French Coupons.—With reference to the French decree of September 16, 1924, by which it was decided that from January 1st next the foreign holders of securities of which the coupons are payable in France must present an affidavit for encashment thereof, we are officially informed that this measure does not affect in any way the payment of the coupons payable in London of any French securities dealt in on London Stock Exchange. These coupons will be paid exactly heretofore. As regards the affidavit mentioned above, for coupons payable in France, this will be delivered by the French Consuls. The cost has hitherto been £1 2s 6d, but it will in future be delivered free of charge.

A PUBLIC lecture on "Object Lessons of the Bolshevik Revolution" will be given by Dr Charles Sarsalea at the London School of Economics on Thursday, November 27th, at 5 p.m. Admission will be free and without ticket.

At a meeting of the Institute of Actuaries, Staple Inn Hall, W.C. 1, on Monday, November 24th, at 5 p.m., a paper on "The Value of a Deferred Annuity," with special reference to the valuation of mineral property, will be submitted by Mr C. Carpmal.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Monday, November 24, 1924, at 8.30 p.m., when an address on "The Links of Empire" will be read by the Right Hon. Sir George Foster, G.C.M.G. The Right Hon. the Earl of Selborne, K.C., G.C.M.G., will preside.

Oversea Correspondence.

UNITED STATES.—ELECTION RESULTS AND BUSINESS CONFIDENCE—SECURITIES ACTIVE AND BUOYANT—COTTON REPORT—COMMODITY PRICES—STEEL TRADE IMPROVING.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 11.

In financial and business circles throughout the United States confidence in the future has been greatly increased by the overwhelming Republican victory in last week's national election. The crushing defeat of the third party and the radical policies it sponsored, was one of the most important and reassuring features of the election. Senator La Follette, who headed that party as a candidate for the Presidency, carried only his own State of Wisconsin, with its 13 electoral votes. Another highly important result is that the Republicans have materially increased their strength in the House, and to a lesser degree in the Senate, which indicates that the Administration will have control of the House of Representatives, and a somewhat better prospect than in the present Congress of controlling the Senate.

With the political atmosphere thus cleared, and in such decisive fashion, the most important factor in the domestic situation, which for months past undoubtedly retarded the revival of trade and industry in this country, has been removed, with the result that the exceptionally strong underlying influences which existed before the election are now receiving, if anything, more attention, and seem to furnish a sound basis for expecting a general expansion of business in all directions. The unprecedented volume of railway traffic, large and profitable harvests, ample credit facilities, the marked change for the better in the European situation and outlook, together with the fact that merchants in this country in practically all lines of trade and industry have for a long time past been operating conservatively by purchasing only for well-defined needs, avoiding accumulation of burdensome supplies, and eliminating undue speculation in their undertakings—these are among the factors that are likely to play a most important part in bringing about real and sustained prosperity. Sufficient time has not elapsed to gauge accu-

rately the immediate effect of the election upon trade and industry as a whole, although it is probable that many orders, notably for steel, tentatively placed before election, and contingent upon a satisfactory outcome thereof, are now being confirmed, and that many plans and contracts are no longer being held in abeyance.

On the Stock Exchange the response to the Election results was immediate and spectacular. Trading has been, and continues, on the largest scale witnessed at any time in the past five years. On Friday of last week transactions exceeded 2,300,000 shares, and in the two-hour session on Saturday amounted to nearly 1,500,000 shares. This week the daily turnover has been well above the two-million share mark, and to-day closely approximated 2,500,000 shares. The outside public has entered the stock market on an extensive scale; buying orders have poured into commission houses from all sections of the country, and their facilities as well as those of the Exchange are being overtaxed to handle the rush of business. Under the flood of buying orders from many sources prices throughout the list have scored sensational advances to new high levels for this year, and in many instances to record high levels for a number of years, while some shares established absolute record prices. Railroad shares have led the vigorous rise, and have figured in transactions to a greater extent than have industrials, although demand for the latter has increased materially in the past day or two. Bonds of all descriptions, but especially railroad issues, have likewise displayed increased activity and strength, although the rising tendency has been checked lately by an advance of about ½ of 1 per cent. in rates for time money.

Commodity prices continued to advance in October, the average level showing the fourth successive monthly increase from the low point of the summer recorded on July 1st. Bradstreet's index number as of November 1st is \$13,3499, representing a gain of 2.7 per cent. over that of October 1st and of 9.1 per cent. from the July 1st figure. As compared with November 1st of last year, the present index number is 1.7 per cent. higher, but 4.2 per cent. below the high point of last year, which was reached on March 1st. It is, however, 25.7 per cent. above the low point registered on June 1, 1921, after the deflation of 1920.

During October the United States Steel Corporation enjoyed a further increase in forward business, the total of unfilled orders on its books at the end of last month, amounting to 3,525,270 tons, an increase over September 30th of 51,490 tons. Although this gain is less than one-third of the increase reported for the preceding month, it is considered encouraging since production and shipments were larger last month than in September and August, and shows that the improvement which began in midsummer has continued. The total of unfinished business on October 31st is the largest reported since the end of last May, when the corporation had 3,628,089 tons in unfilled orders on its books, and compares with 4,672,825 tons on October 31, 1923. Last month United States Steel's plants were operated at about 63 per cent. of capacity, while operations at its finishing mills were somewhat above that figure, probably exceeding 64 per cent. Shipments in October are estimated at considerably more than 900,000, and incoming business at 1,000,000 tons or more. At the present rate of operations, which has not changed materially since the end of October, the corporation has enough forward business to last for four months, approximately. Indications point to another increase in orders this month, and the outlook for the remainder of the year is regarded as favourable.

The Government estimate of the cotton crop, on November 1st, and the Census Bureau's report on the amount of cotton ginned to that date were both larger than had generally been anticipated. Evidently weather conditions

during the last two weeks of October were unusually favourable in most sections of the cotton belt, for the Department of Agriculture placed the condition of the crop, on November 1st, at 55.9 of normal, as against 54.7 per cent. on October 18th. The condition on the first of this month compares with 53.5 on October 1st, and 47.8 on October 25th a year ago. The indicated crop is figured at 12,816,000 bales, which, if realised, would exceed last year's yield by more than 600,000 bales, and would be by far the largest crop produced since that of 1920. It would be more than 4,800,000 bales greater than the exceptionally short crop of 1921. Up to November 1st conditions generally favoured the opening and picking of the remainder of the crop that had not been harvested on October 18th, and in most States the late bolls matured. According to the Census Bureau, the amount of cotton ginned to November 1st totalled 9,694,920 running bales, counting round bales as halves, which is considerably larger than the trade had expected; it compares with 7,600,826 bales reported ginned to October 18th, and 7,556,042 bales to November 1st of last year. In sharp contrast with the extensive decline in prices following the previous Government report a fortnight ago, the cotton market this week has displayed increasing strength, despite the larger crop now indicated. Futures especially have scored substantial advances, under active buying for both domestic and foreign spinners, together with speculative purchases for long account, and considerable hasty covering by shorts. Various factors are considered responsible for the upturn, including some improvement already noticeable in the cotton goods trade, which has been acutely depressed for months, and expectations that the increased confidence created by the election results will serve to stimulate business in cotton textiles, as in other industries.

FRANCE.—BUDGET—REINSTATEMENT OF RAILWAY STRIKERS—REVENUE—FOREIGN TRADE. (FROM OUR CORRESPONDENT.)

PARIS, November 19.

THE general discussion on the Budget proposals has now been completed in the Chamber, and we have it on the authority of M. Auriol, the President of the Finance Commission of the Lower House, who is, of course, a strenuous partisan of the Government, that M. Herriot is determined, at any cost, to force the Bill through both Houses before the end of the year. This is a consummation devoutly to be wished, as it will enable the deadly system of votes on account to be avoided, and the new financial year to be a complete one in every respect, extending from January 1st to December 31st. As far as can be seen, there is no serious obstacle likely to prevent the Government from carrying out its determination. M. Herriot appears to have now got his heterogeneous following into something like order, and the many "wild men" who rode into the Chamber on the tide of his victory last May have had time to realise, like the Labour Party in England, that the actual possession of power has a very sobering effect on the undisciplined mind. M. Clementel's "national financial inventory," which, it is alleged, will be a preliminary step to a serious reorganisation of the nation's finances, has not yet been published, but is expected to be in the hands of the deputies within a few days. With this as a basis, the Herriot Government may be expected to put forward several very striking examples of efforts to modify the national system of taxation, but it is impossible that these can be brought into practical form before the Budget proposals for 1926 are ready for submission to the Chambers.

The strenuous opposition offered by the railway companies to the demand of the Government that they should reinstate the thousands of men who were dismissed as the result of the 1920 general railway strike has led to significant developments. Now that the Amnesty Bill has reached the Senate, M. Herriot has realised that to compel the companies to take back, unconditionally and *en masse*, the men who undoubtedly gave them enormous trouble and threatened to make the carrying on of the railways impossible, would be to go too far. The Senate Commission who considered the Bill sent up from the Chamber went so far as to recommend that the rein-

statement of the strikers should be made optional on the companies, and not compulsory, as the Lower House proposes. This was rejected by a vote of 165 against 135, but in the end a text was drafted which, while apparently endorsing the Chamber's view, yet leaves a door open for the companies to be able to avoid having to reinstate obvious undesirables. Meanwhile, the railways are faced with the fact that they are almost certain to be required in the near future to increase their wages bill by something like 1,000 millions a year. The last revision of tariffs upwards showed that, so far as passengers are concerned, the limit has been reached; thousands of people who formerly travelled first-class now take second-class tickets, and, what is more serious, the number of passengers has fallen off by 12 per cent. The additional labour cost can therefore only be recouped by an appreciable rise in goods rates. This must necessarily have the effect of again increasing the cost of living, but, as has already been pointed out more than once, no serious movement exists in France against the comparatively enormous high commodity prices now ruling, and it is expected that increased transport charges will be accepted without exceptional difficulty.

The revenue returns for October indicate that the yield from taxation during the month was enormously higher than has ever before been recorded. The total revenue from all sources was 3,047,031,500f, as compared with 2,015½ millions in September, 1,788½ millions in August, and 2,529½ millions in July, the previous record month. Of this total, only 99,934,300f (including 61,129,600f from overdue taxes on war profits) was derived from exceptional and temporary sources, the yield from normal and permanent revenue being 2,947,097,200f (or 728,915,800f more than the total received from this source in October, 1923). Income-tax represented barely 682 millions of this huge total, or slightly over 21 per cent. of it. The yield from income-tax, however, is larger than that from any other category of impost, registration (521 millions), the tax on turnover (428½ millions), taxes on securities (305½ millions), "indirect taxation" (239 millions), and State monopolies (212 millions), coming next in order in the October return. Customs, duties, owing to the bad situation of the franc, again yielded over 53 millions less than Budget estimates. The total revenue from indirect taxes and monopolies, however, was still over 274½ millions more than had been expected. The yield from these taxes during the first ten months of the year has been 2,114,836,200f more than the Finance Minister expected to get from them. A noteworthy return has just been issued in the report of the Finance Commission of the Chamber on the Budget for the Ministry of Finance. This shows that, for the period extending from the beginning of 1920 down to October 31st last there is unpaid direct taxation outstanding to a total of over 10,000 million francs. This total includes 3,857 millions of income-tax, 5,500 millions of special tax on war profits (which expired some two years ago), and nearly 2,000 millions of other direct taxes. It should be noted that this total includes the greater proportion of this year's assessments for income and other taxes, the demand notes for which were not sent until the end of the summer, or appreciably later than usual.

M. François-Marsal, M. Millerand's Finance Minister, who is the head of one of the great Paris banks, insists that the yield from taxation based on incomes drawn from capital and from wages and salaries represents 51.63 per cent. of the national revenue; taxes on alcohol, tobacco, and other non-indispensable products 21.6 per cent.; and that import duties and other "impôts de défense économique," represent only 8.72 per cent., and "food taxes" only 18.5 per cent. This authority is convinced that the limit of taxation has been reached in France, and that the principle of progressive taxation on personal wealth has been "pushed to its extremity."

The foreign trade returns for October indicate that French imports and exports are steadily rising again to the record levels attained last spring. The total exports during October are valued at 3,531,896,000f (as compared with 3,184 millions in September, 2,697 millions in August, and 4,027 millions in April), while imports for the month are valued at 3,397 millions (as against 3,156 millions in September, 3,071 millions in August, and 3,713 millions in February). The detailed figures for the first ten

months of 1924, as compared with the corresponding period of last year, are as follows:—

	First Ten Months of		Increase in 1924.
	1923.	1924.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	5,942,539,000	7,377,040,000	+ 1,434,501,000
Raw materials	16,150,674,000	21,117,176,000	+ 4,966,502,000
Manufactured goods	3,488,163,000	4,104,937,000	+ 616,774,000
Total	25,581,376,000	32,599,153,000	+ 7,017,777,000
Exports—			
Foodstuffs	2,531,382,000	3,187,560,000	+ 656,178,000
Raw materials	7,372,470,000	8,635,690,000	+ 1,263,220,000
Manufactured goods	13,112,612,000	20,662,060,000	+ 7,549,448,000
Postal parcels	1,323,201,000	1,594,077,000	+ 270,876,000
Total	24,339,665,000	33,979,387,000	+ 9,639,722,000

Over 75 per cent. of the increase in exports, it will be noted, is in manufactured goods, while about 70 per cent. of the increased imports were in raw materials. The increase in the value of manufactured goods imported during the first ten months of the year was only 616½ million francs, while the increase in the manufactured goods exported during the same period was 7,549½ millions, or 57½ per cent. The proportion of this increased value, which is due to increased prices, is to be gauged from the comparative weights of imports and exports respectively during the same periods:—

	First Ten Months of		Increase in 1924.
	1923.	1924.	
Tonnage of total imports	Francs.	Francs.	Francs.
Do exports	44,782,117	47,400,599	2,618,482
	19,784,721	23,924,465	4,139,744

While the first ten months of last year showed an excess of imports over exports amounting to 1,241,711,000f, the corresponding period of this year has shown a surplus of exports of 1,380,234,000f. As compared with 1913, French imports have increased by 377 per cent. in value and 30 per cent. in tonnage, while exports have increased 500 per cent. in value and 33½ per cent. in weight.

GERMANY.—POLITICS—FINANCES—CURRENCY—FOREIGN CREDITS—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 18.

OWING to the absence of a clear issue, the campaign for the Reichstag General Election of December 7th continues to be very tame. There are more signs, in local elections, of a movement away from the extreme Right and Left, and the German-Democratic Party, which of late seemed to be threatened with complete extinction, has gained. The tariff and commercial treaties question attracts little interest among the general public. The Foreign Minister repeats earlier official declarations that the coming tariff must be moderate, and that with foreign countries most-favoured-nation relations must be re-established. The pending negotiations, says Dr Stresemann, will decide whether economic concord or economic war is to prevail in the next decades; the foreign notion that Germany can inundate Europe with her goods and can exclude foreign goods by prohibitive duties is unfounded. "But it is infinitely difficult to induce the interested (German) parties to realise in practice this general economic principle." While all trade and industrial organisations of general scope proclaim for modern duties and international agreements, various special industrial interests maintain that their particular branches are an exception, and demand very high duties. The German-Swiss negotiations for mutual abolition of import restrictions are nearly concluded. Complete abolition is, however, not due until September 30th, 1925; meantime, the list of wares subject to import restrictions will be materially reduced. The account of the Agent-General for Reparations shows receipts in September of 83,510,000 marks, and October 86,203,000 marks. Of these sums, 40,000,000 marks and 29,662,000 marks were cash, and 11,236,000 marks and

19,935,000 marks were booked under the Reparations Recovery Act. Payments in September and October were: to Great Britain, 14,258,000 marks and 23,693,000 marks respectively, of which 11,236,000 marks and 18,520,000 marks were collected under the Reparation Recovery Act; to France, 24,618,000 marks and 36,224,000 marks—for October appears the first French entry for Reparations recovery; to Italy, 4,383,000 marks and 8,900,000 marks; and to Belgium, 6,556,000 marks and 9,264,000 marks. Expenditure of the commissions was, in September and October: Reparations, 1,165,000 marks and 585,000 marks; Rhineland, 1,250,000 marks in each month; Military Control, 1,000,000 marks in each month; Marine Control, 70,000 marks in September, nothing in October.

October showed the largest yield from taxes on record:—

	M.
October	686,732,609
September	609,207,831
August	592,033,933
July	583,141,258

The credit situation, after a considerable improvement and a great drop in interest rates, has of late altered little. Bank deposits are reported to be increasing, and liquidity prevails. The banks, however, prefer not to tie up their money, their aim being apparently to show a high ratio of liquid investments at the end of the year. The banks are inclined to give credits in foreign exchange only when a need for these for actual foreign payments is proved; many borrowers, in view of the lower interest rate on exchange credits, borrowed in pounds or dollars, which they immediately converted into marks for home use, in the knowledge that since the freeing of exchange dealings they could always meet their debts. The Reichsbank's return for November 7th shows an addition of only 64,000 marks to the gold reserve, and this was purchased at home. The Gold Discount Bank's outstanding discounts on November 7th totalled £6,351,092, against £6,715,377 on October 31st; this decline marks a further stage towards the liquidation of the bank. Bankers express the view that the Reparations Settlement may operate towards an improvement of home credit conditions, as under certain circumstances large Reparations deposits will accumulate in the Reichsbank, with the result of increasing funds for credit to German business.

The applications for American credits, both from public bodies and from industry, reach a very large total sum. American financiers hesitate on various grounds; they are not yet sure as to the incidence of the Reparations bonds or as to the practicability of payments of interest by Germany, in view of the dominant authority of the Transfer Committee. Since the withdrawal of most of the exchange restrictions there is theoretically no difficulty in obtaining exchange for foreign payments (and, incidentally, mark credits for goods, stocks, &c., may be freely granted to foreigners); but interest payment to foreign countries remains a part of the general question of the foreign payment balance, and doubt still exists here. Also New York seems to have doubts, with good reason, as to the securing of principal. The party agitation in favour of restoring fully paid-off private bonds and mortgages is very strong; the agitation for raising the 15 per cent. restoration so far granted of unpaid bonds and mortgages is equally strong; and there is a general belief that after the Reichstag Elections something in this direction will be done. As a result of this practically no industrial concern can be sure that it will not be saddled with a new heavy secured debt by statute, although all its calculations have been so far made on the assumption, justified by present law, that it has no such debts. Government declarations of intention in this connection have no value, because they do not bind the Legislature, or even (as experience has shown) the Government itself. In view of these difficulties, trade journals demand a "final" settlement of the depreciated debts question; but, in fact, there can be no final settlement, unless—what is in practice impossible—debts are restored to 100 per cent. of their original gold value.

The wholesale price index number on November 12th was 129.7, against 126.6 a week earlier; the cost-of-living number 112.4, against 123. The *Frankfurter Zeitung's*

wholesale number was 139.93 on November 13th, against 138.45 on October 30th, and 140.10 on January 3rd. According to this index, prices have not fluctuated this year more than 10 per cent., and are now practically back at the starting level. The group numbers on November 13th were:—

Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Goods.
135.38	183.44	128.78	126.09	140.42

Unemployment has further decreased. Unemployed in the whole Republic on November 1st totalled 435,000, against 473,000 on October 15th. The improvement in steel and iron continues, and prices are firm, being on the 15th (in marks per metric ton): Ingots, 100; blooms, 105; billets, 110-112; slabs, 117; bars, 122; thick sheets (over 5 mil.), 135-138; medium do. (3 to 5 mil.), 150; thin do. (1 to 3 mil.), 180; thin do. (under 1 mil.), 195. The *Bergwerks-Zeitung*, the Essen organ of the heavy industry, declares that Germany has no special interest in embodying the new Steel Syndicate in an international concern, and doubts whether an international concern is possible. Even in national syndicates price-conventions have a very limited value. The pre-war international Tubes Cartel proved that international price-conventions were doomed to collapse as soon as trade depression begins. An international steel syndicate would at most apply to raw steel only, and merely to the "contingenting" of the production of this. France alone is interested; the Alsace-Lorraine works are the superfluous element in the steel industry; as France certainly will not close down these works merely because of the general over-production, she alone, concludes the *Bergwerks-Zeitung*, stands to gain from an international agreement restricting output. A report on the German Cartels Law of 1923 states that out of 1,500 Cartels in the Republic, 178 have been up before the Cartels Court, and that in 44 cases the Court confirmed the notices to dissolve the Cartels. Hamburg shipping recovered in October, arrivals being 1,242 vessels of 1,484,926 net tons, against 1,181,207 tons in October, 1923, and 1,291,625 tons in October, 1913.

Last week the first "D"-Bank gold mark balance-sheets appeared. The Dresdner Bank has scaled down its paper mark capital to gold in the ratio of 12½ to 1. The capital on December 31, 1923, was 975,000,000 paper marks; on January 1, 1924 (the date for which the gold mark balance-sheets are compiled), it is 78,000,000 gold marks. The bank's capital on December 31, 1923, was 200,000,000 gold marks. The Darmstaedter und National Bank has scaled down in the ratio of 10 to 1, that is from 600,000,000 paper marks to 60,000,000 gold marks. The pre-war capital was 283,000,000 gold marks, so that the bank's loss since 1913 has been heavier than that of the Dresdner. The reasons why the banks, unlike most of the industrial companies, show a loss in net property since before the war is that their chief asset, their own capital, depreciated together with the mark currency, and that they did not reap a counterbalancing gain from payment off of bonds and mortgages in depreciated money. The reserve of the Dresdner Bank is fixed at 22,000,000 gold marks, against 61,800,000 gold marks in 1913; of the Darmstaedter Bank at 40,000,000 gold marks, against 53,100,000 gold marks.

CANADA.—HARVESTING IN THE WEST—TRADE RELATIONS WITH GERMANY—RAILWAY RATES—BANK MERGERS—IMMIGRATION—PLIGHT OF WESTERN CATTLEMEN.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 10.

CONTINUED wet weather during the first half of October had begun to chill the optimism created in the West by high grain prices, but luckily a change for the better has come, and threshing operations have been pushed forward under very favourable conditions. Indeed, in all save very backward areas, threshing operations are now well nigh complete, and grain is moving to the seaboard in large quantities. There is a very good export demand, and prices, if they have not risen in the last fortnight, are keeping very firm. In view of the damage wrought by frost and rain, the grading problem is more difficult than

usual; the farmers complain that they are being penalised by too low grades, and the elevator companies retort that they have lost heavily because their employees at country points made appraisements which were reduced by the official inspectors. However, the returns which will be secured will undoubtedly increase the funds of the rural community. The banks and mortgage companies report that the western farmers are liquidating their obligations better than at any time since the beginning of the depression, and while a good deal of the farmers' money will be employed for that purpose, a sufficient surplus will be available for the purchase of necessities and luxuries to give a decided stimulus to general business. There is evidence that the King Government is sounding out public opinion to discover whether a commercial treaty with Germany, which needs a lot of Canadian raw products, would be favourably received, and some sort of subterranean pourparlers sponsored by interested business men on both sides seem to be afoot.

The controversy about western railway rates still continues to boil. The decision of the Railway Commission that it has power to override the statutory terms of the Crows' Nest Pass Agreement and its fixation for a large number of commodities of rates higher than the maximum decreed by this pact, will not be accepted by the West without a prolonged conflict, and for the moment party differences seem to have been laid aside to secure a united front for the restoration of what is regarded as a vital charter of transportation rights; there is even some threat of a secessionist movement. An appeal on a crucial legal point has been taken to the Supreme Court, and an emphatic demand has been made upon the Government for the suspension of the higher rates which have been brought into force by the railways. The Government has refused this demand, pending the decision of the Supreme Court, but is not likely to accede to it because public opinion in the East, and especially in the maritime provinces, is disposed to uphold the verdict of the Railway Commission, and to regard the Crows' Nest Pass Agreement as a special privilege which should be abrogated, as it entails higher rates for the rest of the country than would otherwise be necessary. The Progressive party will undoubtedly bring the issue before Parliament next session, but if the Government stands firm they can do very little, as Mr Meighen, the Conservative leader, has declared that the subject of rates should be left to the Commission, and that the agreement was an obstacle to the general recasting the rate structure which was necessary. The higher rates will be very welcome to the railways, but both the C.P.R. and the C.N.R. seem to be managing to offset the loss on gross revenues, due to the smaller exportable surplus of grain, by heavy reductions in operating expenses. For September the C.P.R. shows a decline of \$2,251,925 in gross revenues, but a cut of \$2,301,599 in operating expenses leaves the net earnings at \$4,547,645, which is a gain of \$49,674. C.N.R. gross earnings fell in this month \$2,334,397, but the net increased \$297,999. For the first nine months of the calendar year C.P.R. net earnings have gained \$1,194,458, and C.N.R. \$853,875. In a recent speech Sir H. Thornton, the president of the C.N.R., admitted that his hopes of net earnings of 30 million dollars for the present year could not be realised, but expressed confidence that last year's figure would be maintained. The process of bank consolidation in Canada is still going ahead. Following the union of two small banks, the Sterling and Standard, it is now announced that the Finance Department has given its assent to the absorption of the Molson's Bank by the Bank of Montreal. The Molson's Bank was founded in 1855, most of the capital being raised by the well-known family of Montreal brewers, who gave it their name. It has been managed on careful and conservative lines, and all save half a dozen of its 110 branches are in Ontario and Quebec. Its capital at the time of the absorption was \$4,000,000, and it will increase the assets of the Bank of Montreal by \$68,785,605, giving it a complete primacy over its rivals. The shareholders of the Molson's Bank receive for every three of their holdings two shares of Bank of Montreal stock, plus a cash bonus of \$10 per share. These recent mergers reduce the number of chartered banks in Canada to 12, and there are rumours afloat that the Union Bank

will in the near future likewise be received into the capacious bosom of the Bank of Montreal. Undoubtedly the revelations produced by the home bank *débacle* shook very severely the credit of all the smaller banks, and most of them have had to suffer the transference of a very substantial amount of deposits either to the four major banks, or to the savings banks established by provincial governments. The system of government inspection of banks, which was established by an amendment to the Bank Act last session, was welcomed by the smaller banks as likely to promote the restoration of public confidence in themselves, and its full effects cannot be yet gauged; indeed, since the Government find difficulty in securing a Chief Inspector of the proper calibre, the system has not come into practical operation. But whatever its results may be, the wide impression prevails that the consolidating process will continue until five or six large institutions handle the whole banking business of Canada. Meanwhile the provincial Savings Banks are thriving. The immigration figures continue to be very disappointing. During September the arrivals were only 8,493, as compared with 14,172 in September, 1923. For the first half of the fiscal year, which ended September 30th, there was a decline of 10 per cent., the comparative figures being 84,602 and 94,513. Moreover, the proportion of British immigrants has fallen from 55 per cent. to 49 per cent., and a loss in the American contingent is just balanced by an increase in the arrivals from the continent of Europe. Considerable controversy exists about the present extent of the southward exodus, and there is some evidence of Canadian workmen returning from the U.S., but the emigration is still of very serious proportions. Although the graingrowers of the West are receiving good prices for their crop, cattlemen are not enjoying the same good fortune, while hog prices have climbed in response to the rise in grain prices, cattle are still disappointingly cheap, and thousands of western cattle of fairly good quality are now passing through the markets at prices below \$50 per head on the average, which is not profitable. Despite the Fordney tariff, which imposes a duty of 1½¢ per lb on light, and 2¢ on fat cattle, large numbers of Canadian cattle are still going to the U.S., but the return to the Canadian farmer is reduced by anything from \$15 to \$25 per head, and recently whole trainloads of western Canadian cattle, sold in Chicago at 5 or 6¢ per lb, live weight, have only netted the consignors \$25 or \$30 apiece. The present high price of maize in the U.S. has brought down the price of store cattle there. As far as the British market is concerned, it is now generally admitted that the results of the removal of the embargo have been very disappointing. The number shipped shows some increase, but most of the cattle crossing the Atlantic to British ports are fairly well finished cattle from Ontario, which are mostly slaughtered for beef at the port of landing. "Store" cattle, which the embargo had kept out, are not going in any large numbers, chiefly because only the more valuable cattle can stand the transportation costs; the restrictions imposed in connection with the foot and mouth disease also prevented free movement to inland areas. But apparently there is so far no active demand by the British farmer for Canadian cattle, and no effective machinery for their distribution. The first shipments after the embargo was greatly exploited, and easily sold, but thanks to an unfortunate turn in the market, many farmers lost money on them, and have fought shy of them ever since.

ARGENTINA.—GROWING PROSPERITY—CROPS—BALANCE OF PAYMENTS—BUDGET—MARKETS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 27.

ALL the great Anglo-Argentine railway companies have held their annual meetings, and the speeches of the respective chairmen have, without one single exception, embodied unqualified optimism. One must go back to the days of 1907-8 for such wholehearted testimony to Argentina's prosperity and prospects. The actual state of the crops, as estimated by the Board of Rural Economy and Statistics, from information supplied by honorary correspondents, as well as its own paid officials, is set

forth as follows:—With "normal" estimated at 100, the proportional average over the whole Republic reads:—Wheat, 96; linseed, 87; maize, 100; oats, 93; barley, 89; rye, 87; alfalfa, 94; birdseed, 97. In cotton and in tobacco a considerable increase in the sown area can be counted upon. On October 1st the exportable surplus of wheat was put at 744,352 tons, while the linseed surplus was 256,886 tons. Shipments from January 1st to October 2, 1924, are contrasted with those for the first nine months of 1923 in table form:—

	First Nine Months, 1923.	First Nine Months, 1924.
Wheat.....tons	3,390,669	4,039,201
Maize....."	2,339,272	3,497,550
Linseed....."	1,003,422	1,177,271
Oats....."	367,656	605,636
Cotton.....bales (not tabulated)	33,124	33,124
Wool....."	275,253	234,870

Prices for cereals during July-September, inclusive, have been, roughly speaking, \$2 more per 100 kilos for wheat and linseed, and \$1 more for maize than they were for the first six months of the year, while in chilled and frozen meat the movement has been both heavy and profitable to the cattle breeders, though the freezing companies aver that on Smithfield parity they are losing money at the moment. When it is remembered that the diversity and monetary value of Argentina's smaller export interests appreciates steadily, it will be understood why there is a general feeling that the tide has completely turned, and that the balance of payments for the seasonal year 1924-5—October 1st to September 30th—will be in Argentina's favour. For the period between October 1, 1922, and September 30, 1923, Señor Carlos Alfredo Tornquist, the eminent Argentine banker, who for many years past has made a practice of compiling an estimated balance of payments, calculates that the adverse balance touched \$239,000,000 gold.

The following figures show how this sum is arrived at:—

ASSETS.	Millions of \$ Gold.	LIABILITIES.	Millions of \$ Gold.
Exports.....	767	Imports.....	846
Issues of already established undertakings.....	8	Service of the public debt.....	52
New capital.....	15	Service of "Cédulas Hipotecarias".....	69
Convention with France and England-Interest.....	17	Railway companies' dividends and interest.....	695
Interest on foreign securities..	2	Earnings of other capital.....	328
Sale of Argentine bonds.....	14	Remittances and savings of foreign residents in Argentina	38
Expenditure of foreign travellers in Argentina.....	6	Expenditure of Argentine travellers in foreign countries.....	12
Decrease in gold stock.....	13.1	Argentine bonds repatriated.....	16
Loans.....	9	Convention with England and France—Increase of balance	0.8
Foreign correspondents and accounts.....	9	Cancellation of loans.....	0.8
Total.....	837.65	Decrease of mortgage capital..	1.9
Or say, in round figures.....	838	Total.....	1,076.7
		Or say, in round figures.....	1,077
		Assets.....	838
		Adverse balance.....	239

Meanwhile the national finances remain the chief stumbling block in the way of complete recovery. Dr. E. S. Perez, the new Administrator of the State Railways, and an ex-Minister of Finance, has issued a statement giving a reasonably exact position of the department's floating debt. It stood at \$140,000,000 paper on October 1st, and a further sum of \$10,000,000 was urgently needed before the end of the current month to meet wages in arrears, interest on American purchases, and other matters. Again the Government has had to come to the aid of the State railways, by issuing six-month Treasury bills for \$10,250,000 paper, a measure which at best is but temporary, and leaves the main problem of how future expenditure and consolidation of all outstandings may be best dealt with, still to solve. Until the extraordinary sessions at which the Budget estimates for 1925 are to be discussed has been held, in the month of December, there is little use in commenting on a situation familiar to all acquainted with Argentine financial matters. It may, however, be pointed out that doubt as to the full responsibility of the national government for the railway debts may now be considered as out of the question. What is not so clear is how far the existing plans for further extensions and connections can be carried without extraneous aid. It has been freely said that the Government intends to press on with schemes which call for \$245,000,000 paper further outlay, spread over the next three years, but where the money will be found is not indicated. Argentina's 1925 Budget, despite

much mention of economies, is, on the estimates submitted, the biggest ever drawn up, and the economies, as far as one can gather, are not designed to reduce the total of \$665,000,000 paper, but merely indicate that subsequent additions, usually brought forward by the various ministries at the last moment, will be discouraged. Due proportion maintained, in this matter of the Budget, there is considerable similarity between the Argentine and the French position at the present moment, as outlined by the Paris correspondent of *The Economist*, under date September 17th. The chief similarity lies in the fact that large amounts of additional money must be found, presumably by taxation, though in Argentina, where the sum needed is smaller, and the country itself in the flood-tide of intensive development, there is ground for hoping that a long-term loan under equitable conditions may eventually be arranged.

Money has been in better demand during the past month, and rates are firm, with the monthly returns of bank deposits again showing a small decrease, some four million paper, in the totals. Lists of trade bills were discountable at 6 to 7 per cent. per annum, while single name promissory notes and advances on current account were 7 to 8 per cent. per annum, though it must be remembered that for first-class business in both categories easier conditions could be had, while the Treasury bills were placed at $4\frac{1}{2}$ per cent. Rates allowed by banks on deposits in savings account, and at 6 months' notice, range from 3 to 6 per cent. per annum, according to the category of the institution, but it is surprising to see how large, comparatively speaking, is the number of small depositors who are attracted by terms that on the face of them are bound to imply a margin of risk. Exchange during the first week of October moved steadily in favour of Argentina, sterling being quoted for a moment at 45 $\frac{1}{2}$, and the rate for U.S. dollars going down to 116.80. There was, however, the inevitable reaction, and sterling is at the moment of writing steady at 44 $\frac{1}{2}$, sight drawing, with U.S. dollars 119.40. Continental rates have further depreciated, French francs being now 16.05, lire 19.45, and the pesetas 6.21 $\frac{1}{2}$. There have been no gold exports since September 25th, the present position of the Conversion Office reading as follows:—Gold in hand, \$456,426,056 gold; notes, &c., in circulation, \$1,330,350,176 paper.

ROUMANIA.—TRADE FIGURES—PUBLIC FINANCE—OIL PRODUCTION AND PRICES—SUGAR AND CROPS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, November 8.

THE following are the official figures of Roumania's foreign trade during the year 1923:—

Category.	Imports.		Exports.	
	Weight in Metric Tons.	Value in Thousands of Lei.	Weight in Metric Tons.	Value in Thousands of Lei.
Animal products	26,692	3,611,631	70,986	2,202,065
Agricultural products, including textiles	163,695	8,962,641	4,206,730	18,493,851
Minerals, oil, and sub-soil products	440,414	3,825,814	577,444	3,429,496
Miscellaneous commodities ..	72,473	3,312,855	23,050	247,263
	703,274	19,712,941	4,878,210	24,372,675

These figures show an "active" trade balance of Lei 4,659 millions, or, roughly, five millions sterling.

The official figures for the year 1922, which have recently been revised, are now given as follows:—

Category.	Imports.		Exports.	
	Weight in Metric Tons.	Value in Thousands of Lei.	Weight in Metric Tons.	Value in Thousands of Lei.
All categories	583,668	12,325,366	4,695,903	14,037,113

or an "active" balance of Lei 1,712 millions, equivalent, roughly, to three millions sterling.

Imports during the past four years have shown a steady decline in value, and the figures for the current year are almost sure to show a further contraction. While the normal pre-war equilibrium of an "active" trade balance seems now to have been definitely restored, the continued decline in imports is not a sign of economic health. Roumania has not yet reached that stage of industrial development which would justify a drastic diminution in the import of manufactured articles.

The situation of the public Treasury as on September 30th indicates that the Budget surplus for the present fiscal (and calendar) year may reach a total of between Lei 3,000 and 4,000 millions. The yield from direct taxes during the first nine months of the present year amounted only to Lei 1,398 millions—Lei 840 millions less than anticipated—but indirect taxes have brought in Lei 8,033 millions, or Lei 1,699 millions ahead of the Budget estimate. The greater part of the Budget surplus is being used for reducing the internal floating debt, and for the services of foreign obligations. The Budget for 1925 will probably reach a total of Lei 28,500 millions (an increase of Lei 4,500 millions over the present year), and will make provision for salary increases for Government employees (who are still badly underpaid), and for the services of all the country's external and internal funded debts.

Crude oil production in September established a record of 166,000 metric tons, bringing the total for the first nine months of the year up to 1,347,582 tons. This is a gain of 212,772 tons over 1923, and of 361,964 tons over 1922. Crude oil prices, however, have fallen sharply during recent months, Moreni grade being currently quoted at Lei 15,000 per carload (of ten tons), against a high of Lei 36,000 per carload recorded only last March. It is the belief among oil producers here that crude prices have now touched bottom, and a sharp rise is not unlikely. The export of refined oil products for the first nine months of 1924 totalled 254,622 tons, against 250,119 tons for the same period of 1923.

The beet sugar harvest of the present year has exceeded all expectations, and the complete output will probably be close on 1,000,000 metric quintals. This is the first time since the war that the sugar crop will completely provide for the country's domestic requirements for a full year. The 1923 crop amounted to 502,200 quintals, and 1922 to 300,003 quintals. Definite official figures on the grain harvests are not yet available, but the production of wheat, according to an official estimate, will exceed 2,000,000 tons, and the corn crop will be close on 4,000,000 tons. Rye, barley, and oats have been disappointing this year. There will be more than 1,000,000 tons of corn available for export from the present crop, but, as it is in a very damp condition, it will probably be next April or May (or the reopening of the Danube) before it can be moved. It is estimated that autumn wheat this year has been sown to an area of 3,500,000 hectares, an increase of 500,000 hectares over last year.

Letters to the Editor.

COLOMBIAN FINANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to your statement in your issue of the 8th inst. that for the current calendar year a deficit of \$4,680,556 was anticipated by the Colombian Government, may I be allowed to point out the fact that that is not the case; indeed, on the other hand, I may state that there is already a considerable surplus in the national revenues.

What actually happened was that, as stated by your correspondent, the national income was fixed at \$38,285,377, and the expenditure at \$42,965,953, which includes a provision for a loan of \$5,000,000 for the special purpose of withdrawing from circulation an equivalent amount of Treasury bonds. Failing that loan, the expenditure would automatically be reduced by the same amount allocated to the withdrawal of the said Treasury bonds.

The following cable was received from President Ospina, on the 5th of this month:—

"Dollars at par. Current rate of interest 9 per cent. Internal debt bonds $1\frac{1}{2}$ per cent. premium. Revenues for October, \$3,400,000.

The above shows the situation in Colombia has greatly improved.—Yours faithfully,

J. MEDINA.
Colombian Government Bureau of Information
and Trade Propaganda
(Ministry of Industries and Commerce),
7 Sicilian avenue, Southampton row,
London, W.C. 1, November 14th, 1924.

"THE UNCLAIMED WEALTH."

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to the criticism of my book, which appeared in your issue of August 30th, I beg to say that I am sorry that you should have seen fit to deal with the matter in this way.

In the first place, I do not think that there is the least ground for the following phrase: "the author's..... deplorably loose and inconsistent use of economic terminology." It is true that Mr Hobson, in his introduction, states that I have disregarded "the conventional meaning of some portions of the accepted economic terminology"; but with this statement I agree, and I maintain that my few deviations from the conventional were duly explained, and necessary in order to clear up certain existing confusions that it was my main object to contend with.

In the second place, to refer to the work as "economic confusion" in the sweeping manner adopted by your critic is anything but fair. Failing arguments in support of his view of the matter, I can only say that I know of no confusion in the book, but that, if I am wrong, I should be grateful to anybody who would enlighten me. I may say, however, that first-class authorities who have considered my book have given a very different verdict to that of your critic, and, as the latter has given his opinion without stating his case, I think I may cite the opinions of some of the former.

The *Times Literary Supplement*, dated September 11th, says:—"Mr Abbati.....has a mind which is at once systematic and penetrating, and he uses it to follow out all the complexities of the relation of credit to production and consumption. The creation of purchasing power, the part that the banks play, the results on production, and the effects of different kinds of saving, he examines in an analysis that.....is independent and consistent."

The *Manchester Guardian*, dated September 16th, says:—"The unclaimed wealth is a clear and convincing statement of the mechanisms through which under-consumption and maldistribution result in unemployment.....it will more than repay careful study."

The *Economic Review*, dated October 3rd, states:—"Mr Abbati.....is not an academic theorist, but he is an acute practical thinker, and this book reflects all the freshness of a vigorous mind in direct contact with affairs.....we must allow that this volume is an important contribution to the discussion on the causes of trade depressions and their cure, and the line of thought which it adumbrates deserves further development.—I am, Sir, yours truly,

H. ABBATI.

Hotel Londra, San Remo, November 8th, 1924.

[It would require more space than we have at our disposal to enumerate all the grounds on which our criticism of Mr Abbati's book was based. We will be content to quarrel with his definition of consumers' surplus as a calculable sum of money (see p. 123) representing "the difference enjoyed by consumers between the price which they pay for the majority of commodities and the price which, in case of need, the utilities of the commodities would justify their paying," with the concrete example of matches with which he follows up this definition, and with his subsequent treatment of consumers' surplus as something which can be estimated in "colossal quantities," redistributed, and even "hoarded" and "accumulated in a stagnant surplus." We will leave our readers to quarrel, if they feel so disposed, with his final proposal to secure a "just distribution of consumers' surplus" by "Government employment being constantly

available at a minimum wage. The wage to be determined by weekly or monthly statistic returns of supplies arriving and leaving the premises of retailers. The minimum wage to be deemed too low when average arrivals tend to be held back by stocks in hand, and too high when average stocks in hand tend to outrun average arrivals."—Ed., *Economist*.]

Books and Publications.

TRADE OF THE ROMAN EMPIRE.

BEFORE the civil wars broke out in Italy, trade and industry had begun a great development, but the storm in which the Republic was swept away saw disorder and desolation. "The provinces were the scene of bloody fighting, and Italy was drained of her best stock; farms lay neglected in the absence of their masters, there were sudden requisitions, burning of towns and villages, and all those wanton acts which war lets loose. Piracy began to lift its head again upon the sea, and brigands overran the land. Then came a flood of confiscations and evictions to satisfy the greed of the triumvers, and to provide the wherewithal to reward their soldiery. No man's goods could be thought safe, no man's land was secure; property sank to a ridiculous value, the rate of interest soared high, credit was impaired, the promise of a few years before seemed hideously blighted." The sober, wise reign of Augustus repaired these evils. "The wounds of civil war had to be healed, a jealous body of the old noblesse had to be conciliated, the Senate had to be assured of power and respect, payment had to be found for the veterans, the frontiers defended, piracy overcome and brigandage put down, the hungry populace of Rome fed, the provincials won over by good and settled government, trade and commerce and industry restored to their prosperity, and credit brought back. Above all, the whole population of the empire had to be given that feeling of security and freedom from fear without which men will never embark on any undertaking of commerce. All this Augustus did, and so brought about the renaissance of industry and trade."

These problems are very like those which face our own age. The story of what was done by the Roman emperors of the first two centuries is fascinating. As told by Mr Charlesworth,* it excites the highest degree of interest and attention, and his book once begun, its rapid urbane style compels the reader to press on, until with a sigh of regret he reaches the end.

It is hard to pick out from a host of delightful details those which are most intriguing. Only a few tempting morsels can be chosen, in the hope that they may whet the appetite and lead the curious to the book itself. Of Egypt, we read Seneca's terse characterisation: "Loquax et in contumelios praefectorum ingeniosa provincia," as true to-day as two thousand years ago. Egypt was the great cornland of Rome; the entire corn trade was an imperial monopoly. Industry also flourished—weaving and glass-blowing filled Alexandria with workers, and then, as now, the country was a great *entrepôt* for trade between West and East. Correspondence has been preserved which calls up for us the eternal preoccupations of humanity; we read of cheeses and wines begged for by town dwellers from their country friends, in exchange for friendly presents of fine rugs and cloaks; and one young man in financial trouble is warned to "keep away from the Jews." Syria and Asia Minor then teemed with manufacture and trade. In Syria, what is "now little more than desert was fertile and prosperous, owing to the careful irrigation." The Syrians were the great commercial race of antiquity; they spread all over the world, even in the North of Britain one was found. "A man named Barates, from distant Palmyra. Doubtless he traded in the silks and spices and dried fruits of his native land." We read of the relative desolation of Greece, of the wild tribes and rude traffic between Rome and the races who lived in lands since become Slavic; of the fertility of Northern Africa in corn and olive and vine; of the

* "Trade-Routes and Commerce of the Roman Empire." By M. P. Charlesworth. Cambridge University Press, 1924. 12s 6d.

wealth of Spain, and the industry of Gaul, where pottery and metallurgy flourished, and of Great Britain—"O fortunata et nunc omnibus beatorum Britannia"—which exported hides and fleeces, cattle and flocks, lead and iron, slaves and hunting dogs, the latter "renowned for speed and fierceness," and geese, which ancient Rome considered "a great dainty."

Much attention is paid to the Roman roads, that great achievement of their civilisation. They stretched from farthest West to Afghanistan; from Britain almost to Khartoum; and the main roads that spread across each province and along every great trade route were interlaced with minor highways, all built with the same Roman solidity. Accessory engineering works were also strong. In Syria the Romans' "magnificent bridges still remain standing where the modern French or Turkish constructions have been swept away." Along these roads swept the comedy and tragedy of life. The Via Equatia, between Apollonia and Thessalonica, was one of the most famous. "By this route Cicero made his melancholy way into exile; by it Pompey meant to fall back on Asia, and along it later came Antony and Octavian, to avenge Caesar's murder at Philippi." Security was fostered. We hear of an Arab tribe which revolted, "an expedition was sent against them, and the town of Arabia Eudaimon reduced to unimportance." The deeds of that expedition are well buried in oblivion.

Roads and security encouraged travel and trade. All the Roman seas were cleared of pirates. Trade went astonishingly far, and great courage was displayed, as by the heroic sea captain Hippalus, who, observing the periodicity of the monsoon, first made the direct voyage from Aden to India. Commerce was carried on with the wild lands of the Baltic, and with Ireland. Venturesome travellers made their way to Tash Kurgan, in Afghanistan, and here, at "the very heart and centre of all commerce for the old world, and the most ancient meeting place on the whole earth," Romans first traded with Chinese, who then, as now, were "very honest in their dealings." Romans were found as far apart as Mogador and Trebizond; they journeyed down the Euphrates, and through the Menai Straits; merchant adventurers, they traded and prospered.

This picture shows the Roman empire as it appeared to the common man of the age. Gone, perhaps, was the glory of the Senate, imperious and irritable; gone were the Consuls and the Republic; gone the ancient simple days of stern morality and scanty wealth. Instead, "the might of the Roman Empire has given unity to the world; all must agree that human life has benefited, both in the general intercourse made possible and in the common enjoyment of the blessings of peace."

THE RESOURCES OF GREECE.*

In this pamphlet, which the impending issue of the Refugee Loan renders timely, the Secretary of the National Bank of Greece reviews the resources of his country with a reasoned optimism. A decade of warfare and political and economic vicissitudes has increased her territory by 17 per cent., and her population by 45 per cent.; but her development has been arrested, her political stability imperilled, much of her merchant shipping destroyed, and she has been burdened with some 1,500,000 destitute refugees. But these, as the author points out, will develop her agriculture, cultivate the 1,000,000 hectares of good land now unreclaimed, and, as peasant proprietors, will stabilise her politics, and will be aided by the great recent growth of co-operation. Her railway communications are supplemented by her coasting trade and a growing motor traffic, for which, however, more and better roads are needed; her mineral resources, if not rich, are plentiful; her fisheries are important; she has large sources of power in her lignite and her water, and great facilities for water storage; her mercantile marine, which suffered more than any other through the submarine warfare, and has not received its due compensation, has been largely replaced by purchases; and her industries have an expanding market in Egypt and the Balkan States. Her increased

note circulation is less per head than that of many other countries, and is partly due to the expansion of her territory and population, and to the purchases by the National Bank of foreign currency to regulate the exchange. The fluctuations in exchange are largely "psychological"—set up by alternations of confidence and mistrust. Her ordinary Budget now balances; but for the burden of the refugees, soon to be alleviated by the good offices of the League of Nations, the deficit would disappear; and her Government is substituting direct for indirect taxation, in accordance with sound principles of finance. Through all her troubles she has remained solvent, and her debt is largely held at home. The author illustrates the position by full statistical tables, but these, owing to the fluctuations in the drachma and changes in the official methods of calculation, are not always very helpful. Some observers may regard his optimism as excessive, but, given peace and stability, his conclusions, we think, may be regarded as not without justification.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, December 3. ACCOUNT, December 4.

The post-election excitement which followed the Unionist victory at the polls has subsided to some extent in Stock Exchange markets, but business in a good many parts continues decidedly active, and the settlement which concluded on Thursday proved to be heavier, in some offices, than that of the previous fortnight. Prices are well maintained in various directions. The strength of gilt-edged stocks, and a further outburst of strength in tea shares, are two of the leading features of the week. Subscription-lists for new stocks close promptly in every case where sound stock is offered.

The Government's offer to holders of the 5½ per cent. Exchequer bonds that they should change these into new stocks met with a favourable response, and caused a slight improvement in the price of the 4½ per cent. conversion. The War Loan has remained at a little over 101. Leicester Corporation offered 4½ per cent. stock at 98½, and the price opened at ½ discount, rising rapidly to 7½ premium. Other new issues have also improved, and there is an insatiable demand for such securities.

In the foreign market, German Sevens have risen above 6 premium; French bonds incline to be dull, there being little interest taken in them. It is declared that Paris opinion views the French rate of exchange as likely to improve, whereas on this side a more cautious attitude is taken. Turkish and Egyptian bonds have been better, but the assassination of the Sirdar in Cairo led to prices giving way. Portuguese have weakened. The new Greek loan is expected to make its appearance at an early date.

The public are still as resolute as ever in their determination not to buy Home Railway stocks. This week, the market has a further cause for inattention in the vague threats of a strike, which have had the effect of putting down prices. Argentine Railways were unfavourably influenced by talk of damage done by drought. Brazilians keep hard as a whole, and Cendone Uruguayans spurred, owing to the course of the exchange.

The rubber market, after experiencing depression, rallied towards the end of the week, but business is quiet in this section. Tea shares have been buoyant, there being eager demand for shares, and not too much supply to meet it. The coffee group is a shade easier. In the oil market, activity continues to be largely professional, with prices moving narrowly. Lobitos fell to 9½, to rally to 10½. The textile group keeps good, a recovery having taken place from the levels to which prices fell after their shake-out from the top of the market last week.

The appointment of the Food Commission led to a little hesitation amongst companies that are likely to be affected by its findings, but brewery issues keep strong, and whisky shares are better, on optimistic talk of dividend probabilities. In the tobacco group, Copes fell sharply, on the declaration of a disappointing dividend, though the others moved on to a higher ground. The banking market is better, and insurance shares move continually upwards. There are a few small rises amongst shipping issues. The iron and steel group has swung rather hesitatingly, falls one day being balanced by recoveries on the next. Marconis are heavy; it is thought that the new management may insist upon publication of the company's assets, and that these are likely to make a showing none too favourable. Cable stocks received strength from an excellent

report by the Western Telegraph Company. Gas and electric lighting shares hold their ground.

The Cape, after rendering support to the Kaffir market, turned a seller of the leading shares, and prices on the whole finished the week without material change. De Beers and other diamond shares were advanced, to react, however, from the best, and the same comment covers copper descriptions. Sharp fluctuations in Cam and Motors kept the Rhodesian list alive. Various tin shares, West African and Malayan in particular, are better, though the changes are not exciting. Russians gained a little advance. In Mexicans there is nothing doing, and, although talk runs upon the likelihood of resumption of animation in Canadian mining shares, no indication of this has presented itself during the week just ended.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	£ 1,172,415,507	..	£ ..	£ ..

Lewis's, Limited.—Share capital £1,675,000, practically all of which has been issued. This is an issue at 95 per cent. of £1,500,000 (part of an authorised amount of £2,000,000) 5 per cent. first mortgage debenture stock, of which £500,000 has already been applied for and will be allotted on the terms of the prospectus. Properties have recently been valued at £3,002,860. The company, which has only recently become a public company, has departmental stores in Liverpool, Manchester, and Birmingham. The stock now offered will be redeemable by March 1, 1963, by means of a cumulative sinking fund of 1 per cent. per annum, to be applied annually by purchase on or before February 15th if any of the stock is available at or under 100 per cent., plus accrued interest, or by drawings after that date for redemption at 100 per cent. on March 1st following. The first redemption is to take place on March 1, 1926. The company has power to redeem the whole or any part of the stock at par, plus interest to date of redemption on March 1, 1936, or on any subsequent September 1st or March 1st, on giving six months' notice. The proceeds of the present issue are required for repayment of bank overdrafts, existing mortgages and debentures, and provision for further working capital. Profits are given from 1918. These are ample to cover services on the stock and provide a comfortable margin for contingencies.

The United British Steamship Company, Limited.—Authorised capital £500,000, divided into shares of £1 each, of which 240,000 shares have been issued. This is an issue of 160,000 shares at par. The shares of the present issue will rank equally with the old shares for all dividends declared in respect of the year 1925, but not in respect of any final dividend declared for 1924. The company, which was incorporated in 1921, is under the same management as the Court Line, Limited, and the Cressington Steamship Company, Limited. A dividend of 6 per cent. was paid for the year 1921, and dividends of 6½ per cent. were paid in 1922 and 1923. For the

for the third year. The directors recommend a final dividend on the participating preference stock of 5 per cent. actual, subject to tax, making with the interim payment $7\frac{1}{2}$ per cent. for the year, a dividend of $5\frac{1}{2}$ per cent. subject to tax, on the ordinary shares, and 4 per cent. subject to tax, on the funded investment certificates.

SOUTH AMERICAN SPOKE (Guthrie and Cochrane)—Directors recommend an additional dividend of 1 per cent. on the preference and ordinary shares, making 7 per cent. for the year, and an interim dividend of 15 per cent., less tax, on account of the year 1924, payable on December 2nd. The dividend a year ago was 10 per cent., less tax, on a smaller capital, a bonus distribution in shares equal to 50 per cent. of the dividend having been made this year.

BRITISH PLATINUM.—"For the four weeks ended November 15th, No. 1 dredge produced 462 ozs platinum and 137 ozs gold, in addition 22 ozs platinum from tributaries. No. 2 dredge produced 52 ozs platinum and 15 ozs gold."

FALCON MINES, LIMITED.—Crushed 17,150 tons of ore producing 220,202 short tons (2,000 lbs) of blister copper containing 2,395 ozs of gold, 4,877 ozs of silver. Estimated value £23,781 (taking copper at £60 per short ton, gold at 89s per oz, and silver at 2s 6d per oz).

THE MOUNT MORGAN GOLD MINING.—For the four weeks ending November 11th treated 3,405 tons Mount Morgan Ore; 314 tons Many Peaks Ore; 2,943 tons concentrates and 10 tons of purchased ore and secondary products. Produced 304 tons blister copper, containing 301 tons copper, and 4,368 ozs gold, including 4 tons copper and 5 ozs gold from Many Peaks, also 4 tons copper from purchased ore and secondary products. Concentrator treated 10,556 tons ore for a production of 3,570 tons of concentrates, containing 182 tons copper ore for a production of 3,570 tons of concentrates, having matte on hand 2,487 ozs gold. In addition to above production, have matte on hand 2,487 ozs gold, and 1,299 ozs gold.

COMPANY MEETINGS, &c.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED.

MR ANDREW WILLIAMSON ON ECONOMIC AND TRADE CONDITIONS IN AUSTRALIA.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

INCREASED PROFITS—BUSINESS EXPANSION.

PROMISING OUTLOOK FOR CURRENT YEAR.

TERMS OF NEW SHARE ISSUE.

The thirty-second ordinary general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 19th instant, at the head office, 5 Gracechurch street, London, E.C.

Mr Andrew Williamson (chairman of the bank) presided.

Mr E. M. Janion (London manager and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with cheers, said:—Ladies and gentlemen, when addressing you last year I said that, taking Australia as a whole, the outlook for primary products was encouraging, and the prospects for the internal trade of the country for the year then current were good. The actual results, taken as a whole, have fulfilled that forecast.

During the past year both imports and exports reached higher figures than in the previous one. The official statistics of the Commonwealth show:—

For year to June 30, 1924—

Imports to value of £140,569,853

Exports to value of £119,567,407

Or an excess of imports over exports of £21,002,446 against a similar excess of imports over exports in the previous year of £13,887,688.

AUSTRALIAN FUNDS IN LONDON.

On the other hand, Australian funds in London were increased during the year by a further payment through the banks here of £5,331,618 by way of a distribution of 9s per share to the shareholders of the British Australian Wool Realisation Association; the borrowings of the Commonwealth and States in London also added about £24,000,000 of new loan money to the funds in London. But for the material shrinkage in the value of the exports of wheat and butter, the balance would have been reversed, and there would have been a small excess of exports over imports.

During the past year maturing War Loan obligations of the Commonwealth Government—namely, £39,000,000, to take up the War Loan due September 15, 1923, and £19,000,000 of war gratuities which fell due on May 31, 1924, or in all £58,000,000—have been provided for within the Commonwealth itself, mainly by new conversion loans.

The internal trade has been satisfactory, and has been carried on smoothly under fairly normal conditions, similar to those existing before the war, save that prices are higher owing to increased cost of production and higher wages. The financial stringency, also, is being felt by merchants in collecting outstandings; this, however, has its beneficial aspect in inducing an attitude of watchfulness making for soundness of trade.

The past year, while not without difficulties of its own, to which I will refer later, has been a good year, and one during which Australia has enjoyed a prosperous time.

The report, together with the published statement of accounts, having been in your hands for some days, has no doubt been carefully perused by you all, and to save your time I will, with your permission, take it as read.

BALANCE-SHEET ITEMS.

I will first of all go over the accounts, and, as usual, I will begin with the balance-sheet, and will be glad if you will look at the figures on the printed statement of accounts which you have in your hands, as thus you will be better able to follow my remarks.

The authorised capital is unchanged at £3,000,000, in 600,000 shares of £5 each. The whole of the capital has been issued, and the amount paid up is the same as in last year's balance-sheet—namely, £1,500,000.

The reserve fund is now £1,635,000, against £1,483,150 1s 9d in last year's balance-sheet, having been increased by the allocation

made at last annual meeting of £136,849 18s 3d, and by the addition of £15,000 out of the profits last year, as required by our articles of association. Out of last year's profits we now recommend that a further sum of £185,000 be added, bring the fund up to £1,820,000, or £320,000 more than our present paid-up capital of £1,500,000. When, however, the new capital which we are about to issue, of £750,000, is paid up, our reserve fund will then be £430,000 under our paid-up capital, so that the allocation recommended in the report is none too large. I am sure that it is quite unnecessary for me, in an audience such as this, to insist on the vital importance of steadily building up our reserve fund, for I am quite sure that this sound principle is fully realised and approved of by you. As I said last year, it is a self-denying ordinance which brings its own certain reward, both directly and indirectly.

The only change in our perpetual stocks is a decrease of £67,500 in our deferred inscribed deposit stock, as explained in the report.

DEPOSITS AND CURRENT ACCOUNTS.

Our deposits at interest show an increase on the previous year of £868,000, and stand at £14,251,220. On the other hand, our current accounts, at £11,445,534, show a decrease of £374,000, which is not surprising considering the exceptionally stringent financial conditions which have prevailed throughout the year. The deposits and current accounts together show an increase of £494,000, and stand at a combined total of £25,696,754.

Notes in circulation stand at £1,185, or a reduction of £102 from the figure of last balance-sheet, and, as you are aware, is an item which is gradually disappearing, the issuing of notes being now confined to the Commonwealth Bank.

Bills payable, rebate on bills, and other liabilities, at £2,013,870, show an increase of £259,000, but this calls for no comment.

ASSETS.

On the assets side of the balance-sheet, cash and bullion show an increase of £182,000 at £5,154,378.

Cash at bankers and short notice is less by £417,000, and stands at £1,355,057, or taking these two items together the figures are £6,509,435, which, while £235,000 less than last year, discloses a strong cash position, being 11s 4½d in the £ of our current accounts.

Investments consisting of British and Colonial Government securities taken at or below market values on June 30, 1924, stand at £1,164,139, being £165,000 less than last year, due to the running off of short-term Government and corporation loans. Our cash and investments together amount to the substantial figure of 13s 4½d in the £ of our current accounts.

Bills receivable and remittances in transit, at £4,441,858, show the gratifying increase of 1845,000.

Advances and other assets, after making provision for bad and doubtful debts and contingencies, show an increase of £408,000, standing at £20,720,839, arising from the steady expansion of our business.

The last item, bank premises and furniture, stands at £804,980, or £12,000 more than last year. During the year payments on our new properties in Melbourne, and on necessary additions and extensions to premises in Melbourne and branches in Victoria, New South Wales, and Adelaide, amounted to £101,200, while on the other side the proceeds of satisfactory sales of properties no longer required in Melbourne and Brisbane, and the amount of the purchase of the cancelled deferred inscribed deposit stock referred to in the report came together to £89,200, leaving an increase in the book value of our bank premises account of £12,000. The appropriation now proposed of £25,000 out of the available profits of the past year will convert this increase into a decrease of £13,000, and the account will then stand at £779,980.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, I will, as usual, ask you to look at the first page of the report, where you will find the figures grouped in a convenient form.

The profits for the year, after making full provision for bad and doubtful debts and contingencies, amount, you will observe, to £1,304,455, against £1,251,197 in the previous year, or an increase of £53,258, and the previous year, you will doubtless remember, showed a marked increase on the year preceding it.

Expenses of management in London and Australia, including directors' and auditors' fees, &c., amount to £616,279, and are an increase on the previous year of £59,241. Of this increase about £29,000 is on account of increase of salaries and wages; the remaining £30,241, I am pleased to say, is on account of items of a more or less intermittent nature, and not likely regularly to recur. On the other hand, income and other taxes at £185,673 are down by £37,638. Expenses of management and income and other taxes together amount to £801,952, and deducting this from the profits, we have net profits £502,502, or £31,655 more than in the previous year. Taxation, though a little lighter, is still a very heavy burden.

DIVIDENDS AND ALLOCATIONS.

Coming now to the appropriation of the net profits of £502,502, as you are aware an interim dividend was paid in May last of 5 per cent., free of income-tax, absorbing £75,000, and there has been added to reserve, as already explained, £15,000, leaving for further appropriation £412,502.

This we recommend be allocated as follows:—To carry to reserve fund £185,000, making, with the £15,000 just referred to, £200,000 for the year, and bringing this fund up to £1,820,000. To the English, Scottish, and Australian Bank Officers' Provident Fund, £10,000.

To the payment of a final dividend of 7½ per cent., making 12½ per cent. for the year, free of British income-tax, £112,500.

To the purchase and cancellation of deferred inscribed deposit stock in accordance with our articles of association, £62,500.

And to the reduction in bank premises account, £25,000.

With these appropriations an accumulated balance is left of £130,102 3s 11d to be carried forward.

BUSINESS WELL MAINTAINED.

This brief review of the accounts shows that the results of the working of the bank during the past year have been very satisfactory. The business, which is vigorously carried on in all the States of the Commonwealth, has been well maintained, and our connections have been extended, and the expansion could easily have been greater but for the cautious policy followed in restricting advances.

It has been my custom at our annual meetings to give you a general review of the trade and industry of Australia during the year embraced in our accounts. On the present occasion some other matters call for attention, and as I am anxious not to detain you too long I propose to-day to confine my remarks on the trade and industry of the past year to little more than an abstract of the figures of the principal exports.

WOOL INDUSTRY.

The wool industry, by far the most important of all the industries of Australia, was again prosperous in 1923-24. Though the clip was short of normal by over 200,000 bales, the high prices ruling have more than compensated for this. The exports, quantities, and values for the last four years, according to official figures, are:—

Year to June 30, 1921:—
1,401,565 bales, value £33,780,761.

Year to June 30, 1922:—
2,557,442 bales, value £47,977,243.

Year to June 30, 1923:—
2,315,599 bales, value £57,138,766.

Year to June 30, 1924:—
1,705,081 bales, value £56,197,676.

The quantities in the years 1921-22 and 1922-23 were abnormally increased by large additions of old Bawra wool previously purchased by the Imperial Government but only then shipped. Whereas last year's exports had no such fortuitous addition of old wool, and though on this account, and from the shortage due to partial failure of the season, much less in quantity, it yet reached a record total in value at slightly over £56,000,000. With an anticipated increase of fully 12 per cent. in the size of the clip, and with higher prices, the current year should show a marked advance, the estimate being about £75,000,000.

WOOL PRICES.

The prices ruling this time last year were very satisfactory, the rise of 50 per cent. in the case of merino reached in

November, 1922, over the rates ruling twelve months before having been fully maintained, and in the case of crossbred having marked a rise of fully 20 per cent. Since this time last year, merinos have had a further rise of about 25 per cent., and crossbreds of fully 65 per cent.

Comparing prices to-day with those ruling in July, 1914, we find that merinos have risen by about 150 per cent. and crossbreds by about 80 per cent. Of course, alongside of this remarkable rise in prices there has been a very great rise in the cost of production, principally under the heading of wages.

PRODUCTION AND DEMAND.

I last year so fully explained the statistical strength of the position of wool that I will not take up your time by saying much on the subject now. In a word, the world annual demand for wool is greater than the annual production, and the demand is increasing more rapidly than the supply; indeed, this only increasing states the position as regards merino, for in Australia perfectly states the position as regards merino, for in Australia there has been an actual falling off in numbers of sheep. Speaking generally, there seems little likelihood of the world's annual production of wool overtaking the growing demand for many years to come. Not only is the use of wool increasing in Europe and the U.S.A., but in the East, Japan is already a large consumer, and now China, which hitherto has been almost wholly a cotton and silk-using country, is becoming alive to the advantages of wool. The importance of doing everything possible to encourage and expand an industry so vitally important to the welfare of Australia cannot be too strongly emphasised.

WHEAT AND FLOUR: EXCELLENT HARVEST PROSPECTS.

The exports of wheat and flour for the last four years in quantity and value in round figures were:—

Year to June 30, 1921:—

84,500,000 bushels, value £39,400,000.

Year to June 30, 1922:—

112,000,000 bushels, value £34,100,000.

Year to June 30, 1923:—

44,700,000 bushels, value £12,991,550.

Year to June 30, 1924:—

76,970,000 bushels, value £19,292,776.

And for these years the average prices for wheat realised were respectively 8s 11½d, 5s 8½d, 5s 4½d, and 4s 8d per bushel.

The prospects of the coming harvest are excellent. With a large Australian wheat crop and a partial failure of the crop in other countries, this current year's exports from Australia of wheat and flour should show very gratifying results.

BUTTER.

The export of butter from Australia for the last four years was:—

Year to June 30, 1921:—

92,421,000 lbs, value £11,067,104.

Year to June 30, 1922:—

127,579,800 lbs, value £7,987,558.

Year to June 30, 1923:—

78,975,387 lbs, value £6,133,864.

Year to June 30, 1924:—

65,983,910 lbs, value £4,919,653.

And the average prices realised for the respective years were about 2s 4½d, 1s 3d, 1s 6½d, and 1s 5½d.

FROZEN MEAT.

The exports of frozen meat for the last three years were:—
Mutton and Lamb. Beef.

To June 30, 1922 2,139,615 1,867,927

To June 30, 1923 4,321,917 1,803,882

To June 30, 1924 1,170,850 1,302,151

The outlook for the export of frozen beef has somewhat improved, and it is expected that the export of frozen meat of all kinds will, during the current year, show an improvement on last year. The revival of demand from Austria and other countries in the European Continent is a hopeful feature.

METALS AND COTTON.

The continued low prices ruling for copper have told heavily against the copper-mining industry of Australia, and for the 12 months ending October 31, 1924, the output of copper was only about 13,500 tons, against 17,500 tons in 1923 and 45,000 tons in 1913. On the other hand, the extraordinarily high price of lead, at present £39 17s 6d per ton, has greatly benefited Australia; the production of lead for the year ended September 30th last was approximately the same as last year—viz., about 124,000 tons. The production of zinc is increasing, and high prices are being realised. The output of the Electrolytic Zinc Company in Tasmania for the year to June 30th last was 44,768 tons of electrolytic zinc. Silver at 8,000,000 ozs last year shows practically no change.

The cotton industry in Australia is still in its infancy, but is being pushed on vigorously, though last year the season was a

discouraging one. More land in several States is being brought under cultivation. In Queensland, especially, the Government are keenly interested in what, if it can be successfully established, may yet develop into a great Australian industry.

At the present time Australia is enjoying an exceptionally good season, and there have been bountiful rains in all the States. The outlook for the pastoral and agricultural industries of the Commonwealth could hardly be better. With an increased wool clip and a bountiful harvest, with record prices ruling for wool and good prices for wheat, the immediate outlook is most encouraging.

CURRENCY AND EXCHANGE.

During the past year the question of currency and exchange has again occupied a foremost place, and has been the most disturbing factor in Australian banking.

From the statistics which I have already given you, you are aware that the exports from Australia have been on a large scale, especially the export of wool, and when I remind you that in the year ending June 30, 1921, the total value of the wool exported was £33,000,000, whereas the value for the year ending June 30th last was over £56,000,000, and that the current year may reach and even exceed £75,000,000, you will readily appreciate that to finance the purchase and export of this greatly increased value of wool, in addition to that of wheat, dairy produce, and other exports, it is obvious that the amount of currency which was sufficient for this purpose in 1921-22 was quite inadequate for the purpose in 1923-24.

INCREASE OF NOTE ISSUE.

Before the establishment of the Commonwealth Bank the trading banks had the right of issuing notes, as the banks in New Zealand have to-day. The banks then availed themselves of this right to meet the increased seasonal demands of the export trade, the notes thereafter being withdrawn and cancelled. Had the banks possessed that right during the past year there would not have been such a shortage of currency, or the resulting serious monetary stringency, nor such a consequential rise in the exchange rates between this country and Australia.

On the formation of the Commonwealth Bank in 1911 the right of note issue was taken away from the trading banks and handed over to the Treasury, and in 1920 to the Note Issuing Department of the Commonwealth Bank, controlled by a small board called the Notes Issue Board. Both in 1922-23 and 1923-24 the Notes Issue Board could not see their way to accede to the requests of the banks for what the banks regarded as the necessary seasonal issue of notes for the handling of the large body of exports.

The Commonwealth Bank has during the last few months been reconstituted by Act of the Commonwealth Parliament, and is now under the control of the Governor and a specially appointed board of directors, to whom has been transferred the control of the note issue. The new board of directors of the Commonwealth Bank, I am glad to be able to inform you, have decided to increase the note issue by £15,000,000, by an issue to that amount for a defined limited period, carrying interest at Bank of England rate, in order to deal with the heavy seasonal requirements.

FINANCE OF WOOL AND WHEAT SHIPMENTS.

Our latest advices inform us that the stringency has been greatly relieved owing to the arrangement thus arrived at, whereby the banks, including the Commonwealth Bank, have all agreed to finance wool and wheat shipments on a pooling basis, the Commonwealth Bank agreeing to advance in temporary currency notes a certain proportion of each bank's quota, against the deposit in London of cash or securities. This should certainly prove of great assistance, and it will be interesting to you to remember that the latter part of this arrangement is on the lines which I have suggested at each of our last two annual meetings as being the simplest and most natural way towards meeting a difficult temporary situation.

But for the extension of currency thus agreed to, it would not have been possible for the exports of wool and wheat to have proceeded smoothly, great delays would inevitably have occurred with serious consequences to the business communities concerned, both in Australia and here.

This relief can, however, only be regarded as a temporary expedient; the balance can only be effectively adjusted by the movement of manufactured goods cannot go without creating a glut and more or less disaster through a slump in prices. Restricted Government borrowings (both Federal and State) until gold settlements are again possible, would materially improve the position, and, indeed, effective steps have already been taken to limit such borrowings up to June of next year.

One of the main objects of the reconstitution of the Commonwealth Bank has been to enable it to exercise the functions of a Central Reserve Bank, that is to say, a bankers' bank, and great hopes are entertained that this will prove highly beneficial to the

banking and general financial business of Australia, as has been the case in other countries where a central reserve bank has been established.

NEW ISSUE OF SHARES.

Not the least interesting part of the report to all the shareholders has probably been the intimation that the board have decided to make a further issue of shares, upon terms that must be very attractive to the shareholders. I will now endeavour to explain clearly all that is involved in this new issue.

Our present share capital consists of 600,000 £5 shares, £2 10s paid up, with a liability of £2 10s. The new issue will be one of 150,000 shares of £5 each, to be paid up to £3 per share, leaving an uncalled liability of only £2 per share. These shares will be offered in the first instance to the shareholders on the register at the date of the offer, which will be on December 15th next, at the price of £5 per share, and in the proportion of one new share to each four shares then held. This, of course, represents a premium of £2 per share. The price, however, in the market at the present time for these shares is 7½ to 7¼, and allowing for the accrued final dividend for the year to June 30 last, which is included in that price, of 7½ per cent., leaves the price, x.d., at well over £7, as against the issue price of £5.

The allotment letters for the new shares will be sent out on December 15th, and the first instalment of the £5 will be payable as to £1 10s on January 15th (of which £1 will be capital and 10s premium); the second instalment of £1 10s on March 16 (£1 capital, 10s premium); and the third instalment of £2 on May 15th (£1 capital and £1 premium), but though these shares will thus only be paid up gradually over the last six months of our current financial year, they will rank for the full final dividend for the year to be declared in November next.

APPLICATION OF THE PREMIUM.

When the new issue has been completed and the instalments paid, it is proposed that the premium of £2 per share shall be applied in paying up 10s of the present uncalled liability of £2 10s per share on the 600,000 shares at present issued, bringing all the shares to a paid-up amount of £3 per share, with £2 uncalled.

The addition to the paid-up capital by the issue of 150,000 new shares, and the payment (out of the premium on that issue) of 10s of the present uncalled liability on the 600,000 shares at present issued, will amount to £750,000, bringing the paid-up share capital to £2,250,000.

Issuing the new shares at £5 each, that is at a premium of £2, gives the shareholders, on the basis of the present market value of, say, fully 7, ex div., a margin in their favour of over £2 per share. The proposed application of the premium on the new issue will also give them a bonus on their present shares equal to the premium (in other words, will be equivalent to returning the premium to them), the premium being on the new issue £2 on one share in four, and the application of it 10s each on the four old shares (i.e., £2 in each case), and in addition the present shares thus increased to £3 paid will secure the enhanced market value.

The new issue to those shareholders who take up their shares, you will thus clearly see, is not only equivalent to an issue of the new shares at par, but is distinctly better than an issue at par.

ULTIMATE EFFECT ON BANK'S CAPITAL.

The ultimate effect of the combined operations on the capital of the bank is that:—

The issued capital will be 750,000 shares of £5 each, £3,750,000. The paid-up capital will be 750,000 shares of £3 each, £2,250,000. The uncalled capital will be the same as it is now, viz., 750,000 shares £5, £2 uncalled, £1,500,000.

In other words, we will have added to our paid-up capital fresh money to the extent of £750,000, and although 10s of the former uncalled liability will have been paid up out of the fresh money provided by the premium on the new issue, that will have been replaced by a corresponding liability under the new issue, viz., 150,000 shares, £2 uncalled.

DATE OF ALLOTMENTS.

You will observe that although intimation of this proposal was made in our annual report, issued on November 8th, and the details have now been fully explained, the allotments will not be made until December 15th, in order to give the shareholders ample notice in case any should wish to acquire further shares in order to level up their holdings, and thus be in a position to take full advantage of their right to an allotment of shares of one in every four held, for as explained in the report no fractions will be regarded, the shares representing fractions, and the shares, if any, not taken up, will be dealt with by the directors for the benefit of the bank. It should be remembered, however, that while the allotment will be to shareholders on the register on December 15th, the transfer books of the bank will be closed from December 8th to December 15th, so that any shareholder wishing

to acquire any further shares for the purpose of levelling up should bear this in mind.

I will a little later move the necessary resolution for giving effect to the recommendation of the board with regard to the application of the premium of £300,000 on the new issue in paying up 10s of the uncalled liability on the 600,000 shares already issued.

MR JANION'S VISIT TO AUSTRALIA.

During the past year our greatly valued London manager, Mr Janion, has carried out his projected visit to Australia, to which I referred at our last annual meeting. He visited all our main branch offices, and met with all of our chief executive officers, as well as many leading business men in all the chief centres, and on his return was able to give the board a highly satisfactory report of his trip. Such a visit cannot but be of great benefit to the bank. Later on I will ask Mr Janion himself to give you a short account of his visit.

During Mr Janion's absence his place was taken by our assistant manager, Mr Shipston, who ably discharged the duties of the head office manager to the entire satisfaction of the board.

During the past year we have also had the advantage of a visit to this side of Mr Joseph Ewing, one of our chief executive officers in Australia, who has been in charge of our Tasmanian branches, where you will remember, we now carry on what was until we acquired it the business of the Commercial Bank of Tasmania. This was Mr Ewing's first visit to England, and the knowledge he has acquired of London and the methods of business as carried on here will be of great use to him in the future.

TRIBUTE TO THE STAFF.

Before drawing my remarks to a close, I desire to express the board's appreciation of the work during the past year done by the management and staff both in Australia and in London. But for the devoted, loyal, and able service which has been rendered we would not have been able to present you with so satisfactory a report as I have the pleasure of submitting to-day.

I will now move the following resolution, which I will ask Mr Paterson, the deputy-chairman, to second:—

"That the report and statement of accounts now submitted be and are hereby adopted; and that the amount available for distribution be applied as therein recommended."

Mr John Paterson (deputy-chairman) seconded the resolution, which was unanimously adopted.

MR JANION ON HIS VISIT.

Mr E. M. Janion, who was received with cheers, said:—Ladies and gentlemen,—As the time is short, I will make my remarks as brief as possible. I sailed towards the end of December *via* Ceylon, Rangoon, the Straits, and Java, visiting our agents in those countries en route and arriving *via* the Torres Straits at Brisbane in February. From Queensland I worked my way across the Continent *via* New South Wales, New Zealand, Victoria, Tasmania, South Australia, and Western Australia. I stayed for some time at each of our chief offices and had many consultations with Mr Wren, our general manager in Australia, and with our senior executive officers in all the States.

In all, I visited about 100 of our widely-spread branches and agencies, and everywhere I found our managers most keen on the progress of their different offices and hard-working men who had the interests of the bank very much at heart. Our business is conducted on sound lines, and every care is taken by them to avoid any undue risks.

Our senior officers have already made their mark, but you will be pleased to hear that I met many of our more junior men, who showed great promise, and to whom we can look with confidence to assume higher responsibilities when their turn comes for promotion, for we all know how greatly the future success of the bank depends on our branch managers.

In all the States I found the bank and its officers very popular and highly spoken of by our constituents in the different places, and I should like to say that personally I met with the greatest kindness and hospitality on all sides, which I very much appreciated, and shall always remember with great pleasure.

POTENTIALITIES OF AUSTRALIA.

This, I may mention, was the first occasion on which I have been privileged to visit Australia, and it is only when one is there that the immense size of the country and its great future possibilities can be properly realised. It is a wonderful heritage, and I was impressed with the use that has been made of it so far.

Of course, increased population is greatly needed, but that will come in time, and when it does the progress of the Continent will be still more rapid.

Our business in the Commonwealth is a very valuable one, and we have an excellent staff there, working together like a great family under the most able guidance of Mr Wren, our general

manager in Australia. He works like a Trojan himself, and has the great gift of bringing out the best in his junior as well as in his senior officers. He is a great asset to us. I think we may look forward to the future with every confidence.

The Chairman proposed, and the Hon. Sir John Cockburn, K.C.M.G., seconded, the re-election of Mr George Slade as a director of the bank.

The resolution was unanimously agreed to. The Chairman further moved, and the Hon. Sir Arthur Lawley, G.C.S.I., seconded, the re-election of Mr Sydney Marr Ward as a director of the bank.

The resolution was carried unanimously. On the motion of Mr J. M. Laine, seconded by Captain Slack, and the retiring auditors, Messrs Turquand, Youngs, and Co., and Messrs Price, Waterhouse, and Co., were re-elected at the same remuneration as before.

INCREASE OF CAPITAL APPROVED.

The Chairman then moved the following resolution, viz.: "That this general meeting, acting pursuant to the recommendation of the board, hereby declares that when the full sum of £300,000 shall have been received for premiums on the 150,000 shares of £5 each about to be offered for subscription, a dividend at the rate of 10s upon and for each of the 600,000 shares now outstanding be paid, and that such dividend shall be paid out of the said sum of £300,000 representing premiums on the said shares (which premiums are hereby declared to be applicable for the purpose), and upon the basis that the same shall not be paid in cash, but shall be applied in crediting the sum of 10s on each of the said 600,000 shares, so as to make the same respectively credited with £3 per share paid up."

Mr John Paterson seconded the resolution, which was unanimously agreed to.

VOTE OF THANKS TO CHAIRMAN, DEPUTY-CHAIRMAN, AND DIRECTORS.

Mr T. B. Connell, in proposing the following resolution, viz., "That a hearty vote of thanks be accorded to the chairman, the deputy-chairman, and the directors for their conduct of the affairs of the bank, and that they all be congratulated on the result of the year's working," observed that the board could be heartily congratulated on the results of the year's work. Some of them were personally acquainted with the members of the board, and, therefore, knew the nature and extent of their activities; but all the shareholders could appreciate what they had accomplished, whilst the resolution the shareholders had passed as to the increase of the capital of the bank was a further witness to the progress of the institution. The proposals indicated that the directors were not prepared solely to follow in the footsteps of others, but, where they considered it right and prudent, they had been always willing to take the lead.

Mr Robert Ward, in seconding the resolution, referred to the generous and ingenious proposal which the board had formulated, and which had commended itself to the shareholders.

The resolution was carried unanimously.

The Chairman returned thanks on behalf of his colleagues and himself.

VOTE OF THANKS TO MANAGERS AND STAFF.

Mr Frederick Tomkinson moved: "That the thanks of the shareholders are due to Mr Wren, the general manager in Australia, Mr Janion, the manager in London, Mr O'Sullivan, the assistant general manager in Australia, Mr Shipston, the assistant manager in London, and to the executive officers and the staff at home and in Australia for the valuable services they have rendered to the bank during the past year." He expressed his keen satisfaction with the results which had been obtained, and said that there was no doubt that much credit was due to the work of the executive both here and in Australia. The results were splendid, and he had specially attended the meetings to express his gratitude.

Mr G. Shirley Chapman, in seconding the resolution, said that he had been in business in Australia for many years, and from his own personal experience he could assure the shareholders that they had a magnificent staff.

The resolution was passed with acclamation.

Mr Janion, having returned thanks on behalf of the whole of the staff,

Mr Andrew Cunningham moved a cordial vote of thanks to the chairman for presiding, and for his informative and interesting address. He expressed the hope that Mr Williamson would long be spared to occupy the splendid position which he had won by his energy, high character, and ability.

Mr E. E. Edwards seconded the resolution, which was carried with acclamation.

The Chairman briefly responded to the compliment, and the proceedings terminated.

KILLINGHALL (RUBBER) DEVELOPMENT SYNDICATE, LIMITED.

SATISFACTORY RESULTS AND EXCELLENT PROSPECTS.

The fifteenth annual general meeting of the Killinghall (Rubber) Development Syndicate, Limited, was held, on the 20th instant, at the registered offices, 7 Martin's lane, Cannon street, London, Mr W. Arthur Addinsell, the chairman, presiding.

Mr J. Lewis, on behalf of the secretaries, Messrs Bright and Galbraith, Limited, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I move: "That the directors' report and account for the year ended June 30, 1924, as submitted to this meeting, be approved and adopted, and that a dividend of 7½ per cent. for the year be declared and paid."

From the report you have seen that the output for last year was less than the previous year by some 40,000 lbs, which is attributable to the export restriction enactment.

Production costs were naturally adversely affected, because to maintain the estate efficiently it was not possible—indeed it would have been unwise—to reduce overhead charges to correspond to the lower output. The result was a decline of £3,148 in the net profit.

The balance-sheet reveals a satisfactory position. It will be seen that the company has some £15,000 in liquid assets, while sundry creditors and bills payable only amount to approximately £4,200.

The average net price realised for all grades of last year's crop was just under 1s 1d per pound, and although it is difficult to estimate the output, having regard to the fluctuations in the export allowance, it is, I think, fairly safe to anticipate a considerable appreciation in the net average price for this year. I therefore look forward with pleasure to meeting you next year, for I am sanguine that the board will be justified in recommending an increased rate of dividend.

Your property has now reached a mature state of development, and as I told you last year, capital expenditure could be considered at an end. You will see from the accounts that only £124 was required to maintain the unproductive portion of the estate during last year, and a similar outlay is all that will be necessary in future years unless a further planting programme is embarked upon, which is not contemplated at the moment.

We have an excellent estate of 1,210 acres capitalised at only £43 per acre at the par value of the shares, therefore, so long as pro-

ducers can secure a fair market price for rubber, the company will be in a position to pay regular dividends.

Mr Harold C. Rendle seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with a vote of thanks to the chairman and directors and to the staff in the East and in London.

THE PICCADILLY HOTEL, LIMITED.

CONSIDERABLE IMPROVEMENT IN YEAR'S RESULTS.

The fifteenth annual general meeting of the Piccadilly Hotel, Limited, was held, on the 19th instant, at the Hotel.

Sir Charles T. Ruthen, F.R.I.B.A., the chairman of the company, presented to the shareholders the accounts for the year ended July 31, 1924, and said:—

I will ask you first to turn to the profit and loss account where you will find that this year's figures are compared with the previous year as has been our custom in the past.

It is my pleasant duty to draw your attention to the very considerable improvement in this year's figures. You will observe that the whole of the 6 per cent. participating debentures, amounting to £250,000 have been redeemed. This redemption releases the whole of the profits for distribution to the ordinary shareholders, the ordinary shares as you are aware, being entirely held by R. E. Jones, Limited. Little of the benefit of this cancellation appears in the present balance-sheet, but even so our net profits have increased this year to £43,514 12s 2d, as against £15,870 1s 5d last year. In the next balance-sheet the full effects of the saving in interest, charges, &c., will become apparent.

INCREASED POPULARITY OF THE HOTEL.

The increase in profits reflects a corresponding increase in turnover and the general improvement in the business of the company is due, we are convinced, to the very great attention which is given to every detail of the business and particularly to the thought which is expended upon the question of the comfort of our visitors, which results in a steady increase in the popularity of the hotel in all its departments.

In connection with the increase in our turnover, perhaps you will allow me to stress the point mentioned in the report, that a very

considerable part of the increase in our profits over those of last year was an accomplished fact before the Exhibition at Wembley was opened.

BALANCE-SHEET FIGURES.

Turning to the balance-sheet, the amount of £50,000, under the heading of "Loan account" and stated there as borrowed from the Westminster Bank, Limited, has, since the date of the balance-sheet, been repaid out of the earnings of R. E. Jones, Limited, and the Piccadilly Hotel, Limited, and the certificates for £102,906 6 per cent. participating debentures which were lodged with the bank as collateral security have been returned and cancelled, also since the date of the balance-sheet.

You will notice that the principal asset of buildings, &c., remains at the same figure, although the valuation of the company's property just made by the company's valuers shows that this figure is very much lower than the actual value at the present time. Your directors are therefore satisfied that the reserve which stands at the substantial figure of £150,210 is ample for the time being and no sum in consequence has been carried to reserve in the year under review.

STRONG AND HEALTHY POSITION.

I think you will agree that the position shown by the balance-sheet is a very strong and healthy one, and when I am able to inform you that the receipts since the turn of the year still show considerable increases over those of last year, I consider that we may congratulate ourselves with good cause, and we may confidently anticipate that the good results of the year under review will not only be maintained but probably surpassed in the current year.

I should like to express the board's appreciation to the managers and staffs under them for the efficient and conscientious way in which they have carried out their duties and which in no small measure is responsible for the good results of the year's trading.

ANSSELLS BREWERY, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFITS.

COMPANY'S SPLENDID FINANCIAL POSITION.

The twenty-third annual meeting of the shareholders of Ansell's Brewery, Limited, was held at the Queen's Hotel, Birmingham, on Friday, November 14th, Mr James A. Fairhurst presiding.

The secretary read the notice convening the meeting and the auditors' certificate.

The Chairman, in moving the adoption of the report and accounts, said: The net profit for the twelve months ended September 30, 1924, after making full provision for depreciation and bad and doubtful debts, is £167,233 9s 2d, which, with the addition of £83,101 8s 10d, brought forward from last year, produces £250,334 18s. Out of this amount the sum of £53,937 10s has been paid for interest on debentures at 4½ per cent., and interim dividend on the preference and ordinary shares at the rate of 5 per cent. and 10 per cent. per annum respectively, the latter free of income-tax. The directors, after providing interest on debentures accruing to September 30, 1924, now recommend the payment of a final dividend at the rate of 5 per cent. per annum, less income-tax on the preference shares, and at the rate of 15 per cent. per annum (making 12½ per cent. for the year) on the ordinary shares, annum (making £137,584 18s. Of this it is free of income-tax, leaving a balance of £137,584 18s. Of this it is proposed to place £50,000 to reserve, bringing this account up to £230,000, and to carry forward £87,584 18s to next year's account.

THE PROFITS.

Before I say anything in regard to the report and balance-sheet, I must apologise for the absence of Mr Edward Ansell, whose health does not permit of his being present here this morning.

From the above report you will observe that the profits for the last twelve months have increased by £35,000, and it will be readily understood that as we have had the benefit of the extra trade brought in by the acquisition of Rushtons business, an increase in the profits was expected. I am glad to say that the purchase of Messrs Rushtons Brewery, Limited, is turning out quite satisfactorily, the public having responded to the change in beer in a manner that is most gratifying.

I need not, I think, trouble you by going into details with regard to the balance-sheet, but there are certain figures of considerable interest. You will observe that the profit is sufficient to pay the debenture interest eight times over, and after paying that interest there remains enough to pay the dividend on preference eight times over. If you look at the total assets it will be observed that the position of debenture holders and preference shareholders is a very strong one.

As regards goodwill, you will see that it does not figure at all,

but the goodwill is a possession of high value, and its absence from the books is an important supplement to the reserve account. Another item of great interest is the net assets. At the formation of the company in 1901 that figure stood at £800,000, and it now stands at £1,717,000. Therefore, after discharging all our liabilities there is an increase of £917,000 in 23 years—a figure which is remarkable and most satisfactory.

PRICE AND QUALITY.

I do not propose to go into detail in regard to the other figures, and I will call upon Mr Thomas Ansell to second the resolution. Then, when that has been done, I will invite anyone to ask any questions they may have in regard to the balance-sheet, which I will endeavour to answer.

Mr Thomas Ansell: Mr Chairman and gentlemen, I have great pleasure in seconding the resolution. The chairman has dealt so fully with all matters that there is no need for any further comment from me. I am still sorry to say that my remarks made at our last two meetings in reference to the price of beer still hold good. No reduction can be made to the public if the quality of our beer is to remain as at present until a reduction of the Beer Duty takes place. With those few remarks I have great pleasure in seconding the resolution.

The resolution was unanimously carried.

Mr A. E. Wiley was re-elected a director of the company, and Messrs Fisher, Randle and Fisher re-elected auditors of the company.

The meeting concluded with a vote of thanks to the chairman.

HOTEL CECIL, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The annual general meeting of the Hotel Cecil, Limited, was held on the 20th instant, at the hotel, Mr J. Douglas Broad (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance from trading account gave a total of £98,607, an increase over the previous year of £21,106. Shareholders would remember that at the previous meeting he reported that it would be necessary to incur during the year considerable expenditure on reconditioning their plant. The work had progressed steadily during the year, and, as generally happened when dealing with machinery, had cost more than the original estimate, as it was quite impossible to provide for repairs and renewals which did not show themselves as necessary until the work was opened up. The directors carefully considered the best way to deal with the abnormal expenditure falling in one year, and came to the unanimous decision, as it was necessary expenditure properly incurred to maintain the property in an efficient state, to charge it as an expense, and the board hoped the shareholders would approve of this course. The available balance of profit and loss was £65,760, against £75,485 last year, but shareholders must remember that the preference dividend for the first six months had already been paid. Speaking generally, they looked back on last year's trading with some satisfaction. It had been a strenuous year for all concerned, but their manager, Mr Farmer, the assistant manager, and the staff had risen to the occasion, and given that loyal and willing assistance which they never failed to give. On the assets side of the balance-sheet, it would be noted that the freehold property and plant account remained the same. Cash showed a decrease of £27,304, which was accounted for by the reduction in creditors, the payment of the half-year's dividend on the preference shares, and the increases of £951 in stocks and £5,192 in sundry debtors and investments. With reference to the latter item, the directors had increased the investment in the company's own debenture stock during the year to the extent of £2,267. What the prospects for the current year were it was too early to foresee, but so far they had every reason to be satisfied with their business, and the banqueting department continued to expand under the able management of Mr Bertini. They were at present redecorating the west block, and were taking the opportunity to instal running water in the bedrooms of that block to meet the growing demand for this convenience. The time had now come when the directors felt justified in fixing the date for the payment of the preference dividend, and they proposed in future to pay the dividend half-yearly, on February 28th and August 31st.

Mr C. L. Huggins seconded the resolution, and it was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

THE FINANCIAL AND ECONOMIC SITUATION IN GREECE.

In view of the approaching issue in London and New York of the Greek Loan for the settlement of the Asia Minor refugees, the details given below relating to the financial and economic situation in Greece will no doubt be read with much interest in this country. It is generally recognised that Greece is steadily progressing on the road of healthy finance; and if account be taken of the large resources of the country, of the intelligence of her people, and of the determination of her rulers to put their house in order, one may be sure that the day is not remote when Greece will see her Budget balanced and the value of her currency improved.

GENERAL SITUATION.

The actual situation of Greece is very different from that which existed a year ago. The clouds of the political horizon, which might have given one some misgivings then, have been completely cleared. A total of about 1,000,000 refugees had flocked into Greece from Asia Minor, and it was impossible in June, 1923, to forecast the burden which the upkeep of these refugees, the majority of whom were destitute, would throw on the national finances. The Treaty of Lausanne had not been signed. A revolutionary Government was in power and the uncertainty as to the future *régime* was a very disquieting factor. Since then the Treaty of Lausanne has been signed, a Government is now at the helm which enjoys the complete confidence of the country, and it has been definitely settled, as a result of a plebiscite, that the Republic is permanently established. The Greek Sub-Committee of the League of Nations Council, which met in London this year, has acknowledged that "it wishes to recognise the considerable progress which has been made towards stability in the economic and political situation in Greece."

NATIONAL FINANCES.

As the Treaty of Peace was signed at Lausanne only towards the end of July, 1923, it cannot be said that the past year was a peace year for Greece. This must be taken into account when studying the results of that year and drawing conclusions from the returns of that period. The budgetary estimates for 1923-24 were originally as follows:—

(In Million Drachmæ.)				
1923-1924.	Revenue.	Expenditure.	Surplus (+) or Deficit (—).	
Ordinary.....	3,031	2,961	+	70
Extraordinary ..	910	3,663	—	2,753
Total	3,941	6,624	—	2,683

In consequence of additional credits during the year, the estimated deficit rose subsequently to Dr. 3,038 millions. The actual returns from April 1, 1923, to March 31, 1924, show the following results:—

(In Million Drachmæ.)				
1923-1924.	Revenue.	Expenditure.	Surplus (+) or Deficit (—).	
Ordinary.....	3,117	1,582	+	1,535
Extraordinary ..	588	2,311	—	1,723
Total	3,705	3,893	—	188

The above deficit of 188 millions is due to extraordinary expenditure, the deficit from which was greatly reduced by the surplus of Dr. 1,535 million from ordinary revenue. As the books for the financial year 1923-1924 were closed at the end of July, 1924, the above deficit of Dr. 188 million was finally increased to Dr. 1,316 million, in consequence of payments that were made by the Treasury up to that date. Thus the year under review shows a deficit of Dr. 1,316 million in lieu of the estimated amount of Dr. 3,038 million—i.e., Dr. 1,722 million less. As the Treasury disposes of a creditor balance from the previous years of Dr. 350 million, the deficit is reduced by that amount to Dr. 966 million. In this connection, it should be stated that the deficit is due exclusively to war expenditure. In fact, since the financial year 1920-21, when the Asia Minor campaign began, to the end of 1923-1924, war expenditure amounted to no less than Dr. 7,731 million, distributed as follows:—

(In Million Drachmæ.)	
War Office	5,802
Ministry of Marine	956
Refugee Relief	479
Refugee Settlement	250
Soldiers' Families Relief	244
Total	7,731

This amount has been raised by internal loans or by taxation. The items for the refugees do not include the advances made by the Bank of England and the Greek Banks against the Refugee Loan. Nor do they comprise the sums disbursed for the settlement of refugees by the Refugee Settlement Commission.

BUDGET FOR 1924-1925.

The original estimates for the current year, as subsequently modified, are as follows:—

(In Million Drachmæ.)				
1924-25.	Revenue.	Expenditure.	Surplus (+) or Deficit (—).	
Ordinary	3,458	2,906	+	552
Extraordinary.....	500	1,569	—	1,069
Total.....	3,958	4,475	—	517

Without expenditure on refugees this deficit would be even smaller. Provision of Dr. 240 million has been made for assistance to refugees, colonisation charges, and expenses incurred by exchanges of population. Freed from these burdens, the 1924-1925 Budget would only show a deficit of Dr. 277 million. The prompt settlement of the refugees has, therefore, a double economic interest for Greece. In the first place, the Budget position would be considerably improved; in the second, once the refugees are definitely settled, they will prove an important factor in the future exploitation of the economic resources of the country. In the words of Mr Morgenthau, chairman of the Greek Refugees Settlement Commission, in his address to the Council of the League of Nations: "This calamity (the expulsion of Greek nationals from Asia Minor) could be converted into a great godsend to Greece if we enabled these refugees to become self-supporting and to increase the production of Greece to such an extent that she herself would become a self-supporting nation, and would, after a few years, no longer be dependent upon her imports. We discovered that Greece was going to be enriched by the Asia Minor rug trade, as practically the whole of that trade had been transferred to Greece. We found that, among the peasants, there were many expert tobacco growers, and that, even in the first year, the tobacco crop of Greece increased so much, and that the growers prospered so greatly, that they are already prepared to pay back some of the advances which had been made to them. We found that the silk industry had been expelled from Turkey, and that the refugees were ready to start afresh, planting their mulberry trees and developing that industry."

REVENUE.

Greece has not shirked her duty in attempting to cope with the ever-growing expenditure which circumstances have forced upon her. Direct taxation brought in Dr. 319 million for the year 1922-1923, Dr. 719 million for the year 1923-1924, and is estimated to produce Dr. 823 million for the year 1924-1925. The corresponding figures for indirect taxation are Dr. 897 million, Dr. 1,652 million, and Dr. 1,709 million. New measures are being studied to increase the returns both of direct and indirect taxation. The figures appended bear eloquent testimony to the fiscal efforts made by Greece.

(In Million Drachmæ.)				
Financial Year.	1914.	1922-23.	1923-24.	1924-25.
Direct taxes....	48	319.3	718.7	823
Indirect taxes ..	127	879	1,869.8	2,172
Total taxation	175	1,216.3	2,588.5	2,995

VERIFICATION OF ESTIMATES.

The decrease in expenditure is due mainly to a reduction in the extraordinary expenditure of the War and Marine Ministries,

which, for 1923-24, amounted to Dr. 1,328 million, and for which the estimate for the current year has been reduced to Dr. 518 million. Moreover, the loss difference in exchange is reduced this year by Dr. 244 million. These figures suffice to show the exactness of the expenditure estimates. As regards revenue, the actual returns of the past year have been taken as basis. However, a greater yield of the taxes is anticipated this year. In fact, a comparison of the returns for the first four months of the current financial year with those of the past year comes to the support of this assumption. Revenue receipts for April, May, June, and July, 1924, amounted to Dr. 496 million, as against Dr. 352 million for the same months of 1923. The position of the Public Treasury is considered as very satisfactory. The disposable funds amounted, at the end of August, to Dr. 434,500,000, £60,000, and Fr. 4,300,000. The balance in drachmæ consisted almost wholly of tax receipts. Less and less recourse is being made to the discounting of Treasury bills.

FOREIGN EXCHANGE POSITION.

In the first months of 1923, when a continuation of the war was still feared, the national currency showed a depreciating tendency. Exchange on London was then fluctuating between 385 and 428 drachmæ to the pound sterling. Since then the Greek exchange has greatly improved. It has dropped as low as 200 drachmæ to the pound sterling, and has not risen much above 260 drachmæ. It seems to have found a stable level between 255 and 260 drachmæ. This improvement is proof of the soundness of current financial policy, and of confidence in the economic robustness of the country.

GOVERNMENT BOND VALUES.

The value of Greek Government bonds has experienced steady appreciation in foreign centres. In the table given below the yearly average sterling prices are given for the bonds quoted on the London Stock Exchange; the figures are taken from the annual report of the International Financial Commission:—

Loan.	1922.	1923.	Current Value.
1887 4%	31.75	37.83	46.5
1893 5%	34.93	38.80	55.5
1881 5%	34.85	41.39	55.5
1884 5%	34.98	41.28	55.5
1890 5%	33.71	39.82	55.5
1889 4%	27.30	33.29	43.5
1902 4%	37.53	37.54	50.5
1914 5%	39.69	49.23	63.5

This steady appreciation is an excellent criterion of the increase of confidence in Greece on the part of particularly well-informed quarters. This confidence is quite justified if we consider the way in which Greece, in spite of all the difficulties that have assailed her, has carried out the service of her debts. All loans contracted by the various Governments, not excepting even those of the revolutionary Governments, have been acknowledged and respected by the succeeding *régimes*. Difficulties have arisen with creditor nations, but the arrangements concluded 26 years ago on this question have been faithfully kept, and Greece has since honoured all her obligations in spite of the many difficulties that have assailed her, and has even improved the terms of the arrangements in the interests of her creditors. The same will hold true in the future. A tradition of integrity has been built which will always characterise the Greek nation's dealings with its creditors. During the war period not only has Greece paid regularly the interest and sinking fund charges on its public debt, domestic and foreign, but has even improved the rate of interest paid on the old gold loans which are controlled by the International Finance Commission.

THE PUBLIC DEBT.

The figures of the Greek National Debt are as follows:—

At	Gold Drachmæ.	Paper Drachmæ
March 31, 1923.....	1,671,883,532	6,742,092,311
March 31, 1924.....	1,665,758,695	7,612,421,486
Change (+) or (—)	— 6,124,837	+ 870,329,175
There was thus a net increase of Dr. 864,202,338, made up as follows:—		
Floating Debt in paper drachmæ.....		806,852,682
Issue of remainder of 750 million loan (on proceeds of capital levy)		250,000,000
Gold floating debt.....		773,650
Remainder of first Refugee Loan.....		21,403,918
Funding of Canadian debt.....		1,719,245
		23,869,813
		1,079,722,495

Repayment of Debt 1923-1924—

Floating debt in paper	186,594,168
Floating debt in gold.....	28,951,000
	215,545,168
Net increase	864,177,327

Of this increase, expenditure on refugee account was responsible for Dr. 465,308,848. The remainder of the increase in the National Debt, or about Dr. 400 million, is due wholly to military expenditure, which, during the year in question, amounted to Dr. 1,125 million. As far as Greece is concerned, the war ended with the Treaty of Lausanne (August, 1923). The main cause for the increase in our indebtedness has thus been eliminated.

FIDUCIARY CIRCULATION.

The National Bank of Greece has the monopoly of note issue, and on May 31st last the total issue amounted to Dr. 6,053,252,675, of which Dr. 1,440,007,557 were held by the Bank. The circulation, therefore, was Dr. 4,613,245,118, made up as follows:—

Dr.	
1. Issued by National Bank in virtue of its privilege	569,405,000
2. Issued on Government account	2,903,455,915
3. Special issue covered by Ally credits	1,139,734,175
4. Issued according to law of 23/4/1923 for purchase of exchange and covered by such exchange	1,440,611,585
Total issue.....	6,053,252,675

The notes in the first category are issued according to the banking legislation. The third category of notes is issued by the Bank for account of the Government against credits, of which the Government disposes abroad. As these credits are utilised so the notes are withdrawn from circulation; the notes are entirely covered and cannot exceed the total of disposable credits. These credits were opened as follows: In 1918 and 1919 by France, England, and U.S.A., for Frs. 1,150 million, £12 million, and \$50 million respectively. Of these issues, Dr. 578,308,130 remain outstanding. By an arrangement made in 1918, the National Bank placed Dr. 309,468,045 at the disposal of the French Government for expenditure on the French Army in Macedonia. These notes will be cancelled as soon as the debt thus contracted has been settled. Further issues, amounting to Dr. 452,008,175, were made between 1914 and 1917 on the basis of various credits granted by English, French and Russian loans.

Notes of the fourth type are sanctioned by the Law of April 23, 1923, according to which the National Bank may issue notes against deposits of foreign currencies. As soon as such foreign currencies are disposed of, the notes issued against them must be retired. These notes, which are thus fully covered, form about one-quarter of the total circulation.

As regards notes in the second category, those issued for account of the State, we must distinguish as follows: (1) Notes issued before the financial arrangement of 1898, which then amounted to Dr. 90 million, and are being gradually cancelled. They amount now to Dr. 42,951,915, and will have disappeared in 20 years' time. (2) An issue of Dr. 750 million, dating from the end of 1923. Concurrently with this issue a capital levy was decreed, the proceeds of which will be used to cancel these issues. This year, Dr. 90 million have been cancelled in this way. (3) The remainder, a little over Dr. 2,000 million, is subject to a special amortisation arrangement at the rate of 3 per cent. per annum.

From what precedes it will be seen that, of all the notes issued on State account, those that may be considered as inconvertible and unsecured are being steadily and even rapidly redeemed. The average amortisation for the year 1923-1924 was at the rate of 5 per cent., and a total of Dr. 141,500,000 was cancelled, made up of Dr. 2,000,000 in notes of the first category, Dr. 90,000,000 in notes of the second category, and Dr. 49,500,000 in notes of the third category.

It must be admitted that, during the period 1921-1922, there were heavy issues of notes; but many countries which have found themselves in a situation no more difficult than that of Greece have availed themselves far more freely of the printing press. It must also be realised that, even at a date previous to the signing of the Treaty of Lausanne, Greece ceased to make further issues of notes, and since then has considerably diminished the total of her fiduciary circulation. At the same time, the influx of immigrants, which has increased the population by 25 per cent., the development of business and the growing needs of the market have all been factors counteracting the effects of inflation. The improvement of the situation in this direction is reflected in the appreciation of the drachma on the foreign exchange markets. A more rapid deflation than has actually taken place would have had

the most serious consequences on the economic prosperity of the country.

FOREIGN TRADE.

To realise the growth of Greek foreign trade, it is only necessary to consider the export figures. For 1920 these amounted to Dr. 664 million; for 1921, to Dr. 974 million; for 1922, to Dr. 2,485 million; and for 1923, to Dr. 2,545 million.

According to statistical information received from the Ministry of Agriculture, the average total value of agricultural produce stands at Dr. 15 milliards, or about £60 million. The activity of the refugees will certainly increase the total of this production.

THE REFUGEE LOAN.

In view of the foregoing investigation into the economic and financial situation of Greece, and by comparing it with the past, it may safely be said that the country is now on the way to sound economic reconstruction. The solution of the refugee problem would make for an element of security, which would bring back conditions of normal prosperity within a very short time. The solution of this problem is only possible on the condition that the funds necessary for the immediate and complete settlement of the refugees are placed at the disposal of Greece by way of a loan. The situation of Greece certainly justifies her appeal for such a loan. By the end of this year the total of refugees in Greece will have risen to 1,480,000, or about 370,000 families.

About 100,000 refugees have already been sheltered and settled. The remainder are homeless and in danger of spending a third winter in conditions of absolute destitution.

That Greece has made great efforts to cope with this problem may be gauged from the following figures:—Up to the end of March, 1924, Dr. 505,000,000 had been spent on relief work (in kind, housing, and alms) and Dr. 470,000,000 on costs of transportation, i.e., a total of Dr. 975,000,000 out of the State Budget. For the current financial year provision for relief work has been placed at Dr. 240,000,000, and a supplementary sum of Dr. 63,000,000 has been voted for the housing of the refugees. The State will thus spend during the current year Dr. 303,000,000 on the refugees. But, in spite of these efforts, the needs of the task of settlement remain heavy and pressing. The Refugee Settlement Commission foresees expenditure during the half-year August-January amounting to £3,835,799, and maintains that, in order to complete its task, it will require at least £4,000,000. Against this expenditure the Commission has in hand about £1,500,000, the balance of advances granted by the Bank of England and the National Bank of Greece. The Refugees Relief Fund, which is grappling with the problem of housing, has already spent an amount of Dr. 133,000,000 on the building of urban quarters, and will require a further Dr. 456,000,000 before it can complete its task, or about £1,824,000; altogether, then, a further expenditure of £8,159,799 is foreseen. When the question of international financial help to Greece for the purpose of refugee settlement was first submitted to the League of Nations last year, permission was given to raise a loan between the limits of £3 million and £6 million. At the same time, a committee of investigation was set up, of which Mr Morgenthau was named chairman. In his report to the Council of the League of Nations, made on September 13th last, Mr Morgenthau paid a glowing tribute to the work of reconstruction which had been carried through by Greece herself. "We find, however," he continued, "that, in order to stabilise Greece thoroughly and to take care of all these refugees, or most of them, we need £10,000,000. Greece is ready to do her share; she has undertaken to advance 25 per cent. of this sum.....We believe that the security given for this money is ample and proper. The Greek Government is stable. Ever since 1897 the Greek Government has adhered to the arrangement made then as to the payment of interest and amortisation, and during all her tribulations she has never defaulted. Tremendous strength has been shown by the Greek Government during this rehabilitation period, and everything now points to the fact that, with this additional money, these refugees will be of great assistance to Greece instead of being a hindrance. Taking all those facts into consideration, we think that we are justified in coming here for your assistance. Greece is not asking for charity, nor are we recommending that charity be given to her. Greece is asking this Council to put its stamp of approval on her desire to appear before the financial public of the world, and to raise this loan of £10,000,000." Speaking at the same sitting of the Council, Mr Tsouderos, Greek Minister for Finance, said:—"The settlement of several hundreds of thousands of workers belonging to a hardy and industrious race would shortly bring Greece considerable addition to her resources. The share of this new wealth accruing to the State would be more than sufficient to cover the service of the loan, which could be termed an eminently productive one. Moreover, as the Council knew, the loan of £10,000,000, which was barely adequate to provide for the complete settlement of the refugees, would be guaranteed by revenues estimated at Dr. 750

million, a sum covering the service of the loan three times over, and by the land transferred to the Refugee Settlement Commission, the value of which exceeded the capital of the loan, to say nothing of the income derived from this land and the taxes thereon." The Council of the League, at a meeting held on September 19th last, adopted the resolutions proposed by the Greek Committee of the Council; the chief one is an authorisation by the League of Nations that Greece should raise a loan or loans not exceeding £10,000,000, and should arrange for the subscription by the Greek banks or financial groups of a block equivalent to at least 25 per cent. of such a loan or loans. The issuing houses shall place the whole proceeds of the loan or loans directly at the disposal of the Refugee Settlement Commission for the purposes specified in its Organic Statutes, and for the repayment, if necessary, of any advances.

SECURITY OF NEW LOAN.

The Refugee Loan would be specifically secured by: (1) The monopolies of New Greece, i.e., salt, matches, playing cards, and cigarette paper. (2) The Customs receipts received at the Customs of Canea, Candia, Samos, Chios, Mitylene, Syra. (3) The tobacco duty in New Greece. (4) The stamp duty in New Greece. (5) The duty on alcohol in the whole of Greece. (6) Any surplus of the revenues already assigned to the International Financial Commission, subject always to existing charges on such a surplus. Receipts from these revenues are shown below:—

	(In Drachmae.)		Estimated Revenue
	1922.	1923.	
Monopolies.			
Salt	7,191,798	12,927,266	.. (a) 18,000,000
Matches	11,831,384	17,789,326	.. (b) 21,000,000
Playing cards	952,171	1,652,625	.. 1,855,000
Cigarette papers	6,313,137	9,698,228	.. 10,000,000
Customs.			
Canea, Candia, Samos, Chios, Mitylene, Syra	22,892,909	35,929,935	.. (c) 38,424,316
Total	49,181,399	77,997,380	.. 89,279,316
In gold francs ..	—	42,125	.. 16,000

(a) Estimate justified by increase in price of salt.
(b) Increased receipts from this article are estimated on basis of increase in price per box and increase in consumption.
(c) Increase of Dr. 3,000,000 is justified by the receipts of the first two months, which for these six customs were Dr. 6,804,086 and gold francs 2,872.

	(In Drachmae.)		Estimated Revenue.
	1922.	1923.	
Tobacco duty in New Greece	84,554,888	178,795,237	.. (a) 240,000,000
Stamp duty in New Greece	12,161,821	33,083,352	.. (b) 60,000,000
Alcohol duty in the whole of Greece ..	56,852,985	140,067,445	.. (c) 165,000,000
	153,569,694	351,946,034	.. 465,000,000

(a) Increase of Dr. 62,000,000 justified by increase in the duty on tobacco (law of December 15, 1923).
(b) Increase justified by recent application to the new provinces of the legal and supplementary stamp duties.
(c) Duty on alcohol increased by law of April 4, 1924, from Dr. 20 to Dr. 27'50 per thousand litres.

As regards the surplus of the revenues already assigned to the International Financial Commission, these amounted in 1922 to Dr. 200,775,049, in 1923 to Dr. 301,651,040 and £103,885, and are estimated for 1924 at Dr. 203,450,752 and £50,000. The total of the surplus of revenues for the year 1924 was estimated at Dr. 420 million; but of this amount Dr. 216,549,248 is reserved to the service of loans not controlled by the International Financial Commission, there remains thus Dr. 203,450,752 as security on the transferred to the Greek Government for the first six months of 1924 an amount of Dr. 284,283,000, as well as £19,322, as excess on revenues; it may be concluded from this that the actual excess for 1924 will considerably exceed the estimates.

A loan of £10,000,000 would, on the basis of a rate of 10 per cent., require for its service an annual sum of about Dr. 250,000,000. The estimates for 1924 of the revenues specifically pledged to this service amount to over Dr. 750,000,000. Even without the additional security of a mortgage on the land transferred to the Refugees Settlement Commission, the value of which would exceed the capital of the loan, the loan would be amply secured.

THE BANK OF POLAND.

The Bank of Poland, as the only institution having the right to issue bank notes, was opened in connection with the reform of the currency which took place in Poland the beginning of the present year.

This reform consisted in replacing the provisional monetary system—in the shape of the Polish mark issued by the state banking institution, the Polish Loan Bank (P.K.K.P.)—by a currency based in gold with the "zloty" as monetary unit, being equivalent to a unit of the Latin Union. The Polish mark, the relation of which to the zloty has been legally fixed at 1,800,000 marks for one zloty is gradually being withdrawn from circulation or bought up by the Government for the purpose of liquidation. There remain now not quite 9 trillion marks not yet bought up, of the former circulation of about 600 trillions.

These 9 trillions represent a value of 5 million zloté. At present there is as yet no circulation of gold metal in Poland. The coinage of gold at private cost is foreseen in Poland as soon as the necessary technical arrangements can be made in the State mint. Notes issued by the Polish Bank are the only circulating means, except small coin, in the country; hence the Polish Bank is the only regulator of monetary circulation in Poland.

The basis of existence of the Bank of Poland is a statute of the President of the Republic, announced in the Bill for the reform of the finances and the currency passed January 11, 1924. In this Bill only the most general principles for the organisation of the Bank of Poland were included, but it determined that the Bank of Poland was to be a private institution, that its issue of bank notes must have at least a covering of 30 per cent. in gold and valutas, and finally that the State Exchequer must not be in debt to the Polish Bank for budgetary purposes.

The above-mentioned statute of the President, by virtue of Parliamentary Bill, can only be altered by the Legislature. Likewise, to make an alteration in the statute of the Bank it is also necessary to have a resolution of a general meeting of the Bank passed by a majority of two-thirds votes; thus an alteration of the statute presents enormous difficulties.

The fact is important, as the privilege of issuing bank notes constitutes an integral part of the statute of the Bank, and consequently cannot be expanded on the part of the Government by way of ordinary concession. The Bank of Poland is a shareholders' bank with a capital of 100 millions, the nominal value of a single share amounting to 100 zloté. The capital has been fully paid in golden and foreign valutas, and was entirely subscribed in Poland. The shares are in the holder's name, but may be ceded by consent of the President of the Bank.

The rights of the Government in regard to the Bank consist of nominating the President and Vice-President, in approving the members of the directorate and in nominating the commissioner, whose function it is to maintain connection between the Government and the Bank.

It is the duty of the President to see that the Bank complies with the resolutions of the Bills and statutes; to watch over the execution of the general aims of the Bank and to guard the general interests of the State. For this purpose he is invested with the right of veto upon the resolutions of the Council, and can suspend the decisions of the directorate if resolutions or decisions, in his opinion, are not in accordance with the duties of the Bank.

The policy of the Bank is directed by the council, consisting of 13 members elected in general meeting, and the management is composed of the chief director and several other directors. There is also a revision commission, consisting of five persons elected by the general meeting. The Bank attains its aim, as expressed in the statute, of "regulating the circulation of money and facilitating the credit," by profiting from its privilege of emission. The emission of bank notes having a currency fixed by statute is the monopoly of the Bank of Poland till the year 1945. The Bank has the obligation on principle to exchange its bank notes for gold, although the time from which this exchange is to become obligatory is to be determined by the Council of Ministers. As this regulation has not been announced, the exchange for gold is at present postponed, and replaced by an active policy of circulation of bills. The central point of the limitations of the emission lies in the covering of the emission and the adaptation of the separate elements of this covering to each other. Above all, at least 30 per cent. of bank notes in circulation must have a covering in gold or in foreign valutas or bills of exchange. The idea of bills of exchange able to serve as a security for emissions is limited in this sense, that they must be met by a valuta not dependent on great fluctuations of exchange, and, besides, must be in themselves a claim on foreign institutions of unquestionable solvency.

The valutar resources of the Bank of Poland consist principally of locations in first-class foreign banks. In reckoning the amount of resources of valuta that may serve as a security for emission, it is necessary to take off all liabilities of the Bank in foreign valutas.

The rest of the covering of bank notes may consist of the following:—Discounted bills of exchange warrants; drawn lottery papers; silver coins and metal coinage at a maximum value of 5 per cent.

of the circulation of bank notes; and, finally, liabilities of the State Exchequer from credit without interest of not more than 50 million zloté by reason of the grant of the privilege of emission.

As regards separate items of bank covering, it should be observed that, contrary to other statutes of shareholder banks, silver is not considered as a metal covering, but as a bank covering. On the other hand, the limitation of silver money to 5 per cent. of the general circulation makes it impossible for the Government to practise a policy of silver inflation for budgetary purposes.

As regards bills of exchange, besides the normal order concerning their circulation, which may not exceed three months, and the necessity of three or a minimum two signatures, it is clearly stated that the bills must be the "results of economic turnover." This means that it is impossible to discount any finance bills, however secure they may be. Of course, this regulation also is binding on all bills bearing the endorsement of the State (taxation bills which may not be discounted in the Bank of Poland). The maximum debt of the State Exchequer to the Bank of Poland by reason of its granting the privilege of emission may not exceed the maximum sum of 50 millions. This right, until now, has not been exercised, as on October 10th the sum amounted to 35,276,589.72 zloté. Among the active interests of the Bank, which may not be a base of emission, should be mentioned, above all, the loan office of gold and silver, valutas and bills, also papers of worth. A loan office of goods is not permitted.

Besides this, the Bank of Poland concerns itself, among other things, with the purchase and sale of gold and silver, valutas and bills, with the cashing of bills of exchange, with the acceptance of savings, and the opening of current accounts (without interest).

One of the most important departments conducted by the Bank is the business in foreign bills. The Bank of Poland is the largest receiver and furnisher of foreign valutas on the exchange market in the country. Consequently, it has become the sole regulator in foreign bills and currency exchange. Thanks to its active valuta policy, which consists on the one hand of completely satisfying the market in foreign means of payment, and on the other in securing for itself a settled flow of foreign valutas, the Polish Bank is now in a condition to keep up the currency of the zloty at par in spite of its temporary inability to change bank notes for gold.

The Polish Bank, besides being the regulator of the circulation of ready money, also in a high measure fulfils the task of facilitating exchange by means of endorsement bills and also by organising, in its central office and some of the larger provincial branches, clearing houses.

Within the limits of the above statutory rights the Bank of Poland has from the very beginning of its existence pursued a very careful policy of issue, having in view before everything else the maintenance of the absolute stabilisation of the valuta.

The metal covering of the valuta, of which the minimum according to the statute amounts to 30 per cent., is now maintained by the bank at about 70 per cent. This, in practice, with the active foreign bill policy that is pursued, is entirely sufficient for keeping up the exchange of the zloty without fluctuation for a long time ahead. In this connection the credit policy of the bank likewise is noticeable for its great caution. The rate of discount, amounting at present to 12 per cent., is for the time being not an absolutely sufficient brake for the increase of issue by discount bills. Nevertheless, the contingency of credits granted to separate customers, and the severe censoring of bills (especially the refusal of all material not issuing from actual commercial transactions, and having as their aim only the securing of a money loan) have proved until now to be a quite successful means of stopping the flow of bills to the bank in such quantities as might unfavourably alter the relation of the metal valuta covering to the circulation of bank notes. This cautious policy has not had any unfavourable influence on providing the market with means of circulation, since it is notable that at the present time there are bank notes in circulation in Poland amounting to about 450 million zloté, whilst in January of this year the circulation of Polish marks reckoned in zloté amounted to not quite 100 million zloté. Simultaneously with this, the amount of credit bills granted has increased from 110,185,430.33 zloté at the beginning of the activity of the Polish Bank to 236,411,239 zloté on October 10, 1924. The amount of gold and valuta serving as a base of the issue increased in the same time from 299,915,687 zloté to 317,865,551 zloté. It should, however, be mentioned that this increase of credit granted by the Bank of Poland was not a replacement of credit previously granted by private institutions; on the contrary, it accompanied a favourable development of conditions also in the sphere of private credit. The explanation of the increase is the enormous increase in the deposits by private banks during the year 1924.

The activities of the Bank of Poland, both in safeguarding and strongly supporting the Polish valuta and in pursuing a cautious credit policy, have made this institution a principal factor in effecting the improved financial position in Poland. The results already achieved during its short existence permit the belief that it will in the future continue to fulfil the important task with which it is charged.

AUSTRALIAN, MERCANTILE LAND AND FINANCE COMPANY, LIMITED.

PROBABLE ISSUE OF NEW SHARES.

The sixtieth annual general meeting of this company was held, on the 20th instant, at 20-22 Coleman street, London, Mr R. H. Caird (chairman and managing director) presiding.

The Assistant Secretary (Mr W. D. Turner) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the year to which the report referred had been a very prosperous year for the company, and he thought the shareholders would all be very well satisfied with the profits shown and the distribution recommended. During the past year he had spent some months in Australia visiting all the company's offices and several of the properties they owned. He found everywhere that the name of the company stood very high, and that their reputation for fair dealing was thoroughly well established in all the States where they carried on business, and that even in the States where they did no business there was a desire that they should be represented. He had visited the capital cities of all the States in Australia, and was much struck with the progress that had been made in all of them since he was last in Australia some 30 years ago. The cities were much too large for the population of the States of which they were the capitals, and the crowding of the population into the cities was much to be regretted when such vast areas remained unpeopled in the interior, but it was the natural result of the extraordinarily good wages that could be earned, and as long as those high wages could be earned in the towns it was likely that working men would prefer the amenities of city life to the risk and privations that were often the lot of those who worked in the interior. While the towns were crowded, there was room and opportunities in the country for a vast increase of population. There was no doubt at all that there was plenty of room in Australia, and that what she required more than anything else was population.

The company's sales of wool, as brokers in Australia, had amounted to 167,690 bales, and they still ranked third in the list of sellers in Australia. The clip of wool for 1923, from their own stations, had amounted to 6,631 bales, or a reduction of 599 bales as compared with 1922, but the money value was £240,623, or an increase of £53,539, and the average per bale was £36 4s 9d, against £25 17s 6d in 1922.

EXCHANGE.

Dealing with the accounts, the chairman said that £25,000 had been added to the equalisation reserve. When they had exceptionally large profits it was only prudent to set something aside. It must not be forgotten that the price of wool was at a very high level, and their profits largely depended on wool, and though he could not see any likelihood of a fall in prices, still shareholders were getting a very handsome dividend, and it was wise to set something aside for possibilities. The general reserve fund was now half the paid-up capital, and, as far as he could see, that was sufficient, as they had no terminable debentures, and they always kept ample cash in hand to provide for sundry creditors. Referring to exchange, and observing it was a very costly operation to get money from London to Australia, he went on to say that with the difficulty of transporting funds from London the demand for money was likely to continue. Large building operations were going on in most of the large cities, and the funds of the banks seemed to be fully employed, while in the company's business there had been evidence that more money could be employed advantageously. To make provision in London meant, of course, that they must either realise some of their gilt-edged holdings, borrow by means of an issue of debenture stock, or raise fresh capital by an issue of shares. The directors had carefully considered these three courses, and, having come to the conclusion that an issue of new shares was the best of these courses, it was only right to tell the shareholders that there was a possibility of a new issue of shares, though he could not say when it would take place. If and when an issue took place, it would probably take the form of an issue of 60,000 £5 shares at par, and these shares would be offered to the then holders of the old shares, whether £25 with £5 paid or the £5 fully paid, in the proportion of one new share for every three old shares, and, as that would mean a substantial bonus, the directors took this opportunity of letting everyone know.

There was a distinct improvement in Argentina, and prices for cattle had risen considerably. Although the results up to June 30th last did not reflect an improvement, he was quite hopeful that the results for the current year would do so. The latest telegram from the general manager for Australia indicated that the prospects generally from the season and markets point of view were the best for many years, while a telegram from Buenos Ayres stated that their properties wanted more rain, but were comparatively comfortable for the present.

The report and accounts were unanimously adopted, and a final dividend of 5 per cent., together with a bonus of 5 per cent. (making 15 per cent. for the year, free of income-tax), was declared.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Nov. 24—Nov. 29 were opened on Nov. 21, 1924, and the total amount applied for was £57,400,000. For bills at three months dated Monday to Friday at £99 1s 4d. about 59 per cent., and above in full; Saturday £99 1s 7d and above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds, nil

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.				
Oct. 17.....	35,000,000	57,670,000	3 14 11-17	94 10 0
Oct. 24.....	35,000,000	55,135,000	3 14 5-74	94 10 0

		Other countries	1,092
Total declared value of imports	179,224	Total declared value of exports	930,148

Messrs Samuel Montagu and Co. write on November 19th as follows:—

GOLD.

There was a keen Indian demand for the small amount of gold on offer here this week, and all available supplies were taken for that quarter. Gold valued at \$3,500,000 has arrived in New York from Paris, and is said to be part of a consignment of \$15,000,000 expected from Europe in the near future. A large parcel of gold is expected to arrive there shortly in connection with the instalment of the British debt to the U.S. Government, due on the 15th proximo. The following figures show the United Kingdom imports and exports of gold during the month of October, 1924:—Imports, £1,499,414; exports, £960,446.

CURRENCY.

On the 17th instant a new Bill was introduced to the Danish Parliament by the Premier with the object of stabilising the Danish currency. The Bill authorises the Government to seek a loan of \$40,000,000 from the United States, the proceeds of which are to be deposited with the National Bank as a special currency reserve. The project will be strengthened by the formation of a special finance council, and by the imposition of a currency tax.

SILVER.

Owing to lack of any special demand and further rises in the dollar value of sterling, prices have dropped further, and quotations were fixed on November 14th at 33 1/2 for cash and 33 1/4 for two months' delivery—the lowest price fixed for cash since May 8th last, and for forward delivery since August 16th last. China and India have been rather sellers than buyers, and America has sold with some freedom. The s.s. "Majestic" brought to London from New York this week 2,183 silver bars, weighing 2,324,671.65 ounces, worth \$1,620,073.43. This is a record arrival in recent times. The actual record is still held by the Royal Mail steamship "Tasmanian," which delivered, on September 28, 1860, silver valued at £1,186,760 13s 1d, weighing over 4 1/2 million ounces. The undertone of the market, owing to the apathy of the Far Eastern and Continental demand, is not promising, and depreciation of sterling with America, should it arise, would probably have to be considerable before the position of silver could be rendered really healthy. To-day, after a temporary rally, prices again relapsed, and 33 1/2 and 33 1/4 are quoted for the respective deliveries. No fresh Indian currency return has come to hand. The stock in Shanghai on the 15th instant consisted of about 51,700,000 ounces in sycee, 43,500,000 dollars, and 640 silver bars, as compared with about 50,700,000 ounces in sycee, 44,500,000 dollars, and 2,650 silver bars on the 8th instant.

NOTICES.

The directors of the Standard Bank of South Africa, Limited, announce, with regret, the retirement of Mr Francis Shipton from the head office management on December 31st next, after 36 years' service. Mr Bertram Lowndes (assistant manager in London) has been appointed manager, and Mr Francis E. King (chief inspector in London) assistant manager.

Mr Charles J. Hambro has been offered, and has accepted, a seat on the board of the Mercantile Bank of India, Limited.

Lloyds Bank, Limited, announce that the business of the bank hitherto carried on at 82 High street, is now transferred to enlarged premises at 49 High street, Winchester.

The following notice is issued by the Bank of England:—On and after Monday, November 24th, all stocks will be transferable at 18 Finsbury circus, E.C. 2.

The Midland Bank announces the opening of a new office in Barnard's Green, near Malvern, under the supervision of Mr F. E. Laughton, manager of the Church street, Malvern, branch.

We are informed that in accordance with Banco di Roma's policy of converting its foreign branches into independent banks organised under the laws of the countries in which they are situated, a French limited company has been created, under the name of Banco di Roma (France), in order to take over the offices of Banco di Roma in Paris and Lyons. The new bank started business on the 15th instant, with a capital of 15,000,000f.

Reports and Notices.

The directors of the Anglo-Dutch Plantations of Java, Limited, report that none of their properties is in any way affected by the recent earthquake in Java. The estates of the Besoeeki Plantations, Limited, and the Java United Plantations, Limited, and the Java Investment, Loan and Agency, Limited, are far distant from the scene of the earthquake.

Sir Samuel Hoare, Bart., having joined the Cabinet, he has relinquished his post as chairman of the United Anthracite Collieries, Limited. The board has elected Mr F. A. Szarvasy as chairman, and Mr Daniel Daniel, who has a life-long experience in the anthracite business, has accepted the post of managing director.

The Right Hon. Sir Auckland C. Geddes, G.C.M.G., K.C.B., has been elected a director of the Rio Tinto Company, Limited, in place of the Right Hon. Sir Arthur Steel-Maitland, Bart., M.P., who has resigned on being appointed to the Cabinet.

The Right Honourable Sir Philip Lloyd-Greame, P.C., K.B.E., M.C., M.P., has retired from the board of the Anglo-Argentine Tramways Company, Limited, on accepting office as President of the Board of Trade.

GOVERNMENT STOCKS, &c.

CANADA (£5,000,000 DOMINION OF CANADA 4½ PER CENT. BONDS 1920-1925).—The Bank of Montreal announce that the Government of the Dominion of Canada notify that it has been decided to exercise its option to redeem the above-named bonds, subject to three months' notice. These bonds will, therefore, be repaid on February 13, 1925, on which date interest will cease. Interest from November 1, 1924, to February 13, 1925, will be paid along with the principal. The bonds (with the unmatured coupon due May 1, 1925, attached) must be presented for redemption to the Bank of Montreal, 47 Threadneedle street, London, E.C.2, who will carry out the redemption on behalf of the Government of the Dominion of Canada. Listing forms can be obtained from the Bank of Montreal on and after February 2, 1925, and bonds should be left three clear days before the above-mentioned redemption date.

OTTOMAN PUBLIC DEBT.—In accordance with the provisions of Article 57 of the Lausanne Treaty, which came into force on August 6, 1924, the Council of Administration of the Ottoman Public Debt notify holders of coupons of bonds of the Ottoman 4 per Cent. Unified Converted Debt 1903-1906 that the prescription period of six years for coupons, which fell due before October 29, 1914, and which have not been presented for payment, is suspended from that date to November 6, 1924, and that the remaining portion of the said period of prescription for these coupons will again become operative from November 6, 1924. With regard to the coupons falling due during the period beginning on October 29, 1914, and ending on November 6, 1924, which have not been presented for payment, the prescription period will only operate from the latter date.

SALVADOR REVENUE.—Cabled advice received from Messrs F. J. Lisman and Co., of New York, states:—"Total Customs revenues of Salvador collected for ten months, \$3,876,876. Interest and sinking fund requirements for 'A' bonds, \$379,758, and for the 'B' bonds, \$269,000."

BANKS.

BANQUE BELGE POUR L'ETRANGER SOCIETE ANONYME.—This important Belgian banking institution has just issued its report and balance-sheet for the year ended June 30, 1924. The following comparative table of balance-sheets reveals an interesting record of progress:—

	Year Ended June 30,		
	1922.	1923.	1924.
Net profit of the business year	Francs. 8,008,714	Francs. 9,478,582	Francs. 12,238,806
Dividend	7%†	7%*	8%*
Capital—			
Subscribed	100,000,000	100,000,000	100,000,000
Paid up	75,000,250	75,000,250	75,000,250
Reserves	19,962,294	21,852,280	24,000,000
Sundry creditors	626,676,194	603,353,525	610,789,934
Acceptances	26,687,331	69,266,319	60,266,692
Note issue in China ..	1,679,019	2,443,964	2,163,121
Cash	144,087,491	124,218,085	113,984,928
Loans	37,268,217	37,393,610	68,721,150
Sundry debtors	243,919,595	288,021,726	278,788,626
Investments	69,948,067	85,319,446	99,352,782
Bills receivable	229,012,890	170,109,014	153,304,792
Total of balance-sheet ..	787,813,552	810,094,670	813,949,553

† Less tax. * Tax free.

Value of coupon (fully-paid shares) 1922, 31.50f; 1923, 35.00f; 1924, 40.00f.

The report states, amongst other interesting details, that in spite of the obstacles in the way of trade resulting from the uncertainty of the international situation and the consequent variations in rates of exchange, the affairs of the bank continue to expand without interruption.

BANCA COMMERCIALE ITALIANA.—The extraordinary general meeting of shareholders of the Banca Commerciale Italiana, held in Milan on the 7th inst., sanctioned the proposal for increasing the capital from 400,000,000 lire to 500,000,000 lire. The new shares will be issued at 900 lire, and will be offered to present shareholders at the rate of one new share for every four shares held.

INSURANCE.

UNITED INSURANCE (AUSTRALIA).—The balance of the profit and loss account for the year ending September 30, 1924, is £74,711. A dividend of 10 per cent. has been declared, and 5,000 unallotted shares are being issued at £5 each, appropriating £25,000 from profit and loss for payment of same. To the reserves £11,752 has been added, and the balance of £2,959 carried to the contingent account. The capital of the company is £1,000,000, of which £375,000 will be paid up. The total assets amount to £853,914.

MISCELLANEOUS.

ASSAM RAILWAYS AND TRADING.—The 43rd report just issued provides the following interesting comparative table:—

	GROSS EARNINGS AND EXPENDITURE.				
	General Earnings.	Coal Earnings.	Total Earnings.	Total Expenditure.	
	Rs.	Rs.	Rs.	Rs.	
In 1920-21 ..	10,06,484	5,81,694	15,88,178	12,59,699	
In 1921-22 ..	10,19,084	6,97,253	17,16,337	12,38,692	
In 1922-23 ..	11,79,717	7,58,158	19,37,875	13,40,935	
In 1923-24 ..	13,50,342	6,85,928	20,36,270	15,14,523	

The total capital expenditure on the collieries, saw mills, and brick works remains at £365,982. After payment of debenture interest, and allowing for all the preference dividends paid or accrued to date of the balance-sheet, there remained a balance at credit of net revenue account of £81,833 16s 6d. Out of this the directors have to provide £50,400 for the service of the "A" stock, the dividends on which have been paid at the usual dates, the interim dividend of 2 per cent. on the "B" stock, and out of the balance available recommend the payment of a final dividend of 6 per cent. on the "B" stock, and that £5,000 be written off the discount on debentures, leaving £2,433 16s 6d to be carried forward.

BARCELONA TRACTION, LIGHT, AND POWER.—The reorganisation of the finances of the Barcelona Traction, Light, and Power Company, Limited, approved by the bondholders in June, has been successfully carried through. The comparative statements have been prepared on the instructions of the board in order that holders of the company's securities may be informed of the result of the re-arrangement of the bond and share capital of the company and the reduction of the annual charges resulting therefrom. The comparative statement of bond issues and share capital as at December 31, 1923, and after the reorganisation will be found in our advertisement columns.

CARGO FLEET IRON.—The net profit, after payment of debenture interest for year ended September 30, 1924, amounted to £60,250, against £55,957 in preceding year. The sum of £50,000 is put to depreciation, and £212,809 carried forward, against £202,650 brought in. The sum of £12,500 4½ per cent. debentures have been cancelled. Total assets are £2,568,619. Cash at bankers and in hand amounts to £76,932. Cash on deposit at bank in names of trustees for debenture holders amounts to £45,007. Government securities amount to £50,216. Debtors stand at £217,866. Stocks are at £241,404. With regard to liabilities, the ordinary issued share capital is £1,000,000 in £1 shares. There are no preference shares. The 4½ per cent. debentures outstanding amount to £234,000, while 6 per cent. debentures outstanding amount to £496,500. General reserve is at £150,000. Creditors stand at £368,095.

COMPANHIA DE MOCAMBIQUE.—Movement of the Port of Beira for the first nine months, compared with the similar period of 1923, 419,487 tons, against 368,293 tons.

SOUTH DURHAM STEEL AND IRON.—The report just issued for payment of debenture interest, shows that net profit, after pares with £168,609 in preceding year, amounted to £93,144 which is again 10 per cent. for the year. The ordinary dividend to depreciation, and £203,816 is carried forward, against £203,671 brought in. Total assets are £2,951,061. Investments stand at £521,091, of which £502,500 are in Government securities. Cash stands at £46,785. Debtors are at £311,299. Stocks stand at fund of £1,445,783. Creditors stand at £310,246. Ordinary share capital is £350,000 in £1 shares. There are £300,000 in 6 per cent. cumulative preference shares of £1 each. The issued 4½ per cent. debenture stock is £300,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were more favourable for field work during the week, a spell of cold, dry weather enabling farmers to push ahead with ploughing and seeding operations. Threshings were on a larger scale, but a good deal of the quantity marketed is in a damp condition. Quotations are on the easy side, and range from 12s to 12s 10d per 112 lbs, free on rail, according to quality. Imported grades move off quietly, and prices moved in a downward direction following the decline in c.i.f. values. No. 1 Northern Manitoba quoted 68s 6d, No. 2 hard winter 63s 6d, No. 1 Northern Duluth 63s, and choice white Karachi, 63s 3d, all per 496 lbs ex ship terms. In the floating and forward cargo section business made quiet progress, apart from some inquiry for white kinds, and with more favourable crop news from the Argentine, prices mark a decline for all descriptions. Steamers of Australian December changed hands at 65s 3d, February 64s 9d to 64s 7½d, ditto January-February 64s 4½d, sailer ditto March 64s 3d, choice white Karachi affoot 62s, ditto end November early December 64s 1½d, Rosafe 63½ lbs old and/or new expected to load December 5th 64s, No. 2 hard winter January, 63s 9d. Flour cargoes depressed, owing to lack of demand, and liberal offerings, especially in near positions, and a steamer of La Plata affoot sold at 42s, all per 480 lbs c.i.f. terms. Flour, quiet, and tendency easier in sympathy with the wheat position. London standard straight run quoted 51s, patents 53s to 54s, town whites 51s, all per sack delivered in Metropolitan area, with outside districts at 1s per sack extra. Country straights from all English wheat 44s to 45s per sack free on rail at London stations. Imported, quietly steady. Manitoba patents range from 49s to 52s, Minneapolis 49s 6d to 51s 6d, Australian 46s 6d ex store, and Kansas patents 47s ex ship, all per 280 lbs. Barley, quiet and easier. Californian 70s-74s, Chilean brewing 80s-88s, Polish ex store 62s-68s per 448 lbs No. 4 Canadian Western ex ship 39s, Danubian, Persian, also American malting (48 lbs) 39s, all ex ship per 400 lbs. English American malting (48 lbs) 39s, all ex ship per 400 lbs. English ranges from 11s 9d-23s per 112 lbs free on rail. Maize, quiet, and prices again lower. Plate ex ship quoted 40s 3d-40s 6d, ditto landed 42s 3d, and Odessa in latter position 42s 3d per 480 lbs. Oats, dull and weaker. Plate ex ship quoted 29s, ditto landed new 30s, No. 2 Canadian Western ex ship 33s 3d, ditto landed 34s 9d, American white clipper 38 lbs landed 31s, all per 320 lbs. English 8d-10s 10d per 112 lbs free on rail. Millers' offals, quiet. Broad bran quoted 9s 3d, middlings 9s 6d, fine ditto 13s 3d, bags included, ex mill. Light oats 9s 3d, powdered oat husks, 9s 9d, feed oatmeal 10s 9d, ground oats 14s 9d, all per cwt free on rail. Oatmeal, quietly steady. London-made flaked 20s, rolled oats, 19s 6d, medium, also fine cut 19s 6d, coarse and medium pinhead 19s 6d, ordinary Scottish oatmeal 21s, American and Canadian rolled oats 20s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

	1924-1925.	1923-1924.	1922-1923.	1921-1922.
Estimated sales of home-grown wheat—				
1 week to Nov. 15	Cwts. 231,285	Cwts. 392,377	Cwts. 461,658	Cwts. 301,137
11 weeks to Nov. 15	2,672,734	4,469,166	4,812,158	4,036,137
Average price of English wheat per cwt.	s d 12 6	s d 9 3	s d 9 11	s d 10 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1924.						
Nov. 8	Cwts. 235,409	Cwts. 525,847	Cwts. 102,395	s d 12 9	s d 16 9	s d 10 4
Nov. 15	231,285	499,156	83,125	12 6	15 11	10 2
1920	353,636	712,425	52,246	21 0	25 1	18 7
1921	301,136	544,632	50,277	10 7	13 7	9 6
1922	461,657	471,893	80,379	9 11	11 2	9 8
1923	392,377	646,419	72,487	9 3	10 7	8 8

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 20, 1924, is as follows:—Pig-iron: There has been a fair amount of inquiry for export, no doubt due to the rise in Continental pig-iron, and Cleveland producers are rather firmer in their quotations. The price of No. 3 Cleveland is not less than 82s per ton, whilst East Coast mixed numbers hematite are still maintained at 88s 6d per ton. Manufactured iron and steel: The steel works are getting more orders and specifications, but are not yet working to their full capacity, as there is not sufficient new business to warrant them extending their output at present. Prices remain unchanged as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: There has been some business done for delivery over the remainder of this year and the first few months of next year, based on best rubio at about 22s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Conditions in the market for raw and partly manufactured iron and steel remain much as

before as regards the booking of work, but a slight change for the better can be noted, and there is a decidedly hopeful feeling abroad. Sellers seem inclined to stand out for firmer prices, and any appreciable increase in demand is almost certain to stiffen them. Very little forward buying has, however, taken place up to the present time. The engineering industry continues to be disappointing as a whole, although improving in parts, and there is a great amount of slackness among machine tool and stationary engine builders. Railway work is increasing, both as regards the home and the export markets, and substantial foreign orders for locomotives are in hand. In axle tyres and springs new work, although considerable in amount, scarcely keeps pace with output. As the file trade constitutes a reliable index of the state of all kinds of workshops, it is encouraging to learn of increasing activity in that department. To-day's output of 70 per cent. of capacity compares very favourably with any period since 1919, and at one time the output was less than half capacity. Depression still obtains in the coal market, and sales of house coal for the winter have this year been much below the average. Quietude is the rule in exports, gas coal, and all kinds of manufacturing fuel. The output of coke is considerably in excess of consumption. Prices are nominal for the most part. Best hand-picked branch coal commands 31s to 32s, and South Yorkshire hards about 20s or 20s 6d at pits. Very low figures have been taken for nuts and smalls.

Our Glasgow correspondent writes:—Improved conditions prevail in the iron and steel market. Pig-iron is in good demand for home trade, and there has also been some buying for export. Prices are firm at last advance. The shipments from Glasgow harbour totalled 1,549 tons, of which 960 tons was on overseas account. For the corresponding week last year the respective tonnages were 2,183 and 2,045 tons. The heavy steel trade shows signs of revival, some fairly good lines of plate and sectional material having been secured. The demand is not so far of large dimensions, but the feeling is general that the next two or three months will see a decided improvement. Very few new ships are being ordered, but strong hopes are entertained that this industry will shortly see better times. The Scotch coal trade this week shows some slight improvement on the depressed conditions lately existing, several parcels having been disposed of on account of Italian buyers. Bar iron is in small request, and keen cutting on the part of Belgian works has deprived re-rollers here of some good export trade. Sheet makers are again busy, the market showing considerable liveliness. Higher prices rule for most gauges. The demand for galvanised sheets shows little sign of slackening, and large tonnages have been booked during the past week. Makers have advanced prices by about 15s per ton, the lowest quotation now being £17 10s. Recent orders placed include an order for a powerful screw tug, which the Union-Castle Mail Steamship Company have placed with Messrs Henry Robb, Limited, Leith.

CHEMICALS, CRUDE DRUGS, Etc., Etc.

ARCOS EXPORTS TO RUSSIA

MANUFACTURED GOODS OF ALL KINDS.

Turnover (June, 1920, to October, 1924) £46,141,420

BRANCHES:

MOSCOW: Tverskaya 1, (Ugol Pl. Revelutskii).
CONSTANTINOPLE: Grande rue de Pera, No. 464.
Agents in U.S.A.: Amtorg Trading Corporation, 136, Liberty Street, New York.

LENINGRAD: Ul. Cortezna, 24.
KHARKOV: Chernogolovskaya, 1.
TIFLIS: 38 Rustaveli Prospekt.
RIGA: Valdemara iela 61, dz. 3.

Next Tuesday will see the opening of the final series of sales for the year in Coleman street, there being no less than 132,000 bales available. This quantity is above an average compared with previous years for a November-December series, and we hope that everything will be sold, and ready to start the new year with entirely new clip wools. We understand that there is available some very good Queensland new clip wools, and possibly West Australia and New South Wales will also be represented, while nobody need be surprised if some of Adelaide and Perth first sales' wools are also available. The trade seems fully ready for the auctions, and we anticipate a very good time. Prices for merinos will, in all probability, rule fully up to the close of the last series. Some talk of a 5 per cent. advance, but we fail to see its justification. Notwithstanding reported advances from Australia, the clean scoured cost is no more than what was ruling in Coleman street at the close of last series, and any advance in merinos should be well covered with 5 per cent.

The trade is looking towards crossbreds for a sensible advance, and to per cent. is freely talked about in medium and coarse qualities. No doubt there will be a keen demand, with possibly some American competition. All the same, the home trade is prepared to purchase all the crossbreds available, and there should be a good, healthy, sound series. We do not see the least justification for anyone to lose their head.

THE TIMBER MARKET.

(FROM OUR OWN CORRESPONDENT.)

The cold snap of wintry weather this week was not necessary to remind those engaged in the timber trade that the close of the season is drawing near—to the majority in this country it cannot close early enough. Nature, however, has played some pranks with those engaged in the trade for the past few years, the cold days of late November invariably being followed by mild weather and a very late close of navigation.

There cannot be said to have been much change in the market for building timber since our report in the *Economist* a month ago. Cargoes have been arriving in large numbers, much larger than for the corresponding periods of 1923 and 1922, and for the year the import has been considerably beyond those of its immediate predecessors. Thus stocks of nearly all descriptions are heavy, particularly in London and at some of the ports on the East Coast. Finland has shipped very largely to this country this season, and Russia is again coming well forward. Latvian and Polish timbers have also increased in import, but the Swedish arrivals are not so heavy as a year ago—the Swedish wood is available for shipment, but the f.o.b. rates of the past six weeks have been too low to attract all sellers, some of whom are not willing to make too great a sacrifice of their unsold balances.

Although the spot market is depressed by the weight of stock, the consumption of North of Europe deals, battens, and scantlings is by no means unsatisfactory, for it is estimated that though the supplies in London are much larger than a year ago, at present rates of consumption their duration of life in the store ground is shorter, present stocks of the above being estimated at nearly four and a half months, not a long period should ice set in early and prevent many cargoes from reaching here this season.

Prices, on the whole, have weakened considerably during the past two months, but should firm up a month or so hence; they already show improvement. European floorings for houses, large and small, are in good supply. Of Canadian spruce the stocks are lighter than a year ago, but the demand is very poor. American pitchpine is also in poor request, due to the continued slackness in the shipbuilding and other industries in which this wood finds a place. Stocks in London of pitchpine in the log are large, but the high ideas of shippers in the States and the improving demand there prevent any fall in values on this side, prices being firm. For teak values are steady; deliveries have shown improvement over the month, and, compared with 1923, for the year, and stocks are light. A revival of our leading industries would be an immediate call for larger quantities of teak—in fact, for all woods.

In other hardwoods the imports for the month and for the year show considerable increases. Mahogany in log form is improving in volume of import, and is welcome, provided that the timber is of good dimensions and quality, while the continued heavy supplies of oak, poplar, gum, ash, mahogany, and walnut in boards and planks from the United States are providing a sufficiency of raw material for the cabinet and furniture trades. For these prices keep firm.

In colliery timber there has been a considerable decline in the import trade this year, due to the falling off of the French supplies of nearly 200,000 loads compared with a year ago. This denotes a lessened consumption in our very depressed South Wales coal fields. There is also a falling off in the Finnish and Swedish imports of this class of timber for our northern collieries.

In native grown woods there is a good demand for best qualities of ash, oak, sycamore, &c., but the poor grades are hard to clear.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market continues to show an advancing tendency, and prices all over the world are firmer. At the Bermondsey auctions on Thursday, best ox sold from 8½d to 9½d, and seconds from 7d to 8½d—fractional advances being obtained in several classes. Best heavy cows made 7½d and kips from 4½d to 7½d. Calf were very firm, and advances of ½d to 1d were obtained. Best sold from 8½d to 16d per lb. in view of a strong demand from light leather tanners. Wools sold from 8s 2d to 12s 6d, and hogs from 9s to

20s 6d each. The fregoric market is excited with higher prices asked; best Argentines have made 10d, and Montevideos 10½d, and as killings show a decline, higher prices are possible. Dry hides are also dearer, and 11½d to 11½d has been paid for Americanos. Capes have been in good demand, and Australian hides—although higher in price—have sold well. The Chicago position is cabled as strong, with best heavy packers now selling at 18 cents.

Upper leather is in moderate demand at higher prices. Both German and American patent has again advanced, whilst imported willow calf of German origin is now on a basis which will permit of home competition. Glacé kid is quiet, but kip leathers are meeting with an improved demand.

Most of the shoe trade centres report business as moderate. Good orders have been received from multiple distributors for spring and winter goods, but dating forward seems a common complaint.

VEGETABLE OILS AND OILSEEDS.

Trade in oils this week has been on quiet lines. Linseed oil has declined in sympathy with seed, and about £45 per ton naked ex Hull mill now represents current value for delivery to the end of December, with new year oil indicating slightly less. Consumers do not appear to be in any hurry to anticipate requirements, and are looking to more favourable opportunities. Cotton oils have been inactive, and prices have been reduced, crude Egyptian now offering at £46 10s and technical refined at £47 15s per ton ex Hull mill. Palm kernel, soya, and ground nut oils are in poor demand.

In the oilseed section oilseed had a sharp setback on the publication of the official estimate of the new Argentine crop placing the probable yield at 1,350,000 tons, or considerably higher than market opinion, which up to recently expected a yield of a million tons.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 21.

SUGAR.—The refined market exhibited firmer features in face of improved trading for all descriptions. British standards were raised 6d on the spot, and 6d to 1s per cwt for forward delivery. Messrs Tate and Lyle's cubes quoted 38s 9d to 39s 9d; crushed, 37s 3d; granulated, 35s 4½d to 35s 10½d; ditto November, 35s 3d; December, 35s 3d; and yellow crystals, spot, 31s 10½d. English-grown granulated firmer at 34s, prompt delivery, ex works Norfolk. Imported descriptions experienced a much better demand, and the general trend of values moved in sellers' favour. White Java, spot, sold, 32s 4½d to 32s 9d; Belgian granulated, 33s; Dutch "J.", 33s 6d to 33s 9d; and Czecho at 34s. Forward positions also shared in the improvement, and a good business transpired in near positions of

Continental granulated, though top points were not maintained. Czecho, ready, sold at 20s 4½d to 20s 1½d; November, 20s 3d to 20s 1½d; December, 20s to 19s 9d; and April-June, 19s 9d, f.o.b., Hamburg. Belgian granulated, ready, done, 19s 4½d to 19s 3d; December, 19s 1½d to 19s, f.o.b., Antwerp. Dutch met a December, 19s 1½d to 19s, f.o.b., Rotterdam. Offers of 20s 1½d; and December, 20s, f.o.b., Rotterdam. Offers of Continental cubes remain scarce, as refiners appear to be manufacturing smaller quantities than usual. Raw kinds attracted more attention at full rates. Peruvian, 96 per cent. afloat, sold up to 17s, and Continental beet, 88 per cent. November, done, 16s 6d to 16s 9d, c.i.f. terms U.K. India remained a quiet market, with buyers of Hungarian crystals, January-March shipment, at 20s 3d. Mauritius crystals, November-January, quoted 20s 3d, both c. and f. Bombay, and white Java, January-March, quoted 21s 6d; July-September, 18s 6d, c. and f. Calcutta. There was a fairly extensive business in the white terminal market, but prices very irregular in sympathy with fluctuating advices from New York. November, sold, 19s 9d to 19s 10½d and 19s 7½d; December, 18s 7½d to 19s 3d and 18s 6d; March, 18s 10½d to 19s and 18s 4½d; May, 18s 10½d to 19s 1½d and 18s 6d; August, 19s 1½d to 19s 4½d to 18s 10½d, and 18s 7½d per cwt. Cuban receipts for past week totalled 8,863 tons, compared with 2,076 tons at corresponding period last year, exports 33,806 tons against 12,167 tons, and stock 85,113 tons, against 63,042 tons at same time last year.

TEA.—Public sales this week comprised 50,958 packages Indian, 10,812 Ceylon, and 4,117 Java and Sumatra. The market again displayed marked strength under brisk competition both on home and export account, with common and low medium grades ruling from ½d to 1½d per lb dearer on the week. All descriptions move off readily into consumption, so that increased arrivals during the present year have been mostly accounted for. Imports into the United Kingdom during the past ten months totalled 384,242,000 lbs, compared with 356,563,000 lbs at corresponding period last year. Stocks on Oct. 31st amounted to only 149,494,000 lbs, against 146,999,000 lbs at same time in 1923, heavy takings by the home trade, together with a large export demand, accounting for the small increase. Despite a steady falling off in quality usually noticeable at this period of the year in finest grades, these continue to command extreme rates. The Indian crop up to the end of October was 6,000,000 lbs smaller than last year, 10,812 Ceylon, and 4,117 Java and Sumatra. The market again displayed marked strength under brisk competition both on home and export account, with common and low medium grades ruling from ½d to 1½d per lb dearer on the week. Imports into the United Kingdom during the past ten months totalled 384,242,000 lbs, compared with 356,563,000 lbs at corresponding period last year. Stocks on Oct. 31st amounted to only 149,494,000 lbs, against 146,999,000 lbs at same time in 1923, heavy takings by the home trade, together with a large export demand, accounting for the small increase. Despite a steady falling off in quality usually noticeable at this period of the year in finest grades, these continue to command extreme rates. The Indian crop up to the end of October was 6,000,000 lbs smaller than last year, 10,812 Ceylon, and 4,117 Java and Sumatra. The market again displayed marked strength under brisk competition both on home and export account, with common and low medium grades ruling from ½d to 1½d per lb dearer on the week. All descriptions move off readily into consumption, so that increased arrivals during the present year have been mostly accounted for. DE BEERS CONSOLIDATED MINES, LIMITED

REPORT OF DIRECTORS

For the Twelve Months ended the 30th June, 1924,

To be submitted to Shareholders at the Thirty-sixth Ordinary General Meeting to be held on the 5th December, 1924.

TO THE SHAREHOLDERS.—Gentlemen,—Your Directors beg to submit their Thirty-sixth Annual Report. Balance Sheet at 30th June, 1924, Profit and Loss Account for the year ended 30th June, 1924, and Appropriation Account, 30th June, 1924.

The undistributed balance at 30th June, 1923, was represented by:—
 Suspense Profit Account—Diamonds unsold at that date, £22,584 11 8
 £233,271 1s 10d; Balance unappropriated, £89,513 9s 10d 3,452,541 5 8
 During the year the Diamond Account amounted to 3,452,541 5 8
 Add to this the following:—Interest and Dividends on Investments, £301,673 8s 11d; Profits realised on sale of Investments, £4,619 17s 4d; Net Income from Farms, Landed Property and Electric Railway, £8,601 4s 11d; Income from other sources, £11,422 7s 2d 226,316 18 4

Deduct Expenditure as follows:—Mining Expenditure, £1,817,125 11s 7d; Donations and Relief, £10,970 7s 2d; Allowances to Employees, £46,182 13s 9d; Directors' Fees, Salaries and General Charges, £91,373 13s 10d; Exchange on Remittances, £26,948 14s 11d; Other Charges, £35,967 13s 11d; Interest on Debentures and on Capital of Lease Companies, £164,469 19s 8d; Sinking Fund towards repayment of Debentures, £92,173 19s 11d; Depreciation, £54,000 2,537,992 14 9

Leaving a balance of £1,864,220 0 11
 Which has been dealt with as follows:—Union of South Africa Income Tax and Provincial Tax, £191,279 18s 4d; Preference Shareholders' Dividend after deduction of Dividend Tax, £740,000; Deferred Shareholders' Dividend free of Dividend Tax, £525,722 £1,457,001 18 6

Balance undistributed carried to next year:—Suspense Profit Account—Diamonds unsold 30th June, 1924, £233,271 1s 10d; Balance unappropriated, £73,852 18s 4d £497,218 2 5

The stock of blue ground and lumps on the floors at 30th June, 1924, was as follows:—De Beers Mine, 48,396 loads; Wessleton Mine, 415,289 loads; Bultfontein Mine, 425,004 loads; Dutoitspan Mine, 2,769,772 loads—3,658,461 loads.

During the period under review the diamond market remained steady, and it is gratifying to record that there has been an increase in the sales as compared with the previous year.

In February last a Conference of Representatives of the four large Diamond Producers and the Diamond Syndicate was held in Johannesburg, resulting in contracts being entered into for the disposal of the Producers' diamonds to the Syndicate for the six months ended 30th June, 1924. Since that date further negotiations with the Syndicate have resulted in an extension of those contracts, with slight modifications, for the six months ending 31st December, 1924.

The agreement at present existing between the four Conference Producers, under which each Producer is allotted a fixed quota of the total quantity (based on value) of diamonds put upon the market by those Producers, expires on the 31st December next. In April last representatives of the Company attended a Conference held at Cape Town, with the object of discussing the question of a renewal of that agreement.

BALANCE SHEET, 30th June, 1924.

	£	s	d		£	s	d		£	s	d

Balance carried to Appropriation Account	1,431,635	9	3				
	£3,778,858	4	0				

No decision was come to by the Conference, which was adjourned sine die, but it is hoped that a renewal of the agreement will be come to, with some slight modifications. Your Directors are pleased to be able to report that the profits made during the year permitted the declaration of a dividend of 10s per share, free of dividend tax, to Deferred Shareholders as at 30th June, 1924; the first dividend paid on Deferred Shares since December, 1920.

The usual dividend of 20s per share was paid to Preference Shareholders during the year.

During the year mining operations were resumed at Wessleton Mine. The Crushing and Washing Plant at Wessleton which was completed and put into operation during the year is working satisfactorily, and at present ground direct from Wessleton Mine, as well as ground from Dutoitspan Floors, is being treated there. The ground from Bultfontein Mine is crushed and washed by another plant situated on Bultfontein Floors.

The Accounts for last year disclosed the fact that there was an unissued balance of 48,556 shares of the 100,000 new Deferred Shares created in accordance with the resolution passed by Shareholders at the Extraordinary General Meeting of the Company held on 29th December, 1922. On the 30th June last your Directors issued a Notice to Deferred Shareholders of the Company offering to sell these unissued shares at £10 per share at the rate of one new share for every 25 shares held; while in respect of fractions of 25 shares Shareholders were entitled to apply for a cash payment at the rate of 1s 6d per share held. A total of 38,695 new Deferred shares has been taken up by the Shareholders, leaving a balance of 9,861 shares still unissued.

Your Directors have to report the resignation of Mr. G. W. Compton from the Board of the Company as from the 1st December, 1923, and in doing so they place on record their deep regret at losing the valuable services of their esteemed colleague, who had served the Company ever since its inception in 1888. The vacancy on the Board has been filled by the appointment of his son, Mr. A. G. W. Compton.

The Cape Explosives Works, Limited, which was owned and controlled by your Company, was, as from 1st January, 1924, merged, on a basis of equality, with the South African interests of Nobel Industries, Limited. A new (Company) styled African Explosives & Industries, Limited, was formed to take over the merged interests, and was registered on the 21st March, 1924. Your Company is represented on the Board of the new Company by Mr. P. Ross Frames (as Chairman), Mr. S. B. Joel, the Hon. Hon. E. S. Montagu and Sir Evelyn Wallers.

Pursuant to the intimation contained in last year's report, the Cape Explosives Works, Limited, during the period under review, issued £1,250,000 of 5½ per cent. Debenture Stock in conversion and redemption of the old 7½ per cent. stock. Payment of interest and redemption of the capital of the new issue are guaranteed by the De Beers Consolidated Mines, Limited, who are indemnified by Nobel Industries, Limited, to the extent of the liability under such guarantee.

A report by the General Manager will be submitted at the Meeting. In terms of Clause 84 (c) of the Company's Articles of Association, three Directors retire, namely, Francis Baring-Gould, Albert George William Compton, Sir David Harris, but, being eligible, offer themselves for re-election.

P. ROSS FRAMES, Chairman. W. PICKERING, A. G. W. COMPTON, J. P. RUDD, Directors.

THE MONEY MARKET.

A VERY large amount was borrowed from the Bank of England in the early part of the week, and since most of it was left in the bankers' balances, money became plentiful by Thursday, when it was assumed that the pressure caused by the end of the month was over. The ease was

increased by extensive purchases by banks of December Treasury bills at rates ranging down to $3\frac{1}{4}$ per cent. The three months' rate, however, remained steady, at $3\frac{1}{8}$ per cent., owing to the large amount of Treasury bills to be paid for next week, and the big repayments due to the Bank, which are expected to offset effectively the proportion of War Loan interest that usually finds its way into the market.

	Nov. 28, 1924.	Nov. 21, 1924.	Nov. 14, 1924.	Nov. 7, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount Call	2	2	2	2	1 (Jly. 5, '23)
Houses Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

The Bank return showed a decrease, largely due to increased note circulation, of £837,000 in the Reserve. Borrowing by the market added £6,396,000 to the Other securities, while Government securities declined by £570,000. Deposits thus expanded by five millions, rather more than the whole of which went to Other. Currency notes outstanding were reduced by £502,000 to £285,378,000, which includes £1,362,200 for notes called in, but not yet cancelled. The fiduciary issue is £234,565,700, being £13,625,200 below the maximum for 1924.

THE STOCK MARKETS.

Stock Exchange business, though still of considerable volume, has been somewhat irregular. Activity in the gilt-edged market is spasmodic. Five per cent. War Loan remains firm, but some British Government stocks are slightly easier. The Egyptian crisis caused a fall and recovery in Egyptian bonds, while Turkish bonds rose sharply. The new German scrip rose further, but French issues were erratic. Industrial markets have been animated in places, with tea and whisky shares most prominent for strength. The tone of the rubber share market is stronger, while newspaper and cable companies are among those whose shares have been supported. Gold mining shares are suffering from the fall in the price of gold, fears being entertained of the effect on dividends.

THE COMMODITY MARKETS.

Quietness prevails on the Cardiff coal market. Although prices are maintained for pig-iron, transactions are on a smaller scale. In manufactured iron and steel, works are finding more employment, but there is not sufficient business to warrant the restarting of additional furnaces. Tin prices were irregular, but copper was in good request. The volume of small orders has increased in the cotton trade, whilst in the wool market the London auctions have emphasised the strength of the position. Wheat is higher. Sugar and tea were in demand. Rubber was quiet, and the tendency easier. The hide market is firm. Further details of markets and prices will be found on later pages.

FOREIGN EXCHANGES.

The foreign exchange market showed no signs of revival during the week, and remained featureless and dull throughout, except for the minor and temporary reactions which are referred to below. It will be remembered that none of the principal exchanges, except the dollar, and perhaps at intervals the franc, has commanded any serious attention for some little time past, and the dollar was out of the running for one day out of the six under review owing to the general holiday in New York on the 27th. In the absence of the speculative element, which appears to have burnt its fingers more than once, there is no need to seek further for the causes of this week's stagnation. Opening at 4.63 $\frac{1}{4}$, there was an improvement to 4.63 $\frac{1}{2}$; but on Monday there was a sharp reaction on the news of the happenings in Egypt, and the rate fell to 4.61; it subsequently recovered to 4.63 $\frac{1}{8}$, settling down at the close firmly at 4.63 $\frac{1}{8}$. No great changes have since taken place, and yesterday it was at the same level, approximately, at

which it has been for the past three days, 4.63 $\frac{1}{8}$. The franc seems to find it difficult to shake off the weakness to which it has been subject for some time past, in spite of the external loan of 100 million dollars in New York which was authorised by the Chamber on the 22nd. It is true that as the immediate result of this announcement the rate improved from 87.75 to 87.30, but by Tuesday all the strengthening effect seems to have disappeared, and the rate rose again to 87.90-88. An improvement set in on Thursday, when the rate fell to 87, and this continued yesterday, the rate being 86.40. Whether this improvement is due, as is alleged, to French official intervention, it is, of course, impossible to say; but if it is so due, the note of caution we ventured to express last week as to the mistake of attempting to bring about too rapid an improvement seems to have anticipated the official attitude. By now it should not be difficult for France to know the level at which it would be most advantageous to try to keep her exchange, and with the Morgap loan and other external borrowings, which are the subject of strong rumours, she should have the power to put her ideas into effect. The last Banque de France return shows a net improvement, for, although the note circulation has increased by 83,000,000, advances to the State have decreased by 300 millions. Brussels moved in sympathy with Paris throughout. The lira rate managed to escape the effect of the influences which operated on Brussels and Paris, and remained, with only slight daily variations, in the neighbourhood of its opening level of 106.65. Yesterday the rate was 106.50. The peseta maintained its recovery from last week's enfeebling influences on the reports of the steady execution according to plan of the policy of evacuation in Morocco, and, opening at 33.90, improved to 33.86 on Thursday. Yesterday the rate was firmer at 33.84. Amsterdam is said to have been selling dollars and buying guilders throughout the week, and the rate has hardened steadily from 11.51 $\frac{1}{2}$ to 11.47. Switzerland, with minor reactions during the week, remains at its opening level of 24; Helsingfors is $\frac{1}{2}$ worse on balance at 184, and Riga unchanged at 23.91. Christiania at 31.27 is rather worse than its opening rate of 31.12, but Stockholm is rather better at 17.21, as compared with 17.26. Berlin, Vienna, and Warsaw remained unchanged, but Bucharest is rather weaker at 885, as against its opening level of 825. Of the South American exchanges, the milreis is firm at 5 $\frac{3}{4}$, and Buenos Aires stronger at 44 $\frac{1}{4}$ d, as against its opening at 44 $\frac{1}{2}$ d. In the Far East the yen is stronger again with the prospects of rigid economies in the national finance and promises of a good budget, and, after touching 1s 8 $\frac{1}{2}$ d, is a little weaker at 1s 7 $\frac{1}{2}$ d. The silver market witnessed considerable and almost daily fluctuations during the week, which in the absence of Continental buying, may be attributed to alternate buying and selling by both India and China, and to the influence of the sterling-dollar exchange. While the outlook is rather uncertain, no great changes are anticipated for the present. Hong Kong, Shanghai, and Singapore remained firm and practically unchanged at 2s 4 $\frac{3}{4}$ d, 3s 3 $\frac{3}{4}$ d, and 2s 4 $\frac{1}{2}$ d. The rupee remained very firm at 1s 6d, and sometimes $\frac{3}{4}$ d over.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 22nd:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	7,450	From Revenue	15,901
Interest, &c., on Debt	1,394	Decrease in Exchequer balances	134
Sinking Fund	920		
Sundries	1,488		
Decrease in Debt	4,780		
	16,032		16,032

The Revenue for the week amounted to £15,901,003, as compared with £15,010,030 for the corresponding week last year. Customs were lower, at £1,795,000, against £3,888,000, but Excise was higher, at £7,637,000, against £3,549,000. Estate Duties brought in £1,890,000, as compared with £2,760,000. Property and Income-tax reached £1,182,000, against £974,000, and Super-tax was well maintained, at £400,000, against £430,000. Ordinary receipts were higher, at £267,513, as compared with £263,522, but Special receipts were lower, at £1,059,490, against £1,505,508. The

week's operations reduced the National Debt by £4,780,096, and caused the following changes:—

(000's omitted.)	
Treasury Bills	6,001
Treasury Bonds	47
Sundries	122
	+ 6,170
Public Department Advances	10,950
	— 10,950

The floating debt was reduced by £4,960,000 to £787,460,000.

FINANCIAL YEAR, 1924-1925 (April 1 to November 22).

£		£	
Total Expenditure ..	472,302,207	Raised by Revenue ..	445,417,527
		Decrease in Balances ..	3,597,294
		Amount borrowed ..	23,287,386
Total	472,302,207	Total	472,302,207
ESTIMATES for YEAR 1924-25.		£	
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, Anglo-Egyptian Bank, Anglo-Persian Oil Company, Inveresk Paper Company, Wall Paper Manufacturers, Consolidated Goldfields of South Africa, Assam Railways and Trading, South Durham Steel and Iron, Cargo Fleet Iron, Western Telegraph, Joshua Hoyle, and Claudius Ash, Sons and Company. His Grace the Duke of Buccleuch at the annual court of the Royal Bank of Scotland referred to the acquisition of Drummond's Bank and the increase of capital. He spoke optimistically of the trade outlook, and, in reference to the recent offer of stock to the staff, stated that 60 per cent. of the staff were now stockholders of the bank. Sir Charles Greenway at the meeting of the Anglo-Persian Oil Company, having dealt with unfounded statements made in recent criticisms of the company, referred to the company's oil production, and showed a large increase in tonnage in each year from 1918-19. We discuss his speech in a "Note of the Week."

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of Italy's Economic Position.

GREAT BRITAIN AND EGYPT.

ONCE again we are faced with one of those tragedies—so frequent in the history of the world, and especially in its history during the last ten years—in which the crime of a murderous fanatic has undone the patient work of statesmen, and has brought not only an untimely and unmerited death to the murderer's victim, but trouble and sometimes disaster to many millions of human beings. Only a short time ago we had reason to hope that the Anglo-Egyptian problem was in a fair way to solution. British statesmanship had not been blind to the signs of the times. It had realised that the spirit of nationality was spreading over the world, and that the Islamic countries—Egypt among the rest—were in a state of political transition. In February, 1922, the cry of "Egypt for the Egyptians" was met on our part by the grant of a political independence complete in form so far as it went, though it was pro-

visionally limited by the reservation of certain points in which British imperial responsibilities were involved, such as the safeguarding of our communications across Egyptian territory or territorial waters, the status of the Sudan, and the protection of foreign interests in Egypt itself. These questions were reserved for future negotiation between the British and Egyptian Governments, and in spite of the disappointment in this country at Zaghlul Pasha's intransigence, as revealed again last August in his abortive conference with Mr MacDonald, we still looked forward to a settlement of these reserved points on a basis of conciliation. If Egyptian statesmanship was intransigent, it behoved British statesmanship to be long-suffering. Our position in Egypt was anomalous, and while our imperial interests there were of vital importance to ourselves, the responsibility of reconciling these interests with the legitimate desire of the Egyptian people to live their own independent national life rested upon our shoulders.

Last week we discussed the internal situation in Egypt, and the way in which it was affected by the development of Anglo-Egyptian relations. The whole situation was delicate as it was, and now the abominable murder of Sir Lee Stack has wrecked it completely. The resort to assassination as a weapon in the conduct of political controversies, however grave or bitter they may be, strikes at the roots of civilisation; and any British Government was bound to regard this crime as the culmination of agitations which the Egyptian Government had, to say the least of it, done nothing to suppress. A weighty opinion on the principles involved in this very situation was given to the Council of the League of Nations on January 24th this year by a special commission of jurists, in answer to a questionnaire arising out of the political sequel to the murder of General Tellini. "The responsibility of a State," in the opinion of these eminent international lawyers, "is only involved by the commission in its territory of a political crime against the person of foreigners if the State has neglected to take all reasonable measures for the prevention of the crime, and the pursuit, arrest, and bringing to justice of the criminal. The recognised public character of a foreigner, and the circumstances in which he is present in its territory, entail upon the State a corresponding duty of special vigilance on his behalf."

Considering that Sir Lee Stack was one of the highest officials in the Egyptian Government's own service, the obligations of that Government to protect his life were obviously of the greatest possible stringency, and the British Government clearly had the right and duty to take firm and immediate action after the murder, in these circumstances, of a distinguished British officer. They may even have been justified in making demands that Zaghlul Pasha, or any other head of an Egyptian Government, would have found it difficult to accept. On the other hand, if the jurist's opinion implies, as we think it does, that the Egyptian Government has been very gravely to blame in this instance, it equally implies that the British Government ought to have given Zaghlul Pasha a fair opportunity, after the tragedy had occurred, to retrieve the honour of his country as far as possible by "taking all reasonable measures for the pursuit, arrest, and bringing to justice of the criminal." There is every indication (and, so far as we know, no allegation to the contrary) that Zaghlul Pasha and his colleagues were genuinely shocked at the crime (realising, no doubt, how far their own political tactics had been responsible for it); that they did at once take energetic steps to bring the murderers to justice; and that in this action they were supported by the great body of Egyptian (including nationalist) opinion. Where we quarrel with the action taken by Mr Austen Chamberlain in the difficult situation in which he found himself is that he presented demands of such a character that Zaghlul Pasha's position became utterly impossible; that, over and above the relevant demands for adequate reparation, for the detection and punishment of the criminals, and for the fullest possible safeguards against the repetition of such political crimes in future, he took far-reaching steps in matters not directly connected with the crime, but intimately concerning the permanent political and economic relations of Great Britain and Egypt; and that the tone of his Notes, the manner of their presentation, and the show of military force with which this diplomatic action has been accompanied, are calculated not only to exasperate Egypt-

tian opinion to an extreme degree, but to lower the reputation—and therewith the prestige—of Great Britain in the eyes of the world.

The two Notes presented to the Egyptian Government last Saturday, November 22nd, made Zaghlul Pasha's resignation inevitable; it is possible that his successor, Ziwar Pasha, may accept all the British demands; and the quiet which so far prevails throughout Egypt may continue—but we need not flatter ourselves that we have disposed of the Egyptian nationalist movement. It is perfectly true that Zaghlul Pasha's Nationalist party have been not only intransigent towards us, but violent and dictatorial towards their fellow-countrymen. Their yoke had become hard to bear during the two years for which they had been in power; and, as we noted last week, Zaghlul Pasha was being driven into strange manoeuvres in order to maintain his position. A few months more and the moderate Egyptian nationalists might have got the better of the extremists, though a spontaneous change in Egyptian public opinion, and a favourable atmosphere for negotiations on the "reserved points" might at last have arisen. Now, however, it is to be feared that Mr Chamberlain has given the extremists a new lease of life, and that we are back again in the *impasse* of 1919-1922, when a succession of "tame" Egyptian Governments executed the British Government's will without commanding the allegiance of the Egyptian people, while the folly and misconduct of the extremists were forgiven to them by their countrymen because they were out in the wilderness. To re-establish this barren situation is not the way to solve the Egyptian question.

