The customary half-yearly statement of the Reparations Commission shows that the total payments made by Germany since the Armistice down to June 30th last have amounted to 8,405,932,000 gold marks, of which 5,570,942,000 gold marks have been distributed among the Allies, while the balance of 2,834,990,000 gold marks has been carried to suspense account. This suspense account consists for the most part of the value of property ceded by Germany and portions of the German public debt (Poland, 1,913,163,000 gold marks; Dantzig, 311,845,000 gold marks), and the balance of 100,000,000 gold marks on the value of the Saar mines. Of the total amount actually distributed, the principal recipients have been:—

	Gold Marks.
France.....	1,724,601,000
Belgium.....	1,715,685,000
Great Britain.....	1,297,528,000
Italy.....	391,434,000
Serbia.....	265,140,000
Japan.....	68,392,000

The forms in which these amounts have been distributed to France, Great Britain, Belgium, and Italy are as follows:—

	Paid in Cash.	Deliveries in Kind.	Ceded Property.
	Gold Marks.	Gold Marks.	Gold Marks.
France.....	144,027,000	1,278,532,000	302,042,000
Great Britain.....	641,334,000	655,656,000	538,000
Belgium.....	1,083,800,000	631,250,000	635,000
Italy.....	33,382,000	358,052,000	..

The 1,724,601,000 gold marks (in cash and kind) which have been received by France, on account of her 52 per cent. share in the total German Reparation payments, have been employed as follows:—

	Gold Marks
In reimbursements of advances made to Germany by the Spa Conference (for coal, &c.).....	238,771,000
In repayment of cost of army of occupation.....	1,381,809,000
Profit on exchange operations.....	2,147,000
Balance to credit of reparations account proper.....	101,874,000

It should be noted that, owing to the recent revision of the valuation of rolling stock and other material, and the fact that higher value has been placed, since the earlier statements were issued, on the property ceded to Poland and Dantzig, it is impossible to check the above figures by comparing them with those included in previous half-yearly statements.

The taxation returns show that several new records in collection were set up during the month of July, when the yield from all sources exceeded that of any previous month. A certain proportion of the exceptional yield was due, of course, to the rush of people who were in arrears to clear these off in order to avoid the threatened penalty of an increased demand of 10 per cent., which was provided for in the last Finance Act. This provision should have come into force on July 1st, but the outcry was such—principally on account of the fact that the revenue collection offices were unable to cope with the payments offered at the last moment—that the operation of the penalty clause was postponed for a further six months. A large proportion of those affected, however, paid up their arrears during the first days of July, and thus considerably swelled the total for the month. Other reasons for the enhanced total yield were that the operation of the additional *double décime* on most of the indirect taxes and monopolies is now giving its full yield, and the continued increase in the yield from the *ad valorem* taxes owing to the present high commodity prices.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

The total revenue for the month is returned as 2,529,693,700f, as compared with 2,122 millions in June, and 1,968 millions in May. Of the total for the month, only 108,715,400f was from exceptional sources (including the payment of 68,858,900f off the outstanding arrears on the now expired special tax on war profits). The increase during the month of 612 millions in the receipts from normal and permanent sources was especially due to an increased yield of 525½ millions from indirect taxes and monopolies, which may be regarded as proof of the continued improvement in the economic condition of the country. The outstanding feature of the return, as in previous months, is the remarkable yield from the tax on turnover, which produced 380,333,000f during the month (the highest total registered since the creation of the tax), or 87½ millions (nearly 23 per cent.) more than Budget estimates. In view of the extraordinary success of this tax from the fiscal point of view (it yielded nearly 50 per cent. more than the income-tax in July), it is difficult to see how the present Government is going to carry out the promise for its abolition which was so freely made during the recent elections. It is significant that during July the luxury tax yielded only 686,000f, or over two millions less than Budget estimates. Taxes on Bourse operations were 948,500f less than expected, but registrations were nearly 108½ millions above the estimated yield, taxes on securities over 73 millions in excess, and stamp duties 7,380,000f. Income-tax produced 251,783,000f during the month, or 77,364,100f more than in July last year. The total yield from all permanent and normal resources during the first seven months of the year has been 14,180,511,400f, or 3,156,511,300f more than during the corresponding period of 1923. The figures show that the total increased yield this year has been nearly 50 per cent. greater than the amount represented by the revenue secured by increasing most of the indirect taxes by 20 per cent. That this result has been achieved without involving any manifestations whatever of marked or exceptional discontent on the part of either the middle or working classes is a striking tribute to the general prosperity of France. It also offers a striking commentary to the charge which is often made on the other side of the Channel to the effect that the Frenchman is far more lightly taxed than his British brother.

The index figures for both wholesale and retail prices at the end of July, which have just been issued by the Statistique Générale, once more emphasise the curious anomaly that, while wholesale prices as a whole, including those of foodstuffs, have been rising substantially during the past four months, the retail price of articles of prime necessity have during the same period been steadily falling. As a matter of fact, the general index figure, embracing the wholesale prices of 45 categories of commodities, has risen from 459 to 491, or 32 points, since the end of April, while that representing the retail prices of the usual 13 categories of common necessities (bread, meat, bacon, butter, eggs, milk, cheese, potatoes, beans, sugar, oil, petroleum and methylated spirit) has fallen during the same period from 392 to 360, or by exactly the same difference of 32 points. In each case the base figure of 100 represents prices in July, 1914. The anomaly is partly explained, of course, by the fact that practically the whole of the commodities represented by the index figure for retail prices are (with the notable exception of petroleum) of French origin, while coffee is not included in the categories selected; whereas the commodities on

which the index figure for wholesale prices is based include copper and other metals (the figure for which alone rose 23 points last month) and cotton and other textile staples (a category which rose 27 points last month). The detailed wholesale index figures for July and the previous months are as follows:—

	No. of Articles.	July.	June.	May.
General index figure	45	491	475	468
Foodstuffs, general figure	20	436	428	425
Vegetable foods	8	416	421	423
Animal foods	8	423	406	401
Sugar, coffee, cocoa	4	514	492	488
Raw materials	25	539	517	506
Minerals and metals	7	479	456	440
Textiles	6	677	650	653
Various	12	493	474	456

The index figure for retail prices in Paris, which stood at 392 in March (equivalent to an increase of 292 per cent. in the cost of the 13 commodities, as compared with July, 1914), is returned for July as 360, as against 365 in December last, 305 at the end of 1923, and 426 in Paris and 452 in the Provinces in November, 1920, these latter figures representing the maximum recorded. As against these figures established by the Statistique Générale, the Regional Commission d'Etudes on the Cost of Living recently published figures indicating that, if rent, clothing, heating, &c., be included, the cost of living has not decreased during the present year, the figure for the second quarter of 1924 being returned as 366, as against 365 for the previous quarter.

GERMANY.—REPARATIONS—FINANCES—FOREIGN SPECULATION—CURRENCY—INDUSTRY—AGRICULTURE—DUTIES—STOCKS.

(FROM OUR CORRESPONDENT.)

BERLIN, August 12.

THE proceedings in London since the arrival of the German delegates have in general caused satisfaction. A collision of principle on the military evacuation question was feared; and the discovery that this is mainly a question of dates and conditions has brought relief. In the coming Reichstag struggle over the Dawes Bills nothing would do so much to strengthen the Cabinet's hands as a favourable settlement of the evacuation question. This is only another way of saying that the proposed settlement will appeal to Germans in such measure as it guarantees them immediate relief. There is still very little interest in the question of the possibility and the manner of its execution. The Government shows no sign of coming forward with a national programme to meet the entirely unprecedented situation which will arise as soon as the annual liabilities begin to take considerable dimensions. It is noted by the few Germans who have studied the Dawes Report carefully that the schedule of payments is based wholly upon the assumption that prosperity will automatically and immediately begin to increase. The function of the mechanism provided by the Report is merely to collect and control. The underlying idea of the Report that Germany—apart from Reparations—is already self-sufficing, and could both exist nationally and balance her Budget is apparently true, though it was denied—mainly on the grounds of the unfavourable trade balance—both in the inflation years and in the first ten months of stability. The Dawes Report, however, gives no ground for its assumption that prosperity will automatically increase far past the limit of self-sufficiency. In the Experts' minds was apparently merely the pre-war precedent of increasing prosperity, which may or may not be repeated. Some inquirers here have been examining the possibilities of Reparations fulfilment if the precedent is repeated. One statistician, adopting the Dawes six-item index, and setting the average figure of each item for the period 1897-1902 as 100, shows the following index for 1913:—

Foreign trade	200
Federal and State budgets	181
Railway traffic	179
Sugar and liquor consumption	136
Population	118
Per capita coal consumption	138

The resulting combined index, according to the Dawes method, is 160, which would involve a 60 per cent. increase in the annual payment after eleven years. After five years the increase would have been 126 per cent. Germans have always understood that if production increases in value as rapidly as it did after past great wars the Reparations burden might be very small, and the advantage (if any) to the claimant countries equally small. The Government here, finding enough trouble in the mere mechanical features of the Dawes scheme, fights shy of anything like a national programme aimed at increasing production, and it is relieved by the character of the Dawes scheme from the need for preparing the nation for heavily increased taxation. The plan to take only half of the annual sum (in the standard years) directly out of taxation obscures in the public eye the real nature of the scheme. The citizen is led to regard the expected railway profits and the earnings for Reparations industrial bonds as new resources, which are to rid him of part of the Reparations burden, instead of regarding them as new burdens. The whole question of what will happen after the scheme is put into force is, in fact, ignored, except by some outright pessimists who believe that in no conditions could the payments be made.

The Finance Ministry's return for the third ten-day term of July shows revenue 260,638,600 gm, expenditure 211,411,900 gm. For the first time for many months no money was spent on redeeming Gold Loans. In all July there was a surplus of 81,800,000 gm, against 1,400,000 gm in June. The surplus since the beginning of the financial year (April 1st) is 46,800,000 gm. Of 472,300,000 gm revenue received in June, 378,400,000 gm came from direct taxes, 93,500,000 gm from Customs and Excise, and 600,000 gm from miscellaneous receipts. Railway receipts, for which a separate account is kept, are falling off as a result of the trade stagnation, being 282 millions in June, against 287.7 millions in May, and 305.9 millions in April. The Government has extended the term for submission of gold-bank balance-sheets by public companies. The question of the further restoration of secured debts continues to be the subject of controversy. It is intimately connected with the present boom in Federal, State, and municipal bonds, into which many foreigners have precipitately rushed. These foreigners ought to understand that there is no possibility whatever of the question of partial restoration of Federal or State loans being taken up within visible time by the Governments concerned. The question of municipal bonds, into which large sums of American money went in 1920, is not quite on the same level. In principle these bonds are in the same position as federal and state loans; but the Third Taxation Decree, which practically repudiated the latter two classes by postponing their consideration until after Reparations are fully paid, admits of the possibility of favoured treatment of municipal loans by federal law, and by action of the State Governments. Those municipalities which are in a position to recognise a part of their debts may be compelled to do so; this in particular would take place where the borrowings went into profit-earning local enterprises. It is characteristic of the recklessness with which foreigners have indulged in the new bonds boom that this distinction has been ignored, and that federal and state loans which are certainly excluded from the smallest measure of restoration have been bought at five to twenty times the quotations of early in the year.

This speculation is favoured by the abundance of short-term credit. Money which would normally go into long-term loans is diverted to speculation owing to the prevailing insecurity. The number of protested bills is increasing. The European exchanges have risen here in accord with the general movement as against the dollar. No shortage of exchange prevails. It is stated unofficially that this last fact will be taken advantage of to pay back, by agreement with holders, the Dollar Treasury bills of 1923, which first fall due on April 15, 1926, and that possibly the bills, which are legally payable in gold or in drafts on New York, will be paid, again by agreement, in marks. At present half the Reichs-

bank's gold reserve is tied up as security for these bills. The Reichsbank during the past months has been steadily increasing its gold reserve, mainly by purchasing gold abroad with its exchange holdings. The return for July 31st shows the gold reserve at 484,322,000 gold marks, against 441,815,000 gold marks at the lowest point on April 23rd. Gold held in Berlin is 439,374,000 gold marks, against 425,677,000 gold marks; held in foreign central banks 44,948,000 gold marks, against 16,138,000 gold marks. The Rentenbank's monthly return for July 31st shows the definitive burden imposed on industry and agriculture as 3,068,397,236 gold marks. This is the result of allocation in unoccupied territory only. The estimate was that 3,200 millions would be raised in the whole Republic. Rentenmark circulation is 2,071,442 Rentenmarks, against 2,049,788,266 Rentenmarks on June 30th. The Reichsbank has repaid to the Rentenbank 100 million Rentenmarks borrowed for the institution of Reichsbank Rentenmark current accounts, and for the conversion of the post-check system from paper marks to Rentenmarks. A Bill has been prepared for conversion of the Rentenbank into a permanent Agricultural Bank. The Gold Discount Bank's discount credits on July 31st were £6,471,912. This item has fallen slightly during the past month, while rediscount credits, which first began on June 14th, are now £7,334,685, against £3,995,173 a month ago.

The weekly cost-of-living index number for August 6th is unchanged at 114. The Railways Council has recommended a reduction of transport rates for coal. Manufacturers and traders continue to press for an all-round reduction in rates. The *Frankfurter Zeitung* estimates that railway freight rates average 75 per cent. more than in 1913, which is much more than commodities have risen. Reports concerning industry are still unfavourable. The shortage of working capital is general. The sugar industry has obtained from America a six months' credit of four million dollars, and negotiations for a credit of one million dollars for the aniline concern are stated to be under way. Export to Russia has recommenced, considerable new Russian orders are being given, and negotiations are proceeding for the opening of more consignment depots in Russia. The Wupperthal textiles industry reports a slight revival of business in certain branches, and states that foreign credit is being given on easier terms. The discharges of workmen have ceased. The boot and shoe industry reports that sales can only be made at a loss. Ruhr coal production is declining. No progress has been made towards reconstitution of the Westphalian Coal Syndicate. The present provisional selling syndicate, which is organised as a public company, may be dissolved at the end of this year. Attempts to create syndicates and conventions in the iron and steel branches, with the aim of rationing orders and of reducing production all round, have so far failed. The Mannesmann interests refused to join a sheets syndicate. The shortage of pig-iron, which, like the shortage of coal, until recently seemed to be chronic, has ceased. Prices are still slowly downward.

The Reichsrat, by 35 votes to 26, has sanctioned the Food Duties Bill, and reduced the sales tax from 2½ to 2 per cent. Prussia sharply opposed the duties, declaring that agriculture must be helped by credits, that the duties would bring nothing to the farmers, that measures must be taken to reduce middlemen's profits, and that the present time, with the Reparations settlement pending, is not propitious for increasing the cost of living. The crop reports for August 1st are more favourable than was expected. Winter wheat, spelt, and barley are over medium or medium, winter rye under medium, and all the spring bread grains over medium. The potato, sugar-beet, and fodder-root crops are all between medium and good.

The Bourse boom continued last week and yesterday, while stocks were irregular and weakish to-day, and bonds weak. After the big rise, a reaction in the boom was due. The *Frankfurter Zeitung's* industrial index between July 11th and August 8th rose from 361.85 to 540.26, while the home paper mark loans index rose from 3.13 to 8. Compared with last winter, stocks are still low, but loans average nearly twice as much as then. The movement of loan quotations in the last weeks (in

milliards of paper marks per 100 marks nominal) has been:—

	June 27.	Aug. 11.
War Loan	260	795
Fours	500	1,275
3½ per cents	375	1,275
Threes	900	1,625
Forced Loan	5.5	20 (Aug. 8)
Colonial Fours	2,500	4,000
Prussian Three, Consols	425	1,650

The disparity in the rates of rise of securities, which are really identical in that all have the same paper mark bases, and that none pay any interest, shows how irrational this new gamble is.

CANADA.—CROP CONDITIONS—BUSINESS—STOCK AND BOND MARKETS—PROBATION OF PARLIAMENT—COMMONWEALTH TRADE POLICY—DEBATE ON BRITISH PREFERENCE—THE HOME BANK REPORT.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 21.

JULY is the month when the eyes of the whole business world of Canada are concentrated upon the western grain crop, for it appraises its prospects for the autumn and winter by its varying condition. Up till the middle of last week the news was exceedingly gloomy; all over the West there had been a long spell of hot dry weather, continuous in many areas, and in others relieved by a few scant showers. On the 16th the drought was broken in many areas of the West by thunderstorms and substantial showers, but all chance of repetition of last year's record crop has disappeared, and the West will be glad to salvage 300 million bushels. If the price of wheat, as is thought probable, goes to \$1.50, the returns to the farmer will not be materially smaller than last year, but the great diminution of the volume of grain available for export will seriously affect the earnings of the railways, and reduce employment at the ports.

However, crop prospects in Eastern Canada have materially improved in the last fortnight. Winter wheat is in good condition, and is now beginning to ripen. Haying is now in progress, and the crop averages between 1½ and 2 tons per acre, which is light, but the yields of clover and alfalfa are very heavy. There has been sufficient rain to keep pastures in good condition, and dairy farmers are well satisfied. There are some bad spots in the fruit crop, but on the whole it is good, and one of the chief difficulties is a shortage of labour in some areas.

Business generally finds itself in the midsummer doldrums. Wholesalers get a steady flow of orders from storekeepers at the numerous summer resorts on the seaboard and among woods and mountains, to which American visitors, especially since the advent of prohibition in the U.S., are coming in increasing numbers every year. But retail trade in the towns and cities is quiet. Industrial production proceeds at a very cautious rate, and manufacturers adhere steadily to a very conservative policy in regard to the forward buying of raw material and the production of finished goods.

The stock markets have shown more activity during the past fortnight, and new high marks for the year have been reached by a number of stocks like Winnipeg Electric and Canada Bread. On the other hand, a great deal of Canadian money is invested in Brazilian enterprises, notably the Brazilian Traction Company, and the anxiety of investors about the effects of the rebellion in San Paulo is reflected in a decided recession of Brazilian stocks. The bond market continues quiet, and the only flotation of importance was an issue of 5 per cent. bonds by the Province of New Brunswick. Its Government preferred to accept the highest bid for 10-year bonds payable in New York Funds rather than the 20-year tenders in Canadian Funds. Substantial blocks of Canadian bonds held in Britain are being offered at intervals in Canada. The Acting-Finance Minister, Mr J. A. Robb, has sailed for Europe, and his departure makes it definitely certain that the projected Federal loan will not be floated before the autumn. Immigration returns during the first four months of the year showed a marked improvement over last year's figures, but in May and June they have been disappointing.

and the increase of 10 per cent. recorded in these months is rated unsatisfactory.

Parliament prorogued on July 19th, after sitting continuously, with the interruption of a brief Easter recess, for almost five months. The most important measure which it passed was a Redistribution Bill, which registers a rearrangement of constituencies made in conformity with the census of 1921, and alters the balance of political power by giving 12 extra seats to Western Provinces and depriving Nova Scotia of two. The Budget embodied tariff and taxation reductions sufficient to secure for the King Ministry the support of the Progressives, and thereby provide them with a Parliamentary majority; but the controversy over it revealed once more the serious cleavage in the Liberal party on the fiscal issue, and it will probably come to a real climacteric next year. Owing to strong opposition, the Government was compelled to abandon its plan to establish a special taxation board, but it secured authority to add some tariff experts of the Finance Department and to transfer from the latter to the Department of Customs and Excise the collection of the income-tax. The session opened with heroic professions of zeal for economy on the part both of the Government and the Opposition groups, but it closed amid an orgy of fresh expenditures. In the last week sanction was obtained for financial provision for a huge new bridge across the St Lawrence at Montreal and a large viaduct to give access to the water-front at Toronto; Vancouver is to be consoled with an expenditure of 5 million dollars on its harbour, and Prince Rupert, Edmonton, and other places get lesser doles. In most of these cases the liability upon the Federal Government is indirect, but it is to-day meeting many indirect obligations out of its funds. The Senate killed a number of indefensible branch lines planned for political purpose, but a substantial contingent were endorsed. The net result is, at a time when the revenues are falling ominously and crop prospects are far from good, authority is gaily given to spend more than a hundred million dollars more on increasing the physical plant of a country, which already possesses a plant thrice too large for the needs of its population, and carries thereby a serious handicap. The last day of Parliament saw a dramatic declaration of war against the Senate by the Prime Minister, who proposes next session to seek authority to curtail its powers; but his ground was not happily chosen, for Senator Dandurand, the Liberal leader in the Senate, had counselled the application of drastic surgery to the Bill, whose amendment aroused the Premier's wrath.

Considerable interest is being manifested in Canada in the proposal of the British Government to investigate through a special committee the problem of marketing Dominion food supplies in Britain. The promoters of the co-operative wheat pool movement in the West are particularly interested, and they are establishing liaison with British Labourites who are urging the plan for State control of the importation of food supplies. One of their hopes is that, if the British Government decides to embark seriously on this scheme, and establish a system of State storage and refrigerator plants, special terms for the use of this equipment will be available to co-operatively marketed products from the Dominions. The basic idea is to bring into direct contact the producers of the Dominions and the consumers in Britain, and to eliminate as far as possible a number of toll gates and obstructions, which are to-day blamed for lowering prices to the producer and enhancing them for the consumer.

There has lately been a prolonged debate in the Senate on the subject of the British preference. It was initiated by a veteran Liberal, Senator David, who moved that there should be a review of the whole preference situation, and suggested that the special privileges given to British goods should be cancelled pending such time as the British people saw fit to accord reciprocal privileges. He was supported by a number of Conservatives and a few Liberals, but the majority of the Liberal senators opposed the motion, and the most effective speech against it came from Sir George Foster, a Conservative who was Borden's chief lieutenant. Sir George is a convinced protectionist, but he is also a strong advocate of closer Imperial trade relations and he demolished very effectually the arguments of the enemies of the preference. He pointed out that as it was now an integral part of

Canada's tariff system, its abolition would entail enormous confusion, and was at the moment politically impossible; Canada had lately concluded a series of trade treaties with other countries, and the abolition of the preference would at once give their goods more favourable access to Canadian markets than British goods would have. He also argued that the depression in Canadian industry must be credited to other factors than the British preference, and this point has been more fully emphasised in a long memorandum published by the Canadian Associations of British Manufacturers and Importers. It adduces evidence, supported by definite figures, that in many lines the increase of imports from France has been much greater since the war than from Britain, and contends that the preference has been of great benefit not only to the Canadian people in general, but also to the industrialists as a large proportion of the British imports are the raw materials of Canadian factories.

In the closing week of the session the House of Commons, without debate, gave unanimous endorsement to a report of the Banking Committee, which declared that while the Home Bank depositors had no legal claim for recompense, they had a strong claim on equitable and moral grounds. The Government intimated that they must have more time to consider a decision, which involved great responsibility, and promised that as soon as Parliament reassembled a declaration of policy would be made.

AUSTRIA.—POLITICAL SITUATION—STATE FINANCE —CENTRAL FINANCE INSTITUTE—METAL CURRENCY.

(FROM OUR CORRESPONDENT.)

VIENNA, August 1.

PARLIAMENT has just closed its session. It was the first after the new elections in October, 1923, full of incidents, but rather poor of economic results; only with the greatest difficulties were the Budget for 1924 and various tax bills passed. Also the thorny question of the division of the tax revenue between the Government and the County Council was solved after endless negotiations. The new Tariff Bill, however, which will have to form the basis for the commercial treaties between Austria and the surrounding States, could not yet be passed owing to the general disapproval of the members to extend the session into the month of August.

The effect of the present economic crisis on State finances is beginning to be gradually felt. Until July it had not been necessary to utilise the League of Nations' credit to meet State expenses, so that the General Commissioner had reckoned on a surplus of 46 milliard kronen (3.2 million gold kronen) for the first four months of the year. The estimate for expenditure for July, however, shows a deficit of 110 milliard kronen, i.e., 8 million gold kronen, so that the General Commissioner was obliged to come to the assistance of the Government. He could only place 46 milliard paper kronen at the disposal of the Finance Minister; it is, however, hoped to meet the balance of the deficit out of reserve funds at the disposal of the Government. The outlook for the development of the State Finance is rather bad, because it is expected that the revenue will greatly decrease during the coming months. Last year, not only companies, but all business men, had considerable profits, and therefore not only the profit tax, but also the income-tax, showed exceptionally good results, which, in view of the present economic crisis, will shrink very soon. It will, therefore, be hardly possible to balance the Budget at the end of this year, as was provided for by the League of Nations Reconstruction Scheme. The initiated reckon on the probability that the control of the League of Nations will have to be extended over the year 1925.

Although the situation has not changed very much during the month of July, a slight revival of confidence was noticeable on the market during the last few weeks, and has gradually extended to all branches of economic life. In order to help in the solution of the financial crisis, the Government intends forming a "Central Finance Institute" jointly with the National Bank, the

Post Office Savings Bank, and the Union of Vienna Banks. The object of this institute will be:—

1. The control and support of the market.
2. Supervision of the management of all banks in Austria.
3. To provide credits from abroad for the Austrian banks.
4. Financing of public works.
5. To act as trustee in the event of the liquidation of a bank, or a merger of smaller banks.

Although the object of this institute will practically be a public one, it is intended to organise it as a Joint Stock Company with a share capital of 200 milliard paper kronen.

This project is greeted in all financial circles as the best solution of the present financial crisis in Austria, and it is generally hoped that it would lead to a revival of business on the Stock Exchange. It appears, however, that the Commissioner-General of the League of Nations fiercely opposes the participation of the Government in this Finance Institute, which, of course, would jeopardise the whole scheme.

The Austrian industries are at present working less on foreign than on home orders, prominent among the latter being those recently placed by the Municipality of Vienna, by which not only the electric industry and the building industry itself, but also a number of accessory industries will profit largely. Unemployment has reached its lowest mark since the beginning of the reconstruction work, no more than 63,083 unemployed being registered on July 15th (as against 92,789 in July, 1923).

Although the trade balance statistics show a slight improvement as against the first two months of this year, the deficit of the trade balance still remains very high. During the first five months the imports had a value of 872,055,000 gold kronen, and exports a value of 447,859,000 gold kronen, giving a deficit of 424,196,000 gold kronen.

The Austrian National Bank, which works in closest contact with the other banks, has done its utmost to assist banks, industries, and trades in the present difficult situation. As a consequence of this the amount of bills discounted is continually rising, in spite of the increase in the Bank rate from 9 to 12 per cent., and reached on July 15th a total of 3,197 milliard kronen. The bank-note circulation amounted, on the same date, to 7,336 milliard kronen; the gold security of these bank-notes, which according to the Bank Law has to be 20 per cent., actually amounts to 38.5 per cent. The Bank has started to issue metal coins, viz., silver "Schillings" (equal to 10,000 kronen), a 100 "Stüber" (1 Stüber = 100 kronen); the 10 Stüber (1,000 kronen) coins are of nickel, the 2 and 1 Stüber (200 kronen and 100 kronen) are of copper.

HONG KONG.—TRADE SITUATION—METAL STOCKS —FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

HONG KONG, July 5.

WITH the close of the first half of 1924 we seem to be as far off from the long-looked-for revival in business as ever. There has been a perceptible slackening in the trade of the colony during the past six months, and to-day there is scarcely a market which shows signs of any vitality. Civil war, piracy, brigandage, currency depreciation, illegal taxation are all impeding the normal flow of trade between this centre and the neighbouring provinces, and it appears to be beyond the powers of any Chinese leader to clear these obstacles away. Throughout the length and breadth of China conditions go from bad to worse, and we have now reached the stage where the 400 million inhabitants of the Republic are held in bondage by a handful of self-seeking militarists.

Despite the gloom which enshrouds us here, we still struggle to carry on until the tide turns. The mushroom firms of the post-war boom have long since disappeared, and the volume of business during the past year or two has been sufficient to enable most of the older firms to clear off indebtedness incurred during the slump and re-establish themselves on a sounder basis. The same applies

Rubber Plantations Investment Trust, Ltd.

to the majority of Chinese dealers, who have had no incentive to launch out on a bigger scale than they could cope with. There is, therefore, no cause for anxiety at the moment, but it is quite clear that unless the situation in China improves within the next six months, there are difficult times ahead. One Chinese bank with its head office here recently failed, and other Chinese banks with foreign connections are not in too strong a position, but so far this has had little effect on the general situation.

The metal market is perhaps in as moribund a state as any other branch of foreign trade, and the warehouses are full up with steel bars, angles, joists, wire nails, galvanised wire, &c., which cannot be moved owing to conditions prevailing up country. A good deal of this material has accumulated on account of speculative transactions entered into after the Japanese earthquake of last September. The general impression then was that Japan would be forced to draw on the neighbouring markets of Shanghai and Hong Kong for metals. A certain quantity of material was actually taken off these markets during the early days of reconstruction, but prices rose to such a height that Japan turned to America for further supplies. Contrary to expectations, prices in America and Europe did not bound up to any extent, and so the large orders which were wired home from here during the autumn have found no outlet in Japan. Meantime, the goods have arrived, and are piling up with little prospect of being cleared for many a long day.

On the other hand, the market for cotton and woollen piece goods is in a comparatively healthy state, and there has been little, if any, speculation. There has been a restricted demand for staple lines, such as greys and white shirtings, but fancies like cotton brocades have found a ready market, owing to the price of silk being beyond the reduced purchasing power of the average customer. Clearances of piece goods generally have been excellent until quite recently, and if the future were more promising dealers and merchants would have little to grumble at.

The local industries of Hong Kong have a comparatively small effect on the general prosperity of the Colony, but it is gratifying to find that practically all branches are in a flourishing condition. This is due to a combination of causes, but underlying all is the fact that Hong Kong is British territory. A vast amount of money has found its way here, in most cases from the reserves of a thrifty peasantry through the treasuries of their oppressors to the sanctuary of Hong Kong, where it is safely invested for the benefit of some Tuchun or general who is probably keeping his followers months in arrears of pay. The influx of this capital has sent up the value of land to a ridiculous level, and it is just as well that a slight reaction appears to have set in. There seems, however, little doubt that real estate throughout the Colony is permanently enhanced in value, and as practically all the industrial companies here own the sites on which their factories stand, their assets have been appreciably strengthened. Surplus funds have overflowed from property deals into the share market, which, for the past six months, has been booming on and off with no actual slump in the intervals of quietness. The rise in purely local securities has been general, and several companies have taken advantage of prevailing conditions to increase their capital. The new issues have been readily absorbed, and most industrial concerns are in a healthy position.

However pleasant it may be to watch one's holdings of shares steadily rising in value, the fact remains that Hong Kong's trade can never expand while Canton and the provinces of the South are in a state of turmoil. Whether the country will ever be restored to law and order is a moot point, but we have not given up hope of seeing some enlightened leader come to the fore in sufficient strength to control the Southern provinces effectively.

Letters to the Editor.

A SILVER STANDARD?

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am asking this question of you as an undergraduate would of his tutor in economics, seriously and for information, for I cannot puzzle it out myself; it is this: What would be the effect upon the world if one or more of the nations trying to struggle to their feet were to discard gold as a standard of value and as a circulating medium, and take to silver? The value of silver would, of course, immediately alter in its relation to gold, and I can conceive that if Germany and Russia did this, and other debtor nations followed their lead, some considerable advantage over their creditors would accrue to them through the fall in the value of the yellow metal, for a fall would ensue when it was known that half the world had no use for gold except for ornament. I put a few further questions to follow this: What would be the effect on the United States with their buried hoard of gold? Would they relish being compelled to take more from us and their other debtors when the article was depreciating? And, above all, what would be the effect on us at home, for that is what matters most?

This is not bimetalism, by the way, though I think that had not the Rand deposits been discovered the world would have had to come to that solution before this; the discovery of the Rand made monometallism on a gold basis possible; the supply then met the demand.—I am, yours faithfully,

CHARLES ROBERTSON.

Arundel, Sussex, August 5th, 1924.

[Most of the world abandoned the gold standard in the War, and thus made possible the rise in gold prices in U.S.A., which is the measure of the depreciation of gold. The first question to be answered is what would be the effect on the value of gold if it were restored to its former position as a general standard. This will depend on the economies in its use which will be retained as well as on future output; but it is unlikely to be restored to its old pre-war value. If other countries were to go on to silver (and thereby create for themselves a new exchange problem), or remain on a paper standard, gold is unlikely to appreciate at all, but is more likely to depreciate, in spite of the monetary policy of the U.S.A., which is referred to in a previous column. (See also the *Economist* for June 14th, p. 1190.) Nevertheless, the advantage of paying debts in a cheapening medium does not seem to us a sufficient reason for adopting a policy which would have much greater disadvantages.—Ed., *Economist*.]

Books and Publications.

INDIA AND EMIGRATION.*

The first few pages of this admirable volume suffice to show that Indian emigration had no history before the 'thirties of last century. Legally defined in 1869 as "the departure of any native of India out of British India for the purpose of labouring for hire in some other place," it was the practical sequel to the abolition of slavery. The plantations needed labour to replace the slaves of the former régime; India supplied the need, and the indentured system developed in response to the call for organisation; the result was what has happily proved to be only a transition period of "helotry," as our author euphemistically terms it—let us frankly call it semi-slavery.

* "India of To-day." Volume V.—Indian Emigration. Humphrey Milford, Oxford University Press. Price 3s.

Public opinion—both British and Indian—has summarily terminated that phase. In doing so it has, so far as one can judge an event of our own time fraught with such far-reaching possibilities, closed the door to Indian emigration and opened up in its place a political problem of infinite difficulty—a problem that must vitally affect the future of the British Empire.

India cannot be expected to view with equanimity the indefinite cooping up of its teeming population in a restricted space. She claims the right to emigrate, and, with it, a position of equality in the Empire. That, under present conditions, she will probably never secure. Our author would seem to be unduly optimistic on this point, but, to tackle the problem sanely, we should appreciate the difficulties, the fears, and—let us be frank—the prejudices of the Dominions and the Colonies. The problem is no longer an economic one. It is political. Great Britain can never override the attitude of her children abroad, even in the interests of the Empire. And there is an alternative—one to which internal developments in India already point the way, and which the Empire itself must seriously face before it finally refuses the Indian demand for unrestricted equality. That alternative is Indian autonomy—within the Empire, of course, but complete and involving a subordination of the European in India to balance the subordination of the Indian elsewhere. If the Empire cannot stomach this implication of the accepted principle of reciprocity, the Imperial Conference resolution of 1921 cannot be regarded as more than a tentative approach towards a solution of the problem.

More than half the volume before us is devoted to a careful and valuable statement of the facts relating to Indian emigration in so far as they affect the various Colonies and Dominions. But it is its beginning and end that will chiefly attract the attention of the general student and give him food for thought. The author does not, perhaps, sufficiently emphasise the fact—at least so it appears to us—that the Government of India showed itself distinctly lacking in imagination when, in 1912, with its official majority, it defeated a unanimous vote of all the Indian members of the Legislature in favour of Mr Gokhale's resolution for the complete "prohibition of recruitment of Indian labourers under contract of indenture, whether for employment at home or in any British colony." Lord Sanderson's Committee, which had then recently spent three years studying the problem, and reported in favour of continuing the indenture system, stands equally discredited. At any rate, in 1915 "the time had come.....to assent to a total abolition of the system of indentured Indian labour....." Indian opinion had correctly anticipated the inevitable verdict. The war hastened it.

Imperial citizenship for all, including Indians and complete autonomy for India, are the extremes between which we must finally choose. The controversies of the past have left no middle way. And it is of the irony of fate that General Smuts, one of the foremost champions of the League of Nations ideal, should have found himself unable to solve at home this issue between conflicting national ideals.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, August 27. ACCOUNT, August 28.

The unexpected gathering of trouble clouds along the north coast of Africa, and their extension to Egypt, checked, though only temporarily, the mild optimism which Stock Exchange markets developed owing to the Peace Conference decisions. Nor does it seem certain at this particular moment whether the latter will be finally accepted in the form that would ensure peace in Europe. The Board of Trade returns for last month are held to be satisfactory, and the usual holiday influences have been counteracted to some extent in the Stock Exchange by a variety of incidents that have served to quicken business in some directions. At the same time, it must be stated that trade in the Stock Exchange as a whole is quiet. Many members are experiencing the truth of the convention that nobody can expect to pay expenses during August.

The sharp rise in the value of sterling as compared with the dollar helped to cheer the Consol market, and to remove the immediate likelihood of a rise in the Bank rate. Although this latter is deemed to be sufficiently close to render it a factor of consequence, the gilt-edged market has been good, with the Funding Loan and Victory Bonds distinctly harder, the War Loan keeping to the neighbourhood of 101½.

The trouble in Egypt and the excitement in Morocco have induced caution in the foreign market. Turkish and Egyptian bonds are, naturally, weaker. The wild gamble in Germans has given way to a quieter condition of market, though there is still a lot of business being done in Germans and Prussians, the prices moving up and down in volatile fashion. French issues have been better, though without holding their best prices. Brazilian, Chilean, and Argentine bonds are disposed to mark time, there being little business afoot even in the first named. Czechos continue to be a good market.

Great Western, London Midland and Scottish, and several other Home Railway stocks went ex dividend on Thursday, and, in advance of the deductions, the prices improved. The railway market as a whole is a shade better, thanks to publicity given to the reserves of the four principal groups. Undergrounds are quiet; the £10 shares of the Underground Electric Railways stiffened with the rise in sterling. Argentine railway stocks enjoyed a moderate amount of support, and Brazilians are steady, resumption of traffics publication by the San Paulo company reflecting the return to normal conditions after the strike.

The rubber market barely holds its prices, without there being any fresh movement of interest, while tea shares have gone ahead again, in some cases to a fairly substantial extent, the outlook for the industry being regarded as bright. Amongst oil shares, a sudden rise in Mexican Eagles caught the bears short. This was accompanied by talk of new discoveries

having been made on the field. Insurance shares are one of the strongest markets in the House, prices rising with clockwork regularity every day. In some cases the jobbers refuse to sell shares at all, saying that they have none left on their books, and they do not know where to go for fresh supplies. Banking shares keep firm. In the tobacco market a further rise in Carreras is the outstanding feature, leading to talk of a possible bonus. Amongst textiles, Courtauld preference have taken a turn for the better, the ordinary shares in this company being very placid. Hotels and other Exhibition stocks show little change. Egyptian land shares are weaker, following upon the news from Cairo, and the shipping market is practically unchanged. More attention is being paid to Nitrates, in consequence of the expectation that, if peace were to be assured, Germany would be a substantial buyer; prices are higher on the week. Iron and steel shares show many, if small, improvements. Marconis strengthened in advance of yesterday's meeting, and Canadian Marconis sympathetically improved. Cable stocks are steady; rises in Henley's, Callender's, and British Insulated are deemed to forecast probable dividend increases. Motor shares are rather better.

Four and twenty Kaffir prices went ex dividend on Thursday, without the market being stimulated into any semblance of activity. A sharp drop in Cam and Motors is the feature amongst Rhodesians. Diamond shares lie dormant, but the base-metal groups contain a number of rises. Tin shares, particularly Malayan, have again been well supported. The copper market is better. Lead, silver and zinc shares, e.g., Burina Corporations, are also higher. Russian and West Australian shares are quiescent. No great part of the activity in the mining markets is due to public orders; holiday-makers do not care, as a rule, to be bothered with mining speculation.

The Committee for General Purposes have given instructions for the quotations of the Chinese 5 per cent. 1896 and Chinese 4½ per cent. 1898 Loans to be reinstated in the Stock Exchange Daily Official List on the intimation that the full service of the loans in question has been resumed.

THE NATIONAL BANK OF SOUTH AFRICA,
LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

GREATLY IMPROVED RESULTS.

BOARD'S SOUND DIVIDEND POLICY.

COMMERCIAL BANKS AND CREDIT FACILITIES.

RETURN TO GOLD STANDARD PROBLEM.

ALLOCATION TO PENSION FUND.

At the annual meeting of the National Bank of South Africa, held at Pretoria, on August 8th, the chairman, Mr James R. Leisk, C.M.G., in moving the adoption of the directors' report and accounts for the year ended March 31, 1924, said the conditions under which they were met contrasted very favourably with those that prevailed on the occasion of the two previous meetings. The satisfactory results shown were achieved notwithstanding the continuance of the most depressed conditions in the general business situation and the disastrous losses which farmers have sustained through the drought and the locusts.

BALANCE-SHEET ITEMS.

Reviewing the balance-sheet, Mr Leisk said the contraction in the aggregate figures of some £10,000,000 was largely attributable to the exclusion of bills rediscounted and now shown as a contingent liability, and that of the drop, only some £4,000,000—or roughly 7 per cent. of the aggregate—was due to general trade contraction. The cash balance at bankers and other quick assets represented 53 per cent. of the liabilities to the public, as compared with 48½ per cent. last year—a very liquid position.

ASSETS.

Coming to a survey of the assets, he said that bills of exchange, bills discounted, advances, &c., showed a substantial drop as compared with the previous year's figure, due partly to the general contraction in trade and industry, partly to an altered method of representing the balance-sheet, and partly to adjustments made with amounts taken from capital and reserve.

LIABILITIES.

Turning to the liabilities side, the Chairman explained that the contraction in capital, which now stood at £2,075,500, was in pursuance of the resolutions taken at the extraordinary general meeting in October last, and the fall in the note circulation was accounted for by the operation of the Currency and Banking Act of 1920. In the terms of this Act, he mentioned that the amount of just under £250,000 had been paid over to the reserve bank on June 30th last, representing the value of the bank's Union notes outstanding on that date. The deposits, current and other accounts at £34,000,000 reflected a drop of some five and a-half millions as compared with the March, 1923, figures. This, he said, was another indication of the trying time through which the country had been passing.

PROFIT AND LOSS ACCOUNT.

The profit and loss account showed that gross revenue for the 12 months was £1,496,000, an improvement over the previous year of some £137,000. It cost £1,240,000 to earn this revenue, a decrease of £28,000. On the 1923 figures the net profit was £203,000, which, with the carry forward from the preceding year, gave a sum of £228,127 10s available for allocation. This, the Chairman said, would be allocated as follows:—To the reserve fund £150,000, to the pension fund £60,000, to the carry forward £28,127.

QUESTION OF DIVIDENDS.

Continuing, the Chairman said the directors are not unmindful of the claims of the shareholders to receive a distribution of profits as soon as possible. On the other hand, they must not ignore the obvious principles of sound and prudent finance. Applying these principles to the question under discussion, the directors came to the decision that the past year's profits should be retained in our business and utilised towards the rebuilding of our reserves and the maintenance of our pension fund. A few shareholders have expressed disappointment that they are not to receive a portion of the year's available profits, but the directors feel confident that the great majority of shareholders approve of their recommendation and endorse their policy of conserving profits until the reserves have reached adequate dimensions. Now, it is not improbable that we shall be asked this morning to define the expression "adequate dimensions," and to give some approximate indication of the date when the dividend distributions are likely to be resumed. It is desirable, therefore, to anticipate such inquiry by stating that this is a point into which the directors decline to allow themselves to be driven at the present time.

So many factors enter into the situation—factors that are quite outside the control of the bank—that it would be unwise for us to commit ourselves to-day to a definition of the term “adequate dimensions.” There is only one certain factor in the dividend situation—namely, that it is impossible that by the completion of our approaching half-yearly balance at September 30th the obscurities of the outlook can be so far dispelled as to permit of any dividend announcement on the results of the current half-year’s trading. With respect to the proposed allocation to the pension fund of £50,000 out of these profits, it is on record that at the extraordinary general meeting last October some discussion took place regarding the expediency in the existing circumstances of keeping up our annual contributions to the pension fund. Upon this point our views are very clear and definite. It would be fatal to the peace of mind, and consequently to the efficiency, of our staff if any feeling were to be created that the bank was ignoring its obligations to the pension fund.

The result of an actuarial investigation has established the fact that our usual annual contribution of £50,000 is fully required.

STAFF MATTERS.

Speaking about the staff, Mr Leisk said it was with the greatest pleasure that he was able to announce that the year under review had marked a very distinct advance in the restoration of harmony and goodwill among all ranks in the bank's service; that it was clear that the process would continue, and that as a consequence of this happy state of affairs there had been noticeable an improvement in efficiency. Continuing, he mentioned that during the past year the bank had engaged upwards of 200 youths straight from college, that the majority of these were young South Africans and were of an excellent type and promised to make their mark in the banking world. He had no hesitation in stating that, as the conditions are to-day, banking offers a promising career for the educated youth of this country, provided he is prepared to work and become thoroughly proficient in his profession. Referring to the closing of branches, he said that little more remains to be done in that connection, the position happily being that, with the exception of one or two small and unimportant branches, the policy of closing might be said to be at an end. On the question of the adequacy of the bank's existing capital, regarding which there was some discussion at the last annual meeting, the Chairman said the conditions at present were not favourable for the raising of additional capital on terms which the directors would be prepared to recommend. In London, which would be the most likely source of supply, the bank already had large cash balances which were earning a somewhat limited return, and were immobile owing to the prevailing trade and exchange situation. To raise additional capital in London would, therefore, be unprofitable. The directors would, however, continue to give close attention to that subject, and the shareholders need not fear that delay would be harmful to the bank's interests.

Thanks to the reserve bank system, the means of supplementing the bank's ordinary resources was at hand in the shape of rediscounts of trade paper and Treasury bills, and full advantage was taken of this source of supply, with the result that the bank had experienced no difficulty whatever in meeting the needs of clients and in financing all sound business that came in its way.

PROPOSED STATE BANK.

Mr Leisk next referred to the proposed State bank, and expressed the opinion that from the point of view of the general public interest the entry of the State into the province of banking would be fraught with considerable danger. The expectation of cheap credit, from which the movement appeared to derive most of its support, could only be realised at the expense of the taxpayer. He presumed, however, that before any policy was decided upon the new Government and Parliament would fortify themselves with the advice of a commission of inquiry, and that the commercial banks, whose experience in these matters was extensive, would be given every opportunity of ventilating their views.

On this subject, Mr Leisk said there seems to be a persistent

feeling that the existing commercial banks are pursuing a deliberate and malicious policy of withholding or restricting legitimate credit facilities. Speaking for our own bank, I can give you the assurance that since I was appointed 2½ years ago to the chairmanship of the National Bank I have not known of a single case in which we have declined business that satisfied the well-understood tests of sound and prudent banking. I am confident, too, that the experience of our competitors is precisely the same.

RETURN TO GOLD STANDARD.

Referring to the controversy as to the merits and demerits of a general return to a gold standard, Mr Leisk remarked that recently there had been noticeable a revival of interest in the subject, that expert and public opinion had undergone a considerable change, and that the advocates of an early return to gold were now very much in the ascendant.

In so far as South Africa was concerned, he said, according to existing legislation the inconvertibility of Union Gold certificates would remain in operation until June 30, 1925, or until the market price of gold was restored to 77s 10½d per standard ounce, whichever date might be earlier. There was so little prospect of the price of gold returning to that level before June 30th next that that aspect of the question might be eliminated. What then, he asked, should be the Union's attitude towards the problem? Should the period of inconvertibility be extended beyond June 30, 1925, or should Parliament refrain from an amending law, and thus automatically bring about the return to a free gold market in South Africa on July 1st next?

ONLY SAFE COURSE.

He ventured to think that the only safe course for South Africa to follow was to extend from time to time as required the period of inconvertibility in the confident expectation that the measures adopted in Great Britain to restore the gold standard would be successful, and thus pave the way for the restoration of a free gold market in South Africa, with the minimum of risk and of

local economic disturbance. The Chairman said: As a practical illustration of the uncertainties of the situation from the point of view of the South African banks, I would point to the directors' report which is in your hands this morning. It is there stated that we have established a reserve against the possibility of depreciation in our overseas sterling balances. The precise meaning of that precaution is that if South Africa goes back to a free gold basis before the pound sterling moves closer to its gold parity, then all those South African concerns which have surplus balances in London will automatically see these balances depreciated in value by the amount that it would cost to return them to this country.

Obviously that cost, under conditions such as I have indicated, would be greatly in excess of the present-day rates of exchange for remitting from London to South Africa.

ECONOMIC OUTLOOK.

With regard to the economic outlook, the Chairman said the determining factor was beyond our control, as it was to be found not in South, but in the Council Chambers of distracted Europe; that our economic troubles were almost entirely due to the delay in reaching a settlement of the reparations tangle, but that there was evidence that this problem was nearer solution than at any time since the Versailles Conference. If, he continued, the hopes of an early settlement were realised, then the South African conditions were ripe for an upward move to share in the resultant prosperity. Our gold industry would see a revival of activity, the effect on unemployment would be manifest, and the demand for our base metals, wool, maize, sugar, fruit, coal, &c., would be stimulated. Meanwhile, it was essential that the greatest care and prudence should continue to be exercised in all business dealings. Mr Leisk then gave an interesting review of the advancement in South African industries and agriculture, and the growth of imports and exports, and said the country was making steady progress, and that there was every reason for confidence.

The directors' recommendations were adopted.

MITCHELLS AND BUTLERS, LIMITED.

SUCCESSFUL YEAR'S TRADING RESULTS.

WELSH LOCAL OPTION AND BISHOP OF OXFORD'S BILLS.

IMPROVED LICENSED HOUSES THE SOLUTION.

The thirty-seventh annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 14th instant, under the presidency of Mr W. Waters Butler.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and Gentlemen,—Taking into consideration all the regrettable industrial conditions prevailing during the past year, your directors feel that they have presented to you a balance-sheet which indicates far better trading results than were anticipated this time last year, fearing, as they did, that the amount of the reduction in the beer duty of 20s per barrel, which took place in the Budget of 1923, being less than the accompanying decrease of 24s per barrel in the retail prices, would impose a heavy charge upon the trading operations of the company unless we had a big increase in our sales. Our sales are much better than we expected through the reduction in the retail prices, due not to an increase in the spending power of our customers—for there is every evidence it has been less during the year than in the previous year—but to the gratifying fact that our products are becoming more widely popular through the maintenance of their quality and strength, no attempt having been made to recoup ourselves for the charge imposed upon us by offering a weaker or inferior article to the public.

PENSION FUND.

During the past year the income-tax authorities have approved of a scheme in connection with our pension fund, which will be augmented by the investments in connection therewith being exempted from income-tax. The scheme provides a very liberal scale of pensions without any contributions from those who benefit from it. Last year the sum of £6,813 was paid as pensions. At the present time the fund totals £127,958, which sum is not included in the assets of the company.

You will have noted that we have paid off in the year £80,000 of the loan in connection with the purchase of the Midland Brewery, although only £40,000 was due. This loan was originally £400,000, of which £240,000 has been repaid.

PUBLIC'S APPROVAL OF COMPANY'S PREMISES.

It is exceedingly gratifying to hear almost daily from persons in the highest quarters their approval of our artistically designed and well-equipped licensed premises which we have erected, and are erecting in our trading area. I can assure you the return on the capital expended in such new premises is at present a meagre one,

but we are building for the future, feeling confident that our policy of the closing down of redundant, badly-constructed premises, which offer poor service to the public, and the substitution of more up-to-date premises, not only will tend to strengthen the defence of the industry by the public, for whose needs they are erected, but also advance the sobriety of the nation, which the trade is as eager to promote as the most ardent true temperance reformer.

The seven years' service agreement existing between the four senior managing directors and the company expires this year. The board has renewed the same for a further seven years, without any alteration in the terms.

The board has appointed Mr William Owen Butler a managing director, and Mr Lauchlan Campbell a director of the company. I feel sure that the confidence reposed in my son, who will be the first representative of the third generation of the Butler family to go on. Mr Lauchlan Campbell has served us during the past 27 years as a member of the staff, and fully deserves recognition of his valued services by our offering him a seat on the board.

CURRENT YEAR'S PROSPECTS.

Altogether I think we may look back on the financial results of the past year, and the present condition of the company as in every way satisfactory. Our prospects for the coming year are promising. Although there is every indication that the cost of barley and malt will show a material increase during the coming year, I am glad to say we are in the fortunate position of holding, or having contracts fixed for, sufficiently barley and malt for our requirements during the current financial year.

Since the advent of the Labour Government, two important bills affecting the trade have been discussed.

WELSH LOCAL OPTION BILL.

The first of these measures was the Welsh Local Option Bill, which was introduced as a Private Member's Bill. The Government realised what was thoroughly exposed by the debate—that there was a strong element in its own party against the proposals contained in the Bill, for Welsh and English Labour leaders spoke against it, so much so that in the Division which terminated the discussion and killed the Bill for the time being, many Labour Members aided by their votes to bring about that result.

Daily we have evidence that Prohibition is no solution of the so-called drink problem. We find that countries which have

attempted to so solve it are now rescinding their former legislation, and returning to controlled forms of sale, plainly indicating that where Prohibition is imposed upon people who do not recognise its need or value, it is not only fore-doomed to failure, but that resistance to its operation creates far worse evils than existed before the change.

BISHOP OF OXFORD'S LIQUOR BILL.

The most interesting event in connection with licensing legislation has been the re-introduction of the Bishop of Oxford's Liquor (Popular Control) Bill. It was almost word for word the same Bill as presented by him in the House of Lords in 1921.

The Earl of Birkenhead, in his admirable criticism of the Bill, seemed to indicate that he personally would not oppose an increase in the present Compensation Levy under the Act of 1904 to accelerate the rate of reduction of those licences which, he said, must still be pronounced to be redundant.

Lord Dawson of Penn, the King's Physician, speaking against the Bill, said: "It may be taken that the opinion of the medical world, both in this country and abroad, is by a very large majority in favour of alcohol as a useful substance."

Viscount Astor, who strongly supported the Bill, stated that it proposed to give compensation on a lower scale than was given at Carlisle. He was entirely against trying to commit the country to any drastic change as a whole, and said he had spent a great deal of time explaining to Prohibitionists that the country does not want Prohibition.

Viscount Milner, who supported the Bill, said he believed the true method and ultimate solution of this most harassing problem was a system of public management and control. Referring to Carlisle, he said that "above all by the elimination of the competitive supply of drink, a great and conspicuous improvement was effected in that district, and has been maintained since, in spite of the great difficulty of maintaining an isolated experiment of that kind, and the great attacks to which it has been exposed from many sides." He wanted "to know why, in the name of common sense, the system which has succeeded in that instance should not be applied to other districts if the people of those districts desire to apply it, and why they should not follow that example, especially as that example has shown that it is possible to get rid of private interests in the liquor trade on absolutely fair terms without any loss, and, indeed, with the prospect of ultimate substantial profit to the community."

LORD LAMINGTON'S RESOLUTION.

Arising out of the debate, Lord Lamington moved a resolution, which was agreed to, and was as follows:—

"That it is desirable that an inquiry should be made, and a report made to Parliament, on the different systems of disinterested management of licensed houses, and in particular on the working of the licensing system in Carlisle."

After perusing the reports of the debate on the Bishop of Oxford's Bill, in which so many references were made to Carlisle and disinterested management, I was pleased when I read that Lord Lamington had moved the resolution which I have just read. I am sure an impartial investigation will confirm my view that this scheme has attained a great success, which is unattainable elsewhere without the exercise of special powers such as were applied to Carlisle.

Viscount Astor made a strong attempt to widen the reference of the inquiry by including other towns of similar character to Carlisle, to see exactly the nature and extent of the improvement in Carlisle.

Although the House of Lords would not agree to extending the inquiry beyond the question of disinterested management, including Carlisle, the Lord Chancellor (Viscount Haldane) announced that the Government propose to hold an inquiry into the system of disinterested management, and also other points germane to such inquiry, but not in such a way as to divert the inquiry from its plain terms to see whether there is any system which renders the work of temperance on the Carlisle model possible. While guarding himself against anticipating the results of the inquiry, he said that the inquiry might be adverse to disinterested management, or it may be that the inquiry will say that you must go further in the direction of the limitation of facilities for the sale of drink. Earlier in the debate he said: "I think it would be rather an absurdity to refer the question of Prohibition to any tribunal of any kind. That must be a question for Parliament and for the nation."

So we are to have another inquiry as to the manner in which the licensed trade should be conducted. I trust we shall have a report that plainly indicates which form of trading is the best to meet the requirements of the consuming public under the best conditions of service.

"DISINTERESTED MANAGEMENT."

I fear many people are not clear what is meant by "disinterested management." Originally it referred to that method of trading

set up by Public House Reform Associations and trust companies, the shareholders of which agreed that they would not take out of the net trading profit a greater dividend than their capital would receive if invested in an ordinary average investment, say 5 per cent. At one time these undertakings were referred to as "philanthropy at 5 per cent." The limited profit does not prevent them from affording every facility to encourage patrons to come there. If good service and environment result in "pushing the sale of liquor," then we get it here just as much as in a well-managed licensed house of a brewery company.

To-day the term "disinterested management" has been widened to include the form of trading carried on by the State at Carlisle, where all the managers of the licensed houses have a fixed salary free from any commissions on the sales of alcoholic beverages.

INTENSIVE AND UNHEALTHY COMPETITION.

You may say that exactly the same method of trading is carried out in the 750 directly-managed houses of your company.

The fact is, no matter whether houses are conducted under the auspices of the State as at Carlisle, or under the management of companies who limit the profit distributed to their shareholders—which limit they find it difficult to attain—you are offered no better service and certainly no better fare or at lower charges than in the best type of licensed house, of which your company possesses many. One wishes we had more, and that the conditions were favourable to bring about a great increase in their number here and throughout the country. What are the conditions I have referred to which do not facilitate the increase in the number of these desirable houses of refreshment? The main obstacle is that a trader in endeavouring to obtain a proper remuneration for his labour, and the property owner an adequate return on his capital, have to combat with intensive and unhealthy competition, which is not to the advantage of the consumer or the general well-being of the community. From whence and how does this competition arise? Mainly through licensed houses being not only too many in number, but worse still, badly distributed, resulting in districts having redundant licences, while other areas have not proper facilities afforded them, mainly through the action of land owners restricting their estates against the distribution of liquor in any properties erected thereon, and through the licensing justices in certain districts not favouring the removal of licences from congested areas to more thinly licensed districts, contrary to the action of the Birmingham justices, who have favoured such removals, adding, I venture to say, to the well-being of the city. The improved conditions brought about by such removals and the closing of redundant licences under the Licensing Act of 1904 at the present rate of reduction, is not sufficiently rapid to attain the desired conditions even in Birmingham, where a group of brewers have worked together, unequalled in any other licensing area, and have greatly aided the justices in accelerating the reduction of licences.

CASE OF CARLISLE.

A big reduction in retail trading centres, and in addition a decrease in the number of manufacturing establishments, have been mainly responsible for the profitable character of the trading operations in Carlisle. The licensed trade in Carlisle, had it not been transferred to the State but remained under private ownership, would have a very hard struggle to exist, and certainly would not be in a position to show the trading results and the improvements in the licensed houses which are now obtained under State management aided by a Local Advisory Committee.

My reasoning brings me back to what I have said to you on several occasions, that the improvement of licensed houses must be coupled with the policy of "fewer and better." As a trader, I agree that unless the improvement in licensed houses is accelerated, we help the clamour of those who would abolish alcoholic beverages, notwithstanding there is abundant evidence that there has been a great advance in temperance during even the past ten years, the convictions for drunkenness to-day being less than one-half of what they were ten years ago, an improvement which the Archbishop of Canterbury admitted was constantly under-rated and under-stated by those who advocate temperance reform.

I am glad to note the growing determination of the leading brewers not only to thoroughly investigate the methods whereby the demand for reform may be met, but also by the expenditure of large sums in the provision of improved licensed houses showing an earnest of their willingness to meet the requirements of the times. The problem is how we can accelerate this improvement.

STATE PURCHASE.

Many have thought, among them myself, that it can only be accomplished by the State purchasing the trade outright. That solution of the problem in consequence of the present financial position of the country cannot, I fear, come about, but I do not see why any municipality should not signify its desire that the State should, or the municipality be permitted to, take over the breweries and the licensed houses within its area. The Treasury aid and

backing in either event need not necessarily be a heavy, or any, charge on the country, as the purchase price, which at Carlisle was paid in cash, might be met by the issue of terminable annuities (which annuities would be transferable just as any share certificate) extending over a reasonable period. A State ownership scheme to be under the direction of a central authority such as applies to Carlisle to-day, aided by a thoroughly representative local committee with some measure of executive power, so as to bring about what Lord Haldane refers to as "popular management"—a management in the interests of the people themselves. Or, if a municipality should prefer to be the owners of the property rather than the State, then, of course, there would be no necessity for direction by any State Department, but the trading would be carried on under modified national licensing regulations such as is the case to-day at Carlisle.

ACCELERATION OF REDUCTION OF LICENCES.

If we cannot have similar schemes to Carlisle in other towns, then there is the less effective course still open, which has been available since the Act of 1904 came into operation, but which for some unknown reason has not been taken. It is that to which I referred last year, and is the power given to the Home Office to consent to the licensing justices of an area borrowing sums on the security of the compensation levy for the purpose of accelerating the reduction in the number of redundant licences. Personally, I see no reason why "off" licences should not also contribute to the fund, seeing that they gain betterment by the closing of other licences; in return, they should be given protection against refusal of renewal of their licences without compensation, except on the grounds of misconduct.

COMPETITION OF CLUBS.

Without a redistribution of licences and also a diminution in the number of licensed houses in many of the towns, and even in some villages, you cannot advance the coming of the improved licensed house of refreshment. Of course, such a reduction would be valueless if clubs could freely increase by simple registration as they are allowed to do to-day, adding, as they do, to the prevalent severe competition. The growth of clubs is the natural outcome of the severe limitations imposed upon the recreations permitted in licensed houses, the freedom to construct club premises as is thought desirable, and the liberty to vary the hours of supply to their members; in fact, to the absence of that restrictive control of justices and police imposed upon licensed traders in such directions.

Since the termination of the war, the licensing statistics for 1922 show that the increase in the number of clubs has exceeded the net decrease in the number of licensed premises.

There are many clubs which reflect the highest credit upon their founders and those who make use of them; the management and conduct are beyond reproach, but there are also clubs which, if they were licensed houses, would not be allowed to exist.

No matter where alcoholic beverages are sold, whether in privately owned licensed houses, or in houses under so-called "disinterested management" owned by the State, or a trust company, or distributed in a co-operative club, if competition between these sources of supply is so severe as to result in an uneconomic return on the capital employed in them, then the distribution of such beverages will take place under conditions not conducive to good service or to that advancement of temperance which all, including brewers and publicans, are so pleased to see is taking place, and desire to continue.

I am sure that the shareholders of this company hope with me, that the inquiry which the Government proposes to make will result in a report being presented recommending practical reforms which, while conferring benefits upon the public generally, will be

attained only by methods which are in accord with that spirit of fairness and equity which has always been characteristic of our race and legislation.

With these remarks, ladies and gentlemen, I beg to move the adoption of the report, and will ask Mr Herbert W. Bainbridge to second the resolution.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.

"BEAM" SYSTEM—AGREEMENT WITH GOVERNMENT.

The 27th ordinary general meeting of Marconi's Wireless Telegraph Co., Limited, was held, on the 15th instant, at the Connaught Rooms, Great Queen-street, London, Senator G. Marconi, G.C.V.O., LL.D., D.Sc. (chairman), presiding.

The secretary (Mr A. Ogle, M.C., A.C.I.S.), having read the notice convening the meeting and the report of the auditors,

The chairman, in moving the adoption of the report and accounts, said that the trading profit for the year showed little change from that of 1922, and, but for the fact that they had had serious losses of an exceptional nature to write off, the result of the year would have compared favourably with the preceding year, notwithstanding the deduction in respect of interest on debenture stock amounting to close upon £100,000. As regarded current year, there was every reason to expect a substantial improvement over last year. In those circumstances, and having regard to their brighter prospects generally, they felt justified in recommending the payment of a dividend of 7 per cent. on the preference shares and 10 per cent. on the ordinary shares.

THE FUTURE.

Looking forward, he thought it was not too much to say that the prospects of the company were brighter to-day than they had been at any previous period in the history of the company. For the last 14 years at least the directors had realised that the company's main objective must be the creation of a world wireless telegraph service. At the present moment the directors were able to say with some confidence that there was every probability of that ideal being realised. As far as the directors were able to judge, the company had reached a turning point in its history, and they looked forward to a more sure and prosperous future.

Since their last meeting their work on what was known as the "beam" system had made a great advance. Not only had they been able to establish satisfactory communication with South America by that system, but for the first time in history the human voice speaking in England had been easily and distinctly heard in Australia. It was that system, with its fascinating possibilities, which had contributed to the favourable change in the prospects of the company. By reason of its directional characteristics, it increased the secrecy of wireless communication; it eliminated to a large extent the atmospheric disturbances which had always been the bane of the wireless engineer; in capital cost and in operating charges it was far more favourable than the old system of super stations working on long wave-lengths, and, in addition, it gave a rapidity of communication which the old super station could never do. The new system offered a prospect of reductions in rates far in excess of anything which had been previously contemplated, but which, nevertheless, would secure to the company a substantial margin of profit.

AGREEMENT WITH GOVERNMENT.

The House of Commons had recently ratified an agreement between the Government and the company for the erection in this country of stations to work the "beam" system; the company would be erecting reciprocal stations in Canada, South Africa, Aus-

tralia, and India, on behalf of the associated companies which would operate them. That, however, they regarded as only the beginning of a great scheme of Empire wireless communication, for the "beam" system, by reason of its relatively small capital requirements and its economic cost of working, would permit of every part of the Empire, however remote and sparsely populated, being brought into communication with this country and the Dominions. It was exceedingly gratifying to the directors that, after so many years of negotiation, the Government had at last entered into another agreement with the company, which this time should lead to the practical realisation of an Empire wireless scheme.

A basis of an agreement had been reached with the Post Office in regard to the payment by that Department for the company's war services. They were not yet in a position to state the exact amount which would come to the company, but there was every reason to expect that it would be settled in the course of a very few days.

