sinclair lease of the Teapot Dome Naval Reserve in Wyoming would also be a severe blow to that company, although the latter reserve has thus far proved disappointing; according to a recent estimate made by Government experts, the lands comprised in that lease have an oil content of only 25,000,000 barrels. Under heavy selling pressure, induced by the facts revealed in the testimony and by the possibility of Congressional action as indicated, both companies' shares broke sharply in the stock market, an additional depressing factor in the case of Pan-American issues being the complete cessation of its production in Mexico owing to revolution there, although late advices state that some of its Mexican properties have been able to resume operations. Other oil shares have held comparatively steady or have advanced moderately in response to the further improvement in the domestic oil trade and industry, as evidenced by the continued rise in prices of crude and refined petroleum and decrease in production of crude.

The recovery in crude oil prices has been very rapid. During the past six weeks Pennsylvania crude has been advanced eight times. It is now quoted at \$4.25 in the Bradford district, thus equalling the peak price of last year, which was reached in February. The upward tendency is due largely to the mild, open winter thus far experienced in the East, which has resulted in an exceptionally heavy consumption of gasoline and lubricating oils, and has increased the demand for Pennsylvania crude oil, used extensively in the manufacture of lubricants.

The most noteworthy development this week in the financial situation was the further easing of time money rates, which are now quoted at $\frac{1}{4}$ per cent. bid and $\frac{1}{2}$ per cent. offered for all maturities on both mixed and all-industrial Stock Exchange collateral. The decline is regarded as seasonal, and is due to increased supplies of surplus funds and light demand for accommodation. Call loan rates have held at 4 per cent., with abundant offerings in the outside market at $\frac{3}{4}$ per cent. Broker's borrowings for stock-market purposes continued small in volume. The Federal Reserve banking position has become stronger. The system's ratio of reserves to note and deposit liabilities advanced this week to 80.4 per cent., as compared with 80.1 per cent. last week and

76.5 per cent. a year ago. The present ratio duplicates the previous high point reached on August 9, 1922, and, with that exception, is the highest level recorded since the spring of 1917. Combined cash reserves of the 12 Federal Reserve banks now amount to \$3,271,585,000, a new high record, and exceeding legal requirements by \$1,745,000,000, the latter sum also being a new high record. Total holdings of discounted bills stand at \$540,778,000, as against \$569,735,000 last year at this time. During the past two months loans have decreased \$205,410,000, or approximately 25 per cent., whereas in the corresponding period a year ago the decrease was only about \$44,400,000, or 7 per cent. That heavy shrinkage of loans has forced regional banks into the investment market. An outstanding feature of the Federal Reserve bank weekly statements during the past month has been the unusually rapid retirement of Federal Reserve notes in circulation. On December 26th the total in circulation was \$2,340,375,000; on January 23rd the amount was \$2,049,834,000, showing a reduction of \$291,000,000 in four weeks. The exceptionally strong banking position, as disclosed by the reserve ratio, has revived talk of a possible lowering of rediscount rates by Federal Reserve banks. While there has been indication that such action is contemplated in the near future, it may be recalled that when the New York Federal Reserve Bank reduced its rate to 4 per cent. in June, 1922, the combined ratio for the entire Federal Reserve system stood at 79.1 per cent., or somewhat below the present ratio.

The drop in money rates accounts in a measure for the continued broad and active demand for bonds at rising prices. Trading has been on a heavy scale this week, embracing practically all descriptions of investment and speculative issues.

FRANCE.—NEW FINANCIAL MEASURES—PROHIBITING IMPORTS—IRON AND STEEL OUTPUT—COAL.

(FROM OUR CORRESPONDENT.)

PARIS, February 6.

THE Government's new financial proposals, by which it is expected to balance the Special Budget (or Budget of Recoverable Expenditure) are being steadily forced through the Chamber, although progress is much slower than M. Poincaré's original programme foresaw. Last week, after deciding (as a side issue) that all dossiers connected with claims for war losses exceeding 500,000f should be revised, in view of the terrific scandal that has developed in connection with the restoration of the devastated regions, the Chamber went back on its decision, and raised the minimum figure at which the coming searching investigation shall begin to 1,000,000f. In view of the manner in which claims are alleged to have been inflated, it is confidently expected that even with this important modification a substantial number of milliards will be recovered from industrialists and others who have received more than just compensation from the State. This highly inflammable subject once out of the way for the time being, the House took up on Monday the first of the series of Bills whose object it is to place French credit on a better footing. This is the measure proposing that the Government shall be authorised, by simple decree, to effect reforms in the various public services by which a saving of 1,000 million francs a year can be effected.