Even more serious is the effect of Mr. Chamberlain's action upon our general international position. What would otherwise have been an unimpeachable case for firm and prompt action has been gravely prejudiced in the eyes of the world by the inclusion of irrelevant demands and the manner of their presentation. It is exceedingly unfortunate that the British Government should have committed itself at this moment, when the Geneva Protocol is under discussion, to action which the French and American Press can compare at all (however false the analogy) with the action taken 16 months ago by Signor Mussolini against Greece, or even with the Austrian ultimatum to Serbia in 1914. We do not consider that these comparisons are justifiable, for they entirely overlook the peculiar relationship between Great Britain and Egypt at this moment, which is not that of two sovereign and independent states on an equal footing. Nevertheless, the fact that these comparisons are possible, and are regarded as reasonable in other civilised and not unfriendly countries, is a setback to all the work on behalf of the pacific settlement of international disputes in which British statesmanship has been taking so important and so honourable a part. What is more, it is a blow to the fundamental interests of the British Commonwealth in the world as it is to-day. The history of international affairs during the last ten years proves conclusively that Great Powers are more often damaged than strengthened when they take advantage of their strength to "make an example" of weak offenders. Where are the Hapsburg, Hohenzollern, and Romanov Empires to-day? As one of the few surviving Empires, we have a fundamental interest in promoting methods of peace and conciliation in international affairs. We pride ourselves on our capacity to profit by experience, and latterly it had seemed as though all parties and all Governments in this country had learnt the lesson of 1914. In September, 1923, when our representatives at Geneva took their stand against the high-handed coercion of a small country by a Great Power, and when all the small States represented in the League Assembly rallied behind us, then we were strong, and that is our path of salvation. It must be a matter of grave concern to all far-seeing Englishmen who care for the preservation of the Commonwealth that the present Government should apparently have chosen a different path on this grave occasion.

No doubt they can act with impunity for the moment. The idea that France might exercise her friendly right to bring the Egyptian question before the Council of the League has faded away, and the protest of the Egyptian Parliament sets no machinery in motion, since it is not a request from a Government. It is still possible, however, that some member of the League may bring the question

officially to the Council's attention; and, if this happens, we trust that the Government will realise that the only possible course for this country is to acquiesce, and not to keep the League at arm's length by the exercise of pressure upon other members or by falling back upon judicial technicalities. We have to prove to the world, in our own interest, that we do not fear investigation into our handling of the Egyptian problem in the past or now. We have to remove the suspicion, to which Mr. Chamberlain's method of action has unfortunately laid us open, that we are taking advantage of this tragedy in order to settle high-handedly, in our own favour, those great questions regarding the permanent interests and permanent relations of Egypt and Great Britain in the Canal zone, and the Sudan, which can only be settled satisfactorily by mutual agreement, in an atmosphere of calm and conciliation, and not in the atmosphere which exists at this moment.

THE DOLLAR AND THE POUND.

Is the recent upward movement in the dollar value of sterling to be read as meaning that the pound is at last really on the way back to par? In business circles opinion on this subject has lately expressed itself with increasing confidence, though cautious prophets are careful to safeguard themselves by observing that there are so many incalculable factors in the situation, that anything like certainty is out of the question. The outstanding fact is the rise that has taken place in sterling at a time of year at which seasonal demands for dollars usually turn the movement in the other direction, and the most obvious explanation of this appreciation ascribes it to speculative purchases due to the resignation of the Labour Government and the return of the Conservatives to power. In so far as it is due to this cause, the recent movement is a reaction from the "flight from the pound" which happened last autumn. As everyone will remember, it began shortly before Mr Baldwin went to the country, and was started by an indiscreet utterance made by a minor Minister, who said, or was understood to mean, that the Government was about to embark on inflationary schemes, involving expenditure on a great scale, for the relief of unemployment. Mr Baldwin very promptly and categorically denied any such intention, but, as was proved by correspondence received in the City from all over the world, confidence in the stability of sterling had been shaken; the movement, on the part of domestic and foreign holders, to turn sterling into dollars, was quickened by subsequent political events, culminating in the assumption of office by a Labour Government, and consequent fears of confiscatory financial measures, which were fortunately falsified by Mr Snowden's Budget.

Even at that time it was noted by some of those through whose hands the business of turning pounds into other currencies passed, that the resistance offered by sterling to the selling pressure to which it was subjected was astonishingly sturdy, indicating reserves of financial strength possessed by this country, the power of which surprised them; and now the rapidity of the recovery seems to indicate that it has a certain elasticity behind it which makes it more easily amenable to favourable than to adverse influences. In October, 1923, the dollar exchange was well over \$4.50; in January last it was down to the neighbourhood of \$4.20; yesterday it was \$4.63½. Besides the so strongly on the market for exchange, monetary policy has also been quietly and effectively at work. A year ago the Federal Reserve Board of New York's rediscount rate was 4½ per cent.; now it is 3 per cent. During the same period our Bank rate has remained at 4 per cent., but has been brought into much closer touch with the market rate, partly owing to less assistance given to the market through what bill-brokers called "hidden hand" operations, and partly to the higher rate charged by the banks for weekly loans. A year ago the market rate for fine three months' bank bills was 3¼ per cent. to a fraction over; now it is nearly ½ per cent. higher. In pre-war days, when exchange fluctuations were confined within

gold points, these changes in the rates for money in New York and London would have made a great difference to their relative attractiveness as centres in which to lend and borrow; even now they must have had considerable weight, though owing to the possibility of wide swings in exchange, the question of the rate to be earned by shifting money from one centre to another is less important than it was. There can, however, be no doubt that political sentiment and Bank-rate policy worked together, harmoniously and successfully, to improve the position of sterling. It has also to be noted that—partly, perhaps, owing to the lower rate for money current in New York—the demand for foreign securities has expanded very considerably in America, especially since a prominent part was taken by Americans in the preparation of the Dawes scheme for European reconstruction. Foreign issues brought out in New York have not lately come over to Europe by the next steamer, as they were at one time said to be doing. There seems to be now a real placing power for European securities in America, and it is confidently stated that this is a tendency that will grow, especially in view of the great publicity given to the German Loan and its high yield, as compared with Liberty Bonds, which have stimulated the attention of a new type of investor. In view of the extent to which American-European financial transactions are settled through London, this is another important influence in favour of sterling.

All these factors, however, give a more or less temporary and untrustworthy foundation for the improvement in sterling; if it is to be well and truly based, it must stand on a genuine increase in our hold on the currencies of other countries, earned through the growth of our sales of goods and services abroad. The reversal of the flight from the pound, in so far as it brings back to us funds which were only removed owing to foolish and baseless fears, may perhaps be relied on to restore to us power which will be fairly permanent as long as our politicians will refrain from producing unnecessary panics; but money that flows to London to pay for Continental purchases of sterling bills, or in the process of American payments for European securities, is a temporary visitor, of whose timely help we can best make use by adding to it funds that we have earned by hard and successful work, such as that with which, in the nineteenth century, our forbears built up London's financial supremacy on the solid foundation of expanding production and commerce.

How far we are doing so, it is difficult to detect from the trade figures, partly because they are necessarily somewhat belated, and also because they cover by no means the whole of the field of the international exchanges; but for what they are worth, they have to be read with an optimistic eye if they are to be made to confirm a belief in the rapid recovery of sterling. In our issue of November 15th, we pointed out in an article on "Our Overseas Markets" that the increase in imports from the United States during the first nine months of this year, taken in conjunction with the decline in British exports to that country, makes the firmness and recent spurt in the dollar exchange appear the more remarkable; but it need hardly be said that the exchange between any two countries by no means depends on the trade relations between them, but is chiefly influenced by the interchanges of each with all the rest of the world. This is especially true of England and America, both of whose currencies are so largely used as international money. On the basis of total trade, however, the British figures need a very kindly interpreter, for during the first ten months of this year we have increased our imports by 142 millions, and our total exports, including re-exports, by only 38 millions, so adding 104 millions to our excess of imports. On these figures, taken by themselves, the rise in sterling would seem to be very deficient in staying power, but it would, of course, be most misleading to take these figures by themselves even as an indication of actual trade in visible goods; for British capital has done so much development work all over the world, that the exports of other countries are continually giving us claims on purchasers who do not appear to have been buying from us at all. Our investments in Australian, New Zealand, and South American land companies, Indian tea gardens and Malayan rubber plantations, mean that Australian wool, New Zealand mutton, Argentine wheat and cattle, Chilean

nitrate, and Brazilian coffee are continually being sold for our benefit, and this list might evidently be lengthened enormously. Moreover, it is not only a question of what we are doing, but also of the performances of other countries, since exchange must evidently be affected by relative rather than absolute considerations. On this point, it may be noted that in his paper on the Economic Position of Great Britain, just published, Mr Edgar Crammond states that "the British proportion of the world's export trade, which in 1912 was 13.8 per cent., increased to 17.3 per cent. in 1922," and that we are "more than holding our own for such world trade as is being carried on." If this be really so, in spite of all the difficulties with which our manufacturers have had to contend, justification for the improvement in sterling is not far to seek.

Perhaps, however, we have all this time been looking down the wrong end of the telescope, and the problem is not the improvement in sterling, but depreciation in the dollar. On this point light is thrown by some figures which we published in our August Trade Supplement, taken from a League of Nations Memorandum on Foreign Trade Balances. They showed that in 1923 United States imports were 194.8 per cent. of the 1913 figure, while the export percentage was 94.1. If the United States will only continue to develop their foreign trade on these lines, and at the same time to lend and spend freely in Europe and elsewhere, the path of sterling back to par should be smooth. For ourselves, we hope that those who guide our financial destinies will do all that may properly and wisely be done to make the path smoother and capable of quick transit. We have reason to believe that if our authorities make clear a determination to secure an early return to the gold standard, assistance will be forthcoming from America in promoting a return to parity, and also in maintaining parity, if and when it has been achieved.

SHIPPING PROSPECTS.

GRADUAL appreciation in the market value of shipping securities, initiated by the successful outcome of the London Conference last August, has recently been transformed into an upward movement so pronounced as to attract fresh interest to the position and prospects of the industry. That the price of leading companies' ordinary stocks should have been marked up to a level representing a very moderate yield on the basis of last year's dividends is doubtless due in large part to the general wave of speculative optimism following the election result, and may be ascribed to market sentiment rather than investment demand. At the same time, the readiness with which a substantial amount of fresh capital for fleet extension was secured in the past week by a small shipping company, operating purely cargo tonnage (an issue of £160,000 being quickly oversubscribed, notwithstanding a distinctly uninformative prospectus), would seem to indicate more optimistic views on the part of the investing public with regard to the future earnings of well-managed fleets not saddled with inflated capitalisation per ton. That a degree of optimism is warranted cannot be gainsaid. Freights have lately been more in equilibrium with running costs than has been the case for some years, and idle tonnage, excluding American vessels, has been reduced to a relatively insignificant figure. Apart, however, from the need to discriminate sharply between the substantial concerns owning efficient tonnage at reasonable book values, and such of the shipwrecked boom-floatations as still succeed in deferring the day of liquidation, it were well if confidence were tempered with caution.

The position of the dominant combines is a thing apart. Organised for the most part on the principle of "vertical" as well as "lateral" trustification, with revenue not solely dependent on the transportation of passengers and cargo, the big groups, so far as can be ascertained from the reticence of their published accounts, emerge from the last four years of depression without apparently weakened resources. The relatively high average rate of distribution which these concerns have maintained

throughout a period of meagre cargoes makes it questionable whether undisclosed contingency reserves have not to some extent been used for dividend equalisation, and the possibility of managements deciding, if and when net profits expand, to replenish these hidden resources before increasing distribution to shareholders, is a factor which should be kept in mind when future "yields" are estimated. None the less, confidence in the earning power of capital invested in the British combines appears fully warranted. Their association with the bulk of their foreign competitors in international cartels or "conferences," whose tendency, as recently exemplified in the case of South and East Africa, is to become increasingly comprehensive, enables the combines, subject to limited competition from "free" tonnage, to fix freight rates on the principle of "what the traffic will stand." How far continued curtailment in the movement of emigrants can be offset by the enormously high fares now charged for first and second-class passenger accommodation may be questioned. What is certain is that in respect to freight revenue it is the combines which stand particularly to gain by such developments as have taken place since the shipping outlook was last discussed in these columns.*

On the one hand the improved political stability on the Continent resulting from the successful initiation of the Dawes Plan, encourages hopes that European production will steadily expand. On the other hand, the re-adjustment between the price-levels of cereals and other commodities which the past three months have witnessed implies at once greater purchasing power on the part of overseas agriculturists and the necessity for a relative increase in the volume of (mainly manufactured) goods which Europe must export if European standards of consumption are not to fall. From these premises it is a reasonable inference that expansion in European exports will develop, and that the exports, taking the form of manufactured goods, will, as such, be carried by the "liner" class of vessel. A separate encouraging feature is the assurance of immediately greater traffic in raw cotton, followed, it may be hoped, by heavier exports, no longer at cotton-shortage prices, of manufactured cotton goods to the East.

The position of "free" shipping—that is, the competitive casual tonnage which, catering mainly for grain, coal, timber, ore, and "rough" goods normally shipped as whole cargoes, supplements as and where required the services of the regular "liner" sailings—calls for more qualified optimism. In so far as increased productivity in Europe involves greater importation of sea-borne raw materials—and there is evidence of some small increase already in the movement of ore—this class of shipping stands equally to benefit by the considerations arising from the Dawes Plan discussed above. As against this, there is the prospect that as a result of recovery in continental coal-output, the sea-transportation of British coal to European destinations will be, for a considerable period, if not permanently, on a much lower level than that artificially attained last year. Pending, therefore, an expansion in the volume of seaborne raw materials other than coal—an expansion which must be very substantial in view of the visible supply of tonnage—"tramp" vessels must continue to rely chiefly on grain for cargo. Until the movement of "finer" goods—i.e., cargoes bearing proportionately higher freights—is adequate to fill the capacity of the "liners," the "tramp" will be exposed throughout to competition from the combines, whose ability to undercut homeward rates until monopoly is established in all traffic save seasonal crop-movements will obviously increase with expansion in "outward" revenue. The more outward voyages in ballast the "tramp" has to make, the less can that competition be faced, and though coal exports to South America have somewhat increased this year, the diminishing use of coal as ship-fuel is bound to restrict the volume of outward cargoes destined for overseas bunkering stations, to the detriment of the "tramp" as competitor with the "liner" for return cargoes.

In the following table the October figures of the *Economist* Index of "free" shipping freights for the current and two preceding years are shown in each geographical group:—

	Average 1898-1913 = 100.		
	October, 1922.	October, 1923.	October, 1924.
European Waters	147.74	133.66	118.80
North America	116.16	125.46	143.09
South America	129.82	114.03	125.46
India	133.50	117.38	126.59
Far East and Pacific	122.42	124.40	135.47
Australia	149.11	136.05	156.68
Total	133.12	125.49	143.43

The relative levels of freights represented by the total figure in each case indicate adequately the measure of "tramp" shipping recovery. It is now evident that 1923 witnessed a definite turning-point in the extreme depression following the post-Armistice boom, and that a movement towards remunerative rates has already made some headway. Exceptionally, it will be observed, the figure for traffic between countries in Europe has steadily fallen. Here, in the construction of the index as in practice, coal shipments play a predominant part. This autumn, less coal is being shipped than in 1923, while more tonnage is seeking coal cargoes than in 1922. For the most part the shipping built for European traffic is unsuitable for employment on distant grain routes, and the situation of many of the small "tramp" ownerships is one of anxiety.

In other quarters the position, as compared with a year ago, shows uniform improvement. Up to the present the autumn has gone well. Shipment of the portion of the Canadian grain-crop loaded on the Atlantic side appears to have been arranged, so far as delivery in the United Kingdom is concerned, at an average rate of 3s 9d per quarter, as opposed to an average of 3s 1d in 1923, while a substantially greater volume of chartering has proceeded this autumn, at similarly improved rates, from the United States, India, and the Eastern rice ports. The ascertained results of the European harvests suggest that the potential requirements of the chief importing countries will be considerably greater than last year. The immediate prospects for "tramp" shipping depend on the exportable surpluses eventually available, and the effect which increased cereal prices may have on consumption. Assuming European consumption, pending more marked recovery in industrial productivity, to be somewhat curtailed by current cereal prices, it is still difficult to put minimum tonnage requirements for grain at a figure lower than last year, provided that the grain is forthcoming and values rise no further. The key to the situation is the Argentine, and, to a less extent, Australia. The poor Canadian yield makes it doubtful if as much tonnage as last year will find employment between Vancouver and Europe, apart from the absence this year of abnormal Japanese demand, and while shipments from the Atlantic ports of the United States are likely to be substantial throughout the winter, tonnage is more quickly released after each charter in this trade. Thus, if a temporary recurrence of a glut of casual tonnage, with a reaction in freights, is to be avoided, harvests in the Southern Hemisphere must be plentiful. In a month's time probabilities will be better known. So far, a fair quantity of tonnage has been taken up by Australia on the basis of 45s to 47s a ton for new crop loading, but grain exporters on the Plate have recently been inclined to a policy of masterly inactivity in respect to their 1925 tonnage requirements, a policy which, since their organisation is much more concentrated than that of the "tramp" managements, has sometimes proved profitable, and may again, if an excess of ballast tonnage is sent out to the Argentine "unfixed" for the return voyage. Between November, 1923, and February, 1924, the rate obtainable for a cargo steamer ready for immediate loading in the Plate rose by over 100 per cent.—from, say, 15s to 35s per ton. The speculative temptations of this market are obvious, but whereas a ready steamer in the Plate this week could command, perhaps, 20s per ton, it by no means follows that the "spot" rate in two or three months time will again be double the November figure. With less tonnage likely to be employed in the Pacific than 12 months ago, and with probably more efficient tonnage in commission than last winter—all allowance made for vessels scrapped—it is not yet certain that Southern Hemisphere crops will succeed in absorbing at

remunerative rates all the available tonnage capacity likely to be offered.

The complete recovery of "tramp" shipping from a severe slump has proved slow in the past. After the depression of 1908, when the *Economist* Freight Index reached a record low level of 78.32, it was not until 1911 that rates recovered to what other evidence suggests was, on the then level of costs, a uniformly profitable basis, the annual figures being:—

Year.	Index Figure.
1908	78.32
1909	82.00
1910	84.48
1911	96.94

If shipping history may be held in some degree to repeat itself it is perhaps permissible to imagine an analogy between the present year and 1909. On this analogy, "tramp" shipping has still to face a year of difficult though progressively improving conditions. To found a serious forecast on such a basis is obviously absurd, there being on the one hand no assurance that the next two years will succeed in repeating the industrial expansion of 1909-11, while, on the other hand, the relative rates of scrapping old and launching new tonnage cannot be anticipated. No legitimate conclusion at present can go beyond assertion that the position is improving, but that the possibility of adverse fluctuations has not yet been eliminated. So far as expansion of "tramp" fleets is concerned, optimism should be tempered with caution.

HOUSING AT HOME AND ABROAD.

HOUSING and Rent Restriction Bills have occupied a large part of the time of the last two Parliaments. The next session will undoubtedly see a further Act to extend the period of rent control, but it is most improbable that it will give us a new Housing Bill. It may be taken for granted that Mr Baldwin's Government will refrain from any attempt to upset Mr Wheatley's Act. The primary facts of the housing problem are still the urgent need for the erection of houses on a large scale, and the lack of adequate labour to erect them. Mr Wheatley's Act did little or nothing to provide the essential objects of more labour and more houses; but to revise it now might serve to frustrate them. The public is in the dark as to what has been done to secure the additional apprentices, to which the building trade unions were supposed to have agreed as a *quid pro quo* for Mr Wheatley's Act, but Mr Wheatley was believed to be doing something, and it is clearly the first duty of the Government to press on with this and every other feasible means of enlarging the supply of labour and materials. It is worth noting in this connection that the Committee on New Methods of House Construction, appointed in September, has just issued an interim report on Lord Weir's plans for the quantity production of houses by methods which would practically dispense with skilled building labour. The report is favourable in effect to Lord Weir's idea. The Committee are chary of expressing an opinion on Lord Weir's claim that his type of house will show a large economy in construction costs; but they are "satisfied that houses of the type proposed can be erected rapidly on the site," they hold that all the technical objections that have been brought against the Weir house can be easily overcome, and they urge "that local authorities and others concerned in the carrying out of housing schemes should be encouraged to undertake voluntarily the erection of houses of this type in sufficient numbers to enable the system to be properly tested." The Weir house is not expected to have a life of more than 40 years at the best, so that we must clearly not look to it for more than an emergency expedient, but in solving our emergency problem it may conceivably play a useful rôle.

The phenomena of acute housing shortage, rent restriction, and subsidised State housing schemes are in no way peculiar to Great Britain, as is vividly brought out in a most valuable report just issued by the International

Labour Office.* The same problems have appeared, and have been handled on broadly similar lines in practically every country on the Continent. It is impossible to study the experience of other countries, especially those which were neutral during the war, without realising what a superficial diagnosis it is which attributes the trouble to the embargo on private building during the war, and the diversion of building labour into munition works. There was no such embargo, nor any need for it, in Holland, Denmark, Sweden, or Norway; but in all of them the volume of house-building fell away during the war, in all the phenomenon of housing shortage appeared and gradually became acute, in all legislation was introduced to protect tenants and restrict rents, and State aid in one form or another was granted to revive the output of houses. In Scandinavia, indeed, legislation went further in some respects than it did in this country, comprising measures to enforce the letting of vacant dwellings and to empower the local authorities to take them over if need be for this purpose.

The main explanation of this identity of experience lies, of course, in the common rise of price-levels. As general prices rose, building costs rose along with them for a time, indeed, leaving the index number far behind, while rents lagged a long way in the rear. It was the housing shortage and the consequent tendency for rents to rise that led to rent restriction, but in reality it was the inevitable failure of rents to keep pace with general prices that lay behind the whole trouble. Even before the war the trend of house-building was closely associated with movements in the price-level. Building booms occurred as the sequel to prolonged periods of falling prices; a decade of rising prices, such we had before the war, served to bring about an apparently unaccountable *malaise*. The main influence of the war was a great aggravation of this general tendency.

Though wages and incomes may rise as fast as prices, people are slow to grasp the conception of a fall in the value of money, implying an increase in money rents as a natural and equitable concomitant. Everywhere throughout Europe rent restriction was invoked directly there were signs of a general tendency for rents to rise. In some of the neutral countries small increases in money rents were permitted during the war years, but elsewhere rents were limited until the Armistice to the pre-war figure, while in France and Italy soldiers on active service were secured reductions in their rents, and, in some cases, complete exemption. Rent restriction thus served to widen and to fix the gulf (which must, in any case, have been large for a considerable time) between rents and building costs. It is the existence of this gulf which constitutes the housing problem throughout Europe, and which has led to the necessity of State-subsidised housing schemes.

This gulf has been greatly narrowed in many countries since the war by the double process of a fall in the general price-level and an increase in the rents allowed under the restrictive legislation. In countries where inflation has persisted there is, however, a different story to tell. The following table shows the relation existing at the end of last year between rents and general prices in various countries in Europe and in the United States:—

	Cost of Living in Dec., 1923, as Percentage of 1914.	Rent in Dec., 1923, as Percentage of 1914.	Column 2 as Percentage of Column 1.
United States	173	166	95.9
Switzerland	168	160	95.4
Sweden	176	178	101.1
Great Britain	177	147	83.0
Finland	1,170	981	83.8
Denmark	204	160	78.4
France	345	200	69.0
Italy	499	307	61.5
Austria	1,124,900	72,400	6.4
Germany	1,261,600	218,000	17.5
Hungary	502,292	32,000	6.3

It is clear from this table that the degree of inflation that has taken place has been the main factor in determining

* "European Housing Problems Since the War." International Labour Office. Price 6s.

* Vide *Economist*, August 2, 1924.

the discrepancy between rents and the price-level. To this rule, Finland, the value of whose money is less than a tenth of what it was before the war, but who has re-established a relation between rents and prices practically identical with our own, provides a notable exception. Finland, indeed, is one of the countries where rent restriction has now been more or less brought to an end. The table refers, it must be borne in mind, to the position at the end of last year. There has since been a material change in the position in Germany, where rents are now nearly two-thirds of their pre-war level, reckoned in gold marks. The attempt to move back towards an economic basis even in countries where rents had been practically wiped out by the continued influences of currency depreciation and rent restriction is, indeed, highly significant, for it is by no means an easy thing to do. Wages are apt to be kept down by the fact that the workers are living virtually rent free, so that the majority of tenants cease to be able to afford substantial rents. If the State sets out seriously to meet the need for new houses, the resultant burden of taxation diminishes the employer's capacity to pay adequate wages. The ultimate logic of an extreme policy of rent restriction and housing subsidies is, indeed, a wasteful system, under which everyone is subsidising everybody else. It is not an easy matter to break through this sequence of vicious reactions once it has become established; it would not be possible to do so without a fairly general sense that its consequences are intolerable.

"There is still," declares the Report which we have cited, "a shortage of houses in nearly every country." State-aided housing schemes have, in fact, failed everywhere to accomplish adequately the work that was previously done by private enterprise. In an environment in which the bulk of houses are erected by unaided and unrestricted private enterprise there may still be an important and a permanent place for State-subsidised schemes to meet particular needs. But we shall be disappointed if we look to the State to supply the main provision of houses. A continuance of rent control in some form in this country for a few years longer, until we have made greater inroads than we have as yet upon the housing shortage, is, we believe, inevitable. It would be unwise at this juncture to prejudice the chances of speeding up the output of houses by incontinently throwing over Mr Wheatley's Act. But we ought to aim at decontrol by stages, and a return to an economic basis at the first favourable opportunity.

BACK TO THE UNIONS.

(BY OUR LABOUR CORRESPONDENT.)

THE partial defeat sustained by Labour on the political field is suggesting to many in its ranks that the next few years may be years mainly of industrial effort. Labour in office presented trade unionism with many problems, moral and tactical, and, above all, the great problem whether the whole method of industrial action was not being superseded by that of political action. More and more, legislation was covering the field previously regarded by trades unionism as its own. It was through action in the House of Commons that Labour hoped to secure a legal maximum working week, and ultimately a minimum working wage, together with some measure of control over and responsibility for working conditions for the workers themselves. More and more, that is to say, the constructive aspects of the industrial struggle were being handed over to political Labour, and the function of trades unionism inevitably was becoming more and more merely protective. Thoughtful trade unionists were not at all disposed to cavil at such views as those expressed, for instance, by Mr MacDonald that trade unions, "essential for defence, are weak for progress"; that products, as they are, of the capitalist system, they are not immune from its characteristic defects; that strikes are not a form of Socialist action. The latest meetings of the Trade Union Congress revealed a growing doubt as

to the effective function of the purely industrial conference—a doubt which agenda largely occupied with political issues did nothing to lessen.

This political preoccupation had another aspect. One of the main reasons why the British working class bore with such heroic patience the many sacrifices and disappointments imposed upon it by the long aftermath of war—wage reduction, unemployment, the dearth of houses, &c., was that its eyes were turned towards Westminster, and turned there with rational hope. The steady advance of the political side of the Labour movement gave it the courage to wait.

Now, however, the scene is changed. That advance has been arrested; a Government is in power from which the average worker feels he has little to hope and a good deal, possibly, to fear. It is to the unions that he has now to look for protection. Can they give it? Two or three years ago Mr Shinwell, one of the ablest of the younger trade union leaders, dealt frankly with the weakness of the unions, which he put in a nutshell as an inability to act in a falling market. Is the position to-day any stronger?

One advantage the unions have assuredly secured by the demise of the Labour Government. Many of their ablest and most experienced leaders are back again at their union jobs. Mr Thomas is at the helm at Unity House; Mr Bromley's class consciousness may be mollified by his arrival at St Stephen's. Mr Shinwell has returned to the Marine Workers; Mr Gosling has, after a slight breeze, been restored to the presidency of the Transport Workers; Mr Clynes and Miss Bondfield are again associated with the General Workers, and Miss Bondfield is to undertake an active propaganda campaign for her union throughout the country. The recent T.U. Congress confirmed the co-ordination plan, which certainly gives more power to the General Council; and the Council's personnel is strengthened by the return to it of ex-Ministers. That power, however, depends, in the last resort, on the effective membership of the unions for which it claims to speak; it is, therefore, right and natural to find the industrial leaders throwing their weight into the campaign to increase that membership. The urgency of this task is shown by the figures for 1923 collected by the Chief Registrar of Friendly Societies. At the end of 1923 the total membership of trade unions was 5,405,000, against 5,610,000 at the end of 1922—a decrease of 3.7 per cent. It is worth setting out in tabular form the movement of trade union membership, male and female, since the war, since the figures show how much leeway remains to be made up before trades unionism can claim to have accomplished its primary task of organising the workers in effective combinations.

Year.	No. of Trade Unions at End of Year.	Membership at End of Year (in Thousands).			Percentage + or — on Total of Previous Year.
		Males.	Females.	Total.	
1903.....	1,285	1,838	156	1,994	— 1.0
1913.....	1,267	3,703	433	4,136	+ 21.0
1914.....	1,258	3,709	437	4,146	+ 0.2
1915.....	1,227	3,868	491	4,359	+ 5.1
1916.....	1,222	4,019	625	4,644	+ 6.5
1917.....	1,236	4,622	877	5,499	+ 18.4
1918.....	1,258	5,326	1,209	6,535	+ 18.8
1919.....	1,350	6,603	1,325	7,928	+ 21.3
1920.....	1,346	6,996	1,340	8,336	+ 5.1
1921.....	1,251	5,622	1,003	6,625	— 20.5
1922.....	1,176	4,742	868	5,610	— 15.3
1923.....	1,135	4,590	815	5,405	— 3.7

Trade Union membership is well above the pre-war mark, but both male and female membership is still falling off from the 1920 high water mark. The decline is, as the detailed tables show, marked in the case of all unions, save the mining and quarrying group, in which there was, over 1922, an increase of 70,000 (over 8 per cent.), and the railway group, which likewise showed a nearly 8 per cent. increase (35,000). As might be expected from the lamentable continued pressure of unemployment in these industries, the heaviest decline is on the metal engineering and shipbuilding group, in which membership fell by 133,000, or about 16 per cent. Other unions showing a 10 per cent. or more reduction were building labour (over 17 per cent.), agriculture (over 14 per cent.), and

pottery (over 14 per cent.); general labour, and linen and jute (over 10 per cent. in each case). Female membership showed a larger proportional decline than male; whereas the decline in male membership between 1922-23 was 3.2 per cent., that of female membership in the same period was 6.1 per cent. This was in the main due to a reduction of over 10 per cent. in the cotton industry, where there was a falling off of no less than 26,317 in the group which always has been the most important, numerically, among the industrial categories employing women.

When the groups are compared with 1913, the cotton group shows only a small increase—6 per cent.—whereas in every other group the female membership in 1923 is more than double the pre-war figure. In the case of men, the mining, quarrying, cotton, bleaching, dyeing, finishing, &c., groups, showed little change in membership as compared with 1913; all other groups, however, showed considerable increases. In the case of agriculture, membership nearly quadrupled; in that of paper, printing, &c., it was more than doubled.

Since 1919 the number of separate unions has declined, owing to amalgamations. There were at the end of 1923 1,135 separate unions, against 1,350 in 1919; the number of separate federations has also declined from 134 in 1919 to 87 in 1923, largely as the result of a merging of local into national federations. In 1920, it may be noted, a total membership of 10,740,000 was claimed as included in 113 federations, against 5,610,000 in 1923. Evidently there is plenty of room for an energetic "Back to the Unions" movement.

RECONSTRUCTION PROBLEMS IN HUNGARY.

(BY A CORRESPONDENT.)

IT would seem as if the main difficulty of reconstruction in Hungary were likely to be not a financial but an administrative and social question. The basis of reconstruction, in Hungary as everywhere else, is a balanced Budget, because a balanced Budget is required for the maintenance of a stable currency. The currency has been stabilised, and can be held stable, but the balancing of the Budget (which means, of course, the covering of current expenditure out of taxation, without the help of any foreign loan) can only be achieved at the cost of sacrifices which will certainly involve a thorough administrative reorganisation, and which may be fraught with serious political and social consequences. The great problem is the problem of State employees. Its main features are simple, and can quite easily be described.

In Hungary the State spends altogether about £20 millions a year, and of these expenses some £12 millions are for personnel. There are close on 200,000 State officials (not counting the Army or the pensioners), out of a population of eight millions, in a country which is mainly agricultural. If the State spends a million pounds a month in salaries and wages, and distributes this amount among 200,000 people, the average payment received must be something like 25s a week. It is true that, in addition to their salaries, the officials enjoy certain privileges and concessions (as, for example, on the railways), and that they do not pay an economic rent. But all this amounts to very little, and does not affect the truth of the general statement that the State does not pay a living wage.

Rather more than 10 per cent. of all the State employees are "classified" civilian officials, the backbone of the middle classes, and of the intelligencia. The highest grade in the permanent Civil Service is paid a salary of less than £350 a year, and this grade includes the three first posts in the judiciary. University professors draw roughly £200 a year, and the pay of a full colonel in the Army is, at most, about £170. The initial pay of a young man who, at the end of his University career, goes into the higher administrative service of the State, is the equivalent of 35s a week. The cost of living is not very different from what it is in England. In order to restore to official salaries the same purchasing power as they had before the war, it would be necessary to double them all round.

Those are the facts and figures. The consequences are not calculable. All that can be said is that a really satisfactory solution is out of the question. It may be true, and, indeed, it is true, that there are far too many people who look to the State for a living, and that some of them do not overwork themselves. But the State cannot turn half its employees on to the street in order to double the pay of the remainder. Even if the necessary administrative reorganisation could be achieved overnight, the desired end would not be reached by this means, because dismissals, though they reduce the salary lists, increase the pension charges. Whatever is done, more officials will have to be paid than the State can afford to pay decently, unless the yield, and, indeed, the burden, of taxation, is increased beyond anything that is contemplated at present.

Palliatives are, therefore, all that can be thought of. The reconstruction plan provided for two such palliatives in a relatively small increase of salary, which has already been given in advance of the due date, and in a programme of dismissals (15,000 in all), which is being gradually carried out. Another palliative, it was hoped, might come of itself in the form of a fall in commodity prices after the stabilisation of the currency. The fact that stabilisation was effected on sterling, a currency with prospects of appreciation, was expected to favour a price reduction, but the introduction at the same time of a terrific general customs tariff was probably more than enough to offset any such tendency.

The Customs receipts, which form part of the pledged revenues under the control of the Commissioner-General are exceeding all expectations. They produce an apparently favourable revenue position, which is used by the State employees as evidence of the fact that they are paid starvation wages out of an overflowing Exchequer. Since any stick is good enough for flogging the Government, the opposition parties of the extreme right and the extreme left combine to make this grievance their own, and the whole problem, which from the administrative and social points of view is really serious, acquires in addition a political complexion.

Meanwhile, the Government must abide, more or less, by the figures of the reconstruction budget. There is, therefore, no fear and no possibility that they will satisfy the officials by increasing the deficit, or that the security of the currency will be threatened by further inflation. But forces contained in one direction tend to break out in another, and even if in this instance nothing gives, it is difficult to see any possibility of avoiding real economic and moral damage due to the degradation of some of Hungary's best social material.

ARGENTINE LAND COMPANIES.

BRITISH land companies operating in the Argentine possess considerable attractions for a large number of investors in this country, especially those who seek to use their money in developing fertile agricultural lands overseas. Our little group of representative Argentine land companies which we review each year is a striking record of the recovery in the agricultural industry, which has passed through some difficult times. It is a pity, perhaps, that the companies concerned cannot see their way to adopt a common date for the conclusion of their financial year. We could then take a comprehensive view of a given 12 months. Out of eight companies, five close their accounts on June 30th, one on March 31st, one on September 30th, and one on December 31st. We should like to say here that we are unable to present the new figures of working of the Cordova Land Company, its financial year having been altered from September 30th to December 31st; we are informed that the accounts to be issued in February or March, 1925, will be for a period of 15 months to December 31, 1924.

For the year ended June 30th the value of the Argentine dollar has fluctuated between 38½d and 43½d, closing at 41½d. The problem of the fluctuating exchange is being seriously tackled by the companies,

Imperial Preference.—When commenting a few weeks ago on Mr Baldwin's selection of Ministers, we expressed anxiety that the Colonial Office should have been entrusted to one whose obsession it is to view Imperial problems through the blurred spectacles of Preference and Protection. Mr Amery has lost no time in showing that he has taken these glasses with him into office. In a speech to the Empire Producers' Organisation his subject was Imperial development and co-operation, but the thread of protection ran through the whole of his utterance. He agreed—he could hardly do otherwise—that the Government was bound by Mr Baldwin's pledge, that no new food duty should be imposed. But almost in the same breath he promised that the Preferential proposals laid by Mr Baldwin's first administration before the Imperial Conference, and defeated in the last Parliament, should be passed and put into force. These proposals, if we remember rightly, involve the imposition of minor duties, in order that preference may be given; they involve, too, stabilisation of duties; and their full institution would certainly violate both the spirit and the letter of the Baldwin pledge, which in the country as a whole, and in Lancashire in particular, did so much to swell the Conservative poll. We fancy that Mr Baldwin, after the great lesson of 1923, will tread more warily than his lieutenant, and caution, we hope, will be enforced upon him by the Free Traders in his own ranks. But obviously there is every reason for Free Traders to keep their

armour on and their swords in their hands. Of this Mr Amery's speech gives us a clear warning, for which we may be grateful. All through his speech runs the old idea of controlling, guiding, and developing British trade by tariffs and preferences. Big tariff changes are taboo during the life of the new Parliament. But the idea is there, and Free Traders must be prepared to see it at work for the next few years—not, indeed, making a frontal attack—but consolidating ground and infiltrating Free Trade positions, and in a hundred ways making it easier to launch, later on, one more grand assault on our fiscal system. Those who hold with us that the system of free imports is the only one suited to the economic needs of the country should realise that a sense of security on the strength of Mr Baldwin's plan is shortsighted and may be disastrous. They should devote the coming years to persistent preparation and education, so that the new generation of voters may see the economic truth clearly enough to repeat with even greater emphasis the ban on Protection which successive generations have pronounced.

The Greek Loan.—Our Athens correspondent states:—The negotiations carried on in London by the Governor of the National Bank of Greece concerning the issue of the loan for the settlement of refugees in Greece have now reached an advanced stage, and it is expected that the loan will be issued shortly. The raising of the loan has been authorised by the League of Nations, and has the active support of the Bank of England. The amount of it has been fixed at £10,000,000 actual money. The interest and the issue price have not yet been fixed. It is understood, however, that the net yield to the investor will be slightly over 8 per cent. As the loan is of an international character, it will be issued simultaneously in England, America, Greece, and perhaps in some other markets. Greek banks will participate to an extent of £2,500,000. The loan will be redeemable by half-yearly drawings at par in 40 years. However, the loan may be redeemed at an earlier date—perhaps in 20 years—as a consequence of amortisation to take place—parallel with the regular sinking fund—from the current income of the Refugee Settlement Commission. It is essentially a reconstruction loan, as the proceeds will be handed over to the Refugee Settlement Commission, and utilised for the settlement of refugees in productive works. In accordance with the resolutions of the League of Nations, not a penny of the money to be raised can be utilised for other purposes. The settlement of the refugees started last year, and has been going on at a good pace, thanks to the advances, aggregating £3,000,000, made against the loan by the Bank of England and the Greek banks. The service of the loan will be effected by the International Financial Commission, which is an international body residing at Athens, and having control of previous Greek loans. The Greek Government has assigned as a guarantee for the service of this loan some special revenues, the yield of which is estimated to exceed £4,500,000 in 1924, that is, more than five times the annual service of the loan. In addition to these revenues, the loan will be secured by a first charge on the property and the income of the Refugee Settlement Commission. According to a recent conservative estimate emanating from the National Bank of Greece, the present value of the lands assigned and to be assigned to the Refugee Settlement Commission, and constituting its property, should be over £13,000,000. The value of these lands should be considerably enhanced when the settlement of the refugees has been brought to an end. Since 1898 Greece has been paying regularly the service of its foreign and domestic debt. During the world war, not only has the service of the debt been regularly met, but the interest paid on the old gold loans has also been increased. By far the greater portion of the external debt of Greece is held by Greece. The present population of Greece is estimated at 7,000,000, and its total debt, including the projected loan, amounts to, roughly, £104,000,000, which represents a total indebtedness of £15 per head. The 1,500,000 refugees will develop Greece's agriculture, and as they will be peasant proprietors, they will largely contribute to the political stability

of the country. Greece has large sources of power in her lignite and her water, which need development. Her industries are expanding in the Balkans and Egypt. Her merchant marine has almost recovered the losses suffered during the war for the cause of the Allies. The profits of the merchant marine, with the emigrants' remittances, are the principal items of invisible exports, which turn the balance of foreign payments to the favour of Greece. Agriculture, forests, cattle-breeding, fisheries, and minerals are all on the way of being developed, and form an important item of wealth. At the same time, the State's finances are gradually improving. But for the expenses incurred in connection with the establishment of the refugees, the Budget of the State would have balanced. As, however, the raising of the refugee loan will alleviate the Budget from this burden, it is expected that the equilibrium of the Budget will be obtained at an early date—provided, of course, peace and political stability prevail in the next two or three years. While the increase of note circulation and the fall of the drachma are almost on the same level, taxation has increased to a much larger extent. Foreign exchanges have been stabilised for some months. This is due to the exchange policy followed by the country. On the other hand, issues of paper currency for the needs of the Treasury stopped last year. In fact, a gradual withdrawal of the notes in circulation is going on, and moreover, the ratio of notes covered in proportion to the total circulation has greatly increased since the issue of notes covered by sound foreign currencies bought on the market.

Great Britain and Mexico.—A correspondent writes:—Another revolution is believed at Washington to be impending in Mexico. It is said to be promoted by Señor de la Huerta, now in the United States, and General Angel Flores, who, aided in suppressing the rising last winter, and alleges that he was defeated by fraud in the subsequent Presidential election. Its success depends on the amount of disaffection in the army, which is said to be considerable; and the expectation of it must prolong the suspension of Anglo-Mexican diplomatic relations, of which the inconveniences have been again exhibited this week. The report of the Inter-oceanic Railway of Mexico for the year ended June last states that since August, 1914, the line has been in the possession of the Mexican authorities, who have neither paid compensation nor rendered accounts; so that on June 30th last the debit balance had reached £2,892,939, against which the company claims over £4,000,000 in respect of earnings alone. Its only revenue during the year, apparently, has been £5,000, minimisation and moratorium expenses of the company and its two leased lines, and of the expenses of the Commission sent to Mexico in January, 1923. Here is one afforded by the murder, on October 18th, of Mr Cecil Hodson, a British subject and mine manager, probably by discharged employees and for the sake of robbery, but under circumstances even more shocking than that of Mrs Rosalie Evans in August last. His widow and his Government to demand compensation, but the demand should come from our own Foreign Office, and Sir Thomas Hoblen, who was to prepare the way for an arrangement with the Government of President Collis, has been sent as Minister to Montevideo. In commercial circles in London and Liverpool there is a movement in favour of recognition; but at the meeting of the Associated Chambers of Commerce a fortnight ago a resolution to that effect was shelved by the previous question. Its support had declared its attitude; the latter will doubtless be shortly invited to do so by a question in the House of Commons. One of the obstacles to recognition has been at any rate lessened by the conviction of two of the murderers of Calles has intimated that he is willing to negotiate, but that Great Britain should make the first move. But at present Great Britain can only wait and see.

The New Departure in China.—Tuan Chi-jui and Feng Yu-hsiang arrived in Peking last Saturday, and the former has been installed as Provisional Chief Executive of the Chinese Republic. He is to be assisted by a new Cabinet, in which Tang Shao-yi is Foreign Minister, but it is clear that, subject to the approval of Chang Tso-lin, Tuan Chi-jui is practically Dictator. Meanwhile Feng Yu-hsiang, the Christian General (who has been aptly described by a Chinese Christian lady as an "Old Testament Christian") has decided, having stopped the civil war by his action, to retire from politics and visit America and Europe. His retirement, it is believed, will induce Wu Pei-fu and the Tsuchuns of the Central Provinces to accept the new order of things. Extensive changes are expected in the constitution, presumably tending to increase provincial autonomy, and foreign observers seem to have confidence in the new Dictator and in his chief supporter, and to regard them both as capable and honest reformers, and friendly to the foreign residents. The Chief Executive and some of his Ministers belong to the Anfu or pro-Japanese party, but Japan will doubtless co-operate with the Western Powers in promoting the restoration of order and peace. Sun Yat-sen has been welcomed at Kobe, and has appealed to Japan to aid in abolishing the extra-territorial privileges "which enable foreigners to force civil wars on China." It would be interesting to know how they do so; but the treaties cannot be reconsidered till China has a stable Government.

Cotton Trade Short Time.—Our Manchester correspondent writes:—The result of the ballot of spinners of American cotton in Lancashire on short time has been announced this week, and, owing to the proposal of the Masters' Federation receiving the support of the owners of more than 80 per cent. of the spindles, the recommendation will be put into force. From February last up to the end of October the factories worked only 26½ hours per week. From the beginning of this month the working hours have been increased to 32 hours per week. There has been an agitation in the trade for further expansion in production, the opinion being held in some quarters that full time should be resumed. In the opinion of the Committee of the Masters' Federation, however, there was a danger of over-production if there was entire abolition of curtailment of output. They, therefore, decided to ascertain the views of the members as to whether they were in favour of stopping the mills for 8½ hours per week (one day) from the beginning of December, and the ballot figures show that the owners of 86.46 per cent. of the spindles were in favour of this recommendation, with 7.61 per cent. against, no replies being received from 5.93 per cent. The result has given considerable satisfaction in trade circles, as at one time there was a fear that spinners would decide to run full time. In the Manchester market, because of this anticipation, business has been quieter during the last two or three weeks, owing to the expectation of lower values, and smaller profits for spinners and manufacturers. It is understood that the Masters' Federation will continue to watch the state of trade very carefully, and they will recommend the abandonment of all short time immediately there are signs of the demand for yarn being sufficient to absorb the full output of the spindles.

Wages in the Engineering Trade.—The consideration of the claim of the workers in the engineering industry for an all-round increase in wage-rates promises to be one of the outstanding features in the labour world in the near future. Briefly, the position is that the average time rates in the principal centres are about 55s to 60s a week in the case of skilled men, and about 40s a week in the case of unskilled workers. These rates, which are generally 17s above the pre-war level, compare with 90s to 95s and 70s a week at the end of 1920, when wages were at the maximum. Expressed as percentages over the pre-war rates, the present averages show a rise of about 45 per cent. for skilled men and 75 per cent. for labourers. The rise is thus less than in many other industries, and considerably less than that shown by the cost of living index number. Moreover, the heavy reductions in wages have resulted in the skilled engineer becoming one of the lowest-paid craftsmen, whereas before the war he ranked

high in the wage scale. The adjustment of wages in the engineering industry has never been closely related to variations in the cost of living, and since 1920 it has been in accordance with the principle enunciated by the Industrial Court, in its award granting the last increase, that remuneration "should, in ordinary circumstances, depend on the value of the work done, and the value of the work done depends on the state of the market and the demand for the products of the workshop." In the present instance, therefore, the negotiations turn not so much on the cost of living, which, incidentally, is at about the same level as it was at the date of the last change in wages in the industry, but on the state of trade, as indicated by the turnover and profits of the employers. The facts on these points will no doubt be brought to light during the controversy, but it is worthy of notice, as having some bearing on the subject, that when the present level of wages was reached in the autumn of 1922, the percentage of unemployment in the engineering trade was about 23, whereas it is now 15. One matter which appears to deserve consideration is the question as to how far it is a desirable policy to determine the level of wages in the industry as a whole on a uniform basis, in view of the fact that there is a considerable variation in the nature of the products and in the markets for which they are provided. The determining factor of the employers' ability to pay would appear to be a variable quantity in different sections of the industry. There are certain branches, notably the motor section, which are making headway in spite of foreign competition, while the electrical section is also improving. On the other hand, the marine and textile machinery sections are far from prosperous. It appears that an examination of the possibility of sectional or district advances in wages might furnish an avenue for negotiations leading to a gradual restoration of wages to a level approaching the pre-war standard.

American Cotton Crop.—Further important statistics have been published by the United States Government on the cotton crop for this season. The yield, exclusive of linters, has been estimated at 12,992,000 bales, against 12,816,000 bales a fortnight earlier. This statement was about equal to expectations. It has also been announced that up to November 13th a total of 11,148,000 bales of cotton had been ginned. This is a big amount, and indicates very clearly that favourable weather in the belt has prevailed for picking. On the whole, it is anticipated that the total growth will be about 13,250,000 bales, making with linters a crop of about 14,000,000 bales. The carry-over at the end of last season was 2,300,000 bales, and available supplies for the current 12 months are therefore 16,300,000 bales. Some uncertainty exists as to the requirements of users, but owing to improved trade in most countries of the world, the wants of spinners will be larger than last year, and it is estimated that consumption will be about 12,700,000 bales, against only 11,200,000 bales in 1923-24. There seems to be every probability, therefore, of a substantial carry-over at the end of next July.

The Outlook for Rubber.—Under the fostering influence of the cut made at the beginning of the month to 50 per cent. in the standard production of rubber-producing companies, the price of the produce has crept up, until now it stands at nearly 1s 6d per lb. This is 8½d per lb higher than rubber commanded six months ago; to be exact, rubber fell to 9½d per lb on May 19th last, the lowest reached this year. Standard production throughout 1924 stood at 60 per cent. until July 31st, when it dropped to 55 per cent. for the next three months, and again to 50 per cent. on November 1st. The restriction applies, of course, only to the output of the companies that have given voluntary adhesion to the Stevenson scheme. Just before the adoption of this plan, two years ago, rubber had touched 7½d per lb, so that, from the point of view of the industry, rubber has benefited substantially by the incidence of restriction. That the scheme should have given advantage to Dutch, Chinese, and other planters who declined to acquiesce in its voluntary self-denial policy is not to be questioned. That it has been

an indirect incentive to the activities of the rubber smuggler is another self-evident proposition. The British rubber companies, however, are justified in their claim that the Stevenson scheme has achieved success in spite of the unexpected developments to which it gave rise. There was an outcry in favour of still closer co-operation between the British producers when rubber fell to 10d per lb in the spring of this year. In answer to a general demand, various members of the leading groups met and appointed a committee to draw up heads of agreement for a Central Selling Agency. But it may be shrewdly suspected that there was no great enthusiasm for the idea amongst the London leaders of the rubber producers, and, as the price of rubber began to rally, so did the Central Selling proposal quietly slide behind the shelves of the committee. The effect of the reduced production is already marked. It synchronised with a rapid expansion of demand for the new balloon tyre, which, as the latest novelty, is arousing interest amongst all motorists, and accounting for the consumption of large quantities of rubber. The companies, cut down now to half their standard production, will find their standing charges increase in proportion to output, and their profits will naturally diminish because of their reduced output, but the advanced price of rubber will make up for this to a large extent. What shareholders look to is, of course, the time, deemed to be rapidly approaching, when the buyers will find something of a shortage in the material, with a consequent further rise in the price of rubber and a relaxation of restriction upon output. This consideration it is which buoys prices and hopes alike. Such familiar rubber shares as Linggis, Highlands, and London Asiatics pay $\frac{3}{4}$ to 4 per cent. on the money at today's quotations. Vallambrosas yield less than $\frac{2}{3}$ per cent., United Serdangs return 5 per cent. Better interest on the money can be obtained from trustee securities than from many good rubber shares. The theorist who maintains that at least 10 per cent. on the money should be required from shareholders in companies connected with a tropical industry is ridiculed as being old-fashioned and short-sighted. People buy rubber shares to-day on the expectation of the dividends that are likely to be paid two or three years hence. With their normal huge output the big producers find every eighth of a penny rise in the price of rubber makes a substantial difference in profits. Restoration of such normal output, and maintenance of a high price for rubber, may sound rather contradictory to the cool observer, but, unless he has passed beneath the harrow of the really bad times in rubber, the outsider will fail to gauge the extraordinary faith that sustains the holder of rubber shares, and the strength of the conviction that there are good times, not far ahead, for the industry.

Welsh Tinplate Trade.—The Welsh tinplate trade since the beginning of November has been in a very depressed condition, and it is to be feared that the glowing reports of the activity of the industry that were circulated last month were somewhat overdrawn. There are just now about forty mills idle, and the further stoppages in the Swansea district this week have added to the large number of men unemployed. Some of the works are running on short time, and the outlook is not very favourable. The stocks at Swansea amount to 282,750 boxes, and this is somewhat heavier than the figures for the corresponding period of last year. The shipments lately have been running into about 100,000 boxes per week, and this is considerably less than the exports at this time last year. The check to the steady run of activity in the tinplate industry is due to various causes. Countries like France, Italy, Spain and Norway are expanding their own production, and protective tariffs have been built up lately in the case of Spain and Belgium by increasing the duty on imported plates. Germany, moreover, is extending her tinplate industry, and there is great competition in the foreign markets for all business. The Price Stabilisation Committee have decided to make no change in tinplate prices, but tinplate bars have been put down to £8 7s 6d per ton, less 7s 6d rebate to members, and sheet bars have also been reduced. This is a significant move; some of the steel works making tinplate bars are simply working for stock, so dull is the consuming demand. The export

trade for account of South America and the East has fallen off considerably of late, and, naturally, there is a tendency amongst the merchants to place the blame for the loss of trade on to the fixed prices and the changes made in regard to selling plates which have been introduced during recent months. Some good orders have recently been lost to America owing to price-cutting, and British merchants are very dissatisfied with the whole position. This week a good order for oil plates running into 200,000 boxes was secured partly by the selling combine and outside mills. These plates are wanted for delivery early next year, but the position is far from satisfactory, and in some quarters current rates are looked upon as too high. Reports from the American side indicate that the mills there are well engaged. The order books for the first quarter of 1925 have been opened, and \$5.50 is apparently going to be maintained. The U.S. mills have some good contracts on hand and expect to secure further big orders.

Commercial Arbitration.—A correspondent writes:—During the last few years there has been a distinct tendency for commercial firms to accept in cases of dispute the arbitration of the chambers of commerce. Lately there has been an extension of this idea in the way of a working arrangement with chambers of commerce abroad. An interesting case has just been reported by the Manchester Chamber of Commerce. As long ago as 1921 an award was made by the Manchester Tribunal in favour of a local firm against a New York firm. The American house neglected to comply with, or to reply to, the various notices served upon it, and eventually the award was made on such evidence as was available. Having obtained judgment, the Manchester firm found themselves unable to enforce it, owing to the fact that the respondent was not resident in this country. The case, however, was taken up by the Manchester Chamber, in co-operation with the New York Chamber, and legal assistance was obtained in New York with a view of forcing the American firm to accept arbitration. The American Court, on being informed of the existence of the arbitration clause in the contract, decided that this was sufficient to warrant settlement by arbitration, and ordered that the matter be referred to the New York Chamber for decision. After some little delay the hearing took place, and an award was given for the Manchester firm for about the same amount of damages awarded by the Chamber of Commerce Tribunal in Manchester. This case illustrates the importance of firms in their contracts including the clause providing for any dispute to be settled by the tribunal of the chamber of commerce. In this way expensive litigation is avoided.

British Trade with India.—A very elaborate and most encouraging Report on "Some Aspects of British Trade in India, 1923-24," by H.M. Senior Trade Commissioner in that country and Ceylon, has just been published (3s net) by the Department of Overseas Trade. It states that last year India really began to recover from the depression of 1920; since then the monsoons had been favourable, the crops were abundant, political conditions better; the Budget, for the first time in six years, had at last been made to balance; Customs duties ceased to rise; exchange, on the whole, improved, so did exports of Indian produce and manufactures; and the stocks of goods imported before the slump were at last cleared off. Imports fell off by 2 per cent., the expected revival being checked by the high and varying prices of cotton goods; the trade balance in India's favour was 144 crores—a record; and the import of 46 crores of specie signifies that much purchasing power is stored up. Political and racial bitterness is less, notably between British traders and their Indian clients; and the dissensions in all the native parties mitigate its practical effects. Nationalism, of course, has set up certain hindrances to British trade: the most formidable are separately dealt with in much detail. Government stores are now, as far as possible, to be purchased only in India; this regulation will tend to alter the relative proportions of the kinds of goods imported, and will compel British firms who contemplate tendering to keep stocks in India; it may also encourage foreign competition with them. Infant industries, again, are being protected, but only such among them as will be able to stand alone hereafter. The subject has a

chapter to itself, and the iron and steel industry, the most vigorous infant, has another. And, as 76 per cent. of the population is agricultural, its interests will act as a check on Protectionism. The boycott of British goods, now condemned by Mr. Gandhi, meets with much native opposition and will probably decline. Even the city governments under Swarajist control cannot carry it out effectually in their purchases of stores, for their engineering standards are British, and suitable tramway materials, spare parts, and various other requisites can only be purchased in Great Britain and are not made in India. The Nationalist aspirations after an Indian commercial fleet, exhibited in the report (here summarised) of the Mercantile Marine Committee, may be partly satisfied by its unanimous recommendations as to the provision of training for Indian officers and engineers, and Government aid to Indian shipbuilding; but the proposals to limit the coasting trade to Indian-owned shipping, and to purchase one of the existing British lines and have it run by the Government, seem very much less practicable. Foreign trade, on the other hand, must gain immensely by the great irrigation works now projected and under construction, largely with the aid of excavating machinery: the Sarda scheme in the United Provinces, the Sutlej Valley scheme in the Punjab, and the Lloyd (Sukkur) barrage and canals in Sind—the last named, the largest of its kind in the world, will turn 5,000,000 acres of desert into fertile cereal and cotton lands. The second and third schemes should cause a great development of Karachi as a seaport. There is much else which we have no space to summarise—full particulars, illustrated by tables, of the shares of other countries in Indian overseas commerce; of Indian wages and cost of living, and a detailed examination, extending over some 70 pages, of the whole Indian import trade. We commend the entire Report to the attention of British merchants and investors, and particularly to those who are apprehensive as to the future of the British connection with India.

Ecuadorian Exchange.—Little surprise, writes a correspondent, will have been occasioned by the announcement that the Government of Ecuador has finally abolished official control of foreign exchange, and that free dealings have again been resumed. The resignation, in September, 1923, of the greater number of the members forming the Executive Economic Commission robbed that body of a great deal of its intended utility. As a result of the enforcement of the exchange regulations that became effective in January, 1923, the economic significance of business had become largely lost, any effective analysis of conditions in that country being rendered impossible. On the other hand, the causes counteracting the upward tendency of the local exchange market may have been found in the administration of the public funds, and in the sustained, generally unsatisfactory financial condition of the country. Strikes and incipient revolutions have, likewise, had their effect upon the situation. The supply of drafts resulting from the sale of Ecuadorian crops and other export commodities has been entirely inadequate for the needs of importers, with the result that trading in exchange has been carried on outside the official agency. At the time that the Executive Economic Commission was sitting, although the street rate for the sucre was quoted, perhaps, at 5.90 to the dollar, the official rate was given as 3.20 sucres; even at this quotation, however, drafts were often unobtainable, and purchases for importers very difficult to finance. The amount of unliquidated accounts to be settled by the Exchange Control Office as from July 1st last was over 55,500,000 sucres. Between November, 1922, and January, 1924, the unliquidated accounts had increased by nearly 18,000,000 sucres, while for the first six months of the current year it was estimated that a further 5,000,000 sucres had been added, since imports had considerably increased compared with the same period of the previous year. Many of the large importers of Ecuador pay their accounts with drafts purchased in the open market at a high rate of exchange, subsequently registering their transactions with the Exchange Control Office, in order to be able to secure drafts at a lower rate than that officially quoted.

* The current official rate of exchange in Ecuador is about 4 sucres to the £, although the open market rate is quoted at 5.60 sucres.

The Anglo-Persian Meeting.—What Sir Charles Greenway meant when he referred, at the shareholders' general meeting, to "the very strong recrudescence of attacks upon the company," we do not know. We are only concerned with the financial criticism that the accounts are designed to conceal more than they disclose of the important operations of the company. Unfortunately, Sir Charles Greenway's reply to the "attacks" did not help the financial critic at all. It enables no one to understand the accounts any better to be told that the company has "in Persia five hospitals, containing 274 beds, eleven British and two Indian doctors, and twenty British nurses," and that these hospitals last year "gave free treatment to no fewer than 3,866 in-patients and over 34,000 out-patients." Such figures, together with those of the numbers of houses and bungalows, of refineries and tankers, may be interesting, but are a strange method of reply to a request for intelligible information. We commend to Sir Charles Greenway the report of the Tube Investments, Limited, which contains these excellent remarks:—"Your directors have from the first recognised and regretted that the balance-sheet of a holding company does not give to the shareholders sufficient information to enable them to form a useful opinion as to the position of the company. It is with pleasure that the directors publish this year a combined statement of assets and liabilities, which they intend to submit annually." The Anglo-Persian is a holding company, in that its most important operations are carried on through subsidiary companies which it finances. Yet no combined statement of the assets and liabilities of those subsidiary companies is ever given. Shareholders are never informed as to the extent to which the profits shown in the parent company's profit and loss account have been reduced by extraordinary losses or extraordinary depreciation in the books of the subsidiary companies. We have no doubt that the prospects before the Anglo-Persian, having regard to its wonderful oilfield, are rosy, and we accept with gratification Sir Charles Greenway's word that the current year's trading should show a considerable increase in profits. But we should have still more confidence if these encouraging sentiments were backed up by plain figures in the company's accounts.

East London Railway Absorption.—It is announced that after prolonged negotiations agreement has been reached as to the terms on which the Southern Railway proposes to acquire the East London Railway Company. The following are the terms of exchange proposed:—

Existing Stocks of East London Railway.		Amounts of Stocks of Southern Railway to be issued or cash for each £100 East London Stocks.	
Amount.	Description.		
£172,920....	1st Charge	£87 10s	4% Debenture Stock.
	3½% Debenture Stock		
£544,440....	2nd Charge "A"	£100	" "
	4% Debenture Stock		
£381,116....	2nd Charge "B"	£100	" "
	4% Debenture Stock		
£624,994....	3rd Charge	£30 5s	Preference Stock.
	4% Debenture Stock		
£575,996....	4th Charge	£12 10s	
	4% Debenture Stock		
£3,240,799..	Consolidated Stock..	£5 10s	cash

The stocks of the Southern Railway Company to be issued in exchange for the debenture stocks of the East London Railway Company will rank for interest or dividend from January 1, 1925, although the actual exchange cannot take

By the end of October the adverse trade balance had been converted into a surplus of exports; the figures were then in millions of marks:—

	Imports (c.i.f.).	Exports (f.o.b.).	Surplus of Imports.
January-October, 1923	3,763.7	3,656.4	—107.3
1924	3,989.7	4,036.9	+ 47.2

The favourable harvest was followed by a decline in the import of cereals. Comparing the figures for the first nine months of the present year with those for the same period last year, we find that imports (c.i.f.) of metals increased by 25.7 million marks, whereas the value of imports of textiles fell by about 12.4 million marks. Timber exports increased largely in volume, while the export values (f.o.b.) of the group rose only from 1,853.1 million marks to 1,875.6 million marks. Exports of the products of the paper industry advanced in value by 38.7 million marks. Exports to Great Britain represented 42.3 per cent. of the total of Finnish exports, and imports from Great Britain 18.8 per cent. of the total of Finnish imports. The total index number of import prices in September was 947, again 899 in January. The index number of export prices was 1,104 in September, against 1,157 in January. Exports of unsawn timber have fallen short of last year's quantities. The props market, in the absence of any considerable demand from Great Britain, has been inactive. Sales of sawn timber to the middle of October are estimated at 770,000-780,000 stds, a figure exceeding that reached last year. Shipments to the end of September amounted to 631,900 stds. Prices fell in some cases below the cost of production. The export of chemical wood pulp has expanded in volume, the export of the period January to October totalling 209,955 tons, compared with 157,313 tons for the same period last year, and with 188,791 tons for the whole of 1923. Prices in this market are firm. The export of mechanical pulp and cardboard from January-October reached 88,389 tons, as compared with 62,105 tons for the same period last year. The total export of paper in October amounted to 18,046 tons, as against 15,064.3 tons in the same month last year. For the period, January-October, the quantity exported was 149,270 tons, as against 144,932 tons during the same period of last year. The National Debt, External and Internal, amounted, on September 30th, to 2,309 million marks, being less than at the end of 1923 by 106.2 million marks; at the end of October it had fallen to 2,289 million marks. The total State revenue during the first seven months of the year, totalled 1,594.3 million gold marks, as against 1,506.5 million marks for the same period last year. The State railways produced an increased gross revenue, though the surplus on September 1st was less by 47 million marks than at the same date in 1923. During September the money market remained stringent, and the situation in October did not improve to the extent expected from the municipalities' dollar loan. As usual at this season, deposits in the banks declined. The Bank of Finland's reserve of foreign currency decreased in September by 25.1 million marks to 446.8 million marks. The note circulation remained unchanged. The foreign value of the mark rose slightly on October 9th-10th, the dollar rate sinking from 38.85 to 39.75. The downward tendency on the Stock Exchange which was observable during September and the greater part of October, was arrested in the last week of October, when a lively demand for the shares of the leading banks and of certain industrial concerns began to set in. The interest in bank shares has been maintained. The favourable harvest has strengthened the position of home industries. There is relatively little unemployment, and in some branches a shortage of labour is felt. The cost of living index rose in September by one point to 1,199 (1,172 in the corresponding month of 1923), and the wholesale price index by 6 points to 117.

A PUBLIC lecture by Sir Gregory Foster on "The University of London: what it is and what it may be" has been arranged by the XXth Century Society of London Graduates. By the kind permission of the director, Sir William Beveridge, the lecture will be delivered at the London School of Economics and Political Science, Kingsway, on Thursday, December 4, at 8.15 p.m. Admission is free, and no tickets are required.

Oversea Correspondence.

UNITED STATES.—EXTRAORDINARY ACTIVITY IN STOCKS—TRADE AND INDUSTRY IMPROVING—MONEY FIRMER—FOREIGN CREDITS.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 18.

BULLISH enthusiasm, which began to develop in the stock market shortly after the election, has reached extraordinary heights, and for the present is the outstanding feature of the financial situation. For nearly a fortnight trading has been of enormous proportions, taxing to the utmost the facilities of the Stock Exchange and its members. Daily transactions in the full five-hour sessions have exceeded 2,000,000 shares—one million is ordinarily considered a big turnover—and often approximated 2,500,000 shares. Frequently the stock ticker tape, even though it is much faster than in former years owing to the adoption of a new mechanism, has been 15 to 30 minutes behind in recording sales and quotations. On at least three different occasions in the past week the final hour for clearings has of necessity been postponed. Many houses in Wall Street have been obliged to increase their clerical forces, and in numerous instances are employing night shifts. Under a veritable avalanche of buying orders, prices have scored sensational advances. Railroad issues at first led the rise, but the upward movement quickly spread until it embraced practically every group of stocks listed on the Exchange, including industrials, public utilities, oils, shares of merchandising concerns, and a long list of what are known as "specialties." Up to and including to-day, total transactions in stocks on the "big board" since the election have exceeded 23,000,000 shares, and prices in many issues have recorded in that period net gains of 5 to 10 points, and in some cases 15 to 20 points, approximately. Both high and low-priced shares have figured in this remarkable movement, and more than 600 different stocks have been dealt in—the largest number active in such a short period in the history of the New York Stock Exchange. One has to go back to the so-called panic weeks of May, 1901, to find anything approaching the recent activity. The following table shows at a glance the extent of the advances in some representative stocks:—

Stocks.	Closing Prices—		Net
	Nov. 5.	Nov. 18.	
American Canning.....	137½	151	13½
American Locomotive.....	79½	84½	5
American Smelt. & Refining..	79½	84½	5

U.S. Indus. Alcohol.....	70½	86½	16
U.S. Steel.....	109½	116½	7

Practically all stocks in the above table reached levels somewhat higher than to-day's closing prices, having reacted in the past few sessions from their top records. While profit-taking has been extensive at times, all offerings have been taken quickly, and after such temporary breathing spells, so to speak, the upward tendency resumed under fresh waves of buying. While there has been a material increase in trade in some directions, with plain indications of a further

quickening of activity, the actual improvement that has taken place since the election is not sufficient to warrant such a violent upbidding of stock market prices. The rise, therefore, must be regarded as a discounting of possible further expansion of trade and industry.

As to business conditions throughout the United States, trade sentiment has greatly improved in the past week, and more active buying is reported in numerous primary markets, notably in cotton textiles and dry goods. But no boom has yet developed in actual final distribution. In the iron and steel industry, demand is steadily increasing, as well as production, and prices display an upward trend. Anthracite coal is moving in large volume, while bituminous coal output and buying is described as liberal. Mail-order and chain-store sales compare favourably with those of recent months and a year ago. Bank clearings have expanded over this time last year, and business failures show a decrease from a year ago. During the past week there has been a pronounced upturn in prices of commodities, no less than 39 different commodities having advanced, while only four declined, and 39 remained stationary. Wheat prices in particular reached new high levels for this year, due to reports of damage to foreign crops, lower Canadian estimates, and extraordinarily heavy export buying. Cotton prices also ruled strong, despite the recent increase in the Government's estimate of this year's crop; the advance in the price of the staple was attributed mainly to the better feeling and some increase in operations in cotton goods manufacturing centres. Retail trade is still patchy, the movement of seasonal lines in different sections varying according to weather conditions.

The market for outstanding bonds continues active, though not comparable with the huge volume of transactions in stocks. Prices lately have shown considerable irregularity. United States Government issues, as well as high-grade corporate bonds, which had previously advanced sharply, have reacted, owing partly to realising sales by speculative interests, and partly to the firmer rates for time money. Demand for accommodation has lately been more active, reflecting the enormous volume of trading in the stock market. This, together with the optimism created by the election results, has served to stimulate borrowing.

In banking quarters it is expected that the French Government loan, which has been under discussion for some time, will be offered here before long, although no definite announcement of details has yet been made. Investment demand for new securities continues strong and active, judging from the quick absorption of recent offerings in most cases, and the general opinion is that a French offering would readily be disposed of. Negotiations are under way for various foreign loans or credits of comparatively small size, including a credit to be extended by a group of American banks to the iron ore industry of Sweden. It is understood that this credit will amount to \$5,000,000, possibly more, and will be made on an acceptance basis, with no public offering of securities. Reports are current that the City of Tokio, as well as the Government of Newfoundland, may enter the American market for loans in the near future.

FRANCE.—BUDGET PROSPECTS—NEW TREASURY BONDS—AMERICAN LOAN—GOVERNMENT AND BANK OF FRANCE.

(FROM OUR CORRESPONDENT.)

PARIS, November 22.

THE hopes that were entertained that the Budget Bill would be voted by the end of the year are already vanishing, and to-day it is generally believed that the beginning of the coming financial year will see a resumption of monthly votes on account, owing to the Budget being once more behind time. The intention of the Government was that time should be saved by the Chamber adopting the entirely novel method of first voting the estimates of expenditure and passing them on for approval by the Senate, and meanwhile proceeding, while the Upper House was busy with this part of the Bill, with the revenue half of the project. This proposal has apparently fallen through, owing to the announcement by M. Milliès-Lacroix, the President of the Senate Finance

Commission, that the Senate will refuse to begin its discussion of the Bill until it has been completely approved by the Lower House. The resumption of the objectionable system of *douzièmes provisoires* is, therefore, to be expected.

Behind this change of plan there is also the fact that the Government is finding great difficulty, now that it is face to face with the actual problems at issue, in balancing the Budget by modifications of taxation that will prove acceptable to its own supporters. The suppression of the tax on turnover, which was promised at the last election and which won many votes to the Government, especially from members of the smaller trading class, is proving impossible to carry out, and so is the dropping of the *double decime*, or an all-round increase of taxation by 20 per cent., which was imposed by the previous Government. It is now becoming clear that, in view of the increases of pay to the military and civil servants of the State, and other additional projected expenditure, the taxpayer will not only not obtain any relief under the Herriot Government's first Budget, but will in all probability find himself still more heavily burdened. According to M. François-Marsal, the taxes at present imposed on capital and on the revenue from capital and from labour now represent 53.63 per cent. of the nation's total revenue; taxes on non-indispensable commodities (alcohol, tobacco, and luxury products) account for another 21.6 per cent. of the total, while Customs duties and other taxes classed under the heading of "economic defence" are equivalent to 8.72 per cent. Imposts on articles of common necessity, the same authority asserts, amount to only 18.5 per cent. of the total revenue.

An extraordinary effort is being made, by means of lavish publicity and organised propaganda, to ensure the success of the new issue of 10-year 5 per cent. Treasury bonds, redeemable at 150 per cent., which began a fortnight ago. At present, however, it appears to be an extremely open question whether the public will respond to a sufficient extent, during the fortnight the lists have still to remain open, to enable the Treasury to secure the

per share per annum and accumulate at 5 per cent., as can be done, within limits, by Government Savings Certificates, to reinstate the present price of £7 10s at the end of the period; while a purchaser of New Modders at £4 should similarly set aside 2s 6d per share. Money for first mortgage loans is freely obtainable in Johannesburg at 7 per cent. on the highest class security, while the majority of loans are at 8 per cent. The value of an annuity—and all Rand gold mines may be considered as terminable annuities of varying amount—to yield 8 per cent., and replacement of capital at 4 per cent. (the latter the highest rate quoted in "Inwood's Tables"), lasting for 20 years, is 8.804 years' purchase. Thus to justify the present quotation, Government Areas will require to pay 17s for every one of the ensuing 20 years, and New Modder 9s. It is unlikely that the life of Government Areas will exceed two decades on the basis of 200,000 tons per month, but if the period were 25 years, the requirement would be 15s 6d, good years with the poorer. On account of greater mining risk, which earth "tremors" remind us of several times a week, City Deeps and other mines of the Central Rand are bought on a higher interest basis. Ability to pay 10s a year for 20 years would make City Deep an 11 per cent. investment (with reinstatement as before at 4 per cent.), that dividend paid for 17 years a 10 per cent. investment, and if for 14 years a running yield of 9 per cent. But is it by any means certain that present high rates can be maintained for such lengthy periods as the two first-named in view of the exigencies of mining?

The long month of October, embracing only four week-ends, when some of the newer plants have to be shut down on Sunday, has enabled record tonnages to be crushed, the increasing number of jack-hammer drills breaking ample ore to cope with their rapacious demands. The crushing of 1,091,400 tons by the Central Mining-Rand Mines group, of 186,000 tons by the Anglo-American group at an average for the three members varying less than a penny from 20s 3d per ton, the 179,500 tons of the "Gold Fields," and the 670,800 of the Barnato groups are all records. This higher tonnage crushed, accompanied by a reduction in costs, though not in evidence at the two principal groups, has neutralised the drop of 1s in the currency price of gold. Government Areas made the remarkable profit of £210,000 (the additional plant is expected to add £40,000), and New Modder no less than £163,850. Another striking feature was the lowering of Simmer and Jack's costs to below 14s, or a florin per ton less than the estimate on which the reconstruction scheme and acquisition of the old Simmer Deep ground were founded. We have to bear in mind that the improvement in British credit will still further reduce the currency premium on gold.

Rather a melancholy significance attaches to the abstract of accounts of the Johannesburg Municipality, which reaches me a day or so after the death of Mr William Easton, the Town Treasurer, who has been so largely responsible for the remarkably sound financial—if not "impregnable"—position of the town. The total loans outstanding are £7,660,000, and the investments on account of redemption funds, plus cash awaiting investment, £3,651,708. It is calculated that £3,213,500 of the debt is remunerative, and £2,818,600 partly remunerative. The former includes the capital of the Tramway Department, which, however, showed a loss of £19,701; but the auditor says that power was charged at .65d per unit, and adds, "The costs of the Electric Department show that this price is too low, and that power should have been charged for at 1d per unit at least.....making the loss on tramways £43,450.....It is, therefore, clear that the lighting consumers are bearing a part of the loss on the trams." There was a wastage of 21 per cent. in water, costing £33,795, and of 11 per cent. in electrical energy. The Municipal Council spends slightly under 2½ millions a year, of which lighting and tramways account for a million in gross expenditure.

Mr W. H. Clegg, governor of the Reserve Bank, in addressing the Congress of Associated Chambers of Commerce, declared: "The longer I live in South Africa the more I become convinced that its financial arrangements are out of date, and, therefore, harmful to its progress." Storekeepers were largely agents of, and in debt to, importing merchants, "a debt due at any time

was practically due at no time, and the capital locked up in debts, created under the open account system, remained immobile until repaid. This easy credit was extended to the storekeepers' customers, and the whole of South Africa was burdened with these stagnant debts. The miasma of easy credits and easy debts spread through the entire country. It affected wholesale merchants and retail merchants down to shopkeepers and their customers. It was one of the chief causes of extravagance, which was so marked a feature of South African life, and also one of the chief causes of the high cost of living." He was not in the least opposed to extension of credit, when needed to facilitate production. The bill system should be substituted for the overdraft, and beyond a currency of four or six months the retailer should go to his banker for further credit. The present system was devoid of elasticity, precluded competition, and resulted in large profits and slow returns. The root cause of a very large proportion of the enormous number of insolvencies in the Union was the large amount of credit given to men of straw, and numerous people were attracted into trade who had no business there. Taking in each other's washing was no greater an absurdity than the process of "passing through an army of superfluous middlemen an insufficient quantity of commodities." Later, Mr Clegg, lecturing on "Exchanges" before the University of the Witwatersrand, said that one of the curses of South Africa was the confusion by many people of capital with credit. "If a man saved and bought a motor-car, then he had a right to it. If, however, he borrowed money from his banker to buy a car, he had no right to it. One might build a house on borrowed money, but it was economically unsound to build it on a bank overdraft." But if the money were borrowed from a mortgage company, or from any source where funds were in existence, that was a different matter, as there was no credit creation or inflation. The true use of credit was to give elasticity to capital, not to act as a permanent substitute for it.

HOLLAND.—EXCHANGE AND THE GOLD STANDARD —ROTTERDAMSCH BANKVEREENIGING.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 25.

THE long-entertained expectation that the gold standard will again be introduced in this country will in all probability be shortly realised. True the guilder has not at the moment reached its gold parity, but the course of the rate of exchange of late warrants the belief that this point will be reached within a reasonable time. The causes for this rather rapid return practically to par are numerous, but must be sought for principally on the other side of the ocean. It is not, of course, the guilder alone which shows such a favourable course in relation to the dollar; at the same time, the pound sterling, the Swiss franc, and the Swedish crown also show improvement. It is, therefore, the position of America as regards Europe that has changed in favour of the latter, and this is the cause of the recent course of exchange.

That Holland, in comparison with the other European countries, has secured a more favourable position for her currency, in relation to the dollar, is due to special factors affecting this country in particular. The gold policy of the Netherlands Bank plays only a minor rôle, as also does the conversion of dollar values into guilder values. This, of course, represents a fairly important amount, but, on the other hand, it may be assumed that large amounts have of late been invested in Central Europe from Holland, by which a counter-weight has been established. Of great importance for the course of rate of exchange has certainly been the favourable price movement of Indian and Dutch agricultural products, from which the balance of payments of the Netherlands has profited.

The favourable figures of our foreign trade for 1924 reveal another important influence, while the important points to a larger source of income from transit traffic.

Although the guilder has not yet reached its gold parity, the question may soon arise whether it is desirable by a further decrease in the dollar rate, even to below the gold-import point, to encourage the import of the precious metal. Considering the gold deliveries from Holland of

the last few months, and that the metal cover for bank-notes is about 50 per cent., a further import of gold seems undesirable. It is not probable that the Netherlands Bank will resort to this policy.

Regarding the affairs of the Rotterdamsche Bankvereeniging, some particulars have lately been published which have caused some consternation and conjecture. On October 10th last it was stated by the management of the Rotterdamsche Bankvereeniging that shares to the amount of 25 million florins were in "friendly hands," and that they would be exchanged for redemption certificates. This 25 million florins would be written off, together with an amount of 5 million florins taken from the reserve; a further sum of 12 million florins would be taken from this reserve to cover obligations attended with more than usual risk. A total of 42 million florins would thus be devoted to writings-off and special reserves, leaving a capital of 50 million florins and a reserve fund of 20 million florins. At the meeting of shareholders, where this matter was discussed, the policy of the bank was subjected to criticism. This criticism was not confined to past events only, but was extended to more recent ones. Astonishment was expressed at the failure to publish a reorganisation balance-sheet, and at the secrecy as to the identity of the "friendly hands" holding 25 million guilders' worth of shares. A satisfactory answer was not forthcoming to any of these questions. The immediate result has been a decline in the price of the shares—the support of these on 'change has now been discontinued—to the level of about 70 per cent. This is how matters are at present. Mr A. J. van Hengel, hitherto managing director of the Amsterdamsche Bank, has at the instance of Mr Vissering, president of the Netherlands Bank, and in accord with his co-managers, agreed to act as delegated member of the board of directors of the Rotterdamsche Bankvereeniging. In due course the Rotterdamsche Bankvereeniging will be able to publish a balance-sheet, which will be audited by a competent person in no way connected with the previous management of the bank.

As is usual in such cases, the Amsterdamsche Bank have appointed the retiring managing director member of the board of directors. No co-operation whatever between the two banks is aimed at. The interests of the city of Rotterdam require a large bank working entirely independently. Moreover, the divergent policies of these two banks do not render any amalgamation possible. The management of the Amsterdamsche Bank have, moreover, stated that they are not interested in the Rotterdamsche Bankvereeniging either financially or in any other way. This also applies to the syndicate that has supported the price of the shares on 'change.

As to the Government's attitude in this question, reference can be made to the official communication made to the second Chamber on November 5th last. According to this communication, the Netherlands Bank has fixed its attitude towards the Rotterdamsche Bankvereeniging, in the public interest, and with the knowledge and approval of the Government. The Netherlands Bank had inquired whether they might expect a guarantee from the Government in the event of their having to grant a credit exceeding the usual normal limits. In view of the exceptional circumstances, the Government has agreed to guarantee the credit, if such should be necessary, subject to the approval of Parliament. As affairs were at present, the statement continued, the Government had no reason to suppose that this approval will be required. There are rumours that further particulars will be asked in Parliament.

POLAND.—CROPS—RISE OF PRICES—FINANCES— BUDGETARY ESTIMATES FOR 1925—MR GRABSKI'S OPTIMISTIC OUTLOOK.

(FROM OUR CORRESPONDENT.)

WARSAW, November 14.

THE results of this year's crops are very unsatisfactory as compared with the harvest in 1923. The yield of wheat per hectare has decreased from 13.3 to 10.8 quintals. The corresponding figures for rye are 12.8 and 10.3, for barley 13.8 and 11.8, for oats 14.0 and 12.0 quintals. Poland has in consequence a much smaller quantity of cereals at her

TEXTILES AND HARDWARE GENERALLY.

1-4, GREAT TOWER STREET, LONDON, E.C.3.
Associated with Harrisons Ramsay Proprietary Ltd., established throughout Australasia.

disposal than a year ago, as may be seen from the figures below:—

Average.	POLISH CROPS. Metric Quintals (000's omitted).			
	Wheat.	Rye.	Barley.	Oats.
1909-13	16,835	56,591	14,985	28,101
1922.....	11,597	50,660	13,039	25,481
1923.....	13,535	59,623	16,555	35,224
1924 (provisional figures)	8,951	38,274	12,432	27,706

This year's crops of wheat, rye, and barley are not only smaller than in 1923, but they compare even unfavourably with 1922. Last year's crops gave a large exportable surplus. It is estimated that in 1923-24 the excess of exports over imports amounted for wheat and rye to 77,800 quintals, for barley to 322,000, and for oats to 34,900. This year Poland will be obliged to import cereals to meet the deficiency of her home production.

The bad harvest has caused a rapid rise of prices, as may be seen from the figures below (1914 = 100):—

Commodities.	Wholesale Prices of 57 in Warsaw.	
	Cost of Living	
January, 1924	111.2	120.5
April "	109.1	126.5
July "	102.3	127.2
September "	112.4	141.1
October "	..	150.0

During the early months of the stabilisation of the Polish currency prices were falling. This tendency was arrested in July, and since the new harvest we observe a steady upward tendency of all index numbers.

The rise of prices, which is more accentuated in Poland than in other countries, has a very detrimental influence on the economic and financial conditions of the country. The depreciation of the purchasing power of the zloty at home, while the foreign exchanges are maintained in a stable level, is a great hindrance to the Polish export trade. On the other hand, the import of commodities from abroad is much facilitated by the rise of prices at home. In consequence the balance of trade is becoming with every month more adverse.

The rise in the cost of living also reacts on the Budget. The salaries of officials in Poland are not stable, but vary every month according to the level of index numbers. Since July it has been necessary to increase for this reason the expenditure of the Government, while revenue collections fell behind estimates. As pointed out in my last correspondence (*Economist*, October 11th, p. 577) the capital levy gave only one third of the amount which Mr Grabski expected to collect this year. In order to make both ends of his budget meet, Mr Grabski is obliged to ask the Diet for a supplementary credit of 125 million zlotys.

The Polish Diet is now discussing the Budget for 1925, introduced by Mr Grabski. I reproduce below the principal items of these estimates (million zlotys):—

	Revenues.			Expenditure.		
	Ordinary.	Extraordinary.	Total.	Ordinary.	Extraordinary.	Total.
Administration	996.2	495.6	1,491.8	1,536.2	294.0	1,830.2
Government undertakings	85.5	50.0	133.5	0.1	106.0	106.4
Monopolies ..	356.6	..	356.6	..	45.0	45.0
Total	1,438.3	545.6	1,983.9	1,536.5	445.0	1,981.6

The estimated revenues for 1925, amounting to 1,982 million zlotys, are 400 millions higher than those for the present year. Doubts are expressed if such estimates are not too optimistic. Mr Grabski expects that in 1925 the capital levy will yield 333 million zlotys, though this year only 39 per cent. of this amount has been collected. Other taxes have also yielded much below the estimates; for instance, the income-tax (29 per cent.), and the ground tax (47 per cent.). Happily, the deficiencies of these taxes

have been offset by increased revenues from other sources, such as import duties, stamp duties, &c.

Mr Grabski, replying in the Diet to the critics of his figures, pointed out that Poland is only now beginning to draw revenues from the alcohol monopoly, whose yield in consequence must be in 1925 much greater than in 1924. The Polish Premier tried in general to dissipate the fears which were expressed. He dwelt on the fact that the statistical data for September and October reveal a great economic improvement. Unemployment has decreased. Savings are increasing, so that, according to Mr Grabski, the economic outlook is not so black as is generally believed.

SWEDEN.—NEW GOVERNMENT—LABOUR UNREST— GERMAN LOAN—NEW STEEL PROCESS—TRADE AND PRICES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 13.

THE Elections, which took place here this autumn, showed a great increase in votes for the Moderates as well as for the Socialists, at the expense of the Liberals and the Communists. The result of the Election has been a change in Government. The Socialist, being the strongest party, have now formed the new Government, headed by Mr Branting as Premier. The cause of the late Government's downfall was the defence question, which the Socialists insist shall be decided at this Riksdag, whereas the late Government considered it wiser not to hurry a decision before the armament question has been dealt with universally next summer at the special conference.

The labour market is suffering from some uneasiness and strikes in some quarters, but unemployment is not great. The demand for increased wages is general among the workmen at present, and is a cause of great anxiety as to the future of Swedish industry. The chief reason for the depression is not unemployment, but the high wages demanded by the labourers, which make it difficult for industry to stand competition. Agreements affecting 160,000 labourers have been recalled for January 1st. This uneasiness in industry is reaching the share market. Industrial shares are not very much in demand, but good bonds are sought after. The Swedish part of the German bond loan was very successful; 16 million crowns out of the Swedish part of the loan (in all 23.74 million crowns) were issued here last month and sold out in a very short space of time. Some part of the German dollar loan was sold here and quickly absorbed. This interest for good bonds in general has resulted in a great import of securities from abroad, which is causing some uneasiness, as it is considered that this export of capital is bigger than we can afford. The National Debt Office has, through negotiations of Stockholm's Enskilda Bank and Skandinaviska Kreditaktiebolaget, taken up a loan of 30 million dollars with 5½ per cent. dividend in U.S.A. The loan will become payable 1954, but with right for the National Debt Office to redeem it at par 1934.

Some interest has lately been centred on a new Swedish invention, which, if it turns out as promising as it is said to be, will revolutionise the iron industry. This invention, made by Swedish engineers, has for some time been practised at the Uddeholm Works with good results. Through this invention it would be possible to obtain steel directly out of the concentrated ore. This would be specially useful in Sweden, as electrical furnaces and cheap electric power are needed. The production costs for steel would, of course, be greatly reduced.

The shipping season for timber is now drawing to a close, which seems to have stimulated the sales. Freights have also been influenced by this, and the rates have become stiffer. The quantity of timber sold is estimated at about 825,000 standards, which is little less than the quantity sold at the same time last year. The ice conditions do not yet prevent shipping, but this time of the year is unreliable from this point of view, as the cold might come quickly and suddenly close the northern ports. Prices are still very unsatisfactory. Some increase has taken place in wood pulp prices, but compared with production costs they are not considered remunerative.

Both for paper and pulp the export figures have been very good this year.

September is showing an export surplus of not quite one million crowns, while the export surplus for August was 12 million crowns. The value both of imports and exports has increased considerably this year compared with last, but the import surplus was smaller for January-September this year than in 1923.

The official quarterly index (including all necessities of life) issued by the Board of Social Welfare on October 1st was 174, while it was 171 July 1st. The monthly index (including foodstuff, light, and fuel) issued by the same institution was 165 on October 1st, while it had increased to 172 November 1st.

Feeling here is strong against American measures of exploring the costs of production in Swedish industry, and steps are being taken to prevent it.

Letters to the Editor.

BRITISH ECONOMIC POLICY IN CENTRAL EUROPE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Nothing could be more inconsistent with facts than the notion that, generally speaking, Central Europe is a continent, the resources of which have been fully developed, and that capital and labour are working on decreasing returns. This may in some way be true of certain parts of France and Germany, but the countries east of the meridian of Zurich may, on the whole, be regarded as "undeveloped" as any territories in the New World.

The water power of the Alps and the Carpathian Mountains, the soil of the Hungarian and Roumanian plains, the timbers of Yugoslavia and the Bukovina, the mineral resources of Austria, Czechoslovakia, Poland, and Serbia, the petroleum of Roumania and Poland, not to speak of the immense possibilities of Bessarabia and the Donetz Basin, can hardly be said to have been tapped at all, whilst the organisation of transport and industry of these countries is still in its infancy, and capable of big development. On an area of roughly 400,000 square miles there live about 80 million people, that is, about two-thirds of the population of the United States, but possessing barely one-fifth of their purchasing power.

In France and the United States these facts and their significance are slowly being realised. The great industrial concerns of France, like the Schneider-Creusot group and others, have formed a network of banking and industrial connections all over Central and Eastern Europe. In some notable cases parcels of shares of certain banking institutions have been acquired, which, owing to the representation of English banks and financial houses on their board of directors, are able to use the resources of the London money market for their own national ends. American Trust Companies have of late sent their presidents and vice-presidents, resulting in many cases in the opening up of new business connections, and a complete change in the attitude of their boards in America regarding the financing of Central Europe.

After a great start, by which English banks obtained a footing, directly or indirectly, in most Central European banks, and some relatively considerable investments on the part of financial houses and private investors, chiefly in Austrian shares, the movement stopped short at the outbreak of the financial crisis in Vienna last spring. Shareholdings were sold in wild haste, and the city, once so trustful, declared that Austria had abused this trust and officially turned in disgust from Vienna and Central Europe. Unofficially, some very profitable business was done by certain quarters when the crisis was at its height and money very scarce in Vienna.

At present the attitude of the city towards financing Central Europe may be summed up as sceptically reluctant. It is fully realised that Central Europe can only be developed on cheap credits, but what business is done is transacted on high rates of interest, and as to the American competition, the answer most frequently met is, "Oh, yes, the Americans have plenty of money, and they will burn their fingers yet. That's why we don't

want to do anything." Nothing is said about the French, because very little is known about them. And yet, the French way, without its nationalist aim, is the right one, while the withholding of credits from Central Europe must, though at present seemingly justified by circumstances, lead only to further trouble, first economical and then political, like the wholesale granting of advances as imputed to the financiers of the United States.

At present, the outlook for industrial development in Central Europe is indeed black enough. None of the Succession States and the Balkan Monarchy can by any stretch of imagination and sympathy be said to have met their various Treaty obligations. There is a spirit of pettifogging mercantilism in all of them, and where there was once a free trade area of 230,000 square miles, comprising a population of 50 millions, the successors to the Austro-Hungarian Monarchy are at present engaged in raising barriers against trade, high enough to keep the sun from shining on their neighbours. So far as commercial treaties do exist at all, they are mere patchwork intended to deceive the eye of the "internationalist," and giving advantages only to the politically most powerful industrial wirepuller. This policy, in which tariffs play only a minor part, is pursued with the utmost cunning only known and felt by those who want to trade in all these States. The differential treatment of Polish coal on Czechoslovakian railways, the sliding flour tariffs of Austria, the reasons behind the Yugoslavian sugar cartel, the embargo on certain exports and imports in Hungary, Poland, Roumania, Yugoslavia, and Czechoslovakia are only a few of the most glaring instances.

The result of this policy has been the creation of a hydrocephalic industrial system. According to recent statistics, there were in little Austria 6,283 factories in 1919, and 7,419 in 1922, although there has been a small decrease of late. In Hungary there were 1,442 joint stock companies in 1913, and while there was only an increase of 180 till 1921, 3,501 were counted in 1923, of which 271 were founded in the preceding year only. By the Treaty of Trianon, Hungary lost its whole textile industry, consisting of 7,000 cotton looms. At present this number has been replaced, and despite the fact that the spindleage in Austria was even in pre-war days sufficient to cover practically the whole needs of the monarchy, Hungary can boast of 80,000 spindles at present. Of Czechoslovakia it has been said by one of the greatest authorities that two-thirds of its industrial equipment could meet the demands of the whole area of the old monarchy. In Poland industrialisation has made similar progress, while the rest of the Balkan States are doing their best in similar directions.

If one realises that this industrial movement has been chiefly confined to textile engineering, chemical and metallurgical industries, the effect upon British trade in these countries, and its outlook, need not be dwelt upon in detail. On the other hand, it is equally clear that, speaking from a lender's standpoint, the securities for a prosperous future which can be furnished by Central Europe at present are but very small indeed, and that without having regard to the dangers arising from taxation, labour troubles, and tendencies towards nationalisation.

What, then, is to be done, since one thing is clear, that without foreign money these countries cannot go on? Learning from past experience, concerted action between all parties concerned is politically and economically the best way out. To withhold English credits from these countries pending their repentance, as advocated of late in the *Times*, is only bound to create trouble and resentment against England. There are others willing to lend, and besides, as recent events in Vienna have shown, the London money market is by no means willing always to follow the official lead, thus creating consternation, and doing untold harm to the British moral prestige. The policy of making piecemeal credits or investments stands equally condemned. Its only result can be the additional inflation of one already inflated industry, and the temporary postponement of the inevitable end, acting in the meanwhile only as further incentive towards this mercantilistic policy.

If banking in England may be described as the business of lending money on character, and in industrial life everybody is expected to stand alone, banking in Central

Europe is the art of running industries, while the industrials either run banks or are being run by them. English people, in their attempt to rebuild Central Europe—and this should also be borne in mind as regards Germany—committed two grave blunders. They either trusted their new business friends absolutely or not at all, and as far as it is publicly known, the financing was only undertaken by bankers, merchant bankers, and financiers, without any industrial concern taking part directly or otherwise. Central European bankers, faced by the necessity of getting money at all costs, will naturally take what they can get, using it for such purpose as will pay them easiest and quickest. If left unwatched, they will certainly use it for their own private or national ends, while, on the other hand, the men who are worth their salt will relinquish their posts if ruled in a narrow spirit of misapplied principles.

In order to reorganise Central Europe, and develop the East, there should be first an international conference of bankers and industrialists from either side to take stock of what is there and how much is wanted and where, either in industry or agriculture, and paying due regard to the position and needs of labour. Secondly, no credits should be given without having regard to the result of this conference, and without the co-operation of the industrials concerned. In the meanwhile, only the latter scheme should be adopted when dealing with these countries. Force should not be used, since peaceful persuasion, if backed by sufficient financial strength, will go far to achieve most things desired, while threats or passive resistance will only lead to political trouble; but the City should do its utmost to prevent the indirect financing of other people's economic imperialism, and work as far as possible in concord with the United States. Above all, negotiations should only be carried out by men fully conversant with the peculiarities of the people, and at least one of their languages. The decay of Central and Eastern Europe will do nobody good; its industrial development on nationalistic lines will only postpone this fate; its reorganisation as indicated will be at once profitable and sound politics.

London, November 20th, 1924.

OBSERVER.

REMUNERATION IN GOVERNMENT SERVICE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As your correspondent in your issue of November 15th endeavours to revive the recommendations of the Anderson Report, may I, so far as the Civil Service is concerned, be permitted to make one or two comments?

I think it can be taken, as your correspondent admits, that the present rates of pay and numbers of staff were fully justified, though in one or two branches of the Civil Service, more especially the manipulative, there were certain criticisms as to wages. These criticisms have, naturally, never been regarded by the staff as well founded, and the Service has never accepted as applicable to itself the opinion of the three business men who formed the Anderson Committee, as to the standard of Government remuneration—viz., "In our view, there is only one principle in which all the factors of responsibility, cost of living, marriage, children, social position, &c., are included—the employer should pay what is necessary to recruit and retain an efficient staff."

The Civil Service has been built up on certain essential conditions—namely, the provision of at least an adequate living wage with contentment, and, therefore, efficiency; with the provision of a career which will attract the best brains in the country; by the recognition of skill and responsibility by appropriate remuneration, and by the grant of compensation for the sacrifice of the opportunities of exceptional advancement which exist in the world of business. On the observance of these conditions the Service still stands.

Let me, however, touch on the question of hours—this is a vital one to the Civil Service. What is the history of the seven-hour day in the Civil Service, which is confined to about 30,000? In 1920 the Report of the Civil Service National Whitley Council on Organisation of the Civil Service contained the following statement:—"We recommend that the normal hours of attendance of the clerical class should be seven a day." These are the terms of an

agreement, confirming the practice of 30 years, signed in 1920 on behalf of the Government on the one side and the representatives of the whole Civil Service on the other. It was reached after full discussion of all the circumstances affecting hours of duty, and was part and parcel of an agreement fixing scales of pay appropriate to a seven-hour day. Any departure from its terms without agreement would be a distinct breach of faith with the staffs concerned. Parliament has always maintained the sanctity of contracts, with a view to the maintenance of a high standard of morality in public life.

Experience has shown that an arbitrary increase in hours, even if accompanied by increased remuneration, is rarely an economic proposition, the increase of output being usually less in respect of each added hour. Still more would this be the case if no payment is to be made for the additional hour, and if it should be imposed in circumstances which give rise to resentment on the part of the officers concerned.

There would be very little saving in respect of overtime payment, as a number of the seven-hour day classes do, in fact, work eight or more hours when necessary without payment for overtime, and in the case of the remainder 42 hours per week must be completed (*i.e.*, the equivalent to the Saturday half-holiday must be made up) before payment is made for overtime.

The total number of Civil Servants employed on a seven-hour day is about 30,000, and the only substantial economy which could be effected by the proposal would be the dismissal of temporary staff numbering one-seventh of this total—*i.e.*, about 4,000. The majority of these would be ex-Service men, who would be thrown upon the labour market with little or no hope of finding employment. The saving on their salary, which in any case would be much less than half-a-million pounds, would be very largely offset by the payment of unemployment benefit to which they would become entitled.

Your correspondent seems to think, as so many do, that the heavy cost of the Civil Service is entailed by the payment of the staff. The proportional cost of administration is very small; the heavy outlay is entailed by policy, with which the Civil Service has nothing to do. I will, therefore, not trespass on your courtesy any further with general arguments. I have only wished to deal in any detail with the hours question, though I would add that if your correspondent wishes to reduce national outlay, he should devote his attention to aspects of policy to which the State is committed, but which can always be modified by Parliament. So long as Parliament prescribes certain policies you must have the staffs to carry them out, and in so doing you ought to treat them properly.—Yours faithfully,

CHARLES WATNEY,

Parliamentary and Publicity Officer, Civil Service Confederation.

London, November 19th, 1924.

Books and Publications.

A FRENCH VIEW OF CURRENT MONEY PROBLEMS.

FRENCH is a language specially suited to lucid exposition, and the clearness and simplicity with which Professor Nogaro treats the tangled subject of present-day monetary problems should make his book* welcome and instructive to the general reader. While his conclusions are, on the whole, sound and sensible, he seems to waste a great deal of space in conducting controversies with opponents who must be chiefly created by his own imagination. A large part of his book is devoted to showing that the quantity theory has to be accepted with many qualifications and reserves, a fact which is surely admitted by its stoutest supporters, and he is again forcing an open door when he argues at considerable length that gold is not valued merely as merchandise, because the fact that it can always be disposed of at a statutory price makes an essential difference between it and other commodities. Professor Nogaro, however, is an interesting and original thinker, and his criticisms of contemporary

* "La Monnaie et les Phénomènes Monétaires Contemporains." By Professor Bertrand Nogaro. (Paris) Marcel Giard.

thought are entertaining and suggestive, if sometimes slightly wayward and superficial. The conclusion at which he arrives is sensible and safe, but not exactly original. "Only," he says, "a rational monetary policy, methodically pursued, tending to re-establish the external convertibility of the note, can put an end to the world-wide crisis in the exchanges; a courageous fiscal policy, and the cessation of inflation, are without doubt necessary helps, but insufficient; for by themselves they imply the indefinite maintenance of the abnormal and revolutionary reign of inconvertibility, with its inevitable corollary, instability in the exchanges." In order to arrive at something like the degree of stability in exchange that the world enjoyed before the war, Professor Nogaro suggests that by a redistribution of the stock of gold, each nation should be supplied with a quantity of international money corresponding to the amount of its foreign transactions, with the only condition that this gold should not be put into circulation, but should be exclusively destined to secure the external convertibility of the national fiduciary money. The necessary redistribution of the stock of gold he proposes to effect by means of an international loan, the proceeds of which would not be remitted to each of the participant countries, but would be held by an International Credit Institute, which would open for each nation offering the necessary guarantees a credit adequate to the normal needs of its trade balance. In other words, Professor Nogaro follows many other distinguished authorities in looking for exchange salvation by means of a general adoption of the gold exchange standard; and there is every reason to believe that he and they are right, and there is even some ground for hope that reform along this line may actually happen, though not, perhaps, on the elaborate scale sketched by the professor, but rather by individual arrangements made in increasing number. It should be added that he proposes an immediate return of convertibility, in the case of currencies that have suffered severe depreciation, by means of devaluation. In extreme cases he would have an altogether new currency, otherwise the parity should be fixed at the average rate during the period which preceded stabilisation. "But the rate of exchange could be progressively raised, if circumstances allowed, by successive stages, to the pristine parity; for the object of stabilisation is not to fix the rate of exchange at the first blow and immutably, but at first to put it beyond the risk of disturbance by sudden jumps, and above all by new depreciation, and finally to assure to the nation interested the control of its exchange." This last ideal is surely rather too ambitious; since exchange depends partly on the action of other nations, no one nation can expect to be able to control it completely. Even the United States at the present moment, in spite of its enormous financial power, could hardly control the exchange value of the dollar in all European currencies, except perhaps for a time, by a system of unlimited lending, which would, in the end, leave the situation more uncontrollable than ever.

BUSINESS FORECASTING.

THE present volume* contains a set of essays on business forecasting. This problem, which is intimately connected with the study of the trade cycle, has been closely investigated, especially since the war. The economic records promptly available for students and business men have increased in number and accuracy, and their examination has shown that business is generally subject to four great sets of influences; those which spring from slow-moving, steady forces, from seasonal factors, from cyclical fluctuations, and from accidental events, such as strikes, wars, and earthquakes. Methods have been developed to eliminate the first two influences, and the existence of the trade cycle has been clearly demonstrated. Further investigation has brought to light a rough sequence in time between movements in Stock Exchange and credit conditions, and the relation of some industries to the trade cycle has been broadly worked out. The net result is that, although the business world still moves with uncertain knowledge of the future, and although

* "The Problem of Business Forecasting." Edited by Warren M. Persons, William Trufant Foster, and Albert J. Hettinger, Junior. (New York) 1924. 24s.

absolutely accurate prediction is quite impossible, more information than ever before is available for the guidance of those upon whom rests the responsibility of deciding at what pace the industrial machine shall operate.

"The Problem of Business Forecasting" is a composite work, and therefore uneven in quality. Nevertheless, it shows the progress which has been made in America in studying the trade cycle in relation to agriculture, building, transport, distribution, and mineral production. It contains hints for further enquiry. All persons interested in learning how further control may be acquired over the course of business will glean much from the book, and especially from a close and attentive study of the fascinating essay with which the volume concludes.

HOW TO SPEAK.

THE ingenuity of Mr Wicks is shown, in advance, by his clever title. He starts off by flattering his audience. He calls his book "Public Speaking for Business Men," because "the ideal aimed at is not turgid platform rhetoric, but the logical, vivid, and downright speech of the sincere man"—as if that were the characteristic type of speech of business men! His very intelligent and ingenious hints are intended not for the company meeting, but for the public hall. This is shown everywhere; it is by no accident that he selects a speech by Mr C. F. G. Masterman with which to illustrate the sort of use that a practised speaker makes of notes. And there is much in his lively volume that can be read with profit as well as with entertainment. He perhaps underrates one essential element in the serious art of speaking—that of having something that you really want to say; like all those who try to teach, he is inevitably more concerned with what the actor calls "business" than with the part itself. But he knows a vast deal about this technique, and if his advice be combined with practice, profit should accrue from the study of his manual. Certainly he is entirely right when he lays down as the great primary laws, "Speak low" and "Speak slow." He might, in his section on open-air work, have added the invaluable hint, given by a man with vast experience: "When you begin, don't fix the man on the limit of the crowd, and try to reach him; if you do, you will strain your voice at the start to its top range, and have no reserve. Look at the feet of the people near you." Here is the ounce of practical knowledge that is worth tons of theory.

STOCK EXCHANGE NEWS.

SETTLING DAYS,

TICKET,	ACCOUNT,
December 3.	December 4.

The general volume of Stock Exchange trade during the week now ended has been what members describe as patchy. A firm may do, that is, quite a lot of bargains on one day, and find that, in the two succeeding days, they receive comparatively few orders. It is the same with brokers and jobbers alike. In the Consol market activity is spasmodic. Industrials have been very animated in places, with tea and whisky shares more particularly conspicuous by their strength. South African gold shares tended to give way on apprehension in regard to the fall in the price of gold, and the idea that this may lead to reductions in the December-January dividends.

The Commonwealth of Australia is the largest borrower this week, asking for six million pounds in 4½ per cent. stock at 97½. The issue had no effect upon other securities in the same market, scrip stocks being, indeed, a little better after developing dullness earlier in the week. The War Loan keeps firm, on purchases made in advance of the interest-payment due on

Mr Cecil Buckley, a dealer in the Miscellaneous market, has been elected to fill the vacancy on the Stock Exchange Committee brought about by the resignation of the Hon. Gilbert Johnstone.

The new issues of the week and the current year have been as follows :—

Commonwealth of Australia.—This is an issue of £6,000,000 Commonwealth of Australia 4½ per cent. registered stock at £97½ per cent. The proceeds will be used to meet expenditure for settlement of migrants from Great Britain, for developmental works, for the redemption of £2,000,000 Treasury bills due January 1, 1925, and £1,000,000 due February 1, 1925, and other securities. The principal is repayable in London at par on July 1, 1960, the Government having the option of redemption, in whole or in part, on or after July 1, 1940, on giving three months' notice. The stock constitutes a trustee investment. Attention is again drawn in the prospectus to the provision for sinking fund payments in connection with the Australian National Debt Sinking Fund. Commonwealth of Australia debentures and stock issued and payable in London and the interest thereon, the property of persons not domiciled in Australia, are not, and will not be, subject to any taxes, duties, or levies in Australia. It may be recalled that in May last the Government of Australia issued £10,000,000 stock here, bearing 5 per cent. interest at par. Thus in the new issue a slight measure of improvement is noticeable. It will be observed that £3,000,000 of new capital is raised. A sound investment in its class.

The Galicia Nitrate Company.—Incorporated under Chilean laws. The authorised capital is £650,000, in shares of £1 each, of which 600,000 have been issued. There are also £150,000 7 per cent. first mortgage debentures. These are redeemable by 1941 by 15 annual drawings at £102 per cent., but the company reserves the right to redeem outstanding debentures on any interest date after December 1, 1927, on giving six calendar months' notice to that effect, on the following terms:—After December 1, 1927, up to and including December 1, 1930, at £105; after December 1, 1930, up to and including December 1, 1934, at £104; after December 1, 1934, at £102. The debentures are the whole of the authorised issue, and will be constituted by a trust deed in favour of the London and South American Investment Trust, Limited, as trustees, which will provide for the creation by the company of a specific first mortgage under Chilean Law over three oficinas with lands and nitrate grounds, comprising an area of about 8½ square miles, belonging to the company, situated in the province of Tarapaca, together with buildings and plant. These are valued at £683,677. The above details are taken from an advertisement in the Press made to comply with Stock Exchange regulations in connection with the issue of debenture stock.

Belseri-Chardwar Tea Estates, Limited.—Authorized capital £85,000, divided into 40,000 cumulative 8 per cent. preference shares and 45,000 ordinary shares, all of £1 each. The undertaking has been formed to acquire as going concerns from the Chardwar Tea Company, Limited, the Belseri and Chardwar tea estates situated in Assam, British India. The whole of the preference capital and 40,000 of the ordinary shares are now being issued at par. Shareholders of the Chardwar Tea Company have applied for 20,000 of each class of shares. The gardens and lands which are to be taken over from January 1st last have a total area of approximately 2,900 acres, of which about 766 acres are under tea. The output in 1922, it is stated, was 302,240 lbs, and in 1923 357,920 lbs. The original estimate for 1924 was 376,000 lbs, but it is now considered that the actual output is unlikely to exceed 324,000 lbs owing to unfavourable weather conditions. Profits of the Chardwar Tea Company in 1922 amounted to £6,410 and in 1923 to £9,153. The average price obtained for the 1923 output, the prospectus states, was 1s 5.473d per lb, whereas the average for the 1924 crop to date is equivalent to 1s 6d per lb, which shows an increased profit per pound, compared with 1923, of 4.527d per lb. The prospectus is a clear statement of affairs.

West Surrey Water Company.—Authorised share cap £170,000, of which £157,780 has been issued. The auth

used loan capital is £56,400, of which £20,000 remains to be borrowed. This is an offer for sale by tender—the minimum price being par—of 750 £10 to 5½ per cent. preference shares. For the twelve months ended June 30th last revenue amounted to £13,607. The interest on the debenture stock requires £1,456. This leaves £12,151 available for the dividends, and as the dividend on preference shares, including those now being issued, will absorb but £1,786, a substantial margin is available for security.

Horne Bay Waterworks Company.—Authorised share capital £64,000 of which £52,535 has been issued. Loan capital amounts to £24,900, and £15,050 has been issued. This is an offer for sale by tender of £3,000 7 per cent. ordinary stock—the minimum price of issue being £114. This gives a yield of £6 2s 10d per cent. Net revenue for the last financial year is given as £2,154, and £1,266 is available for dividends on ordinary stocks. Ordinary capital will amount to £35,620.

The following tables show the movements of the week in the more active securities of the various markets:—

(a) Tax free. (b) Interim, tax free.

At a meeting of the board of directors of the CORDOBA CENTRAL RAILWAY COMPANY LIMITED, held on November 26th, it was decided to pay on January 1st next the half-year's instalment of interest, less income-tax, falling due that day on the per cent. second and debenture stock.

HARRIS & WILSON, AIRRES, LIMITED.—Subject to completion of audit, the accounts for the year ended August 31, 1924, after payment of salaries, advertising, and other expenses, and after deduction of income-tax, and after setting aside for all other working expenses, and including interest received on cash and deposits, and dividends amounting to £137,643 6s 10d receivable from the South American Stores (Gath and Chaves), Limited, show a profit of £204,499; less depreciation on installations, fixtures, and fittings, £18,267; add amount from last year's account, £18,267; balance available for distribution of £208,184. The directors recommend the payment, less income-tax, of the interest for the year on the 5 per cent. funding certificates, £18,800; the dividend of 8 per cent. on the year on the preference shares, £138,000; and the transfer of the balance to the 5 per cent. funding certificate redemption fund, £1,381. Dividend will be payable on December 20th to the holders of funding certificates and preference shares whose names are registered in the company's registers on December 1, 1924.

PARA ELÉCTRICA DE CORDOBA, S. A.—Interest of $\frac{1}{2}$ per cent., being payable on the 1st of the half-year to May 31, 1924, will be paid on the 5 per cent. second and debenture stock, together with accrued interest at 7 per cent. per annum for the half-year to November 30, 1924. After deduction of income-tax the net payment will be 20s 1d per cent.

THE NATIONAL FREEHOLD LAND AND BUILDING SOCIETY have raised the rate interest on completed shares to 5 per cent. per annum, free of tax, instead of per cent. as formerly.

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

ACQUISITION OF DRUMMONDS' BANK.

EXCELLENT POSITION TO ASSIST TRADE.

INCREASED PROFIT AND DIVIDENDS.

The annual general court of proprietors of the Royal Bank of Scotland was held at Edinburgh, on 26th inst.

His Grace the Duke of Buccleuch, K.T., the governor, presided.

In moving the adoption of the report, His Grace said:—

I presume it will be your pleasure that the annual report and balance-sheet with the auditors' report, which has now been in your hands for some days, shall be taken as read. The directors have again the pleasure of submitting a statement containing results which, I trust, are satisfactory to the proprietors. The year has been an eventful one in the history of the bank.

ACQUISITION OF DRUMMONDS' BANK.

The business of the old private banking house of Messrs Drummond, Charing Cross, London, was acquired, their assets and liabilities being taken over as at January 12th last. The assets included the bank and adjoining freehold buildings. This step has had the effect of introducing the bank to a new and valuable clientele, and has also furnished us with a West-End branch in London, the provision of which had been contemplated for a considerable time. The business is carried on under the personal charge of the Messrs Drummond, with the same management and staff, so that there is no change so far as their customers are concerned, whilst customers of the Royal Bank find a West-End office a convenience.

INCREASE OF CAPITAL.

At the special desire of the Messrs Drummond, part of the price took the form of an allotment to them of £60,000 of Royal Bank stock, and in connection with this the opportunity was taken of further increasing the capital of the bank by £440,000, making a total addition of £500,000, thus raising the capital to £2,500,000—a scheme which, in view of the bank's expanding business, the directors had been considering for some time. The issue at the price of 250 per cent. was well received, and it is a source of gratification to the directors, as it must be to the proprietors, that the stock is now standing at 285 per cent.

INCREASE IN DEPOSITS.

Turning now to the balance-sheet, the deposits at £39,719,331 show an increase over last year's figures of £1,839,000. This, of course, is due to the accretion from Drummonds' Bank, and it is proper to say here that the deposits at Drummonds' branch have been maintained, and that the amalgamation has been effected without any loss of business, the directors having every reason to be satisfied with their acquisition. There has been a moderate diminution in deposits elsewhere, due to well-known tendencies at present, affecting banks in general, but I think we may congratulate ourselves on our showing.

LIQUID ASSETS.

On the assets side the customary liquid position is shown, and in addition to cash and call money, and our holding of British Treasury bills, I may remind you that a very substantial proportion of the bank's investments in British Government securities consists of short-dated bonds.

BANKING ADVANCES AND THE STATE OF TRADE.

Our banking advances show a considerable increase, a reflection of the Drummond acquisition, and also an evidence of the support which the bank has been able to give to its trading customers during a period of considerable difficulty. It is hoped and believed that with the improved outlook in Europe, and the prospect for a period of years of settled Government at home, trade may now have an opportunity of recovering. The process, however, must necessarily be slow, and patience will be required in dealing with the situation. In the meantime something has been achieved by the return of the spirit of confidence, in the absence of which commercial enterprise was to a large extent at a standstill, and a considerable proportion of capital was stagnating. What is most needed in the country is some adjustment of the industrial position, so that all concerned may see it to be in their own interest to pull their full weight in the struggle for new markets, and for the retention of old ones in the face of increasing competition from

abroad. It must never be forgotten that the maintenance of the foreign trade of this country is absolutely essential, and that this can only be achieved by up-to-date methods, hard work, and increased output which will enable us to get down the cost of production. Having regard to trade requirements in view of a revival, it is satisfactory to reflect that the bank, with its increased capital resources and reserves, is in an excellent position for rendering assistance to our trading friends, who are able to submit proposals for advances on sound lines.

INVESTMENTS.

The bank's investments this year, as is natural in view of the larger deposits, exhibit a considerable increase, and it is only right to say that the market value of these stocks shows a substantial surplus over their book value.

PROPERTY.

As has been shown by our annual statements, the bank's properties have been written down from time to time by substantial amounts. This year there is an increase in the item of freehold properties in London, owing to the acquisition of Drummonds' Bank Buildings—those premises overlooking Trafalgar square, and occupying one of the finest sites in the West-End of London—which have been taken into our statement at what we believe to be a safe figure. This opportunity may perhaps be taken of mentioning that the bank are prepared to let on lease several suites of offices above the bank at Charing Cross, and in the adjoining new buildings, and some of our friends in Scotland or elsewhere may consider this a good opportunity of securing premises in the West-End.

PROFIT AND APPROPRIATION.

Our net profit, after making all requisite provisions, is brought out at £452,369, making an increase of £26,000 over last year's figures.

After making the customary provisions for bank buildings and heritable property and pension reserve fund, the directors are glad to be able to recommend a dividend for the half-year at 15 per cent., making with the 14 per cent. for the previous half-year 14½ per cent. for the year, as compared with 14 per cent. last year, the distribution this year being, of course, applicable to the increased capital.

THE REST.

The addition to rest from the current year's profits is £121,432, but this account was augmented very substantially by the premium on the £440,000 of new stock allotted to the proprietors, amounting to no less than £660,000. The result is that the rest has now reached £2,347,393, so that it is within measurable distance of equalling the enlarged capital of £2,500,000. These figures afford evidence of the increased strength of the bank and of the extent of its resources.

FOREIGN BUSINESS.

Besides fulfilling its functions as a distinctively Scottish bank, with over 200 branch establishments in Scotland, and with large and increasing connections in London, the Royal Bank has in recent years considerably extended its arrangements for conducting foreign business, and it is now in a position to perform every kind of service, both at home and abroad, which is required by the clients of a modern banking institution.

THE STAFF AS STOCKHOLDERS.

It will be remembered that in connection with the issue of new stock power was given to the directors to dispose of or deal with any allotments of stock which were held as declined, in such manner as they might determine in the interests of the bank. These allotments, although individually of small account, amounted in the aggregate to a substantial sum, and the directors considered it to be alike in the interests of the bank and of the staff that this stock should be made available to the officers of the bank on the same terms as it had been issued to proprietors, special consideration being given to those who were in a position to take up only a and, indeed, embarrassing—the applications far exceeding the amount available. The result is that, to the regret of the directors, it has only been possible to give a small allocation to each individual applicant, but it is interesting to record that our list of

proprietors will now include about 60 per cent. of our staff—a considerable number having previously been stockholders. I am sure this will meet with the warm approval of the proprietors.

THANKS TO OFFICIALS AND STAFF.

In a year which has been one of considerable stress the directors desire to place on record their high appreciation of the services of the general manager, Mr. Wright. They also wish to extend their thanks to the other officials, and to the whole staff of the bank, including our new friends at Drummonds.

With these remarks I beg to propose that the report now submitted, containing a statement of the accounts and balance-sheet of the bank, be approved, and that out of the profits of the year a dividend of 15 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected, and auditors were appointed for the ensuing year.

SOUTH DURHAM STEEL AND IRON COMPANY, LIMITED.

CHAIRMAN ON FOREIGN COMPETITION.

The twenty-sixth annual general meeting of the South Durham Steel and Iron Company, Limited, was held, on the 26th instant, at Middlesbrough.

Captain John E. Rogerson (deputy chairman) presided, and, after referring to the absence of Lord Furness through ill-health, said that the profit for the year was £106,644. It was proposed to pay a dividend of 10 per cent., less tax, on the ordinary share capital.

The immediate outlook of the iron and steel trade—especially for steel plates—was uncertain and involved. Steel was being imported into the country from the Continent in large quantities, and if these imports continued to increase they would seriously affect the steel trade generally by undermining stability and destroying efficiency. He had already quoted at the Cargo Fleet meeting figures showing that whilst steel imports were increasing exports were decreasing, the latter showing a loss at the rate of 1,000,000 tons per annum as compared with 1913. Should the suggested Safeguarding of Industries proposals ultimately mature and become law, here was an opportunity of assisting one of the most vital trades of the country, which was at present passing through probably the most critical period in its history.

Numerous references had recently appeared in the Press about the Germans and the French agreeing upon a common policy in regard to their iron and steel trade. Whether any definite arrangement was immediately feasible, he could not say. The Germans owned the coal and coke oven plants, with their valuable by-products, while the French owned the ore deposits. In those circumstances it would appear quite probable that some working arrangement between those two countries would be arrived at sooner or later, and, if that did take place, it would naturally react very seriously upon the steel trade of this country.

To meet the existing foreign competition, suggestions amongst others had appeared in the Press for more intimate relations being formed between different undertakings in regard to the sale of various products. He was of opinion that so far as the iron and steel trade was concerned one could not divorce sales from manufacture, and it was absolutely essential that the actual manufacture should be co-ordinated with the sale departments. Responsibility must not be divided, and any scheme which embraced only co-operative action in sales and individual purchasing and independent operation at the works of various companies would not be effective, and would certainly not prove permanent or beneficial.

The report and accounts were unanimously adopted.

WESTERN TELEGRAPH COMPANY, LIMITED.
LARGE REDUCTION IN EXPENSES.

The ninety-first ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 27th instant, at Electric House, Moorgate, London.

Sir John Denison-Pender, G.B.E., K.C.M.G. (the chairman), said it was gratifying that the board were able to present a satisfactory statement for the past year, although the actual traffic carried had been less than in the preceding twelve months, the receipts from messages being £83,847 less than in 1922-23. This would, however, not come as a surprise to anyone who was aware of the state of trade generally, and the position of exchange for remitting money home. Against this decrease the dividends from their subsidiary companies, which in the past had been at a lower rate than the dividends the company itself had paid (their reserve funds thus benefiting), together with increased interest on invest-

ments, came to no less than £52,248, so that, after all, the total receipts from all sources were only £32,377 less than in the last account. To summarise the result, the total receipts were less by £32,377, expenses and taxation were less by £164,613, showing a balance in the company's favour of £132,236, and by adding the differences in the amounts brought in and carried forward—namely, £17,764—there was a surplus of £150,000, which was carried to the reserve fund. That fund had been charged with £98,950, costs of diversion and renewals of cables, &c., so that after payment of dividends of 10 per cent., free of income-tax, the substantial sum of £327,322 was carried forward, against £329,739 brought in.

The company had now replaced their two old cable steamers, which had done such good work for many years, and the new vessels, the Norseman and the Cable Enterprise, were both at their stations on the east coast of South America. With regard to the negotiations with the French Government for the lease of a special wire between Paris and London, up to the present the board's endeavours had not met with success. Their case was a strong one, seeing that the North American cable companies, as well as the French cable company, in competition with them for South American traffic, were allocated special wires to and in Great Britain for their traffics, and, in common justice, surely our Post Office Department should see that they, a British company, were granted the same facilities accorded to these foreign cable companies here.

With reference to the concession granted to an Italian company to lay a cable to Azores, joining Italy with North and South America, certain negotiations had taken place between those concerned, resulting in an agreement whereby the Western Telegraph Company's South American traffics were protected at Azores, not only at the outset, but later on when the projected direct Italian-South American cables became interrupted. Within the last two months the second section of the concession, the Italian cable from Malaga to Azores, had been laid, and the first section between Rome and Malaga, to complete the connection with Azores, was in course of manufacture. When the Italian through line was completed it would serve Rio de Janeiro, Montevideo, and Buenos Ayres, and would compete with them at those points.

The report and accounts were unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.
RECORD PROFIT.

The forty-fourth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 26th instant, at Winchester House, London, Mr George Turner, M.E. (the chairman) presiding.

The Chairman said that, in spite of considerable difficulties, the directors were able to submit a general net revenue account with a profit larger than the company had ever before shown. In the railway accounts the traffics showed very distinct improvement, and their steady increase in general earnings which they had had for years was again maintained. This year the increase was approximately 15 per cent., and the latest returns to hand for the current year showed still higher figures. In view of the development of the traffic they had thought it wise to make a further increase in their rolling stock. The output of the collieries was down, but it was now improving. The development of their new mines continued satisfactorily. The railway out to them was now through, but a good deal of work was still needed before it could be regarded as consolidated and actually completed.

With regard to their other interests, the Makum Tea Company had done well, and with the recent share-for-share bonus they now held 40,000 shares in that company. The dividend paid for 1923 was 25 per cent. free of tax on the increased capital. They held five-sevenths of the capital of the Nandang Tea Company, and for 1923 they had received 8 per cent., and they expected a much larger dividend for the current season.

The Bogapani Garden was doing extremely well. Its crop last year was well reported on and sold for a good figure. This year the crop was larger than they had expected, and up to the present it had sold at very good prices—so much so that he expected that from now onwards the proceeds would be sufficient to pay the cost of the maintenance and extension of the garden. At present they had 640 acres under tea, and this year they hoped to get out another 150 acres, their idea being to extend the garden to about 1,400-1,500 acres. As a whole, he was very pleased with the company's investments in tea. They were an improving asset, and had already made substantial contributions to revenue. The timber department had done well, the sawmills having made a good profit. The Rivers Steam Navigation Company continued to pay them their dividends. The general net revenue account showed a profit of £137,778. The directors recommended a final dividend of 6 per cent. on the B stock, making 8 per cent. for the year, the largest they had paid on this stock.

The report and accounts were unanimously agreed to.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

PRODUCTION RAPIDLY INCREASING.

CHAIRMAN'S REPLY TO ATTACKS ON COMPANY.

COMPANY'S SPLENDID RECORD OF DEVELOPMENT.

The fifteenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held, on the 25th instant, at Winchester House, Old Broad street, London. Sir Charles Greenway, Bart. (chairman of the company), presided.

The Secretary (Mr John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—When last I had the pleasure of meeting you I indicated that I did not anticipate any improvement in results for the past financial year. This anticipation is confirmed by the figures now before you. I explained last year some of the adverse factors which militated against better results being shown, but one other to which I did not then refer was the competition which we have experienced in some of the Continental markets in which we have established ourselves. In some of these markets "rate wars" have been carried on to an insane extent, but we can await the result with perfect equanimity; since for every shilling that we lose, our competitors must lose two, or more. Taking into account these conditions and those previously explained, the results shown may, I think, be regarded with satisfaction.

The dividend on the ordinary shares which we have recommended is again 10 per cent. As in the case of the previous year, the profits shown might have justified a higher rate of dividend, but with a view to conserving our financial resources as much as possible—in regard to which point I shall have something more to say later on—we have again deemed it advisable to follow a conservative policy.

CURRENT YEAR.

As regards the current year, it is more than ever difficult to venture a forecast. Last year I indicated the possibility of a considerable improvement, basing this on the further anticipated large increase in our throughput, but subject, of course, to there being no further decline in the prices of products. Our anticipations in regard to throughput are being fully realised, but prices during the past few months have shown an appreciable decline as compared with the average of the past year, and the abnormal competition to which I have referred still continues in some of our selling markets. Provided, however, that there is no further decline in prices, we are hopeful that the current year will show a considerable increase in our profits.

MARKET OUTLOOK.

As to the probable future course of prices for petroleum products, it is, as I said last year, always dangerous to prophesy. At that time it looked as if consumption were overtaking production. This would have happened had it not been for the bringing in of some new fields in the United States, and for the reckless system of drilling obtaining in that country, which results from a large number of competing producers being able to operate at the same time in one field, regardless of the life of the field or of market considerations. The combined effect of these causes was—temporarily only, I think—to again bring production ahead of consumption.

On the other hand, there has been an enormous increase all over the world in the consumption of petroleum products, sufficient, nearly, if not quite, to counterbalance the increased production; and now that the production of crude has again begun to decline there is every reason for believing that, subject to no prolific new fields being discovered in the near future, the barometer of oil prices has reached its lowest point, and that any change will be in the "fair weather" direction.

AMERICAN STOCKS AND STORAGE.

The weakness of prices in the United States during the past few months has, I should point out, not been due so much to the growth of production as compared with consumption as to the want of sufficient storage accommodation, for both crude oil and products, to meet the expanding trade, since stocks in that country, relatively to its increased consumption and exports, show an appreciable decline on the figure at which they stood when prices were on a higher level.

This is, however, a difficulty which is being daily overcome, and when the tankage in that country has been sufficiently extended, the forced sales, which have been so marked a characteristic of the American market for some time past, must necessarily cease, and prices be re-established on a basis more consistent with the world's average cost of production. I do not, of course, speak of our cost of production, because in this respect we stand,

as I have previously pointed out, in an exceptionally favoured position, owing to the unique productivity and life of our wells and to the very high quality of our crude.

BALANCE-SHEET ITEMS.

I will now deal with the items of the balance-sheet which call for explanation. Taking the debit side first of all, the only changes of importance are (1) the amount of issued capital, which shows an increase of £121,233 10s, being the amount of calls on the last issue of capital outstanding at March 31, 1923, but since paid; (2) redemption of debentures to the amount of £125,000; (3) the £2,000,000 five-year secured notes, which were issued during the year and applied to paying off the loan from our bankers which in the previous accounts stood at £2,829,000; (4) employees' provident pension and insurance fund, which shows an increase for the year of £273,034 6s 5d, and now stands at the satisfactory total of £1,089,812 3s 5d; and (5) the reserves, which show an increase of £202,940 18s, bringing the total up to £5,283,128 11s 6d.

PROFIT AND LOSS.

The profit and loss account shows, as you will see, after payment of preference dividend up to September 30, a total remaining to be dealt with of £3,079,143 9s 11d, as compared with £2,993,051 17s 2d in the previous year. Out of the former amount we have since paid a further £437,500 in respect of preference dividends for the half-year ended March 31 last, and we now recommend the payment on December 31 next of the dividend of 10 per cent. on the ordinary shares to which I have already referred, absorbing £895,000, leaving a balance of £1,746,643 9s 11d to be carried forward. This balance, as before, is subject to such excess profits duty as we may be ultimately called upon to pay, and also to corporation profits tax for the year ended March 31 last. No settlement in respect of the former item has, I am sorry to say, yet been arrived at, but, whatever it may be, it, as also the liability for corporation profits tax, is very amply covered by the balance carried forward.

IMPROVED LIQUID POSITION.

Dealing now with the credit side, the only items calling for remark are (1) purchase price of concessions, shares in and advances to associated companies, &c. The amount appearing under this heading shows an increase on the previous year of £98,457 10s 5d, but on the other hand the contingent liability has been reduced by £1,767,906 2s 9d; (2) refineries, tank installations, &c. This item shows an increase for the year of £232,640 7s 7d, being the balance of capital expenditure in excess of the amounts written off for depreciation; (3) stocks of stores and materials show a reduction of £63,651 10s 10d; (4) our cash at bankers and in hand stands at £876,359 5s 4d, as compared with £561,182 6s 2d.

During the year we disposed of the war loan stock which appeared in the last balance-sheet at a cost of £594,427 17s, but our net liquid position shows, as will be seen from the balance-sheet, a satisfactory improvement.

RENEWED ATTACKS ON THE COMPANY.

Last year I referred to the attacks which had been made upon the company and the attempts which had been made to depreciate the value of our concern. Ladies and gentlemen, we had hoped that the information and explanations I then gave would have enabled the public and the Press to have grasped the true position and facts. It is therefore a matter of great regret to us to find that there has lately been a very strong recrudescence of these attacks, and consequently I feel it necessary, in justice to our shareholders and to the public generally, again to deal with the matter and to give some further particulars of the present position of the company in order that everyone may fully understand its great potentialities and the magnitude of its operations.

In the first place, I will give you some figures in connection with the present state of development of our own and our associated concerns.

The production of crude from our main Persian fields is to-day at the rate of 4,500,000 tons per annum—the maximum quantity we are in a position at the moment to dispose of—all of this being produced from flowing wells. In addition to the wells from which we are producing we have a large number of others drilled in time that it may be required. Last year I reported to you that we had proved a valuable field in an entirely new area, and I am pleased to say that the further developments in this field fully confirm what I then said of it. In the Argentine, also, I have to

report that the further drilling to which I referred last year led to the striking of oil in considerable quantities, thus further augmenting our sources of supply.

COMPANY'S VAST ORGANISATION.

We have now in operation about 700 miles of pipe lines, a large portion of them being of 10 inches or more in diameter, 1,510 storage tanks situated in various parts of the world, and 382 boilers and 31 boiler-houses. We have nine separate refineries, situated in different parts of the world. Among our buildings we have 180 workshops and factories, 4,239 dwelling houses and bungalows, 69 blocks of buildings for the accommodation of our native staff, and over 1,000 other buildings of a miscellaneous description. We have in connection with our distributing organisations 685 bulk oil installations, including 48 ocean installations (i.e., installations erected at various ports in different parts of the world) and 708 subsidiary installations.

We provide employment for over 50,000 people, including 20,500 of British nationality. We have 164 miles of railways situated in and outside our works, 71 locomotives, and 3,462 rail tank cars and wagons. We have for road transport 1,847 motor lorries, motor tractors, and tank cars, apart from a large number of horse and mule drawn vehicles. Our fleet now amounts to a total of 333 vessels of all descriptions, all fully employed, including 67 tankers nearly all built within the past eight years. To accommodate these vessels, and to handle the cargoes they carry, we have built or acquired no fewer than 89 jetties and wharves at the various ports where they call.

For the carrying on of the different operations of our business—producing, refining, storing, and distributing—we have had to purchase tens of thousands of acres of land in the various countries where these operations are being carried on.

MEDICAL WORK IN PERSIA.

We have in Persia five hospitals containing 274 beds, 11 British and two Indian doctors, and 20 British nurses. I may mention that at these hospitals we last year gave free treatment to no fewer than 3,866 in-patients and over 34,000 out-patients. A large proportion of these patients were local Persians not in the employment of the company, and it is needless for me to say that this beneficent care of the inhabitants of the country in which we are operating has been greatly appreciated by them, and has been of invaluable assistance to us in our relations with the local tribes. In addition we are contributing liberally to the principal Persian hospital in Teheran. We are also giving financial aid to several schools in different parts of Persia with the object of educating and training Persians to fill the various capacities for which there are openings in the company's service.

We have also provided in Persia and elsewhere a number of fully equipped clubs for the recreation of our various staffs. I would add that the plant and buildings which we have erected at our fields, refineries, and elsewhere are all of the most improved modern type and have been designed with a view to securing the maximum of efficiency at the minimum of cost.

The few figures I have quoted will, ladies and gentlemen, give you some idea of the huge organisation which we have built up in the 13 years which have elapsed since we first began operations and it is a record of development which, I am confident, has not been equalled in the same short space of time by any other concern in the commercial history of the world.

FINANCIAL RECORD.

As to our financial policy and administration, I claim that in these also we can show a record unequalled by any other company in the same period of time. I told you last year that during the previous three years we had provided out of revenue no less than £12,000,000 for new capital outlay. I will now add to these figures by telling you that since we first became a revenue-producing concern in 1914—only ten years ago—we have provided out of our earnings a total of no less than £19,000,000 for expenditure of a capital nature, in addition to paying out the sum of £9,500,000 in dividends and debenture interest.

These figures are, I think, an ample demonstration of the soundness of our financial policy, inasmuch as by restricting our capital issues to a figure far below the amount of our capital expenditure we have greatly enhanced the intrinsic value of our ordinary shares without at any time straining our financial position. Some financial critic scoffed at the statement I made last year that the assets of the company would, on a modest computation, be valued at two or three times the amount at which they then stood in our balance-sheet. If he will ponder over some of the figures I have given you to-day—and add to the estimate he then arrived at his own estimate of the value of our various concessions on the basis of the information which is available to everyone—he will find that my statement erred much on the side of modesty rather than the reverse.

I hope, ladies and gentlemen, that I have not wearied you with this long explanation of the company's position. I am afraid that what I have said savours very much of self-praise. This is extremely distasteful to all of us, and we would have very much preferred to have continued "hiding our light under a bushel"—particularly as in the old business it is not advisable to let our competitors know too much of what one is doing. But the false atmosphere which has been created by our detractors renders it necessary that the position of the company should be better understood, and from what I have said you will, I am sure, all be satisfied that the statements which have been recently again put into circulation are entirely devoid of foundation, and that you will share with us the great pride we feel in being associated with a concern which has, notwithstanding the strong opposition it has always had to contend with, achieved such a unique record of development and success.

AMERICAN EXPERTS' TRIBUTE.

Before passing from this subject I would like to mention that our fields and refineries in Persia were visited a few months ago—with our permission, of course—by three American experts of the highest repute, and that their confidential report—which, by the courtesy of their principals, I have been permitted to see—was, I am pleased to say, of an extremely favourable character, it being admitted that our arrangements were in some respects even in advance of the latest U.S. methods. Independent testimony of this nature is, I think you will all agree, far more reliable and convincing than loose dinner-table talk or club whisperings of men who have no actual knowledge of our operations or of our great potentialities.

Success, as we all know, breeds envy. Envy by itself we do not object to, for it is a tribute to our success. But we do object to it—and object very strongly indeed—when it is accompanied by damaging attacks on the company for which there is not the slightest foundation, especially when conveyed by verbal statements and innuendoes which we only hear of indirectly and have no opportunity of refuting.

I trust that the information I have given you to-day may have the effect of putting an end once and for all to this underhand mode of attack, but it will, in any case, enable the persons to whom these statements are made to judge for themselves what credence to give to them.

NO FURTHER CAPITAL ISSUES.

As regards capital issues, we have, as I have already mentioned, made an issue during the year of £2,000,000 short-term notes to enable us to pay off the loan we had from our bankers, and beyond this we do not anticipate having to make any further new issues in the near future. We are, of course, constantly incurring large fresh capital outlay, this being inevitable in connection with a concern which is expanding so largely and rapidly as ours, but so far as we can see we shall be able to meet this out of revenue until such time as we may find it advisable to extend our production beyond the 5,000,000 tons per annum limit for which we have so far been building up our organisation.

PRODUCTION.

With regard to production, I must repeat that I have again nothing but good news to give you.

In Persia we have again considerably extended the area of the proved territory in our main fields. At any point of this area we can now put down a bore with the practical certainty of tapping a prolific well, and the wells from which we have so far been obtaining our production still continue to maintain their large yields. I have heard that we have been described as a "one-well company." This is no doubt due to what I have told you from year to year about our now famous F7, which has now given a total yield of about 6,000,000 tons, and is still maintaining the same high rate of production. But this is only typical of the wells we have opened up all over our proved territory, and it has already been far surpassed by other wells—e.g., B17—situated 1½ mile from F7, which flows at the rate of 18,000 barrels per day, or, roughly, 1,000,000 tons per annum. These large producing wells are, I may explain, not located in any one particular spot, but are spread all over our proved territory, and as we extend this territory, as we are constantly doing by putting down fresh wells at distances of about half a mile from each other, we continue to strike wells of the same prolific character. In order that you may be better able to follow the course of the development of our production, I will continue the table of figures which I gave you last year, viz.:—

	Tons.
In 1918-19 our production was	1,106,415
In 1919-20	1,385,301
In 1920-21	1,743,557
In 1921-22	2,327,221
In 1922-23	2,959,028
In 1923-24	3,714,216

against my estimate of 3,775,000 tons, and in the current financial year it should be between 4,250,000 and 4,500,000 tons.

RESERVES.

I may add that were we to tap all the wells already opened up we could at once bring our production up to 10,000,000 tons per annum or more, and that by drilling in the wells which have already been carried down to the cap rock we could still further largely augment our production within a few months. But it would be extremely unwise to produce at this high rate until we have ascertained more definitely the extent of our reserves, and in any case it could not be done without a corresponding increase in our pipe-lines, refineries, tankers, and distributing organisations—apart from the fact that the sudden producing of this large extra quantity of oil would undoubtedly cause serious disturbance to the world's markets. Therefore we have come to the conclusion that in this respect our soundest policy is to "festina lente," and only to provide for this bigger production when we have satisfied ourselves, first, that we have ample reserves of oil to justify producing at this higher rate, and, second, that we can market the additional quantity at remunerative prices. As to the first point, we are daily getting nearer to the position where we shall be able to increase our production materially without fear of unduly exhausting our reserves. As to the second, this is largely dependent upon the growth of the world's consumption and the development of production in other countries.

"FIND" AT KISHM.

Outside of the main fields to which I have referred we have continued our drilling operations in several parts of Persia with a view to discovering new fields, but so far without much success, and several areas which had been favourably reported upon have had to be abandoned. On the island of Kishm, however, where we had been drilling for some years past, and which we had also decided to abandon, we met some months ago with an unexpected flow of oil when the casing was being withdrawn from one of the wells. This oil, which has been continuing to flow ever since at the rate of between 400 and 1,400 gallons daily, is of a very unusual character, being practically nothing but pure petrol and kerosene. Though we do not attach much importance to this "find," we are proceeding with our examination of the territory in the hope of being able to discover the source from which this highly infiltrated product has been derived.

The development of the new area referred to by me in the opening part of my remarks is being actively pursued with a view to proving its maximum extent and productiveness before we can safely embark upon any large scheme of pipe-line or refinery development. The further developments in this area are, I am pleased to say, of a satisfactory character, and the oil produced is of an excellent grade, and there is but little doubt that in this area we have proved another valuable field.

ARGENTINE.

As regards the Argentine, I am very pleased to be able to inform you that, notwithstanding my somewhat gloomy predictions of last year, we have had some much more favourable developments recently. Up to date we have produced a total of 28,000 tons of oil, and since August 15 we have produced and sold about 18,000 tons at satisfactory prices. We have a number of wells drilled in which are capable of producing on a much larger scale than this, but until we can get some necessary short pipe-lines laid and further tankage erected we cannot deal with the whole of the production now available. Although the lives of these wells may not be comparable with those in Persia, there is every reason for anticipating that we shall be able to produce sufficient oil in the Argentine thoroughly to justify our entry into that country.

As regards our refineries, the position is, as you will have seen from the report, entirely satisfactory.

LOADING FACILITIES AT ABADAN.

At Abadan the difficulties to which I referred last year have all been overcome, and the throughput since the close of the last financial year has been at the rate of over 2,800,000 tons per annum. One drawback from which we have been suffering, in the detention which it causes to our vessels, is the inadequacy of the number of our loading berths at Abadan to handle the constantly expanding volume of oil. We are now handling tankers there at the rate of about one and a half vessels per day, and in addition we have to find accommodation for loading and unloading a large number of other vessels employed in carrying our packed oil, plant, stores, and other general cargo. To overcome the congestion which we have been recently experiencing in this direction we are erecting and have nearly completed four additional jetties, besides carrying out extensive additions to the existing ones.

To assist further in accelerating the movements of our fleet we have undertaken to provide the Iraq Government with the finance necessary to enable it to dredge the bar at the mouth of the Shatt-el-Arab. The total cost of the scheme is estimated at £450,000, and

payment of interest and repayment of capital are to be covered by dues which are to be levied by the Basra Port Authority. Two powerful dredgers of the latest type and costing £250,000 have already been built for this work. One of these has already arrived at the Persian Gulf, and the other is just about to start from this country. If the scheme is successful, it will result in a very large economy in the direction of less lighters and a three to four days quicker turn round of our tankers.

ADVANTAGES OF HOME REFINING.

At Llandarcy a considerably larger throughput has been dealt with, and very gratifying results have been shown, both in the quality of the products obtained and in the percentages of yield, and also in the direction of reduced working costs.

At Grangemouth the refinery which was being erected by Scottish Oils, Limited, for dealing with Persian crude has been completed, and has for some months past been in full operation. Here also the results have been of a most gratifying character, showing, in some respects, owing to the lower average temperature and other causes, an improvement even on those obtained at Llandarcy.

I may mention here that the further experience gained at these refineries more than ever confirms our anticipations in regard to the great advantages of home refining. Apart from the many other advantages which I have previously indicated, the reduction in evaporation and consequent larger yield of the lighter and more valuable products, the gain from which much exceeds our original estimates, alone more than justified us in having taken what was regarded by some of our critics as a novel and dangerous departure.

COMPANY'S MOTOR SPIRIT.

Another important advantage that we gain is that with the constant care and supervision which our research chemists are in a position to give at close quarters to our refining processes we are able to produce motor spirit and other products of a much better and more uniform quality than is practicable when the refining is carried on in a bad climate, and thousands of miles away from the countries of consumption. We can, in fact, now claim that as a result of this closer and more scientific attention to refining we produce the best and most uniform quality of spirit at present on the market.

The refinery which was being erected in Australia by our associated company in that country—the Commonwealth Oil Refineries, Limited—was completed some months ago, and its products have now been introduced on the Australian markets. The company having now reached a commercial stage, we have at the request of the Australian board transferred to that company the services of an experienced member of our staff as managing director.

The refineries belonging to our other associated companies call for no special comment, but they are all working satisfactorily.

As regards Scottish Oils, Limited, I am pleased to say that the improvement in prices which took place early this year enabled the shale companies embraced in this concern to show a less untimely position at the close of their financial year than at one has taken place in market values has again adversely affected the industry, but strenuous efforts are being made in every direction to meet these unfavourable conditions.

DISTRIBUTING.

To come to the last stage of our business—i.e., distributing—I am pleased to report that we are making satisfactory progress in every direction. The superior quality and unvarying character of "B.P." are getting better appreciated every day, and as time goes on we get more and more firmly established in all the markets into which we have so far made an entry, and our trade continues to show a steady increase. In the earlier part of my remarks I made a passing reference to the "rate wars" which have been waging in some of these markets in which we are established. These are, unfortunately, characteristic of the oil trade. In view of our favoured position in regard to costs we can, however, regard them matter what the objective may be—can carry on business independently at a loss. The best protection against this form of competition is, of course, to be established in as many markets as possible, so that our competitors may not be able to make good in any one or more markets what they may lose in others. This is the policy we have been pursuing, and must, of course, continue to pursue.

RELATIONS WITH THE PERSIAN GOVERNMENT.

Our relations with the Persian Government continue, I am pleased to say, to be quite satisfactory, and there appears to be more disposition generally on the part of leading Persians to re-establish the friendly relations which subsisted for so many years between the two countries. There is at present an unfortunate dispute going on between the Central Government and the Sheikh of Mohammerah, which has led to the gathering of troops on either

side and to one or two unimportant collisions between them. But the scene of these movements is far distant from our fields and works, and we have received assurances from both sides that in any circumstances our operations and property will in no way be interfered with. We have no views in regard to the matter in dispute—nor if we had have we any right to express them, as it is purely a governmental question—but in view of our large interest in the country we hope that a solution of the difficulty will soon be found, and that any conflict of a serious character may thereby be averted.

The Chairman, after paying a warm tribute to the loyalty and work of the staff, moved the resolution.

Sir Edward H. Packe, K.B.E., seconded the resolution, which was carried unanimously.

INVERESK PAPER COMPANY, LIMITED.

MR WILLIAM HARRISON REVIEWS A SUCCESSFUL YEAR.

STRONG FINANCIAL POSITION—INCREASED DIVIDEND.

The second annual general meeting of the Inveresk Paper Company, Limited, was held, on the 22nd instant, at Dowell's Rooms, George street, Edinburgh, Mr William Harrison, LL.B. (chairman of the company), presiding.

The Chairman said: I beg to submit to you the balance-sheet and profit and loss account of the company for the thirteen months ended the 31st ultimo, and I propose in the first place to briefly deal with the figures in the balance-sheet and profit and loss account, and subsequently with the future prospects of the company and one or two other matters upon which I should like to address you.

I can assure you it is a great pleasure to my colleagues and myself to be able to meet and to present to you again a good report and balance-sheet for the financial year which has just ended. When I addressed you at the last annual general meeting I concluded my remarks by saying that you had a fine undertaking, and that I felt confident that we would be able to present you with as good a report, if not a better one, for 1924 as we had just presented for 1923. That forecast, I am sure you will all agree with me, has been fully justified, as the results now disclosed to you prove.

PROFITS AND DISTRIBUTION.

As you will see from this report, the profits for the period of thirteen months to October 31, 1924, amount to £69,783, making with the balance brought forward from last year of £11,369 a total of £81,152. Out of this latter sum we have set aside £10,000, as usual, for depreciation, and after providing for debenture interest, income-tax, &c., there remains £52,686, out of which has been paid the sum of £7,750, being the dividend on the preference shares to June 30th last, leaving a balance available for distribution on the 125,000 ordinary shares of £44,936. Your directors recommend the payment of a dividend on the ordinary shares of 12½ per cent., an increase of 2½ per cent. on last year, leaving a balance of £32,826 to be carried forward to next year, against last year's carry forward of £11,668.

Last year we placed £10,000 of our profits to a reserve fund, which we have not repeated this year, for the reason that we hold one particular investment, which stands in our books at nil, which we can realise if so minded at a large sum. In addition, I would like to point out that we have reserved in our balance-sheet as a liability a sum of about £10,000 for taxation, which we are now satisfied is not owing, and, in fact, we now find that we have paid far too much in taxes, and have a large claim outstanding for refund of taxes overpaid.

By a singular coincidence, which, I think, is a good augury, this morning a little document came from His Majesty's Government with a very substantial cheque, so what one had anticipated is now a fact.

I wish, therefore, to impress upon you that, although your balance-sheet is a strong one, it is really stronger than it looks. The policy of your directors is to build up a substantial reserve fund, and the debenture-holders and preference shareholders of the company may take it that we intend to strictly adhere to this.

CARRONGROVE PAPER COMPANY.

At this stage I should like to refer to our acquisition of a controlling interest in the Carrongrove Paper Company, Limited. In February last an opportunity arose of acquiring this control by the purchase of 111,000 ordinary shares of £1 each in the Carrongrove Company, and your directors, in the interests of

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

the company, lost no time in completing the purchase. Several of your directors have joined the board of the Carrongrove Company, and I think you all have received a print of the Carrongrove report and balance-sheet for the year ended October 31st last. This report shows a gross profit of £90,776 on the year's working, plus £5,864 brought forward, leaving an available balance of £54,657. A dividend of 5 per cent. has just been declared on the Carrongrove Company's ordinary shares, £5,000 is carried to reserve, and £29,507 is carried forward.

A dividend of £5,500, subject to tax, will therefore be receivable almost at once by your company in respect of its holding in the Carrongrove Company, which will come into the profits of the current year.

Might I just say this, gentlemen, that the dividend of 12½ per cent. will be paid with your balance-sheet intact, and without encroaching upon it, because I have got enough money in hand which is not disclosed in the balance-sheet—the sort of thing that comes once in a while, and no encroachment will be made on our balance-sheet figures for that dividend.

The financial position of the Carrongrove Company is a strong one, and your directors look forward with every confidence to the future prosperity not only of your own mills at Inveresk, but also at the Carrongrove mills, which, thanks to the vision of their able managing director, Mr William M. Wallace, are probably the finest and most modern esparto mills in Great Britain.

PRODUCTION OF HIGH REPUTE.

As you know, the Inveresk mills have been established over half a century, and have for many years past held a high reputation for producing one of the best esparto papers, and certainly the finest coated papers in the market, and I should like on this occasion to impress upon you, as I did last year, that the prosperity of your company is due in the first place to its exceptional location for coal and shipping, and, in the next place, to the high quality of its productions, which are known to every buyer and user of high-class esparto and coated papers. We have in Mr Snelling an able and energetic managing director, and his efforts are concentrated in maintaining the high quality of our productions.

At the Carrongrove mills we are just completing the erection of one of the largest and most modern of coating factories, and it will be the aim of the Carrongrove Company, in which we are now so greatly interested, to produce, by close co-operation with the best skilled men we possess at Inveresk from the starting-up of the new factory, a first-class coated paper.

CONDITIONS IN PAPER TRADE.

Now, I should like to say a few words on the paper trade of this country as we find it to-day. Although we are fully employed at the Inveresk and Carrongrove mills, I am sorry to say, speaking this country during the year under review, and having regard generally, there has been no improvement in the paper trade of the present condition of affairs, which is largely brought about by the importation into this country of paper at low prices from Continental countries, I see little or no prospect for immediate improvement. We are making at our mills esparto and coated papers of the highest quality, and although all paper manufacturers in this country suffer in a greater or less degree by the importation of this foreign paper, we suffer at our mills less than mills which are making lower grades of paper.

Great Britain is a very large consumer of paper, and in the first ten months of this year we imported approximately £12,000,000 of foreign manufactured paper, whereas the paper

mills of this country exported abroad in the same period only £7,628,000 of British manufactured paper, of which well over 80 per cent. went to our colonies, especially Australia and New Zealand.

Gentlemen, this shows you what our fellow-subjects in the colonies can do and are doing to help British trade by giving us a small preference over the foreign manufacturer, and it is up to us to reciprocate.

Now, we have an appalling number of unemployed in this country, but there is no reason why any man willing to work for a fair day's pay should remain unemployed if the unemployment problem is properly and fearlessly tackled.

Might I say, in conclusion, that there is very little paper which is imported from abroad which could not be made in this country.

I have thought it my duty once again to bring these facts before you, so that you may understand the position of the paper trade of this country in general, and I am sure you will appreciate that with a little practical encouragement in the right direction a great deal could be done to relieve unemployment in one of the great staple industries of this country.

In conclusion, I should like to say as regard our own and associated undertaking at Carrongrove that we have every confidence, notwithstanding the difficult times through which the trade is passing, that we will be able to maintain our present profits and, I hope, improve upon them during the current year. I will now move: "That the balance-sheet, together with the report, be adopted."

Mr Pike seconded the motion, which on being put to the meeting was unanimously carried.

The Chairman then proposed: "That a dividend of 12½ per cent., less income-tax, on the ordinary shares be and is hereby approved and payable on December 1st next to the shareholders whose names appear on the register on November 22, 1924."

Mr Snelling seconded this motion, which was carried unanimously.

Mr Burnside and Mr Gotch Berrill, two of the directors retiring by rotation, and the auditors, Messrs A. and J. Robertson, were unanimously re-elected.

A hearty vote of thanks to the chairman concluded the proceedings.

WALL PAPER MANUFACTURERS, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

INCREASED PROFIT—STRONG FINANCIAL POSITION.

STEADY PROGRESS OF THE BUSINESS.

The ordinary general meeting of the shareholders of the Wall Paper Manufacturers, Limited, was held, on the 27th instant, at the Holborn Restaurant, High Holborn, London, Mr Edgar Smith (the chairman) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—As you have all received a copy of the report and balance-sheet, may I assume that you will take them as read.

If you will turn to the profit and loss account, you will see that we have a balance brought forward from last year of £223,000, against £114,000 in the previous year. The profit on trading, including dividends and interest on investments and the profits of our various subsidiary companies, including Walpamur, Limited, and after providing for corporation profits tax, is £725,000, against £634,000 in the previous year, an increase of about £91,000. After this year there will be no further charge for corporation profits tax, as it ceased at June 30th last.

This year we have a special credit of £25,000 from the Hansa Iven Company, and there is still a further amount which we expect to recover of about £9,000. When the loss on the German business was incurred it was written off to revenue; hence we are taking credit in the profit and loss account for anything recovered in respect of it.

On the other side of the account, the debenture interest and the interim dividends on the shares are the same as in the previous year.

After payment of the interim dividends there remains a balance for appropriation of £838,200, as against £621,173 the previous year, or an increase of £217,000.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, you will see that we start with the value of the capital expenditure at the same figure as last year—namely, £3,459,000—and that the net additions to land and buildings and plant and machinery are £43,133. The charge for depreciation is about the same as last year, leaving the value of the capital assets about £5,000 more than the incoming value.

There is a new item in the balance-sheet this year—namely, property in King street West, Manchester—which is being converted into office property, and part of which will be used for the Manchester offices of the company. The total cost to date on the purchase of the property and alterations thereto is £53,359.

You will observe that the investments are now £1,624,843, an increase over the value in the last balance-sheet of £265,000. Of these investments, £1,554,000 is in Government, Indian, and colonial stocks, which at to-day's prices are worth more than that sum. The remainder of the investments are in subsidiary and commercial companies.

The stock-in-trade is about the same value as last year, and is taken on a conservative basis.

Ample reserves have been made to cover any debts that appear to be doubtful in addition to a general reserve on all debts.

The bills receivable show a slight increase over the value at 1923, and the cash in the banks at £386,000 is about £96,000 more than in 1923.

On the liabilities side of the account you will find the share capital and debenture stock the same as at the commencement of the year.

The creditors are about £27,000 more than in the previous balance-sheet, due to an increased amount owing and increased reserves for income-tax and corporation profits tax. The actual trade creditors are less than they were the previous year.

The reserve fund stands at £300,000, which will be doubled if the appropriations suggested in the directors' report are approved.

APPROPRIATION OF PROFIT.

Turning to the appropriation of the balance of profit recommended by the board, you will see that it is proposed to pay the same dividends as last year, with a bonus to the deferred shareholders of 2½ per cent. in addition to the dividend of 10 per cent.

The reserve fund and the balance of profit to carry forward will together amount to £667,000, and this, with the million and a-half of gilt-edged securities and the credits at bankers, I think, indicates a very sound position.

Now that we have completed our twenty-fifth year as a limited company, it is not unpleasant to look back upon a quarter of a century of effort and achievement and of service to the public. The trade as a whole has been stabilised. Our workpeople are more regularly employed and receive better wages. Above all, the public gets good value for their money. We are always trying to improve our designs and colourings, also the quality of our materials and goods, so as to offer that combination of quality in materials, excellence in design, and reasonableness in price which make our wall papers supreme. We know no similar trade where a comparison in quality and price to-day with those of pre-war days is so satisfactory.

TRADE FULLY MAINTAINED.

The year under review, like the preceding year, has been one in which we have experienced keen competition in prices both from English and foreign sources, but, owing to the efficiency of our organisation, we have been able fully to maintain our trade. This competition has been even more intense in the overseas Dominions, and yet in those markets our trade has very considerably increased.

In all our mills the machinery has been kept up to date by renewals and repairs, and, as I foretold you a year ago, there has been a considerable amount of capital expenditure in further improving the company's factories and plants.

Our operations other than the manufacture of wallpaper are also making steady progress, and are contributing largely to our profits. The increasing popularity of Walpamur and Duradio have compelled us to make great extensions to the works at Darwen, where all kinds of paints and varnishes are made. Our holdings of shares in subsidiary companies and the large sum which we have invested in gilt-edged securities have greatly contributed to the amount available for distribution.

Our factory in Paris produces an excellent range of goods, which are highly appreciated on the Continent.

CORDIAL RELATIONS WITH LABOUR.

Our cordial relations with labour have been maintained. You will remember that about five years ago the Wall Paper Makers'

Industrial Council was formed. It has done useful work, and has pursued a steady course of reconciling differences; also it has brought about a better comprehension of the difficulties which beset the employer and the employed. It has promoted a better understanding and good will on both sides. I think this may be illustrated by the fact that on the two occasions when the turn came round for the employees to have the chairmanship of the Industrial Council for the next year they have each time elected your director, Mr Sugden, to continue in that office. We think very highly of our workpeople, and the way they have supported wholeheartedly all our schemes for improving the methods of manufacture, avoiding waste of time and material, &c.

I must express our appreciation of the services of our mill managers, travellers, and foremen, and especially mention the artists who design our wallpapers, for everybody must have observed the progress and excellence of the art side of our productions. Our craft, the manufacture of wallpapers, is an ancient one, and includes several skilled occupations which are all of an artistic nature. The cutting and engraving of the printing rollers require men who are artists. The colour mixing can only be done by men with an eye for colour and a training in the harmonious use of it. The printer, also, has to put his individuality into his work, for I can assure you that it is not a mere mechanical operation.

DUKE OF YORK'S VISIT TO FACTORY.

It was very gratifying to everybody employed in our industry when His Royal Highness the Duke of York, as president of the Industrial Welfare Society, paid a visit to our factory at Chiswick last March. He showed a real interest in the many departments of skilled work, especially the one where hand-printed wall papers are made. His Royal Highness actually printed part of a wall paper which was then being made for Windsor Castle. All the workpeople were impressed by the genuine interest which he took in their occupations and in their welfare.

During the year one of your original directors, Major Arthur Huntington, D.S.O., has very generously set aside 5,000 of his ordinary shares in our company in trust for the benefit of the employees of the Darwen mills and their dependents to assist them in cases of illness or distress of any kind. This he has done as he writes "out of real affection for the Darwen workers." It will be remembered that four years ago a gift of 5,000 deferred shares was made by our late chairman, Mr J. C. Potter, and vested in the same trustees for the same object.

HOUSING SCHEME.

Your director, Mr G. F. Jackson, who manages the Holmes Chapel Factory, in Cheshire, has carried out a scheme for work-people's houses, of which there was a very urgent need. Each cottage is provided with the usual accommodation, including bathroom and three bedrooms, also a good garden at the back and a small lawn in front. He has selected and improved the designs himself, and brought out the cost so low that I recommend these interested in housing schemes to view them. We have also built at Holmes Chapel, with the help of our workpeople, a fine institute with a hall capable of seating 300 people, and a billiard room with two tables, besides other spacious rooms. The grounds are well laid out with bowling green, two tennis courts, &c.

Since our report was issued you will have heard with regret that Mr G. W. Osborn died three weeks ago. He had been a director of the company since its formation. He was our chairman for an unbroken period of eleven years, and very highly esteemed by all his colleagues. He was a Deputy-Lieutenant of the County of Sussex, and held many other important offices in that county, besides being a member of the first L.C.C. I am

sure you will join with me in offering our condolences to his family.

In accordance with the articles of association, the directors named in the report retire by rotation, and offer themselves for re-election.

In the place of Mr Osborn, it is the wish of the directors that our secretary, Mr J. T. Chasney, should join the board. Mr Chasney has rendered great services to the company ever since its formation, and while retaining his services as secretary, we desire to strengthen his position by making him a director.

I now formally move the adoption of the report and the accounts for the year, and will ask Mr Sugden to second this resolution.

Mr A. V. Sugden seconded the resolution, which was carried unanimously.

ANGLO-EGYPTIAN BANK, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

RECENT EVENTS IN EGYPT.

The thirty-eighth ordinary general meeting of the Anglo-Egyptian Bank, Limited, was held, on the 25th instant, at the bank, 37-39 King William street, London.

Mr Raoul H. Foa, chairman of the bank, presided.

The secretary (Mr H. H. Mallet) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I am sorry to have to announce to you that owing to continued ill-health our colleague Sir Henry Procter telegraphed to us from Canada that he was unable to discharge the duties incumbent upon him as director, and therefore handed in his resignation. With regret my colleagues and I accepted it, and I am sure that you will wish Sir Henry in his retirement a complete restoration to health.

BALANCE-SHEET ITEMS.

You will observe in the balance-sheet very little alteration this year in the figures as compared with those of last year. The deposits and current accounts have risen £1,200,000. The investments have been reduced by £452,704, and the acceptances have risen to £428,726, while our bills receivable have risen £1,200,000, roughly representing the increase in deposit account. The gross profit this year amounts to £444,999 9s 2d, against £417,698 last year, but the expenses in London and the branches have increased some £13,000, with the result that the net profit this year amounts to £157,301, against £156,883 last year.

We have paid the usual interim dividend of 5s per share, and propose to pay the equally usual dividend of 10s per share on December 1st, both free of income-tax. We have this year been able to allocate £10,000 to writing off the premises account, and we are carrying forward £48,755 8s 10d.

INVESTMENTS.

The remarks which I made last year on the subject of our investments, which consist almost entirely of gilt-edged British securities, and stand at cost or market price, whichever is the lower, thereby constituting an inner reserve, hold good this year also.

In the early part of the year our colleague Mr Mounsey made an extended tour through Egypt, the Sudan, and Palestine, and his trip was of much service to the bank, besides giving him personal insight into our business, which cannot be gained elsewhere than on the spot.

The cotton crop of Egypt this year is estimated at 6,970,000 cantars, as compared with 6,411,435 last year, 5,356,934 in 1922, and 6,036,000 in 1921, the highest previous having been 7,684,172

in 1914. As long as these large yields of cotton, combined with high prices, obtain the prosperity of Egypt is assured, given sound and stable Government.

SATISFACTORY PROSPECTS.

You are aware, no doubt, that the well-being of a bank such as ours depends to a certain extent upon the line of policy laid down for it by the directors, more still upon the efficiency and energy of its managers, and most of all upon the prosperity of the countries in which it works, and under these conditions I think I am not overstating the case in predicting a future for the bank as satisfactory to its shareholders as its past has been, although competition in banking in Egypt is ever on the increase.

We have opened branches this year in Minieh, Upper Egypt, and in Wad Medani, in the Sudan, but have closed our agency at Amman, in Transjordan. We went to this country at the request of the Colonial Office, but the hopes which we formed of profitably working in that country were not realised, and, truth to tell, the development of civilisation there has not gone on as was to be expected.

Trade, as you know, has been very slack throughout the world for the last year—a condition of affairs which you will find reflected in our balance-sheet, as well as in that of most other banks. It is devoutly to be hoped that the gradual evolution of tranquillity, after the stormy years of the last decade, will bring the world that restoration of confidence and mutually satisfactory intercourse between peoples which existed previously to it. The remarkable result of the British elections will have a repercussion a long way outside the shores of our islands, and will no doubt strengthen the forces of stability against the attacks of insurrection which have been so noticeable in the past few years.

EVENTS IN EGYPT AND SUDAN.

It must occur to you that I should refer in my speech to the events recently taking place in Egypt and in the Sudan. Now, if there is one thing which I invariably avoid in speaking it is a detailed reference to events in politics in the countries in which we work, and I will content myself by saying that while they have gone by by no means unperceived my colleagues and I have not been dismayed by them, and we hope and trust that a reasonable and honourable *modus vivendi* between England and Egypt will soon be reached.

Since I began making notes of the subjects to be placed before this meeting, there has occurred the tendering of the resignation of Saad Zaghlul Pasha and its refusal by King Fuad. The meaning and portent of this is at present hidden from us, but may be fraught with incalculable consequences to Egypt.

TRIBUTE TO THE LATE SIRDAR.

I revised the few words which I have spoken to you only last Thursday before going abroad, and since then events of the greatest importance have occurred—events which, I feel sure, will ultimately be fraught with the greatest good to that country. The Sirdar of the Egyptian Army and Governor of the Sudan was foully murdered, and I hasten to pay tribute to a good and just man, the whole of whose life had been devoted to the good of the country which he governed, and in which he was beloved by white and coloured races alike. He had extended most gracious hospitality to me when I was in the Sudan, and I shall miss him much. I feel sure that Egypt will retain its prosperity, which is as precious to you, the shareholders of this bank, as it is to the inhabitants of the country.

It now falls to me to propose "That the directors' report and the accounts annexed thereto be received and adopted."

Sir Marshall F. Reid, C.I.E., seconded the motion, and it was carried unanimously.

DIVIDEND RESOLUTION.

The Chairman next proposed, "That a dividend at the rate of 10s per share, free of income-tax, be hereby declared, and that the same be paid on December 1st next."

This resolution was seconded by Mr L. H. Walters, and unanimously approved.

On the proposition of the Chairman, seconded by Mr Emil Pusch, the retiring director, Sir Marshall F. Reid, C.I.E., was re-elected, and the auditors, Messrs Cooper Brothers and Co., were re-appointed, on the proposition of Mr L. D. Lewis, seconded by Mr W. N. Seeley.

Mr. Bevan proposed, "That a cordial vote of thanks be given to the chairman, directors, and staff for their services during the past year."

Mr Seeley seconded the vote, and it was unanimously accorded.

The Chairman, in acknowledging the compliment, said that he could assure the shareholders that nothing would be left undone by his colleagues and himself, by the manager, and by the whole staff to maintain the prosperity of the bank.

The proceedings then terminated.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED, FAVOURABLE RESULTS OF THE YEAR. DIVIDEND OF 10 PER CENT.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 27th instant, at the Cannon street Hotel, London, Lord Harris (chairman of the company) presiding.

Mr. H. G. Sidgreaves (one of the joint secretaries) having read the notice convening the meeting and the report of the auditors, The Chairman, in moving the adoption of the report and accounts, said:—I will deal first with the accounts of the New Consolidated Gold Fields, the operating company. The gross profit amounted to £521,636, as against £460,228, a satisfactory increase of £61,408. The cost of management, which last year was £41,801, has been reduced to £31,211, a reduction of £10,590 as 7d.

The New Consolidated Gold Fields, after creating the nucleus of a reserve fund by allocating thereto £100,000 from its year's profits, declared a final dividend of 4 per cent. on November 13th, which places the Consolidated Gold Fields of South Africa in a position to recommend a dividend of 10 per cent., less income-tax.

INCREASED PROFITS.

Well, I hope you will consider this a satisfactory statement. The favourable results shown are largely due to the fact that the depreciation we have had to write off in order to reduce investments to current market prices or valuation has been considerably less than in the past year, and in some measure to the economies effected.

The increased profits are mainly derived from dividends on our shareholdings in the Transvaal, which continue our mainstay pending the arrival at the productive stage of the many promising ventures in which we are interested elsewhere. We have for many years past received but little revenue from two of the Transvaal companies which we control—viz., the Robinson Deep and Simmer and Jack. The former company has made good, and we may from now on expect a steady revenue therefrom and from our holding in Simmer and Jack, while the Sub Nigel has been and remains a consistent dividend payer. In addition to the companies controlled by us, we draw large dividends from our considerable holdings in Government Areas and New Modderfonteins.

Turning now to the Consolidated Gold Fields of South Africa, Limited, from the balance at credit of profit and loss account, we recommend you to take a dividend of 10 per cent., less income-tax, costing £155,000, leaving a balance of £42,261 1s. 7d. to be carried to the current year's profit and loss account.

THE FUTURE.

As regards the future, I shall explain to you that, although we have had no income from the Gold Fields American Development Company during the past year, our expectations of revenue from this source are undiminished, and I may safely anticipate that the falling off of income from the Gold Fields Rhodesian Development Company during our current financial year will be more than balanced by dividends from Simmer and Jack, to which I have referred.

On the whole, therefore, I feel hopeful that, given immunity from labour trouble in the Transvaal and realisation of our anticipations regarding the promising prospects of our other large and varied investments, direct and indirect, in gold, platinum, silver and base-metal, potash, borax, and asbestos properties, our present satisfactory position will be maintained, if not improved upon.

In addition to these ventures, we and our associates are interested in Rumanian oil companies and in the American Cellulose and Chemical Manufacturing Company. In all these concerns we are well organised to keep in the closest touch, and though it goes, I hope, without saying, I can assure you that the safeguarding of these interests receives our very constant attention and watchfulness.

SIMMER AND JACK'S REVIVAL.

You will no doubt have read the Simmer and Jack report hereon with interest. The result of the reconstruction has been to secure to a moribund mine a new lease of life estimated at 17 to 18 years, and to its shareholders and ourselves as shareholders the probability of a handsome return on their investments during that period. The scheme of reconstruction was very carefully considered by us before we undertook to guarantee the subscriptions of £250,000 new working capital.

The whole position with all the information at the disposal of the directors was placed before the Simmer and Jack shareholders in great detail, and in the result the shareholders took up 1,000,000 shares out of the 2,000,000—2s 6d par value—offered to them. Shareholders representing only 8,000 shares dissented and were bought out by the liquidators, leaving us and our associates to take up 1,000,000 shares. The market, which is no mean judge, values the 2s 6d shares to-day at 3s 4½d.

The directors expect to pay a 20 per cent. dividend at the end of this year, and the future will have to speak for itself. There may

be ups and downs during 17 or 18 years, but the chances seem on the right side in view of the fact that working costs for the last month have been lowered to 13s 11d.

ROBINSON DEEP AND SUB NIGEL.

Robinson Deep is about to reach a stage at which the profit-earning capacity will be of greater interest to the "B" shareholders than to the "A" shareholders. It may safely be assumed that all accrued dividends to December 31st of this year on the "A" shares will be paid off in February next, and after that these shares will be entitled to receive 3s per share (preference and cumulative) for 12 years, diminishing thenceforth. After providing for these annual dividends, for the debenture service, for current capital expenditure and taxation, the balance of profit will accrue to the "B" shareholders. I venture the opinion that the expectation of handsome dividends over a considerable period is justified, of which we shall have the advantage on our substantial holding in the "A" and "B" shares.

Whilst the progress of the Sub Nigel Company also gives cause for satisfaction, as is evidenced by the latest returns, you will have seen from Mr Christopherson's report that it has not as yet been possible to carry into effect the means by which it was sought to attain an increased milling tonnage and consequently improved profits—namely, by an amalgamation with the Nigel Company and by the incidental acquisition of an additional claim area. Negotiations with the Union Government regarding the latter are, however, still pending.

Meanwhile the increase by 111,000 tons of the ore reserves, which at June 30th of this year stood at 370,000 tons, of an average of 12.1 dwts over a stoping width of 39.8 inches, is a gratifying feature of the company's present position.

As regards Rhodesia, those of you who are interested in the Gold Fields Rhodesian Development Company will have gained the information given to the shareholders of that company a fortnight ago. In spite of vigorous prospecting, that company has not as yet been successful in finding what it is in search of—namely, any new property which is likely to have the makings of a big mine. Its representatives in Rhodesia, however, have been encouraged to persevere, and the directors look forward to advice on the subject from Dr MacLaren, who has been reporting to the company on its various interests. We disposed of our investment in Cam and Motor shares at a satisfactory profit.

The Chairman, having referred at some length to their American interests, then moved the resolution.

Lord Brabourne seconded the motion, and it was carried unanimously.

CARGO FLEET IRON COMPANY, LIMITED. FOREIGN COMPETITION IN HOME MARKETS.

The annual ordinary general meeting of the Cargo Fleet Iron Company, Limited, was held, on the 26th inst., at Middlesbrough.

Captain John E. Rogerson (deputy-chairman), who presided, said that the financial year had been one of great difficulty so far as the heavy steel trade was concerned. Notwithstanding that many of the Continental steel works had been entirely closed down during the early part of the current year, in consequence of the French occupation of the Ruhr, and that effective competition had thus been reduced, the world demand for steel had been insufficient to keep the whole of the British steel works in operation, and consequently prices generally had not been upon a remunerative basis. The settlement of the Reparations problem, and the stabilisation of the currency in Germany as the result of the loan which had been granted to them, would undoubtedly lead to an increase in competition, and export business from this country be made more difficult. Foreign competition in the home markets would continue to be most severe unless some form of restriction was imposed.

The Chairman then gave figures of the exports and imports of iron and steel, which, he said, indicated that for 1924, as imports would apparently be at least equal to those in any previous year would apparently be 1,000,000 tons less than in 1913, the steel trade and exports over 1,000,000 tons lost on exports. The had suffered to the extent of that tonnage lost on exports. The following table of imports and exports showed the decrease in effective exports from 1907:—

	Imports. Tons.	Exports. Tons.	Excess of exports over imports. Tons.
1907	935,472	5,152,227	4,216,755
1913	2,230,955	4,969,225	2,738,270
1924	2,394,000	3,686,000	1,492,000

Trade with a diminishing export and an increasing import could not be considered to be in a satisfactory condition, particularly in the case of a nation with such a large industrial population, many of whom were unemployed. The present position was all the more disappointing when it was remembered that the steel

producing capacity of the country was increased during the war by at least 50 per cent., so that, but for the question of prices, there was really no need for steel to be imported. The most difficult problem before them was that of a reduction in the costs of production, as it was essential that the export trade should be maintained in order to provide funds for the payment of the necessary raw materials and the import of food so essential to the country. In that connection three main factors presented themselves: coal, transport, and taxation—both local and national.

The present price of British steel was not more than 37 per cent. above that prevailing in 1913, whereas for gas-producer and boiler coal the current prices, free on trucks at the colliery, were 65 per cent. in excess of those paid in 1913.

The report and accounts were unanimously adopted.

CLAUDIUS ASH, SONS, AND CO. LIMITED.

AMALGAMATION APPROVED.

An extraordinary general meeting of Claudius Ash, Sons and Co., Limited, was held, on the 25th instant, at Cannon street Hotel, London, to consider resolutions for the purpose of carrying into effect the amalgamation of the businesses of the company and of De Trey and Co., Limited.

Mr E. Russell Polden presided, and in his address to the shareholders traced the course of the negotiations with De Trey and Co., Limited, the object of which was, he said, to endeavour to come to some working agreement to stabilise prices and to prevent the disastrous price-cutting which had been going on between the two companies, particularly abroad. The only solution was the amalgamation of the two companies, and in the scheme now under consideration the uppermost thought in the minds of the directors was the interest of the proprietors of the business—the shareholders—that of the dental dealers, and, last but not least, that of the dental profession. The directors believed that they had achieved their object.

The directors had already had evidence from the dental dealers that they considered the amalgamation would benefit the trade generally. In the scheme the interests and subsidiary companies of both undertakings were provided for. To facilitate a fair division of the capital the ordinary shares would be divided into 8 per cent. cumulative preferred ordinary shares of £1 each and deferred ordinary shares of 5s each, the object being that after the payment of a fixed return on the preferred ordinary shares the balance available for distribution would be equally divided between the ordinary shareholders of each of the amalgamating companies, for the reason that the deferred ordinary shares would be equally divided between them. The basis of the purchase price to be paid to De Trey and Co. was the value of the assets, less goodwill, plus the agreed increased value of their holding in the Dentists' Supply Company, and the net surplus assets arrived at after deducting the surplus assets of Claudius Ash, Sons and Co., giving De Trey and Co. a net surplus of £217,935, satisfied by the issue of preference shares.

The company for obvious reasons, and having regard to the magnitude of both businesses to be combined, would change its name to the Amalgamated Dental Company, Limited.

When amalgamated, the businesses of this company and of Messrs De Trey and Co., Limited, with the combined subsidiary and affiliated companies, would become incomparably the greatest dental organisation in the world, with large commercial interests

spread out to every corner of both hemispheres where trade can be done.

The scheme was unanimously approved by the meeting, and separate meetings of the preference and ordinary shareholders also gave it their consent.