COMPANY AND THE FIGHTING FORCES.

Last year the managing director had to refer once more to the fact that no definite decision had yet been come to in regard to the promised arbitration on the matters in dispute between the company and the three Government Departments representing the fighting forces. The arbitration should begin immediately after the holidays, and should at last secure to the company fair and equitable payment, both in respect of the use by the fighting services of its very many patents during a great many years, and would also provide the basis upon which the company would be paid for the continued use of the patents in future.

The directors had had to face difficulties and harassing problems. The unsettled state of the world which followed the Great War had created for them problems of the greatest difficulty, but he thought shareholders would agree that they now had an assured promise of growing and prosperous telegraph business, and they could now look forward to the future with much more hope than at any time during the past few years.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1924-25. (See Note.)	Total Receipts into the Exchequer from April 1, 1924, to Aug. 9, 1924.	Total Receipts into the Exchequer from April 1, 1923, to Aug. 11, 1923.	Receipts Week Ended Aug. 9, 1924.	Receipts Week Ended Aug. 11, 1923.
Balances in Exchequer on 1st April:—					
Bank of England....	..	5,069,613	5,442,685	..	..
Bank of Ireland....	..	1,562,001	1,375,502	..	..
REVENUE.		6,631,614	6,818,167	..	..

BURMA CORPORATION.—During July 22,955 tons of ore were mined; 22,400 tons of ore were milled in the treatment plant, producing 11,470 tons of lead concentrate; 11,941 tons of lead bearing material were smelted in the blast furnaces, producing 4,830 tons of hard lead for treatment in the refinery. Refinery products were 4,802 tons lead and 435,000 ozs silver. Of silver production, 1,500 ozs were recovered from treatment of copper matte. Experimental zinc plant produced 1,320 tons zinc concentrates, assaying 10.1 ozs silver, 7.8 per cent. lead, and 5.5 per cent. zinc. In addition to above, 300 tons copper matte were produced from the treatment of 1,407 tons copper ore and accumulated smelter by-products.

MESEMA (TRANSVAAL).—Progress report for July:—Ore hoisted, 15,222 tons; concentrates produced, 1,033 tons, containing 388 tons copper. Smelter, copper ingots 115 tons.

NORTH BROKEN HILL.—July—The production was as follows:—38,270 tons of crude ore were treated, producing 7,060 tons lead concentrates, averaging 63.5 per cent. lead, 28.9 ozs silver per ton, and 7.1 per cent. zinc; also 6,270 tons zinc concentrates, averaging 47.6 per cent. zinc, 6.8 per cent. lead, and 8.1 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO.—Ore treated, 12,029 tons; lead concentrates produced 2,212 tons; zinc concentrates produced 2,354 tons. Estimated net smelter return on lead, \$124,978 (U.S. currency); on zinc, \$45,945; total, \$170,923. Operating expenses, \$71,211; estimated operating profit, \$99,712; capital expenditure, \$17,512.

SOUTH AMERICAN COPPER.—During July 2,948 tons of ore were produced; 3,125 tons, with approximately 1,000 tons quartz flux added, were smelted, producing 64 tons copper matte, assaying 23 per cent. This figure does not include total clean up. Everything points to increased output during August, improving grade of ore and water supply.

Reports and Notices.

The directors of the Friends' Provident and Century Life Office have appointed Mr D. Ridley Williams assistant agency manager at their head office. Mr Williams was previously joint secretary at the City office.

Resolutions for the voluntary winding-up of the Frank Smith Diamond Estates and Exploration Company, Limited, were passed at the extraordinary general meeting of shareholders held at Johannesburg on August 12th.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to June 30, 1924, compared with those from January 14th to June 30, 1923:—

	Monopolies, Tobacco, Stamps, Stamp Paper, Naxos Emery.	Piræus Customs.
Gross receipts, June, 1924.....	Drachmæ. 8,443,756.35	Drachmæ. 32,447,545.40
Do June, 1923.....	6,111,375.90 (c)	7,324,989.00
Estimated receipts for six months (Law of Control) ..)	1924-14,450,000.00	1924-5,350,000.00
	1923-13,420,685.00	1923-4,969,890.44
Actual receipts for 1924, six months	51,380,059.70 (a)	198,249,231.85
Actual receipts for 1923, six months	42,001,721.40 (d)	113,058,834.70
Difference between estimated and actual receipts for 1924, six months	+ 36,930,059.70 (b)	+ 192,899,231.85
Do 1923, six months	+ 28,581,036.40 (e)	+ 108,088,944.26

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49.15 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893.

Owing to the change in the Greek calendar from Old to New Style, both the estimated and actual receipts in the above statement are for 14 days less in 1923 than in 1924.

As regards receipts subject of the system of plus values, all increases in duties and prices are excluded therefrom in the above table, minimum receipts have, however, been fixed in order to guarantee the plus-values against eventual diminution in the consumption.

(a), (b), (c), (d) and (e).—In addition to these amounts import duties equivalent to £6,098 in the case of (a) and (b) and to £24,361 in the case of (c), (d) and (e) were paid in gold at the Piræus Customs.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received advice from the bankers in New York notifying the payment of the August, 1924, instalment of the debt service in accordance with the arrangement of May 25, 1912.

STATE OF BAHIA.—Under the scheme arranged with the State of Bahia, further funds have now been received by the Ethelburga Syndicate sufficient to pay the coupons, dated January 1, 1922, on the 6 per cent. Treasury bills, 1918.

MINES.

BROKEN HILL PROPRIETARY COMPANY, LIMITED.—Net profit for the year ending May 31, 1924, £279,339 2s 2d, after providing £156,153 11s 6d for ordinary depreciation, and £142,964 14s 1d special depreciation, and £121,546 6s 8d debenture interest.

MISCELLANEOUS.

ANGLO-CONTINENTAL GUANO WORKS.—The net profit for the year 1923, after providing for all trade charges, directors' fees, taxation, and doubtful debts, amounts to £9,923, to which is added the balance brought forward from the previous year, viz., £5,396, making in all, £15,319. After payment of debenture interest for the year and dividend on the preference shares for interest for the year ended June 30, 1923, totalling £20,679, there is a debit balance of £5,360 to be carried forward to next account. The report adds that a considerable amount having been expended during the year in maintaining the plant and machinery at the London factory in an adequate state of efficiency, no depreciation has been set aside in the accounts for the year. The directors regret that, owing to the prevailing depression in agriculture, the demand for fertilisers for the year 1923 proved very disappointing, and that the business done by this company and its subsidiaries was rendered unremunerative by persistent competition from the Continent, largely through depreciated exchanges, throughout the whole year. These two causes account entirely for the unsatisfactory result of the year's working

(Value F.O.B.).

Our Middleboro' correspondent's report dated August 14, 1924, is as follows:—Pig-iron: The weakness in the pig-iron market is further accentuated by the local holidays. There will be no market here next week. Prices, although nominally unchanged, at 85s per ton for No. 3 Cleveland G.M.B. and 93s per ton for East Coast hematite mixed numbers, can be shaded for prompt business, as stocks are accumulating and makers are anxious to sell. Manufactured iron and steel: Practically all the local works will be closed next week, and advantage will be taken of the stoppage to do necessary repairs. Prices are unchanged as follows:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: What little business is doing is confined

Our Sheffield correspondent writes:—Although the holidays are practically over, buying in the iron and steel market is as quiet as previously, and few of the furnaces have contracts on their books. Some of them are consuming a certain proportion of their output in their mills and forges, and the balance is accumulating. It is feared, therefore, that output will have to be curtailed. The steel workers of the three largest steel firms in the district have arranged to strike at the end of the week, and that will mean the stoppage of practically the whole of the plants. The dispute relates to wages, and 600 men will be affected. The steel makers' association last week reduced their quotations of hard basic billets to 15s per ton, in order to bring them level with those of a firm which recently succeeded. Depression is acute in wrought iron, and the demand for hoops, steel strip, wire and wire rods, is now poor after a lengthy spell of activity in the last-named. More encouraging reports are heard of the higher qualities of steel. The engineering branches are ordering rather liberally of tools and steel used in the shops, and good business is being done in motor steels, motor parts and accessories, and railway steel. Exports of certain classes of steel are looking up. Cheap Continental billets, tin-plate bars, and similar material, are being offered in our markets, and considerable quantities have been bought. The demand for steel sheets for export is being maintained at a low level. Last month this country exported 339,748 tons of iron, steel, and their manufactures, and imported 201,000 tons of such material. These figures are rather higher than for June, in which month trade was interrupted by the Whitsun holidays. Cutlery and plate are looking up somewhat. Competition is keen in all classes of Sheffield products. The fuel market is weak in all sections, both home and export. Normal quotations are not much lower, but rates are being cut to induce orders. Quotations per ton at pits are:—Best Yorkshire hard, 21s to 22s; Derbyshire ditto, 20s to 21s; Blythesshire ditto, 21s 6d; Durhams, 24s; best branch, 32s; best Silkstone, 26s; rough slacks, 12s to 15s; smalls, 7s to 8s.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 27s to 27s 6d; best drys, 26s to 27s; Black Veins, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 16s 6d to 17s 6d; ordinary cargo smalls, 13s 6d to 15s 6d; coking smalls, 16s 6d to 17s 6d; anthracite Big Vein, large, 50s to 52s 6d; machine-made cobbles, 57s 6d to 60s; French nuts, 57s 6d to 60s; stove nuts, 52s 6d to 57s 6d; rubble culm, 13s 9d to 14s; coke for export, 52s 6d to 55s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 27s to 29s; pitwood, ex ship, 30s to 31s.

In the tinplate trade the position is unchanged, and this week the employers and workmen have satisfactorily adjusted the claims which the workmen have submitted to the annual meeting of the Conciliation Board. It has now been decided to create a joint Standing Committee, which in future will deal with disputes as they arise, and not defer them for consideration at the annual meetings of the General Industrial Council.

Tin market developed a weaker tone, and prices declined on selling pressure and lower cable advices from the East, though offerings were fairly well absorbed. Standard cash sold at £256 10s to £249 15s, and three months £256 10s to £250 10s to £253 10s to £250 10s. Eastern cables reported sales on the basis of £255 c.i.f. The tendency at Thursday's market was firmer, with sales on a fairly liberal scale. Standard cash dealt in at £254 to £254 10s to £254, and three months £254 to £255 to £254 10s to £255, while finally registered at £254 15s. Again firmer at the close. Standard cash being dealt in at £256 10s, and three months £257 10s to £256 5s to £257. English ingots quoted at £257 10s to £258. Copper market slightly irregular, but barely steady on balance, and a good turnover resulted, especially for forward positions. Standard cash sold at £64 to £63 11s 3d, to £63 12s 6d, and three months £64 17s 6d to £65 2s 6d, to £64 12s 6d, and £64 13s 6d. On Thursday rates moved in an upward direction, with liberal dealings. Standard cash sold at £63 18s 6d, and three months £64 17s 6d to £65 to £64 17s 6d. Closed rather easier. Standard cash sold at £63 17s 6d, and three months £64 17s 6d to £65 to £64 17s 6d. Electros quoted at £68 5s to £68 15s, best selected £66 10s to £67 15s, strong sheets £64, wire bars £68 15s per ton. Lead firmer, and quoted at £33 to £32 5s as to position. Spelter dearer at £32 13s 6d to £32 10s, according to position. Aluminium: home quoted at £125 export £130. Antimony: English regulus £44 10s to £47 per ton.

Business in the market continues to be hampered by the wide fluctuations in raw cotton rates. There is a lack of confidence on the part of buyers, and no disposition to enter into commitments of importance. In cloth the general inquiry has continued extensive, and in small lots a fair amount of trade has been done. Operations for India have been somewhat checked by the fall in the value of the rupee. Rather more demand has been mentioned for China in bleaching descriptions and fancies. Useful lines have been put through for Egypt, the Near East, and South America, and towards the close of the week fancies have attracted increased attention for the Continent. Quotations in American yarns continue very irregular, and buying has been patchy. A fair inquiry has come through in yarns for export purposes, particularly for India. Rates in Egyptian spinnings have been well held, with a steady demand.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Some very good business has been put through during the week in both wool and tops, though the bulk has been in wool in the bale and matchings. The raw material market has received another fillip, and, with greatly improved conditions in America, there is a growing feeling that prices will continue to advance. The Australian selling season is expected to open next month with values on a high level, and the strong position of wool is undoubtedly influencing buyers in looking to their future requirements. Practically all top quotations have been advanced this week, and in some cases top-makers are by no means anxious to sell. A general market quotation for warp 64's is now 74d, super 60's are quoted at 66d, 56's average at 46d, 46's carded at 27½d, and 40's prepared at 26½d. Spinners appear to be doing a little better than for many months past, especially in the botany section, and hopes are entertained of a big forward movement if a satisfactory settlement is effected of the Continental difficulties. In the meantime, prices remain very irregular, but there are indications that most of the large firms are taking a firmer stand, and extreme price-cutting is not being indulged in to the extent that was common a few weeks ago. There is not much change in the piece-goods trade. Home demand shows some improvement, though it is very difficult to induce wholesale fabric buyers to pay prices commensurate with the cost of production. The overseas markets are quiet, but some business is being put through for the Colonies, and also for the Far East. Home-grown wools are very firmly held, but prices are still above the ideas of Bradford users. The tone of the market generally shows a distinct improvement.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A Melbourne cable received in the city last week made the startling announcement that a merino ram had been sold for 5,000 guineas, which easily makes a record. The previous record price was 4,000 guineas paid for a ram sold two or three years ago to South Africa. At the time this was regarded as a colossal figure. That anyone is prepared to pay 5,000 guineas serves to show the great faith that sheep men have in the future of the merino. Australian and South African pastoralists are to be commended for being very much alive to the needs of the times, and the investment of such a large amount of money in one sheep testifies to a recognition of the influence of good sires. When the first merino ram bred by the late Honourable James Gibson, of Bellevue, Tasmania, sold for 1,000 guineas, it was looked upon as a great feat, but since that notable event hundreds of stud sheep have been sold for over that amount, and the 5,000 guineas marks another step forward in the great pastoral industry of the Commonwealth. We hope shortly to learn that the ram was secured for shipment to South Africa. The wool growing industry throughout the Union of South Africa has taken on a new lease of life. Pastoralists are keen to acquire good stock, in order to produce sound, commercial wool, and we know no better means of achieving this than using the best stud stock, and protecting the sheep properties against the depredations of the jackal. In localities for which the merino is suitable, to-day high values for wool, which bid fair to continue a considerable time, are the greatest incentive possible towards the production of good fine wool.

A cable received last Tuesday from the Sydney office of Messrs Dalgety and Co., Limited, states during the year ended June 30th a clip of 1,779,738 bales was produced in Australia, this being a decrease of 138,214 bales compared with last season. The production of New Zealand was 588,673 bales, showing an increase of 5,233 bales. These figures indicate that the production of Australia last season was greater than had been generally expected. The drought was responsible for the lessened production, although even those in the best position to make an estimate were anticipating that the decrease would be 250,000 bales. The small increase from New Zealand is very significant. One wonders if this is due to increased killings on the part of freezing establishments, or the marketing of clips which many pastoralists had held over on account of the low prices prevailing during the two previous seasons. In any case, the sheep men of the Dominion are maintaining their flocks, and no doubt Australian pastoralists are doing their utmost, at least as far as natural conditions will allow them in this direction. It certainly is a startling statement, and greatly affects London sales, to be told that the actual sales in Australia last season amounted to 1,608,141 bales, which only left 81,647 bales to be shipped to London on growers' account. In New Zealand the actual sales were 503,896 bales, which means that 84,777 bales were sent to Coleman Street.

VEGETABLE OILS AND OLSEEDS.

Markets have been of an uncertain character, and in this fully reflect the crop outlook. Raw linseed oil has suffered a relapse, following lower seed prices and lack of substantial demand, having fallen to about £40 per ton naked ex-Hull mill for prompt delivery, with a discount for August and later positions. Last week America was a buyer to some extent for shipment in bulk from Hull to New York, but the demand from this direction is spasmodic, and only develops when values are markedly in buyers' favour. Cotton oils are in poor demand, and are offered at reduced prices. Crude Egyptian quoting £42, and technical refined £44, naked ex Hull mill.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Domestic cattle hides were distinctly firmer at the resumption of the auctions here in Bermondsey after the August holidays, most

weights of ox and heifer advancing from 4d to 4½d per lb, and selling at prices ranging from 6d per lb for light seconds to 9½d for best heavies. Cows were unchanged, while bulls made from 4d to 4½d per lb more money. Kip skins appreciated in value, as was also the case with calf, the advances in the latter ranging from 4d to 4½d per lb. Pelts made from 5s 6d to 9s, and lambs from 3s 10d to 11s 3d per skin. In the foreign hide market the firm tone is responsible for the limitation of inquiry to parcels to cover actual needs so far as the home trade is concerned, although a fair amount of business has been done at origin for United States and Continental tanners. Sales of frigorifics have been mainly confined to the United States, with considerable quantities of Saladeros taken on Continental account. Dry River Plates are very firm, and it is reported that some descriptions show as much as 3d per lb advance on the week. Other classes of foreign hides are firm in price, with a fair amount of business passing.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 15.

SUGAR.—Business continued to move with fair freedom, both on home and export account, while recent liberal absorption by the former leaves available supplies of the finer grocery sugars in a very narrow compass. Java descriptions are arriving at a very steady pace with a good many parcels of same still being lifted by exporters. British refined produce enjoyed a good demand, with an all round advance of 6d per cwt registered on Messrs Tate and Lyle's. Cubes now quoted 43s 3d to 44s 3d, as to quality: crushed, 41s 9d; nibs, 44s 3d; granulated, 41s 1½d; fine, also coarse grain, 38s 10½d; No. 1, 38s 7½d; No. 2, also London and T.L., 38s 4½d; ditto, forward to September, 38s 3d; yellow crystals, spot, 35s 10½d; castor, finest, 42s 7½d; A, 42s 1½d; B, 40s 6d; pulverised, 41s 3d. A steady clearance was recorded in foreign kinds. White Java, spot, 35s 3d; ditto, due steamer, 22s 9d; June-July, 21s 9d; July-August, 21s, c.f. and i., London. American granulated, spot, 37s 3d; August, 24s 1½d, c.f. and i., London. Czech granulated, spot, 37s; November-December, 20s 6d, f.o.b., Hamburg. Meyer granulated, November-December, 20s 7½d, f.o.b., Hamburg. Dutch granulated, spot, 37s; J, November-December, 20s 3d, f.o.b., Rotterdam. India still figures largely as a buyer, and B.R.B. crystals, November-December, sold, 21s 3d, c. and f. terms, Bombay. White Java, October-December, quoted 22s; January-March, 22s 4½d, c. and f., Calcutta. Raw refining kinds steady, with business still doing in parcels of Cuban early shipment at 18s, c.f. and i., Clyde. White terminal market manifested some irregularity in the new crop positions while attended by weakness. Fair transactions include August, 23s 1½d to 23s 3d and 23s; December, 20s 4½d to 19s 10½d, and 20s 4½d; March, 20s 6d, 20s, and 20s 4½d cwt. Cuban receipts last week, 60,698 tons, against 17,005 same time last year; exports, 95,571 tons, against 37,509; stocks, 535,929 tons, against 478,832.

Centrals, 1, against 1. U.K. consumption for July, 158,000 tons against 120,300 last year.

COFFEE.—The market remains very firm for all the finer qualities, which continue in demand, while supplies are on a small scale. Costa Rica, fine, bold blue, sold, 170s 6d to 171s. Kenya, greyish, 135s.

COCOA.—Spot market steady, but business proceeded quietly. Accra, F/F grade, August-October, 30s; October-December, 34s, f.o.b. terms.

TEA.—Auctions were resumed this week, and 22,000 packages Indian elicited active and well-distributed competition at full to higher prices. 28,150 packages Ceylon also offered were readily disposed at mostly 4d to 1d per lb advance. 9,000 packages Java and Sumatra were brought to auction, and with an active demand for all descriptions, a ready clearance was effected at mostly 4d to 1d per lb advance. Pekoe, sold, 1s 0½d to 1s 4½d; broken ditto, 10½d to 1s 6d; pekoe souchong, 1s 2½d to 1s 4d; orange, 1s 4½d to 1s 7½d; broken orange, 1s 0½d to 1s 10½d, with fine flowery ditto from Sumatra up to 2s 1d lb in bond.

RICE.—There is no improvement to note in the market for Eastern grain, business at the moment being at a standstill, while hampered by fluctuating rate of rupee exchange. Two stars Rangoon, spot, 17s. Italian and Spanish steady, but rather quiet at recent figures. Japanese peas, spot, 20s cwt.

SPICE.—Pepper in moderate request, and market steady. Black Singapore, August-October, L.S. quality, quoted 43d; Lampong, October-December, sold, 43½d; Muntok, August-October, 88d; October-December, 88d. Zanzibar cloves, October-December, 99d. Fair flake tapioca, spot, 3½d for Singapore, and fine Bendore 4½d lb. Singapore, August, to Havre, sold, 29s 3d; September, sellers, 29s; Penang seed, August-September, 24s 6d. Sago flour flat. June-August, sellers, 1s 3d; August-September, 1s; September-November, 14s 10½d. Desiccated coconut, fine cut, spot, 40s 6d; medium, 40s; halves, September-October, 40s 6d; October-November, 40s 9d cwt.

JUTE. continues rather unsettled, and prices lower on increased selling pressure, closing dearer. Firsts, August, Continent, sold, £31 to £32 5s; August-September, £30 10s to £30 7s 6d and £31 15s; September-October, £30 to £31 5s; November-December, £29 15s to £32 per ton. Hessians firm. 10-oz, spot, also afloat, sold, 38s 3d per 100 yards. Twills firm at recent rates.

HEMP.—Market for Manila very firm on paucity of selling orders, but demand was decidedly quieter after recent marked activity. J grade, August-October, £43 5s; K, £42; L, £41 10s; M, £39 per ton. Mexican and African sisal unaltered.

SHELLAC steady. T.N., spot, 280s; October, 270s per cwt. **GAMBIER** strong, and block August, sold, 63s per cwt, c.f. & i., U.K. **COPRA.**—More reservedly offered and market firmer. F.M.S., Straits, June-August to Rotterdam, sold £30 7s 6d; July-September

£30 2s 6d; August-October, £29 18s 9d to £30; September-November, £29 13s 9d to £29 15s. Dutch E.I., June-August, quoted £30 5s; August-October, £29 17s 6d. Ceylon, afloat, £31 10s. South Sea Islands F.M.S., afloat, £29 5s. Cebu, August-September, £29 12s 6d; F.M. Straits, August-September, Marseilles, £29 2s 6d; kiln-dried South Sea ditto, £28 17s 6d. Palm kernels steadier, June-August and August-October, Liverpool, sold £20 17s 6d ton.

RUBBER.—Again received rather scanty support, and prices further eased on sellers being more in evidence. Standard Plantation crepe and sheet, spot, also August, sold 1s 2d to 1s 4d and 1s 1d; September, 1s 1½d to 1s 1d; October-December, 1s 1½d to 1s 1½d and 1s 1½d; January-March, 1s 1½d. To New York, standard European estate sheet, September-October, sold 1s 1½d per lb c.f. and i. terms. Wild sorts dull.

EGG PRODUCTS.—Sellers adhere to steady, asking prices, but apart from some inquiry for hen albumen, the market otherwise is very quiet.

FRUIT (Dried).—There was no new feature to note in this market, business being confined to very moderate limits, at prices showing little or no alteration. Stocks of Smyrna sultanas are very small, and consist of the lower grades, fine fruit being unobtainable from first hands. Of currants: Pyrgos, ½ bags, quoted 41s; Patras, 46s to 50s; Gulph, 52s; Panarit, 56s; Vostizza, 60s to 65s; Australian, new, ½ cases, fair, 43s to 45s; good, 55s. Raisins: Cape, new, 44s; ditto fine, 50s. Sultanas: Greek, ½ cases, 48s; Smyrna, boxes, 50s to

(Continued from page 295.)

3s. fine, 60s to 62s; Australian, 4 cases, 50s to 54s. Figs: Genuine natural in bags, 36s; fine, 38s. Dates quietly steady. Evaporated fruits: Californian standard apricots, 72s to 76s; choice, 85s; extra ditto, 90s. Peaches, choice, 45s; extra ditto, 50s; new crop, fancy, 65s. Plums, Bosnian, 4 cases, 72/77, quoted 33s; Oregon, 30/40, 65s; 35/45, 50s; 40/50, 46s per cwt.

CANNED GOODS.—Sardines steady, while in moderate support. Portuguese 1/2 flat, quoted 3s 3d to 3s 6d; clubs, 3s 6d to 4s; 12 oz. 5s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobster largely nominal in absence of supplies. Crayfish quoted 72s. Salmon remains firm, and supplies on a limited scale. 1 lb flat reds, labelled, quoted 53s; ditto, tall, 46s to 46s 6d; 1 lb tall pink, 26s to 26s 6d; cases of 96 1/2 lbs, 27s to 29s per case. Canned fruits very firm, excepting pines, which show a slightly easier tendency. Singapore pines, 48 1/2 s, best quality, 5s 9d to 6s; cubes, 24 2 1/2 s, 10s 9d to 11s 6d; slices, 48 1 1/2 s, 5s 6d to 5s 9d. Californian apricots, 2 1/2 s, 8s 3d to 11s 6d; ditto, 1 1/2 s, 5s 3d to 5s 6d. Pears, 2 1/2 s, 14s to 16s. Peaches, 2 1/2 s, 9s 9d to 11s 6d; 1 1/2 s, 6s 6d. Fruit salad, 2 1/2 s, 19s to 20s; ditto, 1 1/2 s, 10s 3d per dozen tins. Canned meats are in fair request at full rates.

OILS.—Linseed irregular, but steady on balance, with a fair demand. Spot, net, naked, 41s 6d; August, 40s 4 1/2 d; September-December, 40s 4 1/2 d; January-April, 39s 1 1/2 d. Rape steady. Crude, spot, 47s 6d; refined, 50s 6d. Castor-oil steady. First pressure, spot, quoted 71s; second pressure, 69s; and pharmaceutical, 76s per cwt. Hull, with London 2s per cwt extra. Cotton firm. Crude Egyptian, spot, 44s; Bombay, 41s 6d; common edible, 49s; deodorised, 51s. Chinawood quiet. Hankow, spot (barrels), 76s; October-November, 72s 6d. Coconut firm. Ceylon, spot, 51s; August-September, 47s 3d; Cochon, ditto, nominally 58s. Soya quiet. Oriental, barrels, August-September, 44s; bulk, 39s 9d. Cod quiet. English, spot, 33s 6d to 34s 6d. Groundnuts firm. English, crushed, naked, spot, 48s; deodorised, barrels, 56s. Turpentine irregular, and demand quiet. American, spot, 68s; July-

December, 69s 6d; January-April, 71s 6d. Rosin steady for pale grades, but common and medium quiet. American, grade B, 13s 7 1/2 d; G, 14s 3d; WG, 17s; WW, 21s 6d per cwt. French WW, 17s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

OILSEEDS.—Linseed market quiet, and prices barely steady. Calcutta, afloat, £22 5s; July-August, £22 5s; August-September, £22 2s 6d. Plate, afloat, sold, £20 5s; July-August, £20 5s; August-September, £20 5s; and January-February, £18 15s. Rape seed easier. Toria, July-August, £21 5s; and real bold Ferozepore, ditto, £21. Cottonseed dull and easier. Egyptian, new, October, £12 12s 6d; November-January, £12 12s 6d. Sakellaridis, October, at £11 17s 6d. Bombay, August-September, £10 12s 6d. Gingly seed quieter. Chinese, new crop, October-November, £26 10s. Groundnuts dull and easier. Coromandel, machine-dried, August-September, £25 17s 6d; Chinese decorticated, f.a.q., ditto, £25 2s 6d; East African, August-September, £25 15s. Soya beans quiet. Manchurian, afloat, £13 2s 6d; October-November, £12 12s 6d. Castor seed easier. Bombay, August-September, £29 7s 6d; Cawnpore, ditto, £29 5s per ton.

BASS, RATCLIFF & GRETTON, LIMITED**REPORT OF THE DIRECTORS**

PRESENTED TO THE ORDINARY SHAREHOLDERS

at the **THIRTY-EIGHTH ANNUAL GENERAL MEETING,**

HELD AT THE OFFICES OF THE COMPANY, BURTON-ON-TRENT.

On Monday, the 11th August, 1924, at 12.30 o'clock.

DIRECTORS.

COL. JOHN GRETTON, M.P., *Chairman.*
 COL. ROBERT F. RATCLIFF.
 MAJOR H. F. GRETTON.
 P. W. RATCLIFF.
 GERARD A. CLAY.
 JOHN LAMBRICK.
 CLAUDE N. BURT.
 MAJOR THE HON. EVAN BAILLIE.

The Directors submit to the Shareholders the Balance Sheet of the 30th June, 1924, and Profit and Loss Account for the year ending on that date showing a Profit, before charging Interest on Debenture Stock of £543,857 18s 11d, which, with £63,570 19s 1d, brought forward from the previous year, makes a total of £607,428 18s 0d. Of this amount £210,000 has been appropriated to the payment of Interest on Debenture Stock, Dividends on Preference Stock and an Interim Dividend of 3 per cent. on the Ordinary Shares, leaving a balance of £397,428 18s 0d. Out of this it is proposed to declare on the Ordinary Shares a further Dividend of 8 per cent. making 11 per cent. for the year and a Bonus Dividend of 2 per cent. (together £204,000) both free of Income Tax, payable on the 25th August, 1924, to place £100,000 to the Reserve Fund (which will then amount to £950,000), and to carry forward to the next account the balance of £93,428 18s 0d.

The Directors consider that they have made sufficient provision for contingencies which may be reasonably foreseen.

The retiring Directors are Col. ROBERT F. RATCLIFF, Major H. F. GRETTON, and Major The Hon. EVAN BAILLIE, who offer themselves for re-election.

The retiring Auditors, Messrs. COOPER BROTHERS & Co., are eligible and offer themselves for re-appointment. BURTON-ON-TRENT, 30th July, 1924.

By order of the Board,
 D. BURRELL, Secretary.

THE MONEY MARKET.

LOMBARD STREET has experienced slightly more comfortable conditions this week, but there has been a fairly steady demand for short loans, the general rate being from 2 1/2 to 3 1/2 per cent. There were some heavy cash displacements on Wednesday, when about £6 millions was paid in the form of railway dividends, but in spite of substantial transfers of tax revenue to the Exchequer on Thursday, conditions were easier towards the end of the day, and the market repaid its debt to the Bank, supplies of credits

Houses' Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills	3½	3½	3½	3½	..

Thursday's Bank return showed a decline of £916,000 in the active note circulation, and the Reserve was increased by that amount, the proportion rising to 18.2 per cent. Government securities declined by £389,000, but Other securities were nearly £3 millions higher. Public deposits rose by 2½ millions, and Other deposits by just over a million. The circulation of currency notes declined by £4,216,000 to £29,362,100, which includes £1,376,500 for notes called in but not yet cancelled. The fiduciary issue is now £240,535,600, or £7,655,300 below the maximum.

THE STOCK MARKETS

The stock markets are better, as a whole, as a result of the London Agreement. Bank rate possibilities are in the background at the moment, and the gilt-edged markets are good throughout. French bonds have relapsed after an early burst of strength, and Germans have fallen sharply on profit-taking sales. Home rails have improved, and there is some public investment going on. Grand Trunk Pacific 4 per cent. debentures further improved, and Argentine rails have shown some strength. The oil market has been very dull on talk of accumulation of heavy stocks in America, and rubber shares are inactive. Insurance shares have fluctuated, but breweries have gone ahead, and there has been a firmer tone in the motor group. Mining shares have mostly been quiet.

THE COMMODITY MARKET.

In the majority of the commodity markets there has been a very much better tone this week, which is presumably to be traced to the brighter political outlook. Our Manchester correspondent reports that demand for cotton goods has been very extensive, and that encouraging sales for India have taken place. With small stocks of wool and tops the wool market has been firm, in spite of the holiday season. The hide and leather markets are steady, and vegetable oils have experienced a fair demand. Sugar and tea have been good markets. The wheat market has been steady, but the price of flour has been changed three times, and is 6d higher on balance. The non-ferrous metals have moved irregularly, and iron, steel, and coal markets are an exception to the general improvement. Sheffield trade is dislocated by a local strike, but there are signs of a slight revival in certain sections. The Cardiff coal market is quiet, and there is little doing at Middlesbrough.

FOREIGN EXCHANGES.

In the foreign exchange market the week has provided an interesting example of the reaction which almost invariably follows the discounting of an important political event, in this instance the signing of the London Agreement. It is true that the attitude of France with regard to the Ruhr evacuation has created much disappointment, but it was hardly to this cause that the movement in rates could be assigned. As usual, the bulls had gone too far, and the moment the London Agreement was a settled fact other and more immediate considerations came into play. The dollar, which closed on the 15th at \$4.54½, and rose at one time on Saturday to as high as \$4.55½, began already on Monday to fall away, by Tuesday closed at \$4.49½, and on Wednesday dipped to \$4.47½, but closed at \$4.49. On Thursday there was some recovery at the close to \$4.51½, but yesterday morning the rate was rather weaker again at \$4.50½. On the American side there is

a feeling that the reaction has spent its force, and that a recovery in sterling will follow. It is, however, still doubtful whether the autumn movement has yet been met, and it would be rash to anticipate any decided improvement. Forward rates at ½ to 1 cent. per month below spot are much the same as a week ago. The Paris rate has moved much the same as sterling, from 80.15 on the 15th and 79 on Saturday up to as high as 83.75 at one time on Tuesday and 83.80 at one time on Wednesday. On Thursday there was a recovery to a closing price of 82.75, but yesterday morning the rate was up again to 83.15. In the same period the Belgian franc has moved from 87½ to 90½, after being as high as 90½. Forward rates in Paris have widened again to 7-9 centimes per month above spot, after being 4-6 centimes a week ago, and Brussels has narrowed from 1-3 centimes above to par to 2 centimes above. Italy has also shown marked weakness, the lira having moved from 100.80 to 101.75, after being as high on Thursday as 102½. Berlin has remained fairly steady, with the mark at 18½. Amsterdam has moved against us from 11.62 to 11.59½, Switzerland from 24.06½ to 24.02½, after being considerably lower. The peseta, on the other hand, shows little sign of improvement, and in spite of the fall in the value of sterling stands at 33.65½, as compared with 33.62 a week ago. In the North, Stockholm, as was to be expected, has moved down from 17.09 to 16.92½, while Christiania has actually improved from 27.92½ to 27.73½, and Christiania has moved only from 32.45 to 32.45½. Riga and Warsaw have followed their gold parity, while Esthonia is again higher at 1,930. Helsingfors, at 180, compares with 180½ a week ago. In Central Europe, Vienna has followed the dollar to 320,500, while Budapest has maintained its parity with sterling at 350,000. Prague has improved in value from 152½ to 150½, and Bucharest is also slightly better at 990. In the East, the rupee has moved up from 15 5/16 to 15 9/32, and a rise of 1 per cent. is announced to-day in the Indian bank rate. The yen, at 15 9/16, is only slightly better than the 15 9/16 quoted a week ago. The silver market has been influenced by the sharp movements in the American exchange, and by renewed activity in China. On the whole conditions would seem to favour considerable firmness. Hong Kong stands at 2s 4½d, the same as a week ago, after some fluctuations, and Shanghai is also the same at 3s 3d. In South America Rio has improved somewhat from 5 7/32 to 5 1/8, while Buenos Aires has moved up from 40 21/32 to 41 5/32, and Monte Video from 41½ to 42½. Valparaiso, however, has depreciated from 43.90 to 44.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 16th:—

EXPENDITURE.		REVENUE.	
	£		£
Supply Services	5,500	From Revenue	12,416
Interest, &c., on Debt	493	Decrease in Exchequer Balances	8
Sinking Fund	500		
Sundries	1,087		
Decrease in National Debt	4,844		
	12,424		12,424

Revenue for the week ending August 16, 1924, only brought in £12,416,000, against £18,019,000 for the corresponding week last year. Customs were slightly down at £1,190,000, against £1,580,000, and Excise yielded much less at £2,215,000, against £8,010,000. Post Office receipts were maintained at £1,250,000. Ordinary receipts amounted to £268,000, against £147,000, but Special receipts were £618,000 lower on the week at £500. Property and Income-tax was higher at £4,871,000, against £3,800,000, and Super-tax at £580,000 was £110,000 higher. The week's operations decreased the National Debt by £4,844,000, and caused the following changes:—

EXPENDITURE.		REVENUE.	
	£		£
Unemployment Insurance	670	Treasury Bills	2,011
		Public Dept. Advances	2,550
		W.I. Islands (Telegraph)	50
		National Savings Certificates	100
		Telegraph Act	780
		Anglo-Persian Oil	23
	670		5,814

The floating debt was decreased by £4,605,000 to £778,038,500.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RESULTS OF THE CONFERENCE.

THE London Conference is over, and in all interested countries stock is being taken of the new situation which it has created. We speak of a new situation, for though its results may have fallen short, and in some respects seriously short, of those we had hoped to see emerge from the new attitude towards international affairs represented by a radical Government in France and a Labour Government in England, the protocol of last Saturday clearly starts a new phase in the German problem on the basis prepared by the Dawes Committee. A study of the chief provisions of the agreement, which we give in another column, will show that, compared with the deadlock of 1923, the advances that have been made are immense. In the first place, the Allies have condescended to negotiate with Germany. It is true that the continued occupation of the Ruhr strongly suggests an iron hand in the velvet glove. But the fact of the matter is that the Ruhr policy having proved bankrupt, real negotiation began with the visit of the Dawes Committee to Berlin—or rather it would be more correct to say that the Allies took the trouble to find out, after consulting German opinion, what could and what could not be done. The natural accompaniment of negotiation instead of dictation is provision for arbitration which comes in at many points of the new agreement. This principle, though it has not in the last resort superseded the appeal to force, has been provided for in such clear detail that in effect it puts a whole series of barriers between a complaint that Germany has not fulfilled her obligation and the resort to action such as that taken by France in January, 1923. Again, the elaborate provisions of the Dawes Report, which the interested parties are pledged to put into effect, does something to bind up the running sore of Europe. For the first time we shall have a rest—which, with reasonable good fortune, will be a long one—from the periodical crises which have arisen over the Reparation question, and finally, if things go according to plan, Europe may at last hope that the finances of the chief Powers will be placed on a firm foundation, and the crazy and bewildering disturbances in the value of money rapidly become a matter of history.

Against these gains has to be set the fact that German territory still remains in French military possession. We need not repeat the views we expressed on this subject last week, for they have been endorsed by more powerful voices than our own. Mr. Snowden, for example, has declared to an interviewer in the *Manchester Guardian* that he is "profoundly dissatisfied with the determination of the French and Belgians to continue the occupation of the Ruhr.....All justification for remaining there for a moment after the Dawes plan comes into operation disappears.....The occupation of the Ruhr is the sign and symbol of the old and vicious policy." Moreover, the Prime Minister, in a letter to M. Herriot, bearing the same date as the London Agreement, repeats that in the British view the occupation is illegal, and that

its continuation is contrary to the spirit of the Dawes Report, and may "prejudice the working of the Dawes plan and jeopardise the arrangements agreed to at the London Conference." This is simple common sense, but it should have been the prologue, not the epilogue, to the conference. But it is not given to politicians to retrace their steps, any more than it is to other mortals. In the circumstances Mr MacDonal has done well to make his position clear. His letter is intended, not, as a section of the Paris Press appears to think, for home consumption, but is addressed to France. We hope that it will be accepted across the Channel as expressing the well-nigh universal regret felt in this country that the French nation could not have seen its way at this turning-point in European history to have taken a step which would have had an immense effect throughout Europe. The immediate evacuation of the Ruhr would have been a symbol of her faith in those moral forces which saved her from destruction in the agony of the Great War, and would at one step have enabled her to take her rightful place at the head of those forces which will ultimately establish international relationships in Europe on the basis of mutual respect for national liberty and national rights.

But the continued occupation, as the Prime Minister points out, has an immediate practical importance. Mr Snowden comes down to hard facts when he discusses what effect it will have on the prospects of the German loan. He thinks the Agreement, though far from perfect, will be sufficient security; but the final answer will, we think, be largely dependent on events yet to come. The Agreement has to be ratified in both France and Germany, and the international outlook will largely depend on the tone of these discussions. The tone of M. Herriot's speech in the French Chamber is encouraging. He regards the London Agreement as the beginning, but only the beginning of a real peace. He had to choose between isolation or collective action. He has chosen the latter. He had to choose between arbitration and war. He chose arbitration. The scheme removes the Reparation question from the political to the economic sphere, and substitutes for penalties a practical method of obtaining payments from Germany. If this temper finally asserts itself in France, the hope of final peace will indeed be bright. Much will also depend on the forthcoming discussions at Geneva on the problem of security and the proposal for a treaty of mutual guarantee which M. Herriot will shortly bring before the League; and also on discussion of the Inter-Allied debts, on which subject our debtors have an unanswerable case for at least as favourable treatment as has been accorded to Germany in applying the doctrine of "ability to pay."

Meanwhile, the Conference has been succeeded by a domestic storm. Mr Snowden's interview with the *Manchester Guardian* showed publicly what was indeed common knowledge already, that the Chancellor of the Exchequer was not at all happy about some of the features of the German settlement, and the turmoil has been increased by the assertion that he shared the views expressed in these columns about the Russian treaty. This is hardly the occasion to discuss this Cabinet breeze. We are on firmer ground in considering the warnings which he expressed as to the economic effects of the agreement. Mr Snowden's comments in this respect are not seriously open to question; but too much has been read into his words by our pessimists who are in full cry on the old theme that Britain's prosperity is in danger from the renewal of German competition as a result of the Dawes report and the prospect of a Franco-German industrial combination strong enough to crush our great exporting industries. In this connection it is important to distinguish sharply between two quite different questions. One is the results to this country of the recovery of Germany, and the other the possibility of France using political or military pressure to force commercial concessions from Germany. On both points much of the comment in the Press has in our view been hasty.

On the general question of German competition, and the extent to which it will be intensified by the settlement and the economic recovery of Germany, it is extremely difficult to gauge the ultimate distribution of world trade under the conditions left by the war. These conditions include

depressed standard of living in Germany, reflected in low-wage rates. But low wages do not always mean low costs, and another consequence is a low standard of work. All observers were struck by the general deterioration in German morale last year—a change which cannot be undone in a day. We do not know whether these conditions are likely to last long when Germany has passed through the period of convalescence following the collapse of her monetary system, and gets once more into her stride. All experience would lead one to doubt whether there can be a permanent change in the relative wage standards as between Germany and other countries, and we are inclined to the view that the old equilibrium is more likely to be restored by a rise in Germany than by a fall elsewhere. But this is looking far ahead. For the moment Germany is starved for capital, and according to all accounts has still to go through a period of acute industrial difficulty before she begins to rebuild her economic prosperity. Undoubtedly the economic recovery of Germany means that while British industry will benefit from the revival of a great European market, it will also have to keep a sharp eye on its own efficiency. But the business world is not likely to become unduly alarmed just yet. The fear of a flood of German exports has been raised at regular intervals since the armistice. It has not yet materialised. Moreover, the payments under the Dawes scheme do not begin at once. On the contrary, Germany is to obtain a loan to enable her for the moment to go on buying abroad without supplying goods in exchange. And finally this operation is designed to enable the German exchange to be stabilised. In fact, if the programme works according to plan, British industry is immediately to be relieved from the nightmare of violent exchange fluctuations—the influence which by general consent has been by far the most potent in upsetting price levels, and disturbing markets in the last few years. The removal of this handicap will be of very great assistance in restoring confidence, and will far outweigh the vague fear of acute competition in some unknown future.

On the second question—viz, that of military and political pressure, there is much more reason for an active interest on the part of the Government, and in the forthcoming discussion on other issues with France it is of first importance that it should see to it that commercial agreements are framed in the interests of trade generally, and that unreasonable privileges are not extorted at the bayonet's point. But even here let us keep a sense of proportion. France aims at securing for a further period the free entry of goods from Alsace and Lorraine into Germany. This is only an extension of the situation that obtains to-day, and, let us add, that obtained before the war when these provinces were part of Germany. It is not some new encroachment on British trade prospects that is proposed. Nor is the economic collaboration of Westphalia and Lorraine a new idea. It is the restoration of pre-war conditions. These commercial arrangements greatly interest Great Britain, but our interest is to see that they are reasonable and economic ones—not to block them.

THE NATION'S HEALTH.

HEALTH, according to the old proverb, is greater than wealth. Of all the raw materials concerned in the production of happiness and well-being, whether in the individual or the nation, it is the first and foremost. Most individuals take either too much or too little interest in their own personal health; but to the vast majority the corporate health of the nation is a dull subject, ignored or neglected, except at such times when a national emergency produces short-lived jeremiads about a C3 population. We fear, therefore, that the number of people who will purchase and study so important a document as Sir George Newman's report* on the public health in 1923 will be far smaller than it should be. Yet everyone who is interested in the economic future of Great Britain should know the facts which it presents. Those who deign to

* "On the State of the Public Health." Annual Report of the Chief Medical Officer of Health for 1923. (H.M. Stationery Office.) Price 3s net.

give this report their attention will derive encouragement both from the statistics presented and from the conclusions drawn from them. The rapid decline in the birth rate we are all aware of as an important factor in the national outlook. But Sir George Newman calls attention to some compensating features in the shape of a decline in the death rate, a big reduction in infant mortality, an increase in longevity, and the success attending public efforts to fight certain diseases.

The fall in the birth rate is apparently slackening, the number of births in 1922 declining by only 22,000, as compared with a drop of 70,000 in the previous year. But the extent of the fall in recent decades is perhaps more startling than is generally recognised by the public. The annual birth rate per 1,000 of population has actually fallen from 35.4 in 1871-1880 and 27.2 in the first decade of the present century to 19.7 in 1923. Such a fall, if unaccompanied by a great improvement in infant mortality, would surely leave school buildings empty and teachers to walk the streets. But the death rate has also fallen remarkably, to 11.6 per thousand last year from 15.4 in the first decade of this century and 21.4 in the period 1871-1880. The 1923 death rate of 11.6 per thousand is the lowest ever recorded, and our satisfaction with it is not destroyed by the remembrance that 1923 was a lucky year as regards the comparative absence of serious epidemics. More striking still is the reduction in infant mortality—that is, in the deaths of infants under the age of one year. This figure ranged up to 149 per thousand births in 1871-1880, and was still as high as 10 per cent. in 1911-20, but in 1923 had been reduced to 69 per thousand. This Sir George describes justifiably as "perhaps the greatest recent triumph of preventive medicine." He warns us, however, that it is fallacious to measure the public health conditions of a country wholly by changes in the general death rate, and recalls that the low mortality of 1923 is in part an expression of the present phase of distribution of our population in regard to age, and in part due to meteorological conditions propitious for the good health of infants and old people, and to the absence of serious epidemics.

Of particular interest is a table analysing the disorders from which the population dies:—

ENGLAND AND WALES: DEATHS FROM PRINCIPAL CAUSES, 1923.

Disease.	Number of Deaths.	Proportion per Thousand Deaths from All Causes.
1. Measles	5,316	12
2. Whooping cough	4,162	9
3. Diphtheria	2,722	6
4. Influenza	8,461	19
5. Tuberculosis of respiratory system	32,097	72
6. Other forms of tuberculosis	8,691	20
7. Cancer—malignant disease	48,667	109
8. Diseases of nervous system and sense organs	47,694	107
9. Diseases of the heart	56,886	128
10. Other diseases of circulatory system	17,120	38
11. Bronchitis	32,707	74
12. Pneumonia (all forms)	33,413	75
13. Other diseases of respiratory system	5,591	13

The report gives a substantial quantity of data for assessing the progress of medicine in the fight against the principal enemies of life. With the sole exception of cancer the record of achievement is decidedly encouraging. There seems at last to be definite evidence that tuberculosis is declining. In 1914 deaths from this cause exceeded 50,000, and in the war years the figures rose further. Last year the figure was below 41,000, and showed a drop of over 2,000 from the preceding year. Evidence is also afforded that the public campaign against venereal disease has resulted in a decline in the number of newly infected cases. The diphtheria death figures are the lowest since 1911, while in the case of typhoid we have the remarkable fact that the 1923 rate is only one-tenth of that recorded in 1900. But when we come to cancer, there is a different

story to tell. Deaths per million from cancer, which in the middle of last century were only 274, reached in 1923 a record figure of 1,267, having shown a 50 per cent. increase even since the first decade of the present century. Here, surely, is the great target for medical effort, and one can only hope that the anti-cancer campaign recently inaugurated will produce concrete results.

Sir George Newman estimates that loss of time from sickness, most of which is preventable, "costs the country not less than ten times more than that which it loses owing to strikes and labour disputes"—an estimate which gives some idea of the potential contribution of medical science towards increased national output. But the performance of this service rests not alone with the medical profession, but with those who apply, direct, and use medical services. At the present moment, in Sir George's opinion, public expenditure on health is yielding a very high rate of interest in life and well-being. But much remains to be done, and the following passage is worth attention:—"The progress of the science and art of medicine in the last quarter of a century has, it is true, outstripped the organisation of our sanitary, poor law, and education authorities. The new wine is being poured into old wine skins. But what is much more pertinent to our labours, we fail in hundreds of sanitary districts to use the facilities provided. On the whole existing facilities are reasonably well furnished; but all too often people fail to use them, and the authorities fail to co-ordinate them." Thus, while there is reason for satisfaction in the progress that is being made, there is still need for the country to take its health a little more seriously, and this it may surely do without falling into a morbid valetudinarianism.

THE DIRECTION OF OVERSEAS TRADE.

THE figures showing the geographical distribution of our overseas trade for the first half of the past three years are given in the August trade returns, but the comparative value of the 1923 figures is upset by the separation of the Irish Free State figures from April 1, 1923, onwards. Our imports from the new Dominion in the first half of the current year are shown as £22,831,000, and as £11,635,000 for the June quarter. In the second quarter of 1923 imports were £10,141,000. Exports to the Irish Free State were £21,050,000 for the half-year and £10,248,000 for the second quarter, the latter comparing with £6,883,000 a year ago. Re-exports to the same country were £5,724,000 in the past half-year, £2,517,000 in the second quarter of this year, and £1,863,000 in the second quarter of 1923. The excess of exports for the half-year was thus £3,943,000.

In the tables which follow we show separately the figures for Europe, other foreign countries, and the Dominions. The first table compares imports from and

exports to the principal European countries for the first half of the past three years and of 1914:—

	Imports from				Exports to			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
France	23,929	25,625	30,034	35,419	14,364	28,406	30,975	24,372

Ethiopia	..	531	530	1,180	..	640	443	291
Total	146,808	143,097	171,445	187,838	88,940	133,461	140,261	133,669

During the war period our trade with these countries showed a very pronounced excess of exports, but the surplus of imports has been steadily growing in recent years, a further increase in the past half-year being partly due to the drop in our exports to the Continent. Even now, however, the position is more favourable to this country than it was in 1914. The decline in exports this year is entirely accounted for by the reduction in our exports to France and Holland, the total going to the former being the smallest for several years. Imports from these two countries have expanded, but imports from Germany have dropped by £2½ millions, while exports to Germany are over £2 millions higher. Imports from Belgium have increased by nearly £5 millions, but our exports thither are over a million lower.

In the next table we show our trade with other foreign countries:—

	Imports from				Exports to			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.

Total	132,447	185,489	200,718	222,064	72,277	81,150	97,477	94,823

Imports from the United States have increased by £9½ millions, while our exports have declined by £5½ millions.

From a later table it will be seen that re-exports to the United States have also declined by nearly £6 millions. Our adverse trade balance to the United States for the half-year has thus increased from £54.7 millions to £75.6 millions. Our exports to most of the countries in the list show a decline in comparison with the first half of 1923, but Japan and China are exceptions, with increases of over £2 millions each. These two countries, on the other hand, have sent us less than they did a year ago. Imports from South America have been on a substantially higher scale, but our exports have been lower, except in the case of Brazil.

Our trade with the Dominions is shown in the next table:—

JANUARY TO JUNE.
(000's omitted.)

	Imports from				Exports to			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
Australia.....	21,431	36,815	34,234	30,882	17,711	27,569	29,112	28,495
New Zealand.....	16,068	27,443	29,172	31,802	4,689	7,148	9,850	9,060
India & Ceylon.....	22,615	22,625	36,830	40,548	36,676	46,291	47,131	47,144
Canada.....	9,899	18,997	21,240	23,617	9,580	11,619	13,586	13,321
Egypt.....	15,872	10,068	7,732	9,446	10,830	12,664	13,573	15,436
South Africa.....	7,179	5,685	6,494	6,647	3,931	5,799	6,021	4,571
West Africa.....	3,394	5,685	6,494	6,647	3,931	5,799	6,021	4,571
Straits Settlements.....	7,134	3,637	4,426	5,330	2,612	3,620	3,862	4,177
West Indies.....	1,373	3,007	3,341	2,907	1,233	1,539	1,699	1,724
Irish Free State.....	10,141	10,141	22,831	22,831	6,883	21,050	21,050	21,050
Other Possessions.....	5,536	14,588	13,005	14,552	6,979	13,196	13,204	14,795
	94,629	158,737	166,615	188,532	94,241	137,151	144,921	159,773

The totals for the last two half-years are affected by the Irish Free State figures, those for 1923, as already mentioned, being only for the second quarter of the year. If these figures be excluded, imports show an increase of £9.2 millions, while exports are about half a million higher. The most notable changes in the table are the increases in the imports from New Zealand, India, Canada, and South Africa. Both imports from and exports to Australia have dwindled, but India and Ceylon have as much from us as at this time last year.

The final table gives re-exports to the principal countries:—

JANUARY TO JUNE.

Re-exports to	1914.	1921.	1922.	1923.	1924.
United States.....	18,210,000	10,813,000	10,376,000	17,576,000	11,792,000
Germany.....	11,396,000	10,374,000	10,226,000	10,389,000	17,972,000
France.....	6,205,000	4,710,000	10,224,000	10,494,000	9,707,000
Belgium.....	4,140,000	3,828,000	5,973,000	4,983,000	5,688,000
Netherlands.....	2,615,000	3,942,000	3,512,000	2,631,000	4,065,000
Australia.....	1,281,000	2,695,000	2,004,000	2,715,000	2,715,000
Canada.....	890,000	1,599,000	1,453,000	1,237,000	1,406,000
Italy.....	507,000	703,000	863,000	1,095,000	1,406,000
Sweden.....	452,000	871,000	825,000	934,000	985,000
India and Ceylon.....	1,456,000	757,000	757,000	568,000	467,000
South Africa.....	602,000	605,000	668,000	727,000	727,000
Denmark.....	261,000	649,000	556,000	895,000	902,000
Norway.....	212,000	334,000	377,000	432,000	280,000
Japan.....	108,000	427,000	189,000	153,000	143,000
Russia.....	4,556,000	98,000	186,000	612,000	2,768,000
China.....	103,000	103,000	103,000	82,000	103,000
Irish Free State.....	10,554,000	8,605,000	6,679,000	7,033,000	7,825,000
Other Countries.....	59,276,000	49,686,000	55,672,000	63,864,000	74,128,000

The principal features here are the substantial increase in our re-exports to Germany and the decline in those to America, to which reference has already been made. Re-exports to Russia also show a substantial growth.

THE TREND OF WAGES IN GREAT BRITAIN.

THE most significant feature of recent wage movements in this country is the tendency of rates to fall into two main groups, according as the recipients are employed in what are now familiarly known as "sheltered" or "unsheltered" trades. While real wages in industry as a whole are probably not much different from what they were in 1914 (the average money rates being something like 175 per cent. and the cost of living 170 per cent. of the pre-war level), the fact that one large body of workers is at present enjoying a definitely higher, and another a definitely lower standard of living, as compared with 1914, gives rise to much discontent, with which

one can readily sympathise. As the authors of "Is Unemployment Inevitable?"* succinctly state:

In building, in transport, and in the whole mass of labour engaged in employments which constitute what may be called our national overhead charges, there has been a tendency to maintain a higher standard of life than in other industries less fortunately placed.....[Industries depending on export] must in the end.....sell their products at the world price. The other great group, immune from foreign competition, starts the calculation at the other end. It first calculates what it considers a fair rate for labour.....and to this figure are added the cost of raw materials, administrative charges, and profits. The natural result is an obviously undesirable difference in the standard of life between workmen performing operations of precisely the same type in the two great groups.

Accurate data regarding wage rates is, as a rule, extremely difficult, and, in some industries, well-nigh impossible, to obtain. From a very convenient summary of the most recent information, collected by the American Trade Commissioner in London, and published by the United States Department of Commerce†, it is possible, however, to compile various instructive tables showing the position, broadly, at the beginning of 1924, and suggesting an approximate answer to the questions: (1) How wide is the gap between "unsheltered" and "sheltered" trades? and (2) Is this gap tending to contract or to expand?

To take first the most extreme example of an "unsheltered" industry, the following table shows how engineering and shipbuilding earnings compared, as at March and September, 1923, with the earnings of August, 1914:—

ENGINEERING AND SHIPBUILDING—RECOGNISED WEEKLY FULL-TIME EARNINGS.

Classes of Labour.	Aug. 4, 1914.	Mar. 31, 1923.	% of 1914.	Sept. 30, 1923.	% of 1914.
Fitters and turners.....	38 11	56 6	145	56 5	145
Patternmakers.....	42 1	60 9	145	60 10	145
Iron moulders.....	41 8	59 2	142	59 1	142
Shipwrights.....	41 4	48 11	118	48 7	117
Ship joiners.....	40 0	50 9	127	50 5	126
Platers.....	40 4	47 10	118	47 7	118
Labourers—Engineering.....	22 10	40 3	176	40 3	176
Labourers—Shipbuilding.....	22 10	38 6	169	38 6	169

From the above table it may be seen that skilled workers have suffered much more than unskilled, and that there are degrees of difference even among "unsheltered" trades, engineering labour being in a relatively better position than shipbuilding, in spite of the close trade-union bonds between the two. Full-time earnings only 18 per cent. above pre-war, in an industry so chronically under-employed as shipbuilding, are eloquent of the privation which necessarily exists among workers whose standard of individual skill is decidedly high.

In the next table are shown average earnings in another industry which has been called on to make heavy sacrifices in putting its house in order:—

COAL MINERS—AVERAGE EARNINGS per SHIFT in VARIOUS DISTRICTS.

Districts.	June, 1914.	Oct. Dec., 1922.	% of 1914.	July-Sept., 1923.	% of 1914.
Northumberland.....	6 2 2	8 10 8	145	10 7 1	171
Durham.....	6 2 2	8 10 8	145	10 6	169
Cumberland.....	6 2 2	8 10 8	145	10 6	169
Lancashire, North Staffs, Cheshire.....	6 0 8	8 8 8	145	9 3 4	150
Yorks, Derby, Notts, Leicester, Warwick.....	6 7 8	10 1	157	11 2 1	169
Forest of Dean.....	4 10	7 9	169	7 8	159
South Wales and Monmouth.....	5 4	7 9 3	145	8 3 5	155
Scotland.....	6 9 2	9 5	140	11 10 4	176
Great Britain.....	6 5 1	9 5 1	145	10 7 1	171

* "Is Unemployment Inevitable?"—A Continuation of the Investigations of a Committee of Business Men and Economists embodied in "The Third Winter of Unemployment." (London: Macmillan and Co., Limited. 8s 6d.)
† "Changes in Representative Wages in British Industry." United States Department of Commerce, Trade Information Bulletin No. 247.

The coal mining industry remunerates its workers in accordance with the proceeds of its operations, a minimum rate being fixed below which wage rates cannot fall in any case. The effect is to throw into strong relief variations in earning power between the different districts. At the end of 1922 the real wages of all workers were below the 1914 standard, but nine months later the position had definitely improved in most areas, and the more fortunately placed workers had regained the pre-war standard. The new agreement arrived at in the spring of 1924 would normally have tended to raise the level of remuneration of the worst-paid miners, but the subsequent occurrence of a partial "slump" in the coal trade has necessitated a certain amount of short-working, and the full effects of the amended arrangements have yet to be experienced by the workers concerned.

Similar particulars in the case of the iron and steel trades are not readily obtainable. Wage rates in this group fluctuate according to the selling prices of specified "key" products. According to the *Labour Gazette* of October, 1923, increases over pre-war rates vary widely, certain blast furnace labourers, for instance, receiving wages equivalent to more than 200 per cent. of the pre-war remuneration, while at the other extreme South Wales iron and steel workers' earnings reach only about 123 per cent. of the pre-war figure. The average weekly earnings of the similar workers throughout the country, according to the compilations of the National Federation of Iron and Steel Manufacturers, work out roughly as follows:—During 1913, £1 16s 8d; in January, 1922, £2 19s 4d; January, 1923, £2 18s 2d; January, 1924, £3 1s. The last-mentioned figure is 165 per cent. of that of 1913.

Approximate weekly full-time earnings of workers in the cotton textile industry are given in our next table.

COTTON—APPROXIMATE WEEKLY FULL-TIME EARNINGS.

Classes of Labour.	1914.	Jan., 1922.	% of 1914.	Jan.-Sept., 1923.	% of 1914.
PIECE RATES.					
Spinners, counts below 80's.....	40 6	54 4	134	55 2	137
Drawers-in "above".....	30 11	74 3	246	85 10	282
Twisters-in.....	25 7	59 10	233	57 6	226
Weavers, 4 looms.....	24 11	58 2	238	46 4	188
TIME RATES.					
Grinders.....	29 3	68 2	233	53 5	183
Big piecers.....	17 9	41 5	233	33 0	188
Cloth lockers.....	25 9	60 0	233	47 9	188
General warehousemen and others.....	23 2	54 1	233	43 1	188

The above rates apply to the more skilled and highly-paid operatives. Owing to dull trade, short-time working has been the rule in many sections for some time past, so that actual earnings are appreciably below the levels shown above.

The succeeding table throws some light on the vexed question of agricultural wages. In certain cases, it may be noted, allowances are made to workers which would tend to raise the weekly total:—

AGRICULTURAL LABOUR: APPROXIMATE WEEKLY RATES for ADULT MALES in ENGLAND and WALES.

Classes of Labour.	End of 1914.	Beginning of			
		1923.	% of 1914.	1924.	% of 1914.
Ordinary male workers—					
Highest county rate.....	23 4	40 0	171	35 0	150
Lowest county rate.....	13 4	25 0	187	20 0	150
Especially skilled workers—					
Highest county rate.....	..	40 0	..	35 0	..
Lowest county rate.....	..	30 0	..	25 0	..

NOTE.—1914 rates include cash allowances. Post-war rates for ordinary labour are exclusive of the value of allowances for board, lodging, cottage, milk, and potatoes, where provided by the employer.

Although the unknown factor of "allowances" renders exact comparison impossible, one can safely say that, while the earnings of the best-paid agricultural labourers will bear comparison with, say, those of engineering labourers, the standard of the worse paid is extremely low, while in agriculture as a whole the trend of wages over 1923 was downward.

ESTABLISHED 1836

General Manager W. A. HOREMAN, F.I.A.

A couple of examples of wage rates in "sheltered" trades may now be set out:—

BUILDING TRADES.
Recognised Average Weekly Full-Time Earnings.

Classes of Labour.	1914.	Sept., 1922.	% of 1914.	Feb., 1924.†	% of 1914.
Bricklayers.....	s d 40 7	s d 71 4	175	s d 74 0	182
Masons.....	39 8	71 8	180	74 6	188
Carpenters and joiners.....	39 11	71 4	179	74 0	185
Slaters.....	39 11	71 4	179	74 0	185
Plumbers.....	39 9	73 6	185	77 0	193
Plasterers.....	40 2	71 11	179	74 0	184
Painters.....	36 3	71 4	196	73 0	201
Labourers.....	26 11	53 6	198	55 0	204

† Approximate.

The increased earnings of 1924 were to follow, largely, on the working of an extra 2½ hours per week, the non-observance of this provision in certain cases being one of the causes of friction leading up to the present dispute in the building industry. The conclusions to be drawn from the above table seem to be that for most classes of labour the standard of living is appreciably, but not considerably, above the pre-war level; that it shows no tendency to decline; that, as in the engineering trades, unskilled labour has secured a bigger advance than skilled; and that painting and plumbing, among skilled trades, have gained ground most rapidly.

Conditions in the railway world form the subject of the next table:—

RAILWAY WORKERS: COMPARATIVE MINIMUM WEEKLY WAGES.

Classes of labour.	1914.	January, 1923.	April, 1924.	January, 1924.	April, 1924.
Porters.....	15 0 to 20 0	51 0 to 57 6	300	46 0 to 57 0	290
Guards.....	25 0 to 40 0	58 0 to 68 6	195	50 0 to 65 0	175
Shunters.....	22 0 to 27 0	55 0 to 68 6	230	50 0 to 75 0	220
Signalmen.....	23 0 to 40 0	53 0 to 81 6	215	49 0 to 76 0	200
Ticket collectors.....	21 0 to 30 0	56 0 to 64 0	265	54 0 to 60 0	255
Checkers.....	21 0 to 31 0	57 6 to 64 6	235	50 0 to 60 0	210
Permanent way men, &c.....	19 0 to 36 0	53 0 to 71 6	225	48 0 to 65 0	205
Drivers & motormen.....	33 0 to 48 0	72 0 to 90 0	200	72 0 to 90 0	200
Firemen.....	21 0 to 30 0	57 0 to 72 0	220	57 0 to 72 0	220

These rates affect some 500,000 workers. They show in each case the minimum earnings, governing by a sliding scale based on the official cost-of-living index, with a provision, however, that earnings cannot fall below a certain rate, which itself ensures a higher standard of living than was the case in 1914. By January, 1924, the wages of guards, ticket collectors, drivers and firemen had reached this "basic" level. Certain additions for overtime, Sunday or night-work, for mileage exceeding a fixed daily figure, &c., bring actual earnings above the minima in many cases.