JOSHUA HOYLE AND SONS, LIMITED. AN ANXIOUS AND DIFFICULT YEAR.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held, on the 27th instant, at India Mill, Bacup, Lieut.-Col. J. Craven Hoyle, T.D., D.L., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year showed a gain of £1,000 above last year, and the balance carried forward an increase of £4,200, after payment of the dividends as stated in the directors' report.

Twelve months since he had stated that the period through which the company had passed had been one of the greatest anxieties since the firm had been established, and he regretted to say that during the period under review the conditions governing business and trade generally had been, if anything, worse, and a period of even greater anxiety. The same difficulties to which he had referred in November, 1923, as confronting business firms, still continued, and in addition to that, as regarded the cotton trade, there had been constant and violent fluctuations in the price of raw cotton.

It was gratifying to all interested in the trade to know that efforts were being made through the British Empire to find and develop areas for the production of cotton, and although at the moment the situation as regarded raw cotton was very much improved, he trusted there would be no relaxation in those efforts. Though it would take time to produce an appreciable amount, there were areas in the Empire where the required staple could be produced and suitable labour obtained, and only waiting for means of transport to handle the produce on a commercial basis.

Through the depression of trade the amount of time lost through actual short time and extended holidays had materially affected the cost of production all round. With the rest of the trade, the firm of Joshua Hoyle and Sons had backed up the Masters' Federation in their efforts to reduce the serious loss which the whole trade was suffering between the cost of production and the selling prices obtained.

He thought they could congratulate themselves on having come through such a trying and difficult position, and on being able to show such a favourable result.

As to the future he had never prophesied, but, providing the trouble in the Far East was settled and there were no serious developments in the Near East, he was of the opinion that the trade of Lancashire would get into a much more stable position, and he felt entitled to express the hope that they had now turned the corner.

Sir William E. Berry, Bart., seconded the resolution.

Mr Walter Pilling (managing director), in supporting it, said that in the whole of his forty years' experience of the cotton trade he never remembered anything to equal the depression through which they had passed. Last year he held out a pious hope that things would be better. Unfortunately, they had had to wait until practically the last few weeks of their financial year before seeing material signs of that hoped-for improvement. He was glad to be able to say that they had booked orders which would keep their Bacup Mills running for three to four months.

The resolution was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Dec. 1—Dec. 6 were opened on Nov. 28, 1924, and the total amount applied for was £72,040,000. For bills at three months dated Monday at £99 2s 1d and above in full. Tuesday to Saturday at £99 1s 10d, about 16 per cent., and above in full. The amounts allotted were as follows:—In bills at 3 months, £44,500,000; in bonds, £500,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Oct. 24, 1924.	35,000,000	55,135,000	3 14 3/4	nil
Oct. 31.	35,000,000	57,995,000	3 12 10/66	nil
Nov. 7.	35,000,000	58,080,000	3 14 1/6	94 10 0
Nov. 14.	35,000,000	58,975,000	3 14 0/65	94 10 0
Nov. 21.	35,000,000	57,400,000	3 13 9/38	nil
Nov. 28.	35,000,000	72,040,000	3 10 10/79	94 10 0

Tenders will be received on Dec. 5, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £45,000,000. The amount of Treasury Bonds issued will not exceed £4,000,000.

Messrs Samuel Montagu and Co. write, on November 26th, as follows:—

GOLD.

The demand from India for gold this week was very keen, and the moderate supplies available were readily absorbed by that country and the trade. Gold valued at \$3,500,000 has arrived in New York from Germany.

SILVER.

The lower level to which prices have fallen has provoked considerable bear covering. This tendency has been assisted by revived activity in the Indian bazaars, where stocks for some time have been rather excessive. Silver quotations there have risen, and some orders have been despatched to London. Although a somewhat better tone is felt here, the market is not robust, and any pronounced recovery would possibly lead to speculative sales. America was a buyer when the lowest

of recent prices were touched, but is inclined to let out supplies at rising rates. To-day's quotations fell sharply &d below those of yesterday—33½d for cash and 33½d for two months' delivery—which were the highest touched during the week.

NOTICES.

The Standard Bank of South Africa, Limited, intimate that the Press cable report to the effect that it is dismissing its staff of lady clerks in South Africa is entirely without foundation.

At a meeting of the directors of the Dominion Bank, held Friday, November 21st, Mr F. Gordon Osler, a son of the late president, Sir Edmund Osler, was elected a director to fill a vacancy on the board.

On his election as a Member of Parliament, Mr R. Roy Wilson has sent in his resignation as assistant-general manager of the Bank of British West Africa, Limited, and the directors have accepted it with great regret.

that merits attention. There is no need to make any invidious comparisons with what is being done in Australia or South Africa, for at all centres prices are being realised which certainly show an exceedingly sound situation. France and the home trade seem to be by far the keenest and most extensive operators in merinos, and the advance is certainly more pronounced in greasy than inoured descriptions. America so far has done very little in any ass of wool, and apart from picking up a few lots, there is nothing to shout over regarding United States operations. What a like about the sale room is the good, all round competition, particularly on the part of Yorkshire and the Continent. As far as we can see, the Australian clip this season is particularly well down; a few of the clips are more burry than usual, but the uensland clips are in splendid order, and on the whole some excellent prices have been realised.

Beginning with next series and in March the slipes will be all a clothing length, and suitable only for the woollen trade. However, the attention being given to crossbreds is remarkable, and apparently conditions have wonderfully changed during the interval. What we feel should concern the trade most of all is not the forcing of wool values to a higher level, but combining all energies to stimulate trade at the manufacturing end of the industry.

THE COTTON TRADE.

A NEW PRIZE FOR A DISTINGUISHED ECONOMIC STUDY

In the belief that the

Theory of Wages

is of exceptional importance, and that constructive study of it should be stimulated, a Committee composed of

PROFESSOR J. LAURENCE LAUGHLIN, Chairman

PROFESSOR JOHN BATES CLARK

PROFESSOR EDWIN F. GAY

HON. THEODORE E. BURTON

PROFESSOR WESLEY C. MITCHELL

has been authorized by Messrs. Hart Schaffner & Marx to offer in 1926 a cash prize of

Five thousand dollars

for the best original treatise on this subject

THE Committee places no restrictions upon the scope, method or character of the studies submitted beyond the requirement that they make genuine contributions toward our understanding of the problem. Emphasis may be laid upon analysis of the economic principles underlying the determination of wages, upon the conditions which set maximum and minimum limits to the prices paid for important types of labor, upon quantitative studies of the factors involved, or upon any other aspect of the problems which a writer can show to be significant and upon which he can throw new light.

The prize will not be awarded except for a work of high merit. Contestants are not limited

to any country; but the manuscripts must be in English. This offer is entirely separate from the annual competition in Classes A and B of the Hart Schaffner & Marx prizes elsewhere announced.

The ownership of the copyright will vest in the donors, who will arrange for the publication of the book.

Competitors should inscribe their manuscripts with assumed names and in sealed envelopes give their real names and addresses, together with degrees, distinctions, or positions held.

Inquiries concerning the competition may be addressed to the undersigned. Manuscripts should be sent on or before October 1st, 1926, to

J. LAURENCE LAUGHLIN
UNIVERSITY OF CHICAGO
CHICAGO, ILLINOIS, U.S.A.

Banks, &c.—Continued.

THE MAURITIUS COMMERCIAL BANK,

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7/6 net.

The Economic Review:—"His excellent and clear little book ought to be in the hands of every student of social conditions."
The Economic Journal:—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the fascinating but complicated study of prices." That is, perhaps, the most crucial of present popular economic questions and it must always occupy a prominent place in the scientific discussions of professional economists."

LONDON AND MANCHESTER ASSURANCE CO., LTD.
London, E.C.2. Premium Income exceeds £1,500,000.
Funds exceed £4,500,000. Claims paid exceed £7,500,000. Annual Reports and Prospectuses can be obtained on application.

THE BRITISH OVERSEAS BANK, LTD.

ESTABLISHED 1919.

Report by the Board of Directors to the Fifth Annual General Meeting of Shareholders to be held in the Bank Premises, 33 Gracechurch street (Lombard court), London, E.C.3, on Tuesday, the Ninth day of December, 1924, at 12 noon.

The Directors submit to the Shareholders the Balance-sheet of the Bank, as at 31st October, 1924, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts, Income-tax and other Taxation for this year ended 31st October, 1924, amounts to	£105,548	1	4
Balance available from last account	£68,781	19	8
Making a total of	£174,330	1	0
Interim Dividend on "A" Ordinary Shares at the rate of six per cent. per annum for the half-year ended 30th April, 1924, and Income-tax thereon	30,000	0	0
Leaving a Balance of	£144,330	1	0
which has been appropriated as follows:—			
In payment of a Dividend on the "A" Ordinary Shares at the rate of six per cent. per annum (less Income-tax) for the half-year ended 31st October, 1924, which together with Income-tax thereon amounts to	£30,000	0	0
To Reduction of Premises Account	£5,000	0	0
To General Reserve	£55,000	0	0
Leaving a Net Balance to be carried forward to next year of	£54,330	1	0
	£144,330	1	0

Last year reference was made in our Report to certain alterations in the Constitution of the Bank that were contemplated. These changes, when effected, did not completely meet the objects in view, and further alterations were subsequently submitted to the Shareholders and unanimously approved. The Board are glad to be able to report that these further changes have been accomplished all that was hoped for them, and close and friendly relations continue between the Bank and those Institutions who disposed of their "B" Ordinary Shares to the Union Bank of Scotland, Limited, Williams Deacons Bank, Limited, and the Prudential Assurance Company, Limited.

The Directors retiring by rotation are Mr. James Caird and Mr. Nigel L. Campbell, who, being eligible, offer themselves for re-election. The Auditors, Messrs. A. W. Tait, C.B.E., and A. S. Macharg, also retire, and, being eligible, offer themselves for re-appointment.

By order of the Board,
A. E. THORNE, Secretary.

BALANCE-SHEET as at 31st October, 1924.

LIABILITIES.		ASSETS.

AUDITORS' REPORT.

We have examined the above Balance-sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange and have verified the Securities. We have obtained all the information and explanations which we have required, and are of the opinion that the Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

CHRISTIANIA, NORWAY

TRANSACTS ALL KINDS OF
BANKING BUSINESS.

Correspondents in all Norwegian places
of any importance.

CREDITO ITALIANO.

Capital Lire 400,000,000
Paid Up Lire 510,000,000
Reserve Lire 110,000,000

Head Office of the Bank: MILAN.

THE BANK HAS BRANCHES THROUGHOUT ITALY.

London Branch: 22 ABCHURCH LANE, E.C.4.

Managers { D. A. HORNER.
F. N. SCHILLER.

Transacts a general Foreign Banking Business, having correspondents in all Countries, and is specially prepared to grant facilities for the development of trade between the British Empire and Italy.

Every facility provided to Letter of Credit holders, and all other exchange operations transacted by Italian branches, particularly at the Chief Office and Sub-Offices in Rome.

Correspondent of the Royal Italian Treasury.

Telegrams: "Italocredi, Cannon, London."

Telephone: 7802-7803 City.

37 Avenue de L'Opera.

THE MONEY MARKET.

MONEY has been plentiful, owing to the War Loan interest payments on December 1st, and the market has been easily able to repay its indebtedness to the Bank of England; at the same time, there was no evidence of extreme abundance. Discount rates were slightly easier, with three months' bills at 3½ per cent., but the tone of the market was quite steady. The suspension of sales of Treasury bills "on tap" produced much discussion and

many ingenious explanations, but was probably decided on owing to the very limited demand for them.

	Dec. 5, 1924	Nov. 28, 1924	Nov. 21, 1924	Nov. 14, 1924	Previous Rate and Date Changed
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills	3½	3½	3½	3½	..

The Bank return showed the effect of the War Loan payment in an increase of 23 millions in the Government securities and of 21 millions in the Other deposits. Public deposits declined by 8½ millions, and Other securities were reduced by repayments to the extent of 9½ millions. Note circulation expanded by £730,000, and the Reserve declined by £727,000. Currency notes outstanding were increased by £2,720,000 to £288,098,000, which includes £1,360,400 for notes called in, but not yet cancelled. The fiduciary issue is £237,287,100, being £10,903,800 below the maximum for the year.

THE STOCK MARKETS.

The settlement this week proved to be of smaller proportions than either of the two preceding accounts, and business in most sections shows a tendency to fall away a little. The distribution of War Loan interest on Monday failed to affect prices in the gilt-edged market, but foreign bonds have been strong, the premium on the new German loan touching 8 premium. There was a big demand for underwriting of the new Greek Refugee Loan. Home rails have scored moderate rises, but foreign rails continue to be somewhat out of favour. Tea and whisky shares have been prominent, and investment trust companies' stocks show considerable rises on the week, and many other sections continue active, but mines are attracting little public interest.

THE COMMODITY MARKETS.

The general position of the Cardiff coal market has improved this week. Business is quiet in pig-iron, and prices are inclined to be easier. Although some of the works have booked fresh orders, there are no signs at present of increased output. Tin opened with a firm tone, but subsequently developed irregularity. Copper fluctuated slightly. In the cotton trade the market is firm, and conditions in the wool trade are inclined to be buoyant. Sugar was quiet, and tea was easier. Rubber was steady, but actual business was confined to moderate limits. Wheat moved on even lines. A weaker tone is reported in the hide market, which may be temporary. Linseed oil is easier. Further details of markets and prices will be found on later pages.

FOREIGN EXCHANGES.

In the Foreign Exchange market interest has centred on the movement of the dollar. At the end of last week the news of the Sudan revolt brought a sharp relapse in the value of sterling from a closing price of \$4.63½ on the 28th to as low as \$4.61½ at one time on Saturday. By Monday evening there had been a recovery up to \$4.64, since when there has been a steady and rapid appreciation in sterling, until for a short time yesterday morning a figure of \$4.69 was reached, although later the rate steadied down to \$4.68½, rather lower than the previous day's quotation. It is clear that this movement is not based on general economic factors, as both the movement of prices and the trade balance in the two countries would suggest a fall rather than a rise in quotation. The immediate cause, however, is probably the difference in market rates at the moment between the two countries which has resulted in the movement of a large amount of short money from New York to London. It will be seen from this that the position is far from being stable, and, though a further rise as the result of these same influences is possible, caution as to the movements in the immediate future is very necessary. We make further reference to the subject in a leading article. Forward rates have moved to par to ½ cent discount for

one to three months. The Paris rate, from 86.20 on the 28th, moved down gradually to 84.80 on the 3rd, since when it has risen again to 85.25. As compared with the dollar, however, the franc shows a marked appreciation, owing, it is suggested, to the French Government's desire to create a good atmosphere for the last days before the closing of the lists for the internal loan. After that, it would appear to be the intention, with the help of the funds now at France's disposal in New York, to keep the dollar steady somewhere about a rate of 18.50 francs, but whether or not this will be carried out is still very doubtful. Francs, one month forward, are quoted at about 20 to 30 centimes above spot. As compared with a week ago, when the rate stood at 106.57½, the lira shows in respect to sterling a marked depreciation to 108.50. As compared with the dollar, however, it has remained practically stable. In the same way the Dutch rate has moved up from 11.47½ to 11.56, while appreciating slightly on dollars; Switzerland from 23.99 to 24.18½; Stockholm from 17.21 to 17.36½; Vienna from 327,500 to 332,000 Berlin from 19.45 to 19.68. Madrid, on the other hand, maintains its close relation to sterling, and has actually appreciated from 33.85 to 33.76½, while Christiania has moved only from 31.27½ to 31.29½, and Budapest remains pegged at 345,000. Prague, at 155½, is ¾ points higher, but Bucharest has jumped again from 902½ to 950. In the East the rupee remains at 1s 6½d, but heavy exports are being balanced by correspondingly large imports of gold. The yen, on the other hand, is cheaper, at 1s 7½d, as compared with 1s 8½d. The silver market has been quiet, with a weak tendency, some demand from India not having been quite sufficient to keep up the price. Hong Kong, at 2s 4½d, and Shanghai, at 3s 3d, are both somewhat cheaper. In South America, Rio has moved down from 5 63-64d to 5 55-64d, Montevideo from 50½d to 50½d, Buenos Aires from 45d to 44 27-32d, and Valparaiso has also depreciated on the week from 40.50 to 40.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 29th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,886	From Revenue	9,894
Interest, &c., on Debt	2,246	Increase in Debt	1,622
Sinking Fund	500		
Sundries	795		
Increase in Exchequer Balances	89		
	11,516		11,516

The Revenue for the week amounted to £9,893,700, as compared with £12,982,100 in the corresponding week last year. Customs and Excise were lower at £1,992,000, against £2,624,000, and £1,626,000, against £1,724,000 respectively. Estate Duties were up at £1,270,000, against £600,000. Property and Income-tax brought in £1,502,000, as compared with £2,121,000, and Super-tax at £330,000 was £30,000 lower than last year's figure. Ordinary receipts reached £74,600, against £40,900, while Special receipts only amounted to £1,011,100, against £3,309,400. The week's operations increased the National Debt by £1,622,025, and caused the following changes:—

(000's omitted.)			
Treasury Bills	£	Public Department Advances ..	£
National Savings Certificates ..	2,690		2,100
Sundries	50		
	982		
	3,722		2,100

The floating debt was increased by £585,000 to £788,045,000.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

AN EARLY RETURN TO GOLD.

WE reviewed in these columns last week the causes underlying the recent rise in the sterling-dollar exchange. We make no apology for returning to the subject this week, for we have, in the meantime, received timely information on the point from the United States; and there can be no doubt that hopes are growing on both sides of the Atlantic that the recent movement foreshadows an early return to parity and the resumption of the gold standard by Great Britain. If these hopes can be realised a contribution to world reconstruction will be made second only in importance to the introduction of the Dawes plan. Germany is nominally on a gold basis; but her footing is very precarious. If Great Britain returns to a gold basis she will soon be followed by the great Dominions and by other countries, among whom Holland, Switzerland, and Spain are likely to be the first. Theorists may have some ground for arguing that a paper standard might be made more stable than gold, but actual experience of paper standards is not encouraging. We are by no means clear of the period of paper chaos; 1923 saw the lowest exchange records for many countries of Europe, and in France and Belgium 1924 has even beaten the 1923 record. The most practical assurance of steady progress which can be given to the world would be a prompt return of a substantial part of the world to a gold basis.

Although there are, as we pointed out last week, some views in the outlook which justify a little scepticism, it seems that in many respects we have at the moment a blend of sentiment and economic conditions which is unusually favourable to a return to parity. This combination of circumstances may not last, and for this reason we should like to feel that the authorities concerned are well prepared, should the developments of the near future be favourable, to take action, and to take it quickly.

One of the favourable factors is the commodity price situation in the United States. The values of dollars and of sterling have been kept apart by the fact that the United States' prices have been low, and the price level in the United Kingdom relatively high. It has been a matter of surprise to many people in Great Britain that low money rates in the United States had not hitherto had the effect of raising prices. The cause of the surprise is now vanishing. Commodity prices in America are set for a rise. The upward movement has been started by the rise in wheat prices, caused by short harvests in many countries; it is being stimulated by the trade expansion which has followed the Republican victory in the Presidential campaign. In its final stages the Presidential election was fought on two slogans—"Coolidge means continued prosperity," and "If the election is thrown into Congress it will hold trade back for six months." Indeed, the election was in the end so much an issue between prosperity and stagnation, that many plans for expansion were held back until after November 4th. These influences, together with the fact that industry has for a long time been running on the basis of very low stocks, mean an expansion this winter, and with it must come a general rise in commodity prices. This rise might go a considerable distance without being checked, for the tariff is a barrier which has not yet had its full protective effect, while the monetary situation is such that considerable expansion can be financed without producing stringency. Some phases of this price advance—wheat, of course, is an example—are already communicating themselves to British prices, but the upward movement in Great Britain is not so likely to be a general one. For in the latter country another set of factors is keeping down such items, for example, as coal and steel, and the wage level is less

likely to become generally affected. It is, therefore, on the whole, probable that the margin between British and American prices—or, to put it the other way round, the difference in the value of money in the two countries—will narrow very soon. It must not, however, be assumed that the pound cannot get to par until there is complete statistical equality of price levels, for even in the days when we were all on the gold basis, such indices as then existed showed frequent, and some prolonged, divergencies of prices in England and America. Nor have we, indeed, to-day any certainty that our index numbers are measuring the right prices, and in the right proportions, for making an exact comparison. The price index numbers are, in fact, not an accurate enough instrument to show us at what moment a par exchange would be normal; but they will show, and are already showing, that prices are moving in directions which will tend to make a par rate normal.

Another, and perhaps for the moment a more potent, influence on the exchange is the movement of American funds to Europe, and particularly to Great Britain. America has subscribed for an enormous number of foreign issues in the last six months, and has—particularly recently—been transferring commercial balances to the European side to take advantage of higher money rates. While these transfers are being made they tend to make the demand for sterling bigger than the demand for dollars, and thus put up the price of the former. But—unlike a change in price levels—they have no permanent effect on the balance of payments, and, indeed, if short-term funds are withdrawn quickly, the return movement undoes the effect of the first. In so far, therefore, as such funds have been moved here to take advantage of an expected rise in the value of the pound, and will be moved away when the pound has risen, these investments, while helping the pound up, will make it difficult to keep it up. To the extent that short-term capital investments influence the problem, the condition needed is that English money rates should remain substantially above American rates, and keep money over here for some time.

Whether this is likely to happen or not is difficult to foresee. The American situation is complicated by a big Stock Exchange boom, and with trade expanding, and money moving to Europe, the resources of the banking system will have many outlets. But in spite of these varied demands, probably the balance of banking opinion expects low money rates for, say, two years to come—so great are the possible credit resources of the country. On the other hand, among a certain school the Stock Exchange boom and the enthusiasm for trade expansion is already causing disquiet, and a demand may soon be made for action by the Federal Reserve Board, through its rediscount rate, to check undue expansion. Whether any possible action would in present circumstances be effective is open to argument, but that it may be attempted later in the winter must not be ruled out of the possibilities, in view of the revived Press discussion on the perils of inflation. If we have read the signs correctly, the upward movement of sterling is backed by strong influences. On the other hand, we have previously had occasion to point out that as the pound approaches the dollar new influences enter in, which make the last stages increasingly difficult. The last stages may, therefore, have to be jumped by the announcement that on a certain date the freedom to export gold will be restored. Is there any likelihood that such an announcement will be made in the near future? We believe that if events move as we have suggested, and are favourable in the New Year, British opinion would strongly support the Bank and the Treasury in such action as might be necessary. Two years ago the pound sterling—in Mr Lloyd George's phrase—looked the dollar in the face and turned away. There is a very widespread feeling that it is time to put an end to the policy of drift.

Opinion in America is looking in the same direction, and there is no doubt that some form of co-operation could be arranged, or assistance given, in the New York market if it were thought necessary. This attitude is not the outcome of philanthropy. It is dictated by two motives of self-interest. On the one hand, American opinion regards the restoration of the pound as one of the key moves in the stabilisation of European conditions, and hence in the restoration of her chief market. On

the other, the wisest Americans realise that if the world does not resume the gold standard, the American monetary and banking system will be in danger of being broken down if it is flooded with the whole of the world's gold available as currency. Her power of absorption is not unlimited, and her responsible financiers will be greatly relieved when the golden flood is more evenly distributed.

THE ANGLO-GERMAN COMMERCIAL TREATY.

COMMERCIAL relations between Great Britain and Germany have been governed for nearly five years past by the rather one-sided conditions laid down in the Treaty of Versailles. As, however, these clauses were to run only for five years from the date of ratification—which actually took place on January 10, 1920—it had become imperative that negotiations should be resumed with a view to putting the whole question upon a definite basis. A German delegation came to London recently for this purpose, and on Tuesday last a new Commercial Treaty was signed between the two countries. The actual document was published yesterday, and follows, in the main, the familiar lines of agreements concluded upon the basis of the "most favoured nation." There is, therefore, to be no discrimination in either country in the treatment accorded to the nationals of the other, except in so far as such discrimination may apply to all foreigners without exception, while, in a number of respects, nationals of either country are to enjoy in the territory of the other the same privileges that are accorded to its own nationals. In general, and within the limits of the Treaty itself, "each party agrees not to impose, reimpose, or prolong any duties or charges which are specially injurious to the other party." In the event of any dispute arising as to the proper interpretation of the Treaty, recourse is to be had to the Permanent Court of International Justice, unless the two Contracting Parties otherwise agree.

In general, it may be said that the terms of the Treaty are exceedingly satisfactory, and ratification by this country may be regarded as a foregone conclusion, necessitating a certain amount of legislation to remove the disabilities placed upon German nationals by a number of British Acts. Although Germany is now going through a general election—polling actually takes place to-morrow—and the composition of the new Parliament is therefore a matter of speculation, it hardly seems conceivable that ratification by Berlin is seriously in doubt. At the same time, there appears to be a certain amount of disappointment in German circles that this Treaty has not finally disposed of the 26 per cent. duty imposed under the head of Reparations Recovery. The attitude of the Agent-General for Reparations towards this mode of payment is shrouded in a certain amount of mystery, and has occupied the attention of some sections of the German Press. Whatever the ultimate outcome will be, however, the German delegates have obtained some slight satisfaction on this point also, as is shown by the following Treasury announcement, which was issued on Tuesday night:—

"The British and German Governments have agreed that the practicability of some alternative method to the existing procedure under the German Reparation (Recovery) Act, not involving payments by individual merchants, should be discussed by the German Government with the Agent-General and the Transfer Committee, and that the British Government thereafter, if satisfactory arrangements can be reached, will endeavour, with a sincere desire for mutual agreement, to come to an understanding with regard to any modification which does not diminish the payments to the British Government."

The significance of the Treaty itself is much greater than a mere reading of the text would suggest. Here, at least, victors and vanquished have negotiated upon equal terms, and their agreement marks a definite step forward towards the establishment of normal conditions. In pre-war days, of course, the trade between the two countries was enormous. In 1913, for example, Great

Britain imported over £80 millions' worth of goods from Germany, while our exports totalled £40.6 millions, and re-exports £19.8 millions. Since the war, on the other hand, the volume of trade has been greatly diminished, and the balance has actually been "favourable" to this country, as may be seen from the following figures:—

JANUARY TO SEPTEMBER (000's omitted).				
	1922.	1923.	1924.	
Imports from Germany....	18,701	25,454	25,325	
Exports to Germany	24,384	33,014	31,016	
Re-exports to Germany....	13,643	14,308	21,293	

In 1913 Germany was the most influential buyer of our goods in the world, outside the Empire, her purchases representing 7½ per cent. of total British exports, and being exceeded only by those of India, who took 13½ per cent. of the whole. In the first nine months of 1924 Germany had sunk to fifth place in the list, being surpassed by India, Australia, the United States, and France, and her share in our total exports had declined to only 4½ per cent. The possibilities of expansion are clearly very great, and should be helped forward by the new Treaty.

At the same time, the prospect of a return of German banks to the City appears to be giving rise to rather mixed feelings in some quarters. The question raised is perhaps not so much the desire for discrimination against the German banks in particular, but rather the general position of the branches of foreign banks in London, which may conceivably increase considerably in importance as a consequence of the Treaty. In certain eventualities it does appear as a possible source of danger that foreign banks, with their assets abroad, should be able through their acceptance business to create claims on London, and thereby increase an eventual drain on sterling. In this connection, however, the nationality of the actual bank is not of primary importance, and, in any case, the Treaty will clear up a somewhat anomalous position. It seems, however, to be unlikely that British banks will avail themselves on any considerable scale of the permission to open up branches in Germany, though the possibilities for English insurance companies, which, incidentally, played an exceedingly important part in pre-war Germany, are sure to receive attention.

It is interesting to observe that the Treaty between Great Britain and Germany has been signed precisely at the moment when, according to all appearances, something approaching a deadlock has been reached in the Franco-German commercial discussions. Iron, steel, and coal naturally loom large in this connection, and there appears to have been a certain reluctance on the part of the German magnates to enter into an understanding with their French rivals without first attempting discussions on an international basis. This, of course, implies delay, and it now seems to be unlikely that the official negotiations will lead to a definite conclusion by January 10th next, when the present provisional régime comes to an end. The discussions, however, will be followed with considerable interest on this side, and we may hope that the new Anglo-German Treaty will prove the first step towards a general settlement of outstanding problems which await solution before world commerce can return to more normal conditions.

THE AGRICULTURAL CONFERENCE.

(BY A CORRESPONDENT.)

WHATEVER may be thought of the Government's "policy of inquiry" in dealing with certain urgent and difficult questions, it must be recognised that they have lost no time in starting the investigations they promised. With regard to agriculture, Mr Baldwin's pledge was in the following terms: "For a permanent solution of the agricultural problem a common agreement between all parties is desirable; and the Unionist Party, if returned to power, will summon a representative conference, in the hope of arriving at an agreed policy by which arable acreage may be maintained and regular employment and adequate wages secured to the agricultural worker." During the election the question was raised whether the intention was to call a conference of political parties or of agricultural classes. This remained uncertain, although the reference

The New York Trust Company

Capital, Surplus & Profits - \$28,000,000

COMPLETE INTERNATIONAL
BANKING FACILITIES

100 Broadway

New York City

to a "permanent solution" by "an agreed policy" appeared to point plainly to a political agreement. The point has now been settled, and a few days ago it was officially announced that the Government will summon a conference, representing landowners, farmers, and workers, "with the view to arriving at an agreement on the main features of a national agricultural policy." In the statement accompanying this declaration it is said that if such an agreement can be reached, the Government is of opinion that it could be presented to the country with a good prospect of acceptance. This is probably true, but, in any case, it is clearly within the power of the present Government to give legislative effect to any policy which it may adopt.

The precise reference to the conference is:—"To consider what measures, if any, are necessary either by the State, or by the agricultural industry itself, or by both in concert (1) to maintain, and (2) to increase the area of arable land in England and Wales, and by what further measures the economic maximum production of food from all the agricultural land of the country can be stimulated." The first question which naturally arises on these terms of reference is: Where does Scotland come in? Is it intended that any permanent agricultural policy which may be adopted shall stop short at the Border, or that Scotland shall adopt a separate, and possibly different, policy for itself? The area of arable land in Scotland, it is true, is not only proportionately larger, but it is more stable than in England and Wales, but it is noteworthy that, after its war-period expansion, it reverted to the pre-war level last year, whereas England did not do so until this year. In fact, the arable area in England and Wales, although it has fallen to 10,928,000 acres (as compared with 10,998,000 acres in 1914), is relatively larger than before the war. The total extent of land in agricultural use has diminished by 1,171,000 acres. In 1914 40.6 per cent. of the agricultural land was in arable cultivation, and this year the percentage is 42.2. It is therefore rather misleading to say that arable cultivation has declined below the pre-war standard. The position is clearly and reasonably set out in the statement of the Ministry of Agriculture to the effect that it is important to maintain, and, if possible, increase, the area of arable land so as to provide employment for a greater number of men, and also to obtain a larger amount of produce per acre. As to the desirability of this object, there is no dispute. The problem for the conference to consider is how it can be achieved and at what cost.

The Government have posed two questions. The Conference is to consider in the first place whether the present arable area will be maintained if nothing is done, and what measures, if any, can be taken to prevent its further reduction if that appears probable. In the second place, the Conference is to suggest measures which would secure an addition of not less than 1,000,000 acres of arable land, or, in other words, restore it to the level of 1920. In that year the index number of the prices of farm products was 192 per cent. above the pre-war level. It is now not more than 60 per cent. above. There has also been a

substantial, and even greater, fall, in the prices of fertilisers and feeding stuffs. But, notwithstanding this, farmers allege that they are worse off than they were four or five years ago, and to that fact they attribute the reduction of the arable area.

It will be observed, with satisfaction, that the Ministry of Agriculture takes a moderate, not to say modest, view of the possibilities. The restoration of a million of the lost acres is not an impracticable proposition, but its achievement would not effect any very great change. The old standard of the employment of three to four men per 100 acres of arable has been generally maintained in recent years, and there are many farmers working their land with a smaller quota. But the additional acres might at least be expected to provide employment for from 25,000 to 30,000 men, while, from the food supply point of view, they would grow wheat, in an ordinary rotation, sufficient to feed nearly 200,000 persons.

If these results can be achieved they will be welcome, but the Government may well wish that its supporters would moderate the enthusiasm with which the appointment of the Conference has been acclaimed. If it is wholly successful in its task, and the objects in view are completely attained, the dependence of the country on imported food can only be momentarily reduced, with a population which increases at the rate of some 350,000 per annum.

The Conference, whatever its results, will serve a useful purpose in bringing the representatives of agriculture face to face with the facts of the situation. The crude scheme of asking the taxpayers to pay considerable sums for vague and visionary benefits has little chance of acceptance by the public, which has, in fact, rejected it once. But there are methods by which arable cultivation could be encouraged, and greater production from the land secured, which would not involve the presentation of an annual bill to the Exchequer. The Conference may be expected to attack the problem with open minds, to explore the practicability of all proposals, whatever their origin, to contribute individually to the common stock of ideas, and collectively to approach their discussions in the spirit of compromise and conciliation. In many respects the time is favourable, and the auspices propitious, for a candid and courageous effort to place agriculture on a relatively stable basis, provided its representatives are wise enough to recognise the inexorable economic facts which control the destinies of the British nation.

Meanwhile the constitution of the Conference appears to present difficulties. The discretion which the Minister of Agriculture displayed in framing the reference to the Conference and defining its scope failed him in arranging its personnel. In forming a deliberative and advisory body to represent the whole agricultural interest, it was not well advised to rely upon only five organisations, however important. The result is that one, at least, of the organisations has already attempted to make conditions, the effect of which, whether intended or not, is to jeopardise the whole scheme. The National Farmers' Union has

demanded, in substance, that the Government should define its agricultural policy before the Conference meets. Obviously, if the Government does this, the Conference is a waste of time, and it may be that this is the view of the National Farmers' Union. In that case their attitude is intelligible, although it is somewhat unexpected.

OUR INDEX NUMBER.

CHANGES in commodity wholesale prices during November produced a slight decline in our Index Number, the total of which at 4,833 shows a decrease of 14 points, as compared with the end of October. There were no outstanding changes during the month, but on the other hand the primary foodstuffs and textile groups record a considerable decline following the previous month's substantial increase. The present slight decline still leaves the total very much higher than it was two months ago, the rise during October having amounted to 118 points. The following table shows the changes in each group and the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Ber. Oil, &c.).	Total.	%
Index (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914 ..	579	382	616	464	553	2594	118.6

Nov., 1924 ..	1009	801	1424	797	801	4833	219.7

Imported wheat is a little higher on the month, but the home-grown variety is lower, the general quality of the English crop turning out better than was expected. Other cereals were also lower, but there was a slight rise in neat prices. The rise in other foodstuffs is entirely accounted for by coffee, which rose by 17 points in October and 15 points in November. Estimates of world production for 1924-25 show a pronounced decline, as compared with the previous year, and fall far short of the expected consumption. In the textile group cotton prices are practically unchanged, but British wool has advanced. This increase was offset by a decline in flax, and there were also declines in silk, hemp, and jute. In the minerals group the only change of importance was a rise of 13 points in lead. A decline in timber prices is responsible for the drop shown by the miscellaneous group. In the table below we show the changes in the index number of each separate commodity in comparison with the figure at the end of October, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.

These movements reduce the percentage increase over the July, 1914, level from 89 to 88.4 per cent. Recent movements in this figure and in the percentages for the five groups are shown in the table below, in which the indices for July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
Dec., 1922	149	200	193	152	146	166.2
Dec., 1923	148	231	225	167	136	178.6
Mar., 1924	155	240	213	173	141	181.0
June, 1924	158	210	219	164	139	176.6
Sept., 1924	173	221	226	164	143	184.4
Oct., 1924	177	224	234	169	146	189.0
Nov., 1924	174	228	231	172	145	188.4

The lowest percentage increase recorded this year was 76.5 at the end of May. At the end of November, 1923, the figures stood as follows:—Cereals and meat, 144; other food, 226; textiles, 226; minerals, 166; miscellaneous, 135; and total, 177.0.

IRISH LINEN.

WHEN we consider that the business of linen manufacture comes into direct competition with the cotton trade as to finer fabrics, and with the jute trade as to coarser goods, it is perhaps not to be marvelled at that the linen industry of this country has made such moderate progress during the past three-quarters of a century. The cotton industry has, of course, gone forward with giant strides, and the comparatively youthful jute trade has increased its overseas business tenfold, while the linen trade merely succeeded just before the war in re-establishing its exports at a level reached 50 years before. The contrast is remarkable, but there are sufficient reasons to explain the position and to absolve our linen manufacturers from any charge of backwardness or lack of enterprise.

The records of overseas business in linen goods are easily accessible for a long term of years, and from them the following table, covering the 65 years before the war, has been compiled:—

OVERSEAS TRADE IN LINEN MANUFACTURES (not including yarn.)

Five Years' Averages.	Exports.			Gross Imports.	Excess of Exports over Imports.
	Piece Goods.	Other Goods.	Total.		
	Mill. yds. Thous. £.	Thous. £.	Thous. £.	Thous. £.	Thous. £.
1849-53	..	..	4,108	..	..
1854-58	..	..	4,351	..	..
1859-63	147.0	4,582	399	4,981	..
1864-68	227.0	7,783	509	8,292	..
1869-73	223.0	6,939	478	7,417	178
1874-78	180.2	5,658	618	6,276	239
1879-83	167.6	5,018	695	5,713	268
1884-88	161.8	4,194	1,087	5,281	340
1889-93	170.7	3,952	1,340	5,292	406
1894-98	169.3	3,611	1,199	4,810	370
1899-1903	159.5	3,904	1,355	5,259	606
1904-08	174.6	4,856	1,588	6,444	781
1909-13	209.0	5,915	2,152	8,067	1,026

In this, the first thing that strikes one is the enormous jump in exports as early as the 'sixties of last century, when they reached figures never since repeated. Of course the American Civil War of 1861-65 was the cause, for it raised our shipments to the States from three-quarters of a million sterling in 1861 to nearly 4½ millions in 1866, and they were kept at well over three millions on the average for eight years longer. It also produced a great inflation of prices. So much so, that if the same rates had ruled just before the war, the 209 million yards of piece goods sent abroad annually in 1909-13 would have been worth nearly 7½ millions sterling instead of less than six millions as actually recorded.

Equally striking is the contrast between the comparative stagnation in piece goods and the growth shown in

all other goods. These other goods comprise thread for sewing, in which there has been no great progress, handkerchiefs and table linen not in the piece, and unenumerated articles. Unfortunately, handkerchiefs and table linen not in the piece were not shown separately until 1914, when they formed rather more than half of the total of goods not in the piece. It seems not unlikely that the proportion may have been the same in previous years away back to the 'sixties, in which case half of the increase of 1½ millions shown in "other goods" in the above table would be due to handkerchiefs and table linen.

A significant feature of the table is the steady growth of imports, and it should warn leaders in the trade that they must be prepared for strong competition from the Continent when post-war conditions have become thoroughly settled. Imports were in 1913 derived as follows:—

	Piece Goods.	Other Goods.	Total.
	£	£	£
From Belgium	489,000	70,000	559,000
Germany	51,000	304,000	355,000
France	130,000	28,000	158,000
Austria-Hungary ..	..	17,000	17,000
Japan	..	50,000	50,000
Other countries ..	24,000	31,000	55,000
Total	694,000	500,000	1,194,000

* Not specified.

The overwhelming preponderance of Belgium in piece goods, and of Germany in other goods, is remarkable. It would seem that these are the countries to be watched, as pre-war conditions are more closely approached. An examination of post-war records shows, indeed, that Belgium has already resumed her position as a principal supplier to this market.

The post-war figures, contrasted with the last five years of the pre-war period, are as follows:—

COMPARISONS, POST-WAR, and PRE-WAR.

	Exports.			Gross Imports.	Excess of Exports.
	Piece Goods.	Other Goods.	Total.		
	Mill. Yds. Thous. £.	Thous. £.	Thous. £.	Thous. £.	Thous. £.
1909-13	209.0	5,915	2,152	8,067	1,026
1914-18	125.1	5,906	2,617	8,523	361
Single Years					
1919	76.9	7,805	3,490	11,295	167
1920	93.0*	14,935	7,209	22,144	727†
1921	40.0	5,249	4,402	9,651	302
1922	77.4	7,070	4,509	11,579	338
1923	89.7	7,043	4,692	11,735	693

* Square yards in 1920 and after. † Linen lace and embroidery added in 1920 and after.

Imports, it will be seen, have revived, but not sufficiently to cause our manufacturers any anxiety so far. They are considerably lower than in the pre-war years, in spite of the much higher prices now ruling. Exports, on the contrary, are nearly 50 per cent. above the pre-war level. This, of course, is due to the rise of prices, since the yardage of piece goods is much lower now than it was then—even if we make all reasonable allowance for the records being now in square yards, whereas before 1920 they were in linear yards.

How far prices have risen will perhaps best be indicated by contrasting the price of imported raw material. For the five years to 1913 this averaged about £48 per ton. It rose in 1915 to over £74; in 1916 to over £90, in 1917 to £155, in 1918 to over £159, in 1919 to more than £263, and in 1920 to well over £400 per ton. In the following year there was a drop of more than 50 per cent., and by 1923 the price had come down to slightly less than £96 per ton. This still left it, however, at 100 per cent. more than the average figure for the five years immediately preceding the war.

The bulk of the raw material is imported. Supplies landed here in 1909-13 averaged over 75,000 tons a year, whereas for 1922 they were 31,000 tons, and for 1923 only 27,600 tons. Home-grown supplies have during the last 15 years never exceeded 17,020 tons, and for 1922 were only 5,548 tons. It is regrettable that flax supplies should be so scarce and dear, and unhappily the prospects this year are for higher rather than lower quotations.

ALL BRANCHES OF
INTERNATIONAL BANKING

BANKERS TRUST COMPANY

HEAD OFFICE, NEW YORK.
16 WALL STREET

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendome

In pre-war times Russia and Belgium were the principal sources of supply. Of the 84,000 tons imported during 1913, 68,000 came from Russia, and 14,000 from Belgium. In 1923, out of the 27,600 tons landed, only 3,000 came from Russia, and 7,700 from Belgium. Of the remainder, however, a considerable proportion was derived from territories formerly included in Russia.

This question of supplies is one of the main handicaps of the industry at present. At the annual dinner of the City of London Wholesale Linen Trade Association recently one of the speakers declared that manufacturers were hoping for cheaper flax, so that they might "knock the cotton fellows out," a remark which called forth good-humoured laughter, as some representatives of the "cotton fellows" were present. If flax could be procured at 50 per cent. advance on pre-war values, the laudable ambitions of the "linen fellows" would be greatly aided.

It is somewhat remarkable that the United States, which gave the British industry its first great "lift," should still remain, in spite of all the intervening tariffs, its best customer to-day. Here are that country's purchases of all classes of goods:—

	1920.	1921.	1922.	1923.
Piece Goods—				
U.S.A. mln. sq. yds	45	24	45	52
All other countries ..	48	16	32	38
Handkerchiefs—				
U.S.A. thous. dozs	1,275	1,098	1,372	2,041
All other countries ..	752	310	583	786
Damask Table Linen—				
U.S.A. thous. £	1,779	1,448	1,446	1,142
All other countries ..	472	357	342	478
Thread—				
U.S.A. cwt	1,924	1,113	2,568	3,110
All other countries ..	25,882	12,273	17,177	19,979
Made-up Canvas Goods—				
U.S.A. thous. £	1	8	11	10
All other countries ..	920	500	329	438
All Other Manufactures—				
U.S.A.	661	423	503	451
All other countries ..	508	232	277	394

It will be seen that in every line save made-up canvas goods and thread the United States takes more than all other countries in the world combined. In canvas goods—which consist of rick-covers, tarpaulins, tents, awnings, and similar articles—the largest purchaser in 1920 was Argentina, and in 1923 British India. As to thread, Australia was at the top of the list in 1920 and in 1923.

The enormous preponderance of America in most lines is impressive, but in some cases it is no greater than it was in 1913. Of piece-goods, for example, America took about 57 per cent. of the quantity shipped in 1913 and in 1923. Most of the other lines cannot be exactly compared. If we take the value of all linen manufactures, however, the comparison is as follows:—

	1913.	1923.
	£	£
Total exports	8,248,000	11,735,000
To U.S.A. only	3,925,000 (47%)	6,014,000 (51%)

On the whole, the change in America's proportion is small, and we do not know that it is altogether in the desirable direction. This great dependence on the custom of one country involves a considerable element of danger,

and it is to be hoped that when the foreign exchanges become more settled, and Continental purchases are thus made easier, the export trade may tend towards a wider distribution.

As against this element of danger, there are certain considerations which point in the opposite direction. For a while the beauty and durability of linen goods cannot be surpassed, and it is difficult to conceive any change of fashion or taste that is likely to alter this. Here, then, we have one element of safety for the trade, and it is reassuring to note from the first two tabulations given above that for 60 years past goods not in the piece (which include table linen) have steadily grown from about 8 per cent. of the total exports in the early 'sixties of last century to about 26 per cent. just before the war and 40 per cent. in 1923. Indeed, this section of the export trade has in the whole period been multiplied nearly twelvefold, and even before the great rise of prices caused by the war it had been multiplied about sixfold.

Now let us see how the trade has progressed so far this year. We have already found that the position in 1922 and 1923 was good. The following table shows that this year it is even better:—

LINEN TRADE 10 MONTHS TO OCTOBER.

	1922.	1923.	1924.
Imports	254 ..	563 ..	858
Exports	9,702 ..	9,756 ..	10,934
Excess of Exports.....	9,448 ..	9,193 ..	10,076

To October of this year, exports of piece goods have already reached nearly 93 millions of square yards, as against 90 millions for the whole of 1923 and 77 millions only in 1922. Out of this the United States was responsible for 56 million square yards, or over 60 per cent. of the total. Handkerchiefs, too, are up by 50 per cent. in quantity and value, and the total for these goods for 1924 will be well over a million sterling.

HOTEL COMPANIES' PROFITS.

ADDITIONAL interest is lent by the fact of the Wembley Exhibition to an examination of the results of hotel companies whose figures are analysed in this article, as it is possible to form some idea as to what effect the exceptionally large influx of visitors to London has had upon profits. Naturally, those hotels whose financial year corresponds with the calendar year will not be able to show how they benefited from the patronage of Exhibition visitors until their 1924 results are published, but those companies whose year ended at any period from June 30, 1924, onwards, can be said to have felt some of the effect of the visitors who flocked to London from all parts of the world to visit Wembley. Our first table shows dividends declared over a period of years upon shares of a number of companies:—

	1913-14	1914-15	1915-16	1916-17	1917-18	1918-19	1919-20	1920-21	1921-22	1922-23	1923-24

* Free of tax. † Ordinary. ‡ Year 1923. § For 7 months to end of 1922.
(a) Pref. ord. shares

Some interesting facts are revealed from a glance at the above table. The Piccadilly Hotel pays the record dividend of 250 per cent. on its small ordinary capital of £15,000. This huge dividend is explained by the directors to be due to the fact that they have paid off the whole of the £250,000 6 per cent. participating debenture stock; it has also been possible to amalgamate the company's reserves, and the general reserve now stands at £150,210. The Carlton pays 12 per cent., against 10 per cent. a year ago. The Burlington pays a dividend of 5 per cent. after an interval of 14 years, and the Waldorf pays 10 per cent.

on its ordinary shares, against 8 per cent. for previous year.

In the next table we set out the gross profit and net profit of these companies for the past three years, adding comparative figures for 1913-14:—

Company.	1913-14.		1921-22.		1922-23.		1923-24.

* Trading profit. † Year 1923. ‡ For 7 months to end of 1922.

The Burlington is able to show excellent results. Figures for the Carlton are up to August 31, 1924; to what extent the increase of profits from £46,064 to £62,465 is on account of the influx of visitors to London we are not informed. The Frederick Hotels issue accounts to June 30, 1924, but here profits are normal. The 'Gordon Hotels accounts are to the end of 1923. Accounts for the Cecil are to August 31st last, but profits show no increase. Figures for the Langham are to the end of 1923. Good progress is shown by the Piccadilly, to which we have already referred; accounts are to the end of July this year, but it is stated that the increased profit was made before the Wembley Exhibition opened. The Savoy figures are for the year 1923. This year we regret to find that Smedley's no longer publish gross receipts. It would be interesting to learn the reason for not producing these figures, as profits are only slightly lower. Earnings of the Strand Hotel are a little higher, the accounts running to September 30, 1924.

Our next table shows comparative figures of principal assets and liabilities for the past four years:—

† Includes claim against Government for expenses of reinstatement and loss of goodwill.

In the above table perhaps the most remarkable movement is that of falling stocks. With the exception of the Cecil, Savoy, Smedley's, and Waldorf, all stocks show automatic

reductions over a period of years. Reference has already been made to the capital reduction of the Piccadilly. Having paid off £6,320 income bonds, the Burlington shows a slightly lower capital. Redemption of debentures goes on steadily by the Carlton and other companies mentioned. Reserves have also been strengthened in many cases, but big reserves are not an outstanding feature in the hotel industry, and our table brings this fact into prominence. Properties reveal no extraordinary change.

In our final table we show the movement in share prices over past two years, also present yields:—

	Prices of 1923.		Price of 1924 to Nov. 30.		Price End Nov., 1923.	Price End Nov., 1924.	Present Yield.

* £10 shares.

The hotel industry is one which has become well stabilised in this country. In particular in London it has reached a remarkable degree of excellence. Expenditure to a casual observer appears to be on a lavish scale, but apparently the best patrons are pleased with results; and while substantial dividends are declared, we do not see much chance of the complaint as to high charges from more humble members of the community receiving much attention. Perhaps other companies will come into being, emulating the excellent example set by the Strand Hotel, Limited.

THE MEXICAN PROBLEM.

(BY A CORRESPONDENT.)

THE politics and economics of Mexico present many baffling problems to the outside observer, and apart from the large amount of British and Canadian capital involved in Mexican enterprises, the situation in that country has at present a special interest in view of the diplomatic breach with Britain over the murder of Mrs. Rosalie Evans and the summary dismissal by the Mexican Government of Mr. H. A. C. Cummins, and other British representatives. In the satisfactory settlement of this quarrel Mr. Austen Chamberlain will find a delicate and urgent task claiming his early attention at the Foreign Office. However, there is now a good prospect that domestic circumstances may bring the Mexican Government to a less truculent mood. On December 1st President Obregon will turn over the reins of government to his protégé and successor, General Plutarco Elias Calles, who has just completed a pilgrimage through Europe and at the time of writing is making his way home by easy stages through the United States. Calles owed his nomination to Obregon's influence; and the large popular majority which he piled up over his conservative opponent, Flores, owed something of its size to the vigorous exercise of its extensive patronage power by the Obregon Government; the defeated party also allege that the manipulation of ballots outraged the ordinary accepted standards of Mexican elections in this respect, but such charges receive scant attention in Mexico. Calles, however, like Obregon, finds his political strength in the backing of the agrarian radicals and the labour element in the industrial centres, and his course must be steered to meet their views. After his election he declared that all the efforts of his Ministry and himself "will be directed to the betterment of the oppressed," and he announced himself a believer in the international eight-hour day and in liquor prohibition. On general economic problems he professes a creed of mild Socialism, and cable reports of his steady predilection for the society of advanced Socialist politicians during his European tour aroused grave forebodings both in Mexico and the United States. However, during his journey through the United States he had been

BANK ESTABLISHED IN 1864.

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

making speeches calculated to reassure the American investor, and recently declared that his Government, when it takes office, will have no disposition to take over the property of any American oil company, and will welcome American capital or any other capital for the development of Mexico. The general tone of his speeches shows a marked anxiety to conciliate American opinion, and a compelling motive lies behind it.

President Obregon is anxious to hand over, and President Calles is equally anxious to receive, a Treasury that is not quite as bare as Mother Hubbard's cupboard, and this object can only be achieved by the success of a loan which is now being floated in the United States. For some mysterious reason the Mexican Government has not selected as their agents one of the well-known American banks or financial houses, but have entrusted the business of underwriting and flotation to a comparatively little known firm of Texas financiers. A fortnight ago the head of this firm announced that he had placed 65 per cent. of the bonds, and would soon dispose of the balance at favourable rates, but within the last week President Obregon has stated in an interview that his Finance Minister has so far given him no report whether the bonds have been taken up or not. Without questioning the probity and ability of the firm in question, there is some disposition in American financial circles to doubt their capacity for the successful flotation of a \$50,000,000 loan.

One distinguishing feature of Mexican public finance is the perennial absence of any regular budget statement. The President's annual message at the opening of Congress each year always teems with abundant and glowing prophecies about the volume of prospective revenue in sight, but the country never receives a business-like statement of what has actually been received and expended during the previous year, nor will the Ministry of Finance deign to disclose any concrete figures. A special committee appointed by the Chamber of Deputies to report on the probable income of the Republic for the year 1925 has recently concluded its labours, and has estimated that the total revenues from all sources will be in the neighbourhood of 286,000,000 Mexican gold pesos. Their report made no mention of the probable expenditure, but Deputy Fabella, the chairman of the committee, intimated that another committee would be set to work on budget expenditure, and also expressed the view that at least 70 million pesos of the estimated income must be earmarked for Mexico's obligations on what he called "external commitments." The assumption is that in this amount is included the money necessary to pay overdue interest on the bonds covered by the Lamont agreement, the indebtedness to mercantile firms for goods supplied on credit to various departments, and the back pay due to many Federal employees. Since it is unlikely that the public expenditure for the coming year will fall short of 300 million dollars, the Calles Government will start out with a heavy handicap if 20 per cent. of its prospective income has to be absorbed in payment of overdue debts. The interest of President Calles in the success of the new loan is therefore intelligible.

But, whatever may be its fate, Mexican politicians and officials remain incurable optimists, and although the Treasury is at present practically bare, the project for the establishment of a State bank with a monopoly of the right of issue is talked of as being on the eve of consummation. There is a vigorous demand in some quarters that the proceeds of the loan be devoted to this enterprise, but in the

end they will probably be allocated to more urgent needs. However, recent visitors to Mexico report that commercial and financial conditions are distinctly on the upgrade. Since Huerta's recent rising, which Obregon crushed with the surreptitious assistance of the United States, merchants have been loath to buy and keep anything above a bare minimum of stocks, and banks have also been curtailing their loans. But now that the elections are over, and the new President has announced a Cabinet whose personnel is reasonably satisfactory, merchants are replenishing their stocks, and banks are showing a willingness to accommodate them with loans on anything like decent security. There have been disturbing rumours about the impending collapse of the oil industry, but the Ministry of Industry and Commerce gives its authority to some reassuring statistics. In 1923 the total production of oil in Mexico reached 149,584,856 barrels, and although in the first half of 1924 the oil production was only 71,231,066 barrels, yet this total exceeded by 306,429 barrels the production for the first half of 1923. It is true that some famous old fields show signs of petering out, but new wells are being constantly brought in, and if British capital is at present rather shy of the country, the plenitude of capital in the United States provides an ample reservoir for financing attractive ventures.

Apparently, if political stability could be guaranteed, Mexico could count upon a quick economic and financial recovery, but it is exactly about this antecedent condition that doubt exists. The Cabinet selected by President Calles meets with no serious criticism except from its partisan enemies, and contains some figures of undoubted capacity and proved integrity; several of its members have enjoyed the benefit of education at American colleges, and one of them, Eduardo Hay, the Postmaster-General, who has served as Ambassador to Switzerland and Italy, is the son of a Scotch mining engineer. Calles himself is a large landowner, with extensive estates in the province of Chihuahua, and he has committed himself to a policy of very drastic agrarian reforms. Before his election, part of the properties owned by himself and Senor Saenz, the Foreign Minister, had been apportioned as communal grants to villages by the National Agrarian Commission which Obregon had appointed to deal with the land problem. Calles and Saenz had been fighting in the courts for the recovery of their land, but their efforts have failed, and the question now at issue is the amount of compensation to be paid them. Now that Calles is President, the amount which will be paid him for his 2,500 acres that have been taken is of great interest to all other landholders. Already a great deal of land has been expropriated by the Commission, but no settlement about compensation has so far been made, and as a great deal of property owned by Americans is involved, this problem has been a stiff bone of contention between Washington and Mexico; a number of British-owned estates are likewise interested.

There are at present signs that Calles will return to Mexico to face substantial domestic troubles. Luis Morones, an influential Labour leader, who gave him great help during the election, has quarrelled with him and withdrawn his support. On the other hand, the beaten opposition are reported to have secured the co-operation of important military chiefs in plans for a fresh revolution. Everything is said to be in readiness for the blow if President Calles on his return will not give what are described as "satisfactory declarations of security" to the conspirators. The Government party declare that as the rank and file of the army remains devoted to Obregon, and the plans of the conspirators are known, the movement can easily be suppressed, but there is undoubtedly some nervousness in official circles. Notoriously, oil interests have played a very unsavoury and discreditable part in Mexican politics in the past, and the suspicion prevails that anxious landholders and oil entrepreneurs may be backing the conspirators in order to secure by way of blackmail definite guarantees that Calles will pursue safe conservative policies, and not countenance any schemes of confiscation. Any real *volte face*, however, from his previous professions and pledges would ruin his credit with his supporters, and might lead to trouble from another quarter. Accordingly, under the circumstances, skilful statesmanship will be required to

ensure the political stability which is Mexico's primary need.

The breach caused by the Evans' episode with Britain should be easy to heal. The Mexican Government at first intended to confine the quarrel to Great Britain, but a statement issued on November 5th announces that their representatives will be withdrawn on November 20th from all British territory, including the Dominions. However, a qualifying clause, "if relations between the two countries are not improved by that date," and the further announcement is made that business intercourse between them need not terminate, as shipments from British ports to Mexico can be made without the usual consular documents, and can be forwarded direct to the port of entry, where invoice charges and the usual consular fees will be collected. President Calles can scarcely desire to have on his hands a prolonged controversy with Britain, and the impression is that certain powerful influences are at work to bring about a renewal of friendly relations. However, the great danger is that various interests who are afraid of Calles' Radicalism, and its effect upon their holdings, will try to bring pressure upon both the British Foreign Office and the State Department at Washington for the exaction of pledges from the Calles Government that all vested interests, whatever their origin, will be respected, and ample compensation paid for any expropriations. Such tactics have been employed before against weak communities with deplorable results, and if there could be one thing more dangerous and discreditable than a rivalry in economic Imperialism between Washington and London, it would be a co-operative combination for its promotion. The economic Imperialism which the United States have been practising in Central and South America during the last decade has brought them great distrust and unpopularity, and Mr Austen Chamberlain should be shrewd enough to realise that a contrary policy is likely in the end to redound to British political prestige and commercial interests.

Notes of the Week.

The Egyptian Crisis.—The most serious development towards the end of last week was the revolt of two platoons of a Sudanese infantry regiment in Khartoum. Happily, since its suppression on Friday morning, the Sudan has been reported quiet, and there seems no reason to suppose that the disaffection among the Sudanese troops is widespread. Meanwhile, the last Egyptian troops have left the country. In Cairo, on Sunday afternoon (November 30th), the new Government of Ziwar Pasha accepted those points in the British ultimatum which Zaghul Pasha's Government had rejected—that is, the terms regarding the Sudan and those regarding the status of three foreign officials in the Egyptian service. These officials are the judicial and financial advisers and the Director-General of the European Section of the Department of Public Security. The precise extent of their future powers has been defined, and it is stated semi-officially that these powers are simply those which were agreed upon at the time of the British declaration of February 28, 1922. The point is somewhat obscure, for the status of these officials surely remained *in statu quo* at that date in so far as their duties related to the reserved subject of the protection of foreign residents, while otherwise the Egyptian Government presumably obtained full liberty to remodel these offices as it chose in virtue of the British recognition of Egyptian independence. If there was an understanding on this question in 1922, it must have been of an informal character. It has also been stated that "various questions of detail arising from the demands in regard to the Sudan—the withdrawal of Egyptian troops and the Gezira irrigation area—may come up for discussion, but were not discussed in the conversations that have ended in agreement." Meanwhile, the acceptance of the ultimatum by Ziwar Pasha has been treated as adequate, and the British detachment which had seized the Custom House at Alexandria has been withdrawn. It is perhaps permissible to infer that the British Government has intentionally left open a door for the modification of this part

of their demands—especially the clause regarding the Nile water, which has been criticised in many quarters, especially in a moderate and weighty speech by Mr MacDonald. It may be proved ten times over that there is enough water in the Nile for both Egypt and the Sudan, just as it might have been proved before the Great War that there was enough room in the sea for the navies of Germany and Great Britain. No nation, however, will be content to see an element on which its life depends pass under another nation's control. This is not a question of hydrography, but of psychology, and it can only be settled by negotiations between the British and Egyptian Governments on an equal footing at some more propitious time than the present. In touching upon the Sudan in his speech at the Nonconformist Unionist luncheon on Wednesday, Mr Austen Chamberlain confined himself to arguing that the Government's demands were merely an execution of the measures foreshadowed in Mr MacDonald's dispatch after the abortive visit of Zaghul Pasha to London a few weeks ago. This treatment of the question is somewhat barren from any but the party point of view. Much more important was Mr Chamberlain's attitude towards the suggestion that the Egyptian situation should be referred to the League of Nations—a suggestion which, incidentally, had been taken up by Mr Lloyd George a few days before he was elected sessional chairman of the Liberal Party in Parliament. While Mr Chamberlain definitely pronounced the opinion that "what has occurred in Egypt does not come within those provisions of the Covenant which invite or suggest the interference of the League," he took great pains (and in this he spoke explicitly in the name of the whole Government) to express deference for the League and a desire to support it by his personal attendance at the forthcoming meeting of the Council. He went on to say that he would "gladly give the Council any information as to what has occurred or as to the reasons for the policy which His Majesty's Government has pursued." This declaration, and the spirit in which it was made, are to be welcomed. It gives us hope that, in Rome, Mr Chamberlain may do something to restore that confidence abroad in the moderation of British policy which undoubtedly received a rude shock at the news of the ultimatum. It is also an extremely prudent step from the practical point of view, for, in regard to the Sudan, our judicial difficulties have hardly yet begun, and a mandate from the League may still offer us the only satisfactory alternative to that joint Anglo-Egyptian trusteeship which has just broken down.

President Coolidge and Europe.—President Coolidge's second annual message to Congress follows lines which could naturally be foreseen fairly clearly by all close students of the Presidential election campaign. It contains, nevertheless, a number of passages which deserve the close attention of European readers. One concerns the Immigration Law. This law, Mr Coolidge pronounces to be "in principle necessary and sound," although he would like to see it "rendered a little more humane for the purpose of permitting those already here greater latitude in securing the admission of members of their families." But the main interest centres, of course, on his references to armaments, inter-Allied debts, and international co-operation for peace. While re-affirming refusal to join the League of Nations, Mr Coolidge emphasised in terms very welcome in London his determination to prosecute the aim of disarmament, and expressed strong approval of efforts to outlaw war. He favours the adherence of America to the protocol establishing the International Court of Justice with certain reservations, and mentions the hope of arranging a disarmament conference, although he sees the necessity of first awaiting the decisions of the other Powers on the proposals that have already emanated from Geneva and are now under consideration by the members of the League. Naturally, in addressing a Congress that is nearing the end of its days, the President observed restraint in his speech. But from what he actually said, Europe seems justified in deducing that his attitude towards European problems will be increasingly helpful. A reference to foreign debts was called for by

the fact that legislation is needed to prolong the life of the American Debt Funding Commission, which is otherwise due to expire on February 8, 1925. On this subject Mr Coolidge said: "I am opposed to the cancellation of these debts, and believe it for the best welfare of the world that they should be liquidated and paid as fast as possible." Here, too, his language is, quite explicable, guarded and throws little light on the prospects of the inter-Allied debt conferences. French delegates are now in Washington discussing the funding of the French debt to the United States, and in Paris Mr Churchill will shortly raise the whole question of inter-Allied debts in general and of the French debt to Great Britain in particular. It is in our eyes obviously unreasonable that France, who has two great creditors, should make a composition with the one and take no steps with regard to the other. We believe that there is strong support in Paris for the view that a Franco-American debt settlement should not be made unless a simultaneous and equivalent settlement is forthcoming of the Franco-British debt. The two creditors must be treated alike and together. It is both unbusinesslike and unjust that both France and ourselves should pay to America, while we receive nothing from France. Less sound, however, is the suggestion which finds favour in some sections of the British Press, that Great Britain should demand any privileges and concessions in the matter of debt repayment that Washington may concede to France. Any concessions that America might voluntarily make to Great Britain would, of course, be very welcome. But in this matter we cannot attempt to occupy the same ground as France. We have made our own bargain (good or bad) and must stand by it, unless the United States volunteers a revision. Moreover, in the case of France, some moratorium is essential, while Great Britain could not produce any case for a moratorium. If a scheme on the lines of the Dawes plan was applied, by which payments to the United States were limited by exchange possibilities, the result would be large payments by Britain and small payments by France. The inter-Allied debt problem requires handling not unilaterally, but as a whole. Hitherto the deadlock over Reparations has made a settlement impossible. Now, with Reparations settled, the task of placing inter-Allied debts on a sound basis should no longer present insuperable obstacles to statesmen who approach it with courage and goodwill.

The Government and Protection.—Although the new Parliament met on Tuesday, the whole of the week was occupied by the preparatory formalities of re-electing Mr Whitley as Speaker—no other choice was thinkable—and of swearing-in the members. Real business will begin on

Tuesday next, and already we are treated to forecasts of the King's Speech. Much of its contents is, of course, a foregone conclusion, but there is room for considerable speculation as regards the references which it may contain to Tariffs and Imperial Preference. In this respect we are exceedingly disquieted by what looks very much like an inspired forecast of the Speech in Thursday's *Times*. According to this forecast, the Speech will contain "an intimation that the Imperial Preference Resolutions will again be submitted to Parliament, probably in next year's Budget." To re-submit them in full would, as we pointed out last week, violate both the letter and the spirit of Mr Baldwin's pledge. Further, we are told from the same source that among the domestic matters to be dealt with in the King's Speech is: "A new Safeguarding of Industries Bill, to give industries, when they have proved their case, protection against unfair competition, from whatever part of the world it may come." At the time of the election we warned our readers that Mr Baldwin's election manifesto left the way open for extensive piecemeal tariff experiment of a dangerous order. Obviously, if any such phraseology as that which the *Times* suggests finds its way into the Speech, Free Traders of all political parties must join issue at once. We should have imagined that Mr Baldwin must realise that his sweeping victory at the polls would have been quite impossible had not the tariff issue been hidden in the wings while the Socialist ogre took the centre of the stage. We shall not believe, unless and until we actually see it in the King's Speech that Mr Baldwin will allow the exuberance of his protectionist colleagues to triumph over the lessons of bitter experience so far as to allow him to lead Protection on to the centre of the stage naked and unashamed. If he really takes this course, it will mark a completely distorted interpretation of the meaning of the polls, which will without doubt bring Nemesis in its train. In his "Victory" speech at the Albert Hall on Thursday evening, the subject was rather noticeably avoided.

Australo-Canadian Preference.—There is still some uncertainty, writes our Ottawa correspondent, about the fate of the Australo-Canadian commercial treaty, whose terms are now fully known. Australia gives Canada British preference rates on fish, newsprint in rolls, writing and typewriting paper, textile gloves, linotype and other printing machines, typewriters, rotary grinding machines, adding and computing machines, and cash registers. The Australian intermediate tariff is given Canada on corsets, iron and steel tubes or pipes of specified diameter, rubbers, rubber boots, shoes, chassis, unassembled or assembled, and vehicle parts. The chief concessions which Australia secures from Canada are the British preferential rates on dried fruits and dairy products, and the French Treaty rates on wines, brandy, and champagne. Apparently, the treaty has now passed the Australian Parliament, but it is far from popular with local Protectionists in that country, and the *Melbourne Age* has been conducting a vigorous campaign for its annulment, on the ground that the Bruce Government has merely handed out a series of favours to American trusts which have branches in Canada, and it is true that establishments of this character will get the chief benefit from the Australian reductions. The treaty still awaits endorsement by the Canadian Parliament, and the *Graingrowers' Guide*, which is the chief organ of the Progressives, has been criticising the alterations in the dried fruit duties, upon which the Australians have been very insistent. Formerly, all raisins, regardless of their origin, paid a duty of two-thirds of a cent per lb, but henceforth Australian raisins will enter free, and other raisins will pay 3 cents per lb. Australian raisins have been making good headway in the Canadian market, but the volume imported is as yet only about 1 per cent. of the supply secured from the United States. The object of the change is to turn over to the Australian raisin grower the market now largely held by California, but the process of transition is going to be very expensive for the Canadian consumers. Californian raisins are abnormally cheap this year, but Canada is not to be allowed to profit by their cheapness, and if the *Guide* voices the opinions of the Progressive leaders, the treaty may be opposed at Ottawa. The chief bene-

ficiaries as far as Canada is concerned will be the motor and newsprint magnates, and the main result may be that some American millionaires living in the East will get increased dividends at the expense of some American fruit-growers living on the Pacific slope. But British paper-makers are also likely to suffer. In recent years they have been enjoying a substantial preference over their Canadian rivals, and had practically driven the latter out of the Australian market. Imports of newsprint to Australia from Canada had fallen from \$2,434,961 in the fiscal year ending March, 1922, to \$156,293 in the last fiscal year. Canadian newsprint will henceforth get the British preferential rates, and British firms will find the competition of mills in British Columbia very severe. Trade between the two countries has been increasingly one-sided; in the fiscal year 1922 Canada exported to Australia goods valued at \$10,678,000, and took imports valued at \$1,079,324, but in 1924, while her exports had jumped up to almost 20 million dollars, her imports had fallen to \$1,037,451. It is significant that of the Canadian exports in the latter year, almost exactly half, or \$9,923,299 worth, consisted of motor-cars and their parts.

Trades Union Funds.—The statistical summary showing the operations of registered trade unions for the years 1912-1923 (H.M. Stationery Office, 4d net), published by the Chief Registrar of Friendly Societies, shows that the total funds of the unions in Great Britain at the end of 1923 amounted to £10,888,500, as compared with £9,906,700 at the beginning of the year, an increase of £982,000. Expenditure amounted to £10,407,000, of which £3,733,400 was for unemployment, travelling and emigration benefit, as compared with £8,359,400 in 1922 and £15,149,600 in 1921, while management and other expenses absorbed £3,308,500, against £3,856,500 in 1922 and £4,503,700 in 1921. Income in 1923 was £11,389,000, of which £8,086,800 was from members and £2,649,400 from the Ministry of Labour for unemployment insurance and administration expenses. Income in 1922 was £15,438,000, including £8,988,800 from members and £5,448,700 from the Ministry of Labour. Total expenditure in 1922 was £16,451,000, so that in that year the funds were reduced by £1,013,000. Dispute benefit paid out in 1923 was £721,100, against £1,427,900 in 1922 and £3,427,000 in 1921. Total membership at the end of the year was 4,413,589, of which 822,913 were in the mining group, 716,270 under metals, machines, &c., and 600,533 in transport. Total membership was 4,559,167 at the end of 1922, 5,506,490 at the end of 1921, 6,981,750 at the end of 1920, and 2,561,885 at the end of 1912, when the income was £3,844,000 and total funds £5,622,300.

Shipping Freight Index Number.—As measured by our Index compiled from fixtures in the open market for whole cargo tonnage, the average level of freights, during November was 2.42 per cent. below that of October, the Index figure for November being 131.18, as compared with 129.38 for November, 1923, and 138.95 for November, 1922.

The movements of the various groups in the Index are indicated in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100

September ".....	117.90	138.94	123.20	124.93	122.19	144.22	128.56
October ".....	118.80	143.09	125.96	126.59	135.47	156.68	134.43
November ".....	115.01	137.32	120.31	120.50	131.95	162.02	131.18

The month's changes in the Index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	97.43	- 6.27	S. America—outwards	95.49	- 3.14
Bay—outwards.....	123.85	- 4.59	" homewards.....	145.13	- 8.16
" homewards.....	130.65	+ 4.84	India—outwards.....	10.48	- 8.42
Mediterranean—outwards	1 9.25	- 13.46	" homewards.....	131.52	- 3.76
" homewards.....	111.45	+ 3.01	Far East, &c.....	131.95	- 3.52
North America.....	137.32	- 5.77	Australia.....	162.02	+ 5.34

The volume of outward, i.e., coal, cargoes continued to be on a moderate scale during the month, and, with freer offering of tonnage lately released from voyages with grain, rates were further depressed. The course of the indices relating to homeward voyages reflects a "between-season" lull in chartering, the demand from North America having passed its peak, and the seasonal movement of crops from South America not yet being arranged for by exporters to any marked extent. The most encouraging feature of the month has been a steady demand for tonnage to load in Australia early in 1925 at satisfactory rates. A moderate recovery in the indices for the homeward routes from Mediterranean and Bay ports appears to be ascribable to more optimistic views on the part of iron and steel producers. The relation of the Index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1921.	1922.	1923.	1924.
January.....	194.59	..	131.60	..	114.05
February.....	164.54	..	135.76	..	112.73
March.....	162.17	..	135.53	..	115.23
April.....	147.48	..	129.46	..	115.45
May.....	158.42	..	125.12	..	114.55
June.....	165.73	..	117.45	..	106.82
July.....	169.87	..	114.52	..	103.39
August.....	170.60	..	113.16	..	100.16
September.....	154.47	..	110.37	..	103.04
October.....	141.85	..	114.42	..	107.86
November.....	136.47	..	119.43	..	111.21
December.....	134.66	..	117.39	..	111.81
Mean for year.....	158.40	..	122.02	..	109.69

There are no features in the general situation to warrant fears that the downward fluctuation in rates last month heralds a renewed depression in business for "tramp" shipping, and it will be observed that in 1923, while November recorded a rise over October, the upward movement was then suspended until the shipment of Southern Hemisphere crops began. Insufficient data have so far been collected to justify any very positive conclusions about the seasonal "rhythm" of "tramp" freights, apart from "true" movement, but a suggestion may be hazarded that fuller experience will show that rates for whole cargoes normally register a "rhythm" with two annual peaks in March and October, coinciding respectively with the heights of the Northern and Southern Hemisphere harvest loading.

Bankruptcy in 1923.—The report by the Inspector-General in Bankruptcy on the general working of the Bankruptcy Act, 1914, for the year 1923,* shows an increase of 276 in the number of cases under the Bankruptcy and Deeds of Arrangement Acts, but a decrease of £8,915,560 in liabilities, and of £2,662,197 in assets, both as estimated by debtors. The number of cases was 6,856, with liabilities and assets estimated by debtors of £16,003,435 and £4,840,889 respectively. There were in all 38 cases during the year in which the liabilities exceeded £40,000, in 18 of which, with liabilities amounting to £1,432,414, the failures may apparently be classified as "ordinary trade failures"; in 15 cases, with liabilities amounting to £1,172,804, the failures were apparently due to "financial and speculative enterprise apart from ordinary trading"; in two cases, with liabilities aggregating £155,591, the failures were ascribed to personal extravagance, gambling, &c., on the part of persons of no occupation; and in the remaining three cases, with liabilities amounting to £663,418, the failures were due to miscellaneous causes. The aggregate liabilities in these large cases, namely, £3,424,227, is about one-third of the estimated liabilities under the whole of the receiving

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
70 Federal Street.

BUENOS AYRES: HAVANA:
501 Bartolome Mitre. Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in
America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

orders for the year, as compared with nearly one-half for the previous year. The Inspector-General writes that there seems to have been a tendency of late for dishonest traders to account for their deficiencies by alleging "bad debts," generally purporting to have been contracted shortly before the receiving order. In 26 cases investigated during 1923 at the High Court, with unsecured liabilities of £404,000 and assets of £50,000, as estimated by the bankrupts, "bad debts" were alleged amounting to £210,800. A classification of the 1923 failures by trades shows that the largest number of cases occurred under the headings of publicans and hotel-keepers, 242; builders, 271; drapers, 218; farmers, 472; and grocers, 339. The heaviest liabilities were shown by 102 general merchants, with a total of £1,687,969.

Central American Crops.—The close of the year (writes a correspondent) finds the economic position of the Central American States but little improved upon that of last year. Their main crop—coffee—although, on the whole, of a superior quality, has proved disappointingly small, owing largely to the unfavourable climatic conditions prevailing. In Guatemala prices for the last crop showed a slight advance, while the new harvest is expected to be a good-medium and early yield. In Costa Rica, where the supply of low-grade coffee has been excessive, the increased exports have not proved very remunerative to the growers. The difficulties of Brazil have, to some extent, assisted the Central American States, but fewer sales for future deliveries in December and January are reported. The best prices offering have been from \$0.18 to \$0.20 per lb, f.o.b. railway, but before anything like satisfactory profits can be gained, higher rates than these must be offered. Profiting by last year's experience, the growers on the Atlantic slope are inclined to hold back future sales, hoping for better prices upon a rising market. In regard to other Central American crops, sugar has been somewhat scarce, and has, therefore, sold at higher prices. The Costa Rican crop, however, having largely failed, efforts to relieve the situation were made by importing from Nicaragua. Prohibitive import duties having intervened, the Government was approached to lighten them. Another food article of this State—beans—which form the principal diet of the poorer classes, have been scarcer and more expensive, thus inflicting considerable hardship upon the masses. It has been found necessary to import supplies from El Salvador and Nicaragua, where beans can be purchased comparatively cheaply. The new Costa Rican crop, which has recently come in, is helping to relieve the situation.

The Outlook for Tin.—The Bandoeng Agreement came to an end on November 30th, and a very interesting position is developing in the tin market. On December 31, 1922, the world's visible supply of tin stood at 22,500 tons, and the pooled surplus amounted to 17,500 tons, making 40,000 tons altogether. During the last two years nearly all the Government-owned tin has been sold, and there is now only 1,300 tons left in the hands of the Federated Malay States Government, the other holders having none at all. On December 1st this year the world's visible supply of tin stood at 19,627 tons. This represents an increase of about 1,500 tons on the month, but the position is remarkably strong from the statistical point of view. Taking the actual visible supply, and the

remainder of the "pooled" stocks, the total is only about 21,000 tons; thus in two years there has been a reduction in the quantity available for market purposes of 19,000 tons, and there is actually less than three months' full supplies on hand. The United Kingdom stocks are moderate at 4,500 tons, and in the States the holdings are not much over 2,000 tons. Despite the increase in the visible supply, prices this week rose to £261 cash and £264 three months. The demand for tin is expanding, and it is quite likely that the German output of tinplates will increase very considerably in the coming year, there being a full supply of cheap steel available. The American tinplate industry is in a very flourishing condition, and reports about the Welsh trade are somewhat better than they were. The United States needs a lot of tin not only for coating plates, but for other purposes as well, including solder, motor-car bearings, and tin foil, and there is going to be some competition for supplies in the coming year. Already American interests have started making large purchases both here and in the East.

P. and O. Results.—The accounts of the Peninsular and Oriental Steam Navigation Company for the year ended September 30th last show that the "net result" was substantially better than in the preceding year, the amount being £1,346,900, against £1,013,200. These figures, however, are quite useless for comparative purposes, for they are arrived at after providing for depreciation, and it is utterly impossible to ascertain how such provisions compare from year to year. Evidence that the company has been thoroughly conservative in its financial policy in the past is afforded by the fact that, in spite of the depression which the shipping industry has experienced in recent years, the company has been able to maintain a dividend of 12 per cent. on its deferred stock, and it is highly probable that this policy has been continued. In the table below we summarise results for a number of years past:—

YEAR ENDED SEPTEMBER 30TH.						
	1914-15.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
"Net result" Brought forward.	£ 494,160	£ 710,430	£ 623,531	£ 696,661	£ 1,013,241	£ 1,346,938
	68,703	115,230	111,939	100,305	101,799	101,873
Deb. interest..	562,863	825,660	735,470	796,966	1,115,040	1,448,811
Deb. stock red. fund, &c. . .	63,000	53,054	52,065	52,065	297,065	375,814
Preferred div.	152,000	152,000	152,000	152,000	152,000	152,000
Deferred div. . .	269,681	508,668	431,100	431,102	431,102	431,102
(15 %)	(15 %)	(15 %)	(12 %)	(12 %)	(12 %)	(12 %)
Carried forward.	78,182	111,938	100,305	101,799	101,873	101,034

In November of last year the company issued £3½ millions of 5 per cent. debenture stock, the interest on which, in the present accounts, requires £131,250, while discount and cost of issue absorbs £139,700. The balance-sheet, which is analysed in detail in another column, is still open to strong criticism with regard to its form. Total assets figure at £29,510,300, and two items account for nearly £28 millions out of this total. The fleet is valued at £14,674,600, including payments on account of new ships, and shows an increase of £2,660,100. It is, however, to the second item of £13,207,700 that we take objection. This covers "sundry investments (less loans), cash at bankers and in hand, and debts owing to the company." It may be recalled that until two years ago the credit side of the balance only contained one monster item, and when this was split a year ago into five our hopes began to rise that the company would in course of time present a balance-sheet which would be of some value to shareholders. It appears, however, that we must have patience, for no progress is made in the right direction this year. We have seen it suggested that shareholders, in view of the excellent results and the obviously competent manner in which the concern is managed, should rest content with what figures are vouchsafed to them, and not press for further information. Shareholders have certainly no cause for complaint so far as dividend payments go, but that is surely no reason why incomplete and obscure accounts should be presented. It is highly regrettable that

this shipping company of world-wide reputation should set an example which, if generally followed, would lead to the most unfortunate results. We have always urged the fullest publicity in the matter of company accounts, and shall continue to do so until the necessary alterations in existing company legislation have been enacted. The report states that trade conditions in all the company's spheres of operations have been "very difficult" during the year. Labour conditions have not improved, with the result that most of the ships which the company had looked forward to being ready by the end of this year are still undelivered. The indications of a year ago of a slight improvement in outward trade have not materialised, and latterly the war in China has affected both outward and homeward business with the Far East. Passenger business, however, continues satisfactory. The tonnage of the fleet is given as 615,866 tons, making, with 753,918 tons of the British India Steam Navigation Company, a total of 1,369,784 tons. A year ago the figures were: P. and O., 651,610 tons; B.I.S.N., 801,553 tons; and total, 1,453,163 tons.

Coats' Progress.—The slight setback recorded in our table last year of J. and P. Coats, Limited, has given place to rather better figures for the year ended June 30, 1924. Indeed, it may be said that the company has had a fairly good year, especially as the distribution on ordinary capital of 17½ per cent. is maintained. There is an allocation to reserves of £200,000, and the amount carried forward is £398,580, as against £402,617 brought forward. The following table shows how profits have been distributed since 1906:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
1906	£ 2,974,088	£ 36,642	£ 1,972,821	£ 294,629	£ 450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000

Total assets amount to £31,378,643, which is very close to £31,232,211, recorded a year ago. Stocks are down from £4,376,148 to £3,999,648, but cash is up from £948,699 to £1,596,550. Bills at £24,279 compare with £266,485. The balance-sheet will be found fully analysed in our usual column.

The Salvador Railway Report.—For the year ending with last June this railway again prospered; the current year, it is feared, will be less satisfactory, owing to the diminution of the coffee crop. The receipts amounted to £215,634, against £206,927 for 1922-23; the working expenses, however, also increased, and in a greater proportion, to £151,537, against £136,389. The profit, therefore, fell to £64,097, as against £70,538. The net revenue account, however, was swollen by £47,291, arrears of subsidy, with interest, received from the Salvador Government, and by various minor items, to £115,233, against which the interest certificates, with other expenses, amounted to £63,322, leaving a net balance of £51,910, balance of £9,894. The passenger traffic, in the distances travelled as well as in the numbers carried, surpassed the record figures of 1922-23; the receipts from it in sterling were £52,290, against £44,462. The goods traffic was somewhat less than in the previous year, owing

to a decrease of 4,017 tons in the amount of sugar carried; but in 1922-23 this commodity represented the bulk of the output of 1922 as well as that of 1923; allowing for this, the sugar tonnage handled is well above the yearly average. The inevitable decline in the coffee traffic next year may to some extent be compensated by an increase in that in cotton, which has been planted on a fairly large scale in the country; the attempts to introduce the production of silk have, unfortunately, not been successful. The decrease in exports, moreover, which is expected next year, will cause a rise in the exchange. Still, the line has known much greater vicissitudes, and we do not gather that there is any cause for apprehension. Nothing is said of possible competition, either from the projected extension of the International Railways of Guatemala or from motor-lorry traffic. But neither of these seem formidable, and there is no sign of political disturbance.

Tate and Lyle.—Henry Tate and Sons, sugar refiners and manufacturers, were registered as a company in February, 1903, and in August, 1921, amalgamated with Abram Lyle and Sons, the concern now being known as Tate and Lyle. The report for the year to September 30th last discloses net profits of £516,784, which, with the sum of £38,650 brought in, leaves an available balance of £555,434. The previous accounts covered three years, so that no strict comparison is possible. During that period, however, net profits totalled £1,759,462. There was no balance of undistributed profit brought forward from September 30, 1920, the balance of £95,515 referred to in the report for that year having been disposed of by resolutions passed at an extraordinary general meeting held on August 9, 1921. In respect of the past year, after payment of the preference dividend, the ordinary shareholders, who have already been paid 2½ per cent., tax free, receive a final dividend of 10 per cent., subject to tax. The sum of £100,000 has been transferred to general reserve, making the total of the fund £600,000. In addition to this, there is an investment reserve of £230,419. The bank overdraft has been increased from £377,206 to £621,319. Perhaps further information on this point may be forthcoming. Stocks are down from £1,856,785 to £1,261,700. Total assets stand at £8,281,340, compared with £10,594,770 in 1923. In another column the balance-sheet will be found fully analysed.

Van Ryn Gold.—Within the comparatively recent past this old-established Witwatersrand proposition has taken on a new lease of life. One factor in the change consists in the acquisition of additional ground, the other in the opening up of supplementary reefs known to exist in the original property. Work in each of these directions has been attended with encouraging results, and the board observe "there is clear evidence that the life of the mine will be materially extended." In this position it has been decided to electrify the whole of the plant, at a cost of about £25,000. As the saving should amount to £1,000 per month, the change-over—due to be completed early in 1925—will practically pay for itself in a couple of years. At 1,401,000 tons, the ore reserves show an increase of 178,000 tons in quantity, with a small decrease in value to 5 dwts, both variations arising partly from the development of the upper reefs, which are of lower value, and partly from the increase in the gold premium. The total represents some three years' supply for the mill, irrespective of the large tonnage of material left behind in the old workings, which provided nearly 35 per cent. of the material treated in 1923-24. Last year's profit of £95,100 scores a moderate increase. An enhanced tonnage was crushed, and a decline in the recovery value was more than compensated for by economy in the working costs. After the payment of dividends totalling 17½ per cent., as against 15 per cent. (tax free in both cases), the slightly reduced balance of £44,600 remains to go forward.

Mexican Corporation.—Although last year's net earnings of \$706,600 show little variation from those of the preceding period, their effect is a further substantial improve-

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

ment in the financial position. In 1922-23 a large debit balance on the part of the operating concern became converted into a small credit; the present accounts show a total surplus of \$281,700. This sum, together with a considerable portion of the \$413,700 allowance for amortisation, is available for remittance to the English company in redemption of the Mexican company's indebtedness. Remittances last year were equivalent to £82,200, and the due £53,100 of the notes have been purchased. It may be recalled that of the profits 20 per cent. is first taken towards the redemption of certain capital expenditure, the balance being divisible equally with the former owners of the Fresnillo unit. Work here having been chiefly devoted to the opening up and preparation for extraction of the large ore bodies already disclosed, the reserves show a slight decrease, being now estimated at 6,519,000 tons, value 0.17 dwt gold and 5.71 ozs silver. The great bulk of this is amenable to the cyanide process without any preliminary treatment. From a speculative point of view, interest attaches to the results which will be secured when the workings get into virgin ground; hitherto it has been a case of unwatering and reopening the old levels in the deep mine. The Teziutlan (copper) property remains closed down, but if working tests in selective flotation prove as successful as the laboratory experiments, the mill will be modified to treat about 150 tons per day of the better grade copper-zinc ore. In the opinion of the directors the value of the investments approaches the balance-sheet figure of £106,000. They include shares in the British Equatorial Oil Company.

Pahang Consolidated.—Some of the shareholders in this Malayan tin-winning enterprise have expressed surprise at the failure of the shares to participate in the present "boomlet" in the group. There are two reasons. One appears upon a consideration of the yield afforded, the other upon an examination of the report lately issued. The balance dividend of 15 per cent. on the ordinary makes a total of 20 per cent. for the year ended July 31st last; but, even on this basis, the return to the investor is no more than 10 per cent., the 5s. shares being quoted at 11s. cum. div. Then the new ore opened up last year was insufficient to replace that extracted, developments on the principal lodes proving somewhat unfavourable. It may be pointed out that the Pahang Company is unique amongst Far-Eastern tin-producers, in that it operates a lode mine, although a small output is derived from alluvial. During the past financial year an increased tonnage of ore was treated for the same average yield as before, the total yield being 2,700 tons, as against 2,400 tons in 1922-23 and 2,700 tons in 1921-22. The value has progressively increased from an average of £100 to £120, and then £150—although the latter compares with £203 for 1919-20, when the company paid 20 per cent. on its ordinary. Three barren years followed. The 1923-24 profit of £128,700 contrasts with £45,100 for 1922-23 and only £2,200 for 1920-21, the period of deflation. If the price of the metal keeps high, the current session should display some further expansion in earnings.

Bingo Gold.—Scarcely has the noise of the Porcupine-Davidson affair died away than the Canadian section of the mining market becomes the victim of another surprise. During the past few days the preference shares of the Bingo

Mines have fallen heavily to the accompaniment of adverse rumours. At the close of business on Thursday they stood at $\frac{3}{8}$ nominal, as against $\frac{1}{4}$ on Monday and nearly $\frac{1}{2}$ a fortnight previously. During Thursday the following was posted up in the Stock Exchange:—"Some recent sampling of crosscuts having failed to confirm previous values, the Bingo Company have engaged Mr Dresser, Past President of the Canadian Mining Institute, to make a complete examination and valuation of the mine. Mr Dresser is at present on the property." In view of preceding incidents, an adverse interpretation was naturally placed on this intimation, and holders rushed to sell the shares of all the companies in the group. There is certainly an ironical commentary in the circumstance that several events of this nature should have occurred within so comparatively short a time after the visit to London of the Ontario Minister of Mines, with his emphasis on the "square deal" offered by Canadian mining. It is to be feared the market will not quickly recover from these successive shocks.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, December 9, 1924, at 8.30 p.m., at which a paper on "Thoughts on India" will be read by the Rt. Hon. Viscount Willingdon, G.C.S.I., G.C.I.E. The Rt. Hon. Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., will preside.

UNITED STATES.—FRENCH LOAN QUICKLY OVER-SUBSCRIBED—STOCK AND BOND ACTIVITY—TRADE IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 25.

EXPECTATIONS that the new external loan of the French Government, offered here this week, would find a ready market were fully realised. The entire issue, consisting of \$100,000,000 25-year sinking fund 7 per cent. gold bonds, dated November 1, 1924, was heavily over-subscribed, the subscription lists having been closed 45 minutes after their formal opening. The bonds were offered by a nation-wide banking syndicate at a price of 94 per cent., and accrued interest to yield approximately 7.53 per cent. to maturity. That yield figure does not take into consideration the operation of a sinking fund, amounting to \$4,200,000 per annum, and payable in equal monthly instalments, beginning January 1, 1925, which will be sufficient to retire each year one twenty-fifth of the entire issue at 105 per cent. Proceeds of this loan will be applied to the reduction of the French Government's indebtedness to the Bank of France, which will hold and use such proceeds as it may deem wise for the protection and stabilisation of the French franc, according to a letter addressed by Minister of Finance Clementel to J. P. Morgan and Co., managers of the underwriting syndicate. The French Government's indebtedness to the Bank of France, M. Clementel says, has already been materially reduced since the peak of such borrowings was reached at the close of 1920. In this connection the bankers announced that the \$100,000,000 American credit to the Bank of France, first extended last March, for the stabilisation of the franc was not being used, and would not be renewed at its expiration on December 12 of this year.

The marked success of the French offering is attributed to a number of factors. The yield evidently proved attractive. The sharp advance recently in bond prices has reduced the yield on domestic issues generally to such an extent that many investors are turning to foreign bonds, which afford a comparatively higher return. This accounts, partly, for the heavy subscription to the French as well as to the previous German loan. The improvement in France's financial and economic position since the Armistice, as indicated in an analysis prepared by M. Clementel, and published here, together with the expected balancing of the French Budget in 1925, also made a favourable impression on American investors.

The prompt sale of the French and German bonds, and likewise of the Japanese offering earlier this year, clearly indicate that Americans, to a much greater extent than heretofore, regard foreign bonds as desirable investments. The number of Americans who hold foreign bonds has greatly increased since 1914; their present investment in European bonds is estimated at more than \$1,000,000,000 in the aggregate. This week's offering of the French issue is expected to be the last extensive foreign financing in the American market this year. Considerable German financing for States, cities, and corporations, as well as for various other European interests, is in prospect, but most of this will probably be postponed until after the turn of the year.

Trading in the stock market has continued on an extraordinarily broad scale during the past week. The number of separate stocks dealt in has repeatedly passed previous high records, and in most of the 5-hour sessions the transactions have exceeded 2,200,000 shares, while approximately 1,000,000 shares changed hands in last Saturday's two-hour session. Up to a few days ago prices generally kept soaring until the average level of 20 leading railroad stocks reached \$96.19 a share, and that of an equal number of representative industrials touched \$110.73, both of these average prices being the highest recorded for many years. Rails last week displayed the greater strength as a group, scoring a net gain on the average of \$2.08 a share, while industrials had a net average advance of only 87 cents a share. Public participation in the stock market is still extensive and widespread, though not so heavy, apparently, as a week or two ago, and many cross-movements in prices have occurred recently. Liberal profit-taking has occurred in the speculative industrials and specialties, while rails, after receding moderately as a result of realising sales, have this week resumed the upward trend, notably high-grade investment issues like Canadian Pacific, Union Pacific, and Delaware and Hudson. Purchasing of these and other stocks in their class is generally believed to reflect further substantial accumulation by large banking interests.

The bond market also has been very active, but prices have fluctuated irregularly, some groups of bonds scoring sensational advances, while others declined sharply. Railroad issues have been the outstanding feature, with most of the transactions in bonds of companies long regarded as weak and of railroads that have been reorganised in recent years. Bonds with high yields and offering speculative possibilities have figured prominently in the dealings. As indicated, however, price changes have been irregular, even among the rails. While many of the latter have advanced, numerous high-grade investment issues have declined as a result of banks and large investors switching to issues that seemed likely to appreciate in market value. Two reasons given for the recent decline in prices of high-grade bonds are, firstly, expectations that an eventual boom in trade and industry will force interest rates higher; and, secondly, large investors have been switching from tax-exempt and low-yielding securities into high-yielding investments, on the theory that future surtax reductions will enable them to take profits which will not be absorbed by Federal income-taxes. Such readjustment of investment holdings is considered largely responsible for the recent slump in Liberty Loan issues and United States Treasury 4½'s, the latter having dropped last week to 105.8 from a recent high point of 107.7. Practically all new bond offerings continue to be absorbed rapidly. Many prospective domestic offerings were deferred to give the right of way to the French loan flotation, but such as were placed on the market were readily over-subscribed to the French bonds, indicates that there is still a vast amount of funds in this country seeking desirable investments.

Further quickening of activity is noted in most lines of trade and industry. Colder weather in northern sections of this country has stimulated business in seasonable goods at retail. Jobbing and wholesale trade is comparatively slow in reflecting the increased movement of merchandise to consumers, but is larger in volume than before the election, and mail-order business is considerably greater. A better tone prevails in basic industries, and reports from the majority indicate that operations are now on a larger scale than at any time since last spring. The iron and

steel industry, especially, is much more active; pig-iron and steel prices have advanced, production has increased, and sales are larger than for some time past. Building returns from 178 cities reporting to Bradstreet's show that expenditures for which permits were issued in October totalled \$276,526,381, as against \$236,551,695 in September and \$274,237,597 in October of last year. For the 10 months of this year such expenditures aggregate \$2,764,054,169, as compared with \$2,624,395,734 in the corresponding period of 1923, representing an increase of more than 5 per cent.

FRANCE.—BUDGET—INTER-ALLIED DEBTS—FRANCO-GERMAN TRADE NEGOTIATIONS—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

PARIS, December 3.

It is now generally admitted that the balancing of the Budget for 1925 is proving a much more difficult task than had been expected, and that many of the estimates already submitted to the Chamber will have to undergo considerable modification before they will take final form. M. Clementel's first draft of his project showed an estimated surplus of 38 million francs. By the end of October, owing to substantial increases in projected expenditure and equally substantial proposed reductions of certain categories of taxes, this estimated surplus had been reduced to eight millions only. Yesterday the Rapporteur Général of the Finance Commission of the Chamber, M. Violette, declared that the Government's proposals at present show an estimated deficit of 550 millions. The prospect of having to find new resources wherefrom to draw the missing half milliard has caused little short of alarm, and it is becoming clear that the only solution of the problem will be found either in a substantial revision upwards of existing taxation proposals, or in another resort to borrowing, against which latter method all parties appear to have resolutely set their faces.

The question of exactly how the money is to be found to carry out next year's portion of the reconstitution of the devastated regions is also causing increasing difficulty. In his Boulogne speech, M. Herriot prided himself on the fact that next year, for the first time, France would be able to include in her estimated revenue "about a milliard," which it is anticipated will be received in reparations payments from Germany during the twelve months. As a matter of fact, the Finance Minister's draft estimates show that he is counting on the receipt of 1,000 milliards from this source to help him balance his Budget. Quite apart from this fact, the application of any payments that may be received from Germany, "either in cash or in kind," has already been settled in advance. The Finance Minister informed the Chamber a fortnight ago that "all sums coming to France from the Dawes plan"—and he expressed the hope that in a few years' time these will amount to from four to five milliards—"must be applied to the amortisation of the debt." It cannot, therefore, be also available for assisting in the completion of the restoration of the devastated regions. Nervous as to the effect the Finance Minister's present proposals may have, the inter-Parliamentary group for the liberated regions (including MM. Klotz and Loucheur) yesterday interviewed M. Herriot and the Finance Minister on the subject. After an exchange of views, it was agreed that a further meeting shall be held in a fortnight's time, when it is hoped decisions may be taken as to the manner in which the annuities which it is expected will be received from the operation of the Dawes plan shall be utilised. Meanwhile, M. Clementel and his experts are to work out the Government's own plans on the matter. These, it is announced, will be based on a system of loans guaranteed chiefly by the annuities which are to be received under the operation of the Dawes plan.

There is again a large amount of speculation as to the manner in which the inter-Allied debt question is to be settled in the near future, and particularly as to the debt which France owes to the United States. It is universally

LEGAL & GENERAL

ASSURANCE SOCIETY LIMITED

General Manager W. A. WORKMAN, F.I.A.

agreed that, whatever basis of settlement is arrived at in regard to the latter matter, the American Government will not find it possible to insist on payment in full. Any reduction that might be made, however, would necessarily involve, in the view of opinion here, a similar reduction in the amount ultimately to be paid by Great Britain to the same creditor, which it is unlikely the United States would consent to. If, on the other hand, the Franco-American debt were funded on the 4 per cent. basis, which has been suggested, this country would have to find rather over 2,000 millions a year for interest alone, plus, probably, a similar sum to Great Britain, which will apparently be practically impossible for some years to come, even if the annuities due from Germany under the Dawes plan were available for the purpose.

The Franco-German commercial treaty negotiations which are proceeding here are believed, in spite of the reticence that is observed on both sides, to be progressing favourably. The German metallurgical experts left for Berlin yesterday to consult with the leaders of the industry and their Government, but are expected to renew the discussion in a day or two. The machinery industry experts of both countries are still in pourparlers, and are now discussing the effect the proposed treaty may have on both labour and consumers. The basis of the negotiations appears to be still the problem of bringing about an alliance between French iron ores and German combustible, with the possibility of developing it into a highly-organised international consortium, if not trust, in which other countries would participate. The French Press generally recognise that British susceptibilities constitute the most delicate factor in the whole situation, and is showing exceptional restraint in its comments.

The figures setting forth the output of the French collieries for October show that for the first time in the annals of the coal industry of this country the monthly production total has reached and exceeded 4,000,000 tons. The following figures indicate the comparative average daily output and number of miners employed both before the war and during certain months of the last two years:—

	Average Daily		
	Output.	Tons.	Miners Employed.
Year 1913.....	136,147		203,208
January, 1923.....	121,064		242,566
October, 1923.....	136,661		271,166
January, 1924.....	144,680		286,804
September, 1924.....	147,591		300,777
October, 1924.....	151,982		302,771

The average monthly figure for 1913 concerns only the collieries inside the pre-war French frontiers; the others include the output of the liberated regions. Taken by themselves, the output of the collieries within the old frontiers was last month only 1,354 tons below the average daily figure for 1913, or much less than half the increase in average daily production registered for the whole country last month as compared with September. The extent of the reconstitution achieved in connection with the wrecked mines in the Nord and the Pas de Calais may be realised when it is noted that the daily output last month was only 2,916 tons behind that of 1913. The total output for the whole country in October was 4,103,516 tons, or 266,138 tons more than in September. The output of metallurgical coke during October was 230,694 tons, as compared with 223,810 tons in September.

GERMANY.—POLITICS—FINANCES—CURRENCY AND CREDIT—INDUSTRY—OCTOBER FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 2.

THE news that an agreement had been reached in the matter of the Anglo-German Commercial Treaty had a marked effect upon sentiment in business circles, which were already optimistically inclined owing to the conclusion of further American loans and to favourable Labour reports. Sentiment last week expressed itself in a big rise of stock quotations, and even the very unfavourable foreign trade report for October had no counter-effect. The uncertainty prevailing as to the outcome of the Reichstag elections next Sunday also did not affect sentiment. All the non-Socialist parties have now committed themselves more or less definitely to a revision, in the interest of creditors, of the provisions of the Third Taxation Decree concerning restoration of depreciated public and private debts, and even the Socialists find it necessary to catch votes by promising fresh "Aufwertung" benefits to impoverished persons.

The Finance Ministry's return for November 11th to 20th shows receipts of 185,103,700 marks and expenditure of 178,418,300 marks. In a petition to the Government, the Hansa Association ascribes the failure of the recent official measures for cutting down the price-level to the fact that the States and municipalities did not follow the Republic's example in reducing taxes. The association further protests against the delay in creating a regular income-tax. The present system, under which business firms pay income-tax provisionally, not on profits, but on turnover, is apparently to be prolonged for another year. Income-tax levied in this way operates, it is objected, almost as does the existing Sales Tax, and the burden is probably transferred to the consumer. If so, the Government's reduction of the ordinary Sales Tax from 2½ to 1½ per cent. would naturally have little effect. Finally, the petition warns against any amendments of principle in the Third Taxation Decree, and justifies this warning on the ground that the foreign credits lately received by Germany were granted on the basis of the Decree. The meaning of this is that foreigners before lending money to German concerns naturally investigated the latter's debts, and the creditors will be much surprised if, as is now proposed, enormous new debts are imposed on the concerns by act of the Legislature.

A credit of 15 million dollars for the new Railways Corporation has been arranged with a New York syndicate under leadership of Speyer and Co., and a London group under Henry Schroeder and Co. The Railway Corporation is at present without liquid capital. The Reichsbank is trying to find out what is the extent of recent American loans to Germany. An American estimate for 1924 so far is 200 million dollars, but this, if correct, must include America's part of the Reparations Loan. Money rates in Berlin last week rose in connection with month-end settlements and with the increased demand for cash in connection with the new Bourse boom. Day money rose from 11 to about 13.4 per cent. per annum, month money from 12.9 to 14 per cent. At the beginning of this week interest-rates again fell. Since December 1st all securities on the Berlin Bourse have been quoted in new Reichsmarks. In the case of stocks this involves no change of figures. Theoretically, stocks until now have been quoted in billions of paper marks per 100 marks nominal. In practice, however, 12 cyphers were omitted, and at the billion to one depreciation of the paper mark the result was a "gold-mark" quotation.

The Reichsbank's return for November 22nd shows that the repayment of the 800 million Rentenmarks which were borrowed from the Rentenbank in order to help industry has begun. Circulation declined by 83,049,000 marks, so that although only slight increases took place in the gold and exchange reserves, the percentage of cover in gold rose to 44.8 in gold and exchange together to 59.6. Of the gold reserve of 694,834,000 marks, 240,033,000 marks are on deposit in foreign central banks. Inquiry at the Reichsbank brought a statement that the Bank intends to bring the deposited gold gradually to Berlin.

It considers the enactment anomalous that it can count gold which is not in its vaults as cover for notes, and, further, it considers that practical inconveniences might ensue from the present system. Part of the gold now booked as deposited abroad was sent abroad by the Reichsbank as security for exchange loans; the other part is gold bought abroad and left there.

The industrial situation has changed little, but continues to be much better than it was two months ago. Many reports of impending fusions come in. The *Frankfurter Zeitung* thinks that fusions and amalgamations will be fostered by foreign borrowing, because only big concerns can expect to deal directly with foreign financiers. Difficulties are being met with in founding the subordinate syndicates for special products, which were to be affiliated to the new Raw Steel Syndicate. The chief obstacle is that most of the big companies have created their own sales organisations, and they are reluctant to entrust their selling to syndicates. The contract now published creating the Raw Steel Syndicate shows 31 member companies and firms, whose production totals 13,641,904 metric tons. The biggest participators are Krupp, Phoenix, and Thyssen, with 1,580,640 tons each; Deutsch-Luxemburg (Stinnes), with 1,006,640 tons; and Rhenish Steelworks, with 940,800 tons. Member concerns, which in two successive months have produced more than their "contingent" have to pay to the syndicate a fine of 25 marks per ton of their over-production.

The October foreign trade report shows a very heavy passive balance, due to largely increased imports of food and raw and half-finished materials. Against this, in spite of considerably increased exports of manufactured goods, total exports increased relatively little. Values in gold marks (000's omitted) are shown below:—

	Oct. 1924.	Sept. 1924.	Jan.-Oct. 1924.
IMPORTS.			
Live stock.....	11,706	7,934	72,246
Food and drink	335,820	206,684	1,874,954
Raw materials	289,356	223,901	2,865,149
Half-finished materials..	83,347	58,537	671,161
Manufactured goods	427,141	121,436	1,402,876
Gold and silver	8,236	4,930	74,072
Totals.....	855,606	623,422	6,960,458
EXPORTS.			
Live stock.....	2,216	1,550	9,144
Food and drink	32,911	34,543	317,376
Raw materials	48,166	40,519	343,359
Half-finished materials..	44,000	42,756	341,403
Manufactured goods	482,750	412,821	4,140,764
Gold and silver	1,804	1,768	13,707
Totals.....	611,847	563,957	5,165,753

It is now plain that the export surpluses achieved in July and August were due to temporary declines in food and raw material imports, and that when these declines come to be made up for, new import surpluses must result. Against 289 million marks of raw materials imported in October, only 148 millions were imported in August, and food imports in the respective months were 335 and 152 million marks. The main part of the October increase in exports of manufactured goods consisted of rolling-mill products and iron goods. Exports of textiles slightly increased; exports of dyes, clothing, and locomotives decreased. The October report is unfavourably commented on in the Press from the viewpoint of fulfilment of the Reparations scheme.

CANADA.—OFFICIAL CROP SURVEY—WESTERN WHEAT GRADING POORLY—EXPORT MOVEMENT—BUSINESS AND GENERAL CONDITIONS—FEDERAL REVENUES—COMMODITY PRICES—REPAYMENT OF FRENCH WAR DEBT.

(FROM OUR CORRESPONDENT.)

OTTAWA.

THE serious effects of the damage wrought to the western grain crop by frost and rain are now admitted by the latest crop survey of the Dominion Bureau of Statistics, published November 12th, which makes a substantial cut in its earlier estimates. It gives the total yields for all

Canada of the principal grain crops in bushels as follows, last year's final estimates being added within brackets:—

Winter wheat.....	22,005,000	(19,315,000)
Spring wheat	249,617,000	(454,884,000)
Total wheat.....	271,622,000	(474,199,000)
Oats	429,500,000	(563,997,500)
Barley	84,095,000	(76,997,800)
Rye	14,500,000	(23,231,800)
Peas	3,345,000	(2,898,200)
Beans	1,172,000	(1,041,700)
Buckwheat	11,122,000	(9,743,700)
Mixed grains	30,359,000	(29,750,500)
Flaxseed	9,751,000	(7,139,500)
Maize for husking.....	10,042,000	(13,608,000)

While the eastern crops were about the average, it is now plain that, taking into consideration increased acreage under cultivation, the western crop of wheat and oats is one of the most disappointing in volume in the last decade, and the high prices are a veritable godsend to the country. The average yield of spring wheat has only been 11.5 bushels per acre, as compared with 20.8 last year, and the oat yield has fallen from 39.3 to 29. Saskatchewan, the great grain-growing province, with 135,543,000 bushels of wheat and 96,872,000 of oats, has only about half last year's crop of these grains, and Alberta's 167 million bushels of wheat in 1924 have fallen to 68,691,000. The Manitoba crops, however, show an all-round improvement. Prices after a stationary period have again begun to rise, but it is now doubtful if the prairie farmers will receive as large pecuniary returns as last year, because grading inspections reveal an abnormally large proportion of inferior wheat. Up till the middle of October car inspections had only been about half the total completed at the same date in 1923, 47 as against 90 million bushels, and only in the latter part of last month did outward shipments begin to assume normal proportions. This situation means the postponement of the inflow of some of the money which the West so badly needs to meet its debts, and will have an adverse effect upon winter business. There has already been a heavy snowfall in the West, and unfortunately owing to the lateness of the harvest very little autumn ploughing has been done, which may mean a curtailment of acreage next spring.

The beginning of another winter finds the business community, if not in a mood of buoyant optimism, at least satisfied that things have not worsened during the summer. In the East the extra purchasing power of the rural districts is being utilised, and is benefiting firms dealing in groceries, dry goods and hardware, and in many industrial centres factory employment showed a slight increase in October. The western farmer, however, will find it necessary to exercise a very strict economy, which will extend both to farm implements and personal outlay; in some of the best districts of the West not a single new binder has been sold during the past season, and everywhere the demand for agricultural machinery is confined to necessary purchases. One satisfactory feature is that banks, mortgage companies, and merchants find a much greater liquidation of debt being made all over the Dominion than at the same date last year. The industrial situation in the Maritime provinces is still perplexing, but luckily they have been favoured with a bumper yield of apples and potatoes, two of their staple crops. Money seems to be reasonably plentiful, and the stock markets have been feeling the reflex of the boom, which has been proceeding in New York since the Presidential election. The economic life of Canada is always profoundly affected by conditions in the U.S., and if the boom now foreshadowed there materialises, Canada cannot fail to benefit. With the Republican victory all prospects of a fresh attempt at a reciprocity treaty have for the moment disappeared, but as the chances of Mr Davis, the only candidate who would have promoted it vigorously, were never rated high, there has been no serious disappointment in Canada at the result.

The Federal revenues continue to be very disappointing. The month of October did show a small gain over September, but whereas the acting Finance Minister only provided for a decrease of 26 million dollars for the whole year, he has already in the seven months ending October 31st lost over 30 million dollars. There are hopes that the new sales tax will henceforward yield better results, and recent loans to replace maturing obligations effect some

saving of interest charges, but political claims still prevent the curtailment of expenditure which is necessary, and it is difficult to see how a substantial deficit can be avoided.

The index number of wholesale prices compiled by the Dominion Bureau of Statistics, and covering 236 commodities, rose 3.2 points in October, being 157, as compared with 153.8 in September. Sixty-five price quotations were higher, 31 lower, and 110 unchanged. The increase in what are classified as consumers' goods—i.e., foods, beverages, tobacco, household goods, &c.—was small, from 148.7 to 149, increases in flour, fish, coffee, and dairy products being counterbalanced by decreases in vegetables, sugar, beef, bacon, gasoline, and vegetables. But in the class described as "producers' goods"—i.e., materials used in manufacture—there was a steep climb from 145.1 to 153.8. The outstanding change during the month was the increment in grain prices, which brought the index for farm products up from 143.4 to 153.8. Cotton prices showed a very slight rise, and there has been a stronger upward movement in wool.

It may interest Mr. Winston Churchill to learn that, according to the Canadian High Commissioner, the French Government has agreed to pay off to Canada on December 31st a war debt of \$5,657,000 which it owes. This happy result can be attributed to the influence of some prominent French-Canadian politicians, who have lately been in France.

GREECE.—BRITISH CAPITAL IN PUBLIC WORKS—ELECTRICITY CONTRACT SIGNED—BUILDING AGREEMENT IMPENDING—AMERICAN PROPOSALS FOR THE WATERING OF ATHENS.

(FROM OUR CORRESPONDENT.)

ATHENS, November 29.

By the signing in London, some days ago, of a provisional agreement between the Power and Traction Company, Limited, and the Syndicate of the Greek Banks, the first step has been taken towards a close co-operation of British and Greek capital in reconstruction work in Greece. The agreement provides for the creation of a Greek General Company, whose first object will be to re-organise and extend the electricity supply and tramways of Athens and the Piræus, and to electrify the railway to Kefissia. To that effect, the Greek General Company will form three subsidiary companies, the Electricity Company, the Distribution Company, and the Traction Company, which will hold concessions from the responsible Greek authorities. The first will own and operate the generating stations, the high tension transmission lines, and the sub-stations, the second will distribute electricity and gas, while the third will be responsible for the tramways, for motor omnibuses and for the electric railway to Kefissia. The latter will also negotiate at a suitable opportunity for the amalgamation of the Athens-Piræus Railway with it. The Anglo-Greek group have agreed to collaborate with the existing companies in Greece, that is, the electricity, the gas, and the tramways companies in which French and Belgian capital is interested. The terms of such a collaboration, which has been agreed in principle, will be determined later on, but the plan is to buy the assets of the companies by the issue of shares. It is estimated that an amount of £3,000,000 will be required to carry out the programme of works. Of this amount, part will be raised by the issue of debentures

THE NATIONAL BANK OF GREECE

A HISTORY

of the Financial and Economic
Evolution of MODERN GREECE

by

M. S. EULAMBIO.

Managing Director of the National Bank of Greece.

EYRE & SPOTTISWOODE, LTD., EAST HARDING ST., LONDON, E.C.4

secured by a first and second mortgage on the assets of the three companies to be created. The remaining part will be provided by the issue of shares. A large portion of the amount to be borrowed for the purpose will be spent in Great Britain for the purchase of machinery and other material.

Negotiations for another contract with one of the first English building and contracting companies are making good progress. The purpose of the contract is the building of a large number of houses in Athens at first, and the other Greek towns subsequently. As the influx to the towns of the refugees and other people has caused a severe house famine in Greece, thousands of houses have to be built, which will require a large expenditure. Part of this sum will be placed in Great Britain on orders for building material of every kind.

American capital, however, is not resting idle in the meantime. An American firm, Messrs. Ulen and Co., in co-operation with the Bank of Athens, has submitted proposals to the Government for the supplying of water to Athens. The amount to be spent is put at \$10,000,000, and will be loaned to the Greek Government, half by the American company and half by the Bank of Athens. During the period of the loan, which is to continue for 22 years, the American company will have the exploitation of the works. These proposals will be considered shortly, together with other propositions already in the hands of the Government, and a resolution will be taken at an early date.

DENMARK.—GOVERNMENT EXCHANGE SCHEME—IMPROVEMENT OF THE BALANCE OF TRADE—WHOLESALE PRICES—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 28.

THE Exchange Council appointed by the Government has made its report. After a summary of the negotiations of the Council, a unanimous opinion is expressed, and from this we quote:—"The Exchange Council agrees with the Government that at present no reduction of the gold value of the krone should be planned or decided upon, but all efforts should be concentrated on the prevention of a further drop of the krone and the furtherance of an upward movement. The Council considers it expedient that, before the renewal of the Act suspending the obligation of the Nationalbank to redeem its notes with gold, an arrangement should be made by which a selling rate for dollars, corresponding to a gold value of the Danish krone of about 65 ore, should be maintained until July 1, 1925, while in the course of the following three half-years this selling rate should be reduced so as to make the gold value of the Danish krone rise in the course of each half-year at a rate and in a manner to be decided after further negotiations between the Nationalbank and the Government." After mentioning that the negotiations desired by the Council in this connection have been commenced, the report advocates that it should be ascertained, before putting the exchange question before the Rigsdag, what are the conditions under which the Nationalbank considers itself able to undertake the above obligation, and what sacrifices the bank would make in order to carry through the scheme. "Provided an arrangement can be made by which the Nationalbank undertakes the obligation to maintain the above-mentioned rate and make the sacrifices required, the Council can recommend the repayment of the debt of the State to the Nationalbank by means of income derived through special legislative measures of such a description that the note circulation of the Nationalbank may be reduced by the said redemption. On the same conditions the Council can recommend that the Act suspending the gold redemption of notes by the Nationalbank be renewed for a period of two years as from December 31, 1924."

In connection with the report of the Exchange Council, negotiations between the Government and the Nationalbank were immediately commenced, and on the 17th the Government put before the "Folkething" an exchange scheme based on the report of the Council, and granting to the Nationalbank a dispensation from its obligation to redeem its notes with gold for a period of two years as from January 1st. The State is to co-operate in con-

tracting an exchange credit of up to \$40,000,000, by acting as surety for this amount, while otherwise the Nationalbank should take no risk of possible loss on this credit beyond its net profits for the years 1924-25 and 1925-26, some further contributions to the State being likewise taken from the net profits of the said two financial years. Apart from this, the State should take the risk of the said credit. If, as calculated, a dividend for the two years is to be paid to the shareholders of the Nationalbank, the amounts required will be defrayed out of the considerable dividend regulation fund set aside by the bank for such contingencies. When the said exchange credit has been provided, the Nationalbank should—according to the scheme—in so far and for as long as the said credit enables the bank to do so, from a date to be fixed by the Minister of Industry, Commerce, and Shipping, with the sanction of a majority of the Financial Council mentioned below, maintain such a rate for dollars that the selling rate on the Copenhagen Exchange does not exceed Kr.5.74 (corresponding to a gold value of the krone of 65 ore) during the period ending July 1, 1925; Kr.5.65 during the period ending January 1, 1926; Kr.5.57 during the period ending July 1, 1926; and Kr.5.49 during the period ending January 1, 1927. In case special conditions should necessitate such a course, the Minister of Industry, Commerce, and Shipping may grant temporary concessions to these provisions, on the recommendation of the Minister of Finance and the Financial Council. However, during the period from the commencement of the obligation of the Nationalbank to maintain the rate of Kr.5.74, and until December 31, 1926, the selling rate for U.S.A. dollars must not exceed this rate, in as far and as long as the Nationalbank is able to maintain this rate by means of the funds provided by the credit.

In order to provide the means for a reduction of the note circulation of the Nationalbank, the scheme includes an extraordinary "exchange levy" to the State, to be paid once only. These funds are to be employed, partly in repayment of the loan of Kr. 40,000,000 borrowed by the State from the Nationalbank for subscription to preference shares in the Landmandsbank, and partly to strengthen the available cash holding of the State. The funds are to be raised, partly through additional taxes on income and capital, calculated in proportion to the taxes already levied, and thus every taxpayer for the year 1924-25 will be affected. Finally, the scheme provides that a Financial Council of 21 members be appointed, for the purpose of declaring their opinion on questions put before them by the Minister of Trade, and of following developments in the exchange market. If the Financial Council, with the support of a majority of its members, should propose the adoption of measures considered suitable for the support and improvement of the value of the Danish krone, the Minister may make effective the measures suggested, the section in question specifying in detail how measures, taken according to this authority, should be put before the Rigsdag for sanction.

The Government scheme has immediately met with a somewhat unkind reception, and it is maintained by the opposition that more far-reaching measures are required. It is, for instance, pointed out that the scheme does not contain any provision aiming at an improvement of the balance of payments. Further, it may be said that everything goes to show that the Nationalbank does not find the scheme satisfactory, as the bank would have preferred a strong and definite policy on the part of the State during the period while the gold redemption was still to be suspended, in order that the matter might subsequently be taken up for reconsideration on the basis of the experience gained.

Fortunately, the balance of trade of Denmark is still rather favourable. For September it showed an excess of exports of Kr.4,000,000, the exports amounting to Kr.204,000,000, and the imports to Kr.200,000,000. For the first nine months of 1924 the exports had an aggregate value of Kr.1,571,000,000, and the imports were thus only Kr.1,560,000,000, the total excess of imports being of trade during the corresponding period of 1923 amounted to Kr.286,000,000. During the month of October the wholesale price index of the "Finanstidende" shows a drop from 234 to 231. Within the food group

the prices of butter, meat and sugar have dropped somewhat, while in continuation of the rise of the preceding months the prices of eggs and coffee show further rises. The prices of most other articles are unchanged or lower, only the metals, with the exception of iron, showing rises. The most considerable drops are for coal, cotton yarn, lumber, hides, and oil cakes. Danish wholesale prices are now 12 per cent. higher than at the same time last year. The reports to the Labour Directorate concerning unemployment—as at November 14th—show a rise in the total number of unemployed of from 19,518 to 20,865, and the unemployment figure of last year—viz., 22,900—is now closely approached. At the same time of the year the number of unemployed was 38,400 in 1922 and 63,700 in 1921.

NORWAY.—RISING PRICES—MONEY RATES—BANK TROUBLES—EXCHANGE.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 29.

THE rise in wholesale commodity prices continues. The Statistical Central Bureau's index figure at November 15th shows an increase of 3 points from October—namely, from 273 to 276 points. The increase is due mainly to the rise of prices for articles of vegetable food—viz., 289 to 304 points. Other necessities, as sugar and fuel, have declined somewhat. Though the rise, in the main, cannot be said to be very considerable, yet it is troublesome enough, especially at this time of the year, with its usual augmentation of unemployment.

The money market remains very stringent, and as there is a certain amount of nervousness among the public on account of the many bank difficulties—27 banks now have had to seek shelter under the Bank Administration Act—the large banks that are entrusted with large amounts from depositors are very loth to part with their money, as they wish to keep their position very liquid in order to meet any contingencies. Under these circumstances, the claim which is being advanced by the trading community for a reduction of the discount rate has little prospect of success. The present rate of 7 per cent. was established just over a year ago, on November 10, 1923.

The recent feature of the share and bond market has been a downward movement in bank shares. Last year the Bank of Norway suggested to the private banks that they should not distribute any higher dividend than 8 per cent.—a suggestion that was generally heeded. A rumour—so it now transpires—had been spread that this year the bank would suggest a dividend maximum of 6 per cent., and this was the cause of the weak position of bank shares. Now this misunderstanding has been removed, and bank shares are again firmer.

For other shares and bonds the market has been quiet lately, and rather featureless.

One of the largest of Norwegian industrial undertakings—the Norsk Hydro—had a successful year from July 1, 1923, to June 30, 1924, and announce a dividend of well over 11 per cent. The concern, which has for object the manufacture of azote, is constantly extending its ramifications, and finds a ready market for the products. There have been but narrow variations in the exchange of foreign money during more recent days; on the whole, the tendency has been for an improvement of the Norwegian krone, which to-day stands at 31.30 kr to the £.

Letters to the Editor.

REMUNERATION IN GOVERNMENT SERVICE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter from the Parliamentary and Publicity Officer of the Civil Service Confederation in your last issue is a fair and temperate statement, such as might be expected from the official of such a society, of the views of its members on matters affecting their own interests; but it cannot be regarded as disposing of the Anderson Report.

THE BRITISH LINEN BANK.

London Office: 38, Threadneedle St., E.C.2.

JAMES FORREST, Manager. W. F. BLACK, Deputy Manager.

Every Description of Home and Foreign Banking Business transacted

All the conditions which Mr Watney claims should enter into the determination of Civil Service pay—contentment, efficiency, or career for brains, skill, responsibility, and an offset to the prizes of the business world—are recognised, in passages of the Report too numerous to be quoted here, as factors; but efficiency is held to include all the rest, each in its due degree. On this point I will only observe that Mr Watney, in speaking of "contentment and, therefore, efficiency," seems to miss the Committee's remark that "contentment does not always lead to progress and efficiency."

On the proposal to increase hours of work in London to the level in the provinces, he suggests such alarming possibilities as breach of contract, exaction of extra hours without compensation, and 4,000 dismissals, mainly of ex-Service men. These are not necessary consequences of the proposed change, but points to be guarded against in its application, and do not affect the question of principle. On that, it must be remembered that an "8-hour day" in the Civil Service does not mean 48 hours' work per week, as it does in industry, but "office hours" of eight hours for five days a week, with a half-day on Saturday. Allowing an hour a day, on full days, for mealtimes, and a little "law" in the morning, this means at most 39 hours of actual work; the present 7-hour day means 33 hours. The higher grades, as the Report says, habitually exceed these hours, which for clerical work of the more mechanical type cannot be said to give a full week's work. The fact that the so-called Whitley Council of the Civil Service in 1920 proposed to keep the 7-hour day carries no weight. The essential feature of a real Whitley Council, that one side consists of employers dealing with their own money, is absent where both sides consist of employees dealing with the taxpayers' money; and we are no longer in the spacious days of the inflation boom.

Accepting Mr Watney's figure of 4,000 as the number becoming redundant under an 8-hour day, his estimate of the saving on pay (before making any temporary offset for unemployment benefit) as "much less than half a million" appears low. An average of £2 per week would give a saving of over £400,000, and after taking into consideration overtime on one side and compensation for the extra hour (dying out as fresh men come in) on the other, this figure seems very low. And office accommodation, furniture, coals, and light for 4,000 persons cover a tidy sum in addition.

Mr Watney must not impute to me the view that the heavy cost of the Civil Service (£75 millions in 1923, as against £44 millions in 1914) is due to excessive rates of pay. The Report itself says emphatically that large savings can only be made by Parliamentary action in the sphere of policy. There may be costly activities of the Civil Service with which Parliament would be willing to dispense, but I cannot point to them; and in the absence of full knowledge, the Axe system of reform, as recently exhibited, does not attract me. The truest form of economy—the fine art of administration—is to find ways of reducing your expenditure without abandoning your policy, and this the Anderson Committee has shown us how to do.—I have the honour to be, Sir,

YOUR CORRESPONDENT.

Books and Publications.

IRON AND STEEL IN HISTORY.

THE present prolonged depression in the iron and steel trades has recently brought them much attention, and Mr Ashton's book* on their history during the industrial revolution is therefore especially welcome.

At the end of the seventeenth century the iron and steel trades were divided into two branches, one dealing with cast-iron, the other with wrought. The position of both was disquieting. The trade depended upon charcoal, and any expansion, therefore, implied destruction of the forests; but statesmen, alarmed lest the timber which constituted the foundation of British sea-power should be burnt away in the furnace or at the forge, passed severe laws to avert that evil. These statutes were vigorously enforced, and their operation compelled ironmasters to cast about for another fuel. All such endeavours proved vain until 1709, when Abraham Darby I. succeeded in smelting pig-iron with coal. His success where others had tried and failed was due partly to the good fortune which laid the scene of his experiments in Coalbrookdale, where the available coal was adapted for coking. This discovery did not win the *éclat* with which other inventions were favoured. Early in the eighteenth century the cast-iron branch of the trade was small, and wrought-iron makers, who, in the absence of sufficient English iron, were largely supplied from abroad, thought that pig-iron smelted with coal was brittle, and therefore disliked it. Hence Darby did not advertise his achievement, lest he should spoil his market. Nevertheless, under the influence of his process the industry developed quietly but steadily throughout the first three quarters of the century. The legislative fetters which restricted ironmasters so long as they depended on charcoal had been struck off, and though slow to appreciate their new freedom, they came gradually to use it.

Three other inventions were needed before the vigorous industry which carried the nation through the French wars could be built up. The first step was taken by Boulton and Watt. Watt's steam-engine permitted a more powerful blast to be used at the furnace, and could be adapted to work the tilt hammer and the rolling-mill. But the steam-engine itself required accurately-bored cylinders, which, early in Watt's career, could not be obtained. At this point came John Wilkinson, the stubborn ironmaster of Bersham. He had devised a new method for boring castings; applied to cylinders, it gave the requisite degree of accuracy; and the gap was filled. The last great invention was made by Henry Cort. Until his experiments culminated in 1782-83 with the discovery of the puddling process, the use of coal in the manufacture of wrought-iron had yielded only a brittle metal unsuited for further use. With the aid of this method, which enabled mineral fuel to be employed throughout the entire production of iron, the industry was prepared for the great expansion which shortly preceded the French wars, and which, under their influence, progressively gained in strength.

Upon these technical discoveries the hand of time has been somewhat heavily laid. They belong to the empire of things accomplished; and though none the less interesting for that, they fail to stimulate as do accounts of difficulties age-old yet perennially new. It is to Mr. Ashton's chapters on capitalistic combinations, commercial policy, and trade depressions that the reader who ransacks the past for analogies with the present will turn. He will find there a story very like our own. Throughout the eighteenth century the ironmasters endeavoured to regulate prices by gentlemen's agreements. A little later they formed societies, met in inns, read technical papers, and defended their common interests. Their policy towards foreign countries was consistently protectionist—except when a necessary raw material came from abroad. And they often had reason to complain about the state of trade. The eighteenth century was full of wars, during each of which the iron trade expanded. When peace came the industry had generally outgrown demand, and depression ensued. The worst depression followed the Napoleonic

* "Iron and Steel in the Industrial Revolution." By Thomas Southcliffe Ashton. Longmans, Green, and Co. 15s.

wars. Prices slumped, production declined, furnaces were blown out, and unemployment was rife. The cause of each separate crisis was over-development of the industry during the preceding period of war; for, as Montaigne says, "the more we amplify our needs and possession, the more we engage ourselves to the crosses of fortune and adversities." In this story will be found ample material for the moralist, and for practical men the hope that, as previous difficulties were surmounted, so may present hardships be overcome.

THE ORIGIN OF MONEY.*

THIS book is learned, ingenious, and sometimes fanciful. Economists from Aristotle onwards have taught that money was generated by the need of a medium of exchange: that in early Greece cattle served this purpose, and that gold and silver were substituted as more convenient, and coined to save the trouble of weighing them. Herr Laum points out that in the Homeric age there was very little exchange: households were self-sufficing, and the "agora" was an assembly, not a market; and that, though goods are sometimes valued in terms of cattle, a bullock was too costly to be a satisfactory unit of value. But cattle were suitable offerings to deities conceived in the likeness of their human worshippers, and sometimes—Zeus and Here, for example—manifesting themselves in bovine shapes. Thus compensation for offences against religion, including homicide, was made in cattle: hence their use as a medium of exchange. Gold and silver were associated in ancient Babylonia with sun and moon worship respectively: their age-long ratio of 1 to 13½ is derived from the relative duration of the apparent movements of the two heavenly bodies; they were treasured in the temples, and, when coined, were stamped with the image of the temple-god as a sign that they belonged to the deity, and, therefore, that man must not tamper with them. Even when early coins are stamped with figures of oxen, or fish, or axe-heads, these figures do not, as has been held, represent the commodity they have displaced as currency, but something connected with the deities of the State. And the coins derive their currency from the State as the guardian of religion. Exchange arises originally from reciprocal present-giving; and foreign trade in its earliest form is conducted by the king, that the novel commodities imported may impress the people with his power. The book is full of such ingenious and often highly disputable suggestions; many are quoted from other writers, and mostly they are based on some sort of evidence; and it deserves the attention of all students of economic history.

THE STORY OF A NATIONAL BANK.*

THE National Bank of Greece is so closely connected with the Greek State and people, and has taken such an important part in developing the resources of the country and ameliorating the crises in its financial relations, that it offers the natural centre for a history of Greek economics and finance. Its present managing director, who is not unknown to readers of the *Economist*, has here set forth its history in great detail, and has incidentally dealt both with the post-war financial position in Europe, and with the economic development of the Greek nation from its partial embodiment in a small and weakly kingdom to its expansion into a republic temporarily weakened by its recent disasters, but now convalescent and full of hope. Founded in 1841, after two abortive attempts to provide a State banking institution, the bank owed its existence partly to a Philhellene Swiss financier, M. Eynard; its first shareholders included the Rothschild firm, King Ludwig, and the Greek Government; and, in the undeveloped condition of the Greek kingdom at its establishment, its earliest business apparently consisted mainly in lending on mortgage. But it encouraged savings, even on a small scale, and deposits, by paying substantial interest. It was from the first a bank of issue, and has used its privilege—which is now, and till 1950, exclusive—judiciously throughout its history; it has

* "The National Bank of Greece: a History of the Financial and Economic Evolution of Greece." By M. S. Eulambio. (Athens) Printed by S. C. Vlastos. 1924.

promoted the development of the national resources, and has largely financed the successive Governments; it has taken effective measures at various times to stabilise in some degree the national finances during the chequered career of the kingdom, and to regulate the foreign exchanges; it sustained and promoted Greek production and foreign trade during the world war, and exhibited its enterprise in undertaking the provision of the supply of food to the Greek people from entirely new sources in the United States. It has earned its reward in a dividend in 1924 of 150 per cent.; it has also earned the gratitude and confidence of the Greek people, and half its deposits now come from Greeks living abroad. The author adds a chapter suggesting an international effort to stabilise the depreciated currencies of Europe, which, though other remedies are being adopted, is worth attention. The book merits the study of all students of banking and economic history.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
December 17.

ACCOUNT,
December 18.

THE Stock Exchange settlement which was concluded on Thursday proved to be of noticeably lighter dimensions than either of the two preceding accounts. Business in some markets shows a tendency to fall away in consequence of the approach of Christmas and the New Year, with their requirements for shopping and window-dressing respectively. Amongst Government stocks the feature has been rush for underwriting of the new Greek Refugee Loan, while, in the industrial market, several sections, including those for tea and whisky shares, continue very active.

The quieter aspect of Egyptian politics served to allay the apprehensions previously excited by the events which occurred

on either side of the assassination of the Sirdar. Distribution of the War Loan interest on Monday last had no particular effect upon prices in the gilt-edged market. Dealings started in the new Commonwealth 4½ per cent. scrip that was offered at 97½, and the price kept closely within an eighth of "par." Large applications for this issue received 55 per cent. of their subscriptions, but the loan was evidently staggered on an extensive scale. There has been a good deal of scrip thrown on the market by people who do not require it for permanent investment.

Peruvian Corporations have been strong, in recognition of the recently-issued excellent report. German scrip has touched 100, being a premium of 8 points above the issue price. This served to strengthen the prices of other Mid-European bonds. South Americans are firmer in a good many cases, while Mexicans continue to languish.

Home Rails have at last escaped from the doldrums into which the market was steeped during the greater part of November, and some rises occurred in the principal stocks. The impression prevails that the railway men are reluctant to strike, and that the vague talk of a general suspension in the transport industry is not likely to materialise. Most prices are better on the week. Grand Trunk Pacific debenture, after its sudden spurt to 72, relapsed to 65, from which level there was another rally. Argentine Railways have been heavy, and foreign rails as a whole continue to be somewhat out of favour, with Leopoldinas an exception to the general dullness.

Raw rubber's rise to 1s 6d per lb had the effect of infusing a little fresh interest into the rubber share market, without, however, attracting active business. The tea market, on the other hand, is very animated, although movements are not all one way. Many shares show substantial rises on the week, but profit-taking on fairly liberal lines set in on Thursday. Speculation in the market is on a large scale, and the character of the buying for new account which occurred early in the week gave rise to some inquiry as to whether the buyers were all investors, or whether the speculative element were not becoming conspicuous. In oil shares, the recent Anglo-Persian meeting assisted to bring about a better tendency amongst the good-class descriptions, without increasing public interest in the market to any pronounced extent.

Trust companies' stocks have been rising by leaps and bounds, gains ranging from 2 to 7 points. The banking share market is firm, and insurance shares have become more difficult to buy, owing to the shortage of supply in the market. Iron and steel shares again moved within narrow limits, the uncertainty which surrounds the outlook for the industry causing hesitation. Firmness, rather than price improvement, is the feature of the shipping group. Whisky shares enjoyed further substantial rises, in spite of an announcement that rumours of a contemplated combine had no foundation in fact. Brewery stocks are generally better, and, in the tobacco market, Carreras again went ahead, on the 50 per cent. dividend now declared. Tobacco shares are good throughout. Courtaulds and other textiles have been strong, the former spurring sharply. Brickmaking and similar shares are good, with cements particularly popular. A few rises occurred in nitrates, and newspaper shares are mostly higher. Sudan Plantations responded promptly to the quieter state of affairs reported from Egypt. Various London electricity supply shares show advances on account of the expectation that the London Bills will be duly carried in the House of Commons during the new session.

South Africans attract little public interest of the active kind, owing to the impression that the price of gold must go lower, in consequence of the rally in sterling as compared with the dollar. Part of the recent nervousness, however, gave way to a more confident feeling as the Cape sent buying orders. Paris has been supporting De Beers and Rio Tintos, the latter by reason of the rise in pyrites. Tin shares of the Middle East group display robust strength, insistent buying from the Middle East coming upon a market on this side none too well supplied with shares. Mexicans remain neglected. Canadian mining shares are flat; the Dominion has been selling, and recent developments on some of the properties are very disappointing.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

Greek Government 7 per cent. Refugee Loan.—

Issue of £7,500,000 7 per cent. sterling bonds at £88 per cent.

This is part of a total authorised amount of £12,300,000, of which £2,500,000 will be issued in Athens and the balance of £9,800,000 is reserved for issue in America in dollars. The issue is under the direct control of the International Financial Commission, which is to retain the amounts necessary for the payment of interest and for amortisation. The loan is secured by a first charge on certain specific revenues, including those from the monopolies of salt, matches, cigarette papers, &c., the revenues from the tobacco and stamp duties in the new Greek territories, various Customs receipts, and revenue from the alcohol duty. The yearly surplus of the total revenues, on the basis of the returns made for nine months to September last is estimated to produce for the service of the loan during 1925 the sum of £5,526,894. The loan is raised for the purpose of providing moneys to enable the Refugee Settlement Commission to carry out the work of settling and engaging refugees in Greece, and in productive work under the auspices of the League of Nations. Principal and interest on the bonds will be payable in sterling, and will be exempt from all Greek taxation. Repayment is to be effected at par during a period of not more than forty years, by means of a cumulative sinking fund of ½ per cent. Half-yearly drawings will take place, commencing on September 1, 1925. In addition, 75 per cent. of the repayments of capital made by the refugees to the Settlement Commission will be applied to half-yearly drawings at par. The first will be made as soon as such repayments shall equal £10,000. The numbers of all bonds drawn will be advertised in two London papers. The Greek Government reserves the right, on or after May 1, 1926, to redeem the whole of the outstanding bonds at par on giving three months' notice. All reasonable precautions appear to have been taken to protect the investor, who must regard the generous return as some indication of the risks involved.

Anglo-Spanish Construction Company, Limited.—

Share capital £312,500 in £1 shares, of which 250,000 have been issued at par for cash, while there are £2,500,000 of 6 per cent. registered debentures, of which £2,000,000 have been issued at 95 per cent.; £45 per cent. has been paid up, and the balance is payable on October 1, 1925. The total debenture issue is redeemable at par not later than September 30, 1931, but, subject to three months' notice, the company may repay on any interest date. The company reserves the right

to purchase debentures at any time in the open market. The subscription of the 250,000 shares of £1 each and £2,000,000 6 per cent. debentures, which have been already issued by the company, was guaranteed by the Central Mining and Investment Corporation, and Messrs Bernhard, Scholle and Co. No underwriting commission was payable under this agreement. The company has been formed primarily to construct a railway in Spain, approximately 260 miles long, under a concession granted by the Spanish Government. The Construction Company acquires shares of the Railway Company, which is to operate the line when completed, and will be allotted the Railway Company's bonds when issued. There is a guarantee by the Spanish Government in respect of interest on the Railway Company's bonds. These and other details are published in the Press to comply with Stock Exchange regulations. The enterprise appears to be in good hands.

International Sleeping Car Company.—

Incorporated under Belgian law in 1875 as the Compagnie Internationale des Wagons-Lits et des Grands Express Européens. The total share capital is £15,000,000, all of which has been issued. There is, in addition, a total of 48,718,500 in bonds already outstanding. This is an offer for sale of £1,000,000 6 per cent. sterling bonds (1924) at £97 per cent. Redemption of the bonds is to be provided by an annual payment of £33,333, the latest redemption date being 1956, but the company reserves the right to repay the bonds at par after January 1, 1935, on giving three months' notice. The operations of the company include the running of sleeping cars, and dining and drawing-room cars on all European railways. In 1923 profits amounted to 45,307,315f, an increase of 11,724,634f over the previous year, and the dividend was raised from 14 per cent. to 23 per cent., while the allocation to depreciation and reserves was 19,518,201f, in contrast with 16,844,477f. According to the last balance-sheet, rolling stock in service figured for 125,121,927f, after allowing for depreciation. There is a special reserve for depreciation, provision of loss on exchange, &c., amounting to 33,648,988f, and the surplus of assets over liabilities at December 31st last was 102,214,081f. Messrs Erlangers have acquired the whole of the bonds, and are offering them for subscription. It will be noticed that all bonds issued by the company, whether sterling or not, carry no preferential rights.

Agar, Cross, and Co., Limited.—

Share capital £1,000,000 of which £750,000 has been issued. This is an issue of £500,000 5½ per cent. mortgage debenture stock at 90. The stock will be secured by a trust deed constituting a first specific charge upon assets in the Argentine Republic. The business was founded in 1884, and exports merchandise to South America. It was converted into a company, with a capital of £650,000, in March, 1908. Surplus assets, exclusive of goodwill, are valued at £1,143,794. Freehold properties in the Argentine are valued at £474,572. Profits are given from 1919, and these show that interest payments are well covered.

The Neuchatel Asphalte Company, Limited.—

Authorised share capital £1,000,000, of which £619,880 has been issued. This is an offer to shareholders only of £200,000 of 6 per cent. ten-year convertible debenture stock at 98 per cent. The stock is redeemable at par on December 1, 1934, or at the company's option at 105 per cent. after December 1, 1927, on six months' notice. It constitutes a first floating charge on the whole assets and undertaking of the company. In a statement in the Press, made to comply with Stock Exchange regulations, details are given of profits during the past fourteen years, the net profit for 1924 being estimated at £60,000. The assets, we are told, upon which the stock has a first floating charge are valued at approximately three and a-half times the amount of the issue. The stock carries conversion rights into ordinary shares, beginning in 1926. A well covered industrial debenture.

Godfrey Phillips, Limited.—

Share capital £950,000, of which £630,000 has been issued and paid up. Details have been advertised for public information only of an issue of £200,000 7 per cent. sinking fund 15-year notes. A trust deed in favour of the Law Debenture Corporation, as trustee, provides that the notes be redeemed by the application of an annual cumulative sinking fund, commencing in 1927, in the purchase of notes or by drawings, at 101. The company have the power to redeem the whole of the notes outstanding at 102 per cent. at any time after January 1, 1931. Any notes not previously redeemed will be repaid on December 15, 1939, at 101 per cent. The proceeds of the notes will be used for provision of additional working capital and for the extension of plant and factories.

Staveley Trust, Limited.—

Authorised capital, 250,000 ordinary shares of £1 each, of which 33,660 have been issued, and 75,000 deferred shares of 1s each, of which 22,580 have been issued. This is an issue of 125,000 ordinary shares at par, subscribers for which will be entitled to apply for and receive an allotment of one deferred share of 1s at par for every four ordinary shares allotted. In the event of subscribers

applying for the total number of deferred shares to which they are entitled, the issued capital will then consist of 158,660 ordinary and 53,830 deferred shares. The company was formed in 1921 as an investment and finance undertaking, and for each of the two years, 1921-22 and 1922-23, a dividend of 10 per cent. was paid on the ordinary shares. For 1923-24 the total distribution on the ordinary shares was 9 per cent., in addition to which the deferred shares (which were issued in October, 1923) received as dividend a sum equal to an additional 1 per cent. on the ordinary shares. At the end of the last financial year (July 31, 1924) there was a surplus of assets over liabilities of £37,923, as compared with the then issued capital of £34,789. The prospectus is a candid document.

Rhodesian and General Asbestos Corporation, Limited.—

Authorised capital £630,000, of which £529,561 has been issued, in shares of £1 each. In order to comply with the regulations of the Stock Exchange, particulars of this company are advertised for public information only. Incorporated in Rhodesia on July 12, 1917, the corporation acquired asbestos and other properties, and in particular the Shabanie and Gaths Mines in Rhodesia. It is proposed to make a further issue of 100,000 shares, being the purchase price payable in connection with the acquisition of the King Mine. A useful statement appears, which shows capital at various dates, net profits, and dividends paid for the last seven years.

The Cheapside Land Development Co., Limited.—

Share capital, £200,000, divided into shares of £1 each. The company was incorporated in October, 1924, and has recently entered into a contract for the purchase of a freehold plot of land of some 21,806 superficial feet on the East side of St Martin's le Grand, on the site of the old General Post Office. It is intended to erect a building on this site. The contract prices of the land and building amount to £428,664. According to estimates, the premises should produce a net income when fully let of £37,500 per annum. The directors have power to raise or borrow money for the purposes of the company, but so that the amount at any one time owing in respect of money so borrowed shall not, without the sanction of a general meeting, exceed double the nominal amount of the issued capital. Another prospectusless proposition.

Liquid Air, Limited.—

Share capital £75,000, divided into 71,500 ordinary shares of £1 each and 3,500 management shares of £1 each. The company was incorporated under the title of Liquid Air and Rescue Syndicate, Limited, on October 25, 1913, to acquire the Liquid Air and Rescue Section of the business then carried on by Messrs Henry Simonis and Co., of Park Royal, especially for the equipment of mine rescue stations. The purchase consideration payable by this company was £7,000. This sum was satisfied as to £3,500 in cash and as to £3,500 by the allotment to the vendors of 3,500 fully-paid shares of £1 each in the capital of the company; 3,000 of these shares were termed management shares, and have double voting power, but rank otherwise and in every respect *pari passu* with the existing shares. Dividends of 10 per cent. and 12½ per cent. respectively have been paid for 1922 and 1923 on the capital then issued. Of the unissued shares, 22,000 are under option until next year. Another prospectusless concern.

London Restaurants, Limited.—

Authorised capital £255,000, divided into 250,000 10 per cent. cumulative participating preference shares of £1 each and 100,000 ordinary shares of 1s each. The company has issued a mortgage debenture for £50,000, which is charged upon properties owned by the company. Incorporation took place in June, 1923, when the company took over the Florence Restaurant, London, while since then 57,182 shares of Romano's, Limited, have been purchased. The preference shares rank for 10 per cent. fixed and to one-half the balance of profits available for dividend following upon the payment of 10 per cent. on the ordinary; voting rights are equal to the ordinary. Assets are shown as £255,461, as against issued share and loan capital of £255,000. The purchase price paid by the company was £239,628. These details are given in connection with Stock Exchange regulations.

Weston-super-Mare Gaslight Company.—

Incorporated by special Act of Parliament. The authorised stock capital of the company is £200,560, of which £150,762 has been issued. Loan capital amounts to £72,280, the whole of which has been raised. This is an offer for sale by tender of £15,000 6 per cent. preference stock, to be redeemed at par on June 1, 1935. The net revenue of the company for its last financial year was £9,713, after paying interest on loan capital. As the dividend on the preference stock, including that now being issued, will require but £1,606, ample margin is available for contingencies.

Bournemouth-Swanage Motor Road and Ferry Company, Limited.—

The share capital is £60,000, in 30,000 10 per cent. participating preference and 30,000 ordinary shares of £1 each, which are now being issued at par, toge-

ther with 300 7½ per cent. first mortgage debentures of £100 each, also at par. The debentures are repayable at 105 per cent. on July 1, 1944, or at 110 per cent. on any earlier date at the company's option. This company has been incorporated by a special Act of Parliament for the purpose of constructing and working a motor road and ferry to shorten the distance between Bournemouth and Swanage by fifteen miles. The directors are people who should understand the work which is to be done. The company is authorised to charge tolls on the ferry and on the road.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

AERATED BREAD COMPANY, LIMITED. SUCCESSFUL YEAR—INCREASED PROFIT.

The seventy-first ordinary general meeting of the Aerated Bread Company, Limited, was held, on the 1st instant, at the Cannon street Hotel, London, Sir Charles Cottier (chairman of the company) presiding.

The secretary (Mr A. G. Nisbet, C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that he was happy to be able to state that again the company's trading had passed any previous records. It was generally anticipated that the Wembley Exhibition would prove a considerable benefit to Metropolitan catering concerns, and there was no doubt that the influx of people into London consequent upon the Exhibition had in some measure contributed to the increased trading. On the other hand, the company's ramifications, direct and through its subsidiaries, were now so wide that the purely local conditions occasioned by the Exhibition did not greatly affect the undertaking as a whole.

YEAR'S PROFITS.

The gross profit on trading was £652,185, as against £595,121 last year, an increase of £57,063. Wages, expenses, and charges amounted to £526,639, against £497,954 last year, an increase of £28,684, due to the increased number of establishments and the larger business done. Sundry profits and revenue amounted to £29,392, against £33,982 last year. The total net profit earned by the company during the year amounted to £154,939, against £131,149 last year, an increase of nearly £24,000, which, he thought, the shareholders would agree was satisfactory. The board were continuing to give real value at the lowest possible prices, and the continued expansion of the business showed that the company's policy was recognised and appreciated.

The board had continued their policy of extending the company's business, and an additional number of new branches, which had proved successful acquisitions, had been secured. Some of these

new branches having been opened late in the year, the company had not received the benefit of a full year's trading from them. Further premises had been acquired for new depots, and would be opened for business as soon as the necessary alterations had been completed. He would like to refer to the systematic improvement of the company's existing branches. As in recently previous years, where leases and other circumstances permitted, a number of branches had been dealt with, and over 30 branches had been modernised within the last year or two. A large expenditure had necessarily been incurred, but the success of the policy was its justification.

The business of Bertram and Co. had been most satisfactory. This had proved one of the best investments the company had made. The business of James Cottle had also been satisfactory, and the profit earned showed a good return upon the capital invested in the business.

DIVIDEND.

The directors, he said, proposed to allocate the available profit of £166,469 as follows:—Final dividend at 1s 3d per share, less tax, making, with the interim dividend, 2s per share, leaving, after provision for preference dividend, income-tax, &c., £39,275 16s.

It would be agreed, he thought, that the directors had been prudent in their recommendation as to the ordinary share dividend to be declared, but it was the board's earnest endeavour that the financial position of the company should continue strong and sound—growing yet stronger and sounder in each succeeding year.

It had been suggested in some of the newspapers that the increased profits of this and other catering companies might be directly attributable to the reduction of duties on tea and sugar. While the reduction in sugar had benefited them, the price of tea had in no way resulted in a saving, this reduction being more than counterbalanced by the subsequent increase in prices. What they were likely to suffer from was the large increase in the cost of flour being brought about largely by American speculators and combinations, and here was a great opportunity for the present Government, with its undoubted mandate from the country for the extension of Empire inter-trading, immediately to set up legislative machinery for the assistance and encouragement of both home and Empire farmers in order that they might profitably grow wheat in much larger quantities. We should not, he thought, as a country, rest until we were free from any combination or organisation which had for one of its objects the gambling in this essential foodstuff of the people.

The shareholders would probably have noticed in the newspapers a statement that the company's directors were negotiating for a

controlling interest in "Cabins, Limited." The whole of the ordinary share capital of that concern had been purchased by the Aerated Bread Company, and this business would, he had no hesitation in saying, prove under the company's management of considerable advantage as a profit-earning entity.

The resolution was carried unanimously.

STRAND HOTEL, LIMITED.

UNPRECEDENTED DEMANDS FOR ACCOMMODATION.

The seventeenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 4th instant, at the Trocadero Restaurant, London.

The secretary (Mr H. F. Joyner) read the notice convening the meeting and the report of the auditors.

Major M. Gluckstein (the Chairman) said that the accounts for the year ended September 30th last showed that the company still maintained that steady improvement which had characterised its trading since it commenced business 15 years ago. Most London hotels had reaped the full benefit from the great influx of visitors attracted by the British Empire Exhibition, but this company had not been able to house any more visitors in their hotels than in previous years, because the whole of their accommodation was invariably taken up. The demands made upon them, however, had been unprecedented, and they had been regretfully compelled to disappoint a very large number of people, including many of their regular and valued patrons. Charges for rooms elsewhere had been, generally speaking, substantially higher than the normal, and the company could have benefited by many thousands of pounds by temporarily increasing their terms, but the board took the longer view and kept to their standard rates, knowing that thereby the company's interests would be better served and its reputation for pre-eminence in value still more firmly established. Wherever possible, their food charges to the public had been reduced during the year, but they had been able to carry out their policy in this direction to a limited extent only, owing to the fact that, as compared with last year, the cost of foodstuffs had been, on the whole, greater.

The directors had been negotiating with the Crown for a building agreement for a lease for 84 years of the remaining portion of the block of which the Strand Palace Hotel formed part, and, in addition, for a reversionary lease of the present Strand Palace Hotel premises for 21 years, so as to make the leases of the whole block coterminous. The rentals payable, which were very high, had been agreed. He was afraid it would be impossible to commence the development of the additional site until the expiry of the existing leases three or four years hence. When this development could be carried out, however, the Strand Palace Hotel would be double its present size, and should contain some 900 bedrooms. They knew from their experience that an extension of this hotel was much needed and would give great satisfaction to the travelling public, as well as being profitable to the company.

The report and accounts were unanimously adopted.

RHODESIA CONSOLIDATED, LIMITED.

The ordinary general meeting of the Rhodesia Consolidated, Limited, was held, on the 28th ultimo, at Winchester House, London, Colonel Frank Johnson, D.S.O. (the chairman of the company), presiding.

The Chairman, having reviewed the accounts, said the company's most important asset was 386,000 acres of land, in the intrinsic or ultimate value of which he was a firm believer. He was strongly of opinion, however, that they must create such conditions and prospects as would attract customers in a steady stream. Hitherto, the attempt to develop Rhodesia had been on the old lines of 5,000- or 6,000-acre farms, carrying in their undeveloped condition comparatively small herds of cattle or growing Indian corn. To realise and develop their large land holdings they must cease this process, and look for settlers of small means, but with good health and the essential British characteristic—the "will to make good."

The Chairman then touched upon the possibilities in this direction and the essentially pastoral nature of Rhodesia, and proceeded to deal with a scheme of amalgamation, one of the chief reasons for it being their desire to be in a position to further settlement upon their land. He said: A new company has been registered to absorb such Rhodesian companies as see fit to amalgamate their interests through absorption by it. At the moment the new company has no issued capital, and if you approve, the purchase of your assets will be its first business. The principal assets of the Mashonaland

Consolidated, Limited, will come to the new company through its liability to this company, and the Rhodesia Mining and Land Company has also arranged to join the amalgamation. I am not in a position to give the names of the other companies whose advent into the new company is contemplated. Negotiations are proceeding, but until they have been completed it would obviously be improper for me to mention their names. However, the basis of all amalgamations will approximate on the market value of the shares, and in no case will any land be taken in at a higher valuation than that given for yours.

The amount of working capital available is also a matter depending on the extent to which the system of consolidation is carried, but all reasonable requirements for the maintenance and development of the combined assets will be provided without calling on you to find any portion of it unless you wish to subscribe voluntarily.

The underlying principle of the amalgamation is that the assets of each company should be taken over at such a conservative figure that the depreciation of the shares of the new company will be virtually impossible. In other words, future profits will not be anticipated in the purchase prices, but left to accrue through appreciation of the value of your new shares.

You will recognise as one of the great advantages of this scheme the economies that will be effected in administration, both here and in Rhodesia, besides ensuring continuity of policy.

The report and accounts were adopted unanimously and resolutions were passed approving the sale of the company's undertaking and assets to Rhodesian Mining Corporation, Limited, the voluntary liquidation of the company, and the ratification of an agreement with Rhodesian Mining Corporation, Limited, and the distribution of 358,440 shares of 5s each of that corporation among the members of the Rhodesian Consolidated, Limited.

barely steady, best milling samples ruling at 12s to 12s 6d per 112 lbs, free on rail. Imported descriptions moved off slowly, and values generally tended in buyers' favour. No. 1 Northern Manitoba quoted 6s 6d, No. 2 hard winter 6s, No. 2 mixed Durum 6s, and choice white Karachi 6s, all ex ship terms per 406 lbs. Dull conditions prevailed in the floating and forward cargo section, and prices moved in a downward direction on pressure to sell Plate descriptions, and with home granaries well stocked for the moment, cargoes near at hand weigh somewhat heavily on the market. Steamers of No. 2 and No. 2 Northern Manitoba shipment from Vancouver, on passage sold at 66s 9d and 65s 6d respectively, and No. 2, also No. 3, ditto at 65s 3d and 64s both to Mediterranean, also No. 2 hard winter afloat to Continent at 60s 3d all per 480 lbs c.i.f. terms. Flour quiet, and tendency easier in sympathy with wheat. London standard straight run quoted 50s, patents 52s-53s, town whites 50s per sack delivered in Metropolitan area. All English country straights 44s to 44s 6d per sack free on rail at London stations. Of imported, Manitoba patents quoted 50s to 51s, Minnesota 49s to 51s, and Australian 47s per 280 lbs ex store. Barley quiet and values weak. Californian quoted 70s-72s, Chilean brewing 84s-87s, Polish ex store 60s-68s per 448 lbs. No. 4 Canadian Western ex ship 39s, Danubian, also American malting (48 lbs), 39s, Persian 39s 6d ex store, all per 400 lbs. English ranges from 11s-20s, all per 112 lbs free on rail. Maize quiet and easier. Plate ex ship quoted 40s 6d, ditto landed 42s, and Odessa in latter position 42s per 480 lbs. Oats steady. Plate ex ship near quoted 28s 9d, ditto landed 30s, Canadian Western ex ship 33s 9d, ditto landed 35s, American white clipped (38 lbs) landed 31s, all per 320 lbs. English 9s 6d-10s 10d, all per 112 lbs free on rail. Millers' offers generally quiet. Broad bran quoted 9s, middlings 9s 6d, fine ditto 12s, bags included, ex mill, light oats 9s 3d, powdered oat husks 9s 9d, feed oatmeal 10s 9d, ground oats 13s 9d, all per cwt free on rail. Oatmeal steady, with a fair business in force. London-made, flaked 20s, rolled oats 19s 6d, medium also fine cuts 19s 6d, coarse and medium pinhead 19s 6d, ordinary Scottish oatmeal 21s, American and Canadian rolled oats 20s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

	1924-25.	1923-24.	1922-23.	1921-22.
Estimated sales of home-grown wheat—				
1 week to Nov. 23.....	Cwts. 244,298	Cwts. 329,296	Cwts. 657,580	Cwts. 387,168

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 4th, is as follows:—Pig-iron: Business is quiet in the pig-iron market, and prices are inclined to be easier. No. 3 Cleveland G.M.B. is to-day quoted at 81s 6d, with mixed numbers East Coast hematite at 88s per ton. After a fair amount of business, inquiries are now very few, and the general feeling is that there will be very little new business put through until after the turn of the year. Manufactured iron and steel: Some of the works have booked fresh orders, but specifications are not coming forward as expected, and there are no signs at present of any increased output. Prices are unchanged:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: With the exception of one or two odd cargoes, there has been practically no new business in iron ore during the past week or two. Sellers are still quoting on the basis of 22s 6d per ton for best Bilbao Rubio, c.i.f. Tees.

Our Sheffield correspondent writes:—Business in most branches of the Sheffield steel industry is experiencing a sharp relapse, as, owing to the approach of the end of the year, consumers have reduced their buying to immediate needs, and are desirous of keeping down stocks to the minimum. It is now difficult to sell semi-material, such as billets, and as regards mild steel generally in a rolled state demand is poor. It has been found necessary at several works to reduce production. The heavy steel forges and foundries are quiet. A few of the largest makers of the best tool steels are booking rather more freely from a number of overseas markets, but this branch is stagnant as a whole. The season demand for house coal is the smallest ever experienced, and there appears to have been much less stocking for the winter than is usual. Prices all round are low and irregular.

Our Glasgow correspondent writes as follows:—The situation in the iron and steel markets is practically unchanged; few new features are discernible, with the exception of the receipt by Clyde shipyards of contracts to build and engine a couple of fair-sized steamers. Messrs. Stewarts and Lloyd, Coatbridge, have booked an order for 18 miles of steel piping, 36 inches diameter,

for a water supply scheme in the East. This involves a very large tonnage of steel plates, which will probably be manufactured at the firm's Mossend works in Lanarkshire, and will keep the heavy department of the tube works busy for fully 12 months. There is less business passing in pig-iron, and shipments are again at a low level. Prices, however, are firm. Shipments from the Clyde last week amounted to 728 tons, of which 687 tons were for foreign destination. The corresponding figures for the same week of last year were 2,022 tons and 1,942 tons respectively. Steel makers are feeling the want of orders for plates, although some of the section mills are busy on structural steel. One or two good lines of semi-finished steel have been secured locally, but re-rollers have given out considerable tonnages to Belgium at prices which home producers could not approach. In the Scotch coal trade a sharp advance has taken place in certain grades, owing to a brisk demand from two overseas markets, but otherwise the general depression continues. Black and galvanised sheets are a dull market for foreign account, with prices slightly lower.

Our Cardiff correspondent writes:—The general position of the Cardiff coal market this week has slightly improved. The approach of the Christmas holidays has increased the supply of tonnage, and contractors uncovered for their month's supplies have been buying. The collieries are consequently better stemmed, and while prices have not shown any upward movement, they have been much steadier than they were a few weeks ago. Contracts over next year have also been placed at prices higher than those concluded early in November, and the most important of these is one for 300,000 tons placed by one of the leading transatlantic shipping companies at an f.o.b. price of 25s 3d for one of the second Admiralty steam coals, and another for 200,000 tons placed by the Egyptian State Railways for Monmouthshire coals at prices ranging from 34s 3d to 35s, c.i.f. The joint audit for the South Wales coalfield in October was again an unfavourable one, showing a loss per ton on an output of 3,705,000 tons of 6.47d. There has thus been an average loss under the new wages agreement of over 9d per ton, and a total loss to the collieries of over £737,000. The general wage rate in December remains unchanged at the minimum of 42.22 per cent. on the 1915 standard rates.

The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; seconds, 25s 6d to 26s 6d; best drys, 27s to 27s 6d; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 24s; coking smalls, 16s to 17s; ordinary cargo smalls, 13s to 14s; red vein, large, 35s to 36s; anthracite big vein, large, 47s 6d to 50s; French nuts, 58s to 60s; machine-made cobbles, 55s; rubbly culm, 12s to 12s 6d; coke for export, 45s to 50s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 25s to 27s 6d; pitwood,

ex ship, 28s 6d to 28s 9d. In the tinplate trade prospects have improved during the past week, and several works that were closed a fortnight ago have resumed operations. Minimum prices remain unaltered.

METALS.

The market for tin opened with a firm tone, but subsequently developed irregularity and weakness under selling pressure. In the aggregate a fair business transpired, including standard cash at £260 15s-£261 10s, and £258 15s, with three months' fluctuating between £264 15s-£261 10s, and £262 15s. In the East business was reported at £264 10s to £266 15s and £264 5s per ton c.i.f. terms. Copper has been a barely steady market, though fluctuations were confined to narrow limits, and a good business resulted. Standard cash changed hands at £64 5s-£64 10s, and £63 17s 6d, three months' £65 10s-£65 8s 9d, £65 12s 6d, and £65. Lead easier, with dealings on a smaller scale. Good soft foreign pig quoted £39 2s 6d to £37 as to position. English £40 10s per ton. Spelter also declined on heavy offerings, quotations ruling at £35 to £35 2s 6d as to position. Antimony firm. English refined quoted £69 10s to £70; foreign, £58 to £60. Crude, £34 per ton. Aluminium steady. Home trade quoted £125; and export £130.

The market has continued generally firm. The possibility, however, of cheaper raw cotton has had some effect upon the policy of buyers of manufactured goods. A feature of interest has been the increased demand in cloth for China, and although contracts have been rather unevenly divided, a larger business has been done than for some time back. Some of the buying has been forced out owing to the fear of customers not being able to get delivery if the placing of orders is delayed. Inquiry for India has also broadened, and in fair lots the total sales have been more encouraging. Useful lines have been booked for Egypt and South America. Fancies continue to attract a good deal of attention for the Continent. American yarns have been somewhat irregular in price when tested, and transactions of weight have been few and far between. A steady demand has been met with in Egyptian spinnings. A few more contracts have been put through in export yarns for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The tone of the market is well maintained, but business during the last week has been conducted on more restricted lines, and hand-to-mouth buying is again the general rule. Demand for wool, both in the primary markets and in London, is still sufficiently strong to keep values firm, and topmakers are quoting in accordance with the raw material position, but in most cases this is equivalent to quoting protective rates. There is no material change in quotations for merino tops, warp 64's being still obtainable at about 81d and super 60's at 76d, but here and there an odd lot can be picked up at less money, especially second-hand lots. Average 58's are about 1d dearer at 63d, and the same rise is seen in super 56's, but average 56's are steady at 54d, 48's at 38d to 39d, 46's carded at 36d, and 40's prepared at 33d per lb. The yarn trade is very slow in responding to the higher prices ruling in wool. New business in botanics is scarce, and users are not prepared to pay anything like replacement costs. A considerable amount of machinery in this section is still idle or only partly employed, and particulars against old contracts are slow in coming to hand. Business can be done in crossbred yarns where spinners are prepared to pass on the advantage of any cheap tops they may have, but although quotations were put up in sympathy with the sharp rise in tops, they are mainly nominal and cannot be made.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The second week of sales in Coleman Street has passed off with all the sound features of the first week well maintained. The attendance has remained good, competition has never flagged, and, on average, the opening advances are still in evidence. We have been very favourably impressed with the high character of the merino offerings, and nothing but satisfaction can be expressed regarding this season's Australian clip of this description. There has been a splendid show from Queensland, New South Wales, and West Australia, and buyers speak in very appreciative terms of the wools catalogued. The clip is particularly well grown, full of life and elasticity, and is meeting with an excellent reception. One has only to look at the high standard of values paid to see that there is nothing wrong either with the market or the wool, particularly so when the top side of 40d is frequently being paid for good grease combing. Comparing the prices ruling this series for the same clips a year ago, there is oftentimes an advance of 8d to 10d per grease lb, which means that growers will receive something like £12 extra per bale than they did last year. One can well understand that growers are going to receive from their current clip £80,000,000, a sum that has never been realised before in the history of Australia.

Some express a little disappointment that French buyers are not operating so extensively as many expected to see. There is no doubt that French buyers are just as concerned regarding the future of wool as British buyers, for they say they are finding it an almost insuperable task to pass on the present high wool values to the ultimate consumer. However, the catalogues are being absorbed.

VEGETABLE OILS AND OILSEEDS.

Linseed oil has taken quite an easier turn, and prices have sharply declined on liquidation of speculative holdings to £43 10s, ex Hull mill, for oil on spot and delivery to the end of April. The market, however, closes rather steadier with an improved consumptive demand. Cotton oils continue in only poor request, crude Egyptians offering freely at £45 10s, and technical refined at £47 10s, ex Hull mill. Palm kernel oil has been in good demand, particularly for export, current value of crude being £43 10s. Not so much is doing in soya oil, which is lower at £44 10s.

HIDE, LEATHER, AND ALLIED TRADES.

Whilst there are no signs of a general fall in hide prices, there seems a weaker tone, which may be temporary, in some directions. Only three classes of best ox hides sold at Bermondsey auctions on Thursday, these making 9½d to 9½d—two classes being withdrawn. Seconds sold from 7d to 8½d, four classes showing a fall of ½d per lb as compared with last prices. Best calf were steady, selling from 8½d to 10½d. Wools sold from 8s 6d to 17s 6d, and hogs from 5s 6d to 23s each. After a short weakness last week, the frigorific market has firmed up, and sales are reported to have been made on a basis of 9½d c.i.f. for Argentine, and 11d for Uruguay to the United States. Dry hides are as dear as ever, and dry B.A. American hides have sold from 11½d to 12½d. African and other classes of dry hides are very firm, and tanners are holding off these classes as long as possible. Cables from Chicago report the market as quiet, with best packers still selling at 18 cents. Buffs have fallen 1 cent, and native cows are a shade weaker.

Upper leather is quieter, with firm prices. Box and willow calf are advancing, whilst glacé kid is also dearer in some grades. Lining and sheep leathers are very dear, with imports of the latter small.

The boot and shoe trade is keeping up fairly well, although business seems unevenly distributed. Spring orders are, however, finding work for some of the larger factories, and the outlook is considered good for the new year.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 5.

SUGAR.—The market failed to produce any new noteworthy feature. General course of trade remains quiet as demand is still restricted to wants of immediate necessity and this in turn is decidedly limited as consumers and distributors alike appear to be in possession of fair stocks, with liberal November tenders having yet to be digested. Prices, however, are steady in the main as the bridge leading from paucity to plenty in the matter of supplies, is apparently a longer one than previously anticipated. Roseate accounts continue to come to hand respecting the American domestic beet crop. A moderate turnover resulted in British refined at late rates. Tate and Lyle's granulated as to quality quoted 35s 10½d to 36s 4½d; yellow crystals, 32s 10½d, since reduced 6d all round. Home-grown granulated 34s ex-works Cantley/Kelham. White Java on spot in small supply and held for 33s 6d. Forward positions nominal. Czecho granulated, spot, 33s; ready, 20s; January-March, 19s 1½d f.o.b. Hamburg. Belgian granulated, spot, 32s 9d to 33s; ready for shipment 19s 4½d, f.o.b. Antwerp. J Dutch granulated, spot, 33s; Hungarian crystals, spot, 32s 9d. Raw refining kinds slow. Brazilian prompt 9 per cent., sellers, 17s 4½d; continental beet basis, 88 per cent., ready, 16s 10½d, both c.f. and i. U.K. Some business done in the latter on American account at equal to about 17s 3d c.f. and i. terms. White Terminal steady but quiet. December sold 18s 7½d; May, 18s 6d; August, 18s 7½d. Mr Licht increased European estimate by 182,000 tons.

COFFEE.—Market steady, and only small supplies brought to auction soon cleared. Kenya, bold sides, 160s to 165s; Costa Rica, medium, 170s. Brazilian shippers offered with reserve, while further reports of drought in growing districts came to hand, but with buyers indifferent, prices eased later.

COCOA.—Market steady on spot, but general course of trade proved quiet. Forward Accra firmer, and F/F quality, January-February, sold, 37s to 38s, 6d f.o.b. terms.

TEA.—Indian auctions of 49,200 packages experienced quieter support, and common and medium teas declined ½d to ¾d per lb. Finer sorts steady where quality was maintained. Pekoe, sold, 1s 10d to 2s 3d; broken orange, 1s 10½d to 2s 4½d; fine to choice, 2s 6½d to 3s 7d. Ceylon sales totalled 15,060 packages, for which fair competition ensued at prices mostly ½d to 1d per lb lower. Pekoe, sold, 1s 10½d to 2s 3d; broken orange, 1s 11d to 2s 6d per lb in bond. The market in general developed a lower tendency this week, which is not surprising while bearing in mind how prices have been forced to an abnormally high level. Rates are quite ½d to 1d lb lower, though the finer grades of Indian show but little change, with finest in comparatively small supply. Darjeelings were inclined to weakness unless of stand-out quality. Weakness in the market is chiefly observable for teas under 2s per lb. Common leaf and broken have been sold down to 1s 9½d, against 1s 10½d last week. Ceylon imports ¾d to 1d easier, but buyers evinced considerable interest at the decline. Some operators lately out of the market bought freely. Quality of Ceylon still marks a falling off, and leaf grades suitable for export attract marked attention. Dust and fannings in strong demand. In auction, about 4,900 packages Java and Sumatra were offered, and met a quiet demand. Prices manifested a decline of ½d to 1½d per lb, the latter figure being for inferior qualities, and which proved rather difficult of sale. Pekoe, sold, 1s 7½d; broken pekoe, 1s 4d to 1s 9½d; pekoe souchong, 1s 6½d to 1s 7½d; orange, 1s 6½d to 1s 8d; broken orange, 1s 8d to 2s 0½d per lb in bond.

RICE.—Market remains generally dull. Two stars Rangoon, spot, 17s 9d to 18s; January-February, 15s; February-March, 14s 10½d, c.f. and i., U.K. Sp. nish quietly steady. There is only a limited call at the moment for both peas and beans.

SPICE.—Pepper market presented steady features. Black Singapore, fair quality, spot, quoted 5½d; L.S., January-March, steamer, 5½d; Lampong, January-March, 5½d; Muntok, spot, 10½d to 11d; November-January, L.S., 10½d; January-March, 10½d. Zanzibar cloves, October-December, sold, 1s; January-March, 11½d to 11½d per lb. Tapioca unaltered on spot. Singapore flake, January-March, to Havre, quoted 23s 6d; Penang seed, ditto, to London, 20s 3d. Sayo flour, January-March, sold, 16s 6d. Desiccated coconut slow. Spot halves, quoted 38s 6d cwt. Ginger steady.

JUTE.—This market took a sharp upward turn on increased buying orders, partly on covering account. Calcutta cabled higher for both manufactures and raw product. Firsts: December-January, Continent, sold £39 to £39 5s, and £38 15s; January-February, £38 15s to £39 5s and £39; February-March, £39 10s to £39 2s 6d.

"The Magic of Islam"

NORTH AFRICAN MOTOR TOURS

24 Distinct Optional Itineraries for Tours from London both at fixed dates or dates to suit independent travellers, covering the whole of

Algeria Tunisia Morocco (French)

RABAT, MARRAKESH (Morocco City), FEZ, FIGIG, LAGWAT, BOU SAADA, BISKRA, CONSTANTINE, TUGGURT, TUNIS, KAIRWAN, TIMGAD, CARTHAGE. The palm-clad OASES of the SAHARA. The snow-capped Atlas. Across the Sahara by 12-wheeled Desert Cars.

LONDON TO ALGIERS IN TWO DAYS

Company's own Express Mail Steamers from Marseilles and Bordeaux. Company's own Hotels (24) the wonder of North Africa. Special feature: The fares are absolutely inclusive, even of Gratuities, Bathing, Afternoon Tea, etc., etc.

Full particulars from any Tourist Agency, or FRENCH LINE, Compagnie Generale Transatlantique, Ltd., 22, Pall Mall, London, S.W.1.

Hessians and twills dearer. 10 oz hessians, January-March, sold 33s to 34s 6d; 8 oz ditto, quoted 30s 6d per 100 yards. B twills, January-March, 102s 100 bags.

HEMP.—Manila sparingly offered, and market firm with moderate inquiries. J grade, December-February, quoted £56 10s; K, £55 10s; L, £55; and M, £54. New Zealand, H.P.F., December-February, quoted £44; fair, £42. African sisal: No. 1 Tanganyiki, December-February, £50; Kenya, £49 10s per ton.

SHELLAC. steady, but general trade moves quietly. Fair T.N., spot, 320s to 325s; December, sellers, 312s 6d; and March, 295s per cwt.

COPRA more reservedly held, and market firmer, while a fair demand was experienced. F.M.S. Straits, October-December, Rotterdam, quoted £29 2s 6d; December-February, £29 12s 6d; January-March, sold, £29 10s to £29 13s 9d. Dutch East Indies, October-December, changed hands at £28 18s 9d. Ceylon, November, Rotterdam, quoted at £30 10s. South Sea Islands, December-January ditto, £28 10s; smoked ditto to Marseilles, £28 2s 6d. Palm kernels firm, and November-January to Liverpool, sold, £22; January-March, sellers, £22 ton.

RUBBER steady in value, though actual business was confined to moderate limits. Standard plantation, crepe and sheet, spot, also December, sold, 1s 5½d to 1s 6½d; January, 1s 6½d; January-March, 1s 6½d to 1s 6½d; February, 1s 6½d; April-June, 1s 6½d to 1s 6½d. To New York, standard estatesheet, January-February, sold, 1s 6½d lb, c.f. and i. terms.

EGG PRODUCTS.—Market steady, but there is only a moderate inquiry. Liquid yolk, spot, 82s 6d per cwt.; Albumen, spot, 4s 9d per lb.

CANNED GOODS.—There is a steady trade in force, and late rates were generally maintained. Sardines continue firm, especially for fine quality, which are sparingly offered, and there are no signs of any improvement in supplies for the present. Portuguese sardines quoted 3s 9d to 4s 1½d; clubs, 4s 1½d to 4s 6d; 12 oz, 6s to 7s 6d; 18 oz, 11s to 12s 6d per dozen tins. Salmon: The demand is well sustained, and prices fully steady. 1 lb flat reds, labelled, 55s to 60s; ditto, tall, 47s 6d to 48s 6d; 1 lb flat pink, 25s to 26s; cases of 96 ½ lbs, 29s to 30s per case. Canned Fruits: Ample supplies are available for present needs, but prices continue firm, and may possibly harden in the New Year. Singapore pines rather easier, and 48 ½s, quoted 5s 6d to 5s 9d; cubes, 24 2½s, 10s to 10s 6d; slices, 48 1½s, 5s to 5s 3d. Californian apricots, 2½s, 8s to 11s; ditto, 1½s, 5s 3d to 5s 6d. Pears, 2½s, 13s 6d to 16s 6d. Peaches, 2½s, 10s to 11s 6d; ditto, 1½s, 6s 6d. Fruit salad, 1½s, 10s 6d, 2½s, 20s. Loganberries, 10s to 11s 6d per dozen tins. Meats firm, while there is a good demand for corned beef and lunch tongues. Condensed milk steady for full cream, but machine skimmed continues dull and prices weak.

FRUIT (Dried).—Currants ruled quiet. New crop ½-case Pyrgos,

quoted 42s; ½ bags, 41s. Amalia, ½-cases, 44s to 46s; Patras ditto, 48s to 49s; Gulf, 52s to 54s; finest, 57s, and Vostizza, 60s to 65s. Sultanias quiet, with an easier tendency. New Smyrna, fair quality, 53s to 55s; finer grades, 63s to 70s; Carra-bourra, 83s to 87s; fine Cretan, 90s to 95s; Australian, fair, 48s to 50s, with finer lots cleared. Valencia raisins in fair request, and prices steady, stocks being nearly cleared. ½ boxes quoted 41s to 65s. Figs generally steady. Natural, in bags, quoted 34s to 39s; layers, large boxes, 65s to 70s; ditto small, 75s to 80s. Dates in fair request at easier rates. New crop, Hallowie, spot, 20s; Khadowie, 18s 6d. and Sair, 14s 6d. Evaporated fruits firmly held. Californian apricots, old crop standards, 78s to 80s; choice, 90s; new crop, extra choice, 110s; fancy, 125s. Peaches, old crop, choice, 48s; new extra choice, 57s; fancy, 65s. Plums: Oregon, 30/40, quoted, 67s; 40/50, at 54s; Californian, 70/80, 44s, and 80/90, 43s per cwt.

MISCELLANEOUS.—Coconuts quoted 25s per 100. Coir yarn: Ceylon, £23 to £39; Cochin, £21 to £47. Ceylon bristle, £22 to £28 10s; cinnamon leaf oil, 5d; Citronella: Ceylon, 3s 1d; Java, 6s. OILSEEDS.—Linseed quiet and easier. Calcutta, afloat, £23 5s; November-December, £23 10s; April-May, £23 5s. Plate, afloat, £21 5s; November-December, sold, £20 17s 6d to £21 5s; January-February, sold, £21 to £20 15s and £21 7s 6d. Rapeseed lower. Toria, November-December, quoted £22 10s; and real bold Ferozepore, ditto, £22. Cottonseed easier. Egyptian, black, December-January, sold, £12 17s 6d. Sakellaris, December-January, £12 7s 6d. Bombay, December-January, £10 12s 6d. Gingly seed

TALLOW.—Messrs Colchesters and Woolner write on December 3rd as follows:—The tallow market was quiet during the week, and prices were about 6d lower to-day. The demand has slackened as usual at this time of year. The stock in London on November 30th, as re-

turned by the wharves, amounted to 6,111 packages, showing a decrease during the month of 1,966 packages. At auction to-day 606 casks tallow were offered, and 170 were sold. Quotations are:—Australian mutton: Fine, 53s; good to fair, 52s to 50s; dull to dark, 46s 6d to 44s; hard, 53s. Australian beef: Fine, 53s 3d; good to fair, 50s to 48s 6d; dull to dark, 45s 6d to 44s; sweet, 53s 6d. Present shipment from Australasia: Good mixed, 48s. Present shipment from South America, 48s 9d to 48s. The market letter is unchanged. Town tallow, 45s 6d per cwt. Rough fat per 8 lbs, 6d; melted stuff, 35s per cwt. Quotations are:—Town, 45s, net cash, naked, ex works. Country: Frail casks, 45s; home melted, shipping casks, net, f.o.b., good coloured, 49s; fair to dull, 46s to 45s. Bone fat: white, none; pale, none; benzine, 40s 6d; melted stuff, 40s, f.o.b.

THE MONEY MARKET.

MONEY was very abundant in the early part of the week, but was rather more easy to lend yesterday, the supply being limited by the fact that the clearing banks were adhering, more closely and generally, to 2½ per cent. as their minimum for all kinds of loans to the market. Dis-

counts also showed a slightly firmer tendency as the week went on, the tone of the market being affected by the rise in the French Bank rate, and also by the transfer of £1,000,000 Bank of England notes to reinforce the currency notes reserve against the danger of exceeding the fiduciary limit. Three months' bank bills, which were placed a shade under 3½ per cent. in the early part of the week, were quoted yesterday at 3½ per cent., after the Treasury bill result had been announced.

	Dec. 12, 1924.	Dec. 5, 1924.	Nov. 28, 1924.	Nov. 21, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	3½	3½	3½	..

The Bank return shows an increase (owing to the above-mentioned transfer) of £649,000 in the "circulation," and an addition of £9,000 to the stock of gold, with a consequent decline of £640,000 in the Reserve. Government securities had been reduced by seven millions, presumably through the repayment of Ways and Means advances, and Public and Other deposits dwindled to the extent of £360,000, and £7,573,000 respectively. Currency notes outstanding were increased by £2,781,000 to £290,879,000, which includes £1,358,800 for notes called in but not yet cancelled. With the addition of £1,000,000 of Bank of England notes in redemption account (making the total £23,450,000), the fiduciary issue is £239,069,700, or £9,121,200 below the maximum.

The monthly statement of average weekly balances for November of the London Clearing Banks, printed in detail on a later page, does not show, apart from a further substantial increase in acceptances, any changes of great importance. In the table below we compare the aggregate figures of the nine English banks with those of preceding months:—

	Dec., 1923.	Mar., 1924.	June, 1924.	Sept., 1924.	Oct., 1924.	Nov., 1924.
Capital and reserves	116.3	118.7	119.2	119.4	119.4	119.4
Acceptances	96.1	99.2	85.3	83.2	9.5	9.5
Deposits (incl. undiv. profits, &c.)	1,673.1	1,603.2	1,661.9	1,612.4	1,634.5	1,627.8
Total liabilities	1,885.5	1,821.1	1,856.4	1,807.3	1,837.1	1,843.7
Coin, notes, balance at bank, and cheques in course of collection	254.2	230.2	249.1	235.3	240.4	238.5
Money at call	111.3	93.5	108.1	107.9	103.8	102.1
Investments	363.8	361.7	349.3	340.1	336.6	332.1
Discounts	276.3	224.0	245.0	225.3	237.6	234.3
Loans and advances	756.5	785.5	791.7	794.8	807.0	810.8
Over for accept., premises, &c.	123.4	126.2	113.2	103.9	111.7	125.1
Total assets	1,885.5	1,821.1	1,856.4	1,807.3	1,837.1	1,843.7

The month's movements are very similar to those which took place twelve months ago, although in November, 1923, deposits were practically unchanged at £1,629 millions, whereas this time they have declined by nearly £7 millions. Advances show a further increase of nearly £4 millions, but discounts and investments are lower.

THE STOCK MARKETS.

The tone of stock markets in general has not been quite so good this week, and business has been restrained by delays caused by the weather conditions. A feature of the week has been the spectacular success of the Greek loan issue. Gilt-edged stocks have been inclined to give way, though War Loan keeps its price, and Home Railways fell sharply on publication of the railwaymen's new wages demands. The rubber market keeps firm, but tea shares have suffered from profit-taking. In other directions in the industrial markets recent activity received a check, though banking and insurance shares maintain a good tone. Kaffirs and other mining markets have been uninteresting.

THE COMMODITY MARKETS.

The slightly improved tone which the coal market developed last week has been maintained on the Cardiff Exchange this week, and substantial contracts for delivery next year are reported. Home consumers of pig-iron having covered their immediate requirements are not inclined to buy, and market conditions are quiet in consequence. In manufactured iron and steel the position remains unchanged, but there are indications that some improvement may be expected after the turn of the year. Although in-

quiry in the cotton trade has been extensive, the actual business effected has not been important. Wheat is stronger. The sugar market developed increased depression on account of the high estimates of crops which are to hand from producing countries. Tea is slightly easier. The hide market is weakening. Further particulars of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the Foreign Exchange market the dollar rate has continued very firm, although for the moment it would seem that the top of the recent movement has been reached. From a closing price of \$4.68 on the 5th, there was a rapid jump upwards over the week-end to over \$4.70 on Monday, and at one time on Tuesday a price of \$4.71½ was reached, very little below the post-war record. After that there was more hesitation, and it seemed difficult to keep the rate steady above \$4.70. On the 11th it closed at \$4.69½, and yesterday morning was again a little weaker at \$4.69¼. Forward quotations stand at about ½ cent per month above spot. With regard to the immediate future, the rise in short money rates in New York suggests the necessity for extreme caution. Of the countries following the dollar, Berlin and Austria have gone in our favour, as also has Helsingfors, which for some time past has followed closely the dollar movements. Stockholm, Amsterdam, and Switzerland, all less closely attached, have nevertheless moved well in our favour, as have also Prague and Warsaw, while Italy shows a further rise from 108 to 109.05. For Paris the week has been unsatisfactory, the franc moving up from 86.25 with spasmodic jerks to as high as 88.45 on the 11th, and only recovering to 88.30 at the close of that day, in spite of the raising of the Bank of France discount rate. Yesterday morning, however, showed some recovery to 87.55, but at the same time it is doubtful whether this action has not come too late to secure any substantial recovery. Brussels, as usual, took a roughly parallel course, moving on the week from 94.35 to 95.25. Forward rates in Paris have moved up considerably to 40-45 centimes per month above spot, as compared with 20-30 centimes a week ago. In Brussels they stand at 7-10 centimes above. Of the more unattached exchanges, Madrid shows a sharp improvement from 33.77 to 33.49½ pesetas, while Christiania has also appreciated at 31.04½ kr., as compared with 31.25½ a week ago. Copenhagen, however, has moved in our favour from 26.45½ to 26.62½ kr. Bucharest has fluctuated again considerably, being down to 900 on the 10th, and standing yesterday at 920, as compared with 945 on the 5th. Athens at 260 shows little change, in spite of the success of the loan. In the East the rupee is unchanged at 1s 6 1-64d, while the yen has gone again slightly in our favour from 1s 7 21-32d to 1s 7 7-8d. The silver market has been quiet, with prices kept up at first by some buying from India and bear covering in China. The outlook, however, is uncertain, as the Continent is selling, and demand from the East seems weak. Hong Kong is ½d lower at 2s 4½d, and Shanghai ½d cheaper at 3s 3d. In South America Rio at 5 20-32d is 1-32d cheaper than a week ago. Buenos Aires has moved up from 44 24-32d to 45d, while Monte Video has depreciated from 50½d to 49½d, and Valparaiso from 40.70 to 41.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 6th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	6,681	From Revenue	10,996
Interest, &c., on Debt	45,628	Increase in Debt	41,408
Sinking Fund	116	Decrease in Exchequer Balances	96
Sundries	75		
	52,500		52,500

The Revenue for the week amounted to £10,995,600, as compared with £9,916,900 in the corresponding week of last year. Customs were lower at £2,509,000, against £3,114,000, and Excise at £1,686,000, against £1,837,000. Property and Income-tax yielded £1,952,000 as compared with £1,319,000. Super-tax was lower at £450,000, against £470,000. Post Office receipts at £1,000,000 were £250,000 higher. Interest on Sundry

loans brought in £1,027,400, as compared with £107,500. Ordinary receipts amounted to only £3,900, against £297,700, but Special receipts brought in £737,400, against £6,800. The week's operations increased the National Debt by £41,407,898, and caused the following changes:—

	(000's omitted.)	£
Treasury Bills		+ 4,110
National Savings Certificates		+ 50
Bank of England Advances		+ 19,250
Public Department Advances		+ 17,300
Sundries		+ 697
		+ 41,407

The floating debt was increased by £40,660,000 to £828,705,000.

FINANCIAL YEAR, 1924-1925 (April 1 to December 6).

	£		£
Total Expenditure ..	536,228,079	Raised by Revenue ..	466,306,918
		Decrease in Balances ..	3,603,852
		Amount borrowed ..	66,317,309
Total	536,228,079	Total	536,228,079

ESTIMATES for YEAR 1924-25.

	£		£
Ordinary Expenditure	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure..	3,178,000	Special Receipts....	30 000 000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, Peninsular and Oriental Steam Navigation Company, Dorman, Long and Co., Chinese Engineering and Mining, Parent Tyre Company, Bwana M'Kubwa Copper Mining Company, New Modderfontein Gold Mining Company, Kerr Stuart and Co., and Van Ryn Gold Mines Estates. The Right Hon. Viscount Churchill, at the meeting of the British Overseas Bank, referring to the Dawes' proposals, said that they had given a breathing space of at least several years, not only to Germany, but to the whole of Europe, and, by attacking the trouble from which we are all suffering at one of its most important sources, they had brought Europe, as a whole, a long step forward on the road towards normal conditions. Lord Inchcape, at the meeting of the P. and O. Company, said that Governments would be better off if, instead of competing with private enterprise, they took a share of business profits in the form of income-tax. If they continued to run ships, they would fail commercially, and, to make good their losses, would have recourse to additional taxation. Sir Arthur J. Dorman, at the meeting of Dorman, Long and Co., said that in the long run he was satisfied that increasing stability in industrial conditions on the Continent would bring with it a steady rise in the cost of production, so that British and Continental prices will sooner or later come closer together.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

POLICY AND APPLICATION.

THE active Parliamentary career of the fourth Government which this country has had since the Armistice was opened on Tuesday with the King's Speech, which, though of unusual length, contained no surprises. The first of the four Governments, the Coalition of 1918, set out to give us a new heaven and a new earth. The second—that of Mr Bonar Law, afterwards succeeded by Mr Baldwin—gave us, by the natural swing of the pendulum, a wholly impracticable promise of tranquillity. The third, the Labour Government of Mr MacDonald, propounded, but had not the numerical strength to enforce the application of a new school of political and

economic thought to post-war problems. The fourth, which Mr Baldwin leads to-day, strikes no new note of political thought, and rejects the impossible doctrine of tranquillity in a world seething with problems that cry out to be faced and solved. It is, indeed, a salutary reminder of the magnitude and scope of the pressing problems of the hour that the King's Speech, although of almost inordinate length, can find no room for even a passing mention of inter-Allied debts—an omission rectified, however, in the debate on the Address—nor for reference to the glaring anomalies of our electoral system, an omission which unfortunately we hardly hope to see repaired.

The King's Speech ranges, metaphorically speaking, from China to Peru. The crisis in Egypt, the abortive Russian Treaty, the policy of the League of Nations, the Geneva Protocol, relations with Argentina and Italy, Empire development, the Singapore Base, public economy, fiscal policy, unemployment relief, agriculture, cost of living—even that does not exhaust the field over which the Government's programme roams. Gone, indeed, are the make-believe days of tranquillity.

Let us turn first to the two omissions from the Gracious Speech which we have mentioned above. It would, perhaps, be more than human to expect a Government which derives so large a part of its majority from the anomalies of our electoral system to set out on the morrow of the election to reform it. But it is as well that the facts and figures familiar to readers of the *Economist* were brought out and emphasised by Mr MacDonald and Mr Lloyd George. In the present Parliament every Conservative member represents on the average 20,000 votes, every Labour member 39,000, every Liberal member nearly 90,000. If they will not take steps to prevent a repetition of this absurdity, we hope at least that the Government will remember these figures, and allow them their proper weight in regard to the efforts of the Opposition to colour their policy. With regard to the question of inter-Allied debts, a statement was drawn from Mr Churchill in the course of a debate raised on the initiative of the Liberal leaders. We shall have occasion in the near future to examine in detail the various aspects of this problem as it has been left after the separation of the twin question of Reparations by the Dawes settlement. That separation should surely make the debt problem easier of solution. As to Mr Churchill's main position, namely, that in any debt settlement where both the United States and ourselves figure as creditors we should not receive in any case less satisfactory treatment than our friends across the Atlantic, there will, we think, be general support from all sections of public opinion. But in two respects Mr Churchill's first speech as Chancellor of the Exchequer is open to serious criticism. In the first place, by taking his stand on the Balfour Note of 1922, he has made his task, and the task of all those who labour at this problem, more difficult than it need be, for he has resurrected the barren controversy over a document which, as we have shown in these columns, was guilty of inaccurate statement, and which, moreover, created a bitterness and friction in Anglo-American relations which it took the Baldwin settlement to assuage. In the second place, his statement appears to tie his hands in rather too embarrassing a fashion in negotiations which can only be brought to success by the greatest freedom for give-and-take and for unfettered discussion.

It was said of the Treaty of Versailles at the time of its signature that it contained all the germs both of a bad and of a good settlement, everything depending on the application and the spirit of approach. The same may be said of the Government's programme as outlined in the King's Speech. There are points in it which arouse anxiety. There is in the forefront of the Speech the insistence on the correctness of the ultimatum policy in Egypt, the unfortunate effects of which Mr Chamberlain in Rome has been striving manfully to modify, though he cannot obliterate. There is also the exceedingly hurried decision on the Singapore Base, which, we should have thought, might have been referred for inter-Imperial deliberation during a period when the whole question of international dis-

armament is under the close scrutiny and discussion of all the Governments. There is, again, the absence of any constructive suggestion with regard to the Russian problem—although here we may be thankful that in registering the country's decision against the Labour Government's proposals the Government have not reflected in the *précis* of their policy the extravagances of the election platform. We trust that these not inconsiderable straws do not indicate the way in which the wind of Conservative policy is set. We prefer to believe that the spirit of the new Government's approach to this wide range of problems will be that of Mr Baldwin's speech at the Albert Hall last week. If the spirit of that fine announcement pervades the work of himself and his colleagues, the country will not have reason to be disappointed with a Government to whom, as the mover of the Address pointed out, the country has given much, and from whom it therefore expects much. But, as Mr MacDonald, with the assistance of a familiar nursery rhyme, suggested in the course of the debate, one of Mr Baldwin's dangers is the embarrassment of his own numerical power. In so large a family there will be evil influences, and evil influences in an over-crowded household are notoriously infectious. One of the most welcome features of the first week of the new Parliament is its revelation of the debating strength of the Opposition. This strength will, we hope, compensate for the lack of numbers in giving the Opposition the power which every Opposition should possess of compelling the Government of the day to display the virtues of keenness, foresight, and broadmindedness. They will, above all, we trust, restrain the Government's wanderings in what Mr Lloyd George describes as the "sterile wilderness of Protection," keep the Prime Minister's eyes firmly fixed not only on his own fiscal pledge, but on his electoral lesson of 1923, and finally provide a continual reminder that the great problems of Imperial development, political and economic, will not be solved or assisted by futile tariff tinkering, nor by an attempt to establish that contradiction in terms—Imperial preference without food taxes.

A TESTING TIME FOR DEMOCRACY.

"It is a testing time for democracy. Many are those who would pay and do pay lip service to it. But I remember that democracy is after all but the government of the people, by the people through their freely elected representatives, and unless the responsibility for that government is felt throughout the length and breadth of the country, from top to bottom, by men and women alike, democracy itself will fail.

"Democracy, democratic Government, calls for harder work, for higher education, for further vision than any form of Government known in this world. It has not lasted long yet in the West, and it is only by those like ourselves who believe in it making it a success that we can hope to see it permanent and yielding those fruits which it ought to yield. The assertion of the people's rights has never yet provided that people with bread. The performance of their duties and that alone can lead to the successful issue of those experiments in Government which we have carried further than any other people in this world."

In the remarkable passage here quoted from his speech in the Albert Hall, on December 4th, Mr Baldwin has put explicitly a question which has imperceptibly come to fill a large place in the background of many people's minds. What are the prospects of Democracy in the world after the war?

At first sight it seems a paradox that this question should arise at all. Democracy was the watchword of the Allied and Associated Powers; it was in order to make the world safe for it that we carried the war through to a military decision, and our victory seemed to deal a knock-out blow to those systems of Government which formerly had stood for all that was contrary to the democratic principle. The Hapsburg, Hohenzollern, and Romanov Dynasties fell, carrying a dozen lesser thrones to ruin with them, and in the twinkling of an eye there had arisen among the ruins a number of new States,

vowed to parliamentary Government (which we commonly regard as synonymous with Democracy), and based on national independence and sovereignty (which we also commonly regard as one of the essential foundations for a democratic State). Moreover, a few months before the Armistice, the initiation of the Montagu-Chelmsford scheme had seemed to inaugurate the progressive and orderly introduction of Democracy into India, while the convulsions of the young Chinese Republic might prove to be the revolutionary birth-pangs of Democracy in another great non-Western community. "The irresistible movement of Democracy" seemed to be taking the human race by storm; yet now, half-a-dozen years later, we are doubting whether after all democracy is destined to prevail. What new experience, or new reflection upon our previous experience, has caused this change in our attitude?

In the first place, we have begun to realise the magnitude of the task which we have undertaken in proposing to convert the civilised non-Western peoples to Democracy in our Western sense of the word. Before the outbreak of the war the new ferment of Eastern political ideas was hardly taken seriously by the public—even the educated public—in Western countries. The transformation of Japan was still a miracle which we assumed to be unique, and did not examine critically as a possible symptom of a general tendency. Therefore, we did not at this time look closely into the Japanese attitude towards Democracy, or inquire whether the Japanese people had become converted inwardly to our political faith, besides adopting our external observances and material technique. In India, again, we saw nothing more significant than a handful of agitators who could be smothered with a sprinkling of reforms; and as for the first constitutional movements in Persia, Turkey, and Egypt, we treated them as a joke if we were aware of them at all. The writer can remember being present at a little meeting of political philosophers and historians in Oxford during the first days of the war, when we were discussing what we were fighting for. "National liberty and self-government," somebody suggested; "in Europe," added somebody else, "for after all we do not believe that this is possible or desirable in our Oriental dependencies"; and the qualification was accepted without debate—so little had the idea then entered our minds that Democracy had a universal application. By 1918, on the other hand, we had practically ceased to doubt that any other theory was tenable on a long view. By that time, what was to be made safe for Democracy was not Europe, but the world. So stupendous a revolution of thought in four years could only have occurred under war conditions, and in this case the present pricks of doubt may well be a sign of returning mental alertness. In fact, we might still have doubted on the basis of our former experience, even if our subsequent observation of what has since been happening in India, China, and Japan had not suggested new grounds for uncertainty.

Then there is the case of Central and Eastern Europe. Before the war we assumed (in spite of Zabern incidents, Hungarian elections, and Russian pogroms) that the undemocratic features in the Hapsburg, Hohenzollern, and Romanov empires were anachronisms, doomed to disappear by evolution. During the war we ourselves doomed them to destruction by force; and now, six years after we have destroyed them, we cannot be sure that Democracy is going to be the heir to the kingdom. In the "Succession States," to begin with, Democracy is still a feeble plant, struggling to maintain itself on the stony ground of illiteracy, corruption, and intolerance towards national minorities; but even if the Democracy of the "Succession States" may be saved as though by fire, what are the prospects of Democracy in Soviet Russia, who, since her recognition, must be regarded juridically as the largest most populous, and strongest "Succession State" of all? Unlike the three dynastic empires of the time before the war, the Soviet Government is not content to be merely undemocratic or incompletely democratic. It is consciously and deliberately anti-democratic, and proclaims from the housetops its *odium theologicum* against our political

* See the book of this name by John Simpson Penmen (London 1923, Macmillan, 21s net), which deals with the History of Democracy in the United States, France, and Great Britain since 1764.

creed. To the Bolsheviks liberty of elections, liberty of the Press, liberty of speech and conscience are anathema, just because they are the essence of Western Democracy, for the Bolsheviks see in our Democracy a device for governing States in the interests of one class against those of another. According to them, we evade government for the people by maintaining and manipulating the mechanism of government by the people, and the Bolsheviks have committed themselves to the dogma that, at any rate for a transitional period, true government for the people can only be secured by the dictatorship of a minority exercising force.

So far, perhaps, our survey might seem to give ground for disappointment rather than for positive alarm. The oriental world, and even Eastern Europe, we might say, are on the outskirts of Western Society, and we need not fear for the future of Democracy so long as it is secure in the homelands of Western civilisation. Here, however, we come to the strangest and most ominous political phenomenon in the world after the war. The ideal of a dictatorship, to be exercised by a minority and imposed on a majority by force, which has been proclaimed by the extreme Left in Russia, has also been adopted by the extreme Right in several countries of the Western world, and in this Signor Mussolini, as well as Lenin, has conquered. Psychologically, Fascism and Bolshevism are one. Their agreement on political method is more important than their disagreement in point of programmes, which in either case are so extreme that they are mere abstractions. The essential fact is the common resolve, and glorification of the resolve, to seize and hold political power by violence against the will of the majority, as that will would be expressed constitutionally in Parliamentary representative institutions. In Italy, indeed, Fascism and Communism are directly related, for Fascism in its origin was simply a successful attempt to fight a momentarily triumphant Communist movement with its own weapons. Thus, in the form of Fascism, the anti-democratic movement has penetrated perilously near to the heart of the West. We see it dominating Italy, Spain, Hungary, and Bavaria, menacing the other States of the German Reich, and raising its head in America in the guise of the Ku Klux Klan. Between them, Bolshevism and Fascism have almost beleaguered the citadel of Democracy in France, the United States, and Great Britain.

These challenges to Democracy are formidable, and Mr Baldwin has done us good service in warning us, without equivocation, that Democracy is on its trial; but the Fascists and Bolsheviks may unwittingly do us a service likewise, for by challenging our watchword they may stimulate us to analyse what we mean by it, and so indirectly help us to strengthen and improve the essential features in it which we really value. There is, indeed, an element of loose thinking in the connotation of the word. It suggests something common to ourselves and the Ancient Greeks, something that is as universal as those Platonic archetypes which are laid up in heaven, and which may, therefore, be taken for granted without any special human effort being needed to preserve them. This temptation to a supine and complacent attitude towards Democracy which lurks in the etymology of the word can only be counteracted by recalling the history of the institution. Our modern Democracy is not, historically, an inevitable state of affairs or a facile classical revival. It is a peculiar set of institutions, which have been developed very gradually, with great labour and sacrifice, on the soil of one or two Western countries like Switzerland, Holland, and, above all, England and the countries colonised by England overseas.

By Democracy we all mean, with Mr Baldwin, "government of the people by the people through their elected representatives"; but when the Prime Minister says that Democracy is "simply" this, he forgets that representative government is a precise system which differs in its characteristic feature from the system which the Greeks practised and called Democracy when they invented the word. It is, indeed, difficult for us to remember how narrow a plot the seed-bed of modern Democracy was, and how many centuries the plant took to grow up in this plot before it began to seed itself further afield. The evolution of responsible parliamentary government out of the rudimentary assemblies which the Teutons

possessed in common with most other primitive barbarians began in England as far back as the 13th century; but this English-grown system of government was not transplanted to France until the Revolution, and it is only in its French adaptation that it has spread, since then, over Continental Europe, round the shores of the Mediterranean, and into parts of Latin America. No wonder that in these new fields the tender growth is still easily uprooted by Red, White, and Black dictators!

After all, then, it appears that the world has not been made so safe for Democracy as we had momentarily assumed it to be; but that, so far from discouraging us, should move us to further effort. If we have built up our particular democratic form of government, in the course of centuries, in a world in which these political principles were elsewhere either unknown or ill-looked upon, we can surely uphold this Democracy in a world which has learned to do lip service to it, and where it is practised with an assured understanding and conviction by the six self-governing English-speaking peoples of to-day, as well as by the French, Belgians, Dutch, Swiss, and Scandinavians. "Democracy," as Mr Baldwin, has said, "can rise to great heights; it can also sink to great depths. It is for us so to conduct ourselves and so to educate our own people that we may achieve the heights and avoid the depths."

SAFEGUARDING "EFFICIENT" INDUSTRIES.

THE Government have under consideration a Bill—so runs the King's Speech—"for safeguarding employment in efficient industries where, after inquiry, the need for such exceptional action is established." In his speeches after the defeat of a year ago, in speeches before the recent election, and again in a speech on Tuesday night, the Prime Minister pledged himself not to introduce a protective tariff, or to use the so-called safeguarding of industries as a wedge to introduce it. But in all these declarations he claimed freedom, and announced his intention, to safeguard "efficient industries" where great unemployment was caused by "unfair competition." It cannot, therefore, be maintained that Mr Baldwin in pressing forward with a new Safeguarding of Industries Bill, on the general lines indicated in the King's Speech, is violating any pledge. He is doing what he has repeatedly declared his intention to do. Had the electorate paid more attention to the shortcomings of the pledge and a little less to anti-Bolshevist extravaganzas, the result of the elections might have been very different. In our view the whole idea that industries which really are efficient need to be bolstered up by tariffs against foreign imports is wrong-headed and fallacious. It is a contradiction in terms to safeguard by artificial means an efficient industry, for if it be efficient it can look after itself much better than any Government can look after it. But, however we may object to the whole policy as certain to do more harm than good, and to introduce the worst kind of wire-pulling into our political system, Mr Baldwin is Prime Minister, and his Government has an enormous majority behind it. We shall have the Bill beyond a doubt, and it will become our task not vainly to rail against its principles, but to endeavour, by timely criticism, to prevent it from becoming too injurious as an Act.

It does not seem very likely that the Government, after their experience of the existing Safeguarding of Industries Act—of which some remnants still survive—will attempt to follow its lines in their new Bill. Those clauses of Part II., and the Orders based on them, which came to an end last August, were explicitly aimed at Germany, and were not put into operation against any other country. No future Act can proceed in this fashion. The Anglo-German Commercial Treaty sets up the fullest reciprocity under most-favoured-nation clauses between the United Kingdom and Germany, and no duties can be imposed upon German goods which are not also imposed on similar goods coming from other foreign countries. The early

legislation which is promised setting this Treaty in operation will profoundly remodel any Safeguarding of Industries Bill. That Bill must be general in its terms and apply to foreign imports as a whole. The surviving dumping clauses of Part II. are already made by it a dead letter, and may possibly be repealed by the new Bill. Anti-dumping orders cannot be made against any country, including Germany, with which we have most-favoured-nation treaties. Therefore dumping—of which so much was alleged by protectionists and so little demonstrated—also may be ruled out of the Bill. We get, it may be concluded, the prospect of a measure which will propose to set up machinery for inquiry and examination of complaints by "efficient industries" that they are failing to give employment owing to unfair competition, whatever that may be. This will be much more simple a Bill to criticise and to make the poor best of than was that extraordinary and contemptible hybrid, the Act of 1921.

Seeing that Mr Baldwin bases his policy of safeguarding "efficient industries" on an alleged loss of the means of giving employment through exceptional competition, it seems clear that he must contemplate restricting his new Bill to industries of some national importance. Nothing did more to make the existing Act an object of derision than to observe the scratch company of insignificant industries—the most important was fabric gloves—which successfully set up claims for protection by Order under Part II. Unless an industry can establish some claim to be a factor in the country's industrial life, to be an industry employing a considerable number of our work-people, it is quite ridiculous to give it any kind of special protection on Mr Baldwin's principles. Therefore, whatever may be the declared intentions of the Bill as drafted, when it comes before Parliament it will be the duty of the opposing parties and of the Press to see that its operation is confined to industries of real importance. A restriction of this kind can scarcely be opposed by Mr Baldwin's supporters, seeing that their avowed purpose is to increase employment, and not merely to set in operation special machinery to protect fabric gloves, hollow domestic ironware, gas mantles, and the other subjects for the Orders which expired in August.

Industry in this country is so closely organised a net work, the one part dependent upon the other, that any special protection of one industry may quickly put out of business other industries which are dependent upon the first for their raw material or means of production. The products of one industry are very often the raw material of another. It is therefore of the highest importance that no industry should be able to set up a claim to protection, and ignore those other industries which will be adversely affected by any artificial increase in the cost of its products. Even the existing Act, the dumping part as well as the lately expired portion, recognised this interdependence of industries, and directed that account should be taken, before making an Order, of industries which sought. Provisions, at least as strong as those of the earlier Act, must, and doubtless will, be embodied in the new Bill before it becomes an Act.

From our point of view, which is that of the country's welfare as a whole, the machinery of examination and enquiry into claims of industries for protection against "unfair competition" can scarcely be too strict. First, we must have the coldly critical eye of the Board of Trade. If the Board be charged with the duty of subjecting all claims to a searching scrutiny of its own before any question can arise of enquiry by committee, then a large proportion of the claims will be officially ruled out under the new Act, as they were under the old one. Secondly, we must have an enquiry into claims (which pass the Board of Trade) by committees sitting in public. The people of this country will not tolerate any hole-and-corner protection, any introduction of tariffs by the "wedge" which Mr Baldwin repudiates. Then, if and when Orders are made, we must have open criticism in the House of Commons and in the country; then and then only can it be allowed that the Prime Minister has done his utmost to keep the pledge, which he has declared and to terated, of not seeking to introduce a system of protection under the guise of "safeguarding employment efficient industries where, after enquiry, the need for

such exceptional action is established." If the Act fulfils all the conditions demanded by the interests of industry as a whole, then it will be comparatively impotent for good or evil.

THE PROBLEMS OF CANADA.—I. HER HANDICAPS AND ASSETS.

(BY A RECENT VISITOR.)

THOSE who form their impressions of Canada from Wembley or from propagandist literature would, perhaps, be surprised if they visited the Dominion to find that the attitude towards the future is far from being one of un-mixed confidence, and, indeed, that in certain quarters there is prevalent a sentiment which can only be described as pessimistic. If a fair estimate of Canada's present and future situation is to be formed, it is essential first to examine the causes of this anxiety. Four factors are mainly responsible—viz., the political situation, the drift of population to the United States, the burden of taxation, and the railway problem. As regards the first of these points, it has to be recognised that while Canadians generally feel an intense pride in their young nationhood (of which membership of the League of Nations is so striking a symbol), there still remain disruptive forces between the different parts of the Dominion. As this aspect of the Canadian problem is little understood in "the Old Country," it may be convenient to give some evidences of it here. Thus a writer in a recent number of the *Round Table* (June, 1924) observes that "in certain quarters there have been secret forebodings that in Western Canada a psychological condition was maturing which might be the prelude to a movement for absorption in the United States." Again, on the occasion of the visit of the British Association to Toronto the local organisers remark, in the preface to a handbook on Canada, that "We have had serious difficulties to overcome in the organisation and unification of Canada.....It would not be true to say that at the moment there is acute feeling between East and West, for in older Canada there is no sentiment of hostility to the prairie provinces; but in Manitoba, Saskatchewan, and Alberta there has been a revolt among the farmers against the Customs duties maintained for revenue and for the protection of Eastern industries."

Later on the editor remarks, "Unfortunately, the war produced friction between Quebec and the English provinces, but this now is generally deplored, recriminations have almost ceased, and the wounds heal slowly, perhaps, but surely."

The greatest problem of all, however, is, perhaps, the case of the maritime provinces of Nova Scotia, New Brunswick, and Prince Edward Island—a part of the Dominion that has always been sceptical of the advantages of Confederation. These provinces complain bitterly that their interests are being sacrificed to those of predominant partners—viz., Toronto and Quebec. One of the representatives of these provinces in Parliament, who speaks of them as being "soured by a sense of injustice," demands, in a pamphlet entitled *Nova Scotia's Right to Live*, "the appointment of a fact-finding commission to investigate and report upon the economic results of private and public business in this province, including the position, merits, services, and charges of the inter-colonial railway, and also the merits records and results had, and probably to be had, from the economic system which has grown up out of the Confederation of Nova Scotia with the rest of Canada." After examining the causes of the economic depression and the decline in the population and trades of the region, the writer continues: "If Canada is not to become economically independent and nationally protected in the matter of ocean ports, transportation, fisheries and mines, as well as industries, why should the outlying provinces be satisfied with merely the protection of industries for the special benefit of the two central provinces, to the economic loss of the outlying ones?"

That this is not merely the view of a single or unimportant writer is shown by the fact that in the report of the Canadian National Railways, Sir Henry Thornton observes that "in those provinces, there appears to exist a

feeling of disappointment and dissatisfaction in a way which is not itself revealed, that the provinces have not obtained that advantage from Confederation which they had been led to expect. The consideration of such a problem is obviously beyond the scope and responsibilities of the administration of the national railway system, but when dissatisfaction in any section of the Dominion reaches such proportions as to involve a possible effect upon the company's operations, it is desirable that at least some attention should be given." The italics are ours. The trouble must have reached substantial dimensions to justify such words. Sir Henry proceeds to explain that the traffic department has endeavoured with some success to encourage the use of the ports of Halifax and St. John's by modification of freight rates.

These discontents are not to be taken too tragically, and there is little doubt that they would be swept away by the strength of national sentiment if the two came seriously into conflict. But the fact that they exist, and are often the subject of discussion, illustrates the difficulty of binding together into a single unit a country so widely scattered and with such divergent economic interests as the Dominion. They undoubtedly make politics difficult, for it is hard for the elector to envisage the problems of the whole country—far less of the Empire—when his interest is held by the big economic questions affecting his own province. Canadian politics have always been, and still are, largely the effort of the different provinces to secure benefits for themselves—very often in connection with railway building. Thus, on his recent Western tour, Mr King finds his farmer audiences interested, not so much in the Geneva protocol of the League of Nations, but in whether the Government is going to proceed with the Hudson Bay Railway, or what it is going to do about the Crow's Nest Pass freight rates. It is more than usually difficult in such circumstances to keep politics free from log-rolling.

In the second place, Canada is disturbed by the fact that her people have been drifting across the border in large numbers. The *Montreal Gazette* recently asserted that in the last few years the Dominion has not even retained its natural increase of population, but has lost to the States more than it has received by immigration. The figures are very disputable, and those of the Dominion Statistician do not tally with those of the Washington Government. Indeed, it is well nigh impossible to keep an exact tally over 3,000 miles of frontier. But it is certainly a fact that the maritime provinces are declining in population, and that certain parts of the prairie provinces—e.g., the dry area in the neighbourhood of Medicine Hat—are losing their inhabitants. In both cases there are special influences to be taken into account, but the fact of the matter is that after the big post-war slump Canada has not enjoyed so marked a recovery as the United States, and her economic life has been to an increasing extent overshadowed by the rapid growth and colossal trade of her great neighbour. It is a common remark that the States are an irresistible lure to enterprising young Canadians in all walks of life, for they find there much more varied opportunities than are available in their own country. Canada is constantly described as the Scotland of the United States. No one stays who has an opportunity of going South. In this connection it is to be remembered that Canadians are privileged in the States—native-born Canadians not being subject to the immigration restriction laws. It is commonly asserted, and apparently with truth, that the cost of living is no higher in the United States than in Canada, but the wages are substantially higher.

The tide of emigration has, however, turned for the time being. The check to trade expansion in America this summer, and better conditions in Canada, have made it less attractive to go South when there is some renewed unemployment. Canadians are, however, still exercised over their slow growth; for it is widely realised that Canada's economic difficulties can only be solved by a growing population.

Again, Canada complains of its heavy taxation. All nations do that, especially those who carry a heavy war burden. But the weight seems particularly heavy to Canada by comparison with conditions in the States, where the cost of the war per head is slight, where taxation is being rapidly reduced, and the war debt can be,

and probably will be, repaid in two decades. Canada, on the other hand, is not within sight of a falling Budget, but is saddled not only with a heavy war debt, but with heavy annual deficits on the Government railway system. This constitutes a very serious problem. Canada has been overbuilt with railways, i.e., she has built in advance of her requirement, while in some cases she has indulged in unwise building and in unnecessary duplication of lines. But instead of the investor losing his capital, the Government has taken on the responsibility for a large amount of unremunerative capital. The Canadian National Railway system, since the war, has added to Canada's debt an amount considerably larger than her total national debt before the war. These difficulties together constitute a situation which cannot be lightly dismissed.

There is, however, a silver lining to the cloud. The problems mentioned are one side only of the situation—and need to be set against the great natural resources of Canada and the great progress she has already made. To take the last point first, it has to be borne in mind that Canada's recovery in recent years has been poor only by comparison with the U.S.A. It has been very good compared with almost every other country of the world. If we go a little farther back, we find that her population increased 34 per cent. between 1901 and 1911—a more rapid rate of growth than any other country—and between 1911 and 1921, in spite of war losses, it rose by 22 per cent.—a rate more rapid than that of the United States. The increase of the last few years amounts to less than 5 per cent. Whether this is a permanent or a temporary phase depends mainly upon economic and social conditions, as compared with America. It is, however, worth pointing out that even in the years of temporary depression Canada's main source of economic strength, the agricultural output of prairie provinces, has steadily advanced. The following is the area under field crops in these three provinces:—

	Million acres.		Million acres.
1890	1.4	1915	22.5
1900	3.6	1920	30.2
1910	13.6	1923	37.8

It will be seen that the area added since 1920 is double the total area under cultivation in 1900. Thus one part at least of the Dominion has gone ahead steadily, though even here there has been a slight shift in the direction of the wheat belt.

Potential resources make an even more striking story. Starting with the prairie provinces, the cultivable area is estimated to be 167 million acres. But Canada is not, and will not be, a country of one product only. Canada's splendid resources in lumber, fish, fruit, and furs are well known; but it is not so generally realised that in minerals she is one of the most richly endowed countries in the world. In one or two rare products, viz., nickel and asbestos, she is almost a monopolist. She is a large producer of silver and gold; she possesses one-fourth of the coal reserves of the New World; great iron ore deposits

are at her door in Newfoundland; she produces copper in considerable quantities, and in her western provinces she has extensive undeveloped oil fields. The relative importance of the different sides of Canadian life may be judged from the following figures of values for 1921, to which has been added a figure for 1901—not for purposes of direct comparison with 1921, since prices have so greatly changed, but as a guide to the relative growth of the different classes of activity:—

	Value of Canadian Production (in Millions of Dollars).	
	1901.	1921.
Field crops	195	932
Minerals	65½	172
Primary forest products		159
Dairy products	30	112
Fisheries	25½	35
Exports	177	1,189

No figure is available for forest products in 1901, but it would not show a very rapid rate of growth. The lumber industry was a comparatively early one in Canada. To-day it is one of Canada's greatest assets, but one which gives some ground for anxiety. Though favoured with enormous resources, it is officially asserted "that more than one-half of our original forest wealth has been destroyed by fire, and that more timber has been so destroyed in recent years than has fallen to the axe." Also, the method of lumbering in many districts is extremely wasteful and destructive to the young and growing trees. The spruce bud-worm is also causing great destruction. Forest products may, therefore, not show the phenomenal development of which other branches are capable. But this table and any statement, however brief, of Canada's natural resources cannot fail to inspire confidence in the economic future of the country. The pace at which these assets are developed depends upon the way Canada deals with the problems bequeathed to her by the war, and with the other man-made difficulties summarised above.

SHALE OIL.

(BY A CORRESPONDENT.)

THERE was a shale oil boom in the U.S.A. about 1919-22, largely due to the high prices of petroleum at that time, and more than 250 companies rushed prematurely into the business with insufficient technical and financial backing. Most of them quickly came to grief. Despite these numerous failures, however, the exploitation of the enormous oil shale deposits in the Western States is again being keenly and seriously considered. Keenness in some quarters, indeed, has never flagged. Several years ago the U.S. naval authorities, with an eye to their future fuel supplies, reserved to themselves vast areas—some 130,000 acres—of shale deposits, and some of the big petroleum companies did likewise; but development has been held up mainly through lack of a really economic process of shale distillation. The search for such a process has been earnestly pursued by the petroleum companies, some of the universities, and by Government research stations. A suitable "process" has, it is true, often enough been proclaimed, but has turned out to be a bubble, of a bright and glittering hue, wherewith to adorn the pages of the company promoter's prospectus. But just lately a research chemist, M. J. Trumble, associated at one time with the General Petroleum Corporation, and afterwards with the Shell Company, has evolved a distillation method of which great hopes are entertained. It was recently described by Dr V. C. Alderson in the *Colorado School of Mines Quarterly*, and has been tested on a semi-large scale at Alhambra, near Los Angeles. The Secretary of the U.S. Navy considers it very promising, and Dr Alderson thinks that Mr Trumble's investigations may mark a new era in the distillation, not only of oil shale, but also of coal and other hydrocarbons.

The financial success of any process must necessarily be largely dependent on the price of petroleum. There has been a marked stimulation during the last year or two in petroleum production, and prices have become easier; and there is always the possibility of great discoveries of

fresh sources. Yet the view is held that even if such discoveries materialise, the demand for liquid fuel is growing so rapidly that new discoveries cannot much more than compensate increased demand, and every possible alternative supply must be fully exploited. Since 1914 domestic consumption of crude petroleum has increased nearly 300 per cent., namely, from 261 million barrels to 711 million barrels in 1923 (or 70 per cent. of the world total). Domestic production, as the result of intensive drilling and the discovery of new fields, has increased in about the same proportion; but only three times (in 1914, 1915, and 1923) during the last ten years has it been sufficient to supply domestic needs. The difference between production and consumption, which in 1920 reached the maximum of 88 million barrels, has been made good by importations, chiefly from Mexico. The position has been examined in some detail by the American Petroleum Institute, but it is not necessary to give further figures here. We turn again to the vast deposits, whole mountains in fact, of shale in Colorado and neighbouring States. An American writer has likened these to mighty bulwarks staving off the future fuel famine.

The U.S. Geological Survey gives the following estimates of total reserves:—

	Oil Shale Area.	Oil per Acre.	Total Oil Yield.
	Acres.	Barrels.	Barrels.
Colorado	896,000	75,000	67,200,000,000
Utah	2,700,000	15,000	40,500,000,000
Wyoming	500,000	6,000	3,000,000,000

The oil yields per acre are based on very conservative estimates, which are often exceeded. In the Naval Reserve the yield in many places is computed at 185,000 barrels per acre. This gigantic shale oil total is about fourteen times the total amount of petroleum produced in the U.S.A. since the beginning in 1859. Another interesting comparison is that if shale mining and distillation were undertaken on a scale sufficient to supply the equivalent of one year's consumption of petroleum, there would be required 1,900 shale plants of 1,000 tons daily capacity, or 19,000 plants the size of the largest which has yet been worked for any length of time in the U.S.A.

In regard to yields, costs, and possible profits, the Scottish shale oil industry, although furnishing invaluable experience, is hardly comparable with U.S.A. conditions. For example, in the Scottish industry ammonium sulphate to the extent of about 35 lbs per ton of shale is an important by-product, but it is considered doubtful if it would pay to recover this from American shale. A great variety of by-products has been claimed from oil shale by enthusiastic inventors, ranging from helium or platinum to hair oil and lamp black. The latter, in fact, is one of the most valuable. A new development in which shale residue is used for brickmaking will be noted later on. The yield of shale oil itself varies from 5 to 70 gallons per ton of shale, the average being about 35 gallons.

Costs will largely depend upon methods of mining used, whether underground or open-cut quarrying. The former has hitherto been the most largely used, and the cost is roughly estimated at 35 to 65 per ton, according to figures given at the Milwaukee meeting of the American Mining Congress in September, 1923. This was based on a proposed working of 10,000 tons per day. In open-cut quarrying the cost is put at 15 to 25 per ton. Two companies have been working experimental plants at De Beque, Col., during the past few years, and they claim to be able to mine shale yielding 60 gallons per ton at a cost of about 3s 6d. Another estimate for deposits near Green River, Wyoming, is 2s 6d. Mining costs are, of course, a most important factor in the total costs. In Scotland in 1919 these accounted for 52.97 per cent. of total costs, retorting 18.56 per cent., oil refining 15.10 per cent. These figures do not include fixed, general, and overhead costs of retorting. Costs of crushing in the U.S.A., according to data supplied by the two companies already quoted, range from 3d to 6d per ton. Generally, it may be concluded that shale oil may cost anything from 4s to 12s per barrel.

The above figures are only very approximate. Data based on large-scale continuous working are too few to yield anything more precise, and there are numerous variables to be taken into account, e.g., amount of shale reserve available, and its yield of oil and by-products, the

physical character of the shale as it affects mining, crushing, and retorting, the character of the shale oil and its refinability; also transport facilities, water supply, labour supply, and disposal of residue or waste shale.

The disposal of the shale residue is a serious problem. A plant of 1,000 tons daily capacity would have to dispose of 500,000 cubic yards of waste shale per annum. All kinds of methods have been suggested, and a great deal of research work has been concentrated on the question. The most promising outlets so far suggested appear to be the manufacture of fertiliser, cement, and bricks. A brickmaking plant is now being operated by the British Brick Company, of Philipstoun, in Scotland, using the Broxburn shale residue. The output is 1,000 bricks per hour of the ordinary sand-lime (calcium silicate) kind. Shale residue consists mainly of silica (56 per cent.) and ferric oxide (31.2 per cent.), with small proportions of carbon, alumina, lime, and magnesia. The colour of the bricks varies with the composition of the shale, but they are of better quality than the ordinary burnt clay bricks. A report on these shale bricks has just been published by Professor T. Hudson Beare, of Edinburgh University.

CATERING COMPANIES' PROFITS.

IN our issue of December 6th, on page 912, we examined the financial position of a number of representative hotels. We propose in this article to supplement this analysis by examining the accounts of a group of catering companies, which can be said to be closely allied to hotels, inasmuch as they are chiefly concerned in the important work of providing for the food requirements of the population. As in the case of hotel undertakings, the exhibition at Wembley was expected to enhance the profits of catering concerns; the effects of the influx of visitors to London will, however, only be found in those cases where the accounts are made up to a period ending on or later than June 30, 1924. For instance, the great catering organisation of J. Lyons and Co. make their accounts up to March 31, 1924. As this firm secured the contract for food supply at Wembley, the exhibition will play an important part in its accounts for the year ended March 31, 1925. It may, however, be of interest to examine the results of some of the leading catering organisations, disclosed in their latest accounts. We begin by showing the net profit, after payment of debenture interest, during the past three years, adding also the amounts carried forward:—

Name.	Net Profits (after Payment of Deb. Interest).			Carry Forward.		
	1921-22.	1922-23.	1923-24.	1921-22.	1922-23.	1923-24.
Aerated Bread	£ 136,645	£ 122,266	£ 146,970	£ 14,639	£ 19,499	£ 30,276

"Ye Mecca"		5,754	16,899		1,501	1,720

† Year 1923.

The Aerated Bread Company issue accounts to September 30th of this year; the results are certainly better, but in view of general expectations they are not remarkable. J.P. Restaurants issue figures for the year ended June 30th last; here results have proved disappointing, and the board is inclined to blame the continued depression in trade. It should not be overlooked, however, that this set-back is only a loss in the comparative sense, and that the ordinary shareholders received a final dividend at the rate of 18 per cent. per annum. Lyons issued their report for the year ended March 31, 1924, on June 12th last, and by this time most people are aware of the figures of this enterprising undertaking. If Dame Rumour is to be believed, the profits of this undertaking should be even higher when the next accounts are published. Slaters, with accounts to September 30th of this year, record a

substantial increase. We are officially informed that Romano's report for year ended June 30, 1924, has not yet been issued. For purposes of comparison, we show the figures for the two preceding years.

Our next table shows the principal assets and liabilities of the companies already dealt with:—

Name.	Principal Liabilities.			Principal Assets.				
	Total Share & Deb. Capital.	Re-serves.	Cred-itors.	Prop-erties, Plant, &c.	Stocks.	Cash.	Invest-ments.	Debtors
Aerated Bread— Sept. 30, 1922	£ 1,138,556	£ 54,575	£ 82,479	£ 1,000,139	£ 100,517	£ 60,649	£ 179,747	£ 23,671

March 31, 1923	1,173,418	221,850	106,472	1,274,356	63,176	76,743	138,650	50,132
March 31, 1924	1,160,290	247,503	144,623	1,290,440	74,407	86,792	142,719	50,609
"Ye Mecca"— End of 1922	114,750	28,823	20,872	165,495	6,67	7,025	10,908	700
End of 1923	125,000		33,162	168,412	9,949	1,321	10,908	708

Recent additions to capital have not been on a very considerable scale. There has been an increase of £1,000,000 in the 7 per cent. preference and of £6,000 in the "A" ordinary shares of Lyons. Hill and Son issued the balance of their authorised ordinary share capital, amounting to £16,500, while the increase in the case of J.P. Restaurants was on account of debentures, bringing the total outstanding up to £50,000. "Ye Mecca" issued £10,250 of 8 per cent. preference shares. The reduction in the case of Spiers and Pond was caused by the redemption of part of the 5 per cent. debenture stock. It will be seen that in a number of instances reserves are in but poor relation to the total of assets. The Aerated Bread, with assets totalling £1,752,478, show reserves of £68,000. R. E. Jones have assets valued at over £1½ millions, but reserves are only just over £100,000. Spiers and Pond and Lyons, however, are certainly much better in this respect.

In our final table we show dividends on the ordinary shares for past two years, a comparison of share prices and the present yield:—

Name.	Ordinary Dividends.				Price End of 1923.	Price End Nov. 1924.	Yield.
	1920-21.	1921-22.	1922-23.	1923-24.

† Also capitalised bonus of 100 per cent.

The catering industry has not, in our opinion, reached the degree of stability which we are now able to associate with the hotel industry. The point is brought out in detail in the above table of yields. Even where dividends are steadily maintained over a period of years in old-established concerns, the return upon capital is high. In other cases where dividends fluctuate the instability is naturally accentuated. Apparently profits depend entirely upon efficiency of management, and in seeking investments in this direction the cautious person will look more to the man behind the organisation than to historic names and undertakings which are living upon their past.

THE GERMAN ELECTIONS.

(FROM A GERMAN CORRESPONDENT.)

The chief feature of the German elections is the increase in the polls, which has automatically raised the number of Deputies elected from 472 to 489. The majority needed for carrying on a Government has thus been raised from 237 to 245. If this increased number of votes is taken into account, none of the big parties, with the exception of the Socialists, have gained ground. The Nationalists have risen from 96 to 103, the Centre from 65 to 69, the People's Party from 44 to 51, and the Democrats from 28 to 32. These parties have merely held their own. The only real gainers have been the Socialists, whose increase of 31 per cent. is far beyond the general growth of the poll. But this comparison does not tell the full story. For the decline of the Communists from 62 to 45 and of the Ludendorff Party from 32 to 14 is full of meaning.

The total strength in the old Reichstag of the out-and-out reactionary parties, the Nationalists, the Ludendorff Party, the Land Union, and the German Social Party, was 142. It has now fallen to 125. On the other hand, the Republican parties, including the Centre, the Social Democrats, and the Democrats, have risen from 193 to 232. There remains the Bavarian People's Party, somewhat allied to the Centre, which has grown from 16 to 19, and some smaller composites which have grown from 10 to 17. And chief of all there is the People's Party, sometimes led and sometimes followed by Dr Stresemann, which has practically maintained its position, having grown from 44 to 51. It cannot make up its mind whether it is a Republican or a Monarchical party, and is trying, as it has tried in the olden days when it was the National-Liberal Party, to be all things to all men.

The elections have shown a considerable growth of the Republican spirit. The Monarchists, including the People's Party and the Bavarian People's Party, have declined from 202 to 194. The anti-reactionary parties have grown from 193 to 232, and if the Communists were included, to 277.

This is quite an achievement, having come about within half a year. But it is not enough to make the formation of a Government easy. Unfortunately, the so-called Old Coalition, led by Dr Wirth, which was composed of Socialists, Democrats, and Centrists, are 13 short of a bare majority, as they number but 232. Such a coalition might not have been desirable, as it would have driven the German People's Party into opposition. But the mere fact that their services could be dispensed with would have made this party quite willing to come in on reasonable terms. Things being what they are, they do not seem willing to enter into a coalition in which the Socialists are strongly represented. The bulk of the party is hankering after an alliance with the Nationalists. As the Nationalists need not be frightened any longer of the Ludendorff section, whose short and merry days are over, and as they have expressed their willingness to swallow Dr Stresemann, provided they get into power, they are sure to return the People's Party's affection. They hope to rope in the Centre Party and some of the nondescripts. That would give them a voting strength of about 250 to 260, or just a bare majority. They need not get the support of the Democrats. The Democrats who brought about the elections, as they objected to a "bourgeois block," are bound to keep away from such an unholy alliance, after the elections have shown them that, especially in Berlin, their star is rising. It is not likely, moreover, that the democratic wing of the Centre will stultify themselves and go in for reactionary policies at a time when, as the great success of the Socialists has shown, the tide is running in the direction of moderate progressivism. And it is almost impossible that Prussia, where elections have taken place, too, can be governed by a bourgeois block, for it can count only on 235 members out of 450, to which some of the "chips" might be added.

The present Prussian Coalition Government includes all parties, from the People's Party to the Socialists; it has

a voting strength of 261 members, which gives it a comfortable working majority. Without a change in Prussia, the participation of the Nationalists in the Reich is of no use to them. They want to get hold of the Prussian Administration and oust the extremely able Socialist Minister of the Interior. If they cannot do that, the joy in having to vote taxes and to carry out a foreign policy they do not believe in will not compensate the party as a whole, though it may gratify the ambitions of a few individuals who want seats in the Cabinet.

As a Parliamentary proposition, the formation of a new Government is not easy. The way out may be the continuation of the present minority Coalition, which has gained a little in strength, with the support, but not the participation, of the Socialists. No doubt Dr Stresemann's oscillations in the election campaign make co-operation with him not always very easy. But politicians have long ago realised that his apparent want of constancy is merely his particular way of being constant.

Great as these difficulties are, they must not blind one against one solid achievement—the overwhelming majority of the German people have approved their Government's foreign policy. For though the Nationalists talked against it, they would willingly continue it if they were admitted to the Cabinet. A year ago Germany was on the brink of dissolution, social as well as political. The May elections were the Parliamentary index of that situation, showing plainly enough that very nearly a fourth of the German people, the Ludendorff crowd and the Communists, were politically mad. Nationalism was rampant as the result of M. Poincaré's policy. A few months of moderation on the side of the Allies have been sufficient to destroy a good deal of that movement, and to give the moderates in Germany a chance to find their legs. They have not yet succeeded completely, but the lesson is clear. It lies with the Allies, and with the Allies alone, whether Germany is to be peaceful, moderate, and progressive, or whether she is to be nationalist, mad, and reactionary. The mainstay of German nationalism has been M. Poincaré. The improvement in the German situation is the result of a moderate policy, and the improvement will continue if the German people and the German Government are treated with justice and consideration. Any new slight, any deviation from the wording of the Treaty of Peace, like a continuation of the occupation of Cologne, is bound to bring support to the waning strength of the Nationalists.

Notes of the Week.

Mr Chamberlain at Rome.—The absence of the Foreign Minister from the debate on the Address is a handicap to the House of Commons, only excusable by very special circumstances. But Mr Chamberlain's absence, owing to his attendance at the Council meeting of the League of Nations at Rome, is entirely justified. If this country is to play the part expected of it in the business of the League, it is exceedingly desirable that it should be represented at important meetings by delegates of the highest possible authority. Mr Chamberlain is, therefore, to be congratulated on his choice of occupation this week, and the congratulations may, we think, also apply to the pains which he has quite obviously taken to counteract the wide suspicion and dislike aroused abroad by certain aspects of his Egyptian policy. His unofficial offer to explain, if desired, to the Council the action of the British Government in Egypt was a timely and tactful act. Nor can the keenest critic find anything to take exception to in Mr Chamberlain's first speech to the Council on Monday, in which he emphasised the profound importance attached to the League not only by the present Government, but by all parties in the Council, for the postponement of the consideration of the Geneva Protocol until March. The part which this but of the world, the vital questions which it raises for the trend of American foreign policy, and its relation to it essential that it should be subjected to close and prolonged, though sympathetic and constructive, scrutiny. In

our own case, it is obvious that time is required for exhaustive consultation with the Dominions. An interesting development is the appointment by the Council of a Commission to study, in connection with the Geneva Protocol, possible modifications in international law. This appointment derives significance from President Coolidge's recent declaration of willingness to co-operate in any steps towards "the codification and unification of international law." Altogether, Mr Chamberlain's visit to the Council meeting looks like being twice blessed. It has contributed something towards British prestige; and it will also have given him refreshing contact with the League atmosphere and the trend of international opinion, which, later on, we hope will be strengthened by attendance at the next League Assembly. But the Foreign Secretary's visit to the Continent has not been solely devoted to League affairs. He has established personal contact with M. Herriot, and has discussed with Signor Mussolini the whole range of Anglo-Italian relations. This discussion has been, of course, facilitated by the Jubaland decision, and although rumours of territorial arrangements in Northern Africa have created uneasiness in some quarters, it is to be hoped that, when he tells the House of Commons next week of the fruits of his journey, he will be able to announce a complete and satisfactory concord with Italy on the various points where the interests of the two countries meet.

Inter-Allied Debts.—In view of the rather haphazard quotation of the figures of inter-Allied indebtedness which has been made in the House of Commons this week, it may be useful to set down such official figures as are available. In the table below we show the indebtedness of our late Allies and of the Dominions to Great Britain, as shown in the Finance Accounts, 1923-24*, the totals being the amounts remaining unpaid on March 31, 1924, together with the obligations of foreign governments held by the United States Treasury, according to a statement issued by the Treasury Department, on May 16, 1924:—

Due by—	To Great Britain.	To United States (at \$5 = £1).	Total.
	£	£	£
Great Britain	—	959,857,000	959,857,000
France	623,279,000	812,786,000	1,436,065,000
Italy	553,300,000	411,256,000	964,556,000
Belgium	—	92,629,000	92,629,000
Austria	10,794,000	5,821,000	16,615,000
Czecho-Slovakia	474,000	22,643,000	23,117,000
Poland	4,489,000	31,978,000	36,467,000
Roumania	26,974,000	8,940,000	35,914,000
Russia	722,546,000	49,344,000	771,890,000
Jugoslavia	30,733,000	12,573,000	43,306,000
Other European countries ..	58,802,000	13,924,000	72,726,000
	2,031,391,000	2,421,751,000	4,453,142,000
Australia	89,271,000	..	89,271,000
New Zealand	29,169,000	..	29,169,000
South Africa	11,884,000	..	11,884,000
Other British Dominions ..	1,146,000	..	1,146,000
Total by Dominions	131,490,000	..	131,490,000
Grand total	2,162,881,000	2,421,751,000	4,584,632,000

For comparative purposes we have converted the American figures at the rate of \$5 to the £, and have added to the \$4,577 millions in the American statement a further £44 millions sterling shown in our own Finance Accounts for ten and twenty-year bonds. The American statement also shows the payments made up to May 16th last on account of principal and of interest. These amount in the aggregate to \$304 millions and \$787 millions respectively, Great Britain being responsible for \$225 millions on account of principal and \$496 millions on account of interest, while France's repayments were \$64 millions and \$201 millions respectively. According to the October number of "The Index," published by the New York Trust Company, payments between May 15th and October 8, 1924, amounted to \$157,200 on account of principal and \$79 millions on account of interest, Great Britain accounting for \$69 millions of the latter and France for \$10 millions.

* H.M. Stationery Office. 2s net.

Overseas Trade in November.—The official returns of our overseas trade in November show little improvement on those for October, and the month's adverse balance is still over £38 millions. As compared with October, imports show a decrease of £1¼ millions, but both British exports and re-exports have declined by about half-a-million. As compared with November of last year, imports are up by over £17 millions, while British exports have only risen by £2 millions. Re-exports have also increased by £2 millions, and the excess of imports shows an increase of over £12 millions. The following tables give the figures for November and the 11 months:—

MONTH OF NOVEMBER.

	1923.	1924.	Increase or Decrease in November, 1924.	
	£	£	£	%
Imports	101,596,991	118,740,228	+ 17,143,237	+ 16.9
British exports	65,768,155	68,150,816	+ 2,382,661	+ 3.6
Re-exports	10,171,110	12,326,985	+ 2,155,875	+ 21.2
Total exports	75,939,265	80,477,801	+ 4,538,536	+ 6.0
Excess of imports over total exports	25,657,726	38,262,427	+ 12,604,701	+ 49.1

FIRST ELEVEN MONTHS.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	988,488,166	1,148,330,554	+ 159,842,388	+ 16.2
British exports	703,213,467	726,056,715	+ 22,843,248	+ 3.2
Re-exports	108,175,962	128,096,798	+ 19,920,836	+ 18.4
Total exports	811,389,429	854,153,513	+ 42,764,084	+ 5.3
Excess of imports over total exports	177,098,737	294,177,041	+ 117,078,304	+ 66.1

The large increase in imports as compared with November, 1923, is to some extent due to higher prices, especially of foodstuffs and wool. In the case of the latter, while the quantity was practically unchanged, the value rose from £2,870,000 to £4,873,400. On the export side coal shows a decline in value of £2,975,600 as compared with November last year, and iron and steel and manufactures thereof are down by £1,324,800. The food, drink, and tobacco group shows an increase of £1¼ millions, of which fish accounts for nearly a million. Exports of British wool show an increase of nearly half-a-million, and woollen manufactures are up by over a million. The increase in re-exports is largely accounted for by rubber, cotton, and hides and skins. Of the increase of £160 millions in imports for the 11 months, £68 millions occur under the heading of raw materials, £53 millions under food and drink, and £37 millions under manufactures. In the last category, iron and steel and manufactures thereof show an increase of nearly £8 millions, and non-ferrous metals account for £6½ millions. Raw cotton and raw wool show increases of £29 and £21 millions respectively, and the only declines of any prominence in the whole list are £5½ millions under meat and £2½ millions under raw rubber, the volume of the latter having decreased from 1,625,400 centals of 100 lbs to 1,320,200 centals. Exports of coal for the 11 months show a drop of over £26 millions, the volume having fallen from 73½ million tons to 56½ million tons. Germany has taken 7½ million tons less, France 4 million tons less, and Belgium 3 million tons less. Exports of manufactured goods show an increase of over £33 millions for the 11 months, more than half of which is accounted for by cotton manufactures. The value of exports of motor-cars and parts has increased from £3½ millions to over £5½ millions. The figures for exports of ships illustrate remarkably the decline which has taken place in the tonnage value in the last three years. In the first 11 months of 1922 the tonnage exported was 469,700 tons, in 1923 170,800 tons, and in 1924 131,500 tons. The value figures were £30 millions in 1922, £9½ millions in 1923, and £4½ millions in 1924. With an average monthly excess of imports over total exports of nearly £27 millions, as against £16 millions in 1923, the position does not appear to be as healthy as could be desired.

The Greek Loan.—The response accorded to the Greek Refugee Loan surpassed all expectation. It had been anticipated that the sum asked for would be fully subscribed, but a fifteen-fold over-subscription was hardly

looked for. The rush of investors—and stags—actually exceeded that which was recorded in the case of the German loan. The result may be explained by the very favourable moment chosen for flotation, by the attractive rate of interest offered, and by the very thorough campaign of informative propaganda in the Press. But the success of the Greek Loan has a deeper significance than this. It is the latest of a series of loans—Austrian, Hungarian, Greek—issued under the auspices of the League of Nations for reconstruction purposes in those countries. The two former met with outstanding success, and now the overwhelming subscription to the Greek offer brings more forcibly than ever to the mind and attention of the financial world, and of the investing public, the prestige of the League and its effective work in initiating and directing international effort for European reconstruction.

The Railwaymen's Demands.—The National Union of Railwaymen on Thursday presented to the companies, on behalf of some 650,000 workers in about 150 different "grades," a programme of demands which occupies no less than five closely-printed pages in their journal, the *Railway Review*. The programme has been under consideration for some time; it was because it was under weigh that the N.U.R. discouraged the Doncaster sectional strike in 1923, and the action of the locomotive enginemen and firemen in the early months of this year. Throughout the service the national agreement of 1920 was regarded as a beginning, not an end; such gains as were made under it were reduced in succeeding years; at the same time, a great impetus to fresh demands was given by the publication, at the time of the regrouping into four companies, of the figures of railway reserves, and the details as to the compensation secured at the end of the control period. The "all grades" movement, moreover, is not a wages movement only; it is part of a concerted effort to get all railway workers into one combination. Although the present programme issues from the N.U.R., and Mr J. H. Thomas has been released from the National Wages Board in order to fight for it, it has the active support of the Railway Clerks' Association, whose members stand to gain directly by it, as do those of the A.S.L.E. and F., whose union, however, stands aloof so far. It covers wages increases ranging from 19s to £1 per week; better terms for night duty and overtime; the reckoning of meal times in the eight-hour working day; pensions for all at 60; 12 days' holiday in the year, with pay, instead of six as at present. As to wages, porters, now on a minimum of £2 7s, are to have £3; engineers in railway shops are to have flat rates of £4 for skilled men, £3 19s for semi-skilled, and £3 for unskilled—in each case a considerable rise. Clerical and supervisory staffs are to have more rapid salary increments to meet the grievances resulting, in their case, from amalgamation. The programme, of course, affects men working not only on the great main systems, but also on the London Tubes, &c. Women and girl workers are included. In every case the increase demanded is an increase in the "basic rates" fixed under the national agreement. The existing sliding scale, above these rates, which provides a cost-of-living bonus at a certain index figure above these rates (an arrangement which, at present, benefits a comparatively small number of workers), is to remain. No accurate estimate of the cost involved has yet been attempted; but it would certainly be very great, and would, of course, be reflected in freight and transport charges, which most traders think excessive at the moment. In any event, the programme has to pass through a considerable number of stages before a crisis can be reached—it is first discussed by the staff conference, then passes to the Central Wages Board, and thence reaches the National Wages Board, a body, of course, comprising representatives of outside interests as well as of the men and of the companies, and with an independent chairman. Only from it are definite recommendations to be expected, and the end of February or the beginning of March is the earliest date at which they are likely to be reached.

China and the Powers.—The Ministers of the Powers signatory to the Washington Agreements have sent a Note to the Chinese Provisional Government, promising

support to the new order on the understanding that all treaties and other engagements binding China will be respected under it, and that all the existing rights and privileges of foreigners will receive due recognition. On that understanding, they state that their Governments are ready to carry out the measures contemplated by the treaties and resolutions which were the outcome of the Washington Conference. The Note is a timely warning against the demonstrative nationalism which Chinese patriots, like those of India and Egypt, were only too likely to exhibit in any case, and which has been already indicated by recent utterances both of Feng Yu-Hsiang, the chief promoter of the recent transformation scene, and Sun-Yat-Sen, who promises him the support of Southern China. Indeed, the *Times* correspondent states that there has been reason to expect an ultra-Nationalist combination of these two potentates under the influence of Karakhan, the Soviet envoy. This has probably been averted by the retirement of Feng Yu-Hsiang, who is to be sent abroad on an official mission. But any excitement of the masses against foreign residents would probably have results not contemplated by Chinese modernists, and fatal to their hopes; and it is well that Tuan Chi-jui and Chang Tso-lin, who control the Provisional Government, and whose attitude to foreigners is believed to be reasonable, should have their hands strengthened against Nationalist unrest and Soviet influence. The kidnappings of foreign missionaries by brigands, which are reported this week, will introduce quite enough difficulty into the foreign relations of the new Government.

Great Britain and Argentina.—A correspondent writes:—The visit of the Prince of Wales to Argentina will strengthen ties which have long been close and manifold. In no South American Republic, not even in Chile, has British influence been so extensive. Nearly a century ago Great Britain was the first European Power to recognise the infant Republic. British travellers drew attention to its resources; Britons—including Scotsmen—improved the native breeds of sheep and cattle, modernised its ranching, and eventually established its export trade in meat to Europe; British investors and engineers provided the country with nearly all its railways, and its capital city with tramways, water supply, drainage, department stores, and led the way in establishing steamship lines across the Atlantic. British settlers and their descendants form a large element in the upper classes of the population, and the younger generation, by birth and training loyal citizens of Argentina, have not forgotten the country of their ancestors. British advisers helped the Government to surmount the financial difficulties of 30 years ago; and a British Boundary Commission and the arbitration of King Edward VII. averted a war with Chile over the partition of Patagonia in 1903. The total British capital invested in the country was estimated some years ago at £700,000,000; that in the railways alone can be stated, less conjecturally, at £230,000,000, probably more. Great Britain takes 30 per cent. of the exports, and supplies about 23 per cent. of the imports, though in the latter since the war the United States has taken the lead. The economic ties may be strengthened by the recent recovery in grain-growing and the increasing production of cotton, to which nearly 250,000 acres are now devoted in the North. It is well that the multiplicity and closeness of the Anglo-Argentine relations should be brought to mind by the Prince's visit, and it is specially appropriate that, as a Canadian ranch-owner, he should see the modern cattle in Canada.

The Strength of Investment Demand.—A Stock Exchange correspondent writes:—Efforts that are always being made here to indicate the manner in which investment seeks for channels of employment have shown, for many months past, that capital insists upon sound stock and good security, irrespective of the hopes of a revival in trade. Cabinet Ministers, in our various Governments, have spoken cheerfully, time and again, of the improving outlook for trade. They have prophesied, more cautiously or less, that the world stood on the verge of such a revival as would provide employment for every

man, and for every shilling, that could be spared. Students of financial matters, giving diligent ear to opinions from all sides, shared in the general hope that these estimates of revival would prove to be correct, but at the same time bankers and stockbrokers have been under no illusion as to the real trend of money. When people are content to take a modest 4½ to 5 per cent., less tax, on their capital, and to pour increasing amounts of money into the stock markets, no clearer indication can be required of the slow progress made in trade directions. Within the past few months there have been useful rallies in the shares of iron and steel companies, while amongst textiles, the leading issues have enjoyed substantial advances in price, owing to the impression in the first place that the settlement in Europe is likely to lead to better business; while, in the second, it is common knowledge that some of the textile branches are doing exceedingly well. The money required for financing the textile industry has been readily found without the disturbance of existing securities. The hope for brighter conditions in the iron, coal, and steel world has yet to materialise. The accession to London of business produced by the Exhibition, with its 17,000,000 visitors, has had little effect upon the general volume of trade. London has benefited, this season, but at the expense of many seaside and country resorts, laments from which of a bad season are general. The Exhibition was blamed from the Channel Isles to the North of Scotland, for restraining the usual exodus from London, and for focusing upon Wembley the interest, which also spells capital, that would otherwise have been spent locally. Stock Exchange speculation that has taken place in the industrial sections, considerable though it has been, and calling for a good deal of money to finance it, served to underline the ease of monetary conditions. People seem to have been able to buy tea shares, breweries, or whatever took their fancy, without having to realise the payment money through the sale of more sedate securities. The amount of capital available for Stock Exchange work is so large as to call for comment even in the Stock Exchange itself, and the slight dullness which has occurred during the past few days over the investment markets can be dismissed as a temporary factor, brought about by the usual considerations that prevail at the end of the year, and by the many new issues. The tendency, however, of money to flow into sound stocks is as strong to-day as it has been over the past few years. Those companies which employ money for investment, speculative or otherwise, such as banks, insurance, trust undertakings, are likely to find their balance-sheets in an exceedingly strong position at the end of this month, for the incessant pressure to buy sound stocks has carried up prices to levels from which the yield is modest, but which show substantial increment in capital value as compared with the prices given originally for the stocks. No doubt the Stock Exchange, equally with other bodies, would be only too thankful to think that the national trade is reviving so briskly as to encourage the idea that gilt-edged stocks are likely to be sold by those who experience a need for putting more money into industrial branches. It must be confessed that, so far as the immediate outlook is concerned, there is nothing in the position to warrant the assumption that investment stocks are likely to yield any of their present strength. The investor clamours insistently for more stock, and the steadily falling yield on gilt-edged stocks is accompanied by the automatic raising of this country's national credit.

Iron, Steel, and Coal Output.—There is little evidence in the figures just issued by the National Federation of Iron and Steel Manufacturers that the revival in the iron and steel trades has yet proceeded very far. Output of pig-iron in November amounted to 583,500 tons, or a daily average of 19,450 tons, compared with 586,400 tons, or a daily average of 18,916 tons in October. The output of steel ingots and castings, though falling from 678,500 tons in October to 672,800 tons in November, was also, in fact, at a slightly higher rate, since not only was there one day less in November, but the month also included five week-ends. The number of furnaces in blast increased

THE FIRST NATIONAL BANK OF BOSTON

24, OLD BROAD STREET, LONDON.

by two during the month, four furnaces being blown in and two damped down or blown out. December output will probably be less than November, as the iron and steel trades are now experiencing the quiet conditions usual at this time of the year. The report of the London Iron and Steel Exchange, however, states that there is a general tendency to anticipate an expansion of business early in the New Year, and that if the present tendency of the market is maintained, a number of new furnaces will start operations in January and February. Imports of iron and steel in November amounted to 213,000 tons, which, although considerably less than the high figures in October, are higher than the average for the previous ten months of the year; the December figures should show a decrease, in view of the pre-occupation of the Belgian and French producers with the German market in anticipation of the revised tariff to come into force in January, on which we commented last month. Exports of iron and steel in November amounted to 311,600 tons, compared with 309,200 tons in October. While production in the United Kingdom remains practically stationary, production in France and Belgium continues to increase, and we give below estimates of the production in these countries for 1924, compared with 1913 and 1923:—

	1913.		1923.		1924.	
	Pig iron.	Steel.	Pig iron.	Steel.	Pig iron.	Steel.
United Kingdom....	Tons. 10,260,000	Tons. 7,664,000	Tons. 7,440,500	Tons. 8,481,800	Tons. 7,340,000	Tons. 8,350,000
France	5,125,000	4,614,000	5,347,000	5,023,700	7,500,000	6,780,000
Belgium	2,446,000	2,428,000	2,149,000	2,234,000	2,770,000	2,630,000
Luxembourg	2,508,000	1,305,000	1,384,700	1,182,400	2,110,000	1,820,000

In France production of pig-iron has steadily increased from 577,000 tons in January to 649,000 tons in October; in Belgium the production has increased from 206,000 tons to 242,000 tons in the same period, and in Luxembourg from 160,000 tons to 186,000 tons. The output of coal in the four weeks ending November 29th averaged 5,245,000 tons per week, compared with 5,098,000 tons per week in the five weeks ending November 1st. Exports of coal amounted to 4,758,800 tons, compared with 4,932,900 tons in October, a decrease of 174,100 tons. Of the total, 1,084,400 tons went to France, 591,400 tons to Italy, 459,200 tons to Germany, 313,200 tons to Sweden, and 291,800 tons to Denmark. Exports of metallurgical coke amounted to 143,700 tons, compared with 168,800 tons in October.

Raw Cotton Supplies.—Our Manchester correspondent writes:—The Department of Agriculture of the United States Government has this week published further statistics relating to the cotton crop. The final report on production for the season 1924-25 gives the estimated yield at 13,153,000 bales, exclusive of linters. This total, when issued, was considered in market circles as rather bullish, as most people expected at least 13,300,000 bales to be announced. Owing to buying, prices advanced in New York and Liverpool, but the upward movement was short lived, and during the last day or two there has been an easier tendency in values carrying rates to a lower level than that existing previous to the report. Many private firms are of opinion that the crop for this season will be 13,500,000 bales, against only 10,200,000 bales in 1923-24. With linters and the carry-over from last season the supplies for this twelve months should be about 16,500,000 bales. Much difference of opinion prevails as to the consumption. Last season it was about

11,200,000 bales. Owing to increased trade activity in this country and on the Continent, the requirements of users will be larger. According to some authorities there is a probability of the consumption being about 12,400,000 bales. It is satisfactory, therefore, to know that the carry-over at the end of next July will be about 4,000,000 bales, against only 2,300,000 bales twelve months earlier. The crop this season has been marketed very rapidly, and according to the Government 12,225,000 bales had been ginned up to the end of November. There has been some excitement in the Egyptian cotton market this week as a result of a stiff advance in prices of over 2d per lb. It is understood that certain users were caught short, and extensive covering has brought about the rise. During the last twelve to eighteen months there has been a considerable increase in the consumption of Egyptian cotton, especially in Lancashire, and quite a number of mills have turned off American on to the Egyptian staple. The market at the moment is considered very dangerous, and spinners of Egyptian yarns are passing through a rather trying time, although it must be said that the leading concerns in Bolton and district were well covered by purchases before the advance in values took place.

Electric Supply Progress.—The annual report recently issued by the Electricity Commissioners covers the fourth year in which they have held office. These four years have witnessed notable progress in the electric supply industry. The industry comprises 560 undertakings, 225 being companies and 335 being local authorities. The present report of the fourth year, ending March 31, 1924, indicates particularly rapid development. The units sold in 1923 amounted to 4,338 millions, as compared with 3,645 millions in 1922, an increase of 19 per cent. The fuel cost per unit generated has shown a notable decrease during the last few years—the average consumption of fuel for the year under review being reduced from 2.78 lbs to 2.67 lbs per unit generated, that is, a saving of about 4 per cent. Further, the table of fuel consumption shows increasing economies in the big central stations, where a varied supply (domestic, power, railway, &c.) is concentrated. The highest efficiency is attained by the Newcastle-on-Tyne Company in their new station at North Tees, where the fuel consumption per unit generated is only 1.67 lbs. If this low figure be compared with the average figure above mentioned, viz., 2.67 lbs, it will be seen how big a margin there is for possible economies by centralising generation in capital stations. Such centralisation of electric supply generation is indeed the purpose of the Electricity Acts, 1919 and 1922, and of the various schemes which are at present being put forward. The present promise of a period of settled conditions politically will no doubt react favourably on the development of the industry, seeing how much the electric supply industry is controlled by and dependent upon legislation and the Government's attitude towards private enterprise. The development of the industry is also shown by the new generating stations which have been authorised and the new plant authorised for extensions in existing stations. When the plant sanctioned by the Commissioners up to March 31, 1924, has been installed, the total capacity of plant in the stations of authorised undertakers will amount to about 4,417,000 kilowatts, less some deduction in respect of plant to be superseded. The significance of this figure will be seen by comparing it with the total capacity of generating plant installed at the beginning of 1920, namely, 2,309,500 kilowatts. The prospective business of the supply undertakers is, therefore, indicated by these big provisions for new plant. New enterprises are indicated by the application for special orders. During 1924 the Commissioners had in hand for consideration a total of 140 applications relating mainly to the authorising of new distribution undertakings and extensions of existing areas of supply. To this has to be added 80 fringe orders, authorising special supply outside existing areas—and certain private Bills for extension of electric supply operations. A further item of interest in the report is the large number (207) of authorised undertakers who are now taking, or have arranged to take, bulk supplies. As a result, since the early part of 1920, 47 local stations have either been shut

down entirely or used for stand-by supply only. In this direction also, therefore, the purpose of the Act, 1919, is being gradually fulfilled, namely the elimination of small and uneconomical stations.

Juvenile Employment in London.—The appointment, some nine months ago, of the London Advisory Council for Juvenile Employment* attracted a certain amount of current interest, though possibly less than was warranted by the importance of its public duties. A report on the activities of the Council and of its 20 local juvenile advisory committees shows that during the last six months work has been found for some 30,000 boys and girls within the Administrative County of London. The first year or two's operations of such a body must necessarily be devoted to breaking down inherent prejudice and educating those interested, both on the supply and demand side, in the true aim and limitations of its activities. The Council have, very wisely in our opinion, disclaimed all intention of competing with existing employment agencies, whose services they desire rather to supplement and to co-ordinate, with a definite social purpose in view. In the words of the report already alluded to, "The Council are fully aware that the real problem in London is not so much the finding of employment for the vast majority of boys and girls leaving school, but of gradually working up to and awakening a general conception of the value of these juveniles in terms of national life. The largest possible number should be enabled to enter employment under such conditions that, apart from periods of exceptional emergency, there may be good prospects of permanent absorption within the same or a kindred industry." The predominance of "distributive" over "manufacturing" industries in London gives point to the Council's special effort, implied in the sentence last quoted, to cope with the problem of "blind-alley" juvenile employment.

South American Oil.—A correspondent writes:—The production of petroleum in South America during the past year foreshadows two possible future results, the first that the majority of the States, while adding considerably to their production, will not be able to produce sufficient for their own consumption; the other, that their trade in crude petroleum with other countries will be greater than in refined products, such as gasoline and kerosene. The lack of transportation facilities still stands in the way of these countries' exports, either to one another or to the principal market found in the United States. Peru, having an output of 3,000,000 barrels, and first in both production and exportation, with Venezuela, alone produce sufficiently largely to export; but Ecuador and Colombia are developing their fields sufficiently to encourage the hope that they will take their place as regular suppliers of the fuel within a few years. At present, their product amounts to little beyond their own requirements. Chile and Brazil stand merely upon the fringe of petroleum development; while, on the other hand, their imports remain the largest of all the South American States. Chile needs annually about 220,000,000 gallons, thus ranking second only to Argentina in requirements, but exceeding that country when the respective populations are taken into consideration. Brazil ranks as the third largest consumer of petroleum products, importing about 110,000,000 gallons annually, and drawing supplies from both Mexico and the United States. Hopes are entertained regarding the petroleum deposits of Bolivia, still only in their early exploration stage; but, as yet, no discoveries of any importance have been made in either Uruguay or Paraguay. Both of these States, however, are considerable users of the fuel, the first-named importing annually between 4,500,000 and 5,000,000 gallons, and the second from 600,000 to 700,000 gallons of refined and lubricating oils. The most successful of the South American producers is Venezuela, which now rivals Argentina in the quantity and the value of its oil exports. Foreign capital continues to flow towards the country, which promises to become a formidable rival to Mexico. While, in 1923, over 160,000,000 gallons were produced, comparing with 137,000,000 gallons from Argentina, it is

* 59 Queen's gardens, Paddington, W.2.

believed that the current year may show a marked advance upon this total. The home consumption scarcely exceeds 20,000,000 gallons, so that a considerable surplus (over 70 per cent. of the total production) is likely to remain for shipment abroad. The geographical position enjoyed by Venezuela, on the north coast of the South American continent, renders steamer transportation to the West Indies, on the one hand, and to the United States on the other, both easy and economical.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that in all parts of the country there were some spells of dry weather during November, which allowed fair progress to be made with field work, though the cultivation of heavy land was difficult, as it remained wet. Conditions were unsettled towards the end of the month, and heavy rains occurred. On the whole, the weather was mild, though there were a few sharp frosts early in the month. Cultivation is still in arrears, and on stiff soils much sowing remains to be done. The seed has gone in moderately well on light land, but in other cases the seed-beds have been in very poor condition. At the end of November the land was very wet. Wheat and other autumn corn which was sown early germinated quickly, and is showing a regular, healthy plant, as a rule. The lifting of potatoes was practically completed in all districts by the end of November. A large proportion of the tubers have been stored in dirty condition, only those from light land being got up clean. Disease was found in most crops, and those grown on heavy or wet land, especially in the West of the country, are badly affected. The yield per acre over the whole of England and Wales is estimated at 6 tons, or one-fifth of a ton below average, and very slightly more than in 1923. The total production, as a result of the reduced area, is only 2,697,000 tons, or 61,000 tons less than last year. Cattle have done fairly well during the past month, with the help of some dry food. Sheep generally are in fair, thriving condition, especially on the higher farms, but fairly heavy losses have been experienced in some districts. The supply of labour has generally been sufficient for requirements, and there appears to be little unemployment among agricultural workers. In some districts skilled men are none too plentiful, especially thatchers.

An Insurance Fusion.—The Western Alliance Reinsurance Company, Limited, which is to be definitely fused with the Consolidated Assurance Company, Limited, has, from its establishment in 1919, been closely allied with the purchasing company. The two companies have had the same manager, and been housed in the same building in Gracechurch street. Under the fusion scheme, one Consolidated share (£1 fully paid), together with 3s in cash, is to be issued in purchase of three Western Alliance shares (£1; 10s. paid). Reckoning by market-values, the three Western Alliance shares, worth before the announcement about 36s, will be purchased for the equivalent of 50s 6d. It is officially stated that the Western Alliance has not the advantage the Consolidated enjoys of being empowered to transact all classes of insurance business. It is explained that, in these circumstances, the directors consider the fusion desirable, as thereby the business could be given "a wider scope and a stronger basis, while important economies could be effected by combining the organisation of the two companies under one board of directors and a single executive."

Orient Steam Navigation.—The accounts of the Orient Steam Navigation Company for the year ended June 30, 1924, make a satisfactory showing, but as profits are shown "after providing for depreciation and contingencies," the value of the figures for comparative purposes is small. The profit disclosed is £296,600, the highest recorded, and compares with £280,100 for the preceding year. The following table summarises results for the past five years and for 1913-14:—

June 30.	1913-14	1919-20	1920-21	1921-22	1922-23	1923-24
Profit	£ 227,454	£ 218,699	£ 164,656	£ 282,578	£ 280,093	£ 296,607
Brought forward	56,717	63,912	118,678*	50,167	72,909	72,821
	284,171	282,611	283,334	332,745	353,002	369,428
Deb. int. and fees....	23,383	21,265	18,014	15,123	10,468	9,785
Reserve	75,000	100,000	70,440	100,000	125,000	150,000
Repairs and renewals.	25,000					
Prof. div.	10,176	14,603	14,603	14,603	14,603	14,603
Def. div.	63,701	78,065	130,110	130,110	130,110	130,111
	(55 %)	(15 %)	(12½ %)	(12½ %)	(12½ %)	(12½ %)
Carried forward	86,911	68,678	50,167	72,909	72,821	64,929

* Includes £50,000 transferred from Underwriting Account.

The dividend on the deferred shares is maintained at 12½ per cent., free of income-tax, after placing £150,000 to general reserve, against last year's allocations of £100,000 to reserve and £25,000 to underwriting account. The balance-sheet, in the usual manner of shipping companies, shows the bulk of the assets in one item; the book value of the fleet, plant and investments stands at £3,662,500, out of total assets of £4,198,300, and shows an increase of £171,900. Cash has increased by £73,100 to £130,200. An analysis of the balance-sheet will be found in a later column.

Baldwins' Report.—The profits of Baldwins, Limited, for the year ended June 30th last show an increase, but the total is still well below that of the boom year 1919-20. As £75,000, as compared with £70,000, is allowed for depreciation, and £11,000 more is required for debenture interest and redemption reserve, the net profit is a little lower than that of a year ago. This may be seen from the summary below:—

	1917-18.	1918-19	1919-20	1920-21	1921-22.	1922-23.	1923-24.
Trading profit	£ 442,300	£ 554,997	£ 683,405	£ 410,758	£ 306,132	£ 484,760	£ 493,520
Net profit	359,043	471,138	567,023	325,167	86,993	200,902	193,412
Brought forward	156,869	255,139	285,799	291,325	303,479	309,178	424,140
	516,012	726,270	852,822	616,492	390,472	510,080	617,559
Reserve	75,000	75,000	75,000	25,000			
Preference dividend ..	13,750	13,750	45,687	80,476	81,294	85,940	90,935
Ordinary dividend	153,790	131,729	440,830	207,537			
	(118 %)	(124 %)	(124 %)	(124 %)	(5 %)		
Carried forward	273,473	285,799	201,325	303,479	309,178	424,140	1506,617

The dividend on the preference capital requires a little more money, and the ordinary dividend is again passed owing to the "special circumstances of the present time and the uncertain conditions of trade." In consequence, the amount carried forward is now increased to £526,617. The property item stands at £3,512,180. Unlike many recent balance-sheets, this item does not include holdings in subsidiary companies, but the latter are, however, shown in an item of £4,234,130 headed "Investments at cost or under, including shares and debentures in subsidiary and other companies." We trust that with an improvement in the industry, this representative undertaking will be able to resume dividend distribution on the ordinary capital. It is stated that the board have received with much regret a letter from Sir Robert Horne announcing that on account of his many engagements he reluctantly finds it necessary to resign his position of vice-chairman of the company.

The Amalgamated Cotton Mills Trust.—The net result of operations by the Amalgamated Cotton Mills Trust during the twelve months to October 31st did not differ greatly from that disclosed in the previous accounts. The present report states that trade was most unsatisfactory during the year, but "the directors are gratified to be able to report that since August 31st last there has been a substantial improvement in trading conditions. More machinery has been started up, longer hours are being worked, and if the price of raw material remains around the present figure your board is of the opinion that the prospects for the current year's trading are much more hopeful than they have been since 1920." Revenue received in respect of dividends, interest, and other receipts amounted to £210,287, compared with £207,205, which, with the sum brought forward, makes a total of £227,007, in contrast with £219,068. We are told

by the auditors that the balance-sheet exhibits a "true and correct view of the state of the company's affairs," but we are at a loss to find foundation for this statement. This is a holding company, with investments amounting to £8,032,834, and assets totalling £8,253,046. Investments in cotton mill companies amount to £7,954,571; these, according to a short note appended, "are taken at cost, and no provision has been made in respect of losses incurred by these companies since the shares were acquired." Revenue during the year covered by the accounts amounted to £210,287. The directors simply report that "the combined results of all the subsidiary companies, after deducting losses from profits made, show a result for the year of approximately the amount received by this company in dividends." The shareholders, therefore, have to content themselves solely with remarks and figures of doubtful value, and upon the optimistic utterances of the Board as to the prospects for 1925. Interest, directors' fees, and general management expenses absorb £60,590, against £53,322, and after payment of the 7½ per cent. dividend on the preference and "B" preference shares, the sum carried forward amounts to £15,292, in comparison with £16,719 brought in. The bank overdraft has been increased from £179,009 to £223,206. The company has a long lane to travel before the Elysian fields are reached.

Peter Walker and Robert Cain.—The report of the brewery undertaking of Peter Walker (Warrington) and Robert Cain and Sons for the year ended September 30th last discloses slightly better results. Incidentally we are very pleased to receive the accounts of this concern, for although it is partly a holding company the directors are able to provide shareholders with a consolidated balance-sheet. This practice we would commend to the notice of other directors. Net profits are £576,299, which compares with £542,225 in the previous year. With the sum brought in, the available balance is £601,769, out of which has to be paid the service of the debenture stock and preference dividend, leaving a disposable surplus of £291,769 in contrast with £252,770. The ordinary shareholders again receive 9 per cent., and the reserve appropriation is increased from £20,000 to £50,000, which brings the total of the fund up to £70,000. Here the consolidated balance-sheet comes to our aid. Obviously a reserve of £70,000 against assets of approximately £6,900,000 is absurd. On turning to the consolidated accounts we find that reserves are nearly £617,000. The amount carried forward amounts to £34,469, as against £25,470 brought in. During the year an advance of £253,443 took place under the heading of properties, goodwill, loans, &c., which now figure for £6,332,483. Sundry creditors at £427,373 are £299,676 higher, but debtors are £27,386 lower at £49,812. Stocks have declined from £31,369 to £27,188. Funds in the hands of the trustee for the debenture holders show an advance of £79,652, and now amount to £79,768. The balance-sheet is fully analysed on another page.

The Mexican Railway Report.—An electricians' strike at Vera Cruz, which held up the terminal services, and a serious landslide on the mountain section, combined with the effects of the abortive de la Huerta rising in decreasing the revenue of the Mexican Railway for the year ended June 30th last. The gross revenue for 1923-24 was \$11,621,158, against \$14,196,123 for 1922-23; express traffic alone showed a slight increase. The working expenses declined slightly—by \$12,515 to \$11,442,824. The balance transferred to net revenue is \$178,334, equivalent at the standard rate of exchange to £17,833. Adding differences in exchange, with interest and transfer fees, the total amount credited to net revenue is £25,001. Against this, however, there is debenture interest of £165,392, so that the deficit for the year is £140,390, and the debit to net revenue is increased to £574,853. Unfortunately the estimated net receipts for the first two months of the current year are only \$124,400, against \$293,700 for July and August, 1923. However, the mountain section between Orizaba and Esperanza, where the

line ascends some 1,000 feet in 29 miles, has been traversed by electric trains since November 20th. This is encouraging; so is the announcement that an arrangement has been made with the Government under which most of the sum as yet collected from the company in payment of the 10 per cent. tax on gross railway earnings imposed to meet the interest payable under the Lamont Agreement, will be credited to the account of the indemnity due to the company from the Mexican Government. The total to the credit of this account is now £504,609.

Santa Gertrudis and Camp Bird.—Our mining correspondent writes:—Until recently the last-named company virtually had its *raison d'être* in the holding of a large block of shares in the first-named, and in the Mexican Corporation, whose affairs were dealt with in a "Note" last week. During the past year, however, the company purchased a block of claims near those operated by the Santa Gertrudis Company, thereby securing what may prove to be a new lease of life as a mining concern. The accounts to June show a small loss. Some disappointment appears to have been occasioned amongst the shareholders of the Santa Gertrudis at the circumstance that last year's earnings were practically all absorbed by interest and other charges in connection with the five-year notes, plus reserve for income-tax. The explanation is that the company did not really turn the corner in the operation of its new properties until after June 30th. As capital expenditure is now on a greatly reduced scale and the capacity of the plant is being somewhat increased, future returns should show enhanced profits. Moreover, the grade of the ore made available by the developments of 1923-24 is substantially higher than that reckoned to be in reserve 12 months previously. The original Santa Gertrudis mine is now practically worked out, but in the El Bordo, Dos Carlos, and other mines operated the reserves at the end of June last were computed to total 1,475,200 tons, having a recoverable content of 60,850 ounces gold and 15,492,700 ounces silver. These figures represent an increase of about 30 per cent. in quantity and nearly 50 per cent. in value as compared with those of 1923. With reference to the Dos Carlos, the managing director reports that "a great ore shoot is being opened up on the 14th, 15th, and 16th levels. . . . The probabilities for the future are excellent." Nearly a quarter of a million shares are held in the Mexican Corporation, incidentally giving the Camp Bird an indirect as well as a direct interest in that concern.

Progress at Letchworth.—A period of 20 years was required before the First Garden City, Limited, reached a point at which it could pay the modest 5 per cent. which is the maximum dividend allowed to the ordinary shares under the memorandum. Arrears of dividend were then over £133,000, and doubtless many shareholders hoped that the 21st year would mark a beginning in the payment of these arrears. A small payment could, indeed, have been made, for the net profit (£12,027) shows an increase of £771, and, after allowing for the 5 per cent. dividend and an allocation to the staff pension fund, £1,829 is left to increase the amount carried forward. The directors apologise for not beginning on the arrears, but say, as they have said in many earlier reports, that the demand for additional capital continues, owing to the rapid progress and development of the city. The company owns the gas, water, and electricity services, and has to spend largely on each every year, the amount so spent last year having been £16,529, together with a further £11,740 for roads. The three services show a satisfactory increase, electricity being 26 per cent. above last year's figures, and the company has now agreed to supply both the urban and rural districts of Biggleswade. With the prospect of further expenditure on a considerable scale, the directors think that they will soon have to make a public issue of additional capital. During the past year they have maintained their policy of redeeming the earliest debenture issue, or of converting debentures into preference shares; the total debenture burden is now £89,000. Nearly three times this amount has been borrowed on mortgages or from the bank.

Transvaal Gold Output.—The output of fine gold of the mines of the Transvaal amounted to 802,313 ounces in November, 1924, as compared with an output of 827,583 ounces in October. The output figures for the eleven months of each year since 1918 illustrate the recovery in the gold output that has taken place during that period:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.

August	740,210	706,669	702,083	711,526	752,490	768,371	809,437
September	708,206	698,558	682,173	691,026	747,089	739,504	799,422
October ..	679,764	723,722	662,472	707,825	778,159	793,842	827,583
November	658,701	677,970	633,737	704,236	764,476	780,639	802,313
Total (11 months)	7,779,315	7,679,300	7,521,410	7,432,669	6,229,398	8,354,211	8,773,361
December	641,245	650,791	632,215	681,847	790,712	778,849	8,773,361
Total (12 months)	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	9,646,722

In the table below are given the numbers of natives employed at the end of each of the past eight months by members of the Witwatersrand Native Labour Association and Contractors:—

	Apr., 1924.	May, 1924.	June, 1924.	July, 1924.	Aug., 1924.	Sept., 1924.	Oct., 1924.	Nov., 1924.
Gold mines	173,022	172,586	174,198	174,347	175,770	177,406	177,954	177,733
Coal mines	15,800	15,863	16,042	15,574	15,486	15,458	15,304	15,183
Diamond	2,762	2,863	2,999	3,155	3,025	2,952	2,884	2,769
Total	191,584	191,312	193,239	193,076	194,281	195,816	196,142	195,685

It will be noted that a slight decline took place in the number of natives employed in each branch of mining.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday December 16, 1924, at 4 p.m., when a paper on "Empires Old and New" will be read by J. Stanley Little, Esq. Sir Sidney Low, M.A., will preside.

Oversea Correspondence.

UNITED STATES.—BUDGET—OCTOBER FOREIGN TRADE.—PANAMA CANAL.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 2.

FOR the fiscal year ending June 30, 1926, governmental expenditures of the United States will total \$3,267,551,378, according to the annual budget submitted to Congress to-day by President Coolidge. This shows a decrease of \$266,532,430 from the estimate for the current fiscal year. Receipts for the next fiscal year are figured at \$3,641,295,092, representing an increase of \$39,326,795 over the present year. On June 30, 1925, the Treasury surplus, it is calculated, will amount to \$67,884,489. Owing to the heavy cut in the budget for the next fiscal year, together with the estimated increase in receipts and the surplus for the current fiscal year, the President forecasts an unusually large Treasury surplus of \$373,743,714 on June 30, 1926. At the same time, he urges a programme of drastic governmental economy in order to permit another reduction in Federal taxes, although he recommends that consideration of further tax-reduction legislation by Congress be deferred until the effect of the present revenue law is more clearly defined. Mr Coolidge points out that the actual Treasury surplus at the end of the last fiscal year was \$175,727,000 more than the official estimate, the year which closed June 30, 1924, having shown a surplus of receipts over expenditures of \$565,366,000. Receipts for the current fiscal year are expected to be \$400,000,000 less than in the preceding year, owing principally to

the reduction in taxes, and, furthermore, \$114,000,000 must be provided for the extraordinary increase made necessary by the world war adjusted compensation Act. Nevertheless, the President has confidence that this fiscal year will close with a surplus, as indicated, of more than \$67,000,000. The extensive reduction in the budget for the 12 months ending June 30, 1926, is the result of heavy cuts in the estimated expenditures of many Governmental departments, although such reductions are partly offset by increases in others. Among the more important departments or agencies for which decreased expenditures are recommended in the budget just presented to Congress are the Shipping Board, the Emergency Fleet Corporation, the Veterans' Bureau, interest on the public debt, and the Departments of Commerce, Interior, Labour, Navy, State, Treasury and War. On the other hand, increased expenditures are recommended for governmental printing, the Federal Board for Vocational Education, the Federal Power Commission, the Interstate Commerce Commission, the Tariff Commission, the District of Columbia, and the Department of Agriculture, Justice, and the Post Office.

Including funds required for the military activities of the War and Navy Departments during the coming fiscal year, the budget estimates for national defence show a total decrease of \$29,000,000. "This reduction," says President Coolidge, "is made in accordance with my belief that we can have adequate national defence with a more modest outlay of the taxpayers' money. Further study may point the way to additional reduction without weakening our national defence, but rather perfecting it. This nation is at peace with the world. We no longer have international competition in naval construction of major units. We are concerned primarily," he adds, "with maintaining adequate preparedness. We should have adequate preparedness in 1926 within the limits of the amount recommended." The President again expressed his growing conviction that the basis for the defence of the United States lies more and more with aviation. "The outstanding weakness in the industrial situation as it affects national defence," he says, "is the inadequacy of facilities to supply air service needs." He calls attention to the fact that the budget provides a total expenditure of \$38,945,000 for the air service maintained by the army, navy, and air mail. The budget carries a proposed appropriation of \$56,237,600 for rivers and harbours, including \$10,500,000 for flood control on the Mississippi and Sacramento Rivers, and \$3,040,390 to complete Dam No. 2 at Muscle Shoals. A sum of only \$50,000,000 is recommended for the soldiers' bonus fund in the 1926 fiscal year. Veterans' applications (under the bonus legislation enacted by Congress) have thus far been less in number than expected, and it is pointed out that, should such applications increase unexpectedly, a supplementary can be made of the amount required. During the fiscal year ended June 30, 1924, the public debt, it is shown, was reduced \$1,098,894,375, bringing the total as of that date down to \$21,250,812,989, and decreasing the annual interest charge by \$45,000,000 approximately. In the past fiscal year, such interest amounted to \$940,000,000. For the current fiscal year this interest charge is estimated at \$865,000,000, and for the fiscal year ended June 30, 1926, \$830,000,000, making a total reduction for these two years \$110,000,000. An appropriation of \$109,000,000 is contained in the budget for Federal aid to States, but President Coolidge voices his strong disapproval of State aid, declaring that the broadening of this field of activity is detrimental both to Federal and State Governments.

Foreign trade returns for the month of October show that exports reached a total value of \$527,000,000, an increase of 23 per cent. over September, and of 32 per cent. over October, 1923, the total for October of this year being the heaviest reported for any month since January, 1921. Imports, valued at \$310,000,000, indicated a gain of nearly 8 per cent. over the preceding month, but only a slight increase over October a year ago. The October excess of exports, \$217,000,000, was the largest recorded since February, 1921. As was the case in September, there was a big expansion in grain and cotton exports, especially the former. The follow-

ing tables compare exports of four leading classes of products in the months indicated:—

	EXPORTS.		
	Oct., 1923.	Sept., 1924.	Oct., 1924.
Foods	59,338,538	102,790,223	142,461,173
Cotton and manufs..	127,363,266	108,885,751	136,834,174
Coal and coke	12,698,449	10,503,925	11,331,905
Mineral oils	27,824,222	35,630,484	34,464,254
Total	227,224,475	257,810,383	325,091,506
Ten Months Ending October, 1924.			
Foods	583,113,510	633,285,311	
Cotton and manufs..	648,803,183	759,608,997	
Coal and coke	145,540,745	98,461,134	
Mineral oils	298,518,941	354,537,764	
Total	1,675,976,379	1,845,893,206	

The fiscal year ended June 30, 1924, was the Panama Canal's most profitable year. After all operating, interest, and depreciation charges on the canal property and equipment used for business purposes, there remained a profit of \$6,202,462, but revenues of the canal and projects connected with it, before deducting interest, depreciation, and amortisation charges, totalled \$18,254,459, representing an increase of nearly 50 per cent. over 1923. This gain was due to the larger volume of business, and also to the fact that expenses did not increase so fast as revenues. Gross transit revenues were \$24,681,853, and gross business earnings \$12,968,777, or a total of \$37,650,631, while expenses and charges, including depreciation and amortisation, amounted to \$31,448,168. The interest, at 3 per cent. (a rate much lower than that paid in ordinary business enterprises) on \$273,673,818 transit and business capital amounted for the last fiscal year to \$8,210,214. The \$273,673,818 does not represent the entire cost of the canal, but rather the amount of capital devoted to business operations. Additional capitalisation of \$112,618,082 is charged to the account of national defence, and is invested in fortifications and other works.

FRANCE. — FINANCIAL SITUATION — WHEAT SUPPLIES AND PRICES—INDEX NUMBERS.

(FROM OUR CORRESPONDENT.)

PARIS, December 10.

FOR the moment the financial sky is clearer, in spite of the now certain fact that there will be no possible chance of securing the passage of the Budget Bill until the new financial year is well advanced. Following the success of the new American loan, the ten-year 5 per cent. Treasury Bond issue, which closed last night, is reported to have been very satisfactorily taken up. No official figures are yet available, but it is stated in authoritative quarters that the total bonds subscribed amount to over 4,000 million francs, which is believed to have been the minimum amount at which the Government was aiming. As all this has been subscribed in cash, the Treasury will for once be in a position to make without inconvenience the usual heavy end-of-the-year payments, which have been a cause of such trouble during several years past, owing to the chronic lack of disposable funds. Whether it will be found possible this year to reduce the debt owing to the Bank by the two milliards which the law stipulates shall be paid off at the end of each year, remains to be seen, but it is generally believed that this will be found feasible. The total of these advances was increased last week by an additional 400,000,000, and now stands at 23,000,000,000, while the note issue, which was increased last week by 253,820,000, and rose to 40,700,831,000, now stands within 212,000,000 of the legal maximum. It should be explained, however, that last week's increase was largely due to the fact that the bills discounted by the Bank showed an increase of no less than 785½ million francs on the week, which explains to a great extent the need for so much additional paper money. Incidentally, it may be mentioned that during the coming year 22,000,000,000 of Obligations de la Défense Nationale will come to maturity, for which provision will have to be made.

The continued dependence of this country on foreign-grown wheat to meet part of its requirements, which has now become chronic, is attracting serious attention to the necessity for devising means to ensure greater production of this cereal both in France itself and in the North African territories. Official figures show that since 1923 the total area sown with wheat in France has decreased by 1,100,000 hectares (or 2,750,000 acres), which have been transformed into grazing land. But for this reduction in the area devoted to wheat, which is equivalent to 20 per cent. of the total formerly sown with this cereal, the last French harvest, with its yield of 14.15 quintals to the hectare, would have more than met all requirements for the current 12 months. There are three chief reasons for this situation. One, and perhaps the most serious of these, is the shortage of agricultural labour, due partly to the large proportion of men of this class killed in the war. Another cause is that in many districts it pays the farmer better, owing to the high prices obtained for pasture-fed cattle to-day, to devote land to grazing rather than to wheat-growing. A third cause is that, through lack of an abundant supply of chemical manures at low prices, the yield per acre from wheat is much lower than it should be. Provision is made in the present Budget Bill for the opening of a special credit of 5,000,000, which will be devoted to giving wheat-growers a rebate of 8f per 100 kilogrammes in respect of their increased purchases of chemical manure. This policy is based on the theory that every additional 15 to 20 kilogrammes of chemical manure used per acre may be regarded as resulting in an increased yield of from 2½ to 3½ bushels of wheat. The Minister for Agriculture informed the Chamber recently that the Government has entered into an agreement with Germany for the purchase of 90,000 tons of sulphate of ammonia for agricultural purposes at a total cost of 139,000,000, the whole of which sum, in accordance with a clause in the London agreement, will be credited to the German Reparations account. The Minister explained that this sulphate will be sold by the French Government to consumers at prices equivalent to 180,000,000, so that it would make a cash profit of some 41,000,000 on the deal. The Government could, therefore, afford to make sacrifices which would be equivalent to an excellent investment.

With a view to stabilising wheat and flour prices, and thereby helping, it is hoped, in reducing the sale price of bread, the Government has included in the Army Estimates an additional credit for 150,000,000, which will be used for the creation of a stock of ostensibly Army wheat, which will be stored in the military granaries. This wheat, it is planned, will be utilised as a weapon against grain speculators who may attempt to create an artificial rise in quotations. Whether this wheat is actually thrown on the market or merely held in reserve, the effect, it is argued, would be practically the same, as it would be always available for use in case of emergency, exactly on the same principle as the American credit of \$100,000,000 secured by the Bank of France last spring was utilised in the interest of restoring the situation of the franc.

The index figure for wholesale prices for November, which has just been issued by the Government Statistical Department, indicates a further rise of seven points during the month, following one of eleven points in October, and one of five points in September. The detailed figures (based on 100 as representing the wholesale prices of 45 categories of commodities in 1914) are as follows:—

Classification.	No. of Categories.	—End of the Month of—			
		Nov.	Oct.	Sept.	
General index figure	45	514	507	496	
Foodstuffs, general figure	20	448	445	440	
Vegetable foods	8	460	451	441	
Animal foods	8	442	434	425	
Sugar, coffee, cocoa	4	434	456	469	
Raw materials, general figure	25	572	562	545	
Minerals and metals	7	498	484	458	
Textiles	6	719	701	704	
Various	12	527	526	502	

The only category which did not rise during the month was that for sugar and coffee, the figure for which fell 22 points. Textiles, owing to the low situation of the franc, remain still at by far the highest level, and are returned as equivalent to over seven times as dear as in

1914. Retail prices in Paris, the index figure for which fell from 392 at the end of March to 340 in July, are still on the up-grade, and are returned at 396 for November, as against 383 during October. These retail figures are worked out on a base of 100 as representing the collective prices of 13 articles of common necessity in 1914. The figure for November, therefore, indicates an average rise in retail prices of 296 per cent., as compared with 1914, whereas the rise in wholesale prices is equivalent to 414 per cent.

GERMANY. — COMMERCIAL TREATY — FINANCES — BANKS — PRICES — INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, December 9.

THE conclusion of the Commercial Treaty with Great Britain has been well received. The first articles dealing with most-favoured nation treatment generally seem open to criticism from the viewpoint of British subjects doing business in or residing in Germany. This is made plain from a comparison with Art. 276 of the Versailles Treaty. As this article lapses in January, obviously Great Britain was obliged to make the best terms she could for the future; but in drafting the Commercial Treaty the ingenious methods by which the German Government for five years evaded and violated Art. 276, do not seem to have been taken into account, and as far as the new treaty perpetuates Art. 276, this time on a basis of mutuality, no precautions have been taken against similar German methods in the future. This has arisen out of the inaction of the British Foreign Office, which two years ago told Parliament that it was considering German breaches of Art. 276 in the treatment of British subjects, but nevertheless did nothing. Art. 276, to give only one instance, forbade—by implication—German attempts to prevent Ally subjects acquiring land or houses in German States where that was not forbidden before the war. Such a State was Prussia. But not long ago Prussia, announcing quite openly that under the Versailles Treaty it could not forbid Ally subjects to purchase real property, passed a law requiring official sanction for all such purchases, whether by Germans or foreigners, and arranged with the sanctioning authorities (the *Besirksamter*) that the sanction should be refused to foreigners and granted to Germans. The Prussian Minister who introduced the Bill openly admitted that this was the aim. The *Besirksamter* thereafter refused all foreign applications for sanction. The Commercial Treaty now secures the right to own land on a mutual basis. This sounds very fine, but it is meaningless as long as the above-mentioned Prussian law remains on the statute book. The prevailing licence is still better illustrated by the fact that the Courts on constitutional grounds, as well as on grounds of the Peace Treaty, declared the Prussian law invalid, but that the *Besirksamter*, supported by the Prussian Government, continue to enforce the law. Of Art. 2 of the Commercial Treaty, dealing with taxes, much might be said in the same sense. The only effective guarantee of the rights of British subjects doing business in or with Germany would be the proper vigilance, so far lacking, of the British Foreign Office.

The Finance Ministry's returns are henceforth to be made in monthly, not 10-day, periods. The return for November shows revenue received 492,199,631 marks, expenditure 482,222,936 marks. Revenue received in the first eight months of the financial year totalled 4,715,331,865 marks; expenditure, 4,534,748,267 marks. The Prussian Finance Ministry has circularised the provincial and municipal authorities, advising a reduction of local taxation, in particular of the industrial tax (*gewerbesteuer*), and of fees and charges for municipal services.

All the banks have now issued gold mark balance-sheets under the law of December, 1923. The last paper mark balance-sheets were compiled for December 31, 1923, the new gold mark balance-sheets for the same time (January 1, 1924). The paper mark balance-sheets of the last inflation years were fictions, owing to the impossibility of valuing in an ever-changing medium the various assets and liabilities. In the balance-sheets for December, 1923, some banks entirely omitted their capitals and reserves on

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$14,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

the ground that these, though inflated considerably, were insignificant beside the other swollen totals, while valuable assets, such as buildings and shares in other concerns, were booked at nominal sums, usually 1 billion paper marks, equal to 1 gold mark. The new gold mark balances, therefore, are not conversions of the last paper mark balances; they are complete revaluations. In the case of all banks, without exception, the new balance-sheets show heavy losses in the net value of assets as compared with 1913. As a result, not only has the inflated paper mark capital of 1923 been drastically scaled down, but also the new gold mark capital has been fixed at much lower than in 1913. The following table shows the capital changes:—

	—Millions of—		
	Gold Marks. 1913.	Paper Marks. 1923.	Gold Marks. 1924.
Deutsche	250	1,500	150
Disconto	300	900	100
Dresdner	200	1,100	78
Darmstaedter und National ..	250	600	60
Commerz und Privat	85	800	42
Berl. Handels.-Ges	110	110	22
Mitteldeutsche Credit.	60	1,120	22

The heavy losses suffered are best shown by the case of the Berliner Handelsgesellschaft, which did not inflate its capital at all, but which has, nevertheless, been obliged to reduce its capital to one-fifth of the pre-war figure. The banks' own capital, invested in discounts, advances, &c., dwindled in gold value precisely as did the similarly invested deposits of customers. As a result, when the banks' investments are for the first time revalued in gold marks they are seen to be a mere fraction of the pre-war totals. In the Deutsche Bank's assets cash fell from (in gold marks) 127,450,000 in 1913 to 36,300,000 in 1924, discounts from 639,400,000 to 11,500,000, advances from 233,226,000 to 7,200,000, and securities from 161,200,000 to 10,000,000. Equilibrium in the balance-sheets could be restored only by fixing the new gold mark capitals and new gold mark reserves at far below the 1913 levels. The new balance-sheets mostly show largely increased assets

under the head of "correspondents"; these consisted largely of credit balances in foreign exchange, that being the manner in which the banks (at a rather late stage in the depreciation process) protected their own capital from further loss.

The official wholesale price-index for December 3rd was 128.5. The average for all November was also 128.5, which was 2.1 per cent. lower than in October. The cost-of-living index number for December 3rd was 122.2, and shows no change. The *Frankfurter Zeitung's* wholesale index for December 4th shows:—

Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Goods.	All (100 Wares.)
137.30	124.30	129.82	129.24	138.10	140.80

Textile journals state that efforts to cut down production cost in this branch have failed, and that the cheapness of goods now appearing in the home market has been attained at cost of the quality. The Prussian Ministry's monthly trade report attributes the present increased industrial activity exclusively to more active home buying. The number of publicly supported unemployed on November 15th was 426,382, against 472,116 on October 15th. Bankruptcies numbered 599 in November, against 520 in October and 1,173 (highest point) in July. The condition of winter crops in Prussia is reported to be very good, considerably better for the chief crops—rye and wheat—than at the same time last year. The capital market is more active. Company capitalisation increases in November were nearly twice as high as in October; but capital issues by new companies fell off, and there were no loan or bond issues. The use of motor-vehicles is rapidly increasing. The total in 1914, including motor-bicycles, was 84,682; in June, 1923, 212,949; in June, 1924, 293,188. The trades union opposition against a longer working day than eight hours seems to be having success. A census made at the end of November among 2,400,000 workers showed that 45.3 per cent. were working longer than 48 hours a week, against 54.7 per cent. shown by the similar census of May.

ITALY.—THE DIRECTION OF FOREIGN TRADE — REVIVAL OF TRADE UNIONS' MOVEMENT — FASCIST CORPORATIONS AND CLASS FEDERATIONS.

(FROM OUR CORRESPONDENT.)

TURIN, November 30.

It is very difficult, on the basis of published statistics, to analyse the direction of Italian foreign trade. Only for a few States are the figures up to date. Imports from leading countries (in millions of lire) are shown below:—

	IMPORTS.	1913.	1923.	From Jan. 1 to Aug. 31, 1924.
Austria-Hungary	264.1	..	..	..
Successor States—				
Austria	..	..	325.6	275.5
Czecho-Slovakia	..	..	158.5	146.9
Serbo-Croats-Slovene Kingdom	..	..	489.3	356.2
France	280.9	..	1,322.6	922.8
Germany	612.5	..	1,299.1	946.0
Great Britain	601.1	..	2,189.7	1,389.2
Switzerland	88.5	..	375.8	243.5
Argentina	173.8	..	1,053.0	707.5
United States	505.6	..	4,619.5	3,183.8
Total of the principal States..	2,526.5	..	11,833.1	8,171.4
Other States	1,111.3	..	5,365.4	4,229.9
General total	3,637.8	..	17,198.5	12,401.3

The increase of the total import value figure is roughly in the ratio of 1 to 4.5, which is the ratio of the depreciation of the lira in terms of gold. Two-thirds of the total trade is to-day, as in 1913, transacted with the seven principal States, or their successors, but the relative importance of the single States is changed. The United States, which held the third place in 1913, is to-day easily first; Great Britain has gained the second place; and France became third. It is, however, probable that Germany in 1924 will recon-

quer a part of the lost ground. Preliminary conversations for a commercial treaty have taken place, and on December 4th the official delegates of the two countries will meet in Rome.

The 1923 exports of the three successor States to Italy, judged by values, were four or five times those of the whole of Austria-Hungary in 1913. The new Serb Kingdom is one of the most promising fields of trade for Italy. The following table shows Italy's principal customers:—

	EXPORTS (In Millions of Lire).	1913.	1923.	From Jan. 1 to Aug. 31, 1924.
Austria-Hungary	218.8	..	..	..
Successor States—				
Austria	..	..	335.2	415.6
Czecho-Slovakia	..	..	67.2	79.5

Other States	758.2	..	3,372.2	2,696.9
General total	2,503.9	..	11,059.5	8,539.2

Here France steps into the first place; United States comes next; while Great Britain and Switzerland maintain their old positions. But here, again, Germany promises to return in the current year to her old position as the best market for our agricultural, silk, and other textile goods.

Perhaps the most significant economic event in the month of November was the revival of the working-class movement. The 1924 total of strikes and working days lost by strikers will be much over that for 1923. The atmosphere, above all, is changed, and workers are no more prone to submit to the omnipotent influence of the Fascist Corporations. These held last week their Congress at Rome, preaching, as usual, the gospel of harmony between capital and labour. It was, however, a significant indication of the new spirit that the Corporations denounced fiercely those captains of industry who were obdurate enough not to accept all the proposals made on behalf of workers.

The great majority of workers suspects organisations which are not simply for Labour against Capital, and is true in its allegiance to the old Federations. Fascist Trade Unions are called "Corporations" perhaps as a reminder of the mediæval Corporations, in which all classes of capitalists and workers were amalgamated; while old Trade Unions, sympathisers with Socialism, maintain their old name "Federations," and are directed by the "General Labour Confederation." At Milan, which was said to be a stronghold of the Fascist Corporations, when the latter signed a new wages contract in metallurgical industry, the men flatly refused to accept it. At a referendum, almost the entire body of workers ranged themselves under the old banner of the Federation. And when entrepreneur organisations, disdaining to take note of the referendum, maintained that the wages contract signed between themselves and the Fascist Corporations was to be observed, the men struck for a day in proportions which ranged from 50 to 100 per cent. of the number employed in various establishments.

After a lapse of two years, a Congress of the Trade Unions adhering to the General Labour Confederations will shortly be held. While in November and December, 1922, there was much wild talk about D'Aragona and Buozzi, and other leaders of the workers' movement going into the Mussolini Cabinet, to-day the only debated question is whether the Trade Union Organisation will be captured by Communists or Marxian Socialists, or held as at present, by the United Socialist Party, which is of sort of British Labourism, perhaps, with a greater tinge of pure politicians of the Turati and Treves type. Expectations favour a victory for the latter.

AUSTRIA. — POLITICS — STATE FINANCES — ECONOMIC SITUATION — TRADE — STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

VIENNA, December 1.

SEIPEL's Cabinet was not overthrown by Parliament, but by his own party. Some groups of the Christian Socialist party did not agree with Seipel's rigid policy of centralisation, which gradually met with more and more opposition from the Federal States; other members of the Christian Socialist party were of the opinion that some working arrangement with the Social Democrats ought to be arrived at before long. Such a policy, which aimed at avoiding as much as possible any friction, did not suit Seipel's energetic nature, and he therefore resigned. The new Cabinet, which is mostly composed of representatives of the various Federal States, will be much more able to resist any exaggerated claims put forward by the Federal States than a Government which, like the previous one, consisted only of Vienna politicians. Whether Dr Ramek's Cabinet will remain in power for some time, or whether it will soon be replaced by a Cabinet representing a coalition of Christian Socialists with Social Democrats, remains to be seen.

The expenditure in the Budget for 1925 shows a total of 7,125 milliard kronen, which corresponds to 494,800,000 gold kronen, and is, therefore, 200,000 gold kronen below the limit allowed by the League of Nations. The new Finance Minister has asserted that he will endeavour to cut down expenditure. His task will not be easy, as he will have to face claims from all sides. The most important reduction of expenditure has been obtained by the reconstruction of the Federal Railways; whilst the State had to pay a subsidy of 1,630 milliard kronen to the railways in 1923, this subsidy was reduced to 1,212 milliard kronen for the year 1924, and to 966 milliard kronen for 1925.

The economic crisis which has hovered over this country since the beginning of this year seems to be gradually subsiding. No bank failure occurred in the month under review, and the number of trade insolvencies and arrangements with creditors is slowly decreasing. Most of these insolvencies occurred in the textile, leather, and shoe trades. In some industries, however, improvement can be noticed. The Alpine Montangesellschaft, the largest iron and steel works in Austria, which had practically shut down, has restarted operations, as it obtained considerable orders from the Federal Railways Company; the electric industries have received big orders for the electrification of the Vienna Suburban Railway. Wireless industry is developing very favourably; Austrian lignite mines will profit by the decision of the Federal Railways Company to buy their lignite only from Austrian mines, commencing in 1925. The most important thing for the industries, however, is to obtain cheap credits; as this is impossible in Austria at present, negotiations to this effect are in course in London and other financial centres. The number of unemployed has again increased from 77,968 in October to 88,237 in November.

The balance of trade shows an improvement for September, as the deficit, which was 68 million gold kronen in August, decreased to 61 millions. This slight improvement has, of course, but little influence on the unfavourable result which the balance of trade will show for 1924, as the deficit for the first nine months of this year amounted to 746 million, as against 462 million gold kronen during the same period of last year.

The position of the National Bank has greatly improved during the month under review. The gold reserve rose during the period October 15th-November 15th from 3,941 milliard kronen to 4,416 milliard kronen, whilst the total number of bills discounted fell during the same period from 2,652 to 2,039 milliard kronen. It is true that the bank-note circulation was only reduced by 63 milliard kronen—from 7,666 to 7,603 milliard kronen; but, if converted into dollars, the bank-note circulation in Austria appears to be lower per head of population than in other countries. The bank-note security is at present 51 per cent.—i.e., 31 per cent. more than the minimum security provided for by the Bank Statute. The Bank rate was reduced in the beginning of November from 15 to 13 per cent., and a further reduction is expected in the near future.

The efforts to merge middle and small banks continue, and at the end of the present year probably only few of the small banks founded after the war will be left. The Treasury has left no doubt that it will force banks which can barely exist either to merge with other banks or to wind up their affairs. This fact will doubtless have the effect of making most of the unsound banks disappear.

During the past month a remarkable revival took place in business done on the Stock Exchange. The recovery of prices was common to almost all types of shares, and amounted to 20 to 30 per cent., as against the lowest level; some shares even gained 50 to 60 per cent. This improvement is due to considerable purchases for foreign accounts and to the increase of buying orders from the public, which is gradually beginning to take an interest again in the Stock Exchange.

AUSTRALIA.—WOOL AND WHEAT EXPORTS AND FINANCE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 30.

THE Australian export season is turning out the largest on record, owing to the favourable season, which means increased production of wool, wheat, and butter, combined with substantially higher prices for wool and wheat. The average price realised for wool at the Australian auction sales last season, according to Dalgety and Co.'s statistics, was £31 7s 10d per bale, but since the opening of the new season's sales a few weeks ago, averages of £35 to £40 per bale have been realised for different catalogues, according to the class of wool comprised. Between this and the larger clip, it is expected that the wool exports for 1924-25 will approach £80,000,000 in value, against something over £50,000,000 represented by wool bills last season. Wheat and flour exports next year are expected to represent about £30,000,000, making, with the wool exports, a total of 110 millions, against 70 millions for 1923-24, or an increase of about 40 millions in the export trade to be financed by the banks, in addition to butter, meat, metals, and miscellaneous exports.

The position of the Australian wheat crops before the spring was doubtful, but the spring rains have been excellent, and the crop is expected to be 135,000,000 to 145,000,000 bushels. The exportable surplus will be about 2,750,000 tons, and a considerable amount of chartering for the new season has already been done. The spring rains have also been beneficial to the dairying districts, and the production of butter so far is well in excess of last season to the corresponding date.

The financing of wool exports has been attended by special difficulties, due to the administration of the note issue by the Commonwealth Bank and to the over-concentration of cash in the hands of that institution in consequence of the large Government balances held by it. The note issue, together with the stocks of gold held by the banks, has, during the last two years, been insufficient to provide for currency requirements, calculated even on the most conservative basis, and the banks have had to work on a proportion of cash to liabilities smaller than was regularly maintained before the war, and smaller than they desire under existing circumstances. This has proved troublesome in practice during the export season, when those banks which purchase wool bills make large payments to other banks, thus creating a flow of cash from the former to the latter. This flow is capable of

THE NATIONAL BANK OF GREECE

A HISTORY

of the Financial and Economic Evolution of MODERN GREECE

by

M. S. EULAMBIO.

Managing Director of the National Bank of Greece.

Price 15s. 0d.

EYRE & SPOTTISWOODE, LTD., EAST HARDING ST., LONDON, E.C.4

adjustment by exchange transactions between the banks, but the point which has lately arisen has been that the Commonwealth Bank, with large Government balances, has drawn cash from the other banks without sharing in the means by which the movement is adjusted.

Thus the total amount of currency in existence was insufficient, and an undue proportion of it became virtually locked up in the Commonwealth Bank outside regular business use, the situation largely resembling that which formerly arose periodically in America, where heavy revenue receipts used to cause a drain of cash into the Treasury at times when business requirements were large. It had been hoped that the early part of the wool season would have been negotiated without immediate pressure, but the congestion of cash in the hands of the Commonwealth Bank precipitated matters, and the banks were compelled to regulate operations under wool buyers' credits in a manner which reduced competition at the wool sales. The question thus arose whether the sales could be continued without forcing a decline in the market beyond the point (say, $7\frac{1}{2}$ per cent. below the prices previously obtained) to which the selling brokers were willing to go, having regard to the interests of their clients, the wool growers.

The situation was discussed at a conference between the directors of the Commonwealth Bank and representatives of the ordinary banks, when it was made clear that a reform in the policy of the Commonwealth Bank was essential. It has accordingly been decided that additional notes up to £15,000,000 will be made available, which does not necessarily mean that the exact amount will be used by the banks, the mere fact of availability being itself of value. Steps are also being taken to release some of the undue accumulation of cash in the Commonwealth Bank. Another step is a broadening of the basis of wool and wheat bill buying by allocating the business amongst the banks generally, together with the Commonwealth Bank, so that the responsibility for financing wool and wheat exports should not be confined to the small number of banks which have hitherto engaged in it. As the Commonwealth Bank is now to take a share of this responsibility, this also will help to counteract the congestion of cash in its coffers. The wool sales have since been proceeding with more strength, and prices for fine descriptions have hardened afresh.

ROUMANIA.—BUDGET OF 1924—ESTIMATES FOR 1925.

(FROM OUR CORRESPONDENT.)

BUCHAREST, November 25.

MR VINTILA BRATIANU, the Minister of Finance, has presented his Budget estimates for the fiscal year beginning January 1, 1925. Revenue is placed at 31,750 million lei, as compared with 24,000 million lei in the preceding year.

The expenditure side includes an allowance of 7,607 million lei for the Ministry of Finance, which is intended to be sufficient to cover the interest and amortisation charges on the country's internal and external funded debts, and on the special arrangements which have been concluded with a number of European creditors who held Roumanian short-term Treasury notes that were not consolidated into the £32 million sterling issue of 1922. Export taxes (which are expected to yield more than 5,000 million lei in 1925) are earmarked for the services of the latter issue. The Finance Minister has recently intimated that, as lei exchange appreciates in value—which he seems confidently to anticipate—export taxes can be reduced in proportion to the amount of lei necessary for meeting debt payments in foreign currencies. The tax on exports, however (in that it curtails production and restricts exports) is in itself a serious obstacle to any sustained rise in lei exchange. It has been the invariable rule in recent years for stagnation at the ports to follow a rise in exchange to around 800 lei to the £. The tax on exports, however, still performs the function (necessary for political reasons) of holding down the cost of living, and while the Finance Minister no doubt realises that such a tax is economically unsound in principle, he evidently feels that the time is not yet ripe for taking up

the "spread" which export taxes create between domestic prices and world-market prices.

The Finance Minister takes credit for the fact that the 1924 Budget, for the third year in succession, will provide a surplus, and, while definite and comprehensive figures showing the exact condition of the public treasury are not produced to bear out this statement, Mr Bratianu is certainly entitled to credit for the grip he has now secured on the national finances. Out of the chaotic condition of affairs which he found when he came to office early in 1922 he has at least secured a complete documentation of the country's liabilities, and arranged the greater part of them in proper shape for settlement.

Letters to the Editor.

LAND POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The articles published by you on the Liberal land policy, and the terms of reference drawn up for the guidance of the Agricultural Conference summoned by the Government justify alarm amongst those who have studied the history and economics of agriculture.

We are agreed that the land of England cannot produce food to supply the population of England, and I think I may assume that the food imported from abroad should be as far as possible of a nature that does not deteriorate by sea carriage, whilst the food grown at home to supplement the foreign supply should consist of perishable articles less suitable for sea carriage. We are also, I think, agreed that in view of the advantages of a country life, it is desirable that agriculture should maintain the largest population consistent with the payment of a suitable wage.

Space does not allow me to deal fully with the history of agriculture in England, but it is an established fact that England, though an excellent country for the production of all forms of livestock, horses, cattle, sheep, or pigs, has never been a good corn-growing country. English corn does not ripen properly, and always fetches a few shillings less than the imported corn grown in drier climates. Moreover, the Western counties of England are so damp as to be quite unsuitable for corn growing, though they are unrivalled for dairy or fruit-growing purposes. Corn is grown chiefly in the Eastern counties, and has to compete with a superior quality grown in better climates with better machinery (for the American machinery is the best in the world), and on larger areas. It follows, therefore, that the English corn farmer can never pay high wages, for, except under a protective system, he can never get the same price as is paid for the more cheaply produced foreign corn.

On the other hand, the dairy farmer, the market gardener, potato grower, fruit farmer, and poultry farmer produce food which is more perishable than cereals and less suitable for sea carriage than either cereals or mutton, which are the products of the large farmer.

For corn can only be grown profitably on large farms with the best labour-saving machinery, whilst potatoes, products of the small holder, and are valuable supplements to the corn and chilled mutton imported from overseas. Incidentally, it may be said that the potato is a small man's product, and gives two and a-half times as many calories per acre as wheat gives, whilst it has more vitamins than wheat.

During the great wars of the 17th and 18th centuries the price of corn rose from 26s 9d, the price in 1761, to 119s 6d, the price in 1801, and the small yeoman farmer was starved out, his lands being absorbed by "engrossing" the large corn farms. For the small man is a consumer, not a producer, of corn, and cannot grow corn.

Cheap corn is a necessity to the existence of the small holder. He requires cereals for his pigs, his poultry, and his horse, if he has one. In 1901 the price of corn fell to 26s 9d, but between 1901 and 1911 the agricultural population increased by 9.8 per cent., though 819,000 acres were withdrawn from arable cultivation. The

increase was due to the greater number of small holders, and to more intensive cultivation by nurserymen and market gardeners. For glass cultivation was extended on a large scale. Now, the working of the economic law, when left to itself, had the following results:—1. An increase in the agricultural population. 2. Higher wages. 3. An increased production of more perishable foods which cannot be conveniently carried by sea. 4. Cheap and good bread, mutton, milk, butter, vegetables, eggs, fruit, and potatoes for the increasing population.

The war, by forcing the production of corn, has reversed this healthy economic development. The countryside is now returning to the economic conditions best adapted to our insular position with a large population. It is now proposed to interfere with the natural operation of economic conditions by Government control, Government subsidy, or some other artificial stimulus to uneconomic production. War having ceased to divert agriculture from its proper channels, it is proposed to find some substitute for war. Why?—Yours truly,

GRAHAM BOWER.

PROFESSOR KNAPP ON MONEY.

THIS book* has to be approached with special respect, because it is published on behalf of the Royal Economic Society, a fact which hall marks it as guaranteed by high authority as a work of exceptional importance to the scientific economist. To ordinary mortals it would have been useful if the translators, or the Royal Economic Society, had explained why Professor Knapp's work should have been singled out for this compliment, and what is the special significance of its doctrine. As it is, they present us with an interesting but difficult treatise, full of incredibly puzzling jargon, which does not, as far as one can understand it, say anything very new, and makes many statements that raise doubts in the mind of the reader.

His first sentence, for example, tells us that "money is a creature of law," and this remark at once brings into one's mind a host of examples to the contrary, culled not from the mists of antiquity, but of quite recent date, and in fact of yesterday if not of to-day. Many of us can remember the time when in the West of England "Stuckey's" notes were more popular as money than the Bank of England notes which were legal tender. Professor Knapp himself gives on a later page a very interesting account of the Giro Bank, founded in 1619 by the Hamburg merchants, which established a unit of value, the mark banco, unconnected with the unit of value for State money, and draws the conclusion that "each pay-group can make a unit of value for itself," which seems to be an admission that, sometimes at least, money is not a creature of law. When, owing to loss of confidence in the mark and the crown, people in Germany and Austria lately preferred to handle dollars and pounds, and when, as happens to-day and has happened for years, Bank of England notes are readily taken in payment on the Continent of Europe and in many other places, the law of the countries in which they pass current has nothing to do with the popularity of these forms of payment.

Again, Professor Knapp sings the praises of what he calls "Autogenic" money, by which he appears to mean inconvertible paper money. "Instead," he writes, "of perpetually insisting on the defects of autogenic money, just think a little of its services. It frees us from our debts, and a man who gets rid of his debts does not need to spend time considering whether his means of payment were material or not. First and foremost it frees us from our debts to the State, for the State, when emitting it, acknowledges that, in receiving, it will accept this means of payment. The greater part played by the taxes, the more important is this fact to the taxpayer. Payment with non-material money (I do not say immaterial money) is

AGENTS AND SECRETARIES OF TEA, RUBBER,
AND OTHER PRODUCE ESTATES.

for the country of its origin just as genuine a payment as any other. It is sufficient for the needs of domestic trade; in fact, it makes such trade possible." In fairness to the Professor it is important to remember that his book was written before the war. But since it is now translated and published under exalted authority, one is surely justified in observing that the theory has not worn very well. Since the war, "autogenic" money has freed some debtors from their debts in a sense that Professor Knapp can hardly have intended, in Russia, Germany, Austria, and elsewhere. As for making domestic trade possible, there was plenty of domestic trade before "autogenic" money was ever heard of, and in the extreme examples of it that have been seen since the war, it has gone far to make domestic trade impossible.

Professor Knapp's main theory appears to be that the State can make money out of anything it likes, as long as it marks certain metallic or paper tickets as bearing a certain value, and makes them legal tender. This is doubtless true, within limits, of a State governing a well-disciplined nation. Before the war it might have been possible for the German Government to have forced a purely copper currency on its subjects; but no English Government could have dared to attempt to do such a thing. But having very ingeniously argued that the material of which money is made is a matter of no consequence, he ends by proposing to "return to the firm ground of the actual world," and to leave gold its "hylic" use in our group of civilised States. It should be explained that in Professor Knapp's vocabulary "hylic" means a metal which may be converted into money without limit. And, as a warning to readers whose recollection of Greek is shaky, it is necessary to quote a characteristic example of the jargon in which the book is written:—

"But the papyroplatic variety is only mentioned as an example. It might also happen that every pound handed in might be paid for in 1,395 marks as before, but that this sum might be paid in thalers. In this case the thalers would be hylogenic, indeed chrysogenic money, but they would be argyroplatic, and therefore not orthotypic, for gold has remained our hylic metal, while the thalers are made of silver. Such a form is incomprehensible from the point of view of the metallist, while it offers not the smallest difficulty to the chartalist. In Holland, though the system is not laid down in actual ordinances, the Dutch silver gulden is a near approach to chrysogenic argyroplatic money. This brings out very clearly the difference between the platic and the genetic point of view."

Perhaps it would be unfair to ask the translators to translate the translation, but until they can do so the book can only be recommended to highly scientific economists who are also familiar with Greek.

THE ETHICS OF INVESTMENT.*

The writer of this work attacks contemporary American practice in regard to the issue and marketing of new securities. As the President of the New York Stock Exchange adds his benison in a foreword, it may be inferred that the views Mr Sturgis puts forward enjoy a certain amount of support in influential quarters. The argument runs on these lines:—(1) At present new securities commonly reach the investor through the medium of salesmen who receive a commission on the orders they secure. The process is, in fact, on all fours with the sale of motor-cars, or encyclopædias, or sewing machines, and plausible salesmen are frequently in a position to foist undesirable securities upon the unwary investor. (2) Investment ought, on the other hand, to be a scientific business, conducted with due regard to current economic conditions; and (3) for this purpose the investment banks

* "Investment: a New Profession." By Henry S. Sturgis. (New York) The MacMillan Company. 1924.

should maintain a service similar to that of the "forecasting agencies," adopt a professional ethical code on the model of the American Bar Association, and definitely shoulder the responsibility of administering the investor's resources to best advantage. Despite a certain looseness of style, and a tendency to fall into contemporary American money-market slang, the writer succeeds in making out an effective case for his reforms. By "investment," Mr Sturgis means "speculative investment." His ideal investor is constantly changing his holding, "getting out at the top" in one class of securities, and in at the bottom in another. A process by virtue of which the investor is left at one time holding nothing but Government stocks, and at another ordinary industrial shares, with a few short-dated Government securities, will certainly appeal to the conservative British investor as much too drastic. The commendation of the British law regarding disclosure of material facts in a prospectus will be gratifying to English readers, but the author is evidently unaware of the extent to which the purpose of the law is defeated in this country by the issue of "offers for sale" as a substitute for prospectuses. Among the most interesting features of the work are an able review of American economic conditions in 1921-22, a chapter giving various shrewd hints on the reading of a company balance-sheet, and a vigorous defence of the part played by organised speculation in the security markets.

THE BANKERS' ALMANAC.*

AGAIN the march of events in the banking world has necessitated a revision, and in some respects rearrangement, of the "Bankers' Almanac and Year Book" in this its eightieth edition. A further large number of institutions has been added in the section devoted to "International Banks." We should imagine that every bank of importance is listed in this volume.

In addition to its value as a directory of banks, other features worthy of remark are changes in the Bank rates of England, France, Germany, and Holland since 1844 and Belgium since 1851; prices of bar silver since 1833, and weekly average prices of gold and silver in recent years. We notice that there is also an article dealing with the North and South American exchanges included in this edition. A book which should be in the possession of every banker throughout the world.

KELLY'S POST OFFICE LONDON DIRECTORY, 1925.

AMONG the many annual works of reference,* it may reasonably be claimed that Kelly's Post Office Directory, which has just been published, stands out as one of the most indispensable in every busy office.

Particulars of the establishments are given of the various Government Departments, with an alphabetical list of officials; a Transport and Hotels section also appears of all the principal places throughout the country, giving hotels, railway stations, early closing and market days, &c.; and the Law and Banking sections, complete directories in themselves for the professions which they cover, will be found in the book. The Parliamentary section contains an alphabetical list of the members of the newly elected House of Commons, with their addresses, and also a list of the constituencies with their representatives. Particulars of the new Ministry are also included.

STOCK EXCHANGE NEWS.

SETTLING DAYS,
TICKET, December 17. ACCOUNT, December 18.

THE fog in the past few days exercised a distinct effect upon Stock Exchange markets in serving to restrain business and to render activity more difficult, owing principally to the uncertainty that prevailed in regard to the time at which a man could arrive at work and get away again. The instantaneous success of the Greek Loan stands out as one of the features of the week, subscription lists being open for a very short space of time. The allotments will probably be out by Monday morning, and dealings are expected to begin on the basis of anything between 2 to 5 premium.

British Government stocks show a yielding tendency, and this in spite of the fact that one or two official departments have been big buyers of Funding and other such issues. The War Loan keeps its price. Colonials are influenced to some extent by the competition of new comers, and by the knowledge that there are further loans likely to be made in the near future. Nevertheless, one of the principal Home railways succeeded the other day in placing well over a million pounds of prior-charge stock, without disturbing in any way the market for existing securities.

The rush for the Greek Loan stimulated strength in the older Greek loans, the prices of which are generally better on the week. It also attracted buyers to Hungarian, Austrian and Middle European loans. German scrip weakened on sales

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch 168, Fenchurch Street, London, E.C.3

Liverpool Foreign Branch 45, Castle Street, Liverpool.
Manchester Foreign Branch 94, Portland Street, Manchester.
Bradford Foreign Branch 13, Market Street, Bradford.

by holders who think the Greek Loan is cheaper. South American bonds are quiet, without much variation in prices. Home Railway stocks gave way rather sharply, on publication by the National Union of Railwaymen of a programme containing proposals which, if carried into effect, would mean substantial addition to expenses. This took the heart out of prices, which show a general fall on the week. Grank Trunk Pacific Debenture gained half-a-dozen points, on the latest statements made in connection with the status of the stock. Argentine Railway stocks braced up, in consequence of a favourable turn in the exchange, after their prices had been dull on crop apprehensions. Mexican Railways are dull, owing to the poor results disclosed by the recent report.

The rubber market keeps firm, with business very meagre. The price of the raw material moves in the upward direction anticipated by those who have been watching the course of the restriction policy. A halting mood fell upon the Tea share market, profit-taking sales being accelerated by the fairly substantial addition to the stocks of tea in hand in November, as compared with October. The Oil market, still left largely to the professionals, has been dull on the whole. Courtaulds spurred to 65s 6d at one time, without holding the full extent of the rise, and other Textile shares, after showing pronounced strength, gave way a trifle towards the end of the week. Tobacco shares are also a little reactionary, and the boomlet in brewery and whisky shares suffered a check by reason of desultory selling towards the end of the week. P. and O. deferred fell away on the cautious speech made by Lord Inchcape at the meeting on Wednesday. Trust companies' stocks continue to advance, but the new Staveley Trust shares, after a rise to 9d premium, have fallen back to their par price. Illumination shares failed to benefit from the foggy weather. Banking and insurance shares keep hard; the insurance market, in particular, is extremely bare of stock. Hudson Bays were little affected by the declaration of the usual interim dividend. Sudan Plantations eased off, and other land shares have been inclined to dullness. The iron and steel group turned dull, and motor shares remain neglected in London.

There is nothing much doing in Kaffirs, where the course of the New York exchange, with its effect upon the price of gold, does not encourage optimism, though the Van Ryn Deep Company, by increasing its interim dividend, flatters hopes of satisfactory New Year distributions to be made by other gold producers. Chartered varied between 15s 6d and 16s 6d, finishing the week near the latter figure. Paris has been buying Rio Tintos, but selling De Beers, which, after a rise to 12½, quietly dropped on the absence of further support. Malayan tin shares have been moving narrowly. Amongst West Africans, a fall in Ropps attracted speculative purchasers, whose buying sufficed to bring about a smart recovery. Mexican mines are quiet, and Canadians have yet to recover from the unfavourable impression produced by recent incidents connected with the Porcupine Davidson and one or two other mining companies in the Dominion. Business in the mining markets, as in other departments, has run on humdrum lines.

The Lord Mayor and Sheriffs will be entertained to dinner next week in the Stock Exchange by the Managers and Committee of the House.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

Newcastle-upon-Tyne Corporation.—Issue of £1,000,000 4½ per cent. stock at 96 per cent. The principal is repayable at par in 1955, unless previously cancelled by purchase or by agreement, the option being reserved to redeem, in whole or in part, at par, on or after January 1, 1945. Of the present issue, £750,000 is required for the repayment of corporation mortgages expiring shortly, the balance being for capital purposes. The stock and interest is secured upon the property, rates, and revenues of the corporation, the rateable value of the city being £1,989,481. A rate of 1d in the pound produces £7,632. The freehold land, it is stated, consists, in addition to extensive properties in the city, of various estates, together with valuable coal royalties. The land is chiefly let on building leases for terms of 75 years, and will become of increasing value as the periods approach when the leases fall in. The corporation are also owners of quays, tramways, parks, and markets, and in the last accounts the total assets of the corporation were valued at £10,626,426, and showed a surplus of assets over liabilities of £4,345,905. The total outstanding debt is £5,737,461, of which £4,037,874 is in respect of reproductive undertakings. An excellent investment.

City of Belfast.—The City of Belfast publishes some interesting information about its mortgages and redeemable stock. These, it is stated, are trustee securities yielding 5 per cent. Mortgages can remain in force for 5, 10, or 15 years; they are quoted on the Belfast Stock Exchange, and mortgagors can have their holdings subdivided into amounts of £50 and upwards. "Redeemable" stock is now available for subscription. This stock will run until 1945, and yields 5 per cent.

George J. Mason, Limited.—Capital £800,000, divided into 400,000 7 per cent. cumulative preference and 400,000 ordinary shares, all of £1. All the ordinary and 100,000 preference shares have been issued, and the vendor is allotted 69,924 preference shares. This is an offer for sale of 300,000 preference shares at 21s per share. The British, Foreign, and Colonial Corporation have purchased the whole of the shares now issued. The price paid by them for the 69,924 shares allotted to the vendor is 19s 6d, and for the 230,076 shares £1 per share. In addition, they receive a commission of 5 per cent. in respect of the latter. All expenses in connection with the offer are payable by the corporation, including an underwriting commission of 2½ per cent., and an overriding commission of ½ per cent. The company was incorporated on June 20, 1909, and owned 12 grocery and provision shops. In 1914 two similar businesses were acquired, and the company now controls 273 shops in Wales, Manchester and district, the Midlands, and Yorkshire. In addition, there are offices and warehouses at Birmingham, Liverpool, Cardiff, Manchester, &c. The auditors certify profits for the past 5½ years. These vary from £71,168 in 1919 to £143,092 in 1922. Last year they amounted to £130,176, and for the six months to March 29th last they are given at £125,306. During that period the number of branches increased from 141 to 273. According to the last balance-sheet, dated March 29th last, total assets, without including goodwill, amounted to £775,553, and net assets

to £579,769. Freehold and leasehold premises together figured for £218,024, and stock (at cost or under) for £343,828. We should have liked an independent valuation of the properties, but considering that this is an "offer for sale," the amount of information given is quite good.

Candover Estates, Limited.—Incorporated in Natal, South Africa. Share capital £150,000, divided into £1 shares, of which 140,454 have been issued and are fully paid. This is an offer for sale which is being made simultaneously in Great Britain and South Africa of £200,000 8 per cent. first mortgage debentures at £97 per cent. The company is, according to information given in the published statement, "by far the largest producer of raw cotton in the Union of South Africa." The debentures now offered are secured by a mortgage bond specifically charging the company's freehold lands and buildings, as well as a floating charge upon all other assets. The proceeds of the offer, after repayment of existing debentures, will be utilised for working capital and for development of the cotton-growing land. The estates are stated to be completely equipped, and by the passing of a Bill in the South African Parliament a railway is to be constructed which will pass through the property. Including the balance of cash from the present offer, a valuation of the assets gives a total of £480,168. At June 30th last 6,093 acres were under cotton. The company's products, it is mentioned, have realised a price "which has been as high as 3.75d per lb over the American middling price." This is a proposition which should be supported by those who have knowledge of the directors, or an understanding of local conditions.

Mid-Kent Water Company.—This undertaking was incorporated by special Act of Parliament in 1898. Authorised share capital £380,000, of which £18,000 of original ordinary shares, £127,550 of 7 per cent. ordinary shares, and £149,020 preference shares and stock are issued. Premiums amount to £4,189. The authorised loan capital is £149,379, of which £65,000 is outstanding in the form of redeemable debentures. Tenders are invited for 1,000 7 per cent. ordinary shares of £10 each, at a minimum of £10 per share, and for £20,000 of 5 per cent. perpetual debenture stock at a minimum of £95 per cent. The ordinary shares are entitled to a maximum dividend of 7 per cent. per annum, but in the event of the distribution in any one year being less than 7 per cent., the company is authorised to make up the deficiency in succeeding years. The debenture stock now offered will be a charge upon the undertaking both for interest and repayment of capital in priority to all existing shares or stock of the company, but the outstanding debentures rank first for repayment of capital. The amount of debentures or debenture stock is limited to an amount not exceeding one-half of the paid-up ordinary and preference capital. The company supplies water over an area of 400 square miles in Mid-Kent. In 1918 net profits amounted to £11,922, since when, with the exception of 1919, they show a continuous increase. For the year ended September, 1924, they amounted to £19,379, compared with £18,102 in 1923. The rate of dividend on the 7 per cent. ordinary shares has risen from £4 11s per cent. in 1918 to £6 6s per cent. for the half-year to the end of September last. The capital now raised is required for extensions. At the minimum price of tender, namely, £10 per share, the ordinary yield £6 6s per cent., and the debentures, if tendered for at the minimum of £95, yield £5 5s 3d per cent.

Herne Bay Gas Company, Limited.—This undertaking was established in 1853, and in 1899 obtained Parliamentary powers for supplying gas in Herne Bay and district. The authorised share capital is £86,000, of which £16,000 has been issued in £5 original shares, having a standard dividend of 10 per cent., and £29,160 in £5 additional 7 per cent. shares. Premiums figure for £2,876. The amount of loan capital outstanding is £43,000, of which £9,500 of 4½ per cent. debenture stock, £5,850 of 6½ per cent. redeemable debentures, and £8,668 of 6 per cent. redeemable debentures has been issued. This is an offer for subscription by tender of 3,000 additional ordinary 7 per cent. £5 shares. The reserve and special purposes funds together amounted on October 31st last to £7,980, and the sum standing to the credit of the suspense account for renewals of works, plant, &c., at the same date, was £1,788. After payment of the dividends to December 31st last, £2,589 remained to be carried forward as undivided profit. The sales of gas for 1913 were 73 million cubic feet, and for 1912 they were 88 millions. The number of consumers at the present time is 2,786. No record of profits is given in the offer.

The British Tea Shares Trust, Limited.—Authorised capital £50,000, divided into shares of £1 each, of which 25,000 shares have been issued for cash at par. Particulars are advertised in the Press for public information only. The company was incorporated on June 10, 1912, for the purpose of acquiring financial interests in companies and concerns engaged in the production and cultivation of tea, rubber, and

allied products. Borrowing powers are equal to the nominal amount of capital. There is obviously scope for an efficiently controlled company of this type, but the capital in this case is small.

Selayang Tin Dredging, Limited.—Capital £140,000, in shares of £1 each. Subscriptions are invited for 80,000 shares at par, the remaining 60,000 shares being issued credited as fully-paid up in part purchase consideration. The company has been formed to acquire and work for tin, 160 acres of land in the Federated Malay States, situated in the district of Kuala Lumpur. The company also proposes to acquire an additional 160 acres of adjoining State lands, and applications for further concessions have already been made. In addition to the 60,000 shares, the vendor is to receive £5,000 in cash. The prospectus states that the first dredge (expected to cost about £55,000) should be in operation in the course of the next twelve months. The issue has been underwritten at 5 per cent., with an overriding commission of 1 per cent. A speculative venture.

Sabiwa Gold Mines, Limited.—The capital of this undertaking is £120,000 in 480,000 shares of 5s. each. Of these, 300,000 shares are offered to the public at par, the remaining 180,000 being allotted, as part purchase price, to the vendor. The object of the company is to acquire 274 claims in the Gwanda district of Matabeleland. The ore reserves are estimated at 139,000 tons, or sufficient for three years' milling on the proposed basis of 4,000 tons per month. It is stated in the prospectus that during the ten months ended October last, 17,950 tons were treated, yielding gold to the value of £24,397. The purchase price of £80,000 is payable as to £45,000 in shares and £35,000 in cash. After payment of the underwriting commission of 5 per cent. preliminary expenses, and the cash portion of the purchase consideration, and buying new plant, the sum of £6,500 will be left for working capital.

The Country Gentlemen's Association, Limited.— Authorised capital £67,500, divided into 60,000 6 per cent. cumulative preference and 7,500 ordinary shares, all of £1 each. Preference shares for £43,550 and ordinary shares for £4,255 have been issued. This is an offer for subscription at par of 16,450 6 per cent. cumulative preference shares. It is stated that the new capital will be employed in the further development of the business. To enable orders to be more promptly executed, it is desirable that the association should hold larger stocks of commodities as are most in demand. To make this possible, further warehouse accommodation is required, and as the association is in possession of suitable land at Letchworth, work can be commenced in this connection almost immediately. The capitalisation appears to be top heavy.

ACTIVE SECURITIES.

COMPANY NEWS.

DIVIDEND ANNOUNCEMENTS.

Name of Company.	Rate marked % or stated in Cash.	Dividend for Whole Years.	Interim Date of Method	Lat's Pre.
	* Interim div.	† Final div.		

MANILA ELECTRIC.—Dividend of 62½ cents per share of "no par value" on the common stock for the quarter ending December 31st, payable in New York on that date.

STRETTON'S DERBY BREWERY.—The total dividend for the year on the ordinary capital (increased during the year by a 100 per cent. bonus distribution) is 10 per cent. against 15 per cent. paid for 1922-23 on the smaller amount.

BRAHMAPUTRA TEA.—Interim dividend on account of the profits for 1924 of 15 per cent., less tax, payable on December 17th (against 10 per cent. a year ago). In addition, an allowance equivalent to 1s 5½d per share is to be made in respect of Dominion tax relief.

HURONIAN BELT.—The directors propose to pay a dividend of 25 per cent., less tax (against nil), on shares numbered 1 to 150,000. The 50,000 shares numbered 150,001 to 200,000, which were issued after December 31, 1923, do not participate in the dividend.

EAST INDIA RAILWAY.—Dividend from the surplus profits account of 7s 10d per cent. on the deferred annuity capital and the deferred annuity capital class "D," in addition to the guaranteed interest of £1 13s 4d per cent. for the five months ending December 31st, and 3s 10d per cent. compensation paid by the Secretary of State for India on account of income-tax.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—The production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of November amounted to 59,293 barrels.

TAMPICO OIL, LIMITED.—The total production during November was 49,560 barrels, in respect of which the Royalty due to Tampico Oil Limited, amounted to 3,717 barrels.

THE CALTEX OIL COMPANY.—November production, 2,589 barrels, or 411 tons.

THE KERN OILFIELDS OF CALIFORNIA, LIMITED.—The total production for November amounted to 121,284 barrels, or approximately 17,326 tons, including:—St Helens Petroleum Company, Limited, 32,762 barrels (4,680 approximate tons); Kern Trinidad Oilfields Limited, 12,489 barrels (1,784 approximate tons); Kern Romana Limited, 3,444 barrels (492 approximate tons); Kern Mex Oilfields S.A., 26,646 barrels (3,807 approximate tons).

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM
NAVIGATION COMPANY.LORD INCHCAPE ON THE POSITION AND PROSPECTS OF THE SHIPPING
INDUSTRY.

LOSSES ON STATE-OWNED VESSELS.

BUILDING AND OPERATING COSTS.

The eighty-fourth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 10th instant, at the offices, 122 Leadenhall street, London.

The Rt. Hon. Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the chairman), presided.

The Secretary (Mr F. J. Abbott) having read the notice convening the meeting.

The Chairman said:—I presume, ladies and gentlemen, you will, as usual, take the report and accounts as read.

The report and accounts having been taken as read, his lordship said that after setting aside £249,150 for redemption of the 5 per cent. and 5½ per cent. debentures, and writing off the discount and cost (£139,711 5s 6d) of the 5 per cent. debenture issue, they were able to recommend the same dividend as last year, and to carry forward £101,033 13s 8d. These results were not derived from working profits, but from the company's investments and other sources, such as dividends from their allied lines.

The insurance fund, which had suffered heavy losses, had increased by only £18,081, and several claims were still outstanding against the year's premiums. Since the fund was started seven years ago their premium had exceeded claims by £1,918,961 10s 2d. With 427 ships at sea covered by the fund, they could not expect to run free of accident every year.

COMPETITION BY STATE-OWNED SHIPS.

Twelve months ago he had said that with few exceptions the earnings of every voyage had fallen short of disbursements, and that he feared some years must elapse before we got back to pre-war conditions. The same remark applied to-day. While crop prospects in Australia and India were hopeful, there was no indication of a rise in freights, and the war in China was seriously affecting their trade with that country.

During the war our Government built a great many steamers, very wisely, as soon as the war was over, they got rid of them, and at high prices, for trade was booming. Not so wise were Canada, America, Australia, Brazil, and Portugal, which held on to their State-owned steamers. These had been competing with privately-owned vessels the world over, with the result that these countries had lost millions of pounds which had had to be made good by the taxpayer. Some of these Governments were now attempting to dispose of their ships, but the vessels, if sold, would not realise one-fourth of their cost. In saying this, he was not exaggerating. He recently bought for about £60,000 two steamers which had cost a certain Government no less than £600,000 only four years ago, and heaven only knew how much more they had cost in the interval.

It was, he continued, not within the capacity of public servants or Government Departments to manage great international enterprises such as shipping.

He would like to quote a trenchant speech which he had heard Lord Birkenhead make in the House of Lords a few months ago:—"You cannot master the business system of this country in the cloisters of Oxford, and suddenly take up and deal with a most complex organisation which has developed and grown up with centuries of our life. You can no more become an adequate and intelligent reformer in this respect than you can at the age of 50 or 55 go suddenly into the practice of law or medicine. The whole business is one of the most extraordinary nicety and complexity, and to attempt to deal with it without the advantage of most careful preparation is to invite a sure and certain failure."

Lord Birkenhead's axiom was, he thought, illustrative of the fallacy of any Government embarking on shipping or business of any kind. Such businesses were built up by men who had been trained for, and devoted themselves to, commerce. It would, he believed, have paid the shipowning Governments to have sunk their ships rather than to have kept them running during the last four years. When Governments had rid themselves of the incubus of State-owned vessels, the public might see a moderate return to prosperity in the shipping industry. Meantime, the ship-

building yards of this country would have many empty berths, with resulting lack of employment; but shipowners would not go on building ships unless they could expect a reasonable margin of profit.

Governments would be better off if, instead of competing with private enterprise, they took a share of business profits in the form of income-tax. If they continued to run ships, they would fail commercially, and, to make good their losses, would have recourse to additional taxation.

A HOPELESS ENTERPRISE.

He had, he continued, heard a good deal lately of a proposal to build six 20-knot steamers to carry only passengers, mails, chilled meat, and fruit between England and Australia, a proposal in which the Commonwealth Government had been invited to assist financially. Application had also been made to the Trade Facilities Committee for public money to finance the project. It was said that £9,000,000 would have to be put into the venture. Such proposals had been hardy annuals for 25 years. Let the promoters, he said, go to the public for the money; he doubted if they would get it, and if they got it, he doubted whether the subscribers would ever see any interest on their investment. It was much more likely that the principal would vanish. In his opinion the whole idea was doomed to failure. In his (the speaker's) opinion—he might, he said, be wrong—it would be sounder to leave the public to subscribe any money required to develop the industry.

BUILDING AND OPERATING COSTS.

Shipbuilding costs were still from 60 to 70 per cent. above the pre-war level, mainly through high wages and low output in the shipbuilding and contributory trades, while overhead charges in yards not fully employed were a serious cost factor.

Continuing, he quoted figures, taken from British and foreign tenders for railway material, to illustrate the difficulty British manufacturers had as against Continental manufacturers in competing for orders for their factories and employment for their workpeople. For wheels and axles, the highest British and Continental tenders were respectively:—British £1,350, Continental £800; the lowest tenders: British £920, Continental £678. For steel tyres for locomotives, the highest tenders were: British £1,988, Continental £1,531; the lowest British tender was £1,891, Continental £1,119. For steel springs, the highest tenders were: British £2,040, Continental £1,706; the lowest, British £1,463, Continental £978. The lowest tenders for locomotive boilers were: British £94,691, Continental £54,695. These samples, he said, could be multiplied. The current f.o.b. quotations for English bar iron were £8 2s 6d to £9 16s 6d, against for Continental bar iron, £5 10s to £5 12s 6d. He believed, however, that Continental prices were rising, as Continental firms found they were working at a serious loss.

In London and the outports used by the P. and O., the cost of loading and discharging showed a percentage increase of about 131 per cent. over pre-war charges; in Antwerp it was a little over 49 per cent. Port dues in London had advanced 63 per cent., their coal now cost 80 per cent. to 90 per cent. more than in pre-war days. These increases had resulted from the higher cost of labour. Production costs must be reduced in order that our export trade might revive.

PEACE IN INDUSTRY.

It was, he continued, not always understood by the public what effect even a slight advance of wages might have on the community unless it was accompanied by a corresponding increase of output. Despite all suggestions to reduce it, our population continue to increase, we had to depend on other countries for the bulk of the necessities of life, and we could not pay for these unless we could market our exports. To do this we had to meet, in our prices, the competition of other countries.

Only by persistent hard work and the rigid keeping down of

expenses should we get our share of the world's trade, and so be enabled to support our population.

Many orders for steamers had been placed abroad on terms with which our builders could not apparently compete. He supposed hard economic facts would bear their fruit eventually, but meantime the people of this country were suffering. The loss of wages occasioned by strikes during the past few years must have run into many millions, causing great privation among the employees' families and depleting the trade union funds, which had to be restored by levies on the workmen's wages. If this vicious circle continued, Great Britain would become a land of paupers. If common sense were allowed to prevail, and our Government departments displayed economy, we should, despite drastic taxation, regain our world supremacy in trade and finance. So far, ours was the only country which had met its war commitments; our credit remained untarnished; and he believed, despite certain prophecies, London would continue to be the centre of the world's finance. The resumption of a free market for gold would be good for trade and good for the City of London.

"Peace in industry" should be our watchword. Much depended on sane counsel by the leaders of labour. His faith in the good sense of the British workman remained unshaken. It was vital, as never before, that our industries should go on unchecked by trade disputes. Thereby we might see, better than a rise in wages, a rise in the purchasing power of wages. This, he was convinced, was the best way to increased prosperity for the country, and to a better standard of living for the workers.

TROUBLES IN AUSTRALIA.

An extraordinary state of affairs had, he continued, lately arisen in Australia. From what they could gather, a bureau was some time ago set up in Sydney for the enrolment of ex-service men as waterside workers. Recently the Labour Union had objected to members of the bureau being employed who were not also members of the union. The company's steamer "Maloja," which had been partly loaded by bureau men in Sydney, was declared "black" on arrival in Melbourne, and could get no cargo. On reaching Adelaide she was there also declared "black," and could get no cargo. They had been informed she would get no pilot or tugs at Fremantle, and would be unable to embark mails, so she was sent into Albany, where she picked up the mails, but she was refused the service of tugs, and passengers had to be embarked in the ship's boats. She was now on her way home, practically without cargo.

Several other steamers were in the same predicament, although they had not worked cargo by bureau labour. One steamer outward bound was not allowed to get a pilot at Fremantle, and when she came alongside in charge of the captain her hawsers were cast adrift, and she had to anchor in the stream. A steamer, chartered by the Australian Commonwealth Line (Government owned) to take cargo from this country to Australia, had been tied up three or four weeks in Fremantle with all her cargo on board, because her crew were not being paid the Australian rate of wages, and the Government had chartered this vessel and laid up some of their own ships, because they could not run them except at a heavy loss.

The position was almost inconceivable. They were between the devil and the deep sea, and apparently law and order in the Australian ports did not exist. He had, he continued, implicit faith in Mr Bruce, the Prime Minister of Australia, to protect his country from what was more or less Bolshevism, and to save her trade from such paralysis.

THE BRITISH MARITIME BOARD.

During the six years in which the Maritime Board, by which sea-going wages were fixed, had been in operation the trade had been free from strikes. The relations between shipowners, seafaring men, and the men's leaders were most cordial. Although in anticipation of improved freights wages afloat were some months ago advanced, there were few vessels which, even yet, were making ends meet in their earnings and disbursements.

THE MAIL SERVICE.

Their mail service had been carried on satisfactorily, but not without difficulty. Until they got possession of the ships now building they would not reach the efficiency at which they had always aimed. The delivery of these ships would enable them to revert to the full schedule on all the company's lines.

Last year they carried 700,000 bags of mails, equal to nearly 70,000 tons of space, an increase in ten years of about 100 per cent. of mail matter. This increase, to a great extent, had resulted from the development of the parcel post, which, even with a limit of 11 lbs per parcel, greatly affected the company's freight traffic.

In the resumption of the fortnightly mail service to and from Australia the directors, looking for additional sources of revenue, had instituted regular calls at Algiers and Port Sudan.

WAR MEMORIAL.

Three hundred and sixty-one members of the sea and land staffs—258 of the P. and O. and 103 of the British India Companies—gave their lives during the Great War. To commemorate the service they rendered to their country a permanent memorial had been placed at the entrance to the board-room.

THE POLITICAL OUTLOOK FOR TRADE.

The Conservatives having taken up the reins, he trusted we might have a stable Government for a lengthened period. Pledges given by the Leader of the party not to interfere in trade were sufficient to inspire confidence of the business community. The minds of a certain section of the Conservative party might still lean towards Protection, but the country had pronounced against this a year ago, and the decision had been accepted by Mr Baldwin.

The country had now given its verdict as to whether the nation was to carry on with its constitutional monarchy—God save the King—or whether the whole fabric of society was to be demolished.

In Russia, under Bolshevism, murder was rampant, property confiscated, family and moral life destroyed, and the teachings of the Christian religion being annihilated. He did not believe there were two people in four hundred thousand of our population who wished to see their native land reduced to this condition. He believed that not for five years, not for five hundred years, should we have any Bolshevist nonsense in this country. The people would have nothing to do with it.

THE YEAR'S PASSENGER TRAFFIC.

Although cargo had been scarce and freight rates low, passenger traffic had been well maintained. He could not speak too highly of the devotion and zeal of their agents, their shore establishments in all departments, their captains, officers, engineers, pursers and pursers' staff, to whom the board were indebted for the P. and O. Company's popularity with passengers. Any complaint was inquired into with a view to improvement, and every letter of thanks was, he said, sent to the captain for his information and that of those below him.

In the vessels now under construction to take the place of those destroyed by enemy action they were avoiding extravagance in the way of decoration; but every care was being bestowed on the arrangements for the convenience and comfort of the travelling public. This was a matter of great interest to their technical staff and to all of those who were concerned in the success of the new ships; an interest which was shared by his wife and his daughter, Elsie, whose suggestions were of value. Lady Inchcape and he were, he said, going with their technical advisers to Belfast next week to go through the arrangements on board the *Rasmak*.

During the year the number of steamers in commission of the P. and O. and allied lines was 445; number of sea miles run, 26,692,686; number of entries into port, 28,773; tons of cargo carried, 14,470,267; number of animals carried, 253,227; number of passengers carried, 1,883,027; average daily number of crew employed, 37,027; expenditure in wages and victualling of crews, per annum, £5,127,000.

TRADE WITH GERMANY.

The Commercial Treaty with Germany negotiated by the President of the Board of Trade, Sir Philip Cunliffe-Lister, signed on behalf of the British and German Governments within the last few days, and which would shortly come up for that ratification by Parliament, which it would most assuredly get, was, he said, the most important step yet taken towards a renewal of our trade, not only with the Continent, but all over the world. If he might venture to say so, the time had now come when the hatchet had to be buried. Germany was now expiating as far as she could the horrible outrage perpetrated by Prussian militarism; and it was important to resume friendly commercial relations with her, with all the safeguards provided by the Treaty. Our present Government had only been a few weeks in power and already by the firm steps they had taken in Egypt and by their trade treaty with Germany they had vindicated the verdict of the country. The denunciation of the proposed Treaty with the Soviet Government, which would have done no more for British commerce with Russia than the trading agreement made in 1921, was, he said, all to the good.

THE COMING YEAR.

With regard to the operations of the year on which they had just entered, many of their voyages were not even now covering expenses. Every economy consistent with efficiency was being effected. Until trade revived they would have considerable anxiety. Their Stock Exchange investments, taken as a whole, stood in their books at much less than they would realise if sold to-day. Their ships stood at considerably less than cost, after allowing depreciation at 5 per cent. per annum on the original price; their properties all over the world were well written down.

Their allied companies were all perfectly sound, although they too were suffering from the general depression.

The company would, he said, carry on its great work, but if the board had to recommend a lower dividend for the current year they, the stockholders, would, he was sure, accept it philosophically.

A CONSERVATIVE POLICY.

Continuing, his lordship said he had always favoured Free Trade, but, now that Protection had had its quietus, at any rate for the time being, by the Prime Minister, he did not know on which side he was except that he was not a Communist, a Socialist, or a Bolshevik. But as long as he remained their chairman he would, with the approval of his colleagues, observe the conservative financial policy which had built up the P. and O. On the other hand, he would continue to adopt what might still be called a liberal policy in marching with the times; and in improving their ships, for the convenience of their passengers and shippers, in large things and in small things.

SUEZ CANAL DUES.

He had been assailed by the Chamber of Shipping more than once to get the Canal dues reduced, and he was not without hope that a reduction would shortly be announced. Although he had no authority to say so, he hoped the reduction would be 25 gold centimes a ton. The dues would then be 7.25f as against 6.25f in 1914. He trusted, if the traffic continued to improve, that a further reduction might be made before long.

As chairman of the London committee and a vice-president of the board, he had never failed to urge that the lower the dues were the more would traffic be attracted to the Canal. His representations had always been received with the greatest courtesy, and he cordially acknowledged that the president of the Canal Company and its officials, by the high quality of their administration, and the manner in which their staff in Egypt discharged their responsibilities, both as to the traffic and the improvement of the Canal, left nothing in this respect to be desired. The Canal system and its administrations were an object lesson against nationalisation of industry. Woe betide this country if railways, banks, shipping, and other enterprises were handed over to Government departments. There would be much weeping and wailing and waiting at the doors—to say nothing of the gnashing of teeth.

THE STAFF—AN APPRECIATION.

He would, he said, continue to add to the comfort and amenities of all those who spent their lives afloat in charge of the company's vessels, from the captain downwards. Their devoted service and their resource in emergencies were beyond praise. Speaking from experience, both as a subordinate (they were, he said, all subordinate to somebody; some, he would not say all, were subordinate to their wives!), and from a long experience of administration, he had never known loyalty and discipline to surpass those which characterised the entire staffs, both afloat and ashore, of the P. and O. Company. This, he said, made his work not a task, but a real pleasure.

They still drew their young officers from the *Worcester* under Sir Thomas Sutherland's scheme, and in Captain Sayer (H.M.S. *Worcester*) they had an admirable disciplinarian and instructor. The young officers were highly spoken of by their commanders, and their respected friend, Captain Angus, the company's former nautical inspector, who was with them to-day, put them through a crucial examination before passing them for the service.

A TRIP TO CEYLON.

He had made a voyage to Ceylon by the new steamer *Maloja* last winter, and came back by the *Moldavia*. Everything on board went like clockwork, and the vessels were kept like yachts. If anyone wanted to get away from the winter at home, he could do nothing better than take a run out from Marseilles to Colombo by P. and O., spend ten days in the charming Island of Ceylon, with its delightful climate of Neoralia, and get back to Marseilles after having been absent less than six weeks. If he backed a winner at the Neoralia races at five hundred to one—as he, the speaker, had been credited with doing—he could have his trip for nothing and something in hand which, as they all knew, he could double with ease at Monte Carlo on his way home.

DIRECTORS.

The board had nominated as a director the Right Honourable the Viscount Churchill, who, as chairman of one of our greatest, most up-to-date, and best managed railways, the Great Western, had had a long experience of affairs. If his appointment were confirmed, as he was sure it would be, they would have in him not only a most valuable, but a most agreeable colleague.

AUDITORS.

He wished to express their great regret at the death of Mr W. F. Courthope, who had served as auditor with great ability for twenty

years. He was a member of the firm of Williams, Deacon, and Co., and, following tradition, they suggested Sir Robert Williams, of the same banking firm, to fill Mr. Courthope's place.

Mr. F. A. White, whose services as auditor they had had for nearly 25 years, also came before them for re-election to-day, and would, he hoped, for many more years.

In conclusion, he said that if he had trodden on anyone's toes in his remarks on general topics, he hoped he would be forgiven. Before putting the resolution, he would be glad to answer any questions to the best of his ability.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr H. N. Gladstone.

RETURN ON THE TOTAL CAPITAL.

A shareholder said that it was true that the deferred stockholders were getting 12 per cent., but that stock represented only one-eighth of the total capital employed, and, as a matter of fact, the return upon the whole of the capital was considerably less than 3 per cent. He was not complaining of that, as he knew the reason for it. This was a public concern, the premier shipping company of the world, and its business was to "carry on." If the shareholders had to put up with lower dividends in the future until better times came, they would have to do so. He hoped that the public understood the position, and appreciated the fact that this great company would carry on even at a loss, if necessary.

The Chairman, in reply, said that he agreed that they were getting a very poor return upon the capital employed in the undertaking. Of course, they had paid considerably higher dividends in previous years, not only in actual dividends, but also in distributions of bonuses, and the board would be only too pleased, when trade improved, as they hoped it would in the course of a year or two, to give the stockholders a larger dividend than the one they were receiving on the present occasion.

The resolution was carried unanimously.

The Chairman next proposed: "That a dividend for the half-year ended September 30th last of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 6 per cent. on the deferred stock, free of income-tax, as recommended in the report, be now declared, and that payment for the same be made on and after December 12th."

This resolution was seconded by Sir Montagu Cornish Turner, and unanimously approved.

The retiring director (the Right Hon. Viscount Churchill, G.C.V.O.) was unanimously re-elected, on the motion of the chairman, seconded by Sir Charles S. Addis, K.C.M.G.

On the proposition of Mr A. Pitt, seconded by Mr H. B. Henley, Mr F. A. White was re-elected an auditor, and Colonel Sir Robert Williams, Bt., was elected an auditor.

VOTE OF THANKS.

Sir Charles Stewart-Wilson, K.C.I.E.:—My lords, ladies, and gentlemen,—Before we break up this meeting I have to ask your permission to put another resolution. It is: "That the cordial thanks of the proprietors are due to the chairman, directors, and staff for their continued successful management of the company's business." The shareholders of the P. and O. Company owe to you, my lord, and to your colleagues on the board, their sincerest thanks for the brilliant manner in which you have conducted their business. It is no little thing to control the destinies of a great concern like ours, and we should like you to feel that we are indeed grateful for the splendid efficiency with which the task has been executed. I trust I shall not be misunderstood if I say that most of us here are thinking that if such results can be achieved in the dry tree, withered by the drought of years of bad trade, what may we not expect when returning normal conditions enable the tree to put forth its green leaves again. I am much encouraged by what his lordship has said on that subject.

Turning to the staff, I know I have a sympathetic listener in your lordship; we perceive that from what you said to-day, and we knew it before. No one realises better than our chairman what the board owe to the loyal devotion, quiet, unassuming industry, resourceful skill and efficiency, and often the magnificent heroism of the staff ashore and afloat. Those of us who are here present have the privilege of tendering to you, my lord, and to your colleagues, our thanks for what you have done for us, and we do so most heartily. I know that I am saying only what all of us are feeling when I ask you to be good enough to convey to the staff, large and small, ashore and afloat, an expression of the shareholders' thanks for, and warm appreciation of, what they have done.

The vote was accorded with acclamation, and the Chairman, in acknowledging it, said that it would be a great pleasure to the board to convey the appreciation of the shareholders to the staff of the company, both ashore and afloat.

The proceedings then terminated.

THE BRITISH OVERSEAS BANK, LIMITED.

BANK'S STEADY PROGRESS MAINTAINED.

EXPANSION OF BUSINESS—INCREASED PROFITS.

IMPROVEMENT IN TRADE CONDITIONS.

CHAIRMAN'S REVIEW OF CONDITIONS IN CENTRAL EUROPE.