The discrepancy between "sheltered" and "unsheltered" wages is clearly too serious to permit of its eradication in a comparatively short period. Over the year 1923 it appears to have been reduced to some extent, coal-miners and iron and steel workers benefiting from increased wage rates, while such "sheltered" trades as transport and public utility services registered a decline. During the present year the movement has continued so far as coal, iron and steel are concerned, but conditions in these industries are not at the moment favourable. Certain of the "sheltered" groups have effectively resisted all attempts to bring about lower wage-levels, and earnings have, in fact, risen appreciably since January.

building, transport, and public utility services. On the whole, wages have fluctuated very slightly in the last eight months, and, pending a general revival in the world's trade, which would rehabilitate the fortunes of our great export industries, no marked change in the situation can be looked for.

THE CANADIAN CROPS.

(BY OUR OTTAWA CORRESPONDENT.)

It would be idle to deny that the condition of the Western wheat crop, on whose fate the economic prosperity of Canada in a large measure hinges, has been a subject of great anxiety since the beginning of the month. This year the usual crop reports compiled by the Government bureaux, banks, railways, and newspapers have been supplemented by the researches of a tribe of special investigators, and the result has been an abundant literature of estimates and speculations, which has been greedily devoured by the business community. Upon one point there is common agreement: that, given even the most favourable conditions for the rest of the growing period, the crop will fall far short of the 473 million bushels secured in 1923, and may not even reach an average yield. It is abnormally late, and wheat harvesting will not seriously begin before August 24th, which is a full fortnight later than the average; as a result there is much greater possibility of damage from rust and early frosts, and the next two weeks will be a very anxious time. In the end of June crop conditions in the West were reckoned moderately favourable, but in the first half of July there developed a combination of very adverse conditions, a complete lack of moisture and hot, dry winds, in a wide area of territory, and coming as they did at a very critical time, irreparable damage was done.

By the middle of July the wheat crop in many districts had come into a very perilous condition, the young plants being badly burnt up, and just at that time there descended upon the prairies a group of American experts, chiefly emanating from Chicago, who published a series of highly pessimistic reports to the effect that the Canadian crop was almost ruined, and would not reach half the volume of 1923. One result was a rapid rise in grain prices in Chicago and elsewhere; indeed, during July there was an unparalleled rise of almost 50 cents per bushel in wheat prices. The Canadian authorities would not admit the accuracy of these American reports, and the suspicion has prevailed that their pessimistic tone was deliberately enhanced for political purposes not unconnected with the Presidential election. The Republicans cannot elect President Coolidge unless they carry Kansas, Oklahoma, Iowa, and other grain-growing States, where agrarian discontent is rife, and Senator La Follette, the Independent candidate, threatens to make serious inroads upon the normal Republican vote. In these States the harvest begins in July, and their grain is ready for marketing by the end of that month, or early in August. Obviously if a strong bull movement in grain could give satisfactory prices to the American wheat growers, it might induce them to take a more favourable view of President Coolidge and his administration than they would otherwise do. This theory of a political background for the sensational rise in grain prices may or may not be correct, but it is freely held in Canada, where there is now clear evidence that the extravagant pessimism of the American reports was not justified.

The latter laid great emphasis on the prevalence of rust, especially in Manitoba, where the prospects were better than in the other provinces. Rust wrought great damage there in 1923, but the agricultural editor of the Manitoba Free Press reports on August 1st, after a careful inspection of a large part of the province, that while there are frequent traces of rust blisters on the leaves, and also on the straw near the root, they are no more numerous than might have been found in other years when the plague did no serious damage. This report refers to the deadly black rust, and admits that a spell of hot muggy weather might develop these traces into a fatal epidemic, but luckily so far the weather in Manitoba has remained cool and dry. There is visible a good deal

of red rust in many districts, but it is not nearly so deleterious in its effects. Since the drought was broken about July 18th, most districts in the West have been favoured with abundant rains at periodic intervals, and only in a few areas is there any serious lack of moisture. As the result of these rains, there has been a marked improvement in the general crop conditions, but unfortunately the restoration of the crops in Central and Northern Saskatchewan and Eastern Alberta has not been as great as was hoped for, and the yield in these areas will not be large. However, Manitoba seems likely to reap an average crop of all grains, the districts of Saskatchewan south of the C.P.R. main line will also give fair returns, and Alberta authorities claim that the late rains have virtually doubled the yield; in that province it will still be less than half last year's crop of 160 million bushels, but a fortnight ago less than 40 million bushels was predicted. Estimates of the total volume of the crop show a considerable spread; the report of the Canadian Bank of Commerce still predicts 325 million bushels, and the Dominion Bureau of Statistics hazards about 300 million. But the figure of 275 million bushels is suggested by three such important authorities as Sir Henry Thornton, the president of the Canadian National Railways, Mr Grant Hall, a vice-president of the C.P.R., and Mr T. A. Crerar, the late Minister of Agriculture, and it will probably be found not far from the mark. During the present week prices have shown a tendency to sag, and talk about \$2 wheat has subsided. If a crop of 275 million bushels can be secured and prices for No. 1 Northern range between \$1.40 and \$1.50, then the gross monetary returns for the wheat crop of the West will not be substantially less than last year, and the profits may be greater, for labour is much cheaper and the shortness of the straw will cut the cost of harvesting and threshing. But, unfortunately, the gains will be unequally distributed; farmers who have a decent crop will fare very well, but the less fortunate ones will be in sore straits. Towards the end of the drought period there was great anxiety about the feed situation for animals, for the pastures had been burnt up and the hay crop was poor, while the coarse grains were also suffering. The rains have wrought an improvement, but more is needed before cutting begins. Oats are still well below the average as a crop, and both flax and barley are very late; rye, however, is very satisfactory. One fortunate circumstance for the West is that the rise in grain prices has reflected itself in the livestock markets, and the *Financial Post*, of Toronto, calculates that the total revenue from stock finished this year will experience a welcome increment of 25 per cent. over the 1923 figures.

But there is one very serious by-product of the shortness of the Western crop. After domestic requirements have been provided for, Canada will not have available for export half as much wheat as last year, and a curtailment by anything between 150 and 200 million bushels of the grain freight available means a serious impairment of the railway revenues. In any case, the traffic returns of the railways have been showing an ominous decline, and in anticipation of smaller revenues the C.P.R. have ordered a discontinuance of most of their improvement work for the time being. Hopes of a further decrease in the annual deficit of the State lines are also receding, and the Government will be confronted with the difficult problem of a further drain upon the public treasury at a time when revenues have been falling at a rate far above the calculations of the Finance Department. Another adverse consequence will be less employment in the distributing end of the grain trade and at the ports. However, it is satisfactory to report that most sections of the Eastern provinces have enjoyed very good growing weather for the past five weeks, and good average yields are expected. The cutting of winter wheat is now in full swing, and both the yields and samples are excellent. The hay crop has been good, and pastures are in first-rate condition. In Ontario and Quebec the crop of small fruits has been satisfactory, and a large yield of the hard fruits is certain. The fruit crop in Nova Scotia and British Columbia is less promising, the prospective yield of apples in the famous Annapolis Valley being only 75 per cent. of last year's return. As there has been a general betterment of agricultural prices, the purchasing power of the rural community in Eastern Canada ought to be somewhat larger than in 1923.

GERMAN VIEWS ON THE LONDON SETTLEMENT.

(BY OUR BERLIN CORRESPONDENT.)

THE internal situation created by the London settlement is not yet cleared up; but it is likely that the two-thirds majority for the Dawes Bills will be attained. At yesterday's negotiations with the Cabinet, the German-Nationals, whose assent is necessary unless, what is almost impossible, the 62 Communist members should support the Government, reserved their decision; and the Bavarian People's Party and Wirtschaftspartei, who together command 31 votes, also withheld their declaration. The German-Nationals are afraid of wrecking the Bills, but they are hampered by past declarations and by the attitude of their newspapers. The General Election which is promised if the Bills are not passed would probably result in a loss of National seats; and even if the contrary was the case, a Cabinet on an anti-settlement basis could not be formed. The Cabinet has, however, issued a warning that the London decisions fall to the ground if the present Reichstag rejects the Bills.

By the public the London settlement proper, being overshadowed by the enforced surrender in regard to military evacuation, is not taken too well. The prevailing sentiment hardly gives colour to the satisfaction in their own work expressed by Ally statesmen in London; and it is easy to remember that the same satisfaction was expressed in May, 1921. Nor are the utterances of German Ministers in London after the settlement regarded as seriously meant. The public does not believe that complete military evacuation is intended, does not consider German territory to be safe from further raids; and cannot understand British policy in this matter, or really, in spite of the text, credit the report that after the developments in the last week of the Conference a written reminder as to the badness of her occupation policy was sent to France. The public also knows that the question whether Reparations will, or can, or in anyone's real interest ought, to be paid, has not been answered by the Dawes Report or the London proceedings; and at home it finds confusion and lack of plans as to this vital issue. It sees, however, that the inevitable inconveniences of the best conceivable Reparations policy have been aggravated. Years ago, after the first failures, it remembers, there was loose talk of the Allies "taking over" Germany in the interest of Reparations—reforming her currency, guiding her financial and commercial policy, and dictating her legislation; and at the time of the London Ultimatum many Germans declared that to the Allies might be transferred the whole responsibility of governing the Republic on Colonial lines; the Allies, it was commented maliciously, would soon find out things. Today these Germans see the Allies—and even see officials chosen by the Allies who will not even be controlled, except indirectly, by Ally legislatures—invested with much of this power but without any of the responsibility. Germany's sovereignty in currency, transport, and commercial matters has largely disappeared; and if the Ally regulators blunder, as they certainly will, the result may be "sanctions" for failures for which Germany, having her hands tied, will probably not be responsible. The elaboration and complexity of the settlement awakens distrust. In their home policy since the autumn of 1923 Germans have got rid of a great deal of the bureaucratic strait-waistcoat economic policy which resulted from developing war-control measures too far; and the Dawes scheme, elaborated by the London agreements, seems to promise much the same evil. If the electorate, as is likely, is ready to support the Cabinet's acceptance of the scheme should appeal be made, that would probably be because the immediate relief promised will be to Germany, not to the Allies. As to the incidence of the ultimate burden, the way in which it is to be borne, and the responsibility which it theoretically puts upon individual citizens, there is no notion at all in the public mind.

Very little is being written as to the practicability of the Dawes scheme, and what is written usually revolves around the trade balance question, which, the basis being past and present figures, of course makes the payments look

impossible. It is probably, however, right to assume that if German production in the coming years materially exceeds the necessary consumption, the trade balance question would gradually settle itself, that if the surplus production and the pressure to transfer it abroad exist, no international trade conditions or restrictions would ultimately prevent an export surplus being created by taxation, as taxation here being counted the payments out of railway profit and from industrial bonds. The former Minister of Industry, Professor Julius Wirth, publishes on this question of production and consumption relatively optimistic data. He denies what has been asserted by Germans and foreigners that the whole national economy is passive in the sense that the nation cannot support itself. He declares that between the conclusion of peace and the Ruhr invasion production certainly grew more rapidly than consumption, this being only in part due to the keeping down of consumption. The first post-war years were years of undoubted recovery. The loss due to reduced working hours and other unfavourable factors was much more than compensated for by the great increase in the number of producers. Before the war while German production increased, the proportion of producers, as in other rich countries, was tending to fall. Between 1882 and 1907 the percentage of unoccupied persons increased from 5 to 8.4. The official memorandum prepared for the Dawes Committee refers to the growth in number of occupied persons, which is now about 33 millions against 27,274,000 in the same area in 1907. The causes, apart from the reduction of the fighting forces from 800,000 to 100,000, are the increased employment of female labour, and the diversion of former idlers, ruined by loss of investments, into productive work. The new age conditions are less favourable, and personal efficiency is lower, but to this the persons liberated from military service are an exception. Dr Hirsch gives data to show that during the inflation years industry, agriculture, and transport made great progress.

A SUMMARY OF THE LONDON AGREEMENT.

In a previous article we have discussed the London Agreement from a critical standpoint. It is worth while, perhaps, to append a brief summary of the text of the Agreement for purposes of record and reference. The Protocol, initiated by the representatives of the conferring Governments and of the Reparation Commission on August 16th, is due to be formally signed on August 30th. Its purport is as follows:—The Governments concerned and the Reparation Commission have confirmed their acceptance of the Dawes Plan, and have agreed to its being brought into operation. Certain agreements necessary for that purpose have been drawn up. It is understood that these agreements, which have now been signed or initialed *ne varietur* (except as regards certain dates mentioned in Annex III.), are mutually interdependent. The Protocol is followed by four Annexes, the gist of which is given below:—

Annex I. sets out the terms of agreement between the Reparation Commission and the German Government:—(1) The German Government undertakes to take all appropriate measures for carrying the Dawes Plan into effect, especially as regards the promulgation of laws and regulations, notably those concerning the banks, the railways, and the industrial debentures in the form approved by the Reparation Commission. It will also apply the necessary provisions as to the control of the revenues assigned as security for the annuities under the Dawes Plan. (2) The Reparation Commission undertakes on its side to take all appropriate measures for carrying the Plan into force, and in particular to facilitate the issue of the German Loan, and for making necessary financial and accounting adjustments. (3) The Reparation Commission and the German Government agree in their respective spheres to carry into effect such additional arrangements as may be agreed as necessary to the application of the Plan—these to be signed later on, and to form a schedule to the London Pact. Further, any dispute that may arise as regards the agreements or the German legislation to put them into effect shall be referred to arbitration.

Annex II. contains the terms of the Agreement between the Allied Governments and the German Government concerning the Agreement set out in Annex I. (Clause 1): Subject to the powers of arbitration given to the Reparation Commission by the Treaty

of Versailles and to provisions as to arbitration contained in the Dawes Plan or elsewhere, any dispute between the Commission and Germany shall be referred to three arbitrators appointed for five years, one by the Commission, one by Germany, and one by agreement between the two parties, or, failing such agreement, by the Permanent Court of International Justice. *Clause 2* is a very long and detailed agreement, mainly concerning the work of the Transfer Committee. Germany recognises the right of this Committee to pursue ordinary commercial methods in employing funds at its disposal, and that delivery programmes shall not be subject to limitations prescribed by the Treaty of Versailles, and undertakes to facilitate these programmes. The most important point in this clause is the stipulation that in default of agreement between Germany and the Reparation Commission as to delivery programmes, these programmes for certain periods shall be laid down by an Arbitral Commission, of which the chairman shall be a citizen of the United States—the members to be appointed in the same manner as the Arbitrators referred to in *Annex I*, *Clause 1*. The Arbitral Commission, whose decision is to be final, is to take into account all the pertinent factors in Germany's financial and economic position. Allied Governments, if dissatisfied, may submit reasoned claims to this Commission. (*Clause 3*) Germany agrees to the appointment of a Special Committee not exceeding six members (the Allies and Germany to be equally represented), with the power to co-opt a neutral member, to determine procedure with regard to deliveries in kind, and to examine the best means of ensuring the fulfilment of German undertakings. The decisions of this Committee will be subject to the approval of the Reparation Commission, and, where applicable, the Transfer Committee. *Clauses 4 and 5* provide for arbitration in the case of certain possible differences between the Transfer Committee and the German Government, or, in the case of divided opinion on the Transfer Committee in certain matters. *Clause 6* prescribes the procedure for an appeal to arbitration where any Allied Government considers that there is a defect in the Plan as regards collection of deliveries, which can be remedied without affecting the vital principles of the Plan.

Annex III contains the terms of the main agreement between the Allies and Germany as regards the institution of the Dawes Plan. Article 1. is of primary importance, and is reproduced below in full:—(A.) The Experts' Plan of April 9, 1924, will be considered as having been put into execution, except as regards measures to be taken by the Allied Governments, when the Reparation Commission has declared that the measures prescribed by it in its decision No. 2877 (4) of July 15, 1924, have been taken, that is to say:—

- (1) That Germany has taken the following measures:—
 - (a) The voting by the Reichstag in the form approved by the Reparation Commission of the laws necessary to the working of the Plan, and their promulgation.
 - (b) The installation with a view to their normal working of all the executive and controlling bodies provided for in the Plan.
 - (c) The definitive constitution, in conformity with the provisions of the respective laws, of the Bank and the German Railway Company.
 - (d) The deposit with the trustees of certificates representing the railway bonds and such similar certificates for the industrial debentures as may result from the report of the Organisation Committee.
- (2) That contracts have been concluded assuring the subscription of the loan of 800 million gold marks as soon as the Plan has been brought into operation and all the conditions contained in the Experts' Report have been fulfilled.

(B.) The fiscal and economic unity of Germany will be considered to have been restored in accordance with the Experts' Plan when the Allied Governments have taken the following measures:—

- (1) The removal and cessation of all vetoes imposed since January 11, 1923, on German fiscal and economic legislation; the re-establishment of the German authorities with the full powers which they exercised in the occupied territories before January 11, 1923, as regards the administration of Customs and taxes, foreign commerce, woods and forests, railways (under the conditions specified in Article 5), and, in general, all other branches of economic and fiscal administration; the remaining administrations not mentioned above will operate in every respect in conformity with the Rhineland Agreement; the formalities regarding the admission or readmission of German officials will be applied in such a manner that the re-establishment of the German authorities, in particular the Customs administration, may take place with the least possible delay; all this without other restrictions than those stipulated in the Treaty of Versailles, the Rhineland Agreement, and the Experts' Plan.
- (2) The restoration to their owners of all mines, cokeries, and other industrial, agricultural, forest, and shipping undertakings exploited under Allied management or provisionally leased by the occupying authorities since January 11, 1923.
- (3) The withdrawal of the special organisations established to exploit the pledges and the release of requisitions made for the working of those organisations.
- (4) The removal, subject to the provisions of the Rhineland Agreement, of restrictions on the movement of persons, goods, and vehicles.
- (5) In general, the Allied Governments, in order to ensure in the Occupied Territories the fiscal and economic unity of Germany, will cause the Inter-Allied Rhineland High Commission to proceed, subject to the provisions of the Rhineland Agreement, to an adjustment of the Ordinances passed by the said Commission since January 11, 1923.

Articles 3, 4, and 5 of Annex III. are mainly concerned with dates on which various stages towards the application of the measures necessary for the institution of the Dawes Plan should be completed. October 5th is the date on which the whole plan should be brought into full operation; September 20th, the date for the transfer of the railway system of the Reich to the new company. Owing to delay in the signing of the London Pact, the time-table will presumably be proportionately delayed. Article 7 provides for amnesty in respect of offences in occupied territory since January, 1923, and other conciliatory measures.

Annex IV gives the terms of agreement between the Allied Governments, and has three main features. First and by far the most important is the provision that in all deliberations affecting the Dawes Plan a seat on the Reparation Commission shall be occupied by a representative of the United States, to be appointed by unanimous vote of the Commission, or failing that, by the President of the Permanent Court of International Justice. The person so appointed is to hold office for five years. The second point is the following:—"In order to secure the service of the loan of 800 million gold marks contemplated by the Experts' Plan, and in order to facilitate the issue of that loan to the public, the signatory Governments hereby declare that in case sanctions have to be imposed in consequence of a default by Germany they will safeguard any specific securities which may be pledged to the service of the loan. The signatory Governments further declare that they consider the service of the loan as entitled to absolute priority as regards any resources of Germany so far as such resources may have been subjected to a general charge in favour of the said loan, and also as regards any resources that may arise as a result of the imposition of sanctions." The third point is that unless otherwise stipulated in the London Agreement, the signatory Governments reserve all their rights under the Versailles Treaty.

Together with the text of the London Agreement were published the letters exchanged between the Belgian and French delegates and the German Chancellor on the subject of a Ruhr settlement. The first Franco-Belgian letter restates the well-known defence of the legality of the Ruhr occupation, but promises evacuation within the maximum period of a year, provided the London agreements for the putting into force of the Experts' Plan "are carried out in the spirit of good faith and pacification which has inspired the deliberations of the Conference." Dr Marx, in reply, repeats the German view of the illegality of the Ruhr occupation, and urges the desirability of "hastening as much as possible military evacuation so as to terminate it before the date fixed by you." By way of answer Messrs Herriot and Theunis promise immediate "military evacuation of the zone between Dortmund and Hùde, and of the territories outside the Ruhr occupied since January 11, 1923." Finally, Dr Marx writes "rejoicing at this decision." The evacuation of these territories was duly carried out on the day after the signature of the London Pact.

Notes of the Week.

The Course of the Strikes.—Londoners are apt to take more interest in London disputes than in any others, and although the Covent Garden trouble is really less serious in extent either than the protracted muddle in the building industry, or than the threat to all industry involved in the danger, now happily averted for the time being, of a national strike of electricians, it has bulked and still bulks larger in the Press. The conditions of employment and organisation generally in London's great fruit and vegetable market are notoriously bad. They have been condemned again and again, most recently in the Linlithgow Report. So far as can be understood, the men have definitely before them the idea of regularisation. Many of the porters who ask now for a guaranteed minimum of £4 5s all the year round may earn as much as £8 per week in the summer rush; against that has to be set the short-time and irregularity of the rest of the year—all the familiar evils partly met at the docks. The point on which discussions between the employers (organised in four main groups) and the porters broke down on August 14th was the insistence of the employers on taking on non-union and casual workers at their own discretion. In the same spirit, the employers refused to meet the Minister of Labour, or to take advantage of his good offices in negotiation. They appear, on their own showing, to have adopted the "take it or leave it" attitude. Against this the men and Mr Bevin for the Transport Union have expressed readiness to negotiate. On this point, then, whatever the merits of the wages issue, the honours are with the men. Good sense and fairness have also been shown by the electricians, who have agreed that their demands shall go to a Tribunal representative of both parties, with a Ministry of Labour chairman, the said Tribunal to report to the Industrial Council. So long ago as February, the Electrical Unions demanded a 10s per week increase for all grades. After long discussions, the municipal authorities and private

companies replied that, while not admitting the claim, they were prepared to submit it to arbitration. The Unions took a ballot of their members (some 30,000). Less than half voted; of those who did, two areas only, London and South Wales, showed clear majorities against arbitration and for a strike, the total votes being 7,630 against, 5,112 for arbitration. A strike would have paralysed industry; three days before the notices were due to take effect the unions agreed to reference to a tribunal. The building dispute has been far more protracted, and is, in its origin and course, extremely complicated. The court of inquiry, presided over by Lord Buckmaster, issued a report on July 9th, which, making painfully clear the misunderstandings out of which the trouble had, in essence, arisen, unfortunately brought understanding no nearer. The trouble dates back to the award of 1923. A certain number of employers outside the federation have since then been paying the rates the men demanded but did not get. In Liverpool, in April, the local branch of the Operatives' Union was struck off the union because its members refused to be bound by the terms of the agreement arrived at nationally between the union and the federated employers. When on June 16th last this new national agreement was signed for both sides, it was an implied condition that the operatives should endeavour to deal with the Liverpool men; the employers, however, read this as a definite pledge that the Liverpool men would go back on the national terms. This misunderstanding is the root of the distrust and suspicion which has caused the present trouble to drag on in varying forms ever since that time. Towards the end of June the employers declared a national lock-out; they suspended notices on the intervention of the Ministry of Labour, and for the holding of the court of inquiry; meantime, however, the men had declared a strike. In London, at any rate, this strike-lock-out (for both have been nominally in force since the first week of July) has mainly meant that men have transferred themselves from works belonging to federation employers to works belonging to employers outside, or, at any rate, willing to pay the terms for which the operatives now stand—i.e., an additional penny per hour in London and halfpenny in the provinces. Any national settlement has, despite continuous efforts by the Labour Ministry, been held up on the Liverpool snag. At last, on Thursday the Liverpool men came to terms.

The Finance Accounts.—There are always many points in the National Accounts which are not made clear to the outsider until the "Finance Accounts" are published. Those for 1923-24 have appeared this week (No. 103, 2s net), and are full of useful information for those who are interested in the details of the public finances. They will find, for instance, all the items of Customs and Excise receipts, under which it is shown that £52 millions was received on imported tobacco and £1,400 on home-grown tobacco, £344 millions on imported sugar, £103 millions on tea, and £31 millions on foreign wine. The motor duties produced £1,436,100, "key industry goods," £382,900, and "depreciated currency goods," £248,100. Under the head of Customs there was a debit item of £4,890,000 for an adjustment of revenue with the Irish Free State for the year 1922-23. Excess profits duty receipts, at £231 millions, exceeded repayments and allowances by £381,800, repayments of Munitions Levy exceeded receipts by £1,867,500, and no payments under these two heads were made into the Exchequer. Over £9½ millions was received in interest on War Loans, of which £7 millions was from the Dominions and £2½ millions from Allied Powers, Australia paying £4½ millions, New Zealand £1½ millions, and France £1,853,700. Of the £16 millions shown under the head of ordinary miscellaneous receipts, £6,440,000 was from the currency notes investment reserve account on account of excess of reserve beyond the prescribed 5 per cent. of the securities held; £1,339,100 was from the Post Office Savings Bank, being a moiety of surplus of interest from securities beyond interest paid to depositors; and £2,013,400 was the saving on supply grants. "Conscience money" brought in £3,700. Under special receipts of £36½ millions, £22½ millions was from the Disposals and Liquidation Commission, £4½

millions from the Shipping Commission (of which £2½ millions was for earnings of ex-enemy vessels), £1½ millions for repayment of grants and sale of equipment by the Food Department of the Board of Trade, and £2 millions for the proceeds of salvaged gold from the s.s. *Laurentic*. On the expenditure side we find details of the application of the new sinking fund (1923) which are as follows:—

Principal of Terminable Annuities	£ 1,794,900
Sinking Fund—	
3½% Conversion Loan	13,585,700
4% Funding Loan	2,416,400
4% Victory Bonds	2,062,500
U.S. Government Loan—	
Installment due December, 1923	4,894,100
Pittman Silver Advances repaid	6,565,400
Issue to meet deficiency on Funding Loan and Victory Bonds surrendered for Death Duties	7,275,000
Ditto in respect of other securities	21,200
Balance issued to National Debt Commissioners	1,383,800
	40,000,000

Details of the National Debt as at March 31, 1924, enable us to correct the total in our weekly table, the figure being £7,707½ millions, as against £7,812½ millions at March 31, 1923, a reduction of £105 millions. Estimated assets are given as £111½ millions, or £2½ millions less than at the end of the previous financial year. A full statement is also given of loans guaranteed by the British Government outstanding on March 31st last, which, correctly speaking, should be added to the National Debt. The nominal net liability is shown as £402 millions, the loans guaranteed including local loans, Irish land stocks, and several small colonial and foreign loans. To this figure should be added the liability on the Austrian loan, which is 24½ per cent. of principal and interest. For the purposes of this guarantee, bonds for the amounts guaranteed have been deposited with the National Bank of Switzerland to become effective in case of default. There is, of course, a further contingent liability for guarantees under the Trade Facilities Act, which at the date of the latest return (to June 30, 1924) amounted to £47½ millions. Loans to Allies and Dominions remaining unpaid on March 31st last are given as £2,163 millions.

A Bounty for British Sugar.—The Minister of Agriculture announced this week that he proposes to offer a bounty to the beet sugar industry of this country. The Government proposal is to offer 19s 6d per cwt to the manufacturer for the first four years, 13s for the next three years, and 6s 6d for a further three years on condition that the manufacturer pays the farmer not less than 44s per ton. This last clause is an essential part of the scheme, for beet sugar production cannot develop unless the farmer has some inducement to take up what is for most British agriculturalists a new form of production. In general, subsidies to particular industries at the expense of the taxpayer are economically objectionable, because they encourage producers to look to the Government to help them out of their troubles instead of relying on their own enterprise and efficiency. Like protection, they are a means of keeping out the invigorating breezes of competition. But if any industries are to be subsidised, the beet sugar industry is one of the very few that can make out a case for this sort of assistance. Practically ever since commercial methods of producing sugar from sugar beet were discovered, the industry in European countries has been given various forms of Government assistance, directly or indirectly, and the exports from each country were carried on under highly artificial conditions in which the various Governments competed with one another in offering export bounties. Under these conditions for many decades sugar consumers in Great Britain and a large group of sugar-using industries greatly benefited from very cheap sugar; but it was impossible for the manufacturer of beet sugar to start in this country in competition with the fully-equipped industries of the Continent. These conditions afford an argument for giving in this country some help during the period of infancy to an industry whose birth has been so long delayed. In the circumstances the method of a subsidy is far preferable to that of using the tariff as a means of protection. The nation

sees exactly what sacrifices are to be made; the fact that the subsidy appears as a charge on the Budget means that the period of these payments is not likely to be unduly prolonged, and the likelihood of the principle being extended to other trades is small if every industry which seeks for a subsidy has to make out a special case for dipping its hands into the taxpayer's pocket. Even the present proposal will be examined with a very critical eye. It can only be justified if the Minister can give convincing reasons for thinking that in a few years the industry will be able to stand alone. In these days of straightened finances we cannot afford the luxury of trying experiments.

Cost of Living.—July saw a continuance of the June rise in the cost of living of an average working-class family, as calculated by the *Ministry of Labour Gazette*. The increase over the pre-war level is now 71 per cent., as compared with 70 per cent. at the end of June, and is exactly the same as a year ago. How this figure has moved, month by month, since the beginning of 1918 is shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January ..	85.90	120	125	165	92	78	77
February ..	90	120	130	151	88	77	79
March ..	90	115	130	141	86	76	78
April ..	90.95	110	132	133	82	74	73
May ..	95.100	105	141	128	81	70	71
June ..	100	105	150	119	80	69	69
July ..	100.105	105-110	152	119	84	69	70
August ..	110	115	155	122	81	71	71
September ..	110	115	161	120	79	73	..
October ..	115-120	120	164	110	78	75	..
November ..	120-125	125	176	103	80	75	..
December ..	120	125	169	99	80	77	..

For food alone the corresponding percentage at August 1st was 64, which compares with 62 at July 1st and 65 a year ago. The rise in July was mainly due to increases in the prices of flour, bread, butter, and eggs, which were, however, partly counterbalanced by a heavy drop in the price of potatoes.

Employment in July.—Unemployment increased in July, the *Ministry of Labour Gazette* showing that of the 11½ million workers covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland 9.9 per cent. were unemployed at July 28th, as compared with 9.4 per cent. at June 23rd. Similarly the trade union percentage of unemployment rose between the end of June and the end of July from 7.2 to 7.4. This follows a rise in June, as will be seen from the following table, which shows monthly movements of the trade union percentage over a number of years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	1.0	2.4	2.9	6.9	16.8	13.7	8.9
February ..	2.0	0.9	2.8	1.6	8.5	16.3	13.1	8.1
March ..	1.9	1.2	2.9	1.1	10.0	16.3	12.3	7.8
April ..	1.7	0.9	2.8	0.9	17.6*	17.0	11.3	7.5
May ..	1.9	0.9	2.1	1.1	22.2*	16.4	11.3	7.0
June ..	1.9	0.7	1.7	1.2	23.1*	15.7	11.1	7.2
July ..	1.9	0.6	2.0	1.4	16.7	14.6	11.1	7.4
August ..	2.0	0.5	2.2	1.6	16.3	14.4	11.4	..
September ..	2.3	0.5	1.6	2.2	14.8	14.6	11.3	..
October ..	2.2	0.4	2.6	5.3*	15.6	14.0	10.9	..
November ..	2.0	0.5	2.9	3.7	15.9	14.2	10.5	..
December ..	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Excluding coal miners.

The total of registered unemployed rose from 1,015,000 at June 30th to 1,052,000 at July 28th, an increase of 37,000. The demand for labour in the shipbuilding industry showed some improvement in July, but this was more than counterbalanced by reverse movements in other industries, among which pig-iron manufacture, and the woollen and worsted, hosiery and lace trades afforded the chief examples.

The Inland Revenue Report.—The sixty-sixth report of the Commissioners of His Majesty's Inland Revenue for the year ended March 31, 1923 (Cmd. 1934, 3s net), is packed full with interesting information and valuable statistical data, from which we extract a few examples. A classification of all property paying estate duties in 1922-23 shows that 13.73 per cent. was in the form of British Government securities issued since 1914, 7.11 per cent. in other Government and municipal securities, 28.28 per cent. in stocks and shares, 7.06 per cent. in cash, 6.15 per cent. in land, and 14.48 per cent. in house property and business premises. The total gross capital values on which duty was paid were £472½ millions. Stamp duties, at £21,851,300, increased by nearly £3 millions as compared with 1921-22, of which transfers of stocks and shares accounted for over £2 millions, receipts from this source rising from £2,908,700 to £5,063,000. Total receipts from stamps in connection with stocks and shares increased from £4,525,000 to £7,174,500. Dwindling activity in new issues is reflected in the figures for companies' share capital duty, which at £1,855,500 compares with £2,141,500 for 1921-22 and £5,853,100 for 1920-21. Stamps on cheques and bills of exchange brought in £4,472,100, against £4,286,400. Inhabited House Duty, which has now been abolished, brought in £1,989,500, of which £1,563,600 was from private dwelling houses. The gross income assessed for income-tax was £3,214.8 millions, and the taxable income, £1,308.3 millions, the net produce of the tax being £346 millions. Super-tax brought in £64 millions, the numbers liable being 85,000 and the total income £495 millions. The effective rate of tax—income-tax and super-tax combined—on incomes of £150,000 is shown to be 10s 8d in the £. Corporation profits tax was levied on 34,745 companies, with taxable profits of £458.7 millions, and produced £22,581,800. The comparable figures in 1921-22 were 39,395, £512.2 millions and £25,352,300.

The Stock Exchange and the London Pact.—The general tendency of the Stock Exchange markets since the announcement of the signature of the London Conference Pact has been, writes a Stock Exchange correspondent, what members call steady to good. Only in the foreign market did any semblance of excitement arise in connection with the event. In that department, French bonds enjoyed a very brief spurt, but, so far as Germans were concerned, the anticipations of the bulls were realised, and stock was accordingly turned out in liberal quantities by speculative purchasers. Talk, in advance, reported the purchases of German bonds as being on behalf of German interests, via Holland and Belgium. The sequel to the Pact signature, however, seems a curious commentary on the strength of the purchasers, who, had they been the German Government, as suggested, would hardly have turned sellers in what was obviously an attempt to secure profits. The rapid reaction in the prices of German bonds suggests, indeed, that the purchasers were of a more transitory order. British Government stocks improved by reason of the hope that, with peace assured, the New York exchange might be expected to continue its movement in favour of London, and thus to remove into the background those fears of an August rise in the Bank rate which had been worrying the markets for the past few weeks. Consequently, the War Loan, War 3½ per Cents., Funding, Victory, and Conversions all went better, and the firm front displayed by the Consol market served to buttress not only gilt-edged stocks, but investment securities of all kinds. Not a few of the recently issued stocks display a better tendency. Harland and Wolff preference, to take a representative example, moved up from 2s 9d discount to 1s 9d discount; New South Wales 5 per cent. scrip, another newcomer, strengthened from 1½ discount to ¾ discount. Stock Exchange securities are re-attracting money which lay dormant, though expectant, during the period of mild crisis which prevailed at the time when the issue of the London Conference hung in the balance. Stock Exchange men cannot be said to welcome with any enthusiasm the latest peace developments. Brokers and jobbers thankfully recognise that there is at length a hope of some sort of settlement being achieved on the Continent, with a concomitant prospect of trade improve-

ment and a stabilisation of exchanges. Whether the Pact will succeed in restoring international confidence and good faith remains to be seen. The doubt which exists on this point is the reason why there is but little heard on the subject in the Stock Exchange markets. Feeling runs high in some quarters that the Germans are capable of supplying, out of their own resources in America, in this country and elsewhere, the forty million pounds sterling which is to be raised by way of loan. It is safe to assert that rarely has there been any financial operation of recent years which has aroused more sentimental feeling than this loan is already doing. The fact of markets being better, however, and of the strength permeating so many sections of industrial shares at a season of the year when holidays are at their height, is practical evidence that the House looks forward with expectancy rather than optimism to the ultimate outcome of the negotiations which have ended in the signature of this agreement.

Acreage and Crop Conditions in England and Wales.—The Ministry of Agriculture has published a preliminary tabulation of the agricultural returns collected on June 4th last in respect of agricultural holdings above one acre in England and Wales. The following table compares the results in respect of the present year with those of 1923:—

	1923. Acres.	1924. Acres.
Total acreage under crops and grass	25,943,000	25,873,000
Arable land	11,181,000	10,928,000
Permanent grass { For hay	4,357,000	4,502,000
{ Not for hay	10,405,000	10,443,000
{ Total	14,762,000	14,945,000
Wheat	1,740,000	1,546,000
Barley	1,327,000	1,316,000
Oats	1,978,000	2,035,000
Mixed corn	116,800	135,100
Rye	73,200	59,100
Beans	(a) 235,000	241,300
Peas	(a) 141,400	171,500
Potatoes	466,700	451,800
Turnips and swedes	862,000	831,800
Mangold	402,900	389,600
Cabbage, savoy and kale	72,200	80,100
Kohl-rabi	12,600	14,700
Rape	78,000	68,100
Vetches or tares	86,900	112,200
Lucerne	57,900	64,400
Mustard for seed	31,200	35,900
Brussels sprouts	16,900	20,700
Cauliflower or broccoli	11,100	12,400
Carrots	10,100	10,700
Onions	2,400	2,900
Sugar beet	16,900	22,800
Linseed	8,800	5,200
Hops	24,900	26,000
Small fruit	63,700	73,500
Orchards	232,100	239,200
Clover and rotation grasses { For hay	1,815,000	1,751,000
{ Not for hay	785,000	797,000
{ Total	2,600,000	2,548,000
Bare fallow	435,600	355,600

(a) Excluding 4,900 acres of beans and peas grown for fodder.

The arable area of the country shows a further reduction, and that of permanent grass an increase, the area of arable land being now practically the same as in 1914. The acreage of wheat is again substantially lower, and is smaller than it has been since 1904. Barley is also slightly smaller, but oats and mixed corn show a somewhat larger acreage than a year ago. Beans and peas have recovered to some extent the substantial decline recorded last year, but the acreage of turnips and swedes is the smallest on record, except for 1922, and mangolds also show a reduction. Potatoes, which fell heavily last year, show a further decline, fairly evenly spread throughout the country. The Ministry reports that many of the heavier crops were beaten down by storms in the latter part of July, and tended to ripen slowly owing to lack of sunshine. Wheat on the whole is healthy and vigorous, and has headed well. On some lands, however, it is frequently thin, and prospects are less satisfactory. For the

whole country the yield was estimated on August 1st at 17.5 cwts per acre, or rather less than ½ cwt over the average. On the basis of the acreage figures given above, the total yield of wheat, barley, and oats this year is forecast as follows:—

	Production, 1923. Cwts.	Forecast, 1924. Cwts.
Wheat	30,431,000	27,055,000
Barley	19,301,000	19,872,000
Oats	27,059,000	28,083,000

As these figures are based on estimates made at the beginning of the present month, they may require modification in the light of the experience during August and September.

Canadian Production.—According to the Dominion Bureau of Statistics, Canadian workers engaged in various branches of "productive" activity—agriculture, forestry, fisheries, trapping, mining, manufacturing, &c.—produced in 1922 goods having a net value of \$2,951 millions, against \$2,814 millions in 1921 and \$3,745 millions in 1920. By "net production" is understood the value remaining in the producers' hands after eliminating the value of materials consumed in the productive process. These figures include the output of about two-thirds of the total workers of the country, and as the remainder are mainly employed in auxiliary services, such as transport, commerce, the liberal professions, local and central government, &c., about 50 per cent. may be added to the above figures to obtain a very rough estimate of Canada's national income during the years in question. The following table shows the value of the net production of the main branches of industry in 1921 and 1922:—

Division of Industry.	1921. Value. Million \$.	1922. Value. Million \$.
Agriculture	1,092	1,149
Forestry	263	266
Fisheries	35	42
Trapping	10	17
Mining	163	177
Electric power	73	82
Construction	169	220
Repair work	58	58
Manufactures	1,150	1,131
Grand total	2,815	2,951

The item "manufactures" includes dairy factories, saw-mills, pulp mills, fish canning and curing, shipbuilding, and a number of other industries which had already been included under earlier headings. This duplication, involving \$198 millions in 1921, and \$192 millions in 1922, has been eliminated from the grand total. Agriculture in 1922 regained the premier position it occupied up to 1920, though manufacturing activities come a very good second. As regards the shares of the respective Provinces, the pre-eminence of Ontario in production, as in population, is distinctly marked. The statistics show that Ontario contributed about 39.3 per cent. of the net value of Canadian production. Quebec held second place with 24.7 per cent., and the three Western Provinces of Saskatchewan, British Columbia, and Alberta followed with percentages of 10.6, 7, and 5.5 respectively. The agricultural resources of Manitoba enabled the Province to contribute 5.4 per cent. of the net output for 1922.

The Turkish Petroleum Company.—The Compagnie Française des Pétroles, formed under the auspices of the French Government, has, writes a correspondent, formally exercised its option on 40,000 shares in the Turkish Petroleum Company. This block of shares represents the 25 per cent. interest formerly held by the Deutsche Bank, which was assigned to the French Government under the terms of the San Remo Agreement. The various interests in the company appear to be in a state of flux. The pre-war division was plainly laid down in a Foreign Office document, signed on March 19, 1914, which has recently been unearthed and published in America—how and under whose authority we do not know. It bears the signatures of representatives of the German and British Governments, of the National Bank of Turkey, of the Deutsche Bank, and of the two

oil groups interested. The division of interests is given as 50 per cent. to the D'Arcy group (Anglo-Persian), 25 per cent. to the Deutsche Bank, and 25 per cent. to the Anglo-Saxon Petroleum Company (Royal Dutch Shell group). Further, it contains the interesting clause that "Mr C. S. Gulbenkian shall be entitled to a beneficiary 5 per cent. interest without voting rights, this 5 per cent. being contributed equally by the D'Arcy group and the Anglo-Saxon Petroleum Company out of their respective holdings.....If Mr Gulbenkian shall desire to dispose of this interest and also in the event of his death, the D'Arcy group and the Anglo-Saxon Company shall have the option of purchasing the interests standing in their names (as nominees of Mr Gulbenkian)." Now it is well known that negotiations have taken place between the Anglo-Persian Oil Company and the Standard Oil Company of New Jersey regarding American participation in the Turkish Petroleum Company. It has been stated unofficially that half the original interest of the D'Arcy group has been assigned to Standard Oil and five or six other American companies, so that the company has become, as it were, an official partnership between Great Britain, the United States, France and Holland. But nothing, up to this date, had been publicly known of the 5 per cent. interest of Mr Gulbenkian. It is a fact that he was, in pre-war days, an Ottoman subject, and was helpful in securing consideration for the Royal Dutch Shell group in the disposal of these Turkish oil concessions. He was also, no doubt, helpful as an intermediary in the negotiations between the Royal Dutch Shell group and Lord Cowdray's Mexican Eagle Oil Company, and at a later stage between that group and the Venezuelan Oil Concessions. It is to be hoped, for the sake of the other shareholders, that the price of his mediation is not always a shilling in the pound sterling. But it would be strange if his 5 per cent. interest is allowed to remain in the Turkish Petroleum Company when competition for participation is so severe. And if the Anglo-Persian Oil Company is to assign, on diplomatic grounds, a half of its 50 per cent. interest to American companies, it has yet to be explained to the satisfaction of its shareholders what compensation it is to receive. The uncertainty of the company's internal position would appear to be reflected in that of its external position, or *vice versa*. The negotiations between the London and Angora Governments for the friendly determination of the frontiers between Turkey and Irak have broken down, and under the provisions of the Lausanne Treaty the dispute is to be settled by the Council of the League of Nations. The British case has already been presented, but the Turks, having refused to present a joint case, have apparently done nothing further. There the matter remains, and the validity of the Turkish Petroleum Company's concession is seemingly left dependent on the ultimate disposition of Mosul. But why should it be? As a matter of common-sense, it seems strange that the two Governments cannot come to terms about this oil concession irrespective of the Irak boundaries. We have a strong suspicion that the first would determine the second, but the diplomatists are unfortunately proceeding the other way about.

Austro-Hungarian Pre-War Debts.—An important communication addressed by the Council of Foreign Bondholders to the holders of certain Austrian and Hungarian pre-war bonds states that at the instance of the Sub-Committee of Repartition of the Austro-Hungarian Debt, duly authorised by the Reparation Commission, a conference was held at Innsbruck in June, 1923, between representatives of the Continental holders of bonds of the pre-war External Debt of the Austro-Hungarian Monarchy and delegates of various Successor and Cessionary States established by the Peace Treaties. The Sub-Committee of Repartition proposed for acceptance a *ne varietur* arrangement, and a protocol embodying the terms proposed was signed by the representatives and delegates present (with the exception of the delegate of Roumania), liberty as regards ratification or non-ratification by their respective Governments and principals being reserved. A copy of this Protocol was sent to the Council of Foreign Bondholders, who thereupon called a meeting of bondholders in London, and a committee was appointed to look after the interests of the British holders. The prin-

cipal provisions of the Innsbruck Protocol are as follows:

1. The service of the debt to be recommenced on April 1, 1925, on the following bases:—
 - (a) Gold loans, viz., Austrian 32 per cent. of the full interest to be paid in gold.
 - 4 per cent. gold rentes and Hungarian 4 per cent. gold rentes.
 - (b) Foreign currency loans, viz., Austrian 4½ per cent. interest to be paid in the currency of issue. In the case of the redeemable currency loans (viz., the Austrian 4½ per cent. Treasury notes 1914, Hungarian 4½ per cent. rentes 1913, and Hungarian 4½ per cent. loan 1914) the same percentage is to apply to the capital amounts repayable.

[Note.—No internal currency loans are dealt with under the scheme.]
All payments are subject to a deduction to cover the expenses of the debt service.

2. The arrears of interest and drawn bonds, from 1920 in the case of Austria, and from 1921 in that of Hungary, to be paid on the same bases, such payment being spread over twelve years from 1926 to 1937, i.e., one 48th part would be payable each quarter during the said period.
3. The foregoing terms to be subject to revision before 1931 if the financial condition of the States concerned improves.
4. In case of default on the part of any of the contributive States, the bondholders to revert to their full rights against such defaulting State or States.
5. A Caisse de la Dette to be established in Paris, the members of which are to be appointed by the associations representing the bondholders. The Caisse to be charged with the collection and distribution of the revenues contributed by the various States who still remain responsible for their share of the old debt.

(The foregoing arrangement and the establishment and constitution of the Caisse are subject to the approval of the Reparation Commission.)
The Peace Treaties provide that the percentages of the old Austro-Hungarian debts to be assumed by the new States should be fixed by the Reparation Commission. The Commission has fixed these percentages as follows:

	In the Case of the Austrian Debt.	In the Case of the Hungarian Debt.
Austria	36.827	1.581
Czecho-Slovakia	41.700	15.945
Flume	..	0.748
Hungary	..	45.733
Italy	4.087	..
Jugo-Slavia	2.043	14.116
Poland	13.733	0.075
Roumania	1.610	21.802

Each of the above States is under the obligation (a) to deliver to the Reparation Commission its own new bonds equal in amount to the difference between the share of the old debt for which it is responsible, and the amount thereof held within its own territory, and (b) to present bonds so held for stamping within three months. Owing to the large number of bonds comprised in the old debt the period allowed for stamping has been extended, and it will probably be a considerable time before the exact amounts held within the territories of the various States can be ascertained. It is also understood that the more substantial States, such as Austria, Hungary, Czecho-Slovakia and Italy, have meanwhile increased their holdings, and will thus be in a position to prove to the Reparation Commission that they hold sufficient old bonds to satisfy the whole or the major portion of their obligations under the Treaties. In that event the bondholders will ultimately have only Jugo-Slavia, Roumania and Poland to look to for any payments on account of the old Austro-Hungarian debt in accordance with the Peace Treaties.

L.M.S. Conversion Scheme.—The Stock Conversion and Investment Trust, Limited, which holds about £2 millions of London, Midland, and Scottish Railway ordinary stock, announces the formation of the London, Midland and Scottish Stock Conversion Trust, which is offering conversion facilities to holders of the remaining £93 millions up to 5 per cent. of their present holdings. The basis of conversion is an offer for each £100 of L.M.S. ordinary stock £100 4 per cent. preference stock of the Trust, £50 5 per cent. preferred stock of the Trust, and £100 deferred stock of the Trust. There is to be a deduction of £2 10s from the preference stock, and a charge for management of ½ per cent. on the stock converted. It is contended that by means of the proposed conversion the

dividend which should be forthcoming out of the standard revenue of the L.M.S. Railway Company should soon command for the capital which it represents a value of £125-£135 per £100 in place of its present depreciated value of about £97. We are inclined to think that this estimate errs on the optimistic side, and the scheme seems rather cumbersome in proportion to the advantages it will bring. Among the disadvantages are a slight loss of income and less marketability. Holders of L.M.S. ordinary stock to whom the offer appeals must come into the scheme before September 22nd.

An American Railway Merger.—Our New York correspondent writes:—One of the largest railroad consolidations ever effected in this country will probably be consummated within the next few weeks. Five of the leading railroads, with an aggregate capital of \$1,500,000,000 approximately, and more than 10,000 miles of track, will be included in the merger, plans for which have been announced, and will be submitted shortly to stockholders of the lines concerned for their approval. Under the proposal as it now stands the present Nickel Plate will control through an exchange of stock and by lease the Père Marquette, the Chesapeake and Ohio, the Erie and the Hocking Valley; eventually the Pittsburgh and West Virginia and the Wheeling and Lake Erie may be added to the new system. While all details have not yet been worked out, the terms outlined this week for the exchange of stock of the different roads are as follows:—Holders of Erie first and second preferred shares are to receive 50 per cent. of their holdings in preferred stock of the new Nickel Plate holding company which is to be formed, and Erie common stockholders will receive 40 per cent. in new common stock. Holders of Père Marquette prior preference shares will receive 100 per cent. of new preferred stock bearing a dividend rate of 6 per cent., as compared with the present annual rate of 5 per cent., while Père Marquette common shareholders will get 85 per cent. in new common. For the Chesapeake and Ohio 6½ per cent. preferred stock it is planned to give 115 per cent. in new 6 per cent. preferred, yielding a return of 6.90 per cent., as against the present 6.50 per cent.; the Chesapeake and Ohio common stock will be exchanged for 55 per cent. in new 6 per cent. preferred and 55 per cent. in new common, yielding, on a basis of 6 per cent. dividends on the new common, a return at the rate of 6.60 per cent., as compared with the present 4 per cent. dividend. Hocking Valley common stockholders will be offered 50 per cent. in new 6 per cent. preferred and 50 per cent. in new common, to yield 6 per cent. instead of 4 per cent. as at present. The new holding company is to have only two classes of stock, namely, 6 per cent. preferred and common stock which it is proposed to place on a \$6 dividend basis as soon as issued. This is considered possible, since the 1923 consolidated earnings of the railroads entering the combine show an amount equivalent to about \$14 a share was available for the common stock of the new holding company for that year. The existing Nickel Plate company owns more than 150,000 shares of Chesapeake and Ohio, which, in turn, owns approximately 90 per cent. of the stock of the Hocking Valley. The Nickel Plate also owns, it is understood, upwards of 100,000 shares of the Père Marquette. All of the foregoing controlled stocks will be exchanged in accordance with the plan indicated, and will remain as assets of the present Nickel Plate company. The stock which will be given to the latter in exchange for its physical properties will be in addition to that which it will receive for its stock holdings in the other properties mentioned. The old Nickel Plate, now known as the New York, Chicago, and St. Louis, will continue as a holding company after disposing of its assets to the new corporation. The consolidated system will be under the control and direction of the Van Sweringen interests of Cleveland, who are the prime movers in this undertaking, and who already control the New York, Chicago and St. Louis, the Chesapeake and Ohio and other railroads, and are said to have acquired recently practically a working control of the Erie. Many of the largest stockholders in the various railroads to be merged have already approved of the project, including the First National Bank interests, who

have taken a prominent part in bringing about the pending consolidation. The Inter-State Commerce Commission is expected to sanction the merger in due course, since it is in line with that body's plans for the consolidation of railroads of the United States into several big systems.

U.S. Iron and Steel Statistics.—The annual statistical report of the American Iron and Steel Institute for 1923 gives in more detail the production figures for 1923, which have already appeared in the aggregate, but possibly the most interesting tables from a British point of view are those relating to the capacity of blast furnaces and steel works. The number of blast furnaces completed or building at December 31st last was 438 (of which 26 were charcoal furnaces), and their annual capacity 53,292,080 tons. The average annual capacity of blast furnaces using coke was 52,709,680 tons, and of charcoal furnaces 582,400 tons. Eighteen stacks of an aggregate annual capacity of 780,000 tons were abandoned or dismantled during the year. Of these the oldest was built in 1847, and the most recent in 1910. Six stacks were building at December 31st, four of which, with an aggregate capacity of 563,250 tons per annum, were coke, and two of 45,000 tons capacity charcoal. There were 461 completed steel plants at December 31st, of which 222 were equipped to make open-hearth steel, 105 to make bessemer, and 245 to make crucible, electric, and miscellaneous steel. The annual capacity of steel ingots and castings was 59,431,710 tons, compared with 39,689,265 tons in 1913. The total capacity includes 43,460,825 tons of open hearth basic, 2,437,365 tons of open hearth acid, 12,007,685 tons of bessemer, 182,545 tons of crucible, and 1,340,890 tons of electric steel. During the year 23 plants, with an approximate annual capacity of 421,870 tons, were abandoned or dismantled. The report also gives tables showing the rolling mills active and idle during 1923, production of pig-iron, steel ingots, and castings, and finished steel products over a series of years, consumption of raw materials in the production of pig-iron and crude steel, the imports and exports of iron and steel, and the prices of certain typical products. No information is given, however, with regard to labour or wages.

Recovery in Silver.—Silver this week has benefited by the fall in the sterling rate. American sellers have been offering nothing and at times were buying; but apart from this there are now factors at work that will influence the market favourably for some time to come. Last week the price fell to 33½d, but this week the tendency has been strongly upwards, sentiment generally being better, and it is quite likely that there will be a recovery to the best of the year. The reports of large silver purchases for Germany may be disregarded. Large quantities of silver coins were melted down, and the bars derived therefrom were deposited against advances, but the bulk of this silver is being reshipped to Germany and will be used for coinage purposes. There is at present enough for this year, but, of course, if Germany increased its silver issue to the maximum allowed under the Dawes scheme, which would mean 20 marks per capita, large purchases of new silver would be necessary. The minting capacity of Germany is very limited, however, but the business might be partly placed in the States. Poland is coining 48 million zloty, and has purchased 6,000,000 ounces of silver from the American producers. This is double the original contract, and busy times are foreshadowed at the Philadelphia mint. It is hoped that the Polish Government will take altogether something like 25,000,000 dollars' worth of silver from the States, and this has given rise to reports of active buying for European account. On this side everything points to better markets. There are very important commitments for Continental account, which will

have to be reckoned with over the next few weeks. A large quantity of silver will probably be taken off the market, and this means that the short interest will have to look out. China has turned from a seller to a buyer, and the Indian Bazaars are rather eager to cover. With Russia and Poland committed to a big coining programme which will call for a lot of silver, and Germany in favour of a policy that will absorb the whole of the 25,000,000 ounces collected by the Reichsbank at the very least the outlook for the commodity is certainly better, and well-informed bullionist opinion favours the view that higher prices will be witnessed later on. There is a fairly big bear account to be covered in, and the set-back in sterling will keep American offers back.

UNITED STATES.—BIG RAILROAD CONSOLIDATION —COMMODITY PRICES ADVANCE SHARPLY— HIGH BUILDING COSTS—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 12.

DURING July, prices of staple commodities showed a marked upward turn. Bradstreet's index number at August 1st was \$12.6231, and recorded the first gain since that of December 1, 1923. The increase amounted to 3.2 per cent. over July 1st, and brought the average level of commodity prices about up to that prevailing on April 1st last, thus wiping out the declines in April, May, and June. The August 1st index number, however, is still 1.5 below that of August 1st a year ago, but 4.5 per cent. above August 1, 1922, and 18.8 per cent. higher than that of June 1, 1921. As compared with February 1, 1920, the peak point of the after-war boom in prices, the latest index number is 39 per cent. lower, but 45 per cent. above that of August 1, 1914. No less than ten different groups of commodities shared in last month's advance; they included breadstuffs, livestock, provisions, hides and leather, textiles, metals, coal and coke, oils, naval stores, and miscellaneous products. Three groups showed slight declines, namely, building materials, drugs and chemicals, and fruits. Of the 106 commodities used in the compilation, 41 advanced, 20 declined, and 45 remained unchanged.

Despite the tremendous building activity which has been under way in this country for the past four or five years, and the great increase in the number of houses and apartment dwellings, the average wage-earner is still forced to pay for rent a much larger portion of his income than he is justified in doing, or else occupy quarters beneath his status. A decade or so ago the average person expected to pay not more than one-fourth of his income for rent. To-day, he is indeed fortunate who can keep the rent item in his family budget down to that percentage. The majority are compelled to pay nearer one-half of their earnings for rent, whether for a detached house, a two-family house, or an apartment. The reason homes cost so much, either to rent or purchase, is that building costs have at least doubled in the past ten years. There is also a great deal of speculative building, buying and selling, each turnover yielding someone a substantial profit before the real home-seeker acquires the property. A survey recently completed by the National Industrial Conference Board shows how the building boom which started in 1919 forced up the prices of building labour and materials. The report states that the shortage of building labour is the outstanding factor of the high cost of building, and was the chief cause in limiting construction work immediately following the war, when building labour was forced to seek other work, and when apprentices were discouraged from entering the building trade. The failure of the supply of skilled labour to keep pace with

the demand can be traced to the immigration restrictions, and to the fact that employers in the past did not encourage apprenticeship. The result is hourly wages in 17 building crafts are now 100 per cent. higher than in 1914, and by far the highest of any industry in the United States, irrespective of considerable bonus additions. The survey referred to points out that at the last census 86 per cent. of persons employed in the whole country received incomes of \$2,000 or less a year, and that rents for low and moderate-priced accommodations suited to the average wage-earner are 85 per cent. higher than they were in 1914. "The prospective home-seeker," it adds, "is not in a position to bargain with the landlord, and it is a question of exactly how much surplus needs to be established to give the home-seeker better opportunity and freedom of choice."

Although trade and industry still show some irregularity, there is abundant evidence that the business tide generally has turned, and is rising, and there is good reason to expect that the volume of business will continue to increase from now on. Should this prove to be the case, it will undoubtedly have an important bearing upon the political situation and the outcome of the Presidential election in November. In many quarters it is felt that favourable trade, industrial and financial conditions during the next two or three months will materially strengthen the prospects of President Coolidge's re-election. It is quite natural, therefore, that developments in the domestic, industrial, agricultural and financial situation, as well as economic developments in Europe, especially with respect to the solving of the reparations problem and the putting into practical operation of the Dawes plan, are being followed here with the keenest interest. Some basic industries still lag behind distributive trade, which in the past few weeks has shown considerable expansion. Pig-iron production in July, for instance, fell 15 per cent. from June, and more than 50 per cent. from July a year ago. Shoe manufacturing and wholesale branches of that industry, on the other hand, gained materially, while cotton goods and silk fabrics moved in much larger volume. The lumber trade in the South and on the Pacific Coast was more active. Structural steel and supplies for implement manufacturers are now much more active than they were a month ago, but reports from automobile centres display irregular conditions so far as manufacturing activity is concerned. In its review of basic and industrial movements last month, the Department of Commerce says that pig-iron output in July amounted to 1,784,899 tons, as against 2,026,221 tons in June and 3,678,334 tons in July, 1923. Furnaces in blast on August 1st numbered 144, with an average daily capacity of 55,350 tons, compared with 161 in blast on July 1st, having a capacity of 62,200 tons, and 298 a year ago, with a capacity of 114,200. Leading manufacturers of locomotives shipped 140 locomotives in July, as against 145 in June and 239 in July of last year; orders on hand at July 31st totalled 483 locomotives, compared with 531 at the end of June and 1,738 on July 31, 1923. July car-loadings aggregated 3,526,500, as against 3,944,386 a year ago; total loadings for the first seven months ended July 31st were 26,713,207 cars, contrasting with 27,946,653 for the corresponding period of last year, and loadings of grain products increased over a year ago, both for July and the seven months. Sales of two leading mail-order houses in July totalled \$22,069,000, as against \$22,453,000 in the same month of 1923. Commercial firms failing in July numbered 1,615, against 1,607 in June and 1,231 in July of last year, the liabilities exceeding those of June and a year ago. July transactions on the New York Stock Exchange aggregated 24,000,000 shares approximately, as compared with 17,000,000 in the preceding month and only 13,000,000 in July, 1923. Price increases accompanying the greater activity raised the average for 25 industrial stocks to \$113.53, as against \$108.93 in June and \$102.52 a year ago, while the average for 25 railroad shares advanced to \$68.39 in July from \$65.07 in June and \$58.07 a year ago. Thus far in August further sharp gains have been recorded, carrying the average prices of both industrial and railroad stocks to new high levels for this year. Bonds also have been very active, with many issues, including Liberty Loan bonds, reaching new high ground since the first of the

FRANCE.—THE LONDON AGREEMENT—INTER-ALLIED DEBTS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, August 20.

M. HERRIOT is to report the results of his efforts in London to the Chambers to-morrow only, therefore it is at present impossible to know whether the decisions come to by the Inter-Allied Conference will be ratified by the French Parliament. The debate in the Chamber, it is expected, will last until at least Saturday evening, in view of the large number of deputies who have given notice of their desire to take part in it, but so far as can be observed at present there is no serious intention to repudiate the London decisions, although many of the details of the agreement arrived at will undoubtedly be the subject of sharp criticism.

It cannot be said that Frenchmen are satisfied with the results achieved. French critics of the London agreement insist that its results are all for the benefit of Germany and to the prejudice of this country. Germany, it is asserted, secures not only a loan of 800 million gold marks, but also the restoration of the Ruhr and the Rhineland railways, the reconstitution of her economic unity, the suppression of Customs barriers, the reinstallation of her own administration on the left bank of the Rhine, and protection virtually against any sanctions in the future; while, at the same time, she loses nothing and is given strong ground for hoping to enter the League of Nations on a footing of equality, to have her finances restored, and to be given facilities for her industry to reconquer the world, while she is also given the possibility of preparing another war of aggression. France, on the other hand, it is insisted, gains absolutely nothing by the agreement, while she loses more than half of the reparations which it was agreed should come to her, even under the London agreement of 1921 (which in itself cut down her original rights enormously); she has also lost her majority on the Reparations Commission, and the economic and political pledges which she held in the Ruhr and the Rhineland, including the administrative control of the left bank of the Rhine; while she is now rendered helpless to act on her own initiative in the event of Germany again making default. She has now to be content, according to the nationalist view of the situation, with promises of a Franco-German treaty of commerce (which in any case will be as favourable to Germany as to herself); of a conference on inter-Allied debts, of which the basis is still unknown; of the payment, if Germany keeps her engagements, of 45 per cent. of the reparations which were admitted to be due to her by the London agreement of 1921, the whole of which may be absorbed by her debts to England and America; and of consideration being given to the question of her security under the form of general disarmament, coupled with reciprocal treaties of guarantee under the aegis of the League of Nations. In spite of this state of mind on the part of the majority of those who form the French commercial, industrial, and professional classes, there is, as I have indicated already, a fairly general opinion that in the end M. Herriot will secure approval by both Chambers of the agreement he has helped to negotiate in London.

In banking circles here it is estimated that the total payments that will be made by Germany under the Dawes plan, if it is honestly carried out, will not amount to more than between 41,500,000,000 and 46,500,000,000 gold marks. The French share of 52 per cent. of this will not be equivalent to more than about one-half of the 100,000,000,000 of which she has already expended on the restoration of the devastated area, plus the 20,000 to 30,000 million francs that has yet to be found for the same purpose. Against this, France is faced with debts owing to her allies, which may be set forth thus:—

Bonds handed to the British Treasury, including interest (capitalised)	15,275,285,000
Advances made by the United States Treasury	15,194,314,000
Interest on latter	3,070,000,000
Total in gold francs	33,539,599,000

Transformed into paper francs, this represents a grand total of about 117,000,000,000. It is frankly questioned

London, E.C.3

here whether there will be the slightest utility in convoking the proposed international conference on inter-Allied debts, which it is suggested shall be held in November next, when it is obviously impossible for this country to liquidate even a substantial proportion of this colossal sum, except by surrendering the German "C" bonds. If there is any question of payment in cash, it is argued, France's creditors will be faced with the same transfer difficulties as those which are involved in the latest settlement with Germany.

In a remarkable study which he has just published, M. Jules Décamps, the able "director of economic studies" at the Bank of France, argues that the only practicable means for France to receive payment from Germany would be in the form of merchandise and labour to an amount equal to the debt owing. M. Le Trocquer, former Minister for Public Works, set forth a day or two ago a detailed programme of public works, in the way of improvements and developments of the French railways, ports and waterways, at a cost of about 18½ milliards of francs, which he urges should be carried out by German labour and materials, the financing of the plan being so arranged that Germany might contribute as to two-thirds of the cost in reduction of her reparation debt to this country. Critics of both M. Décamps and M. Le Trocquer's arguments point out, however, that the effect of the application of their ideas would be seriously prejudicial to French trade and industry, and that any revenue received therefrom, in the way of reparation payments, would be more than counterbalanced by the loss in wages, profits and revenue from taxation that would inevitably result.