The fifth annual general meeting of the British Overseas Bank, Limited, was held on December 9th at the bank premises, 33, Gracechurch street (Lombard court), London, E.C., the Rt. Hon. Viscount Churchill, G.C.V.O., chairman of the company, presiding.

The Chairman: I will ask the secretary to read the notice convening the meeting.

The secretary (Mr A. E. Thorne) read the notice convening the meeting accordingly.

The Chairman: I will now ask the secretary to read the auditors' report.

The secretary read the auditors' report.

The Chairman then said: Ladies and Gentlemen, the report and accounts for the year under review have already been circulated. May I, therefore, assume that it is your pleasure that we should take these as read?

The bank, ladies and gentlemen, has now completed the first five years of its existence, and although this, I hope, is a very short period in its history, it may perhaps help us a little if we glance back at the conditions under which we have so far worked.

Founded, as you will remember, well towards the peak of the post-war boom, our first care, among the many initial difficulties of organisation, was to go forward slowly, in order to make sure of each step in our development, to set our faces firmly against the universal impulse towards overtrading and undue optimism. In this, I think, ladies and gentlemen, we may claim to have succeeded, and the proof of this lies in the way in which, young and undeveloped as we were, we were able to meet the subsequent period of depression. During the boom period our development seemed perhaps slow. During the depression, however, it continued at the same quiet but steady pace as before.

IMPROVEMENT IN TRADE CONDITIONS.

In the course of the year now under review we have, I hope, seen some small beginnings of a change in general trade conditions. This change has as yet had little time to operate. Indeed, in many ways its first effects would seem merely the continuance, in another form, of the depression to which we have so reluctantly grown accustomed. But the beginnings of healthier development are there, and I think I can assure you that during these five years, we ourselves have laid the foundations, quietly but systematically, for an organisation which is now strong and well established enough to take its full share in any recovery that may be before us.

POSITION OF GERMANY.

The central feature in this change in general conditions has been Germany. From a state of affairs in which financial chaos had already, for all practical purposes, been reached, and in which political and social chaos was growing more and more threatening, we have seen a change to currency stability, and, more than that, the promise of a solution of the Reparation problem. It would be easy to criticise the solution offered by the Dawes' proposals. Its importance, however, lies, not in whether it will work out in the way which was at first intended, but in the fact that it has given a breathing space of at least several years, not only to Germany, but to the whole of Europe. It has also given the opportunity to the French Government to withdraw from the position it had taken up in the Ruhr, and it has formed the basis for the provision, under good security, of fresh capital to Germany, without which economic recovery in that country was impossible. In this way, by attacking the trouble from which we are all suffering at one of its most important sources, it has brought Europe, as a whole, a long step forward on the road towards normal conditions.

RUSSIA.

Unfortunately, in Russia, the other main source of Europe's difficulties, there is little as yet that is satisfactory to record. It is true that the existing régime in Russia has now been recognised both by Great Britain and by France, as well as by Italy. But the history of our recent negotiations with Russia shows how little we have as yet to hope, while political intrigues in Russia

itself remain as a warning that we ourselves shall do well to wait until a position of greater stability there has been reached.

GERMANY AND TRADE COMPETITION.

To return for a moment to Germany, it is well to remember that there are still difficulties ahead. Currency stability and a balanced Budget have been attained. But this has been done at the cost of a severe dislocation in prices and stagnation in trade. At present, prices in Germany are too high and wages too low, and before real progress can be made a painful period of readjustment will have to be gone through. It is well, too, to remember that when this readjustment has been reached Germany will be our competitor again on the world markets, and, under the stimulus of Reparation payments, she will certainly be a more serious competitor than before the war.

STABILISATION IN POLAND.

Stabilisation, with its ultimate advantages and its immediate difficulties, has not been confined to Germany. The other most outstanding instance, which we ourselves have followed with particular interest and satisfaction, is that of Poland. As was perhaps to be expected, developments there have attracted less general attention. But the achievement is, if anything, more remarkable. From much the same financial chaos, and without any assistance from abroad, stability has been reached both in currency and in Government finance. Unfortunately, stability has been followed by a still greater rise in prices and stagnation in trade than in Germany, and here, too, the same painful process of readjustment will have to be gone through. It remains now for Poland to win the confidence of the outside world in order to obtain the capital necessary for its development in the future. The first steps have been taken in the energetic reforms of the past year, and we have confidence that the difficulties ahead, great as they are, will be surmounted.

HUNGARY AND AUSTRIA.

In Hungary, with the assistance of the League of Nations, the problem was a simple one, and there is every indication that the reforms carried through during the past year will, given political stability, prove the basis for a steady recovery. As regards Austria, the year has not been so satisfactory, and it is very much to be regretted that the wave of speculation on the Vienna Bourse, which ended so unfortunately, was not more effectively controlled. There remains, too, as yet unsolved, the difficult task of the adjustment of Austrian industry to post-war conditions. However, compared with the progress and the promise of progress elsewhere, the setback here is of relatively small importance.

GENERAL TENDENCY TOWARDS STABILITY.

Apart from the dramatic collapse of the franc, and its subsequent partial recovery, the general tendency throughout the year has been towards greater stability, but up to now this movement, welcome as it is, has not made life much easier. The fever of depreciation has left us with a general maladjustment of production and consumption, of prices and wages; it has eaten up much of the world's capital and has seriously diminished the habit and capacity of saving. We are at last beginning to be able to take stock, and the prospect is not a pleasant one. The calamity of a complete collapse, with which Europe was seriously threatened, has, however, been avoided, and there is a fair chance now that with self-denial and steady work—if the habit of these can be learnt again since the war—the return to normal conditions is assured.

BANK'S PROGRESS DURING YEAR.

Turning to our own affairs, you will see from the report and balance-sheet in your hands that steady progress is maintained both in regard to the expansion of our business and also in the profits earned, which represent much careful and painstaking work under conditions which, if more satisfactory in some respects than formerly, have been, nevertheless, extremely difficult.

The year has also seen considerable changes in the internal organisation of the bank. As mentioned in our report, we required twice in the course of the twelve months to submit changes in our articles to our shareholders for approval. Perhaps, ladies and gentlemen, it is not altogether a matter for surprise that we did not succeed in finding, at the first attempt, a constitution that was in all respects satisfactory. It is, however, a pleasure to be able to assure you to-day that our present memorandum and articles work with perfect smoothness and efficiency, and that our relations with those institutions who are no longer our colleagues on the board, continue to be of a cordial and friendly character.

CREDIT DEPARTMENT.

The internal organisation of the bank has continued to develop on the same lines that have proved satisfactory in the past. In particular, the credit department has been greatly developed and increased, in order to meet the very rapid expansion in that side of our business.

TRUSTEE DEPARTMENT.

A further departure has been the creation of a trustee department. Under our constitution we have power to act as trustees, and we have been asked on several occasions to exercise these powers, both as an executor and as a trustee in connection with public issues. It seemed expedient, therefore, that this side of our work should be placed on a regularised footing, which has now been done. We have, I may add, drawn up a code of general conditions under which we are prepared to act as trustee, and the booklet dealing with these questions was issued to you with the report.

BALANCE-SHEET ITEMS.

You will see from the figures in the balance-sheet that current, deposit and other accounts total some £500,000 more than last year, while advances to customers are slightly less. From the balance-sheets which we have published from time to time, it would appear as if these two items were of a steady character showing little variation in amount. This is far from being the case, as both, in practice, show rapid variations. This feature necessitates the maintenance of a strong liquid position, of which evidence is given in our cash in hand and money at call.

ACCEPTANCES.

Acceptances by the bank show an important increase, amounting to £1,250,000, as compared with our figures a year ago. The increase in itself is satisfactory testimony to our activity. It is still more so when I am able to say that the increase does not relate to any particular item or country, but is spread over a number of commodities, and that we have in the course of the year opened up satisfactory relations in a number of centres where previously we had done little business. Fresh connections of this kind are only made after careful study of the conditions. That we have been enabled to accomplish so much this year is evidence not only of much painstaking research during the twelve months, but of a large amount of spade-work earlier in the history of our institution, which is only now bearing fruit.

The contingent liability of £1,620,000 for endorsements is, as I mentioned last year, merely nominal, as it is represented by the obligations of first-class banks or financial houses in the City of London.

PROFITS AND ALLOCATIONS.

If you turn to the report for a moment, you will see that our profits for the year amount to some £5,000 more than last year, and that it is proposed to distribute a dividend on the "A" shares on the same scale as during the previous period. You will also find a further allocation to "reduction of premises" account. This action was not taken because we feel that we have not received full value for the money laid out in this direction. The exact opposite is the case. But we feel that, with a lock-up of this character, it is desirable to effect reductions whenever we are in possession of profits which can be conveniently utilised in this direction. As that is so on the present occasion, we have written down this item in our balance-sheet by a further £5,000, making £30,000 in all since we acquired our property.

RESERVES.

The next allocation is £55,000, with which we propose to open our reserve account. I hope you feel, with me, that we can all congratulate ourselves on the fact that, at this comparatively early stage of its existence, the bank is in a position to create a reserve of this substantial amount. As you will see from the balance-sheet in your hands, we had already established a special reserve of £45,000 against our shareholding interest in foreign banks, and, for the sake of greater simplicity, a motion will be submitted to the meeting to-day to combine this amount with the £55,000 which

is being allocated this year to our reserve. We feel that a multiplication of accounts in the balance-sheet is only confusing, and serves no useful purpose. After effect has been given to these allocations, a balance of £54,330 will be left to be carried forward to next year, a reduction from the previous year's figures of some £14,000.

THE RESOLUTION.

I now move the following resolution:—
"That the report and accounts, as audited and certified by the bank's auditors, now before the meeting, showing the position of the bank's affairs as at October 31, 1924, be approved and adopted; that the final dividend recommended by the board, at the rate of 6 per cent. per annum on the 'A' ordinary shares, for the half-year ended October 31, 1924, be approved; that the dividend be paid to shareholders on the register of members at the closing of the books on November 22, 1924."

I need hardly say that before I actually put the resolution I shall be only too pleased to answer any questions to the best of my ability. I will now ask Mr Hird to second the resolution.

Mr Norman L. Hird (advisory director): It would be superfluous on my part to say very much in seconding the resolution which has been proposed by the chairman. Your chairman has dealt very fully with the European position, and he has also dealt very fully with the balance-sheet, and I think one can say about the British Overseas Bank balance-sheet that it does not require a great deal of explaining, as, on the assets side certainly, it is what one would call a very clean balance-sheet; but I should just like to say, as one who has seen a good deal of the inside working of the British Overseas Bank, that the shareholders probably do not realise—I mean, they cannot realise—the enormous amount of work that has been carried out during the past five years in building up what we all hope will be a very excellent and profitable business.

Mr W. J. Slatford: All honour to you.
Mr Hird: I think it is very gratifying to the board that the policy they adopted in the early days of advancing slowly has been justified by results. I have nothing further to say, except that we as shareholders are greatly indebted to the board, and to the management of this bank. I have very much pleasure in seconding the resolution as proposed by the chairman.

The Chairman: Now, ladies and gentlemen, if there are any questions I should be very happy to attend to them. (After a pause) Well, ladies and gentlemen, as there are no questions, I will put the resolution to the meeting as proposed by myself and seconded by Mr Hird.

The resolution was carried unanimously.
The Chairman: I will now ask Mr Caird to propose a resolution.
Mr James Caird: I have much pleasure in proposing "That the sum of £45,000 held as 'reserve against shareholding interests in foreign banks' be transferred to general reserve, which will then figure at £100,000." I will ask my colleague, Mr Campbell, to second this.

Mr Nigel L. Campbell: I have great pleasure in seconding the motion.

The resolution was carried unanimously.
The Chairman: Mr Hindley, will you please propose the next resolution?

RE-ELECTION OF DIRECTORS.

Mr R. T. Hindley (Advisory Director): I have very much pleasure in proposing that the retiring directors, Mr James Caird and Mr Nigel Leslie Campbell, be re-elected directors of the bank. Representing, as I do, one of the shareholding banks in the British Overseas Bank, I do recognise the amount of hard work, careful consideration and judgment that is shown by, and that devolves upon the board and the executive of the bank in the conduct of—especially in the building up of—a new business such as this. It has been a source of great satisfaction to us to realise that our interests were in such good hands as we have here with the board of the bank. I can assure you that on occasions when they have so kindly asked me to come to the board meetings from time to time, as I have been in the City, the amount of real work that is put into these questions of a routine nature which come before the board, by these gentlemen of wide commercial experience and financial experience in the City, has been a source to me of the greatest satisfaction, as it must be to you as shareholders of the bank. I have, therefore, the greatest pleasure in proposing to you that Mr Caird and Mr Campbell be re-elected directors of the bank.

Mr Edgar Horne (Advisory Director): I have much pleasure in seconding the resolution.

The resolution was carried unanimously.
The Chairman: The next resolution is for the reappointment of the auditors. Will some lady or gentleman kindly propose that? Col. G. R. C. Westropp, C.B.: I have much pleasure in proposing "That the retiring auditors, Messrs A. W. Taft,

C.B.E., and A. S. Macharg, chartered accountants, be reappointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of five hundred guineas."

Mr Ernest F. Donne: I beg to second that, Mr Chairman.
The resolution was carried unanimously.
The Chairman: That is the end of our business, and I am extremely grateful to you for your attendance here to-day.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr W. J. Slatford: Before we separate, I should like to move a cordial vote of thanks to you, Mr Chairman, and your eminent colleagues, for the excellent conduct of our business. I put that to the shareholders.

The vote was unanimously accorded.
The Chairman: Thank you, ladies and gentlemen. I am sure all my colleagues and the officers of the bank appreciate your kindness in passing this resolution. As you have heard it already referred to, I, as the chairman, am in a somewhat independent position here, because my friend on my left, Mr Gairdner, with his great experience, has to look after the technicalities of the business—may I put it?—and the well-being of the bank, and the greatest credit is due to the managers and to the other officers of the bank. Only this morning I heard how smoothly, how efficiently, and how happily the whole staff from top to bottom is working, and how proud they are to be members of the British Overseas Bank, which is making such a name for itself.

The proceedings then terminated.

BWANA M'KUBWA COPPER MINING COMPANY, LIMITED.

BOARD'S CONSERVATIVE ESTIMATE OF PROFITS.

The ordinary general meeting of this company was held, on the 8th instant, in London.

Mr Edmund Davis (chairman and managing director), in the course of his speech, said: We are dealing with a very large proposition, which will probably be the centre of a large copper-producing area in Northern Rhodesia, and we have to take every possible care in the initial stages of our equipment, so that full benefit may be derived therefrom as development, not only of our own, but also of other properties, proceeds. This being so, we appointed a technical committee of the board, who came to the conclusion that not only was it in the interests of the company that the first unit of plant should be on the basis of treating 1,000 tons per day, but that the plant should be so laid out that two further units of 1,000 tons per day each might be added at a later date at the least possible cost.

EXCELLENT QUALITY OF COPPER.

When presiding at the ordinary general meeting early in the year, I stated that on the basis of treating 1,000 tons per day we might reckon that 300,000 tons of ore would be treated per annum, and that the metal production therefrom would be in the neighbourhood of 10,000 tons of refined copper, and, further, that the product should be delivered c.i.f. British port at £42 per ton. Though this cost would be increased by London charges, and provision for depreciation, it should in no event exceed £45 per ton. We are satisfied that our estimates of production and profits are conservative with standard copper at £60 per ton, though the quality of the copper we have produced in our pilot plant and shipped to this country is remarkable. It had been refined in a one-ton refining furnace, the copper bars produced analysing 99.85 per cent. to 99.91 per cent. These have been classified by a prominent metal-broking house as "excellent best select quality," and, of course, should realise a much higher price than standard. The estimate of profits which I gave at our last meeting—namely, £175,000 per annum—was based on the figure given of c.i.f. cost, and after allowing for London expenditure and other necessary usual debits. This, in the light of our present information, should prove to be a very conservative figure.

INDEPENDENT ENGINEER'S REPORT.

The report of the chief engineer of the American Corporation of South Africa amply confirms all reports we have had from our own technical advisers. His estimate of the ore reserves from the assay plans at their disposal gives down to the 350-foot level 4,592,054 tons of 3.63 per cent. ore, as compared with our own estimate of 4,349,946 tons of 3.76 per cent. copper, the Johannesburg estimate being greater by 242,108 tons, with a lower value of 0.13 per cent. copper. This is a very close agreement, and highly satisfactory. The longitudinal distance explored on the 350-foot level is 1,240 feet on the hanging wall ore body, and 1,420 feet on the footwall ore body. These are the measurements used for the ore reserve estimate, but there is no reason why the ore

bodies should not continue beyond these distances, and as the values in the 350-foot level are better than those in the levels above, the value of the reserves as a whole would somewhat benefit if more ore were included for this level.

In the various estimates of cost, £5 per ton of copper has been added to cover other charges, and the grade of the ore has been assumed to be 3.66 per cent. Taking these two factors into consideration with "best select" copper at to-day's price, £70—which is a reasonable assumption for the future—there should be a profit of about £244,558 per annum on a production of 10,254 tons of copper. Costs per ton should be lower than the figure taken in the estimate, and the tonnage of copper produced should be better. When the reserves which are available for open working production have been consumed, there will be an increase in costs, provided no economies are effected when the underground mining state is reached many years ahead.

In addition to the Bwana M'Kubwa mine, the company possesses another asset of very considerable potential value. That is the N'Kana mine, and the exclusive prospecting right held till December 31, 1927, over an area of about 1,800 square miles. In the N'Kana mine, about 954,938 tons of 3.48 per cent. copper ore being already proved, there is no necessity to continue development on this property at the moment. The results so far obtained have disclosed the existence of further interesting points where the existence of copper ore has been proved. Mr Horner reports two very promising discoveries, which are apparently extensions of the N'Kana ore bodies. The one is about one mile north of N'Kana, and has a prospect shaft on it, and a cross-cut at the 60-foot level has proved 25 feet at 3 per cent. ore; the other situated about half-a-mile further north had had two shafts sunk on it. In the first, which is now down to 58 feet, copper ore was met at 43 feet, the bottom of the shaft still being in ore, which so far averages 4.5 per cent. copper. In the second shaft, which is now down to 70 feet, ore was met at 45 feet; the bottom of the shaft is still in ore, which so far averages 4 per cent. copper.

The report and accounts were unanimously adopted.

KERR, STUART AND COMPANY, LIMITED.

"A MARKED INCREASE IN ACTIVITY."

The fourteenth annual general meeting of Kerr, Stuart and Co., Limited, was held, on the 8th instant, at Winchester House, London.

Mr Herbert L. Reed (chairman and managing director), in moving the adoption of the report and accounts, said that the net profits for the year amounted to £28,780, and they were proposing to pay a dividend of 8 per cent. for the year on the ordinary shares. The year had been a very difficult one; in the early part of it very little work was obtainable. Later in the year, however, they were able to obtain considerable orders for locomotives and boilers, and a pronounced improvement in the position had taken place, as reflected in the balance-sheet, the figures of which showed a marked increase in activity. The railway companies, both for this year and the forthcoming year, had put in hand, large programmes for the construction of new rolling stock, a considerable proportion of which was being put out to tender to the companies engaged in the business. This company had recently received a large order for locomotive boilers from the Great Western Railway. The acute depression which characterised the locomotive industry until the last few months had its cause in root principles, of the disappearance of which there was yet no tangible sign. These were chiefly the inability of their foreign clients, for financial reasons, to purchase rolling stock, and also the inability of firms in this country to compete with the Continental manufacturers for orders put up to international competition. How long this would last it was difficult to say, but there were distinct signs that Continental prices were approaching nearer to those of manufacturers in this country. The Chairman then dealt with the position of the locomotive industry in India, and said that, in view of the small number of locomotives ordered last year by the Indian Government, it was quite evident that the Peninsular Locomotive Company, a portion of whose capital was held by Kerr, Stuart and Co., could not tender advantageously without some assistance from the Government, and in view of the tariff board's report, the Government was not in a position to give such assistance. The tariff board had, however, recommended an extended scheme for bounties on steel wagons manufactured in India, and the Government had given the company a large order for wagons at an agreed price. Having referred to the interest acquired by Kerr, Stuart and Co. in Gas and Fuel Plants, Limited, the Chairman, in conclusion, said he thought they had now laid the foundation of a successful enterprise for the company.

The resolution was carried unanimously.

DORMAN, LONG AND COMPANY, LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR.

POSITION OF THE STEEL AND IRON TRADES.

BIG BRIDGE CONTRACTS OBTAINED.

The thirty-fifth ordinary general meeting of the shareholders of Messrs Dorman, Long and Co., Limited, was held at the registered office, Zetland road, Middlesbrough, on Tuesday, the 9th instant, Sir Arthur J. Dorman, K.B.E., in the chair.

Before proceeding with the business of the meeting, Sir Arthur Dorman, Bart, said:

I should like to refer to the loss the company have sustained through the recent death of my very old friend, Mr C. Arthur Head, who was one of the original directors of the company. He always took a keen interest in its affairs, and his advice and assistance will be greatly missed. The directors, at their meeting this morning, passed a resolution of sympathy with Mrs Head and the family of their late colleague. I hope I may be allowed to associate the shareholders with that expression of sympathy.

I will call upon Mr G. B. Nancarrow to read the auditors' report.

In accordance with the provisions of the articles of association, I confirm the minutes of the thirty-fourth ordinary general meeting held on December 21, 1923.

I assume that, as usual, you will take the directors' report and balance-sheet, which you have before you, as read.

I will now ask you at once to refer to the directors' report. Later, I will deal in detail with those items in the balance-sheet which call for special comment.

HALF-A-MILLION PROFIT.

You will see that the profit earned in the year was £504,984. Debenture interest and redemption service absorb £208,500 and £27,872 respectively, dividend on the 6 per cent. cumulative preference shares takes £31,083, and £120,000 is required to pay interest on the 8 per cent. preferred ordinary shares. We have charged against the profit and loss account £7,044, being the balance of the expenses incurred in amalgamating the several subsidiary companies in 1923. These sums, together with directors' fees, make a total of £397,499, leaving a balance on the year's working of £107,484. Including £202,667 brought in from last year, the amount at our disposal is, therefore, £310,151.

Your directors view with great concern the fact that no dividend has been paid in recent years on the ordinary shares, but in view of the small balance remaining out of the year's working after meeting prior and preferential charges, they do not feel justified in reducing the amount brought in from last year in order to pay a dividend this year, and they have decided, therefore, to write off £100,000 on account of depreciation and to carry forward the balance, viz., £210,151.

While we would like to have been able to place a better result before you, I cannot help remarking that a profit of £505,000 is not unsatisfactory, taking into consideration the conditions under which we have been working. When I tell you that, even in this year of depression, with one of our works idle and the others only working intermittently, we produced 650,000 tons of finished steel from our own resources of raw material, except for a percentage of imported ore, and in addition 65,000 tons of bridge and constructional work, you will appreciate readily what would be the effect of a favourable turn in the market.

THE BALANCE-SHEET.

I will now deal with certain other items in the balance-sheet. Debts due by the company amount to £1,332,251, as against £1,513,599 last year. The reduction is largely due to the progress which has been made towards the settlement of questions of taxation and of claims by the company which were outstanding with the Government, whereby our liability has been reduced by approximately £280,000. We are satisfied, so are our auditors, that in the amount now standing in our books, ample provision has been made for any possible future claims.

The general reserve fund has been increased by £50,000, which was transferred from the profits of last year, and it now stands at £700,644. Below this you will notice a new item, viz., a reserve for deferred war repairs. After a prolonged negotiation with the Government, a settlement of the company's claim on account of the increased cost of repairs deferred owing to the war has been reached, and this settlement has enabled us to place to a special reserve account the sum of £311,986. This will be drawn upon as the repairs in question are carried out, so that in course of time it will disappear.

WORKS EXTENSION.

Capital expenditure shows an increase of £220,144 during the year, due principally to the erection of further coking plant at Acklam, extensions of our by-product plant, and to the provision of a new coal shipping plant at Clarence. After writing off for depreciation the sum of £100,000 out of this year's profits, capital expenditure will then stand at £9,582,170.

Turning now to our investments in other companies, the most important in many respects is our interest in Pearson and Dorman, Long, Limited. You will remember that we hold a half-share in this concern, the other half being held by the Whitehall Securities Corporation, Limited, representing Lord Cowdray. This company controls a large portion of the coal-bearing district of Kent, and if our hopes as to the value of the coal are realised, it promises to be a profitable undertaking.

In the construction of the colliery which has been commenced at Betteshanger, the policy of Messrs Pearson and Dorman, Long, Limited, has been to instal permanent surface plant and equipment as from the beginning, so that when coal is reached no time will be lost in its commercial development. This has meant heavy initial capital outlay, but we are in full agreement with the policy, which will render possible an earlier return in the way of profits than could have been attained if the preliminary stages of the work had been carried out with temporary plant and buildings.

Sinking, which commenced last May, has progressed satisfactorily, and one pit has already reached a depth of some 180 yards, having been carried successfully through the water-bearing chalk.

ANOTHER COLLIERY PURCHASED.

Messrs Pearson and Dorman, Long, Limited, have also acquired Snowdown Colliery, situated on the main Dover-Canterbury line. At the time of purchase this colliery was engaged in working an unprofitable seam, and was also suffering from having to make use of antiquated and, in many instances, temporary surface plant. It has now been closed down to enable the management to complete the sinking of one of the pits to a seam of better quality already reached by the other, and to install more modern plant.

Provision of the capital required in this undertaking is naturally a heavy drain on our resources, but we are very sanguine in our belief that the views held by Messrs Pearson and Dorman, Long's expert advisers as to the value of the coal will be borne out by results.

Since our last meeting we have acquired a controlling interest in the British Structural Steel Company, operating in Buenos Aires. As the result of a visit paid to the Argentine Republic this year by Mr Charles Dorman and Colonel Byrne, two of our directors who are on the board of the British Structural Steel Company, we have decided to support the policy of that company to extend its activities.

For a long time we have felt the need for a more direct representation in the Argentine, and with the holding we now possess in that company we have what is practically a branch of our own undertaking.

OVERSEAS TRADE.

Our interest in Wade and Dorman, whose works are in Durban and Johannesburg, remains the same as it was a year ago. During the year a visit was paid to South Africa by Mr Arthur Dorman, and he found the works and organisation generally in a satisfactory condition. Several new machines have been ordered to enable the output to be increased, and we look forward confidently to our future prospects in that country.

It will not be out of place here to mention that in recent years we have adopted the policy of sending representatives of our board to visit our various overseas connections. The result is to maintain a much closer touch between us, and the effect is immediately apparent.

You will remember that in 1921 we bought an interest in the business of Braithwaite and Co., Engineers, Limited, with the special object of securing the order for the material for the Bombay Pipe Line.

This material has all been despatched, and as we wish eventually to have a fuller control of whatever form our representation in India may take, we have now resold our interest in Braithwaite

THE OUTLOOK.

I would now like to say a few words about the position of the iron and steel trade of the country as I see it to-day. It is passing through a time of trouble which, if not actually critical, is more serious than anything I can remember. The causes are many, all contributing in a greater or less degree to the troubles which beset us, but in my opinion our greatest difficulty to-day lies in the disparity which exists between the prices which Continental makers are able to quote and those we are forced to maintain by the conditions obtaining in this country.

In the long run, I am satisfied that increasing stability in industrial conditions on the Continent will bring with it a steady rise in the cost of production, so that British and Continental prices will, sooner or later, come closer together.

Unfortunately, this may prove a long process, and until it is finished the iron and steel trade of this country may find it difficult to maintain its position in the markets of the world unless some change takes place in the conditions under which it is to-day working.

The obvious remedy is for us to reduce the cost of production, but I find it difficult to see how we are to bring it much below its present figure.

The price of British steel to-day is less than 40 per cent. above pre-war prices. Wages in some branches of the iron and steel trade have reached a low level compared with other sections of the community.

The profits which are being earned are barely sufficient to meet prior and preferential charges, and in some cases not even the latter. In fact, so far as we can ourselves control the matter, we are approaching, if we have not reached, our limit in regard to production costs, so that unless a reduction is effected in the cost of those items of our charges which we cannot influence, such as railway charges, taxation and local rates, and the general cost of living, which to-day is more than 70 per cent. above the pre-war level, I can see but little prospect of being able to offer more attractive prices in our home or overseas markets.

LIMITING OUTPUT.

I am convinced that any step, such as an amalgamation of interests with a view to limiting output, which must have the ultimate effect of raising prices at home, is not in itself going to help us.

In an unprotected home market, the immediate result would be to make the foreign market even more attractive to the British buyer than it is to-day, while a rise in our prices would have a disastrous effect on our power to meet competition in the overseas market.

With a protected home market we might eventually find ourselves able to "dump" our surplus production abroad at a low price, which would enable us to retain our export trade; but the fact remains that not very long ago the country declared itself as definitely opposed to any policy of the kind.

It seems to me, therefore, that except by reducing the cost of production, any remedy we can adopt to-day to meet this disparity, in prices must react unfavourable on our export trade, which is already in a sufficiently precarious position.

Before the war this country's exports of iron and steel were in the neighbourhood of 5,000,000 tons per annum. To-day the figure is at the rate of not more than 4,000,000 tons, and as Continental output increases, as it is doing, our exports are more likely to diminish than to increase.

THE REMEDY.

I will not dwell upon the importance of its export trade to this country; you all know it, and all I will say is that unless there is before long a radical reduction in the cost of living in this country, and in the price that the iron and steel trade has to pay for those services which it does not control, I am convinced that there will be a decline in the export of iron and steel, which will affect seriously the purchasing power of this country in foreign markets. If this is not to happen, it may become necessary to subsidise the export of iron and steel produced in Great Britain until such time as equilibrium is once more restored between British and Continental conditions of life.

This brings me to the end of my remarks, but before passing to the resolutions, which will be put to the meeting, I would like to say a few words to express my appreciation of the work of our staff during the year. From top to bottom they have worked with the utmost zeal in the service of the company, and I want to give them every credit for having given us their whole-hearted service under conditions which have not been altogether encouraging.

Sir Hugh Bell formally seconded, and the resolution was carried unanimously.

Votes of thanks to the chairman, the staff, and the managing director concluded the proceedings.

and Co. to their managing director (Mr Humphreys) and his friends. The sale price showed a satisfactory profit, but as the transaction was effected after the date of the balance-sheet, it does not come into this year's accounts.

Our interests in Horden Collieries, Limited, and the Bowesfield Steel Company, Limited, remain the same as last year, and they stand in our books at a figure which is considerably below their market value. Both these companies are paying us a steady return on our investment.

During the year we took advantage of a favourable opportunity to dispose of the £75,000 of our own 4 per cent. debenture stock, which formed part of our investments appearing in last year's balance-sheet.

NEED OF CAPITAL.

The last item on the balance-sheet to which I will make special reference is that of stocks in hand, which you will see amount to the high figure of £2,937,946. Of this total, £2,000,000 represents minerals, pig-iron and steel in various stages of manufacture all valued at below current prices. This is an amount much beyond our requirements, but it has been very difficult in these bad times to keep stocks within a reasonable limit.

Until recently our business has been conducted on the basis of short credits, but now that we have embarked upon long-term contracts, such as the Sydney Harbour and other bridges, to which I will shortly refer, it becomes necessary for us to reduce our stocks considerably in order to help us in finding the capital required to finance contracts of this nature in their earlier stages before we begin to receive payments.

During the year our iron and steel-making plants have been maintained in good order. We have taken no steps towards increasing their capacity, because we think that it is already sufficient for our purposes, and we have concentrated our efforts, first on building up our raw material resources, and secondly on extending wherever desirable those of our departments which help to absorb our steel output. In addition, we have strengthened our by-product plants, which become every day a more important feature of our undertaking.

A NEW DEPARTURE.

We have recently taken an important step in forming a new department with the object of undertaking bridge contracts as a whole. Hitherto our part in bridge-building has been confined as a rule to the steelwork of the superstructure, and while this has brought many valuable orders to our bridge yard, we did not consider we were in a position to do ourselves full justice unless we were able to undertake complete contracts, including the construction of the civil engineering portion of the work. The new department is established in London, where we have secured the services of Mr R. Freeman, M.I.C.E., and Mr G. G. Imbault as our consulting engineers.

I am glad to say that we have made a good start. We have already obtained the order for the Sydney Harbour bridge at a price of four and a-quarter million pounds, and within the last few days we have heard that our tender for the bridge over the Tyne, which it is proposed to erect at Newcastle, has been considered favourably by the Newcastle and Gateshead Corporations. We understand that it is now in the hands of their engineer, and we hope shortly to hear that it has met with their final approval. In each of these contracts we included in our tender what we considered a satisfactory margin of profit.

We have placed the Sydney contract in the hands of Mr L. Ennis, who until recently was our general manager, and whom we have now elected to a seat on the board. Mr Ennis is well qualified to supervise an undertaking of this importance and magnitude, as he has had several years of experience in bridge-building in America. He was also responsible for the design and construction of our steel works and rolling mills at Redcar.

WORKS IN AUSTRALIA.

We believe we are in an especially advantageous position to carry out this contract, as we are already established in Australia with works both at Melbourne and Sydney. The Sydney works will be supplemented by a special fabricating shop adjoining the site of the bridge, which will be provided with the finest equipment of heavy structural machinery that it is possible to obtain.

We are fortunate in our choice of consulting engineers. Mr Freeman is a partner in the firm of Sir Douglas Fox and Partners, and Mr Imbault is well known in engineering circles as having been responsible for the erection of several important bridges. Our architects are Sir John Burnet and Partners.

We are sparing no pains to secure the services for our construction staff of the best brains obtainable, and altogether I feel very confident that this contract will be completed to the satisfaction of the New South Wales Government and their chief engineer, Dr J. C. Bradfield.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

"EXTREMELY PROFITABLE YEAR."

DIVIDEND INCREASED TO 20 PER CENT., FREE OF TAX.
RECORD OUTPUT—LARGE INCREASE IN SALES.

The twelfth annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London, Mr W. F. Turner (chairman of the company) presiding.

The secretary (Mr Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—At the annual meeting which was held exactly a year ago to-day we were able to report to you that the new financial year had started well, and that, given anything like settled conditions throughout the Far East, it was anticipated that the year's trading would be an extremely profitable one. That forecast has proved to be correct, and we have the pleasure of submitting to you to-day a report and statement of accounts for the past year which I think you will regard as altogether satisfactory. We recommend the declaration of a balance dividend of 10 per cent., free of income-tax, making 20 per cent. for the year, free of tax, as compared with 16 per cent., free of tax, for the preceding year, and we carry forward an unusually large amount for reasons which I will explain later.

The report states that the gross profit of the Kailan Mining Administration for the past year amounted to \$10,830,007. This compares with a gross profit of \$9,205,492 for the preceding year. After providing for interest on the 6 per cent. Kailan bonds, \$56,880; redemption of bonds for the year, \$24,000; reserve for depreciation, \$1,624,501; the proportion of profit to which the Chihli Provincial Government is entitled, and other items, there is a net profit remaining of \$7,330,371, as compared with \$6,109,768 in the preceding year.

YEAR'S AVAILABLE PROFIT.

The proportion of this profit brought to credit of our profit and loss account, together with interest in China, is £494,622. Interest in Europe, exchange and minor items bring up the total credit to £521,635. Administration and expenses of all kinds in Europe, including a donation of £635 to Japanese earthquake relief funds, amount to £21,410, leaving a net profit for the year of £500,225. The corresponding figure last year was £397,467. The balance brought forward from the previous year's account was £9,937, and we have a credit of £100,958 for repayment of excess profits duty, of which you were informed at the general meeting last year. These sums make a total credit of £611,121. Income-tax absorbs £113,746, and corporation profits tax, which, happily, appears for the last time, is estimated at £14,345, so there remains a balance of £483,030 to be carried to the balance-sheet. An interim dividend of 10 per cent., free of tax, was paid on May 1st last, amounting to £140,000, which leaves available the sum of £343,030 shown in the balance-sheet.

THE DIVIDEND.

Out of this balance we propose that a further dividend of 10 per cent. be declared to-day, free of income-tax (making 20 per cent. for the year, free of tax), that is, £140,000. The directors' further remuneration under article 83 of the articles of association amounts to £16,624, so that there will remain a balance of £186,406 to be carried forward to the next account. This balance may be taken to consist of the £9,937 profit brought forward from the preceding year, the £100,958 in respect of excess profits, which is, of course, profit earned in earlier years, and £75,510, balance of the profit of the year 1923-24. It is equal to about 13 per cent. on the share capital. Under ordinary circumstances it would not have been necessary to carry forward anything like so large a sum, and the board would have proposed a larger dividend, which is fully justified by the financial position, but, having regard to the present position of our affairs in China, which is referred to later in the report, we have felt it our duty to restrict the dividend and maintain a condition of exceptional strength until we have returned to a settled state of things in China.

BALANCE-SHEET ITEMS.

The balance-sheet shows liabilities to creditors £120,593, which is about £30,000 more than in the preceding year, the difference being in respect of claims of the Inland Revenue. The reserve for corporation profits tax was estimated at £38,519, and the half-year's debenture interest credited to June 30th was £28,080, making a total of £187,192. On the other side there is a large increase in the cash, which stands at £696,779, being over £300,000 more than in the preceding balance-sheet. Bills receiv-

able were £20,262, against £8,339 last year. The debtors, £2,621, are about as usual, but I must point out that the debtor balance on current account with the Kailan Mining Administration, which was included last time under the head of debtors, has now been shown separately in the balance-sheet, the figure being £134,072. There is nothing else that needs mention. I think it will be agreed that the balance-sheet is all that can be desired.

INCREASED COAL SALES.

Now as regards the history of the year's working. The report states that the sales of coal amounted to 4,284,160 tons, an increase of 571,236 tons, which is about 15½ per cent. over the preceding year. These figures would have been larger if the means of transport had been adequate to the demands of the trade. I mentioned at the last meeting that the Kailan Mining Administration had bought 100 coal wagons in China and had sold them to the Peking-Mukden Railway under a hire purchase agreement. These wagons had been in use only during the last two months of the year 1922-23, but with their help and certain improvements in the handling of the railway traffic the large stocks which had accumulated at the mines had been worked off by September, 1923. In view of the great advantage thus obtained, a further contract has been entered into by the Kailan Mining Administration with the Peking-Mukden Railway for the sale to them on the hire purchase principle of 200 more wagons. These are being manufactured in Europe, and the first consignment of 50 wagons will be made from Antwerp before the end of the present month.

RECORD OUTPUT.

The output for the year was 4,464,000 tons, against 3,874,000 tons in the preceding year. It is just over 100,000 tons in excess of the previous record figure of the year 1920-21. Some difficulty is experienced in maintaining an adequate supply of labour throughout the year, labour being withdrawn at certain seasons for agricultural purposes, but everything possible is being done to make the service in the mines attractive, and to increase the permanent mining population. Development work has continued on a large scale, the consequence being that the coal in sight at June 30th last was estimated at 27,658,000 tons, against 26,505,000 tons at the close of the preceding year, which was itself a record figure. The general manager reports that "our mines were never previously better equipped and better developed than at the end of the year under review."

EFFECT OF HOSTILITIES IN CHINA.

You will see from these particulars that at the end of the financial year the business was in a highly flourishing condition. The sales were well maintained for the first two months—that is, July and August—of the current year. The report states that in the month of September we received advice that, owing to preparations for war in North China, the transport of coal from the mines had been stopped. Hostilities between the rival armies began towards the end of September, and continued through the greater part of October. Fortunately, no fighting, beyond a mere brush on one occasion during the retreat of the Southern Army, took place in the neighbourhood of our mines. The chief struggle occurred at Shanhaikwan, some distance beyond our port of Chinwangtao, and at the end of October we were advised by cable that, so far as our area was concerned, hostilities had ceased. A further telegram on November 6th stated that the situation was all clear, and that no damage had been done. The effect on our business of the railway being monopolised for the transport of troops and material is seen in the figures of coal despatched from the mines. For the first week of September it was 75,000 tons, and for the second week 50,000 tons, in the third and fourth weeks it fell to 10,000 and 12,000 tons respectively, while for the three weeks to November 29th the figures were 15,000, 20,000, and 20,000 respectively. The sales fell from 74,000 tons in the first week of September to 16,000 in the first week of November. There was an improvement to 26,000 tons and 25,000 tons in the third and fourth weeks respectively. The recovery from this state of things is simply a question of a return to normal facilities for the transport of our coal.

MINES WORKING TO FULL CAPACITY.

I am not going to make any pronouncement upon the general situation in China beyond this modest one, that to all appearance things are settling down, and the time of year is not favourable to the recurrence of hostilities. The latest private advices we have

are to the effect that the war for us is happily over, and no damage has been done, and that commercial traffic is likely to be resumed. It is obvious that this resumption must be gradual, and we must moderate our expectations accordingly, bearing in mind, at the same time, that it is to the interest of the Chinese Government and the whole community that the resumption should not be delayed. The mines are being worked to their full capacity. We shall have enormous stocks available to meet the heavy demands that will be made upon us, and the general manager tells us that the mines were never better equipped and ready for future operations. We may, therefore, I think, look with confidence for a return, at no distant date, of the prosperity which was interrupted a few months ago.

DIVIDEND RESOLUTION.

I move: "That the directors' report and accounts to June 30, 1924, be, and they are hereby received and adopted, and that a final dividend be declared of 10 per cent., free of income-tax, making 20 per cent. for the year, free of income-tax, payable on December 9, 1924."

The Right Hon. Lord Southborough, G.C.B., seconded the resolution, which, after the chairman had replied to a few questions, was carried unanimously.

On the motion of the Chairman, seconded by Mr Edmund Davis, the retiring directors (Mr Félicien Cattier, Mr Lambert Jadot, and Col. H. A. Micklem) were unanimously re-elected.

The Chairman next moved the confirmation of the appointment to the board of Major W. S. Nathan, C.M.G., remarking that he told the shareholders at the last meeting that Major Nathan was about to be elected. That had been done, and it now required confirmation on the part of the shareholders.

Col. H. A. Micklem, C.B., C.M.G., D.S.O., in seconding the motion, said he thought it would be a source of great satisfaction to all the shareholders to have on the board Major Nathan, who had been the general manager in China for many years, and did very good service for the company. They all knew that in a very large measure the present prosperity of the company was due to him.

The resolution was unanimously agreed to.

On the motion of Mr H. T. A. Fidge, seconded by Mr J. Dixon, the auditors (Messrs Annan, Dexter, and Co.) were reappointed, and the proceedings then terminated.

PARENT TYRE COMPANY, LIMITED.

PERIOD OF ACTIVE AND PROFITABLE TRADING.

The twenty-seventh ordinary general meeting of the Parent Tyre Company, Limited, was held, on the 11th instant, at the Hotel Cecil, Strand, London, Sir Arthur Du Cros, Bart. (the chairman), presiding.

The secretary (Mr E. Morrissey) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—The balance-sheet which we are considering to-day only carries our affairs up to April 30 last, and is, therefore, somewhat out of date. Substantial alterations in the figures have since taken place, the nature of which I will indicate. Generally, the period has been one of active and profitable trading, combined with some realisations and adjustments of our affairs. Our efforts have been mainly directed to three points: (1) The security and increase in value of our assets, and the resultant increase of our reserve account; (2) the diminution of our liabilities; and (3) the extension of our business and profits.

The recovery in the value of Dunlop shares has enabled us to

increase our reserve fund from £417,000 to £700,000, after deducting the proposed payment of a bonus of 4s per share on the deferred shares, to which I will refer later. Our liabilities have been reduced by, approximately, 50 per cent. of the figure appearing in the balance-sheet, and our profits, both in revenue and capital, are such that we are in a position to pay the dividend and bonus recommended in the resolutions before you to-day without encroaching upon the earnings, whether from investment or trading, of the seven and a half months which have already elapsed of the current financial year. These last-named earnings are available and will, I anticipate, provide a further substantial dividend on the deferred shares for the period to April 30th next, as well as permitting the payment of all fixed dividends on the preferred and ordinary shares to that date.

BOARD'S POLICY.

In a finance business, profits are naturally represented at times by unrealised assets and not by cash, and in computing the profit for any period, much depends upon the valuation placed on such assets. In this respect, it is the policy of the board to err, if anything, on the prudent side, and to value on such a basis that legitimate internal reserve may be created against depreciation or fluctuations in value which might possibly occur before security of this character are converted into cash. We have, in fact, already commenced to accumulate an internal reserve of this character.

The broad policy of the board is to maintain this company as of investment and holding company in such a way that the whole of its issued capital of approximately £2,350,000 will be permanently, and actually represented by investments in sound prior securities, the interest return from which will be sufficient to meet in full and fixed dividends upon our own preference and ordinary capital, to pay, in addition, a substantial dividend on the deferred shares. That is, in fact, the present position of the company. The final of business upon which we are engaged, and which we must undertake in the future under our authorised powers, is being, which will be, provided by utilising surplus assets—that is, assets which we hold in excess of the amount represented by our issued capital—and also by utilising the credits which are at our command as reason of the sound intrinsic position of the company.

Where new business is undertaken by the company involving fresh liabilities, new assets, in the judgment of the directors, of equivalent value are almost invariably acquired on the other side. The company is pursuing a cautious policy, and does not engage in business where this is not the case or where there is undue risk. In considering, therefore, the liabilities appearing on the balance sheet from time to time, this fact should be borne in mind, and in further fact that by a realisation of new securities the position regard to liabilities may materially alter for the better in a short space of time.

INTERESTS IN ALLIED COMPANIES.

As to the nature of our present investments the directors consider it would be inadvisable, in the interests of the shareholders, to publish an exact list of what they are, but our interests in allied companies are large, and are increasing, and they include, our investment, in the form of prior security, in Joint Industrial Limited. In connection with this investment and all our other investments in allied companies, I have to state that they are all in the nature of prior securities, and that the amount of the prior securities is fully represented in the balance-sheets of all the allied companies by tangible, realisable assets, with, in fact, a substantial margin over and above the amounts of our investments. I mention this fact particularly because this item of investments in allied companies is not always the strongest feature of a finance company's balance-sheet. Generally, we have ac-

The Anglo-South American Bank Ltd.

BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

plished a good deal in the direction of diversifying and readjusting our investments, and we did this with sufficient promptitude to benefit by the rise which has recently taken place in good securities.

As to the reserve account, it will be remembered that our holding of Dunlop "C" preference shares stood in our books at 15s 9d per share, the price to which they were written down in August, 1921. At the time that was done I stated to the shareholders that this company might be in a position one day to write back this investment to its original figure. As a matter of fact, we have since April 30, 1924, written the balance of this investment back from 15s 9d to approximately its original cost price to us, but no credit is taken in our profit and loss account in this respect, the amount being carried to the reserve account.

DIVIDENDS AND BONUS.

By having recourse to that part of the reserve account which has been built up in the past out of capital profits, we are enabled to pay a bonus of 4s per share on the deferred shares without having to deduct therefrom income-tax, nor will the shareholders, so we are advised by our auditors and solicitors, have to pay income-tax or super-tax in respect of such bonus.

The proposed distribution of dividends and bonus at the present moment, I am glad to say, can be made without any strain upon the cash resources of the company.

In connection with these matters, I wish to reiterate two points which have been previously mentioned:—(1) that the profits earned by the company are sufficient to pay the dividends and bonus now recommended without resorting to the reserve fund; and (2) that the directors have the power, should they desire to exercise it, of making a bonus distribution to the deferred shareholders at any time from the reserve account, although there is no present intention of exercising that power. The reserve account will be left as follows:—We start with the figure of £417,000 at April 30 last, and to that we add £425,000, the increase in value written back in respect of our investment for the time being in the Dunlop "C" preference shares, making the total amount of the reserve £842,000. From this total there is deducted the amount of the bonus recommended to be paid on the deferred shares, amounting to £144,131, leaving the reserve account at the net figure of, approximately, £700,000, which I mentioned previously, or almost the total of the deferred share capital.

The report and accounts were approved, and extraordinary resolutions altering the title of the company to that of "The Parent Trust and Finance Company, Limited," and sanctioning the various alterations to the articles of association were passed unanimously.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

HIGHLY SATISFACTORY RESULTS.

The twenty-seventh ordinary general meeting of shareholders was held in Johannesburg, on November 6, 1924, Sir Evelyn Wallers, K.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said:

The annual reports and accounts contain full details of the highly satisfactory results of operations during the period under review. The net profit amounted to £1,855,634 11s 11d, which is a record for your company. This sum, together with the balance of £216,381 14s 2d unappropriated at the beginning of the year, makes a total of £2,072,016 6s 1d to the credit of appropriation account. The allocation of this amount is detailed in the directors' report, the chief items being two dividends of 50 per cent. each declared during the year, and absorbing £1,400,000, Government and Provincial taxes amounting to no less than £252,654 7s 6d, and the net expenditure of £95,441 15s 10d on capital account at the mine, principally in connection with the sinking and equipment of No. 2 circular shaft, the provision of additional housing accommodation for our employees, and the erection of a new recreation hall, which has added considerably to the amenities of life on the property. The balance unappropriated at the end of the financial year totalled £313,813 4s 2d, and is represented by cash and cash assets, after allowing for liabilities.

During the year 1,384,000 tons of ore were milled, a gratifying figure, which eclipses the record established the year before. The effect of a fractional decrease in the recovery of gold per ton milled was countered by the increased tonnage milled, with the result that the gold output was the largest for any year in your company's history. Working costs increased by 5d per ton milled, as compared with the previous year, partly owing to the record development footage accomplished; but this was more than offset by the rise of 5s 1d per fine ounce in the average price realised for gold, as a result of which the working profit reached the record figure of £1,825,890.

When addressing you twelve months ago, I pointed out that the satisfactory results of operations during the year ended June 30, 1923, were largely due to the noteworthy improvements effected in our mining and metallurgical methods, as the outcome of prolonged research by our technical advisers. This same factor is mainly responsible for the even better results achieved during the past year. Additional improvements have been effected in drilling methods, in the heat treatment of drill steel, in the supply and control of compressed air and in the economical use of explosives, which have induced a further increase in underground efficiency. The introduction of jackhammer machines for stoping purposes has been attended with considerable success, and has led to a remarkable improvement in rock breaking efficiency.

On the metallurgical side, the results achieved during the year under review were entirely satisfactory. The substitution of corundum blankets for amalgamation plates has led to a substantial increase in the recovery of osmiridium concentrates, the sale of the year's output of such concentrates adding £26,744 to our revenue.

DEVELOPMENT OPERATIONS.

Development operations were vigorously prosecuted during the year, the footage accomplished being increased to the record figure of 28,018 feet, quite apart from the work done in sinking No. 2 circular shaft, with which I will deal later. The results obtained were satisfactory.

The payable ore developed during the year amounted to 1,762,200 tons of an average value of 9.6 dwts per ton, with the result that the ore reserve recalculated at June 30th last totalled 9,064,400 tons of an average value of 8.5 dwts per ton, over an estimated stoping width of 65.4 inches. This reserve includes 701,600 tons of ore, valued at 6.3 dwts per ton, contained in shaft and safety pillars, and at present unavailable. I need not emphasise the fact that the position disclosed by the foregoing figures is an eminently sound one.

By comparison with the position twelve months earlier, the tonnage in reserve has been more than maintained, but the average value has decreased by .3 dwt per ton, chiefly due to the more conservative basis adopted for the recalculation.

Excellent progress has been made with the sinking of the new No. 2 circular shaft, which has been equipped with its permanent headgear, and reached a depth of 1,963 feet at the end of October. It is expected to complete the sinking of the shaft to its final depth of about 2,800 feet by about March of next year. A connection will be made with the reef workings as soon as possible, and the additional ventilation facilities thus provided will assist the rapid development of the western area of the mine.

As regards operations during the current financial year, the average monthly profit for the three months July to September was £150,196, with working costs averaging 17s 5d per ton milled. The monthly development footage was increased to about 3,100 feet, and has exposed very satisfactory values.

The three winzes which are being sunk from the 15th level, on the east of No. 1 circular shaft, encountered good values during the quarter. The winze on the west of No. 1 circular shaft has passed out of the unpayable zone exposed on the 15th level, and is now in payable reef. The two winzes further west have been unpayable on the footwall leader, but those from the 14th level, still further west, are exposing high-grade reef.

As I have already mentioned, development from the Modder Deep mine has been quite up to expectations, and the values recently obtained in the rise from the 18th level to No. 2 circular shaft confirm this; for 295 feet sampled the average value was 23.8 dwts over 22 inches, or 523 inch-dwts.

UPPER LEADER ON 15TH LEVEL.

On the 15th level, to the west of No. 1 circular shaft, the leaders, which are mined together in the eastern portion of the mine, are separated by a considerable thickness of quartzite. The upper reef is usually a very narrow one, though it often carries high values, and has in the past been auxiliary to the footwall reef, the principal gold-bearing body; as such, it has been extensively mined in the western half of your property. Owing to the parting between the two reefs, the primary development does not expose the upper leader, and information as to its position and value can only be obtained by secondary development. For this reason, the upper leader values are usually not available for inclusion in the published quarterly reports on development, though, of course, they are taken into account when calculating the reserve at the year end.

On the 14th and 15th levels, the upper leader has assumed greater importance, for it has been found to be payable over considerable stretches in which the footwall reef has proved unpayable. Since the end of the financial year this reef has been exposed in the 15th West Drive, and the winzes and rises adjacent thereto, and has been found to carry very satisfactory values. It is probable, therefore, that the area above the 15th level West, which was not included in the payable reserve at the end of the financial year, will be brought in when the reserve is recalculated next year.

With the holding of the rise from the Modder Deep to the upper workings, it will be possible to start secondary development on the upper leader on the 18th level; a trial exposure on this level has averaged over 1,000 inch-dwts for 35 feet sampled.

Work has also been started to reopen what is known as the South Reef. Medium-grade ore was mined from this reef, and a considerable tonnage is still standing intact, which should give a good margin of profit under present conditions.

You will perceive, from the annual reports before you, and also from my remarks this morning, that the period under review has been one of steady progress in all directions, that the position at the mine remains an exceptionally strong one, and that its future prospects are highly encouraging.

The resolution was carried unanimously.

VAN RYN GOLD MINES ESTATE, LIMITED.

OPENING UP NEW REEFS.

The twenty-ninth ordinary general meeting of the Van Ryn Gold Mines, Estate, Limited, was held, on the 10th instant, at Winchester House, London.

Mr L. B. Burns (the chairman) said that since the meeting a year ago the company had made considerable progress. Improved and improving monthly returns, with accompanying reductions in working costs, the increased dividend they were able to declare at the end of the financial year in June last, satisfactory developments in newly-exploited areas in various sections of the mine, and the recent acquisition of a considerable number of mining claims adjoining their property—these were all significant indications of the improved position in which the company stood to-day. The balance of £44,600 carried forward to the current year's account was substantially the same as last year's figure, in spite of the fact that they had paid out in dividends £87,500, free of tax, as compared with £75,000 for 1922-23. In addition, £9,950 had been written off permanent works, &c. The figures of the accounts showed clearly the strong financial position of the company, and he would point out that the 1,400,000 tons of fully-developed ore—a big asset—stood in the balance-sheet at nil, the cost having been met out of working expenses.

The new ground comprised a block of 133 claims acquired from the liquidators of the Modder West Gold Mining Company, and a further 18 claims pegged out on the same line of reef, making 151 new claims adjoining the company's present mining area on the north.

The Government mining engineer of the Union of South Africa, in his last annual report, referred to the work done by this company, stating that "the Van Ryn Estate continues to renew its life by opening up neglected leaders on the main reef series." This process had so far been accomplished without affecting the profits; in fact, since 1918 the dividends had practically been doubled. This had been due largely to the very material drop in working costs since the 1922 strike, but, of course, a great deal of credit was due to the local management and the technical staff for the efforts they had made, and were continuing to make, to improve the lay-out of the work on the mine. This work had been found to be justified by the longer life now assured owing to the satisfactory results which had attended the opening up of new reefs. The measures taken comprised extensive sandfilling, improvements in and alterations to the reduction works, and the complete electrification of the power plant.

The directors had decided to pay an interim dividend for the six months ended December 31st of 10 per cent. (2s a share), free of tax, which worked out gross at 2s 3.0d.

The report and accounts were unanimously adopted.

Since purchased (cost price) ..	10,189,894
	40,238,974

SIDNEY TURNER, Accountant-General.

India Office, December 11, 1924.

Messrs Samuel Montagu and Co. write on December 10th as follows:—

GOLD.

Only a very small amount of gold came on offer this week, and was absorbed by Indian and trade demand. Gold valued at \$3,000,000 has arrived in New York from France, and a shipment of \$2,000,000 from New York to Germany is also reported.

SILVER.

The market has been rather quiet during the week. Some moderate buying orders have come from India, and a certain amount of bear covering has taken place on account of China. The pronounced appreciation of the currency pound has not materially affected the tone of the silver market, which has been characterised by only small supplies. The Continent has been a seller, and intermittent sales have been made by America. The immediate future of prices is uncertain. Unless India continues to give support, it is possible that the improvement in the exchange with the United States will make itself more felt.

INDIAN CURRENCY RETURNS.

MISCELLANEOUS.

BRITISH BURMAH PETROLEUM.—The report for the year ended July 31, 1924, shows that the balance transferred from revenue account is £195,080, as compared with £224,253. The disposable profit is £74,069, against £148,359. No dividend is paid on the ordinary shares, against 7½d per share for previous two years. The sum of £67,000 has been transferred to sinking funds accounts, and £5,000 to reserve and contingent reserve account. The total assets are given as £2,365,395, against £2,480,425. Stocks of stores stand at £308,593, and stocks of products at £142,164. Sundry debtors are at £163,465. Investments are given in the balance-sheet at £139,933, all in Government securities at cost. Cash stands at £65,310, against £163,023 in previous balance-sheet.

BRITISH COLUMBIA ELECTRIC RAILWAY.—The net revenue from all sources for year ended June 30, 1924, is £424,262, against £416,472 in preceding year. The number of passengers carried was 68,252,632, against 67,692,851. The amount of freight hauled was 351,308 tons, against 377,822 tons. The decrease is stated in the report to be mainly due to the less active condition of the lumber business throughout the year. The total electric power delivered during the year was 216,146,016 K.W.H.; as compared with 192,453,979. The dividend on the deferred ordinary stock is £6 9s 8d per cent., free of income-tax. The sum of £60,470 is carried forward.

BRITISH INDIA STEAM NAVIGATION COMPANY, LIMITED.—The balance-sheet and profit and loss account for the year which ended September 30, 1924, show balance available for distribution, after providing for depreciation, of £138,609, which the directors recommend should be distributed as follows:—Dividend of 5 per cent. on preference stock, £35,000; dividend of 8 per cent. (free of income-tax) on ordinary shares, £76,576; leaving a balance to be carried forward of £27,033. There has been only a very slight improvement in trade on the coast of India during the year. The company's mail services have been performed with regularity. Five steamers are now under construction for the company, viz., three cargo steamers of 8,000 tons each and two cargo-passenger steamers of 8,500 tons each. The company's vessels have happily run free from serious accident throughout the year. The directors record with regret the retirement of the secretary, Mr P. W. Armour, owing to indifferent health, after over fifty years of loyal and devoted service, during nearly forty years of which he was secretary to the company. The balance-sheet will be found fully analysed in another column. The total assets are shown in one item at £14,703,839.

CHINESE ENGINEERING AND MINING.—The amount brought to the credit of the company's profit and loss account at June 30, 1924, including interest in China, less certain small expenses, is £494,622. Interest, exchange, and other items bring up the total credit to £521,635. After deducting administration and other expenses in Europe, £21,409, there remains a net profit of £500,225. Adding the amount brought forward from the last account, £9,937, and the amount recovered in respect of excess profits duty less expenses, £100,958, there is a total credit of £611,121. Income-tax and corporation profits tax amount to £128,091, and the available balance of the year is £483,030. An interim dividend of 10 per cent. (£140,000), free of income-tax, was paid on May 1, 1924. The board propose that a further dividend of 10 per cent. be declared, free of income-tax (making a total of 20 per cent. free of income-tax, for the year), payable on December 9, 1924. The further remuneration to which the directors are entitled under Article 83 of the articles of association is £16,624, leaving a balance to be carried forward of £186,406, including the whole of the credit in respect of excess profits duty, which will be dealt with at a future date, when the position of the company's interests in China has become normal. The sales of coal by the Kailan Mining Administration for the year amounted to 4,284,160 tons, an increase of 571,236 tons compared with the preceding year.

JOHN I. THORNYCROFT AND CO.—The report for the year ending July 31, 1924, shows that the available balance of profit after deduction of debenture interest and interim dividend as shown by the accounts is £55,323, which the directors recommend shall be dealt with as follows:—To the payment of a final dividend of 3 per cent. on the preference shares, making, with the interim dividend already paid, 6 per cent. for the year, £5,940, leaving a balance to be carried forward of £49,383. The report states that, in common with the other shipbuilding districts of the country, the output of the shipbuilding and the marine engineering side of their business has been adversely affected by the depressed conditions of the industry generally and by labour disputes during the year covered by the accounts. In the latter respect the outlook appears brighter. A contract has been secured for one of the two torpedo-boat destroyers recently placed by the British Government, being the first vessels of this type ordered since the conclusion of the war. The motor-boat business has been satisfactory, and they have recently secured orders for coastal motor torpedo boats from the Swedish Government. The commercial vehicle sales have increased by 40 per cent., and the new War Office subsidy type of 30-cwt. vehicle put on the market by them in October is showing very encouraging results, both as regards performance and sales, so that a further increase in sales is anticipated during the current year. The buildings, plant, and machinery have been well maintained, and further capital expenditure incurred at Basingstoke in order to reduce the costs of manufacture. Ample depreciation has been provided for in the accounts.

PEKIN SYNDICATE, LIMITED.—The report for the year ended June 30, 1924, amounted to £156,281—viz., interest on loans, deposit and current accounts, dividend on shares, commission and transfer fees, £42,282; and profit on collieries, £113,999. The expenditure during the same period on salaries and expenses of administration in London was £12,500, in Paris £1,530, and in China £12,564, making a total of £26,603. After transferring the amounts of £6,000 and £7,511 to reserve against shares in other

companies and debtors respectively, there is left a credit balance of £116,167, which is carried to profit and loss account in the balance-sheet. To that amount has been added the credit balance of £18,316 16s 2d, being difference in exchange in respect of adjustment of floating assets and liabilities in China, thus bringing it up to £134,483. From this amount the sum of £25,000 has been transferred to reserve account for redemption of capital expenditure on the collieries, the balance of £109,484 being added to the credit balance of £78,402 on profit and loss account at June 30, 1923, making a total of £187,885 7s 4d to the credit of profit and loss account, which amount the directors propose should be carried forward to the next account.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 11th, is as follows:—Pig-iron: Home consumers of pig-iron have covered their immediate requirements, and are now out of the market for any further quantities up to the end of this year. At the same time the export business has fallen off. Sellers are rather easier in their quotations, and No. 3 Cleveland G.M.B. can now be obtained at 8s 6d per ton, and East Coast mixed numbers hematite at 88s. Manufactured iron and steel: The situation remains unchanged, but there are indications that some improvement may be expected after the turn of the year. Meantime prices remain unaltered as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: Consumers have good stocks

at their works, and with deliveries coming forward under old contracts are not prepared to make further purchases at the present time. Therefore, sellers maintain their quotations on the basis of best Bilbao Rubio at 22s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—A spell of stagnation, due in the main to the approaching end of the year, has come over the pig-iron and raw steel branches, and no business of weight is passing, while specifications have dropped off to such an extent that a considerable proportion of the output is being put into stock. In consequence of this ruinous condition some of the large works will be closed down for a fortnight, and in a few cases three weeks for the Christmas holidays. The outlook for crude steel is far from good, owing to the excessive productive capacity of the trade and

the prospect of continued underselling by countries having depleted exchanges. More than one responsible leader of industry has declared that nothing can keep the steel trade on its legs except a State subsidy to be given until the economic position on the Continent is modified. Prices are steady, but rather weaker in crude materials. Wrought iron is not sharing in the upward movement noticeable in other directions, and the works have been doing badly for at least three years. The railway wagon builders have very little work on hand from private owners. Except in the cheapest classes of goods the electro-plate and cutlery trades are quiet, and not much new business is likely to be booked until February when buying is usually resumed. The fuel market continues stagnant except for a rather better inquiry at home for steam season demand for house coal has been the poorest for many years. A comparatively small proportion of the public has got in stocks for the winter. Prices are largely nominal, and bargains can be for the winter. Quotations at pits are:—screened branch, 32s; Yorkshire hard, 20s; Blyth ditto, 18s; Durhams, 22s; rough slacks, 9s to 11s; smalls, 4s to 5s.

Our Glasgow correspondent writes:—The improved position of the pig-iron market is being maintained. Prices are firm, and in some instances advances have been obtained. Shipments from the Clyde for the week ending December 6th totalled 2,345 tons, of which 2,245 tons were on overseas account. Figures for the corresponding week of last year were 824 and 682 tons respectively. In the steel trade a better tone exists than is customary at this season. Orders are fairly plentiful, though not for great tonnages. Specifications for plates and sections have been received from several foreign Governments for new and repair naval use, but

for another year. The majority of manufacturers are in favour of its continuance, but merchants are agitating for a higher commission than 1 per cent., and the fact that over 50 per cent. of the output is under the control of one centralised agency is a difficulty in the way of agreement aiming at the satisfaction of the claims of the merchants.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

Though business is now quiet in the Cumberland and North Lancashire hematite pig-iron trade, the volume at command in the past few weeks was sufficiently large to enable makers to deplete their somewhat heavy stocks, and to dispose of their increased production. The number of furnaces in blast between Workington and Carnforth rose from eleven to a total of thirteen, and in the course of a few days a second furnace will be lighted at Millom, and the blowing in of an additional furnace at Cleator Moor before the end of the year is not improbable. Makers are not sold as far ahead as circumstances would have permitted, and clearly they are anticipating a further improvement in the early spring, when they can obtain prices that will leave them a reasonable margin of profit. Activity in the steel trade is nothing more than occasional, orders of railway material being as difficult as ever to come by, and it is doubtful whether there will be any operations of an important character during the next five or six months. Native hematite iron ore output is rising, Scotch and East Coast smelters' needs have increased, as well as those of the local furnaces. Superior sorts of low-phosphoric ore are 21s 6d to 23s 6d, and ordinary kinds 16s 6d to 17s 6d per ton. The coal trade is very dull, Irish business being conspicuous by its absence, on account of Scotch and Lancashire competition, and most of the 8,000 tons being shipped across Channel every week is either going into stock in the Dublin yards, or represents deliveries on old gas contracts in Belfast. Best round at 24s f.o.b. is from 4s to 5s higher than competitors' figure. Coke is a fuller make for the local smelters on ordinary iron at 22s to 23s 6d according to carbon content.

METALS.

The market for tin opened with a quieter tone, and prices generally ruled in buyers' favour, in sympathy with lower Eastern cables, combined with a slow consumptive demand. Values, however, were slightly irregular, especially with regard to forward positions, though closing firm. Standard cash sold £256, £255 17s 6d, £256 5s, and £259 5s, with three months' fluctuating between £260-£258 17s 6d and £262. In the East sales were reported at £262 15s, £260 15s, and £261 15s. Copper was a generally firm market, and a fair business resulted in standard cash at £63 15s-£65 16s 3d, and £64 18s 9d, while three months' was dealt in at £65-£64 16s 3d, and £66. Lead active and dearer. Good soft foreign pig quoted £41 15s to £39 5s as to position; English, £43. Spelter also dearer at £36 7s 6d ton, and a fair business was recorded. Antimony, firm. English refined quoted £70; foreign ditto, £60 to £60 10s. Aluminium, steady. Home trade quoted £125; export, £130. Quicksilver, firmer. Spot, £12 5s to £12 10s per bottle.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Cables from the overseas markets this week indicate that the demand for wool is still general, but prices seem to have eased somewhat from the recent high point. This is most noticeable in regard to the sales at Auckland and Napier, and it now seems improbable that the exceedingly high level established at the opening of the season in New Zealand will be maintained. The fact remains, however, that both in the primary markets and in London wool is selling at very high prices, and it is impossible to sell semi and fully-manufactured goods at anything like replacement costs. There has been a slackening off in demand in this centre during the week, but there is no appreciable change in quotations for tops and yarns. It is possible to buy merino tops at a shade below the market level, and warp 64s may be quoted at 80d to 81d. In crossbreds there is no quotable change, prices being steady at late rates, though the actual volume of business is smaller than it was two or three weeks ago. It seems probable that the trade generally will experience a rather quiet time until after the turn of the year. Yarns do not make much progress, recent advances in wool and tops having made it extremely difficult for spinners to do business on a remunerative basis.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Coleman street Wool Exchange has finally closed its doors on the Colonial wool trade for the current year, and the record for 1924 has been one succession of rises. True the May and July series were nothing great, withdrawals being heavy, but owners seemed to sense the future, and the withdrawals afterwards made sensible advances, all through the year the biggest members of the trade asserting that they were "backing wool." Those who have done this have had a very profitable time, and in the aggregate those engaged in handling the raw material have proved 1924 to be a very encouraging time indeed. All through the year wool has wonderfully improved in value, so much so that at the recent auctions Australian new clips catalogued at the corresponding

series in 1923 have made anything from 6d to 10d per lb more in the grease. In other words, growers are receiving this season an all-round average of £10 per bale more than a year ago, and when clips run from 500 to 1,000 bales, it means an important addition to the revenue. Such important pastoral companies as the N.Z. and A. Land Company, the Australian Pastoral Company, and the Peel River Land and Mineral Company will all materially gain by the sensible enhancement in the price of wool. We are certain they are doing the right thing to meet the market, and turn their new clips into hard cash.

The closing week of the auctions has hardly seen the same high prices realised for even combing wools that took place during the first half of the series. This is seen in some of the rather wasty, fine-haired Queenslands being rather heavily withdrawn. One has missed in this series the keen onslaught of French buyers; in fact, competition from that quarter has been a little disappointing. Good straight combing merinos have mostly appreciated 5 per cent., but there has been no advance in medium and faulty merinos, which during the past week have lost a little ground. Still, the standard of prices ruling for all merino wools has been good, and if extreme rates have not always been forthcoming, the series certainly closed with the market sound and intact.

THE COTTON TRADE.

MANCHESTER, December 11.

Although inquiry in the market has been fairly extensive, actual trade has not been important. A feature of interest has been the advance in Egyptian cotton, and yarn and cloth made from that material have been dearer. In piece goods for India the demand remains disappointing, and buyers seem more determined than ever to resist current rates, the opinion being held that more favourable opportunities of purchasing will exist in the near future. Further orders have been placed for China, chiefly in white shirtings, and producers are now more deeply sold. Bleaching cloths and fine goods have moved off fairly well for Java and Singapore. Occasional lines of fair weight have been put through for Egypt, and a steady demand has been met with for South America and the Continent in finishing styles. Manufacturers all round are maintaining their better position. American yarns for home use have not been bought freely, but here and there fair contracts have been arranged. The larger production is being absorbed. Quotations in Egyptian yarns have been put up, and although some trade has been done, the dearer prices to a considerable extent have checked buying.

Naturals, in bags, quoted 34s to 39s; layers, large boxes, 55s to 65s; ditto small, 75s to 80s. Dates in fair request, and market steady. Halloweet quoted 20s; Khadowie, 19s; and Siar, 14s 9d to 15s. Landed terms, London. Evaporated fruits firmly held. Californian apricots, standards, old crop, 78s to 80s; choice 90s; new, extra choice, 110s to 125s; fancy, 125s. Peaches, old, choice, 48s; new extra, ditto, 57s; fancy, 65s. Plums: Oregon size, 30/40, quoted, 66s; 40/50, at 54s; Californian, 70/80, 44s per cwt.

CANNED GOODS.—General course of trade proved quiet during the week, but price changes were not of much importance. Sardines—Portuguese, quarter flats, quoted 4s to 4s 3d; Clubs, 4s 6d to 5s; 12 oz, 6s to 7s 6d; 18 oz, 11s to 12s 6d per dozen tins. Salmon—1 lb flat reds, labelled, 55s to 58s; ditto, tall, 47s 6d to 48s 6d; 1 lb tall, Pink, 25s to 27s; cases of 96, 1/2 lbs, 29s to 30s case. Canned Fruits—There is only a small movement and supplies adequate to requirements. Singapore Pines, 48-1 1/2s, 55 6d to 58 9d; cubes, 2 1/2s, 9s 6d to 10s; slices, 48-1 1/2s, 5s to 5s 3d. Californian apricots, 2 1/2s, 8s to 10s 6d; ditto, 1 1/2s, 5s 3d to 5s 6d. Pears, 2 1/2s, 14s 6d to 16s 6d. Peaches, 2 1/2s, 10s to 11s 6d; ditto, 1 1/2s, 6s 3d. Fruit Salad, 1 1/2s, 10s 6d; 2 1/2s, 20s. Loganberries, 10s to 11s 6d per dozen tins. Meats—Danish Lunch Tongues in good demand for sixes. Corned Beef steady though trade is on the quiet side. There is not much continental demand at present. Condensed milk meets with quiet support and machine-skimmed offers at attractive prices for the period of the year. Full cream commands steady rates.

MISCELLANEOUS.—Coconuts quoted 25s per 100. Coir yarn: Ceylon, £23 to £39; Cochinchina, £21 to £48. Ceylon bristle, £21 to £28 10s; cinnamon leaf oil, 5d; Citronella: Ceylon, 3s 1d; Java, 6s.

OILSEEDS.—Linseed firmer, with a good demand for Plate descriptions. Calcutta, afloat, £23 5s; December-January, £23 7s 6d; April-May, £23 5s. Plate, afloat, £21 15s; November-December, £21 15s; January-February, £21 15s, £22 3s 9d, and £21 15s. Rapeseed quiet. Toria, new, December-January, sold, £20 17s 6d; and real bold Ferozepore, November-December, £21. Cottonseed and real bold Egyptian, black, December-January, £13 3s. Sakellariadis, steady. Egyptian, black, December-January, £10 12s 6d. December-January, £12 10s. Bombay, December-January, £10 12s 6d. December-January, £12 10s. Chinese, December-January, £27 15s. paid. Gingly seed easier. Chinese, December-January, £23 10s; Groundnuts lower. Coromandel machine-dried, December-January, £24 15s; Chinese decorticated, f.a.q., December-January, £23 10s; East African, November-December, £27. Soya beans steady. Manchurian, November-December, sold, £12 17s 6d; December-January, £12 12s 6d. Castor seed lower. Bombay, December-January, £25 per ton.

OLFS.—Linseed firmer. Spot, net, naked, 46s 6d; December, 45s 6d; January-April, 45s 9d; May-August, 46s. Rape quiet. Crude, spot, 52s; refined, 55s. Castor-oil easier. First

pressure, spot, quoted 71s; second pressure, 69s; and pharmaceutical, 76s per cwt. Hull, with London, 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 46s 6d; Bombay, 44s 6d; common edible, 51s; deodorised, 53s. Chinawood quiet. Hankow, spot (barrels), 80s 6d; December-January, 78s 6d. Cocoa-nut firm. Ceylon, spot, 48s 6d; December-January, 48s; Cochinchina, ditto, nominally 62s 6d. Soya dull. Oriental, barrels, November-December, 45s 9d; bulk, 41s 6d. Cod steady. English, spot, 36s to 37s. Groundnuts, quiet. English, crushed, naked, spot, 56s; deodorised, barrels, 66s. Turpentine irregular. American, spot, 58s; January-April, 59s. Rosin firm. American, grade B, 16s 6d; G, 17s; WG, 19s 6d; WW, 21s 6d per cwt. French WW, 20s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on December 10th as follows: The tallow market was steadier during the week, and prices were about 6d dearer to-day. There has been a little improvement in the demand for immediate requirements, and the reduced prices for shipment from Australia have attracted a few buyers. South America is too dear. At auction to-day 914 casks tallow were offered, and 781 were sold. Quotations are:—Australian mutton: Fine, 53s 9d; good to fair, 53s to 50s; dull to dark, 46s 6d to 44s; hard, 53s 9d. Australian beef: Fine, 53s 3d; good to fair, 51s to 49s; dull to dark, 45s 6d to 44s; sweet, 53s 6d. Present shipment from Australasia: Good mixed, 48s. Present shipment from South America, 48s 9d to 48s. The market letter is unchanged. Town tallow, 45s 6d per cwt. Rough fat per 8 lbs, 6d; melted stuff, 35s per cwt. Quotations are:—Town, 45s, net cash, naked, ex works. Country: Fair casks, 45s; home melted, shipping casks, net, f.o.b., good coloured, 49s; fair to dull, 46s to 45s. Bone fat: white, none; pale, none; benzine, 40s 6d; melted stuff, 40s, f.o.b.

THE MONEY MARKET.

MONEY has been much less plentiful, and on Tuesday a
little business in discounting January bills for the market
was done by the Bank of England. Discount rates re-
mained firm, in anticipation of considerable pressure
between now and the end of the year, and three months'

bank bills were not easy to place at $3\frac{3}{4}$ per cent., yesterday's Treasury bills being taken well above this rate.

	Dec. 19, 1924.	Dec. 12, 1924.	Dec. 5, 1924.	Nov. 28, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills	3 $\frac{3}{4}$	3 $\frac{3}{4}$	3 $\frac{3}{4}$	3 $\frac{3}{4}$	..

The Bank return showed increases of £8,000 in the stock of gold and £1,059,000 in the circulation, with a consequent decrease of £1,051,000 in the Reserve. Repayments of Ways and Means Advances reduced the Government securities by 15 millions, but the Public deposits were, nevertheless, half-a-million higher. There was also a small decrease in the Other securities, and all these movements were at the expense of the Other deposits, which declined by 17 millions. The customary demands of the Christmas season produced an expansion of £5,763,900 in the Currency Note circulation, the amount outstanding being £296,642,400, including £1,357,700 for notes called in but not yet cancelled. The fiduciary issue is £244,834,700, or £3,356,200 below the maximum.

THE STOCK MARKETS.

With the approach of Christmas, markets have inclined to dullness. Thursday was the last Stock Exchange settlement of the year, and a certain amount of liquidation has taken place for "window-dressing" purposes. Gilt-edged stocks have been quiet, with a slight tendency to recede. In the foreign market the feature has been the opening of dealings in the scrip of the new Greek loan, which rose at one time to $7\frac{3}{4}$ premium; French bonds have been dull, but Germans maintain their strength. In the home railway market the wages demands have checked activity, but Undergrounds have been strong. The rubber share market is quiet, but tea shares continue active, on the good dividend declarations which are appearing, while oils are generally heavy. Industrials, on the whole, have been irregular, and Kaffirs have hardly responded at all to this week's dividend declarations.

THE COMMODITY MARKETS.

The proximity of the Christmas holidays has caused considerable irregularities in markets in many cases. The price of wheat ruled steady, there being substantial inquiry for Great Britain and the Continent generally. The depression in the sugar market referred to last week has been more noticeable. Good tea was steady, but common and medium varieties were irregular in price. Dried fruit was quiet, with movements towards weakness here and there. Coal was in demand at Cardiff, and prices displayed an upward trend. Tin and copper were accorded good support. Our Bradford correspondent speaks of "an easier tendency in wool prices in practically all the primary markets." Better business is reported from Manchester in the cotton trade. The hide market is weak. Linseed is firm, but irregular. Rubber maintained its position. Other particulars of markets will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market business has again been dull, the main interest being the recovery in sterling during the last two days, and the strenuous efforts that are being made to support the French franc. After falling away at the close of the 12th to a price of \$4.69 sterling was fairly steady at just over that figure until Thursday, when it moved up again to \$4.70 $\frac{1}{2}$, and was quoted yesterday morning at \$4.70 $\frac{1}{2}$. No new factors have intervened, and the main support for the rate continues to come from New York. On the American side sterling is still talked higher, and it will be of much interest to see whether this attitude will be sufficient to

hold the rate until in the spring the forces normally in favour of sterling at that time of the year can play their part. Forward rates during the week have narrowed a little to par— $\frac{1}{8}$ cent per month over spot. The Paris rate throughout the week has shown the influence of strong intervention, but any recovery made has again been lost, the rate standing yesterday morning at 87.70, as compared with 87.65 a week ago. It is doubtful, too, whether the present attempt at stabilisation will succeed in withstanding for very long the pressure of the market. Contrary to the usual movement, Brussels this week shows a definite recovery from 95.25 to 94.50. In Paris forward rates at 40-50 centimes above spot are about the same as last week, while in Brussels they are rather narrower at 3-7 centimes above. Italy this week, partly as the result of heavy grain purchases, and partly through the fear of political complications in connection with Albania, has moved up somewhat sharply from 108.80 to 110.30. Spain also, with its further troubles in Morocco and uncertain conditions at home, shows a rise from 33.25 to 33.67 $\frac{1}{2}$. Berlin, Vienna, and Warsaw show their normal gold movements, and Budapest remains as before, stabilised on sterling at 345,000. Helsingfors also remains close to the dollar, and Stockholm, after going rather against us, shows at 17.43 $\frac{1}{2}$, as compared with 17.40, its rough approximation to the dollar, as does Switzerland, moving up from 24.22 to 24.26 $\frac{1}{2}$, while Amsterdam has gone in our favour from 11.62 $\frac{1}{2}$ to 11.64 $\frac{1}{2}$. Copenhagen, after a rapid rise, has recovered quickly to 26.57 $\frac{1}{2}$, as compared with 26.65 $\frac{1}{2}$ on the announcement of the extension for a further period of the sterling credits falling due about this time. Christiania, however, has risen slightly from 30.98 to 31.03 $\frac{1}{2}$. In the East the rupee at 15 6 $\frac{1}{4}$ d is 1-6 $\frac{1}{4}$ d higher than a week ago, while the yen has cheapened slightly from 1s. 7 45-64d to 1s 7 1 $\frac{1}{2}$ d. The silver market has shown pronounced weakness, mainly on selling from China, and though India has come in as a buyer on lower levels, a further fall is probable. Hong Kong stands at 2s 4 $\frac{1}{2}$ d as compared with 2s 4 $\frac{1}{2}$ d, Shanghai at 3s 1 $\frac{1}{2}$ d, as compared with 3s 3 $\frac{1}{2}$ d a week ago. In South America Rio, after falling away a little, closes the same as a week ago at 5 20-32d. Buenos Aires has moved up from 44 $\frac{1}{2}$ d to 45 1 $\frac{1}{2}$ d, and Valparaiso has appreciated from 41.20 to 40.30 pesos. Monte Video, on the other hand, has dropped from 50 $\frac{1}{2}$ d to 49d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 13th:—

EXPENDITURE.		RECEIPTS.	
	£		£
Supply Services	5,330	From Revenue	8,669
Interest, &c., on Debt	3,090	Increase in Debt	1,122
Sinking Fund	656		
Sundries	87		
Increase in Exchequer Balances	628		
	9,791		9,791

The Revenue for the week amounted to £8,669,000, as compared with £12,676,800 in the corresponding week last year. Customs were slightly lower at £2,253,000, against £2,446,000, and Excise at £1,819,000, against £2,218,000. Property and Income-tax amounted to £1,383,000, as compared with £1,704,000, and Super-tax to £440,000, against £460,000. Interest on sundry loans was nil, as compared with £1,762,800 last year. Ordinary receipts were higher at £1,131,700, against £59,730, but special receipts were lower at £17,300 against £1,186,200. The week's operations increased the National Debt by £1,121,500, and caused the following changes:—

(000's omitted.)			
	£		£
Treasury Bills	4,409	Bank of England Advances ..	9,250
National Savings Certificates ..	150	Sundries	410
Public Department Advances ..	5,750		
Treasury Bonds	473		
	10,782		9,669

The floating debt was increased by £920,000 to £829,625,000.

FINANCIAL YEAR, 1924-1925 (April 1 to December 13).

EXPENDITURE.		RECEIPTS.	
	£		£
Total Expenditure ..	545,931,802	Raised by Revenue ..	474,975,954
		Decrease in Balances ..	3,517,039
		Amount borrowed ..	67,438,809
Total	545,931,802	Total	545,931,802

ESTIMATES FOR YEAR 1924-25.

EXPENDITURE.		RECEIPTS.	
	£		£
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Columbia Electric Railway, Mexican Railway, Bank of London and South America, National Bank of Scotland, Western Alliance Reinsurance, Orient Steam Navigation, Johannesburg Consolidated Investment, United States Debenture Corporation, Pekin Syndicate, British Burmah Petroleum, Baldwins, Harrods (Buenos Aires), Richard Thomas and Co., Carreras, Edison Swan Electric and Showell's Brewery. Mr W. S. Webber, at the meeting of Johannesburg Consolidated Investment Company, after showing a very favourable position as to working costs in comparison with the whole of the Witwatersrand, said, in reference to the agitation for an increase in European employees' wages, that it would be impossible to have different rates for poor and rich mines, and that the basal truth was that poor mines could not face any increase in working costs. Mr Vincent W. Yorke, at the meeting of the Mexican Railway, said that trade unionism in Mexico was exercising a tyranny which was in many ways without parallel on this side of the Atlantic. He felt sure that if the present state of the relations between employer and employed was allowed to continue, it would be impossible for capital in any sort of public undertaking to earn a reasonable return.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

PLAYING WITH FIRE.

MR BALDWIN'S statement on commercial policy in the House of Commons on Wednesday was appropriately described by Mr Lloyd George as "one of the gravest statements which he had heard from the lips of a Prime Minister"; for his proposals lay the way open to a complete revolution of the fiscal system on which the economic strength of this country has been built up, and the only system under which Great Britain can hope to work its way back through the tangle of post-war difficulties to a plane of normal prosperity. We do not think that Mr Baldwin and most of his Ministers have any present intention of travelling along the road to protection very far. Indeed, we believe that Mr Baldwin is perfectly honest and sincere when he proclaims adherence to his election pledge, and repudiates the accusation that he means to introduce a general tariff. There are several good reasons for this view. It would seem impossible, in the first place, that the Cabinet has not learnt the great lesson of the last three elections, or fails to realise the strength of the Free Trade vote, which, after being antagonised with such disastrous results in 1923, did so much, on the strength of Mr Baldwin's pledge, to swell the Unionist wave of 1924. The Cabinet know the cost of arousing the enmity of this body of opinion once more. Again, the motor industry has just afforded a valuable object lesson in the stimulating effects of free competition. The large orders booked at the Motor Show in October have naturally been followed by a decision not to re-impose the former McKenna duties. The various industries formerly protected by them must now take their place in the queue which will rapidly

gather outside the portals of the Board of Trade, and make a case if they can on the grounds of exceptional circumstances. If the introduction of a general tariff was the conscious object of the Government, the re-instatement of the McKenna duties would be a useful first step. It is avoided because the meaning of the motor trade experience is too patently obvious.

But if, as we believe, Mr Baldwin is sincere in his promise that he is not inserting the thin end of the general tariff wedge, he is nevertheless playing with fire. Strictly interpreted, the "safeguarding" proposals which Mr Baldwin outlined mean general protection, which will be available to any industry which can prove certain things. What, according to Mr Baldwin's words, has an industry to prove? In the first place, an industry, to be a successful tariff claimant, must be "of substantial importance." This description is wide enough to bring almost every industry under its wing. Then it must be "efficient"—again a vague and undefinable qualification. Then (we quote the Prime Minister's actual sentences): "It must be subject to exceptional competition arising from such things as depreciated exchanges, bounties, or subsidies, and lower wages in foreign countries or longer hours. I am not at all sure that it would not be fair to take into account the differences in taxation as between this country and others." Let us look for a moment at some of the forms of competition thus enumerated. The occasional times of stress caused by sudden and substantial depreciation of exchanges are, we trust, largely behind us. But if low wages and longer hours in other countries are to be a ground for a tariff claim, then practically all industries in the country rank for protection—steel because of the wages in Belgium or India, cotton textiles because of Japanese wages, and so on *ad infinitum*. Certainly, if the comparison of taxation here and in other countries is to be a ground for protection, every single industry in the country may hopefully apply. On every tariff duty granted there is to be preference for the Dominions. Thus the foundation stone is laid for a complete national superstructure of Protection and Preference. The Prime Minister may, we believe he does, intend to build no more than a humble bungalow. But what of his followers, among whom, in the Press, in the House of Commons, in industry, and even in the Cabinet, are numbered unrepentant whole-hog Protectionists, determined to take advantage of every chance of establishing a better foothold on the slippery slope? Take, for example, the *Morning Post* of Thursday: "The Conservative Government has embarked upon an enterprise which, as we believe, will by degrees raise into new and beneficent conditions the whole industrial life of this country." The italics are ours. The real danger is that Mr Baldwin and Mr Churchill may be stampeded by forces behind them, and too strong for them, into the morass of Protection on whose edge they are now so perilously playing. The new "safeguarding" Bill—why not honestly and unequivocally call it a Tariff Bill?—will be very anxiously scanned to see whether it includes all those abundant qualification tests previously described in these columns, which, if Mr Baldwin stands by his pledge, it must contain.

The appearance of Mr Churchill as defender of Protectionist proposals was, of course, the *bonne bouche* of the House of Commons debate. On the whole, he extricated himself cleverly from an awkward position, by taunting his Free Trade opponents with fiscal peccadilloes in circumstances very different from the present, and by attempting to belittle the fiscal significance of the Premier's statement. In this he was adroit, if not wholly successful, and succeeded in leaving the impression that his presence at the Treasury is a bulwark against the excesses of his Protectionist colleagues. In his arguments against the discriminating duties of the old Safeguarding of Industries Act, he was sound and convincing. With the most-favoured-nation clause incorporated in the Anglo-German agreement, the discriminating system is more than ever out of court. But his deduction from this argument is less sound. To say that the discriminating method of the old Act was absurd is not to say that the system of a general duty, now proposed, is right. The only proper corollary to an exposure of the follies

of the old Act is that we should have done once and for all with these tariff tinkering in every shape and form.

Although unemployment came in for comparatively little mention in the debate, it is, of course, the *raison d'être* of Mr Baldwin's proposals. If the country believed that "safeguarding," or Protection, could seriously reduce unemployment, it would turn to these expedients. But that the country thinks otherwise has been abundantly and recently proved. The solution of unemployment, as the country realises, is only to be sought in the restoration of confidence in Europe, and in concentration on the problem of enabling our industries to produce cheaply and efficiently enough to make headway in international competition. Mr Baldwin's proposals, whatever be their real meaning, can be nothing but harmful in either respect. Mr Lloyd George put the matter succinctly when he said:—"The thing that matters is that we should be prepared to face that competition in the neutral markets. This takes us away from the best method of doing that. Any business man knows perfectly well what the difficulty is. You have to consider the lowering of the costs of production—not by the lowering of wages. Often you can increase the wages, and at the same time increase production and lessen the cost, and this by a better understanding between those who are engaged in the industry. Better co-operation, yes, and increased efficiency in equipment and management. These are the things upon which we ought to concentrate. The worst of proposals like that of the Government is this: it is taking the mind of the country away from the method of confronting the most dangerous competition which we are ever likely to be confronted with by substituting this vicious, false, artificial, barren scheme for a real method of confronting your difficulties."

The more that we philander with the barren doctrine of trade restraint and tariff juggling, the further away shall we be from facing the problems which must be solved before our industry and our trade can return to a satisfactory degree of activity and prosperity.

THE PROBLEM OF MOROCCO.

RATHER more than two years ago, the *débâcle* of the Greek army in Anatolia suddenly raised the question of the Black Sea Straits. Within the next few weeks it is possible that the question of the Straits of Gibraltar may be raised in an equally acute form by the discomfiture of the Spanish Army in Morocco.

The Spanish zone in Morocco, as it was projected in 1904 and placed at the Spanish Government's disposal in 1912, includes the whole coast-line of Morocco northwards and eastwards from Larache on the Atlantic to the Algerian frontier. It thus entirely surrounds the Tangier zone, and masks the straits on the African side opposite Gibraltar; and this was the object with which Spain was originally introduced into the arrangements regarding Morocco between Great Britain and France. One of the foundations of the Anglo-French entente was that France, in return for giving a free hand to Great Britain in Egypt, should receive a free hand herself in Morocco as far as this could be given her without prejudice to the naval position of Great Britain in the straits and at Gibraltar. The creation of the Spanish zone was the Anglo-French method of adjusting the respective interests of the two entente Powers; and for twelve years national pride has induced Spain to pour out her blood and treasure in order to fulfil the function of a non-conducting medium for the convenience of her neighbours. Now Spain is abandoning, or rather being compelled by the Moors to abandon, her rôle, and Great Britain and France find themselves face to face with the problem which Spain has obligingly averted for them hitherto. The situation is not eased by the fact that Italy has shown an inclination to take on the rôle of Germany as the aggrieved Power, with a claim either to share in the pickings of

Morocco or to obtain compensation elsewhere for consenting to hold aloof.

It is true that the Spaniards have never at any time succeeded in overrunning more than a fraction of the zone assigned to them—which is, indeed, as difficult a country to master as the highlands of the Mosul Vilayet or the North-West Frontier of India. She has merely occupied two patches of territory in the neighbourhood of her two ancient African *presidios*, or fortresses, Melilla and Ceuta. The occupied territory in the hinterland of Ceuta was, however, the vital region from the international point of view; for, so long as Spain held Larache and Tetuan, with the peninsula to the north of them, she insulated both Tangier and the African coast of the straits opposite Gibraltar from the possessions of any other Power. At the present moment, the Spanish Army has fallen back to the line of the Tetuan-Tangier road, thus exposing the Tangier zone on its southern side; and though the Spanish Government intends to stand on this line, it is very doubtful whether it can do so. The harbour of Tetuan is under fire from the Rifis, and—what is more serious—the land communications between Tetuan and Ceuta are threatened by a rising of the Anjera tribe, which occupies a country bordering on the straits in the triangle between Ceuta, Tetuan, and Tangier. It is not impossible that the Spaniards may be driven—perhaps not into the sea, like the Greeks, but at any rate inside the walls of Ceuta.

With that eventuality in mind, it is interesting to look at the situation as it appears to France, for France, after all, has greater local interests at stake on land than any other European Power, just as we, on our part, have the greatest local interest at stake on sea. From the French point of view, the danger created by the withdrawal of the Spaniards and the triumph of Abdu'l Karim is double. It threatens to undo the work which General Lyautey has been doing in the French zone of Morocco during the last twelve years, and it also threatens the position of France as an imperial Power throughout North Africa, and, indeed, throughout the Muslim world.

The threat to General Lyautey's work in Morocco is a question of geography. Morocco (like Gaul in Caesar) consists of three parts: the lowlands, along the Atlantic seaboard, in which most of the potential wealth of the country lies, the Rif mountains skirting the Mediterranean, and the much larger mountain mass of the Atlas in the interior. So long as they are unsubdued, the mountaineers of the Rif and the Atlas can, if they choose, prevent any foreign Power from developing the wealth of the lowlands in peace and quiet. By the diplomatic arrangements of 1904 and 1912 the Rif was assigned to Spain, and the other two parts of the country to France, and France easily occupied the Western plains. The pacification of the Atlas, on the other hand, was as large a task as, in the nineteenth century, Russia undertook in the Caucasus and Great Britain refrained from undertaking in Afghanistan. It must be accomplished very gradually if it was to be done with the minimum of effort, and therefore the first object of the French was to isolate the Atlas in order to be able to deal with it at leisure. The critical flank was on the north, for here the Atlas and the Rif approach nearest to one another, and if their tribesmen were to join hands, the tribes of the Atlas might be able to obtain arms by gun-running from the Rif Coast, which is inhospitable and difficult to patrol. The French, therefore, drove a railway, East and West, between the two mountain ranges, thus establishing land communications between Casablanca and Fez on one side and Algeria on the other. The corridor, however, is very narrow; the railway skirts the southern boundary of the Spanish zone, and a short distance further South again crosses the Atlas—with tribes in its central fastnesses which are still holding out against French domination. It is no wonder if France feels that, by the failure of Spain, her own position in Morocco is threatened.

In addition, there is the larger issue, for Abdu'l Karim and the Rifis are the counterparts in North Africa of Mustafa Kemal and the Turkish Nationalists in the Middle East. Once again, when Islam was being driven to believe that God had deserted His people and delivered them into the hand of the unbelievers, a leader and a

nation have arisen who have proved themselves capable, or have been rendered capable by Divine intervention, of victoriously opposing a European aggressor in arms. In many ways the victory of the Rifis is the more striking of the two. They are a far smaller nation than the Turks, with no training in Western methods of warfare, and no powerful friends in the background, while Spain, whom they have defeated, is not, like Greece, a small and only recently Westernised State, but a country with 20 million inhabitants, an ancient and distinguished member of Western society. Thus the retreat from Sheshuan has dealt a greater blow to Western prestige than the retreat from Afum Kara Hissar, and the reverberations among the neighbouring Islamic peoples may be proportionately violent. The Turkish national movement has been accompanied by sympathetic movements almost everywhere in the Middle East. Afghanistan has shaken off the British control of her foreign policy, Persia has repudiated the Anglo-Persian Agreement of 1919, Ibn Sa'ud has lifted up his horn in Arabia. How will the national movement in the Rif affect kindred Moorish and Arab peoples—not only the recalcitrant tribesmen of the Atlas, but the submerged *indigènes* of Algeria, or the more civilised and Westernised Nationalists of Tunis and Egypt? This is doubtless giving cause for thought at the moment not only to Marshal Lyautey, but to Marshal Allenby.

How, we should be curious to know, does the balance of British interests appear to the mind of Mr Austen Chamberlain? Which prospect does the present British Government find the more unpalatable? A French control over the African shores of the Straits of Gibraltar, or the emergence of a new independent Islamic Republic—sovereign by force of arms and in defiance of a Western Power—in a part of the Islamic world which had seemed to be securely under the dominion of Britain, France, and Italy? It is a hard fact that the substitution of French for Spanish control in the Spanish Zone would make Gibraltar strategically valueless in the hypothetical eventuality of an Anglo-French War, for it would give the command of the Straits to France instead of to ourselves. As it is, Gibraltar is antiquated as a fortress, and during the war there was some vague suggestion that it might be ceded to Spain (which would be a great satisfaction to Spanish *amour propre*) in exchange for some more spacious site—suitable for a *place d'armes* on the scale of modern warfare—within the boundaries of the Spanish Zone on the African side. Is this a possibility in the present circumstances? Probably not, for France appears to have made up her mind, first, that Spain shall have no successor in Morocco except her, and secondly, that, if Spain definitely withdraws from her Zone, France cannot afford to leave a vacuum, but must positively take Spain's place in some way or other. This was foreshadowed in the very significant interview which Marshal Lyautey took care to give to the *Times* correspondent at Tangier on November 8th, when the Marshal was on the way back to his post from a visit to France, where presumably he had arranged with the Government what action France should take if the worst came to the worst. Since then it is reported that the French Ambassador at Madrid has been pressing the unfortunate Spanish Government to announce its intentions. The French apparently contend that by the Anglo-French Agreement of April, 1904, Great Britain gave France a free hand in the whole of Morocco in case Spain were to abstain from playing the rôle allotted to her; that in 1912, again, France obtained a protectorate over the whole of Morocco by her agreement with the Sultan; and that, by her agreement with Spain in the November of that year, she merely transferred her own rights to Spain, in respect of a certain zone, on the definite condition that Spain should "watch over the tranquillity" of the zone in question. *Il appartient à l'Espagne de veiller sur la tranquillité de la dite zone* was the text. Does this mean that Spain is obliged to maintain order, or merely that she is the only foreign Power which is entitled to make the attempt? The coming diplomatic debate between Spain, France, and Great Britain, from which Italy will not readily let herself be excluded, will turn on the interpretation of these words.

Meanwhile, much also depends on the statesmanship of Abdu'l Karim. Will he, like Mustafa Kemal, have

the wisdom to limit his aims to securing the independence of his own people, who form a distinct national entity, or will he attempt to shoulder the burden of Islam, and declare a general war on Western Imperialism in North Africa? We can understand the motive force behind his resistance to Spain, who, instead of bringing tranquillity, has made a desert. The Rifis have fairly won their independence, and a Rif Republic would be just as good a screen for Gibraltar as a Spanish Zone. If, on the other hand, Abdu'l Karim is so ill-advised as to raid beyond his own borders, and to make himself impossible to France, then we can do nothing for him, while he will be doing a very bad turn to us.

BANKERS AND CREDIT INSURANCE.

IN his address last week before the Corporation of Insurance Brokers, Mr Stanley Spain, underwriter of the Trade Indemnity Company, Limited, explained some of the difficulties which still check the development of credit insurance as applied to overseas trade. Mr Spain and his official chief, Mr Cuthbert Heath, of Lloyd's, chairman of the Trade Indemnity Company, have done a really notable work in lifting credit insurance out of the slough of scepticism in which it was threatened with suffocation. They began with it in a tentative way as a branch of the Excess Insurance Company, Limited, of which Mr Cuthbert Heath has been the inspiring guardian. Then in 1918 the branch became the Trade Indemnity Company, with a small paid-up capital of £20,000, formed under the auspices of the British Trade Corporation. The Government then came into the field with their emergency export credits scheme, which was designed, under the post-war emergencies, to take risks upon which no commercially-managed company could safely venture. Though the export credits scheme has, on paper, made some pecuniary loss, it has, on the whole, served its main purpose of importing confidence into a situation where confidence was difficult to come by. Now that foreign exchanges are settling down the business of insuring credits can pass gradually from the emergency stage to that of a sound business proposition conducted on recognised insurance lines. That has been so far realised that some of the leading composite insurance offices have associated themselves with the Trade Indemnity Company, subscribed towards its recently increased capital of £250,000, fully paid up, and nominated representatives on the board of directors. We have, therefore, to deal now not merely with a pioneer company struggling to establish an exceedingly difficult and hitherto unexplored class of insurance business, but with an established concern strongly supported and informed with the best available experience. If, as Mr Spain gives us to understand is now probable, the bankers can be secured against certain risks in accepting credit insurance policies as collateral, the field should be open for a large and welcome expansion in business. And such an expansion would not only be of immediate benefit to bankers and to the Trade Indemnity Company, but would also materially assist—what we all desire so cordially—the expansion of our overseas trade.

The purpose of credit insurance is described as a means of protecting the seller from not being paid for his goods. And seeing that the money to be paid for goods sold is the basis of bills of exchange dealt in by bankers and discount houses, the protection of credit insurance must cover the banker or discount if it is to facilitate those dealings upon which the free movement of goods depends. One great difficulty in gaining the confidence of bankers arises, as Mr Spain frankly explained, out of the "invalidating clauses" which the Trade Indemnity Company is obliged to insert in its policies. The banker rightly judges that his security in a credit policy is greatly weakened by the power which the company retains of refusing to pay losses for reasons adequate to itself. These "invalidating clauses" exist to protect the company against failure on the part of the assured to preserve that utmost good faith—*uberrima*

fides—which is of the essence of insurance. But the banker has no control over the assured, and a policy may be invalidated by acts or omissions by the assured without the banker's knowing anything about it until the policy is invalidated.

We may, perhaps, explain this feature in some detail, and then deal with Mr Spain's proposal to surmount the difficulty of protecting the banker as an innocent third party against the omissions or offences of the assured. All credit policies are based on declarations by the assured of amounts at risk and circumstances of risk. The company never knowingly accepts at its own risk more than from 50 to 70 per cent., in order that the assured may themselves be serious partakers in the hazards insured against. All transactions insured must be new. The company will not insure any contract of sale entered into more than 14 days (usually much less) before the date of application for cover. This freshness is essential, as may readily be seen; if it were possible for the assured to cover risks which information received subsequent to the contract of sale showed to be extra hazardous, there would be a perpetual selection by unscrupulous assured persons against the insuring company. In all declarations of values at risk and circumstances of risk there must be the utmost good faith on the part of the assured; if in this vital respect he fails, then the company has power to invalidate the policy. The applicant may possibly not have read the declarations with sufficient care, and may have omitted to notify the company of default within the prescribed periods. Deception may be deliberate and wilful. The power to invalidate as against the assured must be preserved; the difficulty is the protection of the banker, who has advanced money or discounted bills of exchange against the loss of his collateral security, the credit insurance policy, when the company feels obliged to exercise its invalidatory powers.

Upon this most important point we may quote some relevant passages from Mr Spain's address, as reported in the *Times* :—

"If a Bill, for instance, was discounted with a banker on the strength of a credit policy, and it turned out, subsequently, that the assured had committed some act which would invalidate the policy, then the banker should not suffer through such act. He felt sure that when the Government scheme of financing export credits ceased bankers would welcome their assistance in this manner as a reasonable substitute for the Government Department. He reminded brokers that, although a great field existed for the operations of genuine insurance, the City of London was overrun with financial transactions of a nature not welcome to a credit insurance company.....He had had many conversations with the principal bankers in London and, with but few exceptions, they had expressed the hope that the company should join hands with them. He was afraid they would have to come down a step or two from the severe regulations of the banking platform in order to make that possible. His company and the French company co-operating with them were negotiating a scheme with bankers which, he thought, would go a long way towards bridging the gulf.....The banker rightly assumed that his security in a credit policy was greatly weakened by the power which the company had of refusing to pay losses for any reason whatsoever. They were considering the desirability of eliminating the power of these 'invalidating clauses' for the benefit of the banker only."

This last sentence indicates plainly the proposed way out: that the company should indemnify bankers in respect of their bona-fide interests against the operation of the "invalidating clauses." In other words, that though a policy may be invalidated against an errant assured, the interests of innocent third parties should not be permitted thereby to suffer.

There are two risks which a credit insurance company cannot assume under present conditions. They are the political hazards of a war, or of the imminence of war, leading to a moratorium, and possibly a collapse of credit. The Trade Indemnity Company does not include the insurance of what may be called temporary loss through delay in payment for goods. A collapse of credit upon the outbreak of war cannot be insured against by a

commercial company. The risk is too great, too wide in its range. Mr. Cuthbert Heath has more than once expressed the view that the Government, in return for a portion of the premiums paid under credit insurance, should reinsure the catastrophic risk of war, insurrection, or a general moratorium. This proposal is too large to be discussed at the end of an article. But we may say that reinsurance of this kind is not within the Government's ordinary legal powers. It could only assume this catastrophic risk by special legislation in time of peace, or by emergency legislation in time of war. If a great war should unhappily break out again, the Government of the day would find, as did Mr Asquith's Government in August, 1914, that huge commercial risks had to be assumed if the business of the country were to be saved from a disastrous collapse.

BUILDING COSTS AND NEW METHODS.

DURING the debate in the House of Commons on the housing problem, Mr Neville Chamberlain laid considerable emphasis on the advantage of steel houses, and so bringing in new materials and fresh labour resources as an aid to meeting the large unsatisfied demand. This is clearly one of the most hopeful ways of tackling this baffling problem, for it goes to the root of the economic difficulty. At the same time, it is far from being a simple solution, for new methods naturally present a new set of difficulties. Considerable interest, therefore, attaches to the following statement, which we have received from a well-informed correspondent :—

It will be remembered that during the days of the Addison Housing Scheme, various new materials and methods of construction were tried, with varying degrees of success. One effect of the Wheatley Act has been to stimulate interest in new forms of house building, and the present year has witnessed a crop of new proposals, the most important of which are those for the erection of the so-called steel houses, and the new material for construction which Commander Burney is putting on the market. The house-building industry, which has hitherto been little affected by the changes in methods and materials, which have been widely introduced in the construction of large structures with such marked success, cannot permanently continue on the lines laid down by long tradition, however excellent the tradition may be in many respects. But that is not to say that in the very near future there will be a revolution in the processes and materials of house building. The question is far more complicated than those who are rightly searching for means of providing a large number of reasonably cheap houses appear to realise.

The working-class house, if it is to meet with general satisfaction, must possess certain qualities. In the first place, it must be reasonably durable, and its length of life must extend to the period which will make loan repayment to cover the capital cost and charges an economic proposition. Secondly, the cost of repairs and maintenance must be reasonable. In the third place, it must be weather-resisting and dry. That is to say, it must keep out rain, and extremes of heat and cold. It must not be hot in summer and cold in winter. Moreover, it must be so constructed as to prevent the condensation of moisture within its rooms. Stone and brick houses fulfil these conditions to a marked degree. A stone shell or a brick shell (whether of the solid or cavity kind), with inner plaster lined walls, is durable, and not excessively costly to maintain in a proper condition. It excludes wet, it is not greatly influenced by changes in temperature, and is free from "condensation." These requirements are essential for health and comfort, and new types of houses must conform to these standards. In judging of the feasibility and desirability of new materials and new methods of construction, therefore, we must take into account the quality of the product as well as the price for which new houses can be produced. Not all the various proposals for revolutionising house building would conform to these standards, and even those which have been, or are being, adopted will need to be modified and improved if they are to become satisfactory substitutes for the normal type of house, and to conform to the neces-

sary standards. These technical questions, though they must be borne in mind and taken into consideration in determining the real value of new types of house construction, need not, however, detain us further.

The economic advantages which may accrue from the adoption of hitherto unused methods and materials are twofold. They relate to the supply and price of houses. Firstly, in so far as they call into use new raw materials and new types of labour, they may augment the supply of houses beyond the maximum possible with the available resources of the existing building industry. If the national need cannot be met by normal means because of a shortage of the supply of one or more raw materials, or of particular kinds of skilled labour, it is clear that alternative methods provide the only ready means of satisfying the national demand. Secondly, an alternative source of supply of houses may have far-reaching effects on prices. Houses built with new materials or by new methods of construction do not, as a matter of fact, work out appreciably cheaper than brick houses. Nevertheless, the building industry has to reckon with a new competitor, and it must make its prices comparable with those charged for the alternative supply of houses. The new competition will also tend to eliminate any unjustifiable rise in the prices of "normal" houses, whilst in a district where, because of the heavy charges for certain raw materials, owing perhaps to heavy freight rates, new methods may actually lower the price of houses.

It has been assumed that new types of houses are not going to supersede those to which we have become accustomed, and that they will be rather in the nature of a supplementary source of supply. This assumption is perfectly unassailable, if only because in the new types there are numerous practical defects still to be overcome, and because in the case of some new types at least, the cost of repair and maintenance appears likely to counterbalance any reduced capital expenditure on their construction.

Exaggerated hopes, however, are entertained as to the savings which the various new materials and methods will effect. A house, however much you may simplify its construction and its constituent parts, is a very complex product, and none of the new proposals which are being canvassed to-day claims to reduce more than one or two, or at any rate, a few, of the numerous items in the construction of the completed fabric. They may be designed to cheapen the outer structure, or the roofing, or the inner walls, but do not eliminate these items of cost, and others still remain unaltered. The land and its development, fences, and paths, and gateways, still remain as items of cost. To these must be added windows and window frames, doors and other joiners' work, light castings of various kinds, sinks, lavatories, and W.C.'s., and so on. These items contribute a considerable proportion of the total cost of a house, and in most schemes for new types of houses they are not tackled. A wooden house, for example, equipped and fitted internally like the usual brick house, offers little or no saving as compared with a brick house of equal accommodation and convenience. The Weir house, it is clear, is not going to bring down prices very substantially, at any rate in England, even if it can be produced on a large scale. The standardisation of internal fittings which is being developed could, of course, be applied to brick, stone, and concrete houses, and reduce costs, which would place the older type of house in a more favourable position to compete with Weir houses.

It will be seen from the table given below how the various items of cost enter into the price of houses. The figures are average figures, and are based upon the costs of houses erected under the State housing scheme. They refer to the A3 type of house, containing a living room, three bedrooms, bath and offices, and the average area within the containing walls was 809 square feet.

ANALYSIS OF COSTS.		Provincial Towns.	
	London.		%
Land, development, paths, gates, fences	16.8		15.6
House—			
1. Materials.....	49.1		50.0
2. Labour.....	34.1		34.4
	100.0		100.0

Each item may be analysed further as follows :—

	Percentage of Total Cost.	
	London.	Provinces.
1. Land, &c.		
Land	4.5	4.1
Development—(1) Labour	5.4	5.5
(2) Materials ..	4.7	3.6
Paths, gates, fences	2.3	2.4
2. Materials.		
Cement and lime	3.2	3.4
Slates and tiles	6.0	6.2
Bricks	11.1	11.4
Timber carcassing	3.8	4.1
Timber joinery	6.2	5.8
Lead	2.4	2.6
Light castings.....	4.7	5.0
Miscellaneous	11.7	11.5
3. Labour—		
Bricklayers	7.6	7.7
Carpenters and joiners	7.6	7.7
Slaters and tilers	0.6	0.6
Plasterers	2.8	2.8
Plumbers	1.5	1.5
Painters	2.5	2.5
General labourers	11.5	11.6

There is little scope for new methods of construction which will affect the first group of costs, i.e., those relating to land and land development, &c. These charges account broadly for about a sixth of the total cost of the State-assisted house. Of the remaining charges, none can be eliminated. The question is whether any of them can be satisfactorily replaced by substitutes. There do not appear to be alternatives to the timber carcassing and joinery, lead and light castings used; or, at any rate, alternatives which will result in substantial saving under existing conditions. The real hope as regards these components is more standardisation and greater efficiency of production, which would cheapen all types of houses. As a matter of fact, most of the alternatives are substitutes for bricks, slates and tiles. That is to say, they are concerned with the shell of the house rather than interior fittings. The articles on which savings might be effected may be summarised as follows :—

	Percentage of Total Cost.	
	London.	Provinces.
1. Materials—		
Cement and lime	3.2	3.4
Slates and tiles	6.0	6.2
Bricks	11.1	11.4
Miscellaneous (say)	2.0	2.0
2. Labour—		
Bricklayer	7.6	7.7
Slater and tiler	0.6	0.6
Plasterer	2.8	2.8
General labourer (say)	2.0	2.0
Total	35.3	36.1

The use of new materials and methods of construction for outer and inner walls, roofing, ceilings, flues and chimney-pots, &c., may reduce the above charges, which amount roughly to a third of the cost of a house. If the saving were one of 10 per cent., then the total cost of the house would be reduced by 3 to 4 per cent., which might easily be swallowed up in additional maintenance charges.

Some of the new methods, however, do not supersede entirely the use of bricks, slates and tiles; some, on the other hand, would probably reduce the costs of timber carcassing. It is, therefore, impossible to generalise on the question, but probably sufficient has been said to show that, broadly speaking, attention has been directed to the use of alternatives for certain component items in the working-class house, and therefore the possibility of economies is limited. In practice, such new methods and materials as have been tried do not yield houses much, if any, cheaper than those erected in the normal way. Concrete houses are as costly as brick houses, and may be even costlier and less satisfactory. A large town in the North of England recently obtained tenders for concrete houses in excess of the cost of erecting brick dwellings. The Weir house of, say, the A3 type, could not, on present costs, compete successfully in many parts of England and Wales with brick houses, and it is interesting to observe that the committee appointed by Mr. Wheatley to inquire into alternative methods, in its interim report expressed the view that "the life of such houses will be shorter, and the maintenance charges will be greater than in either a brick or concrete structure."

It is not, however, suggested that there is no room for new methods and materials for house building. They should be encouraged; but even if they be improved upon and further cheapened, it is not to be expected that the solution of the housing problem will be anything but a costly business.

COAL PRODUCTION, WAGES, AND COSTS.

WHILE it is most gratifying that the public should be kept informed as to the true position of a great national industry like that of the mines, it is very much to be regretted that the publication of the ascertainment should be so long delayed. The figures recently issued by the Mines Department only cover the first and second quarters of the year,* and do not, therefore, help very much in forming an estimate of the present position, which, it is claimed in some quarters, is one of very considerable gravity. In this bureaucratic age one should learn, however, to be thankful for small mercies, and the figures themselves, though belated, are of the greatest interest. They relate, as our readers will know, to undertakings which, between them, account for from 93 to 95 per cent. of the total coal production of this country, and give particulars, under separate headings, of all the local mining districts. Within the scope of a short article, however, it is not possible to do more than summarise the results for the country as a whole, though it should be borne in mind that the general picture thus obtained is not necessarily typical of any individual area.

The following table gives the principal totals for the last four quarters for which returns have, up to the present, been made public:—

	1923.		1924.	
	Third Quarter.	Fourth Quarter.	First Quarter.	Second Quarter.
Tonnage disposable tons	56,863,078	62,053,820	61,201,718	56,299,463
Wages	£ 37,733,759	39,261,510	33,581,084	38,471,418
Stores and timber	£ 6,413,744	6,732,766	6,587,208	6,188,100
Other costs	£ 7,896,861	8,177,266	7,953,070	7,903,062
Royalties	£ 1,531,347	1,573,676	1,624,764	1,470,446
Net costs	£ 53,566,626	55,661,970	54,638,688	53,980,250
Commercial disposals	£ 56,463,071	61,744,941	63,215,635	56,889,864
Credit balance	£ 2,896,445	6,082,971	8,576,945	2,909,614

The credit balance is, of course, a very different thing from profit; for, under the terms of the National Agreement which regulates the industry, it forms a fund out of which, amongst other things, the wages to be paid in the ensuing period are, in part, determined or met. The true meaning of these figures, however, is only apparent when they are reduced to a tonnage basis. In order to take a longer view of the course of development, we have included in the next table the principal returns per ton since the beginning of 1922:—

Period.	Pro-ceeds per ton.	Wages per ton.	Net Cost per ton.	Net Balance, Credit (+) or Debit (—) per Ton.	Output per Man-shift Worked.	Earnings per Man-shift Worked.
1922.	s d	s d	s d	s d	Cwts.	s d
First quarter	20 9 90	13 4 08	19 8 28	+ 1 1 62	18 23	11 0 18
Second quarter	18 11 41	12 7 39	18 11 58	— 0 0 17	17 80	10 2 51
Third quarter	18 3 08	11 4 48	17 2 08	+ 1 1 00	17 94	9 3 97
Fourth quarter	18 6 18	11 4 09	16 11 90	+ 1 6 28	18 10	9 5 25
1923.	s d	s d	s d	s d	Cwts.	s d
First quarter	18 11 56	11 6 58	16 6 24	+ 2 5 32	18 25	9 7 72
Second quarter	20 5 21	11 11 46	17 2 57	+ 3 2 64	17 90	9 9 77
Third quarter	19 10 31	13 3 26	18 10 09	+ 1 0 22	17 42	10 7 20
Fourth quarter	19 10 81	12 7 85	17 11 28	+ 1 11 53	17 76	10 3 33
1924.	s d	s d	s d	s d	Cwts.	s d
First quarter	20 7 89	12 7 30	17 10 26	+ 2 9 63	17 79	10 2 82
Second quarter	20 2 51	13 8 00	19 2 11	+ 1 0 40	17 48	10 11 12

Commercial disposals naturally govern wage rates, though this influence does not usually make itself felt until the ensuing period. Incidentally, it may be pointed out that ascertainties for this purpose are made every two months, and not quarterly, a disturbing factor for the student of mining statistics who has only the published returns to go upon. The net cost per ton fell steadily during 1922, rose again in the two middle

* Cmd. 2274 and 2283. 2d.

quarters of 1923, while a fall over the turn of the year was followed by a rise, in the second quarter of this year, to a level higher than any recorded since the beginning of the year before last. Of this increase of about 1s 4d in the cost of production in the second quarter over the level of the preceding quarter, wages account for 1s 0.70d, and the item "other costs," including such things as management, salaries and insurances, for 2½d. The effect of this has been to reduce the credit balance, and this, in turn, will show a falling-off in wages for the third quarter when the figures are ultimately published. It may be noted, in passing, that the Cumberland district showed a deficit in three out of the four last quarters, and the North Wales field in two.

To arrive at a truer picture of the wages actually earned in the industry, however, it is necessary to consider the earnings and the output per man-shift actually worked. The figures for 1922 do not call for special comment, but, since the beginning of 1923, it is a significant fact that the output has diminished as the earnings have increased, and vice versa. Moreover, while earnings in the June quarter of this year are but little over a penny less than those received in the first quarter of 1922—which is the highest point reached in the last two and a-half years—the output per man-shift was under 17½ tons, as against nearly 18½ tons in the earlier quarter.

Our last table completes this general statistical view of the industry:—

	1923.		1924.	
	Third Quarter.	Fourth Quarter.	First Quarter.	Second Quarter.
Number employed	1,108,259	1,120,204	1,111,280	1,107,457
No. of man-shifts worked	71,196,686	76,405,692	75,390,164	70,417,149
No. lost	6,402,572	6,637,723	7,097,159	5,962,902

The ratio between the number of man-shifts actually worked and the number lost that could have been worked gives a rough indication of the absenteeism prevalent during the period, while on the basis of the figures for the number of man-shifts worked, the average earnings per man-shift and the total number of men employed, we can arrive at the average weekly wage paid throughout the industry quarter by quarter.

Our view of the twelve months ended June 30th last may be summed up by saying that, during that period, the proceeds, credit balance, and output per shift followed the same general variations; while wages, both per ton and per shift, tended to vary inversely as the output per shift, and absenteeism in the main directly as wages. The average weekly wage actually earned throughout the industry was in the neighbourhood of 53s 5d, both in the first and second quarters of this year, the fall in the number of man-shifts worked in the latter period almost exactly counteracting the rise in the earnings per man-shift.

FINANCIAL AND COMMERCIAL CONDITIONS IN POLAND.

(BY A CORRESPONDENT.)

THE stability that has marked Polish public finances during the past few months has borne testimony to the reality of the reforms carried out early in the year. The new currency has kept without difficulty its parity with gold, and Budget equilibrium has been maintained. There is, however, little alleviation at present of the difficulties of the industrial situation. High prices continue, with a serious effect on home, and even more on foreign, markets. This period of strain was, of course foreseen, but none the less it has caused a certain amount of pessimism in some circles in Poland, where present difficulties have hindered to some extent a just appreciation of the very great progress that has been made.

Since February this year the Polish Ministry of Finance has succeeded in keeping expenditure within the limits of the legitimate resources of the State. Expenditure in the eight months February to September amounted to

1,021 million zlotys, and revenue receipts to 929 millions. The balance of 92 millions has been provided out of the proceeds of certain special sources of revenue, including loans. During the first eight months of the year, the three most important of these special receipts realised:—

	Million Zlotys
Internal loans	26.6
External loans	54.1
Gain from issue of subsidiary coinage and notes	35.4
	116.1

The proceeds of these special resources are held as a special fund, which has in part been used to cover such part of the deficit shown above as was not met out of funds previously in hand. This use of what are in reality capital receipts can be defended on the ground that the Budget includes large sums of such expenditure, as, for example, a total of 61 millions on capital expenditure on the railways in the eight months February to September.

It is to be noticed that there was actually a surplus of 12 millions in the four months February to May, but a deficit of 104 millions occurred the succeeding four months. This variation is accounted for by the fact that the Property Tax (the exceptional levy falling on property for the three years of financial reform 1924-6) is payable by instalments, which fall due in the spring and autumn each year; hence the position is relatively less favourable in the summer months. One good feature of the revenue side is the steady growth of the regular sources of taxation—in particular, Customs, Excise, and the Turnover Tax. Monopolies (tobacco and salt) have also yielded far more than was anticipated. The outlook of the Property Tax is not quite so bright, though it would be unsafe at present to prophesy that its estimated quota for the year will not be attained.

The future of the Budget position depends much upon the success that is achieved in limiting expenditure. The rise of prices has inevitably forced the expenditure of the State upwards, and a large increase of expenditure for next year is foreshadowed in the estimates for 1925 recently published in preliminary form, and in the additional credits sanctioned for the last months of this year. The former show a total of 1,982 million zlotys, whereas the latter amount to 125 millions, and bring the total estimates of expenditure for the current year up to 1,717 millions. One urgent need, as regards expenditure, is the standardisation of Government wages and salaries. There is good ground for hope, however, that prices will commence to fall before long, and it is clear that the door should be left open for possible economies in salaries in this event. More important is the avoidance, as far as possible, of expenditure on new services, and of capital expenditure, except in so far as it can be met from the capital resources of the State.

The volume of currency in circulation has now gone some way towards reaching a normal level. Approximately 600 millions of zlotys had been issued by the beginning of October, of which 460 millions were banknotes of the Bank of Poland and the remainder Government issues of smaller denominations. This amount for a population of about twenty-eight millions works out at 21.5 zlotys a head (a little under 18s). This would not appear to be large. Estimates of normal requirements vary a good deal, but 30 zlotys a head has been given as a moderate estimate. The point would appear, however, to have been reached when the question of locating the limit of absorption must be studied carefully. A further increase of 43 millions took place in the Bank's issues during October.

Since it commenced its operations at the beginning of May this year the Bank of Poland has shown considerable caution as regards its discount policy, and has not yet yielded to the inevitable clamour for fresh credits. It has built up a strong holding of foreign currency during the period—at the end of October its issues were covered to the extent of 68 per cent. by gold and stable foreign currencies, which should prove a valuable safeguard in the event of temporary difficulties affecting the foreign exchange market. This cover must not, however, blind us to the fact that the only real safety lies in a limitation of issue of the zloty at present.

The most pressing problem of the moment is that of

ALL BRANCHES OF INTERNATIONAL BANKING BANKERS TRUST COMPANY

HEAD OFFICE, NEW YORK
16 WALL STREET

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendôme

the industrial situation. The bank has had to meet the enormous demand for increased credit facilities by the definite "rationing" of accommodation, and by an enormous official discount rate of 12 per cent. Apart from the facilities offered by the Bank, short-term loans can only be obtained at rates amounting to 3 or 4 per cent. per month. Such a shortage of short-term credit has, of course, been very keenly felt by industry—it has put a heavy strain on business enterprise. Prices, meanwhile, have not been falling, and this has been the main cause of difficulties since the spring. Since August, too, prices have actually risen. The situation may be seen from the following figures:—

Last Week of Each Month.	Wholesale Price Index (Jan. 1914=1).	Cost of Living in Warsaw (Jan. 1914=1).
January	111.2	120.5
February	110.5	126.3
March	104	125.6
April	106.6	123.7
May	102.3	127.2
June	109.2	134.7
July	112.4	141.1

Fortunately, although preliminary figures show a further small rise in October, there has been a definite fall in wholesale prices during the first week of November. Much of the rise is attributable to the general increase in the price of grain, whilst the cost of living has been pushed up also by the gradual slackening of the restriction on rents, which are slowly returning to an economic level. Rents are still low, however, and apart from this element the cost of living would have to be accounted very high for a country largely engaged on raising food and raw materials.

There are unquestionably many ways in which remedies can come from the side of the State. Economy in expenditure—capital expenditure being avoided for the present—would provide opportunities for reducing taxation, and this would relieve appreciably the burden on industry. Credit policy is for the banks; but it is a subject worthy of the most careful and constant study with the object of securing that the available credit resources of the country are utilised to the greatest advantage. Greater co-ordination between the banks is required from this point of view. Many of the remedies lie in the hands of the industrial and commercial classes themselves. An increase in the productivity of labour is greatly needed, but it may well be that the first step must be a more serious attempt than has yet been made to secure a reduction of prices by agreement between the various interests concerned. Without a serious effort of this character it will not be possible for Poland to overcome foreign competition either at home or abroad. Already Poland is offering considerable attractions as a market to the foreign exporter, especially where the latter is prepared to give up to six months' credit—and of this fact German exporters are fully aware already. The more stable currency conditions have removed one of the greatest dangers to intercourse, and an increase of trade with this country, of which the beginning can already be traced, may be hoped for in the near future. But before confidence in Polish credit is restored, and before she can benefit from outside help to enlarge her diminished capital resources,

practical assistance to the development of our trade in overseas markets, whether in the Empire or outside it. Meanwhile, the country will not fail to observe that Mr Baldwin, in proposing to provide £1,000,000 from the Treasury as a "money equivalent" to the value of the discarded preferences, admits the important fact that Imperial Preference costs the British taxpayer money. We are grateful to him for this useful admission. We also take note of the following passage: "What was said in the speeches to which I have listened this afternoon is quite true, that you can never get a complete system of Preference as it has been understood in this country until such a time as the country consents to have taxes on food, by which I mean taxes on the food of normal, general, and daily consumption. Such taxation.....is not to-day practical politics in this country."

America and the Debt Problem.—The discussions in America of the Inter-Allied debt problem do not as yet appear to be leading to any clear solution. According to a *Times* cable, a short debate took place in the United States Congress on Tuesday on the settlements of the Lithuanian and Polish debts, during the course of which Mr Crisp, of Georgia, a Democratic member of the Debt Funding Commission, told the House that he would not, "either as a member of the Debt Commission or as a member of this House, vote to settle the indebtedness of any of these other countries in any way which will substantially vary from the basic settlement made with Great Britain." We do not think that there is at present any likelihood of America's offering to modify the terms of the British debt, or of her giving us "most-favoured-nation" treatment. If, therefore, Mr Crisp represents the opinion of the Debt Commission, it means, not that our payments are to be reduced to what France and Italy can pay, but that the latter are to be asked to pay the British terms. At present this is out of the question without precipitating a new exchange catastrophe. On the other hand, there is general recognition in America that terms could not reasonably be asked of France and Italy unless these also can be applied to the claim of Great Britain against these countries. Mr Crisp reminded his hearers that many people had been put into the Bankruptcy Court for trying to give preference to some creditors over others, and stated that in the exchanges between M. Jusserand and Mr Mellon "no definite proposition was made, nor was any suggestion made that would for a moment be accepted by this country." Thus, on the surface the problem is as much at a deadlock as ever, and we doubt if the time is ripe for a solution. But two tendencies are at work which will ultimately untie the knot. The first is that outside administrative and official circles there is much franker recognition of the fact that in the end the European debts cannot be collected at face value, or even on a 3 per cent. basis, and in many quarters complete cancellation is not excluded from discussion. Thus, in the recent political campaign, Senator Borah—whose position as chairman of the Senate Foreign Relations Committee makes his opinion of great importance—told his audience in the North-West that he would be prepared to cancel the European debts if this act facilitated disarmament. The Senator from Idaho perhaps does not appreciate that, while France might be willing to reduce her armaments in return for security, she is not likely to do so for a cash consideration. But the fact that in the most "pro-American" circles conditional cancellation is discussed is itself proof that in no part of the United States is public opinion merely out to insist upon its pound of flesh. The second tendency is the recognition that a settlement is not a matter which concerns America and her debts alone, but is one in which there must be all-round agreement, and, in particular, common policy between England and America.

Cost of Living.—The official Ministry of Labour index of the cost of living rose another point in November. This advance was due to increases, partly seasonal, in the price of food. For food alone, according to the *Ministry of Labour Gazette*, the average increase over the pre-war level was 80 per cent. at December 1st, as compared with

79 per cent. at November 1st, and 76 per cent. a year ago. How the cost of living figure has moved month by month over recent years is shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January	85-90	120	125	165	92	78	77
February	90	120	130	151	88	77	79
March	90	115	130	141	86	76	78
April	90-95	110	132	133	82	74	73
May	95-100	105	141	128	81	70	71
June	100	105	150	119	80	69	69
July	100-105	105-110	152	119	84	69	70
August	110	115	155	122	81	71	71
September	110	115	161	120	79	73	72
October	115-120	120	164	110	78	75	76
November	120-125	125	176	103	80	75	80
December	120	125	169	99	80	77	81

The advance in the food price figures was the net result of slight declines in sugar, butter, and bacon, more than counterbalanced by an almost general rise in other articles of food, especially eggs and tea. It will be seen from the above table that the index figure at August 1st was the same as on August 1, 1923. Since then the seasonal upward turn has been steeper than that of last year, to the extent of four points.

Employment in November.—Over the whole field of employment the change in November was slight, but such movement as occurred was in the right direction. The aggregate of registered unemployed fell by about 14,000, and a slight decline took place both in the trade union percentage of unemployment and in the percentage of all workers covered by the Unemployment Insurance Acts. The trade union figure fell from 8.7 to 8.6 per cent., the latter figure, according to the *Ministry of Labour Gazette*, comparing with 10.5 per cent. a year ago. How this percentage has moved month by month may be seen from the table appended:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.

* Excluding coal miners.

The unemployment percentage among the 11½ millions covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland fell from 11.1 per cent at October 27th to 11 per cent. at November 24th. A year ago it was 11.5. Thus the decline as compared with a year ago is very much less pronounced than in the trade union figure, which represents mainly skilled workers. The totals of registered unemployed compare as follows:—December 1, 1924, 1,233,000; October 27, 1924, 1,247,000; November 26, 1923, 1,304,000. Thus the latest figure is 71,000 lower than the total of a year ago. The features of November were a further considerable improvement in the cotton industry, and a serious decline in the tinplate trade. In the latter the increase in number of unemployed in November amounted to over 10 per cent., while unemployment in the cotton textile industry declined by 3 per cent.

Exchequer Bond Conversion Result.—In answer to a question in the House of Commons on Thursday, the Chancellor of the Exchequer stated that of the £134,600,000 5½ per cent. Exchequer Bonds, maturing on February 1st next, approximately £81 millions have been converted under the recent conversion offer, about

£57 millions in 4½ per cent. Conversion loan, 1940-44, and about £24 millions in 4½ per cent. Treasury bonds, 1934. The cash payment in respect of Conversion loan will be about £1,250,000. While no addition will be made to the nominal total of the National Debt from this operation, the future saving in interest will be something over a million a year.

Turkey and Her Creditors.—The Turkish bondholders have been disappointed again. The Franco-German Arbitral Tribunal set up by the Treaty of Versailles has decided against the claim put before it by the French section of the bondholders for payment to them, at the pre-war rate of exchange, of the sums collected by the Debt Council and deposited in German and Austrian banks during the war. The Council was then under German control, and made no payments to subjects of the Allied Powers, and the French bondholders, as the most numerous section, took the lead by arrangement in claiming repayment. The Tribunal has decided that they have no *locus standi* before it; that the Debt Council was within its rights in depositing the money, but that, not being a subject of an Allied Power, or domiciled in an allied country, it cannot reclaim the money before the Tribunal. (We gather that it might withdraw the money from the banks, but it would only be paid in depreciated marks and kronen.) The British section of the bondholders might put their claim before the Anglo-German tribunal, but the Council of Foreign Bondholders, in notifying the decision, intimates, under the circumstances, that it may be scarcely worth their while to do so. The decision is obviously based merely on legal technicalities, but it appears to be final. However, the coupons affected by the decision have been cut from the bonds and deposited with the Council, so that the matter stands apart from the general question of the future resumption of the service of the debt. The Angora Government intimated some time ago that the service would only be resumed after the reapportionment of the pre-war debt between Turkey and the States which have gained territory from her since 1913, as provided by the Treaty of Lausanne. The reapportionment was effected early in November, and Turkey is now responsible for slightly more than 62 per cent. of the total—apart from certain loans contracted in 1912-14, of which her share is 76 per cent., but these, apparently, are not held in Great Britain. Appeals from some of the States concerned have been before the Council of the League of Nations, which has referred them to an arbitrator, who has been appointed this week, and will sit at Constantinople. His decisions will be final, but their only "sanction" will consist in the injury to the credit of any Government which may disregard them. But it is believed that the Angora Government is now quite alive to the necessity of restoring the credit of Turkey, and has been greatly impressed by the success of the Greek loan. Ismet Pasha, at any rate, recognised this necessity last July, in a speech at Magnesia. And the recent rise in the quotations of the Unified Debt reflects the hopes of the bondholders.

Agricultural Wage Settlements.—Considerable progress has been made by the Agricultural Wages Committees in arriving at agreements determining the new minimum rates of wages in the various counties. In many cases the new rates have been agreed upon unanimously as a compromise between the offer of the farmers and the claim of the workers, but there is evidence that in some areas the agreements are the result of majority decisions, the employers' representatives forming the minority. According to the reports so far available, the following rates of wages have been agreed upon for ordinary labourers:—Norfolk, 28s (winter), 29s (summer); Bedford, 29s; Berkshire, 29s 2d; Warwickshire, 30s; Carnarvon and Anglesey, Essex, Cumberland and Westmorland, Cambridge and Isle of Ely, Northants, Bucks, Worcester and Dorset, 30s; Hereford, 31s; Kesteven and Lindsey, Somerset and Notts, 32s; Rutland, 32s 6d; North Riding, 33s; East Riding and Leicester, 34s; West Riding, Derbyshire, and the Holland district, 36s. The rates represent increases in most cases of 2s or 3s a week over those previously in operation, though

in one case, Cumberland and Westmorland, the new rate shows no change. The hours of labour in respect of which the rates are payable vary in the different areas. In some cases they have been fixed at 48 per week in winter, with longer hours, 50 to 54, in summer, and in others, uniform hours for the whole year have been agreed upon, usually 50 to 54 per week. Several of the committees have also arrived at agreements on the subject of the minimum rates of wages for special classes of workers, horsemen, cattle-men, shepherds, &c., and for youths, women, and girls, and also in regard to overtime rates. In a few cases a weekly half-holiday has been agreed upon. A very complete agreement has been made in Norfolk, hitherto a storm-centre of the agricultural industry, which contains provision for a guaranteed week for all men who present themselves regularly for work. A similar provision appears in the Derbyshire agreement. In some areas a definite period of operation, varying from six to twelve months, is specified in the agreements, and in one case, the East Riding of Yorkshire, it is provided that the minimum rate shall be subject to adjustment in correspondence with variations in the cost of living index number.

The Hukuang Railway Default.—A correspondent writes:—The coupons of the Hukuang Railway 5 per cent. bonds of 1911, due last Monday, were not paid, and, as the loan is a charge on provincial revenues, it is a direct obligation of the Chinese Government. The revenues in question have not reached Peking, the traffic has been interrupted, and the Treasury is empty; but in well-informed quarters it is expected that unless some fresh change takes place in the situation at Peking, the bondholders will not have to wait very long. The Provisional Government is believed to be fully aware of the necessity of preserving the credit of the Republic, and to be able to give adequate security for the very moderate sum required. There is some reason to believe that negotiations on the subject are already taking place. So soon as there is a stable Government at Peking it will receive financial aid from the Consortium. Meanwhile, the obligations of the Republic are not likely to be repudiated except by a purely Bolshevik Government. And, though Chinese Ministers may be demonstratively Nationalist, Chinese business traditions are wholly opposed to Bolshevism.

The Belgian Congo.—The development of the vast resources of Belgium's only colony depends mainly on the adequacy of transport and labour; and, according to the report of the British Consul at Boma, just issued by the Overseas Trade Department*, both are at present insufficient. Only two routes into the country are now commercially practicable: that by sea to Matadi, nearly 100 miles up the Congo, and thence by rail to Leopoldville, and that by the Rhodesian railways to the head of navigation on the Congo at Bukoma, connecting with the sea at Beira or Capetown. The routes by East African ports and the lakes, or by the Nile (or Port Sudan) via Khartoum, are at present far too costly, as involving repeated transfer and handling. The Matadi-Leopoldville railway can only carry 5,000 to 6,000 tons annually, though it is hoped that it may shortly be electrified and its capacity doubled. The natives have at present too few wants to stimulate their industry, though the example of those

* H.M. Stationery Office.

employed in the mines and oil factories and on public works tends to raise the standard of living. The chief exports in 1922, with their values in millions of Belgian francs, were:—Copper, 133.1; oil nuts, 40.6; diamonds, 21.6; gold, 20.7; ivory, 16.7; gum copal, 15.3; palm oil, 14.3; tin ore, 8.9; cotton, 5.6; rubber, 3.3; cocoa, 1.6; with smaller amounts of skins, coffee, and rice, though the collection of wild rubber, which formerly caused so much misery, has all but ceased. In 1923 Great Britain took the largest share of the exports, after Belgium—chiefly copper, oil nuts, and palm oil; in 1922, however, her share in the total trade fell off heavily; but with her African dependencies, particularly Rhodesia, she has much the largest share in the imports after Belgium. Hydro-electric installations are hoped for, there are valuable coalfields and minerals, including gold and diamonds, and an immense amount of valuable timber, whenever it can be got out. The Government has established agricultural experimental stations, and is doing its best to regulate the conditions of native labour and to promote hygiene. The missionaries, both Catholic and Protestant, are doing excellent work in civilising, educating, and promoting the health of the natives, and great progress has been made by Belgium in opening up the country, in spite of the serious physical and financial difficulties in the way. The report gives useful advice to British exporters and intending planters, but the time for the latter is not yet come.

The Non-Ferrous Metal Group.—There has, during the past week or two, been an expansion in the demand for base metals, and all coming within this category have shown a very strong undertone. Copper has been stronger, with reports from New York quite cheerful, and with supplies on a more moderate scale, the metal has responded to the improved demand. Values this week have been higher, with manufactured copper also dearer, and there is every prospect of better markets early in 1925. In the United States the demand on domestic account is well maintained, and on the export side some big sales have been made. Both France and Germany are prominent buyers of American copper, and the unsold surplus in the States, U.K., and Continent is estimated at not more than 150,000 tons. The world output for all 1924 will be heavy, but demand is now keeping pace with production, and the technical position of the commodity is certainly better than it was. Copper has been kept down for a long time, but it is likely to rise during the first quarter of the coming year. The outlook for consumption and the moderate world supplies are the two best points for the metal. In the case of tin there has been some improvement, with forward values well above cash, and the metal at over £260 certainly looks favourable for the tin producers. The market has been interested in the final sales of the remains of the tin held under the Bandoeng agreement, and probably the year 1925 will open with no surplus left. This would increase the visible supply to some extent, but producers and consumers would know exactly where they stood. The Straits shipments for December will be heavy, but American users are in the market for nearby shipments, and certainly the feeling is more hopeful. The world stocks at the end of the year will approximate 21,000 to 22,000 tons. This compares with fully 40,000 tons two years back, and in the coming year the United States alone will call for 75,000 tons of metallic tin. The Welsh tinplate industry is rather dull, but this is only seasonal slackness, and users are not too well covered. The lead position has been very strong, and there does not appear to be the slightest sign of any relief from the shortage of supplies. The U.K. imports this year have been on a very heavy scale, and prices of late have risen to well over £42 per ton for prompt material, but this has not checked the demand. Large contracts have been placed for pig lead for February and March shipment at high prices, and there is no possibility of any material expansion in supplies for some time to come. Values in the United States have been advanced to a very high level in order to prevent export sales and to attract the Mexican lead; thus Europe has to fall back largely on Spain and Australia, with a fair amount coming along from Burmah and Africa. The trade demand for building and electrical purposes is very

persistent, and there are no surplus stocks of any kind in the public warehouses. Germany has been a keen buyer of lead, lately, and further business is expected. So keen has the demand for foreign soft pig-lead been that it has been impossible to find sufficient to go round, and in some cases antimonial lead has been taken after being neglected for a long time. The zinc market has also improved largely with the others, and Germany has been buying quite liberally both in Belgium and also in the United States. The American deliveries for last month were the highest ever recorded for peace times, and stocks have been cut down considerably. Prompt zinc has been over £37 this week, with the undertone firm.

The Rand December Dividends.—Our mining correspondent writes:—Some three months ago agreeable anticipations were indulged in regarding the dividend announcements which would be made by the Transvaal gold mining companies in respect of the second half of 1924. In the meantime, the currency price of the precious metal has fallen away to such an extent that, allowing for exchange charges, &c., the companies are now no better off than they would be under normal conditions. (Incidentally, it may be remarked that fairly sharp declines have taken place in the shares of a number of those undertakings which, as shown in our issue of November 15th, stood to be especially hit by the fall in the gold premium.) As a result, the announcements do not make so brilliant a showing as hoped for. By the treatment of larger quantities of ore, and/or reductions in working costs, several companies during the past six months have earned profits permitting larger distributions than for the second half of 1923. The Brakpan, Crown, Cons. Main Reef, Geduld, Government Areas, Springs, and two Van Ryns are the principal instances in point. On the other hand, the Modder B only maintained its total owing to the increase in the rate for the first half of the year as compared with the corresponding period of 1923. The Witwatersrand Gold will pay no more than 5 per cent., as against 12½ per cent. for the second half of 1923, thereby reducing this year's total to 17½ per cent.; and several of the other low-graders have "felt a draught." In the case of the Durban Deep, capital expenditure has been a factor. We compare the last three half-yearly distributions and the totals for 1923 and 1924:—

Company.	Dec., 1923.	Total, 1923.	June, 1924.	Dec., 1924.	Total, 1924.
Aurora West	10	15	10	10	20
Brakpan	22½	42½	20	25	45
City Deep	25	45	25	25	50

Rand Mines	30	30	..	50	50
..	60	120	60	60	120

* Tax free. † Including distribution announced in March. This table does not include declarations made at dates other than June and December.

Interesting features are the announcement of a maiden dividend of 1s by the Robinson Deep upon its "B" shares, that company's declaration of 5s 6d upon its "A" shares including the final instalment of arrears; the re-entry of the Simmer and Jack with 20 per cent. upon its reorganised capital, and the declaration of 3½ per cent. by the East Rand Proprietary—the first since the 2½ per cent. of June, 1916. Of the thirty mining enterprises scheduled above, rather over half will pay more for 1924 than for the preceding year. This, in itself, can scarcely be regarded as otherwise than satisfactory. The Rand Mines is content to maintain the 120 per cent. rate; the Rand Selection scores a marked advance.

Mexican Eagle Oil Company.—The annoyance which the Stock Exchange may feel at the unsatisfactory and peculiarly timed announcements of the Mexican Eagle Oil Company does not help the bewildered shareholders, who want some independent opinion of that company's prospects in Mexico. The statement which the financial agents of the company issued on Tuesday last regarding this year's operations is certainly depressing. Hitherto the expenditure on exploratory drilling has been confined to an amount equivalent to the profit on refining the company's own production, which has enabled the company to write off each year the whole cost of its exploration for new oilfields, leaving the profit on oil purchased and refined to provide for depreciation generally and the first preference dividend. If the dividend due on April 30th next is to be postponed till June, then it must be taken that the exploratory work is practically eating up both the profits on crude oil produced and crude oil purchased, and that if it so continues for a few years without new fields being discovered, there will be nothing left of the company's resources except the physical assets. Is it conceivable that the Mexican Eagle Oil will come to that? A critical stage has certainly been reached, as will be appreciated from the following table:—

	Year 1922.	Year 1923.	Year 1924.
	Barrels.	Barrels.	Barrels.
Crude oil produced	12,390,429	9,251,591	5,300,000
Oil purchased	4,418,910	11,100,000	13,600,000
Total shipments	22,619,149	21,609,000	18,000,000
	\$	\$	\$
Gross profits (Mexican gold)	26,815,709	19,590,395	?
Exploration outlays (Mexican gold)	1,525,493	7,604,970	..
Depreciation and reserve	6,141,465	7,390,905	..
Distributed in dividends	12,786,726	4,093,687	..
Carried forward	4,632,560	5,141,392	..

The profit this year has been "seriously affected" by the prolonged strike at the Tampico refinery, which has naturally put up the overhead cost. Further, the profit derived from sales in the Mexican domestic market and in Central America will show a "considerable reduction" as compared with 1923, due mainly to increased competition and the political conditions in Mexico. Moreover, the cost of crude oil purchases was "somewhat higher" than in 1923. Against these adversities must be set the exchange profit resulting from the fall in the sterling value of the Mexican peso. It is hardly wise to attempt to guess the net results this year, but it would be surprising to see the gross profits (after allowing for exchange profits) at a figure much above, and they may be below, \$15,000,000. If the conservative policy of writing off the cost of exploratory drilling and providing for adequate depreciation is to be maintained, and the first preference dividend continued next year, then the Mexican Eagle has to find new production or extend existing fields or purchase crude oil very favourably in the immediate future. What are its chances? We think its chances are decidedly better than they were, say, six months ago. The Standard Oil subsidiary has recently discovered what seems to be a new pool in the heavy oil districts north of Cacalilao. The Mexican Eagle holdings in Corcovado are, as far as can be gathered, in the immediate neighbourhood, and, according to the statement, are being "actively tested." Then the Doheny interests not long ago brought in a gusher in new

THE FIRST NATIONAL BANK OF BOSTON

territory at Tres Hermanos, north of the "Southern Fields," from which only "stripping production" is being obtained. This shows that extensions of the once prolific "Southern Fields" are not impossible. Hence the Mexican Eagle exploratory drilling in the Tamiahua Lagoon has good chances of success, especially in view of the encouraging evidence already found. The company's "stripping production" in the "Southern Fields" has been maintained, and operations are being continued in the Isthmus of Tehuantepec, where small producers of lighter grade oil have been obtained. But it cannot be denied that time is against the shareholders. Not only has new production to be found in the immediate future if the first preference dividend is to be paid next June, but new production of the size and importance of the old-time gushers must be discovered if the former fortunes of the company are to be restored. The best that can be said is that nothing is impossible in Mexico.

Ind. Coope's Progress.—The brewery industry continues to flourish. This week we have to deal with two prominent undertakings interested in this trade, namely, Ind. Coope and Co. and Allsopp and Sons. It may be remembered that Ind. Coope and Co. was reconstructed under an arrangement sanctioned by the Court in 1912; this company holds all the issued capital of the Leeds and Batley Breweries, and has a controlling interest in Bindley and Co., Robinson's Brewery, and B. Grant and Co. As will be seen by the following table, the advent of the war and post-war events were both very favourable to the progress of the concern:—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve &c.	Carried Forward.
£	£	£	£	£	£	£
1914..	110,821	58,332	28,516	..	..	14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,494
1917..	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345
1922..	349,982	55,986	48,879	137,000	60,000	104,482
1923..	347,880	60,482	48,534	90,375	50,000	109,226
1924..	378,302	61,792	45,416	116,250	50,000	153,490

The ordinary distribution is on a generous scale. In addition to a dividend of 15 per cent., a bonus of 10 per cent. is declared. In 1919 the capital of this undertaking was increased from £400,000 to £600,000, and in December, 1922, to £1,000,000. The issued capital at present is £600,000. On turning to the balance-sheet, the most noticeable item is goodwill, which remains unchanged at £375,000, although the company is enjoying a wave of prosperity. Properties are up from £1,586,110 to £1,720,784. Cash at £234,442 compares with £166,292 a year ago, and stocks at £221,393 are £55,000 higher. The balance-sheet is analysed in our usual column.

Allsopp's Year.—For the twelve months ended September 30th last a further improvement is recorded in the accounts of Samuel Allsopp and Sons. Ordinary shareholders in particular will probably be gratified with results which enable the directors to declare an ordinary dividend of 5½ per cent., as against 4½ per cent. a year ago. The

following table shows how the undertaking has fared over a period of years:—

	1914-15.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.

Carried forward	16,647	21,116	19,661	20,013	19,979	19,954	19,325

The drop in the amount of debenture interest paid in 1922-3 is due to a change in the form of accounts, which brings in interest on the 4½ per cent. mortgage debentures as a charge before calculating the balance available for distribution. In consequence the amount charged a year ago was for nine months only. In the accounts before us interest for the full 12 months has been charged. Depreciation and repairs need slightly more this year; in other directions there is little room for comment. It may be recalled that in 1913, under a scheme of arrangement, the authorised and paid-up capital of this company was reduced from £1,870,000, consisting of £770,000 ordinary and £1,100,000 preference stock, to £744,250, made up of £19,250 ordinary and £55,000 preference stock; in other words, the two classes of capital were reduced by 97½ and 95 per cent. respectively. Preference stocks were then consolidated into £74,250 ordinary stock, and the capital was increased to £1,200,000 by the creation of 651,500 ordinary and 1,600,000 participating preference shares of 10s each. In January, 1922, the ordinary stock was converted into £1 shares. Another scheme of arrangement was entered into with the 4½ per cent. debenture holders, which was sanctioned in 1915. The balance-sheet will be found analysed on another page. On the whole, it is an informative statement. It would be stronger if the item of £700,000 for goodwill could be reduced.

Oversea Correspondence.

UNITED STATES.—GOVERNMENT BOND ISSUE—OCTOBER RAILROAD EARNINGS—COMMODITY PRICES HIGHER—RECORD BANK CLEARINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 8.

Thus far, the Government's new financing programme has met with marked success. There has been a big oversubscription to the offering of about \$200,000,000 30-year 4 per cent. bonds, total applications approximating half a billion dollars, and, according to Washington advices, very satisfactory progress has been made with the first part of the Treasury's fiscal operation, which will involve the refunding or retirement, by December 1, 1929, of more than \$8,000,000,000 Government obligations. The new bonds are to be dated December 15, 1924, and will mature on December 15, 1954, although they are redeemable after 20 years, at the option of the Treasury Department, on four months' notice. While the current offering is for approximately \$200,000,000, the Secretary of the Treasury has reserved the right to allot additional bonds to the extent that Third Liberty Loan 4½ per cent. bonds, maturing September 15, 1928, and Treasury notes of Series A-1925, also Treasury certificates of indebtedness of Series TM-1925, both maturing March 15, 1925, are tendered in payment. Treasury certificates of indebtedness falling due on December 15th will likewise be accepted in payment for the new bonds, but will be considered a part of the cash offering. The latter is restricted to the necessary cash requirements to carry the Treasury until the March (1925) financing period. On December 1st of this year there were outstanding \$2,978,776,250 of the Third Liberty Loan 4½ per cent. bonds, which mature in September, 1928; present indications are that the hopes of Treasury officials that a large amount of these will be converted into the new 20-30-year Government bonds will be realised.

While the new Treasury offering was the outstanding feature of the past week, financing by foreign governments and domestic interests reached unusually heavy dimensions. Excluding the Government's offering, new bond issues offered to the public totalled nearly \$96,000,000. If this pace is maintained throughout the month, as now seems likely, approximately \$500,000,000 of new bonds will have been offered in December. Recently there has been a material falling off in the volume of State and municipal issues, but this has been more than offset by foreign financing, which last week included an issue of \$30,000,000 Argentine Government 34-year external sinking fund 6 per cent. gold bonds of 1924, Series B, offered here at 95, and interest to yield over 6.35 per cent. to maturity, and \$10,000,000 French National Mail Steamship Lines 25-year 7s, guaranteed by the French Government. Under the terms of the agreement covering the recent \$30,000,000 Argentine flotation, the New York banking syndicate, which underwrote that issue, has the option of taking \$10,000,000 more on the same conditions; the syndicate also agrees to purchase \$20,000,000 Argentine Treasury notes to refund a like amount of notes maturing February 25th of next year. Many other pieces of foreign financing are being negotiated here. Among the largest loans, and one that is considered imminent, is an issue of Belgian Government bonds, which may amount to as much as \$100,000,000.

During October, Class I. railroads in the United States established a new high record for any month since the war in net operating income. The latter totalled \$127,105,100, or \$23,329,400 more than in October a year ago, and \$10,000,000 greater than the record earnings for September of this year. Not since August, 1918, have these carriers reported a total even approaching that for October. Net operating income for October of this year was equivalent to an annual return at the rate of 5.91 per cent. on the tentative property valuation as of January 1, 1923. The amount allowed under the Transportation Act is 5.75 per cent., but railway officials contend that the tentative valuation fixed by the Interstate Commerce Commission is much below the actual value of their property. For the first ten months of this year the railroads have cut their expenditures for maintenance by nearly \$193,000,000, or about 10 per cent.; this big saving is due to the excellent condition of equipment and road bed, as a result of extensive outlays for such purposes in previous years. For the first ten months of the present year, combined net operating income amounted to \$805,075,000, as compared with \$826,616,250 in the same period of last year.

Commodity prices generally continued to soar during November. Bradstreet's index number as at December 1st was \$13,5289, representing a gain of 1.3 per cent. for November and of 10.6 per cent. from the low point of this year on July 1st. Last month's rise in general price levels was the fifth successive advance since July 1st. Only three of 13 groups declined, namely, textiles, building materials, and naval stores, and the declines in these were slight. On the other hand, nine groups advanced, including breadstuffs, live stock, provisions, hides and leather, metals, coal and coke, oils and miscellaneous products. Compared with the August 1, 1914, index, the December 1st number is 55.4 per cent. higher.

Total bank clearings at 122 cities in this country last month reached the second largest monthly total of this year, and the highest figure ever recorded for November. Although there were only 23 business days last month, clearings aggregated \$39,089,888,000, which was 1.3 per cent. below the year's high record for October, but 15 per cent. above the total for November of last year. Ordinarily, November is a light month so far as bank clearings are concerned. The main reasons for the big showing in the eleventh month of this year are found in the tremendous activity in stock market speculation and in the enormous bond sales, together with marked expansion of business in a number of lines, notably the steel trade and industry. For the eleven months of this year, bank clearings at 122 cities totalled \$400,987,026,000, an increase of 9.2 per cent. over the like period of 1923. The gain at New York City was 15.2 per cent., and outside of New York, 2.4 per cent.

FRANCE.—NEW LOAN RESULTS—FURTHER BORROWING—BANK RATE—RECONSTRUCTION FINANCE—REVENUE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, December 17.

THE new issue of 5 per cent. ten-year Treasury Bonds has proved unexpectedly successful, and the Government is now amply provided with resources to meet the end-of-the-year payments. It was announced on Monday by the Finance Minister, M. Clementel, that it is now definitely known that subscriptions to a total of 4,936 millions have been received. When the lists were closed a week ago the hope was entertained in official circles that the 4,000 millions, which it was the object of the loan to raise, had been subscribed, but there were fears that this total might not have been reached. The final details will not be known, however, until the earlier part of next week, and as several large subscriptions are known to have been received at the last moment, it is probable that the total will exceed five milliards. The whole of the yield from the new loan will be entirely fresh money, as subscriptions had to be made in cash. It is stated that an exceptionally large proportion of the bonds were taken up by small investors, who were no doubt attracted by the fact that the issue must be redeemed within ten years with a bonus of 50 per cent. of the amount invested. Colour is given to this statement by the fact that, according to the latest available return of the French savings banks, covering the period from December 1st to 10th, withdrawals amounted to no less than 18,689,351f, as compared with deposits of 5,789,591f. The same return indicates that since January 1st the total surplus of deposits at these popular banks has amounted to only 510,827f. The fact is explained on the ground that small savers, who formerly used the savings banks, are now more and more being tempted by the higher rates of interest paid on National Defence Bonds and similar issues.

Encouraged by the success of his first venture, M. Clementel has announced that, now the Budget has been balanced, he proposes in the near future to arrange for the issue of a huge new loan, with the triple object of unifying, consolidating, or renewing the existing debt. The Minister repeats that not a centime of the new loan will be applied to meet ordinary Budget purposes, as the Government is firmly resolved to undertake no fresh expenditure unless the cost thereof is met from current taxation. M. Clementel's argument appears to be based on the fact that it was found possible to arrange for the recent Morgan loan to be issued at 94, against the bare signature of the French Government, whereas Germany has been able to secure a loan, even at the lower price of 92, only by consenting to a long list of guarantee conditions. He recognises, nevertheless, that it will not be possible to repeat this success unless a determined effort is made still further to improve the situation by a carefully planned consolidation loan. To this end he proposes to create an entirely new organisation, to be known as a Caisse d'Amortissement, which will have the power (which the Government does not at present possess) to buy in, on the Bourse, for redemption purposes. The new body will be under the control of a board of directors consisting of high public officials, financial experts, and representatives of the various great economic, industrial, and other organisations of the country. With a view to ensuring the complete success of the forthcoming consolidation loan, M. Clementel proposes, as an inducement to holders to exchange their existing scrip against the new issue, to offer them the descriptions of securities that will meet their several tastes. He is now working out a scheme to issue simultaneously several different categories of securities, including bonds yielding the normal market rate of interest, others yielding lower rates of interest, but offering substantial lottery prizes, and yet others which, while paying a low rate of interest, will carry valuable rights in the way of exemption from taxation, &c. In this way he expects to please all tastes. In the Finance Minister's opinion, France has now passed the culminating point of her financial difficulties, and from January 1st next her situation can only improve. The question of inter-Allied debts, as might be expected, continues to be regarded here as distinctly a thing apart.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEWART, Chief Manager.

The action of the Bank of France in raising its discount rate from 6 to 7 per cent. has led to the question being raised as to whether this will have any repercussion on the rate of interest that will be allowed in future on Treasury and National Defence Bonds. The Minister states categorically that he does not propose to modify the present rates, in view of the fact that these securities are exempt from all taxation, and of the satisfactory manner in which they continue to be absorbed by the public.

Now that the loan has been issued, M. Clementel's predecessor, M. de Lasteyrie, has lost no time in combating the allegation of the present Ministry to the effect that the recent issue became imperative owing to the Poincaré Government's having left unprovided for a deficit of 4,000 millions on the current financial year. This alleged deficit, M. de Lasteyrie shows, was merely a paper one, and included notably an item of over 2½ milliards of credits authorised before 1919, representing expenditure which was long ago paid off, and which involves no real burden on the present financial year.

Architects and contractors interested in the reconstitution of the devastated regions are bringing pressure to bear on the Government to set forth the manner in which the financing of the work yet to be done is to be accomplished during the coming year. For the time being, construction is practically at a standstill for want of ready money. Out of a total estimated expenditure of 90 milliards, 20 milliard francs have yet to be furnished. The progress that has been accomplished may be gauged from the fact that the reconstructed area is now yielding about 5,000 million francs in taxation per annum, as compared with only 964 millions in 1919. Meanwhile money is so scarce that the Government is being urged to allocate to reconstruction work all cash above 4,000 million francs that may have been produced by the recent loan. The Minister responsible has promised that 6,000 million francs shall be devoted to reconstruction work in 1925, but his proposals as to the manner and form in which this money shall be provided are regarded as entirely unsatisfactory. Only 2,500 millions of the amount, it is proposed, will be in cash, but this sum will first have to be voted by Parliament and then to be raised by a further Crédit National loan, the success of which is regarded as doubtful, in view of the present low quotations of these bonds. In any case none of the money would be available before April, and even then small claimants and school reconstruction would absorb most of it under their priority rights. The balance of the total would be payable in 30-year obligations (which experience this year has shown to be almost worthless, from the practical point of view), and ten-year obligations. The latter have a nominal value of 96 per cent., but are quoted in the market at 75 per cent. only, hence contractors find it politic to cease operations entirely rather than accept these bonds in payment.

The return of taxation for November shows that the total revenue during the month (exclusive of that from the Postal and Telegraph Department, which is now dealt with under a separate return) amounted to 2,472,994,900f, as compared with 3,047 millions in October (which is the highest figure ever reached), 2,015½ millions in September, 1,788½ millions in August, and 2,529½ millions in July. Of this total, 2,376,544,400f was from "ordinary and permanent" sources, the "exceptional" revenue, which amounted to 153,573,500f, being drawn from

various sources, and including 57,123,000 from the now expired special tax on war profits. The revenue for the month shows an increase of 512,415,900 as compared with the corresponding month of 1923. For the first eleven months of the year the total revenue from normal sources has amounted to 23,112,660,700, or 4,893,692,400 more than during the corresponding period of 1923. The revenue from indirect taxation and monopolies during November worked out at over 144 millions in excess of Budget estimates, the total excess of this kind for the eleven months now being 2,258,995,700. While the luxury tax yielded only 1,676,000, or about 60 per cent. of what was expected from it during the month, the tax on turnover produced 369,193,000, or 58,131,000 more than had been anticipated. Registrations were 50½ millions in excess of estimates, and stamp duties nearly 12½ millions above them. Income-tax yielded 718,747,800 millions, or over 254 millions more than in November last year, largely through stricter methods of collection.

The foreign trade returns continue satisfactory, exports during November having had a total value of 3,432,683,000, while imports were valued at 3,414,967,000, these figures indicating a falling off of 100 million francs in exports on the month and an increase in imports of about 17 millions. The month's exchanges, however, still leave a balance of 17,716,000 in favour of this country (as compared with one of about 134 millions in October). The figures for the first eleven months of 1924 show an increase of 37½ per cent. in the value of the exports and of 25 per cent. in that of the imports as compared with the corresponding period of 1923. The total balance in favour of this country since January 1st last now amounts to 1,398,000,000, as compared with an adverse balance of 1,063,000,000 on the first eleven months of 1923. The exports of manufactured goods during the eleven months have been over 7,984 million francs more than during the same period of last year, while the imports of the same category of merchandise has increased only by 652 millions. The imports of raw materials, on the other hand, are returned as having increased by over 5,124 millions. In weight, the total imports have decreased during the past eleven months' period by 300,365 tons, while exports have increased by 266,237 tons.

GERMANY.—CABINET—REPARATIONS BONDS—COMPANY FINANCES—BUDGET—CURRENCY AND PRICES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 16.

THE Cabinet crisis is likely to be solved before very long, but an entirely satisfactory solution is excluded by the composition of the new Reichstag; for while the General Election undoubtedly registered public approval of the policy so far pursued by the Marx Cabinet, it produced no sufficient change in party relations of strength to make any party combination inevitable. The much-talked-of "bourgeois Cabinet," which means bringing in the German-Nationals, but keeping the Social-Democrats out, is plainly impracticable. As was the case during the crisis over the Dawes bills last summer, the Nationals, now that the possibility of office stares them in the face, are by no means enthusiastic. They realise that a reversal of Dr Marx's foreign policy is out of the question, but in view of their past utterances they cannot admit this. Meantime, important questions await solution: the commercial treaties, the tariff, taxation reform, and the never-resting question of restoration of debts.

The first stage of distribution of the Reparations Industrial Bonds has been reached. The Finance Ministry announces that the proportion of company capital taken by the bonds is 17.1 per cent. This figure has been reached on the basis of the property tax assessment of December 31, 1923, and it shows the total taxable net assets of the companies concerned to be 29,240 million marks. This distribution concerns the industrial bonds only in their relation to the Allies. The domestic distribution will be different. The Dawes Committee,

taking into account that the bonds scheme as defined in its report would unequally burden various interests, suggested internal redistribution, as a matter for Germans themselves, and the suggestion has been taken up. Contrary to the original plan, the companies will not issue individual bonds to be handed to the trustee, but bonds in favour of the Bank for Industrial Bonds, which will in turn create a uniform type of industrial bond for the trustee. Only some of the greatest concerns, whose combined bonds burden is 1,500 million marks, will issue individual bonds, and of these only 500 million marks will be realisable in the open market. The effective burden will not be in the nature of private bonds or mortgages for a total capital sum of 5,000 million marks, but rather of periodically varying liabilities for interest and amortisation, the amount of which for each individual concern will change according to (1) the varying value of all chargeable industrial property, and (2) the varying value of the chargeable property of the individual concern as shown by recurring property-tax assessments. The 5,000 million mark bonds really represent only the Allies' security. They are imposed on all concerns in industry, shipping, and private railways, in so far as these concerns are assessed for property tax at 50,000 marks or more. Each will be liable (after the moratorium and semi-moratorium years) for 6 per cent. on 17.1 per cent. of its taxable property. The ultimate dimensions of the burden on an individual concern, however, will be known only when the internal redistribution plan above referred to is carried through under the Contributions Law (Aufbringungsgesetz), which requires proportionate contributions towards interest and amortisation from concerns outside industry proper, i.e., commercial, banking, and insurance concerns, &c. (but not from agriculture), which reduces the exemption limit for all classes of concerns to 20,000 marks.

The industrial gold-mark balance-sheets now being issued indicate that, given normal business conditions, the industrial bonds burden can be fairly easily borne. Analyses of the first 300 or 400 of the balance-sheets show that the average financial strength is considerably greater than it was in 1913. In general, the companies increased their assets, in particular their land, buildings, and plant, while their liabilities did not proportionately increase and often declined. Hence the average capitalisation as refixed to-day is considerably higher than before the war. Some classes of industries, in particular those connected with munitions, profited more than others. The biggest gainers seem to be chemical concerns, next engineering, while certain non-war industries, such as paper and wood, have come off badly. The munitions industries were obliged to expand their plant, and often they were helped in this with State credits, which they repaid very cheaply; and during the mark-depreciation years all classes of companies got rid easily of their pre-war long-term debts. The following table of assets, compiled from the pre-war and the new balance-sheets of the seven companies in the "Aniline Concern," shows how far expansion could go under the influence of war and inflation:—

	Dec. 31, 1913.	Jan. 1, 1924.
Land, buildings, plant	180,700,000	317,340,000
Wares in stock	102,970,000	214,680,000
Interests in other concerns	33,130,000	200,050,000
Cash, claims for debts, &c.	149,330,000	197,400,000

The total value of assets is 940,370,000 marks, against 480,510,000 marks in 1913. On the liabilities side, short-term debts increased from 58,040,000 marks to 136,710,000 marks, but as bonds and mortgages dwindled from 70,480,000 marks to 9,230,000 marks, the surplus of assets is very much greater than in 1913; so that, after refixing reserves at 145 millions, against 166 millions in 1913, the new capital could be fixed at 645,000,000 marks, against 144,000,000 marks. In the ten intervening years the Aniline concern issued stock worth at exchange of the subscription date about 300,000,000 gold marks. The real gain from war conditions and currency depreciation seems to have been about 200,000,000 marks. On such concerns the Reparations bonds would appear to lie lightly; but the doubtful question of the companies' net

earning powers under the changed conditions of to-day has yet to be cleared up.

The total debt of the Republic on October 31st was 3,266,500,000 marks, of which 415,600,000 marks were Dollar and Rentenmark Treasury Bills, 1,435,500,000 marks bank debts, including 1,200 million marks to the Rentenbank, 926,400,000 marks to the Foreign loan, and 489 millions guarantees, &c. To the Reichsrat has been submitted the estimates for the financial year 1925, with the official warning that they have little meaning. The estimates of revenue for 1924 are summarily repeated for 1925, on the bad ground that taxation is about to be changed. In 1925 the direct tax yield is expected to fall below that of 1924, in which it has so far considerably exceeded the estimates. Another ground for uncertainty is that the agreement with the States and municipalities regarding subventions terminates at the end of the current (1924) financial year. This uncertainty has not prevented the Finance Ministry's entering the subvention for 1925 at 1,357,600,000 marks. In general, the 1925 estimates seem to be pure guesswork, which, if the Government keeps to its plan to revise taxation before the spring (among other changes, the Sales Tax, now 1½ per cent., is to be further reduced to 1 per cent.), will require complete recasting. The chief figures are: General Administration Budget, ordinary: revenue, 5,500 million marks, whereof 4,100 millions from direct, 1,000 millions from indirect taxes; recurring expenditure, 5,100 millions, non-recurring 184,400,000 marks. From the surplus a sum of 161,700,000 marks balance is allotted for the War Burdens Budget. General Administration Budget, extraordinary: revenue, 155,900,000 marks; expenditure, 433,400,000 marks, which includes 141,200,000 marks towards the War Burdens Budget. The amount to be raised by loan is 277,500,000 marks. The War Burdens Budget totals 162,200,000 marks ordinary expenditure and 1,238,000,000 marks extraordinary expenditure.

The credit situation has much improved. Interest rates are still moving downward. In a public speech the Reichsbank President, Dr Schacht, states that under the new banking law the Reichsbank is sovereign over the currency, that the reichmark's gold parity will be maintained, and that business must adapt itself to this fact. The foreign credits which are abundantly coming in, added Dr Schacht, are mostly short-term, and the Reichsbank must be prepared for their withdrawal should foreign interest rates rise. This consideration is behind the bank's policy of accumulating exchange. The bank's holding of gold and exchange (the exchange being shown in the returns only in so far as it is booked as legal cover) totals over 2 milliard marks. Private capital, said Dr Schacht, is reaccumulating. Banking and savings bank deposits have doubled since the beginning of the year, and now total an estimated 6½ milliard marks. The Reichsbank has already considered the reduction of its discount rate. Credit is still being rationed by the bank, but the ration of April, 1924, has been increased 15 per cent. Dr Schacht appealed to the commercial banks to work for the restoration of a private discount market. The Government has authorised the lending of Rentenbank moneys to agricultural credit institutions, without waiting for the proposed conversion of the bank. A Government decree requires the substitution of "Reichsmarks" (i.e., new Reichmarks) for "Gold-Marks" and "Rentenmarks" in taxation and other accounts, including the new company balance-sheets.

The official wholesale prices index number for December 10th is 129.8, against 128.5 one week earlier. The *Wirtschaftskurve*, published by the *Frankfurter Zeitung*, gives the following index figures (on the basis of 100 in 1914) for manufactured articles:—

Motors	150.00	Metal-thread lamps	93.67
Motor-cars	198.84	Bottles	170.00
Diving belts	105.56	Plates	88.46
Bicycles	137.70	Boilers	120.18
Typewriters	140.95	Woollen stockings	270.00
Writing tables	100.00	Boots	136.36

Unemployed on November 30th numbered 436,000, against 427,000 on November 15th. This is probably the usual seasonal increase. The improvement in the iron and steel industry continues, and prices have risen considerably.

The syndicate for semi-finished materials has been formed, the Gutehoffnung concern alone staying outside. The reports published here concerning the proposed International Steel Cartel are contradictory. At a time when part of the foreign Press reported that Franco-German negotiations with this aim had been suspended owing to the conviction that all European countries, including Great Britain, must be roped in, some organs of the Rhenish-Westphalian Heavy Industry were proclaiming that no negotiations at all for a syndicate had taken place, but only negotiations directly connected with the pending Franco-German Commercial Treaty; and some of these German organs still declare that an international steel syndicate is undesirable, and even, in view of the absence elsewhere of national organisations resembling the new German Steel Syndicate, impossible.

Although the final report for 1924 has not yet been published, it appears that the belief that the harvest was very bad is mistaken. The Statistical Bureau's data, which, however, are not yet complete, indicate that the yield of wheat was only about 5 per cent. below the advance estimates made in August, of rye 4.2 per cent. below. This would mean 16 per cent. less wheat and 14 per cent. less rye than in 1923, but 1923 was a very good year. The potato crop exceeded by 1,500,000 tons, or 4.7 per cent., that of 1923.

Stocks, after a brief set-back at the beginning of the Cabinet crisis, have been active, and quotations have held well. Interest is concentrated on mining and metallurgical stocks, owing in part to a favourable balance-sheet of the Kloeckner concern. In general, the metal and mining companies seem to have come well out of the currency revolution.

INDIA.—TEA PRICES—STEEL BOUNTY—COTTON MILL PRODUCTION—CURRENCY COMMISSION.

(FROM OUR CORRESPONDENT.)

CALCUTTA, November 27.

THE visit of an America tea expert has directed renewed attention to the large sums being spent on promoting tea consumption, coincident with a deliberate restriction of production, which has raised tea quotations to the high levels now operative, while simultaneously encouraging a remarkably active and persistent demand for tea shares. While consumption continues to expand, the statistics so far available show that Indian production this year is not likely to exceed last year's outturn, and until conclusive evidence is forthcoming that consumption is undergoing permanent extension, the cautious policy followed by producers since the heavy slump experienced in 1920-21 is likely to continue. It is recognised that present prices are exceptionally profitable, and may tend to curtail demand; but tea companies have considerable arrears to make up in the way of profits, and are well content to accept the good fortune Providence (assisted by a judicious manipulation of the markets) has sent them. While high dividends are being distributed—to reward old investors and attract new ones—a portion of current profits is also being utilised for garden improvement in preparation for larger outturns as soon as market conditions appear to render relaxation of present restrictions expedient. Russia, for the first time since the war, is making direct purchases in the Calcutta market, but the large sums spent on tea propaganda in the United States, despite Sir Charles Higham's gallant effort, have so far

THE NATIONAL BANK OF GREECE

A HISTORY

of the Financial and Economic
Evolution of MODERN GREECE

by

M. S. EULAMBIO.

Managing Director of the National Bank of Greece.

Price 15s. 0d.

EYRE & SPOTTISWOODE, LTD., EAST HARDING ST., LONDON, E.C.4.

not yielded much fruit. More Indian and Ceylon tea is being consumed in America, but at the expense of China and Japan tea, which is, therefore, forced to find other markets—the net gain to the tea industry being, therefore, exactly nil. It is beginning to be realised here that newspaper advertising, unsupported by other forms of propaganda, is bound to leave tea consumption in America more or less at its present figure. Meanwhile, in view of present prices, British consumers can afford to regard American restraint with considerable satisfaction, inasmuch as at the present moment a large increase in the American demand would send London quotations skywards.

The Government of India, rather than raise the tariff on steel beyond the standard fixed in May last, has decided to concede the Tata Company a bounty, based on output, not exceeding 50 lakhs of rupees per annum, utilising in this fashion a percentage of the larger revenue derived from the higher steel tariff already operative. There is no reason to anticipate that the Legislative Assembly, at its January meeting, will fail to endorse this proposal. That the rise in exchange since the Steel Protection Act was adopted has entirely nullified its intentions was demonstrated to the Tariff Board by facts and figures which placed the contention beyond challenge. On the other hand, to vary the tariff with every fluctuation of one or two pence in the sterling value of the rupee would have made the steel import trade a hopeless gamble while simultaneously inflicting an unfair burden on consumers. Accordingly, the *via media* now put forward has met with general approval. A bounty, if easy to concede, is also more easy than a tariff to withdraw. It benefits one concern only, and need not continue beyond the duration of the exchange fluctuations that constitute its *raison d'être*. The new concession will not avert the necessity of a capital reconstruction of the Tata Steel Company, the over-capitalisation of which the Tariff Board estimated at approximately four crores of rupees, the sum now being freely mentioned as the amount shortly destined to be "written off." The bounty possesses another significance. It places beyond all doubt the determination of the Government of India to secure the conservation and extension of the Indian steel industry until such time as it can dispense with State aid, and satisfy the main requirements of the Indian market. The deliberate endeavour of the Continental steel producers to drive the Indian industry out of the market cannot, therefore, in any circumstances, succeed.

The Lancashire industry has "stolen a march" on the Indian cotton mills in provoking a share boom, but there are unmistakable signs that the Bombay mills will soon be again earning substantial profits. In August yarn output was 9 per cent., and the output of woven goods 22.5 per cent., better than in August last year. The following statement shows, in thousands of yards, the production of piecegoods woven in Indian mills, compared with the imports of such goods from foreign countries:—

FIVE MONTHS (April to August).

	1924.		1923.	
	Production.	Imports.	Production.	Imports.
Grey and bleached ..	563,000	566,796	458,924	454,016
Coloured.....	233,295	153,612	199,942	140,500

In the same five months the value of goods woven in Indian mills was Rs. 23,92 lakhs, and of imported goods Rs. 29,27 lakhs.