The French foreign trade returns for July show that during the past month the total imports were of a value of 3,099,976,000f, against exports valued at 3,013,713,000f. The adverse balance was, therefore, only 86,263,000f last month, as against a much more serious deficit of 256,563,000f in June. In February, March, April and May, it will be recalled, there was a substantial favourable balance each month. The total figures

for the first seven months of 1924, however, still show an excess of exports to a value of 1,323,381,000f, as compared with a deficit of about 730½ millions in 1923. The detailed totals for the seven months, as compared with the corresponding period of 1923, are as follows:—

	First Seven Months of		Increase in 1924.
	1923.	1924.	
Imports—			
Foodstuffs	3,973,289,000	4,976,613,000	+1,003,324,000
Raw materials	10,874,235,000	15,065,526,000	+4,191,291,000
Manufactured goods	2,444,168,000	2,930,493,000	+486,325,000
Total.....	17,291,692,000	22,972,632,000	+5,680,940,000
Exports—			
Foodstuffs	1,761,722,000	2,269,399,000	+507,677,000
Raw materials	5,166,809,000	6,364,234,000	+1,197,425,000
Manufactured goods	8,729,448,000	14,573,602,000	+5,844,154,000
Postal parcels.....	903,245,000	1,088,778,000	+185,533,000
Total.....	16,561,224,000	24,296,013,000	+7,734,789,000

The increase in exports, as shown by the above figures, is equivalent to 46½ per cent., and in imports to nearly 33 per cent. The most notable increase during the seven months has been in the exports of manufactured goods, which have had a value of no less than 67 per cent. more than those of the corresponding period of 1923. The increase in exports during July was almost entirely in manufactured goods, which had a value of 90 million francs more than in June, and in postal parcels, which increased by 17 millions. Imports of manufactured goods and foodstuffs increased by nine millions and 57 millions respectively. In tonnage, both imports and exports showed an increase during the seven months of about three million tons. Of the 33,551,406 tons of imports, 29,399,041 tons were raw materials (of which 19,211,880 tons consisted of coal, coke, &c., and 851,791 tons of manufactured goods). Of the total exports of 16,034,628 tons, 13,209,963 tons were raw materials, with a value of 6,364,234,000f, and 1,945,371 tons manufactured goods (with a value of 14,573,602,000f). Imported food stuffs since 1924 began

weighed 3,300,574 tons, valued at 4,976,613,000f, while exported foodstuffs had a tonnage of 859,489 tons, but a value of 2,269,399,000f. The growth of French foreign trade since 1913 may be gauged by the following figures:—

	Imports.		Tonnage.
	Value in Frs.		
First seven months of 1924.....	22,972,632,000	..	33,551,406
" " 1913.....	4,910,580,000	..	25,653,799
Increase since 1913	18,062,052,000	..	7,897,607
	Exports.		Tonnage.
	Value in Frs.		
First seven months of 1924.....	24,296,013,000	..	16,034,628
" " 1913.....	3,910,883,000	..	11,552,846
Increase since 1913	20,385,130,000	..	4,481,782

Curiously enough, although the value of the manufactured goods imported has increased by well over 200 per cent. in the 11 years, the tonnage of this category of imports has actually decreased by 66,750 tons, or about 7 per cent. Goods exported by post, the value of which has also increased by over 200 per cent., show a fractional decrease of 472 tons this year as compared with the corresponding period of 1913. The detailed figures as to coal and coke exports show that while during the first seven months of 1913 France imported 13,322,100 tons of combustibles (mostly, of course, from Great Britain), with a total value of 341,032,000f, the total imported this year down to the end of July was 19,211,880 tons, with a value of 2,310,197,000f.

GERMANY.—FINANCES—OUTSTANDING LOANS—COMMODITY PRICES—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 19.

The Finance Ministry's report for the first August ten-day term shows a surplus of 383,500 gold marks, after 270,400 gold marks was spent on redemption of Gold Loan. The Government has declared to the Reichstag Committee against further restoration of private debts, and against abolishing the rents tax in order to make it possible to

restore mortgages on town houses beyond the already conceded 15 per cent. The Food Ministry says that land-owners could not stand a further increase of their mortgages. The Committee itself now seems to be inclined only for "individual restoration," i.e., special treatment of special cases of hardship; but the Government is against even this. It proclaims for handling the question merely as a social problem, i.e., out of taxation or by other means relieving the victim creditor classes. It is not likely that much will be done. Regarding public debts, it may be repeated that home and domestic speculation, based on the smallest measure of "Aufwertung," is not justified. The following summary of federal debts is published, there being included State debts taken over from the former railway-owning States, but not 3 milliards nominal of debts of States which did not own railways. These debts remain liabilities of the States:—

Pre-War Issues.	Outstanding in Millions of M.
4 % Federal	1,150
3½ % "	1,970
3 % "	1,670
4 % Colonial	250
Total direct loans to Republic	5,040
4 % Prussian Cons.	9,640
3½ % "	2,390
3 % "	2,230
4 and 3½ % Bavarian	19,300
Saxony, Baden, Hess., Mecklenburg.....	44,780
Total pre-war loans	6,160
War Issues.	
5 % War Loan	50,940
4½ % Federal Treasury bills	3,840
War Loans total	282,020
Post-War Issues.	
Savings and premium, 1919	822,141,490
Forced loan, 1923	
8-15 % K. Treasury bills.....	

The vast disparity between the nominal totals of the post-war loans has, of course, only an inflationist meaning. The *Frankfurter Zeitung* states that the last-listed loan yielded only 50 million gold marks, the Forced Loan (paper mark) only 10-15 million gold marks, and Savings and Premium Loan (also paper marks) 500 million gold marks. It is hardly credible that even if Reparations were first "fully paid," as is required, any satisfactory scheme could be devised for partial restoration of these loans, which, except the pre-war, brought to the borrowing States all imaginable proportions of gold, and have since passed through innumerable private hands. The result of "Aufwertung" would probably be to aggravate the expropriation by imposing taxes on the ruined former bondholders in order to enrich speculators who bought bonds for almost nothing.

Prices of most commodities now change little. The cost-of-living index number on August 3rd was unchanged at 114. Grain prices, however, move upward. Between July 1st and August 18th native-grown wheat in Berlin has risen from 139-144 gold marks to 204-210 gold marks per ton, rye from 127-134 to 148-157 gold marks, oats 124-134 to 161-171 gold marks, barley 138-147 to 205-216 gold marks. Wheat and oats have passed pre-war prices. The *Frankfurter Zeitung's* wholesale index for August 14th was 131.09, against 130.83 on July 31st. In this index manufactured goods are put at 136.62. Industrial prices have all of late considerably fallen. The July official index (100 in 1914) shows for furniture 157, clothing 140, machines, according to kind, 137 to 164; passenger motor-cars 165, commercial cars 104, bicycles 111, typewriters 100, carpets, curtains, &c., 222. The number of bankruptcies in July was 1,125, against 586 in June, and a monthly average of 815 in 1913. Between July 15th and August 1st the number of publicly supported unemployed in unoccupied territory increased from 277,000 to 328,000. The German and French potash concerns have come to an agreement for a common selling and advertising policy in the United States. Competition is excluded. Between 1919 and 1923 the Alsatian producers increased their sales in America from 5,450 metric tons of pure potash to 50,580 tons, while Germany's sales increased only from 70,128 tons to 112,678 tons. The Reichswirtschaftsrat's inquiry into textiles has yielded the fact that undue profits are not a cause of the high prices

prevailing. The proportion of cost of raw materials in the price of finished and semi-finished textiles is found to be higher than before the war. High interest rates on capital have materially increased textile prices.

The bourse last week was entirely under the influence of the Conference, and the only sharp reaction took place on the day after the evacuation question first looked critical. On the whole week stock averages moved upward a little, while home loans receded, Prussian Consols being the chief sufferers. This week, it was predicted, would begin with a "Settlement Boom," but though stocks were fairly firm yesterday and rose considerably to-day, no violent bull movement has so far developed. It should be remembered that the settlement was discounted, that quotations have now been moving upward for more than a month, and that some industrials are at double their lowest quotations of the year, though well below their highest points. Loans to-day had a setback. There is a good deal of foreign buying of industrials, and on this ground a further moderate rise is predicted, but foreign investors should remember that there is at present practically no material for objectively determining the value of a German stock, and will not be until the gold balance-sheets are out. Stocks are judged "cheap" or "dear" by comparison with their quotations since the currency stabilisation. However, in the year preceding the stabilisation they rose enormously in gold quotations. Loans to-day (in milliards of paper marks per 100 marks nominal) were:—War Loan, 650; Federal Fours, 1,100; 3½ per Cents., 1,050; Threes, 1,575; Colonial Fours, 3,500; Forced Loan, 17.75; Prussian Threes, 1,260.

ARGENTINA.—NEW CURRENCY MEASURES—INCOME TAX—PUBLIC FINANCE—TRADE BALANCE—BANKING.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 23.

SINCE last writing the various Government proposals affecting a radical reform in the banking, monetary, and fiscal systems of the Republic have been formally laid before Congress. Commercial opinion takes little interest in the suggested banking legislation, and as regards the monetary reform, which on the surface does not appear to disturb existing conditions while abolishing the distinction between gold and paper currency, the general public are best described as favourably indifferent. If the measure becomes law, Argentina will have at the outset a circulating medium of 2,243,713,000 units, to be known as "nacionales," as against the existing \$1,353,259,939 paper. The "nacional" would be basically 0.32258 grammes gold, 9-10ths fine, but though some gold coins of 20, 10, and 5 nacionales would be struck, the bulk of the circulating medium would remain paper, being guaranteed as follows:—50 per cent. in minted gold, 15 per cent. in public funds, 15 per cent. in easily realisable commercial paper rediscounted by the Banco de la Nacion on behalf of other banks. Some uneasiness is felt at the clause which would authorise the Government to make use of the surplus gold which the above redistribution would release from the stock actually in the Conversion Office against the deposit of a bond for the equivalent, carrying interest at the current rate, but not more than 6 per cent. per annum. This is, however, the logical issue of the proposal, which is obviously drawn to that end. About \$220,000,000 gold would thus be freed for the purpose of "paying services of the public debt or effecting such public credit operations as the Executive Power considers it desirable to effect, always provided that such operations result in a strengthening of the guarantee fixed for the notes in circulation." Theoretically, and always provided that the question is studied under present-day conditions, the reasoning holds true. What is overlooked is the fact that by law every possessor of a paper dollar has the legal right to claim 44 cents gold for it at the Conversion Office. That right is in no way affected by the emergency legislation which closed the Office, and this point has been pressed in a lengthy interpellation of the Minister of Finance by the Socialist party, who denounce the new proposal as being tantamount to a forced contribution. The similarity with the reasoning of Professor Keynes' comments on the

depreciated currencies of Europe and their indirect taxative effect is striking. That the measure, if made law, will at once place the Government in funds to the extent of some \$500,000,000 paper is clear; and as this is about the amount required to settle their most urgent debts, and popular opinion is hardly alive to the legal point mentioned above, it is reasonable to expect that the utmost endeavours will be used to effect the change. All hangs, however, on the possession of a workable parliamentary majority, and for the present discussion is shelved while the official party prepares the Chambers to that end; with reasonable prospects of success, seeing that the supporters of President Alvear are manifestly growing in numbers and political importance.

It is therefore to be feared that both this and the other measures pending will be but little ventilated in Congress, their chance of acceptance or rejection turning solely on the success of the complicated political manoeuvring that occupies so much parliamentary time to the exclusion of practical consideration of matters of detail and fact. These comments also cover the position of the proposed Income Tax, a most complicated measure embracing virtually all income whencesoever derived. Even a summary is not possible here, but one may quote Art. 5, Section 1, which reads thus:—"Income-tax may be exacted from all Argentines, whether resident in the country or not, and from resident foreigners. Foreigners who without being residents receive income derived from property or from civil or commercial activities or from any other source within the Republic shall likewise be subject to the tax in respect to the income obtained from those sources."

Incomes taxable according to categories are thus classified:—(a) Income from real estate; (b) income from movable capital—securities, shares, bonds, &c.; (c) income from commerce and industry; (d) income from agricultural and pastoral pursuits; (e) income from individual activities—wages, salaries, fees, &c. Apart from the high initial charges which the impost in its various categories would imply, the chief and most serious objection lies in the absence of any really reliable base of collection, except in connection with commerce and industry. There is no machinery available, and no census returns subsequent to those of 1914, while even if it be admitted that the first lack will be readily filled—on paper, at any rate—by the speedy addition to the all too numerous bureaucratic posts of a political complexion, which are admittedly one of the worst handicaps to real progress that Argentina suffers, to compile returns sufficiently exact to be generally accepted by the taxpayers without demur, will call for both time and careful study.

The condition of the official finances has suffered little or no change during the past month. About \$122,000,000 paper of the six months' Treasury bills fell due, and of this sum \$113,000,000 was renewed, the major portion at 4½ per cent. per annum, while the balance was paid off. This rate is ½ per cent. higher than previous renewals. It may not be out of place to mention that this business has no connection with the debts of the State Railways, which have also been much to the fore during the month owing to the fact that something like a miniature crisis among contracting and engineering firms was occasioned by the delay shown in meeting due and overdue documents. The Minister of Public Works resigned, but after a couple of days' suspense his resignation was withdrawn, and the Minister of Finance issued a presidentially-signed decree authorising the State Railways to borrow \$10,000,000 paper to meet urgent needs. Half this amount was at once forthcoming at 5½ per cent. per annum from an American financial institution, but the remainder has yet to be found, while the projected consolidation of the total floating debt of the department, now put at \$125,000,000 paper as a minimum, seems as far off as ever. It should not be necessary to emphasise the increasing seriousness of this policy of drift, especially when it is remembered that the productive forces of the country are unusually flourishing. The past month has witnessed a rise as welcome as it was unexpected in the prices for wheat, linseed, and maize, the quotations showing increases of 15 to 21 per cent., with exportable surpluses of 1,250,000 tons, 400,000 tons, 2,700,000 tons respectively, still in hand for shipment. There is indeed good reason to hope that the unfavourable trade balance of 1923 will this year be re-

versed, always provided that the disastrously heavy drain of the national obligations can be conveniently diverted. From the summarised statistics which have just been laid before the Ministry of Finance it is shown that as compared with the 1922 total, the trade of the Republic has amounted to \$1,639,791,000 gold, an increase of 20 per cent. The figures are based on estimated real values for both imports and exports. In the following table will be found the respective totals:—

IMPORTS.		1922.		1923.
		\$		\$
Dutiable	506,200,000		675,968,000	
Free of duty	183,446,000		192,461,000	
Metallic	16,000		6,000	
		689,662,000		868,435,000
EXPORTS.		1922.		1923.
		\$		\$
Dutiable	465,674,000		538,064,000	
Free of duty	210,334,000		233,297,000	
Metallic	6,000		5,596,000	
		676,014,000		776,957,000

On these figures, which are compiled by the National Statistical Department, it will be seen that the unfavourable trade balance, which was but thirteen million gold in 1922, rose to 97 million for 1923, if the bullion figures be excluded, as they should be, from the calculation; a sufficient explanation of the steadily depreciating quotation for Argentine currency during the past six months, and one that may very well warrant the fear that no real recovery is to be looked for until November or December of this current year. Commercial failures, too, continue high, and undoubtedly constitute an unreasonable charge upon business. For the first six months of 1922-24 they were—liabilities only—as follows:—

Jan.-June, 1922.	Jan.-June, 1923.	Jan.-June, 1924.
\$ Paper.	\$ Paper.	\$ Paper.
70,616,000	48,368,000	52,440,000

It is not expected that the July totals will show any marked improvement on this average of eight and a quarter million dollars paper monthly.

Money grows dearer, and trade discount ranges from 6 to 7 per cent., with 7 to 8 per cent. charged for credits on current account. Banking deposits have also shown marked modifications, as will be gathered from the following table:—

In 1,000's \$ Paper.			
Date.	Discounts and Advances.	Deposits.	Cash Holdings in the Country.
December 31, 1922	2,677,800	3,478,400	1,103,400
June 30, 1923	2,656,200	3,513,000	1,082,900
February 29, 1924	2,942,400	3,440,500	818,000
May 31, 1924	2,814,400	3,368,800	850,900

Thus while the high prices for produce are unquestionably cheering it will be realised that there is an unsatisfactory undercurrent in Argentine affairs at the present time, which might, given unforeseen difficulties, be detrimental to commercial tranquillity, and which most certainly warrants a continuance of cautious views both in trading and financial circles until a clearer horizon can be relied upon, a contingency which it does not seem reasonable to expect for at least another three months.

DENMARK.—BANK TROUBLES—CROP PROSPECTS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August 15.

ABOUT the middle of July a regrettable event took place in the Danish banking world, the "Kjøbenhavns Diskontobank and Revisionsbank"—the smallest of the leading banks—being obliged to stop payments. The bank had been reconstructed early in 1922, but the subsequent difficult economic conditions have prevented a recovery. The semi-annual balancing of the books proved that the profits of the bank had been less than anticipated—partly through a loss on bonds, owing to the decline of the prices—and as, at the same time, an increasing unrest about the bank arose, resulting in the

withdrawal of considerable deposits, it was necessary to commence negotiations with the other leading banks for the purpose of obtaining their support. However, the negotiations proved abortive, and the bank did not succeed in obtaining new capital or a guarantee for its creditors. Consequently, the Diskontobank stopped payments on July 18th, and the management immediately took steps to commence a liquidation. By a provisional Government Act, to be confirmed when the "Rigsdag" again meets, the liquidation has been specially arranged in such a manner that the bank cannot be made bankrupt. The administration of the liquidation has been taken over by a board appointed by the Minister of Trade, Mr Green, the manager of the Nationalbank, being the chairman. Loans are granted by the other banks against collateral in pass-books and deposit certificates in the Diskontobank, carrying interest at a rate corresponding to the official discount, while amounts not exceeding Kr.200 are paid to the depositors by the Nationalbank. The balance-sheet of the Diskontobank at the end of June showed a total of Kr.261,000,000, while the deposits, apart from the item "banks and savings banks," amounted to about Kr.140,000,000. A statement compiled before payments were stopped showed that a small part of the share capital—which amounted to Kr.36,000,000—was presumably intact, provided the bank continued working, and it is not yet considered absolutely certain that the creditors will suffer any loss. In the interest of the foreign creditors of the Diskontobank, special arrangements will be made. The agreements at present made are to the effect that the claims of foreign banks in foreign currency will be covered by the Nationalbank and the other leading banks, who will then file their claim on the estate as ordinary creditors.

As was to be expected, this serious breakdown caused some unrest in other directions. As far as the other banks are concerned, the prices of their shares declined, and part of the deposits were withdrawn, partly to be deposited in the savings banks, and partly to be invested in bonds, while the Landmandsbank, which is fully guaranteed by the State, had its deposits increased. The bank balance-sheets published at the end of the month, however, show that the banks were comparatively slightly affected, and that they had maintained a sufficiently liquid position. This immediately impressed the Stock Exchange, causing a strong recovery of the shares.

On August 1st the Nationalbank published a provisional report on the financial year ended July 30th. From this it appeared that the profits of the bank had been Kr.13,500,000, but that Kr.11,500,000 of this amount were absorbed by writings off, about Kr.10,500,000 representing the shares in the Diskontobank, which the Nationalbank had subscribed for in 1922. The remaining Kr.2,000,000 of the surplus were reserved for engagements which the bank had entered upon in order to support the krone rate. In spite of this, the shareholders will receive a dividend of 8 per cent., as against 10 per cent. last year, the amount required for this purpose being taken from the dividend equalising fund, which amounts to about Kr.28,000,000. From the annual report of the Nationalbank, it appears that the bank has considerable reserves in its holdings of foreign exchange, as these have been booked at par in cases where the current rate exceeds the parity with the Danish krone.

In the general economic situation there is no great change. The number of unemployed on August 8th was 14,853 only, as against 20,300 a year ago. In July prices have had a rising tendency, and in the course of the month the wholesale price index of the *Finanstidende* showed a rise from 220 to 233. The "cost of living index" computed by the statistical department, which in January was 209, has during the past half-year risen to 214.

Crop prospects improved somewhat in the course of the last month, owing to warm weather and rain. It is expected that the spring-sown crops will show an average yield, while autumn-sown crops will be somewhat below average owing to the very cold winter. Otherwise agriculture still benefits by the relatively high prices of export produce. On August 7th the butter quotation was nearly 40 per cent. higher than on August 9th last year, which, of course, is partly due to the high sterling rate. But the market in England has been firm for some time,

and this coincides with increased demands from Germany, which has attained a better purchasing power owing to the more settled economic conditions. In the course of the first half of 1924, Denmark has exported about 62,000,000 kilos of Danish butter. Of this about 44,000,000 kilos were shipped to England. For the same period, the exports of bacon amounted to nearly 99,000,000 kilos, more than 97,000,000 kilos being sold to England, and finally just over 18,000,000 scores of eggs were exported, 14,000,000 scores to England. The total value of the exports of living cattle, bacon, meat, &c., butter, cream, milk, cheese and eggs during the first six months of the year was about Kr.709,000,000, or Kr.143,000,000 more than during the corresponding period of last year. In the half-year January-June the balance of trade of Denmark has shown a deficit of Kr.149,000,000, the imports amounting to Kr.1,149,000,000 and the exports of Danish and foreign goods to about Kr.1,000,000,000, of which the re-exports amounted to Kr.85,000,000. In January-June, 1923, the excess of imports was thus Kr.184,000,000, or Kr.35,000,000 more than this year. It is fairly generally believed that the credit restriction policy adopted by the Nationalbank and the other banks will gradually check imports, and thereby improve the balance of trade, provided exports continue to be good.

JUGOSLAVIA.—EXCHANGE MOVEMENTS—NEW GOVERNMENT'S PROGRAMME—HARVEST PROSPECTS—FOREIGN TRADE—COMMERCIAL TREATY WITH ITALY.

(FROM OUR CORRESPONDENT.)

BELGRADE, August 11.

AFTER fifteen months of steady improvement, the dinar weakened in June and July by about 20 points, and fell to 370 to the £. The reasons were chiefly political, due to the prolonged parliamentary crisis, though they were somewhat aggravated by large withdrawals by Viennese banks as a result of their losses on speculation in francs. There were no internal economic reasons to cause such a weakening. The note circulation is being continually decreased, and amounts (July 31st) to 5,568 million dinars, as compared with 5,790 at the beginning of the year. Similarly, State Exchequer receipts are in excess of the sum estimated in the Budget, and totalled 6,689 million dinars for the eight months July 1, 1923, to February 29, 1924, as compared with the Budget estimate of 5,201 million for nine months. Except for a sum of 180 million dinars, the surplus has been used for special investments and extraordinary credits.

Immediately after the formation of the new Government, which represents all parts of the country, in contrast to the former purely Serbian Cabinet of M. Pashitch, an improvement took place in the exchange, and the dinar recovered practically all its lost ground. The new Government has made no detailed declaration on financial matters, except that the previous policy of relative stabilisation of currency will be maintained, and that a new law to equalise taxation throughout the country will soon be put before Parliament. The declaration that the long-needed radical reform of the civil administration will soon take place, and that laws will be passed dealing with agrarian credits, indemnification for damage by floods, and the disabled, has been favourably received.

Prolonged rains have seriously damaged the quality of this year's wheat harvest, which promised excellent results. The average quantity of wheat is eight metric cwts per hectare, and the quality 75-76 kgs per hectolitre. None the less, export prospects are very good, since a large proportion of the demand for Roumanian and Bulgarian wheat has been deflected to the Yugoslav market, owing to the bad harvests in those countries. Partly owing to the increased demand, and partly to the weakened currency, wheat prices increased at one time from 300-400 dinars, only to fall again last week to 370 dinars, as a result of the improvement of the dinar. The prune harvest is also likely to be poorer than last year, but reports of other fruit and of maize have hitherto been very favourable. No fall has taken place in the cost of living, because the rise of wheat has counteracted the fall in other commodities. The total index for whole-

sale prices in July was 1995, as compared with 2038 in January.

Trade is fairly normal, and does not appear to have suffered materially during the political crisis. Exports continue to increase, figures for May and June being respectively :—

	1923		1924	
	Tons.	Dinars (in Millions).	Tons.	Dinars (in Millions).
May.....	260,259	689.3	318,900	738.6
June	262,514	642.8	289,782	650.6

This makes up a total for the first six months of 1924 of 1,584,939 tons, worth 4,175 million dinars, as compared with 1,274,319 tons, worth 3,333 million dinars, in 1923. The import figures for 1923 have at last been published, and give a total of 8,309 million dinars, as compared with an export total of 8,048 millions, showing a small import excess of 261 millions.

After long negotiations, the commercial treaty with Italy was signed on July 14th. The main principle is that the most favoured nation, with an allowance for the protection of certain national industries. Thus privileges are given to the Yugoslav sardine, macaroni, and wine industries, and to the Italian products of rice Mediterranean fruits, textiles, hats, and metal goods. The treaty includes veterinary, frontier, trade, and shipping agreements, and special clauses for favoured treatment in matters of law and transport.

NEW ZEALAND.—PUBLIC FINANCE—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

AUCKLAND, N.Z., July 7.

THE accounts of the Consolidated Fund for the last quarter of the financial year were only gazetted about the middle of May. The chief features of the national accounts for 1923-1924 are that, as a result of the increase in revenue and the reduction in expenditure, the surplus is now definitely given as £1,812,366, of which £1,000,000 has been transferred to the Public Works Fund, while the balance and portions of previous surpluses, to the amount of nearly £1,500,000, have been used for the redemption of the debt or transferred to such other capital accounts as education buildings. Mr Massey has been repeatedly urged to take the bold course of risking a deficit so that he might give substantial relief from the burden of taxation, but, on the slenderest excuse for hesitation, he budgeted last year for a surplus of £485,000, and has now obtained one of nearly fourfold that sum.

One result of the satisfactory state of the finances is a promised reduction of taxation to the extent of about £1,500,000. The concessions promised by Mr Massey will take the form of a decrease in the duties on tobacco and in railway freights and fares. A reduction of company taxation is also indicated, but no exact figures can be given, as the matter has not yet been definitely decided by Parliament. It may be taken for granted, however, that the main concessions will be along these lines. On the whole the large companies have survived the heavy taxation better than was anticipated, as is shown by the general dividend returns quoted on the stock exchange; it is certain, however, that one or two companies, which were unable to pass the increased charges on to the public, have been heavily hit. In spite of the heavy taxation on companies as separate entities, it is still the general custom in New Zealand when an individual business develops, to form it into a company. The proposed decrease of company taxation has been largely opposed by the Labour party, in the mistaken belief that this meant relief only to the rich. The increase in the customs revenue is very gratifying, and it is noteworthy that it is chiefly luxuries that have caused it to swell to such dimensions. Articles that have helped to increase the revenue are motor vehicles, spirits, silks, and expensive articles of clothing.

The moratorium (Mortgages Extension Act) expires at the end of this year. Adopted originally as a temporary measure, it has been repeatedly extended. Mr Massey (who, in addition to being Prime Minister also holds the portfolio of Finance) now announces that the moratorium will not be further extended when it expires. But he adds

that special cases of hardship will be considered, and allowances or extensions of credit granted to those mortgagors who suffer unduly through the lifting of the moratorium. This is an unsatisfactory settlement, which aims at pleasing both parties—those who favour the extension and those (a numerous class) who oppose it.

Commercial and industrial conditions during the present year have been good and continue to improve. Although one hears many complaints from the farming industry, this is not owing to unfavourable seasons (on the contrary the seasons have been ideal), but owing to the fact that many farmers bought their land during the period of inflation which prevailed a few years ago, and are now suffering from the fall in land values; in many cases having heavy mortgages to meet. There has been little industrial trouble, and the labour agitation which was so prominent a few years ago is now scarcely noticeable. On the whole, the outlook for the future is promising.

Letters to the Editor.

"THE VINDICATION OF FREE TRADE."

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to your leading article, "The Vindication of Free Trade," in the *Economist* of the 9th inst., would you kindly explain for the information of your readers what is to happen to Free Trade Britain if other nations can produce and sell in our overseas markets, say, coal, iron, and cotton goods *more cheaply than we*? Are we to abandon our leading industries and transfer our capital abroad? And if so, what is to become of our population that will be displaced?

Does not our unqualified, one-sided free trade system mean that, other things being equal, British manual labour cannot expect to rise above the standards of living which satisfy manual labour in competing countries, including India?

But other things are *not* equal. The United Kingdom is handicapped by a National Debt, which is involving a weight of taxation far heavier than anything which our competitors are called upon to bear. How can our Free Trade vindicate itself in such circumstances?

Yours faithfully,

M. DE P. WEBB.

Sandgate, Kent, August 18, 1924.

[Sir Montagu Webb appears to labour under the delusion that a country with a low standard of living must undersell a country with higher standards. How then does Mr Ford succeed in selling cars to the Chinese? Nor does Sir Montagu explain how, in the circumstances which he presupposes, a tariff will help us. We cannot live by taking in our own washing.—Ed., *Economist*.]

ECONOMICS—NATIONAL AND INTERNATIONAL.

BOTH these books deal with the historical side of economics, for which German research has done so much; but the history is chiefly recent or contemporary, and the authors' real concern is with the problems of post-war reconstruction. The first, by a Professor at the Technical High School at Berlin, treats of modern international trade as affected by the development of cheap and rapid land and sea transport, and by immigration; with the "international division of labour," now carried far beyond the crude antithesis of "manufacturing" and "raw material" countries, mainly by the immense increase in the export of American machinery and by its standardisation; with the Nationalist and Imperialist reaction of the pre-war period, now revived and intensified by after-war conditions: with the dangers to Europe, and also to Great Britain, of Imperial Preference, and with the immediate future of international commerce. Much of the matter is already familiar, but it is well to have it systematically set forth. More might have been said about the varied character of present-day overseas emigration and its reactions on the countries of origin; the examples of eminent emigrants are oddly chosen, and the founder of the Vanderbilt fortunes should not have been counted among them. And, as in most German works on economics, there is no description of the methods of international payment. But the book should be useful to students, and its Free Trade tendencies are refreshing in a German work on economic history.

The other book is based on lectures delivered at Hamburg to advanced and elementary students, as well as to practical men of business and trade-union secretaries—a fairly wide and diversified audience. After dealing with the apparent triumph, some sixty years ago, of Free Trade in Europe, the author gives clear and valuable sketches of the history of the tariff policy of the German Empire from 1871 to 1914: of the developments during the war and subsequently, and of the effects of the Versailles Treaty, and examines the outlook for Germany and Europe. The future tariff policy of Germany cannot, in Dr Plaut's opinion, be definitely predicted. Agriculture is no longer protected, so that industry has lost one ground for claiming protection. German tariffs must in future be designed to produce revenue; and it is not clear what industries will prove to be worth protecting. The new States generally and France are ultra-Protectionist, and "mercantilism can be met only by mercantilism." (We in England have heard of other weapons.) But high protection may be modified by commercial treaties: in any case, the maintenance of a stable currency is Germany's chief need. And Europe is essentially an interdependent economic whole. Maltreatment of its weaker members, and of the minorities in them by the majorities, national self-sufficiency, and the new mercantilism must open the way to a new catastrophe.

"Die Grundlagen der Weltwirtschaft." Von Herrmann Levy. Leipzig and Berlin: B. G. Trubner. 1924.

SOVIET ECONOMICS.*

THESE pamphlets will be useful to assailants of the Anglo-Russian Treaty, whether on its juristic or its economic side. The first, mostly written by Russian exiles, denounces the Soviet Government as a parasite, supported out of the surplus product of the private enterprise in agriculture and small scale industry restored by the "new economic policy." This class of industry, though hampered at all points by its dependence on State regulation

* "Soviet Russia." (Essays by Several Writers.) (Paris) J. Povolovsky and Co. (London) P. S. King and Son.
"La Réforme Monétaire dans la Russie des Soviets." Par Ezekiel Gordon. Préface de Charles Gide. (Paris) J. Povolovsky and Co.

and State transport, nevertheless competes so successfully with the State-regulated factories that the Communist party demand restraints on its competition. These factories produce at a loss, and offer their products at higher prices than the public can pay. Their increasing output is not a sign of increasing welfare, for they are kept going by subsidies and by incessant borrowing from State credit institutions. The foreign companies which have obtained concessions have generally found them unworkable. Foreign trade means that goods can be imported, but their sale is dependent on a Government licence, determined by the quota allowed to be sold; and that goods for export may be freely purchased by foreigners, but that a licence to export them may be withheld. The currency reform, though sound in principle, cannot work under the existing conditions. All personal rights are explicitly made by the constitution dependent on State authority. The courts are so constructed as always to favour the proletariat, and civil disputes are, therefore, rarely submitted to them. Finally, Soviet Russia is not a Federation, because all the rights of the component States may be interfered with by the central authority; and, having no territorial limits and being potentially international, it cannot be regarded as a member of the family of nations or as subject to international law.

These are some of the points made in the essays; they call for a reply. Meanwhile, students of Russia and of currency problems may thank M. Gordon for his elaborate but concise study of the Russian monetary reform, including the fresh stage achieved last March, and then described in our columns. We have no space to summarise it; the conclusions are given in M. Gide's preface. The tcheronetz, M. Gordon holds, is really only uncovered "paper money," and its par value is an illusion. Its "cover" is partly gold, into which it is not convertible, partly bills drawn by the factories on the State banks and never likely to be met. Within Russia its value is falling, and it will follow the paper rouble down a different road. The value of the same conclusion by a different road. The value of money, he holds, depends on supply and demand. Unless the revenue of the Soviet Government increases—which is highly improbable in view of the low productivity of the State factories and the scanty sources of tax revenue—it will have to break its promise and increase the issue of tcheronetz notes. And then their downward course will begin.

PIONEERS OF STEAM AT SEA.*

MANY books have dealt with the victory of steam over sails in oceanic navigation, but little has been written about the early days of British coastal and Anglo-Continental steam traffic. All these subjects are dealt with in this handsome centenary volume, but the last-named form its chief theme. Formed in 1824 by the combination of a number of London owners of small steam vessels, the General Steam Navigation Company established itself, in spite of much opposition from vested interests, and for many years provided the chief passenger services from London and the South-Eastern seaports to the Continent, sharing also in the traffic between London and Edinburgh, and the carrying of excursionists to Margate and Ramsgate—a branch of its business from which it has never quite retired, though other enterprises have led in the recent revival. Fifty or sixty years later, when quicker routes to the Continent were provided by the railways and their steamers, the company was a pioneer in starting these regular freight lines which have now ousted tramp steamers from Anglo-Continental traffic. Its services have extended from the Baltic to the Mediterranean and the Euxine; and, after many vicissitudes, due to no fault of its own, in the last quarter of the nineteenth century, it made a fresh start early in the twentieth, carried on new passenger lines, and finally capped its record of war services to the British Government by the brilliant achievements of its ships and their crews in the world war. Since the Armistice it has entered on a fresh period of vigorous life. All this has been graphically set forth by Mr Corn-

* "A Century of Sea Trading, 1824-1924." The General Steam Navigation Company, Limited. By L. Cope Cornford. London) A. and C. Black. 1924.

ford, who also tells incidentally of the company's services to ships in distress and to the victims of the Messina earthquake, and deals with its multifarious cargoes, its organisation and its personnel. He is sometimes inaccurate: limited liability, the parcel post, and the through line of the Pacific Steam Navigation Company from Liverpool to Peru and Chile are all (by implication) antedated: but the story is well told, and, as Lord Inchcape says in his preface, it should impress the British public with their dependence on the mercantile marine and foreign trade. Some of the illustrations are contributed by Mr Spurling and Mr W. S. Wyllie, R.A., the latter adding amusing personal reminiscences of travel by the company's steamers. Others are reproductions of old profiles of directors and of coloured prints. The latter, with Mr Spurling's admirable painting of the *Halcyon*, enable us to realise the great progress made, not only in comfort and efficiency, but in beauty of design.

COST ACCOUNTING LITERATURE.

AMONG recent books on factory cost accounting may be mentioned "Factory Costing," by H. H. Emsley, B.Sc. (London, Constable and Co., Limited, 7s net). This book is of particular interest to all concerned with light engineering and instrument work. It has been written for individuals who are, or intend to be, engaged in workshop production of this kind, whether as workmen, executives, or employers. The needs of the small manufacturer have not been overlooked, and Chapter XIII. deals especially with methods suitable for one-man and small establishments. Another useful book is "Technical Costs and Estimates," by Andrew Miller (London, Gee and Co. (Publishers), Limited, 10s 6d net). In this book the duties and responsibilities of the cost accountant and the essential arrangements for technical costs are clearly outlined for establishments of average size, viz., employing from 1,000 to 2,000 workers. The arrangements set out may also be equally well applied to larger works. There is an appendix containing a number of good forms, charts, and graphs. It is to be regretted that in neither of these two works is the subject of the measurement of annual depreciation of plant (expired capital outlay)—an important factor of cost of production—adequately treated, but this omission is, unfortunately, still common to most accounting literature.

STOCK EXCHANGE NEWS.

TICKET, August 27. ACCOUNT, August 28.

The broad financial effect of the signature of the London Conference Pact has been to make Stock Exchange markets better as a whole. The Pact itself is mentioned but little, neither criticism nor commendation being particularly vocal. Thanks to the expectation that the New York exchange will continue to move in favour of this country, the idea of a rise in the Bank rate has retreated into the background. Its place is taken by pronounced strength in Funding Stock, Victory Bonds, and various other British Government issues. The gilt-edged markets are good throughout; various Colonials have hardened, and jobbers in the Home Railway prior-charge market report that they are steadily selling moderate lines of stock. Money is thought likely to remain cheap for several weeks to come.

After a burst of strength in French Government bonds, prices relapsed, there being little public backing for the earlier movement. Germans gave way sharply upon pressure to take profits. There has been a lot of public gambling in the bonds, and some of the buyers are not the people who are likely to want to keep the scrip indefinitely. Prices are fluctuating with vivid freedom. Brazilians are moving on quiet lines, so are other South Americans. Austrian and Hungarian descriptions were put up on the impression that, if there is to be a new German loan, its terms will probably throw into relief the attractions of the two just mentioned. Turkish bonds rallied as a result of better news from Egypt.

London, Midland and Scottish stock rose two points, on the proposal to proprietors that they should assent to a scheme for division of their present security. This, combined with improved traffics, had a favourable effect upon prices of most Home Rails. The market has shown a better front than of late, and there is a little public investment going on, stimulus being derived from the strength of British Government stocks. The Undergrounds are quiet.

Grand Trunk Pacific 4 per cent. debentures further improved, thanks to the expectation that the interest payments can be continued regularly. Argentine Railway stocks enjoyed a mild bout of strength, and other foreign rails keep very steady. Nitrate rails are a little better. Nitrate-producing shares, where they have moved at all, mostly exhibit improvement.

Rubber shares are inactive, while the tea market is better. The oil market developed a dull tone, consequent upon the statement that stocks of oil are being piled up in America at a rate which may lead to a cut in the price of crude. British Controlled shares managed to free themselves from the lassitude displayed by the list as a whole. Calico Printers gave way abruptly upon the contraction of profits shown in the report just out. Other textiles, however, are not particularly affected, and Bradford Dyers stand out as a strong spot. In Courtaulds, speculation has fallen away to a minimum, nor in tobacco shares is there anything of interest taking place. A feature is provided by the fluctuations amongst insurance shares, prices having been exceedingly strong at the beginning of the week, and rising to levels at which they attracted sellers, who consider that the shares are now high enough, having regard to the terms offered by the principal shares on the basis of the last dividends. The banking market is languid.

Brewery stocks went ahead, under the leadership of Guinness and Allsopp preference, both of which scored substantial rises. The iron and steel market became disturbed by the passing of the preference dividend by Bolckow Vaughan, though this was not entirely unexpected in London. The fall in profits recorded by Walter Scott and Co. is another factor making for caution in this branch of indus-

trial shares. The cable manufacturing group spurred because of the impression that Henleys, Callenders, and British Insulated will increase their dividends this year, but here again the rises brought in shares from holders who were able to realise big profits. The Egyptian news caused slight heaviness amongst Sudan Plantations and other Egyptian shares. Firmness in motor shares as a whole caused attention to be paid to Dunlops, and the hotels-stores group holds its ground with scarcely a change worth noticing. Gas stocks and electric lighting shares have hardly moved. There is a little better tone amongst shipping issues.

Kaffirs are in the doldrums. Diamonds improved, and, amongst Rhodesians, Chartered put on a few pence. The South African markets are so little affected by the public at present that it takes but little professional dealing to move prices in either direction. Tanganyikas are better, together with other copper shares. The price of tin continues high enough to encourage bullishness in regard to the shares of the Malayan and West African companies, though the Cornish group is somewhat neglected. The flatness of Esperanzas has been further emphasised. Canadian Mining shares are steady, but in these, together with Indian and Mexican mining issues, there is so little trade doing that the markets can only be described as dormant.

Dealings started this week in Enfield Cables ordinary shares, which are 2½, and in the new County of London Electric ½ per cent. notes, which stand at ½ premium over the issue price of 99½.

NEW ISSUES.

FALCON.—July:—"Crushed 17,296 tons of ore, producing 233,285 short tons (2,000 lbs) of blister copper, containing 2,259 ozs of gold and 4,658 ozs of silver. Estimated value £24,504 (taking copper at \$50 per short ton, gold at 90s per oz, and silver at 2s 6d per oz)."

SAN FRANCISCO MINES OF MEXICO.—Cable for July (official correction):—"Estimated net smelter return on zinc should read \$61,958 instead of \$45,918, and estimated operating profit \$115,725 instead of \$99,715."

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending August 13th amounted to 892 tons.

Reports and Notices.

Booth's Distillery, Limited, announce that the name of the company has been altered to Booth's Distilleries, Limited. Owing to the recent renaming of the thoroughfare, the company's address is now 83-85 Turnmill street, E.C. 1, and not 55 Cowcross street, E.C. 1, as formerly.

The County of London Electric Supply Co.'s issue of £1,500,000 5½ per cent. one-year notes to bearer has been over-subscribed by the existing stock and shareholders. We understand that letters of allotment have been posted.

The Midland Rubber Goods Manufacturing Co., Limited, has changed its name to that of the Midland Rubber Co. (1923), Limited, and from August 14th all business will be carried on in the new name. Mr Robert Young, late of the Dunlop Rubber Co. Limited, has been appointed general manager. Mr Young's technical experience after a service of many years with the Dunlop Rubber Co. should prove a valuable asset.

Mr. Albert Thomas Shead has been elected to a seat on the board of Champion and Slee, Limited.

Mr Cecil Mallet, of 721 Salisbury House, E.C., and Bathurst Lodge, Hayling Island, has been elected a director of the British North Borneo (Chartered) Company.

Mr Andrew Paton Holt, of Andrew, Holt, and Co., London and Montreal, has joined the board of the Brazilian Traction, Light and Power Company, Limited.

GOVERNMENT STOCKS, &c.

CHINESE IMPERIAL GOVERNMENT 4½ PER CENT. GOLD LOAN
of 1896 for £16,000,000.—Royal Siamese Government 4½ per cent.
gold loan of 1905 for £1,000,000.—Royal Siamese Government 4½
per cent. gold loan of 1907 for £3,000,000.—Royal Siamese Govern-
ment 7 per cent. gold loan of 1922 for £2,000,000.—The coupons
of these loans, due September 1st next, will be paid on and after
that date at the offices of the Hongkong and Shanghai Banking
Corporation, c. Gracechurch-street, E.C.

STATE OF BAHIA.—Under the scheme arranged with the State of Bahia further funds have been received by the Ethelburga Syndicate, Limited, sufficient to pay the coupon dated December 1, 1922 on the bonds of the 1888 loan and the coupon dated July 1, 1922 on the bonds of the 1910 loan.

URUGUAY 3½ PER CENT. DEBT.—A telegram from the Bank of London and South America, Limited, Montevideo, dated 10th instant, advises that they have received \$23,260 gold, purporting to be 45 per cent. of Customs duties in respect of the first fortnight in August, and that they are remitting to Glyn, Mills, and Co. the sum of £40,281 for service of the above loan.

RAILWAYS.

BALTIMORE AND OHIO RAILROAD.—The London office of the National City Co. has received cable advice that a group of New York financial houses, including the National City Co. of New York, issued on August 13th \$75,000,000 Baltimore and Ohio Railroad 5 per cent. first mortgage bonds at the price of 98½ and interest, New York terms, dated July 1, 1928, redeemable July 1, 1948. The bonds are not redeemable by the company prior to April 1, 1945, and are secured by a first mortgage on approximately 1,650 miles of the company's railroad and a first lien on various of the company's subsidiary lines. The purpose of this issue is to retire a like amount of the Baltimore and Ohio prior lien 3½ per cent. bonds, redeemable July 1, 1925.

CHICAGO ROCK ISLAND RAILROAD.—We are informed that Messrs Speyer and Co. and Dillon, Read and Co. have purchased from the Chicago, Rock Island, and Pacific Railway Co. \$5,000,000 of the company's five-year 5 per cent. secured gold notes due September 1, 1929, to be secured by pledge of \$7,500,000 of the company's first and refunding mortgage 4 per cent. gold bonds with 20 per cent. margin to be maintained. The proceeds of the notes are to be used for additions and betterments and other corporate purposes.

BANKS.

INDUSTRIAL BANK OF JAPAN, LIMITED.—The London office of the National City Co. has received cable advice that its head office offered for subscription in New York on August 12th \$22,000,000 Industrial Bank of Japan, Limited, 6 per cent. three-year gold notes, dated August 15, 1924, redeemable August 15, 1927, at the price of 99½ and interest, New York terms, to yield 6.25 per cent. to redemption. The notes are unconditionally guaranteed as to principal and interest by the Imperial Government of Japan. Dividend on the share capital of the bank has been paid every year since its establishment in 1902. According to the latest annual report published on August 6, 1924, the bank's dividend was 10 per cent. for the year ending December 31, 1923.

MISCELLANEOUS.

CALICO PRINTERS' ASSOCIATION, LIMITED. announce (subject to audit) that, after providing for corporation profits tax, £522,738 for maintenance, depreciation, repairs, renewals, and upkeep, and £128,000 for debenture interest, the accounts for the year ended June 30, 1924, show a net profit of £540,786, which with £235,432 brought forward from last year makes the total to the credit of the profit and loss account, £776,218. Out of this sum an interim dividend for the half-year ended December 31, 1923, amounting to £75,402, has already been paid on the preference shares, leaving £700,816, and the directors resolved to recommend to the shareholders that £155,725 be placed to the credit of the reserve account and £50,000 to the credit of the employees' benefit fund, and that a dividend be declared on the preference shares for the half-year ended June 30th last at the rate of 5 per cent. per annum (less income-tax) and on the ordinary shares for the year ended June 30 last a dividend at the rate of 10 per cent. per annum (less income-tax), leaving the sum of £218,614 to be carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions proved somewhat unsettled, though mainly fine, with strong drying winds, so that good progress has been made with harvest operations during the week. Only a few samples of new wheat were on offer, indicated values being 12s 3d to 12s 6d per 112 lbs, free on rail. Imported descriptions ruled dull, and rates moved in buyers' favour owing to the decline in c.i.f. offers, and pressure to sell American descriptions. No. 1 Northern Manitoba quoted 61s, No. 3 ditto 59s, Barusso 6½ lbs 57s, Australian 57s 6d, choice white Karachi 56s 6d, red ditto 55s 6d per 496 lbs ex ship. The floating and forward cargo section remained dull, buyers holding off owing to declining prices in the United States, consequently affairs were more or less nominal. A feature, however, was the strong demand for maize, both on Continental and American account, and a large business transpired at advancing prices. Steamers of La Plata, August shipment, sold 38s 3d to 39s 6d, September 40s 1½d, October-November 40s 3d, and November-December 41s 3d per 480 lbs. Cargoes of Morocco barley, August-September, changed hands at 37s 6d per 400 lbs. Flour irregular, but tendency easier in sympathy with the wheat position. London standard straight run quoted 46s, patents 48s to 49s, town whites 46s per sack delivered in Metropolitan area. Of imported, Manitoba patents range from 46s to 49s and Australian 43s to 44s per 280 lbs ex store. Barley firmer. Californian 59s-62s, Chilean brewing 58s-60s per 448 lbs ex ship. No. 3 Canadian Western landed 42s, Karachi ex ship 40s 6d, ditto landed 41s 6d, Russian landed 41s 6d per 400 lbs. English new quoted at 13s 9d to 15s per 112 lbs free on rail. Maize dearer. Plate ex ship 39s 3d, landed 40s 9d, Bessarabian ex ship 39s 6d, ditto landed 41s 3d per 480 lbs. Oats display a hardening tendency. Plate f.a.q. ex ship 25s, landed 26s 9d, No. 2 Canadian Western landed 31s, No. 3 ditto 30s, mixed Canadian feed landed 24s 3d per 320 lbs. English new quoted at 9s 2d-10s per 112 lbs free on rail. Millers' offers maintained. Broad bran quoted 8s 9d, middlings 9s 6d, fine ditto 11s 3d, bags included, ex mill, light oats 6s 9d, powdered oat husks 8s 3d, feed oatmeal 10s 9d, ground oats 13s 9d per cwt, free on rail. Oatmeal firm. London-made flaked 18s 6d, rolled oats 18s, medium and fine cut 18s, coarse and medium pinhead 18s, ordinary Scottish oatmeal, 19s-19s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.
Estimated sales of home-grown wheat—				
1 week to Aug. 16	Cwts. 25,245	Cwts. 67,932	Cwts. 63,291	Cwts. 368,335
50 weeks to Aug. 16	12,744,020	16,988,864	16,139,396	12,877,021
Average price of English wheat per cwt.....	s d 12 11	s d 9 9	s d 12 3	s d 15 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated August 21, is as follows:—Pig-iron: This being holiday week in this district very little is doing, but there is rather a hopeful feeling, and after the holidays business might show some improvement. No. 3 Cleveland G.M.B. has been sold at 8s, but makers are trying to increase this price. The price of mixed numbers East Coast hematite is rather weak at 9s 6d to 9s 3s per ton. Manufactured iron and steel: All the local works are idle, and therefore, there is nothing doing in the way of new business. Prices remain unchanged: steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Owing to the reduced price of hematite pig-iron, consumers of iron ore are looking for still lower prices. But sellers are maintaining quotations on the basis of 22s 6d per ton, c.i.f. Tees, for best Bilbao Rubio ore.

Our Sheffield correspondent writes:—Business in crude iron and steel has dropped almost to zero this week, having been limited to hand-to-mouth lots, and the strike, which has caused the complete closing down of the three largest steel works in the district, is making the situation much worse. While members of the trade have not lost confidence in its ultimate recovery, they do not anticipate much change for the better this year. The production of pig-iron in June and July was the lowest during the present year, and fell short of the average monthly production of 1913 by 240,000 tons. There was a loss last month of 11 in the number of furnaces in blast. Steel production was also the lowest of the year in the last two months, but it exceeded the average of 1913, since when capacity has been increased by fully 50 per cent. Evidences of revival in some classes of engineering, fine steels, tools, and motor construction multiply. The gain so far is not considerable, but the upward trend has been in operation for a long time. The demand for small tools and files is well maintained, and makers of farm and garden tools have had a successful season. Conditions in the coal market are believed to be slightly better. There is an improved demand for steam coal, both in the home market and for export. The public are buying house coal in readiness for the winter. Furnace and foundry coke are less depressed than they have been. Quotations per ton at pits are:—Best hand-picked branch, 32s to 34s; Barnsley best Silkestone, 26s; Yorkshire hards, 21s 6d to 22s; Blyth ditto, 21s 6d to 22s; Tyne ditto, 24s; Derbyshire ditto, 21s; rough slacks, 12s to 14s 6d; smalls, 7s to 8s.

Our Glasgow correspondent writes:—Quiet conditions prevail in the pig-iron market, with prices rather firmer. The total shipments from Glasgow Harbour for the week ending August 16th were 525 tons. Iron and steel manufacturers are far from busy, and orders are not coming in in sufficient quantity to keep mills fully engaged. Better all-round conditions are anticipated, however, from the confidence in the future engendered by the European settlement in London this week, and, provided the arrangement come to is ratified by the respective Parliaments, it is certain that nothing but ultimate good to trade in general will be the outcome. German competition on a more extensive scale is thought to be a danger to the iron and steel industry, but this is not likely to be felt for some time, and meantime traders here will be more likely to feel the benefit arising from more stable conditions abroad. A large bridge-building contract has been secured by Sir William Arrol and Co., Limited, of Glasgow, for the new ferry road bridge at Tilbury, and it is estimated that the steelwork involved amounts to 1,280 tons. It is also reported that Messrs William Simons and Co., Limited, of Renfrew, are to build a new sludge steamer to the order of the Corporation of Glasgow at a cost of fully £48,000. The sheet trade is steadily busy, with a fair home demand, and overseas buyers taking more interest, especially as regards thin gauges for Japan. A considerable tonnage has already been booked this month, some of it speculative, but the larger buyers are on the market with heavy tonnages to place. Galvanised sheets are in steady request, but India seems to be holding off meantime till makers are in a less independent position as regards work in hand. The price is being kept firm at £18 5s minimum, and 5s more has been paid for October shipment.

The decision made on Tuesday to raise the minimum selling price of tinplates to 23s has come as a surprise to the trade, and merchants are somewhat alarmed at the way things have turned. It was confidently expected in some quarters that tin would fall

to below £200. Instead of this, the market has been very strong again this week, with standard round about £260. There does not seem to be much hope of any material setback in tin this autumn. On the contrary, the price may easily go to £275 again; thus the lifting of the minimum rate to 23s should help to pave the way for the autumn business. Makers ask 23s 3d for forward contracts, and there is more Continental business about.

Our Cardiff correspondent writes:—The only feature of the South Wales coal market this week has been the steadiness of the best Admiralty large coal descriptions. The collieries are well stemmed, and prices in one or two cases have improved to the extent of about 6d per ton. On the market itself there has been very little activity even in these coals, and it is presumed that the strength of the colliery position is due to direct private dealings between collieries and foreign consumers. The other coals have lacked support, but their quotations are unaltered.

The following are the current approximate quotations:—Best Admiralties, 28s 6d to 29s; second Admiralties, 27s 6d to 28s; best dries, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 16s 6d to 17s 6d; ordinary cargo smalls, 13s 6d to 15s 6d; coking smalls, 16s 6d to 17s 6d; Big Vein, large, 52s to 53s; machine-made cobbles, 57s 6d to 60s; French nuts, 52s 6d to 57s 6d; stove nuts, 50s to 57s 6d; rubbly culm, 12s 6d to 13s; coke for export, 52s 6d to 55s; inland blastfurnace coke at ovens, 30s to 35s; patent fuel, 27s to 29s; pitwood, ex ship, 30s 6d to 31s.

In the tinplate trade business is quieter. The prices have been maintained chiefly owing to the high cost of tin, but while factories are fully booked up for the next few months, orders for future delivery are falling off.

METALS.

Tin irregular and easier during the early part of the week, but later on, sellers becoming more reserved in their offers, prices marked an upward tendency, with business on a fairly liberal scale. Standard cash sold at £256 to £257 15s, and three months £256 10s to £256 to £259 5s to £259. Eastern cables reported sales on the basis of £259 15s, c.i.f. At Thursday's market values ruled firmer, though top points were not maintained. Standard cash quoted at £259 15s to £260, August sold at £260 15s to £261, and three months £261 to £261 15s to £260 15s. The tone at the close proved quiet, with rates moving in buyers' favour. Standard cash quoted at £257 10s to £257 15s, with sales in three months at £260 to £258 10s to £258 15s. English ingots quoted at £259 to £259 10s. Copper, after opening firmer, subsequently eased on sellers becoming more prominent and a falling off in consumption requirements. Standard cash sold at £63 17s 6d to £63 12s 6d to £63 13s 9d to £63 10s, and three months £65 to £63 17s 6d to £64. On Thursday active trading ensued, and prices moved in an upward direction. Standard cash sold at £63, and three months at £63 15s to £64 7s 6d. Copper closed again rather firmer, but business on a smaller scale. Standard cash quoted at £63 10s to £63 12s 6d, and three months sold at £64 7s 6d to £64 12s 6d to £64 11s 3d. Electrodes quoted at £68 to £68 10s, best selected £67 to £68 5s, strong sheets £94, wire bars £68 10s per ton. Lead irregular and easier at £32 16s 3d to £32 2s 6d as to position. Spelter firmer at £32 18s 9d to £32 12s 6d, according to position. Aluminium—Home quoted at £125, export £130. Antimony—English Regulus £44 10s to £50.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Notwithstanding the break caused locally by the annual holidays, the market to-day is very strong, and interest is being displayed in practically all classes of wool and tops. Stocks of merino wool and tops have got into a very small compass, and although conditions in the yarn and piece-goods section still leave much to be desired, there is a growing impression that wool will dominate the position, and that prices will advance at the colonial wool sales in London next month. In recent weeks there has been a steady upward movement in quotations for tops, and to-day practically all qualities are again dearer. A general market quotation for warp 64's tops is 75d, super 60's are quoted at 67½d, 56's average at 47½d, 46's carded at 28d, and 40's prepared at 26½d. A fair amount of business is being done, but most of the large topmakers are not pressing matters, as they feel convinced that values will go still higher. Reports from spinners show that a slight improvement has taken place in the yarn section, but conditions are still very trying, especially as regards prices. Most requirements and counts are still being sold at pence per lb below replacement costs, and this is difficult to obviate, as users are experiencing the same trouble in the sale of piece-goods. Hopes are entertained of a considerable expansion in demand if conditions in Germany become more settled, and this would give the piece-goods trade. Demand still favours the cheaper woollens, and it is significant that exports of woollens last month showed an increase of over 6,000,000 square yards on the June total.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The question naturally asked is, What effect will the London Agreement have upon the Colonial wool trade? Germany has

always been a big buyer of Colonial wools, as well as raw material grown in this country, and the projected loss is bound to be beneficial to the Continental textile industry. It is difficult to say what were the exact quantities of raw Colonial wool that Germany purchased in pre-war times, because Messrs Dalgety bracketed together in the distribution of Australian and New Zealand wools several Continental countries. For instance, France, Belgium, Holland, Germany, Austria, Italy, Switzerland, Russia, Norway, and Sweden were credited with purchasing 1,283,155 bales, 65 per cent. of the total. From another source we learn that out of the above quantity Germany took 600,000 bales, a by no means insignificant quantity. Since the Armistice Messrs Dalgety have gone more into detail, and according to the record of the distribution of wool sold from Australia, Germany took during the year 1922-23 168,171 bales. The figures for the year which finished last June 30th are not yet to hand, but they are bound to be larger than the year previous. Perhaps of still more importance is the quantity of Colonial and foreign wool re-exported to Germany from the United Kingdom. In 1913 we sent to Germany 93,197,000 lbs. Last year we exported of foreign and colonial wool 101,562,700 lbs, and during the first seven months of this year 91,781,800 lbs, in addition to big exports of such useful products as tops, noils, and wastes of all kinds. Already there are those in the West Riding who see in this Agreement increased competition between British and German manufacturers, it being expected that if bankrupt Germany can purchase such a big weight of wool as has been the case during the past two years, a loan of £40,000,000 will be followed by still larger purchases. Among export houses in Bradford a different note is sounded. Many anticipate that when financial conditions in Germany become easier a bigger export trade in raw and partly manufactured materials will be done, and this, after all, will only be going back to pre-war conditions. The point that many firms are stressing is that, with cheaper labour and a depressed currency, German manufacturers will be able to undersell West Riding products in markets in which hitherto British goods have enjoyed a monopoly. In other words, France and Germany are expected to be put in such a position as will enable them to capture the piece trade in all the countries of the world. Sufficient unto the day is the evil thereof. In pre-war times, when the Continental textile industry has been busy, the West Riding industry has always enjoyed the same measure of prosperity, and we expect this to happen again.

THE COTTON TRADE.

MANCHESTER, August 21.

The outlook with regard to future trade in Lancashire is brighter than for some time back, and spinners, manufacturers, and merchants are looking forward to better industrial conditions in Lancashire this autumn. The drop in raw cotton prices has been a step in the right direction, but stability is wanted before business can be done on a much freer scale. A more hopeful feeling prevails among manufacturers of piece-goods. Compared with a week ago, the demand has been very extensive, and a feature of interest has been the revival of interest taken in staple cloths for India, and some very encouraging sales have taken place. There have also been some heavy bookings in light cloths for the Dependency. Light goods and fancies have moved off in steady lines for China. Advances from Egypt have been better, and more business has been done for the Continent and the United States. Spinners of American yarns have attempted to improve their margin, and have

met with a certain amount of success. There has been more business done for home use. Egyptian descriptions have been fairly firm in price, but quotations in the lower numbers have favoured buyers. More interest has been taken in shipping numbers for India, the Near East, and Holland.

VEGETABLE OILS AND OILSEEDS.

(BY OUR HULL CORRESPONDENT.)

Raw linseed oil helped by dear seed and a fair demand maintained its level of value, and has fluctuated slightly around £4 10s spot, with a small discount for August delivery. Trade requirements, however, have fallen off, and the export trade is only moderate. Cotton oils, after a period of dullness and depression, are rather steadier, and crude Egyptian firmer at £4 2s per

ton naked ex Hull mill, but business generally is within narrow compass, as is also the case with other vegetable oils.

In the oilseed section interest centres largely in linseed. A few transactions in Plate on passage to the United Kingdom or for early shipment have been done at £20 7s 6d, but trade in old crop is mainly on Continental account. A good speculative business has been done in new crop, up to £19 having been paid for January-February loading, since when there has been some reaction. Only a small trade has been done in Egyptian cottonseed, owing to the high prices asked, but buyers of black have recently come in at £12 15s for October and November-January loading. Crushers, however, are fairly well supplied, and large shipments of new crop may be expected next month.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market continues very firm, and slight advances were again recorded at Thursday's auctions in Bermondsey. Best ox sold from 7d to 9d, two classes showing an advance of ½d on last prices. Seconds sold from 6½d to 8½d, advances of ½d to ¾d being made on most classes. Best cows were unsold, seconds making 5½d to 6½d. Best calf are very firm, and made at the auctions from 7½d to 15½d, seconds from 6½d to 13½d. Lambs sold from 3s 10d to 12s 8d, and pelts from 5s 7d to 9s 6d each. The advance in frigorific hides is maintained, recent sales having been on a basis of 8½d for Argentines to the United States. Killings have been reduced of late, being cabled at 365,000 for July, as against 441,000 for the previous month. In all other sorts of wet salted and dry hides prices are advancing, and tanners now seem eager to obtain supplies. The American position is cabled as firm, with West heavy Chicago packers selling at 16 cents with a good demand.

Business in sole leather here in Bermondsey seems undecided. Buyers want bonds and butts, but cannot make up their minds to pay tanners' asking prices, which in view of the rising hide market are very firm. Here and there one hears of sales at reduced prices, but on investigation these turn out to be clearances of weights which are not much wanted. A feature of the week's business has been the demand from repairers, who have taken very fair quantities of medium weight bonds. German competition seems to be heard of now in cheap sole leather, but so far only in odd lines of offal.

The demand for upper leather is better; sellers have shifted parcels of box and willow calf, users being rather more anxious to fill requirements for autumn and winter boots. Glacé kid in black is also more popular, but suede seems a dead letter. Patent is wanted, and prices of imported stock very firm with supplies limited.

The boot trade seems improving, and factories in the Midlands have settled down to work after the holidays. Exports of British-made leather footwear for the first seven months of 1923-24 were valued at £2,006,140 and £2,789,455 respectively, the Irish Free State taking boots and shoes up to the end of July valued at £1,249,056.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 22.

SUGAR.—The undertone of the market shows general stability, a supporting factor being found in paucity of offers from all producing countries. Despite glowing accounts of the development of growing beet crops in Europe, also the promise of a large Cuban yield next campaign, certain stringency in supplies has to be faced at the moment due partly to strength of export demand over a prolonged period. Such inquiries continue so that overseas goods are in request on arriving steamers from Java, and this culminates in available stocks getting into narrow compass. Of British refined, Messrs Tate and Lyle's goods were advanced 6d per cwt all round, making cubes 4½d to 4½d 3d as to quality; crushed, 4½d 3d; nibs, 4½d 3d; granulated, stoved, 4½d 3d; fine and coarse grain, 3½d 10d; No. 1, 3½d 7½d; No. 2, also London and T.L., 3½d 4½d; ditto, forward to September, 3½d 3d; yellow crystals, spot, 3½d 10d; pulverised, 4½d 3d; mineral-water, 3½d 9d; caster, finest, 4½d 7½d; A, 4½d 1½d; B, 4½d 6d. Glebe K, granulated, 3½d 6d; Greenock, 3½d 3d. White Java, spot, sold, 3½d 6d to 3½d 9d; due steamer, 2½d 3d to 2½d 4½d; June-July, 2½d 6d; July-August, 2½d 6d, c.f. and i., London. Czech granulated, spot, sold, 3½d 9d to 3½d; November-December, quoted 2½d 9d, f.o.b., Hamburg. Polish crystals, spot, changed hands 3½d 6d; white Mauritius, quoted 3½d 9d; white Trinidad, 3½d 9d; crystallised West India rather quiet at 3½d to 3½d, as to sample. Dutch granulated, spot, sold, 3½d 9d; J November-December, 2½d 9d, f.o.b., Rotterdam. American granulated, spot, 3½d; August steamer, London, sold, 2½d to 2½d 6d; outports, 2½d 9d, c.f. and i. terms. Cuban basis 96 per cent., August quoted, 1½d 3d; Brazilian basis 80 per cent., October-November, 1½d 6d, both c.f. and i., U.K. To India, white Java, October-December, quoted 2½d 9d; January-March, 2½d 1½d. Hungarian crystals, November-December, 2½d 3d, and Mauritius crystals, October-November, 2½d, all c. and f. terms. White terminal firmer, with good support accorded. August, sold, 2½d 9d to 2½d; December, 2½d 4½d to 2½d 6d; November-December, 2½d 6d; March, 2½d 6d cwt.

COFFEE.—There is a good demand for all the finer mild liquoring parcels, and, with only small quantities available, prices remain firm. Common kinds sell quietly. Good bold Costa Rica sold, 150s. 200 bags Cazenga sold, 88s.

COCOA.—Spot market steady, and there is a fair inquiry. Fine Grenada sold, 47s; Accra, F/F grade, August-October, 30s 6d; October-December, 34s 6d paid, f.o.b. terms.

TEA.—Indian auctions totalled 23,800 packages, which sold readily to a brisk demand at dearer rates. Pekoe sold, 1s 5½d to 1s 11d; broken orange, 1s 6d to 2s 4½d; choice, 3s 8½d. Ceylon auctions of 26,000 packages engaged active support, at 4d to 1½d per lb advance. finer qualities marking the greater appreciation. Pekoe sold, 1s 5½d to 1s 11d; broken orange, 1s 7½d to 2s 3d per lb, in bond. 8,000 packages Java and Sumatra were auctioned, and with active and well-distributed competition, prices ruled dearer. Common and low medium kinds advanced ½d to ¾d, with finer ¾d to 1d per lb. Pekoe sold, 1s 3½d, 1s 5½d; broken ditto, 1s 0½d, 1s 8d; pekoe souchong, 1s 3½d, 1s 4½d; orange pekoe, 1s 5d, 1s 7d; broken orange, 1s 3½d to 1s 10½d per lb, in bond. Market very firm for new season's China and a few fine lapsang souchongs just arrived, possessing a real "tar" flavour, pass readily consumption round about 3s. There is a brisk inquiry for all common Monings, with a large trade effected at 7d to 11d, also extensive sales in siftings from 6d to 7d lb, in bond.

RICE.—There is only a quiet trade doing, but shippers do not press, and market remains steady. Two stars, spot, 17s; September-October, 16s 6d, to London. No. 3, cleaned, to Levant, 16s 7½d. S.Q., for shipment, quoted 14s 9d, f.o.b. terms, and ditto, double bags, to Cuba, 16s 9d. Saigon, quoted 16s 4½d. No. 1, garden Siam, 19s 9d. Italian steady, with sales from second-hands, October-November, at 21s 4½d, and No. 3, Spanish belloch, October-November, 22s 3d, c.f. and i. terms, London. Rangoon bran easier, and 1,500 tons, October-December, sold, £7 7s 6d per ton, ex-ship, Hull. Peas steady. Japanese, spot, 20s; September-October, 20s. Madagascar butter beans, spot, 34s 6d per cwt. Rangoon haricots quite unaltered.

SPICE.—Pepper continued quiet, both spot and forward. Black Singapore, L.S., August-October, sellers, 4½d; Lampong, ditto, August-October, sold, 4½d to 4½d; October-December, buyers, 4½d; Muntok, October-December, sellers, 8½d. Zanzibar cloves, October-December, done, and buyers, 9½d per lb. Tapioca steady, quiet. Sago flour, June-August, sellers, 15s 9d; August-September, 15s 6d; September-November, 15s 3d. Desiccated coconut, spot, fine cut, 40s 6d; medium, 40s; halves, August-September, 39s 9d; September-October, 40s 6d per cwt.

DATES.—Business has commenced in new crop, and Hallowee, first tide, sold, 24s, with Sial 16s cwt, landed terms, London.

JUTE in moderate request, but market rather unsettled after being active and dearer. Firsts, August, Continent, sold, £34 10s to £34; August-September, £34 5s to £33; September-October, £33 17s 6d to £32 15s od per ton. Hessians firm, quiet. 10 oz, spot, 39s; September, 38s 9d; October-December, 35s 3d; 8 oz, spot, 28s; September, 28s; October-December, 27s 9d 100 yards. A twills, spot, nominally 115s; October-December, 105s 6d; B, spot, 89s; October-December, 86s 6d; sugar, spot, 100s; September, 104s; flour, September, 114s; bran, bags, 56 by 28, September, 62s 6d per 100 bags.

HEMP.—With sustained inquiries and reserve still marked on the part of sellers, the market shows general stability. Of Manila, F

Trade with Mexico

MEXICO is potentially one of the richest countries in the world. In development of its trade lies your opportunity.

The National Railways of Mexico are the prime movers—in both senses of the word—in the re-opening of European Trade with Mexico.

Their system spreads a vast network of trade arteries from the Gulf of Mexico clear across to the Pacific, and from the United States border takes a southward sweep, feeding the Capital and all the interior.

Mexico can absorb supplies and pay for them.

The time is ripe for enquiry. You will receive reliable, well-informed guidance upon request.

FRENCH LINE

Regular Express Passenger Service

Carrying the French, American and British Mails, and sailing regularly from

PLYMOUTH DIRECT TO NEW YORK

IN UNDER SIX DAYS.

The route that cuts off the corner.

NEXT SAILINGS.

August 30 - - ss. "PARIS."
September 6 - - ss. "FRANCE."
September 13 - - ss. "LAFAYETTE."
September 20 - - ss. "PARIS."

The shortest Route is PLYMOUTH to NEW YORK, and the FRENCH LINE steamers are the FASTEST on the SHORTEST route.

The steamers are magnificently fitted, and the FRENCH LINE is FAMOUS for its CUIS

grade, August-October, sold, £63; G, ditto, £49; H, £43 15s; J, £44 5s; K, £43 10s; L, £43; M, £41 10s; streaky threes, £50 10s; ditto ones, £58. Cebu No. 2, £34 5s; ditto No. 3, £30 5s to £30 10s. Manila No. 3, £29 10s. African sisal, No. 1 Tanganyika, August-October, quoted £46; Kenya, £45. Mexican sisal in demand, and G.W., August-September, sells at £40 per ton, c.f. and i.

SHELLAC.—Market firm. T.N., spot, 280s to 285s; October quoted 287s 6d; December, sold, 272s 6d to 280s. cwt.

COPRA.—Market steady. Chief crushers continue to show a good deal of interest in the article, and liberal absorption on their part lends latent strength to the market, though the surface appearance is quiet. F.M.S. Straits, May-July, Rotterdam, quoted £31 2s 6d; June-August, £31; July-September, sold, £30 13s 9d; August-October, £30 10s; September-November, £30 7s 6d; Dutch East Indies, June-August, £30 18s 9d; August-October, £30 7s 6d. Other descriptions steady at late rates. Palm kernels, July-September, Liverpool, sold, £20 18s 9d; August-October, £21 per ton.

RUBBER. steady, with fair inquiries. Standard plantation, crepe and sheet, spot to September, sold, 1s 13d to 1s 14d; October-December, 1s 2d to 1s 23d; January-March, 1s 23d to 1s 23d. To New York, standard European estate, August-September, also September-October, sold, 1s 2d per lb, c.f. and i. terms. Wild quietly steady on spot.

FRUIT (Dried).—Market generally steady, but quiet. Currants: Pyrgos, 4 bags, quoted 42s; Patras, 4s to 5s; Gulph, 52s; Panariti, 56s; Vostizza, 60s to 65s; Australian, new, 3 cases, fair, 50s to 60s. Raisins: Cape, new, 44s; ditto fine, 50s. Sultanias: Greek, 3 cases, 48s; Smyrna, boxes, 50s to 54s; fine, 60s to 66s; Australian, 4 cases, 50s to 54s. Figs: Genuine naturals in bags, 36s; fine, 38s. Dates quietly steady. Evaporated fruits: Californian standard apricots, 72s to 76s; choice, 85s; extra ditto, 96s. Peaches, choice, 45s; extra ditto, 50s; new crop, fancy, 65s. Plums, Bosnian, 3 cases, 72/77, quoted 33s; Oregon, 30/40, 65s; 35/45, 50s; 40/50, 46s per cwt.

CANNED GOODS.—Sardines steady. Portuguese 1/2-flats quoted 3s 3d to 3s 6d; clubs, 3s 6d to 4s; 12 oz, 5s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobster largely nominal, in absence of supplies. Crayfish quoted 72s. Salmon remains firm, and supplies on a limited scale. 1 lb flat reds, labelled, quoted 53s; ditto, tall, 46s to 46s 6d; 1 lb tall pink, 26s to 26s 6d; cases of 96 1/2 lbs, 27s to 29s case.

CANNED FRUITS very firm, excepting pines, which show a slightly easier tendency. Singapore pines, 48 1/2s, best quality, 5s 9d to 6s; cubes, 2 1/2s, 10s 9d to 11s 6d; slices, 48 1/2s, 5s 6d to 5s 9d. Californian apricots, 2 1/2s, 8s 3d to 11s 6d; ditto, 1 1/2s, 5s 3d to 5s 6d. Pears, 2 1/2s, 14s to 16s. Peaches, 2 1/2s, 9s 9d to 11s 6d; 1 1/2s, 6s 6d. Fruit salad, 2 1/2s, 19s to 20s; ditto, 1 1/2s, 10s 3d per dozen tins. Canned meats are in fair request, at full rates.

OILS.—Linseed firm with a fair demand. Spot, net, naked, 42s 6d; August, 41s 6d; September-December, 41s; January-April, 40s. Rape steady. Crude, spot, 47s 6d; refined, 50s 6d. Castor-oil steady. First pressure, spot, quoted 71s; second pressure, 69s; and pharmaceutical, 76s per cwt, Hull, with London 2s per cwt extra. Cotton steady. Crude Egyptian, spot, 44s; Bombay, 41s 6d; common edible, 49s; deodorised, 51s. Chinawood quiet. Hankow, spot (barrels), 76s; October-November, 72s 6d. Coconut quiet. Ceylon, spot, 51s; August-September, 46s 6d; Cochin, ditto, nominally 58s. Soya firm. Oriental, barrels, August-September, 44s 6d; bulk, 40s. Cod quiet. English, spot, 33s 6d to 34s 6d. Groundnuts dearer. English, crushed, naked, spot, 50s; deodorised, barrels, 60s. Turpentine dull. American, spot, 67s 6d; September-December, 68s 9d; January-April, 70s 9d. Rosin barely steady for common grades, but pale firm. American, grade B, 13s 4 1/2d; G, 13s 10 1/2d; WG, 17s 6d; WW, 21s 7 1/2d per cwt. French WW, 17s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

OILSEEDS.—Linseed market generally firm. Calcutta, afloat, £22 10s; July-August, £22 10s; August-September, £22 7s 6d. Plate, afloat, sold, £20 7s 6d; July-August, £20 10s; August-September, £20 8s 9d; and January-February, £18 17s 6d to £19. Rapeseed firm. Toria, August-September, £21 15s; and real bold Ferozepore, ditto, £21 7s 6d. Cottonseed firm. Egyptian, new, October, £12 15s; November-January, £12 15s. Sakellariadis, October, at £12 2s 6d. Bombay, August-September, sold, £10 17s 6d. Gingly seed quiet. Chinese, new crop, October-November, £26 7s 6d. Ground-nuts steady. Coromandel, machine-dried, August-September, £25 17s 6d; Chinese decorticated, f.a.q., ditto, £25 2s 6d; East African, August-September, £25 15s. Soya beans steady. Manchurian, afloat, £13 5s; October-November, £12 12s 6d. Castor seed steady. Bombay, August-September, £29 15s; Cawnpore, ditto, £29 5s per ton.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £2 18s 6d. Colonies and Abroad, £3 15s 6d per Annum.

Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C.2. Copies of the Economist may always be obtained in the City at W. Abbott, Limited, 32 Eastcheap. Barker and Howard, Sugar Loaf court, Leadenhall street. P. W. Cooper and Co., 11 King street, Cheapside. Davies and Co., 95 Bishopsgate. Leathwait and Simmons, 34 Throgmorton street. Pottle and Son, 15 Cullum street. Willing and Co., Limited, 50 Cophall avenue, and 123 Moorgate. Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brantano's, 37 Avenue de l'Opera.

THE MONEY MARKET.

The slight easing of the short loan market last week gave way to a return of comparative stringency as the end of the month approached, and the market was in the Bank for small amounts on Tuesday, Wednesday, and Thursday. Daily loans have commanded up to 4 per cent., and on Thursday 3 1/2 per cent. was paid for loans until next Tuesday. Supplies of credit have evidently been reduced by the inflow of money to the Exchequer, and though the Bank return showed private deposits of 105 millions, there

CENTENARY 1924.

is no doubt that the joint-stock banks have reduced the proportion of their balances which they lend out in the market. Discount rates have remained steady at fully 3½ per cent. for fine three months' bills, as, although the September 1st dividends will represent a fairly large sum, previous experience suggests that the effect of their disbursement will soon disappear, and the market is admittedly very short of early September Treasury bills, so that payment for new bills will soon return the dividend money to the Bank.

Thursday's Bank return showed an expansion of £253,000 in the note circulation, notwithstanding the decline in currency notes outstanding, and the Reserve was lower by the above figure. On the other hand, the liabilities were lower, Private deposits showing a decline of £4,582,000, as the result of repayments by the market to the extent of £1,412,800, and by the Government of £1,470,000, while £1,406,500 was added to Government deposits. Hence the proportion was 0.3 better at 18.5 per cent. There was a further reduction of £2,643,100 in currency notes this week, bringing the amount outstanding down to £288,719,000, which includes £1,375,100 for notes called in but not yet cancelled. The fiduciary issue is £237,893,800, or £10,297,100 below the maximum.

THE STOCK MARKETS.

Thursday's settlement revealed the fact that the recent volume of transactions has been greater than is usual at this time of year. In spite of uncertainties regarding the final outcome of the London Agreement and the renewal of talk about a General Election this winter, prices in most departments have remained firm. Fairly large lines of War Loan came on the market and were easily absorbed. French bonds have been the object of speculation, and German bonds have improved. Chinese bonds have fallen on fears of war. Home Railway stocks have improved a little. Public interest in the Oil market remains faint, and Rubber shares are as quiet as ever. But Tea shares continue to advance day by day. The markets for British Industrial shares hold their ground as a whole, without very conspicuous features. The Kaffir market remains out of favour.

THE COMMODITY MARKET.

Wheat has fallen probably on account of the previous upward movement being carried too far. Coal quotations are firm at Cardiff, but business is quiet. The anticipated improvement in the iron and steel industry has not matured, but in some quarters a better demand for pig-iron is reported. Our Sheffield correspondent reports that buying of pig-iron is at a standstill, but mentions that the demand for motor and railway steel "continues fairly large and steady." Tin improved a little, but copper was easier. The tendency of raw cotton prices has been easier, but the outlook is not without bright spots. Our Bradford correspondent reports that there is more activity noticeable in the last few days in the wool trade, stating that "in sympathy with the improved demand, prices of practically all qualities have moved to a higher level." The demand for tea is as brisk as ever, but rubber was quiet. Linseed oil is lower. The hide market remains firm and steady. Further information concerning the commodity markets will be found on later pages, together with market prices from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchange market has, on the whole, been less active during the week, there being little business going through on the Continent, and commercial demands for most currencies having been small. Sterling and dollars have been those principally in request, and these from financial sources chiefly. The franc, which opened at 83.25 on the 22nd, fell sharply to 84.15 on the 23rd on rumours of the possible dissolution of the Reichstag, and non-acceptance of the results of the London Conference, but it recovered again on Monday to 83.05 on these rumours proving false, improved on Tuesday to 82.90, and to 82.75 on Wednesday, as the prospects of acceptance became brighter. At the moment of writing it remains fairly steady at about 82.75-83. The dollar continues to improve steadily against sterling, in continuation, probably, of the natural reaction against the maximum level of 4.57 reached on the 11th. Since then sterling has steadily declined to its present figure of 4.48½, after recovery from a somewhat sharp fall to 4.51 at the end of last week. No doubt the seasonal ebb of the tide of tourist traffic, and a consequent smaller demand for sterling from this source has contributed to the tendency we have outlined. At the same time the demand for forward dollars is fairly well maintained, chiefly on account of autumn covering by merchants, who now appear to be beginning to realise the favourable opportunity afforded by present levels to meet their requirements. Forward rates remain steady at ½ to ¾ below spot for one month. It is worthy of note that the Montreal cable rate is, contrary to usual conditions, at a premium of about ½ cent against New York. Stockholm, Helsingfors and Buenos Ayres all moved, as might have been anticipated, with the dollar in varying degrees, Helsingfors appreciating steadily from 179 to 178½, Stockholm from 16.94 to 16.86, and Buenos Ayres from 41½ (pence to the peso) to 41½. Berlin remained steady at 18½-19 throughout the week, unaffected apparently by rumours and uncertainties with regard to the European settlement. The Italian market remained flat with the lira at 101½-101½; there was, however, fair business in forward lire, which are still at a premium. Christiania showed no appreciable change; Warsaw and Riga remain steady at 23.30 and 23.20 respectively, and Esthonia is again higher at 2,000 (sellors). The lei showed steady improvement from 980 to 890, chiefly, it is to be assumed, owing to the favourable Budget figures of M. Vintila Bratiano, the Minister of Finance. Of the Eastern exchanges, Bombay maintained its previous rise, and keeps steady at 15 5/8 d, for which the recent reports of a good monsoon will no doubt be largely responsible. Hongkong, Shanghai, and Singapore did not move appreciably from their last week's levels of 2.4½, 3.3½, and 2.4, nor was there any movement worth recording in Mexico or the South American exchanges other than Buenos Ayres, which we have mentioned above. The silver market retains its steady tone; and, with America figuring more as a buyer throughout the week, on the improvement of the dollar, than as a seller, this steadiness seems likely to be maintained.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 23rd:—

EXPENDITURE.		REVENUE.	
	£		£
Supply Services	7,750	From Revenue	18,437
Interest, &c., on Debt	355	Decrease in Exchequer Balances	872
Sinking Fund	1,263		
Sundries	628		
Decrease in National Debt	9,313		
	19,309		19,309

Revenue for the week ending August 23, 1924, was higher at £18,437,000, against £13,011,000 for the corresponding period last year. Customs were lower on the week at £2,809,000, against £3,100,000, but Excise yielded £6,668,000 against £1,532,000. Estate duties brought in £2,030,000, against £1,160,000, and Post Office receipts were the same at £1,250,000. Special receipts amounted to £521,400, against nil. Income-tax yielded £3,569,000, against £4,225,000, and Super-tax was £30,000 lower at £460,000. The week's operations

reduced the National Debt by £9,313,000, and caused the following changes:—

(000's omitted.)	
Treasury Bills	£ 9,063
Public Department Advances	5,100
National Savings Certificates	150
	9,313

The floating debt was reduced by £9,185,000 to £768,853,500.

FINANCIAL YEAR, 1924-1925 (April 1 to August 23).

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of New Zealand, Anglo-Austrian Bank, Amalgamated Press, and W. H. Chaplin. Mr William Watson's remarks on Australasian currency problems, at the Bank of New Zealand meeting, are referred to in a Note of the Week.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE SETTLEMENT AND ITS EFFECTS.

DURING the week the results of the London Conference have been before the Parliaments of France and Germany. In the French Chamber M. Herriot's policy was approved by 336 votes to 204 votes, while in the Senate it received the surprisingly large vote of 200 to 40, in spite of a five hours' oration by M. Poincaré, in the course of which the sitting had to be suspended on account of disorder. The only important new point that emerged during the discussion was M. Herriot's statement that he had agreed to the evacuation of the Ruhr after consultation with Marshal Foch, who did not regard the occupation as necessary to French security. In the German Parliament the agreement has had a rougher passage owing to the decision of the Nationalists to reject the agreement. The Government's reply to this decision was to secure the promise of the President to dissolve the Reichstag if the necessary two-thirds majority is not forthcoming. An election is likely to reduce substantially the Nationalists' representation, and the threat is likely to have the effect of securing the passage of the Bill by the necessary majority. At the time of writing the result of the decision is not known. But there are many supporters of the settlement in Germany who would not be sorry if the crisis were to result in a new election; for though it would mean at least a month's delay in putting into effect the Dawes scheme, it would certainly strengthen the hands of the Government, and would mean that for the next two or three years there would be greater certainty that in Germany there would be a Government in office which could work harmoniously with the new Radical Government in France. But whichever way this matter is decided, recent events have confirmed the view expressed at the time of the Conference that in each of the countries mainly concerned the influences in favour of an agreement would prove

almost irresistible. In the last few weeks we have not hesitated to call attention to what we consider as flaws in the London agreement; but at this stage these cannot be remedied, and the clear duty of all directly or indirectly concerned is now quite evidently to leave no stone unturned to make the agreement function according to the desires of its framers and thus make possible the early restoration of normal economic conditions in Europe.

In this country the agreement happens to coincide with a seasonal set-back in trade, marked by a substantial increase in the numbers of unemployed persons on the Labour Exchange registers; and this fact has helped to create the gloomiest foreboding as to the future of British industry as a result of the attempt to restore normal conditions on the Continent. In particular, the coal trade is up in arms, and has angrily demanded an interview with the Prime Minister to protest against the continued delivery of Reparation coal by Germany to France. But it is a little late in the day for the coal or any other industry to make its protest—couched almost in the form of an ultimatum—against the whole conception of Reparation payments. The French occupation of the Ruhr for a while reduced the output of one of the most important producing areas of Europe, and the coal trade undoubtedly benefited in the shape of an exceptional demand for export coal, which in 1923 actually exceeded the figures for 1913. But even from a narrow, selfish point of view this country cannot order its policy to suit the convenience of a section of a single trade. The idea that finds expression in a certain section of the Press, that this country as a whole will be better off if German production is restricted, by force or otherwise, would be more convincing if our industrial activity last year had recovered to a satisfactory level. But the fact is that our national production is still sub-normal, the highest figures suggested in this connection being our own estimate of 95 per cent. of the output of this country in 1913—a sufficiently low figure when it is remembered that the population has risen 6 per cent. This is the best we can do after several years, during which we have had the chance to profit from the embarrasments of our neighbours—who are at once our competitors and our customers. We are about to see whether we shall not make better progress with a Europe restored, both buyer and seller, more nearly to the normal. The directions in which this restoration should help to increase the volume of world trade hardly need repetition. In the first place, we shall be freed from the nightmare of widely fluctuating exchanges. The public memory is short, but the business world can hardly forget that in 1923 the fantastic dance of the exchanges surpassed all previous experience. In his annual review of prices in the *Statistical Journal*, the editor of the *Statist* reminds us "that, besides the German mark and the Soviet paper rouble, new low record values in terms of sterling were established by the currencies of Poland, France, Belgium, Denmark, Spain, Portugal, Greece, Hungary, Roumania, Jugo-Slavia, Bulgaria, Argentina, Brazil, and Uruguay. In a few important cases—notably France and Belgium—the 'records' have been further surpassed in the current year." Great efforts at stabilisation have been made during the present year, but there can be no reasonable doubt that if the method of semi-war, by which France was trying to extract by force Reparations out of Germany, had continued, both German and French currencies must have suffered a renewed collapse. Again, European purchases from the food and raw material countries of the world have up to the present continued to be sub-normal. Thus, Professor Bonn (in *Is Unemployment Inevitable?* page 153) writes of Germany that "the imports of all sorts of foodstuffs have fallen from 11.7 million tons in the last pre-war year to 5.17 million tons. Raw materials have fallen from 60 million tons to 38.9 million tons." It can hardly be necessary to develop this line of argument any further, for it is universally recognised that the reduced buying power of Europe has been the chief cause of the widespread world depression of trade. If large quantities of Reparation coal are delivered to France, it is perfectly true that Great Britain will sell her less than before the war; but against this Germany has always been a British market, and it is probable that we shall increase our sales to that country. If the total world demand for coal recovers, and continues to increase as it did before

the war, the Reparation settlement will not prevent Great Britain getting its share of the increase. It may, indeed, be affected by alternative means of power, including oil, water-power, and the generation of electricity from lignite—but that is another story.

There is, however, room for differing views as to what the immediate effect of the settlement upon British trade will be. We pointed out last week that if the Lorraine iron industry by an agreement with Westphalia succeeds in getting an ample supply of coke at low prices, this will in effect restore the conditions which obtained before the war. At present wage costs, both in Germany and in Lorraine, are low compared with this country, and in that respect the iron and steel industry may have to face a period of acute price competition. But this price-cutting is more likely to come from Lorraine than from Germany. In neither country, however, are the industrial leaders spoiling for a fight. For two or three years past the iron and steel industries of England, France, and Germany have been within easy reach of an international understanding. But hitherto politics have been the chief barrier; the time is ripe for endeavouring to revive the pre-war understanding between these industries.

But differences in wages alone are not the only factors in the situation. In the case of German producers they are handicapped by the exceedingly high rates that they have to pay for necessary floating capital. Some of the reasons for this are set out by Professor Bonn in the article referred to above. He points out that inflation has destroyed the property of the *rentier* classes and of house owners, and by reducing the internal purchasing power of these classes and of the manual classes, who during the period of inflation never managed to raise their wages as fast as prices, has reduced the home market. We do not think any accurate estimate of German production exists, but it is universally agreed that it is enormously reduced below the pre-war level. Plant, it is true, has in many cases been increased, but it is uneconomical to work large plant at reduced capacity. With high charges for interest these conditions of reduced output have prevented a drastic fall of German export prices and prevented the recovery of German exports to anything like a normal level. Professor Bonn sums the subject up thus:—"When things were settling down after stabilisation was under way there was a huge demand for credits, and the rates of interest are extremely high. Twenty-four per cent. per annum is quite a reasonable rate. The fixed capital of industry and agriculture, which is at present pretty free from debt, may be used as security. The value of that fixed capital will, however, depend entirely on the earning capacity of the plant. That earning capacity will be decided by the scope of sales abroad. These sales abroad will be affected by the cost of production. This cost of production will be favourably affected by the wiping out of old debts; it will be adversely affected (a) by the limited scope of sales at home; (b) by the high rate of interest; (c) by taxation falling entirely on 'production.'" These conditions are likely to continue. Germany's need of capital cannot immediately be supplied from abroad, and the conditions which Professor Bonn describes mean that the margin available for saving from internal production is for some time likely to remain small. Indeed, we see little likelihood of a reduction in German costs, for wages are much more likely to move up than down. To our pessimists these considerations may seem consoling, to us they have a different significance, for they suggest the reflection that the damage done to the mechanism of the world international trade by the disturbance of the last decade will not be remedied in a day. The signing of the London Agreement, and the putting into effect of the Dawes report, will certainly not release a sinister flood of German production; nor will it suddenly create purchasing power on the part of Germany. Our view, however, is that the immediate effect will be more good than bad, because it will improve German credit and enable her to secure the means of making purchases abroad on a larger scale than has been possible recently. The loan to Germany is the most important means by which this increased purchasing power will be secured, but our expectation is that this will be supplemented by private credits which should now be advanced more freely.

THE RESPONSIBILITY FOR THE WAR.

WHILE British, French, Belgian, and American statesman and financiers have been discussing in London the technical problems connected with the application of the Dawes Report, the more fundamental question of original responsibility for the War and its consequences has been raised in Germany. In the first article of the Reparation Chapter of the Versailles Treaty, the proposition that the War was "imposed" upon the Allied and Associated Governments "by the aggression of Germany and her allies" is made the ground for the affirmation and acceptance of Germany's responsibility for all the consequent loss and damage, and this responsibility involves, in its turn, the obligation to make Reparation. Thus responsibility and Reparation are intimately related to one another. Yet Germany's revolt against the imputation of sole responsibility is not, we are convinced, a movement to avoid, by a new road, the payment of even partial Reparation. "The vast majority of the German people," we read in a German memorandum which has just been forwarded to us above the signatures of 120 distinguished German citizens of all parties and professions, "are ready to accept the consequences of the lost War, and to assume burdens which present-day Germany is able to fulfil according to the judgment of international experts." The burden which the Germans are most concerned to throw off is not material, but moral. "Germany has been made to feel that, owing to the charge of sole culpability for the War, she is placed on a different footing to all the other States." The German case, as presented in this "Appeal to British Fair Play," is sufficiently interesting to deserve quotation:—

Germany's alleged sole responsibility for the world war is the explicit basis of the Treaty of Versailles.

Every sensible German admits that his former Government, upon different occasions, by grave mistakes, by provocation, by bluff, through lack of psychological understanding, by blustering demeanour, and so forth, contributed to a considerable extent in producing the conditions from which the catastrophe of 1914 arose. No European Government can declare itself innocent in this respect.

But the charge made by the Allies in the Ultimatum of June 16, 1919, in the accompanying note of M. Clemenceau, the President of the Peace Conference, and in Article 231 of the Treaty of Versailles is:

That Germany alone among the nations was prepared for a great war;

That Germany, the only disturber of peace for decades, had prepared a war of aggression and conquest;

That Germany had deliberately unleashed this war in 1914 in order to obtain "predominance in Europe," and to carry out her "plans for universal domination";

Whereas the Allies only desired "to preserve their liberty." We firmly contend that this verdict is, in its gross partiality, untrue. Yet the Treaty of Versailles, a punitive peace almost unparalleled in history, which continuously poisons the life of the European peoples and contains numerous germs of new wars, is admittedly based upon it.

The German people unanimously repudiate the moral stigma of a criminal nation which in 1919 they were forced under duress to admit, and the German people will not rest until this moral stigma which made the German nation a pariah has been removed by a just and impartial verdict as the result of an investigation by impartial judges. For no nation can rest indifferent to an unjust imputation upon its honour.

Below the document from which the above passages are taken we find such weighty and representative signatures as those of Count Bernsdorff (Ambassador at Washington 1908-1917), Professor M. J. Bonn, Dr von Gwinner (of the Anatolian Railway), Professor Ernst Jäckh, Dr A. Mendelssohn Bartholdy (of the German Institute of International Affairs), Professor Oucken, Count von Pourtalès (Ambassador at St Petersburg 1907-1914), Professor Quidde (the Pacifist), Baron von Schoen (Ambassador at Paris 1910-14), Professor Schücking, Professor von Schulze-Gävernitz, Dr Carl von Siemens (the Industrialist), Dr W. Simons (President of the Supreme Court at Leipzig and Foreign Minister at the time of the Spa Conference in July, 1920), and Herr Wolff (Editor of the *Berliner Tageblatt*). The signatures are followed by a review of "European policy from 1870 to 1914" from the hand of one of the signatories, Dr Hermann Lutz (expert of the Parliamentary Investigating Committee of the Reichstag regarding the War).

Before considering Dr Lutz's necessarily summary review of these 44 years of diplomatic history, it may be useful to recall the points upon which the conviction of Germany's guilt, which is undoubtedly widespread outside Germany, is based, and then to consider whether we are warranted in concluding that this guilt was exclusive or even disproportionate to that of other nations. The general feeling about Germany, we believe, is a composite result of impressions produced by the following facts:—(i.) From Bismarck's retirement in 1890 onwards Germany was constantly "rattling her sabre" in peace time—there was the Krüger telegram, the "shining armour" incident of 1908, the Agadir incident of 1911, the perpetual bluster of the Kaiser, and the assiduous expansion of the German Navy to make this bluster appear of grave import; (ii.) during the "Thirteen Days" before the catastrophe, Austria-Hungary behaved indefensibly, and Germany was believed at the time to be "backing" her ally; (iii.) Germany had ready a grandiose plan for offensive military operations which she immediately put into execution; (iv.) this plan involved the violation of Belgian neutrality, which Germany was pledged to uphold; (v.) the violation was committed, and was accompanied by atrocities against the civilian population; (vi.) Germany only just failed to gain a military victory; and (vii.) this victory would have won her the political hegemony over Continental Europe, Russia, and the Near and Middle East.

The first reflection that occurs to us is that while these considerations fully account for the almost world-wide antagonism to Germany, many of them are irrelevant to the question of whether she was guilty of the *specific crime of deliberately causing the war*. The fact that victory would have left her dominant does not, of course, prove that she planned the war with this end in view, though it naturally lends colour to the suspicion. In a court of law it would be taken into account as affording a motive. But a motive is not proof of guilt. Nor is Germany condemned by the fact that she had a military plan in readiness which she almost succeeded in carrying out to a victorious issue. All the other Powers, including ourselves, had military plans in readiness for the eventuality of war, and this general fact cannot be used as evidence that any one Power deliberately turned that eventuality into fact. The special criminality of the German military plan was that it involved a peculiarly gross breach of treaty, coldly contemplated in advance. But although this was an international crime of the first magnitude, which attaches to Germany alone, it also affords no proof of her sole responsibility for the war. Preparations for war cannot be interpreted as proving a deliberate intention to bring about war. On the other hand, there will probably never be evidence that would produce a unanimous verdict on a question of this kind. Even if it could ever be shown that a group of men in Germany had quietly planned for years to manoeuvre the diplomatic situation, to create a situation in which the doubts of the Kaiser would have been overcome, and to work upon public opinion so that war could be precipitated in August, 1914, would that prove the German nation responsible for causing the war? It is a difficult question to answer. But the problem will, we think, not be dealt with by future generations in that way. The verdict of history will be given, not on the last stages alone, but on the events of the decades preceding the war, and it will undoubtedly take the form of apportioning responsibility. Europe went to war because the forces making for peace were too weak and too unorganised to resist those on the other side; the German nation will be apportioned the chief blame, for there is little doubt that the balance against peace was very much greater in Germany than anywhere else.

The verdict in the Treaty of Versailles was given on circumstantial evidence and by the prosecutors, and none of the Allies can imagine it is the last word on the subject. Clearly all the evidence that has been forthcoming in the last few years must be taken into consideration.

Dr Lutz does not deal with the "Thirteen Days," but concentrates upon the previous twenty-five years. As regards the "Thirteen Days," the fresh evidence that has gradually been coming to light indicates that the active criminals were Austria-Hungary and Russia, and that, so far from using Austria-Hungary as a cat's-paw, Germany

sinned in not exercising sufficient influence over her to restrain her from her disastrous course. In fact, Germany's sin in this crisis was rather one of omission than of commission. As regards the preceding 25 years, Dr Lutz frankly admits that German diplomacy was often clumsy and provocative. But he denies that these gestures reflected an intention to bring on a war, any more than the more discreet and decorous gestures of the Entente Powers. The statement of Dr Lutz is one that should be pondered over in England, France and elsewhere. But we cannot conceive that a formal reconsideration of war guilt is practicable or that if it were undertaken it would shift much of the responsibility. The debit balance is a heavy one against Germany, and in paying Reparations she is being asked to discharge some of her debt to civilisation.

POPULATION AND THE LABOUR SUPPLY.

AMONG the many economic questions dealt with in a book just published by a committee of business men and economists, entitled "Is Unemployment Inevitable?" one of the most important is an estimate of the future population by Professor Bowley. So much has been made of the difficulty of finding work for a growing industrial force that it is worth while to set out these results, which indicate the need for modifying many prevailing opinions as to Britain's future economic situation. Two methods of estimation have been worked out, but the one to which Dr Bowley attaches importance is a study of the history of age groups for the period 1901-11. In 1901 the number of males aged 20 to 25 years was 1,725,000, but by 1911 this was reduced by death and emigration to 1,546,000, who were recorded as being between the ages of 30 and 35 in 1911. If the death and emigration rates during the second decade of the century had remained unchanged, one could calculate from the numbers aged 20 to 25 in 1911 the number of males aged 30 to 35 in 1921. Similar calculations for other wage groups would give an estimate of the whole adult population. In actual fact, between 1911 and 1921, emigration was checked, but the difference was more than out-balanced by war losses, and Dr Bowley's method of estimate gives 350,000 more males than were actually recorded in the census of 1921. It, however, gives a very close estimate of the number of females actually recorded. Professor Bowley has, therefore, carried the calculation forward from the 1921 census figures for a period of 20 years. The result (which assumes that emigration continues as in the decade preceding 1911) is shown in the following table:—

	POPULATION BETWEEN 15 and 65 in GREAT BRITAIN.		Females in or Seeking Employment.
	Males.	Females.	
1921.....	13,307,000	14,936,000	5,690,000
1931.....	13,960,000	15,821,000	5,870,000
1941.....	13,898,000	15,701,000	5,800,000

ANNUAL INCREASE OR DECREASE.			
Between 1921 and 1931..	+ 65,000	..	+ 88,000
Between 1931 and 1941..	6,000	..	- 12,000
			+ 18,000
			- 7,000

But as it is possible that emigration may not revive to the level reached in the first decade of the century, Dr Bowley has made an adjustment on the assumption that emigration remains as in the two years July, 1921, to June, 1923. On this assumption the annual increase of the numbers to be employed in the present decade would be about 90,000 males and 30,000 females. In the succeeding decade, even if emigration remains low, the annual increase will be very small indeed. This, of course, is due to the fact that in the 'thirties the number of young people coming on into the employment will be modified both by the fact that the birth rate was dropping before the war and that it was extremely low during and immediately after the war. If normal emigration is resumed, we may actually experience between now and 1941 a shrinkage of the number of persons seeking employment, though, of course, the improve-

ment in public health means that the number of old persons above working age is now, and is likely to be for some time, on the increase.

The contrast between these results and the situation in the United States is significant. According to a statement recently issued by the National Bureau of Economic Research, the population of the United States for each half year since January 1, 1921, has been approximately as follows:—

January 1, 1920 ..	105,711,000	July 1, 1922	109,898,000
July 1, 1920	106,422,000	January 1, 1923 ..	110,883,000
January 1, 1921 ..	107,575,000	July 1, 1923	111,664,000
July 1, 1921	108,533,000	January 1, 1924 ..	112,826,000
January 1, 1922 ..	109,298,000		

This table shows a colossal increase of more than seven millions in four years, of which approximately 1½ millions was due to net alien immigration, and the balance of 5½ millions was the natural increase of the excess of births over deaths. These figures are possibly subject to correction in detail, when they can be checked by the results of the next census. But any subsequent emendation will not substantially alter the fact that the United States has added to its population at the rate of seven millions in four years, or not far short of 2 per cent. per annum. Seven millions is the population of Greater London. It is larger than the total population of Australia, and is nearly equal to that of the whole of Canada. It can well be imagined that to make provision for such an enormous increase in a very short period involves an enormous increase in capital investment in houses, roads, railways, and industrial plant to provide employment for them. It certainly explains the phenomenal growth in recent years of America's internal market, and forcibly suggests that, except for occasional lapses, if it continues capital is likely to be dear in the United States for many years to come, unless saving also goes on at a phenomenal rate. This means also that the United States is not likely to have a large surplus of capital to invest abroad in the development of new or backward countries, and that this process is more likely to be continued out of the savings of the more slowly growing nations of the Old World.

THE POTTER AND HIS COMPETITORS.

THE trade of the potter dates back to prehistoric times in all parts of the world, and even in our own country the records of history contain no definite indication as to when the industry was established in Staffordshire. That it has been carried on there for several hundreds of years is proved by the references of Dr. Plot, a historian of the county, who wrote in 1686. Indeed, some writers have professed to find evidence of its existence there in Saxon times. Reasoning upon etymological grounds, they derive the name of Burslem from Bwlwardeslœm, signifying the place whence clay for pottery is obtained. However this may be, the abundance of clay and coal in the neighbourhood must have led to a very early establishment of the pottery trade there. And it has flourished exceedingly, more particularly within the last 70 years or so.

This progress was greatly helped by the application of scientific principles in the first quarter of the nineteenth century. Until then the industry's methods were almost wholly empirical. But the scientific study of materials—clays, enamels, and glazes—and of methods was fruitful of vast improvements all over the world, and not least in Staffordshire and other parts of England.

In attempting to measure the progress of the industry for the past 70 years we shall be limited to the foreign trade records, which fortunately enable us to cover the whole of this period. In the year 1846 exports of these goods were worth £793,000—a relatively high figure for those days, when the total exports of British goods of all kinds were under 58 millions, as contrasted with 767 millions now. It is highly probable that imports, too, were at that time very considerable, for the art and trade of the potter was well understood abroad. Import records, however, are not easily available, and we shall have to content ourselves with those beginning in the 'seventies. With these data, a bird's-eye view of the trade's achieve-

ments in its competition with foreign producers during the seventy years can be gained thus:—

BRITAIN'S FOREIGN TRADE IN POTTERY, EARTHENWARE, CHINA, STONEWARE, &c. (not including Bricks) (in Thousand £).

Five-Year Averages.	Exports.	Gross Imports.	Excess of Exports.
1849-53	1,083		
1854-58	1,257		
1859-63	1,279		
1864-68	1,589		
1869-73	1,957		
1874-78	1,828	391	1,437
1879-83	2,142	531	1,611
1884-88	1,955	546	1,409
1889-93	2,135	648	1,487
1894-98	1,888	783	1,105
1899-03	2,010	977	1,033
1904-08	2,316	949	1,367
1909-13	2,935	993	1,942
1914-18	2,579	234	2,345
1919-23*	6,047	834	5,213

* Tiles for roofing and street paving have been inextricably mixed with the records in 1920 and since. For five years before the war they figured for £25,000 to £30,000 among exports and much less among imports. Their unavoidable inclusion since 1920 is therefore probably of little consequence.

Down to the opening of the twentieth century, it will be observed, progress was but moderate, though allowance has to be made for the steady fall in prices which went on for so many years until 1895. But this fall also affected foreign goods, which persistently poured into the country in ever-increasing value until the end of the nineteenth century. A halt seems then to have been called. For ten years before the outbreak of the world-war shipments of British goods grew by £925,000, while landings of foreign goods here were only increased by £16,000. The result was to establish at the end of that period a more favourable proportion between exports and imports than had ever existed before.

During the seventy years population at home had grown very largely, and the power of the masses to purchase all forms of pottery had increased enormously. All this increased demand was met by our own manufacturers—for, as shown above, the growth of imports was outweighed by an even greater growth of exports, and there was thus a favourable balance on the foreign trade.

The great war, of course, disorganised the trade, and the full results of the revival of foreign competition since the struggle have yet to be experienced. Just before the war three-fourths of the foreign goods landed here came from Germany, the remaining fourth coming (in order of importance) from France, Japan, Austria-Hungary, Holland, Belgium, and China. It seems certain that when Germany's industrial system is placed on a stable basis she will again become the chief competitor. Only then will the post-war competitive strength of our own manufacturers be put to the full test. That our producers will meet the trial successfully, however, seems likely when we remember their achievements during the 10 years immediately preceding the war.

Unfortunately, changes of classification somewhat hamper a comparison of pre-war and post-war values per cwt. By excluding all tiles, however, it is possible to give the following statement:—

VALUES IN 1913 AND 1923.

	Exports.			Imports.		
	Cwts.	£	Per Cwt.	Cwts.	£	Per Cwt.
1913.....	3,793,134	3,145,323	16/7	793,319	1,068,502	26/11
1923.....	4,024,342	5,833,146	29/0	465,767	904,648	38/10

From this it looks as though the rise in prices has been much more severe in exports than in imports—about 75 per cent. in the one case and 45 per cent. in the other. In this connection, however, it is necessary to bear in mind the vast variety of goods of articles, such as stoneware pipes, now valued at little over 10s per cwt, and lines of chinaware worth considerably more than £20 per cwt. It seems probable that the heavy increase in average value of exports may be as compared with 1913. Too much stress, therefore, should not be laid on this point, though there are some other indications which seem to show that our reductions of prices since the boom values of 1920 have been

considerably less than those of foreign producers. These are to be found in a line of goods which it is interesting to examine on other grounds as well. Before the war the goods entered under the heading of "Porcelain, Chinaware, and Parian" were the only ones in the list showing an actual excess of imports over exports. The quantity imported was double that exported, and though the imports were of distinctly lower grade, the value of them was higher than that of the exports. Let us see how this particular branch of the trade has fared in recent years:—

PORCELAIN, CHINAWARE, and PARIAN.

	Exports.			Imports.		
	Cwts.	£	£ per cwt	Cwts.	£	£ per cwt
1913	20,664	213,081	10.3	42,765	218,574	5.1
1919	14,300	260,891	14.5	5,705	60,253	10.5
1920	15,814	346,235	21.9	23,820	304,861	12.8
1921	13,594	371,375	27.3	11,986	118,369	9.8
1922	16,807	319,518	19.0	12,497	90,948	7.3
1923	18,127	344,193	19.0	13,326	102,653	7.7

Since the war there have been some significant movements in this section. Out of the 42,765 cwts landed here in 1913, 16,000 came from France, over 11,000 from Germany, and over 10,000 from Japan and Hong Kong. Note, now, the enormous jump in the imports during the second year after the war (1920). At 23,820 cwts they largely exceeded exports at 15,814 cwts. This time, however, Japan headed the list with nearly 13,000 cwts, Germany coming next with nearly 5,000 cwts, and France third with over 4,000 cwts. In 1921 the tremendous slump in general trade cut imports down by half, while it affected exports but little. Since then both sides of the account have made reasonable growth, and the position last year was not unsatisfactory from the standpoint of the British manufacturer. The remarkable difference of value between the British and foreign goods shows that our own producers largely specialise on the higher-grade articles. Exports are, at £19 per cwt, still nearly double the pre-war price. On the other hand, the imported articles, at £7 14s per cwt, are only 50 per cent. above the 1913 level. There is ground for thought here, and it looks as if our manufacturers will probably have a severe struggle when Germany again gets on her feet.

SOUTH AFRICA AS AN EXPANDING MARKET.

(BY A CAPE TOWN CORRESPONDENT.)

IT is doubtful if British merchants, as a body, realise the rapidly increasing importance of the Union of South Africa as a market for their products and manufactures, and as a supplier of their requirements in raw material. Certainly they are not so fully alive to its possibilities as are German and other continental firms, and also the U.S.A., all of which have not only their salesmen travelling the country in larger numbers than ever before, but have also sent out expert engineers, chemists, and geologists to inspect and report upon the oil shale and mineral areas of the various provinces.

At the present the British Empire possesses over 60 per cent. of the import trade of this country, and about 80 per cent. of the export trade, and the following figures will show what it means at the present time, and the rate at which both the import and export trade is growing.

In 1922 the Union import trade with the British Empire amounted to £31,230,721, and rose in 1923 to £36,346,263; the Union import trade with foreign countries rose from £15,097,164 in 1922 to £18,189,127 in 1923. The Union exports in 1923 also show an increase over 1922. In 1922 the exports to the British Empire amounted to £51,823,688, and in 1923 increased to £66,466,114. The exports to foreign countries for 1922 were valued at £10,588,913, and in 1923 at £12,091,751.

That the increase in trade is continuing is proved by the fact that the total trade of the Union (export and import) for the first three months of this year was £34,500,000, an increase over the same quarter of 1923 of £4,000,000.

The railway working statistics for the financial years ending March 31, 1924, and 1923, and the calendar year

1914, will give a good idea as to the increased activities of the Union since the Great War.

The railway earnings were as follows:—

1914.	1923.	1924.
£	£	£
11,573,204	20,146,797	21,594,644

Goods traffic (other than coal):—

Tons.	Tons.	Tons.
5,392,009	7,690,140	9,404,954

Coal traffic:—

Tons.	Tons.	Tons.
6,631,952	8,028,754	9,433,619

The total value of the mineral output of the Union for 1923 was £50,606,000, whereas the total for the first half of 1924 is £28,900,000. For the second half of this year, with two new gold mines, the West Springs and Central West, producing, and several other mines obtaining bigger outputs as the result of extensions to their plants, together with a material increase in the outputs of coal and base metals, also the prospect of the newly discovered platinum mines beginning to operate, the chances are that the output will be so increased as to make the total for the year close to £60,000,000, of which gold will probably account for close upon £45,000,000, an amount which will exceed that of 1920, when with a premium on gold of at least double what it is to-day, the total value of the gold recovered was £44,407,544.

The following figures, giving the values of a number of the principal products and manufactures imported into South Africa during the month of March, fairly represent the progress of the import trade at the present time, as compared with the same month of last year, and also represent pretty accurately the rate at which it is moving ahead, for the figures for the previous months show the same ratio:—

	1923.	1924.
	£	£
Cotton goods	466,837	584,082
Haberdashery	133,603	191,423
Woolen manufactures	142,332	175,365
Metal (including cast and wrought pipes, plates, sheets—plain, galvanised, and corrugated—fencing material, nails, bolts, bars, stoves, hollow-ware	391,000	413,000
Machinery and machines (except locos)	205,470	297,546
Electrical material, &c.	128,000	101,000
Paper	74,000	62,000
Sodium compounds	21,119	63,324
Preserved and canned fish	26,962	30,133
Condensed milk	19,700	26,500
Whiskey	29,108	31,418
Motor cars	109,636	325,923
Motor cycles	18,578	38,144
" parts and chassis	9,300	12,152
Motor cycles	2,375	3,768
Side cars	7,244	34,665
Power lorries and steam wagons	5,399	10,901
Power lorry parts and chassis	49,000	53,000
Furniture	24,000	27,000
Glass bottles, jars, &c.		

The all round increase shown by these figures is striking.

THE SITUATION IN VENEZUELA.

(BY A CORRESPONDENT.)

WHILE general improvement in political and economic conditions—necessarily interdependent—of the South American Republics has, as a whole, to be noted within recent years, the progressive tendency of Venezuela, at once one of the more wealthy but less developed of the States, challenges attention. During the prolonged period of internal political strife, more especially under the Governments of Guzmán Blanco (1870) and Cipriano Castro (1900), commerce suffered severely, while the value of foreign investments shrank to an alarming extent. During the past ten years, however, a reign of economic peace and security has been experienced. This may be fairly attributed, in a great measure, to the wise, if strict Government of President Juan Vicente Gómez, whose advent to office in 1908, as a temporary but welcome substitute for General Castro and his horde of cormorants, has been maintained, with but little interruption, from then until now. Except among the "outs," forming but an inconsiderable if noisy body of politicians, few Venezuelans are desirous of witnessing any change in the Executive.

British interests are satisfied with the manner in which commercial affairs of the country are generally controlled, while little complaint is to be heard from other members of the foreign colony, which includes Germans (largely, as always, in the ascendant), Americans, Italians, French, Spaniards, Puerto Ricans, Syrians, Moroccans, and Sicilians.

British economic associations with Venezuela date considerably later than German. Originally engaged in the shipping trade and banking, and becoming gradually united with Venezuelan families by intermarriage, the Teutons firmly established their hold upon the commerce and industries of the country. On the other hand, British capital is more largely represented than that of any other country; it is to be found associated with the majority of the railways and harbours, telephone and electric enterprises, and, more particularly of late years, with oil concessions. While, it is true, such investments have hitherto produced an average yield of little more than 2 per cent., the fact may be attributed to the almost continuously unsettled political conditions already referred to. At the end of 1923 the amount of British capital invested in Venezuela, and quoted on the London Stock Exchange, was £9,839,972, and this may be compared with £7,649,405 in 1920. At the earlier period, however, the interest earned was 2.9 per cent., whereas at the end of last year the yield was only 2 per cent. On the other hand, Government 3 per Cent. Diplomatic Debt Bonds, issued in 1905, have continued to be paid with commendable regularity, and redeemed with no less punctuality. The original debt, amounting to £5,229,700, has now been reduced to £2,233,680. The average price of such redemption for each half-year from June, 1905, to December, 1923, has ranged between 50.551 and 68.959 per cent. During the past year exchange ranged between 24.95 and 23 bolívares to the £ sterling, as compared with a nominal rate of 25.25, giving an average for the twelve months of 24.20. Thus the exchange value of the bolívar is at a premium as compared with sterling, and the fluctuation in the rate of exchange averages to-day little more than one-half of one centavo per month.

Very slightly affected by the European War, Venezuela, unlike many of the sister Republics, has been free to pursue the peaceful path of economic progress uninterrupted by either external or internal disturbances. On the other hand, economic advancement has not been without periodical setbacks, manifested in seasons of stagnation, largely affected by the types of climate experienced and prices of the country's chief agricultural products—coffee and cacao. Venezuela now ranks third among the coffee-producing countries, Colombia being second and Brazil first. The reported partial failure of that country's current crop gave to Venezuela the great opportunity so long sought in the coffee markets of the world; almost the whole of this season's crop has been exported, and little, if any, remains in store. The importance of the staple commodity cannot be overestimated, providing, with cacao, nearly three-fourths of the country's entire exports. Upon the successful marketing of these two crops the prosperity of the people depends. Unfortunately, few of the planters are possessed of sufficient capital to finance their products in storage; the assistance of the local banks has, therefore, to be sought each season, and their charges constitute a somewhat heavy load upon the plantation owners. Of these, there are said to be more than 25,000 in the Republic. Whereas the banks, as a rule, pay no interest on deposits on current account, their lending rates range between 8 per cent. and 10 per cent. per annum on short-term commercial paper. It has been, however, the practice of the National City Bank of New York, which established its first branch in 1917, to allow six months' credit to merchants, with privilege of extension—leaving them to finance the coffee and cacao growers instead of advancing funds directly to the planters, as was for long the practice of the Teutonic commercial houses handling exports as well as imports, and carrying on simultaneously a private banking business. It is not difficult, therefore, to understand why upon occasions collections are found difficult. At the commencement of the present year the foreign position was found exceptionally embarrassing, compelling a number of American exporters to apply to their Consuls

in Venezuela for assistance in collecting and adjusting their accounts due from minor firms.

Similar conditions do not, however, appear to have affected British interests to the same extent, for both at the period mentioned and to-day, little difficulty has been experienced in financing current enterprises, whether in the form of exports or imports. In regard to established enterprises, the Venezuelan Telephone and Electric Appliances Company, Limited, was enabled last year to resume the payment of dividends after a considerable blank period. La Guaira Harbour Corporation also enjoyed a greater measure of prosperity, doubtless the outcome of the new arrangement with the La Guaira and Caracas Railway Company, working satisfactorily since October last. An improved position is likewise recorded by the South American Copper Syndicate, which, in common with other mining enterprises, finds Venezuela a favourable country in which to carry on its operations. With a view to encouraging development in mineral deposits, the Government offer exceptional facilities, both in the way of easy taxation and free imports of mining machinery. This is found particularly favourable in connection with the extensive work being carried on, largely under British auspices, upon the oilfields, the production of which, although still comparatively small, promises ample expansion in the near future.

Notes of the Week.

The League Assembly.—Circumstances have happily conspired to make the Assembly of the League of Nations, which opens at Geneva on Monday, the most important meeting in the history of the League. The decision of Mr MacDonald and M. Herriot to attend in person is in itself a large contribution to this end, and their attendance has caused other nations to send distinguished and representative delegates. Geneva will, in fact, see the most representative gathering of statesmen that has assembled since the Genoa Conference. In atmosphere, subject matter, and general opportunity, the gathering is equally important. The programme which the League Council is now finally preparing for the Assembly is described on a later page of this issue by a Geneva correspondent. On paper the two leading items in the agenda are the questions of the boundary between Turkey and Iraq (referred to the League by the British Government), and of the future control of Austrian finances. But important though these questions are, the main interest in the League meeting turns not upon them, but upon the discussions which will probably occupy a lion's share of its time, on the broad problems of disarmament and international arbitration. There are abundant signs that in many countries these vital questions are attracting at last a new and growing attention both from statesmen and from public opinion. Moreover, the fact that the principle of arbitration is so prominent in the London Agreement is a happy augury for the Conference discussions. Committees appointed by the League have reported to the Council on the control of armaments in countries defeated in the war, and also on the possibilities of controlling internationally the manufacture and sale of the materials of warfare. These two reports, together with a draft convention for international arbitration, emanating from American sources (the text of which was given in yesterday's *Times*), are the principal pegs upon which the discussions will hang. If we must not expect any dramatic results from the Assembly, we may at least predict two things. First, that the discussions will provide evidence of a turn in the tide of international thought in favour of measures for safeguarding the world's peace. Secondly, that the distinguished delegates will emerge from it with a clearer idea of the trend of world-opinion, and a broader view of the League's position and possibilities.

Settlement of the Building Dispute.—After a stoppage lasting seven weeks, the executives of the 14 unions affiliated to the National Federation of Building Trades Operatives decided at the end of last week to endorse the settlement terms negotiated by a joint committee representing masters and men, and work was resumed at most

centres on Monday last. In some cases the men delayed for a day or so compliance with the Unions' instructions, and at a few centres the situation is still obscure. On the whole, however, resumption has been as general as the stoppage which preceded it. The terms of agreement bear out the finding of the Court of Inquiry held in July, to the effect that the unwillingness of the Liverpool operatives to accept "national" status was the chief source of contention. In the result, the Liverpool men obtain a noteworthy concession. While the wages of all craftsmen and labourers are to be advanced by one half-penny per hour, and stabilised at this higher level until February 1, 1926, Liverpool men are to retain their privileged position as regards wages and tool money until the same date. Applications for re-grading due for October, 1924, are to be suspended for twelve months. Working hours are to be 46½ per week during the summer, except in localities where these terms are varied by mutual agreement, and outstanding local differences on the question of hours are to be settled forthwith. A joint committee representing employers and employed is to inquire into the incidence of time lost through inclement weather, and to report within six months. The position of the London operatives is to be made the subject of local *ad hoc* inquiry. The Liverpool operatives agree, on certain conditions, to accept "national machinery for fixing wages and conditions" as from December 1, 1925, except as regards wages, which are to be maintained as already stated. Consequential alterations to the machinery for fixing national wages and conditions are to aim at giving greater power to joint regional committees to settle such matters as are capable of regional settlement. The settlement, in short, differs very little from the terms provisionally agreed upon before the strike and subsequent lock-out, except that the position of the Liverpool men has been more or less regularised. While the wages question has been disposed of, such highly contentious matters as the length of the working week and payment for lost time are left for subsequent discussion. The average observer will question whether all these terms could not have been successfully negotiated two months ago by the exercise of a little more patience on either side, without the waste and loss of a national stoppage.

Stabilisation of Wages.—A significant feature of the settlement of the dispute in the building industry, the details of which are given in the last paragraph, is the stabilisation of wages for a period of seventeen months, till February 1st, 1926. The operation of the cost-of-living sliding scale, which, according to Sir Hugh Fraser's award of May, 1923, was to be strictly adhered to for the future, is thus suspended, and both parties have agreed to take a risk, the operatives gaining by the arrangement if the cost-of-living falls and the employers gaining if it rises. The desire of the engineering employers to obtain an agreement on the question of stabilisation of wages has recently been strongly emphasised in their discussions with the unions, but so far their efforts have not been successful. The woollen employers, on the other hand, have been able to obtain agreement to the payment of wages for the next 12 months at the same rate as those paid during the last year. Other trades in which existing wages have been stabilised until various dates in 1925 include the cotton industry, vehicle building, and brewing in a number of districts. In other important industries, including printing, electrical contracting, and domestic engineering, the period of stabilisation expires at the end of the current year. In several of these cases the agreements have involved the suspension of cost-of-living sliding scales. It seems highly probable that, in the absence of any marked change in the state of employment, or in the cost of living, the stabilisation agreements which are due to expire within the next few months may be continued for further periods, and that employers may succeed in making similar arrangements in other important industries. This tendency to stabilise is a sign of confidence in the price level, but in some respects it may perhaps be regarded as premature, firstly, because the adjustment between wages in sheltered and unsheltered industries cannot be regarded as complete; and, secondly, because the level may be affected by currency policy, the lines of which have not yet been clearly laid down.

The Wheat Situation.—The August *Bull tin* of the International Institute of Agriculture, Rome, summarising reports from countries responsible last year for four-fifths of the total wheat production north of the Equator (exclusive of Russia and China), estimates the yield for the present year at about 87 per cent. of the 1923 total, and slightly less than 99 per cent. of the average for the five years 1918 to 1922. The detailed statistics are shown below:—

WHEAT.—ESTIMATED YIELD IN NORTHERN HEMISPHERE.

§ 1922 only

The yields of several important European countries are not yet ascertained, including those of France, Jugo-Slavia, Germany, Russia, and Czecho-Slovakia. In this connection it may be noted that early August reports from Germany described crop conditions as "nearly average," and from Czecho-Slovakia as "fairly good." For the countries shown in the above table, the aggregate yield for 1924 shows a decline of about 16 per cent., as compared with last year, but is practically equal to the 1918-22 average. In America the August estimates are better than was at one time expected, but the Canadian crop is much below the exceptionally high figure of last year, though above the five years' average. These comparisons are based on the first official crop estimate, and subsequent conditions have proved to some extent unfavourable, as will be observed from a letter from our Canadian correspondent, printed elsewhere. The earlier figures pointed to a decline in the total North American yield of 13 per cent., as compared with 1923, and 5 per cent., as compared with 1918-22. The latest returns from India show a small decline from last year's figure, but a 10 per cent. rise above the average. The Algerian crop has been handicapped by drought conditions, but that of Morocco is relatively good.

and the North African yield is expected to be little, if anything, below average, though over 20 per cent. below last season's unusually heavy total. As a whole, the world's wheat prospects, while not nearly so good as at this time last year, do not seem to call for undue anxiety. An "average" yield would infer a higher level of prices than in 1923, but fairly satisfactory supplies should be obtainable by the chief wheat-importing countries.

American Cotton Crop.—Our Manchester correspondent writes:—To the greatest satisfaction of world spinners the United States Department of Agriculture issued last week-end a Bureau report on the American cotton crop, which indicated a growth of 12,956,000 bales. When the report was published prices broke sharply on the Liverpool Exchange. The indicated yield of the Bureau shows an increase of over 600,000 bales in a fortnight, which is considered a wonderful improvement. Now that we are promised a crop of 13,000,000 bales, exclusive of linters, it would appear that there will be adequate supplies of the raw material this season. At the same time, it must be borne in mind that there are still two or three weeks of critical weather before us, and there will no doubt be many scares created by reports of boll-weevil damage, and that later on the date of killing frosts may have a good deal to say in the matter of the final yield. Raw cotton prices are now getting on to a very attractive level, and the lower range of values has induced buyers of cloth to place larger orders. The whole outlook with regard to the future supplies has completely changed since a month ago, and if the estimate of 13,000,000 bales is not reduced by subsequent unfavourable weather developments, the cotton trade is to be congratulated on the prospects of adequate supplies and reasonable prices. Although we are promised a big supply of raw cotton, the Short-time Organisation Committee of the Master Spinners' Federation have this week strongly recommended spinners to continue the present curtailment of production during September. The Committee is to meet from week to week, and if the state of trade so warrants, the number of working hours can be increased. The American spinning mills at present are running 26½ hours per week instead of the usual 48.

Demand for Homeward Freights.—The long period of stagnation in the homeward freight markets has been terminated, and during the past week or so there has been a very persistent inquiry for steamers to load during September and October. The River Plate has been absorbing steamer space at the rate of 150,000 tons per week, and this may continue for some time, there being large quantities of maize, &c., to be shipped from the Argentine ports. The market has been disturbed a little this week by reports of labour troubles at the ports, but steamers have been taken at 22s 6d for September and 24s for October from the up-river ports. Nitrates are steady, with a fair demand for October-November loading. The chief movement during the last few days has been from the Canadian ports and also the Gulf. A large number of steamers have been fixed for heavy grain from Montreal at 14 to 15 cents per 100 lbs. basis for discharge at Antwerp, Amsterdam, or Rotterdam, and 18½ cents was paid to West Italy, with 19½ cents Sweden. The tendency of the market is strongly upward, and with tonnage on the light side, rates should rise further. From the Gulf steamers have been booked up at 15½ cents per 100 lbs to the Continent, and 3s 10½d per qr. U.K. Wood from the Gulf has been done for Buenos Ayres at 14.25 dols., and the North Pacific paid 30s 6d to the U.K.-Continent for October-November loading. Coal from the Northern States has fixed up steam tonnage for Three Rivers at 1.15 dols., and 3.25 dols. per ton has been paid on the same commodity for Rio de Janeiro. On time charter basis a steamer was fixed at 1.30 dols. for the States/West Indies trade, and for a vessel of about 3,200 tons 2.10 dols. was given for the trip across with delivery Savannah. The Eastern markets have been much more active, Bombay has risen sharply with business done at 24s on the dead-weight basis, and rice from Burmah paid 32s 6d to four or five ports Cuba. From Mauritius 25s was fixed for sugar

to the United Kingdom with the option of New York at 30s. In the ore markets Almeria Pier to Barrow made 6s 3d, and Hornillo to Newport 6s. The outward coal market from the Continent has become much firmer with a good inquiry. Antwerp to West Italy quotes 8s 6d to 8s 9d per ton, and 9s is offering from Rotterdam to the Mediterranean. Chartering for coal from this country is quiet.