It is now believed, in well-informed quarters, that at the end of the present busy season, with its testing experience, another Royal Commission will be appointed to investigate Indian currency and exchange problems, and review, in the light of later experience, the validity of the conclusions arrived at by the Babington-Smith Committee, which reported in 1919. Indian interests will naturally press for strong representation on such a body, but the advisability of appointing an independent chairman, unassociated with any of the many previous inquiries, is generally recognised. The necessity of a fresh survey not being challenged, the only remaining doubt concerns the selection of the period most appropriate for initiating an inquiry. Abnormal and confusing as international conditions still remain, it is hoped the situation will have become sufficiently stable to permit of a reasonably accurate visualisation and interpretation of the main factors in the

case next year. It would be optimistic to hope that its conclusions, whatever they may be, will command general assent, but any programme put forward on its own responsibility and initiative by the Government of India would, outside official circles, probably command no support at all.

Sir Basil Blackett is consequently wise to delegate his responsibility. It is said of the last Commission, which went so wildly astray in its conclusions, that its *personnel* was predominantly non-Indian, and that the minority report, which made a more correct forecast, was the sole production of an Indian expert (Sir Dadiba Dalal, until recently India's High Commissioner in London). It will probably be found expedient on this occasion to place the Indian *personnel* on the Commission in a majority, thereby carrying the delegation of responsibility a stage further, and disposing in advance of the persistent insinuation that India's currency and exchange policy is shaped primarily to promote British interests.

SPAIN. — NATIONAL WEALTH—NEW ISSUES — RAILWAY REORGANISATION—BUDGET.

(FROM OUR CORRESPONDENT.)

MADRID, December 11.

A FRESH contribution to the few existing estimates of the national wealth has been recently published by the Banco Urquijo, which arrives at the following figures:—

	Capital Value in million pesetas.
Agriculture.....	76,675
Live stock	10,119
Mines	7,093
Buildings	35,700
Industrial production	48,247
Railways.....	7,000
Mercantile marine	300
Capital of limited companies.....	9,500
National Debt	12,623
Gold and silver	3,214
Banks' current accounts.....	6,179
Stocks of merchandise.....	1,500
Total wealth	218,150

According to reliable critics, the compilation has been very carefully conducted, but the figures arrived at should not be taken as final owing to the lack of reliable statistics, specially in respect of industry and commerce. At a Congress of the Spanish Chambers of Commerce, held in 1923, the total figure of the national wealth in the year 1895 was given at 58,548 million pesetas, and taking both estimates with the necessary reserves, they would show that the wealth of the country is now 3.72 times greater than 29 years ago. For the sake of comparison we state below the wealth of some European countries in 1919 (according to the *Annuaire General de la France et de l'Etranger*), and of the United States (from a recent estimate by the Department of Commerce) all converted in pesetas:—

	Total Wealth. Mil. Pesetas.	Population.	Individual Relative Wealth. Pesetas.
United States.....	1,661,765	109,000,000	15,225
Great Britain.....	330,000	45,300,000	9,492
Germany.....	400,000	90,000,000	6,666
France.....	320,000	41,000,000	7,804
Italy.....	90,000	36,500,000	2,465

Although the wealth of these countries is now greater than five years ago, the comparison should incline us to the conclusion that Urquijo's figures, which give a mean figure of 9,900 pesetas per capita for Spain, are too optimistic, and should be discounted.

The necessity for renewing a line of bonds falling due on November 4th was seized on as the occasion to ask for 300 millions fresh money. This issue was subscribed nearly nine times over. It took the form of four-year 5 per cent. bonds, redeemable at a premium of 1 per cent. After this issue the total short-term debt outstanding amounts to 4,325 millions pesetas. In view of the difficulties in Morocco, and the frequent assaults on the stability of the present régime, the result of this call on the market is a striking display of confidence in the future of the country. Many private issues of capital have also met with full success. Among others, the new *Compañia Telefonica Nacional de*

España issued 23,700,000 pesetas in 7 per cent. cumulative preferred shares, and the Andaluces Railway Company have placed 16,000,000 6 per cent. debentures.

In accordance with the terms of the Royal Decree of July 12th, the companies had to decide within three months whether they would come into the new system or abide by their old concessions. The second alternative meant the suppression of the 15 per cent. increase of rates authorised by the Government a few years ago, and the State grant to pay for the last rise in the salaries of the men. The two items mean for the North of Spain Company a reduction of income amounting to 65 millions, and to the Madrid Zaragoza and Alicante Company, a decrease in receipts of 58 millions pesetas, and the 1925 balance-sheet of those companies would have closed with a net loss of 30 and 36 millions pesetas respectively. There was, therefore, no real alternative for the big companies but to fall into line with the new organisation.

The official result of the Budget for the fiscal year ended on March 31st last establishes the deficit at 576,315,000 pesetas. The yield of taxes continues to increase. For the first quarter of the present fiscal year the receipts were 862 millions, against 830 for the same period of 1923.

CZECHO-SLOVAKIA. — BUDGET DEBATE — STATE FINANCE — HOUSING — EXCHANGE — AUSTRIAN TREATY.

(FROM OUR CORRESPONDENT.)

PRAGUE, December 4.

THE debate upon the Budget was not marked by any material criticism from the Opposition, and, in the absence of the Germans, the Magyars, and the People's Party, it was carried without any real resistance. During the course of the debate, and in the Press, much attention has been drawn to criticism, in certain English journals, of the conduct of State finance in Central Europe, and especially to the suggestion of international financial control in this new republic. Strong objections are made to these criticisms on all sides. Czech State finances, it is asserted, never stood in such a good position, and foreign capital is assured, *e.g.*:—The yield of the State Tobacco Monopoly (which is one of the guarantees for the State loan raised in England in 1922) is 1,048 million crowns, as against an estimate of 1,000 millions, and for next year the estimated yield is over 1,700 million crowns, which will cover both capital and interest of the loan. As to the charge that artificial tariff barriers have been created by the political settlement in Central Europe, it is pointed out that Austria, Hungary, and Germany have all raised their Customs tariffs, whereas Czecho-Slovakia, by its series of commercial treaties, has considerably reduced her tariffs.

Some financial papers, however, take advantage of this foreign criticism to emphasise the need for a better understanding of the real condition of the State finances, now that the evils of the deflation policy have been realised in bitter experience. Industrial capital has paid dearly for the somewhat precipitate deflation policy pursued for the last three years. It owes to the banks debts to the value of 30 milliard Czech crowns (i.e., at present rate of exchange, 5 milliards in gold). Bank capital has, of course, gained tremendously. The largest single bank, Zivnostenska Banka, has a reserve of five milliard Czech crowns. Increases in interest on deposit accounts amount to .5 per cent., whereas the increase of debt amounts to 1.5-2 per cent.

The crisis in the building trade is also attributable to the same cause. Most of the new buildings were started in 1920 or 1921, when the exchange was at its lowest, and credit available. Deflation led to heavy losses by the building corporations—losses which must ultimately be met by the taxpayer, *e.g.*:—A corporation for erecting dwelling-houses started with a capital of 10 million Czech crowns, two millions of its own and eight millions borrowed. In 1921, when the exchange was 5 cents to the crown, the houses were worth 500,000 gold crowns, and debt to bank 400,000 gold crowns;

to-day the houses are worth 500,000 gold crowns, and debt to bank 1,300,000 gold crowns.

The national desire to maintain an *unnaturally* high exchange has led to this position, in which the banks can go far towards eliminating all trade not dependent upon themselves, and to dictating prices, even though the State must suffer because the merchant cannot pay taxes.

Great hopes are entertained as to the benefits to be derived from the Austro-Czech Commercial Treaty, just signed at Vienna. The former agreements between these two countries—the compensation treaty of March 12, 1919, the tentative commercial agreement of May 5, 1921, &c.—were really only introductions to the treaty now concluded. The importance of these two countries, the one to the other, may be realised from the fact that Czecho-Slovakia's exports to Austria amount to 23.2 per cent. of her total exports, to the value of 228.9 million gold crowns; while Austria exports 10.2 per cent. of her goods, to the value of 104.8 million gold crowns, to her neighbour. Czecho-Slovakia stands first in the list of nations exporting to Austria, and third among those importing from her.

The latest commercial treaty, drawn up upon the basis of "best-favoured-nation" agreements, involves reductions in Customs tariffs upon more than 33 per cent. of the goods dealt in by the two countries. Especially important are the facilities agreed upon as regards the exchange of raw material, semi-finished and finished products.

Transport difficulties between the two countries have been removed by agreeing to mutual liberty of transport, including freedom from Customs upon the same. There is to be no delay or limitation of transport except for technical reasons, or of public security and the like. This is the first tariff agreement signed by Austria since the war, and it is hoped that it will be a basis for the settlement of Central Europe and the increase of trade and improvement of conditions among all the former Austro-Hungarian territories.

HONG KONG.—PUBLIC FINANCE—PUBLIC WORKS—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

HONG KONG, October 31.

ON the day that Dr Sun Yat Sen came very near to destroying the ancient metropolis of South China the Governor of Hong Kong was presenting his estimates for the ensuing year, exhibiting a sound financial position, in striking contrast to the penury of the neighbouring capital. Budget time in Hong Kong causes little excitement, but the rapid growth of revenue and expenditure to figures more than double those for the year preceding the Great War has attracted rather more attention than usual.

For 1925 there is estimated an expenditure of \$30,463,000 (approximately £3½ millions sterling), against a revenue of \$21,812,000 (£2½ millions), leaving a deficit of 8½ million dollars. These figures compare with an actual expenditure of \$21,572,000 and revenue of \$24,783,000 for 1923, and revised estimates of \$26,120,000 expenditure and \$23,800,000 revenue for the present year. The deficit anticipated for 1925 will be set off against the steadily accumulating balance of assets over liabilities, which is expected to be about \$14 millions at the end of this year. It is, however, extremely unlikely that the deficit will amount to so high a figure as \$8½ millions, for the estimated revenue from opium (one of the principal sources of income) has been based on the assumption that means will be found for checking the demand for the drug, a pious hope which has been cherished for some years past, but seems further off from realisation than ever. Land sales, which last year yielded \$3½ millions, are also expected to bring in less, but, as in the case of opium, all depends upon the course of events in the Republic, for as the War Lords wax fat so does the flow of "squeezed" money continue to pour into this safe deposit, where it is absorbed by the property market.

The largest item of expenditure in the Budget is on account of public works extraordinary, over \$9 millions

having been allotted under this heading, as compared with \$1½ millions in 1913. Much of this will be spent on road construction in continuation of the policy of opening up the more remote districts of the island and the new territories on the mainland initiated by a former Governor, the late Sir Henry May. There are, of course, many other directions in which this money will be used, for the Government is committed to various schemes for the development of the colony and its all important harbour. As there is no municipal authority in Hong Kong, all work of this nature is within the province of the Public Works Department, which is directly under the control of the Government. Hitherto this department's undertakings have been financed from current revenue, and although this arrangement may be continued for a few more years, the Governor warned the Council that before long it will be necessary to resort to loans, the many schemes of development in contemplation being too costly to be met by the present generation of taxpayers. This warning was accompanied by a very interesting outline of policy which appears to be well suited to the situation here. Briefly, the suggested method is to finance minor development work out of revenue; to float in London a long-dated inscribed issue of Government stock for works of permanent value to the colony, such as the contemplated water works, which will be of considerable magnitude; and for development schemes which involve a heavy initial outlay, but bring in a big return on completion, principally harbour reclamations. His Excellency recommends short-term debentures or Treasury Bills. It is certainly refreshing to find the executive abandoning the old policy of saddling the present-day taxpayer with the entire cost of improvements which will be of greater benefit to future generations, but unfortunately Sir Reginald Stubbs' term of office is nearing completion. It is to be hoped that his policy will receive the approval of Whitehall, if it has not been inspired from that quarter, and be commended to future Governors.

A good deal of plotting is going on amongst the various prominent Chinese who have taken refuge in Hong Kong, and bonds issued with the guarantee of the Merchants Volunteer organisation are being hawked round the local markets and are being widely purchased. The bonds, which are issued in various denominations from \$100 downwards, bear interest at 10 per cent., and are redeemable in six months, by which time it is hoped that Canton will be in the hands of Chan Kwing Ming. Whether the funds so raised will be sufficient to tempt Chan Kwing Ming to move in the matter remains to be seen.

In the meantime, the excitement caused by the tragic events of two weeks ago has subsided, and trade is gradually being resumed, although a number of business houses in Canton are still closed. The country is undoubtedly bare of supplies, and means will be found to meet whatever demand there is, but considerable uneasiness prevails amongst dealers, and there seems to be no immediate prospect of a return of confidence without which there can be no all-round expansion in the trade of these parts.

Letters to the Editor.

BANKERS AND SHIPPING COMPANIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In six typical cases of compulsory liquidation of "boom-promoted" shipping companies, recorded during the current year, the joint stock banks have figured as creditors for some £450,000. The proportion of the amount which has been, or will be, recovered cannot be precisely estimated. In three instances realisation of total assets is known to have produced less than half the sums due to bankers—to say nothing of other creditors—but it is believed that a substantial percentage of the overdrafts of the bankrupt companies was backed by guarantors, recourse to whom may have proved, or will eventually

prove, effective. There remains, when all is said, a strong presumption that the salvage likely to accrue to the banks from these recent "shipwrecks" will not obviate the necessity of writing off considerable sums as bad debts. It may also be safely assumed that the liquidations were forced by the banks at this juncture lest such assets as were in sight should "waste" to zero. Deterioration of cargo tonnage is capable, under unfavourable conditions, of proceeding rapidly.

Under these circumstances it is of interest to note that, while the joint stock banks do not figure in Lloyd's Register as shipowners, they still none the less effectively "own" a not inconsiderable quantity of tonnage, whose trading operations they may not indeed control, but whose existence is entirely at their disposal. To illustrate the position, without claiming that my researches are exhaustive, I have amalgamated the accounts of 18 shipping companies, registered for the most part in 1919, and thus endeavoured to construct a synoptic picture of what represents in the main the "Bankers' Fleet." This combined argosy comprises 64 vessels, all of the "tramp" type, variously aged and sized. The fleet's aggregate tonnage (round figures are given for simplicity throughout) amounts to 158,000 gross tons, of which all but 36,000 tons was built prior to 1914, while 68,000 tons is over 20 years old. The average size of each unit works out at just under 2,500 tons, and the average age at 14½ years. There will accordingly be a tendency for the fleet's operations, on account of vessels' size, to be restricted to the European coal and ore trades—where rates are peculiarly depressed—while, in view of average age, costs for renewals, repairs, and general running expenses may be expected to be heavy.

The vital question, however, for the "owners" is the value of the assets. The fact that these are found to stand in the books at £4,550,000 has little more relevance than the consideration that the original shareholders—now "late," as well as absentee proprietors—were induced to subscribe £3,450,000 of capital. In parenthesis, one may hope that these unfortunate investors are not grudging by their banking successors the first (and final) dividends which optimism distributed in 1920-21. Having regard to recent sale prices, we consider £6 per gross ton a fair value to place on the "Bankers' Fleet." As there are no other net assets disclosed by the amalgamated balance-sheet—the "combine's" creditors, excluding bank loans, claiming £125,000 more than the aggregate of the assets, less the fleet—it is difficult to put the total value of this shipping property at more than £1,000,000. Against this security, bank loans amount to no less than £1,127,000. How far these loans are guaranteed by third parties is unknown. It is certain that if the banks foreclosed, and this quantity of not very attractive tonnage were thrown rapidly on the market, there would be a deficiency as between the banks and other creditors of much over half a million sterling. On the other hand, this "fleet in pawn" gets older, less able to compete with new economical tonnage, every month. Its net earning capacity is represented by a minus quantity, the combined results of its component units' last year's trading, after paying interest on banks' loans, but before providing anything for depreciation, showing a loss of £78,000. The joint stock banks would appear to be in the position of having bought for £7 a ton an elderly fleet which is not succeeding in earning interest on, much less providing for amortisation of, the capital sum invested by the banks on the security of an already inadequate and yearly wasting asset.

There is talk of an early shipping "boom," and M. Meyer, Under-Secretary of State for the Mercantile Marine of France, is reported to be considering the constitution of a State-aided "crédit maritime" to provide approved advances to shipping companies. If such advances are not to be limited to French "nationals," the English banks would doubtless be agreeable to assign to this "crédit" at—to borrow the phrase of our estate agents—"a very reasonable consideration" some million and a quarter sterling's worth of advances "found surplus to the requirements of their portfolios."—Yours, &c.,
December 2nd, 1924.
SCRUTATOR.

CANADA'S PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have just been reading the *Economist* of December 13th, and the article entitled "The Problems of Canada," by "A Recent Visitor." I am astounded to read, on page 951: "Canada has been overbuilt with railways.....But, instead of the investor losing his capital, the Government has taken on the responsibility for a large amount of unremunerative capital." Has the writer not heard of the Canadian Government's treatment of the shareholders in the Grand Trunk Railway?—Yours, &c.,

ARCHIBALD F. F. SMITH.

64 Ennismore gardens, S.W. 7, December 15th, 1924.

[Our correspondent is quite right in calling attention to the writing off of certain items in the capital of companies now included in the Canadian National railways. But these are greatly exceeded by the enormous amount of bonded indebtedness for which the Canadian taxpayer has assumed liability and is paying interest, though there is no prospect of the earnings of the systems being sufficient to meet these charges.—Ed. Econ.]

Books and Publications.

THE MERCHANT NAVY.*

THIS is the second volume of Mr Hurd's History of the Great War, and carries the story from the sinking of the "Lusitania" down to the declaration of "unrestricted submarine warfare" by the Germans on February 1, 1917.

It is very much to be welcomed that the magnificent manner in which members of the merchant service performed their arduous duties should be placed on permanent record, and this volume certainly does not suffer from lack of material. The author has, moreover, extended the normal meaning of his title to include the activities of mine-sweepers and certain other classes of mobilised merchant seamen, whose work was none the less important by reason of the lack of publicity usually assigned to it. The story is told in a manner at once able and fair, and the author, who has enjoyed access to official documents, is to be congratulated on the efficient manner in which he has performed his task. He has often chosen to leave to the gallant survivors the task of telling their tale in their own unvarnished way, and to allow the reader to draw his own conclusions as to the brutality of a mode of submarine warfare unrestricted in all but name long before the official German declaration of February, 1917. From the point of view of the general reader, however, it would probably have been preferable to have limited the number of incidents which are contained in this volume, and to have relegated those cases which do not call for particular comment to a special appendix. There is a certain sameness in many of the sinkings which are reported, and it is difficult, even for Mr Hurd, to avoid an element of monotony in this long catalogue of ruthlessness, the resistance of which, however, forms not the least glorious of the many great achievements of the British race.

Few things stand out more, perhaps, during the period covered by this volume than the story of the sinking of the steamer "Coquet" early in 1916. The unfortunate crew were left in open boats in the Mediterranean 200 miles from land, and those who survived the attacks of the elements were left to suffer death or imprisonment at the hands of the Bedouins of Tripolitana. The account of the cynical brutality of so many German commanders is, even at this space of time, a despicable one, though it is pleasant to find it broken here and there by touches of human kindness, such as that of the commander of the raider "Seeadler," who, on learning that one of his victims and his wife were on their honeymoon, provided them with a special state-room.

Particular mention should be made of the calm and

* "The Merchant Navy." By Archibald Hurd. Vol. II.; xviii + 464 pp. (London) John Murray. 21s.

judicial manner in which the author writes of the trial of Captain Fryatt, a man who "upheld a right which is vital to those who go down to the sea, and defended it with constancy, loyalty, and unflinching courage." This case of murder, with some, at least, of the appearances of legality, made even the friends of Germany ashamed; while if its purpose was to strike terror into the hearts of our merchant seamen—and there could have been no other—it was as futile as it was immoral, as shortsighted as it was illegal.

AGRICULTURAL ECONOMICS.

THIS volume* is one of a series of social science textbooks, edited by Dr R. T. Ely, of which it is the sixteenth. It is significant of the interest taken in the subject in the United States that this is the second of the series which deals with agricultural economics, while another, dealing with marketing for agriculture, may also be included in the same category.

Dr Gray has aimed at the production of a text-book, not only for the use of students, but also adapted to the needs, as he expresses it, "of the large class of general readers whose interest in the economic problems of agriculture is being awakened." He has succeeded in achieving both objects. The book is carefully planned on a closely analytical method, so that the subjects dealt with in each chapter can be easily followed and readily remembered, while at the end of each chapter is a series of questions on the text, and a list of books for suggested reading. The requirements of the student using the book mainly in preparation for examinations are thus met in the most convenient manner. But the qualities of lucid and orderly sequence which commend the book to the student render it equally attractive to the general reader.

Dr Gray, in his preface, gives a faintly apologetic reason for postponing the chapters on value and price—"the central themes of economics"—to the end of the book. His plan is first to discuss the farm as a business proposition under different systems of farming, then to deal with the different factors of production, and, through a description of the process of marketing, to lead up to a discussion, from both the theoretical and practical sides, of the factors which determine prices. This appears to be a logical and readily defensible arrangement of the subject.

It only remains to add that the book is clearly written and contains a wealth of illustrative and informative graphs and tables. These are largely based on American data, but the matter of the book is none the less suitable for English readers.

* "Introduction to Agricultural Economics." By Lewis Cecil Gray, Ph.D. (New York) The Macmillan Company. 1924. 12s net

EDUCATIONAL IDEALISM.*

IT is an encouraging sign of the extent of genuine interest in and concern for education, that a fourth, revised, and enlarged edition should now have been published of the very scholarly and significant little book which Mr Lane Fox Pitt originally issued in 1913. He is a quite unrepentant, and at the same time, a thoroughly scientific, idealist. He holds that "a strenuous commercial life, as things are to-day, is not the best school for learning the nature of good, or high moral purpose"; that the methods of strenuous competition are out of place, more, are definitely detrimental to real education; and that sound educational method, without which there is no remedy for the ills from which we suffer, is only to be achieved when our teachers have a thorough knowledge "of the composition and working of the human mind." Included in that knowledge must be all the facts revealed to us by the newer schools of psycho-physics.

The genuine understanding of these fundamental facts would lead to the remodelling and readjustment of our whole educational system. Competition, in contradistinction to emulation, as an incentive to effort (and incidentally as the great fostering cause of egoism) would be abolished. Bribes would disappear. Punishment would be mitigated. Children would be discouraged from assimilating false ideals while their minds are young and plastic. Noble ideals would be placed before them, and we should contrive and continue, by suitable examples and illustra-

* "The Purpose of Education." By St George Lane Fox Pitt New Revised Edition. Cambridge University Press. 4s.

tions, to make these appear really interesting and attractive. Ideas so instilled tend to develop spontaneity of action; in a sense, they become instinctive, and would have vastly greater weight and influence over life and conduct than mere intellectual concepts acquired late in life.

Certainly no teacher or parent could fail to derive new and stimulating ideas from the perusal of this book; the stimulus will be all the greater from the fact that Mr Fox Pitt's pages are wholly free from the sort of "slick" talk with which one is only too drearily familiar in works on education. His is a clear and rigorous mind, and he never pretends that difficult things are easy.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, January 7. | ACCOUNT, January 8.

The principal event of importance in the Stock Exchange markets this week has been the commencement of dealings in the new Greek 7 per cent. loan. Allotments were on a very small scale, and a chorus of protest immediately arose from the more modest investor who found himself cut out altogether in such cases as those where his application did not exceed £2,000. The price opened at 6 premium, rose to 7½ premium, gave way a couple of points, and then recovered. A large volume of business has been done, and, notwithstanding the unfortunate impression conveyed by the method of allotment that the small investor has not received all the consideration to which he is entitled, a good deal of business has been done.

British Government funds are inclined to be dull, owing to the approach of the end of the year, which checks fresh buying. Thursday in this week was the final Stock Exchange settlement for the current year, and the next account is fixed for January 8, 1925. Consequently, people who desire to make as fair a show as possible with their bankers on New Year's Eve have been turning out stocks in order to realise the cash.

Dealings in the Consol market are for money only, but the desire to be supplied with funds in advance of the New Year is the reason why capital has hung back from seeking Stock Exchange securities at the present time. Victoria's offer of six million pounds 4½ per cent. stock at 98½ was not warmly welcomed.

The success of the Greek loan turned attention to the senior Greek issues, prices of which in most cases stand better on the week. A general fall occurred in Chinese bonds, owing to the default of payment of the coupon on the Hukuang Loan. The market in French descriptions has been dull, in consequence of the exchange. Germans maintain their price, the new scrip at 7½ premium, and a further rise in Peruvian preference reflected the satisfaction felt with the recently-issued report. Turkish bonds have been good also; the improvement in their case is due to the expectation that Turkey may be granted facilities for issuing a new loan under international auspices. Egyptians are steady.

While the steam stocks in the Home Railway market remain heavy, owing to the wage programme formulated by the N.U.R., the Undergrounds have gone ahead in brisk fashion, scarcity of stock being noticeable in this section. Grand Trunk Pacific debenture still feels the effects of would-be profit-taking. Mexican Rails are weak, on the speech made at the company's meeting by Colonel York on Wednesday. Argentine Rails, finding little public support, have tended to dwindle in price.

Raw rubber continues to advance in price, without bringing about any corresponding improvement in business. The public are doing little in rubber shares, most of the speculative attention being confined to tea shares, where substantial rises have occurred in most of the popular varieties and also in a good many of those whose names are less familiar. The dividends being declared at the present time are, on the whole, very gratifying to the shareholders, and the price of tea itself is well held. Amongst oil shares, Mexican Eagles fell sharply on the issue of the report, which tended to exercise a depressing influence upon the list, though Lobitos rose abruptly, despite the general limpness of oil prices. Courtaulds are what the market calls the star turn amongst industrials, the price jumping to the accompaniment of rumours that credited the company with having acquired an interest in a new and important branch of artificial silk manufacture. Other textiles are over-shadowed by the excitement that has surrounded Courtaulds. The tobacco market was a little disappointed by the British American Company's dividend.

A slump in Associated Portland Cement came about upon the liquidation of a line of stock—said by some people to be 150,000 shares. Upon this being absorbed there was a recovery from the lowest, and Eastwoods have been a strong spot. The banking market, with insurance shares, keeps very

hard, but in the shipping list, P. and O. deferred still feels the effect of a cautious speech made by Lord Inchcape at last week's meeting. Whisky issues have been prominently strong, on further amalgamation rumours. The newspaper group moved rather erratically. In the iron and steel market, the new issue of 6½ per cent. debenture stock at 99½ by Arm- the new scrip strong was a factor making for caution. The new scrip started at a discount of about 15s. Active Christmas trade is associated with the strength shown by stores and hotel shares. The wireless group is heavy, Marconis giving way, though Radios are supported from New York.

Dividend declarations this week by the Kafir gold-producers have passed almost unnoticed by the public. The market maintains a tolerably firm front, undisturbed by any fresh accessions of public business. There are a few reductions of dividends—e.g., from the Village Deep and the Langlaagte Estates. The passing of the dividend on Durban Deeps was unexpected, but a distribution on East Rands came as a pleasant surprise, without its having any influence on the price of the shares. Chartered have been a good market, touching 17s, and holding most of the strength. Diamonds are quiet, Paris lending little support, but the French have been heavy buyers of Rio Tintos, and this caused a brisk advance. Tin-mining shares are harder, West Africans participating in the improvement, and there has been a firmer tendency amongst Canadian mining shares, on favourable news from some of the properties. But the mining markets as a whole remain quiet, and animation can hardly be looked for on this side of the New Year.

NEW ISSUES.

Government of Victoria.—Issue of £6,000,000 4½ per cent inscribed stock, 1940-60, at £97 10s per cent. The loan is raised for the construction of railways and rolling-stock, roads, irrigation, and water and electricity development. Interest is payable half-yearly on January 1st and July 1st, and principle is repayable in London at par on July 1, 1960, though the Government of Victoria reserves the right to redeem the stock, in whole or in part, at par on or after July 1, 1940, on giving three months' notice. An annual sinking fund of 10s per cent. will be applied towards redemption. The purchase price is payable as to 5 per cent. on application and the balance on January 23rd, and six months' interest will be paid on July 1st. No details of the finances of the State are given in the prospectus, but, according to official returns, Victoria's debt on June 30th last amounted to about £124,000,000, which is now to be increased to £130,000,000. Of the former total £112,000,000 is employed in direct interest-bearing undertakings. The railways, in which £67,000,000 is invested, it is stated, are self-supporting, and last year revenue reached the "record" figure of £12,025,987. The interest and principal of this issue are not liable to taxation in the State of Victoria. This is a trustee stock, and can be recommended to investors.

Port of London Authority.—Issue of £3,000,000 Port of London 4½ per cent. inscribed stock at £98½ per cent. The proceeds are required mainly for the purpose of paying off temporary loans to meet capital expenditure on the improvement and development of the facilities of the port and the redemption of £1,000,000 Port of London 5½ per cent. inscribed stock. The stock now offered will rank as to security *pari passu* with the 3½ per cent., 4 per cent., and 6 per cent. inscribed stocks, and the "B" Port stock, and after the £9,379,752 "A" Port stock. The principal is repayable at par on July 1, 1960, the Port of London Authority having the option of redemption in whole or in part at par on or after July 1, 1940, on giving six months' notice. A sound investment.

Sir W. G. Armstrong, Whitworth, and Co., Limited.—Authorised share capital £11,012,500, of which £10,012,500 has been issued. Debenture stock for £6,257,000 is outstanding. This is an issue of £3,000,000 consolidated mortgage debenture stock at 99½ per cent., carrying interest at 6½ per cent. per annum. Repayment is to be made at par on December 16, 1939, but the company may redeem the whole or any part of the stock by drawings at 102 per cent. after December 16, 1926, on giving three months' notice, or by purchase in the market at any time at any price less than 102 per cent. The stock will constitute a specific mortgage on certain specified freehold land and works of the company in England, and a floating charge on all other assets, subject only to the mortgages and charges securing the existing debenture stock. The present issue is made for the purpose of funding floating indebtedness incurred in financing contracts for the provision of a townsite, warehouses, ships, and other utilities, works, and services in connection with the Newfoundland Power and Paper Company, Limited, and also for the purpose of financing other civil engineering contracts. The balance-sheet at December 31, 1923, showed net assets of £16,939,688. Adding the proceeds of the £2,000,000 three-year notes issued in the current year and the proceeds of the present issue of debenture stock, and deducting the 4 per cent. debenture stock, the second debenture stock, and the outstanding notes, the balance of assets is shown as £15,482,687. Profits are given for three years. For 1923 they were £655,651; for the two previous years they were very close to this amount. Interest on debenture stocks, including the present issue, will absorb £514,135. In view of the fact that the issued share capital is over £10 millions, the present new issue, unless the Newfoundland venture yields a steady return within a comparatively early period, will be something in the nature of a burden for shareholders.

Western Australian Bank.—Authorised capital £1,000,000, in £1 shares, of which £500,000 has been issued. This is an advertisement for information only, in compliance with the regulations of the Stock Exchange Committee. The Western Australian Bank was established in 1841, and has 50 branches and 29 sub-branches in Western Australia. For 36 half-years to March, 1923, dividends were at the rate of 20 per cent., free of State dividend tax. In January, 1923, the shareholders received, in addition, a share bonus of 20 per cent. For the three half-years ended September, 1924, 17½ per cent. was paid in each period, with a 2½ per cent. bonus for the six months to March last. Up to 1922 the issued capital was £250,000, but the share bonus distributed in 1923 brought it up to £300,000, and in the same year 78,000 shares were issued in Australia at £2 10s per share. In July last a further 122,000 shares were issued. At the last general meeting the directors were empowered to issue the balance of £500,000 of the capital, and in exercise of this power a City finance house has purchased 100,000 shares, and 50,000 shares will be offered in Australia. The new shares will not rank for any dividend for the half-year ending March 30, 1925, but will be entitled to a full dividend in respect of the half-year ending September 28th next. The additional capital is required "to deal with the increased volume of new business offering and the growing demand of the bank's customers, resulting from the rapid development and general progress of the State of Western Australia." This appears to be a sound issue.

Thorne and Company, Limited.—Authorised share capital £575,000, in 275,000 7½ per cent. first preference, 150,000 9 per cent. second preference, and 150,000 ordinary shares of £1 each, all of which has been issued. Particulars are advertised of this undertaking in order to comply with Stock Exchange regulations. The original company was incorporated in March, 1890, to carry on the business of exporters of cotton and other goods to China, and to acquire the business of auctioneering goods then carried on by Maitland and Co. at Shanghai. The original company was voluntarily wound up in 1904, and the present undertaking was formed with a capital of £150,000, half in preference and half in ordinary £5 shares. This was subsequently increased to the present figure, and in 1919 the preference interest was raised from 6 to 7½ per cent., while in the following year the shares were subdivided into £1 shares. In 1923 the concern was turned into a public company. Investors should be favoured with details of profits and a balance-sheet if they are to purchase these shares in the open market.

Massey's Burnley Brewery, Limited.—Authorised capital £350,000, divided into 100,000 6 per cent. cumulative preference shares, 150,000 7 per cent. cumulative participating preference shares, and 100,000 ordinary shares, all of £1 each. It is stated that £300,000 5½ per cent. mortgage venture stock is to be created. This is an issue of 150,000 cumulative participating £1 shares at par. The shares now offered are to provide the cash portion of the purchase price of Messrs Astley's properties and business, and also to provide additional working capital. The company has recently entered into an agreement for the purchase of a brewery business Astley's—for £320,000, of which £120,000 is payable in cash and the balance in debenture stock. For the past seven years the average annual profits of Massey's Burnley Brewery are certified at £22,879, and Astley's profits have shown an average of £32,747 for the past five years. It is estimated by the board that, after allowing for depreciation and interest on debenture stock, the annual balance will be sufficient to cover the fixed dividend on the preference shares two and a half times. The element of speculation is not absent.

Cobbold and Co., Limited.—Share capital £250,000, all of which has been issued. The company was incorporated in March, 1924, as a private company under the Companies Acts, 1908 to 1917, to acquire from Messrs J. D. Cobbold, P. W. Cobbold, and J. M. Cobbold, all of Ipswich, the businesses and assets of Cobbold and Co. and Cobbold and Son, brewers and wine and spirit merchants, of Ipswich, who had been established for over 200 years. The purchase price was £750,000, payable as to £250,000 in cash and as to £500,000 in £500,000 6 per cent. first mortgage debenture stock of the company at par, to be allotted to the vendors or their nominees. The company owns the Cliff Brewery, Ipswich, and some 270 licensed properties in and around Ipswich, 233 of which are freehold, 18 leasehold, and 19 copyhold. The £500,000 6 per cent. first mortgage debenture stock is constituted and secured by trust deeds, which contain a first mortgage upon the freehold, leasehold, and copyhold properties, and a floating charge on the company's other assets. This stock is limited to £500,000. It is repayable by means of an accumulative redemption fund commencing in 1928, and calculated to redeem the whole of the stock by the end of 30 years after commencement. The redemption fund will be applied in the redemption of the stock by purchase at not exceeding £103 per cent., or in drawings at £103 per cent. The stock is also redeemable at the option of the company at £103 per cent., at any time on six months' notice after September 30, 1928. Any stock not previously redeemed is repayable at £103 per cent. on October 31, 1957. These and other details are given in an advertisement in the Press made to comply with Stock Exchange regulations. The information offered is rather more than usual, but we are still in the dark as to the value of assets.

The Alcohol Fuel Corporation, Limited.—Share capital £200,000, divided into 147,180 "A" ordinary shares of £1 each and 105,640 "B" ordinary shares of 10s each. The issued capital consists of 141,875 "A" ordinary and 52,820 "B" ordinary shares. The object of the company is implied in its title. This is a prospectusless issue, and as permission is being applied for to deal on the London Stock Exchange in the shares of the company, we hope that those of our readers who intend to purchase the shares, and have no more information than that stated in the advertisement, will demand further particulars.

Tingha (N.S.W.) Hydraulic Tin Mines, Limited.—The authorised capital of this undertaking is £200,000, in ordinary shares of £1 each. Of these, 190,000 have been issued, and a further 10,000 are under option. This is an offer for sale of 109,500 ordinary £1 shares at par, by the Anglo-Oriental and General Investment Trust, Limited, who have subscribed for the shares in the first place. The company has been formed to acquire and work certain areas in New South Wales for alluvial tin, comprising a total of 2,817 acres. Certain contiguous areas have also been acquired, extending to about 539 acres, including water rights and sites for storage dams, which form the basis of a scheme of water races and reservoirs. It is stated in the offer that the Government of New South Wales has advanced to the lessees the sum of £15,000 for the development of the water scheme, of which £8,500 has been utilised. Approximately 10 miles of head-water race has already been constructed. As regards the mineral deposits, it is estimated that in certain prospected areas the tin oxide content amounts to an average of 2.71 lb per cubic yard. Preliminary expenses are estimated at £3,000. The purchase price is £100,000, and has been satisfied as to £80,000 in fully-paid shares and £20,000 in cash. The liability to the Government of New South Wales in respect of the repayment of a portion of the sum advanced will be met

in due course. The directors and their friends have underwritten 30,000 of the shares being offered, but at what commission is not disclosed.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED.

SATISFACTORY PROGRESS AND PROSPERITY.

IMPORTANCE OF VANCOUVER AS A SHIPPING PORT.

The twenty-eighth ordinary general meeting of the members of the British Columbia Electric Railway Company, Limited, was held, on the 18th instant, at the Great Eastern Hotel, Liverpool street Station, London, E.C., Mr J. Davidson (deputy chairman) presiding.

The secretary (Mr R. W. Bartlett, A.C.A.), having read the notice convening the meeting and the report of the auditors, The Chairman said: Gentlemen, I have to apologise for the absence of the chairman of the company, Mr R. M. Horne-Payne. He has asked me, as his deputy, to take the chair, and to read his speech to you, which I will now do, with your permission. It is as follows:—

"It is a very great pleasure to us to meet you to-day with a statement of affairs which reflects a year of satisfactory progress and prosperity. The net revenue of the company is £424 10s 9d, as compared with £416,472 7s 9d last year, despite the fact that in April, 1924, the company spontaneously made a large reduction in its charge for current for domestic lighting, as stated in the report. I am happy to be able to state that the public have demonstrated their appreciation of this policy, and realise that we are as constantly and as much concerned for their direct interests as we are for our own. The relations between the public and the company are most cordial.

THE DIVIDENDS.

"Interim dividends on the preferred and deferred stocks of 3½ per cent., free of tax, were paid to you in June last, and, as you will see from the report, we recommend you to approve the declaration of final dividends of 18s 8d per cent. on the preferred ordinary and £2 12s 2d per cent. on the deferred ordinary stock, both free of income-tax, making, with the interim dividends already paid, total dividends for the year of £4 16s 2d per cent., free of tax, on the preferred ordinary stock, and £6 9s 8d per cent., free of tax, on the deferred ordinary stock. These dividends are not large, but they will, no doubt, be regarded as satisfactory, having regard to the fact that we are able to pay them after making proper allowance for depreciation and providing in a proper manner for the upkeep of the property. In considering this matter we have also to take into account the fact that expansion in the territories served is once again the order of the day, and it is necessary for us to provide some time ahead the increased facilities which we know will surely be required from

Mr Mackay said he would like to know if the chairman could tell them whether there had been any revival of building operations in the Vancouver district.

The Chairman, in reply, thanked Sir William Fry for his congratulatory remarks. With reference to the inquiry as to the result of the reduction in the charge for electric current, it was too early to state the precise effects, but their experience of past reductions showed that consumption was always stimulated thereby, and he believed it would have the same effect in the case of the last reduction. In regard to building operations in Vancouver, he could say that when he was there last year and two years before he saw a tremendous increase in the number of houses being built, specially in the residential district of Point Grey.

The resolution was carried unanimously.

The Chairman next moved the payment of the dividends recommended by the directors, and the motion was seconded by Mr. G. P. Norton, and passed unanimously.

On the motion of Mr. Harold G. Brown, seconded by the Chairman, the Hon. Sir Frank Barnard, K.C.M.G., and Mr G. P. Norton were re-elected directors of the company.

VOTE OF THANKS TO THE PRESIDENT AND STAFF.

Mr T. Blundell Brown proposed a vote of thanks to the president and staff of the company in British Columbia, remarking that the shareholders had reason to be congratulated upon the manner in which the affairs of the company were conducted in Canada. The results of the past year's working were a better testimony than anything he could say as to the excellence of the management out there.

Sir Ernest Harvey, in seconding the motion, said he would like to take the opportunity of expressing the sympathy of the board with the Province of British Columbia in the death of the Agent-General, Mr Wade, which happened a short time ago. That gentleman had been a very able, capable, and hard-working representative of British Columbia.

The vote was unanimously accorded.

Messrs Price, Waterhouse, and Co., of London and Vancouver, were elected auditors of the company for the ensuing year, on the proposition of Mr D. Northall Laurie, seconded by Mr John Horne-Payne.

A hearty vote of thanks to the board for their conduct of the affairs of the company during the past 12 months concluded the proceedings.

MEXICAN RAILWAY COMPANY, LIMITED.

A YEAR OF DIFFICULTIES.

HOPEFUL OUTLOOK.

The 19th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 17th instant, at River Plate House, Finsbury circus, London, Mr Vincent W. Yorke (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, it was impossible for us to present any accounts at our last general meeting, and the accounts issued with the report before us to-day are those covering a whole year's working to June 30th last. I cannot help thinking that it would be better if we could fall into line with almost all the railway companies in the world and publish our accounts once a year instead of twice a year as we always have done, and I throw out the suggestion for your consideration.

A DIFFICULT YEAR.

The year we are reviewing has been a very troubled one. There was a serious revolution which lasted from early in December till early in February, a serious landslide on the mountain, and a serious strike of the port workers at Vera Cruz. Even after the revolution had been suppressed and through traffic to Vera Cruz had been resumed, it was some time before normal conditions of operation could be restored. There were constant attacks on trains by rebel bands, and persistent rumours of further attacks which not only prevented many passengers from travelling, but led to merchants diverting their shipments to other routes. In view of all that happened it is really rather remarkable that our traffic has not shown a greater falling off. The average daily earnings for the year were \$31,800, as against \$30,000 for the preceding year. We have taken no account in our figures of the charges for military movement of trains during the rebellion. As the fighting was mainly along our line, and both the Government and the rebels made extensive use of our services, the bill will be a heavy one, and we hope that eventually it will be paid to us.

We made every effort to economise in expenditure during the trouble, but found it no easy matter to do so. The salaries of the chief officials were cut down by 50 per cent., and the hours and pay of the clerical staff reduced to low figures, but the wages of the trainmen, who had to work all sorts of hours on military trains, were much higher than in normal times, and the men in

the shops had to be given work in order to enable them to live. The economies realised were, therefore, quite insignificant, and the expenses for the whole year were only some \$12,515, or £1,250, less than those of the preceding year.

We have earned the small sum of £17,800 as the result of operating the railway, and may, in my opinion, considering all the adverse features of the period, congratulate ourselves on having done so well. On the other hand, we have collected in increases of rates and credited to the Government in respect of indemnity during the year the large sum of £145,000, and it is by the collection of this money that we have been able to pay our current debenture interest and to keep our heads above water.

We estimate that there will be due to us about £2,500,000 when we have finally agreed with the Government the compensation owing to us under the Railway Law, and the accounts show that we have received just over £500,000 to the end of June last. To this there will have to be added about £70,000, so far as we can estimate it in London, which has been collected on account of the 10 per cent. railway tax. If we were in a position to earn a fair return from the operation of the railway, the sums which are thus being paid on account would be of the greatest service to us in enabling us to pay for the new equipment necessitated by the wear and tear of the long revolutionary period, and to liquidate the heavy arrears of debenture interest. As it is, the money can only be devoted to the payment of current interest.

CURRENT HALF-YEAR.

The results of operation for the current half-year were most discouraging, I am sorry to say. The gross traffics are about 7 per cent. less than the average of the three years 1920-23, while the expenses for the months of July and August show the high ratio of 94 per cent. to the receipts. On the one hand there is very little confidence in commercial circles, and, on the other hand, the demands of labour keep expenses at a very high level. In fact, our difficulties with labour are the most alarming feature of the situation. Not only are we paying more men than we require, and paying them at very high rates, but we are obtaining very poor service in return. The spirit of "Ca' canny" appears to be rampant among our employees, and trade unionism is exercising a tyranny which is in many ways without parallel on this side of the Atlantic. I feel sure that if the present state of the relations between employer and employee is allowed to continue, it will be impossible for capital in any sort of public service undertaking to earn a reasonable return. The remedy really lies in the public opinion of the country. We have seen a considerable revulsion lately in public opinion on these questions at home, and I saw certain signs of a similar revulsion in Mexico when I was last there, and the sooner that it manifests itself and is translated into action the better it will be not only for our interests but for the interests of the whole country.

The electrification of the mountain section, Esperanza to Orizaba, is now an accomplished fact. It has, of course, yet to be demonstrated that the economies which were promised to us will be realised, but at any rate it is most satisfactory that the preliminary trials have been made without any hitch, and I hope to be able to speak to you of a considerable saving in expense in six months time.

I will now read to you the cable which we received from the general manager this morning. He says:—

"General local conditions all over system good; locusts have not caused any serious damage. Owing to difficulties between Governments, British imports through Vera Cruz have already declined and will, I anticipate, be further reduced. Electric engines working satisfactorily, and doing better than was anticipated. By the end of the month no steam engines will be used upon mountain division. Labour conditions difficult, and at present hard to say if men will remain reasonable, but I feel hopeful. Government firmly established, and considerable economies already being discussed. A general hopeful feeling as to future prevails, but no great improvement in business can be expected without foreign financial assistance." I think that on the whole we may look on that as a hopeful and satisfactory cable.

POLITICAL SITUATION.

To turn to the political situation, General Obregon completed his four years' tenure of the office of President on November 30th last, and handed over his duties to General Calles. It is too early to say what the verdict of history with regard to the Presidency of General Obregon may be, but I believe myself that it will be a favourable one. He took over the Government in 1920 after the country had for seven years been distraught by internal dissensions, ravaged by bandits, and reduced in most parts to a state bordering on anarchy. With the exception of the two or three months of revolution at the end of last year and the beginning of this year, almost complete order has prevailed in all parts of the vast Republic during the whole period of his office. This remarkable result has been arrived at not by the exercise of the drastic brutality which

has disfigured so many pages of Mexican history, but by a combination of tact, firmness, and good humour which, to my mind, has been wholly admirable. His Government has shown their goodwill towards foreigners by entering into the agreement with the International Committee of Bankers, in which they acknowledge their indebtedness, and have paid not less than £3,000,000 in satisfaction of their debts. There can be no doubt that further substantial sums would have been paid by now if the abortive revolution had not absorbed so much of the energies and financial resources of the Government. He has had the satisfaction of seeing his country recognised by all the great nations of the world, with the exception of ourselves. In spite of the virtual and, latterly, actual rupture of diplomatic relations between our country and Mexico, his conduct towards this company has been invariably just and correct. Almost the last act of his Presidency was to sanction the arrangement with regard to the 10 per cent. tax. The question involved was a complicated one, and the company found itself in a delicate and difficult position, but the settlement arrived at is undoubtedly fair to both parties, and we cannot be sufficiently grateful to the late President for the friendly consideration which he has shown us on this and many other occasions.

GENERAL CALLES.

The personality of General Calles, who now succeeds General Obregon, is a matter of considerable moment to all interested in Mexico, and I feel that I ought to say a few words to you on the subject. Though I have not had the advantage of meeting him myself, I can quote to you the opinion of one whom I can guarantee to be a highly competent observer of Mexican affairs. He writes that "He is credited with all sorts of advanced and Socialistic theories, but foreigners who came in contact with him during his period as Governor of Sonora declare him to have been a most able administrator, a man of his word, and one who held fairly the balance between Capital and Labour." That is an excellent character to give to any man. He took advantage of the short period which intervened between his election as President and his assumption of office to make an extensive trip over a great part of the Continent of Europe and the United States. I am sure that his visit there will have been of great value to him both in making clear to him how much Mexican credit has depreciated on this side of the Atlantic, where it once stood so high, and how the acute differences of recent years between Capital and Labour have been, or are being, arranged in the various countries. The experience which he will have gained must have made clear to him the great need of capital in which Mexico stands to-day, and how hopeless it is for her to expect to get it until the demands of labour there are moderated to such an extent as will enable businesses engaged in public service like ours to earn, at any rate, a modest living.

I spoke to you at some length at our last meeting on the subject of the diplomatic relations between Great Britain and Mexico. I feel the situation to be a very delicate one, and I do not wish to-day to say anything more than that I most fervently hope that some bridge may be found at the earliest possible moment, so that without any loss of dignity on either side the old relations of friendship and affection may be re-established between the two countries.

The resolution was carried unanimously.

WESTERN ALLIANCE REINSURANCE COMPANY, LIMITED.

AMALGAMATION APPROVED.

An extraordinary general meeting of the Western Alliance Reinsurance Company, Limited, was held, on the 15th instant, at the registered offices, Nos. 37 to 41, Gracechurch street, London, for the purpose of considering, and, if thought fit, passing a resolution providing for the amalgamation of the company with the Consolidated Assurance Company, Limited. Mr E. A. Colquhoun, the chairman of the company, presided.

The chairman called upon Mr J. C. Gould as an independent director to state the reasons which had influenced the board in coming to their unanimous recommendation that the offer of the "Consolidated" Company should be accepted.

Mr J. C. Gould recalled that the company had been formed in 1919, the shares being issued at a premium of 1s. There had been no underwriting or promotion profit of any kind, and the directors had been able to recommend the payment of a dividend of 5 per cent. from the first year of operation, a course which had established a precedent. That policy had, however, been justified, in that dividends had been continued each year, and for the last 2½ years increased to 6 per cent., while, at the same time, the assets of the company had appreciated to £86,331. Those years had not been altogether easy. The year 1921 had been a bad fire year for the company, and since 1922 the marine business with all companies had given anxiety. In the case of their own company, however, the funds were more than adequate to meet all claims.

FACTORS INFLUENCING BOARD'S DECISION.

The board had also had to study carefully the company's investments and securities. The entry of the Labour Government into power had caused a slump in gilt-edged securities, which had taken some time to recover. In addition, they had been faced by the bugbear of rates of exchange with violent fluctuations which could not be foreseen, and, furthermore, the collapse of certain reinsurance companies in this country had led to much more onerous terms and conditions being insisted upon by the ceding companies. The success of the Western Alliance had been achieved only by careful and conservative management. The company had been managed by the Consolidated Assurance Company (Limited) since its inception, and in view of the fact that the close of the current year terminated that management agreement, consideration was given as to what steps might be taken in order to reduce the ratio of management expenses, and also to meet the increasing competition from former enemy reinsurance companies, who had again entered the field. After consultation with the Consolidated Assurance Company (Limited) the management of that company had suggested that those difficulties could be best solved by amalgamation or absorption. The prospects of sharing in a world-wide and 21-year-old reinsurance organisation, combined with the terms offered, the relief of the uncalled liability of 10s per share, together with the guarantee of a final dividend of 3 per cent., less tax, were such that the directors, after full investigation by Mr Wheelock and himself, had felt bound to recommend the offer to the shareholders. The result would be to establish, with good business, the strongest British reinsurance company that existed.

MR GOULD'S VIEWS.

Mr Gould, in reply to questions from shareholders, said: In the first place, let me say that we independent directors, myself, Lord Amthill, and Mr Wheelock, are grateful to the Consolidated directors for having given us all information, and laid before us every source of information that we required. Although it is not within the province of any one of the directors at this meeting to discuss the position of the Consolidated Company, I think I may say that we, having had vested in us certain authority on behalf of the shareholders, and being men of recognised standing, if I may say so, we can be taken as having carried out our duties honestly. The Consolidated Company has not, nor has it in this past year, had to face any unprecedented or heavy losses. With regard to the price of the shares, there is no means of saying what price the Stock Exchange will place on a share.

You must remember that the City Equitable crash had a very deleterious effect on the prices of the shares of all insurance companies, and it is that influence which to a certain extent has prejudiced the value of all reinsurance companies' shares. On the top of that, too, a number of reinsurance companies formed in 1918-1920 have had a most unfortunate experience, and all that has tended to make the shares of reinsurance companies something to be regarded carefully when considered for investment purposes. All that has a tendency to depress values. I do not know that I can say anything more than that the Consolidated Company paid a 10 per cent. interim dividend this year. We have investigated the accounts of the Consolidated Company most fully, and we have nothing to fear.

The motion was carried unanimously, and a cordial vote of thanks to the chairman terminated the proceedings.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

SATISFACTORY RESULTS OF THE AMALGAMATION.

The annual general meeting of the Bank of London and South America, Limited, was held, on the 17th instant, at River Plate House, London, Mr J. W. Beaumont Pease (the chairman) presiding.

The secretary (Mr J. A. Stark), having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: To-day's meeting marks a distinct milestone on the path which this bank has travelled so long and so successfully. At the annual meeting last year I was able to tell you of the arrangements entered into with the London and Brazilian Bank, and to-day, with those arrangements completed, I am presenting to you for the first time a balance-sheet for the Bank of London and South America, Limited, containing the combined figures of the two banks. Last year I was addressing to all intents and purposes a single shareholder, to-day, with the accretion of the old London and Brazilian Bank shareholders, my remarks are directed to over 3,000 shareholders, although Lloyds Bank still remains the predominant partner.

Many of you will no doubt have been interested in trying to compare our present figures with those that have been presented to you on previous occasions, but I must warn you that any exact comparison is rendered impossible by the changed circumstances.

The amount of current, deposit, and other accounts at head office and the branches appears in the balance-sheet before you at £45,022,046, an increase of about £500,000 over the combined figures for 1923 of the individual banks. But if this year we had converted the London and Brazilian Bank figures at 16d, according to their former practice, our figures to-day would have shown an approximate increase of seven millions. Equally you may wish for an explanation as to the note appearing against the figures for the credit of our published reserve. This stands at £3,600,000. The same total as the combined figures of the former London and River Plate Bank, £2,100,000, and the London and Brazilian Bank, £1,500,000, but you will notice that, instead of £1,500,000 being specified as coming from the London and Brazilian Bank, the increase figure of £1,650,000 is specially noted on the balance-sheet as arising from that source.

The combined reserves already totalled £3,600,000, and were in excess of our fully-paid capital of £3,540,000. We considered that it was unnecessary to increase the reserve by the addition of funds which, until the amalgamation, formed a portion of the unallocated profits, and, therefore, decided, with the approval of both of our legal advisers and our auditors, to adjust the matter by transferring £150,000 (the approximate balance of the profit and loss account of the London and Brazilian Bank as at the date of taking over) from the London and River Plate Bank reserve to the reserve arising from the purchase of the London and Brazilian Bank, with the result that our total reserve remains at £3,600,000, and our profit and loss account has suffered no depletion. The figures for our current and deposit accounts, bills receivable, and bills for collection show a gratifying and healthy increase.

PROFIT AND LOSS ACCOUNT.

Our profit and loss account stands at £624,792. This figure has been arrived at after allowing for all bad debts, after paying off all the accrued expenses of the amalgamation of, and also after placing a very substantial sum to our internal contingency fund. Our cash at £11,688,799 bears a very strong proportion to our liabilities on current and deposit accounts, and the amounts of our advances, bills purchased and discounted, and our bills for collection show a welcome increase, reflecting the greater activity in trade. Of the total £52,991,594 under the omnibus heading, our bills discounted account for £16,700,000, and our advances for £16,200,000. Our premises account varies somewhat from the sum of the two individual banks' figures under this heading. This is caused partly, on the one hand, by additions and alterations in consequence of the amalgamation, and, on the other hand, by sales of properties vacated. Considerable receipts are anticipated in the future on this account, and you will be glad to hear that all the sales since the amalgamation have been effected at prices well above those at which they stood in our books. The depreciation on capital employed abroad at the rates of exchange ruling on September 30th amounted to £1,402,346. This unrealised paper depreciation has been reduced since that date by an improvement in the exchanges.

ARGENTINA.

The past year has been one of increasing prosperity in the Argentine Republic, in which it has been our privilege to assist and to share, exceptionally fine harvests have been enjoyed, the price of cattle has improved, wool has been in strong demand, and firm prices have been obtained for all classes of Argentine produce. During the nine months to September 30th 9,500,000 tons of cereals have been exported, an increase of more than two and a quarter million tons over the figures for the corresponding period of last year, and the price per ton has been very much more favourable this year than last. Meat shipments for the same period are 7,433,000 quarters of frozen and chilled beef this year, as against 4,800,000 last year, and the figures for mutton and lamb also show an increase. Exported by-products—hides, tallow, and the like—have been larger and of greater value, and the same applies to most of the other minor products—butter, flour, and other items that it is not necessary to detail. The outstanding feature of the 1923-24 grain shipments is the unusually high specific weight and clean condition of the grain. Cotton growing has become of some importance in the Republic of late years, but it cannot be said yet to have passed the experimental stage. The annual production is at present some 45,000 bales, of which 10,000 to 12,000 are consumed locally. Of the Argentine products consumed locally, the sugar and wine industries have been prosperous, especially the latter. The sugar crop, that averages more or less 240,000 tons per annum, is able, practically, to satisfy the country's needs. Whilst in 1911 Argentina imported 41,000,000 litres of foreign wine, in 1923 the figure fell to 2,640,000 litres.

As regards imports, when the 1924 figures are available there is good reason to believe that Great Britain will still head the list of shippers to the Argentine.

When reviewing the banking position in Argentina last year I ventured the opinion that better times were imminent. I am now

pleased to be able to say that my hopes have been realised. Although the past year has been marked by a general reduction in bank deposits, it is satisfactory to find there has been no diminution in our own. With a healthier upward movement in loans and advances there is a corresponding fall in the unemployed surplus cash reserves, and rates for discount and loan business—very weak earlier in the year when money was so plentiful—are now decidedly firmer.

The railways, encouraged by the continued friendly relations existing between them and the Argentine Government, are now undertaking several permanent improvements to their different lines, and are constructing many new stations in the suburban areas, enlarging their termini, and generally making their properties worthy of the important cities they serve.

The period under review has seen the biggest general export movement on record, and the manner in which the produce has been carried to ports of shipment without delay and to the satisfaction of all parties speaks volumes for the excellence of the railways themselves, and for the cordial assistance afforded them by the Government authorities.

The continual large exports have improved the exchange of the gold dollar from 40d a year ago to 45d to-day, and with the increase in public revenues tending to improve the national finances and the lack of any disturbing element in politics to cause anxiety it is not unduly optimistic to say that the outlook for the future appears promising.

URUGUAY AND PARAGUAY.

The hopes which I expressed last year that Uruguay was on the way to a return to its previous prosperity have fortunately been fulfilled. At the end of the country's financial year, June 30th, the pleasing announcement was made that instead of the anticipated deficit in the accounts of some \$4,000,000 there was actually a surplus of \$127,000. There is an evident desire in Government circles for sound finance, and the discussion of the Budget in the Chamber of Deputies manifests a wholly praiseworthy determination to keep expenditure within the limits of revenue. There is a satisfactory absence of political unrest in the country, for the President, Señor Serrato, displays a tolerant recognition of the rights of all parties and enjoys the confidence of the people. Favourable exchanges are stimulating imports, no commercial failures of importance have been recorded recently, and the outlook for trade in general is promising.

Paraguay now appears to have started on a period of peace and prosperity. A scheme presented to Congress, if approved, will provide not only for the resumption of payment of interest on the country's foreign debt, but also for an increase in the annual amortisation.

BRAZIL.

The period under review has been an eventful one for Brazil. Supported by the views of the British Financial Mission, the Government has rigidly adhered to its avowed policy of retrenchment, and it is a matter of universal regret that the process of reorganisation of its finances should have been temporarily interrupted by seditious movements in certain quarters during recent months.

The general adherence of the Brazilian people to the established régime justifies the hope that now the Government will be freed from further revolutionary attempts to hamper its efforts in the long and arduous task before it. That it is meeting with success is evidenced by the substantial reduction in previous years' deficits that is being effected. Continued progress on these lines, coupled with the reported considerable increase in revenue derived from new taxes—amongst these being that of income-tax—would lead one to assume that equilibrium in the Budget may be obtained in the not distant future.

Expansion in general is shown in Brazil's varied exports, and the enhanced prices of most of her principal products have led to severe stringency in monetary conditions. Long-term currency deposits are scarce, and lending rates have hardened correspondingly.

CHILE.

Taken as a whole, the commercial movement in Chile during the past year had been fairly good, and your bank, despite a few misfortunes, has shared in the prosperity. In my review last year it was stated that the total exports of nitrate of soda for the year to June 30, 1924, would probably reach 2,300,000 tons. They actually were 2,150,000, and since then the shipments for the last five months have been 1,056,000 tons, against 840,000 tons in the corresponding period of 1923. The f.o.b. value of those 2,150,000 tons was approximately £22,000,000 (including export duty), and it is not unreasonable to expect that the value of the current nitrate year's shipments will not be less.

Serious and decided efforts are being made to economise in many of the services, in contrast to the alleged extravagances of previous Governments, and it is to be hoped that those efforts will bear fruit and result in a higher level of exchange.

Our three branches in Colombia continue to progress satisfactorily. The effects of last year's crisis have not wholly disappeared in Bogotá, where our branch is now working in its new premises in the centre of the business quarter, but in Manizales and Medellín commercial enterprises have benefited by the rise in price of Colombian coffees. Mild coffee is the principal export of the country, and should its relatively high price persist for some time, all Colombian enterprises will naturally reap the advantage.

The report and accounts were unanimously adopted, and a dividend of 6 per cent., making 10 per cent. for the year, less income-tax, was declared.

On the motion of Mr Kenneth Mathieson, seconded by Mr L. D. Cunliffe, the retiring directors (Messrs J. W. Beaumont Pease, Follett Holt, R. A. Thurburn, E. A. Benn, and M. J. Bonn) were re-elected, and a vote of thanks to the staff for their loyal work to the bank during the past year was carried amid applause.

NATIONAL BANK OF SCOTLAND, LIMITED.

The ninety-ninth annual general meeting of the National Bank of Scotland, Limited, was held, on the 18th instant, at Edinburgh, the Duke of Montrose, K.T., the governor, presiding.

In moving the adoption of the report, his Grace said that when last they met they were looking forward to an improvement in trade after the very grave depression which had existed for two or three years, but he regretted that such had not materialised to the extent anticipated. Many trades and businesses were still suffering from unsettled exchanges on the Continent and in America, but they were hopeful of more stable rates following the adoption of the Dawes scheme by their Allies and by Germany. The directors had had a difficult year. Although the demands for fresh accommodation for trade purposes had not been so heavy as they would wish, all applications which came before the board had received careful and sympathetic consideration.

Coming to the balance-sheet, his Grace said the reserve fund had benefited to the extent of £50,000 from the year's profits, and now stood at £1,300,000, being £200,000 in excess of the paid-up capital. The experience of most banking institutions—and they were no exception—had been a gradual drop in deposits. Their figures, which stood at £31,018,368, showed a fall of approximately £1,300,000. This reduction was, he feared, not due to trade expansion, but to necessitous requirements by many of the depositors.

On the assets side the cash on hand and on short loan showed a small increase, the liquid position showing a satisfactory ratio of 24 per cent., against the bank's liabilities to the public. It would also be noted that the bank's investments in British Government securities had been reduced by £1,769,530 during the year, sales being necessitated by the withdrawal of deposits. It might here be remarked that these investments showed a large surplus, constituting an inner reserve of some value. A considerable amount represented by the above figures was on short-dated securities, and, in this respect, the necessity had not arisen of holding so much money in Treasury Bills as in former years. The advances for trade and other purposes, represented by bills discounted, loans on stocks and securities and advances on current account, of a total amount of £15,673,292, showed an increase of £675,685. The profit and loss account showed a net profit of £291,583. The dividend of 16 per cent., which had been paid for the past nine years, was again recommended, and with £50,000 placed to reserve fund, and other allocations on a liberal scale, a balance of £66,141 was carried forward to next year.

The report was adopted.

UNITED STATES DEBENTURE CORPORATION, LIMITED.

CAPITAL REORGANISATION APPROVED.

An extraordinary general meeting of the United States Debenture Corporation, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London, to consider resolutions for the reorganisation of the capital. Mr Robert V. Buxton, D.S.O., presided.

The secretary (Mr P. M. Spence) read the notice convening the meeting.

The Chairman, in moving the resolutions, said: The scheme which is now before you, and which we have called you together to approve, in our opinion, offers terms to the debenture holders which, we believe, gives them a better security and at only a slight cost to the shareholders, and, if approved by you, will place the capital of the company on a much sounder and better basis than heretofore. The great difficulty has been to offer the debenture holders sufficiently attractive terms to induce them to release the uncalled capital from their charge upon it. This charge the debenture holders have under the trust deed.

You will see by the scheme that we propose giving the debenture holders 15 per cent. more stock, but reducing the rate of interest from 4½ to 4 per cent. This will give them £4 12s of interest, instead of £4 10s. We also propose to make it impossible for the corporation to pledge its assets to a greater extent than 10 per cent. of its subscribed capital. Hitherto it has had power to pledge all its assets. A further proposal which will add considerably to the security of the debenture holders is that the corporation should limit the amount it may invest in any one security to 3 per cent. of the subscribed debenture and share capital.

The small increase in the interest payable to the debenture holders will only cost the company £1,050 per annum, which we consider reasonable in the circumstances; but, in exchange for this, the shareholders are to obtain the concession from the debenture holders that the amount which the company can borrow on debenture stock shall be an amount equal to the subscribed capital, so that when the capital of the company is increased, as we propose at present, there will be £367,500, amount of unissued debenture stock available, should a favourable opportunity arise for using the proceeds.

OBSTACLE SURMOUNTED.

The other difficulty was that, in raising fresh capital, there was the danger that the investment of the new money might not earn sufficient to enable the board to continue the dividend we have paid for the last four years—namely, of 12½ per cent. We believe we have surmounted this obstacle by arranging the share capital as set out in the scheme, by proposing that the share capital shall in future be on the basis of £1 of ordinary share capital to £2 of preference capital. Your directors are confident that, with reasonable prospects of investing the money in the future, they can maintain the dividend at 12½ per cent. In our calculations, your directors have assumed that they will be able to invest the proceeds of the new capital at an average return of 6 per cent. As a matter of fact, the investments made for some time past show a better average than that.

With regard to the terms offered to the 4½ per cent. preference shareholders, the shareholders may remember that this stock was taken as part of the scheme for writing off £1 per share some years ago, and in the prospectus it was set out that the uncalled capital formed part of their security, and therefore it was thought that they might have a slight grievance if they were not offered some small increase in interest for agreeing to the scheme. We propose, therefore, to offer them £87 10s of 5½ per

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital £10,000,000 Reserve Fund - £4,000,000	Issued Capital - £8,734,660 Paid-Up Capital - £4,367,330
---	---

The Bank, in addition to 6 branches in SPAIN, has, with its AFFILIATED INSTITUTIONS

THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

53 offices in the principal countries of LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under the laws of the State of New York) and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

cent. preference stock, which, although writing down their capital by 12½ per cent., gives them a yield of £4 16s 3d, as against £4 10s hitherto. Their stock will then form part of a large issue of 5½ per cent. preference stock, which should command a better market price than heretofore.

PROPOSED ISSUE.

Should you agree to the scheme before you, which, at present, is subject to the approval of the debenture-holders, we propose, after the consent of the Court has been obtained to the reduction of capital, to offer to the shareholders, giving them a preferential consideration, £700,000 of 5½ per cent. preference stock and 225,000 ordinary shares, and so soon as the shares are fully paid to convert them into stock, so that when these issues have been made the 5½ per cent. preference issue will amount to £1,050,000 and the ordinary stock issue to £525,000. The effect of this will be that by the issue of the stock and shares referred to the company should receive over £1,000,000 in cash, to be invested in securities similar to those already held, whereas if the uncalled capital were called up the proceeds, which might not amount to £900,000, would, under the trust deed, have to be handed over to the trustees and invested in gilt-edged securities. Our scheme is placed before you to obviate this, and to place the company, once and for all, on a sound effective basis, and in line with other successful investment trust companies.

The resolutions were unanimously adopted, and the scheme was also unanimously approved at separate meetings of the holders of the 5½ per cent. and 4½ per cent. cumulative preference stock.

ORIENT STEAM NAVIGATION COMPANY, LIMITED. NAPLES AS A PORT OF CALL.

The 25th ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 19th inst., at 3 and 5 Fenchurch avenue, London.

Sir Kenneth S. Anderson, Bart., K.C.M.G., who presided, said that the balance available, after payment of the preferred dividend, was £345,039, and the directors again recommended a dividend of 12½ per cent., free of income-tax, on the deferred shares, transferring £150,000 to general reserve account, and carrying forward £64,929. There had been a considerable reduction over all in the average earnings per voyage during the past year, but this had been set off to some extent by savings in expenditure.

For the last 40 years or more the company had made Naples a port of call, but regulations and requirements of continuously increasing severity had been imposed upon them since the war which were strongly suggestive of a desire to bring about their abandonment of the trade, in order that the Italian flag, which at present enjoyed every consideration in every port of the British Empire, might enjoy a monopoly of Empire trade in Italian ports. They had already drawn the attention of the Imperial Government to the situation, and he trusted that the Government of the Commonwealth of Australia, which conceded to the Italian emigrant the privileges of citizenship, would also take note of it.

CONDENSING SALOON ACCOMMODATION.

The company's policy of condensing the entire saloon accommodation, inaugurated in the *Ormonde*, and continued in the new steamers, was being gradually completed by the necessary adaptation of the *Orsova*, *Orviato*, and *Osterley*, so that with the first sailing in 1925 Orient liners would cease to carry second-class passengers. The results had been entirely satisfactory, and had fully justified their expectation that they would be able to extend a higher standard of comfort to their passengers without increased cost. The *Orama*, the first of their new steamers, sailed on November 15th, and reached Fremantle last Monday morning, and all the reports received went to confirm the high opinion they had already formed of her capabilities and attractions, not the least among which was the large percentage of single-berth cabins. Her sister ship, the *Oronsay*, now completing with Messrs John Brown and Co., at Clydebank, would be delivered early next month, and in April last they ordered from Messrs Vickers a third new steamer of 20,000 tons, which would be substantially a replica of *Orama* and *Oronsay*, subject to certain improvements which experience in building the other two had suggested. The third steamer, the *Otranto*, was due to be delivered towards the end of 1925.

They had been relying upon the expeditious completion by the Port of London Authority of the wet and dry docks, locks, and entrances at Tilbury, but, despite repeated representations, endorsed by the Chamber of Shipping, absolutely nothing had been done; and although they had within the last two days received assurances that the work would at once be put in hand, a deplorable interval of time, during which the company would at best suffer much inconvenience and expense, must elapse before this grave reproach to the Port of London could be removed. The

crucial issue was not whether the additional expenditure would show a direct and immediate return, but whether the Port of London would keep pace with the development of maritime transport, or, by its failure to do so, see its mail and passenger traffic reluctantly driven away to other ports.

COMPANY'S FINE FLEET.

There had been a good deal of talk lately of a projected new mail and passenger service to Australia with a speed of over 20 knots, but he continued to believe that in the airship lay the best hope of any radical reduction in the time of transit. With the advent of their three new steamers, the Orient Line would be equipped with ships which would certainly have no superior in the trade, if, indeed, they had any equals. They would, of course, require a considerable expansion in the numbers they carried to justify the existence of those new steamers, but he saw no reason to be other than optimistic if they could keep clear of droughts, strikes, and foreign assaults on British interests such as the Italian to which he had referred. Australia was enjoying a spell of prosperity; wool prices were high, and seemed likely to be maintained; prospects for the coming harvest were excellent, and even the export of frozen beef, which had been the darkest spot in the picture, showed some improvement. The omens, therefore, were good, assuming that the cost of production, which was exceedingly high, did not further advance to the point where it strangled even the primary industries.

He could say with confidence that the reputation of the company had never stood higher; that it had never been in a stronger position to take advantage of any expansion in the trade, and that, given the slightest encouragement, the three new ships would be merely an earnest of more and, if possible, finer ones to come in the near future.

The report and accounts were unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY LIMITED.

"YEAR OF UNPRECEDENTED SUCCESS." INCREASED PROFIT AND DIVIDEND.

The ordinary general meeting of the shareholders in the Johannesburg Consolidated Investment Company, Limited, was held in Johannesburg on Tuesday, November 18th last.

Mr W. S. Webber occupied the chair, and in moving the adoption of the report and accounts for the year ended June 30, 1924, said:—

The position of your company has steadily improved for many years, and last year was no exception. The profit made was larger than ever before, the position sounder, and the future is full of hope. It is true that some people financially interested in South Africa viewed the recent change of Government with some anxiety. The prosperity of South Africa at the present stage of the development of the country is, however, so closely bound up with the prosperity of the mining industry that it is impossible to think that any body of men who have the good of South Africa at heart, as we feel sure the members of the present Government have, can willingly pursue any policy which will lead to the injury or prejudice of the leading industry of the country. The mining industry of the Rand has been carried on under four different forms of Government; it has survived two long periods of war, and we look with confidence for its prosperity to be continued under the present Government. There will certainly be no lack of energy and goodwill in the efforts of the mining industry to work along true lines of progress.

UNPRECEDENTED SUCCESS.

The directors' report and statements for the financial year ended June 30th last record a year of unprecedented success, and the directors were in the happy position of being able to declare a dividend of 15 per cent. for the year, which is a record dividend for this company, the highest previous dividend on the increased capital of the company being the 12½ per cent. paid in September, 1923. Before examining the details of the year's profits, I shall deal with the balance-sheet, commencing with the company's liabilities.

Issued capital.—The issued capital of the company remains unchanged at £3,950,000.

Reserve fund.—£150,000 has been added to the reserve fund, which now stands at £400,000. The directors intend to continue the policy of strengthening the reserve fund as opportunity occurs from time to time. They consider that this policy will further strengthen the position of the company, and will provide an insurance fund to meet any unforeseen difficulties and losses in the future.

Sundry creditors, £869,628.—A decrease of £209,954 compared with the previous year is shown in this account, principally owing

to a reduction in the deposit money held by the company at the close of the financial year.

Contingent liabilities, £166,733.—These show a small increase of £6,864. They are chiefly in connection with the company's holding of Standard Bank shares, which, as you know, are not fully-paid shares. This is a contingent liability which we can view with equanimity.

ASSETS.

Investments in stocks and shares, £4,036,269.—The increase of £370,235 compared with the previous year is due chiefly to the fact that the capital of the Carlton Hotel Company was increased from £1,000 to £150,000, and the loan made by your company repaid, and that debentures were created in connection with the loan to the Delagoa Bay Lands Syndicate. As a consequence, it will be observed that the account "Loans to South African companies" has disappeared from the balance-sheet. The remainder of the increase represents the difference between shares purchased and shares realised during the year, less the depreciation written off certain of your shareholdings to bring their book value down to their market value at June 30 last. No credit has been taken in the accounts for the appreciation of certain shareholdings over their book value at the close of the financial year. This appreciation to-day represents a very large sum.

MINING PROPERTIES AND REAL ESTATE.

Mining properties, including advances to mining companies, £272,658.—The decrease of £120,455 compared with the previous year represents repayments of loans to mining companies, chiefly New State Areas, whose debt has been repaid in full.

Real estate and buildings, £357,408.—This is £31,182 less than a year ago, owing to the realisation of several properties in Johannesburg and the sale of building plots on the company's estates. The Yeoville, Berea, and Upper Houghton estates are practically sold out, and consequently the most valuable estate remaining to the company is the Lower Houghton. A number of plots were sold on this estate during the year under review, and we are now taking in hand its more rapid development. This will involve a certain amount of expenditure which, however, should amply justify itself.

Two areas on the Houghton estate, measuring 40 acres in the aggregate, were given to the town for public purposes.

Loans on mortgage and real estate, £197,053.—The investments under this heading are more than they were a year ago by £55,824. This represents the difference between fresh loans granted and the amount by which mortgage bonds and balances due on plots sold have been paid off or reduced.

Loans at short call on market and other securities, £150,715.—A smaller amount by £239,570 of the company's funds was employed in this business at the end of last year than at the end of the previous year, and this difference is reflected in the increased cash balance of £608,971, which is £239,416 higher than last year.

Sundry debtors and dividends accrued, £358,444.—This account shows an increase of £52,562 as compared with that for the previous year, due to the fact that the dividends declared as at June 30th, but not paid until after the end of our financial year, were higher, and partly to an increase in the ordinary current accounts of the company.

STRONG FINANCIAL POSITION.

The whole financial position as disclosed by the balance-sheet is exceedingly strong and thoroughly sound from whatever point it is viewed. It will be seen that the liabilities to the public are only £869,628, and that if these be deducted from the assets there remains a surplus of £5,118,490, which is £252,497 more than the surplus shown by the last balance-sheet. Further, it must always be remembered that whilst your directors from year to year write down any of your investments in stocks and shares which stand in the books above market values, they do not write up those which stand in the books below market values. The result to-day is that the aggregate appreciation of your assets represents a very large sum which does not appear in the accounts, and consequently the financial position of the company is substantially stronger than even the excellent position disclosed by the balance-sheet would indicate.

Perhaps shareholders generally do not know the extent to which this satisfactory state of affairs is directly attributable to the close personal supervision given to the affairs of the company by their permanent chairman, Mr S. B. Joel. His attention to the business and interests of the company is unceasing, and he ungrudgingly places the whole of his wide knowledge and experience, and his recognised ability at the disposal of the company. Only those who are in close touch with the business of the company can appreciate how much its prosperity is due to the work of Mr. Joel.

PROFIT AND LOSS ACCOUNT.

Having dealt with the general financial position of the company

as shown in the balance-sheet, we now turn to examine the results of the year's operations as illustrated in the profit and loss account. The gross profit for the year, after provision had been made for taxation in both South Africa and England, depreciation, and had and doubtful debts, amounted to £784,819. The expenses, less the sums received from other companies, were £38,572, so that the net profit for the year was £746,247. This is the figure which is the real measure of the year's work. It exceeds the net profit for the previous financial year by £242,406, and is larger than any profit which the company has made since its inception. This result was principally due to increased dividends on our shareholdings.

Adding to the net profit the sum of £172,243 brought forward from the previous year, the total amount available was £918,490. Of this amount, the dividend of 15 per cent. absorbed £592,500, there was added to the reserve fund £150,000, and the balance of £175,990 was carried forward to the current year. If these results are compared with those for the previous year, when a dividend of 12½ per cent. was paid, no addition was made to the reserve fund, and £3,757 less was carried forward, I think it may be safely said that the results of last year's work afford ample grounds for gratification on the part of everybody connected with the company, and that, in conjunction with the balance-sheet, they must inspire confidence in the future of the company.

COMPANY'S INTERESTS.

As hitherto, the company's principal interests are connected with the gold-mining industry of the Witwatersrand. The mines of the group crushed a total of 7,598,800 tons of ore for the year ended June 30th last, and produced 2,483,449 ounces of gold, which sold for £11,590,939. Of the latter sum, £7,281,890 was spent in working costs, leaving a profit of £4,309,049. The dividends declared for the year amounted to £1,937,344, the payments to the Government in respect of leased areas and Union and provincial taxation amounted to £1,287,000, the balance being expended on capital account, redemption of debentures, interest, &c.

The prosperity of mining ventures, as of all industrial undertakings, depends upon the capacity to produce revenue which exceeds the expenditure. Now, so far as the revenue is concerned, the price of the product of mining is fixed by circumstances which are outside the influence of the mining industry. The price of gold has remained fairly steady for some time. In the calendar year 1922 it averaged £4 12s 5d for a fine ounce; in 1923 the average was £4 10s 9d; and for the first nine months of this year it was £4 14s 5d. Just at present the tendency seems to be for British exchange with America to improve, and for the price of gold to fall. Admittedly, it is difficult, if not impossible, to say what the future will bring, but we are face to face with the possibility that this fall in the price of gold may continue until it reaches the normal price. The gold premium will then disappear, and we may return to the gold standard of currency before the Government has decided what steps to take upon the report of the Commission which it intends to appoint. It becomes necessary that we should prepare for this possible contingency and devote our efforts towards the decrease of the costs of working. This brings us to consider the expenditure of the gold-mining industry.

WORKING COSTS.

Working costs are, fortunately, still showing a tendency to decrease. The working costs for the whole of the Witwatersrand were in June, 1922, 22s 8d a ton of ore treated; in June, 1923, 20s 1d a ton; and in June, 1924, 19s 8d a ton.

For our own group the corresponding figures were:—June, 1922, 21s 2d; June, 1923, 20s 6d; June, 1924, 18s 10d. If allowance is made for the fact that we always charge the realisation costs of gold and exchange to working costs, which is not the practice with other groups, then the comparable figures become:—

June, 1922, 20s 5d, as compared with the Witwatersrand average of 22s 8d; June, 1923, 19s 9d, as compared with the Witwatersrand average of 20s 1d; and June, 1924, 17s 10d, as compared with the Witwatersrand average of 19s 8d. This comparison with the average figures for the Witwatersrand is a striking testimony to the efficiency of the administration and management of our group. In June, 1914, the average working costs of the Witwatersrand were 17s 1d per ton, so that it will be seen that the average costs are still considerably above the pre-war figure. The chief factors in the working costs of the mines are stores, wages, and efficiency. Let us deal with the prospects of these factors separately.

The prices of stores are substantially higher than in 1914, but this is not beyond remedy by our Government. The cost of transport forms a considerable proportion of the total cost of stores. Railway rates in South Africa are very high. Some reductions have been made, but the mines have not benefited much from such reductions, which have been made chiefly on articles which the mines do not use. The burden of these high rates falls very largely on the primary industries of the country—farming and mining.

felt it was necessary to do this in order to assist in the development of the new and the recently opened departments. The South American Stores appeared as debtors for £106,673 in respect of their dividends, which had been paid since the close of the accounts. The company's investments, standing at £190,724, were in gilt-edged securities, and showed an increase of £39,435. Cash on fixed deposit, held against trustees' securities, amounted to £75,000, against nothing in the previous balance-sheet. Cash at bank and in hand stood at £45,209. Adding these last four items together, it would be seen that they had cash, or its equivalent, amounting to £417,607, against £249,130 in the previous year. This was an increase of £168,477. Their financial position was very strong, and he felt sure the shareholders would consider it most satisfactory. Since the close of the financial year the company's holding in British Government securities had been increased by £110,000, and now amounted to the substantial sum of £300,000. The improvement in the rate of exchange further benefited the financial position very materially, as the value of their assets was thereby increased. Thus since the close of the year a considerable part of the reserve had been freed automatically, and the position would be further improved should the recovery in the exchange continue.

PROSPECTS.

The board did not think the time had yet come for the payment of an interim dividend on the preference shares, and the board proposed to maintain for the present the December date for the declaration of the preference dividend. As to the probability of a distribution at an early date upon the ordinary shares, it was, of course, very difficult to speak with any degree of certainty. They were, it was true, anticipating a further improvement in net profit during the current year, but the board did not think the prospects, so far as they could see and forecast them at the present moment, were sufficient to warrant them in holding out confident hopes of paying a dividend on the ordinary shares in respect of the current year.

Sir Woodman went on to say that conditions in Argentina were but slowly improving. However, if conditions in the provinces continued to improve, the South American Stores should show larger profits during their current financial year. Unless, however, the improvement was very substantial, it was improbable that that company's distribution would show any material change from that of the past year. Finally, he referred with keen gratification to the proposed visit of the Prince of Wales to Argentina. As to Argentina generally, the forecast they had recently received from Buenos Aires as to the current year was hopeful of improved trade and results. The outcome of the first three months' trading down to the end of November so far justified the hope that they had finished with the bad years, and that the net profits for the current year would show an improvement on the past year.

The report and accounts were unanimously adopted.

CARRERAS, LIMITED. RECORD PROFITS.

The twenty-first annual general meeting of Carreras, Limited, was held, on the 18th instant, at the offices of the company, City road, London, Mr Louis B. Baron presiding.

The Chairman, in moving the adoption of the report and accounts, said:—I have recently returned from a visit to my father, our chairman, who specially requested me to offer his congratulations to the shareholders on the coming-of-age of this company. At one of our previous meetings, our chairman, who has had a very wide business experience, referred to this company as his youngest child, and to-day he is proud of the child which you have all helped to bring up. It has now reached full age without its health being impaired, and has grown into a very healthy and vigorous condition, which I venture to think is a great pleasure to all of us.

YEAR'S RESULTS.

As I have already intimated, this is our twenty-first annual general meeting, and it gives your directors great satisfaction that the figures they have to put before you to-day are a fitting celebration of the company's coming-of-age. Our results this year surpass anything we have previously achieved, the profit being £480,000, against £180,000 last year, and the balance available for distribution, £619,000.

Looking back over the years since the inception of the company, and remembering all the difficulties with which we have had to contend, is a great satisfaction to the directors, as well as to the shareholders, of this company to feel that the efforts that have been made to overcome these difficulties have not been in vain, and that to-day your company is able to take its place as one of the leading tobacco manufacturers of this country, and of the world.

The achievement which we celebrate to-day has been brought about principally through our determination to give the public the best that can be produced, and the high measure of popularity which our brands enjoy is evidence that the smoking public appreciates this fact. Our success makes us all the more determined to put forth all the efforts of which we are capable, so that in the future we may do everything possible to maintain a consistent rate of progress. I think you will also agree that it is very fitting that this twenty-first year of our existence has been the occasion for the opening of an additional factory.

For a long time past it has been difficult to cope with our orders in the building in which we are met to-day, and some months ago we began to look out for additional accommodation. Ultimately, we were successful in purchasing a well-constructed and well-arranged factory building in New North street, Theobald's road.

Naturally, a good deal had to be done in the way of alterations to make the factory suitable for our requirements, and to equip it with all the most modern machinery for the manufacture of cigarettes and tobacco under the most hygienic conditions. As a result of the splendid co-operation between the workers in our various departments, led by your directors, the removal from one place to another was accomplished over a single week-end, and in an amazingly short space of time we were carrying out the various processes of manufacture and despatch of goods from New North street, as well as from Arcadia Works.

There is one other matter which I wish to mention, and it is a suggestion which originated in the mind of our chairman, Mr Bernhard Baron. My father wishes me to say that on this twenty-first anniversary of the company, he thinks we should all be reminded of the great debt which we owe to our soldiers, sailors, and airmen who fought in the Great War, and but for whose efforts business prosperity, as well as many other things which we prize in this country, would have been impossible.

Mr Bernhard Baron, our chairman, has therefore sent instructions that the company should contribute the sum of £2,000 to Earl Haig's British Legion Fund for ex-Service men and their dependents in distressed circumstances, and that he will contribute a further £1,000 as his own personal gift in addition to the company's contribution to the same worthy object.

Mr Bernhard Baron, our chairman, feels that, in view of the great services and tremendous sacrifices made by our soldiers, sailors, and airmen, it should not be necessary for continuous appeals for money to be made to support the men who fought in the Great War, and who now cannot find work. Many of them lost the means and the power of supporting themselves and their dependents, and the community at large are reaping the benefit of their sacrifice. Mr Bernhard Baron, therefore, makes the suggestion that the commercial world would only be making an acknowledgement which is more than due if every successful company would vote a generous contribution to Earl Haig's Fund on behalf of these men, not on the ground of charity, but because they are entitled to the best provision that can be made for their needs and the greatest possible relief from anxiety about the future.

I will conclude by saying that the present financial year has started very satisfactorily, and we shall do everything possible to bring it to a successful conclusion.

The resolution was carried unanimously.

SHOWELL'S BREWERY COMPANY, LIMITED.

MR DAVENPORT ON ITS SOUND FINANCIAL POSITION.

The annual meeting of shareholders of Showell's Brewery Company, Limited, was held at Winchester House, Old Broad street, E.C., on the 18th instant, Mr. James Davenport, chairman, presiding.

Mr W. G. Holland, secretary, read the notice convening the meeting and the report of the auditors on the accounts for the year ended September 27th.

The Chairman, in moving the adoption of the report and accounts, said a year ago he stated that the balance-sheet showed a sound and even a strong financial position. To-day their financial position was even stronger, and their revenue account showed a further increase. As a result they were able to recommend a dividend on their ordinary shares of 15 per cent., as against 12½ per cent. last year, and to place £10,000 to reserve account (increasing it to £65,000), against £5,000 similarly transferred a year ago. On the assets side of the balance-sheet an exceedingly strong financial position was maintained. Cash was £54,000, against £47,900; sundry debtors £39,100, against £33,500; their holdings of British Government stocks, taken at cost (and they were worth considerably more), totalled over £103,000; sundry other investments stand at just under £30,000 (and a large proportion of this consisted of the company's own

debentures bought at advantageous prices); whilst stock-in-trade was £31,500, against £28,800 in the previous account. On the liabilities side of the account, the reserve stood at £55,000, against £50,000, and with the allocation they proposed to make would appear next year at £65,000. It was growing very nicely, and he hoped they would continue to see this increase. The bulk of the item sundry creditors and reserves consisted of internal reserves accumulated during their administration, and constituted a strength which they might regard with considerable satisfaction. The actual liabilities included in that figure were relatively small, any liabilities they were amply covered by the cash at bank. He thought they would be satisfied with the financial position of the company.

As to the revenue account, they brought in £8,372, and the profit for the year was £34,920, leaving the sum of £43,301 available for distribution. The preference dividend for the year absorbed £13,800, the dividend of 15 per cent. to the ordinary shareholders would take £12,000; they proposed placing £10,000 to reserve, leaving a carry-forward of £7,501. The revenue account might also be looked upon as satisfactory. A year ago we were in the turmoil of politics. He thought they were not unduly optimistic in now looking forward to a fairly long rest from elections, and the unsettlement they inevitably bring. And he thought they were also justified in saying they believed the brewing industry would receive fair treatment.

The resolution was carried unanimously.

EDISON SWAN ELECTRIC COMPANY, LIMITED.

INCREASED TURNOVER AND PROFIT.

The forty-first ordinary general meeting of the Edison Swan Electric Company, Limited, was held, on the 17th instant, at the Cannon street Hotel, London, Mr C. F. Spencer (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that sums of £14,418 and £3,015 had been appropriated out of the sinking fund to the redemption of first and second debenture stocks respectively, whilst the sinking fund had been increased to £24,873. The net debt on first and second debenture stocks was £312,786 on June 30, 1924, and the interest accrued thereon was £5,340. On June 30, 1923, the debt due to the bankers was £314,150, but during the last completed year £109,000 had been paid off. Further repayments had been made since July 1 of the current year, and they hoped to make additional reductions early in the new year.

There was a balance of profit, after providing for general expenses, &c., of £122,140. Out of that sum they had set aside £10,000 as reserve for bad and doubtful debts, &c., whilst loan charges had absorbed £37,225, leaving a net profit of £74,914. They were proposing to pay a dividend of 10 per cent. on the ordinary shares, being an increase of 2½ per cent. on last year's dividend, and to allocate £50,000 to the reserve fund. After making such appropriations there remained a sum of £17,575 to carry forward to the current year's account, and that sum would more than cover any sums payable in respect of corporation profits tax.

The board's policy was to build up reserves and reduce debts, and since the board was reconstituted some two years ago, a sum of £80,000 had been placed to reserve account, whilst debenture and other loan debts had been reduced by £127,433. He looked forward with pleasurable anticipation to the time when the charges for loan interest would be substantially reduced as a result of their policy.

With regard to the present year's trading the turnover and profit for the five months to November 30 last showed a substantial increase on the figures for the corresponding period of 1923. Every phase of the company's activities and operations had been carefully examined, resulting in substantial economies.

They must not be unmindful of the possible effects on their business of foreign competition. He saw evidence of foreign competition making inroads into profits at no very distant date, unless some legislation safeguarding some of the industries in which they were engaged was adopted.

The resolution was carried unanimously.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The fourteenth ordinary general meeting of the British Burmah Petroleum Company, Limited, was held, on the 19th instant, at the Cannon street Hotel, London, the Hon. Lionel Holland, chairman of the company, presiding.

The Chairman said that the general anticipation of improvement in the oil business had not materialised during the past year. The outstanding factor militating against profitable expansion was

the prodigious oil production in the U.S.A., altogether outstripping the rapidly growing demand and causing a slump in selling prices. This company's revenue arose in a considerable degree from sales of benzine in Europe, where the selling price had been reduced by the sale of U.S.A. benzine at a cut figure, leaving scarcely any margin of profit. Had the price of benzine been maintained at the figure of a few years ago, the company's revenue would have been greater by over £150,000. The price realised for their kerosene was reduced since October, 1922, and the higher cost of tinning had also cut into the net revenue from this source, while the Excise duty of one anna per gallon levied by the Government of India absorbed over £75,000 in the year. The trading profit, £195,000, was £29,000 less than in the previous year, and the net profit was £52,008—a decrease of £20,000—after meeting expenses in Burmah and London (which were reduced by £4,000—£5,000), depreciation and interest. Last year £73,000 was obtained by refund of taxes, enabling them to declare dividends absorbing over £77,000. This year the corresponding receipt was £16,000, and though the trading results did not vary materially, it was impossible to recommend a dividend.

Large economies had been made at the refinery and on the field, revenue expenditure being down by nearly £50,000. They had lived down and were surmounting a period of depression, and were rapidly reducing debenture liability, while depreciation allowances were maintained. The position in essentials was sound, but until prices and conditions improved (which, it was generally thought, would not be long delayed), they could not look for a return of the prosperity which had enabled the company since 1917 to pay over £1,000,000 in dividends.

The report and accounts were unanimously adopted.

will be invited to attend a meeting as soon as possible, at which the position of the company will be reported and an arrangement be proposed for dealing with the situation pending such an improvement in conditions as will permit interest payments to be resumed.

MILLOM AND ASKAM HEMATITE IRON.—Report for the year ended September 30, 1924, states that the result of the year's operations shows a profit of £49,957, which, after providing for the debenture stock interest and redemption, £9,303, leaves a net profit of £40,654, against £32,859 in preceding year. This, with the amount brought in, makes a total of £56,218 available for appropriation. The dividends on the preference shares for the half-year ended September 30, 1923, and March 31, 1924, absorb £24,500, leaving a credit balance of £31,718, out of which the directors recommend the payment of the dividend on the preference shares for the half-year to September 30th last, absorbing £12,250, and the carrying forward of the balance, £19,468. The ordinary shareholders again have to go without a dividend. The report states that the extreme depression in the iron trade continued during the period under review, and only one furnace was kept in blast. In the circumstances, the directors think that the results may not be considered unsatisfactory. The whole of the works and plant have been maintained in an efficient condition, and a considerably increased output both at the blast furnaces and mines can be obtained when trade conditions revive.

Commercial Reports.

THE CORN TRADE.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

Mark Lane, Friday Evening.

Weather conditions proved more favourable for field work during the week, and farmers were able to make better progress with seeding operations. Sowings of winter wheat, however, are smaller than desired owing to the saturated condition of the soil during the autumn months, and which hindered or prevented work on heavy lands. Crops above ground present a healthy appearance, the young plants being strong and even in growth. Supplies of native wheat at the principal statute markets continue on a fair scale, but a good deal of the offerings are in poor condition, and realise low prices. Suitable milling grades rule at 12s to 12s 4d per 112 lbs, free on rail, but millers purchase sparingly, while well stocked for the present with imported descriptions. Foreign kinds ruled firmer owing to higher c.i.f. values, and sellers somewhat reserved. No. 1 Northern Manitoba quoted 71s, No. 2 hard Winter 67s 6d, and choice white Karachi 64s 3d, all ex ship, per 496 lbs. Firm conditions prevailed in the floating and forward cargo section, and prices were again dearer in sympathy with higher American cables and unfavourable weather reports for harvesting in Australia. A fairly good business transpired, chiefly in white kinds. Steamers of Australian, January shipment, sold 64s 6d bags, 64s bulk, ditto February 64s 7½d to 65s 3d, choice white Karachi, afloat, 62s, February 62s 6d, Barusso, 63½ lbs, January-February, 63s 3d, No. 1 Northern Duluth, early December, 63s 3d, white Pacific, afloat, 62s, all per 480 lbs c.i.f. terms. Maize cargoes firmer, owing to improved Continental inquiries, and Plate steamers arrived sold 43s 3d to 43s 9d afloat, 44s 6d per 480 lbs. Flour firmer owing to the wheat position, but actual trade moves quietly. London standard straight run quoted 52s, patents 54s to 55s. Town whites 52s per sack, delivered in London area. Imported fully steady. Manitoba patents range from 50s to 52s, Minneapolis 50s to 51s, and Australian 47s to 47s 6d, all per 280 lbs, ex store. Barley firm but quiet. Californian quoted 69s to 71s, Chilean Chevalier 84s to 87s, Polish, ex store, 60s to 68s per 448 lbs. No. 3

Canadian Western, ex ship, 41s 3d, No. 4 ditto 40s, landed 42s, American malting, 48 lbs, ex ship, 39s 6d, landed 41s 3d per 400 lbs. English ranges from 10s 9d to 20s per 112 lbs, free on rail. Maize firmer. Plate, ex ship, quoted 43s 9d, ditto landed 45s 6d, and Odessa in latter position 45s 6d per 480 lbs. Oats firmly held. Plate, ex ship, quoted 29s, ditto landed 30s. No. 2 Canadian Western, ex ship, 34s 6d, ditto landed 35s 9d. American white clipped, 38 lbs, landed, 31s, all per 320 lbs. English 9s to 10s 4d per 112 lbs, free on rail. Millers' offers steady. Broad bran quoted 9s, middlings 9s 6d, fine ditto 12s, bags included, ex mill, powdered oat husks 8s 9d, feed oatmeal 10s 9d, ground oats 13s 9d, all per cwt, free on rail. Oatmeal firmer. London made flaked 20s 6d, rolled oats 20s, medium also fine cut 20s, coarse and medium pinhead 20s ordinary Scottish oatmeal 20s, American and Canadian rolled oats 21s per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 18th, is as follows:—Pig-iron: A fair amount of business has been done during the past few days, but the tendency now is to mark time in view of the approaching holidays. It is expected that two of the furnaces now idle at one of the local works will be blown in during January for the production of hematite. No. 3 Cleveland G.M.B. is still maintained at 81s 6d, and East Coast mixed numbers hematite at 88s. Manufactured iron and steel: There is no improvement yet, and prices are unchanged as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: Only one or two cargoes are changing hands, and sellers are quoting best Rubio 22s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Business, at any rate for forward delivery, is suspended for the year. The holiday stoppage at the majority of the local works will vary from four to ten days, which is the normal period, but the great steel-making plants of United Steel Companies, Limited, are closing for two weeks, and probably longer. Works are busy on steel for the motor trade, steel strip, magnet steel, and steel sheets. Makers

* Half-year.

† Free of tax.

of tramway steel are obtaining comparatively little overseas business, owing to the handicap of deflated exchanges. Stovegrates and light castings for the building trade are in demand. The pig-iron position has gone weak again, and prices are inclined to droop. There is, however, an improved demand for hematite for making acid steel. The coal fuel market does not improve, and there is a good deal of surplus coal and coke about, enabling actual buyers to secure concessions in price. Consumption of blast furnace coke is at a low ebb. Best hand-picked branch is quoted at 32s per ton, Yorkshire hards at 20s per ton, Blyth hards at 18s 6d per ton, and Durham hards at 22s. per ton.

Our Glasgow correspondent writes:—In the iron and steel trade the usual seasonal falling off in activity is observable. During the present week at a number of the works and warehouses stock-taking will be engaged in, and orders passing to the mills will be only to meet pressing requirements. The pig-iron market shows a slight decline in volume of business this week, and prices are weaker. The total shipments of the various brands from the Clyde last week were 2,189 tons, of which 2,022 tons were on overseas account. For the corresponding week of last year the shipments were 1,496 and 1,391 tons respectively. Steel makers are not benefiting much by the shipbuilding and engineering orders placed recently in the district, but it is anticipated that after the opening of the year a very considerable improvement in conditions will be found. In the re-rolled branch, steel bars are in fair request for export to the East, but the home trade is more or less stagnant for the present. This also applies to the bar iron trade, but the feeling is hopeful in view of the fact that the locomotive and general engineers are well supplied with orders, and in a better position to buy in the near future than they have been for some time past. There is a sharp demand for steel sheets of the lighter gauges for prompt shipment to Japan, to arrive before the new duties come into force in March, and some good lines have been placed locally. Galvanised sheets are going well, with works fully booked up till February. The demand from India has slackened, but is expected to come on again early in the New Year.

Our Cardiff correspondent writes:—The approach of the Christmas holidays has given the coal market at Cardiff this week a measure of exceptional support, and it has been diffused enough to strengthen prices generally and in some cases to lead to higher quotations. Production and exports have also been above the average, and have closely approximated the best weekly returns for the current year. German competition is becoming more active. Exporters have been informed by their agents in Paris that under the Dawes scheme the supplies to France of reparation coal will be considerably reduced owing to the steadily increasing outputs of the French mines, and that Germany was already competing actively for French seaboard as well as inland business. The accuracy of this forecast seems to be confirmed by reports that Germany has this week contracted with the Paris Electrical Works and with other consumers in France for the supply of 850,000 tons over next year, for the supply of 200,000 tons of steam coal for the Italian State Railways, and for the supply of 5,000 tons for the Swedish State Railways. In the normal markets for Cardiff coals there are no indications of an expansion, and a reaction is feared

after the holidays. The following are the current approximate quotations:—Best Admiralties, 27s to 28s; second Admiralties, 26s to 27s; best drys, 27s. to 27s 6d; black veins, 24s 9d to 25s 3d; Western Valleys, 24s 3d to 24s 9d; Eastern Valleys, 23s to 23s 9d; best bunker smalls, 16s to 17s 6d; ordinary cargo smalls, 14s to 14s 6d; coking smalls, 16s to 17s 6d; anthracite big vein large, 45s to 49s; red vein large, 33s 6d to 35s; machine-made cobbles, 52s 6d to 56s 6d; French nuts, 57s 6d to 60s; rubbly culm, 11s to 11s 6d; coke for export, 45s to 50s; inland blast furnace coke at ovens, 27s 6d to 32s 6d; patent fuel, 25s 6d to 25s; pitwood, ex ship, 32s to 32s 6d.

In the tinplate trade the position is a slightly improved one. The stabilisation agreement has been renewed for another period of twelve months, and prices are unchanged at the minimum figures.

LEAGUE OF NATIONS

IMPORTANT NEW PUBLICATION.

ARMAMENTS YEAR-BOOK

General and Statistical Information.

The Secretariat of the League of Nations has issued an *Armaments Year-Book*, containing information concerning 37 countries, Members and non-Members of the League of Nations, as follows:

Albania, Argentine, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Chile, China, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Greece, Hungary, India, Italy, Japan, Latvia, Luxembourg, The Netherlands, Newfoundland, New Zealand, Norway, Poland, Roumania, Kingdom of the Serbs, Croats and Slovenes, Spain, Sweden, Switzerland, Union of South Africa, Union of Socialist Soviet Republics, United States of America.

The *Year-Book* consists of a series of monographs, each of which deals with one State, and is generally divided into three parts.

The first—and strictly military—part, which is the most important, gives detailed information concerning the organisation and composition of the armed forces (supreme military authority; large units; arms and services; recruiting system; budgetary effectives, etc.).

The second part deals with the question of budget expenditure on National Defence (analysis of expenditure, detailed notes on the various systems of accounting, etc.).

The third part is concerned with industries capable of being used for war purposes, in particular the production of the more important raw materials (coal, petroleum, mineral ores, chemical products, etc.) and the trade in these materials.

The *Year-Book* contains numerous statistical tables.

The sources of the above information, which has been drawn from official and public documents in the respective countries, are indicated at the end of each monograph.

900 pp., 8vo, bound in cloth.

CONSTABLE AND COMPANY, LTD.,

10-12, Orange Street, W.C.2.

METALS.

The market for tin opened with a fairly steady tone, and prices tended in sellers' favour under higher cable advices from the East, combined with a fair consumptive demand, though slight irregularity was noticeable at times. Standard cash was dealt in at £259-£261 10s, £259 10s, and £261 17s 6d, with three months £262-£265 5s and £264 17s 6d. Sales in the East were reported at £262 10s to £265 10s. Copper was accorded strong support, and a large business transpired at firmer prices, though top points were not generally maintained. Standard cash changed hands at £65 10s-£66 5s, £65 15s, three months £66 15s-£67 5s, £66 10s 3d. Lead active and firmer, though slightly irregular. Good soft foreign pig quoted £42 12s 6d-£43 15s, and English £44. Spelter also firmer, with £39 15s, and quotations ruling at £37 5s to £37 15s sustained inquiries, quotations ruling at £55 to £60, £70, foreign refined £60 to £61, and for shipment £55 to £60, c.i.f. Aluminium easier. Home trade quoted £120 and export £122 per ton. Quicksilver firm. Spot quoted £12 7s 6d per bottle.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—An easier tendency in wool prices in practically all the primary markets this week has had the effect of curtailing business in this centre. Although tops are still being sold at prices well below replacement values based on the current cost of wool, most topmakers have reduced their quotations to-day, and it is possible to buy any quality at from 1d, in the case of low and medium crossbreds, to 1d in fine crossbreds and merinos below prices ruling a week ago. It cannot be said, however, that values are really being tested. Most users appear to be well covered, and as they are experiencing the greatest difficulty in getting new business on anything like a remunerative basis, they are content to mark time and wait for the outlook to become clearer. It does not seem likely that wool will show any drastic fall, especially as stocks on the Continent and in the United States are in exceptionally small compass, but it would make for greater stability if the price of the raw material could be got to a level more in keeping with the prices of semi and fully-manufactured goods. Warp 64's tops are quoted to-day at 80d, super 60's at 75d, 58's average at 62d to 63d, 56's average at 53d, 46's carded at 35d, and 40's prepared at 32½d

per lb. The demand for yarns is exceedingly restricted, and short time is still general.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

This week sees the end of the Australian sales, the resumption taking place on January 10th at Sydney. There is only one more sale to take place at Dunedin next Monday, when New Zealand shuts down until January 5th, the Dominion sales being resumed on that date at Christchurch. The Christmas recess will be very welcome, but the first week in January always sees two sales held at Hobart and Launceston in Tasmania, many buyers going over to the Island from Melbourne and Sydney, combining pleasure with work. Tasmania still grows some magnificent wool, and for both merinos and crossbreds the wools are most difficult to beat. However, we shall hear more about the sales later on. In the meantime, buyers will welcome this respite from the activity and great pressure which has been put upon them during the past three months, and with the next London sales opening on January 20th, the trade is going to have nearly a month in which to size up the situation, and make up its mind what the future has in store.

The direct outcome of the recent London sales shows that, notwithstanding the quietness and ease in prices which has come over the situation in Bradford, the raw material still occupies a very strong position. Most descriptions lost 5 per cent. during the closing week of the recent auctions, and practically all the sales "down under" have seen merinos ease 5 to 7½ per cent., with the exception of specialities, that is, where superfine quality is concerned, these wools this season being scarce.

MANCHESTER, December 18.

Inquiry in the market has tended to broaden, and on the whole rather more business has been done than in recent previous weeks. Some orders have been forced out by the hardening tendency in the raw material, and certain operators who have been holding aloof have been more inclined to give out contracts. In cloth for India some fairly substantial transactions have occurred in light fabrics, and more business has also been about in grey shirtings. In fancies offers have been too low. China trade has not been much in evidence, and limited quantities have been bought. Several minor outlets East and West, including Singapore, Egypt, and South America, have given a good deal of support to manufacturers in moderate lots, and the weaving section of the industry continues busier. Demand in American yarns has improved, and there has been a better turn over in medium counts. A few more sales have also been arranged in Egyptian spinnings. Business in export yarns has been irregular, and not of much weight.

VEGETABLE OILS AND OILSEEDS.

Markets this week have had a much firmer and even buoyant tone, and especially so as regards linseed oil, which, in sympathy with dearer seed, advanced sharply to £47 per ton naked ex Hull mill for December delivery, with forward positions at a premium of 5s to 10s per ton. On Thursday, however, realisations caused some reaction to the extent of 4s or 5s per ton. In an advancing market there has been little inducement to consumers to increase their recent purchases, which were done at £2 to £3 below current figures.

In the oilseed section there has been renewed activity in linseed in all positions. For Plate on passage up to £22 has been paid, and for December and December-January shipment, £22 5s, and for January-February, £22 10s, but business has been largely of a speculative character. London has been a fair buyer of Calcutta, £22 15s and £23, having been paid for seed on passage and up to £23 10s for shipment, but values show a slightly easier tendency now.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market shows signs of a weakness which may be only of a temporary nature, as raw goods are at their worst at this season. At the auctions held in Bermondsey on Thursday, both classes of best and seconds ox hides were withdrawn in the absence of reasonable bids. Best cows made from 6½d to 7d, showing a fall of ½d on last prices. Calf sold from 8½d to 16½d, with slight declines in two classes and a fractional advance on one. Wools made from 8s 8d to 19s, and hogs from 9s 4d to 24s each. The imported hide market is weaker, and 9½d to 9½d has been taken for Argentine ox. The position is not clear, but many buyers think bottom has been reached. The Chicago position is cabled as steady, with best heavy packers selling at 18 cents.

Business in sole leather has fallen away this week, and only small deliveries to manufacturers have been made. Little business is now expected until the end of the year, as shoe manufacturers are busy stocktaking, and will not book ahead.

The upper leather position is firm, as stocks are not heavy and raw skins are very dear. Box and willow calf are wanted, also patent and glacé in common grades, but suede seems dropping out of favour.

The boot trade is fairly well employed, but there are still many factories working short time. The outlook, however, for the New Year is regarded with optimism, as the export section remains excellent.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 19.

SUGAR.—There were no improving signs to note in this market. On the contrary, the depression recently observable becomes more intensified, as increasing supplies coming to hand from continental-producing countries coincide with trade buyers following a hand-to-mouth policy. Holland and Czechoslovakia in particular figure as

rather pressing sellers. Prices of British refined were reduced 1s per cwt. Messrs Tate and Lyle's cubes, 36s 9d to 37s 9d; granulated, 32s 10½d to 33s 4½d, as to quality; yellow crystals, spot, 30s 4½d. Home-grown granulated, 31s, ex works, Norfolk, and 32s 3d, Nottingham. Imported descriptions quiet, and prices favoured the buyer. White Java, spot, sold, 30s 6d, forward positions being nominally. Czechoslovak granulated, spot, quoted 30s 9d; ready for shipment, 17s 6d; January-March, 17s 9d, f.o.b. Hamburg. Dutch granulated, J quality, spot, sold, 30s 9d; Dinteloord, January, sold, 18s 3d, f.o.b., Rotterdam. Belgian granulated, spot, 30s 6d; ready for shipment, sellers, 17s 6d, f.o.b., Antwerp. Raw refining kinds continue in slow support. Cuban basis, 95 per cent., February-March, quoted 14s, and continental beet, basis 88 per cent., ready for shipment, 15s 6d, both c.f. and i. terms, U.K. White terminal received moderate patronage, but prices disclosed weakness. December sold, 17s to 16s 10½d; March, 17s; May, 17s 3d; August, 17s 9d to 17s 6d per cwt. Cuban receipts last week 4,010 tons, against 625 last year; exports 18,251, against 5,866; and stocks, old crop, 8,523, against 5,934 last year. Centrals at work total 31, against 20 in 1923.

COFFEE.—There was only a small movement in spot parcels during the week, chiefly on home-trade account. Prices remain steady, with supplies of the finer mild parcels limited.

COCOA.—Spot goods mostly unaltered in price, but trade proved quiet for all descriptions. Accra, F/F grade, January-March, sold 42s 6d to 41s 6d, f.o.b. terms.

TEA.—52,450 packages Indian were catalogued in auction during the week and passed with some irregularity. Common and medium teas were mostly steady, with slight weakness observable in common grades. General run of quality shows a falling off. Pekoe sold, 1s 8½d to 1s 11½d; broken orange, 1s 10d to 1s 3½d. Ceylon sales of 16 370 packages met with good attention, and apart from some slight irregularity, prices on balance manifested no material change. Pekoe sold, 1s 9½d to 2s 3½d; broken orange, 1s 11d to 2s 5d per lb, in bond. China sorts received moderate patronage. Low Monings sold, 1s to 1s 1d lb. 4,800 packages Java and Sumatra offered, and met with fair competition. Steady prices were realised for all fine qualities, but inferior kinds tended in buyers' favour. Pekoe sold, 1s 6½d to 1s 8½d; broken pekoe, 1s 3½d to 1s 9d; orange pekoe, 1s 6½d to 1s 9½d; broken orange pekoe, 1s 7d to 1s 9½d; pekoe souchong, 1s 6½d to 1s 7½d; with flowery broken orange pekoe Sumatra at 2s 2½d per lb, in bond.

RICE quiet for Eastern grain, but shippers were not pressing, and prices ruled steady, despite liberality of forecast regarding available export surplus in Burma. Two Stars, on spot, in small supply, and held for 18s; January-February quoted 14s 10½d, c.f. and i., London. Siam cabled firmer in local markets. Spanish and Italian quietly steady. Japanese peas, spot, 25s; January-February and February-March, 25s. Madagascar butter-beans, spot, 42s; for shipment, 35s to 36s per cwt, c.f. and i. terms, U.K.

SPICE.—Pepper steadily held, but there was not much response from buyers. Black Singapore L.S., January-March, quoted 5½d; Lampung ditto, 5½d; Muntok, January-March, 10½d; ditto, March-May, 10½d. Zanzibar cloves, October-December, 1s; January-March, 11½d. Tapioca quiet at about late rates, both with regard to spot and forward positions. Sago flour, January-March, 16s 6d per cwt, c.f. and i., U.K.

JUTE.—Market, after being easier, ruled steady, with buyers more in evidence. Firsts, to Continent, December-January, quoted £37 10s; January-February, also February-March, £37 15s ton. Hessians and twills remain quiet, at about late rates.

HEMP.—Manila dull, firmly held. J grade, December-February, buyers, £54; K ditto, £53; L, £52; and M, £51 per ton. New Zealand dull, and largely nominal. African sisal quiet, unaltered.

SHELLAC dull. T.N., spot, 31s 5d to 320s; and March, 28s 9d per cwt.

COPRA quiet, and easier. F.M.S. Straits, to Rotterdam, December-February, sold, £30 10s; January-March, £30 10s; Dutch East Indies, ditto, £30 5s; Ceylon, December-January, £32; South Sea F.M.S., £29 15s. Palm kernels, to Liverpool, January-March, £22 17s 6d ton.

RUBBER was accorded steady support, and market firmer. Plantation standard crepe and sheet, spot, also December, sold, 1s 6½d to 1s 7d; January, 1s 6½d to 1s 7d; January-March, 1s 6½d to 1s 7d; April-June, 1s 6½d to 1s 6½d. Fine hard Para, spot, 1s 6½d per lb.

FRUIT (Dried).—The general tone of the market remained quiet, and prices in some instances displayed a weaker tendency. Of currants, Pyrgos ½ cases quoted 42s; ½ bags, 40s 6d; Amalia, ½ cases, 43s to 44s; Patras, ditto, 46s to 48s; Gulph, 50s to 51s; finest, 53s; Vostizza, 58s to 62s. Sultanias easier. New Smyrna, good quality,

THE BANK OF TAIWAN, LIMITED.

Head Office - - - - - TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kluang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c. and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms

OILS.—Linseed firmer. Spot, net, naked, 48s 6d; December, 47s 9d; January-April, 48s; May-August, 48s 3d. Rape quiet. Crude, spot, 51s 6d; refined, 54s 6d. Castor-oil easier. First

TALLOW.—Messrs Colchester and Woolner write on December 17th as follows: The tallow market was firm during the week, and prices were about 1s dearer to-day. There is a good deal of competition for spot supplies, but for shipment buyers and sellers are too wide apart. The next auctions are fixed for January 7th. At auction to-day 899 casks tallow were offered, and 777 were sold. Quotations are:—Australian mutton: Fine, 54s 9d; good to fair, 54s 3d to 52s; dull to dark, 46s 6d to 45s 6d; hard, 54s 6d. Australian beef: Fine, 52s 3d; good to fair, 52s 3d to 49s; dull to dark, 46s 6d to 45s 6d; sweet, 52s 6d. Present shipment from Australasia: Good mixed, 48s 6d. Present shipment from South America, 49s 6d to 49s. The market letter is dearer. Tallow 1s, stuff 1s. Town tallow, 45s 6d per cwt. Rough fat per 8 lbs, 6½d; melted stuff, 36s per cwt. Quotations are:—Towa, 46s, net cash, naked, ex. works Country: Frail casks, 46s; home melted, shipping casks, net, f.o.b. good coloured, 50s; fair to dull, 47s to 46s. Bone fat: white, none; pale, none; benzine, 41s; melted stuff, 41s, f.o.b.

MONEY was scarce at the beginning of the week, and the Bank of England did some business in discounting January bills; but serious borrowing to cover the turn of the year was not expected to begin on a considerable scale until after Christmas. The discount market was quiet; houses that had full portfolios quoted $3\frac{1}{2}$ per cent. firm for three

months' bank bills, but those who wanted to buy usually found that $3\frac{1}{8}$ per cent. was the best rate that could be secured.

THE STOCK MARKETS.

There has been more activity in the Stock Exchange than is customary at the festive season of the year, and business has been plentiful in certain directions, more particularly in the industrial sections. Gilt-edged stocks remain quiet, and Home Rails are steady, with Undergrounds displaying some strength. A further small increase in the price of rubber serves to maintain the firmness of rubber shares, and the buoyancy of tea shares continues. Tobacco and whisky shares are strong and many other sections show considerable animation. Kaffirs are stagnant, and Charteredreds have receded a little from the recent high level.

THE COMMODITY MARKETS.

Business has been very much disturbed by the holidays, and it is unlikely that developments of any importance will occur until after the turn of the year. The position in the cotton trade is described as "cheerful" by our correspondent. In manufactured iron and steel, works here and there have recently received a few orders. Our Sheffield correspondent reports that South America promises to be a better customer next year. Tin displayed firmer features on improved inquiry. Rubber is active and in demand, while linseed oil continues to rise. On later pages further particulars of the commodity markets are given.

FOREIGN EXCHANGES.

During the short interval since Friday morning the foreign exchange market has been quiet, with no outstanding features other than some slight movement in sterling and a sudden rally in the franc, followed by a small decline. On Friday evening the dollar rate closed at \$4.70½, and rose on Saturday to \$4.71½. On Monday the rate was rather lower again at \$4.71, and yesterday morning was quoted at \$4.70½. Forward quotations remain at about ½ cent per month above par. Although the quotation still shows some difficulty in remaining above \$4.70, the large volume of funds in the United States, together with the belief in the strength of sterling, and a very strong desire to see it back at par continue to provide a steady support. After the weakness of the Paris rate early on Friday, determined intervention brought down the quotation sharply to a closing rate of 87.30, and on Saturday to 87.20. On Monday, however, it moved up at one time as high as 87.65, and yesterday morning showed only a slight recovery to 87.50. Active support continues. During the same period the Brussels rate moved from 94.40 to 94.65. Forward quotations in both centres show little change. After its recent sharp depreciation, the lira shows an improvement from 110.10 on Friday to 109.85 yesterday morning. Madrid, however, has continued to depreciate from 33.65½ to 33.75½ on the uncertain political outlook. Amsterdam and Switzerland have moved slightly in our favour, Stockholm slightly against us. On the Danish kronor the effect of the renewal of exchange credits has been only short, as the rate has moved up again from 26.60 to 26.76½, while Christiania also shows a sharp depreciation. In the East, the rupee was quoted yesterday at 1s 6 5-32d, as compared with 1s 6 9-64d on Friday. The yen was also slightly dearer. Silver remains weak. Hong Kong is ½d lower at 2s 4½d. Shanghai is also cheaper at 3s 2d. In South America, Buenos Aires, on high prices for agricultural products and excellent export prospects, continues very firm, having risen again since Friday from 45½d to 45¾d. Montevideo at 49½d is also ½d higher than the 49d quoted on Friday, while Rio has moved from 5½d to 5 27-32d, and Valparaiso from 40.30 to 40.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 20th:—

(000's omitted.)		(000's omitted.)	
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,622	From Revenue	16,820
Interest, &c., on Debt	17,039	Increase in Debt	15,146
Sinking Fund	6,091		
Sundries	598		
Increase in Exchequer Balances	616		
	31,966		31,966

The Revenue for the week amounted to £16,819,900, as compared with £14,517,700 in the corresponding week last year. Customs were lower at £1,491,000, against £2,685,000, but Excise was higher at £8,094,000, against £7,326,000. Stamps brought in £1,090,000 as compared with £140,000. Property and Income-tax amounted to £933,000, against £936,000, and Super-tax was unaltered at £470,000. Ordinary receipts were lower at £91,900 as compared with £152,800, but Special Receipts were higher at £1,350,000, against £14,000. The week's operations increased the National Debt by £15,146,000, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
	£		£
Treasury Bills	+ 10,746	Bank of England Advances ..	— 10,000
National Savings Certificates ..	+ 50	Sundries	— 80
Public Department Advances ..	+ 14,430		
	+ 25,226		— 10,080

The floating debt was increased by £15,160,000 to £844,785,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The Royal Bank of Australia, Bank of Montreal, Western Australian Bank, London Nitrate, Samuel Allsopp, Peter Walker (Warrington) and Robert Cain, and John I. Thornycroft. Mr Randal J. Alcock, J.P., at the meeting of the Royal Bank of Australia, said that the country was, on the whole, in a healthy and prosperous condition. They began the export season with good surpluses abroad, as yet unexpended, and with the problem of turning these to good account now firmly in hand, they could, he thought, face the future with much confidence. Sir Vincent Meredith, Bart., at the meeting of the Bank of Montreal, said: "My last word is a word of confidence and encouragement. The interests of your bank are more closely bound up with those of Canada than ever before, and unless Canada prospers the bank cannot expect the prosperity it should enjoy. I believe Canada will prosper."

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a special statistical article on The World's Cereal Crops.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

SUCCESS.

THE path of history is strewn with the wreckage of unnecessary failures. Regularly by the roadside we find the remains of men who had the world before them, who started with the opportunity of splendid careers and great fortunes, but turned their back on their own chances and threw everything worth having away for the sake of some idea, some cause, some enthusiasm, which they allowed to seize hold of them and make them into monomaniacs and laughing-stocks to their generation. For the sake of something they fancied was a pearl of great price they sold all that they had—hopes, prospects, riches—and found when the deal was complete that the pearl they had purchased so dearly had no market value, and that they were fools for their pains.

It is, indeed, at once a laughable and a painful sight to watch men of first-class brains and capacity deliberately reject all the glittering prizes that life offers to chase some foolish, ridiculous will-o'-the-wisp for which no sensible man would sacrifice a single evening's leisure or enjoyment. What could be more absurd than Socrates, living in the world's great age, with the possibility at hand of a Career such as Athens in her prime alone could offer, wasting his time, and other people's time, in idle chatter at the street corners, and at the end dying absurdly over a drink of hemlock? What more painful and ludicrous than Rembrandt starving among riches, simply because he would not paint the pictures that the public wanted and were well within his powers to execute? Or Milton, blind, derided out of favour, dragging out a miserable existence and selling his life's work at the finish for a price that any unskilled labourer could earn to-day in a fortnight? Or Wilberforce and Clarkson surrendering careers, the one in politics and the other in the Church, for a few hundred thousand black men whom they had never seen, and who could not have disturbed the peace of mind of any sensible, well-regulated man?

These are a few examples among many that spring to the mind of men who have undervalued their own Careers and preferred to go hunting ideas instead of keeping to the main stream of prosperity and success. But even the most sensible of us to-day, in contemplating these now famous lives, must find it hard to realise how absurd they really were to their successful realistic contemporaries. Thanks to the admirable publicity work of Xenophon and Plato, Socrates has become a household name, and looking back on him from our own age, we cannot but let our critical sense be distorted by the post-mortem advertisement value of his peculiar life. In the same way, we cannot quite forget that Rembrandt's etchings now fetch thousands of pounds at Christie's, and that a first edition of "Paradise Lost" would undoubtedly be worth a lot of money in to-day's market. These considerations (though irrelevant when we remember that we have only one life to live) prevent us from realising the true absurdity of idealists who become famous after death. We see the truth far more clearly when we think of the thousands of others who threw away everything without achieving fame either in life or in death. Imagine Socrates dying with no Xenophon or Plato beside him to report and immortalise his death-bed, with no posthumous fame to counterbalance his unpopularity and failure; imagine the painter starving in an attic to paint pictures that no one would ever want to buy, or the poet giving up everything for the sake of a poem that no one would ever trouble to read; imagine the enthusiast living for a cause that died with him, or the martyr shedding blood that never became the seed of any church—then we can see what foolish risks the idealist runs when he throws away substance for shadow, and what a ridiculous, pitiable figure he really cuts.

Fortunately, this type of self-inflicted failure is rare in modern times. Our British House of Commons is, for example, mainly an assembly of realists who appreciate the Career at its proper value, will allow no nonsense to stand in the way of its achievement, and when one door to advancement is closed will jettison all the things that need to be jettisoned before another door can be tried. Thus we

get a thoroughly practical atmosphere, in which the successful man who gets there is admired as he ought to be. In a recent debate on Free Trade, our truly representative Prime Minister was heartily amused at the spectacle of a middle-aged politician belonging to a beaten—almost exterminated—party, expressing the same old beliefs in time of adversity that he had expressed in the day of success. As an honest but experienced man he was naturally tickled by the thought of a politician not merely out of office, but hundreds of miles away from any prospect of taking office, refusing to recolour and revarnish the outward appearance of his beliefs to a more fashionable and popular shade. He had no difficulty in evoking happy laughter from the House of Commons by his picture of the stranded idealist still talking about what he believed to be true, and getting every day further and further from the prospect of a successful Career. It was exactly the kind of joke that will appeal to an assembly of sensible men with no nonsense about them.

The acknowledged master in the art of self-advancement is our Chancellor of the Exchequer, whose speech, highly applauded as one of the greatest of a great rhetorical life, set out in unanswerable arguments the philosophy of the realist; the politician who faces things as they are, and understands that the duty of a successful man is to succeed. It is true, he said in effect, that having throughout my life been an ardent believer in Free Trade, I have now joined a Government that believes in Protection, and have been put up by my colleagues to argue the case for Protection. We are all politicians cut from the same block, and we can often amuse each other for an evening by charges of inconsistency, and by quotations that are meant to be embarrassing; but we are all in it together, and we all of us understand pretty well the rules of the game. I am different from most politicians, certainly, but the only difference is that I am cleverer, and manage to spend practically all my time in the House of Commons on the right-hand instead of the left-hand of the Speaker.

But politics, after all, represent as it were in a miniature the merits and shortcomings, the higher and the lower, the black, the white, and the grey of the man-in-the-street. We average citizens as we scatter for our Christmas festivities and look back over a year in which amid ups and downs we may note, perhaps, some new rung of the ladder mounted, a handsome dividend well earned, or a speculation aptly timed, may find it conducive to his peace of mind to know that our country is run not on fanciful or foolish principles, but by those who work upon the sound practical doctrine that "things are in the saddle and rule mankind."

And yet—when you have pondered again this Christmas the birth and beginnings of Christian Faith, and in the light of that revelation you turn back to modern conditions and contemporary personalities, to whom do you doff your hat—to the brilliant figure of the successful realist, or to the obscure idealist ridiculously living and (still more ridiculously) dying in his unshakeable belief?

THE RUSSIAN DEBT TO FRANCE.

(FROM OUR PARIS CORRESPONDENT.)

It is now possible to publish figures setting forth with some approach to accuracy the total and the nature of the debt owing to France by Russia. Total French investments in Russia, both before and during the war, amount to about 15,000 million gold francs, exclusive of interest accrued since 1917.

When it became a question after the war of securing from the Russian Government a recognition of its debts, the first thing to be done was to ascertain by whom the debt was held. The greater part of the French investments in Russia had been made in the form of bearer bonds, with no registration of ownership. In January, 1919, therefore, the French Government issued decrees providing for the listing and stamping of all Russian securities held by French citizens, and notifying all French creditors to declare, before August 1, 1919, the nature

and amount of their claims in respect of any countries that had formed part of the former Russian Government. Over 1,500,000 individual claims were thus registered. The details which follow have been extracted from this inventory.

The French pre-war claims against Russia may be divided into six groups, to which must be added a seventh, to bring in the sums advanced to the Russian Government by the Government of this country during the war. The total pre-war French investments in Russia are now represented as follows:—

	Gold Francs.	Per Cent. of Whole.
1. Russian State loans	7,442,768,487	83.90
2. Railway loans, guaranteed by the State	2,009,706,592	
3. Loans to Russian municipalities	523,175,000	5.2
4. Non-State Land banks	233,705,445	2.1
5. Foreign companies operating in Russia	190,626,000	1.7
6. Russian banks and industrial concerns	803,917,125	7.1
Total pre-war debt	11,262,998,649	
7. French Government credits to Russia during the war	3,450,000,000	
	14,712,998,649	

It will be noted that 12,900 millions of the total of just over 14,712 millions is composed of issues guaranteed by the Russian Government, which include loans floated on the French market before 1914, Russian internal and Treasury bonds, and obligations issued by Russian State Land Banks.

The Russian State loans issued in France first took the form of thirteen loans, bearing interest ranging from 3 per cent. to 4 per cent.—namely, 4 per cent. issues in 1867, 1869, 1880, and 1889; a gold and a 4 per cent. loan in 1890 (4 per cent. railway consolidated bonds); 3 per cent. issues in 1891 and 1894; 3½ per cent. gold in 1894; 4 per cent. gold in 1893 and 1894; 3 per cent. in 1896; and a 4 per cent. consolidated annuity in 1901. These thirteen issues absorbed a total of 4,583,115,000 gold francs of French savings. Then came three loans bearing higher interest, in which French participation was somewhat larger—namely, a 5 per cent. issue in 1906, to meet the cost of the Russo-Japanese War, of which the French took 986,772,000 gold francs, or 72 per cent.; a 4½ per cent. issue in 1909, of which France took 910,324,000 gold francs, or about 74 per cent.; and the 4½ per cent. consolidated issue of Russian railway obligations, of which 531,871,000 gold francs, or about 80 per cent., was absorbed in France.

The balance of the pre-war total of State guaranteed Russian loans is accounted for by the issue of 215 million gold francs placed on the French market by the State concern known as the Land Bank for the Nobility, and an issue of 236 million gold francs made in the interest of the Peasants' Land Bank, another State institution. The first-named consisted of an issue of 3½ per cent. perpetual bonds, and the second of 4½ per cent. scrip, redeemable in 1968. Over 90 per cent. of these two loans were taken up in France.

There were no Russian State issues in France during the war, but the Russian Government found it necessary, in order to be able to pay interest on its existing loans, and also to obtain the money to buy war material, to procure money from the French Treasury, through the medium of the Bank of France. The total of the advances thus obtained was 3,450 million gold francs, of which 1,530 million went to pay interest on previously existing loans. French capital also participated to some extent at this period in the credit operations on the Russian market. The French absorbed Russian Treasury bonds and Russian War Loan securities to the extent of 69,900,000 gold francs and 90,100,000 gold francs respectively.

The second of the above-given list of categories of the Russian debt to France is composed of various Russian railway loans, which were guaranteed by the Czar's Government. The greater part of these loans, amounting to a total of 1,941,600,000 gold francs, was floated in France, and quoted on the Paris Bourse. These include particularly the Russian bond issues of 1903, 1908, 1910, 1912, and 1913.

The loans to Russian municipalities included important issues for Warsaw, which was then, of course, included in the Russian Empire. The full list of the municipalities

which called extensively on the French market for money is as follows:—

	Gold Francs.
Petrograd	179,600,000
Moscow	132,200,000
Warsaw	126,600,000
Odessa	73,200,000
Bakou	13,000,000
Ekatérinoslav	10,600,000
Tiflis	6,700,000
Poti	7,400,000
Kieff	4,100,000

Group 4 represents French investments in privately-owned Russian land banks, which was comparatively small (being only about 2 per cent. of the total of the Russian issues held in this country). The French investments in non-Russian and non-French companies carrying on business in Russia consisted chiefly of securities issued by—

	Gold Francs.
Belgian companies	125,900,000
British companies	59,380,000
Swiss companies	4,980,000
Other companies	366,000

The much more important category of French investments in Russia included in Group 6 may be dissected as follows:—

	Gold Francs.
Commercial banks	178,499,398
Factories	150,094,958
Iron and steel works	103,360,333
Collieries	89,169,898
Oil concerns	40,689,065

The French investment of nearly 178½ million gold francs in Russian banks was distributed as follows:—

	Gold Francs.	(or about 50% of the total capital)
Banque Privée of Moscow	16,960,000	
Russian Bank for Commerce and Industry	730,000	(or 7.8% do.)
Russo-Asiatic Bank	51,210,000	(or 34% do.)
Private Commerce Bank of Petrograd	19,500,000	(or 18% do.)
Bank of Commerce for Siberia	16,850,000	(or 21% do.)
Union Bank of Moscow	21,250,000	(or 19% do.)

The principal groups of Russian blast furnaces, steel plants and collieries whose capital consisted of French money are shown by the following table, which gives the French proportion of the entire capital:—

	French Holding.	Per Cent. of Whole.
	Gold Francs.	
Briansk collieries	75,000,000	56
Ekatérinova mines	26,600,000	97
Southern Russian collieries	18,320,000	68
Sosnowice collieries	36,700,000	94
Dnieprovienné	22,570,000	51
Donetz	29,200,000	75
Makewaa	27,700,000	65
Taganrog	13,350,000	22
Donetz-Louriewka	10,540,000	16

The principal percentages of French capital invested in Russian factories and other industrial undertakings, in addition to the above, were the following:—

	Gold Francs.	Per Cent. of Whole Capital.
Hartmann	15,915,000	66
Maltzoff	8,670,000	10
Briansk	60,800,000	30
Haut-Volga	10,000,000	57
Tubes de Sosnowice	9,300,000	46
Russo-Belge	19,850,000	37
Wagons de Petrograd	1,900,000	16
Chantier de Nicolaïef	9,600,000	24

French capital in the Russian oil industry is not very large. French investments in the principal three descriptions of these securities which are quoted on the Paris Bourse amount to about 40 million gold francs, as follows:—

	Gold Francs.	Per Cent. of Whole Capital.
Lianozoff	13,300,000	16
Napthe	24,100,000	17
Baku	2,870,000	14

Other Russian undertakings in which French capital participated to a substantial extent are Société Cauchoutière Provodnik (for 49 per cent. of the whole capital), Southern Russian Soda (8 per cent.), and Toul Cartridge Factories (27 per cent.), while French capital is also invested in the securities of many other concerns of lesser importance.

SINGLE PREMIUM ASSURANCE WITH LOANS.

(BY A CORRESPONDENT.)

A RICH man, paying income-tax at the rate of 4s 6d in the £, and super-tax at the rate of 5s in the £, is likely to be attracted when he is shown an investment which appears to give a gross yield of more than eleven per cent. and a net yield of more than six. If it further appears that the only elements of speculation in it are the maintenance of the existing rate of bonus in a well-managed life assurance office, and the continuance of taxation at or about the present level, he cannot be blamed for regarding it as a gilt-edged security. And it is to this, on the face of it, that the present vogue for single-premium policies with loans upon them is due.

It may be useful to give a typical example, and then to make a few comments upon this scheme which is to-day so much in mind.

A man aged 60 is to be shown how he can invest, say, £7,500 as a lump sum, with annual further sums invested of, say, £1,771 17s 6d during his lifetime, so as to secure an investment equivalent to a gross yield of £11 17s 6d per cent. on all the money so invested.

He effects this object by taking a whole-life policy for £100,000 under the with-profit table; he pays a single premium of £75,000, or, at least, he nominally pays it, for at one and the same moment he pays £75,000 and he borrows from the office £67,500 on the security of the policy itself; on this loan he pays interest at the rate of 5 per cent. gross, nominally £3,375 per annum, but really subject to tax deductions, which will be seen later. In effect, therefore, his initial payment in cash is nominally £7,500; but, as he may get income-tax rebate up to a maximum amount of 2s 3d in the £ on £7,000 of this, namely, £787 10s, the net initial outgo to him may be literally only £6,712 10s.

Further, the net yearly interest on the loan, after allowing for deduction of income-tax at 4s 6d—for he pays his interest to the office net of income-tax—is £2,615 12s 6d. After allowing for the fact that the gross interest forms a charge upon his income, and so escapes super-tax, at let us say, the 5s rate, when he comes to make his return for that purpose, it is further reduced to £1,771 17s 6d, the yearly saving on super-tax at 5s on the gross policy loan interest of £3,375 being £843 15s.

He is shown that the bonuses at, say, the end of 15 years, his normal expectation of life, assuming death to occur then, will have swollen the £100,000 sum assured to some £126,250; and this, it may be said, is only taking for granted a simple bonus of 35s per cent. per annum. Thus he sees that this sum would repay the original loan of £67,500, and leave a balance of £58,750.

This balance of £58,750 is equal to the return of his initial outgo of £6,712 10s, and of his 15 annual payments of net interest, after deduction of both taxes, of £1,771 17s 6d each, accumulated at £6 5s per annum

compound interest, net, over the whole period. That corresponds to a gross investment yield, subject to income-tax at 4s 6d and super-tax at 5s in the £, of £11 17s 6d per cent.

Certain variations in the yield arise, according to whether death occur earlier or later, but the yield, on these bases and hypotheses, is always a good one. With a higher rate of bonus than that adopted in this illustration—and many offices pay a higher rate—the yield might be still greater.

But now let us see whether the investment has anything to be said against it. In the first place the assurer is backing the bonuses, so to speak; for clearly, if the bonuses fell off badly, the yield would be much impaired. The immediate future of life assurance is certainly very bright, and those who assure at such late ages as 60 have not to look very far ahead. It is largely to elderly people that these policies appeal, and, indeed, it is easy for them to secure such policies, for the death risk is a very small element where a man pays a premium of 70 or 80 per cent. of the sum assured; and, at still older ages, there is little or no death risk at all, until it ceases to be necessary for the office even to examine the oldest lives.

One may say, perhaps, on this bonus forecast, that, so long as a good office be chosen, the stability of the bonuses over the next 15 or 20 years is quite a legitimate risk to take; nothing but another Great War is really likely to upset them, and, after all, that would upset almost any investment you like to choose.

But there is a further great assumption in these schemes: that is, the continuance of the present regulations concerning income-tax and super-tax, as affecting permissible deductions.

It would not be difficult, for instance, to draft a clause in the next Finance Act making loan interest on such policies no longer admissible as a charge upon income, thus scotching its present exemption from super-tax. The income-tax allowance in respect of that initial payment up to £7 per cent. might as easily be withdrawn. Somerset House knows that no life office could afford to offer a net yield of 6½ per cent. from its own resources; 4 per cent. is nearer the practicable figure, at the very best; the authorities may begin to ask themselves where the margin comes from, and whether it has any legitimate existence.

There have been similar stunts—the writer refrains from going so far as to say abuses—before; people will remember how short-term endowment assurances were being taken up some years ago in large numbers, because the income-tax allowance, running at the full rate of tax, as it then was, and operating on the whole of a large premium, often £15 or £20 per cent., gave such an extraordinarily good yield. What happened? Somerset House saw that the gain of these people was at the expense of the revenue; saw that regulations, intended to encourage life assurance, were being diverted, and, they thought, misused, to further the attractions of investment rather than those of life assurance business, and the result was drastic tightening up in the next

Finance Act. Full rate was no longer allowed on policies effected thenceforward, and in no case does income-tax allowance now apply to a premium which is above 7 per cent. of the sum assured.

Is it not extremely probable that something of this sort will again be done? And is it not possible that once more some of our existing privileges may be endangered by such straining of them as such a scheme as this involves? Somerset House has a heavy hand; Chancellors of the Exchequer are not likely to feel much sympathy with rich men's policies taken out with the idea of escaping tax. But Parliament uses blunt instruments, of the bludgeon rather than the rapier type, and there is a danger that the innocent may suffer with the guilty.

Looking broadly at the whole question, it is doubtful if the offices themselves are wise to encourage such business. The investment end of life assurance is the easiest end to sell, of course, but it is not the best end in the real interest of life assurance. It is the assurance end that is the thing of real economic value to the country; for it is the assurance end that enables men to turn income into capital; that creates new capital, in fact, as against the mere re-investment of existing capital. It is, moreover, from assurance, from contracts where the death risk is the primary, and the investment element only a secondary feature, that the wealth and prosperity of the offices has been built up, and to which the fine bonuses of the past have been due.

Offices must not too readily follow that line of least resistance which their agents and outdoor staff perhaps naturally follow; whole-life, rather than short-term endowment assurances, should be the bedrock of their campaign; the single premium policy, except for very young lives, at any rate, should be the last thing to which attention should be drawn.

Finally, those who contemplate effecting such policies as that analysed here, should realise that not only are they—possibly quite safely—backing bonuses, but they are, quite hazardingly, in the present writer's opinion, acting on the assumption that tax regulations are sure to remain as these are at present.

Some may think that whatever changes are made in the regulations affecting tax deductions, these will only affect future policies, and will not be retrospective. Too much reliance should not be placed on that argument; for in the Finance Act of 1915 many of the revisions were made retrospective—indeed, a careful reading of that Act, and that of 1916 as well, shows that almost all the changes were made retrospective, that is to say, made to affect already existing policies; the sole exception being that the limit of the income-tax allowance, in respect of premiums, to half the standard rate was only made to apply prospectively.

THE SWISS WATCHMAKING INDUSTRY.

(BY A GENEVA CORRESPONDENT.)

THE watchmaking industry, which is one of the oldest and most important of Swiss industries, settled during the sixteenth century in Switzerland, where it found the skilled workers it needed in the Cantons of Geneva, Vaud, Neuchâtel, and the Bernese Jura. The watchmakers generally worked at home or in small workshops, and everyone of them was capable of producing a complete watch—that is, of making himself every part of its mechanism.

Watchmaking ceased to be a domestic industry towards the middle of the nineteenth century. In 1840, first of all, the Vacheron and Constantin firm, at Geneva (a firm which still exists), introduced machinery in their workshops, and from that time big manufactories were established in all the watchmaking centres—at Geneva, La Chaux de Fonds, Le Locle, St. Imier, Bienne, &c.—and the domestic workshops gradually disappeared.

There are nearly 150 different kinds of operations in manufacturing a watch, and the industry has so much developed that there is a specialist for each distinct part of a watch. There are in all some 1,200 firms in Switzerland employing nearly 50,000 hands, but the number of

manufacturers producing complete watches does not exceed 400. In certain districts 90 per cent. of the population gets its living out of watchmaking. Switzerland exported before the war some four millions of gold, silver, and metal watches per annum, and the total annual value of the watchmaking industry's exports reached a sum of 183 million francs (£7,320,000). The war almost stopped that industry, but it was rapidly transformed, and for many years it produced more shell fuses and special pieces for motors than watches. The watchmaking industry was thus enabled to carry on until the end of the war; but it was hard hit by the subsequent economical crisis, and over 15,000 of its workers were for many months on the unemployment register. In order to meet this very grave situation, the Federal Government, in 1922, granted a subsidy, which made it possible for watchmakers to keep their workshops running and to export their goods, which prevented the emigration of many watch workers to the neighbouring countries. That State subsidy has not only contributed to save the watchmaking industry from disaster, it has also helped it to improve its situation to such an extent that its exports are now superior to the pre-war figures. In 1921 exports reached a value of 161½ million francs (£6,460,000), representing 7,850,000 pieces; in 1922 they rose to 178 million francs (£7,120,000), and 8,403,000 pieces; and to 213,400,000 francs (£8,536,000) and 10,152,000 pieces of every description in 1923; from January 1st to June 30, 1924, exports reaching the unprecedented figures of 7,934,899 pieces, representing a value of 91,987,000 francs (£4,487,480). As for unemployment, it decreased by 70 per cent. during 1922 and 1923, and it is now reduced to nearly nothing.

The manufacturing and exportation of cheap wrist watches has greatly developed during the past two years, and an increase has also been registered in the export of decorated, enamelled, and jewel watches. The most important foreign markets for Swiss watches are, in first place, the United States; in the second place, Great Britain and the Scandinavian countries; in the third place, Spain and Japan, but the latter's place is now gradually being taken by France and China. Besides the ordinary gold, silver, and steel watches which are generally manufactured in the Neuchâtel districts, the Swiss manufacturers have taken up the production of cheap clocks which were formerly made in Germany. They are also producing marine chronometers and decorated watches, the latter being in fashion at present; while some firms are now making new chronometers registering a 1-5th of a second, which are employed in all sorts of races and motor car trials.

Several manufacturers of "precision" watches are now devoting their efforts to the decoration of watches, which become beautiful objects, adorned with precious stones, gilded or enamelled. An interesting and successful experiment has been made, for instance, by one big firm, at Geneva, who have combined in their workshops the two local industries of watchmaking and jewellery, and are now producing remarkable works of art.

Watchmaking schools exist at Neuchâtel, La Chaux de Fonds, and Geneva—the last-named celebrated its centenary in September, 1923—and laboratories for experiments have been also established in all three towns, where the Government controls the standard of gold and silver watch cases.

INDIAN CURRENCY AND TRADE.

IN view of the abnormal features of the period, the report of the Indian Controller of Currency for the official year 1923-24 is a singularly instructive document, and, inasmuch as many of the factors alluded to are still operative, its interest is not merely historical. Dated September 27th, the report deals, in fact, to a certain extent with the course of events in India since the busy season closed. Prospectively as well as retrospectively, the facts disclosed are distinctly encouraging, incidentally assisting to put the political influences, which figure so prominently in the Indian as well as in the British Press, in correct

perspective. Politically, indeed, the factors last year were, at first glance, almost uniformly adverse, not merely in India itself, but in Europe which provides the great Dependency with some of its largest markets. Nevertheless, despite these discouraging circumstances, what happened? "Though," the report remarks, "it would be sanguine to hope that normal conditions are yet within reach of attainment, the year.....marked a continued advance towards their restoration." Furthermore, it is considered safe "to assume that the present revival, though less marked than the boom which immediately followed the war, follows sounder lines, and is more likely to endure."

The import trades, and especially the importation of piece-goods, mainly owing to price difficulties, have still to recover their former activity; such difficulties, however, it must be emphasised, originate not in India, but in circumstances external to that country, viz., the shortage and high price of cotton, and so forth, for which India itself offers neither the cause nor the cure. On the other hand, India's exports, as well as her favourable balance of trade, in 1923-24 established new records, and these favourable conditions were accompanied by an improvement in the exchange value of the rupee, an absorption of rupees by the public, a rise in the quotations for Government securities, and an exceptionally heavy demand for finance which led to stringent money conditions in the latter part of the year. The year, as the official analyst notes, was also marked by an improvement in Government finance; the short-term obligations of Government in the form of Treasury bills issued to the public were reduced to a nominal figure, and practical equilibrium between the revenue and expenditure of the Central Government was attained for the first time after five years of revenue deficits, though this result, beneficially, was reached more by a reduction of expenditure than by an improvement in the revenue returns.

A glance at the trade totals of the year will be found encouraging. The value of private exports of merchandise reached a record figure of Rs. 3,62 crores, exceeding those of the previous year by Rs. 47 crores, or 15 per cent., and those of the year 1919-20 which held the previous record by Rs. 35 crores, or 11 per cent. The value of imports of private merchandise dropped from Rs. 2,24 crores in the previous year to Rs. 2,17 crores, with the net result that exports exceeded imports by nearly Rs. 1,45 crores, as against Rs. 90 crores in the previous year, and Rs. 1,26 crores in the year 1919-20 when net exports last reached the maximum. In no month of the year did the imports of merchandise exceed the exports, and the net exports in the four months, December, 1923, to March, 1924, totalled Rs. 73 crores, or just one-half of the balance for the whole year. The imported piece-goods trade is summarised in the following two sentences:—"Cotton piece-goods decreased by 7 per cent. from 1,593 million to 1,486 million yards, and in value by 3 per cent. from Rs. 59 crores to Rs. 57 crores. The up-country markets showed a continued reluctance to purchase, which must be attributed in the present year more to high prices than to the effects of the political boycott." Indian politicians, who like to see their influence exaggerated, have had as much to do with the recent depression in the Lancashire trade with India as the proverbial fly on the wheel. The piece-goods trade will regain its former volume concurrently with a closer approximation to former prices, and not before.

India's heavy import of gold (Rs. 41 crores in 1922-23 and Rs. 29½ crores in 1923-24) in the last two years, accompanied by proportionately heavy purchases of silver, is officially ascribed to various causes: "agricultural prosperity, especially in the cotton-growing areas where the crops were excellent, and fetched high prices a feeling of insecurity arising from the non-co-operation campaign and the subsequent growth of communal antipathy, restricted purchase of piece-goods, owing to high prices, and lastly, the comparative cheapness of gold. The latter factor disappeared last year, but reappeared this year, with the result that in the six months ending September, 1924, India's gold imports have totalled 21 crores, and promise to excel, therefore, even the large purchases of 1923-24. It may be noted here that an important change was introduced during the year in the mechanism by

which the remittances of funds are effected by Government from India to meet their disbursements in London. The normal method has hitherto been the sale by tender in London once a week by the Secretary of State in Council of rupee bills or telegraphic transfers on the Government of India, supplemented by sales of intermediates at higher rates between the weekly sales. While the weekly sales in London continue as hitherto (though recently with somewhat disturbing effects as viewed by banking opinion in India), the purchase of sterling in India from exchange banks and recognised firms has been substituted for sales of intermediates by the India Office. "The object underlying the change," as the Controller of Currency observes, "was that the factors influencing the immediate course of exchange can be gauged more accurately and more promptly in India, and by regulating the purchases with reference to the varying conditions of the market, the operations of Government could be conducted so as to avoid violent fluctuations in rates with benefit both to trade and to the country generally." The new system has worked successfully, and the experience gained has fully justified its introduction.

There is space for only a brief reference to the expansion of currency during the year, and the measure of Government aid in financing trade in the shape of advances to the Imperial Bank of India. The figures supplied show a further decrease in the Government funds locked up in Government treasuries, and thus unavailable for trade purposes, the average balance in these treasuries amounting to 3,40 lakhs, as against 4,00 lakhs in the preceding year. The decrease is due in part to the opening of additional branches of the Imperial Bank of India, and the taking over by the branches of the Government Treasury business along with the Government balances. But the main reason is to be found in the efforts made to economise balances by the provision of additional currency chests at sub-treasuries. The economy shown is reflected in the remarkable fact that the 3,40 lakhs above alluded to were distributed over 1,381 treasuries and sub-treasuries. Also noteworthy is the extent to which the cash resources of the Imperial Bank have recently been helped by Government deposits, the figures indicating that from February last up to September the Government deposits have stood higher than the cash balance of the bank. The Government note circulation increased from 1,75 crores to 1,86 crores, the Broach cotton and the jute crop in Bengal being now financed almost entirely by notes. Neglecting gold, which has ceased to function as currency, there was a net absorption of currency of 15½ crores divided equally between notes and rupees, against the return from circulation of nearly 40 crores in the three previous years. Recent official pronouncements suggest that 15 4d gold is the official objective in relation to the Indian exchange, and there is a general impression in India that the rate will be held approximately at the level thereby indicated for the duration of the oncoming "busy season."

PROBLEMS OF CANADA—III. THE RAILWAY SITUATION.

(BY A RECENT VISITOR.)

THE preceding article showed what a vital part the railways play in linking together the scattered groups of population that constitute Canada. Yet the railway situation of Canada is one of the most remarkable in the world, and its development is deserving of the closest study. There are to-day two railway systems in Canada. The one is a private enterprise, subject, so far as rates are concerned, to a railway commission. It is conservatively capitalised, with immense assets, including large quantities of land given to it in the days of construction; for years it has consistently paid—even during the war—a handsome dividend, and with its ocean liners and trading ships claims, and not without justice, to be one of the greatest transportation systems in the world. It is, incidentally, Canada's largest taxpayer. It owns Canada's first trans-continental line, built over difficult mountain passes with Government assistance, and completed as one of

the conditions on which British Columbia entered into confederation. To its efficiency and enterprise the opening up of Western Canada, particularly in the last quarter of the XIXth Century, was largely due. The other is an even greater railway system—operating over 21,000 miles of line, against the 14,000 miles of the Canadian Pacific. It is a Government-owned system, composed mostly of bankrupt lines to which, in varying degree, the Provinces and the Federal Government had advanced or guaranteed loans. As an unified system it is still run at a very heavy loss. Indeed, it is only in the last two years that there has been any surplus of earnings over working expenses. The accounts of the system are only gradually being reduced to order, and the report for 1923 is the first one to give a really clear idea of the situation. The form of accounts is not in all respects comparable with the very meagre information given in the annual report of the Canadian Pacific Railway, but the following table, based upon figures taken from the two reports, represents an approximately accurate comparison:—

	Canadian National.	Canadian Pacific.
Mileage.....	21,851	13,658
	Million \$.	Million \$.
Gross earnings.....	262.8	195.8
Working expenses (inc. taxes, &c.)..	249.3	158.4
Net income before paying fixed charges.....	13.5	37.4
Fixed charges.....	65.2	13.5
Net surplus or deficit.....	-51.7	+ 23.9*
Capital—		
Stock.....	270	353
Debt.....	1,953	258

* Of which 35.1 is due to the public, and 30.1 due to the Government.
* The C.P.R., in addition, has net income of \$11.4 million from its fleet, hotels, telegraphs, &c.

The position of the "National" system has much improved in the last few years, the surplus over expenses in 1922 having been only \$1.5 millions, while prior to that the system showed large deficits. The amount to be found by the Canadian taxpayer has consequently fallen, but it is still a very large sum, and as it is far larger than the Finance Minister is able to meet out of his current taxes, the national debt is increasing in snowball fashion, and will continue to do so until the C.N.R. can pay the whole of its bonded obligations out of net revenue. This is not likely to happen for some time to come, and Canadian opinion will consider that Sir Henry Thornton will have done wonderfully well if he expands net revenue sufficiently to cover the interest charges due to the public.

In many countries in the world there exist together private and nationalised railways. But the feature of the Canadian situation is that the two systems parallel one another from ocean to ocean, and compete at hundreds of competitive points. The competition shows itself in duplicated services and in such matters as amenities on trains, such as radio receivers fitted on long-distance parlour cars, &c. The competition even extends to telegraph and telephone services which in Canada are run by the railways, and in every important town there are to be seen C.P.R. and C.N.R. offices next door to one another soliciting custom.

It is not necessary to rehearse here the complicated history of the way this situation has arisen. Suffice it to say that in the last twenty years before the war Canada was the scene of great activity in railway construction. Throughout Canadian railway history politics has played a considerable part. For example, the Grand Trunk was partly a Canadian and partly an American line. The Inter-Colonial Railway was built to satisfy the demand of the maritime provinces for a line which would retain through traffic entirely in Dominion territory. Again, several years after the C.P.R. completed its line from ocean to ocean a second trans-continental line was projected, and supported by the Government because of a very strong suspicion of the monopolistic position of the C.P.R.; but the various projects were not co-ordinated, and in the end three lines crossed the continent. It is worth noting here that one of these lines—the Canadian Northern—was able to profit from experience, which had shown that the C.P.R. route crossed the Rockies too far south. In the Western prairie provinces the area immediately to the north of the international boundary is dry, and the "fertile belt," which is the natural line of de-

velopment at this point, forms an arc to the north. The exploitation of this territory is one of the advantages which the C.N.R. has over the C.P.R. The pre-war decade was one of rapid building in advance of Canada's needs, and though population grew fast, the developed area and railway mileage grew faster still. Between 1900 and 1915 the mileage doubled. The population increased a little less than 50 per cent. Then came the war, and all the railways except the C.P.R. found themselves in difficulties. The Government was deeply committed financially to them, and it was feared that if they went into receivership it would not only be bad for Canada's credit in general, but would precipitate a financial crisis. Indeed, it was feared that one of Canada's leading banks, which was deeply committed with the Canadian Northern, would be in difficulties if the railway failed. The Government therefore appointed an expert Committee, the majority report of which advocated the Government taking over the Grand Trunk and Grand Trunk Pacific systems and the Canadian Northern and welding them into the present system. The Government already owned the Inter-Colonial, the National Transcontinental (a link leased to the Grand Trunk Pacific system), and some others. The present C.N.R. is the result of the report. Unfortunately, the balance-sheets of the amalgamated systems contained large amounts of capital, not merely of common stock, but of bonds, which perhaps would never be remunerative, and still larger amounts which can only be remunerative if and when Canada's development has proceeded very much further than at present. In a reorganisation on a commercial basis large amounts of such capital would have been written off; but the Government had already guaranteed large quantities of the bonded indebtedness, and under the war crisis undertook responsibility for much more. The system has, therefore, started on a greatly overcapitalised basis.*

The situation admits of five possibilities:—

1. The present situation may continue and be put on a permanent basis by the Minister of Finance finding out of current taxes the whole of the deficit on the bonded indebtedness.
2. The C.N.R. may succeed in taking sufficient traffic from the C.P.R. to enable it to pay its way.
3. Net receipts may increase through an understanding with the C.P.R. and the cessation of competition.
4. Net receipts may increase through better organisation.
5. The net receipts of the C.N.R. may increase through the rapid increase in population and trade.

The first of these is a desperate remedy which highly-taxed Canada is not yet ready to face. If, however, the other possibilities fail, it is obvious that the sooner the problem is met in this way the better. As to the second plan, a national appeal to the taxpayer to support his own railway might make serious inroads on the revenues of the C.P.R. This appeal is already made indirectly, and doubtless by many agents. But it is not yet the deliberate policy of the Government, for it would be extremely bad for Canada to cripple its greatest private corporation. Moreover, the C.P.R. still commands great political influence, though it is many years since the C.P.R. decided to "go out of politics." It is, however, not unimportant to remember that the dividends of the C.P.R. interest Great Britain rather than Canada, for, according to its last report, its common stock in February, 1924, was held in the following proportions:—

United Kingdom.....	50.73
Canada.....	21.14
United States.....	20.69
France.....	2.95
Elsewhere.....	4.49

* It is not proposed here to enter into the controversy as to the Grand Trunk Pacific debentures and whether the Canadian Government should acknowledge the liability to pay the interest thereon. But it is worth observing that if the C.N.R. had not been formed these debentures would most certainly have been practically worthless, and could have had no prospect of receiving any interest for very many years to come. They have received this year's interest in full; but in consequence of the fall in C.N.R. receipts from the present harvest they are unlikely to get full interest for the ensuing year. Their prospect of interest in the near future, however, is much brighter under the C.N.R. than it would otherwise be.

The idea of a working agreement between the systems, though it would seem to be almost imperative, would not be popular. The C.P.R. is still disliked as a great monopoly whose economic power and political influence is widely regarded—particularly in the West—as a danger to the country. In Canada, as in America, railway competition is regarded by the farmer as much more effective than any amount of control, and there is some evidence that the C.P.R. will be the better for a period of competition. It is said, for example, that it is the C.P.R. agents rather than those of the C.N.R. who exhibit many of the worst characteristics of bureaucracy—adherence to rigid rules and conservative methods of business. The suggestion was recently made that the whole of the national lines should be put under C.P.R. management, the latter becoming a public utility company with a limited dividend, and the Government retaining ownership of its lines, so that in the event of their yielding a surplus it would ultimately recoup some of its losses. But the proposal was made prematurely, and appeared to the public to be an attempt of the C.P.R. to capture or, rather, to buy off the competition of the C.N.R., and was consequently greeted with a storm of opposition. Something of this kind may be the ultimate solution; but for the present minor agreements for restricting competition are probably the utmost that is politically possible.

As to possible economies on the C.N.R., the field is probably not very large. Sir Henry Thornton's new broom has by general admission created a new *esprit de corps* among the C.N.R. staff. But the big economies from falling prices of material and the deflation of wages have already been experienced in the last three years. Moreover, the new management, with its enterprising reorganisation, involves expenditure. There is no radical improvement to be expected from internal economies.

There remains the hope of increasing traffic as a result of a larger population, and it is to that solution that Canada is pinning its faith.

Notes of the Week.

Mr Coolidge and the Jingoism.—At this season of the year we scan the horizon with more eagerness than ever for signs of influences working in the cause of peace on earth and goodwill towards men. We may give, therefore, a most hearty Christmas welcome to the courageous stand which President Coolidge is making against the mischievous campaign of scare and jingoism which has been developing in the United States in connection with naval affairs and Americo-Japanese relations. In our own country we are only too familiar with all the arts of the scaremonger, and in these small and crowded islands it is obviously much easier to counter them than in the vast territories of the United States. There the scaremonger has a wider field to play in; it is more difficult for the voice of reason to pursue and scotch him, and, therefore, the restoration of a proper perspective demands, even more insistently than it does here, a bold and courageous attitude by the occupants of the great places of the State. This fact Mr Coolidge has been quick to recognise. He has set his face against a special naval investigation, the chief result of which would obviously be alarmist comparisons of the naval strength of certain nations, and much fresh powder-and-shot for agitators. He has declared against competitive building, and has clearly shown his determination to stand, not merely by the letter, but by the spirit of the Washington Treaty. This attitude of the President, coupled with Mr Hughes's striking greetings to the new Japanese Ambassador at Washington, should have a considerable effect in countering the work of the scaremongers in the United States, and of their opposite numbers in Japan, whose activity has been at least equally prominent. Further grease should be applied to the wheels of Japanese-American relations by the voicing in at least one powerful organ of the American Press of an appeal to the Senate to repeal the embargo on immigration from Japan and to place her on a ration basis like other nations—in other words, to revert to President Coolidge's policy which it rejected last session. What strength of public opinion may lie behind this appeal we do not know, but it

may perhaps be regarded as a straw showing in what quarter the wind is setting. While in search for straws, we may note with satisfaction the information, contained in the official report of the Rome Session of the League of Nations Council, that the United States has agreed to send a delegate to the International Conference for the control of the Traffic in Arms, which is to meet in May. An official representative of the United States, it is reported, has assisted in preparing the Draft Convention, intended to replace the St. Germain Convention, which the Washington Government refused to ratify. No radical change in America's attitude to Europe is to be looked for. But now that Mr Coolidge has behind him an overwhelming vote of confidence, he seems likely to lead his country along the road of more friendly co-operation.

Christmas in the Stock Exchange.—Between the conditions prevailing to-day in the Stock Exchange markets and those which ruled at Christmas-tide last year, writes a Stock Exchange correspondent, the contrast is so great as to make it worthy of remark. Twelve months ago the prospect of a Labour Government weighed like a blanket over the mind of every capitalist, large and small alike. None of the Stock Exchange markets pretended to activity. A dull blight lay upon the House. Clients declined to deal. They sold—in some cases very heavily—on the conviction that a few years of Labour Government would overthrow every canon of security and undermine the best traditions upon which financial confidence is based. The event proved, of course, that many of the fears were unfounded, but this did not become apparent until some weeks of the New Year had passed. Christmas was a subdued and rather apprehensive time in 1923, although the younger spirits in the Stock Exchange celebrated it with vigorous outbursts of horseplay. This year, conditions are very different. Some of the markets are quiet, but in others the hands of the investor and of the speculator are turning over everything with a view to getting into shares at reasonable prices in advance of the New Year. Purchases of stocks and shares do not fall for payment—except in the Consol market—until January 8th, and money can therefore remain undisturbed at the banks over the window-dressing period. Stock Exchange members find no time for play; their energies are too greatly absorbed by more profitable employment. Sweet charity takes liberal toll of the benefit shed by the substantial gains that have accrued of recent months to tea shares, textiles, brewery, and whiskey, trust companies' issues, Malayan tin—and a host of others. The year will end, in the Stock Exchange, upon a very cheerful note, and, in the circumstances, there is a ring of unwonted certainty in the wishes, which the House broadcasts to its clients, for a merry Christmas.

Wages in 1924.—The Ministry of Labour statistics relating to changes in rates of wages indicate that up to the end of November, 2,900,000 workpeople had received increases amounting to £580,000 a week, and 500,000 had sustained reductions of £64,000. Figures for December are not yet available, but it is improbable that they will materially affect these totals. An examination of the details on which the statistics are based reveals the fact that the workers who received increases were distributed in the main amongst less than a dozen important trades, while the bulk of the decrease was accounted for by changes affecting coal miners in Scotland, Northumberland, and Durham. Moreover, the number of workers whose wages come under review for the purpose of the compilation of the statistics is between 7 and 7½ millions, and it may be assumed that about 4 million workers, or over 50 per cent., received the same wages at the end as at the beginning of the year. The general position, therefore, is that wages in a few industries have risen, but in others there has been little or no movement in either direction. Since the end of 1920 the statistics show that the weekly average reduction in wages per head amongst the workers who are effectively covered by machinery for collective bargaining, has been 26s 6d a week in the building industry, 44s 6d in mining, 56s in the iron and steel trades, 31s in engineering and shipbuilding, 21s in the

textile trades, 19s 6d in the transport trades, and 20s in the public utility services. These figures contain several features of interest, amongst which the most prominent is the heavy fall in wages in the iron and steel trades. Attention is also again focused on the fact that wages have fallen to a greater extent in the unsheltered industries, mining, iron and steel, and engineering and ship-building, than in the sheltered trades, the building and transport industries, and the public utility services. The average for the textile trades, which are mainly unsheltered, gives a somewhat false comparison, as it includes the effect of changes in the wages of a large proportion of female workers, whereas the employees in other industries mentioned are mainly males. The wage negotiations of 1924 have been, on the whole, carried on with a small amount of serious friction between the parties, except in the case of builders and dockers. In the building industry an increase in wages in February, under a cost-of-living sliding scale, was followed by a further general increase in August, preceded by a six weeks stoppage of work, the total advance being 3d to 1d per hour. A dispute at the ports in February resulted in the concession of an increase in the wages of dockers of 2s a day. In the coal-mining industry the effect of the revised national agreement was an all-round advance in wages in May. From that date onwards wages in some districts remained unchanged at the minimum, but in others there was, on the whole, a gradual decline, and at the end of the year wages are at the minimum in all districts except the Eastern area and Radstock, though higher—apart from Scotland, Durham, and Northumberland—than a year earlier. On the railways, wages were raised and reduced by equal amounts in January and July. Shipbuilders received increases amounting usually to 7s a week. The industries in which wages generally remained unchanged included engineering, the cotton and wool textile trades, printing, the clothing trades, and agriculture, though in the latter case higher rates were agreed upon late in the year by the new committees.

Home Railway Dividend Prospects.—The programme of wage demands recently presented to the companies by the National Union of Railwaymen naturally produced a sobering effect upon the Home Railway market, but, seeing that the matter is not likely to come to a head for at least two months, the prices of the stocks have exhibited no marked signs of depression, and investors appear rather to be turning their attention to dividend prospects. With no figures of expenditure and net receipts, it is difficult to gauge the possibilities, but for what it is worth we give below a table of gross receipts of the four great railways for the first 50 weeks of this year, compiled from the weekly traffic returns, together with a comparison with the corresponding period of 1923:—

(000's omitted.)

1924.	Great Western.	L.&N.E.	L.M. and S.	South-eastern.	Total.	Inc. or Dec.
January to June (26 weeks) —						
Passengers	5,942	10,214	14,639	7,676	38,471	+ 1,174
Goods	8,801	17,759	22,588	2,919	52,067	+ 4,396
Total	14,743	27,973	37,227	10,595	90,538	+ 5,570
July to December (24 weeks) —						
Passengers	7,282	11,931	17,114	8,905	45,232	+ 1,943
Goods	8,122	16,558	21,012	2,873	48,565	+ 507
Total	15,404	28,489	38,126	11,778	93,797	+ 2,450
Total (50 weeks) —						
Passengers	13,224	22,145	31,753	16,581	83,703	+ 769
Goods	16,923	34,317	43,600	5,792	100,632	+ 3,889
Total	30,147	56,462	75,353	22,373	184,335	+ 3,120
Decrease	459	1,758	835	68	3,120	..

We have divided the period into two parts, because in the second half of 1923 freight rates were lowered to the level current throughout the past year; the figures show a slight increase in gross receipts from goods in the second half, though for the 50 weeks there is a decline of nearly £4 millions. Tonnage figures are available only up to the end of September, and these show a decrease of 3½ million tons, or 1.33 per cent., coal being down by 7½ million tons, or 4.75 per cent., while other minerals show an increase of 2½ million tons, or 5.36 per cent., and general merchandise an increase of nearly 2 million tons, or 4.39 per cent. Passenger receipts, it will be seen, are a little higher for the full period, thanks

to a substantial increase in the second half of the year. The heaviest decline in total receipts is shown by the London and North-Eastern, the decrease amounting to over 3 per cent. Those of the Great Western are down by 1.5 per cent., of the London, Midland, and Scottish by 1.1 per cent., and of the Southern by 0.3 per cent. In the matter of expenses, it is possible that some slight saving may have been made in the coal bill, while the cost of other materials as a whole probably shows little variation. Wages, too, will have absorbed very much the same (except in so far as the companies have been able to reduce numbers under the working of the eight-hour day), since the cost-of-living index figure has moved in a similar manner. How far the coming wages question will influence the directors in forming their dividend policy it is impossible to say, but, in view of the existence of the substantial reserves disclosed in last year's balance-sheets, a reduction in the dividends on the junior stocks seems hardly probable.

Co-operative Trade Improving.—A correspondent writes:—The promise of a restoration of the trading position of the Co-operative Wholesale Society made in the spring of the year has been fulfilled in the accounts just made ready for the meetings of the society in January. For the thirteen weeks ended September 27th the total sales of the society to the retail societies in membership were £17,104,566, which is a gain of 12 per cent. on the corresponding period of 1923. Of this the Manchester headquarters did £9,094,238; £2,697,176 was through the Newcastle branch and £4,686,067 through the London, Cardiff, and Bristol depots. Substantial increases were made in the furnishing and footwear sections, although, of course, grocery and provisions still constitute three-fourths of the co-operative turnover. In the co-operative productive works there has been an increase of 21 per cent., the supplies totalling £6,101,507, or nearly one-third of the aggregate trade. The slump in the business of the four jam factories has been arrested, and the production has risen to £358,733 in the three months, while the output of the margarine works has jumped 45 per cent. to £513,480. From the three soap works the weekly supply has been 776 tons, and the output for the quarter reached £548,862. This is an increase of only 3½ per cent. During the thirteen weeks, 842,150 sacks of flour and 761,151 sacks of offal were sent out from the ten mills of the society, the value of which was £2,442,815, which compares well with the £1,827,750 of the corresponding period of 1923. In the clothing trades the C.W.S. has been most successful in boots and shoes, its productions in seven factories and four tanneries having been £472,670. From the works 630,948 pairs were despatched, 250,000 of which were from the works at Leicester, some employees at which have just been celebrating their fiftieth year of co-operative service. The improved state of trade is reflected in the increase in deposits and withdrawals of the C.W.S. Bank, which amounted to £139,921,760 in the thirteen weeks, as compared with £119,918,512 in the corresponding period of last year, an increase of 10 per cent. The C.W.S. Bank now operates current accounts for 1,027 co-operative societies, 8,766 trade unions and friendly societies, and 3,454 clubs and other mutual organisations. This being the quarterly report, there is no effort made to gauge the course of profit, but the fact that trade has been restored to such a considerable degree suggests that when the results of the whole of the year's trade are known, they will enable the maintenance of the dividend being paid on purchases, after capital has received its reward, according to the orthodox co-operative practice.

American Cotton Crop.—The Census Bureau of the United States Government has published its tenth report for this season relating to the amount of cotton ginned up to December 12th, the total being given as 12,796,000 bales. Since the previous report a fortnight earlier 571,000 bales have been dealt with, and at the same time last year the amount was 9,549,000 bales. The statistics on the whole were rather better than expected, but the slightly easier prices which followed were not maintained, as the lower rates attracted trade buyers. There is now

a possibility of the ginning returns exceeding the final estimate of the crop of the Government of 13,153,000 bales, and more people than ever are convinced that the amount grown this season will be 13,500,000 bales. Whatever happens, users of American cotton throughout the world are assured of plentiful supplies during the next 12 months.

The Supply of Capital in India.—A committee has recently been appointed by the Government of India, consisting of members of the Legislature, and known as the "External Capital Committee," "to consider the question of the flow of capital into India from external sources." This committee, we understand, has sent a questionnaire to the Indian Chambers of Commerce, prominent business men, and economists in the following terms:—

FORMS OF CAPITAL.

1. What are the different forms in which external capital enters India?

ENCOURAGEMENT.

2. In which of these cases is the entry either unobjectionable or necessary in the interests of India generally and of Indian industries in particular?

3. Is it necessary to encourage the entry of any particular variety?

4. If so, what steps should be taken in this direction, and to what extent is capital likely to be forthcoming as the result of such steps?

REPLACEMENT.

5. How far is it possible to replace external by internal capital?

6. What measures are necessary for the—
(1) greater attraction of indigenous capital for industrial purposes, and
(2) development of banking organisation and credit facilities in India?

RESTRICTIONS.

7. What are the forms of external capital the entry of which is objectionable?

8. What are the objections in each such case?

9. What restrictions can and should be imposed in each such case?

10. What would be the effect of any such restriction on the—
(1) industries and development of the country generally,
(2) loan policy of Governments and local bodies, and
(3) holders of investments?

DIFFERENTIATION.

11. Is it necessary to differentiate in any respect, and, if so, how would you differentiate between—
(1) British and foreign capital, and
(2) Capital from foreign countries which exercise such discrimination and from those which do not?

PRACTICE ELSEWHERE.

12. What is the practice in other countries (especially in the British Dominions) in the matter of encouraging or restricting the flow of foreign capital?

The subject is one upon which little is known in India, and upon which a good deal of misconception prevails. The possibility of sending the document to economic and commercial authorities outside India was, we believe, considered, but there were obvious difficulties in making a choice. The Committee, however, would no doubt welcome and benefit by contributions upon the subject from this country.

The Position of the Fishing Industry.—A Grimsby correspondent writes:—After an unprecedentedly bad time the outlook of the fishing industry is at last improving. Well-managed trawlers are again being worked profitably, and revived hope is encouraging people to increase their exertions. Coal, always a formidable expense, is a little easier in price, and this, coupled with the larger demand for salted fish from Catholic peoples of the Mediterranean and South American countries, is providing the necessary margin of profit to the white fish industry. The improved position in Germany and the stabilisation of her currency once again bring German buyers into the herring market, and this has made all the difference to the present and future well-being of the drifter fishing. Few trawlers have been built of late years, and values are back to pre-war prices; in fact, some of the older ships are hardly saleable. Fish in the North Sea are scarcer than ever, notwithstanding the great chance they had during the war years, when large areas were unfished; otherwise the

increased prices of to-day would provide a handsome profit. Trawlers are having to depend on distant banks, such as the North coast of Russia, where the fish have much improved in quality owing to the trawler cutting down the size of the shoals, which at one time were so great that the fish were half starved, and consequently very thin. Lately some good cargoes have been landed from these grounds, and the better condition of the fish has merited higher prices. The North Sea ports will in future have to depend more and more on this fishery, which years ago was not exploited in winter. The Iceland Government has adopted very harsh measures against the British trawlers, and in this direction there is considerable ill feeling and a sense of injustice among our fishermen. On the slightest pretext, and often on very flimsy evidence of inshore fishing, skippers have been fined large sums of money, have had their nets confiscated, and sometimes have suffered imprisonment. The fishing trade is outraged, and all sections in the industry think it is time our Foreign Office had the question threshed out. The consumer still thinks the price of fish too high, and often with reason, for, with such a perishable commodity, prices fluctuate to an alarming degree. Everyone to-day feels the taxation burden, and attempts to hand it on. Yet one must remember the increased costs of catching the fish and the greater distances the trawl has to travel. The scarcity in home waters has not improved matters, and new types of trawl and new methods of fishing are bringing to port a larger percentage of immature fish, which does not augur well for the future. The difficult times have made people turn to all the by-products of fish, and in this direction to-day it may be safely said there is little waste compared with pre-war years. The manufacture of fish meal for cattle feeding is now a large industry, and our farmers are buyers of over half-a-million sterling of this commodity. A new industry, that of making a high-grade liquid glue out of fish, is another factor with possibilities. Unlike animal glue, marine glue has the advantage of remaining liquid; thus the carpenter or housewife has no need to heat the glue-pot. The handiness of the little tubes of fish glue is that they are always ready for use. Also, with all the modern talk of vitamins, cod liver oil is now eagerly sought after by cattle breeders, as supplying the necessary, if elusive, germ, and thus another by-product helps the fishery. Taking a long view of the future, it may be said there is a fair prospect of success attending well-managed concerns in our fisheries, but there is no justification for believing all difficulties are over, and the public will be well advised to look askance at any financial proposition promising big rewards in connection with the industry.

The Sugar Position.—The market position of sugar goes from bad to worse, and the forecast which we made early in November has turned out to be substantially correct. The experts have revised their estimates of crops, as we suggested they would, and the cheaper sugar for the consumer of which we spoke has now become an accomplished fact. We put the world's total production for the present sugar year at 21½ million tons, against 19,650,000 tons in the previous season; but this estimate, which looked rather high two months ago, may have to be revised, and world crops of no less than 22,000,000 tons are talked of. There would thus be an expansion of close on 2,500,000 tons to deal with, and of this increase Europe alone will contribute two million tons. Mr Licht now estimates the

European beet sugar crops at 7,143,000 tons, which would denote an improvement of no less than 2,086,000 tons over the figures for the previous year. Germany and Czechoslovakia are the principal contributors to this larger tonnage, and it is certain that both countries will have a very heavy amount of sugar available for export. Mr Licht thinks that the French crops will yield about 800,000 tons, which is well above the figures mentioned by the French factories; thus France will need less outside sugar than in previous years. But this is not all. There is every indication that the European sowings under beet will next season undergo a further large expansion, particularly in Germany and Czechoslovakia, as more capital is being attracted to the industry, and the position as regards fertilisers, &c., is more comfortable than it was, and there are hopes that Russia will do better with her sugar industry, although it will be some time before there is any hope of that country having anything to export. News as regards the cane crops in Cuba is all in favour of a big out-turn, and the market is now talking about a crop of 4,500,000 tons, some estimates even going a little higher. There is not much of the old crop sugar left, and shippers seem rather inclined to hasten as much as possible the export of the new season's supplies. Assuming that the American demand expands according to market forecasts, the United States will probably absorb 3,000,000 tons of the Cuban crop, the cutting of which has now begun, and the marketing of the surplus in the face of the largely increased European supplies should bring about a very interesting position in world sugar circles. The deliveries into consumption in this country of late have been disappointingly small to the trade, and no doubt buyers are fully alive to the possibilities of a lower range of prices being established in accordance with the views expressed in these pages at the beginning of November. The total for the 11 months ended November 30th was 1,438,831 tons, against 1,358,298 tons in the corresponding period of 1923. Of this quantity, 822,327 tons were home refined, against 875,371 tons in the previous year. The imports of raw sugar for the 11 months were 1,099,707 tons, against 1,075,508 tons, and imports of all sugars for the period dealt with were 1,606,355 tons, as compared with 1,405,904 tons in the 11 months ended November 30, 1923. The U.K. stocks at the end of last month stood at 150,050 tons, against 157,300 tons a year ago, and 326,950 tons in 1922. There has this month been a further big decline in values, and foreign beet sugars have been somewhat pressed for sale. The British refiners, finding that buyers are not inclined to do much, have reduced their selling prices, and all home-refined cubes, crystals, &c., have been marked down, current rates, compared with the best seen this year, showing a very considerable fall all round. It is quite likely that with the turn of the year operations in Cuba will be accelerated with the idea of placing the new crop supplies on the market as early as possible. Mr Guma is now inclined to look for a crop of close on 4½ million tons, but, assuming that it turns out to be fully 4,500,000 tons, the problem of finding buyers will not be easily solved. The American sugar interests may try to hold the market up, but obviously the speculative transactions which have been so prominent during recent years will no longer find favour, and the commodity all over the world will sell at prices based on a liberal supply and a moderate demand. Refiners, faced with liberal supplies of foreign raw material, and threatened with State-aided competition at home, will have to pursue a cautious policy in their own interests; thus sugar may accumulate at the shipping ports and make matters worse. Certainly the days of short supplies and inflated prices seem to have vanished, and unless there is an unexpected expansion in world demand, selling rates everywhere must keep in users' favour for some time to come.

Hungarian Conditions.—The new Foreign Minister, M. Tibor de Scitovszky, has more than once declared his intention of giving special attention to commercial and financial matters, writes a correspondent, and, according to the *Bellman* in the "Hunting of the Snark," what is said three times is true. The fact that Baron Korangi, the Finance Minister, gave up his diplomatic position in

Paris to serve his country as Finance Minister seems to afford some sort of precedent for appointing a banker and commercial expert to the office of Minister for Foreign Affairs. Outside Hungary such an appointment would mark a new departure. M. de Scitovszky has not only done duty in the Ministry of Commerce for several years, but also was managing director of the Credit Bank, the largest bank in Budapest; his credentials, therefore, are exceptionally satisfactory for dealing with such things as commercial treaties, and it is probable that his appointment is due to the necessity of having a business man to deal with Czechs and other neighbours. A very great deal of dissatisfaction has been expressed by import merchants at the high duties. These, they say, will ruin trade, which, however, seems to increase by leaps and bounds, in spite of these difficulties. The imports for the month of October were exactly two and a-half times as great as in the same month of last year, and exports were double, so that it looks as if the debit balance at the end of the year will not differ much from 1923, but it will be a balance between enormously increased dealings. It will be disappointing if the figures for November and December are not as good as, if not better than, those for October, in view of the good sugar crop and large stocks of maize to be exported. Some Hungarian towns are perplexed how to get rid of their pre-war debts, and are endeavouring to come to some understanding on the subject. For instance, one town contracted a loan of some two millions from a certain bank, which now claims to be paid 250 times as many paper crowns as were paid over to the Municipality before the war. Naturally, to provide so large a sum at the present time is not altogether a simple proposition. It is hoped to arrange the matter by compromise through the gold institution. There is as yet no diminution in the prices of food, and the all-round charges are pressing very heavily on the middle classes, and to this fact the falling off of attendance at many restaurants and even cafés afford significant, if tragic, testimony. Other things, such as shirts, gloves, and clothes are proportionately dear. In a country where salaries are on a low scale and there is a crisis in trade, it is easy to see how almost impossible it is for the poorer middle classes to live in any sort of comfort. That the crisis was foreseen as the inevitable result of the reconstruction plan being put into execution does not benefit the unfortunate consumers. The cause of the high prices, as is usual in such cases, is attributed first to Government and then to the great land-owners and need of agrarian reform. There may be truth in both these complaints. Probably the prosperous peasantry and small landowners are having their share in the profits to a greater extent than their wealthier neighbours, the large proprietors, and it is obvious that high duties tend to keep prices high in such things as coffee and cocoa, for instance, and other imported foodstuffs. As, however, Hungary is a self-supporting country, profits must go into the pockets of Hungarians themselves, and strict inquiry would seem to be urgently called for.

Finnish Affairs.—A correspondent writes:—The total value of Finnish imports (c.i.f.) amounted to 404.3 million marks in November, and to 4,394.0 million marks for the period January-November; the corresponding figures in 1923 were respectively 451.9 million marks and 4,251.6 million marks. The total value of exports (f.o.b.) was 522.8 million marks in November and 4,559.7 million marks in January-November; the corresponding figures in 1923 were respectively 357.4 million marks and 4,013.8 million marks. For the period January-November, exports, therefore, exceeded imports by 165.7 million marks. During October the price index number for export goods fell 6 points, the index number for import goods remaining unchanged at 947. The decrease in imports during November reflected the influence of the favourable harvest of the present year; the import of cereals was less than in November, 1923, by about 36 million marks; imports of feeding-stuffs were about half what they were last November. On the other hand, the recovery anticipated for the cotton industry has not yet materialised. According to official statistics this year's timber exports amounted, at the beginning of December, to 986,000 standards. If official anticipations are

realised, the total timber export for 1924 will be over 1,000,000 standards, thus exceeding the figure for last year by 100,000 standards, and reaching for the first time the same level as Sweden. The prices for timber prevailing in the autumn were relatively low. Sales for shipments in 1925 were estimated at the end of November to amount to 70,000 standards; on the same date last year sales for 1924 were estimated at about 20,000 standards. The prospects of this market in the coming year are still uncertain. The value of exports (f.o.b.) of timber in November was 327.7 million marks. Exports of paper amounted in November to 17,513 tons, compared with 13,306 tons in the corresponding month of last year. For January-November, paper exports totalled 166,153 tons, against 158,239 tons in the same period of 1923. The export of wood-pulp was well maintained in November. Chemical wood-pulp was exported in that month to the amount of 21,749 tons (compared with 11,684 tons in November last year), and ground wood-pulp and cardboard to a total of 8,875 tons, as against 3,300 tons in the same month of 1923. The total value (f.o.b.) of the products of the paper industry exported in November was 121.0 million marks. In October the National Debt, which is funded in its entirety, was reduced by 20.0 million marks. At the end of the month of October it amounted to 2,289.0 million marks. The total State revenue for the period January-August amounted to 1,824.7 million marks. The Municipal Central Bureau states that more than half (57.1 per cent.) of the amount of the Municipal Joint Loan from America (7 million dollars) will be utilised for extension of harbours, electrical plant, and waterworks. The balance will be applied to such social purposes as the erection of school buildings, dwelling-houses, and hospitals, &c. The average dollar rate in October was 39.78, the highest point touched being 39.85, and the lowest 39.75. Deposits in the savings banks amounted at the end of October to 1,695.5 million marks (1,490.4 million marks at the same date last year). During October, the wholesale price index fell three points to 1,114, while the cost of living index rose 20 points to 1,219 as a consequence principally of the increased prices of foodstuffs in foreign markets. Unemployment has increased; at the end of October the number of unemployed persons, men and women, was 1,594, against 800 at the same time last year. The Diet has authorised the Government to purchase half the shares of the Outokumpu Copper Mine. This mine (South-Eastern Finland) is estimated to contain 7-8 million tons of ore, yielding 4 per cent. copper.

Recovery in Uruguay.—Like other South American countries, Uruguay seems definitely to have emerged from the post-war depression. According to the Report (to September, 1924) of the British Vice-Consul at Montevideo, the improvement is due partly to the abundant crops (except of maize), but mainly to the excellent wool clip, which provided ready money, and enabled the cattle-owners to hold their stock till they could obtain better prices, and also improved the public revenue and the balance of trade. The improvement is reflected in an increased activity in building and greater use of commercial motor transport. The Budget estimates, through retrenchment and readjustment of taxation, show a small surplus, but the public debt has increased since 1914, including the new issues now pending, by some 60 million pesos, of which some 22 millions have been spent on public works, the rest representing Budget deficits. An attempt to borrow 35 million pesos in New York fell through last year, and about half the amount has been raised, to cover the deficits of the last two years, by an internal loan. New public works, including the rebuilding of the Montevideo Custom House, and repairs to roads, wharves, and bridges, have been provided for by raising 2½ million pesos in New York by Treasury bills. The remittances for the service of the External Debt have involved heavy losses through the unfavourable exchange, but proposals to export a portion of the unnecessarily large gold reserve have been frustrated by the opposition of the State Bank. (Since the Report was written there has been a considerable improvement in the exchange.) Great Britain takes the largest share of Uruguayan ex-

 General Manager W. A. WORKMAN, F.I.A.

ports, and in 1923 recovered from the United States the chief place in supplying her imports, but German competition is becoming keen. So with shipping, though here Great Britain has made a marked advance, and some two-fifths of the tonnage is British. German wool exporters, however, patriotically patronise German vessels, even at slightly higher freight rates. Improvements are in progress in the port of Montevideo. The principal British-owned railways, which are comprised in the Central Uruguay system, have had a record year, in spite of the disturbances of trade in Southern Brazil, but have suffered considerable losses on exchange. Changes are pending in the Customs valuation system, and a temporary and partial remission is contemplated of the export duties on washed wool. Uruguay is essentially "a cattle country," and some 96 per cent. of its exports are derived from the raising of cattle and sheep. This must be considered in any estimate of its prospects.

Panama and the Canal Zone.—In 1923 the imports into the Republic of Panama were about four times the value of the exports; two-thirds of the latter consisted of bananas, grown largely in Costa Rica, but exported through the Panamanian port of Bocas del Toro. If the province of Bocas del Toro is ruled out, the imports are ten times the value of the exports. The difference is made up by money coming in from the canal zone from the crews of United States warships, and from tourist traffic. This is the position as stated in the Report of the British Consul at Panama, which has just been issued by the Overseas Trade Department, and is revised to September, 1924. But there are great possibilities for coffee, rice, maize, and tobacco, of which the production is now insufficient, and possibly for sugar, which is only just sufficient for local needs; coconuts account for 9 per cent. of the exports, cacao, grown by the United Fruit Company, for nearly 10 per cent., and banana culture is extending in the neighbourhood of the Gatun Lake and on the Atlantic coast. Manganese is to be worked by an American company: gold is mined, and is now being dredged; and there appear to be good hopes of oil. Business conditions are affected by anxiety as to the impending treaty with the United States, and can only become normal again through improved production, which will be fostered by the system of roads now under construction, for which \$4,500,000 have been borrowed in New York. Germans and Czechoslovaks are being settled as colonists; the restrictions on Chinese immigration have been made more severe. British import trade, though only 10.8 per cent. of the total, was greater by more than 40 per cent. than in 1922, chiefly in small hardware, biscuits, and lard. American prohibition of intoxicants, it is noted, is causing American shipping to be registered in Panama, notably those engaged in tourist traffic. The canal traffic in 1923-24 was the largest on record—5,230 commercial and 418 U.S. Government transits, with an aggregate in tolls of \$24,290,963. In tonnage, the United States naturally came first, with 2,947 ships of a tonnage of 15,806,899; Great Britain second, with 1,265 ships, and a tonnage of 6,097,611; thereafter Japan, with 171 ships; Germany, with 150; Norway, with 136; and Holland, with 102. Half the total cargo passing was United States inter-coastal, and 35.5 per cent. was accounted for by four other routes—Europe and the North American

Pacific coast, the East Coast of the United States and the West Coast of South America, Europe and South America, and the United States and the Far East—which alone showed a slight decline. The canal, of course, cannot yet be regarded as a paying enterprise, owing to the cost of upkeep (\$5,000,000 annually); but it has increased the trade of the United States with 15 countries of the Pacific by 233 per cent. since its opening.

The Stockbroker as Principal.—Keen interest has been aroused in City circles, writes a Stock Exchange correspondent, this week by the publication of a judgment given on Tuesday by the Anglo-German Mixed Arbitral Tribunal, sitting in London. The case before the tribunal was comparatively simple. A firm of London Stock Exchange brokers had shares open for certain German clients on the outbreak of war, the shares being financed partly by contango in the market, partly by the money of the firm and its bankers. At the end of the war, the London firm sought indemnity against the loss which had occurred, and the case came before the Tribunal just mentioned. The three gentlemen who compose the tribunal—Monsieur Borel (president), Mr Vaughan Williams, K.C., and Dr Zacharias, of Hamburg—laid it down that in regard to that part of the account which was contangoed in the market, the London firm were entitled to be indemnified against loss, on the ground that their position was that of agents. On the other hand, in respect of the stock which had been financed through the employment of the firm's or their bank's money, the London firm had adopted the attitude of principals, and that the loss which arose on this particular part must fall upon them. There was some difficulty in identifying the stocks which were carried over for the account of the German clients in the House, and with the firm's money, but this difficulty the tribunal overrode by deciding that the account would have to be dealt with proportionally. Where the importance of the matter lies to the Stock Exchange is in the fact that hitherto the position of a broker, member of the London Stock Exchange, has always been regarded as that of an agent. The matter has been fought out many times in the courts, but with an overwhelming majority of decisions in favour of the principle that a broker is an agent, and only such. The jobber is the principal on the one hand, the client on the other, the broker being a go-between and, therefore, not to be held legally liable for losses which may be sustained. For many years there has been no cause to reopen what is considered as a settled law, and the finding of this Anglo-German Mixed Arbitral Tribunal comes by way of a complete surprise. What the authority of the tribunal may be, as judged by the standard of English law courts, it is hard to say. Apparently the firms concerned will have to abide by the decision, though it will be interesting to observe whether the London stockbrokers take steps to carry the matter further. In examining the matter, it has to be borne in mind that the case has no bearing whatever upon another question which exercised Stock Exchange opinion soon after the outbreak of war, when London brokers entertained some little doubt on the point of whether they were justified in closing commitments, open for German clients, without the consent of the latter. It may be recalled that the Stock Exchange Committee laid down a rule to the effect that when contangoed shares reached the making-up prices of the end-July, 1914, settlement, the seller could call upon the buyer either to sell the shares or to pay for them. The consequence was that when the rise in American rails occurred, as it did not long after the war started, the bulk of the American shares that were open on German account were closed by being sold, although at that time a lurking suspicion was felt in regard to the strict legality of the action. Brokers, of course, were unable to obtain instructions from their German clients, and could not be expected to pay for stock when the price of that stock rose to the make-up of the end-July, 1914, the last settlement prior to the outbreak of war. No question has ever arisen on this particular head, and, as already stated, it

has nothing to do with the case which has just been decided by the Mixed Arbitral Tribunal. But the ruling of the tribunal that a broker who employs his own money, or that of his bank, for taking-in stock for a client becomes *ipso facto* a principal is a mild shock to the established conviction that a broker is an agent. It remains to be seen whether the tribunal's decision will have any direct bearing upon the position of a broker *vis-à-vis* his client as it is held to stand to-day. Obviously, for the sake of everybody concerned, there should be no room for doubt as to the precise relationship which exists between broker, jobber, and client.

British-American Tobacco.—A new record of profits is chronicled in the accounts of the British American Tobacco Company for the year ended September 30th last. As will be seen from the comparative table below, the dividend is increased to 26½ per cent., free of British income-tax, but the payment requires considerably more than the 30 per cent. distributed for five consecutive years, when the ordinary capital was much smaller:—

	Sept. 30.	1914.	1918.	1919.	1920.	1921.	1922.	1923.	1924.

The amount carried forward is a very large sum, and lends credence to the many rumours which were about a year ago as to the capitalisation of reserves. Assets total £33,305,030, of which £16,032,944 consists of "Investments in associated companies," while £6,459,854 is for loans to such companies. Cash in hand is shown as £2,825,785, as against £4,247,040 a year ago. Being partly a holding company, it is difficult to estimate the total of reserves. In addition to the amount carried forward, there are various reserve items totalling over £2 millions. It is to be assumed that the associated companies also have made provision for reserve.

Tin Dredging in the East.—Our mining correspondent writes:—Included in the usual end-year batch of reports are the annual statements of a number of the British companies dredging for tin in the Straits Settlements. Of these the most important is the Malayan Tin Dredging. By an odd coincidence, each of the past two periods has benefited during about nine months from the operation of an additional machine: the latter started in September, 1922, and sunk in March, 1924. Thanks to the treatment of a larger yardage and to the increased price realised for the product, the company in the twelve months ended June 30th last earned a net profit of £53,100, in place of £36,500. Moreover, there was no repetition of the special appropriations which swallowed up so large a proportion of the profits of 1922-23. Hence the shareholders received dividends totalling 3s per share, as against 2s, and the substantially enhanced balance of £58,300 remained to be carried forward. Bar accident, the returns for the current year promise to double those of the past session, for an interim distribution of 1s per share was paid in August, and another of like amount, plus a bonus of 1s, has lately been declared. It is noteworthy that the Malayan Company has secured the benefit of a loan of £100,000 under the Trade Facilities Act. This is to be employed in the provision and installation of an electric power plant, and of an additional dredge. With regard to the sunken machine, the chairman announced at the meeting that, after various delays, a settlement had been arrived at with the underwriters. At least nine months will be required to float and recondition the dredge. Under favourable conditions, it should come into operation again shortly after the power station has been com-

pleted and the No. 6 dredge started up. Thus, there is a prospect in about a year's time of a substantial addition to the output at a lower ratio of cost. Last year 63 acres of ground were worked out, but 158 acres were acquired, leaving the company with 1,550 acres of virgin ground. No need for the shareholders to worry about the question of "life"! Quite naturally, the results of the subsidiary Southern Perak Dredging bear a close resemblance to those of the parent company. The net profit expanded from £14,700 to £25,600, and the dividends totalled 4s per share, in place of 2s. A second interim dividend of 1s, plus a bonus of 1s, has also been declared. The company last year devoted much attention to prospecting, and as a result made substantial additions to its ground. When a sufficiently large new area has been acquired the question of an additional dredge will receive consideration. It may be mentioned that the dredges of both companies are insured against loss of profits due to sinking, boiler bursts, lightning or storms. A feature in the position of this company just now is a marked expansion in the monthly profits due to the treatment of the expected richer ground. Last year's net earnings of the Pari Tin—formerly the Tronoh South—only amounted to £5,100, but as the issued capital stands at no more than £25,000, they sufficed to provide 15 per cent. The bulk of the capital is represented by investments. Here, also, an interim dividend is shortly payable.

Sulphide Corporation.—In commenting upon the 1923 report of this undertaking, we remarked that the fire in the Central mine was likely to have serious after-consequences. Actually they prove to have been worse than generally anticipated, absorbing the whole of last year's earnings. A net profit on operations of £60,000 was supplemented by £37,050 interest or profit on investments, and by £100,000 excess reserve for taxation written back, less £13,500 administration expenses. Practically the whole of the available balance of £184,000 was devoted to amortising the expenditure entailed by the disaster above referred to; thus there are no dividends. In respect of the twelve months ended June, 1923, both the preference and ordinary shares received 15 per cent. Even now there is no prospect of the extraction of ore from the northern section of the mine until towards the end of the current financial year, but the company should be able to earn moderate profits from the Junction mine (purchased in November 1923), as well as from its treatment operations. The decks having been cleared financially, the shareholders would seem warranted in hoping for some return in respect of 1924-25. At the moment the companies operating on the Broken Hill field are under the shadow of a threatened fresh outbreak of labour trouble, the surface employees having struck to enforce a demand for higher wages. Doubtless this step has been encouraged if not initiated by the knowledge that at the current prices of lead and zinc the companies are making large profits. What policy the employers intend to pursue is not yet known, but they could well afford, and probably will offer, a bonus dependent upon the prices of the metals.

Roumanian Oil Companies' Finance.—The two Roumanian oil companies, both "holding" concerns, whose shares are actively dealt in on the London Stock Exchange, namely, Phoenix Oil and Transport Company, and Steaua Romana (British), Limited, afford an interesting comparison. The belated accounts of the Phoenix for the year ending December, 1923, have only recently been issued. Those of the Steaua Romana for the year ending June, 1924, should be issued some time in February next. A noticeable feature of the Phoenix accounts is the statement of the auditors that "no reserve for depreciation has been made in the accounts nor, with one exception (the Orion), in those of the allied companies since acquisition." To make proper allowance for depreciation is nowhere more important than in the ac-

counts of oil companies. No asset is so "wasting" as an oil field, and it is the practice of conservatively financed oil companies to write off out of profits the whole cost of field expenditure. Sir Edward Manville, the chairman of the Phoenix, made light of the auditor's statement by arguing that the allied companies had been acquired on favourable terms, and that the purchase price at which they stood in the Phoenix balance-sheet was less than half their pre-war capital. Seeing that during the war these companies' properties were destroyed, this point is not too strong. He added that £75,568 received by one of the allied companies as war compensation (how it was obtained from the British Treasury when the other Roumanian companies still went without, remains a mystery), and any sums of the like nature would be applied to a reduction of the book value of the assets. That is all the more necessary seeing that preliminary expenses stand on the credit side of the balance-sheet at £80,709. In any case, the profits were not large enough to admit of adequate provision for depreciation. The net profits for the year were £77,862, but did not include profits from the Orion and the Roumanian Consolidated Companies, as those concerns were not acquired until the end of 1923. The figure of profits cannot, therefore, be compared with the figure for the production, 105,259 tons, as that comprised the output of all the allied companies. For the year 1924 the production is estimated at 185,000 tons. To pay a dividend on the increased capital of £3,512,235 would seem to require a much larger production and better market conditions than the oil régime of the Roumanian Government now permits, but Sir Edward Manville was hopeful that the dividend-paying stage would be reached by next July. The Steaua Romana has a capital of £2,025,000. Its revenue is derived from dividends declared on its shares in the Steaua Romana Company of Bucharest, from interest on its loan to a Roumanian banking group, who are co-shareholders, and from its commissions on sales of oil products handled by it in this country. The profit for the year to June, 1923, was £103,725, but this included interest on the loan to the Roumanian Banking Group which had accrued, but had not been paid in sterling. Since that date the loan and the interest accrued have been capitalised and the Roumanian banking group has been paying interest half-yearly in sterling. This should give the Steaua Romana (British) an income of approximately £60,000 per annum, apart from the commissions on sales in this country, which would yield about £15,000 per annum. The dividends declared by the Steaua Romana Company of Bucharest in lei are not likely to be converted at the present rate of exchange, but it is probable that these dividends next year will run into large figures. The production of the Steaua Romana has been greatly increased, and it is noticeable that it has held up better than that of any other company in Roumania. For the calendar year 1924 it is estimated at about 270,000 tons, as compared with 222,256 tons for the calendar year 1923. Within the last month some important gushers have been brought in on the company's holding in the Runcu field. There is another favourable feature which is common also to the Phoenix. At the end of this month the Roumanian Mines Council will proceed to the allotment of certain State oil lands, and it is generally expected that both the Steaua Romana and the Phoenix will figure in the allotment list. If the allotments are favourable, it will mean that the future of each company becomes much more assured. At the present market valuation the shares of these two companies—10s Steaua and 10s Phoenix—there can be little doubt that the shares of the former are more attractive as a speculative "lock-up" investment.

Obersea Correspondence.

UNITED STATES.—GOLD EXPORTS—MARKED REVIVAL IN STEEL INDUSTRY—COTTON CROP FORECAST—MONEY FIRMER—STOCK MARKET REACTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 12.

FURTHER evidence of the marked revival in the steel industry since the election is found in the report of the United States Steel Corporation this week, showing that unfinished business on its books at the end of November amounted to 4,031,969 tons, representing an increase of 506,699 tons over October 31st. The November 30th total, although smaller than at the corresponding date a year ago, is the largest reported since April 30th of this year, and is sufficient to keep the leading producers' plants operating at full capacity for nearly three months. The corporation's shipments last month, it is figured, were between 900,000 and 1,000,000 tons, and incoming business approximately 1,500,000 tons, or considerably more than the finished capacity per month. The gain in new business during November was larger than the aggregate increase from July to October, inclusive. United States Steel's mills are now operating at close to 80 per cent. of capacity, as compared with 40 per cent. in July and 68 per cent. just before the election.

The Government's latest cotton crop estimate of 13,153,000 bales, as compared with the previous forecast of 12,992,000, was somewhat less than the majority of the trade had expected. The market, therefore, advanced sharply after publication of the report, but subsequently lost all of the gain, owing to a growing belief that the Department of Agriculture had under-estimated, rather than over-estimated, the probable crop. If this indicated crop is realised, it will be the ninth largest grown, in point of size. Based on the December 1st farm price of cotton, this year's crop, taking the Government's latest estimate of yield, is valued at \$1,421,356,262. In addition, the cottonseed is valued at approximately \$200,000,000, and the production of linter cotton will probably total some eight or nine hundred thousand bales. This year's crop will be the fifth largest in point of value, having been exceeded by the crops of 1923, 1919, 1918, and 1917. Nearly 93 per cent. of the crop had been ginned up to December 1st, the actual ginnings as reported by the Census Bureau having amounted to 12,225,025 bales, as compared with 9,243,380 bales last year and 9,319,601 in 1922 to the same date. A year ago nearly 91 per cent. of the crop had been ginned to December 1st, and in 1922 95.8 per cent. While the erratic fluctuations of the staple have served to restrict operations in the cotton textile trade and industry, cotton goods manufacturers find encouragement in the comparatively large crop now predicted, since present indications are that there will be an ample supply of raw cotton to meet all requirements, unless demand for goods should exceed expectations.

Although building returns for November fell below the total for October and for November of last year, the aggregate value of permits at 174 cities throughout the country, as reported to *Bradstreet's*, make an impressive showing, amounting to \$230,021,813, as against \$272,158,862 for October and \$250,536,981 for November, 1923. The shrinkage from October was about 15 per cent. and from November a year ago approximately 8 per cent. The decrease last month occurred mostly in New York City.

Only one small foreign loan was floated here during the past week, namely, \$2,500,000 International Railways of Central America 5 per cent. first mortgage bonds, which were offered at 76 and interest to yield 6½ per cent. Additional foreign financing, however, is in process of nego-

tiation, but is not likely to be undertaken here until after the turn of the year. The next large piece of such financing will probably be for the account of the Belgian Government, which, it is understood, is preparing to offer two bond issues. One is expected to amount to about \$25,000,000, the proceeds to be used for extensive improvements to the railway system of the Congo. These bonds may be offered at a price to yield approximately 8 per cent., although the terms have not been fixed finally. The other issue may be as large as \$50,000,000, and its proceeds will be used for various Governmental purposes, it is said. The estimated yield on these bonds is expected to be around 7.75 per cent. They probably will not be placed on the market here until after the small issue has been disposed of.

Money rates generally have displayed a firmer tendency this week. On the Stock Exchange, call loan rates advanced to 4 per cent., and averaged 3½, while rates for time loans on Stock Exchange collateral were ½ of 1 per cent higher, than a week ago, current rates being quoted at 3¼ to 3¾ per cent. for maturities ranging from 30 to 90 days, and at 3¼ per cent. for four to six months' loans. The immediate cause of the stiffening in money rates is the shifting of funds in preparation to meet federal income-tax payments due December 15, and in connection with heavy Government financing on that date. Owing to continued active trading in the stock market, demand for call money has increased somewhat, but the amount of borrowing for fixed periods is very light.

The outward flow of gold from the United States to various European countries and to India is naturally attracting a great deal of attention. Shipments have been increasing the past few weeks, and there is much speculation as to what proportion the export movement may reach in ensuing months. Official figures showing total gold shipments for this month will not be available until late in January or the first part of February, but present indications are that exports during November and December will exceed imports for the first time since 1919. In that year gold exports exceeded imports by \$291,600,000, approximately. The total monetary stock of gold in the United States on November 1st amounted to \$4,570,067,375, or not quite one-half of the world's known monetary stock, which is estimated by competent authorities here at approximately \$9,650,315,056. For the ten months ending with October, the value of commodity exports from the United States exceeded that of imports by \$672,000,000, and the excess of exports for the entire year will probably be close to \$1,000,000,000. This compares with \$324,000,000 for the calendar year 1914. The National City Bank calls attention to the fact that this year's excess of exports will bring the excess in the twelve years since the opening of the World War up to the enormous total of \$22,000,000,000. There would have to be a great business revival, it is pointed out, and a much greater restoration of confidence in the value of gold throughout the world before the effects of this tremendous trade balance could be reversed and the gold-holding balance restored.

Although the stock market has continued very active, the volume of trading has diminished somewhat as compared with recent weeks, and the market as a whole has experienced the first substantial reaction since the full movement began shortly after the November 4th election. Public participation has been on a heavy scale, but more on the selling than on the buying side this week. Under extensive profit-taking and considerable short-selling prices of industrials and specialties, after reaching a new high average for this year of \$112.11 a share, declined sharply to \$110.84, while rails steadily declined from last Saturday's average of \$97.25 a share to \$95.76. To-day there has been a fairly general rally from the lowest levels on covering and fresh bullish demonstrations throughout the list. The upward movement had been checked by apprehension over a possible increase in the New York Federal Reserve Bank's discount rate, but was resumed when it was learned that no change in the present rate of 3 per cent. had been made this week at least.

The bond market has been active, with irregular price fluctuations. The general tendency, however, has been to lower levels as a result of firmer money.

GERMANY.—CABINET—ENGLISH TRADE POLICY—FINANCES—CURRENCY—INDUSTRY—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 20.

DR MARX's failure to form a Cabinet, and the failure to form an alternative Cabinet under leadership of the German Nationals and the People's Party, are expressions of the fact that the Reichstag General Election of the 7th made no material change in relations of party strength. Owing to the permanent association of parties with class and economic interests (in one case with religion), no election can produce a sufficient change in Reichstag membership to create a parliamentary majority of the English kind. The alternative majority coalition system broke down finally a year ago, when the Social-Democrats abandoned the Stresemann Cabinet. The Marx minority Cabinet system of 1924 managed very well, and might be managing well to-day had not the Reichstag been dissolved in the impossible hope of securing a more practicable Reichstag. It is difficult to say what sort of a Cabinet will exist when the Reichstag assembles on January 5th. But even the coming into power of a Conservative Cabinet with the German Nationals dominating, although it might cause international nervousness, would probably have no disturbing influence on the Reparations settlement. The Nationals, as they showed last summer by surrendering on the Railway Corporation issue, realise that no Cabinet with an intransigent policy towards Reparations could exist for more than a few days.

The postponement of Great Britain's decision on the Cologne evacuation question is taken badly by the Nationalist Press. The delay in evacuating is not really considered a hardship. In view of the Ruhr occupation it has certain advantages for Germany, but the reasons given by Lord Curzon are denounced as unfounded. Mr Baldwin's statement of the 17th on the Safeguarding of Industries has made a great stir in business circles. A prolonged struggle between British Free-Traders and Tariff Reformers, like that which preceded the war, is expected. The British measures are naturally not welcomed here. The imposition of general duties, not ostensibly discriminating against individual nations, but protecting such British industries as are of substantial importance, as are efficient, and as are subject to exceptional competition, is taken here as *de facto* meaning Protection against particular countries, because only such countries as happen to export goods in the protected classes will suffer. Also if duties are imposed on certain kinds of goods to counterbalance a particular exporting nation's low wages or depreciated currency, all such exporting nations as do not enjoy the assumed advantage of low wages or depreciated currency will be formally put under a disadvantage. At present all German goods are produced under low-wage conditions, and since last winter most goods have been produced under long-hours conditions; therefore as Germany competes in nearly all branches of finished goods, Mr Baldwin's scheme might mean protection for nearly all goods. The course of the controversy in England will probably affect Tariff policy here.

Money is relatively plentiful. A report read at the Deutsche Bank shareholders' meeting mentions that deposits have doubled since the beginning of the year. Clearings in the first six months of this year recovered to about half the total of the same months of 1914, and have since then increased by about 10 per cent. a month. The condition of the other commercial banks is understood to be similar. The great increase in deposits is an indication of faith in the stability of the currency. The Gold Discount Bank is slowly liquidating its affairs. Its return for December 15th shows discounts totalling £6,309,854, against £6,657,449 on the 6th. Rediscounts fell from £2,969,734 to £2,482,688. The position of the private banks will be materially improved by the lapse of the Capital Flight Laws on December 31st. In view of the absence of the Reichstag, the Government cannot legislate for retention of any part of these numerous and complicated enactments; it is assumed, therefore, that next year unlimited transfers of cash and securities abroad

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

will be allowed; indeed, in view of the higher earning power of money at home, there is no reason for sending it abroad. The Government may, however, using some of its numerous exceptional authorisations, keep alive the restriction imposed by the law of January 14, 1924, upon the foundation of deposit banks. If it does, English banks, in spite of the Commercial Treaty, would not be able to carry on full banking business here.

The weekly wholesale-prices index number for December 10th was 129.6, the cost-of-living index number 122.3. The price-fall of early November seems to have come to an end. Iron and steel prices are firm. Bankruptcies in November numbered 621 against 752 in October, and 850 in September; cases of official supervision with moratorium (*Geschäftsaufsichte*) 219, against 265 and 301 respectively. Both the home and export pig-iron markets have become more active; there is a great demand from the foundries, caused in part by the too high prices of cast scrap, and there have been considerable sales to Scandinavia.

The following is a revised table of distribution of trade with the chief European countries in the first half of 1924. The large imports from Alsace-Lorraine, as distinguished from French imports, will be noted:—

(Millions of Gold Marks.)

	Imports from.	Exports to.
All countries	4,448.6	2,820.5
Great Britain	436.1	229.8
Belgium	65.8	40.7
France	89.5	39.8
Alsace-Lorraine	244.3	5.2
Italy	168.9	103.1
Spain	52.6	40.3
Switzerland	141.3	153.6
Austria	67.9	150.7
Czecho-Slovakia	209.9	167.1
Poland	197.0	134.8
Russia	64.3	36.2

These figures differ from those issued by the separate countries for their German trade, but as they exclude goods in transit they are more correct.

The Bourse last week was firm, with a continued demand for the big mining, iron, and steel companies' stocks. The end of the week saw big realisation sales by gainers on the rise, and the Bourse ended irregularly, some stocks having considerable reaction. The expected new Government declaration on the loans restoration question did not come, owing to the Cabinet crisis. Now that the parties have gained all the votes that are to be had by giving wild promises, they have become very discreet. The Prussian Cabinet has protested against its municipalities' somewhat half-hearted plans for restoration of their loans, or for resumption of interest-payments. The Government refers to the Third Taxation Decree of February, 1924, which does not, indeed, forbid such action by municipalities, but which implies that the municipal loans question must be regulated by the Republic or the States.

All the chief shipping companies, and in all 19 companies, have now published gold-mark balance-sheets, with the necessary restatements of assets, liabilities, and capital. The total pre-war capital of the 19 companies was 675,650,000 marks; the new capital total is 189,000,000 marks. This reduction, which makes such a sharp contrast with the conditions of purely industrial companies, is due to loss of tonnage, the gross tonnage having fallen from 4,130,000 tons to 1,620,000 tons. For 522 out of about 750 dividend securities quoted on the Berlin Bourse, the new gold-mark quotations have been computed, this being effected by multiplying the paper-mark quotations by the ratio of scaling down of paper-mark capital into new gold mark capital. Of the 522 stocks, 77.8 quote under par and 22.2 over par. The leading chemicals, mining, and metallurgical stocks and the stocks of the big banks are mostly over par. Twenty-three stocks quote under 50, and 13 quote over 150.

The financial and currency outlook for 1925 is favourable. The industrial outlook is fairly favourable. The events of 1924 have thoroughly justified the measures taken for stabilisation of the currency in November, 1923. But it has been shown that the substance of industry in no wise suffered from the five years of bad money. Also, most of the undesirable social phenomena of bad money have disappeared, although the revolution in the distribution of wealth has left permanent effects. The chief cause of anxiety for 1925 is the probable heavy import surplus. This would be sufficiently troublesome even if the foreign payment balance were not already burdened with Peace Treaty liabilities, but, as things are, it threatens to be disastrous. The menace to the new currency may be long postponed by the inflow of foreign private credits and loans, but ultimately the capital and interest of these loans must be transferred abroad. While it is possible that the Reparations burdens will bring about a fall in consumption, and so reduce unessential imports, the prospect of creating the necessary active trade balance by such means is very small.

CANADA.—WINTER ARRIVES—BUSINESS CONDITIONS—NOVA SCOTIA AND PROTECTION—TRADE RELATIONS WITH NEW ZEALAND—BRITISH COLUMBIA SALMON—REVENUES AND TRADE.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 6.

ANOTHER Canadian winter has now definitely set in, and, except in the woods, outdoor work will be more or less suspended till March. Thanks to the bountiful crops in Eastern Canada, and the increased prices available for them, farmers in that territory have been buying more freely than at any time since the war, and general business in the towns and cities has benefited. But even high prices scarcely avail to assuage the disappointment felt in Western Canada at what is now generally admitted to be the serious failure of the western crop. Not only has the latest official survey made a substantial cut in the previous estimates of grain production, but grading inspections show a much more serious impairment of quality by rain and frost than was previously suspected. Furthermore, owing to the lateness of the harvest, the marketing process has been greatly delayed, and a substantial por-

portion of the 120 odd million bushels of western wheat which will be available for export will not be forward at the lake ports in time to take advantage of the water route before next spring. This means that many farmers will not be able to get their grain money immediately, and will not make any but absolutely necessary purchases of winter supplies. Business, therefore, in the prairie provinces is facing another dull winter, for even where the farmers have received profitable returns for their crops, many of them have been compelled to devote large sums to the liquidation of their overhanging debts. Unfortunately, the livestock business in the West has not enjoyed the rise in prices which usually accompanies an increment in grain prices; it would certainly have done so if the American market had been open, but instead, the stockyards at Winnipeg and other points have recently been glutted with half-finished cattle which their owners prefer to sacrifice rather than feed throughout the winter on expensive grain. At present, western cattle raisers are receiving ridiculously low prices, and although there has been some improvement in the trade with Britain, the expensive rail haul to the seaboard prevents many western cattle from being shipped.

Nor is the industrial situation satisfactory. Very few factories are working at full capacity, and many manufacturers declare that they are filling orders on terms which admit a quite inadequate margin of profit. The spectre of serious unemployment has raised its head in practically all the large industrial centres, and it has been aggravated this year by two factors, the lessened scope for employment in the United States, and the smaller demand for labour by the lumber companies; however, owing to a recent fillip in the demand for lumber, more men will be required in the woods than seemed probable a month ago. The unemployment problem is peculiarly serious in Montreal, and the officials of the different charitable organisations recently intimated that they were unable to cope with it any longer. The result is that the civic authorities are planning to undertake at once extensive public works which otherwise would have been delayed for some time in order to furnish work for at least some of the unemployed. Meanwhile, behind the scenes at Ottawa constant pressure for a higher scale of tariff duties is being exerted upon the Government, and Conservative politicians are seeking to make party capital out of the unemployment situation, declaring that it would be cured by the adoption of the same level of protectionism as the United States now enjoys. The moral strength of the King Government is about to be severely tested this month by a massed drive on the part of the business interests of Nova Scotia, which returns 15 Liberals out of its 16 members, for higher duties on iron and steel by way of succour to the depressed industries of the Cape Breton area. Representatives of practically every public body in Ottawa, and politicians belonging to both historic parties, will hold a conference in Ottawa and lay before the Government a plea for a revision of the tariff, which will arrest the present decay of their main industries. Many iron and steel schedules are on a specific basis, duty being assessed at a fixed number of dollars per ton. The price of these goods has risen since the duties were last fixed, and the argument is that they no longer bear a relation to values sufficient to give a decent margin of protection. The Government will be urged by the Nova Scotians either to make the duties *ad valorem*, and to raise the present specific duties to a level which will give them the same scale of protection as was originally intended. It will be a difficult dilemma for the Government, because many Liberal members from Nova Scotia are backing the demand, and a leading Liberal paper, the *Montreal Herald*, is supporting it; and a blunt refusal might cost a number of seats at the next election. On the other hand, any elevation of the tariff is bound to arouse the indignation of the Progressives, who are at present very restless about the railway policies of the Government. The chances are that the Government will refuse the Nova Scotian demand because they are aware that while the economic plight of the province is not good, there is considerable divergence of local opinion about the proper remedy.

Canadian manufacturers who have an export trade with Australia and New Zealand do not relish the pros-

pect of the regulations which will insist that preferential tariff rates were only to be accorded to goods if three-fourths of their value is the direct product of the domestic labour of the exporting country. New Zealand now threatens to emulate Australia in imposing this condition, and to fix the proportion of Canadian labour, which must be employed at 75 per cent., instead of 25 per cent., as at present. The motor firms will be particularly affected, as they import from the United States the greater part of the steel and other raw material used in the manufacture of cars; indeed, some of the motor factories are little more than assembling plants. The old arrangements made it much more profitable for corporations like the Ford Company and General Motors to handle their export trade with Britain and the other Dominions from a Canadian base of operations, but when the proposed changes take effect it will become a moot point whether it will not pay them to finish cars in the United States and pay the duties imposed by the general tariff. The King Government is taking the matter up with the New Zealand Ministry, and asking that the proposed change be abandoned.

The British Columbia salmon pack, which is practically closed for the season, shows a very marked improvement over last year's figures. In the end it will amount to about 1,643,000 cases, as compared with 626,266 cases in 1923, and 1,290,326 cases in 1922. Prices are also satisfactory, and shares in packing companies have been rising steadily.

The revenue situation is worrying the Government. In his Budget calculations Mr Robb allowed for loss of some 26 millions of revenue, but already in the first seven months of the fiscal year ending October 31st the loss has been almost 32 million dollars, the respective figures being \$214,494,342 and \$247,349,945. There has been an increase of some 3 million dollars in the income-tax returns, but customs have fallen 8½, and excise almost 25½ million dollars. The reductions in ordinary expenditure have been trivial, amounting to only 2½ million dollars. The month of October, however, shows slightly higher revenues than September did, and the Finance Department hopes that the decline has been checked. The trade returns for the seven months period show a very large increase in Canada's favourable trade balance, which has risen to 120 million dollars from 14 million dollars in the parallel period of last year. Exports show a substantial gain, but the change is largely due to a steep decline in imports, which have fallen off to the tune of nearly 75 million dollars.

As the result of discontent with the results of the commercial treaty which was concluded a few years ago with the West Indies on preferential lines, the Government are sending this month to the West Indies a special trade mission, headed by the Minister of Trade and Commerce, and some readjustments may be made. The Government has also decided, not without long consideration, to continue Canadian support for another year to the Wembley Exhibition.

HOLLAND.—BANK RATE—NEW ISSUES—NATIONAL DEBT.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 20.

It came as a surprise that the Netherlands Bank reduced their rates along the whole line by ½ per cent. on December 13th. A short time before there had even been talk of the possibility of an increase of the discount rate in connection with the considerable gold shipments which have taken place. In the fourth week of September the shipment of gold began, and continued almost uninterruptedly until the first week in November, in which time the total shipments amounted to 48 million guilders. However, a sudden change took place in the condition both of the money market as in that of the Netherlands Bank. In the week from November 24th to December 1st the gold supply of the Netherlands Bank increased by about 25,000,000. At first it was supposed that the imports came from America, but later it appeared that, in accordance with an agreement between the Netherlands Bank and the Java Bank, the latter institution transferred gold deposited here for its account to the Netherlands Bank.

At the same time, yet independent of this agreement, the Treasury was placed in a better position, because the Indian Government paid off in full their indebtedness to the Netherlands Government. By this more than 34,000,000 were released, with which the Netherlands Government paid off the advances of the Netherlands Bank and also a block of Treasury notes. Money rates immediately felt the effect of these favourable influences. The strengthening of the position of the Netherlands Bank has combined with the sudden ease of money to induce the bank to reduce the discount rate. That this has only been done to the extent of ½ per cent. is an indication of the careful policy which it is desired to follow in this respect. Still, the step taken indicates the confidence which is entertained in this country with reference to the near future.

The increased supply of money has at the same time brought about many new issues of bonds. The Government opened subscriptions, on the 22nd instant, for 60,000,000 Treasury bills and Treasury notes. Also a number of municipalities have proceeded to issue loans. Besides these, various plantations and industrial enterprises have made use of the more favourable conditions to provide capital requirements. The rates of interest offered by recent municipal borrowers clearly show, however, that for long-term loans on first-class security a rate of about 6 per cent. is still required. But a change seems to be approaching. The Municipality of The Hague has given notice of having received an offer for placing 10,000,000 debenture bonds at an interest rate of only 5½ per cent. and a price of issue of 98½ per cent.

The latest publication of the Central Bureau for Statistics gives a summary of the present condition of the consolidated debt of the Netherlands; a comparison of the years from 1915 to 1924 gives the following totals, divided according to the rate of interest:—

NOMINAL CAPITAL ON JANUARY 1 (Thousand Guilders).

	6 %	5 %	4½ %	4 %	3½ %	3 %	2½ %	Total.

The total has, therefore, increased very materially. Nevertheless, this increased debt need not cause any anxiety, because, as has already been explained in these articles, steps have been taken to provide for the loan service out of the national receipts without disturbing the balancing of the Budget. The state of the floating debt also does not give any reason to suppose that it will be necessary to issue a new loan within a reasonable time.

JUGOSLAVIA.—CHANGE OF GOVERNMENT—FINANCIAL POLICY—BUSINESS CONDITIONS—EXPORT AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

BELGRADE, December 6.

ECONOMIC life is again suffering severely from political friction, and the forthcoming elections, fixed for February 8th, have momentarily absorbed the national energies. The late coalition Government of the Serbian Democrats (Liberals) and Slovenian and Bosnian parties resigned, at the special request of the King, because it had to rely for support on the Croatian Peasant (Raditch) party, with alleged pro-Soviet leanings. All attempts at a wider coalition with the Serbian Radicals (Conservatives) failed, and finally the King entrusted the National Block (Serbian Radicals and Nationalist Democrats) with an election mandate. The struggle is very bitter, for on the issue of the elections the whole structure of the State will depend. The victory of the National Block will entail rigid centralisation, and the predominance of the Serbs in the kingdom, while that of the Opposition Block will mean a revision of the whole constitution, with wider autonomies

for Croatia, Slovenia, and Bosnia. The result is very uncertain, though the Opposition alleges that the Government will use all possible means of winning, not shrinking even from prohibiting entire parties (referring here particularly to the Raditch party).

The change of Government entails no change in financial policy, because it means simply the return of the former Minister. In his declaration, he reiterated the desire to pursue a deflationist policy, with stages of relative stability, to balance the Budget, and to effect savings in expenditure. Of greater interest are his promise not to favour export to the detriment of import, but to encourage their parallel growth, and the fact that the agio on import duties, thrice raised by the last Minister, has been left untouched. The new Customs tariff, which has been in preparation for some time, will aim chiefly at the protection of home industries, for which there is abundant raw material in the country. Foreign capital will be encouraged in order to ease the money shortage and give impetus to production. The Government has also decided to mint 200 million dinars of small change to replace the present paper. The debts of the Austro-Hungarian Empire, transferred by the Reparations Commission to the Succession States, and accepted in principle at Innsbruck in 1923, will be gradually repaid, from the beginning of 1925. No mention is made of the previous decision of the Government to repay part of the State's debt to the National Bank from the proceeds of the sale of the gold received on liquidation of the Austro-Hungarian Bank. Government receipts and expenditure are near estimate, being for the five months, April to August, 4,171 and 4,159 million dinars respectively.

Business conditions in the country, though constantly improving, are still far from satisfactory, mainly as a result of three difficulties: shortage of money and the consequent high rate of interest, heavy indirect taxation, and the "law of compulsory composition." These are responsible for the disproportion between the great improvement in the exchange and the very slight improvement in the index figures of the cost of living. The index figures are: January, 1923, 2098 (sterling rate of dinar 430); January, 1924, 2034 (dinar 385 to £); October, 1924, 1981 (dinar 320 to the £); while in November it began to rise again. The rate of interest still persists at between 20 and 25 per cent., and a recent conference of business men to explore the possibilities of fixing the legal rate at 18 per cent. had to confess the practical difficulties of such a scheme.

The proportion of indirect taxation to total State receipts can be seen from a detailed examination of receipts for the five months quoted above:—Customs, tolls and dues, 1,131 millions; railways 976 millions; monopolies, 973 millions; direct taxes, 493 millions; and all other receipts, 598 millions. From this it is obvious that the heavy indirect taxation, together with the extortionate rate of interest due to the shortage of money, must enormously increase overhead charges, and thus prevent a fall in the cost of living, and a more rapid development of business and commerce. Lastly, the "Law of Compulsory Composition," which allows merchants to make settlements with their creditors and pay only part of the debt while continuing business, instead of declaring bankruptcy, has been much abused by speculative merchants, thereby injuring the reputation of honest business, and causing a feeling of insecurity in trade. Hence there is a strong movement for the abolition of this law.

Export was brisk during September and October, particularly owing to great demands for corn from Roumania, Czecho-Slovakia, and Austria. Statistics compare favourably with last year:—

	1923.		1924.		Improvement	
	Tons.	Mill. Dinars.	Tons.	Mill. Dinars.		
September	334,766	914	384,596	937	15	2.5
October	334,163	965	415,163	1,009	24	4.5

The exchange remains firm, the sterling rate of the dinar having remained at 320 for the last four months, in spite of the recent rise of the £ in terms of the dollar.

ARGENTINA.—HARVESTS AND GENERAL CONDITIONS—PUBLIC FINANCE—ANGLO-ARGENTINE TRAMWAYS—MONEY AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 29.

THE present moment in Argentine commercial and financial affairs is marked by considerable expectancy and a certain measure of anxiety as to the results which will be obtained during the next few months from the twin sources of wealth, the agricultural and pastoral products of the Republic. Climatic conditions during November have been unusual, and not wholly favourable to either crops or cattle. Cattle are in many regions short of pasture, owing to dry weather and late frosts, which has meant heavy offers of cattle that would otherwise have been retained, and a consequent drop in price of roughly 5 to 7 cents paper the pound, live weight. Then, although cereal and linseed prices are high, there is grave reason to expect a far smaller net production than would naturally be looked for on the area sown. In a word, the possibility of a bumper crop forecast scarce a month ago disappears, and at the moment of writing the total production of wheat is not expected to reach 5,000,000 tons, a figure which means barely 4,000,000 tons for export, with the likelihood of reduction, and no possibility, humanly speaking, of an increase. The linseed position is even more doubtful, and production has been put as low as 700,000 tons, though the great area sown, 2,390,000 hectares, may well falsify this figure. Of the maize it is early to write with any assurance, but that the locust danger is greater than has been known for years is now admitted, and with many of the best maize regions covered with the pest, the worst is feared in some well-informed quarters.

It is necessary to strike the foregoing note of pessimism, since it alone explains the lull that characterises affairs in general. That it may be falsified at the last moment is the natural desire of everyone having dealings with Argentina, especially when the delicate position of the administrative finances is considered. By the use of gold shipments and the renewal of its floating debt, the Government has met all its engagements with punctuality, and, in a sense, without difficulty, but the estimates for 1925, which are based on the receipt of novel revenues, e.g., income-tax, are not likely to be treated in the extraordinary sessions of Congress now in progress. Indeed, the proposal has been made by the Senate that the 1924 Budget be prorogued to such time as the 1925 Budget estimates are sanctioned; a proposal which, if accepted by both Chambers, means that none of the new financial measures will be enforced during 1925. The possibility is not without certain advantages, but, as it is plain that Argentina's present revenue system does not meet administrative needs, and obviously cannot cope with the problem of the heavy incubus which the floating debt implies, the question is, how shall the problem be tackled? It must not be forgotten that the floating debt of the State railways is officially admitted at \$160,000,000 paper, and reasonable rumour puts it nearer \$40,000,000 paper higher. Since your correspondent last wrote, a further statement by the Administrator of the State Railway Department has been prepared, but has not been made public, owing, it is said, to the serious nature of the financial details therein contained. How in the face of such a position the acquisition of another system can be carried out, except on the basis of a large issue of national bonds to cover the major part of the purchase price, is hard to see. True, the national credit abroad stands firm and high, but even the consolidation of the floating debt now running involves such a large increase to the external payments required for service—assuming that consolidation can be effected—that to talk of additional obligations of importance is either visionary or alarming, according as one chooses to regard it. It should be mentioned that the Accountant-General's Department has prepared, at the instance of the Ministry of Finance, a pro-forma statement with actual figures to the end of October, and estimated totals for what remains of the current year, wherein the 1924 Budget is shown as closing with a small surplus, \$738,000 paper. The figures

are doubtless correct as a whole, but the impression given to the general public is misleading. It disguises the fact that on the whole scheme of administration the "per capita" liability for borrowed money has been rising steadily ever since 1914, and that even if it be admitted that a greater proportion of this money is owed at home than was the case prior to the above-mentioned date, the charge as a whole is heavy and burdensome to the national treasury, and, therefore, in the last resource, to the inhabitants of the Republic. During the last twelvemonth the gold shipments have amounted to some 33 million gold dollars, and the circulating medium, the paper money, has been reduced by some 50 million dollars paper. It is, however, questionable whether the onus of these shipments, in as far as the supplying of the necessary notes wherewith to retire the gold is concerned, has not fallen upon the Banco de la Nacion. And it is not altogether surprising that one of the Socialist Senators, Dr Justo, a man of admitted acumen and economic knowledge, has moved for a Parliamentary inquiry into the working of that institution. Whether the inquiry will be held is quite another matter; indeed, the probabilities are against anything of the sort. The point to bear in mind is, however, that a body of opinion unfavourable to the actual financial policy of the Government is gathering weight, and, in the event of any commercial set-back of importance, would unquestionably find more popular support than could be expected when business is running smoothly.

Mention of the Socialist party recalls the recent election for the Buenos Aires Town Council, in which this group has strengthened its position by several new members. The circumstance does not favour the chance of the Anglo-Argentine Tramway Company's just objection to the cancellation of concessions for the laying of subway lines being favourably considered. As is generally known, the Buenos Aires councillors have refused to consider an increase of the universal 10 cent tariff, and, in addition to declaring that the concession of December, 1909, has lapsed, they are already considering, or are about to consider, tenders for the new "tubes" from other would-be concessionaires. What the legal position of the Anglo-Argentine Tramways Company will be one cannot say, since any opinion expressed outside the Argentine courts at the present moment would be valueless. On the mutual convenience of an understanding between the city of Buenos Aires and the tramway company, there can be no two opinions whatsoever, and for the general public the most important thing is that the traffic problem, to-day so acute as to become a real and a heavy charge on everybody's affairs, be solved with the least possible delay. Insistence on the maintenance of the 10 cent fare as a condition to the building of the "tubes" has been preached in season and out of season by the Socialist leaders, regardless of logic and the fact that tramway fares are the one thing in Buenos Aires that remains at the pre-war level. If, as may be feared, other concessionaires build and run the various subterranean services of which the city stands in such need, they may be able to secure for themselves a profit, but it will be at the expense of that all-connecting and most efficient service which the tramways at present provide.

In the money market, rates for the greater part of November were easy, the Government securing short-date loans at $4\frac{1}{2}$ and $4\frac{3}{4}$ per cent. per annum, for the usual term of six months, while 6 to 7 per cent. was the current cost of commercial discount, with advances to private individuals being made at 8 per cent. At the month-end, however, the disquieting news alluded to in the opening paragraph of this correspondence, coupled with a realisation that the steady extraction of gold meant a contraction of the paper in circulation, seems to cause some anxiety. Rates cannot at the moment be said to have changed, business for the present being expectant. But there is every reason to believe that unless some unforeseen and very favourable turn is given to the export outlook, and to the administrative finances, a sharp upward reaction will be experienced. Exchange, though it has recovered to 45d, banks' sight drawing, as against $44\frac{1}{2}$ last month, is equally uncertain, though the American dollar is 115.30, as against 119.40 last month. The States are this year buying freely both wool and hides; their shipments hither have latterly been re-

ported much reduced, and the gold export, together with the New York-London position, evidently helps appreciation of the Argentine dollar in the New York market. Continental rates may be described as wholly dependent on the European political situation in the various countries concerned. French francs have been as high as 16.50 to the dollar gold (Arg.), but are now a trifle better at 16.10. Italian lire are weak at 20, and the peseta is round about 6.35. Of interest locally is the premium on Uruguayan currency. It has moved to as high as 9 per cent. premium over that of Argentina, but is now down to $5\frac{1}{2}$ per cent. premium, which on the London-Montevideo rate is more or less what it should be. Cereal prices are firm, with wheat at \$15.30 paper per 100 kilos, spot, Rosafé type, but as much as \$18 paid for finest Candeal by local millers. Linseed is \$22.80 paper, and maize \$11.70, both being largely speculative quotations. In the wool market the clip comes forward slowly, with prices for Rivers fine wools as high as \$36 paper the 10 kilos. Demand for this class is, however, not as active as is that for both medium and coarse cross wools, where in the range may be said to run between \$22 to \$28 paper per 10 kilos. Shipments this season are 25,000 bales, almost exactly the quantity shipped to same date last year. Freight rates are firmer on the month at 25s, San Lorenzo-U.K./Continent. The water level in the Parana is now rising, thus enabling bigger boats to be more readily fixed.

Books and Publications.

SOCIAL POLICY IN CZECHOSLOVAKIA.

It was an essential part of the teaching of the present President of the Czechoslovak Republic, when still a professor at the University of Prague in pre-war days, that the Czech question was above all a social question. Almost from its inception the Nationalist movement aimed at raising the quality of each member of the nation on democratic lines, and it is, therefore, not surprising that social legislation should have loomed large in the annals of the Parliament of Prague during the six years of independent existence which the Republic has now enjoyed. This was all the more inevitable in that progress along these lines offered the only sure guarantee against that wave of Communist activity which spread so alarmingly over Central Europe towards the end of the World War. The measure of success which has already been achieved by the Czechoslovak Government in its many-sided social activities, makes us, therefore, grateful to the Social Institute of the Republic for the publication of this little volume in English.* Here will be found succinct accounts of such topics as the Eight-Hour Day, Factory Councils, Unemployment, Emigration, Social Insurance, and Trade Unions, in what is, after all, one of the most progressive of European countries. The general treatment is on the whole objective, though the authors share the optimism and enthusiasm of most writers on such subjects. It must also be confessed that the time which has already elapsed since the passing of this legislation, much of which is not more than three years old, is too short to enable anything like final judgments to be passed

THE NATIONAL BANK OF GREECE

A HISTORY
of the Financial and Economic
Evolution of MODERN GREECE

by
M. S. EULAMBIO.

Managing Director of the National Bank of Greece.

Price 15s. 0d.

EYRE & SPOTTISWOODE, LTD., EAST HARDING ST., LONDON, E.C.4

theron. It should be borne in mind, however, that Austrian social legislation had not progressed enormously; that Hungarian social legislation looked better on paper than in actual practice, and was, in any case, primarily intended as a factor in the process of Magyarisation; and, finally, that the disorganisation resultant upon the world-war was particularly apparent in the new Republic. Under these conditions the progress which has already been made towards normal conditions—which was still further hindered by an excess of virtue in deflationist policy—is certainly worthy of our respect.

The writer on the eight-hour day is fully aware of the difficulties of isolated action in this matter by a State whose exports play so important a rôle in its industrial economy, while Czechoslovakia has also realised that the policy of rent restrictions is but a poor contribution towards solving the very serious housing problem. Again, the scheme of State-aided building, which applied first to municipal schemes, but was extended, in 1921, to give assistance to private enterprise, and which consists in the payment by the State of such part of the interest and amortisation charges which cannot be covered by the rents, has only led, in five years, to the adoption of plans for the building of 20,985 houses.

The young Republic has provided for the maintenance of 701,400 war victims (invalids, widows, orphans, &c.), and has given assistance to large numbers of unemployed. Legislation to prevent or lessen unemployment itself, however, is naturally in its infancy.

A particularly interesting chapter is that devoted to Industrial Councils, which are claimed as being valuable pioneer work towards a new regulation of the relations between employers and employed. These councils in the mining industry superintend the enactment of official regulations, present motions concerning the improvement of production, investigate the operation of wage agreements, maintain discipline, mediate in disputes, and are responsible for the dismissal of employees. They also act as auditors of the books of the concern, but are not authorised to meddle with the administration by giving independent orders. In 1921 the principle was extended to other industries by the creation of industrial committees, whose powers are not, however, so far-reaching as those of the Mining Councils.

It is, of course, impossible, in the course of a short review, to do justice to the many topics referred to, but all students of social legislation would be well advised to consider developments in the most highly industrialised of the "new" States, and this small volume offers them the opportunity of doing so with a minimum of effort.

THE BANKING SYSTEMS OF THE WORLD.

This text-book on Colonial and foreign banking systems* deals in the first part with international, Continental, and central banking. The author makes useful comparisons between the financial mechanism of Britain and America, and shows how recent developments have tended to make banking more international in character. In one or two instances he makes somewhat sweeping assertions. For instance, he says: "In the underwriting of loans or important industrial issues banks found another fruitful source of revenue." As Germany and France are now debtor countries, and the share taken by the other countries is comparatively small, the only countries able to handle these large loans are England and America. But in England the underwriting has until now been undertaken by stockbrokers and by powerful financial institutions, &c., and, though some banks are doing a small amount, it still remains the exception and not the rule for banks to do underwriting. In America, where the banks do this underwriting in groups, the author fails to mention a significant fact, which has the effect of spreading the risks. That is that banks also sell their securities themselves over the counter. The Federal Reserve Act has opened the eyes of American bankers to the remunerative possibilities of foreign banking business.

The author gives a forceful picture of central banking. He shows that the Government is always represented on the boards of directors, either directly or indirectly. This

proves that central banks in the different countries are not immune from political manipulation. There is no doubt that the first essential of sound central banking is that the currency of each country should be managed on banking principles, and should be freed from all political interference. The one practical suggestion which was the outcome of the Genoa conference was that the Bank of England should call together representatives of central banks to discuss how this could be achieved. Present-day efforts with regard to the so-called central banks (such as the South African Reserve Bank, the Commonwealth Bank of Australia, the Imperial Bank of India) tend towards such reforms as will create a central bank in reality and not only in name.

In the part on Colonial banking, in which information is given which is not easily accessible to the average student, Canada forms an outstanding chapter; and in the part on foreign banking the author draws a fascinating picture of the manner in which the United States of America, and Japan, have Europeanised their banking systems.

This text-book deserves to be read, not by students for examination alone, but by thoughtful people who are desirous of seeing public finance put on a sound basis. One would like to suggest that in a subsequent edition a final chapter be added containing a summary of the essentials of the note issues, which the author gives separately for each country. He might also, for example, in drawing attention to the cheque systems of England and America, as well as the attempts of other countries in this direction, have shown some of the economies and advantages of this system, which has made deposit banking possible. And he has by no means emphasised with the arresting force it merits the lead which the Bank of England has given towards an ideal central bank. Lastly, one imagines that the author's own conclusions upon some of the vital points of the valuable information which he has gathered together would be interesting, if not also illuminating.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, January 7. ACCOUNT, January 8.

The Stock Exchange started Christmas week in a scene of very unseasonable activity. Although business was patchy, it came plentifully enough in certain directions, more particularly in those devoted to industrial shares. Gilt-edged stocks are dull; underwriters of the new Victoria stock are prepared to take up a fairly considerable slice of their obligation. The War Loan left off on Tuesday night at 101½, this giving a slightly better tone to the other members of the gilt-edged groups.

The success of the Greek Loan, following hard upon the heels of that achieved by the German Sevens, leads to the expectation that there may be other European borrowings in the near future, and on somewhat similar lines. Turkey and Portugal are both mentioned in this connection, with the result that the bonds of these countries are better. Brazilians

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

have hardened. Nothing fresh has transpired in the French list.

Home railway stocks keep moderately steady, with the Undergrounds displaying the principal strength. The idea is that the Underground Electric Railways of London will make a good showing in respect of the year now ending. Amongst foreign railways, Cordoba Centrals and Entre Rios stand out with conspicuous rises in all their stocks, the Argentine Railway group being quiet and uninteresting.

Rubber continues to creep upwards, and the prices of many shares in the rubber market have already undergone a very quiet, but a substantial improvement during the past fortnight, the strength being well maintained. The tea market exhibits robust strength. Amongst oil shares, brisk rises in British controlled of both classes is one of the few features. Courtaulds have been resting after their exertions of last week, but Listers took up the running, and the price rose abruptly. Tobacco shares are strong throughout, the British American figures being regarded as healthy, although the dividend announcement, referred to last week, caused a temporary disappointment. Insurance shares are mostly harder where they have moved, while the banking and shipping sections remain quiescent. Whisky shares have been booming. Hotel, stores, restaurant and catering issues moved rather irregularly, demand on the one hand being met on the other by supply from people eager to even up their books before the end of the month. Hudsons Bays, Sudan Plantations, and other land shares are better. The iron and steel group shows recovery. A good deal of business in newspaper shares has left prices without noticeable change. The industrial market is animated, most of its many sections commanding an increasingly wide circle of attention.

Kaffirs do nothing but stagnate, and Chartered have fallen back a little after their brisk rise. Other Rhodesian land shares, with those of the copper companies, are firmer. Diamonds remain dull. In Burma Corporations there has been a huge turnover of shares during the last few business days, and considerable animation in tin shares, especially in those of the Malayan group, has left prices higher. A few West Africans came in for favourable attention, Keffis being particularly wanted amongst the lower-priced shares.

Beecham Estates and Pills.—Capital £1,850,000, divided into 900,000 8 per cent. cumulative preference and 950,000 ordinary shares of £1 each. There is also outstanding

£1,000,000 of 6 per cent. first mortgage debenture stock. This is an offer for sale of 300,000 ordinary £1 shares at 21s per share. The company was formed to acquire the business of "Beecham's Pills" and Covent Garden Markets and surrounding properties. For this purpose a prospectus was issued in May last, inviting public subscription for 900,000 8 per cent. preference shares of £1 each at par. At the date of the prospectus the value of the Covent Garden estate was estimated at £1,470,000. In the present offer, no statement is made as to the estimated value of the pill business, but the auditors certify annual net profits since September 30, 1919. These figures show an advance from £149,021 to £152,379 for 1923. It is also stated that the combined volume of trade of the pill businesses for the half-year to March 31st last is in excess of that for the corresponding period of the previous year, "while the net revenue from the Covent Garden estate properties for the then current year had been fully maintained." The net profits of the pill business for the year to September 30, 1923, were £152,379, and the net revenue of the estates for the twelve months to July 31, 1923, without deduction, in the latter case, of directors' remuneration and debenture interest, income and corporation profits tax, make a total of £256,213. Of this sum £132,000 has to be set aside for debenture interest, while directors' fees, &c., are charged at £9,500, which leaves a balance of £114,713 available for dividend on the ordinary shares. The ordinary dividend is limited to 10 per cent. until the reserve fund amounts to £500,000. The shares at present on offer were privately purchased in May last at 19s per share, and those who subscribe to the present issue at 21s per share are entitled to the interim dividend of 1s per share, payable on January 1st next. Two points stand out clearly in this proposition. The first is that it is "an offer for sale," and the second is that profits are shown in one case to July 31, 1923, and in the other case to September 30, 1923. This is one of the drawbacks attached to "an offer for sale." When fresh investors are being sought, an industrial concern, surely, should be more up-to-date with a statement of profits.

Coastal Oilfields of Colombia, Limited.—Issued ordinary capital £2,733,606, preference capital £632,422. In order to comply with Stock Exchange regulations, further particulars are advertised of the Coastal Oilfields of Colombia, Limited. The information given is supplemental to that published in the public Press on December 13th, and states that the management company to be formed to take over the agreement shall agree to drill five wells, and to bear the cost of drilling, other than the provision of adequate water supply. The company agrees that the management company shall have control of the producing and marketing operations, and undertakes to provide working capital. The proceeds of the oil produced are to be used to reimburse the concession of the present contract, to reimburse the operating expenses of the management company, and for division of the surplus as to 65 per cent. to the management company and 35 per cent. to the company.

The depression in the butter market referred to when addressing you in April last has been much relieved, and the dairyman has good reason to expect satisfactory prices now until well into the New Year. Herbage being abundant, the output is also expected

A vote of thanks to the directors, general manager, and staff of

the bank was moved by Mr John Bennie, and seconded by Mr C. W. Gray. In support, Mr Lush referred to the "open door" policy of the bank, and paid a compliment to the staff for their courtesy and help.

Mr Alexander Macneil, a director, replied, and said that the strength and stability of the bank was due to the late general manager, Mr Wilson. The general manager (Mr A. A. Laing) and the assistant general manager (Mr H. Le M. Latreille) also responded.

BANK OF MONTREAL.

STRONG LIQUID POSITION.

A SUCCESSFUL YEAR.

REVIEW OF CANADIAN CONDITIONS.

ENCOURAGING PROSPECTS.

The one hundred and seventh annual meeting of the shareholders of the Bank of Montreal was held on December 1st in the board room at the bank's headquarters.

THE PRESIDENT'S ADDRESS.

Sir Vincent Meredith, Bt., in moving the adoption of the report, said :—During the past year continued confused world-wide conditions have been a deterrent to business generally, resulting in cautious buying and unwillingness to undertake forward operations. Yet, despite relative dullness of trade and the heavy burden of taxation imposed on financial institutions, I am happy to say we have been able to earn our dividend and bonus. Low rates of interest in world money markets have naturally affected profits, but the resources of your bank are so large, and its earning power so constant that I feel assured you may depend upon the continuance of satisfactory profits.

IMPROVED OUTLOOK.

While hesitating to prophesy, I am satisfied that a gradual improvement in the trade situation is occurring. Statistical returns support this view, and, while there is irregularity in the movement, in the main the trend is upward. There has been a better demand for steel in various forms, especially from railroads; textile trades are generally recovering from the slump, and dealings in hides and leather have broadened. Other indices may be cited; thus, car loadings showed an increase until affected recently by the smaller prairie crop, while building operations have kept pace with last year, which, in turn, showed a substantial increase.

CANADA'S FOREIGN TRADE.

Figures of foreign trade are encouraging. In the 12 months period to October 31st the aggregate value of this commerce was \$160,000,000 greater than in the preceding year, the total being \$1,895,000,000. We have been able to reach this large amount chiefly because of the enormous Western grain crop in 1923, and, in a survey of economic conditions, there is no more satisfactory feature than the improvement in agricultural returns. Last year there was greater volume; this year there is greater value. Farm products have always made the largest contribution to Canada's export trade, being greater than the combined export value of all other commodities.

FOREST PRODUCTS.

The other outstanding item in respect of exports is forest products. In the seven months ending October 31 shipments of wood and wood products, including paper, declined in value about \$18,000,000, as compared with the preceding year, this decrease occurring in lumber and not in paper. On the import side, a shrinkage is again recorded, so much as \$75,000,000 since March 31st, and, while lower prices may account for some of this decrease, the cause must be attributed to a quiet condition of domestic trade. A gratifying feature of the statistics of foreign trade is the growth of favourable balance. In the last seven months the excess of exports over imports amounted to \$120,000,000, as compared with an excess of \$15,000,000 in the corresponding period of last year, and if the comparison is carried over a 12 months' period, the favourable balance is found to be still greater. I regard this increase in Canada's foreign trade credits as an augury of a not distant improvement in domestic business.

Foreign competition, which for some time past had been anticipated, is now being keenly felt in several basic Canadian products in neutral markets. This situation is due to the advantages the exporting countries abroad possess in their depreciated currencies and cheaper and more industrious labour.

IMMIGRATION.

Immigration has been disappointingly small, and without increase in population increase in production will remain obstinately slow. The problem belongs to other hands than mine, but I am convinced the day is not distant when this favoured land of Canada will be

HUMAN ASSETS

in every business organisation should be protected by Life Assurance.

It financially safeguards the business on the death of one responsible for its success.

THE LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

will be happy to advise you.

Head Office :—

1 Dale St., Liverpool.

London :—

Chief Office, 1 Cornhill, E.C.3.

General Manager and Secretary :—HUGH LEWIS.

sought by the surplus population of Great Britain and Europe, as well as by those thrifty classes who will here find opportunity for further improving their condition.

CONDITIONS IN EUROPE.

Taking a general view of European conditions, it is evident that decided improvement has taken place during the last year. Exchanges have gained in stability and a greater degree of confidence exists, with the result that trade is expanding and moving with more freedom. The chief causes contributing to this betterment are the efforts made by various European countries to balance their budgets, and to this end substantial help has been forthcoming through external loans issued under the auspices of the League of Nations, and in some cases partially secured by international guarantees.

Continental currencies have moved in favour of England, and the pound sterling has substantially appreciated compared with the United States dollar; but what is of great importance to international trade is the disappearance of the wide and violent fluctuations which were formerly such a hindrance to business.

The recent German loan—the first step in applying the Dawes plan—was a conspicuous success, and has already produced a good effect on international finance.

In Great Britain, the result of the elections has proved to be the chief factor in favour of a recovery in trade, and, with a prospect of a stable Government for the next few years, there is a more optimistic feeling current, and already there are distinct signs of trade revival. In this connection, however, it would not be surprising if Germany were shortly to build a wall to keep out British and other goods, unless new commercial treaties are made. She has already drafted her new tariff, with some 1,600 articles, all of which will call for higher duties.

AGRICULTURAL CONDITIONS.

The crop output has been considerably less than last year, about 200,000,000 bushels in the case of wheat, the decrease occurring in the Western provinces. Against this reduction can be set the higher prices paid for the product, the loss in quantity being nearly recovered in the greater value. This view, however, deals with the aggregate, and does not help farmers who have reaped little. Yet, upon the whole, the fact remains that the agricultural condition in the prairie provinces has improved during the last two years, partly because of a bumper crop followed by a fair one marketable at high prices, and partly because of the growth of mixed farming which gives farmers more baskets for their eggs. The reckless extravagance induced by war prices has also moderated, and it may be concluded that farming in the West, where intelligently pursued, has become a stable industry.

PURCHASE OF MOLSONS BANK.

As you are no doubt aware, there has always existed a close, friendly connection between this bank and the Molsons Bank since the latter's inception. When it was deemed advisable to amalgamate the Molsons Bank with a stronger institution, and we were approached, your directors decided to acquire the bank.

A WORD OF CONFIDENCE.

My last word is a word of confidence and encouragement. The interests of your bank are more closely bound up with those of Canada than ever before, and unless Canada prospers the bank cannot expect the prosperity it should enjoy. I believe Canada will prosper. It offers inducements to immigrants vastly superior to those of other countries which are at present endeavouring to

attract citizens. It stands third amongst the countries of the world in natural resources. We possess half of the forest area of the British Empire; our mines produced in 1923 \$214,000,000 worth of metals, and the surface is scarcely scratched. Canada stands second in the world in coal deposits. Her water powers are estimated at 18,000,000 horse-power, and she enjoys unexcelled transportation facilities. For those with some capital and a willingness to work, the cheap, rich lands of Western Canada offer a means of healthful subsistence, and, in time, a better competence than can be obtained elsewhere.

THE GENERAL MANAGER'S ADDRESS.

Sir Frederick Williams-Taylor, general manager in submitting his annual address, said :—Mr Chairman and gentlemen, In presenting for your information and approval the 107th annual balance-sheet of the bank, I shall explain briefly the important changes shown therein, and comment upon some of the factors that have had a bearing upon our operations, and have influenced the results of our business for the past year.

Our cash, call loans, balances with other banks, Government and municipal bonds, and other readily realisable assets, apart from ordinary advances to customers, are about 64.23 per cent. of our total liabilities to the public.

I feel sure that this strong liquid position must be as satisfying to our friends as it is to ourselves. Depositors, as a rule, display more interest in this feature of our balance-sheet than borrowers, but the ability of a bank to withstand any stringent monetary condition without the necessity for calling in advances is a matter of prime importance to those who borrow money for commercial purposes.

SMALL SAVINGS WELCOME.

The increase in the number of depositors in our savings department has been greater in the past two years than ever before. I should like to emphasize, in connection with the growth of these deposits that this bank's services are at the disposal of every class of the population, and that we welcome those who, with a small deposit, wish to open a savings account.

It may be noted in this connection that the rate of interest on savings deposits paid by Canadian banks remains, as for many years past, at 3 per cent., such deposits comprising a large percentage of total bank deposits. In no other important country have depositors received a rate of interest so uniformly high regardless of market fluctuations in the value of money, except for deposits fixed for periods of three months or more.

PROFITS OF THE BANK.

The operations of the bank during the 12 months under review resulted in a profit of \$4,454,000, being a decrease of \$42,000 compared with the previous year. Based on the total of our capital, reserve, and undivided profits, these earnings represent a return of 8.06 per cent., which may be described as modest for a business of such dimensions as ours; but, as you know, our first consideration is to keep strong in cash and liquid assets.

The staff of the bank continue to serve our interests faithfully. With others of the salaried class, the incomes of our staff have not kept pace with the increasing cost of living during the war and following years. They have thus had to carry their share of the burden of disjointed economic conditions, but they will benefit through the return to more normal conditions which we hope is coming. We count ourselves fortunate, indeed, in having had

through these troublous years a most efficient staff of unquestioned loyalty.

Although the wheat crop in Canada was this year less than for the season of 1923 by something approaching 200,000,000 bushels, fortunately for the farmer the price had advanced to about \$1.65 per bushel from about \$1.00 last year, so that Canada's gross income from this staple product should be about the same.

The increase in the current income of the farmers in areas which have yielded favourable crops has naturally been reflected in improved financial and business conditions in those districts.

Adverse rates of sterling exchange continue to be a barrier to Canadian borrowings in England. During the 12 months under review, the rate for sterling exchange advanced from 4.3½ to 4.53, and should the present movement continue, the London market will once more become a field for the flotation of Canadian securities, and our services as bankers for new issues, which have been dormant since the war, will again be in demand.

TRADE CONDITIONS.

The detailed report on trade conditions in the several provinces will appear in the published account of this meeting. My view, in brief, of the situation is that business generally in Canada is unsatisfactory, but with some bright spots. This expression of opinion may not be popular, but it seems to me much better to look the matter squarely in the face than to allow ourselves to be led astray by popular delusions. That general trade is dull, to put it mildly, is no delusion. Many of our industries are running on half-time, with diminished profits or no profits at all. Taxation is heavy to an extent which discourages new enterprises. The cost of living is high and our population in point of numbers is at a standstill, or worse.

These are the conditions, as I see them, but I hope and believe we shall emerge from our difficulties presently.

CANADA : A FAVOURED LAND

We, in Canada, have much to be thankful for. If this were a poor country our case would be a bad one, but we have riches in our forests, our fields, our fisheries, and in our minerals, also in our mighty water powers, and in the industry and ambition of our people.

Where is there a country other than the United States where so high a standard of living prevails? A large portion of the community, notably farmers, who at an earlier day knew little of luxury, now have their electric light, telephones, motor-cars, and radios. We have no doles; poorhouses are hard to find, and, comparatively, there is little unemployment.

The United States for the moment possesses a stronger attraction for emigrants from the Old World, but, taking a longer view, Canada still stands out as a land of opportunity. Nowhere else in the world can the desirable settler from Europe find such good land, such cheap land, under such stable conditions of government, and so near to great purchasing markets for farm products.

The general manager then gave in detail reports on the conditions of trade, &c.

The report having been adopted, votes of thanks to the president, vice-president, directors, and staff were passed.

The votes of thanks having been responded to by the President and General Manager, the ballot for the appointment of auditors and the election of directors was duly proceeded with, and the meeting terminated.

THE LONDON NITRATE COMPANY, LIMITED.**SUCCESSFUL YEAR—INCREASED PROFIT.****POSITION AND PROSPECTS.****CHILEAN GOVERNMENT AND THE NITRATE INDUSTRY.**

The thirty-seventh annual general meeting of the London Nitrate Company, Limited, was held at Liverpool on the 19th instant, the chairman of directors, Mr Frank Tobin, C.B.E., presiding.

The Chairman, in moving the adoption of the report and accounts, said there were one or two items in the balance-sheet which called for a word of explanation. They would see that on the assets side there had been a sum of £14,332 written off for amortisation of grounds. That was an innovation, and the reason for its insertion in the accounts this year was that nitrate properties consisted of what might be called "wasting assets"; that was to say that each year the profits were derived to some extent from capital that they consumed. Companies had always felt, colliery companies in particular, that in imposing income-tax, allowance should be made for this fact. It had been applied for and argued *ad nauseam*, but never successfully, and the hope of getting any consideration on these grounds had been abandoned in England. Now, however, they were in a different position; an income-tax of 3 per cent. had been imposed by the Chilean Government, and they thought the Chilean Government would take into account the fact that capital was being consumed in making that profit, and would make an allowance off the income-tax in respect thereof. They might be quite sure that if they did not show in their accounts the amount of capital that had been consumed in making the year's profits, they would get no allowance, and he thought the shareholders would consider that the directors had been justified in introducing the item.

STOCKS ON HAND.

Some explanation is also needed with reference to the very large stocks of nitrate on hand at the end of the year—£85,000 worth. This was an exceptionally large amount, and was due to the fact that business in June, the last month of their working year, was exceptionally active, and that nitrate was being accumulated in the port for delivery in July, August, and even September of the following year. The stock on hand was therefore abnormally large at the end of June. For the same reason, they would see that sundry debtors showed an increase of about £35,000, as against the figure for the previous year. On the other hand, sundry creditors showed an increase of about £12,000, but as all the items composing these entries had been disposed of long ago, he did not think they called for further comment.

LIABILITIES.

On the liabilities side of the accounts they would see an item of £80,000 reserve for redemption of debenture stock. Last year they set aside for that purpose £30,000, and that had been devoted to the purchase of debenture stock to the amount of £29,390. This year they set aside £50,000 towards the redemption which falls due on April 1, 1926, and they thought they would be in a position next year to do the same, and that would leave them with only £20,000 to find in the first few months of 1926. Debenture holders might rest satisfied that the company would meet its obligations, and that they would, on April 1, 1926, have to look out for new investments.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, income-tax and corporation profits tax showed a reduction of about £4,000, due to the fact that the corporation profits tax was only incurred for a small portion of the year, and now had disappeared altogether. The gross profits for the year amounted to £107,214, as against £80,377, and he hoped that was as satisfactory to the shareholders as it was to the board; it enabled them, in spite of the handsome sum which they had passed to the redemption of debentures, to propose a larger dividend.

OUTLOOK FOR THE INDUSTRY.

The outlook for the nitrate industry generally was distinctly favourable, and the remote prospects were also good, and he thought they must attribute the change which had taken place in the nitrate industry to the formation of the Association of Nitrate producers, who pooled their products, and placed them unreservedly in the hands of a representative committee for sale. Having given in some detail the procedure adopted by this committee, the chairman went on to refer to the value of advertising and propaganda work in connection with the industry, and said the benefits of increased consumption were shared by two bodies of people, the nitrate producers and the Government of Chile. They might, therefore, think it only fair that the Government of Chile, in order to increase their revenue from the heavy duties which they imposed on the nitrate industry, should give some material assistance to this propaganda work,

but he was sorry to say that their contribution was dimly meagre, and one not worthy of the nation of Chile.

GOVERNMENT ATTITUDE TO THE INDUSTRY.

They would have gathered from what he had said that he looked forward with very considerable confidence to the future. There were, however, one or two points which gave the directors cause for thought, and the first one was the recent attitude of the Chilean Government to the nitrate industry, which, was, after all, the ewe lamb of the Chilean Treasury, a very large proportion of the Chilean revenue being derived from the export of nitrate and the duties imposed thereon. It was only natural to think, therefore, that the Chilean Government would do all they could to stimulate consumption and to assist in causing the growth of consumption, but they found that in order to scrape up a few dollars here and there, the Chilean Government kept on imposing new forms of taxation on the industry. It was quite a mistaken policy, because any such taxation only added to the cost of production. The real interest of the industry consisted in producing as cheaply as possible in order to stimulate consumption by selling the article cheaply. They had the finest fertiliser in the world for sale, and they wanted to sell it at an attractive price, and it was a mistaken policy of the Chilean Government to impose any taxation which tended to increase the cost of production and which would militate to some extent against increased sales. He did not know that they could do anything to cure that, but he hoped the Chilean Government would see their way to encourage and foster their industry rather than impede it by additional taxation.

LABOUR QUESTION.

The labour question also gave them cause for thought. At the present time labour was scarce, but just sufficient for the requirements of the industry. It was inevitable, however, that once Europe emerged from her present impoverished state, and when the consumption of nitrate increased largely, a great deal more labour would be required, and it was going to be very hard to find it. Labour in Chile, as all over the world, was demanding and asking, and he thought properly, for improved conditions in regard to better housing, better sanitation, and better medical service, and in this Labour had the fullest sympathy of the whole of the nitrate industry, and that sympathy was taking practical form. They were doing a great deal to improve the conditions in that respect in their own company, and the whole of the industry was also doing what they could in the same direction.

TRANSPORT.

The question of transport also caused some anxiety at the present time. Even a temporary breakdown of transport was a very serious matter, and there was a grave danger of congestion at certain points on the Nitrate Railways, which had a monopoly for the carriage of nitrate in the greater part of Parapaca, and they were very anxious to see that danger removed. The Government had been approached on the point, but no solution had as yet been arrived at.

With regard to the financial position of the company, he thought a glance at the balance-sheet would assure the shareholders that it was not only healthy, but strong. It was true that they had still a debenture debt to the extent of £120,000 to take care of, but they did not contemplate any difficulty with regard to that. To wipe out that debt would be satisfactory to the directors for a reason much stronger than the satisfying of their financial obligations; he had already used the words "wasting assets," and they must remember that they were using up their grounds every year; after a certain given number of years they would find themselves with an empty shell, which would consist of nothing more than their old machinery, and they must always have in their minds the necessity of making provision for the replacement of grounds as the opportunity occurred.

SOUND PROPERTY—GOOD PROSPECTS.

Having referred to the satisfactory results which were being obtained at the Santa Laura oficina, the expense of which had been more than justified by the results, the Chairman went on to say that a careful examination of the accounts and of the properties would enable any inquirer to realise that they had a sound property, with every prospect of still further enhancing its value. In conclusion, the Chairman paid a handsome tribute to the work of their agents on the Coast and the staff generally, and formally moved the adoption of the report and accounts and the confirmation of a final dividend of 2s 6d per share for the year, to be paid on December 20, 1924.

This was formally seconded by Sir James Reynolds, and carried. Mr E. B. Orme was unanimously re-elected a director of the company, and Messrs Harmood, Banner and Son were reappointed auditors of the company.

A cordial vote of thanks to the chairman concluded the proceedings.

WESTERN AUSTRALIAN BANK.**GRATIFYING RESULTS.**

The one hundred and sixty-sixth half-yearly meeting was held on November 5, 1924, at the Banking House, St George's terrace, Sir E. H. Wittenoom, chairman of directors, presiding.

The directors, in their report for the half-year ended September 29th, stated that the net profit was £40,877 19s 9d, which, with a balance of £32,540 10s 7d carried forward from the previous term, made £73,418 10s 4d available for distribution. This compared with a net profit of £39,195 14s 2d for the March half-year, and £36,271 for the corresponding period last year.

The Chairman, in moving the adoption of the report and balance-sheet, said that the same conditions existed in the past half-year as he had pointed out at the previous meeting in regard to the preceding period, viz., that the bank had to deal with increased capital, which, of course, required additional business and more avenues for profitable employment; therefore, in such circumstances, it was gratifying to be able to maintain the same dividend as at that time last year, besides being able to carry forward such a substantial amount as £35,006 0s 4d. Dealing with the question of additional capital for the bank's operations, he quoted the following from his address to shareholders in March last:—"Your directors have not overlooked this matter, but the prospects of the money market have been neither opportune nor encouraging. The several Government loans recently floated have absorbed a quantity of money, and your directors hesitate to take any steps until assured of absolute success. The market is being carefully watched." He said that after the most careful consideration the directors decided to accept an offer from London for 100,000 shares at 30s premium, reserving 22,000 shares for Australia. This absorbed the full amount the shareholders had authorised the directors to place on the market. They would be gratified to learn that all the new shares had been promptly applied for and allotted. The directors were now asking the shareholders for an authorisation to increase the capital by a further £500,000.

The report and accounts were unanimously adopted.

JOHN I. THORNYCROFT AND CO., LIMITED.**TRADE DEPRESSION AND LABOUR DISPUTES.**

The twenty-third annual general meeting of John I. Thornycroft and Co., Limited, was held on the 22nd instant, in London.

Sir John E. Thornycroft, K.B.E., who presided, said that the accounts showed a profit of £29,631, and, after providing for the debenture interest, it was proposed to pay the dividend on the 6 per cent. cumulative preference shares. The directors regretted that the results did not permit of the distribution of a further dividend, but he thought it would be agreed that it was no mean performance to have emerged at the end of the past three or four years, which had been a period of extraordinary depression, with a reserve intact of £250,000 and a carry forward of a further £49,383. In common with other shipbuilding districts, the past year's output had been adversely affected by the depressed conditions of the industry and by labour disputes. The ship-repairing side of the business had also been similarly affected, and, in this connection, the trouble took place when they were carrying out a large overhaul on the Mauretania at a time when the whole of the extensive machinery outfit of that boat was dismantled. The vessel, in her disabled condition, was towed to France, and the re-erection was successfully carried through and the overhaul eventually completed at Southampton. The performance of the vessel since as regarded speed had been better than it ever was—a result upon which they had been specially complimented by the Cunard Company. During the year they had lost some very considerable shipbuilding orders to the Continent, for the reason that the Continental prices at which orders had been accepted had been below the company's costs of actual labour and material. On the other hand, they had succeeded in obtaining an order for one of the two destroyers recently placed by the British Government. These were the first two vessels of this class ordered since the war, and the directors were hoping that further similar orders might be placed in the near future. On the motor vehicle side there was an increase of 40 per cent. in sales, and the current year showed a further increase over the previous year's figures. They had combined with another firm for the sale and manufacture of a 'semi-Diesel engine of an improved and satisfactory type. The directors believed there was very little chance of doing export business unless they worked on more standardised and mass production lines. He would point out, however, that no British motor manufacturer could be expected to take steps in this direction unless his home market was suitably protected.

The report was unanimously adopted.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.**HEAVY DUTIES ON BEER AND SPIRITS.**

The meeting of Peter Walker (Warrington) and Robert Cain and Sons, Limited, was held at Winchester House, Old Broad street, London, on the 19th instant, Sir Harmood Banner, Bart. (chairman), presiding.

The secretary (Mr H. Bosworth, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after referring to the loss the company had sustained by the death of Sir William Cain, said that, taking into account all the conditions which had prevailed during the past financial year, the results were better than they foresaw 12 months ago. Sales were better, and went to prove the correctness of the directors' policy in keeping up the quality and strength of their production. The whole burden thrown on the brewing trade in 1923 by the Chancellor of the Exchequer was borne by the company without seeking to pass any portion of it on to the consumer. With the present Government in power, they were hopeful at least of a cessation of a tax on the trade such as had been experienced during the past year, and for a period during which they might set themselves to work for a higher standard of affairs.

THE FUTURE.

As to the immediate future, they were faced with the fact that their materials during the coming year were going to cost them much more. They looked forward, however, to a reduction in the present unreasonable duties on beer and spirits. With regard to the beer duty, in 1920, when the duty was increased from 70s to 100s, wages were exceptionally high, and the then Chancellor of the Exchequer stated that the beer duty was regarded as a means of collecting from the wage-earner some equivalent of the income-tax, which then stood at 6s in the £—its highest point. Since then the income-tax had been reduced to 4s 6d, but though in many cases wages had fallen almost to pre-war level, the only change made in the beer duty had been that of last year, which resulted in a reduction of a penny per pint to the consumer. There was no hope for cheaper beer until the Chancellor of the Exchequer lightened the heavy burden now being carried by the industry.

As a result of the year's trading there was an available balance of £601,770, out of which they proposed to allocate £3,000 to the staff benevolent fund—a fund which was doing excellent work. They further proposed to pay a final dividend of 5 per cent., making 9 per cent. for the year, to transfer £50,000 to reserve, and increase the carry forward from £25,470 to £34,470.

Sir Charles Alexander Nall-Cain, Bart. (deputy-chairman) seconded the motion, and it was carried unanimously. The usual formal business having been transacted, the proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff.

SAMUEL ALLSOPP AND SONS, LIMITED.**VERY FAVOURABLE BALANCE SHEET.**

The 36th ordinary annual general meeting of Samuel Allsopp and Sons, Limited, was held, on the 23rd instant, at the Cannon street, Hotel, London, E.C.

Sir William B. Peat, C.V.O. (the chairman), said that he did not think there was a single item in the balance-sheet that did not compare favourably with any item in any previous balance-sheet they had ever presented to the shareholders. Their reserves showed an increase of £29,000, the general reserve showing an

increase of £20,000, and the sinking fund for the redemption of the prior lien debenture stock £9,000. Their cash position was eminently satisfactory. Notwithstanding the purchases of properties they had made, their cash position was almost the same as it was 12 months ago. Their profit on trading for the year showed an increase of almost exactly £20,000.

Their sales during the year, excluding certain exceptional sales in bulk during the year ended September, 1923, showed on the whole a somewhat improving position. He did not think they were so fortunate as some brewery companies in the areas in which they worked. Unfortunately, a large proportion of their licensed premises were in the North of England, Wales, and elsewhere where trade had been exceptionally bad.

Their profits might be considered as satisfactory from the point of view that they were steadily improving over those of past years, and he hoped they would continue to improve, but he could not say that those profits were a fair yield on the original capital that had been invested in the company. With regard to attacks on their trade and prohibition, he did not think there was any likelihood at the present time, and he hoped for some years, that any Bills to that end would be encouraged by Parliament, and he hoped they might look forward to a time in which they might have a fair field to run their enterprise in the interests of shareholders and the interests of the public. With regard to their prospects, although they had increased wages to meet and a higher price for barley, there was the diminished cost of other materials and a tendency for unemployment to decrease. There was also an indication of an improvement in trade generally, not only in this country but in every country, which should be of benefit to them.

They had legitimate grounds for complaint, however, when they considered the question of taxation. The tax on beer was still £4 a barrel, and the reduction from £5 made in April, 1923, was coupled with the condition that brewers should reduce the price to consumers by 2s per barrel. He did not think there was any reason for agitation for the brewers to make a further reduction in price to the public which would be a very important thing for the brewers, because at the moment they were compelled to charge 6d or more a pint, which was a high price for the ordinary working man, particularly the agricultural labourer.

The report and accounts were unanimously adopted.

to the continued strength for forward values. No. 1 Northern Manitoba quoted 71s 6d, No. 2 ditto 70s 6d, No. 2 hard winter 68s, and choice white Karachi 65s 6d, all per 496 lbs ex ship terms. In the floating and forward cargo section a good demand prevailed, particularly for white descriptions, and prices were further advanced in sympathy with higher American cables and reserved sellers. Australian January sold 65s 4½d to 65s 9d, March 65s 9d, choice white Karachi January 63s, Rosafe 64½ lbs, December 65s, 64 lbs January-February 64s 9d, and ditto 63½ lbs, January-February 64s 6d, and No. 1 Northern Duluth afloat 64s 3d. Maize cargoes also very firm, and holders reserved in face of sustained inquiries on Continental account. A steamer of yellow South Russian February-March sold at 46s, all per 480 lbs c.i.f. terms.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 22nd, is as follows:—Pig-iron: The market is very quiet, and it is not expected that there will be much business doing now until after the Christmas and New Year holidays. The price of No. 3 Cleveland G.M.B. is quoted to-day at 81s 6d, and mixed numbers East Coast hematite at 88s per ton. Manufactured iron and steel: Works have recently secured a few more orders, but specifications are rather slow in coming forward. Some improvement is looked for after the holidays. Some of the local steel works are closing for a fortnight, whilst others are only closing three days each week. Quotations are unchanged, as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: There is practically no new business to report, and best Rubio is still quoted on the basis of 22s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Business in iron and steel material is confined to small lots to cover immediate requirements, and notwithstanding the improved outlook for finished goods users of pig-iron and billets are displaying unwonted caution with respect to 1925 commitments. Owing to this cause prices have eased off during the last few days, and orders could be placed at the former quotations. Trade in basic pig and steel is in a state of extreme depression, and a large proportion of the limited consumption is coming from the Continent. Increased work from the British railway companies is being booked in the axle, tyre, and spring departments, but very little is coming from India, formerly our best overseas market. South America is buying a little liberally, and promises to be a better customer next year than during the present twelve months. Engineering is looking up, and the depression in the machine tool department appears to have come to an end. Agricultural engineers, however, are still unable to obtain work from overseas, and South America continues to be a lost market for farm machines and implements. There is an improving demand for steel forgings and castings made from acid steel. House coal has sold rather more freely last week and this week, but sales are greatly below normal. Steams are a little firmer, but producers of coke seem anxious to book orders. Hand-picked branch is quoted at 30s to 32s, Yorkshire hard at 20s, Blyth hard at 18s 6d to 19s, and Durham hard at 22s 6d to 23s.

Our Glasgow correspondent writes as follows:—In the iron, steel, and coal trades in the West of Scotland activity is chiefly confined to clearing off necessary requirements prior to the holiday stoppage. In the coal trade, export, which has been somewhat improved of late, has practically stopped for the year, but the prospects for the re-start are described as fair. The pig-iron market has gone back somewhat, with prices inclined to drop; but with the general improvement in the trading position abroad the optimism which is general in the iron and steel trade is justifiable. Several works intend closing down for the New Year holidays on the 30th inst., and extending the vacation till the middle of January; but others find the usual eight or ten days sufficient, and have a fair amount of work on hand with which to start the year.

Although fresh business is rather quiet, it is known that the placing of several good contracts has been held over till January. Sheet-makers, especially those engaged in the light sheet trade, are fully booked up, and colonial and foreign inquiries for galvanised sheets are very numerous. Several hundred tons have been placed locally for February shipment to India, and dealers have inquiries for March and April delivery. Structural engineers report good orders on hand, and estimates for prospective work more in evidence than for some considerable time. Wagon-builders are busy, and the locomotive and general engineering trade are fairly well provided with work.

METALS.

The market for tin displayed firmer features on improved inquiries, though movements were somewhat irregular, values opened 75s per ton dearer compared with close of last week. Standard cash quoted £265 10s-£265 15s, three months £268 10s-£268 15s. Settlement price £265 10s. Sales 1,100 tons, cash at £265 10s-£265 5s, and £265 10s, three months £269-£270, and finally £268 10s. English ingots £266 10s-£267 10s. Copper active at an advance of 15s per ton cash and 12s 6d forward. Standard cash quoted £66 10s-£66 12s 6d, three months £67 10s-£67 12s 6d. Settlement price £66 10s. 2,100 tons changed hands, cash at £66 7s 6d to £66 10s, three months £67 10s-£67 7s 6d, and £67 12s 6d. Electrolytic 15s-£71 5s, wire bars £71 5s. Lead irregular and occasionally the turn easier. 1,600 tons sold, good soft foreign pig, December, sold £42 10s, January £42, February £41 10s-£41, March £40 10s-£39 17s 6d-£40 2s 6d. Settlement price £42 12s 6d. English quoted £44 ton. Spelter firm, with fair sales. 900 tons changed hands, December at £37 17s 6d, February £37 10s-£37 12s 6d, March £37 7s 6d-£37 8s 9d, April £37 7s 6d-£37 8s 9d. Settlement price £37 17s 6d per ton. At the final session tin 40s to 50s ton dearer. Cash sold at £267 5s, three months £271 5s. Copper 7s 6d ton dearer. Near dates sold £66 16s 3d, three months £67 17s 6d. Lead and spelter also hardened on sustained buying orders. Quicksilver firmer. Spot £12 10s to £12 12s 6d per bottle. Tin plates unaltered.

THE WOOL TRADE.

Our Bradford correspondent, writing on Monday, says:—Business is more or less at a standstill, and although the tone of the market is fairly good, there is not really enough doing in tops and yarns to test values. Quotations are nominally unchanged, but the position favours the buyer, and in most qualities concessions could be obtained for definite orders. However, confidence is still expressed in the future, and it is expected that trade will revive early in the New Year. In order to show the course of prices during the past year, the following tabulation has been compiled:—

COLONIAL WOOL IN LONDON.									
First Cost, Clean, per lb, without Oil.

COLONIAL WOOL.

(FROM OUR CORRESPONDENT.)

In our last communication we dealt specially with the New Zealand sales and the present standing of crossbred values. The question is well worth referring to again, because of the marketing of the new clip, the last sale of this year taking place at Dunedin on December 22nd. The new season opens on January 5th, hence the Christmas recess is going to be very short indeed. When the programme of sale dates was arranged only auctions up to January 31st were agreed upon, but we are now able to give readers the selling dates for the balance of the season. The principal qualities of wool sold at the respective centres are shown below, along with the dates:—

		46's to 64's
January	5, Christchurch	46's to 64's
	9, Wanganui	36's
	14, Napier	36's
	19, Wellington	36's
	23, Dunedin	46's
	28, Invercargill	46's
	31, Timaru	46's
February	5, Christchurch	46's
	10, Auckland	44's
	14, Wanganui	36's
	18, Napier	36's
	27, Christchurch	46's
	4, Invercargill	44's
March	9, Dunedin	46's
	13, Timaru	46's
	18, Napier	36's
	20, Wanganui	36's
	24, Auckland	44's
	27, Wellington	36's
	31, Christchurch	46's
April	3, Dunedin	46's

It can now be said that practically all the initial advance at Wellington, on November 15th, has disappeared, and the home trade is generally agreed that the rise was never warranted by the state of trade. The spurt was largely the outcome of sentiment and speculation, and not based upon actual or prospective needs.

THE COTTON TRADE.

MANCHESTER, December 22.

The market has continued to present a more cheerful appearance, and producers are in a healthier position as a result of the

recent increase in the turnover in yarn and cloth. Business, however, has been disturbed by the holidays, and no further developments of any importance can be expected until after the turn of the year. A steady demand has been reported in cloth for India, especially in light fabrics. Only occasional sales have been mentioned for China. In a variety of goods several of the smaller markets East and West have provided a number of small contracts, which in the aggregate have totalled to moderate dimensions. Manufacturers all round are fairly well sold. Quotations in American yarns continue rather firmer, but buying has been irregular. The Egyptian yarn market remains disturbed by the fluctuations in raw material rates.

(II.) Compared with Previous Years.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JULY 26, 1924.

No. 14.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

FOR another month British trade has held its ground, a condition for which the best that can be said is that it is better than at the corresponding season of last year, when we were suffering from a summer depression. Moreover, this general statement is only true in a broad way. Certain industries—notably the export coal, the iron, and the early stages of the steel industry—have been slipping back, but, on the other hand, a certain amount of improvement has taken place in some branches of the textile industries, especially cotton. Unemployment remains practically unchanged, and average prices in June remained extremely steady. But, just as last year an improvement began after July was over, there seem to be certain indications suggesting a similar history this year. In the first place, an improvement in cotton would bring about a better balance in British industry generally, for, in the light of the last 50 years of British history, it is difficult to imagine brisk and prosperous trade in the rest of the country while Lancashire is in a state of stagnation. A lower price for raw cotton, as a result of a good cotton crop, would give substance to present hopes of better things. Again, there has been a slight movement in the right direction in shipbuilding, Lloyd's Register recording an increase in the work under construction as against a reduction of one million tons in the merchant fleets of the world, mainly due to the breaking up of old ships. This process of taking antiquated shipping off the market is the first condition for a revival of shipping, and the progress made in twelve months is encouraging. A third important consideration is that the latest reports from the United States indicate that the set-back to American trade which occurred this spring does not now seem likely to lead to a serious depression, but that in several directions recovery is to be looked for. This is to some extent due to the fact that in the northern hemisphere generally (but particularly in Canada and the United States) the wheat crop is expected to be less than a year ago, and prices

are already hardening. It is expected that this will lead to a better balance of purchasing power between the agricultural and industrial communities of America, and as British crop reports are also favourable, it would seem that the farmer in this country will share in this benefit. Whether this is altogether a sound ground for expecting improvement is not quite certain. Larger shipments of

wheat may perhaps come out of Russia this year, and, in any case, with so large a proportion of British wages based on index figures, a rise in the cost of living will not help Great Britain in industrial competition.

Financial indications, like the direct indices of industry, show little variation. Stock Exchange securities generally are unchanged, and though the index of industrial securities is very slightly higher, the change is so small as to be of no significance. The greatest change in the financial figure is in respect of bankers' advances to industry, which are substantially higher than a year ago, and though we have not yet an index of production, we believe this change is a reflection of a substantially larger turnover of trade generally than in July, 1923.

The situation overseas is in most countries a little better than at the date of our last report, the only important exceptions being those countries which are directly concerned with the reparation crisis. Germany, Belgium, and France are in a state of suspense, and are clearly awaiting the outcome of the present Conference. South America, the Far East, and the Dominions are, if anything, all making a little headway. So far as the international trade situation is concerned, however, it cannot be said that in any quarter speculative optimism exists by way of an anticipation of a settlement in Europe. If such a settlement occurs, it will undoubtedly give a fresh outlet for enterprise, and may be expected to strengthen substantially other favourable influences to which we have referred. The following notes on conditions in various trades and

quite an accumulation of hides and skins of all sorts. Business in imported hides has slowed down, owing to the holidays, but frigorifics have recovered from their temporary weakness, and 9½d has been made for Argentine ox, and 11d for Uruguay ox. Saladeros remain firm, and dry B.A. Americanos have realised 11½d for 10/11 kilos average. All other classes of dry hides are quiet, but firm in price. Latest cables from New York report the Chicago position as weak, with best heavy packers now offering at 16½ cents—a fall of 1½ cents, as against last prices.

Boot manufacturers have been hardly pressed for deliveries of boots and shoes for the Christmas trade, and most of the factories in Leicester, Northampton, Norwich, and Stafford have been very busy dispatching goods during the past week. Taken all round, the year closes with a very hopeful feeling in the allied leather trades.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Tuesday, December 23.

SUGAR.—No change occurred in prices of spot parcels, with a moderate business passing in British makes. Of imported white Mauritius, spot, quoted 30s 6d; Dutch granulated ditto, 30s 7½d; Czecho ditto, 30s 9d; Belgian, 30s 3d; Hungarian crystals, 30s 3d. Forward positions quiet. Czecho granulated, ready, 17s 6d; January-March, 17s 9d, f.o.b., Hamburg. White Java, May-June shipment, quoted, 17s 9d, c.i.f., U.K. Raw kinds remain slow of sale. Peruvian, basis 96 per cent., prompt, quoted 14s 9d, and Cuban, February-March, 13s 9d; Brazilian, basis 80 per cent., December-January, sold, 14s, c.i.f., U.K. English-grown granulated, prompt delivery, 31s, ex works, Norfolk, and 31s 3d, ex works, Nottingham. White terminal irregular, and a fair business transpired. December sold at 17s 1½d; February, 17s 3d; March, 17s 4½d; May, 17s 7½d to 17s 6d; August, 17s 10½d to 17s 7½d per cwt.

COFFEE.—Spot market fully steady, with sustained inquiries for all the finer home trade qualities, and which continue to be sparingly offered.

COCOA.—Spot market quiet. Accra, for shipment, F.F. quality, January-March, quoted 41s 6d per cwt.

TEA.—Market quiet in absence of public sales, but rates show no material alteration.

SPICE.—Pepper steady. Black Singapore L.S., January-March, quoted 5½d; Lampong ditto, 5½d; Muntok, January-March, 10½d; March-May, 11d. Zanzibar cloves, spot, 1s to 1s 1d, as to quality; October-December, 11½d; January-March, 11d per lb. Tapioca quiet. Singapore flake, to Havre, January-March, sellers, 20s; Penang seed ditto, to London, 20s 6d. Sago flour, January-March, 17s. Desiccated coconut, fine cut, spot, 39s 3d; medium, 39s 6d; halves, December-January, 39s; January-February, 39s 9d per cwt. Ginger firm. Japan, spot, 105s; January-March shipment, 92s per cwt, c.i.f.

RICE remains quiet, though held for generally steady rates. Two stars, spot, quoted 18s; January-February, 14s 9d; February-March, 14s 7½d. Spanish, prompt shipment, 23s 6d to 23s 9d; Italian ditto, 22s 3d. Broken kinds dull. Japanese peas, spot, 25s; January-February, 25s 1½d. Rangoon beans, hand picked, spot, 12s 9d; for shipment, 13s. Madagascar butter beans, spot, 40s to 42s, as to quality; December-January, 35s per cwt.

JUTE.—Market firmer, and sellers showed more reserve. Firsts, to Continent, November-December, sold, £38 10s; January-February, £38 10s; February-March, £38 5s to £38 15s. Lightnings, December-January, also January-February, £36 15s; and February-March, £37 per ton. Hessians and twills firm, with moderate inquiries.

HEMP.—Manila firmer, and holders reserved. J grade, December-February, sold, £56; K ditto, £55; L, £54; and M, £52 10s per ton. New Zealand remains quiet, nominal. African sisal, No. 1, Tanganyika, November-January, quoted £49; and No. 1 Kenya, ditto, £48 per ton.

SHELLAC dull. T.N., spot, quoted 31s 5s to 320s; March, 285s; and May, 280s cwt.

COPRA quiet, but fully steady. F.M.S., Straits to Rotterdam, December-January, also February-March, quoted £30 13s 9d; Dutch E.I., ditto, £30 8s 9d; Ceylon, December-January, £31 15s; South Sea Islands, £29 15s. Palm kernels, to Liverpool, January-March, quoted £23 ton.

RUBBER active, and again dearer. Plantation standard, crepe, a lso sheet, spot, to January-March, sold, 1s 7½d to 1s 7½d; April-June, 1s 7½d to 1s 7½d; July-September, 1s 6½d to 1s 7d. Fine hard Para, spot, 1s 7d; soft fine, 1s 5d. To New York, ribbed smoked sheet, December-January, also January-February, sold, 1s 7½d per lb, c.i.f. terms. London stock of plantation is returned at 29,681 tons, being a reduction of 1,665 tons on the week.

FLOUR firmer. London standard straight run quoted 53s; patents, 55s to 56s; town whites, 53s per sack delivered in London area. Imported quiet, Manitoba ranges from 50s to 53s, as to quality; Minneapolis, 50s to 52s; and Australian, 47s to 48s, all per 280 lbs ex-store.

BARLEY.—Firm but quiet. Californian quoted 69s to 71s; Chilian Chevalier, 84s to 87s; Polish ex-store, 60s to 68s per 448 lbs; No. 3 Canadian Western, ex-ship, 41s 3d; No. 4, ditto, 40s; landed, 42s; American malting (48 lbs) ex-ship, 39s 9d; landed, 41s 9d per 400 lbs. English ranges from 10s 9d and 20s per 112 lbs free on rail.

MAIZE again firmer. Plate, ex-ship, quoted 44s 6d; ditto, landed, 46s; and Odessa, in latter position, 46s per 480 lbs.

OATS firm for landed parcels. Plate, ex ship, quoted 29s; ditto, landed, 30s 6d; No. 2 Canadian Western, ex ship, 34s 6d; ditto, landed, 35s 9d; American white clipped (38 lbs), landed, at 31s; all per 320 lbs. English, 9s to 10s 4d per 112 lbs, free on rail.

MILLERS' OFFALS quiet but firm. Broad bran quoted 9s; middlings, 9s 9d; fine ditto, 11s 9d, bags included, ex mill; powdered oat husks, 9s 9d; feed oatmeal, 10s 9d; ground oats, 14s 3d; all per cwt, free on rail.

OATMEAL quiet at the recent advance. London-made, flaked, 2cs 6d; rolled oats, 20s; medium, also fine cut, 20s; coarse and medium pinhead, 20s; ordinary Scottish oatmeal, 20s 6d; American and Canadian rolled oats, 21s 6d per cwt.

CANNED GOODS.—Market remains without new feature, but the general tone is firm, and prices display a hardening tendency regarding fruits. Quotations:—Sardines, Portuguese, ½ flats, 4s to 4s 3d; clubs, 4s 6d to 5s; 12 oz, 6s 6d to 7s 6d; 18 oz, 11s to 12s 6d per dozen tins. Salmon, 1 lb flat reds, labelled, 55s to 58s; ditto, tail, 47s 6d to 48s 6d; 1 lb tall, pink, 25s to 26s; case of 96 ½ lbs, 29s to 30s per case. Canned fruits firm, with only moderate supplies available. Singapore pines, 48 1½s, 5s 6d to 5s 9d; cubes, 2½s, 9s 6d to 10s; slices, 48 1½s, 5s to 5s 3d; Californian apricots, 2½s, 8s to 10s 6d; ditto, 1½s, 5s 3d to 5s 6d; pears, 2½s, 14s 6d to 16s 6d; peaches, 2½s, 9s 6d to 11s 6d; ditto, 1½s, 6s 3d; fruit salad, 1½s, 10s 6d; 2½s, 20s; loganberries, 10s to 11s 6d per dozen tins. Meats: Firm, and finest brands of corned beef 7s 6d to 10s dearer, owing to sustained Continental inquiries. Danish lunch tongues quiet for small sizes, but 6 lb tins sell readily. Condensed milk: Full cream, sweetened, in fair demand at steady prices, but machine-skimmed again easier, owing to lack of support. Honey: New Zealand continues in good demand at full rates, and sellers reserved.

FRUIT (Dried).—General trade remained very quiet, as usual at this period of the year, and prices for the most part without material alteration. Quotations:—Currants: Pyrgos, ½ cases, 42s; ½ bags, 40s 6d; Amalia, ½ cases, 43s to 44s; Patras, ditto, 46s to 48s; Gulph, 50s to 51s; finest, 53s; Vostizza, 58s to 62s. Sultanias quiet. New Smyrna, good quality, 54s; finer, 65s to 70s; Carrabourra, 83s to 85s. Figs quietly steady. Naturals, in bags, 34s to 39s; layers, large boxes, 55s to 67s 6d. Raisins: Valencia in small supply. Australian, ½ cases, 38s to 40s. Dates in good demand at full rates. Hallowee, spot, 20s; Khadowie, 17s 6d; and Sair, 14s 9d to 15s. Evaporated fruits firm. Californian apricots, standards, old crop, 78s to 80s; choice, 90s; new, extra choice, 110s to 112s 6d; fancy, 125s. Peaches, old, choice, 48s; new extra choice, 57s; fancy, 65s. Plums, Oregon size, 30/40, 66s; 40/50, 54s; Californian, 70/80, 44s per cwt.

MISCELLANEOUS.—Coconuts quoted 25s per 100. Coir yarn: Ceylon, £23 to £39; Cochlin, £21 10s to £48. Ceylon bristle, £21 to £28 10s; cinnamon leaf oil, 5d; Citronella: Ceylon, 3s 1d; Java, 6s.

OILSEEDS.—Linseed firm, and in fair demand. Calcutta, afloat, £24; December-January, £24 2s 6d paid; April-May, £24 1s 3d. Plate, afloat, £22 10s; December-January, £22 12s 6d; January-February, sold, £22 12s 6d. Rapeseed dull. Toria, new, December-January, £21 5s; and real bold Ferozepore, November-December, £21 15s. Cottonseed steady. Egyptian, black, December-January, £13 13s 9d. Sakellaridis, December-January, £13 2s 6d. Bombay, December-January, £10 17s 6d. Gingly seed quiet. Chinese, December-January, £28. Groundnuts quiet. Coromandel, machine-dried, December-January, £24 12s 6d; Chinese decorticated, f.a.q., December-January, £23 15s; East African, November-December, £26 15s. Soya beans steady. Manchurian, November-December, £12 18s 9d; December-January, £12 17s 6d. Castor seed weak. Bombay, December-January, £24 per ton.

OILS.—Linseed steady. Spot, net, naked, 48s 6d; January, 47s 6d; January-April, 48s; May-August, 48s 3d. Rape nominal.

Crude, spot, 51s 6d; refined, 54s 6d. Castor-oil quiet. First pressure, spot, quoted 70s; second pressure, 66s to 68s; and pharmaceutical, 75s per cwt; Hull, with London, 2s per cwt extra.

Cotton firmer. Crude Egyptian, spot, 47s 3d; Bombay, 45s; common edible, 52s; deodorised, 54s. Chinawood dull. Hankow, spot (barrels), 79s 6d; December-January, 77s. Cocoa-nut firm. Ceylon, spot, 48s 6d; December-January, 48s 3d; Cochlin, ditto, nominally 62s 6d. Soya steady. Oriental, barrels, December-January, 45s 6d; bulk, 42s 9d. Cod steady. English, spot, 36s to 37s. Groundnuts quiet. English, crushed, naked, spot, 56s; deodorised, barrels, 66s. Turpentine irregular. American spot, 60s 3d; January-April, 61s 3d. Rosin firm. American, grade B, 16s 6d; G, 17s; W.G., 19s 9d; W.W., 21s 6d per cwt. French W.W., 20s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

THE STATE OF TRADE AT HOME AND ABROAD *Continued from page 1.*

industries call attention to some of the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The dullness of the iron and steel trades is partly attributable to holidays and stocktaking, July and August being the slackest months of the year in the best of times. In addition, the fall in fuel prices, especially coke, while bound to be beneficial in the long run, is at the moment causing buyers to hold off in expectation of a further scaling-down of prices. Foreign competition is also an important factor at the moment, although some observers believe that the pace is too hot to last, and any improvement in the Continental metallurgical position would immediately remove a good deal of pressure from the British market. The returns of production in June showed, as was anticipated, a considerable falling-off, the pig-iron output being 607,800 tons, as compared with 650,900 tons in May, and that of steel ingots and castings 651,500 tons, against 809,700 tons in the preceding month. The June figures are considerably below those of the same month last year. In 1923, however, a marked decline was recorded in July and August, so that last month's steel production was, in point of fact, greater than in either of those "holiday" months last year. A similar slackening of activity seems likely in the present instance. Pig-iron output has certainly been in excess of demand for the last week or two. Forge iron, for instance, is described as "practically a drug on the market," and the accumulation of stocks is reported from more than one centre. In other directions, such as hematite, reduced consumption corresponds more closely with existing requirements. Trade in special branches is more satisfactory, orders for tin plates, for instance, extending over the summer months, and in some cases to the end of the year. Galvanised sheets are greatly in demand, especially for foreign account.

Coal.—The coal trade remains quiet, and short-time working is being resorted to in numerous pits. Gas and house coals are passing through the quietest period of the year, domestic needs having been still further affected by the recent spell of hot weather, though a slight improvement next month is not unlikely. Industrial demand is small, supplies of coke, in particular, being more than ample for current requirements. The export trade remains slack, coal from the Ruhr being in keen competition with the British product. Best steam coal continues to find a market fairly readily, but the inferior varieties are not in great demand. Competition between various home producing areas is much in evidence, and the trend of prices is downwards.

Engineering.—The engineering trades, as a whole, have maintained or improved their position during the past month. Inquiries for ship construction are less in evidence after the recent "spurt," but the undertone is not unsatisfactory. Contracts for public works are still being placed by local authorities, of considerable magnitude in some cases. A large engineering firm has secured a further locomotive contract from India, and certain harbour and dock orders from other parts of the Empire. Overseas demand is in evidence also, in the machine-tool trade. Textile-machinery construction shows more activity, a number of Lancashire mills being engaged in replacing worn and out-of-date equipment. The electrical manufacturing industry is as busy as ever. Midland motor-car firms continue to work on active lines, though some falling-off in the next month or two, from seasonal causes, would not be unexpected. The motor-cycle industry reports a maintenance of prosperous conditions, orders, both home and foreign, tending to increase rather than to decline. **Hardware and Cutlery.**—In plate and cutlery generally, business has been of larger dimensions lately, increased demand being recorded in both cheaper and high-grade lines. Conditions in the hardware trade are moderately satisfactory.

Cotton.—The experience of cotton spinners and manufacturers in Lancashire, writes our Manchester correspondent, has improved during the past month, and the general prospects can be described as brighter. There has been a tendency for inquiry to broaden, and although a large part of the demand has been at unworkable rates, the sales in many quarters have been of a more encouraging character. As is usual at this time of the year news relating to the progress of the crop in the United States has been followed very closely. Some operators are beginning to fear that the output next season will not be so large as at one time expected. The outlook remains very uncertain, and the crop may be anything from 12,000,000 to 14,000,000 bales. Spinners of American yarns continue to struggle against adverse conditions. More orders have recently been booked in medium and fine counts, but coarse numbers still lag behind. Producers of Egyptian yarns

have maintained their position, and a steady business has been done from week to week. In export yarns rather more inquiry has come through for India, and increased activity has also shown itself in coarse counts for Holland, and in extra hard descriptions for the Near East. Manufacturers of cloth have reported a large and increasing inquiry. A feature of interest has been the freer operations in standard grey goods for India. Shippers to China have not given any general support, most of the demand having run on white shirtings. There are now indications of rather more activity for Egypt and the Near Eastern outlets, and a fair amount of buying is taking place for Singapore and the Straits Settlements. Continental demand remains quieter, but something continues to be done in fancies for the United States. There are reports of better clearances in the home trade section, and some buyers are rather more prepared to place orders with makers. Compared with a month ago, a few more looms are working in certain Lancashire towns, and increased employment is available for the operatives.

Woollen and Worsted Trades.—June was a period of quiet business, though the tone at London wool sales, and at local auctions of this year's clip, has been better than was expected. Manufacturers maintain their unwillingness to grant reductions of price, and towards the end of June the scarcity of new business at present rates caused some spinning firms to reduce their working hours. The woollen section remains more prosperous than the worsted, recent events having accentuated this difference in respective fortune. Export business is satisfactory. Some light on wage conditions, in relation to the unrest at present existing among workers in the industry, is furnished by the figures of the Wool Textile Delegation of the Federation of British Industries. The average weekly wage of some 50,000 operatives in different branches of the industry fell sharply during the latter part of 1923, but recovered appreciably in the first quarter of the present year. In this respect, however, the worsted has lagged behind the woollen branch, and the belief that the industry could bear a further increase was probably at the bottom of the operatives' refusal to accept a twelve-months' renewal of the existing wages agreement.

Boots and Shoes.—Demand is well maintained, and some factories have lately adopted overtime working. Orders, as a rule, run well into August, and seasonal influences, making for a slackening of production, have not up to the present been of very much importance.

Chemicals.—Though markets are usually quiet during summer months, demand has so far been steady, and is, on balance, rather stronger than a month ago. Slightly improved prospects in the cotton industry are no doubt reflected in this state of affairs.

Shipping.—Prevailing tendencies in the freight markets are still unfavourable. The *Economist's* Index Number fell to 108.6 in June, against 114.3 in May and a maximum of 123.8 attained in February last (1913 = 100). The index has now fallen below the 1923 average for the first time during the present year. For this a falling-away in demand for grain tonnage from the Plate is chiefly responsible, together with a less extensive decline in Canadian and United States requirements. The supply of available tonnage seems lately to have increased to an extent which upset shipowners' calculations, but unless European grain purchases prove to be on a larger scale than at present anticipated, the force of events will itself bring about an amelioration by compelling tramp owners to lay up their oldest and least profitable vessels.

UNITED STATES OF AMERICA.

The decline in business was more pronounced last month, when seasonal factors tended to accentuate tendencies already at work. As wage reductions and a certain small amount of unemployment are steadily reducing the purchasing power of the wage-earning classes retail trade is falling off, though up to the end of June it was little, if anything, below the level of June, 1923. Industry, as a whole, is certainly below that level. Apparently, demand had been less active some time before production actually began to slacken, and accumulated stocks of goods were more considerable than was commonly supposed. In April, when rescission was just beginning to become general, the Department of Commerce found that an index of stocks of 45 commodities stood at 136, as compared with 117 in April, 1923, and 100 in 1919. The iron and steel trades report a slight quickening of confidence, but May's sharp reduction was followed by a further decline in pig-iron output during June, and the corner seems hardly to have been turned as yet. The bituminous coal, and the textile industries, are also closely affected by prevailing tendencies. Trade slackness, the inflow of gold, and increasing bank reserves, have combined to make money very cheap, call money on the New York Exchange being as low as 2 per cent., with outside loans at 1½ per cent. The latest cotton forecast is less favourable than had been hoped for, and agricultural feeling

(Continued on page 8.)

THE FUTURE OF THE WORLD'S WOOL SUPPLIES.

(BY A CORRESPONDENT.)

THERE is a curious anomaly as regards wool, since, while the population of the world during the past generation has increased by several hundred millions, the production of wool has decreased by approximately 600,000,000 lbs. With practically the whole world demanding wool in continually increasing quantities, there is evidence that prices will continue to rise above their present levels, high as they may appear to be compared with pre-war prices. In all countries the use of wool is becoming greater every year, while production is moving in exactly the opposite direction. A brief glance at past consumption, present, and future prospects of requirements, and also of sources of supply, becomes therefore of considerable interest and value, not only to users of the raw material and those directly or indirectly interested in the woollen industry, but also to the public at large.

Australia has long been looked upon as the country producing the finest wools, and, until recent years, as the greatest potential source of supplies. Notwithstanding her millions of acres suitable for wool production, which at present are lying idle, and which can be obtained on almost ridiculously easy terms, either by purchase or lease, her production has of late years fallen away considerably, albeit the last three years have shown somewhat better returns than those immediately preceding. Yet the fact remains that for years production has been going steadily down, although Australia is probably the finest sheep-raising country in the world. One reason for the falling-off in production is undoubtedly the serious disorganisation produced by the war. The various State Government departments, too, in their migration proposals, have directed their propaganda chiefly towards cereal raising and fruit-growing, and have failed to lay sufficient stress upon the vast and far greater opportunities afforded by wool production. Again, the rush of native-born inhabitants from the country districts to the towns and cities has also had its effect in retarding the wool industry. Yet more money has been made, and is even now being made, from wool than from all the other industries combined, and the continued upward tendency of prices should go far towards resuscitating it. Moreover, it must be borne in mind that, although at times droughts have played havoc with the flocks, each year sees irrigation playing a more and more prominent part, and in many sections of the country the risk of failure through such a cause, if not entirely eliminated, has been reduced to a minimum. The fact that sheep require but little attention and thrive in the open all the year round in Australia renders the country ideal for wool-growing, while enormous areas of natural grasses in normal years satisfactorily solve the food problem. The life, it is true, may be slightly monotonous, but the profits which accrue are out of all proportion to the slight discomfort which may be experienced.

Just how Australian sheep-farmers view the situation may be gleaned from the fact that the representatives of the Pastoralists' Association towards the end of May presented a statement to the Prime Minister, Mr Bruce, demanding that immediate action is necessary to encourage and stabilise the wool industry, and suggesting the lines on which this can best be accomplished. The statement was prepared by the Woolgrowers' Council, representing 90 per cent. of the sheep-growers of the Commonwealth. It set out that, whereas the number of sheep increased by 86 millions from the year 1860 to 1891 (31 years), a decrease was shown over the period from 1891 to 1923 (32 years) of 27,617,897.

The decrease was most marked in the Western Division of New South Wales, the numbers falling from 15,379,178 to 4,627,808. The numbers for the current year are not yet available, but it is fairly certain that they will show yet available, but it is fairly certain that they will show a still further considerable falling away. The reasons set out for the decreases are drought periods, adverse legis-

lation, and pests. As regards legislation, it is stated the Federal Land Tax Assessments Act has had a most embarrassing and restricting effect on the industry. Those who promulgated the Federal land tax maintained that, if large estates are to be indiscriminately broken up, that will destroy some of the best stud flocks. It is evident, however, that it was brought in as a taxation measure as well. The incidence of both Federal and State income-taxes in the matter of "walk-in-walk-out" sales prevented the free exchange of pastoral and farming properties, a result which is most undesirable.

To-day it is estimated that there are some 100,000,000 less sheep in the world than there were in 1900, with approximately 150,000,000 to 200,000,000 more population to clothe and feed. The number of Australian sheep in 1921—the last year for which Government statistics are available—was approximately 82½ millions, an increase over the previous two years, but still far below the figures of 1910, when they totalled close upon 98,000,000; the peak being reached in 1891, when 106½ millions were shown in the official returns published.

The world's annual merino wool clip has declined by no less than 175,000,000 lbs. In 1921-2 Australian wool exports amounted to about 820 million lbs, the average value of the past five years being approximately £38 millions, or 70 per cent. of all her exports. While the number of lambs dropped every year in all sheep-breeding countries often temporarily doubles the flocks, it must be remembered that year by year the increasing population of the world requires more and more food, and the number of sheep killed for this purpose prevents the accumulation necessary to raise the flocks to such an extent as to render any fall in wool prices within the bounds of possibility. With the spread of civilisation naturally follows a similar spread of the use of civilised clothing, and with Orientals now consuming far more wool than ever before, and increasing their demands annually, it is easy to foresee that if Europe and America are to keep up their present standards of clothing the shortage must either be overcome, prices must be still further raised, or some suitable substitute found.

Roughly speaking, in 1900 the United States, with a population of approximately 75,000,000, possessed about 61 million sheep; to-day, with that population increased by about 50 per cent., she runs only about half that number of sheep from which wool suitable for clothing can be procured. Going back about 60 years, statistics show that British wool requirements were about 2 lbs per head of the population, and, notwithstanding the steady annual increase, as denoted by the Census, the requirements of wool per head have just about doubled. In the United States the increase has been from about 3 lbs to 6 lbs per head of the population.

In both the great English-speaking countries the tendency is ever progressive, and the demands for both wool and cotton are always on the increase. Then, again, at no distant date, Russia's millions will be clamouring with very heavy demands. How to keep pace with the world's continually increasing requirements affords a problem requiring very serious consideration. There is, of course, a limit to all things, and so there must be to the price of wool.

The successful development of the cotton industry in Australia and certain other parts of the British Empire may be a partial solution to the problem; but it seems, if not absolutely impossible, certainly highly improbable that the increase in the number of the world's sheep can ever more than keep pace with the continually growing populations of the United Kingdom and the United States. And there are all the other countries of the world to be supplied!

Undoubtedly prices will be kept in check to a certain extent by the increasing manufacture of cloth from wood pulp, paper, and fibres, but the outlook for wool is one of which pastoralists could well take greater advantage, and, while materially benefiting themselves, at the same time become the benefactors of the world at large.

THE STATE OF TRADE AT HOME AND ABROAD. *Continued from page 2.*

generally reflects the material and psychological results of a cold and stormy spring. The tendency among industrialists and dealers to "fly to cover" seems, however, to have been overdone, and at least one well-known economic publicist has ventured definitely to predict a renewed forward movement in the autumn.

BRITISH EMPIRE.

Canadian crop prospects are less favourable than at this time last year, but the last week or two has yielded some improvement. Trade generally was rather better in the second half of June, and unemployment tended, consequently, to decline. In Australia the season has opened favourably for the primary producer, but business conditions are not so easy as many would have liked, difficulty being experienced in financing new works. In this respect the official policy of maintaining the note issue at practically a fixed amount has been criticised, though it may be for the country's benefit in the long run. Monetary conditions are much easier in India, where Bank rate has fallen to 5 per cent., and quietness is a feature common to most markets. The monsoon has been fairly satisfactory. Though its penetration up-country has been slow, the jute districts are receiving all the rain they require, and reaping has commenced. South Africa is picking up slightly after the disturbing effect of the election result, but the occurrence of drought conditions in some areas, especially Natal, is a discouraging factor.

SOUTH AMERICA.

The Argentine trade situation remains steady on the whole. Exports of wheat and maize continue on an active scale, but the demand for tonnage has lately fallen off to some extent. More favourable conditions of working in the Chilean nitrate fields are indicated by a production of 22,224,000 metric quintals in the 12 months ended June 30th, against 14,996,000 and 8,910,000 in the two preceding years respectively. A revolutionary outbreak in Brazil has not yet affected trade to any great degree, though Government bonds have lately been weak. Coffee and cotton are firm, and sugar steady. Peruvian conditions show little change.

EUROPE.

French attention is concentrated on the London Conference, political uncertainty reacting on the commercial situation and causing a certain amount of "holding-off." Ruhr coal deliveries are coming through very well, and French metallurgical works are well occupied, though quieter conditions have obtained in the last few days. Among textiles, fair activity is reported in silk, but the woollen industry is not so busy as a month ago. Belgian trade is almost uniformly dull, a further reduction in output being contemplated, even in the relatively well-employed glass industry. Credit stringency is as acute as ever in Germany. Retailers are being compelled to dispose of stocks at reduced prices, and industrial output is being curtailed. Dutch trade is, if anything, slightly better, shipbuilding being one of the industries reporting an increased volume of orders. Monetary conditions remain very easy. Among Scandinavian countries, Norway has not yet recovered from the effects of recent labour troubles, Swedish trade shows seasonal slackness, though the pulp-market is firm, and something like a financial crisis has occurred in Denmark. No perceptible change has taken place in Finnish timber markets, which remain quiet. June crops were reported slightly above average. Austria continues to feel the effects of the credit crisis, though industrial conditions are slowly brightening. The numbers of unemployed fell from 82,551 in May to 68,475 in June. Hungarian agricultural prospects are good. The Italian political crisis did not affect trade to any great extent, and most industries still report a satisfactory amount of activity.

FAR EAST.

Mid-June intelligence from China indicates a certain recovery in demand after the holidays from nearly all parts except the North, where unfavourable weather has upset the crop outlook. The extent to which trade is dependent on the action of the military is illustrated by the revival which immediately succeeded the raising of the import tax on goods entering Szechuan province. The Japanese money market is easy, and trade shows little life. Reconstruction, however, continues to make satisfactory progress.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, AUGUST 23, 1924.

No. 15.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE success of the London Conference in agreeing upon plans for putting the Dawes Report into effect has not yet had time to influence the actual course of trade, and in so far as negotiations can be said to have affected the situation at all in July and early August, it has been by prolonging the state of uncertainty as to the future of Europe. Trade during July showed no marked change from that of previous months. The volume of output, except in the coal and iron trades, where it receded, remained good, and was reflected in satisfactory overseas trade returns. It is true that the comparison of imports and exports with the previous month and with the figures for the corresponding month a year ago makes the situation appear more favourable than is actually the case, for a year ago a prolonged dock strike occurred, while June of 1924 was a short month, and contained the Whitsun holidays. Nevertheless, the trade figures for the first seven months are well above those of 1923, and July is one of the best months of this year to date. On the other hand, there was a small increase in unemployment during the month, and detailed reports from industrial centres show the same sort of summer stagnation as was expressed at this time last year. It is on the order books that the London Conference had its chief effect, for clearly if the Conference had broken down there would almost inevitably have been a serious set-back to trade which would have followed. As the Conference has now resulted in an agreement based on compromise, trade is still a little uncertain as to what is going to happen to prices and to business generally. But as fear of a new collapse has been removed and any economic effects that the Dawes scheme may have upon trade will not become important for some time to come, the indications are that a new revival will set in after the holiday months. That the internal business of the country is large is shown by the rising railway traffic receipts and the state of the currency note issue, which has latterly risen to high figures, and is at the moment close to the legal maximum. The price of industrial securities is

rising, as are also average wages and bank clearings both in London and the provinces.

At this time of the year crop prospects are one of the leading influences upon trade psychology. In several European countries prospects have slightly improved, though not sufficiently to bring output up to normal; on the other hand, it becomes increasingly doubtful whether

Russia will have any grain to export this year. Canadian reports are not quite so pessimistic as a month ago, but are still bad. The conditions undoubtedly indicate high wheat prices during the coming cereal year. On balance, this is a disadvantage to this country, for the increased cost of living, with its effect on those wages which rise and fall automatically, and the fact that there will be less shipping employed in moving wheat, probably outweigh the benefit to arable farmers. The cotton crop, on the other hand, is likely to be better than last year's, and cotton prices may be lower than in the past year—a fact which should substantially increase Lancashire's trade turnover.

America has not yet reached the end of the process of readjustment in many trades, but the consensus of opinion inclines to the view that business expansion during the autumn is by no means an impossible contingency. Prospects of a short crop, even under a higher price régime, have thrown something of a cloud over the Canadian trade outlook. Elsewhere in the Empire business continues to show steady progress. India has passed through a few anxious days owing to the delayed arrival of the monsoon in some parts, but reports are now almost everywhere satisfactory. Argentina is experiencing similar anxiety, owing to unseasonable weather, which threatens growing crops. In Europe, as in England, the prolonged London Conference has not been without its effect on trade generally. French production appears to have slowed down slightly, and in Germany the currency, and credit famine, though less acute, still acts as a grave handicap to business of every kind. With the advent

MONTHLY BULLETIN OF STATISTICS
—ISSUED by the LEAGUE OF NATIONS—

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE	DANZIG	JAPAN	PORTUGAL
AUSTRALIA	DENMARK	JUGO-SLAVIA	ROUMANIA
AUSTRIA	DUTCH EAST INDIES	LATVIA	RUSSIA
BELGIUM	EGYPT	LITHUANIA	SIAM
BOLIVIA	EQUADOR	LUXEMBURG	SOUTH AFRICA
BULGARIA	ESTHONIA	NETHERLANDS	SPAIN
BRAZIL	FINLAND	NEW ZEALAND	SWEDEN
CANADA	FRANCE	NORWAY	SWITZERLAND
CHILI	GERMANY	PALESTINE	UNITED KINGDOM
CHINA	GREECE	PARAGUAY	UNITED STATES
COLOMBIA	HUNGARY	PERU	URUGUAY

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 9.

of stabilised monetary conditions, Poland is experiencing much the same difficulties. Reports from the Far East indicate no appreciable change in general conditions.

The following notes on conditions in various trades and countries call attention to some of the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—Conditions in the iron and steel trades are still unsatisfactory, though the situation in the last week or two has been, if anything, rather better than was expected. Though 11 fewer furnaces were in blast at the end of July than a month earlier, the low prices for pig-iron at present prevailing have induced a certain amount of buying. Whether this is merely a "flash in the pan" or the prelude to all-round improvement in the autumn, it is impossible to say. The movement is certainly not a general one, as Middlesbrough and Glasgow both report considerable difficulty in obtaining new orders as old contracts run out. The railways appear to be making an early start with their programme of renewals and reconstruction, which, according to the Chancellor of the Exchequer, is to run to a total of £55,000,000, and possibly this has something to do with the slightly more optimistic tone of recent reports. In the heavy steel trades business has been slow at picking up since the early August holidays, but the undertone of markets is at least as good as a month ago. In this connection the re-opening of the Ebbw Vale steel works, after a month's closure on account of trade depression, is a favourable sign.

Production figures for the month of July came out higher than those of June, but the average daily output, in point of fact, showed a decline. Foreign competition has become less formidable as a result of the appreciation in the franc's exchange value, though in semi-products Belgian influence is strong enough to keep prices at a more or less unprofitable level from the British manufacturer's point of view. Business in galvanised sheets is steady, while the recent rise in tin prices, together with the fall in output resulting from holidays in South Wales, has kept the tinplate market as firm as could be wished for, though dealings are not on a large scale.

Coal.—The coal trade as a whole remains dull. Industrial demand is confined within narrow limits, and the export side shows no definite signs of revival. On the other hand, house coals are slightly more in request, though this feature of the trade has been far too ill-marked as yet to merit the term "recovery." Best steam coals are steadier, and a fair amount of business has recently been transacted at Cardiff. The North-East coast ports have obtained certain foreign contracts in the last week or two, and, speaking generally, the trade is disposed to view the outlook for the coming months with more hopefulness than was the case as recently as the end of July.

Engineering.—Throughout the semi-depression under which the metal industries have been working for the last quarter, the more finished branches have tended to be less affected by unsettling influences than the earlier processes. An increased volume of work in the shipyards, particularly on the Clyde and at Barrow, has brought about a long-overdue improvement in employment conditions, but much more rapid progress will need to be made before the prospect for shipbuilding can be described as satisfactory. The main railway companies are placing various equipment orders, those of the London, Midland and Scottish being the most prominent, but the amounts involved have not so far been of very considerable dimensions. Numerous road construction schemes have lately been started, the most considerable being in Scotland and the West Riding of Yorkshire. The machine-tool trade is only moderately active, and the textile machinery industry quiet. Electrical equipment manufacturers continue to be very favourably situated as regards home and, to a less extent, export business. While the burst of activity of the last six months in motor-car construction may conceivably have passed its highest point, the volume of production remains considerable, and is attended by a steady decline in unemployment in the industry, and a fourfold increase in exports of cars in the first seven months of 1924, as compared with the corresponding period of 1923.

Hardware and Cutlery.—Seasonal slackness is usually a marked feature of August business, and the present year has been no exception. Though a moderate volume of work is in progress on contracts placed a few weeks ago, new orders are not coming in very briskly. Cutlery firms are in a rather more favourable position. The market for stainless cutlery continues to expand.

Cotton.—Cotton spinners, manufacturers, and merchants, states our Manchester correspondent, continue more optimistic. This attitude is justified by the continuance of a large inquiry, with a tendency for business to broaden. Since a month ago there has been a marked fall in raw cotton prices, but rates for yarn and cloth have not given way to the same extent.

Many firms, therefore, have been able to improve their position. From week to week manufacturers of piece goods have experienced an extensive inquiry. Actual buying has ebbed and flowed somewhat, but demand has covered a wide range of fabrics, and has come from numerous outlets abroad. Spinners of American yarns have improved their position somewhat. Demand has broadened, and stocks at the mills have been reduced. It has been decided, however, to continue the short-time scheme until the end of the year. If a broad view of the situation is taken, there is ground for believing that Lancashire is about to experience more favourable industrial conditions, and it is anticipated that in a couple of months much more machinery will be running.

Woollen and Worsted Trades.—After much hesitation early in the month, the July wool sales closed in buoyant fashion, with an appreciable recovery in prices, merinos, neglected of late, being in much better demand. Though manufacturers have long been complaining of their inability to pass on price increases in their raw material, the latest development is welcomed on the whole because it offers a firmer basis of values, recent fluctuations having been detrimental to business. The volume of production has lately tended to decline, and this feature was accentuated in the West Riding, and to a less extent in Scotland, during July. Short time is reported in the combing section, but spinners are better off, though the worsted side is much less well employed than the woollen.

Linen.—The Irish Linen Society reports that the warmer weather has improved the appearance of the new Irish crop, but prices remain very firm. A satisfactory amount of business has been put through in yarns, but the continued advance in yarn prices is rendering business difficult.

Boots and Shoes.—The tone of the market is decidedly hopeful. Summer trade was good up to the August holidays, and a fair number of orders are still in hand. Demands for the autumn trade have come in satisfactorily up to the present.

Chemicals.—Trade is on a moderate scale, but remains steady on the whole, the heavier alkali products being in fair demand. Manufacturers regard the outlook for autumn business as not altogether unpromising, though no large accession of orders is expected.

Building Trades.—The national strike of building operatives, which began on July 7 and was extended by the subsequent lock-out declared by the employers, has adversely affected the situation in all districts. Employment had previously been good as regards skilled and slack as regards unskilled workers. When once work has been restarted, and the arrears of the past six weeks overtaken, the industry should find steady employment for some months to come.

Shipping.—Apart from a steady demand for tonnage from the River Plate, the freight markets were dull all round during August. The latest Lloyd's figures show that a beginning has been made with the task of reducing the world's "surplus" tonnage, but after all permissible deductions are made there remains about 2½ million tons of more or less efficient tonnage afloat to-day over and above the 1914 total. During each of the last three years a marked decline in "free" freights has been recorded in the summer months, as is shown by the course of the *Economist's* shipping freights index number:—

	1922.	1923.	1924.
April	129	115	117
May	125	115	114
June	117	107	109
July	115	103	104
August	113	100	..

A further decline in the present month would, therefore, not be altogether unexpected.

UNITED STATES OF AMERICA.

While many branches of industry are still reporting unsatisfactory conditions, the prevailing sentiment is rather more optimistic, and manufacturers are inclined to view autumnal prospects with more confidence. The value of industrial securities has lately been rising (though this may be in part the result of abundantly cheap money), the average level of wholesale prices is becoming more stabilised, and much is expected from the increased purchasing power of the farmer arising out of higher grain prices throughout the world. The decline of the last few months has been so rapid as to give colour to the view that the process of readjustment has been more or less completed by this time—an interpretation of the facts which is supported by the experience of the steel industry. Between December, 1923, and March, 1924, output increased by no less than 41 per cent., and during the next three months declined by 49 per cent. During July, however, consumption was approximately equal to production. Most of the large basic industries of the United States are capable of expanding or contracting their output with extreme rapidity, and in these circumstances some observers believe that fluctuations in trade may for some time occur at frequent intervals, and move within fairly wide limits, without indicating any fundamental weakness in the general situation.

(Continued on page 16.)

INTERNATIONAL TRADE SINCE THE WAR.

THE League of Nations has performed an appropriate service in collecting from its members details regarding their foreign trade statistics and the manner of their preparation, and embodying the results in a handy volume*, published at a modest figure. The earlier part of the work contains a summary of the balance of international payments in individual countries. The remainder is based on a study of the published import and export figures of 36 different States, and suggests a number of interesting conclusions.

The following table, compiled from information given in the Memorandum, shows the rate per cent. of exports to imports in some of the most important countries of the world during the pre-war year and each of the years since 1919:—

Countries.	1913.	1919.	1920.	1921.	1922.	1923.
United Kingdom	80.1	54.6	81.2	74.6	82.3	81.0
British Empire—						
Canada	71.8	116.3	97.6	100.8	117.8	113.7
South Africa	157.7	208.7	92.9	130.1	127.5	137.8
India	106.7	123.4	78.5	82.1	97.6	116.6
Australia	98.5	111.7	154.2	80.0	125.1	89.2
New Zealand	103.2	177.5	75.1	104.5	122.7	105.8
Continental Europe—						
France	77.8	33.1	55.0	88.3	89.2	93.4
Germany	91.0	31.1	70.1	84.8	64.0	100.0
Belgium	73.6	43.9	68.5	71.3	67.7	70.8
Poland	70.7	36.5	43.9	47.9	59.0	64.2
Italy	..	..	54.9	53.6	66.2	57.5
Austria	112.7	2.8	49.9	68.4	103.1	..
Roumania	..	..	..	..	..	..
United States of America	138.8	209.3	151.9	134.5	112.6	101.9
South America—						
Argentina	101.6	149.8	96.8	89.5	96.0	..
Brazil	104.5	166.1	85.9	96.9	141.0	144.6
Chile	124.2	82.9	177.7	120.8	139.8	..
Colombia	150.1	220.4	192.3	99.9	176.5	169.5
Peru	156.2	166.1	113.7	138.9	..	..
Mexico	..	..	..	..	..	..
Far East—						
China	68.0	85.5	68.5	68.7	67.6	..
Japan	90.2	83.8	70.8	71.1	86.5	72.7

Comparisons should not be pressed too closely, on account of the very different connotation attached to the terms "imports" and "exports" in different countries. For instance, whilst most countries, including the United Kingdom, value exports f.o.b. and imports c.i.f., all the British Dominions (except India), as well as the United States, use an f.o.b. valuation for both categories, Australia and New Zealand adding a fixed 10 per cent. to cover freight. Again, the method of valuation may differ from country to country, or for the same country at different periods, and in this connection the general tendency during the last decade to substitute "declared" for "official" valuations deserves notice. These considerations do not, however, prevent us from making a number of broad and general observations. The effect of the 1920 "slump" in almost every part of the world except Continental Europe was much more serious as regards export than import trade, the "visible balance" tending to become much more unfavourable than was the case during the "boom." Since then there has been a steady recovery in most cases, an exception being Japan, which had an unusually unfavourable balance last year owing to the earthquake. The export balance of the United States has declined steadily year by year since 1919. Both France and Germany, it may be noted, showed a higher proportion between imports and exports last year than in 1913.

Our next table shows how the volume of trade, expressed as a percentage of the 1913 total, has fluctuated year by year. While British imports have more or less regained their pre-war volume, exports are still little more than three-fourths of the 1913 figure, though the position is much better than in 1920, when the proportion was less than half. Among the countries of the Empire, Canada has made extraordinarily rapid progress as regards her export trade (though unfavourable crop conditions may bring about a check this year), with New Zealand a good second.

The United States shows a remarkable increase in imports, and a falling-off in exports. France is exporting much more than in 1913, but German trade has shrunk to about half its pre-war volume. Despite unfavourable political and economic conditions, both China and Japan carried on during 1922 a more extensive foreign trade than was the case ten years ago.

In a final table we show the respective shares of Great Britain and her most formidable competitors in the total import trade of various countries throughout the world during 1913 and 1922:—

(A blank denotes that the necessary statistics are not available; .. denotes that the proportion is less than 0.1 per cent.)

It is evident that although the real value of America's imports in 1922 was very little more than in 1913, that country obtained a much larger share of a reduced volume of world trade in the post-war year. To a less extent the same is true of Japan. The German position, on the other hand, had deteriorated. Our own position is more doubtful. Most European countries effected a greater portion of their purchases here in 1922 than in 1913. Our exports to Europe were in both years under one-third of our total exports. On the other hand, a large number of extra-European countries, including all the self-governing Dominions of the Empire, the United States, most South American countries (with the important exception of Brazil), and the Far East bought a smaller proportion of their imports from us in 1922.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 10.

THE BRITISH EMPIRE.

Canadian grain crops made a bad start this year, and weather conditions so far have provided few opportunities for recovery. From the latest official bulletin a decline in the exportable wheat surplus of anything up to 40 or 50 per cent. is not improbable, but much depends on the next week or two, and the unofficial reports during the last few days have been more hopeful. The lumber trade is quiet, but pulp and paper manufacturing remains active. Eastern factories report a decline in production, in sympathy with trade movements over the United States border. Fair quantities of rain have fallen in many parts of Australia, and the pastoral and cereal outlook is promising. Conditions in manufacturing industries are less satisfactory, and the campaign for a still higher tariff continues. In India the monsoon this year was late, but is now well established, and anxiety has been relieved in most parts of the country. Up-country grain markets are strong, and reports from the jute districts fairly favourable. Prospects for the tea crop remain good. South African progress is slow, though business on the whole continues on a larger scale than at this time last year.

SOUTH AMERICA.

Argentine crop prospects are less brilliant. The weather has lately been cold and dry, and some anxiety is felt as to its effect on the cereal yield. Chilean business is steady, sales of nitrate having been on an increased scale recently. Peruvian conditions are irregular, and exchange has weakened. Though the San Paulo revolt had no very marked effect on Brazilian trade, its suppression has been followed by increased activity in most markets, cotton, coffee, and rice quotations all showing an upward tendency. A forty-five day moratorium has been declared in the case of bills, one party to which is resident in the state of San Paulo.

EUROPE.

Though the acreage sown is less than last year's, French crops are reported as being in good condition and of high quality. Trade as a whole is proceeding on quiet lines. Similar conditions apply in Belgium, where the steel industry is finding German competition a troublesome factor. The glass industry is now working at about 75 per cent. of normal capacity. Dutch foreign trade figures show a marked recovery as compared with last year, and shipping returns at Rotterdam tell the same

story. Many branches of industry, however, still labour under difficult conditions, which are reflected in the recently-disclosed position of a prominent financial institution. H.M. Commercial Secretary at Berlin describes the present situation as exceedingly unfavourable for German commerce and industry. Capital and credit are everywhere scarce, orders are no longer coming in in sufficient quantity, only a few undertakings are fully employed, output restriction and the closing down of factories obtaining in almost every part of the country. Norway has not yet recovered from the effect of recent regrettable trade disputes. Swedish harvest prospects have greatly improved owing to a substantial rainfall. In Denmark the suspension of a well-known bank has caused a slump in financial business, although the agricultural outlook is fairly good. Finnish trade figures are encouraging, but the low prices prevailing for timber and its products will probably lead to an attempt at organised output restriction in the coming season. Russian crops are likely to fall behind last year's in quantity, and the continuance of grain exports will be a matter of difficulty. A slight revival of confidence is observable in Austria, and unemployment has reached its lowest level since the reconstruction period, internal demand showing a tendency to expand. Poland is now passing through the period of acute trading depression and scarcity of capital and credit which is the invariable accompaniment of more settled financial conditions after a period of prolonged inflation. Seasonal quietness is very noticeable as regards Spanish trade and industry, but Italy has been less affected, the textile industries generally being well occupied with orders in hand, though wool spinners are hampered by difficulty in obtaining sufficient supplies of raw material.

FAR EAST.

China seems as far off a general revival as ever, and although the market for cotton and woollen piece goods is not unsatisfactory at the moment, trade as a whole has tended to contract rather than expand since the beginning of the present year. Commercial circles are exercised as to the effects of the so-called "Luxury Tariff" introduced by the Japanese Government, contemplating a 100 per cent. import duty on many articles, ostensibly for the purpose of preventing luxurious habits, checking imports, and putting a stop to the reduction of Japanese specie balances abroad. The wide scope of the measure, however, has aroused much criticism in certain quarters, who declare that the measure is intended as a counter stroke to the United States ban on Japanese immigration.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, SEPTEMBER 27, 1924.

No. 16.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

At this time a year ago we were able to diagnose a tendency to increased confidence among merchants and manufacturers generally, although we found it necessary to qualify our general statement by saying that the ground for this slightly more optimistic sentiment might be nothing more substantial than a conviction that depression could not last for ever. While much the same

industries) to a seasonal decline which may quite conceivably be entirely offset during the next few months.

Other indications show that the volume of business (outside the coal and "heavy" metal industries) is appreciably larger than at this time a year ago, and is fairly well maintained, considering the time of year. The overseas trade returns are encouraging, the returns for eight months showing imports of raw materials for our staple industries, higher in nearly every case than last year, and a parallel increase in exports (again with the exception of coal, iron and steel). Bank deposits are tending to contract slightly, but advances are well maintained, and bank clearings remain at a considerably higher level than a year ago. Railway receipts during August were surprisingly good, and though the increase over July is chiefly to be ascribed to holiday passenger traffic, the tonnage of merchandise carried has also been well maintained.

Among individual industries the coal export trade is suffering rather from a failure of demand in many countries than from a recrudescence of foreign competition. The same remark applies to iron and steel. If anything, steel is feeling the change more acutely than pig-iron, the heavier branches and earlier processes of the industry being chiefly affected. In Lancashire the outlook is brighter, a good American crop holding out prospects of plentiful supplies of cotton during the coming season. The wool industry is, on the whole, rather better employed, although manufacturers are unable to pass on to customers the whole of recent increases in the price of raw material. The boot and shoe industry is an example of active production, and the building trades have settled down to work fairly satisfactorily after the strike. Shipping conditions have shown a welcome change for the better during the last three or four weeks.

Abroad, the rescission of activity in the United States has quite definitely come to an end. Reports from the British Empire are on the whole satisfactory. Canada's wheat

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

crop is likely to be well up to average, though much behind last year's record yield. In Europe few changes of note have taken place in the last few weeks; the German situation is if anything slightly easier, while in France, Holland, Belgium, and the Scandinavian countries business is characterised by consistency rather than brilliance.

The following notes on conditions in various trades and countries call attention to some of the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The outlook in the iron and steel trades, if very slightly better than a week or a fortnight ago, remains unpromising. Inquiry remains restricted, and new orders received are in too small volume to suggest any proximate return of confidence. The slackening of production during August was most marked in the steel trade, production falling, for the first time in twelve months, below the 1913 level. The decline from 689,300 tons in July to 527,500 tons in August indicates less active conditions than obtained twelve months ago, when, after a quiet spell in the summer months, something approaching a revival was experienced in September. The continuance of labour troubles at three large steel-producing works in the Sheffield district, with a capacity of about 20,000 tons per week, is likely to affect production for the current month. Pig-iron is marking time, and hoping for a reduction at the end of the month in coke prices, which will to some extent set off the concessions made in iron quotations recently. Buying is markedly from hand to mouth. The hematite trade has fallen away of recent weeks, the tendency towards accumulation of stock having led to the closing down of some furnaces. The earlier processes of steel manufacture, and the cheaper grades of the products seem to be feeling prevailing conditions more acutely than do the more finished and "tighter" branches, high-grade crucible steel makers, for instance, being fairly well booked in some cases. Foreign competition is not particularly severe at the moment, nor, on the other hand, is Continental demand for the British product likely to show marked signs of revival so long as the present discrepancy between British and foreign prices continues. Business in tinplates is beginning to show its usual autumnal expansion, though inquiry is not on a very large scale at the moment.

Coal.—Seasonal development in the home trade not having materialised to any great extent up to the present, attention is focussed mainly on the export trade, which continues to show a decline, the August total being some 413,000 tons below that of July, while the bunker trade also registered a decline. Short-time is fairly prevalent, various South Wales pits, for example, working only three or four days a week. Northumberland steam coal is, however, slightly firmer, and in Lancashire the outlook is a shade brighter, but elsewhere very little improvement is reported. Gas coals are dull, and stocks of coke are more than sufficient to cover present attenuated demand. Domestic requirements show a slight expansion with the approach of the colder season.

Engineering.—The August unemployment figures seem to point to a set-back of greater or less extent in some branches of engineering, particularly the motor industry, and while new business is certainly coming forward in some directions, its incidence is extremely irregular as between the different sections, and it appears to have little impetus. The larger concerns in the electrical industry are securing fairly substantial business, but the smaller concerns, which cater more for the requirements of ordinary domestic trade, are not so well off. Among the more favourably situated industries may be cited wagon-building, in which many Midland works have a fair volume of orders on hand, the machine-tool trade, in which autumn prospects are fairly hopeful, and the motor and cycle industries, which, in spite of the customary diminution in orders at the end of the summer (reflected in a rise of 4,000 in the unemployed total during August) are still very busily employed. The locomotive trade is irregular, some concerns being busy on foreign orders, while others remain slack. Textile machinery builders report but slight recrudescence of activity as yet. Shipbuilding is possibly a little brighter, but remains on the whole in a thoroughly depressed state.

Cotton.—Our Manchester correspondent writes:—The event of importance since a month ago has been the distinct fall in the price of raw cotton, the drop in American qualities being over 2½d per lb, and in Egyptian descriptions 1½d per lb. Spinners of yarn and manufacturers of cloth have not reduced their prices equivalent to the fall in the raw material, and in this way the position of producers has been improved. A considerable demand has been met with, but, as is usual in a falling market, much difficulty has been experienced in arranging transactions. There has been a tendency to increase estimates of the American cotton crop for this season, and many people believe that the final yield will be larger than the latest Government estimate. Some advices relating to the growth in Egypt have not been quite so satisfactory, there being an inclination to reduce forecasts of the output. Cloth manufacturers have reported a big inquiry. An encouraging business has been done for India, especially in grey staples, and Blackburn manu-

facturers have extended their engagements. Trade developments for China have been checked by the disturbances abroad. For Egypt, the Near East, and West Africa, operations have been more encouraging, and some improvement has shown itself in the turnover for South America. Fine fancy goods have again attracted considerable attention for the United States, and more orders have been booked for the Continent. The prices ruling in American yarns are more satisfactory than for a long time back. The mills, however, are still running only 20½ hours per week instead of the usual 48 hours. There is a probability of increased production at an early date. The prices now ruling would show a healthy margin of profit if the factories were running full time, but the shorter hours, of course, mean higher standing charges for the reduced output. In Egyptian yarns producers remain busy, but in the lower numbers a little ground has been lost. The undercurrent of demand in yarns suitable for shipment abroad is fairly encouraging. Now that raw material prices are on a much more reasonable level there is every probability of the recent trade improvement in Lancashire being maintained.

Woolen and Worsted Trades.—Though August was a slack month, the industry seems to have recovered some of the ground lost earlier in the summer, as a result of the partial recovery in Continental demand, which is not adequately reflected in the August trade returns. In the wool markets a considerable turnover has been recorded, chiefly on export account, merinos having improved their relative position. The demand for tops has been less marked, but business has been of fair dimensions, at satisfactory prices. Inquiries for yarn have increased, though buyers have been unwilling to shoulder the whole of the increase due to advanced raw material quotations. The home market for piece goods is irregular, and sensitive to very small price changes, each successive advance in the earlier stages of the industry tending to narrow still further the manufacturer's margin of profit. The outlook for the worsted trades is rather better than was the case a month earlier.

Boot and Shoe Trades.—The improvement noted in recent months is fully maintained, although summer trade has come to an end. Northampton bootmakers are reported to have sufficient orders to maintain full-time working to the end of the year, while Leicester manufacturers are also actively engaged on goods for autumn and winter wear.

Chemicals.—The chemical trades remain "quiet to steady." The output of sulphuric acid for the twelve months ended June 30th last, at 1,273,000 tons, shows an increase of 4 per cent. on the period 1922-3, but is 15 per cent. below pre-war. Less than two-thirds of the national plant capacity is in use at present.

Building Trades.—On the resumption of work in the last few days of August, employment was again good in most districts as regards skilled operatives, with the exception of painters, but generally slack as far as unskilled labour was concerned. A shortage of certain classes of craftsmen, especially bricklayers and plasterers, is reported from several centres.

Shipping.—The summer dullness of freight markets has given place to a fairly general improvement, most marked in the first place as regards the grain carrying trade from British North America, and, more recently, from the Northern United States ports. The dimensions of the latter have been larger than for some years past, and have to some extent taken the market by surprise. The autumn revival generally seems to have started earlier than it did a year ago, and, given a continuance of reasonably stable conditions in Europe, the prospects for the industry remain satisfactory for some months to come.

UNITED STATES OF AMERICA.

Business conditions showed more widespread improvement during August, and the lowest point of the current cycle will, it is expected, prove to have been recorded by most industries in late June, or the first part of July. The flow of new orders for the United States Steel Corporation during the first three weeks of August was 10 per cent. greater than in July. How much ground has yet to be recovered is indicated by the fact that the July steel output of the country as a whole was only 1,785,000 tons, against 3,678,000 tons in July, 1923, the furnaces in blast on August 1st numbering only 144, as compared with 298 a year earlier. The textile industries remain slack, but stocks are gradually decreasing. In the cotton manufacturing districts, both in New England and the South, less short time is reported. Production in the automobile industry shows signs of fresh expansion. Throughout the period of trade recession building construction has remained remarkably active, and is still higher than at this time last year. As the harvesting has progressed, and the preparations for financing crop movements attained more considerable proportions, the money market has become firmer, with a slight upward movement in rates. Cotton crop reports have proved much more favourable than had been expected, and although this development has proved a check on high prices, which is paralleled in the experience of most of the grain States, both West and South are in a compara-

(Continued on page 23.)

THE BALANCE OF PAYMENTS—AT HOME AND ABROAD.

THE *Economist* has, in the past, from time to time made more or less extended inquiry into the various items constituting the true national balance-sheet resulting from our overseas trade and financial operations in any particular year. As our readers will doubtless be aware, such a compilation takes into account not merely the values of "visible" imports and exports of merchandise, bullion, and specie, but, in addition, what are usually described as "invisible" items, such as the earnings of Great Britain's mercantile marine, interest payable by foreign nationals on amounts borrowed in this country, exports of British capital, commissions earned by British bankers and insurance companies for services rendered to foreigners, &c. Of late years questions arising out of the balance of international payments have aroused an increasing interest in many overseas countries. The Third Assembly of the League of Nations some time ago passed a resolution drawing attention to the importance of a knowledge of the foreign trade balance and the balance of payments of individual foreign States as an integral part of the study of currency questions, and expressed a hope that inquiry into these subjects would be actively pressed forward. The first-fruits of this resolution are embodied in a memorandum on the subject, recently published by the League*, which give a large amount of information, some of which is new, and the remainder brought together for the first time in its present form. In our *Monthly Supplement* for August last, we examined certain matters regarding the foreign trade balance of various countries. In the columns which follow an attempt has been made to supplement this information by a brief summary of the balance of international payments in twelve different countries, regarding which the League was able to obtain particulars, with a few notes in explanation of the individual items:—

UNITED KINGDOM.

The League has used the estimates made at various times by the Board of Trade, and which are shown below. Similar figures for 1923, as quoted in the *Board of Trade Journal* of January 31, 1924, have been added:—

	1907.	1910.	1913.	1920.	1922.	1923.
Excess of imports of merchandise and bullion	142	159	158	343	170	203
Net income from overseas investments	160	187	210	200	175	150
Net national shipping income	25	90	94	340	110	110
Commissions	25	25	25	40	30	30
Other services	10	10	10	15	10	10
Total "invisible exports" on balance	280	312	338	595	325	300
Available for investment overseas	138	153	181	252	155	97
New overseas issues on London market in year	91	207	198	53	135	136
New overseas issues on London market in following year	142	166	169	116	136	..

The subject has been dealt with from time to time in the columns of the *Economist*, and we do not propose to go into details here.

AUSTRALIA.

The following estimate of the Australian balance of payments has been furnished by the Commonwealth Government, and refers to the year ending June 30, 1922, the latest period for which records concerning both overseas trade and public finance are available:—

	(In Million £'s.)		(In Million £'s.)
Dr. Merchandise imports	103.0	Cr. Merchandise exports	123.5
Bullion and specie imports	0.04	Bullion and specie exports	12.3
Interest on Public Debts raised abroad	18.3	Net public borrowings abroad	41.4
Balance, not accounted for	47.9		
	169.2		169.2

The balance of £48 millions is composed of a number of items on either side—many quite small—for which data

* "Memorandum on the Balance of Payments and Foreign Trade Balances, 1910-1923." In two volumes. (Geneva). League of Nations, 1924.

cannot be obtained. The list supplied by the Australian Government includes, *inter alia*, on the creditor side, Australian shipping earnings, municipal and private borrowings, funds brought by immigrants; on the debtor side, interest on and repayment of municipal and private loans, investments abroad by Australian residents, and remittances to Australians travelling abroad.

BRITISH INDIA.

The following statement refers to the period ended March 31, 1923, and although specially prepared by an eminent official, is not one for which the Indian Government accepts responsibility:—

In lakhs of rupees; one lakh = Rs. 100,000.

In lakhs of rupees.		Cr.	
Dr.			
Imports of merchandise and treasure.....	312.42	Exports of merchandise and treasure.....	342.34
Allowance for under-valuation of imports.....	15.57	Borrowed in England.....	13.12
Net visible imports of funds ..	2.48	Balance	5.26
Invisible items—			
Interest.....	26.25		
Shipping services.....	*		
Financial and insurance commission	*		
Other services	4.00		
	<u>360.72</u>		<u>360.72</u>

* Estimated at 22.15 lakhs, and 9.00 lakhs respectively, but not included, as Indian import returns include cost of freight and insurance.

As regards "invisible items," the allocation of 26.25 lakhs to "interest" is based on the assumption that 10 per cent. of the existing British investments abroad may fairly be attributed to India. India's payments for shipping services are arrived at by applying the pre-war estimate of the British Board of Trade, that approximately 9 per cent. of the total receipts of the United Kingdom's shipping were earned on the Indian trade route, to *The Economist's* computation of such earnings in 1922, viz., £94 millions. Further allowance is made for services rendered by the mercantile marine of other countries, on the basis provided by the Indian trade return for 1922-23, which showed that of the total clearances, British tonnage accounted for 78 per cent., and a final amount is added on account of the coasting trade. Inquiries made in informed quarters show that insurance and similar charges in connection with Indian overseas trade come out, on the average, as follows:—Insurance charges, $\frac{1}{2}$ to 1 per cent.; bankers' commission and bill stamps, $\frac{1}{4}$ per cent.; minor charges, $\frac{3}{4}$ per cent.; making a total of $1\frac{1}{2}$ to 2 per cent. on the total value of imports and exports. For reasons stated in the footnote to the above table, neither shipping nor insurance items are included in the final computation. Under the heading "Miscellaneous items" are grouped such items as payment to London for management of capital invested in India, profits of foreign merchants in so far as not covered elsewhere, remittances of officers and civil servants. A net total figure of 4 crores is given, after balancing tourist expenditure and allowing for missionary expenditure in India, &c.

SOUTH AFRICA.

The following table has been supplied by the Census and Statistics Office of the Union, and is based on data supplied to the Public Accounts Committee:—

(In Million £'s.)

Dr.		Cr.	
Merchandise imports	51.5	Merchandise exports, bunkers, and ships' stores	65.0
Freight and insurance	4.0	Foreign loans and capital introduced by settlers	10.5
Spent by S. Africans abroad	4.0		
Interest remitted abroad.....	16.0		
	75.5		75.5

The figures presumably refer to 1922, which was in many ways a year of unusual difficulty in South African trade. No explanation is given as to manner in which the various "invisible" items are arrived at.

UNITED STATES OF AMERICA.

The post-war estimates of the balance of payments of the United States are unusually detailed and instructive. The Harvard University Committee on Economic Re-

search has published the results of an extended inquiry covering each of the years 1919 to 1921, while for 1922 an official Government estimate is available. The relevant figures are given below:—

(In Million Dollars.)

	1919.	1920.	1921.	1922
"Debtor" items—"Visible"—				
Imports of merchandise	3,904	5,279	2,509	3,113
Imports of silver (net)	..	..	11	8
Imports of gold (net)	..	50	667	238
"Invisible"—				
Governmental expenditures abroad (net)	2,375	305	50	..
New foreign bond issues in United States	436	506	665	637
Foreign securities issued abroad but sold to Americans	39	481	227	326
American securities formerly held abroad, sold to Americans (net)	195	258	..	..
Other foreign investments of American capital	300	200	200	..
Interest payable on foreign capital in United States	100	100	100	100
Imports of United States currency (net)	..	..	100	100
Immigrants' remittances and relief	600	700	500	400
Tourists' expenditures	50	150	200	300
Total	7,999	8,029	5,229	5,122
"Creditor" items—"Visible"—				
Exports of merchandise	7,920	8,229	4,485	3,867
Exports of silver (net)	152	26	..	..
Exports of gold (net)	160	..	..	..
"Invisible"—				
Governmental receipts from foreign nations (net)	..	..	..	141
Foreign loans matured and paid	515	571	255	78
Foreign securities resold abroad	..	..	32	189
American securities sold abroad	..	..	16	27
Interest on American capital abroad	150	150	180	227
Ocean freight payments receivable (net)	93	93	33	7
Exports of United States currency	91	103	..	..
Total	9,081	9,172	5,001	4,536

In the above table some \$56 millions have been added to the official export figures for 1922 to cover the estimated value of parcel post shipments. The balance of net gold imports corresponds with the figures published in the trade returns. It will be noted that on account of capital items there was in 1922 a net debit balance of payment (i.e., import of securities) amounting to \$669,000,000. The total of foreign government, provincial and municipal loans floated in the U.S.A. in 1922 (including those of the Philippines) was \$664,000,000, of which \$131,000,000 resulted from refunding operations, and the total of corporation issues to \$217,000,000, from which \$50 million was deducted as representing refunding in one form or another. The net total is thus \$700,000,000. From this are deducted 8 per cent. on account of bankers' commission and market discount and 4 per cent. on account of commission and discount on refunding issues. The export of capital thus amounted to \$637,000,000.

Up-to-date information regarding interest movement in 1922 was unavailable at the time the table was drawn up, but it is believed that the sums paid and received considerably exceeded the figures published. The table shows a net debit balance of \$586 millions, accompanied by gold and silver imports of \$246 millions. The apparent paradox is, it is believed, explained by the reduction in the unfunded credit balance. Answers to a questionnaire sent out in this connection by the Department of Commerce to about 1,500 banks and trading concerns and exporting manufacturers have been summarised as follows:—

(In Million Dollars.)

Accounts receivable	July 1, 1921.	July 1, 1922.	Accounts payable to	July 1, 1921.	July 1, 1922.
from foreigners—	1921.	1922.	foreigners—	1921.	1922.
Banks	656	479	Banks	358	418
Business concerns	510	384	Business concerns	45	47
Total	1,176	863	Total	403	465

The net amount due to American bankers and business concerns thus declined from \$773 millions to \$398 millions. Many concerns were not, however, circularised. Commenting on the "investment" figures shown, the United States Department of Commerce sums up the situation as follows:—"Our foreign investments of all sorts during the four years have averaged about \$700,000,000 more than the investments of foreigners in this country; interest on them has grown steadily, and is greater than the amount of interest owed to foreigners, but not so great as the amount of new investment during the year. The Government, instead of spending money abroad, is now receiving it, principally because Great Britain has begun interest payments on its share of the Allied debt. Such payments amounted last year to \$103,812,000. This yearly excess of receipts on the Government account should continue, its amount depending upon the arrangements which may be entered into by the Debt Funding Commission with the other debtor nations."

ITALY.

The statement which follows, prepared for and published officially by the Italian Government, is not strictly a balance of payments, as certain items have been included which involve no monetary or credit transactions, such as reparation deliveries in kind. The table represents, rather, a balance of economic exchanges, and is not quite comparable in certain respects with the statements published for other countries:—

(In Million Lire.)

Dr.	1921.	1922.	Cr.	1921.	1922.
Visible items—			Visible items—		
Balance of imports	8,653.9	6,462.4	Reparation deliveries, &c.	110.4	440.5
Gold	9.2	37.7	Current invisible items—		
Current invisible items—			Net sea freight on goods	950.0	527.0
Net expenditure of			Net sea freight, passengers		115.6
Italian ships abroad	322.0	203.1	Expenditure of visitors	2,000.0	2,507.0
Net land freight on goods	135.8	132.3	Emigrants' remittances	4,500.0	3,400.0
Net sea freight, passengers	14.6	115.6	Money Orders received	283.4	274.7
Interest on Public Debt	86.6	115.6	Dividend of industrial undertakings	30.0	30.0
Net interest on bank debts	157.5	140.0	Capital movements—		
Capital movements—			Public Debt, Certificates sold	500.0	460.0
Amortisation of Public Debt	..	412.8	Balance	1,005.8	..
Investments in Foreign Securities	..	12.0			
Balance	..	231.9			
	9,379.6	7,747.8		9,379.6	7,747.8

The debit balance resulting from imports and exports of merchandise is based on the declared values published in the official returns. In the opinion of an eminent Italian authority, the figure shown is on the high side, the tendency of traders to declare goods at other than their true values, inaccuracy likely to arise from the conversion of foreign currencies into lire, and the non-inclusion of contraband goods and certain passengers' luggage tending on balance appreciably to reduce the "debit" balance. In explanation of other items, it is pointed out that freight earnings on goods carried in domestic vessels constitute, as in the case of all countries valuing their imports c.i.f., a considerable credit item. The sum to be deducted therefrom on account of export goods carried on foreign ships has already been included in the value of imported merchandise. The debit item of 132.3 million lire, in 1922, for land freight covers the difference between the Italian receipts and outgoings on account of postal packages, letters and telegraphs, charges for rolling stock, &c. The net amount of receipts by Italy from visitors has been based on the number of tickets sold abroad for Italian destinations and the returns of foreigners disembarking in Italian ports and Italians embarking for foreign ports. The figure for net remittances by emigrants embraces the known amounts remitted through the Bank of Naples, which has organised an extensive service for emigrants, estimates for the sums remitted through other credit institutions, the payments made by the United States to emigrants who fought in the American Army or to their families, and an estimate of the sums brought back by returning emigrants. The transfers by money orders are included in the succeeding item. Interest payments include remittances to holders of the Italian national debt in foreign countries. The sales to foreigners of public debt certificates are apparently computed by ascertaining the difference between the amount of interest payable abroad in the two years. The amortisation of foreign debt refers to payments made to Brazil, Canada, Holland and Sweden, and the 12 million lire invested abroad to the Italian contribution to the capital of the Austrian Bank of Issue. It is but fair to point out that many of these estimates are by no means universally accepted by Italian economists.

HOLLAND.

The following estimate of the international balance of payments for the three years 1920-22 has been published in the weekly journal, *In en Uitvoer*:—

(In Million Gulden.)

Dr.	1920.	1921.	1922.	Cr.	1920.	1921.	1922.
Merchandise imports	3,332	2,230	2,025	Merchandise exports	1,701	1,380	1,220
Dollar funds purchased	..	..	..	Additional exports	50	50	30
Re-purchase of gold	..	..	..	Net gold exports	11	11	..
Re-purchase of gold abroad	..	..	..	Diamond industry earnings	410	10	15
Foreign and Colonial Loans	250	50	..	Transit	450	200	160
Shipbuilding (net)	..	65	..	Shipping freights	475	230	175
Tourists	..	10	..	Yield from investments	..	..	..
				Colonial department expenditure	100	100	..
				Bonds exported	655	..	..
				Reduction in foreign balances	..	25	..
				Foreign capital imported	..	225	150
				Capital issued abroad	60	25	30
				Miscellaneous	..	..	..
Total	3,582	2,355	2,155	Total	3,582	2,355	2,155

* Subsequently raised to 30.

The item, "Additional Exports," on the credit side refers to certain articles, such as cheese, butter, and sugar, the actual receipts on account of which exceeded the values shown in the official returns. Imports and exports under bond are not included in the merchandise figures, nor are the diamonds imported and exported in postal packages. The earnings of this important Dutch industry are computed from published returns of production. The severe decline in net receipts from shipping freights in 1921 and 1922 is based on an estimated fall in rates of 66 per cent. in 1921, allowance being made for the increased size of the mercantile fleet, and a further fall in 1922, together with an increase in the amount of tonnage laid up.

During 1920 and 1921 Holland sold large quantities of her investments in American stock, which had been estimated at 1.25 milliard gulden in 1917. This goes far to explain the steady decrease in the "yield from investments," together with the heavy drop in the yield of colonial investments, owing to the collapse of sugar prices in the world's markets. The expenditure of the Colonial Department includes pensions and salaries, the service of the colonial debt, army and navy expenditure, &c. This expenditure amounts normally to about 100 million gulden per annum, the sum which is shown for the year 1920. In 1921, however, the expenses were met out of the proceeds of two colonial loans floated in the Netherlands, which amounted to approximately 100 million gulden, so that the account cancelled out. On the other hand, the national exchequer advanced about 50 million gulden to the colonies during the course of the year, advances which are shown on the debit side of the account. In 1922, the expenses of the Colonial Department were met by transferring about 300 million gulden of the loan floated by the Dutch East Indies in the United States of America to the Mother Country. No entry is, therefore, given on this account on the credit side in the column for 1922, but 150 million gulden is added to the receipts from issues placed abroad—the 325 million gulden entered against the heading being composed of this sum, 125 million gulden from a loan of the Dutch Government in the United States of America, and 50 million from other issues.