Stock Exchange Markets During August.—For markets to develop any kind of activity and strength during the holiday month, writes a Stock Exchange correspondent, is so unusual as to invite examination into its cause, with a view to seeing in what manner the movement is likely to proceed during the autumn. The Stock Exchange calculates upon making its main income during the weeks that lie between the middle of September and the following end of April. The summer months of the year are usually written off, as providing no more than bread-and-butter business of a kind which serves the purpose of keeping office-wheels running, but which is not expected to yield anything like a reasonable profit. As it happens, the month which finishes to-day has been a good one for many of the Stock Exchange markets, and the fact of the weather having been so bad, thereby checking holiday plans, cannot be regarded as alone responsible for the unusual phenomenon. Nor can it be said that the gilt-edged market deserves any particular congratulation upon the amount of trade which it has attracted during the period. No more than a retail amount of investment and realisation has been going on in that department. The turning-off of the stream of new issues has been counteracted by the fact that underwriters are still left with a fair amount of stock. Bank rate fears proved more potent in July than was the case in August, and the removal into the background of the prospect of a 5 per cent. minimum has helped investment markets all round the Stock Exchange. The London Agreement provided a welcome lever with which to raise public confidence in Stock Exchange securities, and, although there is already a good deal of bitter feeling in connection with the proposed German loan, the hub of the Dawes plan, the signature of the Pact is undoubtedly exercising a favourable influence in the way of restoring courage to the monied public. Speculation has occupied itself a good deal with gambling in German and Prussian bonds. It has taken a mild hand in the oil market, though not to any marked extent. It is certainly playing an active part in the rises which occur almost every day amongst tea shares, and it gives an occasional touch of buoyancy to shares in the mining markets connected with tin. A little investment in Home Railway stocks has had a disproportionate effect upon prices, and remarkable rises in brewery stocks and shares can be traced to people who know, as a rule, what they are doing, and who pay for stock which they buy. Some of the general business has emanated from the Continent, and there was, besides, a good deal of interest taken by the provinces in London stocks and shares. Official and other optimisms in regard to a trade revival are regarded in the Stock Exchange as being polite hostages given to the future. In spite of published figures, the Londoner admits scepticism of any probable increase, on a large scale, of trade in the ordinary industrial circles. This has its direct effect upon prices of investment securities, and although the War Loan, with its satellites, is inclined to be dull in consequence of the possibility of a General Election next winter, the markets for good industrial and sound foreign stocks are finding that the public want their wares, and are prepared to pay for them at rising prices. If the fear of an early General Election becomes widely spread, the effect will be to lay a check upon the strength of the general markets round the House, because the first thing which will leap to the mind of the speculator is the possibility of the Labour party being returned to power with a real working majority as against the present narrow margin of safety. The Stock Exchange enters hopefully, however, upon September, and the autumn bristles with points of interest. The fact of August having produced an unusually large amount of business, to a good many of the markets, is regarded as an augury of increased activity when the holidays are over.

Collecting Austrian Debts.—The Board of Trade announces that the Administrator of Austrian Property has under the powers conferred upon him by Section I. (xiv.) of the Treaty of Peace (Austria) Orders, 1920-1923, and with the approval of the President of the Board of Trade, prescribed September 15, 1924, as the final date by which proofs by British nationals of debts due to them by Austrian nationals, or of pecuniary obligations of the Austrian Government under Article 248 of the Treaty of Saint Germain-en-Laye and other claims by British nationals against the Austrian Government, must be made in order to rank for payment of the fourth dividend to be declared by him. It will be recalled that February 7, 1924, was the final date by which such proofs had to be made in order to rank for payment of the third dividend, but creditors who failed to lodge their proofs of claim with the Administrator by that date will, if they do so by September 15, 1924, be entitled (subject to what is stated below in regard to claims under Article 248 of the Treaty) to rank for payment of the dividends out of assets remaining after payment of the third dividend, before the assets are applied to the payment of the fourth dividend. In accordance with the rule made by the Administrator, on February 5, 1923, claims under Article 248 of the Treaty can only be admitted to rank at all for dividend if the proof was lodged before March 31, 1923, or if the time for lodging the proof is extended by the Administrator, who has power to grant an extension until two months after the claimant became aware of the existence or amount of the claim where the claimant only became aware of its existence or amount at a date subsequent to March 1, 1923. Claims lodged after September 15, 1924, will, if accepted, be permitted to rank only against any surplus of the above-mentioned Austrian assets which may remain over after payment of the said fourth dividend. The prescribed forms of proof of claim may be obtained on application to the Administrator of Austrian Property at Cornwell House, Stamford street, S.E. 1.

The Greek Budget.—Our Athens correspondent writes:—In a statement to the Press the Minister of Finance has dealt at length with the financial situation. He shows that the deficit for 1923-1924, estimated originally at 2,683 millions, and subsequently increased to 3,038 millions in consequence of additional credits, is expected to amount finally to 1,316 millions only, or 1,722 million drachmæ less than the anticipated sum. The reduction is due on the one hand to greater receipts from revenue than the amount budgeted for, and, on the other hand, to economies in expenditure made possible after the signing of the treaty of peace. Ordinary revenue not only covered ordinary expenditure, but to a large extent contributed also to the payment of extraordinary expenditure, to which the final deficit is exclusively due. The extraordinary expenditure necessitated by the state of war since 1920 amounts to no less than 7,732 millions, and is analysed as follows:—

	Millions of Drachmæ
Credits for the War Office.....	5,803
" " Ministry of Marine	956
" " Refugee Relief	479
" " Refugee Settlement	250
" " Soldiers Families' Relief	244
In all	7,732

Part of this amount, or 6,042 million drachmæ, was provided for by loans, and the balance by ordinary revenue. The sums expended on refugee account do not include the amount disbursed by the Refugee settlement Commission out of the advances of £2 millions obtained from the Bank of England and the Greek banks. The Minister further emphasised the fiscal effort made by Greece, which enabled her not only to pay part of the war expenditure from real revenue and to maintain the service of her domestic and foreign debt, but even to increase, during the war period, the interest paid on the latter. As regards the current,

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

BANKERS TRUST COMPANY

16, WALL STREET, NEW YORK
PARIS OFFICE
3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

year, the original estimates, as subsequently modified, provide for:—

	(In Millions of Drachmæ.)	Revenue.	Expenditure.	Surplus (+) or Deficit (—).
Year 1924-25.				
Ordinary.....	3,458	2,906		+ 552
Extraordinary	500	1,569		— 1,069
Totals	3,958	4,475		— 517

A decrease of 799 millions in the deficit is thus expected. Extraordinary expenditure includes the following items which are considered as quite exceptional:—

	Millions of Drachmæ.
War Office	288
Marine	231
Refugee Relief	221
" Settlement	5
Exchange of populations	16
	761

Recent increases of pay to Army and Navy officers, and promised increases to Civil officials, the Minister expects to meet by a restriction of their number, by amendments in various taxes, and by drastic economies in the administrative departments. As compared with the returns for the past year, estimates for this year show a slight decrease in revenue, due to a decline in revenue from extraordinary sources. However, receipts for the current year are expected, on the basis of the returns for the first four months, to exceed those of last year. Moreover, the surpluses due to the Government by the International Financial Commission for the first half-year of 1924, from the revenues assigned for the service of the loans under its control, amount to 284 million drachmæ and £19,322 as against 29 million drachmæ and £50,146 for the second period of 1923. The Treasury, besides, has a cash balance of 434,500,000 drachmæ, 4,300,000, and £60,600. On the other hand, estimated expenditure for the current year shows a decline of 903 millions, as compared with the actual expenditure for the previous year.

Australasian Exchange and Currency Problems.—At the annual meeting of proprietors of the Bank of New Zealand, held on June 20th last, at Wellington, New Zealand, Mr William Watson, the acting-chairman of directors, made some pertinent observations on exchange and currency matters. Mr Watson, after having reminded us that, "owing to the fact that gold has ceased to function as currency, and to the existing export and import conditions, the difficulties of the exchange position between London and New Zealand, and New Zealand and Australia, have become intensified," proceeded to point out that "the present rate of 2 per cent. for purchasing sight drafts on London is unusually heavy for this Dominion, although light compared with the exchange burden borne by many other countries—the Australian rate, for instance, is 17s 6d per cent. higher," and added that "it is fortunate that the better prices now ruling for most lines of produce much more than counterbalance the adverse exchange." He mentioned that "the transfer of surplus funds from London to Australia, where money is greatly needed to settle the adverse balance of our trade with the Commonwealth, has of late been effected on extremely un-

avourable terms to us, so that the purchase in New Zealand of exchange on London is by no means so profitable as some critics appear to think. The question of exchange is so interwoven with that of currency, and the two are so complicated that those who have lately expressed impracticable views may perhaps be excused" (the italics are ours). Mr Watson proceeded: "The highest authorities have stated that, in England, currencies are necessarily limited, and I have told you in my remarks on note circulation that the currency is here regulated to the necessities of the position, but in such a way as to avoid inflation. Had the suggestion for an Empire currency been adopted it is difficult to see how inflation could be locally controlled; this is but one of the objections to that measure." Emanating, as they do, from an authoritative quarter, we anticipate that these remarks may give rise to considerable discussion. Mr Watson then went on to contrast the exchange and currency problem of New Zealand with that of Australia. He pointed out that, "Whilst in New Zealand the exchange question alone presents difficulty, Australia has for some time past experienced even higher exchange rates than the Dominion, and has also suffered from a shortage of currency. The note issue there is in the hands of the Commonwealth, being conducted by the Note Issue Department of the Commonwealth Bank under a special board of directors. The Note Board has recently decided not to make any further issues of notes even in exchange for an equivalent of sovereigns. It is understood that the reason for this is a belief, or fear, that such an increase in the note issues would lead to inflation. A restriction of production, commerce, and trade is the natural outcome." Raising the question of State versus private control of note issues, this banking authority asked: "Can the same stability, combined with elasticity, be expected from a State note issue controlled by a political party?" and replied to his own question: "Our Australian branches, as well as the other banks and the public there, and to a certain extent here also, have felt the effects of the restrictions of the Commonwealth currency; while, on the other hand, examples are only too common in other countries of changes in Government leading to excessive State note issues with all their concomitant evils." The acting chairman of the Bank of New Zealand concluded: "Banks, more than the public, suffer from an excessive State note issue, for the public retain in their possession only as much cash as is needed for pocket money, the surplus being paid into the banks. Therein lies the danger of such an issue in the British Empire, the only remedy for which would appear to be that, failing repayment in gold by the State, the banks as note holders should have the right to demand British Government securities of an equivalent market value in exchange for surplus notes. It would, of course, be no safeguard against an excessive issue if the State could redeem its notes in exchange for its own bonds."

Scottish Co-operative Trade.—That the trade of co-operative societies is returning, after the great slump of the last two years, is evident from the report of the Scottish Co-operative Wholesale Society for the half-year ended June 28th, and from the intention of the directors of the larger Co-operative Wholesale Society in England to pay a dividend of 2d. in the £ on purchases for the half-year just closed—an intention that will be recommended to the delegates at the October meetings. For the first six months of this year the turnover of the Scottish C.W.S. was £8,540,960, of which £7,783,468 was with the 273 retail societies in membership, and £550,709 with 73 other societies, mostly agricultural, that do not hold shares, the remainder being with the English C.W.S. These figures were an increase of £222,249, or 2.7 per cent. From the society's own works the supplies were £2,697,891, an increase of 4.9 per cent. There was an available balance, after paying interest, &c., of £168,323, from which a dividend of 4d is being paid on the purchases of shareholding societies, and of 2d. in the £ on the trade of non-members. In the corresponding six months of 1920 the sales rose to £14,801,915, subsequently steadily descending to £8,318,710 in the first half of last year. In the second six months they increased by 5 per cent., and the present

advance of 2.7 per cent. continues the reviving tendency. The payment of a dividend of 4d brings the amount to the 1920 return, since when it has been 2d and 3d. The distributive expenses of the society for the past half-year were 8 per cent., the figure to which they rose, from 4 or 5 per cent. for 1916-1920, in 1921.

Petrol Production and Prices.—It is said that a fall in the price of petrol in this country is imminent. On February 2nd of this year the price was advanced by 4½d and by 4d respectively to the present levels of 1s 11d per gallon retail and 1s 8d per gallon wholesale for the No. 1 grades. It is not to be imagined that a fall in price to-day is being brought about by the competition of "pirate" companies, seeing that that competition is still only a fraction of the trade of the big distributing companies. It is being brought about by economic considerations of far greater force. The half-yearly figures recently issued by the United States Bureau of Mines clearly bring out the fact of over-supply in the American gasoline (petrol) market. As nearly 80 per cent. of the world's petrol is manufactured in the refineries of the United States, world conditions may be taken as being governed by the American. The figures are as follows:—

U.S. GASOLINE (PETROL) STATISTICS OF U.S. BUREAU OF MINES.
In U.S. Gallons (000's omitted).

1924.	Production.	Imports.	Exports.	Domestic Consumption.	Stocks at End of Month.
January....	695,322	19,309	88,823	498,160	1,202,547
February..	677,740	5,189	103,546	407,709	1,374,221
March.....	743,248	1,044	85,090	462,020	1,571,404
April	754,773	7,627	116,941	762,400	1,607,786
May.....	780,194	14,265	96,879	794,459	1,647,359
June	737,080	13,828	115,330	686,674	1,598,858

It will be found that for the six months the production and imports of gasoline, amounting to 4,461,803,945 gallons, increased by 18 per cent. over those of the corresponding period of 1923, while consumption and exports, amounting to 3,937,845,376 gallons, increased by only 15 per cent. From the end of December, 1923, to the end of June, 1924, a surplus of 523,958,569 gallons was added to the already swollen stocks of American gasoline. Such was the extent of the over-production. Considering the general conditions of trade, it is remarkable enough that consumption and exports of gasoline should have increased by so much as 15 per cent. The fact that stocks of gasoline were actually reduced during June by 51,000,000 gallons is a reassuring sign, especially as consumption in July and August is said to have been well maintained. But there is no indication that the new supply of gasoline is diminishing. The production of crude oil, from which the gasoline is manufactured, is steadily increasing, and is now keeping over the level of 2,000,000 barrels a day. If a large proportion of this huge daily output of 2,000,000 barrels were "flush" production from newly discovered pools, which would be likely to decline, there would be some ground for the belief that the economic position is righting itself, but, unfortunately for the oil industry, the flush production of last year's pools is largely over, and an increasing proportion of the crude oil production has become what is called "settled" production. Export prices of American gasoline have not yet shown a serious decline, but tanker freights have fallen considerably. In February last the voyage charter rate for a "clean" tanker (i.e., a petrol or kerosene tanker) had risen to 52s 6d per ton, but rates have so far fallen that it is now possible to secure "clean" tankers for the voyage from the Atlantic ports of America to this country, and the considerations which may cause the big distributing companies to consider reducing the price of petrol in this country. A reduction in the near future of 3d or 4d a gallon is not unlikely.

The Canadian Railway Position.—Our Ottawa correspondent writes:—The railway situation is once more a source of embarrassment and anxiety. During the early months of the year the seaward movement of the heavy grain crop of 1923 kept traffic returns very good—indeed, appreciably higher than in the parallel months of 1923,

but about the middle of April there began a sharp downward curve which has not been checked. Since it is practically certain that the exportable surplus of wheat will be at least 150 million bushels less from the 1924 crop, the coming months will further aggravate the decline, and Sir Henry Thornton, the President of the Canadian National Railways, has already prepared the public for a substantial increase in the deficit on the enterprise of which he has charge. Moreover, a grave muddle has developed in connection with what is known as the Crows' Nest Pass agreement. In 1897 the Laurier Government drove a sharp bargain with the Canadian Pacific Railway when the latter was in need of subsidies for the construction of an important branch line in the West. In return for that subsidy the company agreed never to raise above a certain maximum level east-bound rates on grain, west-bound rates on a number of commodities vital to the farming interest. The serious disturbance of economic conditions created by the war forced a temporary suspension of this agreement, as otherwise the railways could not have paid their way. After the war ended there was a partial restoration of the terms of the agreement, but the Progressives kept up a constant pressure for its full revival, and at the end of the last session the King Government yielded to their demands, and by refusing to renew the suspensory legislation, brought back the agreement in full force. The Canadian National system was not included in the bargain, but it is automatically compelled at all points where it competes with the C.P.R. mileage of 1897 to apply Crows' Nest Pass rates. But since 1897 the C.P.R. had added thousands of miles of trackage, and the agreement does not apply to the new mileage. The result is that gross inequalities of rates now prevail on both systems. One shipper, whose loading point is on the C.P.R. mileage of 1897, has a certain rate, while another 20 miles distant must pay a considerably higher scale. This patent discrimination has inevitably generated a great deal of discontent and confusion. The railways contend that the Crows' Nest Pass rates are quite inadequate in view of the existing prices of labour and material, and the Cabinet have fixed a day to hear the arguments of their counsel for a further review of the whole position.

LEAGUE OF NATIONS: THE PROGRAMME FOR THE ASSEMBLY.

(FROM OUR GENEVA CORRESPONDENT.)

August 27.

THE League of Nations Assembly opens at Geneva on Monday next, under the temporary presidency of M. Hymans, the Belgian Foreign Minister (as chairman *pro tem.* of the Council), until the Assembly elects its own president. What the meeting will produce this year is on the knees of the gods, but there is no doubt about what its main preoccupations will be. What is in doubt is how far the principal States are ready with definite and precise proposals, which may be finally shaped. This main pre-occupation, of course, concerns security and the reduction of armaments.

As I anticipated in my last letter, the majority of Governments, both inside and outside the League, have for one reason or another declined to accept the Draft Treaty of Mutual Assistance in its existing form. With the exception of France, which would require changes, the principal Powers in the world, England, America, Russia, Germany, and Japan, have rejected it. It must be assumed that the Draft Treaty is dead. But Mr MacDonald and M. Herriot are coming to Geneva to discuss the whole problem. Nothing precise has yet been made available as to what their intentions are, but it scarcely seems possible that either of them can afford to make an appearance without a prepared contribution to the discussions.

There has been a good deal of gossip, some of it apparently unfounded, but a line of approach attributed to Mr MacDonald seems not without some hope of progress. It seems fairly generally accepted that, in some form or

other, he will advocate a firmer establishment of the jurisdiction of the Permanent Court of International Justice in international life, and a tightening up of the processes of peaceful settlements in order as far as possible to broaden the basis of peace.

There seems no reason why a step in this direction should not meet with general acceptance with demilitarised zones, and so far as the ultimate provision for failure to observe these peaceful processes is concerned, there is no obvious reason why any special action should be required, always provided that it is made perfectly clear that the British and other Governments, as signatories of the Covenant of the League, regard this Covenant which they have signed as an honourable obligation. This involves the ultimate consideration of the use of at least the economic and financial blockade.

Even if it is not found possible to reach agreement on sanctions, it would be an entirely logical and certainly valuable step to underline and extend in every possible respect the processes of peaceful settlement, for eventual security and reduction of armaments depend fundamentally upon the better organisation of methods of peaceful procedure. The greatest contribution that any State, America included, can make to the problem of the reduction of armaments and security is to lend all possible assistance to the friendly settlement of political differences. There are no short cuts. Other cognate questions of great importance, such as the control of the traffic in arms and of the procedure for the military control of Austria and Hungary (which is quite properly regarded as having in prospect application later on to Germany), are on the agenda.

Agreement has already been reached in one of the League commissions, with the co-operation of the American Minister in Berne, on the control of the traffic in arms. This draft convention, which is to come before the Assembly, is aimed at replacing the St. Germain Convention, to which the Americans raised objections, and they were invited to co-operate in the drawing up of other regulations to take its place. There should, therefore, be no difficulty in coming to some final conclusion on this subject. The armaments control in Hungary and Austria is a more thorny subject, as it will be discussed from the point of view of its relation to control in Germany. The danger to be avoided is that the League should be engineered into a position in which it might be called upon in the exercise of control to discriminate between Germany and the members of the League. This would be serious now, but still more serious when Germany becomes a member, and it is to be hoped that the British Delegation is not unaware of this side of the matter in its quite natural desire that as many questions as possible should be internationalised instead of being left in the hands of a few powerful States. All-round control is the solution. So far as the organisation of the League's obligations are concerned in relation to Austria and Hungary, there is, I understand, a report being presented to the League by its commission of military advisers.

During the Assembly period the League, through its Council, will also have before it the subject of the Mosul frontier between Iraq and Turkey. It is understood that the Turkish Government raises no objection to this question being placed on the Council's agenda, and is prepared to send a delegate to participate in the discussion, provided certain conditions are fulfilled.

There was an expectation that after the ratification of the Treaty of Lausanne, Turkey would apply this year for League membership. The reference of Mosul to the League may possibly make her hesitate to do so this year, and this would be unfortunate. Incidentally, with regard to admissions to membership of the League, there is still a sporting chance of the Argentine Republic definitely resuming its place at this Assembly, and of an application from Ecuador. Whether Egypt will apply is doubtful, and Germany probably has enough on her hands in getting through the Dawes legislation, without complicating the issue by a proposal for application for membership of the League.

The mere presence, however, of the French and English Premiers, of the Foreign Ministers of Belgium, Czechoslovakia, Poland, Yugoslavia, Roumania, Sweden, Holland, and other countries, is giving the character of

the Assembly greater importance than hitherto. It may not produce final results in some of the more serious problems to which reference has been made, but it can hardly fail to trace the lines of progress and study.

Apart from these, there will be a general review of a vast number of activities in many fields of international life; attention will be devoted to the financial reconstruction schemes in Hungary and in Austria, with a number of economic problems, the final touches will be given to the preparations for the two opium conferences to be held in Geneva in November—a subject which is attracting the close co-operation and attention of the United States—and altogether there will be a very full programme of work of interest to a great many strata running across international life—a programme which is only possible in a permanently and regularly organised institution like the League.

The Assembly will also have an opportunity of varying the constitution of the Council in the selection of the six non-permanent members, but it is doubtful whether there will be any radical change.

UNITED STATES.—EFFECT OF DAWES PLAN ON TRADE AND INDUSTRY—MONEY AND BANKING CONDITIONS—HEAVY NEW ISSUES—BUSINESS REVIVING GRADUALLY.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 19.

THE Department of Commerce believes that stabilisation of the European economic situation will bring a revival of world trade in which the United States will share to a large extent. This opinion is expressed in a survey, prepared by experts of the Department, of the results that may be expected from the practical operation of the Dawes plan. The conclusions reached in the Report, which covers various branches of trade and industry likely to be affected, are summarised by Alan G. Goldsmith, chief of the European division. While the forecasts generally are optimistic, emphasis is laid upon the fact that it will take time for the situation to readjust itself. The adoption of the Dawes plan, he remarks, is "perhaps the greatest effort since the war to bring about stabilisation in Germany and economic reorganisation in Europe as a whole." One result, he points out, will be increased exports of European goods, which will cause sharper competition in outlying markets; at the same time, however, the consuming public will be increased throughout the world, particularly in European areas which heretofore have been disturbed, and the greater demand for merchandise and commodities will lead to a general rise in the standard of living. According to this survey, "Europe now takes one-half of all American exports, and ships to the United States one-third of all goods imported here for domestic use. Leaving out the broader aspects of the problem, it is only reasonable to believe that we could not help but benefit by an improvement in our best market area, which consumes so great a volume of our goods in proportion to those it ships to us." Commenting on possibilities for trade increases with markets other than European, the Department of Commerce says that "if Brazilian coffee, for instance, can be shipped to Europe in pre-war volume, sales of American automobiles, machinery, and textile products to Brazil should be stimulated. Similarly, if Europe can consume increased quantities of Chilean nitrates, American manufacturers and exporters should get their share of the increased business resulting from the higher purchasing power in Chile." Revival of business in Europe, the survey continues, "will naturally stimulate American exports of cotton, grain, meat products, petroleum, copper, lumber, and many other staple commodities."

The Department experts express the opinion that it does not directly concern the American trader whether or not Germany will be able, through her increasing exports and services, to accumulate foreign credits sufficient to transfer payments to the extent anticipated in the Dawes plan. They believe, however, that stabilisation in Germany will probably mean an increase of Germany's consumption, not only of American goods, but of goods of other nations purchasing American commodities. Ger-

man competition, they declare, will be on a stable financial basis with relation to other countries; industry will be bonded as heavily as in pre-war days, and taxation in Germany will be commensurate with that prevailing in competitive countries. These factors will put trade on an equitable basis, it is contended, and it seems plausible that American exporters will be able to meet foreign competition, particularly German, without fear of artificial advantages granted to their business rivals. As to the iron and steel industry, the Department of Commerce considers the outlook encouraging. Good results may not be visible immediately in the shape of increased world production of iron and steel, but enhanced German and other European purchasing power, it is thought, will unquestionably augment demands for such products.

Investment demand for bonds continues broad and active, reflecting further efforts to find employment for the enormous accumulation of surplus funds. Prices of standard issues generally are holding well at close to the top levels of the year, but speculative bonds have lately declined somewhat under profit taking, while foreign Government obligations, particularly European, seem to have reached their peak a while ago on the present upturn, and in the past few days have receded slightly, owing partly to the reaction in foreign exchanges. Although trading in outstanding bonds is still heavy, interest centres largely in issues of new securities which in most instances find a ready market. In fact, the market's ability to absorb such offerings appears almost unlimited. The recent issue, for instance, of \$75,000,000 Baltimore and Ohio Railroad first mortgage 5 per cent. bonds, due July 1, 1948, priced to investors at 98½, and interest to yield more than 5.10 per cent., was entirely taken in advance of the formal public offering, which was made merely as a matter of record. Many other large domestic railroad, industrial and public utility issues, mostly bonds, have been floated readily, and in numerous cases largely subscribed before the formal offering. Foreign Government issues are figuring prominently in the new financing. One of the most successful of these issues was the new Japanese loan recently placed here, consisting of \$22,000,000 external three-year 6 per cent. gold debenture notes of the Industrial Bank of Japan, Limited, unconditionally guaranteed, both as to principal and interest, by the Imperial Japanese Government. An unusual feature of this financing is that under the terms of the loan it is expressly stipulated, in substance, that the notes are payable in time of war or peace, irrespective of the nationality of the holder and without any declaration as to citizenship. This rather unique phraseology is believed in some quarters to have been adopted to allay any apprehension that investors might have had concerning future relations between the United States and Japan because of the Japanese exclusion provision in the new immigration law which became effective July 1st. The notes, which are redeemable beginning August 15, 1926, upon 30 days' notice, were offered for public subscription at 99½ and interest to yield approximately 6.27 per cent.; the subscription books were closed immediately after opening. More than double the amount of the offering could have been sold easily. Another foreign issue which was quickly placed and advertised as a matter of record only was the offering of \$3,065,000 Republic of Bolivia external 25-year secured refunding 8 per cent. sinking fund gold bonds, not callable before May 1, 1937. They were sold to investors at 93, and accrued interest to yield about 8.70 per cent. Some idea of the enormous amount of new financing done in this market recently may be gained from the fact that since June 1st more than \$840,000,000 bonds have been offered to the public, and as indicated there is no slowing up in the output or in the investment demand. While many new issues are being brought out almost daily, the prospective German loan is attracting a great deal of interest. The general view seems to be that the bonds will be 7's or 7½'s, and will be offered at some discount. Should the German loan be floated successfully, it will probably be followed by numerous smaller pieces of foreign financing.

For a long time past every month has witnessed a further influx of gold into this country. During July the amount brought in, namely, \$26,767,662, was the smallest monthly total of the year to date, but it brought

the addition to gold stocks here since January 1st up to \$270,283,040. On August 1st the total amount of the yellow metal held in this country reached \$4,517,483,901. According to the latest compilation of the director of the Mint, the world's stock of monetary gold is placed at \$9,210,007,000. It is apparent, therefore, that the present holdings of the United States constitute approximately 50 per cent. of that total. The further reduction recently in the New York Federal Reserve Bank's rediscount rate to 3 per cent. brings that rate down to the lowest of any central bank in any country. With such an immense stock of gold, abundant credit, a 3 per cent. Reserve Bank rediscount rate, time funds on Stock Exchange collateral readily obtainable at 2 to 3½ per cent. depending upon maturities, and call money in excessive supply at 1½ in the outside market and at 2 per cent. on the Stock Exchange, it is not surprising that other countries are turning more and more to the United States for funds. The extraordinary easiness and abundance of money is really proving quite embarrassing to New York banks, but under present conditions they are powerless to alter the situation, since gold continues to pour in, and trade and industry have not yet recovered sufficiently to affect commercial borrowing to any appreciable extent.

Trade and industry generally show a gradual tendency to revive, but the improvement is more noticeable in sentiment than in actual business expansion. As one authority puts it, "better feeling is more apparent than better buying," except that there has been a steady increase in purchasing for autumn needs in Western and North-Western agricultural sections on account of good yields of, and higher prices for, wheat. Conditions in different trades and industries still display considerable irregularity. Shoe and leather industries in the East are gradually picking up, and the iron and steel trade is somewhat more active. The decrease of only 75,433 tons in the United States Steel Corporation's unfilled orders during July was much less than had been expected generally. Renewed buying of lumber on the Pacific Coast is reported, and building throughout the country continues active; the total expenditure involved in July building permits showed some falling off from June, but a slight gain over July a year ago. A small increase is noted in automobile operations, but buying of textiles, particularly cotton goods, has slackened after the recent spurt.

FRANCE.—VIEWS ON THE LONDON AGREEMENT—COMMERCIAL TREATIES AND BRITISH INDUSTRIES—THE POTASH AGREEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, August 27.

LIKE all compromise settlements, the agreements arrived at by the London Conference have been received here with an entire absence of enthusiasm. At the same time, there is undoubtedly a deep feeling of satisfaction that, poor as the results are generally regarded by French opinion, a settlement has really been come to which contains within it the potentiality of bringing about a better state of relations between France and Germany in the future. On reflection, after the first feelings of irritation at the renewed diminution of the French claims to reparations had subsided, it has been generally recognised that the wisest policy is to accept the terms of the London agreements as the only alternative to a refusal which must inevitably plunge the countries most interested into worse chaos than ever. The long drawn out debates in both Houses of Parliament have really constituted, on the part of the supporters of the previous Poincaré Government, more an attempt to prove that, but for the policy which resulted in the occupation of the Ruhr in January, 1922, Germany would never have been brought to accept the present settlement, than anything in the way of determined opposition to ratification of M. Herriot's work in London. The outstanding thesis of M. Poincaré's own five-hours' speech in the Senate, as a matter of fact, was not that the London agreements are detrimental to French interests, but that the conditions now to be applied are so much more favourable to this country than any previous British proposals that the Poincaré Government has

been justified by the terms now agreed upon in all its previous opposition to suggested settlements.

From the point of view of French economic interests, one of the most satisfactory features of the London settlement is that the problem constituted by the fact that, while France has an abundance of iron ore within her eastern frontier, the coal necessary to its utilisation lies on the other side of the line, has now been solved for many years to come. Under the Treaty of Versailles, Germany is under the obligation to furnish France with coal and coke until 1930. By the terms of the London agreements France is assured, in principle (although I believe no tonnage is mentioned in the text), of receiving supplies of fuel from that source for another 35 years. The importance of this fact can scarcely be overrated. The French coal deposits, it is notorious, are inadequate for the country's needs. Germany, before the war, stood next to Great Britain as a source of fuel for French industry. The French metallurgical industry was dependent on German coke for more than half its requirements. The French collieries are now producing, thanks to the output of the Lorraine mines, at the rate of about 44 million tons per annum, or about five million tons more than before the war, which quantity will almost certainly increase in the near future as the mines in the north which were wrecked during the war return progressively to full producing capacity. The 5,000,000 tons furnished by Lorraine, however, is only a paper increase, as the consumption of Alsace and Lorraine alone exceeds that quantity. The real situation during the first half of 1924 may be summed up in the statement that during that period France consumed 50 per cent. more coal than she produced; in other words, her consumption during the present year will amount to around 66 million tons, whereas her own mines will yield only 44 million tons. The situation in regard to metallurgical coke is exactly similar. The difference must be made up either from Germany or Great Britain, or from both. In any case, whatever supplies are procured from Germany in the future can only be prejudicial to the British mining industry. The announcements that the international miners' committee and the executive committee of the British Miners' Federation are protesting against any further payment of reparations in coal are significant.

It is difficult to ascertain, from inquiries in political circles here, how much foundation there is for Mr Snowden's "warning" to British industrial interests to the effect "that the latter would be seriously prejudiced by 'the proposed commercial treaty between France and Germany,' 'the draft' of which, the Chancellor states, 'proposes to compel Germany to admit free of duty goods from Alsace-Lorraine which are in keen competition with British manufactures.'" Mr Snowden is apparently ignorant that, under Article 268 of the Versailles Treaty, Germany agreed to do this very thing for a period of five years, which will expire on January 10th next. The

object of this article was, of course, to benefit the industries of Alsace-Lorraine, which before the war were included in the German Zollverein and naturally found their best market within the German frontiers. On the re-incorporation of Alsace-Lorraine in the French State, there was every reason to fear the German market would be entirely lost to it, unless special measures such as those represented by Article 268 were taken. The benefit Alsace-Lorraine has derived from this paragraph in the treaty has been very mediocre. The quantity of any category of merchandise to be admitted to Germany free, it was stipulated in the Treaty, must not in any case exceed the average annual quantity purchased by the rest of Germany from the two provinces before the war. As a matter of fact the quantities of any class of merchandise which have been sold to Germany under the provisions of this article have been almost farcical, in comparison with pre-war absorption of the same goods. During the four years before the war Germany purchased 27,000 tons of woollen yarns from Alsace; during the past four years her purchases have totalled 3,700 tons. Her comparative purchases of other classes of products have been as follows:—

Products.	Totals During Four Year Period.	
	Before the War.	Since the War.
Cotton yarns	65,000	19,000
Building timber	175,000	30,000
Leather belting	35,000	900
Cement	597,000	25,000
Iron and steel	6,000,000	700
Machinery	27,000	2,000
Salt	237,000	1,430

The French proposal is that Germany (in return, naturally, for reciprocal advantages of some kind) shall agree to continue the existing arrangement. It is difficult to see how such an agreement could result in seriously prejudicing British trade.

As to any general commercial agreement between France and Germany, French opinion regards such a treaty as perfectly in the natural order of things. It is taken for granted here that the near future will see the conclusion of a large number of commercial treaties between nation and nation, in every direction, if only for the purpose of replacing formerly existing conventions that were denounced during the war, as a matter of mutual convenience in many cases, in view of the complete change of circumstances produced by the great upheaval. A Franco-German trade agreement will obviously be included among them.

A significant instance of the probable future relations between France and Germany is afforded by the agreement that has just been entered into between the representatives of the potash industry in the two countries. Before the war, it will be recalled, Germany had a practical monopoly of the potash market, as her frontiers included the whole of the European potash deposits. The German monopoly was so clearly defined that on one occasion a few years before the war, the Berlin potash barons suddenly notified their customers in the United States, who were (and still are) absolutely dependent on Europe for this commodity, of a very substantial rise in their selling prices. The American consumers protested vigorously, but in vain. In 1923 European deliveries of potash to the United States totalled 200,000 tons, valued at some \$15,500,000. This handsome revenue was shared last year, however, between the owners of the German beds in Saxony, and other parts of Germany, and the new owners of the deposits in Alsace, in France. In alarm lest their former monopoly might vanish in the future through competition between the two nations who now share the world's potash beds, the German potash interests have just entered into a three years' agreement under which they will share the American market with the owners of the Alsatian deposits. The German companies will meet 62½ per cent. of the American demand, and the Alsatian beds will be drawn upon for the remaining 37½ per cent. The price for the three years has been fixed on the basis of \$27. It is believed here that this satisfactory solution of one of the most delicate problems involved in the question of the future relations between Germany and Alsace-Lorraine will be followed before long by similar ententes between the industrial groups on the two banks of the Rhine, who are interested in the metallurgical, textile, and other industries.

GERMANY.—REPARATIONS—FINANCES—BANKING—INDUSTRY AND TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 26.

THE Cabinet up to the time of writing has not succeeded in securing the Reichstag's acceptance of the Reparations settlement. From the Communist party apparently only obstruction can be expected, and the German-Nationals have so far said no. Nevertheless, the public and business circles try to believe that the vote will be favourable; and this sentiment is shared on the Bourse. The Bourse is undoubtedly for the time being entirely under the influence of Reparations prospects, yet on the whole quotations have held well since the London settlement was followed by the Berlin uncertainty. All public manifestations are for the Cabinet. The leading industrial and commercial associations have proclaimed for acceptance, though most of them declare that their motive is fear of the result of rejection, and not contentment with the terms. The Cabinet has declared that if necessary the London agreement will be signed on Saturday, and the Reichstag's sanction obtained later. This can be constitutionally done. The ambiguous policy of the German-Nationals indicates that they fully realise how public sentiment lies. Although in two party resolutions and one Reichstag declaration the party has said no, all three pronouncements left loopholes for withdrawal; and the latest hopeful feature is that the leader, after declaring that his party as such would vote against the bills, now declares that no compulsion will be put on individual members. Further, while the party at the last moment is trying to make its acceptance conditional upon the making of alterations in the now settled scheme, it has secretly negotiated with the Volkspartei for its entry into the Cabinet on conditions which do not concern the Reparations scheme at all.

The Reichsbank President has warned the Reichstag Foreign Affairs Committee that severer credit restrictions and an abandonment of the plan to convert the Rentenbank into an agricultural bank, would result from rejection of the Dawes plan, and that there would be no hope of an inflow of foreign capital. In addition to the Industries Charge Bill, creating the industrial bonds, the Cabinet has submitted a Contribution Bill which distributes the burden of payment of interest and amortisation charge upon a broader basis. This is purely a domestic measure. Whereas the bonds fall on industry only, here being included mining, shipping, and private transport, concerns in these classes, with a property tax capital assessment of under 50,000 marks, being free, the Contribution Bill makes trading, banking, insurance, and hotel industry concerns assessed at over 20,000 marks, liable for interest on and amortisation of the bonds; but on these classes of contributors are not imposed any bonds, and they are not obliged to give any other form of security. An official estimate of the condition of the State railways on October 1st next shows debts totalling 150 million marks, of which 83 millions are to the Republic in shape of Rentenmark credits, unpaid taxes, and credits for redemption of railway emergency currency; and assets of 682 millions, of which 500 millions are stores and supplies, 160 millions cash, and 22 millions claims.

The discussion in England concerning impending trade treaties attracts much attention here. Business circles are not inclined to believe in the possibility of any closer association with French industry than would obtain under ordinary commercial treaties, and the recent iron, steel, and machinery figures indicate that Germany, working alone, is not likely, even under the pressure to export supplied by the Reparations scheme, to become a first-class competitor for a long time to come. The heavy metal trade balance is hopelessly passive, and though machinery exports largely exceed imports they have fallen badly since before the war.

The new Franco-German potash agreement has given colour to the stories of approaching general trade collaboration between the two countries. This industry, owing to the practically complete monopoly of the two countries taken together, is, however, in a special position. The agreement, which covers only the United States, and is for a term of three years, was forced on Germany by

the increase in French production and export. Reliable details are not published, but it is stated that France is to have a three-tenths share in sales to the United States; and that the export price is to be \$30 per ton of pure potash, less 10 per cent. discount, c.i.f., an American port. The French have progressed much since the Basel potash conference of 1922, when the Germans negotiated on the basis that the 17 Alsace works had formerly had a share of only 7.5 per mille in the Potash Syndicate, and offered the French double this proportion of the sales to America. French figures for the Société Commerciale des Potasses d'Alsace show production in 1923 of 248,528 metric tons of pure potash (K₂O), as against 148,937 tons in 1921. An enlargement of the new agreement to cover other potash-importing countries is expected. Meantime, the concentration movement in the German industry is continuing.

The Finance Ministry's report for the ten days, August 11th-20th, show receipts 173,717,800 gold marks, and expenditure, including 473,600 gold marks for redemption of gold loan, 165,339,000 gold marks. Revenue in all July was 583,141,258 gold marks, against 472,296,794 gold marks in June. Receipts from Customs are increasing, having been 43,300,000 gold marks in the January-March quarter, 65,300,000 gold marks in the April-June quarter, and 27,200,000 gold marks in July. The 1924-25 Budget estimated Customs receipts at 160,000,000 gold marks, which would be only 53,300,000 gold marks for April-July, while the actual receipts were 92,500,000 gold marks. The cost-of-living index has now been unchanged, at 114, for three weeks. Prices of breadstuffs are still rising.

It is reported that July foreign trade, for the first time this year, shows an active balance. Figures are not yet published. There is a slight but distinct increase of activity in business, in particular in textiles and iron and steel. The prospects of the Leipzig Autumn Fair have improved. The textiles department of the Fair this year takes enormous dimensions. Exhibits from India appear for the first time. Iron and steel prices have risen slightly. There is an increased demand for half-finished material. The scrap-iron market, which is a barometer for conditions in the heavy iron and steel branches, has revived, and prices are rising. Orders for locomotives for Lithuania have been received. A census by the Miners' Union in sixteen coal, lignite, and iron-ore mining districts shows that nearly everywhere 8 to 8½ hours underground and 10 hours on the surface is now the normal working day, instead of the former 7 and 8 hours respectively. The number of miners so working longer hours is 723,800. In the Saar coal industry 7 hours underground and 7½ hours for surface work continues to be the rule.

Foreign trade in the first half of 1924 was (in thousands of gold marks):—

	Imports.	Exports.
Livestock	44,488	2,612
Food and drinks	1,033,705	150,682
Raw materials	2,004,495	170,000
Half-finished materials	440,661	181,155
Finished goods	924,304	2,315,137
Gold and silver	32,987	7,603

Totals..... 4,480,640 .. 2,827,279

The quantity figures are (in double-centners of 1-10th metric tons):—

	Imports.	Exports.
Livestock	518,381	12,743
Food and drinks	26,110,377	6,943,957
Raw materials	122,864,685	16,507,879
Half-finished ditto	16,760,324	12,182,970
Finished goods	7,863,013	18,446,293
Gold and silver	6,038	554

Totals..... 173,922,818 .. 54,094,196

Nearly 1,000,000 double-centners more of manufactured goods were imported than in the corresponding half-year of 1923, while the exports in this class declined by 3,000,000 double-centners. In value the export surplus of finished goods sank from 2,113,300,000 gold marks to 1,390,800,000 gold marks. Exports of chemicals, dyes, and textiles fell. Exports of aniline dyes were only 118,000 double-centners, against 156,000 double-centners in the corresponding half of 1923 (324,000 double-centners in the corresponding half of 1913). Exports of electrical

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEWART, Chief Manager.

articles were larger than before the war; and exports of print paper much larger—1,288,000 double-centners, against 366,000 double-centners in 1913.

The Bourse last week, considering the political situation, held well; yesterday it was firm, but to-day doubtful. The activity in public bonds continued last week; and foreigners bought both these and stocks. The *Frankfurter Zeitung's* index for the week shows an inconsiderable decline in average quotations of industrials. In a further list of 50 new gold mark balance-sheets, mostly of industrial concerns, the new gold mark capital is in most cases higher than the pre-war, this although the scaling down has, as a rule, been pretty severe. A calculation based on the present gold quotations of the unscaled-down shares, and the ratio of scaling down shows that the new gold mark shares in all but four companies out of fifty start with a Bourse quotation of below par, and in a few cases below 50. Before the war nearly all these shares quoted well above par. Investors therefore apparently do not believe that anything like pre-war dividends will be paid on the newly fixed capitals. Bond prices to-day were (in milliards of paper marks per 100 marks nominal):—War Loan, 849; Fours, 1,190; 3½ per Cent., 1,170; Threes, 1,650; Colonial Fours, 3,625; Prussian Threes, 1,575.

CANADA.—CROP SITUATION IN THE WEST—BUSINESS CONDITIONS—EXCHANGES—INDEX NUMBERS—G.T.P. DEBENTURES.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 10.

THE crop situation in the West has been a source of great anxiety during the past month, and it will not abate until the crop is safely garnered. Very cool weather which has prevailed on the prairies has checked the spread of rust, but it has also retarded the ripening process, and wheat cutting will not be general till the end of this month, which is three weeks later than last year. This postponement of the harvest makes the risk of damage from early frosts very great, and when temperatures fell at the end of last week the whole community in the West was in a state of deep anxiety. Estimates about the total yield of the Western wheat crop still fluctuate, and the latest emanating from the Dominion Bureau of Statistics puts it at about 259 million bushels, which, if far below the 452 million bushels secured last year, is just about the average for the decade 1914-23, which was 262 million bushels. A spell of favourable weather might bring it close to 300 millions, but a sudden assault of frost might bring it far below this mark. However, the reduced scale of overhead charges, owing to the lower scale of wages, and the shortness of the straw, will make the wheat crop very profitable to such farmers as have escaped the incidence of the different plagues.

There is general satisfaction in Canada at the success of the Inter-Allied Conference, and early benefit is expected to accrue from an improvement in the European market. Midsummer dullness has prevailed both in wholesale and retail business, but merchants now profess a more cheerful sentiment about the future, and look for fairly brisk trade during the autumn. At present retailers in the cities have to force business by special cut-price sales, but the tourist traffic from the United States is more profitable than ever for hotel-keepers and merchants at the numerous holiday resorts throughout Eastern Canada. In the industrial world the implement manufacturers claim some

improvement in the volume of orders, but many other industries are very dull. In all the Eastern cities there is already an ominous volume of unemployment, and the Federal Government has summoned a special conference to discuss plans for coping with what may be a very difficult situation during the coming winter. At the beginning of July the percentage of unemployment among trades unions was 5.8, as compared with 3.4 at the beginning of July, 1923. Social workers report a good many cases of serious hardship and distress among immigrants recently arrived from Britain, and although there has been during the past three months a decline in the immigration figures, immigration of all but a few limited classes into Canada for the balance of the present year should be discouraged. The Labour party in London, Ontario, and other places have been holding meetings and demanding a complete cessation of immigration propaganda by the Federal Government.

The recent rise in sterling and other European exchanges is welcomed by manufacturers, as it will diminish the force of European competition, but general satisfaction is derived from the fact that Canadian dollars recently touched \$99.94 in New York, their highest point since November, 1922. It is predicted that the approaching Federal loan will put Canadian funds at a premium in New York. Mr Robb, who will be back in Ottawa at the end of the present month, secured authority to borrow 350 million dollars, but it is expected that he will only float a loan of 200 millions to redeem the 1919 Victory Loan, which matures in November, and provide for Treasury bills totalling 91 odd million dollars. It is now surmised that the loan will be divided equally between Canadian and New York houses.

The Bank of Commerce index number shows that the index number for exports and imports combined stands in mid-July at 153.57, as against 153.17 for mid-June. But, in spite of the marked rise in wheat prices and smaller rises for prices of livestock, flour, cheese, and silver, off-setting decreases in the prices of bacon, potatoes, forest products, copper, &c., have brought the export index number down from 147.38 to 145.98. The index number for imports has risen from 158.97 to 161.17 owing to increases in the prices of maize, sugar, cotton, rubber, linseed oil, and anthracite coal, which have out-balanced declines in pig-iron and coke prices. The payment of the interest on the Grand Trunk Pacific 4 per cent. perpetual debentures seems to have evoked great surprise in London. The Minister of Railways believed at the time of his statement to the House of Commons that only \$322,000 would be available to pay 1 per cent. on this obligation, but a ruling of the legal branch of the C.N.R., establishing priority for these G.T.P. debenture claims, declared the entire interest charge of \$1,395,000 to be payable, and the additional million odd dollars has to be provided from the C.N.R. Treasury. In view of the fall in traffic receipts, it is uncertain whether the Grand Trunk will continue this year to show earnings enough to reach the mark whereby a surplus for the G.T.P. debentures is available, but the *Toronto Globe* suggests that the debenture holders should drop their claim against the defunct G.T.P., and ask the Canadian Government to make this interest charge a direct liability of the Grand Trunk instead of a contingent liability. Thereby any further controversy would be avoided, and the present necessity for keeping separate books and different audits would be at an end.

HOLLAND.—FOREIGN TRADE—PRINCIPAL COUNTRIES.—ANGLO-RUSSIAN AGREEMENT—NEXT YEAR'S ESTIMATES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 20.

THE midsummer weeks are not especially suitable for undertaking large business transactions, or for making important decisions. On the other hand, the prospective conditions of the near future are looked forward to with very great interest, while a glance is also thrown on the times just past. As to this last, the figures of the Dutch foreign trade for the first half of 1924 have given rise to various views. A comparison with the corre-

sponding period of last year gives every reason for this, as the following figures clearly show:—

In Million Guilders.				
First Half-year.	Imports.	Exports.	Import-Surplus.	
1923	990	592	398	
1924	1,147	757	390	

Imports for the first half of 1924, in comparison with last year, have thus increased 15.86 per cent., and exports 27.87 per cent., while the import surplus has decreased about 2 per cent. From a closer investigation as to the countries that have contributed to this foreign trade it appears first of all that Germany has taken first place both as regards imports and exports, which in the corresponding period of 1923 had not been the case. For the six principal countries with which the Netherlands has conducted trade, the figures are as follows:—

Country.	1st Half-Year.	Imports.	Exports.	Total.
		Florins.	Florins.	Florins.
Germany	1923	241,033,757	75,415,478	316,449,235
	1924	275,577,243	233,424,483	509,001,726
Belgium	1923	102,322,327	68,709,440	171,031,767
	1924	126,218,417	64,637,671	190,856,088
Great Britain	1923	154,115,434	155,840,663	309,956,097
	1924	150,277,888	194,133,578	344,411,466
France	1923	33,368,581	64,308,108	97,676,689
	1924	53,759,538	56,624,728	110,384,266
United States	1923	136,578,337	31,428,172	168,006,509
	1924	119,742,120	21,925,817	141,665,937
Netherlands-Indies	1923	52,579,772	52,641,847	105,221,619
	1924	68,818,993	48,598,587	117,417,580

The large increase of Dutch exports to Germany is principally due to the stabilising of the mark. In any case, the value of Germany as hinterland has been sufficiently shown from this; so that it is easily understood that in Holland the results of the successful Conference at London are looked forward to with great interest.

Still, trade with Great Britain is very important as well. Exports to England for the first half-year of 1924 have amounted to more than a quarter (to be exact, 25.63 per cent.) of the total Netherlands exports, so that England must be considered one of the best customers. The increase over 1923 must principally be ascribed to the increased export of sugar (28,989,000 fl in the first half of 1924, as against only 9,385,000 fl in the corresponding period of 1923); margarine, 22,051,000 fl, against 18,795,000 fl; fresh pork, 8,565,000 fl, against 7,246,000 fl; scrap iron and steel, 3,674,000 fl, against 1,152,000 fl; lard, 2,927,000 fl, against 1,018,000 fl; potatoes, 2,552,000 fl, against 80,000 fl; and cocoanut oil, 2,018,000 fl, against 1,794,000 fl.

As to the future, much interest has been taken here in the temporary agreement arrived at between Great Britain and Russia. It is fully realised that this agreement of itself does not as yet mean anything particular, but, on the other hand, it is supposed that it may lead to more important decisions. This may become of importance for the trade between Russia and the Netherlands, the more so as the Soviet Government has also come to an agreement with the German Government with reference to the well-known differences between them. The immediate result of this agreement for our country has been a shrinkage of Russian activities. These, however, have not returned exclusively to Germany. For cotton purchases Bremen has again come under consideration, but for coffee, for which a large amount of business has been done, Havre is said to have been chosen for a part. For cocoa butter alone Russia depends exclusively upon the Netherlands market.

With the approach of the month of September interest is centred in the estimates for the year 1924-1925, which will be submitted shortly after the opening of Parliament on the third Tuesday of September. The estimates of the large cities also attract special attention, because from these it can be seen whether the retrenchment pressure of the Government has penetrated through to the cities. Some

unofficial figures are already known as to the city of Amsterdam. It seems to have been possible to balance the Budget for 1925, without encroaching upon the existing reserves, and without making increased taxes necessary. It will be possible to accomplish this because the year 1923 furnished a credit balance of about 4,000,000 fl; it deserves to be mentioned also that there is under consideration a reduction of the tariffs for the use of gas, electricity, and the telephone, which, in effect, amounts to a reduction of taxes.

NORWAY.—A BALANCED BUDGET—LOAN IN NEW YORK—PRICE MOVEMENTS—BANK INSPECTION—MONEY AND STOCKS—TRADE AND CROPS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, August 14.

It was avowedly the first task of the new Government to tackle the financial question. The Finance Minister at the last meeting of the Storting before its adjournment stated that the Budget would balance with a total of about 530 million kroner. This result was to a great extent obtained by reducing expenses. Some minor taxes have been imposed, e.g., a restaurants tax. For every meal served at a restaurant and costing 3 kroner or more, the keeper of the eating-house must add 10 per cent. for tax to the State. Also, a similar tax is to be paid on all non-alcoholic drinks, while the taxes, or dues, on tobacco in various forms have been augmented. Besides balancing the expenses, the Minister, in the above sum, has included a few millions towards squaring up previous deficits.

The new Government loan raised in New York was very promptly subscribed. It is for 25 million dollars, and the interest 6 per cent. The money obtained is to be used mainly for strengthening the Government reserves.

The cost of living continues to rise. The Statistical Central Bureau has calculated that for the month ended July 15th the rise was 4 points, or from 245 to 249 points. Articles of food, in particular, have risen. The *Farmand* calculates the rise of wholesale prices during July at 11.3 points, or 4 per cent., as compared with June. To some extent it is a recurrent seasonal phenomenon; but there are no doubt also other underlying reasons.

The Storting shortly before being dissolved resolved upon a re-arrangement with regard to bank inspection. Not only the Savings Banks, but also the ordinary banks are to be subjected to inspection, and two inspectors, therefore, are to be appointed. Inspectors' salaries are to be met by levies on the banks, which are also to pay all the other expenses of inspection.

The money market is in a somewhat peculiar situation. The deposits at the Savings Banks, according to the statement of the Statistical Central Bureau, during the month of June continued to fall (the total in June was 2,017 million kroner, as against 2,027 in May and 2,042 in April). The loans had increased a little (by 4 millions since May). This points to the continuation of the present rate of 7 per cent. On the other hand, there is a somewhat stronger tone in the stock market, which suggests expectations of a lower rate of interest. This feeling is strengthened by the recent reduction of the rate of the New York Federal Reserve Bank. So far, the Board of the Bank of Norway have not stirred.

The foreign trade of this country for the first half-year shows rather surprisingly good results, considering the 13 weeks' labour trouble in the wood and allied trades. Total imports are estimated at about 736 million kroner, and total exports at about 432 millions. At present the market for such staple articles of export as timber, woodpulp, and paper is rather weak, but this is seasonal. A spell of beautiful weather enabled the farmers to bring into their barns a vast quantity of hay—one of the greatest harvests for years past. Now rains have set in again, and it is feared that cereals and potatoes will be poor crops.

A COMMENTARY ON THE DAWES REPORT.*

MR MOULTON has become an authority on the Reparation question through his important contribution to the literature on the subject contained in his analysis of Germany's capacity to pay, which was published last year. He has recently issued a second volume with a much more limited scope. It preserves in convenient form the full text of the Expert Committee, it summarises these reports and analyses the purpose and effects of the various proposals and contains a chapter dealing with some unsettled problems. But events are moving too fast for studies of permanent value, and this chapter of Mr Moulton's is already out of date through the work of the London Conference. It is true that the problem of fixing the number of annuities ultimately to be paid by Germany and also any final position of the amount which has really been paid up to the present by Germany, remain unsolved, but when he discusses the occupation of the Ruhr, the question of sanctions in case of Germany's default, and the need of applying arbitration to other questions than that of the index number, as unsettled Reparation problems, he is dealing with a phase already past. Within its limited scope many will find Mr Moulton's book convenient for reference.

* "The Reparation Plan." By H. G. Moulton. (New York) McGraw-Hill Book Company, Inc.

"VALUE."

M. THEODOTOU'S treatise on value comprises a critical analysis (and, we venture to suggest, a somewhat superficial one) of various theories of value, beginning with those of the Physiocrats and ending with Jevons' final utility theory. This last he attacks roundly, asserting that "la thèse de l'utilité finale et celle d'une mesure de l'utilité ressortent avec toute la doctrine psychologique, au domaine de la psychologie et ne doivent donc pas intéresser l'économiste." Without doubt the most original section of the book is the last chapter, in which the author summarises his own conception of value. This consists of an elaboration of the statement that the value of persons or things is the relation between the qualities and faults, the merits and demerits, or the advantages and inconveniences of such persons or things. Thus he is led to explain that value must necessarily vary inversely with price, since any diminution in the necessary cost of production must necessarily detract from its disadvantages without affecting its merits. To say that this conception of value is original is not to say that it makes any important contribution to the problem which M. Théodotou seeks to elucidate.

* "De Quelques Théories sur la Valeur en Economie Politique." Par Solon Th. Théodotou. (Paris) Marcel Giard. 137 pages.

ECONOMIC CONFUSION.*

THE author of this book owes a considerable debt of gratitude to Mr J. A. Hobson, the writer of his introduction. Mr Hobson assures us that the book contributes something to his own doctrine of under-consumption, and that it is in itself a work of real distinction and value. Without such an apologia the ordinary reader might find himself intimidated on the very threshold by the obscurity of the author's reasoning and his deplorably loose and inconsistent use of economic terminology. Nor, when the necessary effort of understanding has been made, do the author's conclusions

(a) Increased capital.

COMPANY MEETINGS, &c.

BANK OF NEW ZEALAND.

SATISFACTORY RESULTS—INCREASED PROFITS.

EXCHANGE AND CURRENCY PROBLEMS.

DEFLATION OF LAND VALUES.

The ordinary general meeting of the proprietors of the Bank of New Zealand was held at the head office, on Friday, June 20, 1924. Mr William Watson, acting-chairman of directors, presided, and said: Our capital reserve fund and undivided profits, after dealing with the year's profits as recommended in the directors' report, will stand as follows:—

Preference capital held by the Government of New Zealand	£ 1,500,000
Ordinary share capital	3,000,000
Reserve fund	2,325,000
Undivided profits	506,513
	7,331,513

In addition, there is the 4 per cent. stock guaranteed by the Government of New Zealand, amounting to £529,988, and due in 1934, which ranks for repayment subsequent to the liabilities of the bank to depositors and other creditors. These funds, aggregating £7,861,501, are equal to over 20 per cent. of the bank's liabilities to the public.

But these figures do not alone indicate the full strength of the bank's position, for, like all banking institutions of first-class standing, we have for many years been steadily accumulating internal reserves to provide for the effects of any exceptional setback which might overtake the Dominion. As this country is dependent for its welfare on the conditions of overseas markets—the course of which we are powerless to shape—these large internal reserves against unforeseen contingencies are essential to the maintenance of the credit of the bank and the country.

NOTE CIRCULATION.

During the year the note circulation of our bank has averaged about £3,920,000, the highest figure reached being £4,885,668, and the lowest £3,655,870, whilst our legal right of issue is about £10,500,000. We have, therefore, an ample margin of currency available to meet the ordinary requirements of our customers and to provide a substantial reserve for an emergency.

DEPOSITS.

Our deposits at the balance date amounted to £30,501,719. When compared with the figures of the previous year, these show an increase of £497,793.

The deposits include those which we hold on Government account, in which there are sometimes very large fluctuations, and it happens that the Government balances on March 31, 1924, were nearly £1,800,000 less than on the corresponding date in 1923, so that the deposits which we held on account of our other customers have really increased during the year under review by more than £2,200,000.

BILLS PAYABLE AND OTHER LIABILITIES.

The reduction for the year of £379,388 in this item does not call for special comment.

DIVIDEND.

On the ordinary shares the dividend works out at the rate of 2s 6d per share on the capital as at April 1, 1923, 1s 4d per share on the new capital paid up as at October 1st last; and 2d per share on the 2,205 shares paid up as at March 8th.

CASH, BALANCES AT BANKERS, AND OTHER LIQUID RESOURCES.

Cash, balances at bankers, Government and municipal securities, and other readily realisable assets, apart from ordinary advances to customers, equal rather more than 70 per cent. of our liabilities. This position must be gratifying not only to depositors, but also to our borrowing customers, denoting as it does our ability to withstand any stringent monetary conditions which may arise, without the necessity for calling in advances.

As compared with two years ago, there is an increase of £1,648,000 in our investments in securities of the Commonwealth and of the various States of Australia. The greater portion of the amount is in comparatively short-dated stock falling due at dates to suit our interests.

PROFIT AND LOSS ACCOUNT.

The ordinary operations of the bank for the year resulted in a profit of £735,831, an increase of £182,194 as compared with the preceding year.

During the year we decided to realise a portion of our holding of British Government securities, and to reinvest the proceeds in other British Government stocks maturing on more suitable dates. The transactions resulted in a surplus of £148,112 over the book values of the stocks sold, and it is proposed to transfer this surplus to the reserve fund.

We have also been able to take into profit the sum of £184,465, which has been allocated from the profits of previous year as provision against possible loss on certain doubtful advances. It is also proposed to transfer this amount to the reserve fund.

ADVANCES.

The advances to our customers amount to £18,787,100—an increase upon the figures of last year of just about £1,000,000.

Ample provision has been made for all bad and doubtful accounts.

LANDED PROPERTY, BANK PREMISES, &c.

This item shows an increase of £44,095, due mainly to the cost of additions to existing buildings and the erection of new premises. With the development of the Dominion and the consequent growth of the bank's operations, expenditure of this nature will be constant, but, as the asset is represented in the balance-sheet at very much less than actual value, we have thought it preferable to add rather more than usual to the reserve fund and to the carry forward, instead of writing down the value of property and premises.

EXCHANGE AND CURRENCY.

The exchange position between London and New Zealand and New Zealand and Australia, has become intensified. The present rate of 2 per cent. for purchasing sight drafts on London is unusually heavy for this Dominion, although light compared with the exchange burden borne by many other countries—the Australian rate, for instance, is 17s. 6d. per cent. higher. It is fortunate that the better prices now ruling for most lines of produce much more than counter-balance the adverse exchange.

The transfer of surplus funds from London to Australia, where money is greatly needed to settle the adverse balance of our trade with the Commonwealth, has of late been effected on extremely unfavourable terms to us, so that the purchase in New Zealand of exchange on London is by no means so profitable as some critics appear to think.

The question of exchange is so interwoven with that of currency, and the two are so complicated, that those who have lately expressed impracticable views may perhaps be excused.

The highest authorities have stated that, in England, currencies are necessarily limited, and I have told you in my remarks on note circulation that the currency is here regulated to the necessities of the position, but in such a way as to avoid inflation. Had the suggestion for an Empire currency been adopted it is difficult to see how inflation could be locally controlled; this is but one of the objections to that measure.

CURRENCY SHORTAGE IN AUSTRALIA.

Whilst in New Zealand the exchange question alone presents difficulty, Australia has for some time past experienced even higher exchange rates than the Dominion, and has also suffered from a shortage of currency. The note issue there is in the hands of the Commonwealth Bank under a special board of directors. The note board has recently decided not to make any further issues of notes even in exchange for an equivalent of sovereigns. It is understood that the reason for this is a belief, or fear, that such an increase in the note issues would lead to inflation. A restriction of production, commerce, and trade is the natural outcome. That the board has adopted this policy in what it believes to be the best interests of the Commonwealth is not questioned, but the point is this—have the members of the board the information at their command to enable them to determine what amount of currency is required from time to time to satisfy the needs of commerce and production? Surely the joint-stock banks, with their intimate and detailed knowledge of financial conditions, should be the better judges.

Hitherto the control of credit in Australia has been mainly in the hands of the banks, but the measure of control which they exercised has now, through the attitude adopted by the note board, virtually passed to the latter.

THE OUTLOOK.

On the whole, I believe we may regard the immediate outlook with equanimity. Prices for some of our most important products may decline, although during the coming season there should still be a considerable balance of trade in our favour. Many of our producers are carrying on under adverse conditions, but their competitors abroad are having trouble also. It must not be forgotten that the great majority of our settlers are in fair circumstances, and quite able to withstand a fall in value of their assets and reduction in income. Had economy been practised during the years when phenomenal prices were received for our products, there would be less grumbling to-day over the burden of taxation and the difficulty of getting an adequate return on capital.

We must look forward to a gradual deflation of land values as the cure for the worst of the evils from which we are at present suffering. Stabilisation at present values is out of the question.

I now move the adoption of the report and balance-sheet, and ask Mr Reece to second the motion.

MR WILLIAM REECE'S REMARKS.

Mr William Reece said: I beg to second the adoption of the report and balance-sheet.

The Chairman, in his comprehensive and very able speech, has gone so fully into matters of concern to the shareholders, and also of general interest, that little remains to be said.

He has, quite rightly, I think, drawn attention to the fact that the dividend paid is earned not alone by the use of subscribed capital, but also by the large reserve which has been built up, and which, I trust, will be always maintained at a high level, as nothing is so appealing to those in whose eyes it is important a bank should stand high.

There is reference in the speech to land values; it seems to me that these will require adjustment before farmers generally can be really prosperous; surely the true value of land can only be computed by taking what it can earn over a number of years, not only in good times, but in bad.

I wish to congratulate the shareholders on being partners in an institution which passed practically unscathed through the great dangers of the war period and the following commercial crisis. This bank, and, in fact, all the banks operating in New Zealand, deserve the greatest credit for the moral courage and keen sense of public duty exhibited by them under conditions little realised by the public generally.

NEW DIRECTORS.

I wish to join with the chairman in his welcome to the two new directors. Mr Gibbs is a veteran in the bank's service, and Mr Nicholson's large business experience will prove most valuable; they will find that the board meetings are not the bear garden some writers would lead one to suppose, but that in its consideration of banking matters the difference in the mode of appointment makes not the slightest difference. Why should it, when those directors appointed by the Government represent shareholders in the shape of all the people of this Dominion.

TRIBUTE TO GENERAL MANAGER AND STAFF.

I cannot sit down without paying a tribute to the general manager and his staff; in working with them one realises the great strain to which at times they are subject. The general manager himself worships at the shrine of the Bank of New Zealand night and day.

I now second the adoption of the report and balance-sheet.

The report and balance-sheet were unanimously adopted.

MR GIBBS ELECTED AS A DIRECTOR.

Mr Gibbs thanked the shareholders for having placed him in the

proud position of being one of their representatives on the board of directors. While he did not claim super-capacity above his fellows, or any superior business knowledge more than would naturally come in the course of years, still he did claim, after nearly half a century of banking and business, that he did know something about it. In view of his experience, he claimed to have some knowledge of the duties and requirements of a bank director. They had passed through strenuous times, and he hoped that in the future, if any crisis arose, they would be able to meet and deal with it as they had done in the past. With general devotion to business and work, he was sure that the present unsettled condition of the world would in time be righted. Mr Gibbs said, as they all knew, he was only elected for the balance of the term of office of the late Mr Kane, and he would therefore submit himself for election again at the end of the year, when, if required, he trusted he would receive the same emphatic support as was afforded him on this occasion.