The export of bonds in 1921 is made up of sales of American stock refund to above and sales of Royal Dutch shares amounting to 33 million gulden. Against this export of bonds, from the point of view of the capital balance of the country as distinguished from the balance of payments, has to be placed capital imports estimated at 225 million gulden in 1921 and 150 million gulden in 1922. Under various services are grouped banking and insurance commissions, the profits of Dutch commercial firms not covered elsewhere, and various transactions carried out abroad.

DENMARK.

The Danish balance of payments during 1922 is set out below:—

(In Million Kroner.)

Dr.	Cr.
Merchandise imports	1,434
Shipping freights	60
Interest on loans	75
Miscellaneous	..
Merchandise exports	1,176
Shipping freights	165
Transit profits from foreign undertakings, &c.	20
Export of bonds	120
Balance	88
	1,569

Most of the items are self-explanatory. Under the heading "Miscellaneous" are grouped, *inter alia*, purchases of coal for Danish ships and net tourists' expenditure. The debit balance of Kr 88 millions represents an increase in the floating credits advanced to Denmark by foreign nations. As at December 31, 1922, Denmark's international indebtedness was approximately as shown:—

(In Million Kroner.)

Dr.	Cr.
Danish bonds, &c., abroad	945
Floating credits abroad	535
Foreign bonds, &c., held in Denmark	65
Floating credits to foreigners	315
Balance	1,100
	1,480

Unfortunately, the data available for calculating the Danish balance of payments during any given period are by no means complete, and the estimates given for net shipping freight receipts and transit profits on the credit side, as also for the miscellaneous item on the debit side, are conjectural.

NORWAY.

It has not been possible to prepare, under existing conditions, a complete table of Norway's balance of payments. The following statement gives, however, for 1922, an estimate of what is no doubt the most important invisible export, namely, the earnings of her shipping services:—

(In Million Kroner.)

Dr.	Cr.
Merchandise imports	1,313.9
Bullion imports	2.0
Merchandise exports	787.4
Shipping earnings	462.6
Balance	65.9
	1,315.9

The shipping earnings shown are, of course, gross, and not net; that is, they represent the gross amount of money receivable by the country for services rendered, not the net profits accruing to individual shipowners in return for those services.

SWEDEN.

In the following table is set out an official estimate of Sweden's balance of payments in 1922:—

(In Million Kroner.)

Dr.	Cr.
Merchandise imports	1,118
Bullion imports	299
Foreign securities purchased	50
Swedish securities repurchased	50
Foreign Debt service	17
Interest	10
Exchange losses	10
Net tourists' expenditure	30
Foreign relief, foreign lotteries, &c.	13
Balance	85
	1,682
Merchandise exports	1,151
Bullion exports	331
Swedish securities sold	20
Other capital imports	20
Interest received from abroad	15
Remittances from Sweden	15
Net freight receipts	130
	1,682

The degree of exactitude of the figures given varies appreciably. There is reason to believe, for instance, that the imports of capital and the sales of foreign bonds in Sweden have been estimated too conservatively. Calculation of exchange losses and tourists' expenditure is an even more hazardous matter. Certain items of minor importance have been omitted from the table altogether, on the assumption that they tend to cancel out.

The purchases by Sweden of Swedish bonds from abroad are estimated for the year 1922 at 50 million kronor. Very considerable quantities of Swedish securities have thus been repatriated during recent years. A record has been kept since 1914 of the repurchases through banks of Swedish Government bonds, from which it appears that such transactions amounted to a value of 107.7 million kronor in 1920, 76.2 million in 1921, and 28 million in 1922. Purchases effected privately are not included in these figures. In 1913 92 per cent. of the total national debt was believed to be held abroad. By the end of 1918 this percentage had fallen, after taking into account amortisation and repurchase of stock through banks, to 43 per cent., and by the end of 1922 to 21 per cent. The real fall, after taking into consideration pur-

chases which were not effected through banks, was no doubt greater, and it is believed that the quantity of Swedish Government bonds, apart from those of the 1919 Dollar Loan, now outside the country is relatively insignificant.

FINLAND.

The following very complete statement has been supplied by the Finnish Government in respect of the year 1922:—

(In Million F. Marks.)

Dr.			Cr.
Merchandise imports* ..	3,949.9	Merchandise exports	4,467.6
Merchandise smuggled ..	90.0	Port and lighthouse fees ..	50.0
Telegraphic fees abroad ..	4.5	Freights	145.0
Railways, expenses abroad ..	1.4	Emigrant remittances ..	127.0
Posts, expenses abroad ..	4.6	Finnish sailors' remittances ..	5.0
Diplomatic and Consular Services	21.9	Tourists in Finland	80.0
Contribution to League of Nations	3.3	Foreign insurance payments	45.0
Tourists' expenses abroad ..	102.0	Posts, receipts abroad ..	3.8
Insurance fees and claims ..	50.0	Interest on capital abroad ..	10.4
Interest and amortisation ..	303.4		
Balance	402.8		
	4,933.8		4,933.8

* Less insurance and other fees payable in Finland.

As this is the first occasion on which such a survey has been attempted, much of the machinery has necessarily been somewhat hastily improvised. Certain modifications in the figures may therefore be made on a subsequent occasion.

ARGENTINA.

Estimates of the Argentine balance have been made for some years past by Mr C. A. Tornquist. A combined statement for the two economic years 1920-21 and 1921-22 has been supplied to the League of Nations by the author. For purposes of comparison this statement is given below, together with those for 1918-19 and 1919-20:—

(In Gold Pesos, 000's omitted.)

Dr.	1918-19.	1919-20.	1920-21.	1921-22.
Imports of merchandise	599,350	844,200	1,504,760	
Service of foreign debt	44,390	42,500	87,100	
" Cédulas Hipotecarias ..	25,100	13,800	13,950	
Railway company dividends and interest	44,600	42,750	100,300	
Earnings of other foreign capital ..	43,210	52,900	66,400	
Remittances of foreign residents ..	50,700	45,400	68,000	
Expenditure by Argentine travellers abroad	20,000	27,000	43,000	
Argentine bonds repatriated ..		58,000	63,130	
Foreign mortgage capital repaid ..		23,000	2,000	
Other capital repaid, &c.		28,000	3,400	
Interest payments to United Kingdom			3,940	
Municipal short-term loans ..			1,650	
Subscriptions to foreign loans ..		43,870		
Increase in stock of gold		78,520		
Sums remitted to ex-belligerent countries	15,000	2,500	2,250	
Total	842,350	1,302,440	1,959,880	
Balance	+ 151,300	- 79,790	- 269,910	
Cr.				
Exports of merchandise	900,150	1,172,040	1,389,460	
Issues of existing companies ..	2,300	4,800	17,500	
Investment of new capital in Argentine	19,600	23,000	38,000	
Amortisation on British and French debt	57,400	2,000	83,680	
Interest on British and French debt	7,300	6,210	5,610	
Interest on foreign bonds	1,100	1,300	5,000	
Correspondents abroad		5,100	1,470	
Loan in U.S.A.			66,000	
Credits obtained by State railways			22,200	
Export of foreign bonds		2,200	6,500	
Export of Argentine bonds			22,050	
Sale of ships	1,600		4,300	
Money spent by foreign travellers ..	4,200	6,000	9,500	
Decrease in gold stock			18,700	
Total	993,650	1,222,650	1,689,970	

In an article dealing with these figures, Mr Tornquist observes that while in 1919-20 the adverse balance was covered almost three times by repatriation of Argentine bonds, repayment of and subscription to various foreign loans, and an increase in the gold stock, in the 1920-21-22 period the debit of the balance of pay-

ments was in great measure an economic debit for the country. It is believed that the "adverse" balance of 270 million pesos represents in part merchandise imported and not paid for at the time of arrival, and in part various credits remaining provisionally in the country, either deposited in banks or invested in Cédulas pending an appreciation of the currency such as would make its withdrawal a profitable financial operation.

As will be seen, the amount of detail given, and the degree of accuracy of the several items vary considerably from country to country. In the nature of things, "invisible" items must be a matter of more or less liberal estimate in all cases. Most of the balance-sheets already given refer to the year 1922, when normal conditions had by no means been restored in a large number of countries, and the 1923 returns would, if available, show a more hopeful state of affairs in many cases. "Invisible," as well as "visible" entries are liable, of course, to change most significantly from year to year, a "debtor" item in one year having quite conceivably to be placed on the "creditor" side the next. Some of the countries, again, for which estimates are, unfortunately, not available are precisely those regarding which such information would have been most interesting, e.g., France, Germany, Japan, &c.

Many other considerations indicate that great caution is required in the interpretation or comparison of the figures given, more especially in forming a judgment about the significance of the balances shown. We therefore conclude by setting out some of the criticisms expressed by the League of Nations in its Memorandum:—

"Very different interpretations are frequently given to the terms 'negative' or 'positive' balance of payments, or the equivalent more popular and misleading expressions 'unfavourable' or 'favourable' balance. An uncovered balance cannot exist. To every debtor there is a corresponding creditor, and for every payment effected a corresponding receipt of payment. Balances result, therefore, simply from the systems of accounting, and systems vary. In the majority of the statements given above, where a surplus or deficit is shown, that surplus or deficit represents changes in the floating commercial loans and advances of a country. A negative balance then means an increase in net floating indebtedness or a decrease in net floating assets, and a positive balance the reciprocal. The exclusion of these floating balances from the formal equation may be accepted as in accordance with the best recognised practice, and the expressions 'negative' or 'positive' balances are here used in the sense just indicated. In certain cases, however, the payments effected and received have been made to equate. The existence of such a formal equation is not by itself a proof that the balance of payments in the course of the year in question has been neither positive nor negative. Its cause may lie in the fact that, as in the Dutch statement for the year 1921, an estimate is made for the changes in foreign balances. Granted changes in foreign balances are not included in the statement, then there is no reason to expect an exact equation, for there is no *a priori* probability that within any defined period of time payments and receipts will cancel out.

"When capital transactions are, and commercial credit transactions are not, included in the balance of payments, with the result that any discrepancy between the active and passive of the account is normally covered by changes in floating credit balances, then there is no reason to expect that the balance of payments and the balance of indebtedness will move in a like direction. If, for example, any country's balance of visible and all invisible items save capital and credit transactions is zero, but that country during any particular year increases its foreign debt by capital issues abroad or obtains a repayment of loans which it has granted, operations both of which will augment its net international debit or reduce its net credit balance, a positive balance of payments will result. On the other hand, however, an increase of net indebtedness even under the first condition postulated above need not necessarily involve a positive balance of payments—for an increase of debt may be due to the addition of unpaid interest, and an

increase in the net debt balance may result from a writing down of foreign claims. Similarly, moneys due to any country from abroad may be directly invested abroad and never enter into the balance of payments. In these and never enter into the balance of payments. In these circumstances, it is necessary to pay particular attention to the causes which have contributed to any disequilibrium between the active and passive of the balance of payments, and among these causes more especially to the movements of capital.

"Very considerable error may arise from one of the 'invisible' items for which available statistics normally exist—namely, the flotation of loans in foreign markets. As a rule, the net proceeds of such loans, after deducting commission charges, &c., are entered in the statements of the lending country as a debit and of the borrowing country as a credit item. But it frequently happens that only a part of a loan raised during any given year is drawn upon by the borrowing country during the course of that year. Thus the Indian statement shows a debit balance of 17.13 lakhs of rupees, partly or fully covered by loans raised on the London market which are not shown among the invisible exports. The amount of new capital raised during the year ending March 31, 1923, in London by India and Ceylon together amounted to £37,626,000. But of this sum less than half was raised during the first six months, £17,351,000 during the month of October, and over a million and a half pounds in the

last quarter. Similarly, over £6,000,000 was issued by the London market, and \$31 millions by the United States during the months of November and December. It is usually impossible to ascertain or estimate the exact sums actually utilised for payments before the close of the year.

"Quite apart from the varying degree of exactitude which the information available rendered possible in the compilation of the tables, caution is required on account of the different practices adopted in showing gross or net figures against any particular item. The statement for the United Kingdom is net throughout. In the majority of other cases, when exactly the same item arises on both sides of the account—as, for instance, ocean freights or tourists' expenditure—the net balance only is given. But sometimes several items are entered into a single group and the balance of the groups given. Reference should finally be made to the essential difference between the final debit balance shown by, for instance, the United States of \$586,000,000, which greatly exceeds the estimated probable error, and the 'balances not accounted for,' as, for instance, that of Australia. In the first of these two cases the very full evidence supplied points definitely towards a negative balance, while in the second it did not prove possible to obtain complete evidence, and figures are simply posted to fill in the lacuna in the data for form's sake."

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 18.

tively strong position this year. The restoration of a more balanced state of affairs as between East and West is the main foundation on which hopes of better trade conditions in the autumn and winter are being built.

BRITISH EMPIRE.

Heavy rains during the greater part of August, followed by warmer weather at the end of the month, have greatly improved crop prospects in Western Canada, and while in certain more or less isolated districts the rain came too late to bring more relief, in the country as a whole the yield is now expected to be slightly above average. The ravages of rust and insect pests have this year been on a much smaller scale than usual. Business in general is marking time, and every endeavour is being made to maintain stocks at a low level, especially in the lumber industry. The Australian figures for the arrival of wool at the sea-board for the complete season 1923-24 show a shortage of 41 million pounds, as against the previous season's total. That this has not involved a corresponding decline in prosperity in the pastoral industry is evidenced by such indications as (1) prices realised at the Sydney sales, the average values for the last two seasons comparing as follows:—

	Per Bale.	1922-23.	1923-24.
		£ s d	£ s d
Greasy		23 6 11	31 2 2
Scoured		22 9 3	34 3 0

and (2) profits of pastoral companies, the eight representative concerns included in the index of the Sydney *Investment Digest* showing a 30 per cent. increase in earnings during the past year, as compared with 1922-23. In India the monsoon has caused serious floods in some districts (as, for instance, in the jute area, where production is now estimated at 7,000,000 bales, against 8,800,000 last year). A subsequent break up of the country, which threatened damage to standing crops, has now come to an end, and conditions are again favourable to good kharif crops. The strength of Bombay stock markets. In South Africa a leading feature of business has been aggravated by the seasonal quietness of business has been aggravated by the losses caused by drought and locusts. Gold output from the Rand, however, continues on a large scale, the total for the first eight months of 1924 being larger than in any corresponding period since the war. The decrease in the maize crop is a discouraging factor, against which, however, may be set a continuance of firm conditions in the wool market and higher prices for wheat this season. Bank deposits are increasing, and the decline in advances—a regular feature since the latter half of 1920—has been arrested.

SOUTH AMERICA.

Argentine export trade continues satisfactory, but local trade is quieter. The high level of grain, cattle and sheep prices is regarded by some observers as providing a favourable setting for future "boom" conditions, particularly if the London Agreement on Reparations results in a revival of German demand for raw materials from South America. The crops of wheat, oats and linseed have benefited by plentiful rainfall in the middle of the present month. After recording a rise of nearly 70 per cent. since the beginning of 1924, Brazilian

coffee quotations have shown a slightly weaker tendency during the last week or two, while quotations for native-grown cotton have declined by about 10 per cent. over the last three months. Sales of nitrate by the Chilean Producers' Association have lately increased considerably.

EUROPE.

The situation in French metallurgical industries shows much the same unsatisfactory features as have been noted in Great Britain, though possibly on a less considerable scale. Failing a revival of demand, the closing down of further blast furnaces would appear to be unavoidable. In the textile industries local demand for cotton is less active, and spinners, though on full time in most cases, are showing some reserve. Business continues active in the Roubaix and Tourcoing combed wool markets. Silk manufacturers have received satisfactory orders, but complaints are heard of labour shortage. Little improvement is shown in the general tendency of Belgian metal markets, though certain large manufacturers have received a few important foreign orders at the cost of significant concessions in prices. The glass industry is rather more active. In Germany the successful outcome of the London Conference has induced a more hopeful feeling, reflected up to the present chiefly in increased business on the Stock markets, though trade as a whole remains in a depressed state. Dutch and Swiss conditions continue to exhibit slow but steady improvement on the whole. The Swedish wood-pulp industry is still very active, and though the timber market has been affected by seasonal influences, the outlook for the autumn season is satisfactory. Danish harvest prospects improved considerably during the later weeks of the summer, and the yield is now generally estimated at, or slightly under, average. Finland, Lithuania, and Bulgaria are, however, according to the International Institute of Agriculture, the only European countries likely to show an increased production of wheat in 1924 as compared with 1923. The financial crisis in Austria appears now to have come to an end. The industrial situation is somewhat irregular, the electrical industries and certain branches of agricultural machinery manufacture being fully employed, while the coal and steel industries are rather badly off. Spanish trade continues to exhibit something more than seasonal dullness, but in Italy the uncertain factors of the political situation do not appear to have caused any setback in trade, the silk industry being particularly active. The grain crops are of somewhat disappointing magnitude, and the wine yield below last year's, but hemp has been a very successful crop this time.

FAR EAST.

The situation in China presents few bright features. Apart from the depressing effects of the political upheaval, much damage has been done to the crops by floods, the worst for several years. A strike of all the Chinese employed on the foreign settlement at Canton, in July and August, led to a suspension of business at that centre, particularly affecting the export of silk. Japanese imports for the first half of this year show an increase of 32 per cent. as compared with the corresponding period last year, and exports an increase of 13 per cent. Imports of "reconstruction" materials have been on a considerable scale throughout the greater part of the year.

MONTHLY BULLETIN OF STATISTICS

ISSUED by the LEAGUE OF NATIONS

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping.

PRICE: Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR: Unemployment Percentages.

This information is given where available for the following countries:—

ARGENTINE	EQUADOR	NORWAY
AUSTRALIA	ESTHONIA	PALESTINE
AUSTRIA	FINLAND	PARAGUAY
BELGIUM	FRANCE	PERU
BOLIVIA	GERMANY	POLAND
BULGARIA	GREECE	PORTUGAL
BRAZIL	HUNGARY	ROUMANIA
CANADA	INDIA	RUSSIA
CHILI	ITALY	SIAM
CHINA	JAPAN	SOUTH AFRICA
COLOMBIA	JUGO-SLAVIA	SPAIN
CUBA	LATVIA	SWEDEN
CZECHOSLAVAKIA	LITHUANIA	SWITZERLAND
DANZIG	LUXEMBURG	UNITED KINGDOM
DENMARK	NETHERLANDS	UNITED STATES
DUTCH EAST INDIES	NEW ZEALAND	URUGUAY
EGYPT		VENEZUELA

OBTAINABLE FROM ANY BOOKSELLER OR FROM

The Economist

MONTHLY SUPPLEMENT.

SATURDAY, OCTOBER 25, 1924.

No. 17.

New Series.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

The general feeling with regard to trade conditions may be summed up by saying that while business has not so far shaken off the effects of the summer seasonal depression so quickly as it did a year ago, the outlook is rather brighter than was the case last month. Unemployment, it is true, is still on the up-grade, but recent changes in the statistical basis of the official figures have tended to exaggerate the increase which has taken place since August. Much has been made of the unsettlement caused by a General Election, but the event has at least put an end to a period of political suspense, the prolongation of which would have been more adverse to the national trade than an election itself. A year ago business pursued an even course, and tended, in fact, slightly to expand during the three weeks which preceded the election, the main repercussions of which were felt some weeks later, when nervousness among certain classes of investors affected the price of gilt-edged securities and brought about a mild and ephemeral "flight from the pound." It is reasonable to expect that, provided no startling readjustment of political power takes place, the General Election will have no unduly depressing effect on the course of trade for the next few months.

The most unfavourable feature in the whole situation is the absence of any sign of increased activity in the iron and steel trades. Conditions in this group, which is often regarded as a barometer of trade tendencies, stand out in marked contrast to the experience of other major industries at the moment. Sentiment in the coal trade, for instance, is slightly more hopeful, though increased demand may mostly be due to seasonal causes. The textile and other industries, again, are looking forward to transacting a considerably larger volume of business this winter than last, the better outlook for the Lancashire cotton trade being the outcome not merely of more satisfactory crop conditions in America, but a growing inquiry from important consumers at home and abroad. Among minor industries such as boots and shoes, pottery, &c., the gen-

eral tone is quite good, while the extent of the demand for shipping tonnage during the last few weeks has come as a surprise even to those closely concerned with the industry. Commercial bills are in fair supply in the City, and although the deposits of the London Clearing Banks showed a decline of £4 millions last month, the total of advances continues its steady increase, and is now £50 millions higher than at this time last year. The September returns of overseas trade were rather less favourable than those of August, but were certainly not indicative of any fundamental weakness in the situation as a whole.

In the United States the volume of trade continues to expand but slowly, and until the Presidential Election is over no marked change is expected. Among the countries of the Empire, India's position is favourable as a result of a satisfactory monsoon; in Canada the reduction in the wheat crops this year is not likely to affect purchasing power to any considerable extent owing to the much higher prices obtained and the reduction during the last twelve months of agricultural indebtedness to the banks. South American conditions are moderately satisfactory, the outlook for Argentina in particular having been improved as a result of considerable rainfall at a critical crop period.

In Europe the metallurgical industries are generally quiet, but in other lines of business a steady expansion can be traced over practically the whole of the Continent.

The following notes on conditions in various trades and countries call attention to some of the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—This group remains in the trough of depression, indications of better things which arise from time to time being usually short-lived. The September output of pig-iron recorded, at 569,200 tons, a decline of 20,000 tons from August's low figure, though about 10,000 more than that of September a year ago. A further reduction during the month in the number of active furnaces brings the total to 170, as compared with a "peak" figure of 223 in May of last year. The pig-iron

quarterly meeting was poorly attended, and has left the general situation unchanged. Continental competition seems to have increased to some extent during the last week or two. While the Midlands and Scotland are reported to be finding difficulty in some cases in obtaining sufficient business to carry through a normal working week, Middlesbrough is a little more hopeful, as it believed a fair amount of orders would be forthcoming were something like stability in prices to be attained. The General Election, however, is an unsettling influence. Production of steel ingots and castings last month amounted to 645,000 tons, against 527,500 in August, a holiday month, but fell short of last September's total by 50,000 tons. Structural steels continue in good, and boiler plates in fair, demand at lower prices, but large orders for such products as steel rails are coming in unsatisfactorily. Business in tinplates has suffered a slight temporary check owing to the Election. Steel sheets, however, remain in strong demand, chiefly on export account. A winter revival in the iron and steel trades is still being talked of, but at present it has to be admitted that, for the most part, the wish is father to the thought, recent price reductions having quite failed to bring about any appreciable quickening of activity.

Coal.—The market tone, on the whole, is better than was the case four weeks ago. Improvement is most marked in the best descriptions of house coal, which last week were in strong demand, with supplies inadequate. Steam coals are being inquired for, and the increased outward movement of shipping to overseas grain-exporting centres has improved the market for bunker coals generally. House coals are beginning to experience the first signs of winter demand. In South Wales the undertone is certainly better, prices being steadier and inclined to harden, the volume of exports slightly better, and inquiries rather more active. The anthracite trade is enjoying somewhat exceptional prosperity and working at full pressure. Improvement in the coal industry as a whole, however, will need to be carried much further, particularly on the export side, before conditions can be regarded with satisfaction, and full employment maintained in all areas.

Engineering.—No very marked change has taken place in engineering prospects. In some branches a slight improvement is recorded, in others a slight recession of activity. Employment over the whole industry is still described as "bad," but this term covers a wide range of different conditions. Railway engineering is very active at Doncaster, but less satisfactory elsewhere. A certain amount of demand for rolling-stock is emanating from British railways, but the resulting business is unevenly distributed. Textile machinery manufacture remains dull, mainly on account of the unfavourable export situation, and short-time working is being practised. Electrical manufacturers, however, are still optimistic as to the amount of business which continues to come forward. After a long spell of comparative idleness, the machine-tool trade is developing much greater strength, and the further outlook is not unpromising. The demand for cycles and motor-cycles has contracted lately, from seasonal causes, but with one of the best summers in the history of the trade behind them, manufacturers are not disposed to over-rate the importance of this feature. Seasonal decline, however, is a more serious factor in the motor industry, and the holding of the annual Olympia Show in October instead of November is a serious attempt to shorten the trade's "dead" period this year. At the moment, Manchester firms are well employed, but the outlook at Coventry is less certain. That there has been nothing very wrong with the export side of the industry may be seen from the following figures from the September Trade Returns:—

	Month of September.			First Nine Months of—		
	1922.	1923.	1924.	1922.	1923.	1924.
British Exports of—						
Touring cars Number	116	369	907	979	1,789	7,581
Commercial vehicles " "	73	96	106	412	632	1,265

Total value of all cars, chassis, and parts						
Thous. £	220	435	617	1,948	2,636	4,519

The trade expansion indicated by these statistics is much greater than is commonly recognised.

Cotton.—Our Manchester correspondent writes:—Compared with a month ago, raw cotton prices do not show much change, but since then there has been a rise in values, followed by a decline. There has been a tendency for spinners and manufacturers to improve their position. Sufficient orders have been obtained to extend the engagements of producers. In the circumstances, a stiffer front has been presented by sellers to buyers, and undoubtedly the prices now ruling are more remunerative than for a long time back. Favourable reports have continued to be received with regard to the progress of the cotton crop in the United States. At the moment the official Government estimate is 12,500,000 bales, but most people expect an output of 13,000,000 bales, against only

10,200,000 bales for last season. Recently the cotton plants in Egypt have not done very well, and it is probable that the crop will be much smaller than was expected two or three months ago. Owing to the increased trade activity in Lancashire, the consumption of raw cotton is increasing. Manufacturers of piece goods have continued to experience an extensive inquiry. Further buying of an encouraging character has taken place for India in a variety of cloths. The outlook for China is chiefly in standard makes. Business has tended to broaden for the sales for South America. Fine fancy materials remain in active request for European countries and the United States. It is estimated that 80 per cent. of the looms in Lancashire are now working. In the spinning section the feature of interest has been the decision of users of American cotton to increase the working hours in the mills from 26½ to 32 per week. The scarcity of American yarns has become more pronounced. There has been an active demand, and it is now very difficult to secure early delivery. Sellers of Egyptian yarns have experienced a healthy inquiry, and producers in this section are in a strong position. A fair amount of business has been done in yarns for export purposes.

Woolen and Worsted Trades.—The story of the wool trade is one of continually rising prices for the raw material, and increasing pressure on the part of manufacturers to pass on to buyers of yarns and piece-goods at least some portion of this rise. The September wool sales realised all expectations as to a fresh range of high prices, increases up to 15 per cent. being recorded, but the last week or two has to some extent justified the doubts recently expressed as to stability of these prices in the future, in view of the fall in cotton prices and the large number of bulls in the market. Trade in Bradford maintains its slow improvement, but a scaling upwards of wool-top prices has had a restricting influence. A wider inquiry for yarns is at all compensate spinners for the increase in cost of their material. The piece-goods trade also continues to improve, and volume of business in the drapery and clothing trades is opening out on satisfactory lines for the winter.

Boots and Shoes.—A slight decline from a relatively high level of production in certain branches has been a feature of the last two or three weeks. The lull, such as it is, gives rise to little uneasiness, however, and output remains higher than at this time last year. Manufacturers of the heavier grades are best employed at the moment, the demand for the finer varieties having fallen off from seasonal causes.

Pottery.—Demand for the Christmas trade has proved of satisfactory dimensions. The export side of this industry is more active than the September returns would lead one to expect. Most potteries are now working full time, although as recently as the end of September about 18 per cent. of the firms furnishing returns to the Ministry of Labour were working, on an average, 14 hours less than the full-time week.

Building Trades.—A general improvement took place in September, although some variety of experience was recorded as between different centres and different occupations. Employment branches, but as regards painting a seasonal decline was in evidence.

Shipping.—Demand has lately been of quite unexpectedly large dimensions, and although volume has shown a slight falling-off in the last few days, no serious break is expected. The *Economist's* Index of Tramp Freight rates rose during September from 104 to 110 (1913 = 100), and will probably record a further rise for October. European grain requirements have been on an almost unprecedented scale, absorbing large amounts of tonnage at steadily increasing rates, while demand for the Plate and Australian waters has been on an increased scale. An unusually large proportion of Canada's wheat harvest is apparently being loaded at Vancouver this year.

UNITED STATES OF AMERICA.
The Iron Age estimates that early this month about 63 per cent. of the total plant of the United States Steel Corporation is in operation. These figures do not point to any well-marked industrial revival as yet, and nothing of the kind seems any rate. At the same time, what slight movement exists in a favourable direction, and is, happily, most prominent as regards certain industries which were most unfavourably affected a few months ago. Railroad traffic, again, has lately been on an unexpectedly large scale, and though part of the produce, there is some reason to believe that many commodities are going into consumption faster than they are being produced, and that available stocks are insufficient to justify any long continuance of such a state of affairs. Money was abundant during the greater part of September, and it is expected that the autumnal movement of the crops will be financed without any increase in money rates. A heavier wheat-

(Continued on page 36.)

GERMAN UNEMPLOYMENT STATISTICS.

THE German Ministry of Labour has recently published an extensive study on the regional distribution of labour in the chief German industries. The monograph, which is accompanied by a number of highly detailed charts and statistical tables, is not only a valuable analysis of hitherto inaccessible facts, but is also a very useful study in the principles of what is known to economic theory as the localisation of industry. It is greatly to be regretted that its data do not permit of compendious reproduction. Among the bye-products, so to speak, of the investigation, however, is an analysis of the position of the German labour market since the war, which presents in a compact form very useful unemployment statistics. The following table gives the number of persons in receipt of public unemployment relief on the first day of each month, from December, 1918, to December, 1923 (from March, 1923, onwards the figures apply only to unoccupied Germany):—

Month.	1918.	1919.	1920.	1921.	1922.	1923.
January	..	905,137	454,775	410,238	165,248	85,418
February	..	1,076,368	430,766	423,164	202,594	150,220
March	..	1,053,854	370,296	426,600	212,526	190,008
April	..	829,758	329,505	413,321	115,845	222,410
May	..	700,000	292,307	394,262	64,708	253,529
June	..	620,000	271,660	357,352	28,626	185,982
July	..	560,000	322,923	314,475	15,137	139,016
August	..	550,000	403,835	267,108	11,671	249,192
September	..	535,000	414,601	232,057	16,678	534,259
October	..	520,000	392,823	185,806	24,813	954,373
November	..	500,000	361,311	150,104	42,900	1,464,447
December	501,610	470,000	350,087	149,337		

These figures, however, like the English unemployment insurance figures, are subject to so many qualifications and exceptions that they must be regarded as representative rather than comprehensive. They include only such unemployed who have a right to relief under certain statutory orders. They exclude those whose claim to benefit is exhausted, those whose unemployment cannot be traced to the consequences of war ("Kriegsfolgen"), and those who are on short time or who are working on Government relief works. The actual total of unemployment is alleged to be much greater. To supplement these figures, therefore, the Ministry supply other statistics.

The following table gives the percentages of unemployment among the members of some 40 trade unions, with a membership of about 6 millions, for a corresponding period:—

Month.	1919.	1920.	1921.	1922.	1923.
January	6.6	3.4	4.5	3.3	4.2
February	6.0	2.9	4.7	2.7	5.2
March	3.9	1.9	3.7	1.1	5.6
April	5.2	1.9	3.9	0.9	7.0
May	3.8	2.7	3.7	0.7	6.2
June	2.5	4.0	3.0	0.6	4.1
July	3.1	6.0	2.6	0.7	6.3
August	3.1	5.9	2.2	0.8	9.9
September	2.2	4.5	1.4	0.8	19.1
October	2.6	4.2	1.2	1.4	23.4
November	2.9	3.2	1.4	2.0	28.2
December	2.9	4.1	1.6	2.8	

The number of applicants at labour exchanges per 100 places offered is shown in the following:—

Month.	1919.	1920.	1921.	1922.	1923.
January	195	156	210	150	218
February	205	143	206	145	246
March	165	132	188	113	250
April	153	139	189	113	272
May	162	151	175	107	219
June	148	174	169	103	206
July	147	187	151	106	180
August	148	195	142	109	268
September	134	184	132	122	402
October	138	174	128	138	600
November	158	185	136	165	902
December	169	204	148	195	941

Each table shows the same broad movement, although, as might be expected, in varying degrees of intensity. Unemployment appears to have been severe at the commencement of the period; the number of persons in receipt of public relief reached 1,076,368 in February, 1919. For the next year and a-half improvement was very slow; after the middle of 1921, however, it was quicker, and by the summer of 1922 unemployment was negligible. In July of that year the number of persons in receipt of public relief was 19,648, the trade union percentage 0.6, and the number of applicants per 100 jobs offered by the labour exchanges 106. This was the peak of the boom. In the autumn a decline set in. The figures of unemployment rose by leaps and bounds throughout the next year, and by the end of the period, December, 1923, the number of publicly supported unemployed (excluding Ruhr workers) was 1,464,447, and the trade union percentage exceeded 28, an unprecedentedly high figure.

It will be seen that with the exception of a period of about eighteen months in the years 1921-22, it was never true to say that Germany was immune from unemployment. On the contrary, she was very considerably affected, and at the worst period of last year suffered even more than we did in 1921. The causes of the final collapse are obvious; there is no need to go beyond inflation and the Ruhr to explain everything; as all three tables show, the depression must have been well-nigh universal. It is clear, however, that the earlier unemployment immediately after the war must have been much more localised. The number of publicly supported persons exceeded a million, while the number of unemployed trade unionists was only 6.6 per cent.—a high figure certainly, but not commensurate with the 28.2 per cent. which was shown last year, when the number of publicly supported unemployed was only 400,000 higher. In the opinion of the Ministry of Labour four causes were largely responsible for this condition of the Labour market. In the first place, the size of the Army and Navy had been reduced almost to nothing—only 117,000 in all services; secondly, there was great distress in the shipping trades, owing to the confiscation of the mercantile marine. Thirdly, large numbers of refugees crowded in from the annexed areas, and countervailing emigration was impossible, and finally the small rentier was ruined; by the autumn of 1922 no less than 500,000 had been compelled to have recourse to public assistance.

The tables from which the foregoing figures are derived do not carry us beyond December, 1923. From tables published elsewhere, however, it is possible to bring the record still further up to date. The effects of the currency crisis were most acute in January, 1924, when the number in receipt of public relief touched 1,528,000. Thenceforward, with the establishment of the Rentenmark, there commenced a recovery, slow at first, but attaining considerable speed as the spring wore on. By April the number in receipt of public relief had dropped to 703,000, and by June this number was reduced to almost a third, namely, 209,000. Since then there has been a mild recession, the August figure reaching 328,000, but whether this is purely seasonal or due to more far-reaching causes it is as yet too early to say.

LIGNITE.

^a Including lignite. ^c Including the production of Lorraine and Saar. ^d Saleable coal only. ^e Irish Free State production omitted since 1921. ^f Average of two months. ^g Strike period. ^h From 1919 excluding Alsace-Lorraine and from 1920 excluding Saar and Palatinat; from June, 1922, excluding Upper Silesia. ⁱ Since July, 1922, including Upper Silesia. ^k Exc. Rhine mine. ^l Exc. Ruhr production. ^m Decreased due to coal strike. ⁿ Average of five months. ^o Exc. Saar.

STEEL

c Excluding Luxemburg, including Alsace-Lorraine and Saar, from 1913 to October, 1918; for 1920-1923 figures not official. to labour disputes. & Corrected figures from January, 1923, based on returns from works reestablished.

crop than last year, with a greatly increased demand from Europe on account of short harvests in other countries, has put the farmer in a much more favourable position.

Though Canada's wheat crops will not greatly exceed 300 million bushels this year, against 474 millions in 1923, prices in Winnipeg are about 40 per cent. higher than they were a year ago, and, providing the average grade of the crop is as good and prices hold at current levels, the net return to the farmer should not be much less than last year. The main loss will naturally fall on the Canadian railways. No marked improvement has as yet been noted in industrial centres, but inquiry has been on a larger scale, and as the volume of current agricultural indebtedness is decidedly lower than a year ago, prospects of a larger demand for commodities during the next few months are reasonably bright. The wool-shearing season in Australia has been, on the whole, favourable, and the problem of financing the clip at continually increasing prices will probably be considerably eased by the issue of "emergency" currency on which the authorities have decided. In India a generally favourable monsoon and the continuance of satisfactory crop conditions seem to indicate that last year's trade experience will be repeated, and that, with lower prices for cotton piece-goods, this market will play an important part in the expansion of business to which Lancashire is looking forward. The Indian cotton crop is expected to be of much the same dimensions as last year, but the final jute forecast indicates a decline from about 8,500,000 bales in 1923 to 8,000,000 in 1924. South African conditions show no marked change. Transvaal gold production remains at a high level, but weather conditions have been to some extent unfavourable to cereal crops, and trade remains quiet in such lines as iron and steel, electrical goods, and textiles.

Argentine wheat, linseed, and oat crops are making satisfactory progress after the recent rains, but a further general fall would be welcome, especially in the South. Chilean conditions are quiet, though the volume of business is higher than at this time a year ago. Drought conditions have been unfavourable to growing crops. While Brazilian trade conditions are not

unsatisfactory, abnormally high food prices have created some amount of discontent, and import duties on certain descriptions of agricultural and dairy produce have been suspended by the Government until the end of the current year.

After an appreciable expansion during August, the French metallurgical industry has been quieter of recent weeks, and prices have tended to decline slightly. The textile industries are active—with the exception, possibly, of silk. The wine crop has been more satisfactory than was expected, owing to improved weather towards the end of September, but a deficiency in wheat production will necessitate considerable importation of cereals this year. The Belgian metal trades remain in a depressed condition, fresh business being difficult to secure, while German competition is increasing. In Germany a gradual improvement in economic conditions is observable, the financial crisis of the early summer having passed away, though an acute shortage of credit still exists. The mining, potash, and textile industries are rather more active, but the iron trade has become quieter after showing signs of increased vitality in the first part of September. The general tone of business in Holland remains fairly good. Stringency continues in the Norwegian money market, but such industries as wood pulp, paper and cellulose have been rather more active of recent weeks. The timber market is quiet. Most branches of Swedish industry report slightly improved conditions, and unemployment is a steadily decreasing evil, but conditions in the iron industry are still far from normal. Danish industrial circles are perturbed by the rise in German exports, and the Industrial Council, following an English example, has called the Government's attention to the alleged "dangers" of the Dawes Settlement. Favourable weather conditions in Czecho-Slovakia have been helpful in producing a good harvest in grain and hops, and the sugar-beet crop is of high quality this year. The Austrian industrial situation is less satisfactory, the unemployment returns showing an increase of 12 per cent. during September, chiefly owing to the steady dismissal of employees in the engineering industry and in Viennese banks. Italian business was quieter last month, after the abnormal activity of August, but the textile industries continue to be well employed. Spanish trade is exhibiting symptoms of quickening activity after a very dull summer.

A STATISTICAL REVIEW of the most recent information of the economic activity of Europe, The British Empire, America, Asia, etc., compiled from official and other defined sources.

The following among other subjects are dealt with in informative Tables:—

PRODUCTION: Coal, Iron and Steel; Shipping Construction, etc.

FOREIGN TRADE: Weight and Value of Imports and Exports; Movement of Shipping

PRICE : Wholesale and Retail Price Index Numbers.

CURRENCY AND FINANCE: Reserves, Note Circulation, Discount Rates, Foreign Exchanges, Capital Issues, Bankruptcies, Savings Bank Deposits.

LABOUR : Unemployment Percentages.

No. 18.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. The table of crop yields on Page 44 has been supplied by the International Institute of Agriculture, Rome. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," is 6d. Constable.

THE STATE

THE General Election has been followed by a not altogether healthy upward movement in share values, but industry, as always, has been slow to respond to changed political conditions. So far, autumn trade has been disappointing in the "heavy" industries, and most encouraging in the textile groups. A glance at the detailed unemployment tables in the *Ministry of Labour Gazette* shows that to the coal-mining industry belongs the doubtful distinction of having made the largest individual contribution to the sharp increase in unemployment during October; that shipbuilding has the largest percentage of workers unemployed (31.4 at October 27th last), and that the recent improvement in the cotton industry removed over 15,500 workers from the list during October.

The returns of our overseas trade are beginning to reflect the marked rise in price of certain essential foodstuffs—notably wheat—and raw materials. Internal prices are rising, and this development is not without its serious side. For one thing, the increase will tend automatically to raise wages governed by index-number movements in “sheltered” trades, which, viewed as “charges” on British industry as a whole, should be less, and not more, in order to be restored in the body economy about a parallel increase in output. To be bound to meet with strenuous opposition, some people are loudly asserting that iron and steel, British shipbuilding, and other exports must be reduced if the present position is to be maintained.

The improvement record of the metallurgical industries does not come none too soon, and it is a condition that British engineering must secure contracts of first-class formidable foreign competition held “the ground won a

Iron and Steel.—At long last an improvement is recorded in the iron and steel trades. Political factors are concerned to some extent, but there seems to have been a general feeling among buyers that further delay would be dangerous. The volume of inquiries has noticeably increased, and in numerous cases definite orders have been placed in the last week or two. The October production figures were affected to but a slight extent by this movement, and show little change as compared with September, when allowance is made for the extra working day, the pig-iron output being returned at 586,400 tons, against 569,200 tons in September, and steel ingots and castings at 678,500 tons, against 645,000 tons. For the first time since February, however, a net increase was reported in the number of blast-furnaces operating, seven having been blown in during October, against six damped down

or blown out. Foundry iron sales are increasing, and stocks at the works are gradually being cleared, but smelters have so far shown no great inclination to commit themselves to large forward transactions. Better conditions in the hematite trade are signalled by the fact that, for the first time in nine months, an additional furnace was put into commission in the Furness district in the middle of November. Prices have risen as much as half-a-crown from the low-water-mark of a few weeks ago, though the average increase is somewhat less than this figure. East Coast sellers have been rather more willing to commit themselves as to the future, and have booked a certain number of orders for delivery anything up to six months ahead. Tin-plates and galvanised sheets are a shade less firm. The volume of buying is not greatly removed from the ordinary as regards steel rails and constructional steels, but the undertone is quite satisfactory. Generally speaking, domestic demands are chiefly responsible for the improvement in business, a number of fairly substantial railway inquiries, for instance, being in the air at the moment, but foreign competition is decidedly less in evidence, the margin between the British and foreign product being smaller than of late, and the amount of foreign material available for early delivery of no considerable amount.

Coal.—Better iron-and-steel prospects will eventually react on the coal trade, but up to the present such improvement as has been recorded has been of small dimensions, and has hardly begun to affect production, the weekly returns showing (with one exception) a steady decline throughout October. The figures, however, still afford a favourable comparison with those of last summer, when seasonal factors were, of course, predominant. A number of inquiries for forward supplies have been received from ironmasters, and some collieries are showing a disposition tentatively to advance prices. Steam coals are in steady request, though in South Wales the existence of certain stocks is a bar to any marked amelioration of prevailing conditions. Domestic consumption of house coal is heavier than of recent weeks, though export inquiries are on no considerable scale, but industrial demand remains below normal.

Engineering.—Conditions remain unsatisfactory in many respects, but sentiment is somewhat better than a month ago. The placing of one or two large foreign contracts recently is a welcome indication of the competitive ability of certain firms. Thus one large concern has obtained an order for 35 locomotives for Argentina, and another has secured a railway construction contract for New Zealand running to about £500,000, as well as an Indian order for 775 railway wagons. Ship-building orders continue to come in slowly, but in slightly increased volume. October launchings on the Tyne totalled 206,000 tons this year, against 105,000 tons in October, 1923. Carriage and wagon builders are well employed, and gradual expansion continues in the machine-tool section. Electrical engineering firms are, on the whole, moderately busy, agricultural machinery is in good demand, but the motor industry is engaged rather on export than home orders.

Cotton.—Our Manchester correspondent writes:—The trade done in cotton yarn and cloth during the past month has not been so large as in the previous four weeks. Many leading buyers have recently shown more disposition to act with caution, and the stiffer prices of spinners and manufacturers which are a result of the trade improvement are being resisted. The opinion evidently prevails that if orders are held back, more favourable opportunities of purchasing will prevail in the near future. The cotton crop in the United States continues to do very well, and there is a tendency to increase estimates of the yield, there being every probability of a production of over 13,000,000 bales. Consumption, however, is increasing, and freer buying is adding strength to the price of article. The Egyptian cotton crop has been estimated by the Alexandria Produce Association at 6,970,000 cantars. It is feared, however, that the shortage of Sakellaris will be a serious matter for Lancashire spinners. The demand for India has fallen off. Buyers are content to accept prices against old contracts without giving out further bids to follow on. The general trade conditions on the other side, however, are no worse, and it is believed that the lull will be temporary. Favourable developments in China are slow in taking place, and business continues to be restricted to sorting up lots. A considerable trade has been done for the Near Eastern outlets, quite active buying being reported for Egypt, Turkey, and the Levant. Rather freer operations have also occurred for the markets of Central and South America. Some improvement has shown itself in the home trade demand, and business has been rather healthier for some of our colonies. The American section of the spinning branch of the industry is now passing through a rather critical period. It is believed in some quarters that production is being increased too rapidly. The mills are at present working 32 hours a week, but by virtue of a ballot taken recently 30½ hours will be worked from the beginning of December. Demand has been on a smaller scale, and some spinners are beginning to lose ground. A fair amount of activity has shown itself in yarns for India and Germany. Quotations for Egyptian spinnings remain firm, but in certain quarters high prices are checking trade.

Woollen and Worsted Trades.—The “Bradford Chamber of Commerce Journal” states:—The rise in the value of fine wools and tops which followed the opening of the Australian season proved to be too rapid, and it went much too far to receive the sustained support of the consuming centres. Higher prices were paid in London than at the various sales in the Commonwealth. It is quite certain that manufacturers have not made prices for cloth which bear anything like a remunerative relationship either to the Australian or the London basis for wool.” Trade in the West Riding has been on quiet lines. Business in tops has been of slightly greater volume, but the piece goods trade is uneven. While general conditions remain steady rather than brilliant, a “sentimental” improvement is observable in most sections.

Boots and Shoes.—The volume of trade is satisfactory on the whole, although orders for next spring have not yet come in to the extent anticipated.

Pottery.—The Christmas demand is the best recorded since 1921, and in some potteries overtime is being worked. Stocks are believed to be running low in many cases, particularly the higher grades, and the general outlook is better than for some time past.

Shipping.—The volume of space chartered during recent weeks has fallen short of the high level established during September, with shippers inclined to adopt a waiting policy, and fluctuations in grain prices tending to restrict forward chartering by merchants. The *Economist* Freight Index Number showed, however, a further rise of 5 points during October, the figure for that month, 115.6, comparing with 110.5 in September last and 107.9 in October, 1924. A substantial amount of idle tonnage has lately been requisitioned, and it is doubtful whether freights can, during the remainder of the year, be raised to any materially higher figure by grain movements.

UNITED STATES OF AMERICA.

The decisive victory of President Coolidge is accepted as a "bull point," mainly because of the new element of "stability" in the political situation which it infers. Many important economic problems as regards taxation, transport, tariff, and financial policy were involved in the issue, and the slow, though perceptible, improvement of the last two or three months would have been much more plainly marked but for political uncertainty as to the future. The iron and steel trade has felt the full effect of this uncertainty, but the corner seems to have been turned, and production is slowly reaching a more profitable basis. The mill consumption of cotton in New England and the South was 22 per cent. higher in September than in August, though less than in any corresponding month for the past three years. Automobile production is again expanding, and building operations remain at a surprisingly high level. Employment, wages, and prices are all moving upward, more or less definitely, and matters generally seem to be shaping for greater all-round activity.

(Continued on page 44.)

ITALY'S ECONOMIC POSITION—Continued.

counteracted by conditions of more continuous employment. The number of unemployed, which had reached its maximum of 606,819 in January, 1922, and oscillated in 1923 between a maximum of 391,974 in January, and a minimum of 178,912 in August, was reduced in 1924 to a maximum of 280,775 in January, and to a minimum of 117,963 in July (in August, 118,955). Emigration is increasing, in spite of American restrictions, the excess of emigrants over returned men being 165,172 in 1921, 188,102 in 1922, 284,475 in 1923, and 163,322 in the first seven months of 1924.

On the whole, it seems that more continuous employment, and probably the larger number of members of the family which find employment, permits a higher level of living to the majority of workers and their dependants. The *per capita* consumption of wine, in a number of the most populous cities, increased from 40 litres in 1913 to 50 in 1923; of beer from 2.19 to 3.19 litres; of edible oils from 19 to 29 kilograms; of fresh meat from 14 to 21 kilograms; of salted meat from 4 to 19 kilograms; of sugar from 5.31 to 7.72 kilograms; of coffee from 0.615 to 1.263 kilograms; of tobacco from 0.615 to 0.709 kilograms; while the number of lamps for electrical illumination increased from 0.27 to 0.48. These indices of increasing well-being go far to justify the assumption that, in spite of political uncertainties, and the arduous struggle for a return to a normal condition of public and social life, the foundations of Italian economics are strong, and the outlook for the future is promising.

Nov. 19,
1924.

ITALY'S ECONOMIC POSITION.

BY LUIGI EINAUDI.

THE financial year 1923-24 closed with a deficit of 623 million lire, against an estimate of 2,616 million lire. In the first three months of the current year the yield of taxation has continued to expand. This increasing ability of taxpayers to pay has made the condition of the exchequer almost affluent, the effective income in the three months in question (July to September, 1924) being 3,894.6 million lire, against an effective expenditure of 3,622.7 million lire. These figures do not infer that the State budget has reached equilibrium, as certain disbursements may have merely been postponed. But they have an important meaning for the money market, for while the public exchequer, with its issues of bonds and exchequer bills, absorbed, in the financial year 1921-1922, 7,040 million lire from the private savings, and in 1922-23 3,237 millions, in the financial year 1923-24 bills and bonds up to 1,087 million lire were repaid, and in the three months from July 1st to September 30th the internal debt was further by 567 million lire.

This is, perhaps, the dominating factor in the present economic situation of Italy: the State is no more the greatest, and almost the only, consumer of current savings; it is refunding to the money market part of the sums previously received. Private savings, which found, in the war and after war years, an easy harbour in the continuous State issues, are obliged to find employment in agriculture, industry, and trade. The impetus which industry received during the war from State war demands was spent in 1920; after two years of uncertainty and social commotion, 1923 saw a return of abundant money due to the new factor in the capital situation.

Another potent element in economic progress is the increasing stabilisation of the lira. The increasing fixity of the gold value of the national currency, and the decreasing importance (owing to death or passage to productive occupations) of classes interested in the appreciation of the lira have induced many people to take heart of grace. The fear of Bolshevism, meanwhile, has vanished; the values of land, houses, and shares in joint-stock companies have risen in proportion. The average price of joint-stock company shares rose from 100 in April, 1922—perhaps the worst of all months on the Italian bourses owing to the prevalent Bolshevist fever—to 213.6 in October, 1924. This movement of capital prices put millions in the pockets of investors and speculators.

Savings deposits, which amounted to 28,126 million lire at June 30, 1922, increased to 32,333 millions at June 30, 1923, and to 35,000 in June, 1924. Net investments in joint-stock companies, which were 955 million lire in the year 1922, rose to 2,088 millions in 1923, and touched 2,300 millions in the first six months of 1924. Failures unfortunately increased, also, from a monthly average of 47 in 1918 to 49 in 1919, 53 in 1920, 149 in 1921, 305 in 1922, 474 in 1923, and 612 in the first nine months of 1924. In order to appreciate this movement, one should remember that in the war years failures were almost nonexistent, and that the present figures are a return to the old monthly average of 616 for 1913, and represent, probably, a more true index of the necessary elimination of the economic struggle.

As an instance of the effects of the growing influx of new savings in the industry, we may quote a few figures relating to the electrical industry. In the year 1898, the acting KW. were 87,000; in 1908, KW. 426,000; in 1918, KW. 1,240,000. At present there are in progress such a number of new installations, that the KW.

acting in 1928 may be estimated, even excluding future additions, at 2,341,000. The consumption, from KW.180,000,000 in the year 1898, rose to 1,000,000,000 in 1908, to 2,300,000,000 in 1915, to 4,120,000,000 in 1917-18, decreased to 3,830,000,000 in 1919-20 owing to social unrest, and may be estimated at 5,500,000,000 in the present year. The capital invested from 200 million lire in 1898, rose to 3,000 millions in 1924.

Only for agriculture we have up-to-date statistics of production. The year 1924 was unfortunate; 4.64 millions tons of wheat were produced, against 6.12 in 1923, and 7 millions of vine grapes, against 8.3. A partial compensation can be sought in the increase from 1.34 to 1.63 million tons in the yield of mulberry leaves (cocoons 42,500 to 49,500 tons), from 0.52 to 0.56 in rice, and from 2.26 to 2.6 in maize production. Higher prices have largely compensated the agriculturist for the smaller production, which, compared with the pre-war average of 1909-1914, is not so unsatisfactory as may be judged by comparison with 1923, which was an exceptionally bountiful year; the percentage of 1924 production on the 1909-1914 average being 94 per cent. for wheat, 98 per cent. for vine grapes, 150 per cent. for mulberry leaves (118 per cent. for cocoons), 114 per cent. for rice, and 101 per cent. for maize.

Current figures of industrial production may be had only for goods subject to excise, beer production rising from 1,187,508 hectolitres in the financial year 1922-1923 to 1,466,507 in 1923-1924; coffee substitutes from 7,804.4 to 8,351.8 tons; sugar from 270,279.4 to 318,987.3 tons; illuminating gas from 259.1 to 292.6 million cubic metres; electrical power consumed from 4,721.4 to 5,390.5 kilowatt-hours. Figures for metallurgical production are more belated; coke pig-iron produced in 1923 amounted to 218,039 tons, as against 140,211 in 1922; electrical-made coke to 15,704 tons, against 14,401; homogeneous iron and steel to 1,141,761 tons, against 981,419; lead to 17,131 tons, against 10,709; zinc to 3,684 tons, against 3,082.

The foreign trade figures show that Italy is gaining ground in outside markets as regards agricultural products and the output of the textile, rubber and motor-car industries. These are the most progressive industries in our country. I doubt very much, however, whether the voice of these industries, which should be mostly a Free Trade voice, will be able to make itself heard, against the potent Protectionist interests of the heavy iron and steel industries, in the negotiations for the conclusion of a Treaty of commerce with Germany, a Treaty which will fix the character of other most important commercial treaties to follow.

It is impossible to make an exact estimate of the real condition of the working classes. Statistics of wages are too old to be of much use. According to Mortara's index, wages increased from 100 in 1913-1914 to 480 in 1923, keeping approximately in touch with the lessening purchasing power of the lira. If we take 100 as the cost of living for a working family of 5 (2 adults and 3 children) in Turin in the first six months of 1914, we have the following minima and maxima after July 1, 1920 :—

Minimum.		Maximum.
1920.....	July.....	384.4 .. December.. 465.6
1921.....	".....	404.7 .. March..... 472.2
1922.....	April.....	424.5 .. January... 465.6
1923.....	March.....	435.8 .. December.. 466.7
1924.....	June.....	462.1 .. October... 492.9

The maximum in the cost of living after August 1, 1924, was reached in October, 1924. This ominous feature is

YIELD OF FOOD CROPS IN THE NORTHERN HEMISPHERE.

The figures which follow are supplied by the International Institute of Agriculture, Rome, and show, in thousands of metric tons, the latest estimates of this year's food crops in all countries north of the Equator for which returns are available. The percentage column— are calculated on the basis of the original data, of which only a summary is given here.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 38.

BRITISH EMPIRE.

Unfavourable October weather delayed October threshing operations in Canada, and has affected the grading of some parts of the crops. The latest yield estimate for wheat is 272 million bushels, as against 474 millions last year, the yield per acre being 12 bushels against 21 bushels last year. Oats and rye also show declines, but barley and flax-seed a slight increase. A somewhat better feeling prevails in industrial circles, the textile industry, in particular, showing improvement, but seasonal causes seem to be mainly responsible. Late August and September rains, at short intervals, have induced an optimistic feeling over most agricultural and pastoral areas in Australia, where high wool and wheat prices are producing all the outward and visible signs of prosperity. South African business has been quiet, unemployment continuing on a fairly considerable scale. Favourable features are the continuance of high gold production, the good rainfall some weeks ago, which brought relief to many parts of the Orange Free State and Natal, and a favourable start to the wool season.

SOUTH AMERICA.

Rainfall has been deficient in the Northern and Western, though fairly satisfactory in the Eastern areas of Argentina, linseed being the crop most affected by these conditions. The country is expecting a much more favourable trade balance this year, imports for the first nine months being back at the 1922 level, and exports quantitative increases over 1923, varying

between 15 and 85 per cent., the only exception being wool, exports of which have fallen by 15 per cent. Chilean conditions are steady. Brazil is likely to benefit from the phenomenal rise in coffee prices during the last three months, but as a "short" crop is in prospect the net gain is hardly likely to be considerable.

EUROPE.

French metallurgical industries have participated in the upward movement already noted in Great Britain. The woollen industry is more active, after a quieter spell during October. Competition for new business remains keen in the Belgian iron and steel trades, but the glass and textile industries of that country are rather more active. The German economic situation shows no marked improvement. The flotation of the Gold Loan does not appear to have made the obtaining of private loans overseas any less difficult than before, and the coming General Election is an unfavourable influence. Dutch conditions continue to show steady progress. The suspension of Den Norske Handelsbank has happily not affected Norwegian finance or industry to any great extent. In Austria the financial and economic crisis continues, though less acutely, and unemployment is still on the increase. A noteworthy re-activity, is reported from Spain, and despite political complications, Italian trade remains brisk throughout almost the whole industrial field. An appreciation of Italy's general economic position is given elsewhere in this Supplement.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, DECEMBER 27, 1924.

No. 19.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

AN undoubted improvement in trade conditions during the last few weeks is to be inferred less from published statistics than from the decidedly more hopeful feeling which pervades almost every branch of industry. One can scarcely claim that the bright hopes of the early spring of 1924 have been realised—during the summer and early autumn, indeed, industry was losing rather than gaining ground. But the New Year is being faced with a degree of confidence which few would have ventured to predict as recently as two months ago. The fact that the Stock Exchange value of industrial shares has risen, since the General Election, much more rapidly than that of "gilt-edged" and fixed-interest stocks, bears witness to the existence of optimism among the members of the investing public comparable with that of manufacturers and traders.

The present year has, it is true, contributed very little to the relief of the national unemployment burden. Despite a slight decline in the Ministry of Labour's figure during November, 11 per cent. of insured workers are still recipients of unemployment relief, the total, at 1,233,000, showing a drop of only 71,000, as compared with November, 1923. The precise value to be put on these figures is by no means clear, since more than one change has been made in the conditions of eligibility during the year, and the Ministry's returns are far less clear than one could wish.

Outdoor relief, on the other hand, is of less formidable dimensions than a year ago, and as the trend of wage rates has been upwards this year (in the 11 months ended November 30th last 2,850,000 workers were returned as receiving increases averaging 4s 1d a week each, against 500,000 who suffered a decrease of 2s 7d), the workers' lot would appear to be rather a happier one this Christmas than last, in spite of the rise in living costs. The returns of overseas trade are noteworthy for the continuance of a heavy "visible" import balance, the average monthly excess for the eleven months of 1924

being nearly £27 millions, against £16 millions in 1923. One explanation of the failure of exports to rise in proportion to imports may be inferred from the fact that a rise of £33 millions in our shipments of manufactured goods has been largely offset by a decline of over £26 millions in the value of coal exports. The volume of railway and shipping traffic apparently suffered a seasonal decline last month. Of the various financial indicators, the most encouraging are the London and provincial cheque-clearing figures, and the discount totals of the London clearing banks, both of which are well above the level of November, 1923.

The iron and steel industries tend to be quiet at this time of the year, when stocktaking considerations assume unusual importance; but the recent course of business has afforded some ground for predication an appreciable expansion of output in the early months of 1925. Engineering conditions are still irregular, and in many ways unsatisfactory, but orders recently placed by the railway companies have had a beneficial effect. Cotton is not quite so active as of late, but confidence of better times in 1925 remains strong. Woollen spinners and manufacturers are by no means easy in mind as a

result of the continued upward curve of raw wool prices. Shipping tonnage is in less active demand, but the outlook for 1925 is not at all unpromising.

As regards conditions abroad, the United States is looking forward to a steady expansion of trade in the coming year. Among the countries of the Empire, Australia and New Zealand can claim to be classed as "prosperous," and the same may be said of Argentina among South American States. In Europe, German economic conditions have taken a turn for the better, and the same statement applies, at the other end of the world, to Japan. The following notes on conditions in various

trades and countries call attention to some of the most striking tendencies:—

HOME INDUSTRIES.

Iron and Steel.—While nothing has occurred to check the decidedly more hopeful feeling referred to a month ago, business has taken a quieter turn, in view of the approach of the Christmas holidays and the usual stocktaking period. Manufacturers are moderately well employed, and though little new business is expected to pass till the turn of the year, orders on hand are sufficient to ensure production at or about the current volume up to the end of January. The average daily output of pig-iron in November was the highest during any month since July, and, in the case of steel ingots and castings since May, although falling in both cases below the figure for earlier months this spring. The total furnaces in blast increased by two during November, and now stands at 173, as compared with a "peak" figure since 1921 of 223 in May, 1923. We give below an estimate of the total production of the United Kingdom in 1913, 1923, and 1924, based on data at present available:—

	Pig-Iron. Tons.	Steel Ingots and Castings. Tons.
1913	10,260,000	7,664,000
1923	7,440,000	8,481,800
1924	7,340,000	8,350,000

Pig-iron prices are firm. The demand for hematite is steady, and remaining stocks are being cleared satisfactorily. Steel orders emanate chiefly from the home market, the inquiry for constructional steels having lately been a strong feature. Foreign competition is less acute, French and Belgian makers being pre-occupied with the German market in anticipation of tariff factors which may arise next month, while domestic demand in Germany is taking a larger portion of that country's supplies. The tinplate trade is slightly better, after recording a surprisingly widespread decline in employment last month, and a few orders have lately been received for delivery up to the end of March.

Coal.—The demand for steam coal continues to show signs of improvement, and the export trade has been better during the last week or two than the Board of Trade figures for November would appear to indicate. Shipments from South Wales have reached something like 90 per cent. of the volume of last spring, and colliery employment in that area has improved. Taken all round, however, sentiment is more optimistic, as is evidenced by the tendency of some collieries to demand higher prices for forward contracts.

Engineering.—The engineering trades as a whole have improved their position during the last few weeks. Large orders placed by British railways have had a sensible effect on employment in certain branches, the locomotive trade in particular being fairly busy. The Horwich works of the L.M.S. Company have just resumed full-time operations, after working short-time since the summer, and contracts, especially for wagons, have been placed with several outside firms. A few new shipbuilding orders have been secured on the Clyde, though not sufficient to maintain activity at its recent comparatively high volume, and the outlook for 1925 cannot be described as particularly bright. Opinion is divided as to the effects likely to follow the extension of the Trade Facilities Act to shipbuilding. Business continues brisk in electrical factories in the Midlands, makers of wireless accessories being particularly busy. One large concern with works at Manchester has secured an important contract for South Africa, and another in connection with London Electric Railway extensions. The textile machinery industry remains depressed, but better things are expected as a result of renewals in Lancashire factories, following the recent increase in the volume of business in the cotton trade. Machine-tool makers were fairly well occupied during November, export demand being in evidence. The October show brought considerable new business to the motor trade, and overtime has been worked in certain Coventry factories. The demand for motor-cycles is still of large dimensions, but has fallen off to some extent in the pedal bicycle trade.

Cotton.—Our Manchester correspondent writes:—The business put through in the cotton industry this month has not been on a large scale, and most buyers, owing to the anticipation of lower values, have not been in the mood to give out big contracts to producers. In small lots, however, the turnover in yarn and cloth has been fairly encouraging, and, on the whole, spinners and manufacturers have maintained their better position fairly well. An event of importance has been the substantial advance in the price of Egyptian cotton, and this movement has had an adverse effect upon trade in cloths made from fine yarns. Further progress has been made by the cotton crop in America, and there is now every likelihood of the growth being nearly 13,500,000 bales. There is a difference of opinion with regard to consumption, but the requirements of users will probably be about 12,400,000 bales, against 11,200,000 bales last season. A further extension has been

made in working hours in the spinning mills using American cotton, and from the beginning of December production has been curtailed by only 8½ hours per week. The members of the Masters' Federation have, however, decided that conditions do not warrant a return to full-time working. Some difficulty is now being experienced in clearing the larger production, and the margin of profit for spinners has been narrowed. Business in export yarns has been very irregular, but, on the whole, rather more has been done for India and the Continent. Foreign inquiry for piece goods has again been extensive, but in numerous instances the offers from buyers have been too low, and there has been a slow response from our customers to Manchester rates. The Indian market has been quieter, although during the past week there has been some improvement in the sales in grey staples and lighter fabrics. A feature of interest has been the revival of buying for China, and an encouraging turnover has been reported, especially in white goods. It is estimated that on November 30th the spinning machinery of Lancashire was being operated at about 85 per cent. of capacity, as against only 60 per cent. a few months ago.

Woolen and Worsted Trades.—Wool prices have continued to advance, and Bradford buyers have been compelled to cover part, at least, of their requirements at a higher figure than they were willing to contemplate a few weeks ago. Spinners have increased their output, but profit margins are still extremely narrow, and if the advance in wool prices continues far into 1925, some restriction of business will be inevitable. Weavers report increased activity, and while retail demand is on fairly generous lines, merchants show a natural disinclination to buy very far forward.

Boots and Shoes.—The trend of trade is regarded as favourable in every way, many orders having been placed this month which are usually reserved for the new year. The export trade remains firm.

Pottery.—Home demand exhibits a seasonal falling away, and unemployment is tending to increase slightly. The export side of the industry is better situated, though the American market has lately proved disappointing.

Building Trades.—Employment during November was good on the whole as regards skilled workers, though still slack so far as unskilled labour was concerned. Weather conditions were responsible for short-time working in some districts. The slight decline in employment which occurred was entirely seasonal in character, and conditions show a marked advance on those of November, 1923.

Chemicals.—Despite seasonal slackness, the outlook for the new year is reasonably good, especially as regards industrial chemicals. Consumption of heavy chemicals is expected to be stimulated by price changes which are impending. A strong demand for potash products has been a leading feature of recent weeks.

Shipping.—Conditions in the shipping world are a shade less satisfactory. Our freight index number declined from 115.5 in October to 112.8 in November, but this decline was partly seasonal, the "peak" of harvest chartering for the Northern Hemisphere having been passed. The position remains fairly sound, however, demand for tonnage to load in Australia and the Plate being expected to attain substantial proportions in the new year. The revival, such as it is, in the export coal trade has been welcomed by shipowners.

UNITED STATES OF AMERICA.

Steadily increasing confidence is attested in several ways at the moment. Stock Exchange activity has reached, and maintained, an exceptionally high level, observers in close touch with the markets being inclined to believe that the majority of orders coming forward represent, not speculative activity, but genuine investment demand, and that some of the "records" established of recent weeks are destined to become the commonplaces of the next few years. With the balance between industrial activity and agricultural purchasing power better adjusted than was the case 12 months ago, America seems likely to resume in 1925 the process of developing her immense internal resources, which suffered a slight temporary check in 1924. At the end of November the *Iron Age* reported a noteworthy broadening in the demand for iron and steel. The unfilled orders of the Steel Corporation increased during the month by a greater amount than in any month since April, 1922. The railways "remain conspicuous on steel takings; general steel building work is of surprising proportions; a slow gain from the agricultural implement trade, until that is now on a 60 to 70 per cent. manufacturing rate, is reported; and automobile companies are placing liberal contracts with parts makers." All this points to a healthy state of affairs in many parts of the industrial field. A measure of revival in the cotton and silk textile industries is also indicated by recent reports. Prices are, on the average, fairly stable. Retail business is still on a "hand-to-mouth" basis in the East, but Western dealers are said to be showing a disposition to stock their shelves for a period of some months ahead.

(Continued on page 52.)

THE WORLD'S FOOD CROPS SINCE THE WAR.

WHEAT, RYE, AND BARLEY.

THE rise in cereal prices of recent months has focused considerable attention on problems relating to the world's food supply. A brief statistical review of production since the war, compiled mainly from data given in the Year-Book of the International Institute of Agriculture*, may not, therefore, be out of place. The totals are in every case exclusive of Russia, the pre-war figures for the Russian Succession States (Esthonia, Latvia, Lithuania, Poland, and Roumanian Bessarabia) being added to those for the rest of Europe for purposes of comparison with post-war years. Further, the total of crops harvested in any given calendar year in the Northern Hemisphere have been added to that of the following year for countries of the Southern Hemisphere, thus bringing the "annual" total into line with prevailing trade practice.

WHEAT.

The "noble cereal" naturally claims pride of place, and the post-war years have witnessed a remarkable expansion in the area down to this crop, thanks to which the virtual exit of Russia as an exporting country has been largely made good.

SOWN AREA (EXCLUDING RUSSIA).
(In Millions of Hectares.)

	Average, 1909-13.	1920.	1921.	1922.	1923.	1924.
Europe	29.3	24.5	26.0	26.1	26.5	26.5
U.S.A.	19.1	24.7	25.8	25.2	23.6	21.8
Canada	4.0	7.4	9.4	9.1	9.2	9.1
India	11.8	12.1	10.4	11.4	12.5	12.6
Argentina	6.5	6.1	5.8	6.6	7.0	7.2
Australia	3.1	3.7	3.9	4.0	3.8	4.0
Other countries	6.0	6.0	6.4	6.1	6.5	..
World total	79.8	84.5	87.6	88.5	89.1	..

* One hectare = 2.47 acres.

Final figures for the past year are not available in the case of all countries, though the general impression seems to be that the fall in the area down to wheat in America has not been made good by slight increases elsewhere. The European area has improved steadily—though very slowly—since the war, but is still below the average for the years 1909 to 1913. The area in the United States, on the other hand, has fallen from over 30 million hectares in 1919 to under 22 million hectares this year—a figure still over 14 per cent. above the pre-war average.

The increase in the total yield has been even more marked—at any rate, down to the current year—when the poor showing of the European and, especially, of the Canadian harvest was not compensated by a really excellent crop in the United States:—

PRODUCTION (EXCLUDING RUSSIA).
(In Millions of Quintals.)

	Average 1909-13.	1920.	1921.	1922.	1923.	1924.
Europe	370.5	258.9	331.5	284.5	343.3	..
U.S.A.	187.8	226.7	221.8	236.1	213.8	232.5
Canada	53.6	71.6	81.9	108.8	129.1	73.9
India	95.8	102.8	68.1	99.9	100.5	99.1
Argentina	40.0	42.5	52.0	53.3	67.2	(50.2)
Australia	24.6	39.7	35.1	29.8	34.2	..
Other countries	49.8	45.9	55.5	47.8	57.5	..
World Total	822.1	788.1	845.9	860.2	945.6	..

* A Quintal is one-tenth of a metric ton, and is equal to 1.97 cwt.

Despite the increase in the area sown, the average yield per acre, save in the Argentine and Australia, has been less of recent years than in the pre-war period, though in 1923, which constituted a record, the earlier figures were exceeded in most cases, and, above all, in Canada. In 1924, however, there was a reaction, save in the case of the United States, where a smaller area yielded a

* International Institute of Agriculture, Rome, Year Book, 1923. Price 8s.

bigger crop than in the previous year, and the average yield per acre was greater than the pre-war figure.

The 1924 total for Europe is not yet available. Returns from 23 countries, however, amount to only about 87 per cent. of the previous year's crop. The estimates for the Argentine are also disappointing.

RYE.

As a substitute for wheat, rye is the most important bread crop of certain European countries:—

SOWN AREA (EXCLUDING RUSSIA).
(In Millions of Hectares.)

	Average, 1909-13.	1920.	1921.	1922.	1923.	1924.
Germany	5.3	4.3	4.3	4.1	4.4	4.3
Poland	5.1	2.9	3.6	4.5	4.6	4.4
Other European Countries	8.1	7.2	7.0	7.0	6.9	..
North America	0.9	2.0	2.6	3.6	2.7	2.1
World's total	19.6	16.6	17.7	19.3	18.8	..
Russia	24.7	19.1	19.4	18.5	21.6	..

The great importance of this cereal in Russia makes it essential to give some sort of estimate for the Soviet territory. The figures themselves are not, however, very reliable, though it is clear that the area remains appreciably less than in pre-war days.

YIELD (in Millions of Quintals).

	Average, 1909-13.	1920.	1921.	1922.	1923.	1924.
Germany	101.3	49.3	68.0	52.3	66.8	60.0
Poland	57.5	18.7	42.6	50.1	59.6	38.2
Other European countries	92.2	72.0	86.1	79.8	84.3	..
North America	9.7	18.2	21.1	34.5	21.9	20.4
World's total	261.3	158.8	218.6	217.9	234.2	..
Russia	186.8	86.6	55.7	66.0	..	..

The yield per acre has been, in the main, well below that of pre-war days, while the disparity between Russia's share of the total acreage and that of the total yield is very striking, particularly since the war.

BARLEY.

As in the case of rye, barley is cultivated almost entirely in the Northern Hemisphere, though the area down to this cereal has shown a slight tendency to expand:—

SOWN AREA (EXCLUDING RUSSIA).
(In Million Hectares.)

	Average, 1909-13.	1920.	1921.	1922.	1923.	1924.
Europe	10.9	10.3	10.4	10.6	11.0	10.5
North America	3.7	4.1	4.1	4.0	4.3	4.4
Asia	5.3	5.6	5.0	5.3	5.4	..
World's total	23.0	23.1	22.7	23.2	24.2	..

While the North American acreage remained practically unchanged in 1924 as compared with the previous year, the steady upward movement which has characterised European sowings met with a slight check last season:—

YIELD (EXCLUDING RUSSIA).
(In Million Quintals.)

	Average, 1909-13.	1920.	1921.	1922.	1923.	1924.
Europe	154.3	123.3	125.9	133.0	146.9	..
North America	50.1	55.0	46.7	55.3	59.9	62.1
Asia	57.3	61.4	53.7	58.9	54.9	..
World's total	285.5	256.6	254.2	264.4	290.7	..

Full returns are not as yet to hand, but it seems fairly certain that the European barley harvest in 1924 was smaller than that of the previous year, while Japan and Korea, at any rate, recorded an improvement.*

EXTRACT FROM THE ANNUAL REPORT FOR THE Year Ending 31st December, 1923.

Ordinary Life Section.

In this Section the number of Policies issued was 9,501 assuring £1,619,481, at a Yearly Renewal Premium Income of £70,172, the Single Premiums amounting to £9,455. The Premium Income for the year was £884,745 and the Funds were £1,800,411.

Industrial Life Section.

In this Section the Premium Income amounted to £758,635, being an increase of £290,326 over the previous year. The Funds being £703,149. THE NUMBER OF INDUSTRIAL LIFE POLICIES ISSUED DURING 1923 WAS 562,265, ASSURING THE SUM OF £10,142,168.

Fire Section.

In this Section the Premium Income amounted to £159,099, which represents an increase of £7,685 compared with the previous year. The claim ratio for the year is 44.03 per cent. of the Premium Income. The Fire Fund now stands at 53.28 per cent. of the Premium Income.

Accident and General Sections.

In these Sections the Premium Income amounted to £249,799. The claim ratio for the year is 42.59 per cent. The combined Fund for the Accident and General Sections now stands at £207,286.

GENERAL RESULTS OF THE YEAR.

In the sections devoted to life, fire, accident and miscellaneous and marine insurance we give details concerning the results of last year as shown by the published accounts of the British insurance offices. In this general introduction we shall attempt to bring these results together and show how the leading companies fared when the whole of their operations are considered. Fire insurance was, on the whole, fairly profitable last year, not perhaps very good, yet considerably better than in 1922. The life assurance valuations showed in almost every instance good surpluses, and although, in the case of proprietary companies, the greater part of the life profits go to participating policyholders, contributions to profit and loss were in some cases quite substantial. Accident and employers' liability insurance was overshadowed by the unfavourable situation in the United States, which will be explained elsewhere. Marine insurance has declined from its high estate of the war years, and is now not a fertile source of profit.

It is comparatively simple to arrive at the underwriting results in fire and accident departments. One takes the premiums, the claims paid and outstanding, the expenses and commissions, and makes the generally agreed allowance of 40 per cent. of the premium income as the necessary reserve for unexpired risks. The surplus for a year, in some instances the deficiency, is then reached by a simple calculation. But marine accounts are kept open for two years, and sometimes three years, and no one outside the office of a company knows precisely how an account finally results. For the purpose of our estimate of marine profits we have taken the transfer to profit and loss made by the companies themselves. The proprietors' shares in life profits are also taken at the figure stated in the profit and loss accounts. Some companies carry the whole amount revealed by a valuation to profit and loss, others transfer a portion annually. In the statement which is printed on this page we have taken the companies' figures for marine and life profits and made our own estimate, on the lines described above, for the fire and accident profits or deficiencies.

In the profit and loss accounts of the composite insurance offices there are two main sources of profit and two main items of outlay. The sources of profit are underwriting and net receipts from interest, after deducting interest upon debentures and income-tax. The two principal outlays are British taxes on profits and dividends provided for shareholders. Expenses charged to profit and loss have been deducted from underwriting profits, and the interest receipts include the whole net interest received on funds other than life and capital redemption reserves. The funds other than life and capital redemption reserves, taken as given by us, is available for dividends to net interest, as given by us, is available for dividends to shareholders. The provision for taxes includes in some cases foreign and colonial taxation, not charged to under-

writing—as it ought to be—though as a general rule the items in the third column relate to British income and corporation taxes only.

Scottish Union	151,914	117,949	118,914	115,500
State	37,846	32,795	14,595	30,750
Sun	278,761	162,631	35,804	175,275
Yorkshire	123,244	91,809	23,343	105,928

Some explanation must be given in detail. The Alliance received as an addition to underwriting profits the proprietors' share in a large life surplus. It also received a refund of excess profit duty (less taxes on profits) of £77,331. So that there was a receipt instead of an outlay under "provision for taxes." The Alliance, Scottish Union, and the Yorkshire all celebrated the completion of a hundred years of existence by allotting a centenary bonus to their shareholders. The total draft on general reserve made by the British Dominions company was £650,000. We have taken £150,000 of this as directly applicable to underwriting—the £150,000 carried to marine account. In addition, £200,000 was transferred from general reserve to profit and loss. The further sum of £300,000 taken from general reserve to meet bad debts and exchange losses was not included when we arrived at a net underwriting deficiency of £133,419. The deficiency of the Employers' Liability Corporation was due to losses on workmen's compensation business in the United States. The sum of £227,082 was brought in from the general account. The General Accident Company (of Perth) had to provide £104,172 for losses on exchange, but, as with the British Dominions, we have not charged this sum to underwriting.

It will be observed that the net receipts from interest in Column 2 go a long way to meet the outlay in dividends given in Column 4. It is the established policy of the sound insurance companies to base their dividends upon interest and not on the underwriting results of particular years. The underwriting profits shown in Column 1, less the provision for taxes in Column 3, then become available as additions to the reserves, and are invested so as to produce interest in the future. As the receipts from interest increase, so the dividends paid to shareholders increase. A complete analysis of the results of the year 1923 shows that the companies, taken as a whole, did not earn, net, in underwriting profits less taxes, more than from 4 to 5 per cent. of their premium incomes.

LIFE ASSURANCE.

NEW BUSINESS AND EXPENSES.

A good volume of new business at a moderate price is the desire of every manager of a life assurance office, and the object of his eager search. Every year policies become claims by death and by maturity, and unless there be a constant flow of healthy new lives to take the place of those who die, or who draw their endowment assurances in cash, premium incomes tend to fall—and every manager or actuary hates to see his premium income fall. The old pre-war standards have gone. They were considered good enough in their day, but the bumper year of 1920 set a new standard, a standard beyond pre-war imaginations, and every office now burns to maintain, and if possible surpass, the peak of 1920. That is as regards new business. In another and less desirable sense the bumper year set up a record. Prices were at their highest and most extravagant level, and life office expenses and commissions went up with prices, in spite of most strenuous efforts to hold them back. Since then prices have fallen, and expenses, though they have scarcely fallen in proportion, have come back with them. The year 1923, of which we publish details for some 48 life assurance companies and life departments of composite offices, was as good for new business, and in many instances, better than 1922, and was not much below the peak of 1920. In almost every instance expenses showed a lower ratio to premium income than in 1922, and a substantially lower ratio than in 1920. So that taking the figures all round, the managers and actuaries were successful in getting their good volume of new business at a lower cost than they have been obliged to pay for it in recent years. In both respects, in volume and in reduced cost, the year was favourable.

When we reflect that last year this country was still struggling through the depression in general trade which followed the boom of 1919 and 1920, that all salaries based on the so-called "cost of living" were being reduced, and that the earnings of professional men were on the down grade, it is remarkable that so much money should have been found to invest in life assurance. And it is the more remarkable when we bear in mind that the figures of new business set forth in our tables almost all came from the United Kingdom. The number of British life offices which seek foreign business could be counted on the fingers of one hand, and though several offices do seek life assurance in the Dominions, the efforts in this direction are small in comparison with their competition for the assurance of lives at home. Fire and workmen's compensation premiums are derived to a large extent from the United States, but America plays no part in British life assurance. Taken as a whole, British life assurance is British, and is confined to Great Britain and Ireland. And for this reason its yearly product of new business is not a bad test of the thriftiness of the professional and salaried classes in this country. It is even wider than that. The "ordinary" life departments of the industrial assurance offices are expanding rapidly—the Prudential last year issued policies for over twelve millions at an average of about £160 apiece—and are drawing in not only clerks and shopmen, but the more far-sighted of the weekly wage-earning classes. That is all to the good, for the cost of conducting an "ordinary" life department, with monthly or quarterly payment of premiums, is far less than that of running the best managed industrial office with its weekly collections. Policyholders, too, have the benefit of assuring on the co-operative with-profit scales, and, in these days of life office prosperity, of getting handsome rates of bonus distributions. We shall deal with valuations and bonus distributions in their own place, but it may be said at once that they were excellent, almost without exception. The dreadful days of depreciated assets are for the time over, interest earnings are higher than they were before the war, and though expenses are still much above pre-war levels, they show an admirable tendency to come down. Beyond a doubt, the success of the offices in keeping their new business figures near the peak of 1920—in the days of faith, for bonuses were then in a state of suspended

animation—that success is mainly due to the profitable results of valuations declared during the past two years. In 1920 the survivors of the Great War rushed at life assurance as an Act of Faith; to-day their faith has been made manifest in bonuses. And these young strenuous lives, which have come in during the past four years, have contributed in no small degree to the bonus results. They have assisted to reduce the rate of expenses, and to bring life office rates of mortality far below those of the general population, and much below those of the Nineteenth Century Tables, on which life office calculations are still based.

* For 1923 the figures include those of the Clergy Mutual.

THE NET EARNINGS FROM INTEREST.

Among the sources whence profits are earned by a life office, none are of greater importance than the margin of net interest actually derived from the funds, over the rate of interest assumed in the calculations made by the actuaries of the office. Suppose, for example, it is assumed in a valuation of liabilities that 3 per cent. net will be earned—a very usual assumption—and the actual rate, after deduction of income-tax, is $4\frac{1}{2}$ per cent. or more, then there is a margin for profits and bonuses of $1\frac{1}{2}$ per cent. or more per annum on the large funds. The lower the valuation rate of interest, and the higher the actual rate, the greater is the source of profit from interest. There are, of course, other factors, but none more important than this. A flow of sound new business at a moderate cost is essential, a low rate of mortality is highly desirable, but provided that full regard be had to the security of investments, no source of profit is more dependable than a substantial margin of interest earnings.

We emphasise this point with some particularity because our analysis of the interest rates of some 48 life offices shows that for last year the net rates were generally higher than in 1922, and nearly 10s per cent. higher than immediately before the war. The heavy writing down of funds during the bad years of depreciated assets had a considerable effect in raising the apparent rate of interest

earned, and as in these more favourable years funds are being revalued, and securities realised at a profit, the apparent rate will tend somewhat to decline. But apart altogether from apparent movements due to the valuation of investments there have been factors powerfully operating to increase the actual yield from interest. Funds have been invested for several years past at rates of interest much higher than was possible with adequate security before the war, and in the course of the past two years reductions in income-tax amounting to 1s 6d in the £ have taken effect. Life offices do not pay on their interest earnings the full rate of tax; they are allowed a rebate in respect of the expenses of management. Nevertheless, the reduction in the standard rate of tax has been a real benefit to them and to their policyholders. This will be seen if one compares in our table the net rates of interest earned in 1920 with those earned last year. Perhaps half of the improvement seen will have been due to the lowered rate of income-tax, and the other half to the general improvement in gross rates at which the funds are coming to be invested. As old investments or loans at pre-war rates have been paid off or realised, the money has been put out again at the higher post-war rates, and all the while new money—the increase in the funds year by year—has come forward for investment.

In 1914 the life offices earned net about 4 per cent. on their funds—taking the mean amount as at the middle of the year. Last year on their mean funds they earned fully on the average $4\frac{1}{2}$ per cent., and some did even better. The net interest earnings now are higher than they ever have been within human memory, and are probably higher than ever in the history of life assurance—except, possibly, in the primitive beginnings of the business more than a century ago. Valuation rates assumed in the calculations, on the other hand, remain pegged at 3 per cent.—in some cases at $2\frac{1}{2}$ per cent.—and any tendency that there might have been a few years ago to weaken the basis of valuations has passed away. With net interest earnings as they were during last year an assumed valuation rate of 3 per cent. gives an ample margin both for security and for the earning of profits from interest.

* Gross yield, excluding funds in reversions.
† For 1923 the figures include those of the Clergy Mutual.

INVESTMENTS IN GOVERNMENT SECURITIES.

We have introduced into the "Insurance Review" for this year a new feature, namely, a table setting forth the proportion of life funds invested by the offices in British Government securities, and in those of India and the Dominions and Colonies. Before the war a comparatively small amount was invested in this manner. The rates of interest were low, and life offices were under no urgent need to keep their funds in securities which could be realised rapidly. No "run" upon them was possible. No epidemic in the United Kingdom—even influenza in its first manifestations some thirty years ago—could exhaust their normal bank balances. So it came about that life funds were locked up in fixed investments, such as loans and mortgages and long-term debentures, and the few short-term investments available in those days were more sought after for the investment of fire funds upon which there might be a sudden unexpected drain.

But the war changed all that. When the country was calling urgently for money the life offices put practically the whole of their new resources into British Government stocks, both long and short, and though long-term Government securities, with their heavy depreciation at one time, became less desirable, the short-term Treasury bonds and bills continued to be favoured. A short-term gilt-edged security suffers little risk from depreciation; it can be bought or sold quickly and easily, and it yields a satisfactory rate of interest. If we take all the insurance offices in this country of every kind, an investigation shows that they hold upwards of 300 millions of British Government loans. And taking the life offices alone, about 40 per cent. of their total funds are invested in this way, viz., £214 millions out of £537 millions.

When, however, we come to detail, there are to be observed great differences between the practice of some offices and that of others. We had not ourselves realised how great these differences were until we prepared the table printed with this article. In so far as the employment of life funds is concerned, all life offices are required by law to keep them exclusively for their life business, and not to use them in any other way whatsoever. But they are not required to show how they are separately invested. Nevertheless, it is the practice of most composite companies to publish a separate balance-sheet for their life funds, and in our table we have availed ourselves of this practice. We show the life assurance funds by themselves, whenever we have been able to do so—here and there some comparatively small other funds are included, because the investments are not separately stated—and the amount invested in British Government securities, together with the proportion which the securities bear to the total life funds. A column giving the proportion held of Indian and Colonial securities is added.

The differences in practice between the offices are then immediately and rather surprisingly revealed. The average holding in British Government securities is rather more than 40 per cent., yet we have a range from the 62.5 per cent. of the Scottish Amicable to the 8.9 per cent. of the Friends' Provident. As a general rough rule, the larger offices keep a greater proportion of their resources in Government stocks than the smaller offices. For example, the huge Prudential has over 68 millions invested in this way, and a proportion to total funds of 44.7 per cent. It is noticeable that the big and admirably managed Scottish mutual societies specially favour the securities of the British Government. The Scottish Amicable, with its 62.5 per cent., has already been mentioned. Then there is the Scottish Equitable with 54 per cent., the Scottish Widows with 55.8 per cent., and the Scottish Provident with 46.4 per cent. The English mutual societies invest rather less in Government loans than their Scottish rivals. The United Kingdom Provident has 35.6 per cent., the National Mutual 36.9 per cent., the National Provident 34.7 per cent., and the Norwich Union Life 32.1 per cent. Some of the proprietary offices show high percentages. There is the Commercial Union with 51.9 per cent., the Sun Life with 57.2 per cent., and the Standard with 54.6 per cent. The legal offices, with their great opportunities for putting money into well secured mortgages, show comparatively small regard for the securities of the British Government. The proportion of the Legal and General is no higher than

17.4 per cent., and that of the Equity and Law 21.8 per cent. Some of the divergences in practice are most puzzling. Why should the "Old" Equitable have no more than 14.7 per cent. of its funds in Government securities, while the London Life (with the Clergy Mutual) has 37.3 per cent.? We can but give the figures without venturing upon any attempt at explanation.

* Royal Exchange includes Bank of England stock.

Some important companies, with life departments, have not been included in the above table because they do not publish separate life balance-sheets. For these companies we have taken out the total assurance funds—including fire, marine, accident, and so on—and shown the total amount of Government securities held. The proportions given in this supplementary table are not comparable with those shown above. Fire funds, for instance, of the big composite offices are to a considerable extent invested and deposited abroad—especially in the United States—so that the proportion held of British Government securities to the total assurance funds may be expected to be lower than the proportion invested of the purely life funds.

MORTALITY EXPERIENCE.

There are three sources from which life assurance offices and their policyholders draw the profits and bonuses which accrue to them. We leave out of account the appreciation in value of investments and the profit on securities realised, since these improvements in capital are more properly to be regarded as reserves against depreciation or other contingencies than as a means of adding to the divisible surplus. We have already dealt with two sources of profit in this review, and will now pass to the third. Those two are a low rate of expenditure and a margin of interest earnings between the net rate actually realised and the rate assumed at office valuations of liabilities. The third source arises from a mortality experience more favourable than that shown by the life tables used in office calculations.

It is a fact well recognised that the death rates of the

BRANCHES AND AGENCIES THROUGHOUT THE WORLD. APPLICATIONS FOR AGENCIES INVITED.

general population of the United Kingdom at the several age groups are steadily improving. And there can scarcely be a doubt that the death rates of assured lives, carefully "vetted" and selected at the start of assurance, are also steadily improving. The most recent life tables employed by actuaries are drawn up from the experience of the British offices up to the year 1893. That experience relates, therefore, to the last century, and does not take account of any subsequent improvement in the health and longevity of the assured classes. Until a full investigation is made—as full as that which has recently been made into the lives of annuitants—it is not possible to say definitely how much longer-lived the customers of assurance offices are now than they were in the nineteenth century. But the reports of the companies, issued year by year, afford some indication that an improvement has taken place, and that it materially contributes to the valuation surpluses and to the divisible profits. The claims paid, claims arising from death, are almost always by a long way within the amounts allowed for by calculation from the British offices' tables. Of course, a large flow of new entrants, and an increase in medical skill in spotting under-average lives, may have much to do with keeping the death claims within the "expectation." An accurate analysis of the various factors at work, and their contributions to the apparent death rate, cannot be made, except perhaps by the actuaries of individual offices from the data before them. All that we can do is to give the results as announced, and leave the figures to speak for themselves. Their language is certainly significant.

ABSTAINERS' AND GENERAL.—This office states that, excluding war casualties, its mortality experience during the past 40 years has been 44.2 per cent. of the rates given in the tables.

ALLIANCE.—During the five years ended last December the claims paid at death were 74 per cent. of the amounts expected.

CLERICAL, MEDICAL AND GENERAL.—During the year ended June, 1923, the death claims were 58 per cent. of the amounts allowed for by the tables.

FRIENDS' PROVIDENT.—This office gives the average mortality for the past four years at 60 per cent. of the expectation, and the rate for 1923 as 66 per cent.

GENERAL LIFE.—Mortality during 1923 71 per cent. of that allowed for.

LEGAL AND GENERAL.—The death claims of this office in 1923 in amount were 62.9 per cent. of that expected.

NATIONAL PROVIDENT.—Last year's claims paid at death were 70 per cent. of the amount allowed for.

NORWICH UNION LIFE.—The corresponding percentage for this office was 66.9 per cent.

SCOTTISH AMICABLE.—The percentage of actual death claims to claims expected is given as approximately 72 per cent.

SCOTTISH LIFE.—The mortality was 64.7 per cent. of the amount shown by the tables.

SCOTTISH PROVIDENT.—The death claims paid last year were less than 72 per cent. of the amounts expected.

SCOTTISH WIDOWS'.—The death claims in 1923 were 64 per cent. of the expectation.

UNITED KINGDOM PROVIDENT.—In the temperance section the death claims paid last year were 48.8 per cent., and in the general section 82.8 per cent., of the amounts allowed for by the tables. For both sections taken together the mortality rate worked out at 62.5 per cent. of that expected.

VALUATIONS AND BONUSES DECLARED.

Since the turning point of 1920 the valuations of the life offices have become progressively more favourable, and those which fell to be made at the end of last year showed results which were excellent, almost without exception. Many of the offices which made bonus declarations had been obliged to carry forward their surpluses five and three years earlier. The revaluation and realisation of securities played some part in producing the surpluses, but the general policy has been to provide in the carryforward for capital improvements of this kind and to treat the appreciation of investments as a provision against

future contingencies rather than as cake to be cut up in the present.

The general valuation rate of interest assumed has been 3 per cent., a perfectly sound rate under present circumstances, when, as we have shown in a previous article, the net rate of interest actually produced by the funds often exceeds $4\frac{1}{2}$ per cent. per annum. Those offices which adopted $2\frac{1}{2}$ per cent. several years ago—some as long as 30 years ago—stick to it, and one or two have come down from 3 to $2\frac{1}{2}$ per cent., but there is hardly any good reason now why the 3 per cent. offices should make a change. If their actuaries desire to tuck away reserves above those shown by the 3 per cent. valuation of liabilities, they can always do so without difficulty. The once standard period of five years between valuations tends to disappear. Many of five years between valuations, and others are coming down to three years, and others are obviously preparing the way for annual distributions. One English mutual office, the National Mutual, has definitely announced its intention to adopt annual distributions. The London Life has done this as long as we can remember, and all (except one) of the industrial life offices—with their large ordinary life departments—value and distribute bonuses every year. There is no difficulty about making annual valuations, and no serious expense once the machinery of continuous valuation has been properly organised.

The rates of bonuses declared have been generally higher than those which used to be considered satisfactory. Those offices which withheld distributions during the years of depreciation have been naturally anxious to compensate their long suffering policyholders with higher rates of bonus; the shortening of valuation periods has also been due to the same desire. The Alliance's compound bonus for the past five years is 34s per cent. per annum, against 30s per cent. per annum in 1913. The Liverpool and London and Globe has maintained the simple bonus of 35s per cent. per annum which it managed to keep up all through the war—the bonus has been continuous since 1875. The National Mutual declared a compound bonus for the five years at the rate of

42s per cent. per annum, as against the pre-war rate of 36s. The Northern, which suspended its distributions in 1920 and 1915, declared a simple bonus of 55s per cent. per annum for three years as against the 31s per cent. per annum of 1905 and 1910. The Scottish Provident, which has a special system of its own not comparable with the ordinary with-profit life assurance, showed very good results, of which details are given elsewhere. The Scottish Widows' Fund made a special distribution of compound bonuses for the five years at 40s per cent. per annum, as compared with 34s per cent. per annum before the war. The Standard's simple bonus was at the rate of 35s per cent. per annum for three years, as against 30s. The United Kingdom Provident, which valued after three years, made a graded distribution under which policies whose bonuses had been suspended derived special advantages. The Yorkshire, making a valuation after four years instead of the usual five, put up its reversionary rates of bonus by 6s per cent. per annum.

The offices with annual valuations and distributions all increased their rates of bonus. The London Life raised its progressive percentages rates of reduction of premium by two instead of the customary one, and the compound reversionary bonus was maintained at 35s per cent. per annum. The simple reversionary bonus of the Britannic was 36s per cent. for the year, against 30s per cent. for 1922. The London and Manchester's simple bonus was 38s per cent. for 1923-24, as compared with 32s per cent. for the previous year. The Pearl's simple reversionary bonus was at the rate of 36s per cent. for last year, against 30s; and that of the Prudential was 40s per cent., as compared with 32s per cent. for 1922. The simple reversionary bonus of the Refuge was 38s per cent., as compared with 32s, and that of the Wesleyan and General was 36s against 30s.

It will be seen from our summaries of the valuation results that the present-day tendency is for interim bonuses, payable on claims during a valuation period, to be fixed at the same rates as those rates of bonus declared at general distributions. There never was any sound

reason, no reason at all except custom, why they should have been declared and paid at lower rates. This levelling up of the interim or intermediate rates of bonus, and the shortening of the valuation periods, are both parts of a progress towards annual valuations and distributions.

ABSTAINERS' AND GENERAL.—A valuation in the ordinary life department was made for the three years ended December 31st last, with the OM table for policies of £50 and upwards, with interest at 3 and 3½ per cent. The life funds of £1,735,135 showed a surplus of £143,468, and the total surplus for the three years was £145,863. A profit of £59,336 was shown on revaluation of securities. The sum of £101,030 was allotted to policyholders (reversionary bonuses of 30s per cent. per annum on sums assured for 1921, 1922, and 1923), £5,320 to the shareholders, £10,000 to staff pension fund, and £27,229 carried forward.

ALLIANCE.—A valuation for the five years to December 31st was made by the OM table at 3 per cent. interest, and the reserves were strengthened in several ways. The life and annuity funds of £18,700,744 showed an available surplus of £1,412,956, exclusive of interim bonuses paid of £107,409. The sum of £970,011 was allotted to policyholders, and £170,469 to the shareholders, £272,476 being carried forward. A compound reversionary bonus at the rate of 34s per cent. per annum for the five years was declared on new series policies. At the end of 1918 the whole surplus was carried forward undivided, and five years earlier the bonus declared was at the rate of 30s per cent. per annum.

BRITANNIC.—The annual valuation in the ordinary life department was made by the OM table at 3 per cent., and in the industrial life department by the English Life Table, No. 6, at 3½ per cent. There was a surplus of £273,786, of which £150,673 was allotted to with-profit policyholders (ordinary branch) and shareholders. This allowed of a reversionary bonus of 36s per cent. for the year, as compared with 30s for 1922, 26s for 1921, and 24s for 1919 and 1920.

BRITISH GENERAL.—A valuation for the five years ended

December 31st at 3 per cent. showed a surplus of £20,077 on funds of £225,241. The sum of £13,690 was allotted to policyholders, £1,521 to shareholders, and £4,866 carried forward. A compound reversionary bonus was declared of 32s per cent. per annum, as compared with 30s five years before.

LIVERPOOL AND LONDON AND GLOBE.—A valuation for the five years to December 31st last was made by the OM and OM (5) tables at 2½ per cent. interest. Annuities were valued at 2½ per cent. A reversionary bonus of 35s per cent. per annum was declared, £313,361 being carried forward, and £100,000 carried to the shareholders' account. The rate of interim bonus for the current five years was raised from 30s to 35s per cent. per annum. The company has maintained a uniform bonus at the rate of 35s per cent. per annum at each valuation since 1875.

LONDON LIFE.—The annual valuation by the OM (5) table at 3 per cent. interest allowed the rates of reduction of premium to be increased by two instead of by one as in recent years. For the year beginning July 1, 1924, these rates of reduction range from the equivalent of 131 per cent. for the First Series to 52 per cent. for the Eighteenth Series. For the reversionary bonus class the bonus was 35s per cent. on sums assured and existing bonuses, the same rate as declared in each year since the system began in 1914. A profit of £41,897 was shown on realisation and revaluation of securities.

LONDON AND MANCHESTER.—The annual valuation for the year ended March 24th last was made by the ordinary life branch of the OM table at 3 per cent., and in the industrial branch by the English Life Table No. 6 at 3 per cent. There was a surplus of £175,561. The with-profit policies in the ordinary branch were allotted a reversionary bonus on sums assured of 38s per cent. for the year, as compared with 32s per cent. for 1922-23, 26s per cent. in 1921-22, and 24s per cent. in 1919-20 and 1920-21.

NATIONAL MUTUAL.—A valuation for the five years ended December 31st was made by the OM table, with 3 per cent. interest. The funds of £3,940,268 showed a

surplus of £912,360. The balance of profit on securities realised or revalued in 1923 was £42,430. A compound reversionary bonus was declared at the rate of 42s per cent. per annum, £468,531 being carried forward. An interim bonus of 42s was declared in respect of 1924, and it was decided to make annual distributions of surplus in future. Five years ago the surplus was carried forward undivided.

NORTHERN.—A valuation for the three years ended December 31st was made by the OM table at 3 per cent. interest. The funds of the participation branch amounted to £3,760,204 and the surplus to £376,502. A profit was made on securities realised of £107,020. A reversionary bonus on sums assured of 55s per cent. was declared for the three years, carrying forward £9,547. The interim bonuses in respect of 1924 and 1925 were increased from 30s to 40s per cent. At the valuations made three years ago and eight years ago the surpluses were carried forward.

PEARL.—The annual valuation for 1923 of the ordinary and industrial life departments showed a surplus of £745,159, including £116,423 brought forward. The sum of £279,788 was distributed among the policyholders in the ordinary branch and £170,150 among the ordinary shareholders. The reversionary bonus for the year was at the rate of 36s per cent. on sums assured, as compared with 30s per cent. for 1922, 26s per cent. for 1921, and 20s per cent. for 1920.

PIONEER.—The valuation for the year ended March 31, 1924, was made by the HM table for the ordinary branch and by the English Life Table No. 8 for the industrial branch, at 3½ per cent. interest in both cases. The reserves were also strengthened. The ordinary branch funds of £237,602 showed a surplus of £2,934, and the industrial branch funds of £191,070 a surplus of £506. These surpluses were carried forward. No with-profit policies are issued.

PRUDENTIAL.—The annual valuation for 1923 in the ordinary life branch was made by the HM table at 3 per cent. interest. The ordinary funds of £69,753,108 showed

a surplus of £2,428,648. The industrial life branch was valued by the English Life Table No. 8 at 3 per cent. interest. The industrial life funds of £80,763,928 showed a surplus of £2,534,013. In the ordinary branch £1,576,022 was allotted in bonuses to policyholders, £500,000 was carried to investment reserve (making it £3,000,000), £173,474 was transferred to profit and loss, and £179,152 carried forward. The reversionary bonus to ordinary life policyholders for 1923 was at the rate of 40s per cent. on sums assured, as compared with 32s per cent. for 1922 and 26s per cent. for 1921. Of the industrial branch surplus £906,650 was set aside to provide a bonus for industrial life policyholders, £500,000 was added to the investment reserve (making it £2,250,000), £751,526 was transferred to profit and loss, £227,642 reserved for a bonus to members of the outdoor staff, and £148,195 carried forward. A contingent reversionary bonus (vesting after 15 years) of 25s per cent. on sums assured was added to all industrial policies which were issued during 1923 and in force on December 31st. The ratio of expenses to premiums in the industrial branch was 29.74 per cent. in 1923, as compared with 32.12 per cent. in 1922, 36.92 per cent. in 1921, and 40.5 per cent. in 1920.

REFUGE.—The annual valuation for 1923 in the ordinary branch was made by the HM table at 3 per cent. interest. The ordinary funds of £18,201,037 showed a surplus of £1,192,398, after transferring £25,000 to the staff pension fund and including £466,050 brought forward. The sum of £652,967 was allotted to ordinary policyholders and shareholders, and £539,430 carried forward. The reversionary bonus for 1923 was at the rate of 38s per cent. on sums assured, as compared with 32s per cent. for 1922 and 28s per cent. for 1921. The industrial life branch was valued by the English Life Table No. 3 at 3 per cent. interest. The industrial fund was £6,803,925 and the surplus £125,535, after transferring £100,000 to investment reserve fund (making it £275,000), £25,000 to the staff pension fund, and adding £250,000 to the special reserve for the future

"Straws show which way the wind blows"

and the recent Valuation of the STANDARD shows what WITH PROFIT Policyholders may expect in the future

- (1) The Assets (£7,000,000 of which are in British Government Securities) have been valued on the strictest basis. In 1920 they were written down to the very low prices then prevailing. They have not been written up since. There is thus a large margin of security.
- (2) The Liabilities were valued on the assumption that interest at only 2½ per cent. will be earned in future. Actually the net rate of interest earned is over 5 per cent. There is thus a margin of interest of over 2½ per cent. on £14,000,000 of Funds to provide future bonuses.

Despite these stringent methods, a bonus of 35/- per cent. per annum has been declared for the triennium ending 15th November last.

An interim bonus of 35/- per cent. per annum for all policies becoming claims before 1926. A balance of £138,000 carried forward.

These are straws that show which way the Wind of Prosperity blows for the Standard. If you are contemplating a Life Policy set your sails to the favouring wind and effect it with—

strengthening of the valuation basis (making that reserve £600,000). The sum of £12,203 was allocated to the shareholders.

SCOTTISH PROVIDENT.—The valuation for the five years ended December 31st was made by the OM table at 3 per cent. interest. The sum of £264,710 was written off the investments and met by transferring £300,000 from the investment reserve fund, leaving £300,000 in that fund. The fund (exclusive of the investment reserve) was £17,510,858, and the surplus £1,662,772. The surplus was apportioned: £1,409,683 to the common fund and £253,089 to the special endowment assurance fund. The sum of £1,093,039 was divisible in the common fund, and policies participating for the first time were allotted reversionary additions at the rate of 28s per cent. in respect of each complete year of their duration (at full tabular rates), excluding the war years 1914-1918, and policies which had previously participated were allotted reversionary additions at the rate of 30s per cent. in respect of each completed year since the previous investigation—December 31, 1918. The sum of £242,023 was divided among endowment assurance policyholders, and provided a compound reversionary bonus at the rate of 38s per cent. per annum for the five years to December 31st last. At the previous valuation, five years ago, the surplus was carried forward.

SCOTTISH WIDOWS' FUND.—A valuation for the five years ended December 31st last was made by the OM and OM (5) tables, with 3 per cent. interest. The life fund of £24,231,186 showed a surplus of £2,626,126, exclusive of the reserve fund of £350,000. The sum of £2,564,000 was allotted to provide a compound reversionary bonus at the special rate of 40s per cent. per annum for the five years 1919-23, as some compensation for the absence of a bonus during the war years 1914-18. The rate of interim bonus during the current five years was increased to 35s per cent. per annum. The pre-war bonus was at the rate of 34s per cent. per annum.

STANDARD.—A valuation for the three years ended November 15th last was made by the OM and OM (5) tables at 2½ per cent. interest, with net premiums at 3

per cent. The funds of £13,905,385 showed a surplus of £711,321. The sum of £494,142 was allotted to policyholders, £78,783 to shareholders, and £138,396 carried forward. A reversionary bonus at the rate of 35s per cent. per annum was declared for the three years. The interim bonus for the current three years will be at the same rate.

UNITED KINGDOM PROVIDENT.—A valuation for the three years ended December 31st was made by the OM and OM (5) tables at 2½ per cent. interest. The balance of profit on securities realised and revalued was £1,198,479, of which £300,000 was carried to investment contingency reserve. The funds of £12,976,501 showed a surplus of £1,578,511, which was increased by interim bonuses to £1,611,654. The sum of £1,417,689 was allotted to policyholders and £160,822 carried forward. The bonus rates per cent. per annum on whole life policies effected since December 31, 1920, were 38s in the temperance section and 35s in the general section; on endowment assurances: 37s in the temperance section (where the original term was 25 years and more), and 35s in the rest of the temperance section and in the general section. Interim bonuses for the current three years were at the same rates. Higher rates of bonus were declared in respect of policies in force in 1920 and in 1919 and earlier. No distribution was made at the valuation for the five years ended December 31, 1920.

WESLEYAN AND GENERAL.—The annual valuation for 1923 was made in the ordinary life department by the OM table at 3 and 3½ per cent., and in the industrial life department by the English Life No. 6 table at 3½ per cent. The funds of £2,693,752 in the ordinary department showed a surplus of £100,774, and those of £2,709,706 in the industrial department showed a surplus of £21,933. The sum of £60,005 was divided among ordinary life policyholders, and allowed a reversionary bonus of 36s per cent. to be declared for the year. Bonuses do not vest until a policy has been two complete years in force. The rate of bonus was 30s per cent. for 1922, 24s per cent. for 1921, and 20s per cent. for 1919 and 1920.

YORKSHIRE.—A valuation for the four years ended

July 12, 1924.]

December 31 was made by the OM and OM (5) tables at 2½ per cent., in place of 3 per cent., as formerly. The funds of £4,266,600 showed a surplus of £307,208. The sum of £213,300 was allotted to policyholders, £23,700 to shareholders, and £70,208 carried forward. There was an increase in the reversionary bonus of 6s per cent. per annum on the scale allotted at the valuations of 1915 and 1920.

FIRE INSURANCE.

A YEAR OF IMPROVEMENT.

The world-wide operations of the British fire insurance offices worked out a good deal more satisfactorily last year than in 1922. This was principally due to the improvement in the conditions in the United States, from which many of the larger companies derive the bulk of their premium incomes. That home business also contributed is shown from the results of the Sun and of the Alliance, especially of the latter company, which withdrew from America several years ago. There was a heavy loss in the Victoria Docks, London, at a tobacco fire which is computed to have cost £1,000,000, but the risks were well spread. We will deal with the United States figures by themselves; they were much better than in 1922. The almost swept these two great cities off the map. The British and American fire offices which had interests in Japan, directly and indirectly by reinsurance, were protected by the earthquake-fire clauses in their contracts. Some losses were incurred on special risks at rates covering the earthquake hazard, but, generally, the earthquake fire losses did not involve liability to pay. Nevertheless, as an act of grace, the British and American companies decided last month to return a full year's premium under all policies affected by the disaster.

The underwriting results given below for the years 1920, 1922, and 1923 have been calculated upon a uniform system. The surplus or deficiency, as shown, of a year's working has been arrived at after deducting the claims paid and outstanding and the expenses from the premiums and then allowing for the increase or decrease in the liability for unexpired risks on the basis of 40 per cent. of the premiums. This is a recognised method which we have applied to the total business, and also in a separate table to the United States business.

The single company with the largest premium income of over seven millions is now the Commercial Union. For, although the share capital of the Liverpool and London and Globe is owned by the Royal, the two "fused" companies work as distinct entities, and publish separate accounts. The largest amount of profit for last year was shown by the Royal with £563,578, or 8.4 per cent. of the premiums. On the other hand, the Liverpool and London and Globe earned £238,154, or 5 per cent. of the premiums. The best result shown by a world-wide office was the £404,906, or 13.4 per cent., of the London and Lancashire, which also had the best result in the United States. The actual highest rate of profit was the £285,934, or 15.2 per cent., of the Alliance, which depends more upon its very fine home business than upon foreign adventures. Other good results were those of the Sun, with a surplus of £276,285, or 11.9 per cent., the North British with £344,588, or 8.8 per cent., and the Commercial Union with £525,283, or 7.4 per cent. The Guardian, which keeps away from the United States, had a profit of £99,228, or 11 per cent. The total fire premium income of the British offices was about 48 millions, and the surplus for 1923 some 3½ millions, or nearly 7 per cent. of the premiums. It will be observed that the ratios of claims to premiums were in many cases lower in 1923 than in 1922, and the ratio of expenses to premiums was also lower. The growth of expenses during the spacious years of the war has caused much anxiety since, and any reduction is of much importance to the offices as profit-earning concerns.

GRESHAM LIFE OFFICE

THE RESULTS IN AMERICA.

The dominating factor in the fire insurance year with most British offices is the working out of their American experience. They operate in the United States chiefly through subsidiary companies. The rates of premiums are some five times higher on the average than in this country, and the losses very often more than correspond with the magnitude of the premiums. Last year the general experience was fairly good, a great deal better than in 1922. The ratio of claims to premiums was, on the average, about $4\frac{1}{2}$ points less, and the ratio of expenses to premiums was about one point less. This improvement of $5\frac{1}{2}$ points, when adjustments are made for the increase in unexpired risks (at 40 per cent.) due to an increase of over four millions sterling in the premium incomes, brought out a profit from America of about £1,300,000, or slightly more than 4 per cent. of the premiums. These

figures show how fine a margin there is between a profit and a loss on the gigantic United States business of British companies. In 1922 there was, on the average, no profit, just a balance between incomings, outgoings, and liabilities.

In the detailed results as given below, the dollar has been converted into sterling at 4s 2d, a formal rate so that the results of one year may be compared with those of another. This rate, of course, brings out amounts in sterling which are higher than those of the exact equivalent at current exchange. The results, as they almost always are in America, were patchy. Of the companies included in our table, three show deficits on the year, all the others made a profit. In 1922 six of the companies had deficits. The largest amount of profit was made last year by the Royal group—not including the Liverpool and London and Globe—with £393,049, or 7.2 per cent. of the premium income. The highest rate of profit was shown by the London and Lancashire, with £181,613, or 11.3 per cent. The London Assurance did very well with a surplus of £106,373, or 11 per cent. The North British had a profit of £243,650, or 6.1 per cent., and the Commercial Union a profit of £209,058, or 3.9 per cent. It is instructive to read the American results of what we may call the international fire offices alongside the total results. For influence of America will then be very clearly seen. For example, the London and Lancashire, which did best in America, also had the best world-wide figures, and the Northern, whose experience last year in the United States was less fortunate—its surplus was £19,106, or 1.3 per cent.—had a lower rate of profit on its whole business than any of the big companies of its own class. The British Dominions, whose deficiency in America was £109,971, had a deficit on its total fire business of £61,141.

SCOTTISH AMICABLE

LIFE ASSURANCE SOCIETY

Established 1826.

Funds exceed £8,000,000

A MUTUAL PROFIT-SHARING OFFICE. An Unbroken Record of High Compound Bonus Declarations.

The Society since its formation in 1826 has a continuous record of high Bonus rates, unbroken by the war.

Throughout that long period of nearly 100 years a Bonus has been declared at each of the periodic investigations, and on no occasion has the rate fallen below 30s. % compound. This was the rate declared for the latest quinquennial period ending 31st December, 1920, which included nearly 3 years of war; and for the preceding 20 years the rate was 35s. % compound.

FIRE RESERVES IN THE UNITED STATES.

Another point which it is of interest to bring out is the extent of the reserves against fire risks maintained by the British offices and their subsidiaries in America. The State insurance laws are most strict, and the legal reserves against current liabilities are on a much higher scale than the 40 per cent. of the premiums which, as has been proved by experience, actually measures the liability. The companies keep not only the legal reserves—which cannot be withdrawn until the liabilities to which they relate run off—but also large surplus reserves to meet the conflagration hazard. These surplus reserves could be withdrawn from America in case of need, though the occasion for their employment is more likely to occur in the United States than elsewhere. It will be observed that the total American reserves of the larger companies range from about 130 to 220 per cent. of the premium income. The legal reserves of British and kindred companies amount to about 29½ millions sterling, and the surplus reserves to 20½ millions, making the total reserves in America 50 millions sterling, or 148 per cent. of the premium income. In practice these reserves yield some two millions a year net from interest available for dividends payable on this side, and to that extent rank among the “invisible exports” of Great Britain.

ACCIDENT AND MISCELLANEOUS INSURANCE.

UNFAVOURABLE EXPERIENCE IN AMERICA.

The accident and miscellaneous categories of insurance—which include personal accident, workmen's compensation, both in this country and in the United States, motor-car insurance, burglary, public liability, plate-glass, and almost numberless other sections—now form a very considerable part of the operations of the composite insurance offices. Most of these once subsidiary branches were started experimentally by small specialist companies, which, after many failures, achieved success and became absorbed by the big companies. The Ocean Accident and Guarantee passed to the Commercial Union, the Railway Passengers to the North British, the London Guarantee and Accident to the Phoenix, and so on. In addition to absorbing specialist companies, the composite offices launched out for themselves. Two only of the major specialist offices—the Employers' Liability and the General Accident (of Perth)—avoided or escaped absorption, and of these the Employers' Liability Corporation has itself become a large composite office with life and marine subsidiary companies. Accident and miscellaneous insurance, so far from being the Cinderella which it once was regarded, is now conducted almost on the scale of fire insurance itself.

Just as the United States dominate fire insurance, so the United States dominate the fortunes of those British accident departments which conduct workmen's compensation business there on the grand scale. The principal companies which are concerned in American work-

July 12, 1924.]

men's compensation risks are the Employers' Liability, the Ocean Accident (Commercial Union), the London Guarantee and Accident (Phoenix), the General Accident, the Liverpool and London and Globe, and the Royal. The American subsidiary of the London and Lancashire is comparatively small. The United States business of the Employers' Liability last year exceeded 20 million dollars of premium income, that of the Ocean was 13.8 millions, of the London Guarantee and Accident 16.4 millions, of the General Accident 11.7 millions, and of the Royal 13.2 London and Globe 15 millions, and conducted under what millions. Business so large, and conducted under what were unfavourable conditions, could not but gravely influence the total results of these offices.

In the United States the rates charged for insuring workmen's compensation business are not fixed by the companies as they are in this country. The method of fixing them was so clearly explained by the chairman of the Employers' Liability Corporation at the general meeting in March last, that we append an extract from his speech:—

“The combined experiences of all the companies transacting this business is considered by the National Council on Compensation Insurance, of which all companies are members, and, when they have arrived at their conclusions, the rates so agreed upon are submitted for confirmation to the respective Insurance Departments or State Boards, and, until that approval is given, they are not effective, and cannot be acted upon by any of the companies.

“The collation of these statistics is naturally delayed, and they are not available until a period considerably later than the period on which they are based, and, that being the case, as in the present instance, if the period on which they are based is one of great prosperity and is

succeeded by a period of unusual trade depression, by the time that the rates based on those statistics become effective they are not true rates for the existing conditions of the business. That is what has happened in this case. The last authorised rates became effective in 1921, and were based upon the figures of a period of great industrial prosperity, 1918-20. By the time they had come into operation in 1921 the break of that prosperity had occurred, and conditions of trade and industry were such that the rates so ordered were quite inadequate to the risks to be insured. This is a condition of things that, under their present system, must be anticipated, and, of course, the converse will be equally true, that rates based upon a period of depression succeeded by a period of great prosperity will result in considerable profits to the companies.

“A revision of rates has taken place in 1923, which is based upon experience more relative to the present situation, and new rates will become operative in practically all the States at various dates from January to July in the current year. Some States have already published and made operative the new rates, and in all those cases very substantial increases of rates have been authorised. Assuming that similar increases are made in those yet to be published, we can look forward with confidence to a considerable and increasing improvement in 1924.”

Bearing, then, in mind that the British companies, with a large workmen's compensation business in America, were working during last year on rates of premium which had not yet been revised, we should expect to find the results of their whole accident and miscellaneous business seriously affected. And this is just what we do find, as may be seen from our table giving the underwriting surpluses or deficits for last year. The Commercial Union,

THE EDUCATIONAL ENDOWMENT SCHEME, which enables a parent to provide for his child's education, whether he be alive or dead when the period of education is entered upon.

CHILDREN'S DEFERRED ASSURANCES, carrying a number of valuable Assurance options at ages 21 or 25.

HOUSE PURCHASE SCHEME, which enables persons to buy their own houses, and in the event of death, to leave them free from debt.

Address: 196, STRAND, LONDON, W.C.2

on its enormous premium income of over seven millions, made a surplus of £149,736, or 2.1 per cent. The Employers' Liability, which operates the largest American business both actually and relatively to its total premium income, had a deficiency of £228,679, or 4.9 per cent. of its premiums. The General Accident was fortunate in coming out with a surplus of £117,258, or 2.8 per cent. The Liverpool and London and Globe got home with a small surplus of £70,108, or 1.8 per cent., and its big brother the Royal did a little better with a surplus of £136,865, or 3.2 per cent. The Phoenix, whose volume of American risks was second only to that of the Employers' Liability, came out with a deficiency of £70,740, or 1.1 per cent. of its premium income. On the other hand, the London and Lancashire, whose American business was comparatively small, did very well with a surplus of £188,922, or 12.2 per cent.

On accident, motor car, and other insurances outside the United States fairly good results were achieved on the whole, and very good results by some offices. The Railway Passengers (North British), a pioneer in personal accident insurance, made a surplus of £122,858, or 13.7 per cent., and the Northern, which has absorbed several accident and miscellaneous companies, achieved a surplus of £128,043, or 13.1 per cent. The Guardian, with its useful subsidiaries, made a profit of £71,094, or 14.9 per cent., and the Scottish Union was relatively the most successful of all, with a surplus of £25,009, or 20 per cent. of its premium income. In the companies' accounts accident business at home and abroad is given separately, but there is no category for the large motor-car insurance premiums which are merged in the general account. The only indication of the working out of motor-car risks is the experience of the Motor Union Insurance Company, which made a surplus of £47,126, or 4.1 per cent., on its premium income of £1,149,000. That income included, however, a good deal of fire and other classes of insurance.

MARINE INSURANCE.

BUSINESS UNDER DIFFICULTIES.

DURING the war marine insurance business expanded enormously, as was to be expected, and large profits were made. The market expanded with the demands upon it, and many companies were tempted to set up, or to develop actively, marine departments. When the war came to an end, and shipping, after the boom years, fell upon evil days, the demand for marine insurance contracted faster than the artificially swollen market could accommodate itself to the new conditions. Thence followed severe competition, and a cutting of both hull and cargo rates to the bone. There has been much adjustment since, but the available market is still larger than the business seeking its services. Profits are difficult to come by, and require for their realisation very great care and skill in underwriting.

The results of marine companies cannot be presented so readily as those of fire and accident insurance. The nature of the business done varies greatly. An allowance for unexpired risks on cargo insurance would be quite inadequate for a corresponding amount of time insurance on hulls. The companies and marine departments have, therefore, to be regarded as individualist, and their officers as alone conversant with the precise kind of risks underwritten. We have to take their figures as they are presented, and not seek too curiously to look behind them.

We give below the underwriting results of six companies which issue accounts on the Liverpool form. It is a good method. Accounts are kept open for two years, and then an estimate is made of the amount still required to liquidate the account. The balance of premiums, after meeting expenses, is the underwriting profit or loss. Five years have been taken, and the latest completed year is, of course, 1922, which was not closed until December last. All these companies, except the Sea, are owned by composite offices. The figures of premiums show how great was the contraction after the post-war boom, and how difficult profits have been to make since. As a rule the account for 1922 shows some improvement, though not much. There were, however, no declared deficits.

The other marine companies, which are all departments of composite offices, present their figures as for fire insurance, but do not as a rule make a public estimate of their unexpired risks. We have been informed that in some instances the fire and accident allowance of 40 per cent. of the premiums is adequate, but we cannot apply that convenient system generally. It is not accepted for marine risks as it is for fire and accident and miscellaneous risks. What we have done, therefore, is to set forth the premiums, claims, and expenses over a series of years, and to leave the figures to emphasise their own moral. The very low claim ratio of the Commercial Union will at once be noticed, and also the comparatively small expansion during the war. The marine department of this company has for 30 years or more been strikingly successful in its underwriting. Over the eight years the claims and expenses of the Commercial Union taken together were no more than 73.1 per cent. of the premiums. The percentage of the other companies runs into the eighties, and the British Dominions over eight years has had a claims and expense ratio of 91.4 per cent. Next to the Commercial Union comes the London Assurance, with 82.7 per cent., then the Maritime (Scottish Union) with 82.9 per cent., and then the London and Lancashire (which owns the Marine and the Standard) with 83.5 per cent. The Alliance shows 84.1 per cent., the Royal Exchange 85.7 per cent., and the Liverpool and London and Globe (Thames and Mersey) 87.6 per cent.

Australian Mutual Provident Society

(A.M.P.)

Established 1849.

SEVENTY-FIFTH ANNUAL REPORT.

Remarkable Figures.—Ordinary Department.

NET NEW BUSINESS.—26,424 Policies Assuring £12,045,573, with Annual Premiums of £379,991.

DEATH CLAIMS.—£1,521,633, including Bonus Additions of £523,867. This is only 54 per cent. of the "Expected."

MATURITY CLAIMS.—£1,203,128, including Bonus Additions of £317,962.

ACCUMULATED FUNDS (including Industrial) have increased by £2,829,924 and amount to £52,278,099.

WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £14,440,000.

THE DIVISIBLE SURPLUS (after strengthening the Reserves by the application of £225,000), is £1,987,289, which represents a return of 50.9 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £3,350,000.

THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.

THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 9s. 1d. per cent. There is therefore an Interest Margin of nearly 2½ per cent.

THE EXPENSE RATE (excluding Taxes) was 14.4 per cent. of the Premium Income. This is only about two-thirds of the provision for expenses included in the Premiums.

THE TOTAL ASSURANCES issued in 75 years amount to £240,039,261, of which £129,524,206, or 51.0 per cent., are still in force.

ECONOMY

No trade can be carried on without EXPENSE, but ECONOMY in expenses combined with increase in business results in LARGER PROFITS.

The constant endeavour of
THE
PRUDENTIAL ASSURANCE Co., Ltd.

is to effect economies at every opportunity
and in every possible way; this results in

BIGGER BONUSSES for POLICYHOLDERS PARTICIPATING in PROFITS

Are YOU benefiting by the success of the PRUDENTIAL? If not, consult the nearest representative, or write direct to:—

Chief Office: HOLBORN BARS, E.C.1

BECOME A PRUDENTIAL POLICYHOLDER

Here's a House For You!

IT is the natural desire of every man to possess his own house. Under the Society's House Purchase Scheme a purchaser need only possess one-fifth of the value of the desired property, and can acquire it under a plan which spreads the cost over a period of years. Every detail has been thought out to the best advantage of the man who desires to become his own landlord; and among the other attractive features of the scheme it is arranged that if the purchaser dies the house immediately becomes the absolute property of his representative, free from further expense of any kind.

THE ENGLISH BANK FIGURES.

NOT much light is usually thrown on monetary problems by the figures of such of our home banks as publish them at the end of the June half-year, but in so far as light is provided by those that are included in this banking number, they chiefly illustrate once more the almost malicious obstinacy with which the movements of bank deposits refuse to contract and expand in accordance with the dictates of fashionable theory. Reviewing them a year ago, the *Economist* of October 20, 1923, said: "We pointed out a year ago that the small decrease in deposits then recorded had been brought about in a year in which a rapid reduction had taken place in Bank rate—from 6 to 3½ per cent.—thus seeming to suggest caution in accepting the doctrine that movements in the official rate can be counted on to produce a prompt effect on the volume of banking credit. According to this theory, the lower Bank rate should have been expected to stimulate expansion of credit, whereas it had been accompanied by slight contraction. During the year that we are now reviewing the theory has been contradicted with equal emphasis, though in a different way. Bank rate was again reduced, from 3½ to 3 per cent., in July, 1922, and remained throughout the rest of the year at this low level, but deposits instead of expanding were contracted by £115 millions. These facts, taken with the previous record, which showed deposits continuing to expand long after the 1919 and 1920 rises in Bank rate had, if the theory so eloquently expounded by Prof. Cassel and Mr Hawtrey were to be relied on literally, demanded their contraction, seem to justify the scepticism with which it is usually received by practical bankers." And now comes yet another year wrongheadedly persisting in showing how cautiously we must receive the theory that a rise in Bank rate can be counted on to contract credit, and a fall to expand it. For Bank rate, as everyone will remember, was raised on July 5, 1923, from 3 to 4 per cent., and the movement was severely criticised by believers in the above-mentioned theory, on the ground that it would tend to contract banking credit, lower the prices of commodities, and increase depression and unemployment. Yet, in fact, bank deposits, with their tiresome refusal to endorse the theories of distinguished economists, have insisted in marking a slight expansion, while prices of commodities, as measured by our Index Number, went up from 4301 in June, 1923, to 4531 in June, 1924, and the unemployment percentage, which was 11.1 when Bank rate went up, was 7.2 for June, 1924. Another theory that the figures, for what they are worth, decline to endorse is the interesting one put forward by Mr McKenna, who in January, 1923, charged the Government with producing deflation "effected in pursuance of a declared policy" by redeeming Treasury bills. This doctrine seems to imply that the bankers, when the total of Treasury bills is reduced, have no power of replacing them by other assets, and that contraction of deposits is thus forced upon them. In fact, the expansion of £12 millions in bank deposits shown in the year to June 30th was accompanied by a reduction of £24 millions in the aggregate of outstanding Treasury bills, so that if the banks were holders of the Treasury bills that were "dropped"—as we shall find reason to guess when we come to analyse the figures more closely—they have evidently found a good deal more than a substitute for them. Our usual table, then, of the growth or contraction of deposits since the war period is brought up to date, as follows:—

INCREASE OR DECREASE IN DEPOSITS.	
	Million £
June 30, 1915	+ 197.2
" 1916	+ 44.5
" 1917	+ 81.1
" 1918	+ 282.5
" 1919	+ 406.2
" 1920	+ 103.4
" 1921	+ 20.3
" 1922	- 27.9
" 1923	- 113.9
" 1924	+ 11.9
	+1,005.3

Looking now more closely at the figures of the aggregate balance-sheet that is appended, we find that on the liabilities side there are, besides the already mentioned increase of approximately £12 millions in the deposits, increases of £3.2 millions in capital and reserves, and of £9.8 millions in acceptances and endorsements. Both these movements are satisfactory. The small proportion of capital and reserves to the total figures of the balance-sheets has long been recognised as a feature of our banking which might be improved, and the increase in acceptances, following an expansion in this item of £20 millions a year ago, confirms the view that we then took, that it might be very cautiously hailed as one of the indications that trade depression was by no means as acute as the unemployment figures and the general complaints of trade industry would seem to show. The same hopeful conclusion may perhaps be drawn from the movements of the assets, investments having declined by £12 millions—perhaps owing to the decrease in Treasury bills, although most banks include these in the "bills discounted" item—while loans, discounts and advances have expanded by £9½ millions. These movements are not large in view of the totals involved, but as far as they go, they show that the banks are acting less as investors on their own account, and more as performers of their proper function—of financing other people's enterprise. The increase of £16½ millions in cash in hand and at the Bank of England is an interesting feature when viewed in connection with the stringency that has lately been an almost chronic feature in the history of the money market, and has been so helpful in enabling the Bank of England to make its official rate so nearly effective that the advance in it—which was in some quarters regarded as likely in the early autumn—has so far been avoided. The Bank return figures and comparison are, as usual, of little service as a guide in this game of monetary guesswork, owing to the difference of the dates on which it, being a weekly exhibit, necessarily tells its tale. This year it was made up on July 2, last year on June 27, so that this year the figures were one day nearer to those of June 30th:—

BANK OF ENGLAND. (Million £'s.)	
	Comparison with
July 2, 1924.	July 1, 1914, July 2, 1915, June 30, 1920, June 29, 1921, June 28, 1922, June 27, 1923.
Rest	+ 0.1 + 0.1 + 0.1 + 0.1 + 0.1 + 0.1
Public deposits	+ 5.2 + 3.5 - 3.9 - 3.9 - 3.9 - 3.9
Other deposits	+ 86.4 - 30.0 - 36.0 - 36.0 - 36.0 - 36.0
Govt. securities	+ 41.2 - 46.5 - 37.9 - 37.9 - 37.9 - 37.9
Other securities	+ 45.7 + 11.9 + 37.2 + 37.2 + 37.2 + 37.2
Notes issued	+ 89.3 + 41.3 + 10.8 + 10.8 + 10.8 + 10.8
Total coin and bullion	+ 128.3 + 88.2 + 59.7 + 59.7 + 59.7 + 59.7
Note circulation	+ 127.8 + 98.1 + 47.9 + 47.9 + 47.9 + 47.9
Gold and silver in banking dept.	+ 1.8 + 0.2 - 0.3 - 0.3 - 0.3 - 0.3
Reserve	+ 20.2 - 8.6 - 6.9 - 6.9 - 6.9 - 6.9
Proportion	+ 138% - 263% - 3% + 44% + 44% - 54% - 4%

This fact may possibly account for a considerable part of the increase of £24 millions shown both in the securities and in the deposits, though not, of course, for anything like the whole of it. But, as we have often been obliged to point out, there are so many cross-currents in the Bank of England's Government and Other securities that inferences drawn from their movements are a matter of interesting and hazardous speculation. On the whole, however, it may certainly be said that the figures of the chief English banks show an improved position, and one which will enable them, if trade revives as we hope, to continue the expansion in trade financing which may perhaps be detected from the balance-sheet movements that took place in the year ended on June 30th.

(In Million £.)

BANK PROFITS AND SHARES.

NEITHER in foreign and Colonial nor in home banking has there during the past two years been any serious change likely to alter the market position or prospects of the leading bank shares. Dividends have not in many cases been varied, and though on the whole profits are well maintained, there is little difference in the prices and yields of most of the shares in which English investors are interested. At the same time if holders of banking shares have no special cause for jubilation at the recent course of the market, they may congratulate themselves that most of the shares held by them have proved themselves in difficult troubled times an eminently steady and sound investment, and at the present time there are few markets which can offer a better yield on so satisfactory a security. In our first table we set out figures drawn from the tables in this banking section, which show the net profits made and the percentage of dividends paid by a number of banks doing business in the Dominions and in South America:—

Name of Bank.	Year Ended.	Whole Year's Net Profits and Dividends.				
		1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Bank of Australia	Oct. 31	573,051	588,389	620,105	618,559	£
Bank of New Zealand	Mar. 31	469,045	827,255	682,043	553,639	735,832
Bank of New South Wales	Mar. 31	606,644	752,566	708,619	771,102	851,514
English, Scottish, and Australian	June 30	170,179	267,975	245,475	470,847	£

† Free of income-tax. (b) Accounts for 15 months to March 31, 1921. (c) For half-year.

It will be seen from these figures that Australasian banking continues to enjoy a very considerable degree of prosperity, the latest profits for the most part being higher than those previously recorded, though the rate of dividend has not been altered. These banks, in fact, are very conservative in their dividend policy, and maintain the same rate in spite of the fact that many of them are making higher profits now than at any recent period. Eastern banks have been continuing at about the same level of profit, and there are no dividend changes to note among them. The Canadian banking figures—the latest available—are not so satisfactory, and the Canadian banker has been having a rather more difficult time since the war than his brother in Australia and New Zealand. The Anglo-South American Bank, which varies its rate of dividend more than most, has maintained last year's rate of 10 per cent., though profits have fallen a little. African banks are

recovering, the Standard Bank's profits being nearly £70,000 higher, while the dividend remains the same, and the National Bank's appalling loss of the previous year being followed by a profit of just over £200,000. There is still no dividend for the shareholders, the directors mainly aiming at the restoration of reserves as their first goal.

In the following tables we set out a comparison of the prices and yields of a number of overseas bank shares and a few English shares. It must be remembered that developments occurring after the appearance of the latest reports are, in a number of cases, reflected in the movements of share quotations which we give in the following table:—

Share.	Amount of Share.	Paid up.	Price July 30, 1914.	Price Sept. 28, 1923.	Price Sept. 30, 1924.	Yield %
Bank of England	Stock	£	247½	256½	259½	4½

† Free of tax. (b) £64 shares fully paid. (c) £10 with £4 paid. (k) £40 fully paid shares. (f) £20 shares fully paid. (h) £25 shares with £12½ paid. * Allowing for rate of exchange.

There is little change here in the yields, the comparative advantages of which the reader may judge from the tables. There is one advantage in bank shares to which special attention may be called, and that is the steadiness of bank shareholders, who hold the securities for the most part as long-term investments, and so insure a level market very satisfactory for the quiet investor. A recent offer of an Australian bank to its shareholders was an excellent illustration of the strength and loyalty of a bank's shareholders. For the benefit of those investors who are frightened at the uncalled liability on bank shares we append a table showing a few shares on which there is little or no uncalled liability:—

Bank.	Denomination.	Amount Paid Up	Price Sept. 29, 1922.	Price Sept. 28, 1923.	Price Sept. 30, 1924.	Yield %
Anglo-South American	£	10	5	9½	7½	7½
Australian Bank of Commerce	1	1	1	1½	1½	6½

IRISH FREE STATE BANKS.

In our Banking Number of May 3rd last we eliminated from the table summarising the accounts of the joint-stock banks of the United Kingdom the figures of the six Irish Free State banks. We now include them with the banks operating in the Dominions. The six Irish Free State banks so included are the Bank of Ireland, Hibernian Bank, Munster and Leinster Bank, National Bank, Provincial Bank of Ireland, and Royal Bank of Ireland. From the table below it will be seen that there has been a substantial increase in profits.

IRISH FREE STATE BANKS.

(a) 4½ per cent., free of tax.

(b) 5 per cent., free of tax.

(c) 5½ per cent., free of tax.

In three cases the dividend for the first half-year was paid free of income-tax, but agreement having been reached as to the amount of tax for which the banks were liable, both to the British and Irish Free State Governments, the old practice of paying dividends less tax has been resumed. The Royal Bank of Ireland, it may be recalled, purchased, some twelve months ago from the Belfast Banking, the latter's 20 branches in the Irish Free State. At the annual meeting in October of last year, the chairman of the Royal Bank said that they had the services and advice of Messrs Price, Waterhouse and Co. during the negotiations, and that the latter's report stated that, "taking all the circumstances into consideration, in our opinion the arrangement which you have made with this bank may be considered eminently satisfactory, and the additional business which may be expected to accrue to you as the result of the acquisition should add materially to the strength and prestige of your bank, and at the same time largely increase its earning capacity." At the meeting held a fortnight ago, the chairman was

able to report that "the results have fully come up to our anticipation."

The balance-sheet figures are set out in historical tables for each bank on later pages, and the latest figures for all the groups will also be found summarised in a large table. The statement appended gives the aggregate balance-sheet figures for the six Free State banks for the past two years, and of all the Irish banks for a number of preceding years. This shows that there was a slight increase in the note circulation, but a decline in deposits, the latter being common to all the banks.

All items on the credit side have declined, but it is interesting to compare the proportion of assets held in the form of investments, a large proportion of which are Government securities, with the ratio of all the Irish banks before the war. In 1913, for example, the proportion of assets in investments was 26.3 per cent., and in discounts and advances 53.5 per cent. The latest figures show that these proportions have changed to 42.6 and 40.3 per cent. respectively.

* Irish Free State.

AFRICAN BANKS.

THE number of banks whose accounts are summarised under the heading of African banks has been reduced this year from six to four, by the return of the two banks operating in Egypt from the Colonial to the foreign category. Of the four banks remaining, the two of greatest importance are the National Bank of South Africa and the Standard Bank of South Africa. The third is a comparatively small Dutch bank, the Netherlands Bank of South Africa, with head office in Amsterdam, while the fourth is the Bank of British West Africa, which carries on, amongst other functions, the banking business of the Governments of the Colonies of the Gold Coast, Sierra Leone, the Gambia, and Nigeria. From the table appended, which summarises the main items of the balance-sheet, it will be seen that there has been a further dwindling in the note circulation to less than one million, this being the result of the operation of the Currency and Banking Act of 1920, under which the right to issue notes passed on June 30, 1922, from the commercial banks to the South African Reserve Bank. The amounts of Union notes outstanding on June 30th last were paid over to the Reserve Bank, and the item will not appear in future balance-sheets, except as regards notes issued outside the Union. The Reserve Bank, constituted under the Act, was given the sole right of issue of currency notes for a period of 25 years, and this was to be its principal function. The Act also provided that every South African Bank must hold stock in the Reserve Bank to the equivalent of 5 per cent. of its own capital, and must deposit large reserves with it. In respect to demand liabilities, 10 per cent. of the total was to be provided, and in the case of time liabilities, including interest-bearing deposits, the proportion is 3 per cent. After

of July, Mr Stanley Christopherson, the chairman, referred to an important change which had been made in the constitution of the directorate of the Reserve Bank. "The Government, for reasons which, no doubt, seem good to them, decided to depart from the American precedent, and to make the bank representatives no longer eligible to retain their seats on this board." He added that he and his colleagues were strongly opposed to the change, but the Government decided in favour of it, and, "needless to say, we accepted readily their decision." Mr Christopherson also touched upon the possibility of the formation by the new South African Government of a State Bank. Among certain sections there has for some time past been a constant complaint that in the matter of credit facilities the existing commercial banks are deliberately withholding accommodation. Both Mr Christopherson and Mr Lusk, chairman of the National Bank of South Africa, flatly repudiated these contentions, the latter specifically stating that "since I was appointed, 2½ years ago, to the chairmanship of the National Bank I have not known of a single case in which we have declined business that satisfied the well-understood tests of sound and prudent banking. I am confident, too, that the experience of our competitors is precisely the same." Mr Christopherson also said emphatically that "given security and a good reason for a loan, 99 out of every 100 will obtain accommodation, but I say equally emphatically that we are not going to be stampeded into undesirable advances by criticism from whatever quarter." As regards profits, the year ended March 31st last has proved to have been very much more favourable than its two predecessors, in spite of a continuance of depressed trade and unfavourable agricultural conditions.

the first three years the proportion of reserve against demand liabilities was to be increased to 13 per cent. The Reserve Bank is not intended to compete in any manner with the commercial banks, and its dividend is limited to 10 per cent. While there is an embargo on the export of gold from South Africa, however, or so long as gold certificates are inconvertible, it may not pay a dividend of more than 6 per cent. per annum, and all excess profits during that time must be placed to a special fund for strengthening the gold reserve of the bank. When the reserve fund is equal to the paid-up capital, the net profit, after payment of 10 per cent. dividend, is to go to the Government. The note issue has to be secured by at least 40 per cent. in gold, and as to the remainder by commercial paper or trade bills, and by a first charge on all the assets of the bank. In June last an amending Act was passed providing, *inter alia*, for the extension for two years—i.e., until June, 1925—of the inconvertibility of gold certificates and the alteration (which remains in force for five years) of cover that may be held by the Reserve Bank for its note issue, British and Union Treasury bills being allowed to be taken as security. At the annual meeting of the Standard Bank of South Africa, held at the end

The net profits of the Standard Bank, it will be seen, expanded by £67,600, while the National Bank turned a loss of £919,700 into a profit of £204,000. No dividend is paid by the latter, in order that profits may be conserved until the reserves have reached adequate dimensions. Twelve months ago the provisions necessary for replenishing reserves against bad and doubtful debts absorbed not only the whole of the reserve fund of a million sterling, but involved the writing down of the paid-up capital from £10 to £7 a share. There was some discussion on the question of the reductions in capital at last year's annual meeting, and in August last the chairman again referred to the matter. He said that the conditions at present were not favourable for the raising of additional capital on terms which the directors would be prepared to recommend. In London, which would be the most likely source of supply, the bank already had large cash balances, which were earning a somewhat limited return and were immobile owing to the prevailing trade and exchange situation. To raise additional capital in London would, therefore, be unprofitable. Thanks to the reserve bank system, the means of supplementing the bank's ordinary resources was at hand in the shape of rediscounts of

trade paper and Treasury bills, and full advantage was taken of this source of supply, with the result that the bank had experienced no difficulty whatever in meeting the needs of clients and in financing all sound business that came in its way.

The balance-sheet totals of the National Bank show a contraction of £10 millions, but this is largely due to exclusion of bills rediscounted, now shown as a contingent liability, and of the decline, according to the chairman's statement, only some £4 millions, or 7 per cent. of the aggregate, was due to general trade contraction. Deposits are down by £5½ millions, and loans and advances by a similar amount. The changes in the Standard Bank balance-sheet are smaller, de-

posits being down by less than half-a-million, while discounts and advances have declined by £2½ millions.

The profits of the Bank of British West Africa declined by £4,600, but deposits show an increase of over £700,000, while loans and advances expanded by nearly a million, cash representing nearly 22 per cent. of deposit liabilities. In reviewing the trade statistics of the West African Colonies, the chairman pointed out at the annual meeting that "notwithstanding the improvement in value of certain products and the increase in total quantities of produce exported, the West African native was worse off, as he had to pay a relatively much higher price for the goods he bought, and the exporters and manufacturers in this country suffered in consequence of the falling off in demand."

INDIAN BANKS.

IN many respects the year 1923 was one of disappointment for Indian banking institutions. Trade was very slack during the early months, and although an improvement took place towards the close of the period, and has been continued since, the Indian banks did little more than mark time. It is, however, significant that the remarks of the chairmen of the exchange banks with offices in London all incline towards a hopeful view. The outlook for improved trade in India, which forms the main text of the speeches, has to a large extent been realised. Stocks have been reduced and the accumulations of the "boom" years distributed, leaving markets in a favourable position to accept new business.

Another favourable aspect of the general situation has been the recovery of the country from the depression of previous years. The Budget for 1923-24 has been virtually balanced, and that for 1924-25 is expected to show a surplus of over three crores of rupees, and to permit of a reduction in the salt duty. A good monsoon and economies in administration have contributed to this encouraging result, which makes the necessity of an external loan this year a remote contingency.

One of the landmarks of the period since that covered by the reports has been the successful appearance of the new India Rupee Loan, issued in long-term bonds repayable at par in 1945-1955, and in short-term bonds repayable in 1933. Both classes of security bear interest at 5 per cent., free of Indian income-tax.

The resumption of the sale of India Council remittances after a lapse of seven months is a further indication of the revival of Indian trade. India drafts were last allotted in February, subsequent offerings meeting with no response. The favourable trade balance has been coupled with a sharp rise in the value of the rupee, which is now well over 1s 6d, against a

highest point of 1s 5 9/32d during 1923. The heavy demands of India for South African gold, which for several months past has been shipped from Durban direct, affords corroborative evidence of growing prosperity in India.

How far the movement has been assisted by the improved financial organisation brought about by the formation of the Imperial Bank of India, through the amalgamation of the three Presidency Banks of Bengal, Bombay, and Madras, it is at this stage impossible to say. The amalgamation, which took place in 1920-21, removed many of the limitations which handicapped the Presidency Banks as separate concerns, with respect to the granting of loans and business in exchange, and facilitated economies of administration. The Imperial Bank was made the Government's banker, and entrusted with the management of the public debt. It is under an obligation to open 100 new branches by 1926. The latest report, which covers the half-year to June 30th, shows that 70 have already been opened, and that eight more are shortly to start business.

Net profits for the half-year amounted to Rs. 78,81,700, as compared with Rs. 76,01,175 in the corresponding period of 1923. The dividend of 16 per cent. was maintained as before. The main point of the directors' remarks relates to the strong demand for money during the half-year. Considerable pressure was experienced until well into June. The half-year opened with the Bank rate at 7 per cent. It rose to 9 per cent. on February 14th, and was reduced by successive stages to 6 per cent on June 19th, and is 5 per cent. at the present time. Owing to the monetary stringency, it soon became necessary to put into operation the Indian Paper Currency Act, passed in the summer of 1923. The object of the Act is to enable the Government of India to lend from the Paper Currency Reserve to the Imperial Bank in times of stress. As the additional currency issued to meet legiti-

mate trade demands returns to the Imperial Bank, it is retired, so that no permanent addition to the circulation takes place. The Bank found it necessary to borrow from the Paper Currency Reserve against trade bills to the full extent of the 12 crores of rupees sanctioned under the Act. The loans were not fully paid off until June 21st.

From the summarised accounts of the four exchange banks given below, it will be seen that net profits for the year 1923 show an aggregate decline of £14,386. Dividends have, however, been maintained at the previous year's levels, and the decline in earnings is on a smaller scale than was the case a year ago. Comparisons of dividends and profits for 1923 and 1922, and details of the past year's appropriations, are given below:—

	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Premises.	Staff Funds.	Carried Forward	Profit and Dividend for Preceding Year.
		£	£	%	£	£	£	£
Chartered of India, Aust., & China	Dec. 31	782,707	607,500	20½	100,000	50,000	25,000	789,531

A comparison of the main figures of the exchange banks, which are concerned with the finance of trade at the great ports, is afforded by the second table, which gives the aggregate figures of the main items of the balance-sheets as at December 31st. It gives evidence of the difficulties of trade during the period. Tendencies referred to in a similar article a year ago have been continued and accentuated. The main features demanding notice are the contraction in deposits from £93 millions to £90 millions, and the sharp drop in discounts and advances from nearly £76 millions to £62 millions. The relative decline in the latter, representing over nine points in the ratio to liabilities, is, indeed, not paralleled since the early years of the war. In conjunction with this movement there has been an increased disposition towards greater liquidity of assets. Thus, cash in hand, at call, and short notice has increased from about £15 millions to £17 millions. Investments have risen from £28 millions to £36 millions, illustrating the tendency towards a greater utilisation of banking funds in the purchase of stocks, owing to the falling off in the demand for credit by industry. Some part of the decline in discounts and advances is no doubt due to the liquidation of old advances. Although, in accordance with sound banking practice, a strong liquid position is desirable, the feeling that a larger proportion of the resources

should be invested in the business has been expressed. Some of the changes are due to altered methods. Thus it was pointed out by the chairman of the Mercantile Bank of India that the large reduction in the amount standing against bills receivable is explained by the fact that on December 31, 1922, the bank held about a million of Indian Treasury bills in India, and none at December 31, 1923, the funds being then otherwise employed. It is now largely the custom of merchants in India to draw against their shipments by telegraphic transfers rather than by bills of exchange. In the case of the National Bank of India, the reduction of bills was accounted for by the conversion of a great part of the holding of Indian and British Government Treasury bills into short-dated securities. Such movements tend to obscure the deductions that would other-

wise be drawn from balance-sheet alterations.

Two instances of difficulties in the Indian banking world came to a head during the year in the failure of the Alliance Bank of Simla and the absorption of the Tata Industrial Bank by the Central Bank of India. The liquidation of the Alliance Bank was undertaken by the Imperial Bank, and the outcome has shown that its difficulties were, in the main, rather local and particular than indicative of any fundamental defect in the Indian banking system as a whole. The present year has been happily free from any such contretemps. The Japanese earthquake in September, 1923, and the civil war in China, which still continues on an intensified scale, were factors which affected the Chartered Bank of India, Australia, and China, whose interests are concerned with these countries as well as with India. The bank chairmen take the view that the political troubles in India should not be regarded too seriously. India is claimed to be sound at heart and loyal, despite the occasional blasts of hot air which at times cause an overheated atmosphere in the council chambers of that country. The general position of business in the East is regarded as in a far healthier state than it was 18 months or two years ago; and the Indian banks as a whole stand in a position fully prepared to meet the increased demands of trade when the hoped-for revival becomes an accomplished fact.

AUSTRALASIAN BANKS.

THE most important event in recent Australian banking history was the introduction in the House of Representatives in June, by Dr Earle Page, the Commonwealth Treasurer, of the Commonwealth Bank Bill. The main features of the Bill, which was passed by both Houses in August, were summarised by our Melbourne correspondent in the *Economist* of August 2nd (p.193). It provides *inter alia* for the appointment of a board of directors, to control not only the general business, but also the note issue, for the issue of capital, for a board to fix and publish its discount rate, and introduces a compulsory system of settlement of balances between other banks, through the Commonwealth Bank. These amendments to the Commonwealth Bank Act are proposed "for improving the efficiency of the Commonwealth Bank and making it a Central Bank." The Commonwealth Bank started without any capital, and has accumulated profits amounting to about £4½ millions. It is proposed to capitalise £4 millions of these profits, to authorise the Treasurer to raise £6 millions by way of loans, and to hand over the proceeds to the Commonwealth Bank as additional capital. It is not proposed to interfere with the authority already included in the Commonwealth Bank Act, under which the bank may issue debentures up to £10 millions. The section which appears to have aroused most discussion in the banking world was that relating to bank settlements, which required the banks to "settle balances as between themselves by cheques drawn on the Commonwealth Bank." In his speech introducing the Bill, Dr Earle Page claimed that this "will necessitate the keeping by each bank of some funds with the Commonwealth Bank, and will tend to strengthen the central system. There is to be no compulsion as to the amount to be kept by any bank at credit with the Commonwealth Bank, but it is hoped that confidence in the new management will bring about the voluntary placing of considerable credits with the Commonwealth Bank, just as is the case with the Bank of England, which holds practically all the cash reserves of the ordinary banks, and which, in the true sense of the term, is a bankers' bank." This provision is to be brought into operation when proclaimed by the Commonwealth Government instead of on January 31, 1925, a slight interval being allowed for the banks to make necessary arrangements. The provision, however, is not considered likely to lead to large balances being kept with the Commonwealth Bank by the ordinary banks.

The board of directors is to consist of the Governor of the Bank, the Secretary to the Treasury, and six persons who are or have been actively engaged in agriculture, commerce, finance, or industry. The original proposal that two of the directors should be appointed on account of knowledge of currency has been dropped. Any decision of the board respecting the note issue requires six votes out of the full eight if all directors are present, or five votes if any of the directors are absent. Our Melbourne correspondent writes that an amendment was proposed to the effect that Australian notes should not be issued to the general banking department of the Commonwealth Bank by the issue of the Treasury without the approval of the Government, but after amendment was supported by the House of Representatives. The position now is that the board can apply to itself for notes for the purposes of the general banking department, and will thus be in a dual position without further check upon its decision. The object of the proposed amendment was to ensure that the Commonwealth Bank should not use the note issue as a means of competition against the ordinary banks, or as a means of inflation.

A new section inserted in the Bill provides that the board may issue Australian notes to the Commonwealth

Bank or to other banks in Australia in exchange for money or securities lodged with the London branch of the Commonwealth Bank. This does not really go beyond existing law, which, however, it renders more specific in application and frees from ambiguity. The section was inserted in the Senate, and was accepted by the House of Representatives by a majority of one. If availed of by the board in administration, it will enable additional notes to be issued in Australia at certain times of the year to meet seasonal requirements against liquid assets in London. The legal requirement of a 25 per cent. gold reserve at least against the total issue is not modified. The note return as at July 28th shows a total issue of £56,890,225, of which £34,227,989 is held by the banks (including the general banking department of the Commonwealth Bank), and £22,662,236 is in the hands of the public, the gold reserve being £24,280,959, or 42.68 per cent. of the total issue.

Turning to the question of general banking conditions, we give in the following table a picture of the visible trade balances year by year since the beginning of the war:—

	(Million £'s.)		—Excess of—	
	Imports.	Exports.	Imports.	Exports.
1914-15....	64.4	60.6	3.8	..
1915-16....	77.7	74.8	2.9	..
1916-17....	76.2	97.9	..	21.7
1917-18....	62.3	81.4	..	19.1
1918-19....	102.3	113.9	..	11.6
1919-20....	99.0	149.8	..	50.8
1920-21....	163.8	132.2	31.6	..
1921-22....	103.0	127.8	..	24.8
1922-23....	131.8	117.9	13.9	..
1923-24....	140.6	119.6	21.0	..

In considering these figures some allowance has to be made for the fact that the British Government paid for wool some considerable time before it was shipped, and also for the supplementary payments received in respect of the Australian wool growers' half share in profits on resales. Other items to be taken into account in considering the balance of payments are the annual remittance to be made for interest on British capital invested in Australia, publicly and privately, and on the other side fresh public borrowings and private investments of British capital in Australia. In his speech introducing the Commonwealth Bank Bill in June, Dr Earle Page said: "Because Australian exports (visible and invisible) have been in excess, the Australian banks have accumulated in London much more money than they need there, and, consequently, exchange rates are favourable to the importer and unfavourable to the exporter. Money in London can be transferred to Australia only at considerable cost, and that has induced Governments and others locally to borrow moneys which might have been obtained in London. Both because so much of the assets of the banks are in London and because Governments are forced to borrow in Australia, money here is very tight." The accumulation of balances in London is put in some quarters as high as £50 millions, but an authoritative article in the *Times* Trade Supplement of September 20th disputes the statement that there is a large surplus of funds here, and figures are produced which show that the surpluses of exports in the war years have been cancelled by excesses of imports since the war, due allowance being made for borrowings and interest payment. The writer of this article claims that the cause of the present breakdown in the matter of the exchanges is to be found rather in the shortage of currency in Australia, and that one of the remedies, which has been practically agreed to in Australia, is the curtailment of the flow of imports by reducing remitting funds to Australia as acute as ever, and on Tuesday of last week the Associated Australian Banks in London raised the price of cable transfers on Australia from 55s to 60s per cent. The principal reason for this fresh rise in the value of the Australian pound is an aggravation of the currency

generally, are better than in Australia. For the last financial year the Treasury was able to show a surplus, and the general improvement in conditions is reflected in the banking figures, deposits exceeding advances by a larger margin than in the preceding year, while both have increased.

* Free of tax.

The paid-up capital of the 14 banks has increased by £2,700,000, and the reserves by nearly £1,800,000. The features of the table below, which summarises the main balance-sheet items, are the shrinkage of nearly a million in the notes in circulation, and the increase of £19 millions in discounts and advances.

considerations of safety, but not so hampered as to prevent fair profits under prudent direction." In other words, the quack remedies of credit and currency cranks and alarmists were rejected; the main features of the existing system were upheld; and it came to be realised that even the most rigid and exacting system would not have prevented the banking troubles in Canada last year. The reverberations of these troubles have not yet wholly died away, and the Home Bank trouble has been the subject of long and exhaustive inquiry. The great banks of long tradition and prestige appear to have benefited in this way—that the alarm caused among depositors tended to drive deposits from the small to the large institutions. Evidence of this is afforded by the growth in the deposits of the three largest banks, which can be traced in the individual balance-sheet statements on a later page. But there is another side to the picture. For instance, Sir Vincent Meredith, in the speech just quoted, attributed a fall in profits chiefly to the fact that he and his directors "felt that, in view of the possibility of untoward developments in the banking world, our cash reserves should be kept exceptionally strong to enable us to lend aid if and when called upon to do so." Of special interest are

But it was not merely the domestic troubles in the banking world which made 1923 what one authority described as "probably as trying a year for Canadian bankers as any year since 1867." In addition to the obstacles of high living costs, heavy taxation, the poverty of European customers, the insufficient recovery of world trade, and an unbalanced Budget (including railways)—obstacles common to many other countries—Canada has been suffering from the population question, anxiety being caused by the large exodus to the United States, which was great enough to outweigh altogether an improve-

Of the current year as affecting banking results, it is too early as yet to speak with definiteness, for much depends upon the harvesting. The crops have passed through vicissitudes, reflected in widely varying estimates at various dates, but it is clear that the total yield of cereals will fall very far short of last year's high figures. Nor have industrial conditions shown much improvement. Canada, like the mother country, looks for the approach of better times when the new *régime* in Europe begins to produce an increase in world trade activity. As regards her greatest banks, satisfaction may be derived from their passage safe and sound through the many difficulties of recent years.

FOREIGN BANKS WITH LONDON BRANCHES

No review of British banking can be considered complete without taking into consideration all those banking undertakings trading overseas which have offices in London. These may be roughly grouped into two sections, namely, British banks, with headquarters either at home or abroad, and foreign institutions with branch offices in London.

It is, of course, very difficult to draw a distinct line between the various British banks operating abroad, but in our first table will be found a little group of companies including a few concerns of comparatively recent growth, together with some dating back before the war.

The expansion of the business of the British Italian Banking Corporation is well illustrated in figures given by Mr Beaumont Pease, at the general meeting of the company; in the clearing accounts with its bankers an extraordinary growth in turnover is recorded, starting from approximately £4 millions in 1917 to £57½ millions in 1923. Liquid resources at December 31, 1923, are stated to be £1,586,177, as against £1,162,083 on December 31, 1922. To those seeking statistics on the measure of trade between Italy and this country, we recommend them to read the chairman's speech, to which we have already referred. The British Overseas Bank now has new articles of association, and although some of the powerful banks which

helped in its formation are no longer shareholders, the chairman was able to assure shareholders that they will not lose by anything that had been done. Perhaps it is also worth while here to draw attention to the steady development of the Anglo-Austrian Bank. Acceptances have grown slowly, but steadily. The chairman in August last pointed out that great care was being taken in the selection of business, which was strictly limited to transactions genuinely reflecting the movement of commodities.

We still consider it unwise to produce our table of Continental banks with currencies reduced to sterling for comparative purposes, on account of the fluctuations in foreign currency, and of the inadvisability of employing the pre-war par of exchange. The detailed balance-sheets, however, of all the leading Continental banks will be found on later pages in their respective currencies. The Société Générale Pour Favoriser, &c., reports that advances on guarantees at 272,089,500f have increased nearly 70 million francs, and cheque accounts have advanced from 1,233,631,000f to 1,272,933,432.01f, being 39,302,428.89f more. But "les dépôts à l'échéance fixe" have decreased from 122,499,000f to 101,711,100f, being 20,737,900f lower. "Les acceptations à payer" show an increase of 27,946,689.40f (103,258,485.37f compared with 75,311,795.97f), and the sundry current accounts show one of 236,438,838.99f (3,999,377,907.86f compared with 3,762,939,068.87f). The net amount of the profit and loss account is 28,482,402.55f. Compared with last year's figure, this is an increase of 2,942,449.81f. The sum brought forward from 1922 was 5,255,657.02f, which, added to the year's profits, makes the total 33,708,059.57f.

The Crédit Lyonnais, in its annual report, reviewing the progress of its offices abroad, says that in Algeria the year has been a very good one, and farmers were able to pay back a considerable amount of their loans, profits on corn, barley, oats, and tobacco being better than in 1922. The wine trade, too, has been good, and high prices were realised. In Tunis the harvest has been a good one, but olives showed a loss, although on the other side the wine trade has been very satisfactory for both producers and merchants. At Geneva the economic situation still depends upon the exchange, which makes export difficult, and hinders the hotel industry. The development of the Geneva Agency is not all that could be desired, but conditions at the Tunis offices have improved. The report of the third of the big three French banks, the Comptoir National D'Escompte de Paris, shows that deposits have risen to 2,413 million francs, an increase of 181½ millions. Acceptances amount to 120,922,069f, having increased 35,893,891f. Reserves total 72,429,579f.

In dealing with the British Italian Banking Corporation, we have already referred to conditions in the Italian banking world. But a review of foreign banking progress would be incomplete without mention of the two powerful Italian banks, the Banca Commerciale

Italiana and the Credito Italiano. In the report of the former concern developments are foreshadowed in Jugoslavia, with a branch at Fiume. Its branch at Constantinople is strenuously carrying on its work. Moreover, the intention is expressed of establishing branches in Egypt. This institution claims credit for handling "the largest foreign transaction ever financed with Italian means." This was the Polish loan of 400 million lire. The many associated concerns connected with the Banca Commerciale Italiana operating in other countries have given good results. The "general movement" of the accounts of the Credito Italiano for the year ended December 31, 1923, showed 522 milliards, as against 432 in 1922 and 385 milliards in 1921. Savings and current accounts increased from 836½ million lire to approximately 918½ millions, and customers' credit balances from 3,086½ millions to 3,213½ millions. The total money deposited amounted to 4,132 millions. Cash and Treasury bills were 2,732½, as compared with about 3,011½ at the end of 1922. Customers' debit balances stood at 1,488½ millions, as against 1,136½ millions in the previous accounts. In its report it is stated that the Paris and Berlin branches of the Credito Italiano have fulfilled expectations, and that participation in banking institutions abroad have shown satisfactory results.

The directors of the Société Belge de Crédit Industriel state that, in spite of the unfavourable circumstances, profits are 343,654f more than last year. These amount to 1,125,266f (781,611f in 1922). "Account-currents" and deposits together amount to 54,628,000f. On the other side of the balance-sheet assets comfortably cover this item. Turning to the accounts of the Ionian Bank, figures for the year ended December last showed a profit of £428,606; this is after making provision for bad and doubtful debts. The corresponding figure for 1922 is £465,245, but the profit is larger for 1923, for the reason that before showing the profit for that staff, instead of taking it, as on previous occasions, from the amount brought forward. Current and deposit accounts show a drop from the previous year—the difference being some £2,000,000. Acceptances, standing at upwards of £3,000,000, compare with £1,600,000 a year ago; this is mainly owing to the greater extent of acceptances for the cotton trade.

General and political conditions have been unfavourable for the Imperial Ottoman Bank. In its Constantinople office, and a large number of branches in Anatolia, results have been affected in consequence, but in other parts—notably Adana—its branches have shared in a progressive commercial movement. The larger holding of Government securities by the National Bank of Egypt mainly consists of short-term bonds. These bonds, it is pointed out, can be readily liquidated in case of need, and do not involve the risk of depreciation inherent to longer-dated securities. The total of advances does not show much variation. Foreign bills, which, almost without

* exception, represent exports of cotton, are again larger than the preceding year, owing in part to the higher price of cotton, and also to an expansion of the bank's

business in Alexandria. Our next table reflects the trend of banking operations in Asia:—

	47,106,810	48,899,816	176,449,332	187,287,457	31,765,260	36,668,923	50,643,134	54,640,227	148,653,430	145,869,853

The items in the balance-sheet of the Hongkong and Shanghai Banking Corporation call for little comment. The rate of exchange at which the sterling assets and liabilities are converted into dollars, and the silver assets into sterling, is about 4½ per cent. over the rate of last year, so a comparison between their totals and those of the previous year is easier than usual. The total sterling is over £4 millions higher, and the total dollars is over \$8 millions higher than in the previous 12 months. Notes in circulation have increased by over \$8 millions, a rather inconvenient but gratifying tribute to the popularity of its notes among the Chinese of Hongkong and China. Silver deposits have increased normally, but in view of the difficulty of securing employment for its resources and of the cheapness of money in London, the bank has not cared to compete for deposits in currencies based on sterling at the rates of interest paid by some of its neighbours. The accounts of the Imperial Bank of Persia reflect a reasonably good liquid position. There is an increase of nearly £130,000 in note circulation,

but on the assets side this amount is amply safeguarded.

The most important matter which reveals itself for notice in South American banking topics is the report and accounts of the Banco Espanol del Rio de la Plata, which appears to be extricating itself satisfactorily from its recent difficulties. The net profit of the Anglo-South American Bank, Limited, for the year ended June 30, 1924, was £425,907 (against £436,256 in the previous year), while £337,661 was brought forward, making a total of £763,568. It is proposed to pay a final dividend on October 27th of 5 per cent., less tax, making a total distribution for the year of 10 per cent. (the same as in previous year). The sum of £25,000 is again added to the staff pension fund, £50,000 is applied in reduction of bank premises account (as against nil last year), and the balance of £350,100 is carried forward. In view of the amalgamation of the London and River Plate Bank, Limited, and London and Brazilian Bank, Limited, it is not possible to publish figures, but we are informed that the first balance-sheet of the combined banks under the new title will be published in December next.

GERMAN BANKING.

(BY OUR BERLIN CORRESPONDENT.)

The condition of German banks has been likened to the Humbert Sage Safe mystery, to be revealed only by the publication of gold mark balance-sheets and profit and loss accounts. The only distinction is that uncertainty replaces fraud. The gold mark balance-sheets already published by industrial concerns throw no light on the matter, owing to the important difference that real estate and plant, the main assets of industry, were not necessarily reduced, and were often increased, and that value as a result of the currency depreciation, and that industry got rid of most of its long-term debts, whereas the chief asset of banks was their liquid capital, which was bound to depreciate with the currency. As only two important commercial banks have so far issued gold mark balance-sheets, the mystery is not yet fully cleared up; but it is already plain that the banks lost heavily in the past ten years. Hence while industrial companies, though they drastically scale down their capital as inflated since the war, are mostly fixing their new gold capital higher than that of 1913, the banks will start their new careers with much smaller than pre-war capitals. The two commercial banks referred to are the Berliner Handelsgesellschaft and the Barmer Bankverein. The balance-sheets of both (and that of the Prussian State Bank—Seehandlung—which, however, has a status of its own) show that their capital has largely disappeared. The measure of disappear-

ance varies in different cases, according to the success with which the banks, by means of exchange and other operations, managed to escape part of the consequences of the depreciation.

The condition of the banks improved greatly after the currency stabilisation of November, 1923, owing to the new security given against depreciation; deposits rapidly increased, and with them the banks' credit operations. It is estimated that by the end of March deposits had doubled. A good deal of foreign money came in. After the credit crisis, signalled by the Reichsbank's rationing of bill discounts from April 7th onwards, deposits again declined, owing to the urgent need of money for business. Large profits were made through the great disparity between interest rates for deposits and loans. Profits from bourse transactions were at first small, but increased enormously after June, the volume of transactions in parts of July and August being ten times as great as in June. For deposits the commercial banks had to compete with the savings banks, which offered, sometimes recklessly, rates 100 or even 200 per cent. higher. The banks gained by heavy reductions of their staffs, and this process will go further owing to the impending abolition of most of the burdensome exchange restrictions. The increase of confidence by

Continued from page 15.

depositors is shown by the fact that in Berlin savings bank deposits increased sevenfold in the half-year, and that by August deposits in all savings banks had risen from practically nothing to one milliard gold marks. The commercial banks' coming half-yearly reports (the first since the war) will show, it is expected, large profits. The Berliner Handelsgesellschaft, which paid 1 per cent. in gold for 1923, promises a dividend for 1924.

The banks' reports for December 31, 1923, have mostly only a historical value, as recording the last throes of the inflation. Both balance-sheets and profit and loss accounts were compiled in paper marks, and were usually introduced by the statement that they revealed nothing, and were issued merely in order to comply with legal requirements. No dividends (with the above exception) were declared. Owing to difficulty in valuation, important assets, such as buildings and interests in other concerns, were written down to nominal sums; and from some balance-sheets the paper mark capital and reserves, being insignificant beside the other swollen totals, were omitted altogether. The deposits of the seven leading banks had shrunk to about 19 per cent. of their total of 1913, this despite the fact that six weeks of stable currency had somewhat improved matters. Reckoning paper marks at their fixed exchange of one billion paper marks to one gold mark, the comparison is:—

(In Millions of Gold Marks.)

	1913.	1923.
Deutsche Bank	1,873.8	349.3
Disconto-Gesellschaft	1,148.6	213.1
Darmstädter und National	936.0	207.5
Dresdner	1,195.1	193.8
Commerz und Privat	486.6	153.2
Berlin. Handelsgesellschaft	296.8	24.5
Mitteldeutsche Credit	131.0	20.4
	6,067.9	1,161.8

Profits for 1923 were devoted to making good partly "substance loss," i.e., shrinkage in gold value of the banks' own resources. The main part of the losses seem to have been suffered while the paper mark was relatively high, up to the 1,000 marks to the dollar, before the banks fully realised the meaning of the depreciation process. Afterwards by investments in exchange, by charging interest high enough to cover the "depreciation risk," and, finally, by valorisation of credits, the banks stopped or reduced their depreciation losses. The last paper mark balance-sheets (for December, 1923) showed, as compared with 1913, great changes between the ratio of the various assets and liabilities. Thus the Deutsche Bank's percentages were as follows:—

ASSETS.			
	1913.	1923.	
Cash	5.6	10.4	
Correspondents	2.0	37.0	
Discounts	27.8	3.3	
Debtors	48.4	48.2	
Other	14.9	1.1	
LIABILITIES.			
Capital and reserves	13.9	..	
Creditors	70.4	99.9	
Net profits	1.5	..	
Other	14.2	..	

Of liabilities, practically only deposits remained. Of assets, in 1913 seven-tenths were lent to industry and trade. In 1920 bills alone amounted to seven-tenths, but here Treasury bills played the chief rôle. At the end of 1923 Treasury bill investments had disappeared, and commercial bills had shrunk to one-thirtieth of the whole. The item correspondents, containing creditors' money in so far as they were in exchange, and the banks' own exchange, increased enormously. It is stated that at the close of 1923 60 per cent. of the deposits of one leading bank were in exchange.

The gold balance-sheets, as far as they have appeared, indicate that the banks would to-day be much better off had they closed their doors in 1914, and protected their own capital by investing it in non-depreciable securities. This is best shown by the gold balance-sheet compiled for January 1, 1924, of the Handels-gesellschaft. This bank, alone among the principal banks, did not increase its pre-war capital of 110,000,000 marks. The gold mark balance total is 59,949,912 gold marks, against 550,952,351 marks in 1913. With the exception of correspondents, swollen by exchange accounts, all assets enormously decreased: discounts from 103,914,000 marks to 2,587,000 marks; investments and interests in other concerns from approximately 95 million marks to 13 million marks; debtors from 232 million marks to 15 million marks; cash from 20 millions to 1 million marks. Probably some assets are undervalued; the value of buildings, for instance, is reduced to little more than half; and, as most companies have not yet issued their gold balance-sheets, investments and interests are necessarily conservatively valued. But the main change is the disappearance of a great part of the bank's capital, so that though on the liabilities side creditors are reduced from 297 to 32 millions, the balance had to be restored by reducing capital from 110 to 22 millions, and reserves from 34½ to 5 millions. The capital scaling down is at the rate of 5 to 1. The Barmer Bankverein's gold balance-sheet shows the same process, though the shrinkage of totals is less extreme. The capital and reserve of this bank in 1913 totalled 116 million marks. To-day the net property of the bank is estimated at 31 million gold marks, of which 21 millions are fixed as capital, and 10 millions as reserve. This bank repeatedly increased its capital, and the scaling down is correspondingly severe, being to one 20 gold mark share to be issued for every 1,200 mark share. The Prussian State Bank has been obliged to reduce its capital from 560 million marks to 10 million gold marks, and reserves from 318 million marks to 10 million gold marks. The four "D" banks stand between the Handelsgesellschaft, with its unwatered capital, and the Barmer Verein, with its heavily watered capital. Their capital has been increased from 780 to 4,100 millions, and it is believed that the scaling down ratio will be around 10 or 8 to 1. These banks' new balance-sheets will probably not be issued until near the end of November. The Deutsche Bank, in a recent report, protested against the scaling down of industrial companies' capitals as being too drastic. The companies, said the report, were discounting a bad future, which is not certain to come, whereas the intent of the Gold Balance law was merely that the past should be cleared up.

On the Bourse bank stocks shared in the general recovery of last summer, and have since receded with other stocks. Quotations in gold marks per 100 marks nominal before the war, at the end of last year, and in September last were:—

	June 30, 1914.	December 12, 1923.	September 9, 1924.
Deutsche	234	14.90	1924
Disconto	183.10	20.90	10.50
Dresdner	146.90	8.10	12.10
Darmstädter	115.50	..	6.75
National	108.40	11.90	9.37
Berl. Handelsges.	149.00	66.10	26.00
Mitteldeutsche ..	115.25	3.40	1.70

The stocks of many banks are quoted around 1 gold mark per 100 nominal. In general the quotations are determined by the extent of capital watering, and, therefore, the probable measure of scaling down. In the relations of the banks, taken place. The Stinnes interests have acquired an interest in the Barmer Bankverein. The "com-munity of German Mortgage Banks" has been extended. The Berlin financial concern, J. Michael and Co., which is a powerful factor in the money market, has acquired interests in the Mitteldeutsche Creditbank and the Deutsche Vereinsbank of Frankfurt-on-Main. The liquidation of the small banks founded in the inflation period has apparently come to an end.

BARCLAYS BANK

Head Office - - - 54, Lombard Street, London, E.C. 3,

and over 1,750 Branches in England and Wales, and Agents and Correspondents in all the principal towns throughout the World.

FREDERICK CRAUFURD GOODENOUGH, Chairman.
Sir HERBERT HAMBLING, Bart., Deputy-Chairman.
EDMUND HENRY PARKER, Vice-Chairman.

GENERAL MANAGERS:
WILLIAM FAVILL TUKE. ROBERT WILLIAM STREET. JOHN CAULCUTT.

Authorised Capital	£20,000,000
Issued and Paid-up Capital	£15,592,372
Reserve Fund	£8,250,000
Deposits (30th June, 1924)	£295,698,105

EXECUTORSHIPS AND TRUSTEESHIPS UNDERTAKEN.

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

FOREIGN BRANCHES:—

CHIEF FOREIGN BRANCH: 168, Fenchurch Street, London, E.C.3.
WEST END (LONDON): 1, Pall Mall East. LIVERPOOL: 45, Castle Street. BRADFORD: 13, Market Street. MANCHESTER: 94, Portland Street.

Affiliated Banks:

BARCLAYS BANK (OVERSEAS) LIMITED: Principal Office, PARIS.
THE BRITISH LINEN BANK: Head Office, EDINBURGH. 181 Branches in Scotland.
THE UNION BANK OF MANCHESTER LIMITED: Head Office, MANCHESTER.
156 Branches in Lancashire, Cheshire, and the West Riding of Yorkshire.
THE ANGLO-EGYPTIAN BANK LIMITED: Head Office, 37-39, KING WILLIAM ST., LONDON, E.C.4.
Branches in Egypt and Palestine. Also at Gibraltar, Malta and Khartoum.

BARCLAYS BANK (Overseas)

LIMITED.

BUSINESS CONDUCTED ON BRITISH BANKING LINES.

Affiliated to
BARCLAYS BANK LIMITED.

PRINCIPAL OFFICE:

PARIS—33, RUE DU IV. SEPTEMBRE.
Bordeaux—4, Rue Esprit des Lois. Lyons—1, Rue de la Republique.
Boulogne—61, Rue Victor Hugo. Marseilles—5, Rue Cannebiere.
Havre—9, Quai George V. Rouen—7, Rue Jeanne d'Arc.
Le Touquet Paris-Plage ... (Open during the Season.)
Aix-les-Bains—13, Place Carnot.

THE RIVIERA:

Cannes—7, Rue du Marechal Foch. Monte Carlo—1, Boulevard des Moulins.
Mentone—1, Avenue Felix-Faure. Nice—4, Avenue Georges Clemenceau.

ALGERIA:

Oran—15, Rue Alsace-Lorraine.
Algiers—6, Rue de la Liberte.
COLOGNE—2, Komödienstrasse.

LONDON—54, Lombard Street, E.C.3.
West End Agency—1, Pall Mall East, London, S.W.1.

The Bank is specially organised to provide banking facilities for trade between Great Britain and France and their respective Overseas Possessions.