DIFFICULTIES SUCCESSFULLY COUNTERED.

Mr T. Shailer Weston said that he thought the meeting should not be allowed to disperse without expressing its thanks to the directors, the general manager, and the staff of the bank for the very good balance-sheet. As Messrs Gibbs and Reece had remarked, it was a most satisfactory balance-sheet. It was a matter of sincere satisfaction to realise that the Bank of New Zealand had pulled through during the last five years, while banks in Canada had gone down, and there had been a heavy amount of water shipped by some of the South African institutions. Because the Bank of New Zealand had done well, there might be a disposition to take the view that it was only natural that it should do so; but that was really due to the general manager and his staff.

Mr John Mill (Port Chalmers), in seconding the vote of thanks, remarked that he for one knew that the interests of shareholders were carefully safeguarded by the present board of directors, the general manager, and the staff. The bank had been a great support to many a struggler. It had itself been helped by the Government, but now it was in a thoroughly sound position—a matter for the greatest satisfaction.

The vote of thanks was carried with acclamation.

The acting chairman (Mr Watson), in responding, said:—

On behalf of my colleagues and myself I thank you for your gratifying recognition of our services.

It is the fashion nowadays in some quarters to consider banking an easy enterprise, but the majority of you will remember that very different views were generally held at the beginning of the 30 years which it has taken to bring the Bank of New Zealand to its present position. We have not been without our difficulties and anxieties, and it is a pleasure to know that you appreciate our work.

The general manager (Mr H. Buckleton), in responding for himself and staff, endorsed what Mr Watson had said as to banking; it was not easy. There had been an immense volume of work done, and he was pleased to say that it had been well done by the very capable staff of the bank.

Mr George Shirlcliffe moved the following resolution:—

"In view of Mr Upton's retirement and his long record of service on the board of the bank, and through the board to the shareholders, this meeting passes a resolution of appreciation of his services, with an expression of goodwill and hope that he will have many years to enjoy his retirement."

The resolution was seconded by Mr T. Shailer Weston and carried unanimously.

Mr Watson stated that he would have pleasure in forwarding copy of the resolution to Mr Upton.

This closed the proceedings.

THE AMALGAMATED PRESS (1922), LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

INCREASED ADVERTISING REVENUE.

COMPANY'S PUBLISHING ACTIVITIES.

The ordinary general meeting of the Amalgamated Press (1922), Limited, was held, on the 26th instant, at the Memorial Hall, Farringdon street, London, E.C.

Sir George A. Sutton, Bart. (chairman of the company), presided.

Mr J. R. Sumpter (joint secretary) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—I assume the report and accounts will, as usual, be taken as read.

It is my pleasure to present to you to-day the balance-sheet of our last year's working, and, in view of the disturbed state of trade, increasing unemployment, and the unsettled state of the world in general, the year's result may be considered satisfactory. The profits, as you will have seen from the balance-sheet which has been placed before you, amount to £540,117 17s 7d.

SOUND FINANCIAL POLICY.

The one item in the balance-sheet which calls for explanation is that of investments. The directors thought it wise to invest the sum of £142,486 in the purchase of £150,000 4 per cent. Treasury bonds, 1933. This money, although invested, is available for the special requirements of the business, as short-dated trustee securities are always in demand, and could be immediately realised.

The balance of the increase is accounted for by the purchase of ordinary shares in the Imperial Paper Mills, Limited, to enable that successful company to complete their extensions, to which I shall refer later.

Our intention is to continue the conservative system of finance which has been the policy of this concern since its inception.

SUCCESSFUL NEW PUBLICATIONS.

During the year under review we have successfully established some 12 new publications, including fortnightly and annuals. As you know, it is our policy to take advantage of any new markets that open for fresh enterprise, or to meet changes in popular taste, and thus we started this year *Popular Music Weekly*. Its success was instantaneous, far exceeding our most sanguine expectations.

We also launched a new style of fashion journal in *Mab's Fashions*. Having secured the exclusive services of "Mabs," who is, perhaps, the best-known fashion artist in this country, *Mab's Fashions* appeared in the spring. It has taken a high place in the favour of the public, and what is equally important, it has been received enthusiastically by the large and increasing body of advertisers who support our fashion publications.

And since the financial year closed at the end of June last, we have launched, with every indication of enduring success, yet another magazine, the *Merry*. Although only two numbers have so far appeared, there is every evidence of its becoming the most popular and largely circulated magazine of its kind in the country.

"ANSWERS" AND "HOME CHAT."

In view of our numerous successful productions of recent date, it might seem invidious to quote the old tag that "old friends are best" as we turn to your older-established journals, but one can't help it in considering your old friend *Answers*, which was the foundation-stone of this great business. *Answers* still holds its unique position as the most up-to-date popular periodical in the country, and its revenue from advertisements last year was the largest in its history, while its net sales record speaks of its ever-increasing popularity.

Home Chat, with its net weekly sale of over 200,000 copies, maintains its unrivalled position as the most widely circulated woman's paper of its kind. Its net sales, of course, are available to any advertiser.

"CHILDREN'S ENCYCLOPEDIA" AND "CHILDREN'S NEWSPAPER."

The "Children's Encyclopedia," the new and entirely re-edited edition of which was started nearly two years ago, will shortly come to an end, having achieved a very notable success. Already circulating in French, Italian, Spanish, and other languages, new foreign editions of the later issue are in hand. Its weekly offshoot, the *Children's Newspaper*, is to be found in most of the homes of the country, where its arrival is eagerly looked forward to.

You would not expect me to go into details of the rest of your many papers, but I may mention that we have been pursuing generally a policy of solidifying all your existing periodicals.

The cost of efficiently maintaining these continues to increase, and working expenses, due to the continual upward trend in wages, are becoming greater each year, while markets are becoming more crowded each day.

EDUCATIONAL PUBLISHING.

An aspect of our work that is worthy of note is less concerned with financial success than with our reputation in the field of educational publishing. I refer here to our famous series of Harmsworth Encyclopedias. Let me just run over the list of those that have been issued since the spring of 1920. First the "Universal Encyclopedia" in 63 fortnightly parts, then "Harmsworth's New Atlas" in 40 parts; "Peoples of all Nations," 49 parts; "Household Encyclopedia," 42 parts; "Wonders of the Past," 24 parts; the "Wireless Encyclopedia," 24 parts; and the entirely new and extended edition, already noted, of that juvenile classic the "Children's Encyclopedia," in 54 parts. In no part of the globe where English is read are these splendid educational works not to be found—their circulation is as universal as their interests. Especially in the British Colonies are they esteemed both as fortnightly publications and in their subsequent continuous sale in volume form. The headmaster of an important Australian school wrote to the editor of the "Universal Encyclopedia" not long ago to say that for him, in common with many of his friends, the name "Harmsworth" had come to mean the hall-mark of a good publication, and his motto was, "If it's Harmsworth's, it's good."

"Countries of the World," another of this great series, was successfully launched last spring, and other ideas are ripening for early production, as no efforts will be spared to maintain our predominant position in this particular field, where it is not merely a question of profit, but of giving to the reading public a body of useful, recreative, and instructional literature which will remain a permanent distinction to the activities of this great publishing house.

A SELF-CONTAINED BUSINESS.

Last year I pointed out that this is a self-contained business, with its controlling interest in Timber Limits in Canada, its own paper mills at Gravesend, its vast printing and publishing factories, and its share-interest in the largest printing ink works in this country. The completion of the extensions of the Imperial Paper Mills makes that now the second largest paper mills in this country, with an output, approximately, of 2,000 tons a week, most of which is sold on the open market.

I mention these facts again in order to correct an erroneous impression so often published, that our entire profits are derived from the sale of periodicals and magazines.

Our printing is now concentrated in three extensive factories—two in South London and one at Gravesend—and during the past year we have been fortunate in being able to keep them occupied, thus contributing to greater efficiency, so essential in view of the increased cost of production, to which I have already referred.

ADVERTISEMENT REVENUE.

Turning now to the advertisement revenue, I would like to point out that the profit created by this side of the firm's activities is not responsible for so large a part of the company's total profits as many people may imagine.

It has always been our policy to sell advertising space at prices showing only a small margin over actual cost of production. In other words, our rates are reasonable and fair. Moreover, all space is sold on a net sale basis, and in every other respect we endeavour to give fair dealing and fair value for money.

It is for these reasons that an ever-widening circle of responsible advertisers and advertising agents consider your publications to be most excellent and profitable media. There is, indeed, no other periodical publishing house in the world which can offer (especially to the manufacturer of articles appealing to women) such a wide audience and such high publicity value.

Figures show most gratifyingly the extent to which the selling value of your magazines and periodicals is appreciated. Year by year the revenue from advertisements has grown. You will, I know, be pleased to hear that the total for the year under review has exceeded by 10 per cent. the total for the preceding year.

CURRENT YEAR'S PROSPECTS.

Although the current year is not yet two months old, there are already indications which make it practically certain that the advertisement revenue for 1925 will show at least as great an increase over that for 1924 as 1924 showed over 1923.

New records have been established by many of your publications. *Answers'* revenue for the year was a sum far greater than the total for any other year of its long history; *Home Chat* showed a most notable increase; without an exception, each of the great group of domestic weeklies, *Woman's Weekly*, *Woman's World*, *Home Companion*, *Family Journal*—I need not name them all—beat its previous best.

Mab's Fashions, to which I have already alluded, has shown advertisers excellent results. It converts what was your trio of "large circulation" fashion monthlies into a quartet!

ADVERTISING CONVENTION.

One other word in connection with advertising. You have all read of the great Advertising Convention held last month at Wembley. This firm, like many others, lent moral and financial support towards the bringing to London of many hundreds of prominent business and advertising men and women from all over the world to discuss the practice and value of advertising. The results abundantly justify the efforts made. Apart from the fellowship and good will which the convention stimulated, I believe that on the practical side it achieved much. It directed the attention of the entire business community to the mission of advertising: increasing production by the encouragement of demand. There is no doubt that the most important result of the convention will be an all-round increase in the volume of advertising. By that increase your company, in common with other publishing houses, will largely benefit.

The outlook depends to a large extent on the settlement of European troubles and their natural effect upon unemployment in this country, and some relief from the present crushing taxation would encourage large manufacturing businesses such as ours to expand in many directions, and would enable private enterprise to become active once again.

TRIBUTE TO THE STAFF.

To the members of the staffs of our various departments we should like to convey our thanks, as well as those of the shareholders, for the loyal and enthusiastic way in which they have co-operated with your directors during this and other years.

To keep well abreast of the times and be enterprising, the directors realise they must encourage a young and up-to-date staff, and I believe we have just such a staff, and also one that is more efficient than that of any other similar firm.

In this connection it should be clearly realised that the maintenance of the profits depends upon initiative and ceaseless enterprise; the finding of new markets in place of those which may be waning, and developing existing ones on novel and up-to-date lines.

As to the future, I shall be faithful to the policy we have always adopted at these meetings, and not venture into the realms of prophecy. But this may be said: we have a very active autumn campaign in front of us, both in regard to our existing publications and also to new enterprises. More you will not expect me to say, in view of the rapidly increasing competition we have to face nowadays, but you may depend upon your directors, whose long association with the building up of this business is known to you, to take whatever steps in their expert opinion may be wise and necessary for its extension.

THE RESOLUTION.

I now have to move:—"That the report of the directors produced, together with the annexed statement of the company's accounts at June 30, 1924, be received, approved, and adopted, and that a final dividend for the year of 2s a share, less income-tax at 4s 6d in the £, be now declared on the ordinary shares." I will ask Mr Linforth, the vice-chairman of the company, to second the resolution.

Mr Arthur E. Linforth (vice-chairman): Gentlemen, I beg to second the resolution.

The Chairman: Has any shareholder any questions to ask?

SHAREHOLDERS' APPRECIATION.

Mr J. Harwood Panting: Mr Chairman, before the resolution is put to the meeting, I should like to have the pleasure of adding a few words of appreciation of the excellent report which you have just presented. In that report you say that "the cost of maintaining existing journals continues to increase, and working expenses are becoming greater each year." You might also have added another important factor—that competition from other enterprises grows fiercer and fiercer every year. In fact, there are gloomy prophets who are continually prophesying in face of this competition that the days of this company's success are numbered, and that, instead of being on the up-grade, the time is coming, if it has not already come, when it will be on the down-grade.

The best answer to these gloomy prophets and prophecies is the report you have just presented. There is no nonsense about figures: they are cold, stubborn facts—facts which cannot be argued away. Well, sir, what do we find? In spite of fierce competition, this company still comes up smiling each year; indeed, the record of one year, as you have said, is excelled by the next, until this year it has again beaten its own record. To what are these results attributable? They are attributable, in the first place, to you, Sir George, to your colleague Mr Linforth, and to your co-directors and the admirable crew under your command. You are the pilot on the bridge, on the watch for storms and rocks, so that the ship may be steered into the port of safety and success. It is to these qualities that this company owes its success; they mean success to the company, dividends for the shareholders, and, last but not least, good wages and employment for thousands of workers. Gentlemen, these are results of which any company might be proud.

THE RESERVE FUND.

Mr Arthur Bennett (Warrington): As a small shareholder from the North of England, I should like to add my tribute both to the chairman for his able address and to the directors generally for the admirable statement of accounts they have submitted to us this morning. It is hardly a criticism, but it occurs to one that the reserve fund might be increased to advantage. It is relatively small when one looks at the very large figures incorporated in the balance-sheet. The directors are more competent to express an opinion than I am, but, in view of possible contingencies, I should like to see in future a somewhat larger reserve fund. Apart from that, I view the balance-sheet with complete satisfaction, and I hope and believe we shall see year by year increasing prosperity for this great company.

The Chairman: With regard to the question put by the last speaker, you must remember that this is really the Amalgamated Press (1922), Limited, so that the company is only two years old. As a matter of fact, we have every intention of increasing the reserve fund.

The resolution was then put and carried unanimously.

Mr Charles Steele: I shall have pleasure in proposing the reappointment of Messrs Turquand, Youngs, and Co., and Messrs E. Layton Bennett, Sons and Co. as auditors of the company for the ensuing year.

Mr E. S. Baring-Gould: I have pleasure in seconding that resolution.

The resolution was unanimously agreed to, and, the Chairman having thanked the shareholders for their attendance, the proceedings terminated.

ANGLO-AUSTRIAN BANK, LIMITED.

STEADY AND SATISFACTORY DEVELOPMENT.

The second ordinary general meeting of the Anglo-Austrian Bank, Limited, was held, on the 29th instant, at Winchester House, Old Broad street, London, General the Hon. Sir Herbert A. Lawrence, K.C.B., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the London office was now well established, and showed steady and satisfactory development. Acceptances were growing slowly but steadily, great care being taken in the selection of that business which was most strictly limited to transactions genuinely reflecting the movement of commodities. Its expansion was a fair indication of a general improvement of trade conditions in Central Europe. Operating as the board did in six Continental countries, they naturally watched with sympathy, and assisted, to the best of their power, any movement toward the restoration of normal conditions and the increase of production. Last year he had taken the opportunity to recount briefly the story of Austria's transformation in 1922 from her apparently hopeless post-war position to a state of hopefulness and self-confidence.

The year 1923 had been characterised by a general tendency to further consolidation, and in 1924 the process of re-establishment was carried one step further. After lengthy negotiations the scheme for the financial reconstruction of Hungary under League supervision had been finally approved by all those concerned, and in June and July, 1924, the £12,000,000 Reconstruction Loan was, with the co-operation of the Anglo-Austrian Bank, successfully placed in the 45 different lending countries. Hungary was pre-eminently an agricultural nation, and her recovery was therefore much less dependent than Austria's upon factors outside her own control. The bank's branch in Budapest had enjoyed a most successful year.

JUGOSLAVIA AND ITALY.

Another very important step forward had been the conclusion of a treaty between Yugoslavia and Italy, which, by settling the Fiume question, had removed a cause of grave economic and

Total declared value of imports	104,518	Total declared value of exports	326,174

Messrs Samuel Montagu and Co. write as follows on August 27th:—

GOLD.

Owing to the large amounts shipped direct from Durban to India recently, the offerings of gold here this week were very small, and were readily absorbed for India. The following figures relate to Indian trade (private account) for July, 1924 (in lacs of rupees):—

	Exports.	Imports.	Exports.	Imports.
Merchandise	2,593	1,998	595	..
Gold	1	175	..	174
Silver	25½	148½	..	123½
Total net exports	2,597	2,221	595	297½

SILVER.

The market keeps in good heart. America has been more inclined to buy than sell on most days. Bear covering—Indian or otherwise—and some intermittent inquiries from the Continent have provided support. Selling has come from speculative quarters, but not so much from China as in the preceding weeks.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 28th, is as follows:—Pig-iron: The anticipated improvement, expected after the holidays, has not matured, and business is very quiet indeed. Makers try to maintain the price of No. 3 Cleveland G.M.B. at 83s per ton and mixed numbers hematite at 92s per ton, but these prices could no doubt be shaded for prompt business. Manufactured iron and steel: The local steel works have partly resumed operations, but complain of lack of specifications and a dearth of new business. Prices are unchanged at: Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9 10s. Iron ore: There is practically no new business, but sellers are offering various ores on the basis of 22s 6d per ton for best Bilbao Rubio ore.

Our Sheffield Correspondent writes:—The reactionary tendency in crude iron and steel continues, and with three-fourths of the steel-making plant of the district idle through a strike, business has reached an extremely low ebb. Several more large furnaces have been out, and some hundreds of men paid off this week. Unemployment has been increasing of late, chiefly in the heavy branches, and the position in this respect is a good deal worse than a month ago. Buying of pig-iron, billets, wire rods, and iron and steel bars is at a standstill apart from oddments, and production exceeds sale in all directions. Prices also continue unsatisfactory, and for weeks the production of mild steel has been a losing proposition. The rolling mills have next to nothing to do in the rod department, but are fairly busy on sheets, for which there is a considerable export demand. The steel foundries and forges are moderately employed on orders from the engineering and shipbuilding branches. The demand for motor and railway

steel continues fairly large and steady. A distinct recovery is noticeable in crucible steels, although the improvement is confined to a limited number of firms, and the position is still very far short of normal. Some satisfaction is, however, to be obtained from the knowledge that the movement is in the right direction. The hand tool and file branches are well employed, but buying on behalf of the collieries is easier. Conditions in plate and cutlery are mixed, a feature of the trade being the poverty of demand for medium priced goods. The sale of the cheapest wares is on a very large scale, and expensive silver and cutlery goods can find a market. Between these grades trade is at a low ebb. The coal market has recovered somewhat from the effects of the holidays, but is on a very restricted scale, and the immediate outlook is the reverse of satisfactory. Some little improvement in coke is reported. Quotations per ton at pits are:—Best hand-picked branch, 32s to 34s; Barnsley best Silkstones, 26s to 28s; Yorkshire hard, 21s 6d to 23s 6d; Derbyshire ditto, 21s to 22s; Blyth ditto, 20s 6d to 21s 6d; Durham ditto, 24s; rough slacks, 12s 6d to 14s 6d; smalls, 6s to 8s.

Our Glasgow correspondent writes:—Consumers are very sparing in their commitments for iron and steel, and there seems to be a spell of hesitancy on the part of traders generally, inconsistent with the more cheerful position in international politics and with the hopes of steadier trade conditions that were expected to arise therefrom. Whatever the cause, the iron and steel trade is experiencing a rather depressing period. Scotch pig-iron makers are curtailing output, and prices are lower. Heavy steel makers are in want of orders to keep the mills going, and merchants connected with the export trade state the demand in several directions is extremely poor. Arising from the fact that Continental competition is now very much less severe than was the case a few months ago, and the placing of one or two fairly good shipbuilding and structural orders this week, there is reason to believe that a good deal more buying will be heard of in plates and sections very shortly. Makers of semi-finished steel are benefiting to some extent by the activity in the light section and sheet trades. The latter continues busy, the demand from various overseas markets being steady, and home consumers' requirements for both black and galvanised sheets show no falling off. The galvanised corrugated sheet trade is in a flourishing condition, the exports being very heavy to all markets. India, the largest consumer, is now anxiously inquiring, and it is anticipated that good tonnages will shortly be placed for that market, but delivery cannot be given before the end of November. Shipbuilding orders placed recently include three steamers for the St. Lawrence River, to be built by Messrs Napier and Miller, and to be engined by Messrs D. Rowan and Co., and two steamers for British Columbia, which are to be built by the Montrose Shipbuilding Company.

CUMBERLAND IRON.

The fear that some of the consuming industries which closed down for the holidays might be slow in restarting has, unhappily, been realised, and the result is that the weakness in the Cumberland and North Lancashire hematite pig-iron trade has become accentuated. The markets in which smelters can sell their iron are smaller, the local and Midland absorption having considerably diminished, while the Scotch, South Wales, and Continental outlets are more constricted than ever, and though there are only 11 furnaces in blast between Workington and Carnforth, iron is now having to be put into stock. The worst of it is that there appears

to be little, if any, prospect of any improvement in the early autumn, and some makers are almost resigned to having further to curtail their output. Consumers are pressing for lower prices, but so far no substantial concessions have been yielded, though there is undoubtedly a shading of the figures quoted for Bessemer mixed numbers—viz., £5 5s per ton delivered at Glasgow, £5 10s per ton delivered at Sheffield, and £5 15s per ton delivered at Birmingham. Special and semi-special qualities of iron are in similarly quiet request, and manganese alloys command no brisk market, and ferro is lower at £13 10s per ton, f.o.b. There is nothing of importance doing in the steel trade, rail orders being very difficult to come by, and operations at the rail mill at Workington, which happens to be working this week, are of a spasmodic character. Native hematite ore is in demand only by the local smelters, and few of the mines are raising a normal output. Superior sorts of low-phosphoric ore are 21s 6d to 23s 6d per ton, and ordinary kinds 16s 6d to 17s 6d per ton. The coal trade has seldom, if ever, been slacker. Three collieries—Camerton, Oughterside, and Allhallows—are idle, but the production of the remaining pits is ample to meet requirements. Irish business continues to be exceedingly poor, merchants across-Channel preferring the cheaper Scotch coal, even if it is not as good quality as is obtainable here. Best round for export is 25s per ton, f.o.b., a figure nearly 4s per ton in excess of the Scotch price. House nuts are lower at 23s 6d, and steam nuts 22s per ton, f.o.b. Gas coal is 25s per ton, f.o.b., and to local consumers 29s to 30s at works. There is not much call locally for industrial fuel; best steam is 30s, and washed steam 29s, delivered. The make of coke is being taken by the West Cumberland and Furness smelters at 24s 6d to 25s 6d per ton, according to carbon content. East Coast coke supplies this week are 4,900 tons.

Our Cardiff correspondent writes:—A comparatively quiet tone has prevailed on the coal market this week. Best Admiralty large coals continue in short supply, and with the demand fully maintained, quotations are firm at recent levels. In other sections, inquiries circulate on a restricted scale, and new business materialises slowly. A number of collieries are carrying heavy supplies, and in the absence of adequate support, prices are slightly easier. This irregularity in prices is mainly for prompt loading, as, for business on forward account, most collieries quote at slightly enhanced figures, in anticipation of the expected autumnal improvement in demand.

The following are the current approximate quotations:—Best Admiralties, 28s 6d to 29s; second Admiralties, 26s 6d to 27s; best dries, 26s to 26s 6d; Western Valleys, 25s to 26s; Eastern Valleys, 23s to 25s; best bunker smalls, 16s 6d to 17s 6d; ordinary cargo smalls, 13s 6d to 15s 6d; coking smalls, 16s 6d to 17s 6d; big vein large, 52s to 53s; machine-made cobbles, 60s to 62s 6d; French nuts, 57s 6d to 60s; stove nuts, 52s 6d to 57s 6d; rubbly culm, 12s to 12s 3d; coke for export, 50s to 52s 6d; inland blast-furnace coke at

ovens, 30s to 35s; patent fuel, 27s to 29s; pitwood, ex ship, 30s to 31s. A moderate amount of new business is passing in Welsh tinplates. The Far East and India have bought substantially, but the Continental inquiry remains quiet. Tinplate bars have been reduced 3s 6d per ton to the fixed rate of £8 0s 9d per ton, f.o.b., less 7s 6d rebate to the tinworks, and buyers are now induced to cover their requirements at these new rates.

METALS.

Tin commenced the week with an easier tone, due to selling pressure, but later values improved on buyers becoming more prominent. Standard cash sold at £255 to £250 5s to £253 10s, and three months £256 to £256 15s to £250 to £254 7s 6d to £254. Eastern cables reported sales on the basis of £255 c.i.f. At Thursday's market rates ruled firmer, though top points were not maintained. Standard cash sold at £255 5s to £256 to £255 15s, and three months £257 to £257 10s to £256 to £256 15s to £255. Tin closed irregular and easier. Standard, cash, sold at £253 to £254 and three months £254 to £254 10s. to £253 10s to £254 15s to £254 10s. English ingots quoted £255. Copper market ruled easier on liberal offerings, combined with lower American advances, with business on a fairly good scale. Standard cash sold at £63 5s to £62 13s 9d to £63 2s 6d, and three months £64 10s to £63 13s 9d to £64 3s 9d to £64 1s 3d. The tendency was fully steady at Thursday's market, while business proceeded with freedom. Standard cash sold at £63 to £63 3s 9d, three months £64 to £64 3s 9d. A quiet tone prevailed at the close, with prices on balance barely steady. Standard, cash, quoted at £63 2s 6d to £63 5s, with three months dealt in at £64 2s 6d to £64 3s 9d. Electros, £67 10s to £68; best selected, £66 15s to £68; strong sheets, £94; wire bars, £68 per ton. Lead easier, and quoted at £32 13s 9d to £32 3s 9d, as to position. Spelter dearer at £33 5s to £32 17s 6d, according to position. Aluminium home £125, export £130. Antimony steady. English regulus £44 10s to £50.

MANCHESTER, August 28.

A quieter state of affairs has prevailed in the market during the past week. The tendency of raw cotton prices has been easier, and bearish sentiment in Lancashire is now more pronounced than has been the case for some time back. Many buyers have held aloof in anticipation of a lower level of values being registered in the near future. At the same time, the outlook with regard

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market has become more active during the last few days, and a big turnover has been done in wool and tops. Stocks of merino wool and tops are now very low, and some firms have nothing to offer. In sympathy with the improved demand, prices of practically all qualities have moved to a higher level, and it is becoming increasingly difficult to buy. Good warp 64's tops are about 1d dearer on the week, and are now quoted at 76d, with some sellers wanting more. Super 60's are firm at 68d, 56's average at 48d, 46's carded at 28 1/2d, and 40's prepared at 27 1/2d per lb. Spinners are showing more interest in tops, but the recent advances have been dictated more by the general expectation of dearer wool than by increased activity among spinners and manufacturers. There has been some improvement in the demand for yarn lately, but orders are few and far between, and no great weight is taken at a time. Moreover, it is still impossible to make prices to cover replacement costs. In sympathy with the advance in wool and tops, however, spinners are now endeavouring to make more money, and in most cases quotations have been advanced for both botany and crossbred yarns. A settlement of the German problem would bring immediate relief to the yarn trade here, for it is known that a considerable amount of business is being held up on account of the political situation and the financial stringency. Some manufacturers report a rather better week, inquiry both on home and export account having been more general. It is still a struggle to make prices in harmony with the cost of production, and the cheaper lines continue to be favoured. Home-grown wools are very firmly held, and prices show a hardening tendency.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There is generally a spirit of hopefulness abroad regarding the forthcoming London sales, and already it is a foregone conclusion that a sensible advance will take place both in merinos and crossbreds. A 10 per cent. advance is very freely forecasted, and some expect even more in the case of merinos. If the business done during the past month is anything to go by, we daresay an all-round advance of 10 per cent. will be justified, but one wonders how much actual consumption is responsible for the business done, and so far as the West Riding is concerned it is doubtful if more spindles and looms are running than in July. Judging by the increasing unemployment, it would appear as if consumption is contracting and not expanding. That, we are sorry to say, offers no explanation of the big business which Bradford merchants and top-makers have done during recent weeks, and we must look further afield for the real source of the demand for wool. We are satisfied that America has purchased considerable quantities, the big, well-known mill trust having bought considerable weights of both merino and crossbred wool at the lowest point of the market. In fact, the beginning of the improvement is directly traceable to the action of America, big weights of wool, noils, and wastes being secured before the advance really commenced.

Then, again, the Continent has shown unmistakable signs of awakening, and considerable private sales have been effected by Coleman Street selling brokers at sensible advances. Hopes are largely concentrated upon an increased Continental demand rather than on any augmented inquiry from America, and everything seems to indicate healthier manufacturing conditions both in France and Germany as the result of the London Agreement. It is to-day a well-known fact that stocks of merino wool in Bradford are practically nil—at least half-a-dozen of the biggest topmakers have nothing to offer in botany tops. Therefore, a new season is about to open with clean-swept boards, and with buyers keen to operate. Naturally, the high standard of values ruling to-day is a serious factor, but the trade cannot stand still and users refuse to operate because prices are not on a level which altogether suits buyers' ideas.

We believe that, notwithstanding to-day's somewhat high and dangerous standard of prices, the world demand for wool will be as pronounced as ever, and users will be in the market to buy at current rates.

Messrs Elder, Smith, and Co., Limited, ask us to state that the date of their second sale at Adelaide will be October 10th.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The timber trade has been more than usually slow this holiday month, the quietness being accentuated by the trouble in the building trade. Since the previous report on the market in the *Economist* large supplies of building woods have been imported from Finland, Sweden, Russia, to name the largest in their order of importance, with good supplies from Latvia and Poland. Prices for European woods on the spot have been unsteady, on account of the moderate demand, large stocks, and the fact that there have been more sellers than buyers; but one satisfactory feature is that, as customary, there have been no public sales this month, and therefore no opportunity of forcing wood on an overwrought market. With their resumption early next month the building trade, it is hoped, will have got once more into its stride with an increased demand after weeks of idleness, and the close of the holiday season should bring a resumed call for timber for work of a general character in almost all industries. In the free-on-board market the position is, perhaps, less gloomy than on the spot. Here importers and merchants are confronted with large stocks, but recent f.o.b. sales have been few, and arrivals will taper off considerably for weeks to come. Foreign exporters, however, are still holding fairly large balances; at a conservative estimate, Sweden and Finland have still between them some 400,000 Petrograd standards still unsold; and as this country, the largest buyer, is full up and "fed-up" with supplies, and the Continental consuming markets are quiet, it seems that sellers will have to offer still further inducements to attract business unless a sudden demand sets in. A feature of the free-on-board market again worthy of notice is the increased supplies of building and joinery timber from Russia to this country this year—267,000 loads, compared with 80,500 loads for the seven months of 1923 and 61,400 loads in 1922—and also compared with Finland's total this year of 422,000 loads and Sweden's 392,000 loads. In Canadian spruce the demand on the West Coast, where this wood is largely used for building purposes, has been poor, but there is a little improvement in the packing-case trade, which has assisted the consumption. In American pitch-pine buyers have not yet become reconciled to the small advanced quotations, shipbuilding being in such a poor condition, while stocks here show an increase. In the furniture woods market the demand is still of a dull character. Very large supplies, particularly of oak, and to a lesser extent of mahogany, poplar, ash, and "satin walnut," in boards and planks, have arrived from the States, with fair supplies of birch from

FRENCH LINE

The steamers are magnificently fitted, and the FRENCH LINE is FAMOUS for its CUISINE and CHOICE WINES. Private suites, unique public saloons, Café Terraces, &c. English freely spoken on all steamers.

For full particulars apply to:

Your Local Tourist Agent or The

Compagnie Générale Transatlantique, Ltd.
22, PALL MALL, LONDON, S.W.1.

Phone: Regent 3270.

Canada. In mahogany logs sellers are firm in their prices, stocks in first hands are lightly held, and not much is expected to come forward, but even for this highly prized wood buyers at late July sales showed an inclination to hold off, many logs being withdrawn; but the holiday period and the building lock-out may have been factors that will be non-existent when the mahogany sales are resumed next month. For colliery timber the imports are considerably less than a year ago, depression in the coal trade being the cause, but market prices are stated to be firmly held, and stocks at the collieries comparatively small.

VEGETABLE OILS AND OILSEEDS.

Markets generally have taken a distinctly easier turn. Following a decline in seed, linseed oil has been a falling market, current value of raw, ex Hull mill, now being about £41 on spot and around £40 for September-December delivery. Prices on a good home trade and a fair export demand, in which America figured, sharply advanced to £42, but the gain has since been lost, further inquiries from U.S.A. not having fructified. Cotton oils have been in better demand, except for common edible, which is slightly easier. Crude Egyptian offers freely at £42, ex Hull mill. Rather more inquiry has been experienced for soya oil. In the oilseed section prices of Plate linseed have been affected by better weather reports from Argentina.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains firm and steady, as best ox again sold at the auctions in Bermondsey from 7 1/2d to 9 1/2d per lb, seconds making from 6 1/2d to 8 1/2d. Best cows were unsold, seconds changing hands at 6 1/2d to 8 1/2d. Calf again advanced, making from 7 1/2d to 15 1/2d, and showing advances of 1/2d to 3/4d per lb on last quotations. Lambs sold from 3s 10d to 13s 2d, and shorn pelts from 5s 10d to 10s each. The South American frigorific position is slightly weaker, Argentine ox selling at 7 1/2d and cows 7d. High prices have, however, been paid by the Continent for saladeros, 9 1/2d having been paid for Santos ox and 9d for Concordias. Dry hides are fairly firm, but many sorts are yet too high for our tanners' ideas of price. The Chicago market is cabled as steady, with best heavy Chicago packers selling at 16 cents.

There is a better tone in the leather market, and sampling is going along freely. Northern tanners are sending out, however, a good deal of leather at very firm prices. Advances are being obtained on the lower grade of bends from dry hides, and tanners are also asking more money for certain classes of English and wet-salted bends, as supplies are not too plentiful. Repairers are cutting up a good deal of medium-class leather, and merchants have been busy this week in this direction. Split hides are hanging fire a little, as tanners are advancing prices in view of the firm hide market. Continental sole has advanced in price, this making the position of home tanners very strong.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 29.

SUGAR.—Quite an even market again resulted, and with regard to spot parcels sellers adhered to previous asking prices. British refiners' boards were moderately well cleared, particularly standard goods. Recent arrivals for Java sugars have been well absorbed by continental interests, in which Russian figured largely, and with but limited quantities now available, demand has shifted to vessels due in six or eight days. All continental sugars continue to be sparingly offered, and the undertone of the market is one of distinct steadiness. Of British refined Messrs Tate and Lyle's cubes quoted 44s 3d to 45s 3d; crushed, 42s 9d; granulated, 42s 1 1/2d; fine and coarse grain 39s 10 1/2d; No. 1, 39s 7 1/2d; No. 2, also London and T.L. 39s 4 1/2d; ditto, forward to September, 39s 3d; yellow crystals, spot, 36s 10 1/2d; caster, 41s 6d to 43s 7 1/2d, as to quality. Later prices were advanced 6d per cwt for all descriptions. White Java, spot, 35s 10 1/2d to 35s 3d; ditto, afloat, 23s to 23s 3d, as to position of steamer; July-August, 22s 3d, c.f. and i., London. Czecho granulated, spot, 38s 6d; November-December shipment, 21s 3d, f.o.b., Hamburg. Dutch granulated, spot, 38s; J. November-December, 21s, f.o.b., Rotterdam. American granulated, spot, 38s 9d; afloat, 23s 9d, c.f. and i., London. Belgian granulated, October, sold, 23s 3d; November-December, sellers, 20s 9d, f.o.b., Antwerp-Ghent. Polish crystals, spot, 35s 9d. White Java to Indian, October-December, sellers, 21s 9d; January-March, 22s, c. and f. terms. Mauritius crystals, October, 20s 6d, f.o.b. terms. Cuban basis 96 per cent., August-September, quoted 19s 7 1/2d, c.f. and i., U.K. White terminal market quietly steady. August sold, 23s 10 1/2d to 24s; December, 20s 4 1/2d to 20s 7 1/2d.

COFFEE.—Spot market continues to show firm features for all the finer qualities, which are in small supply. East African kinds realised higher prices.

COCOA.—There was only a small movement regarding spot parcels, but sellers required steady prices. Some fine pale Java bold sold, 115s; Accra, F/F grade, October-December, sold, 34s to 33s 6d, f.o.b. terms.

TEA.—Indian auctions embraced some 38,800 packages, and with brisk competition recent rates were not only fully maintained in the early part of the week, but in many instances slightly exceeded, though a quieter tone set in later. Pekoe sold, 1s 5 1/2d to 1s 10 1/2d; broken orange, 1s 6 1/2d, with finest up to 3s 1d. Ceylon sales totalled 23,350 packages, which soon cleared to a good demand at full to dearer rates. Pekoe sold, 1s 5 1/2d to 1s 10 1/2d; broken orange, 1s 6 1/2d to

2s 3 1/2d. At public sale, 4,800 packages Java and Sumatra were catalogued. Competition from a good attendance of buyers was carried on with activity at full to dearer prices. Pekoe sold, 1s 3d to 1s 7 1/2d; broken ditto, 1s 0 1/2d to 1s 8 1/2d; pekoe souchong, 1s 4 1/2d; orange pekoe, 1s 4d to 1s 6 1/2d; broken orange, 1s 4 1/2d to 1s 10 1/2d per lb in bond. There was a good steady inquiry for China teas, particularly common sorts, at firm values.

RICE.—Business pursues a quiet course, but, in the absence of any pressure on the part of shippers, prices show no material change. Two Stars, spot, 17s; September-October, 16s 6d, c.f. and i., London. Market also quiet, but steady, for both Italian and Spanish, with actual business doing, more or less of retail proportions. Japanese peas, spot, 19s 9d; September-October, 20s to 20s 3d cwt, business done. Madagascar butter beans, spot, 34s, 35s cwt, as to sample.

SPICE.—Pepper held steadily, but there was not much response from buyers. Black Singapore, L.S., August-October, quoted 4 1/2d; Lampong, October-December, sellers, 4 1/2d; Muntok, October-December, 8 1/2d. Zanzibar cloves quiet. Spot, 1s 1d to 1s 1 1/2d; October-December, value 9 1/2d per lb. Spot tapioca quiet on former terms. Singapore flake, August-September, Havre, quoted 28s; Penang seed, ditto, to London, 23s 6d. Sago flour, June-August, to U.K., quoted 15s 7 1/2d; August-September, 15s 3d; September-October, October-November, both 15s 1 1/2d, c.f. and i. Desiccated coconut firm. Fine cut, spot, 41s 6 1/2; medium, 41s; halves, August-September, sold, 40s 3d; September-October, sellers, 40s 9d; October-November, 41s cwt, c.f. and i., London. Ginger slow, at late rates.

DATES.—New crop rather quiet. Hallowee, first tide, sold, 23s; Khredrowie, 19s; and Siam, 16s cwt, landed terms, London.

JUTE.—Market firmer, but inclined to be somewhat unsettled at times, though a fair demand ensued. Firsts, August, Continent, quoted £34 5s; August-September, sold, £34 to £33 15s; September-October, £33 15s to £33 10s; November-December, £33 5s ton. Hessians and twills firm, but quiet.

HEMP.—Manila steady in value, though general trade moved quietly. J grade, August-October, quoted £44; K, £43; L, £42 15s; M, £41 15s ton. African and Mexican sisal steady, with a fair demand prevailing for the latter.

SHELLAC.—Market stronger. T.N., fair quality, spot, 300s to 305s; October, sold, 300s; December, 290s cwt.

COPRA very steady, with business on a moderate scale. F.M.S. Straits, June-August, Rotterdam, quoted £30 15s; July-September, sold, £30 7s 6d; August-October, £30 5s; September-November, £30 2s 6d. Dutch East Indies, July-September, quoted £30 5s. Ceylon, September-October, £31 5s. Java, July-August, £30 10s. Palm kernels steady, June-August, Liverpool, quoted £21; September-November, sold, £21 2s 6d ton.

RUBBER steady though generally quiet. Plantation standard sheet, spot, and September, sold, 1s 1 1/2d; October-December, 1s 2d; January-March, 1s 2 1/2d, with first crepe 1 1/2d lb more money. To New

London Bankers:—Hambros Bank, Limited; Westminster Bank, Limited; Midland Bank, Limited; Cox & Co.

per cent. has been a usual rate. Discount quotations have been maintained, the minimum rate for fine three months' bills, closing at $3\frac{1}{8}$ per cent., while December Treasury Bills for payment this week have been freely offered at $3\frac{1}{8}$ per cent. Not until the end of the week were there signs of any demand from the banks for short-dated Treasury Bills, when Octobers were bought at $3\frac{1}{8}$ per cent., and a few Septembers at $3\frac{1}{4}$ per cent. The market hardened yesterday afternoon on the Treasury Bill results.

Thursday's Bank return showed an increase of £353,400 in the Active Circulation as the result of end of the month requirements, and the Bullion Stock rose by £87,400. Other Securities rose by £577,600, although market borrowings on one day in the latter part of the previous week were offset by repayments on two days in this week, and the Government dividend payments were reflected in a decline of £6,646,000 in Government Deposits, together with a rise of £2,660,000 in Government Securities, Private Deposits gaining £9,504,200 as a result of these movements. As the result of the decline in the Reserve and the increase in the Liabilities, the Proportion was 0.7 lower at 17.8 per cent. of liabilities. Currency notes outstanding show an increase this week of £716,300 to £289,435,300, which includes £1,374,100 for notes called in but not yet cancelled. The fiduciary issue is £238,611,200, or £9,579,700 below the maximum.

THE STOCK MARKETS.

The influence of the signing of the London Agreement is felt on the Stock Exchange, where an increase in confidence among investors and speculators is noticeable. The general volume of business, however, remains restricted by holiday influences. Gilt-edged securities are, in the absence of new issues, benefiting from the automatic flow of accumulating investment money, but the market is fairly quiet, interest being keener among industrial and speculative sections. A feature of the week is the revival of the wild gamble in German and Prussian bonds; Chinese bonds are weak owing to the fighting in China. In the Home Railway market London Midland and Scottish are prominently strong. Argentine rails are good on dividend prospects. Rubber shares are stagnant, but tea shares have again been very lively, the top of the boom being succeeded by a shake out, from which prices quickly recovered. Insurance, banking, shipping and iron and steel shares are firm. The oil share market is erratic, the reduction in the price of petrol being a disturbing influence. The Kaffir market is better, apprehensions of labour trouble on the Rand being less acute.

THE COMMODITY MARKETS.

The position of wool is probably the most interesting feature in the commodity markets; a substantial advance at Brisbane was expected, but the actual rise was not up to expectations. The cotton trade is marking time, and there is still much uncertainty as to future values in the raw material. A scarcity of new business on the Cardiff coal market is reported, while the pig-iron and the manufactured iron and steel industries are in a state of depression. Tin began the week with a firm tone, and the price moved up, but subsequently part of the advance was lost. Copper also opened well, but weakness subsequently developed. Wheat is better all round, and sugar firm. Tea continues in demand. Rubber is inclined to weakness. The hide market is steady, and vegetable oils and oilseed quiet. Jute is higher on account of Indian mills according good support to the market. Further particulars of markets, together with prices, will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchange market continued quiet until the middle of the week, when a certain "liveliness" developed in the franc, and business in all currencies was again on a very limited scale. Sterling and dollars, especially the latter, were again those chiefly in demand. The effect of these limited transactions should be a fairly safe guide as to the future probable course of the franc, if it is remembered that heavy seasonal demands for dollars on account of the usual autumn shipments of cotton and grain are now about due; and the same consideration must be borne in mind in anticipating future sterling-dollar relations. The franc, opening at 82 on the 29th, reacted slightly to 83.15 on the 1st, probably in response to profit-taking; rose again to 82.80 on the 2nd, and fell to 83.80 on the 3rd in response, it is believed, to demands from the stock market for sterling and dollars. Further weakness was shown on the 4th, when it fell to 84.20, probably as a result of the unfavourable reception in Paris of Mr Ramsay MacDonald's Geneva speech. The weakening tendency continued this morning (5th) with the publication of the unfavourable Thursday statement of the Banque de France showing an increase of 364 millions in note circulation and of 300 millions in advances to the State. This brought the rate to 84.55-84.65, at which it stands at the moment of writing. The Belgian franc, on the other hand, opened at 89.25 on the 29th, and improved to 88.25 on the 2nd on the publication of favourable Budget figures. Although it reacted later to 89.37 on the 4th, and stands at 89.60 to-day (5th), it has managed to maintain in part, at least, its improvement relatively to the French franc. The reaction in the sterling-dollar exchange in favour of the latter, which we indicated in last week's issue, continued on the appearance of the first of this season's cotton bills in the New York market. Opening at 4.49 $\frac{1}{2}$ on the 29th, cable rates moved to 4.49 $\frac{1}{2}$ -50 $\frac{1}{2}$ on the 30th, but reacted sharply to 4.47 $\frac{1}{2}$ on the 3rd, and continued the movement to 4.46 $\frac{1}{2}$ on the 4th, standing finally on the 5th at 4.45 $\frac{1}{2}$. Montreal moved on parallel lines from 4.49 $\frac{1}{2}$ on the 29th to 4.46 $\frac{1}{2}$ on the 4th, finishing at 4.45 $\frac{1}{2}$ on the 5th. The peseta has reflected Spain's varying military fortunes in Morocco in its reaction from 33.74 on the 29th to 33.88-33.92 on the 2nd, when it even touched 33.95, then recovered slightly to 33.84-33.86 on the 3rd, and finished rather better at 33.82-33.87 on the 5th, on better news coming in from the front. The other principal Continental exchanges showed little or no movement. Amsterdam gained slightly against the dollar on the 1st. Milan opened at 101 on the 29th, declined slightly and steadily to 101.50 on the 4th, winding up at 102 on the 5th, probably as a reflection of the growing uncertainty of the Fascist political horizon. Swiss francs showed a slight weakness at 23.86-23.88 on the 30th, but improved to 23.71 on the 4th and 23.64 on the 5th. Copenhagen relapsed rather sharply from 27.28 on the 29th to 27.40 on the 2nd, but improved to 26.85-90 on the 4th, and remained at this level on the 5th. Berlin was unmoved at 18 $\frac{1}{4}$ -19 throughout. Helsingfors, Christiania, and Stockholm kept steady after their recent improvement with the dollar. Riga and Reval were also practically stationary at about 23.25 and 19.50. Warsaw, now another "dollar exchange," showed a slight appreciation from 23.30-23.60 to 23.25-23.50. The lei continued its appreciation on favourable Budget figures, rising from 890-920 to 850-875, where it now stands firm. Of the South American exchanges, the Brazilian milreis improved from 5 $\frac{1}{8}$ to 5 $\frac{1}{4}$ on the 4th, after touching 5 7-32 on the 2nd. Buenos Ayres improved from 41 $\frac{1}{2}$ (pence to the peso) to 42 $\frac{1}{2}$ on the 2nd and 42 $\frac{1}{2}$ -42 $\frac{1}{2}$ on the 5th. Eastern rates showed no great changes, in spite of the disturbing conditions in China, Hongkong remaining at 2s 4 $\frac{1}{2}$ d, Singapore at 2s 4 1-32d and Shanghai at 3s 3 $\frac{1}{2}$ d. The latter had a slight reaction to-day (5th) to 3s 3 $\frac{1}{2}$ d on news of the imminence of military operations. Rupees continued to harden with the favourable monsoon reports. Japan improved from 1s 9 $\frac{1}{2}$ d to 1s 10 $\frac{1}{2}$ d, in sympathy with her gradual economic recovery. Silver has been rather dull, and such movements as there have been have

taken their tendency from the dollar, but not, perhaps, so much as has heretofore been the case. China has been quite out of the market, as might perhaps have been expected.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 30th:—

(000's omitted.)			
EXPENDITURE.	£	REVENUE.	£
Supply Services	7,236	From Revenue	10,577
Interest, &c., on Debt	1,234	Decrease in Exchequer Balances	519
Sinking Fund	500		
Sundries	1,126		
Decrease in National Debt	940		
	11,096		11,096

Revenue for the week ending August 30, 1924, amounted to £10,577,000, compared with £11,730,000 a year ago. Customs and Excise receipts were both down on the week at £1,699,000 and £973,000, against £2,229,000 and £1,158,000 respectively. Estate Duties brought in £990,000, against £860,000. Property and income-tax yielded £4,258,000, against £4,778,000, and Super-tax was also lower at £290,000, against £450,000. Corporation Profits Tax only reached £220,000, against £570,000. Post Office Receipts were £50,000 higher at £800,000, and Special Receipts were £100,000 higher at £500,000. The week's operations reduced the National Debt by £940,000, and caused the following changes:—

(000's omitted.)			
	£		£
Public Department Advances	+ 1,000	Treasury Bills	- 1,230
		National Savings Certificates	- 150
		Sundries	- 560
	+ 1,000		- 1,940

The floating debt was reduced by £270,000 to £768,583,500.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE GENEVA DISCUSSIONS.

In the palmy days before the war we were accustomed to think of August and September as a dead season. But in recent years it has become almost a rule that great events in politics come to a head in these months. The summer time events of the last four years have included, in order, the Upper Silesian crisis, involving the possibility of a breach between England and France; the Turco-Greek war in Asia Minor and the Chanak affair; the Italo-Greek dispute and the Corfu incident; and this year we have the London Conference. The fact, moreover, that the Assembly of the League of Nations meets in September means that in any case this month will always be one in which international discussions will claim a large share of public attention. Certain organs of the British Press, however, seem determined to maintain the traditions of the "silly season" by their attitude towards public questions. We have this year, for example, the spectacle of an important daily journal endeavouring to thwart the united efforts of the Governments of the chief Powers to set upon a stable

basis the economic life of Europe. The proposed loan to Germany is an indispensable step in this direction; some of the terms of the London Agreement are not all we could have wished, but the raising of prejudice against the whole idea of a German loan implies that we should be better off if German finances remained in chaos, if German production and consumption remained far below normal, and if the trade of the whole world remained as it has been for some years, cramped and checked by the lack of normal markets in Europe. We may add that our expectation that the conditions on which the fears of the *Daily Mail* are based, and particularly the low level of wages in Germany, would steadily be modified is confirmed to-day by our German correspondent, who points out in a later column that real wages in Germany in the last few weeks have been rising as a result of the stabilisation of money, and are now for unskilled labour almost equal to real wages before the war. The figures in the last two months show a rise for skilled labour from 27 gold marks per week in January to 34 $\frac{1}{2}$ gold marks in July. This futile campaign to wreck the London Agreement is in keeping with the efforts made in the same quarters in regard to last year's crisis. The action of Italy towards Greece was applauded, and the Government urged to prevent the League of Nations from interfering with matters which were supposed not to concern it. We have expressed the view more than once that the crisis of last September, while it showed the limitations of the League, brought home to certain Governments in Europe that the public opinion of Europe, as expressed in the Assembly, had become a factor to be reckoned with. We will merely call attention here to two of the sequels to this incident. The question whether the League had competence in this affair was referred to a committee of jurists. Early this year, with the concurrence of the Italians, the jurists unanimously decided in favour of the League. Secondly, in Thursday's *Times* a telegram from Rome on Italy's attitude to the League contains these significant remarks: "Last year many newspapers were calling for Italy's immediate resignation from the League; this year the same newspapers exhort their readers not to underestimate the importance of the Assembly for the future of Italy." The telegram continues with a quotation from *Epoca*: "For many years the interests of our country must be defended at Geneva; for many years we shall find in this Assembly the measure of our progress and our strength."

The decision of England and France that the questions of security and disarmament must be dealt with at Geneva, and the presence of several Prime Ministers lend exceptional weight to the present meeting. The discussions are only just beginning, but we already have before us Mr Ramsay MacDonald's speech to the Assembly. The British Prime Minister scored a great oratorical success. In a few hours he has clearly caught the spirit of the Assembly, for both in his general references to the League and in his specific statement of what the League should do, he assigns to the League more important responsibilities than would be gathered from his previous public declarations and from letters addressed to Geneva from this country. In several of his references, such as that to the Traffic in Arms Convention, to which America has for years been a stumbling-block, Mr Ramsay MacDonald seemed imperfectly acquainted with the work which the League has been doing. But it is not to be expected that, with all the burdens he has upon his shoulders, Mr MacDonald should have expert knowledge of the far-reaching ramifications of the League's activity. The major points of his speech, however, merit more careful examination. They are briefly as follows:—

(1) Military alliances cannot produce security, and agreements for security that savour of or include provisions that are really military alliances will recreate the conditions of 1914. Great Britain will not be a party to any of them.

(2) Peace must mainly depend upon devising a proper system of arbitration. Improvements (unspecified) must be made in the courts already existing, and the optional clauses in the present statutes of the International Court of Justice should be reconsidered, and perhaps modified with a view to general ratification. (Under these clauses

States may bind themselves in advance to accept the arbitration of the Court—instead of relying on the conciliation effort of the Council—in certain classes of disputes with all States who have also accepted the clauses in question; but so far only a few minor States have bound themselves in this way.)

(3) The League is to summon as soon as possible a conference, which is to be held in Europe, to discuss land disarmament.

(4) The Covenant of the League to which Great Britain put its signature, and still strictly adheres, should be elaborated.

(5) Germany should at once be admitted to the League.

The last of these points is of immediate practical importance. The League cannot make real headway until this is achieved; but we are disposed to think that France will require, and properly require, that Germany should first be given a clean bill in the report of the Military Commission at present investigating whether Germany remains disarmed or not. The other points made by Mr MacDonald show goodwill; but they are very vague, and can hardly be said to constitute a "plan" on the important problem which France and England have referred to the League. In the first place, it is worth while to recall what are at present the provisions in regard to disputes in the Covenant to which we and over 50 other nations are parties. The problem is very much like the case of industrial disputes. The nations of the world are not prepared as yet to agree that every kind of dispute should be referred to a court of law, just as our trade unions will not agree to submit to arbitration such questions as whether or not their organisations should be "recognised." Apart from this unwillingness, indeed, there are many problems which are not appropriate to a legal settlement, and there is, therefore, a wide field for what is called, in the case of industrial disputes, "conciliation." The Covenant, therefore, provides that disputes which are not considered suitable subjects for arbitration must be brought before the Council for discussion and report. It also adopts the principle, which is applied in the industrial legislation of Canada, and is likely ultimately to be adopted in this country, that disputing parties must not go to war until the dispute has been considered by the Council, or has by agreement been referred to arbitration. The parties may refuse to accept the conclusions of the Council, and may subsequently go to war. But they are pledged to bring their case up for discussion, and, in any case, to delay hostilities until at least three months after the Court has decided or the Council has made its report. No other member of the League may go to war with a country which accepts the decision. Mr MacDonald is perfectly right in urging that progress should be made along the line of developing the functions of the Court of Justice, and by steadily enlarging the categories of disputes on which nations pledge themselves in advance not merely to submit cases to the Court, but to accept the decision of the Court when given. But this will never cover the whole field of possible international differences, and is unlikely to cover the greater part of the field for many years to come. In the meantime, what mutual security are members of the League able to give to each other which will give them sufficient confidence to enable them to reduce their armaments? The Covenant commits them "to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League," and in cases in which an act of war is committed against a member of the League, they may be called upon to use economic weapons against the aggressor. These sanctions may be very potent ones; though France and some other nations of Europe feel that a policeman is a more effective guardian of public order than a bailiff. The real difficulty, however, is to define who is the aggressor, and, as Mr MacDonald truly says, that question may often not be decided until the verdict of history is given perhaps 50 years later. Where, then, are we to find a basis for strengthening the security which the League Covenant should give to its members?

The answer is, we think, along the lines indicated recently by Mr Asquith, who suggested that it must be obligatory, as at present, upon every member in all its disputes to use the machinery of the League—namely, conciliation by the Council if no other provision applies

to the case in point, arbitration in certain types of case previously agreed upon or if the parties to the particular dispute in question are willing, and in any case several months' delay before an act of war is committed. If this procedure is not complied with by any party, he is a law-breaker, whatever may be the merits of the particular dispute. International pressure should be concentrated—by using force, if necessary—not on enforcing decisions which may take time, but upon insisting that disputants use the machinery of peaceful settlement. Sooner or later, we are convinced that not merely moral pressure, but material and military pressure will be exerted by the members of the League against breaches of the peace. This is the principle for which M. Herriot pleaded in his reply on Friday, and we sincerely hope it will not be rejected by Mr MacDonald under pressure from the extreme pacifist elements of his party.

RUSO-BRITISH TRADE BEFORE THE WAR.

For reasons only too well known to most people, British trade with Russia has been under a cloud for some years past. Whether Mr MacDonald's Treaty with the Soviet authorities marks the beginning of better things is a matter of uncertainty, but at all events its signature has served to bring Russian affairs into the limelight once more. The occasion may not, therefore, be inopportune for a brief review of our pre-war commerce with the Russian Empire, even if it serves no more useful purpose than to measure the width of the gulf separating the present from the recent past.

Ten years ago the annual statement of the Trade of the United Kingdom showed that Russia stood sixth in the list of our customers, and held the same position among the nations of the world from whom we obtained our external supplies. In 1913 the total value of our exports and re-exports amounted to £634,800,000, and of this value the share taken by Russia was 4.4 per cent., and amounted to £27,700,000. In that year the total value of our imports was £768,700,000, and our purchases from Russia amounted to £40,300,000, or 5.2 per cent. The combined value of our imports from and exports to Russia amounted to £68,000,000, and the great bulk of these cargoes was carried in British ships, and thus considerably increased the value of our trade with Russia.

Coming to the details of our imports, we find that before the war Russia was the chief source of our supply of imported eggs, sending us £4,745,000 worth, or more than twice the value of the eggs that we bought from Denmark (£2,297,000). Russia, also, was second in the supplies of butter and barley, of which the value of our imports from her was £3,831,000 and £1,847,000 respectively. She supplied us with oats to the value of £865,000, and maize to the value of £490,000, and with bacon to the value of £685,000. Since that date great bacon factories have been erected at a point where the three provinces of Tambov, Orel, and Voronezh meet. Russia stood third in the list of countries supplying us with oats and maize, fourth in the list as regards bacon. As regards our imports of raw materials, Russia stood in 1913 easily first in her supply of wood and timber, sending us £13,622,000 worth, or almost half of our total imports. She also sent us more flax than any other country did, its value amounting to £2,807,000. She was second only to the United States in the value of petroleum, with which she supplied us, and sent us almost our entire import of manganese ore. The following table shows the value of our principal imports from Russia in the last pre-war year:—

Food Imports.	Value, £	Raw Materials.	Value, £
Eggs	4,745,000	Wood and timber	13,622,000
Butter	3,831,000	Flax	2,807,000
Wheat	1,985,000	Petroleum	1,028,000
Barley	1,847,000	Seeds of all kinds	916,000
Oats	865,000	Hides (raw)	580,000
Bacon	685,000	Manganese ore	463,000
Maize	490,000	Ramp	432,000

The next table shows the 12 countries from which we drew our principal supplies of food and raw materials in 1913, and how high a position Russia held among them.

Imported from—	Food, Drink, and Tobacco.	Raw Materials.	Total Values.
United States	50,400,000	64,500,000	114,900,000
Argentina	35,800,000	6,300,000	42,100,000
British India	20,000,000	21,400,000	41,400,000
Russia	15,200,000	22,800,000	38,000,000
Australia	15,600,000	18,400,000	34,000,000
Canada	20,900,000	7,700,000	28,600,000
Germany	16,500,000	7,100,000	23,600,000
Denmark	23,400,000	288,000	23,688,000
New Zealand	8,900,000	11,400,000	20,300,000
Egypt	680,000	20,300,000	20,980,000
Netherlands	17,200,000	2,300,000	19,500,000
France	9,200,000	6,900,000	16,100,000

The table shows that, whereas Russia stood fourth on the list in the combined values of imports of food and raw materials, it was second in the value of raw materials, which it supplied in 1913 to the United Kingdom.

Turning now to the value of our principal exports of British produce and manufactures, and our re-exports of colonial and foreign produce, we have compiled a table from the figures given in the annual statements of trade of the United Kingdom, showing the values in thousands of pounds of our chief exports and re-exports to Russia for the years 1904 to 1913, comparing the average value of the five later years with that of the five earlier ones:—

Values in Thousand £'s.	Coal and Coke.	Machinery.	Raw Cotton.	Rubber.	Herrings.	Iron and Steel Manufactures.	Woolen and Worsted Yarns and Manufactures.	Cotton Yarn and Manufactures.
1904	1,512	1,748	3,143	1,483	547	939	455	331
1905	1,377	1,578	2,917	1,545	576	696	521	368
1906	1,611	1,417	2,574	1,358	792	612	604	564
1907	1,946	2,030	2,944	1,376	1,050	709	782	868
1908	2,205	2,464	3,765	1,069	962	775	713	726
1909	1,910	2,814	2,711	1,587	1,223	646	745	741
1910	1,909	2,362	3,436	2,295	1,433	782	1,048	794
1911	1,954	3,472	4,247	1,279	1,380	881	1,126	1,075
1912	2,673	2,959	3,068	1,647	1,624	891	854	965
1913	4,441	4,192	3,832	2,205	1,988	1,010	845	787
Average of 1904 to 1908	1,730	1,847	3,069	1,366	785	746	615	571
Average of 1909 to 1913	2,577	3,240	3,459	1,803	1,490	842	924	872
Actual increase	847	1,393	390	437	705	96	309	301
Percentage increase	49.0	75.4	12.7	32.0	90.0	12.9	50.3	52.7

After the close of the Russo-Japanese war British exports to Russia rapidly increased in value, and our exports of yarn and woollen and cotton manufactures were half as valuable again in the latter quinquennial period. Our exports of machinery (which included "belting of all sorts") were over 75 per cent. more valuable in the latter period, and our exports of coal and coke were almost half as valuable again in the latter period. From 1903 to 1912 inclusive Russia twice stood first among the sources of our imported wheat, viz., in 1905 and 1910, when we imported 25,600,000 cwts and 28,900,000 cwts respectively; and in four other years—1903, 1904, 1909, and 1911—Russia stood second:—

Imports of wheat (grain) in million cwts.	From Argentina.	From British India.	From Russia.	From United States.	From Canada.	From Australia.	Total imports.
Average import from 1903 to 1912	20.05	17.75	17.30	16.50	13.35	9.05	97.55

THESE figures make a melancholy comparison with those of the present day. Since 1921 our trade with the area officially classified in the returns as "Russia" has been as follows:—

	1921.	(Million £'s.) 1922.	1923.	1924. (6 months.)
Imports	2.7	8.1	9.3	4.6
Re-Exports ..	1.2	1.0	2.0	2.8
British exports	2.2	3.6	2.5	0.7
Total exports	3.4	4.6	4.5	3.5

With an earlier table of our pre-war exports and re-exports to Russia may be compared the following figures for 1922:—

Value in Thousand £'s.	Coal and Coke.	Machinery.	Raw Cotton.	Rubber.	Herrings.	Iron and Steel Manufactures.	Woolen and Worsted Yarns and Manufactures.	Cotton Yarn and Manufactures.
1922	720	106	...	181	52	169	359	75

The contrast between these conditions and those of the pre-war era is too well known to call for special emphasis. The present Union of Socialist Soviet Republics administers a smaller area than that of the former Russian Empire, but its 130 millions of subjects may one day provide an effective market for British goods on a sale which will bear comparison with pre-war days. That consummation, unfortunately, is not likely to be brought about for some time to come. While the majority of the population continues to live in an extremely modest, self-sufficing way, and the economic machine functions with so much difficulty and uncertainty, a speedy return to the 1913 volume of overseas trade is an obvious impossibility. If any money is to be forthcoming for the project of putting the country on its feet again, every precaution should be taken to ensure that the proceeds are spent on none but productive purposes, among which the restoration of the transport system should certainly take a prominent place.

THE STATE OF FRANCE.

THE Report on the economic condition of France, by Mr J. R. Cahill, the Commercial Counsellor to the British Embassy in Paris, which the Department of Overseas Trade has just published,* is in two respects the direct antithesis to the traditional railway refreshment room sandwich. It is not stale, for it carries us up to June 30, 1924, and in the case of some of the statistics, up to July 31st. In this respect it also contrasts happily and strikingly with many official publications. Secondly, its 224 pages are absolutely packed with the nourishing meat of information and statistics. A great deal of the ground has, of course, been covered from time to time in the *Economist*, either by our Paris correspondent or ourselves, and we need not, therefore, follow Mr Cahill through his story of such leading events of the period as, for instance, the new taxation measures, or the wild movements of the franc exchange in the spring. But there are several points in Mr Cahill's crowded narrative that strike the reader with renewed force. The first and foremost of these points is summed up in the word "prosperity." This is how the Report opens:—"The brilliant economic revival that ensued in the early months of 1922 has as yet suffered no eclipse. The entire population of France has continued in full employment, and her production has been consistently retarded by the dearth of labour." That is the keynote, and throughout the industrial section of the Report it is well sustained. Let us quote one or two illustrations at random. In June, 1924, the average number of workers in receipt of unemployment relief was 643. "Unbroken prosperity has been enjoyed since the last months of 1921 by the French woollen industry, which appears to have completely regained at least its pre-war situation." Again, "the French coal industry..... has enjoyed a period of great prosperity since the early months of 1922." The tonnage carried by the seven French railway systems rose from 191.6 millions in 1921 to 250.1 millions in 1923. The engineering trades "have continued to receive constant and abundant orders." Illustrations of this almost monotonous story of activity and shortage of labour may be multiplied at will.

* H.M. Stationery Office. Price 6s net.

But there are exceptions. Of these, iron and steel was or a time, at any rate, a case in point, although even here 1923 production showed an advance over 1922. Mr Cahill gives the following comparative figures of steel and pig-iron production in 1913 and 1923 for Britain, U.S.A., and France.

PERCENTAGE of 1923 to 1913 OUTPUT.

	Steel.	Pig-Iron.
Great Britain	110.8	72.5
U.S.A.	138.1	129.3
France	73.5	60

Instructive in this connection are some figures given regarding the effect of the Ruhr occupation:—"The gravity of the non-arrival of German coke after the Ruhr occupation, is evidenced by the fact that the number of blast furnaces in operation, which had been 116 on January 1, 1923, was only 90 a month later, and only 77 in April and May. By the end of the year the figure for January 1, 1923, had been regained, and even exceeded, recovery being produced by "the improvement in supplies gradually brought about by intensive efforts in home coke production, purchases of coke and coking coal in Great Britain and America, and seizures of stocks at the German works." And finally the iron and steel industry joins the prosperous category: "The prosperity enjoyed by the iron and steel industry in the last three months of 1923 become even more marked in the first four months of 1924." The fall in the franc assisted, but its recovery did not check the movement:—"It has been frequently reported that the improvement of the exchange caused a slackening of the orders, but the works were then even over-abundantly supplied in view of labour shortage, and at the end of May there was no doubt that the metallurgical works were fully occupied, that, although the supplies of German coke had dropped from 600,000 tons in April to 250,000 in May, abundant stocks were held, and that the industry was likely to work well at least for many months to come."

The French Labour shortage, due largely, of course, to the decline in population, led to a large immigration of foreign workers. Mr Cahill indeed describes the immigration movement as "the most striking phenomenon in the social life of France during the last 30 months." In 1922, 180,000 alien industrial and agricultural workers were introduced into France through State agencies; in 1923 the figure rose to 262,877, while in May, 1924, "alien workers were entering the country at the rate of 6,000 a week." Among the immigrant workers in 1923, Italians, with 112,500, formed the largest contingent, and there were 55,000 Poles, 36,500 Spaniards, 34,000 Belgians, 12,000 Portuguese, and so on. If the immigration movement continues on this scale, one cannot help inquiring, may not the effects on French political and social life be far-reaching?

Mr Cahill's chapter on French finances deserves careful reading. As most of the salient figures have appeared in the *Economist* we may here pass it by with two comments and a quotation. The chapter should be read by those who wish to realise the progressive efforts to bridge over the gulf between revenue and expenditure; while attention is due to Mr Cahill's emphasis upon the great increase in efficiency of tax collection. We trust that this is fully deserved. It may not perhaps be generally realised in England that up to 1914 France had no income-tax, while in 1923 the yield thereof was 2,542 million francs. Since Mr Cahill regards it as "idle to speculate" as to the future course of the external value of the franc, we may content ourselves with reproducing without comment his remarks on the subject in abbreviated form:—

The positive factors that should tell in favour of a not too remote recovery are many. With the maintenance of peace, France should rapidly regain, and indeed considerably surpass, her former productivity, as a result both of the reconstruction of the devastated areas and of the improvements as regards equipment, magnitude of units, and organisation in the coal, mining, metallurgical, engineering, textile, and other industries therein, and of the general improvement in the manufacturing power of other areas. The weight of unduly large imports on the franc will therefore tend to diminish with her increased productivity in industry and agriculture. French finances have now traversed their worst period. Reduction in expenditure appears destined to be accompanied by a considerable expansion in revenue, so that, granted fairly normal developments, the primary causes of the depreciation of the French franc—undue expansion of the fiduciary currency, and the

far greater indirect inflation by the unbroken policy of loans or issues of various kinds under State guarantee—should gradually cease to produce their inevitably pernicious effects, and, as gradually, the franc should recover its gold value by the removal of the factors most directly ministering to its present disease.

As unrepentant Free Traders we may perhaps be pardoned for concluding this cursory notice of a valuable and well-compiled report with a reference to some of the difficulties which France encountered in the matter of tariff-bargaining during the period under review. Some of the cases attracted lively attention as they arose; and by an effort we restrain ourselves from retelling the stories as propaganda for our fiscal faith. But even if this Report were not crammed, as it is, with important matter from cover to cover, it would be well worth the while of a Free Trader to spend six shillings in order to read and smile over the stories of tariff bargains and difficulties detailed on pages 35 to 39.

OUR INDEX NUMBER.

As the net result of conflicting movements in various groups, our Index Number of wholesale commodity prices reacted slightly in August after the substantial advance recorded in the previous month. The figure for the end of August is 4626, as compared with 4657 at the end of July—a drop of 31 points. The percentage increase over the 1901-5 basis falls from 211.7 to 210.3. As will be seen from figures given below, there was a tendency in many directions for prices to rise, but the effect of this tendency was more than counterbalanced by notable declines in the quotations of textiles and cereals. A year ago the total figure was 4188, or 438 points below that for the end of last month. The following table compares the figures for the five groups and the total with those recorded at the close of previous months:—

Date.	Cereals and Meat.	Other Food Products (Wheat, Sugar, etc.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oil, etc.).	Total.	%
Basis (avg. 1901-5) ..	600	300	600	400	500	2200	100.0
End July, 1914	879	382	616	464	583	2668	116.6
Dec., 1915	897	446	731	711	848	3634	165.2
Dec., 1917	1286	686	1684	839	1348	5845	265.9
Nov., 1918	1289	782	1848	908	1389	6212	282.6
Mar., 1920	1808	914	2974	1246	1709	8852	399.6
Dec., 1921	1344	805	1284	1216	1275	5924	269.3
Dec., 1922	921	636	1106	762	931	4357	198.0

Sept. "	823	782	1214	732	745	4297	195.8
Dec., 1924	853	815	1382	774	755	4680	208.2
Jan., 1924	909	845	1349	789	769	4662	211.9
Feb. "	899	859	1308	819	783	4658	212.2
Mar. "	897	843	1313	805	780	4640	210.9
Apr. "	904	802	1364	788	778	4637	210.8
May "	912	730	1357	753	774	4627	209.8
June "	914	736	1347	764	769	4631	209.9
July "	951	732	1423	777	773	4657	211.7
Aug. "	941	744	1385	781	774	4626	210.3

The decline in the first group is partly due to wheat, which in accordance with our expectations receded from the high level to which it had been driven by exaggerated fears as to the world's harvests. Flour fell in proportion, potatoes recorded a seasonal decline, and oats dropped more than 1s per cwt, while rice became a shade cheaper. These movements were sufficient to outweigh upward movements in meat (especially pork), and a big jump in barley prices due to weather conditions. Among subsidiary foodstuffs, butter continued the upward movement which was noticed in July, tea markets were a shade harder, while a rise in coffee offset a drop in cane sugar.

Turning to textiles, we find a big drop in raw cotton prices contrasted with an advance in raw wool. The fall in cotton, after the rise in July, was due to the unexpectedly favourable change in the latest crop estimate in the United States. Referring to this movement, Messrs Robert

Barbour and Brother, Limited, write in their latest market report:—"Ever since the rapid rise in prices following the bullish report on the condition of the crop up to the middle of July opinion had been practically unanimous that the advance had been altogether too rapid, and that a few days of good rains in Texas might change the whole situation. This is exactly what occurred. The violent fluctuations which took place prior to the improved weather news had thoroughly unsettled the market, and the extraordinary discrepancy between official and private advices was a source of endless bewilderment. But with the relief of the drought scare, the prospect of a yield of at least 13 million bales, with further possibilities, the likelihood of a carry-over of something like 2½ million bales, and the assurance of nothing worse than minor damage to the new crop by the ravages of the boll weevil, sentiment again became definitely bearish. A lower level of prices was the normal outcome of the more favourable conditions, but the legitimate determination of spinners and manufacturers to extract some benefit for themselves from the drop in cotton prevented rates for yarn and cloth both at that time and later on from coming down to an extent proportionate to the decline in the raw material." The authorities quoted are hopeful of the benefit that the cotton industry may derive from the progress of European settlement, and the Bradford wool trade is basing considerable hopes on the same factor.

Among minerals, pig-iron weakened under a slackening demand, but the chief movement in this group was an advance of between £7 and £8 per ton in tin, which thus continued the sharp rise recorded in the previous month. In the miscellaneous group, the hardening of rubber prices is the feature, and there were contradictory movements in oils and oilseeds.

In the next table we show the changes in the index number of each separate commodity in comparison with that figure for the end of July, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	94	- 7	Cotton, A	143	- 21	Copper	52	..
English	85	- 4	Cotton, B	153	- 14	Minerals	721	+ 4
Flour	114	+ 2	Cloth	144	- 10			
Barley	72	- 9	Wool, Eng.	174	+ 10	Baltic timber	103	..
Oats	73	- 19	Do Aust.	145	+ 2	Amer. timber	89	..
Potatoes	127	+ 4	Silk	107	+ 10	Leather	604	..
Rice	123	+ 8	Flax	177	+ 3	Petroleum	108	..
Beef	140	+ 15	Ramp	634	+ 4	Oil	72	..
Mutton	84	+ 15	Wine	112	+ 2	Oilseed	80	+ 2
Pork	84	+ 15	Tea	112	+ 2	Tallow	84	..
			Textiles	1,345	- 38	Indigo	83	..
Cereals & meat	941	- 10				Crystals	85	..
			Pig-iron	89	- 4	Rubber	154	+ 3
Tea	158	+ 6	Steel rails	73	+ 4			
Coffee	118	+ 5	Iron bars	91	..	Miscellaneous	774	+ 1
Sugar, cane	123	- 5	Coal, steam	48	+ 4			
Sugar, beet	99	- 6	House coal	136	- 4	Total	4,626	- 31
Butter	130	..	Lead	89	+ 3			
Tobacco	115	+ 12	Tin	89	+ 3			
Other foods	744	+ 12						

The result of these changes is to reduce from 81.6 per cent. at the end of July to 80.4 per cent. at the end of August the percentage advance over the level of prices at July, 1914. How this figure and similar figures for the various groups have moved in recent times is shown below:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	188	241	237.5
Dec., 1919	249	250	398	247	263	287.1
Mar., 1920	261	260	494	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1922	159	180	180	184	168	169.6
June, 1923	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
June, 1924	141	220	191	167	137	167.7
Dec. "	148	231	225	167	136	178.6
Mar., 1924	155	240	213	173	141	181.0
Apr. "	156	228	221	170	141	180.8
May "	157	208	220	162	140	176.5
June "	158	210	219	164	139	176.6
July "	164	208	231	167	140	181.6
Aug. "	162	211	225	168	140	180.4

At the end of August, 1923, the percentage increase over the pre-war level was 63.3, and two years ago it was 66.

THE RUBBER TRADE IN AMERICA.

(FROM A NEW YORK CORRESPONDENT.)

THE long-anticipated shortage of rubber for near-by arrival, resulting from the hand-to-mouth method of buying by consumers here, is now becoming apparent. It is clear that that method has been overdone, and the consequences are likely to be serious for many manufacturers, a few of whom may have to close down operations temporarily for want of supplies.

The exceptionally long, cold, wet winter and spring postponed the public demand for tyres, and manufacturing consequently was restricted. With the advent of warm weather in the latter part of June public buying recommenced and has made rapid progress since. Now the manufacturers have discovered that they underestimated demand, and consequently their own requirements in raw materials. This sudden and unexpected call for an increase in production is causing them anxiety, for they find that supplies here are at an exceptionally low ebb and expected arrivals during the next month or two, unless the London stocks are raided, will be insufficient for their necessities.

This situation has not yet been reflected in prices, although spot and August deliveries, reversing recent history, are at a premium over futures. The fact is that manufacturers, particularly the larger consumers, are afraid of showing their interest in the market until compelled to do so, for they know that the nominal market position is being manipulated by shorts, who are using every effort to depress prices to cover their commitments before the facts of the situation become generally known. When that time comes, a race between them and the consumers seems unavoidable.

The statistical position is being watched very closely by manufacturers, and it is recognised that this is strong to an unusual degree. The official figures recently published by the Rubber Association of America show that, contrary to expectations, consumption here during the first half of this year increased by 39,600 tons over the last half of 1923, the figures being 158,800 tons, as compared with 119,200 tons. Manufacturers now estimate that consumption for the second half of this year will be on a heavier basis than for the first six months, and that at least 320,000 tons will be used in 1924, an increase of about 15,000 tons over 1923. Stocks on hand and afloat for both manufacturers and dealers at the end of June were less by 21,000 tons than at the beginning of the year, and less by 39,400 tons than a year ago.

Where are these increased requirements to come from? Total imports here in January to June were 156,300 tons (including 15,500 tons from Europe), some 33,700 tons less than the same period last year. Net shipments from Malaya and Ceylon, the restricted output areas, during the same period were about 92,600 tons, as compared with 119,400 tons last year. Now that the permitted exports from the restricted areas have to be further reduced to 55 per cent. of the standard production during the current quarter, we cannot expect direct arrivals for the rest of the year to be maintained, even on the above levels. Consequently we must look to the Dutch Indies and London stocks for additional supplies. As regards the former, it does not appear that the threatened great rate of increase in production is materialising, exports in January to June being only some 15,000 tons more than last year, and Brazil cannot at present be relied on. As regards the London stock, fears are expressed that possibly a substantial portion may not perhaps be in a very satisfactory merchantable condition by this time, and it is considered that in any event the 50,000 tons there is little in excess of the normal balance which should be carried if manufacturing requirements are to be provided for.

The facts of the situation are appreciated by the manufacturers here, who are showing much nervousness, fearing that almost at any moment there will not only be a sharp advance in prices, but that they will have difficulty in securing the volume they need. Meantime, they have been quietly absorbing all offers which nervous holders have been willing to sell under the stress of the present

manipulated market, but this has only produced comparatively small quantities—at all events, nothing like sufficient to fill requirements. The arrivals for the current month are small, and will be insufficient by some 10,000 tons to fill September requirements, and a similar situation faces the market, though perhaps in a less marked degree, for the coming months.

All the markets are, and have been for a fortnight past, extremely sensitive, swayed from hour to hour in opposite directions, largely, it is reported, under the influence of a prominent speculative operator in Mincing Lane, whose transactions there and here have been bold and caused much confusion. Their ultimate adjustment needs to be closely watched in order to minimise as far as possible the effect of operations which would be impossible in a better organised market.

Once again the inefficiency of present methods in the industry is exemplified, always at the expense of British growers. In spite of the depressed prices ruling between February and early July, it is only now recognised that supplies were less and demand greater than before. It would appear that British growers are merely wasting time in considering the terms on which a central selling organisation should be established, when the whole problem before them is the comparatively simple question of marketing and distribution. They seem afraid of the Dutch growers and the so-called native producer, when they could surely find a way of using their competitors' tactics to their own financial advantage.

However one may differ about the soundness or otherwise of restriction of output from a theoretical or economic point of view, it might at least be expected that its adherents would be prepared to support its administration in an intelligent and effective manner. Have they shown any signs of doing so? The only apparent reply is the suggested Central Selling Agency. No wonder the Dutchman smiles and grows fat on selling his product at a farthing per lb under the maximum price which British growers have advertised as being the height of their expectations. It seems to us on this side an example of the tail being allowed to wag the dog!

Postscript.—Notwithstanding the conditions outlined above, which are gradually being recognised here, a decline of about 10 per lb has since been produced in this market, and London has followed. This decline has been brought about not so much by selling, for the volume of business passing has been almost negligible, but the big buyers have continued to refrain from showing any interest, and a few small sellers have thus been able to mark nominal quotations down.

Whether or not we shall see the logical result of the situation having its effect on prices within the next few weeks remains to be discovered, but it certainly seems a pity that London does not appear to appreciate facts which it could turn so much to its advantage.

EMIGRATION FROM THE BRITISH ISLES.

THE problem of unemployment in this country is considerably influenced by the reduced rate of emigration compared with pre-war days. Last year, however, showed a considerable increase, and some figures recently published by the Board of Trade throw considerable light on the trades and occupations from which they came. Under the Merchant Shipping Acts, persons of 12 years of age and upwards are counted as "adults." A separate analysis has, however, been made on this occasion of the returns of British emigrants and immigrants of 18 years and over, the respective totals being as follows:—

British Subjects.	Emigrants.*			Immigrants.*		
	1921.	1922.	1923.	1921.	1922.	1923.
Males—						
Total number of adults of 12 years and upwards	79,462	77,073	141,027	29,945	25,851	23,066
Adults of 18 years & upwards	73,205	70,272	130,188	26,792	24,742	22,126
Females—						
Total number of adults of 12 years and upwards	87,554	70,816	89,884	28,606	29,518	25,025
Adults of 18 years & upwards	81,522	65,753	82,721	27,323	28,161	23,807

* To and from non-European countries.

The above figures include migrants from and to the Irish Free State, the returns for 1923 thus being comparable with those of 1921 and 1922. The next table shows the occupations of the emigrants and immigrants of 18 years or upwards who left or took up permanent residence in the British Isles during the last three years. For this purpose, residence for a year or more is regarded as "permanent."

Occupations.	Emigrants from the British Isles.			Immigrants into the British Isles.		
	1921.	1922.	1923.	1921.	1922.	1923.
Males—

*Grand total 18 years and over	81,522	65,753	82,721	27,323	28,161	23,807

* Inclusive of migrants of 12 years of age and over, whose ages were not specified.

Commenting on these figures, the *Board of Trade Journal* observes that in each of the three years under consideration the number of emigrants from the British Isles who were classified in the agricultural group exceeded the number in any other individual group, the percentage in this group being 18.4 of the total males of 18 years and upwards in 1921 and 1922, and 20.1 in 1923. The numbers recorded in the mining, engineering, and building groups showed increases in 1922 and 1923 as compared with the figures for 1921, the most noticeable proportional increase being shown in the metal and engineering group, where the percentage of the total rose from 11.0 in 1921 to 15.0 in 1922 and 19.0 in 1923. The percentage employed in mining and quarrying and in building increased in 1923 as compared with 1921. In the commercial, finance, and insurance and professional groups proportional decreases were shown in 1923 as compared with 1921, the percentage in the former group falling from 17.0 to 10.0, and in the latter group from 7.6 to 3.4. Of the female emigrants the number of wives or housewives (not otherwise described) amounted to nearly one-half of the total in each of the three years. The percentage employed in domestic, hotel, &c., service was 27.0 in 1921, 27.4 in 1922, and 28.5 in 1923. Little relative variation is shown in the other groups.

Of the men going overseas, by far the larger number are young men. The following figures show for three important occupational groups the proportion of male emigrants who were between 18 and 30 years of age:—

Occupational group.	From England and Wales.	From Scotland.	From Ireland.
	Percentage of occupational	percentage of total in group.	
Agricultural (1921	56	60	73
(1922	63	70	71
(1923	68	73	75
Metal and engineering (1921	49	60	58
(1922	53	65	68
(1923	57	66	65
Labourers (not in (1921	59	66	65
agriculture or (1922	63	70	83
transport) (1923	65	67	81
			82

The figures show what a large proportion of young Scots and young Irishmen are included among the emigrants in these trades. The numbers who went to the several divisions of the British Empire and foreign countries indicate that, although the bulk of the agricultural workers from England, Wales, and Scotland go to places within the Empire, principally to British North America, Australia, and New Zealand, an increasing number of skilled

workers has left for the United States. Of the 26,886 skilled workers who emigrated from Scotland in 1923, those reported as leaving for the United States numbered no less than 18,793, including 10,188 employed in the metal and engineering trades. Though this emigration makes room for others, it is a serious matter for these trades to lose so many of the best class of worker.

BUCKET SHOP ACTIVITY.

(BY A STOCK EXCHANGE CORRESPONDENT.)

WE have devoted some little attention to the various forms of allurements trailed in front of the public by the outside brokers, who are for ever hanging upon the skirts of Stock Exchange activity in any market which happens to be popular for the moment. It is not likely that many readers of the *Economist* will be misled by the flaming advertisements of these firms, but possibly the informed man is so familiar with this literature that, when he receives it all he does is to throw it into the wastepaper basket without giving a thought to the fact that a great deal of the harm is done amongst people who cannot see as clearly as he does the risk, and almost certain loss, which subscription to such offers will involve.

When a bus conductor, and a servant girl, ask in the same week whether they shall send respectively £5 and £1 to outside firms terming themselves stock and share dealers, it is time to suggest that a word of warning can be very usefully dropped by the business man in directions which are likely to be tempted by the get-rich-quick methods of advertising bucket-shops. Within the last week or two one firm has disappeared, which swamped the country with circulars offering shares at prices well below market quotations. The offers were made so substantially under market levels that this, in itself, would have been sufficient to arouse suspicion in the mind of the ordinary person, but it evidently had its effect in appealing to some who thought that they saw a rare chance of a bargain, and who answered the advertisements of the firm. It is surprising what a number of variations can be run upon the call-option principle.

• Within the past few days, we have come across circulars which profess to have something entirely new to offer in the way of such speculation, but which, upon a very cursory glance, reveals itself to be nothing more than the ordinary gamble on the tape for differences over a longer or shorter period. As a rule, the firms act in the capacity of principals, the inference being, of course, to the tutored mind that the shares are never bought at all, and that they are simply run against the client on the chance of the price going against the latter. Considering the width of the prices sent out on the tape—prices upon which the bargains are mostly based—it is obvious enough that stock, for instance, has to rise quite substantially before anything like a profit appears, though, on the other hand, the fall need be very modest for the cover to run off. For instance, if North-Western stock is quoted 99½-100, the bucket-shop takes option money at 100, and the price must rise to 101-101½, a gain of 1½ points, before a point profit becomes available. On the other hand, it has only to go to 99-99½, a fall of ½, for the margin to run off. If a profit does happen to accrue, the "lucky" speculator is invited to let it run; while, on the other hand, should the price go back, the transaction is immediately closed as soon as the margin runs off, unless more money is put up to keep it alive. Splashes of red ink and plenty of big print announce the "unexampled offer," as it is called, of a £10 combined call option for five different lots of shares in various companies for 30 days. The chance of making a profit on a combination of five different shares may sound attractive. But, in practice, the risk of losing is increased, not diminished, by the money being spread in this manner.

The Cambrian Trust, Limited, is in the field offering units of property in some oil region in Arkansas, upon which it is proposed to develop and to drill for oil at certain favourable positions thereon, locations to be chosen by a

geologist. The chance of striking oil in Arkansas is very slender, and if oil were found the business man will doubtless point out at once that it is likely to require a lot of money for its handling before anything like a decent profit can be expected. Another concern goes to the expense of sending telegrams to people who apply for its literature, urging them to remit money at once for operations in whatever shares it may be that the firm are suggesting. Possibly the mere fact of receiving a telegram tends to throw the unguarded into a state of excitement which results in money being sent for some operation, the chances of profit on which are considerably more in favour of the bucket-shop than of the client. The difficulty is to get any official recognition taken of these touts for business in stocks and shares, touts whose activities drag into disrepute the genuine business of the Stock Exchange itself, and which can easily discredit the House in the minds of people who, through ignorance, do not discriminate between members of the Stock Exchange and the firms of "stock and share dealers," as they call themselves, who apply their tactics under the guise of such a title. The one great argument in favour of giving the Stock Exchange a Charter lies in the monopoly which this would throw into the hands of the House, but there are many matters which require to be carefully weighed in the balance before a Charter is likely to be sought by the Stock Exchange. In the meantime, protection of the public in the matter of warning them against bucket-shop and outside share dealers' activities has to be left to private enterprise.

Notes of the Week.

The Trade Union Congress.—The proceedings at the Trade Union Congress, which has been holding its annual session at Hull this week, derive peculiar interest from the fact that it is the first Congress to be held during a Labour Government's tenure of office. On the whole, the work of the conference has been of more importance than that of many of its predecessors. The step to which the chief significance attaches is the granting of larger powers to the General Council. The Trade Union Congress is powerful as an organ for focussing and expressing opinion, but its executive weakness has been notorious, because it sits but once a year, and has hitherto withheld from its Council any broad or effective powers. On Tuesday, however, the Congress took the plunge, and decided by an overwhelming majority to entrust the Council with powers that will enable it to exercise a guiding influence on the conduct of trade disputes. It will now be obligatory upon individual unions to keep the Council informed on all matters in dispute; but the Council is not to intervene until there is danger of the ordinary negotiations breaking down. On paper, the innovation is very important, for it provides for the first time a body able to co-ordinate and keep under review the movements of the unions in respect of wages and conditions, and puts that body in a position to participate in disputes with authority. Whether it will prove equally important in practice remains to be seen. That will depend largely on three things—the personnel of the Council, the loyalty of trade unions to the new arrangement, and the ability of the Council to achieve general lines of agreement among themselves. To suppose that all these conditions will be fulfilled is a very large assumption. Next in interest in the Congress proceedings come the efforts of the Communists. They began on Monday by trying to exploit the uneasiness about the Dawes' scheme which was expressed in Mr Purcell's presidential address, but met with a rebuff. Ill-success attended them again on Tuesday, when, after an hour's discussion on the relations between British trade unionists and the Communist trade unions of Russia, the Conference decided to pass on to the next business; nor did they fare any better when they attempted to raise the question again on the following day. The Communists have, indeed, had a bad week, for, together with these failures, comes the decision of the Labour Party that they will not adopt any Communists as official Labour candidates at the next election. Mr Purcell's address was more outspoken than those of some of his predecessors. He

urged the Government to go out for a bolder legislative programme, and to show less timidity with regard to the opinion of those who considered themselves to be "the superior classes." Congress proceeded on Wednesday to give shape to the idea of the bolder programme which the Government should, in its view, follow, and adopted unanimously what it calls the "Industrial Workers' Charter." This is an immense political programme, which, however, contains little that is new to the official Labour platform, with the important exception of the proposal for a maximum working week of 44 hours. For the rest, the "Charter" includes public ownership and control of natural resources, nationalisation of land, mines, minerals, and railways, and extension of municipal enterprise. Thursday was devoted to the reception of "fraternal delegates" from abroad, but, in spite of the presence and speeches of Russian delegates, the proceedings were dull.

The Conflict in China.—A correspondent writes: If events in China could be interpreted by European experience, the fighting which began on Tuesday might open a way towards the restoration of order and peace throughout the republic. The pretext for it appears to be that Lu-Yung-Hsiang, the Tuchun of Chekiang, has harboured troops from Fukien who had revolted against its Tuchun, and it is primarily a struggle between him and Chi-Hsih-Yuan, the Tuchun of Kiangsu, to obtain control of Shanghai. Chi-Hsih-Yuan, representing the Chih-li party, is supported by Wu Pei-Fu, Inspector-General of Hupeh and Honan, and the chief military leader, the Tutchuns and armies of the adjacent provinces of Kiangsi, Anhui, and Fukien, and by the authority of the struggling Peking Government. Chekiang is the last stronghold of the Anfu party, reduced almost to impotence by Wu Pei-Fu in 1920; and Lu-Yung-Hsiang, who avows himself the champion of provincial Home Rule, is backed, and probably financed, by Chang-Tso-Lin, the Military Governor of Manchuria, which is now being developed by Japanese settlers and capital, and is probably the most prosperous part of the former Chinese Empire. If Lu-Yung-Hsiang were crushed and Chekiang controlled by Chi-Hsih-Yuan and his associates, and if they held together, the way would be open for an eventual march southward on Canton, where Sun-Yat-Sen's supremacy is imperilled by his quarrel with the local Volunteers—a force raised by the business community of Canton to defend the city and put down brigandage in Kwangtung—and by various rival leaders. Should the Chekiang army be defeated, however, it is predicted that Chang-Tso-Lin may move southwards to attack the victors; but he is more than a thousand miles from the seat of war, and would have great difficulty in reaching it owing to the recent terrible floods on the Yellow River. Both the contending Tutchuns have large forces—together exceeding 100,000—and are fairly well provided with munitions and artillery, and even have some aeroplanes; but the fighting is mainly in difficult country, amid rice-fields and swamps, the coalition between the supporters of the Chih-li party is extremely unstable, the Chinese are not keen fighters, and it seems probable that the negotiations which have hitherto failed will end in a compromise which will leave things much as before. British, American, French, Italian, and Japanese warships are protecting the foreign concessions at Shanghai; but the chief immediate effects of the struggle will probably be an increased disposition on the part of the Tutchuns to seize the railway receipts, and further interruptions of traffic. Peace cannot come till the armies are paid off and disbanded, and that is impracticable without foreign financial aid, which cannot be given until the country in general submits to the authority of the Peking Government.

Japan's Progress in Reconstruction.—Last Monday was the first anniversary of the most disastrous earthquake of modern times. In the intervening twelve months the Japanese people have made great efforts to repair the serious results of that great tragedy. Visitors to Tokyo or Yokohama still find them cities of temporary buildings.

Practically no permanent rebuilding has yet been begun, for the Government has wisely recognised that Tokyo needs to be replanned, and that it must be intersected with wide arterial roads which will prevent a fire in the future from spreading right through the city. We are informed that some 70 to 80 per cent. of the inhabitants have returned to the devastated areas. Factories have been restored to the extent of about 80 per cent., judging from the number of employees. In Tokyo, although some time is still required for the completion of the telephone work, the condition of the telegraph, electric light, electric power, waterworks, gas works and tramway services is nearly up to the standard obtaining before the earthquake. The restoration of similar services, however, in Yokohama is not so far advanced. But the replanning of great cities takes time, and it means that reconstruction will continue for a considerable time to come. In the meanwhile Japan has had considerable trade difficulties to contend with. Nevertheless, Japanese credit still stands high, and trade is active. During the second half of August the general trend of the money market remained easy, although the rate of day-to-day hardened a little to about 8½ per cent. per annum. The rates in respect of short loans were rather steadier than the previous month, as there was a turnover of funds in connection with the end-of-month requirements, while the monies which went into the provinces for the seasonal settlements had not yet fully returned. The latest cabled figures of the Bank of Japan show the note circulation practically unchanged at 1,300 million yen, against 1,287 million yen, while discounts and advances have risen from 346 million yen to 457 million yen. The results of the subscriptions for various debentures were generally good, but there is a pause in issues of this kind for the time being. Foreign trade continued good. Figures for the first six months of the year now available show that exports rose from 714 million yen to 808 million yen, a large part of the increase being under the heading of manufactured goods, and particularly cotton tissues. On the other hand, imports rose to an even greater extent from 1,108 million yen to 1,472 million yen, the increase in imports being fairly general, but the largest increase being under the heading of iron and steel products, no doubt chiefly for reconstruction. The adverse trade balance rose from 394 million yen to 664 million yen. The share market remained inactive. The prices of rice and cotton were unchanged, but the price of raw silk rose gradually to 19.20 yen for the best grade, in consequence of an increased demand of late. There has also been some demand for this latter commodity for autumn settlement. The quotations of the materials for winter requirements were well maintained, owing to signs of scarcity in stocks.

Irish Free State Trade.—Our Dublin correspondent writes:—The boundary issue still continues the dominant factor in all discussions and in all contemplated political developments. The principal danger in the near future will lie in the possibility of "incidents" on the border which might precipitate a conflict, and this is a very serious and real danger. There are hotheads on both sides of it, whose partisan interests would be well served by such incidents if they were to occur. There are proposals here that the Free State, like France in July, 1914, should withdraw all its uniformed men a few miles behind the Boundary—and that it should call on Great Britain to take such steps as may be necessary to guarantee peaceful conditions on the other side of it. The trade returns for the first six months of the current year have just been published. Total imports stand at £33,478,305, and total exports at £21,877,493. Experienced observers are frankly puzzled over the exact significance of this great preponderance of imports. It is easy to speculate, but it is impossible to speak with certitude in the absence of such information of an exact character as would render an explanation convincing. Indeterminate factors like these demonstrate the futility of discussions about a separate Irish currency, for until the whole of the facts are ascertained with substantial accuracy all such discussions are in the air. The Revenue

is coming in well in spite of the severe commercial depression, and at the last week-end there was a credit balance in the Exchequer of £4,469, 652.

The Dawes Scheme Appointments.—Mr Owen D. Young, one of the American signatories to the Dawes Report, who, it was hoped, would be the Agent-General for Reparation Payments, has unfortunately not been able to accept the post permanently. He has, however, been appointed as a temporary measure, and will initiate the scheme. The permanent Agent-General is to be Mr Seymour Parker Gilbert, an American financial lawyer in the firm of Mr Paul Cravath, who was an American representative on the Inter-Allied Finance Council at the end of the war. The Reparations Commission has appointed one of its members, M. Delacroix, the former Premier of Belgium, who changed places with Colonel Theunis when the latter became Prime Minister, to be trustee for the Railway bonds, while the trustee for Industrial bonds will be M. Nogara, who was financial adviser to the Italian Peace Delegation, and is now a member of the Ottoman Debt Council. The Commissioner for Controlled Revenues is to be Mr. McFadyen, formerly of the British Treasury, and at present general secretary of the Reparations Commission. We are glad to learn that "the Reparations Commission has decided to prepare a plan of reorganisation which should have the effect of resulting in economies at least large enough to cover the expenses entailed by the new organisation to be set up under the Dawes Plan. The combination of the office of delegate and of trustee will not involve for the holder of these appointments any increase of emoluments."

Spain and Morocco.—The news from the Spanish zone in Morocco is very grave indeed. The Spanish Government, in spite of its essentially military character, is ready to carry out the change of policy announced by one of its predecessors at the end of 1922. The Marquis de Estella has again made known that the offer tendered to the native leader, Abdul Krim, in 1923, still holds good—economic and administrative independence, with financial aid from Spain towards the development of the resources of the region, the withdrawal of the Spanish troops and the substitution of a native army, and a Spanish Protectorate. The natives, however, stand out for complete independence; Abdul Krim, a born leader of men, controls them entirely; and fighting is actively proceeding, both in the East and West. In the West Raisuli and his adherents remain loyal, but his powers are failing, and there is unrest and intermittent fighting in the region of Larache and Arzeila. In the East the Spaniards are struggling to relieve their scattered out-stations in intensely hot weather and extremely difficult country—mountainous, roadless, and covered by almost impenetrable thickets, which facilitate constant surprises and native attacks. The native auxiliaries of Spain are not altogether trustworthy, and there is some danger that the disturbance will spread to the French zone, where the frontier tribes are beginning to follow the example of their Rifian kinsmen. Reinforcements are being poured in from Spain to both zones, but necessarily they consist of conscripts, and the terrible sufferings of the troops may possibly produce some unrest among them, or a division in Spanish opinion, which at present appears to be united in supporting the continuance of the war. Operations on a larger scale are now announced officially, and it seems to be intended that there shall be a fight to a finish. The region has at present no economic value, though it is believed that its wealth in minerals, if they could be worked, is very great. But the honour of Spain is affected, and it seems to be generally felt that withdrawal is impossible. Meantime the immense expenditure necessary must destroy the hopes of a reduction in the Budget deficit, which it was recently announced would disappear in 1925.

Index of "Free" Shipping Freights.—As foreshadowed in these columns last month, "tramp" shipping freights reached a turning point in August, and for the first time since last February our Index records a slight advance. The figure for August was 121.49, equivalent to a percentage rise of 0.6 as compared with July. The move-

ments of the various groups in the Index are indicated in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1920.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.67
December, 1923.....	134.03	132.72	120.09	124.35	125.07	144.21	130.08
January, 1924.....	130.69	137.49	128.33	124.88	139.45	156.68	136.25
February, 1924.....	138.11	146.26	145.36	129.28	142.17	162.91	144.01
March, 1924.....	143.72	147.62	145.92	132.08	135.20	147.77	142.05
April, 1924.....	141.67	146.28	142.35	127.36	128.79	131.75	136.37
May, 1924.....	134.96	148.71	139.02	127.67	124.45	122.85	132.94
June, 1924.....	128.66	133.80	129.22	129.47	118.33	118.84	126.37
July, 1924.....	123.66	121.87	121.91	120.13	114.69	121.96	120.70
August, 1924.....	120.45	128.10	119.94	118.97	113.31	128.19	121.49

The month's changes in the Index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	106.74	+ 6.16	S. America—outwards ..	89.23	— 7.10
Bay—outwards	133.94	+ 1.83	" homewards	150.66	+ 3.17
" homewards	132.26	— 3.22	India—outwards	187.72	+ 6.68
Mediterranean—outwards ..	131.23	— 3.06	" homewards	110.23	— 7.93
" homewards	111.74	— 2.53	Far East, &c.	113.31	— 1.88
North America—outwards ..	128.10	+ 6.25	Australia	128.19	+ 6.25

The growing strength of the homeward freight markets was a noticeable and satisfactory feature of the month. In the case of the River Plate, chartering was again conducted on a very large scale, and a strong and steady demand developed for grain carriers from North America. Further fixtures at improved rates were secured for the new season's crop at Australia, and business in the East showed a welcome, though belated, revival. On the other hand, with ample tonnage on the market, outward coal freights displayed continued weakness, and homeward chartering from the Bay and Mediterranean was of a moderate character. A better demand for ore carriers, however, appears to be probable in the near future, and the movement of ballast tonnage to attractive markets further afield should have a beneficial effect upon rates in European waters. The relation of the Index to the average for 1913 may be seen from the following table:—

	(1913 = 100.)				
Month.	1921.	1922.	1923.	1924.	
January	194.59	.. 131.60	.. 114.05	.. 117.11	
February	164.54	.. 135.76	.. 112.73	.. 123.78	
March	162.17	.. 135.53	.. 115.23	.. 122.09	
April	147.48	.. 129.46	.. 115.45	.. 117.22	
May	158.42	.. 125.12	.. 114.55	.. 114.27	
June	165.73	.. 117.45	.. 106.82	.. 108.48	
July	169.87	.. 114.52	.. 103.39	.. 103.75	
August	170.60	.. 113.16	.. 100.16	.. 104.43	
September	154.47	.. 110.37	.. 103.04		
October	141.85	.. 114.42	.. 107.86		
November	136.47	.. 119.43	.. 111.21		
December	134.66	.. 117.39	.. 111.81		
Mean for year	158.40	.. 122.02	.. 109.69		

A review of the whole situation would appear to suggest that the autumn revival in freights has now been ushered in, and providing a reasonable measure of stability is reached in European affairs, the shipping industry may assuredly look to the future with quiet confidence.

The Reduction in the Price of Petrol.—Last week we gave the economic facts which might cause the big distributing oil companies to consider reducing the price of petrol in this country. We ventured the opinion that a reduction in the near future of 3d or 4d a gallon was not unlikely. On Thursday of this week it was announced that a reduction had been agreed upon of 3½d per gallon in the retail and 3d per gallon in the wholesale price. This brings the price of the No. 1 brands of the three or four big companies to 1s 7½d per gallon retail and 1s 5d per gallon wholesale. Seeing that the garage still gets a commission of 2½d per gallon on petrol in the tin, and 4d per gallon on petrol from the pump—which is, in fact, a bigger profit than the big petrol companies normally make

for themselves—it is reasonable to give the motorist the advantage of an extra ½d reduction at the expense of the garage. We welcome the present retail price of 1s 7½d as being ½d below the pre-war price. Petrol must now be classed among the cheapest commodities. The fluctuations in the retail price in recent years have been:—August, 1921, 2s 5½d; September, 1922, 2s; July, 1923, 1s 8½d; September, 1923, 1s 6½d; January, 1924, 1s 11d; September, 1924, 1s 7½d. A heavy item in the cost of petrol is, of course, the distribution charges. At enormous expense the big petrol companies have built up a distribution service covering the whole country which is admittedly very efficient. A uniform price is charged throughout England—in Scotland it is 1d more, and 2d more in Ireland—so that, in effect, the accessible places are bearing part of the cost of distribution to inaccessible places in addition to their own. We think, however, that a large consuming centre such as London, in which the turnover is big and the costs of distribution from ocean storage depots on the Thames relatively small, should have some advantage in price over the rest of the country, if it is practicable to enforce a dividing line. "One price, one quality," for the whole country is certainly a policy that does credit to the three big petrol companies; but in the case, say, of London, we should welcome an exception to the rule as regards price.

Record Transvaal Gold Output.—The total output of the gold mines of the Transvaal for July amounted to 829,437 fine ounces, being an increase on June of 56,384 ounces, and surpassing the record of 809,003 fine ounces established last May, by 20,434 fine ounces. This is, strictly speaking, the second occasion on which the 800,000 ounce mark has been exceeded, though, as a matter of historical accuracy, it may be pointed out that the actual declaration of gold for March, 1912, was 830,723 ounces, but this included 70,143 ounces existing at the end of the previous month. The value of the July output was £3,867,250, as against £3,652,675 in June, and £3,822,539 for May. It has to be taken into account that the value of gold for July is calculated at £4 13s 3d per fine ounce, while in the preceding two months it was taken at £4 14s 6d, and it would be much better if for comparative purposes the value of gold for each month was taken at the standard rate of £4.24773 per fine ounce. Using that basis, the value of the May output is £3,431,324, June £3,270,435, July £3,523,224. There is, however, a further factor to be considered. The July total includes the output of the West Springs Mines, which started crushing towards the end of April, and has now made its first output declaration. The quantity of gold is given as 28,218 ounces, which at the month's gold value of £4 13s 3d would give a total value of about £130,649. It is obvious, therefore, that the new mine is responsible for the increase in the output. An outstanding feature in the returns of the mining groups is the performance of the star mine of the Barnato group, the Government Areas Mine—the Rand's leading producer. This mine earned a profit of £206,289, as compared with £197,438 for the shorter month of June, and £200,287 for May. The latest monthly profit is the highest in the history of the mine, and the working costs average of 16s 8d per ton milled is the lowest recorded. On the whole, the July performance, though hardly up to expectation, is not unsatisfactory, as there is still a labour shortage. The next full 27 days' working month is October, and if the miners' demands for 20 per cent. advance in wages do not cause trouble, and no other unforeseen hindrance occurs, that month should see the July record broken as far as output is concerned, though a fall in the gold premium may prevent the total profit being much greater than in July. It is possible, with the accession of West Springs and the Central West to the productive list, that the total output of the Transvaal may be well on to ten million ounces for this year. In addition to these new mines there is the further expected expansion at New State Areas, at Brakpan and elsewhere. As to the value of the year's output, seeing that the value for the first half-year has been over 22½ millions, it may be assumed that, subject to the gold premium not falling materially below the present figure, the value for the whole year

should reach at least £45,000,000, and thus constitute a record. This amount is, of course, without deduction of exchange and realisation charges.

The Tin Position.—Standard tin this week rose to £262 three months, and in the East £264 was recorded, these figures being the highest witnessed for several months. The improvement was based on bear covering, light offerings, and expectations of an expansion in the demand for both American and European account before the close of the year. The world's visible supply of tin on September 1st amounted to 20,390 tons, which compares with 19,462 tons in the previous month, and 16,295 tons a year ago. There is thus an increase of 928 tons shown on the month and one of 4,095 tons on the year. This in the ordinary course of events would be a bad point for the commodity, but it is well known that during the last year or so there has been a very wholesome reduction in the State-owned tin in the East. This big tonnage was held under the Bandoeng Agreement, and it is stated that the Federated Malay States Government has sold no fewer than 6,975 tons of its holdings, and has now only 3,087 tons to dispose of. The sales in the open market last month were 800 tons; assuming that this is kept up, the end of the year will assuredly see the last of this "pooled" tin, and therefore it is quite reasonable to say that, notwithstanding the increase of 928 tons in the visible supply last month, the general statistical position is healthier. Moreover, technical conditions are much sounder, and the outlook certainly favours higher prices in the near future. The monthly supplies for August came to 8,710 tons. The Straits shipments were 6,555 tons, and 921 tons was Banka tin. The supplies are full compared with the deliveries, which only amounted to 7,782 tons, but both this country, Holland, and the rest of the Continental users have been taking less, this being due to quite seasonal causes. The American deliveries at 4,805 tons were better, but still well under the average for the previous 12 months. The reports from the United States anent the tinplate industry are very good, with every prospect of a busy autumn season. The average export of tinplates from the United States for the first half of 1924 was 16,500 tons per month, as compared with 10,500 tons, the average for all 1923, and 6,000 tons for 1913. This shows how the industry in America is increasing its output, and in Great Britain the export trade also has been doing very well during recent months. The stocks in the Swansea warehouses and vans are now about 193,000 boxes, compared with 232,000 boxes at this time last year, and the foreign demand for British plates is well above the 1913 level. The total supplies of tin for the 12 months ended August 31st were 107,214 tons, against 100,058 tons for the previous year, and 54,498 tons for the 12 months to August 31, 1921. Thus in four years the supplies of tin have nearly doubled. The deliveries in the same period were 103,119 tons, against 104,996 tons in the previous 12 months, and thus both the British and American users cannot be very well covered. The American takings during the last year have been fully 5,500 tons per month, and if this continued the outlook would be exceptionally good, especially when the surplus supplies are exhausted.

The Tea Boom.—Encouraged by the remarkably good prices that are current for tea in the Sales Rooms, people have been buying tea shares in a manner which served to lash market conditions into a state of boom. The excitement started about six months ago, and suffered no serious check to its cumulative force until July, when floods in Southern India, accompanied by loss of coolie-life on one or two estates, pulled up the enthusiasm with a jerk. Speculation in tropical produce is never free from the shadow of unexpected natural phenomena, and many people sold their tea shares, mostly at handsome profits, upon this evidence of unlooked-for possibilities. But the set-back did not last for long. Buyers returned in greatly increased numbers to the tea share market, and a sharp

reaction on Tuesday in this week was followed by an equally prompt recovery in prices. Tea meanwhile is advancing, and at this week's auctions a parcel of particularly fine quality went at 4d per lb above the price obtained for the same grade at the previous sale. Less gilt-edged tea fetched higher prices, too, though not of the same sensational order. The spirits of the Stock Exchange bulls revived, and again a fresh set of purchasers came forward. Because of the widely-fluctuating character of the tea industry, tea shares have been always regarded as possessing a very speculative flavour, but the companies are, as a general rule, conservatively managed by boards that have made a special study of the business. Not many years ago, the tea industry fell upon a series of misfortunes that threatened the very existence of all but the strongest companies. Some concerns went under, but the survivors profited by their troubles, and the result has been a building-up of reserves that justifies the payment of remarkably high rates of dividend. Fear of competition is no bugbear, because Ceylon is almost planted up with tea, while labour shortage in India renders it unlikely that any considerable extension of tea-growing will be attempted in the Southern provinces. The entry of the United States into the ranks of tea-drinking countries is a potent factor in expanding the demand for tea. Russia, once a consumer of vast quantities of tea, may come to market again before long as a big customer, and the amount of tea drunk in our own country has never been so great as it is to-day. These are amongst the considerations which justify, according to the bullish argument, the anticipation of a possible shortage, with its natural corollary of rising prices for the leaf. The tea-drinker rejoiced when the Government reduced the duty upon tea in the last Budget, but within the past fortnight retailers have put up their prices, and still higher levels are threatened. As the wholesale quotations rise, picking of the coarser leaves is encouraged by the necessity for selling tea to the customer who, if unable or unwilling to pay more money, must be satisfied to drink tea of a lower quality than heretofore. It is not surprising for the share market to have developed exuberance, considering all the present circumstances and the dividend outlook, but, as already mentioned, the hand of Nature can ban, as well as bless, a tropical industry. From the narrower Stock Exchange viewpoint, the danger is that, if unforeseen mischance occurred, the narrowness of the market in the shares would render it a matter of difficulty to get out if the ardent buyers of to-day should become the urgent sellers of to-morrow.

Mexico and the Oil Industry.—For the greater part of its revenue the Mexican Government is dependent on its oil industry. Apart from royalties on State concessions, it levies taxes both on oil produced and oil exported. The rate of tax varies according to the price of fuel oil in New York harbour. For the months of July and August the production tax on light crude oil was 24.4 cents per barrel, and on heavy crude oil 12.7 cents per barrel, while the export duties, as from August 8th, have been 8 cents per barrel on light crude oil, 5 cents on heavy crude oil, 6 cents on fuel oil, and so on. It will therefore be appreciated that the progress of the oil industry is of great financial consequence to the Mexican Government. For the first half of this year the total crude oil production, happily for the Treasury Department, was very little different from that of the first half of 1923. There was, in fact, a slight increase of 47,804 barrels. It so happened that although the output of the light oil fields declined heavily, by as much as 42 per cent., the increase in the output of the heavy oil fields made good the difference. The detailed figures are as follows:—

MEXICAN CRUDE OIL PRODUCTION (In Barrels).			
	First half, 1923.	First half, 1924.	
Southern (light oil) fields	34,978,762	20,002,476	
Panuco (heavy oil) fields	40,184,998	55,209,088	
Total	75,163,760	75,211,564	
Exports (all oils)	70,924,636	71,231,665

Head Office: ATHENS.

The production and exports of the four leading companies were as follows:—

	Production.		Exports.	
	First Half 1923.	First Half 1924.	First Half 1923.	First Half 1924.
Standard Oil (N.J.)	10,250,396	11,879,594	6,815,188	15,559,810
Mexican Petrol (Doheny interests) ..	19,296,806	12,772,406	16,774,891	15,188,067
Mexican Eagle	5,640,027	4,176,792	9,373,122	4,796,529
Corona (Royal Dutch)	15,703,241	6,580,765	11,267,624	8,526,066

These company output figures indicate the course of production. The drop in the output of the Mexican Petroleum Company was due to the salt water intrusion in the youngest of the Southern fields, the decline in which is likely to continue during the remainder of the year. The production of the heavy oil fields should, however, continue to rise. The Corona Company, which lost heavily in the earlier part of the year on account of salt water trouble in the Cacalilao field, has since made good its losses and is to-day the largest producer of heavy oil in Mexico. The Mexican Eagle is also producing in the heavy oil district. Further, the new pipe-line of the Mexican Petroleum Company, 60 miles in length, from Ebano to Tampico, will enable that company's production, both in Ebano and Cacalilao, to be very largely increased. The total production of Mexico for the year is therefore likely to show some increase over that of 1923. But small, if steady, progress of this kind will hardly satisfy the Mexican Government, burdened as it is by the costs of the De La Huerta revolution. The oil companies, dissatisfied with the position of foreign capital in Mexico, are holding back from the exploratory work and the test-drilling necessary for the proving of new fields in other parts of the country. The oil production of Mexico (and with it the oil revenue) will never recover former proportions without the expenditure of vast sums of money on the part of the oil industry. The Mexican Government, in a recently issued report, has estimated the investment in oil in the Republic at \$796,400,000 (Mexican gold), and the value of oil obtained since 1901 at \$1,758,403,464 (Mexican gold). This realisation, after deducting expenses, has amply compensated, in the Government's opinion, the capital investment, while the investors still have their installations and reserves of land. But apparently the oil companies are not convinced. President Obregon has unfortunately declared that American oil interests are inimical to Mexico's development. The conference which was to have taken place between the President and the leading American oil magnates—with regard to future concessions—has broken down. There, for the time being, the matter rests.

The Cotton-seed Oil Industry in the U.S.A.—A correspondent writes:—The contest between the dairy interests and the manufacturers of cotton-seed oil and margarine in the U.S.A. has been long and bitter. Up to the present the dairy interests seem to have had the best of it, and have succeeded in getting a certain amount of anti-margarine legislation on the statute book. Since the makers of margarine (oleo-margarine, as it is called in the States) have hitherto been the principal consumers of high-grade cotton-seed oil, producers of this oil have directly suffered from the hostility of the butter makers. This hostility, together with adverse tariffs, has indeed brought the cotton-seed oil industry very near to disaster, and its position to-day is precarious. So much is this the case that two of the largest companies in the business—the Southern Cotton Oil Co. and the American Cotton Oil Co.—have gone into liquidation. These two companies formerly disposed of more than half a million barrels of cotton-seed oil in Europe alone, but a great part of this export market has now been lost. In an authoritative survey of the whole industry recently read before the Interstate Cotton-seed Crushers' Association at New Orleans, Mr John Aspegren, president of one of the largest cotton oil companies in the south, said that twenty-five years ago cotton-seed oil could only be used for soap-making, but such progress has now been made in refining and other processes, including that of hardening or hydrogenating the oil into a hard white fat, that it is now possible to supply not only a high-grade liquid oil for culinary purposes and as a salad oil, but also a hard fat for margarine manufacture and as a lard substitute. This business was in a flourishing position in 1920-21, when the fight against the dairy interests became intensified. The present chief line of attack by the butter people is to try and emphasise the alleged lack of vitamins in margarine made from vegetable oil; to which the margarine manufacturers have replied by introducing concentrated vitamin preparations into margarine. In 1920-21 the sales of refined cotton-seed oil reached 1,500,000 barrels, but since then there has been a disastrous falling off and loss of export trade. Mr Aspegren thinks that one of the principal causes of the slump was the tariff against importation of vegetable oils from China and Japan, but it is probable that the main cause lies deeper. The cotton-seed oil industry has shared in the very deep depression which overtook the world's vegetable oil industry a year or two ago, from which it is with great difficulty recovering. Doubtless, also, the cotton-seed oil industry of the U.S.A. was adversely affected by conditions peculiar to that country, including excessive tariffs. The enormous production of lard in the U.S.A. is another special and disturbing factor. The total annual production is now about 5,000,000 tierces, of which about 2,000,000 are consumed in the U.S.A., so that an outlet must be found for the remaining 3,000,000. In addition to and in strong competition with this enormous production is the lard substitute made from cotton-seed oil to the extent of about 3,000,000 tierces per annum. Difficulties have been increased by the short supply of cotton-seed due to three short cotton crops, and the rash competition and scrambling for supplies among the oilmill buyers. This competition is severely condemned by Mr Aspegren, who advocates more regular buying and a spirit of co-operation among the buyers. The same thing applies not only to the manufacturer of the crude oil, i.e., the actual buyer of the seed, but also to the oil refiner and lard substitute manufacturer. These, also, should reform their buying methods and cease fierce competition among themselves.

A South African Local Loan "on Tap."—The Union of South Africa as from August 1st to January 15th next is offering to the public 5 per cent. local stock at par, repayable January 15, 1935. According to a published statement in front of us, the money is required "for the purpose of railway and harbour and other public works in the Union." An interesting point about this loan is the proposed scheme of subscription. It is provided that "on application, 5 per cent. or more of the nominal value of the amount of stock applied for" should be paid forthwith, and the balance on or before February 15, 1925, in one or more instalments, and on such date or dates as the

subscriber may elect." A correspondent writing to us on the subject observes that: "The unlimited amount of issue, 5½ months open list and pay 'as you please' conditions, are surely an entirely new departure in finance." We would remind our correspondent, however, that the prospectus of Treasury bonds issued by our home Treasury did not state any definite sum required. Further, these bonds were "on tap" for a considerable period. The "pay-as-you-please" conditions certainly intrigue us, and we shall be interested to learn if this is a more efficient method of attracting money from small investors than the Savings Certificates. Much depends upon the book-keeping organisation. We do not think that Sir D. Drummond Fraser, when advocating bonds on tap, has so far suggested that the bonds should be payable as and when the subscriber elects.

Broken Hill Proprietary.—This Australian enterprise has a wonderful record, but the period of transition from a mining to an industrial undertaking has, writes our mining correspondent, proved very trying, as well as unprofitable to the shareholders. No dividends have been paid for 2½ years, and the price of the shares is not much more than half that at which the last issue was made in connection with the financing of the iron and steel works. For the twelve months ended May, 1923, a loss of £106,100 resulted, no profit being derived from the ironworks. Last year the mine at Broken Hill was reopened, and the steel works at Newcastle, N.S.W., gave a record output. Hence the profit and loss account shows a credit of £279,300. The directors are of the opinion that the shareholders' interests would be best served by not drawing upon the resources at the present moment; they anticipate, however, that dividends may be resumed during the next twelve months should the company's affairs continue as at present. Various additions have been, or are being, made to the plant, and the fleet has been increased. A departure which may prove of considerable importance is the acquisition of an interest in a coal property—the consumption already amounts to 900,000 tons per annum. Labour, tariffs, and other points were also dealt with by the chairman in his speech, a lengthy cabled summary of which has been made available by the enterprise of a daily contemporary.

Mount Morgan.—Our mining correspondent writes:—The full text of the annual report indicates that the conclusions based on the cabled summary were somewhat erroneous. Encouragement was derived from the statement that the accounts showed a deficit of only £15,300, as against £70,000 for the year ended May, 1923. It appears, however, that the loss on operations amounted to £17,100, or rather more than in the preceding period; the difference in the total net results arose from the marked increase in the sum received as dividends on investments. The net cash assets are now set out as £419,650. This does not include the company's substantial shareholdings in the Electrolytic Refining Company, the Australian Fertilisers, and the Metal Manufacturers—which obviously provided the additional income. Once again work was impeded by labour trouble, this time on the part of the coke employees on the south coast of New South Wales, but by recourse to its own coal mine the company was enabled to avoid shutting down the smelter. The hopes of an improvement in the copper market were only realised in a limited degree, the price secured for electrolytic averaging £73 7s 10d per ton, as compared with £72 6s 9d in 1922-23. A feature of the mining was the discovery of gold values above the average of the reserves; this was reflected in an increase of 9,400 ozs (to 73,160 ozs) in the quantity of the precious metal recovered. At 2,851,650 tons the ore reserves display a shrinkage of 180,500 tons in quantity, the copper value of 2.59 per cent. being a shade up, and the gold average of 6.02 dwts a shade down. The endeavours made to secure better recoveries of the metals have been attended with such a degree of success that the continuance of further experimental work on the mill tailings is considered to be unnecessary. In past years the company has paid fairly substantial dividends, the lowest being the last—5 per cent. for 1919-20. The outlook would be much improved by an advance in the price of the red metal, or easier economic conditions.

THE Board of Trade give notice that they are recommending that the date to be fixed by Order in Council under Section 6 (3) of the Carriage of Goods by Sea Act, 1924, shall be January 1, 1925. If this recommendation is adopted, the rules contained in the Act will apply to all contracts within the scope of the Act which are made after December 31, 1924.

Oversea Correspondence.

UNITED STATES.—EARNINGS OF FARMS—RECORD DYE PRODUCTION IN 1923 — COTTON CROP PROSPECTS AND TEXTILES—MONEY, STOCKS, AND BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 26.

"AMERICAN agriculture, since the slump of 1920, has not yielded a commercial interest return on its invested capital, or a fair wage for the average farm operator and his family." This is one of the conclusions reached by the Department of Agriculture as the result of an investigation, covering a period of several years, into results of farm operations in all sections of the country. The Department ascertained that after the low point of depression had been reached in 1920-21, farming business generally showed some improvement in the following year, while in the last two years the improvement has been quite noticeable, and the belief is expressed that this improvement will continue. Other interesting conclusions given in the survey, which has just been completed, may be summarised as follows. Interest paid on total farm indebtedness absorbed all capital earnings in the crop years 1920-21 and 1921-22. In the next two years there was a return of 3.1 per cent. on the total capital invested in agriculture, including rewards of management. It calculates this return was 6.2 per cent. for 1919-20, 0.6 per cent. for 1920-21, 1.4 per cent. for 1921-22, 3.1 per cent. for 1922-23, and 3.1 per cent. also for 1923-24. Even this meagre showing, it is said, was only made by valuing labour of farm operators and their families at no more than the current rate for common labour. While agricultural capital as a whole had only the small returns indicated, the survey shows it was paying an average of more than 6.7 per cent. on mortgage and other indebtedness. The Department places the gross income of American agriculture (the value of production less feed and seed) at \$15,830,000,000 for 1919-20, at \$12,782,000,000 for 1920-21, at \$9,552,000,000 for 1921-22, at \$10,592,000,000 for 1922-23, and \$11,467,000,000 for 1923-24. Net income for the different years is figured at \$4,954,000,000 for 1919-20, \$438,000,000 for 1920-21, \$865,000,000 for 1921-22, \$1,916,000,000 for 1922-23, and \$1,863,000,000 for 1923-24. After the farmers had paid interest on their total farm debt, the net income left on their unencumbered capital is estimated by the Department at \$4,057,000,000 for 1919-20, losses of \$468,000,000 and \$73,000,000 for 1920-21 and 1921-22 respectively, a net balance of \$964,000,000 for 1922-23 and of \$921,000,000 for 1923-24.

The United States is rapidly increasing its production of dyes and dyestuffs and finding an export market for such commodities, according to the report of the Tariff Commission for 1923. Furthermore, owing to the larger domestic output in recent years, prices of dyes and dyestuffs, the Commission says, have declined sharply. The opinion is also expressed that, as a result of the expansion of this industry in the United States, Great Britain, France and other countries, Germany will find it most difficult to regain the position of supremacy she held in this trade prior to the war. The effect of the famine in dyes, which after the beginning of the war threatened textile and other industries, is no longer apparent in this country. The report discloses a record output of dyes in the United States during 1923, with notable progress, for the first time here, in manufacturing many new dye products and other synthetic organic chemicals. Last year, it is shown,

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

88 firms in this country produced a total of 93,667,524 pounds of dyes, as against 64,632,187 pounds produced by 87 firms in 1922. Total sales for 1923 are placed at 86,567,446 pounds, valued at \$47,223,161. The pre-war production in 1914 by seven firms amounted to 6,619,729 pounds, valued at \$2,470,096. Dyes produced in the United States last year supplied about 96 per cent. of the apparent consumption of coal tar dyes, according to the Commission's findings, and there was in addition an exportable surplus of various dyes aggregating 18,000,000 pounds, approximately. Last year nearly 100 entirely new dyes were produced, as compared with 1922, while other dyes which had been reported previously in small quantities were manufactured on a substantial commercial scale. These comprised, generally, dyes of the speciality class, of greater complexity and more difficult and costly to manufacture. The new products include dyes for silk, cotton, and wool. Although somewhat deficient in the production of certain vat dyes, the domestic industry, the report says, supplies more than 95 per cent. of the demand. Exports of coal tar dyes last year totalled 17,924,200 pounds, valued at \$5,885,457, as compared with 8,344,187 pounds, valued at \$3,996,443, in 1922. "As a result of this remarkable period of expansion and development, the world's present capacity to produce dyes is nearly double that of the pre-war period," the Commission says. "The estimated annual capacity to produce dyes of the seven leading producers—Germany, United States, Great Britain, Switzerland, France, Japan, and Italy—is considerably in excess of 600,000,000 pounds. The maximum estimated or officially reported output of the seven leading dye producers is as follows:—Germany (1913), 280,000,000 pounds; United States (1923), 94,000,000 pounds; Great Britain (1920), 43,000,000 pounds; Switzerland (1920), 24,000,000 pounds; France (1923), 24,000,000 pounds; Japan (1919), 16,000,000 pounds; and Italy (1922), 10,000,000 pounds. This existing capacity to produce over and above normal requirements is resulting in an era

of severe competition in the world's markets," the Commission remarks, "which may eliminate many of the German industries now in operation." In an attempt to regain her lost trade in dyes, Germany, the Commission declares, is seeking to form affiliations in the new producing countries. In Italy, for instance, one of the largest dye producers, the Bianchi Company, is said to have a working agreement whereby the Germans are to supply technical assistance, and, in return, share in the profits. In France, the Compagnie Nationale is said to have effected a similar arrangement with the German Interessen Gemeinschaft, but the conditions arising from the French occupation of the Ruhr, it is reported, affected the operation of this agreement.

In primary markets for cotton goods, demand, which quickened considerably a few weeks ago, has fallen to light proportions, and prices recently have shown a much easier tendency. The decline has been more marked in printcloths than in other unfinished lines, prices having dropped about $\frac{1}{2}$ c a yard to 9c for 38 $\frac{1}{2}$ -inch 64 x 60's, and from $\frac{1}{4}$ to $\frac{1}{2}$ of 1c on grey goods. Various mills have been willing to contract for deliveries to the end of this year at the lower levels, but buyers manifested little disposition to cover distant requirements, confining their purchases, as a rule, to small lots for early shipment. The hesitancy of merchants to operate very far ahead, as well as the recession in prices, is attributed largely to the recent sharp declines in raw cotton and to the Government's latest crop report, which indicated a condition and prospective yield much better than had generally been expected. The Department of Agriculture's forecast of a crop of 12,956,000 bales as of August 16th on an average condition of 64.9 per cent. of normal represents an increase of 605,000 bales over the Government estimate on August 1. This is the critical period for the cotton crop, but it is apparent that the crop made good progress in the first half of the month. Already the cotton trade is beginning to discuss the prospects, if not likelihood, of the yield exceeding 13,000,000 bales, as against less than 12,000,000 which the Department predicted in July. Thus far boll-weevils have caused no serious damage to the crop as a whole, although destructive in some localities. The crop, generally, however, is late; the ravages of the weevil are said to be increasing in many sections, and there is still time for considerable damage to be done. On the other hand, the crop is in a much better condition than it was a year ago at this time.

There has recently been a downward revision of prices on certain lines of southern cottons as a result of wage reductions in some large southern mills. While southern cotton goods manufacturers are increasing their active capacity in many instances, they are also cutting wages. One of the leading southern mills will shortly go on full time, but with a 10 per cent. wage reduction; other plants have resumed full schedules, with a 12 $\frac{1}{2}$ per cent. cut in wages, while several are doubling their output, but have made a downward revision of 10 to 15 per cent. in wages. In all cases such reductions have been made without any concerted action. Very little, if any, progress has been made by New England mills at lowering their operating costs by reducing the wage schedules. One company attempted a cut of 10 per cent., with an increase in working hours, but this resulted in an immediate strike of loom fixers, and the reduction was rescinded. It now seems unlikely that northern mills will endeavour to force any wage cuts, at least until after the presidential election in November, owing to fears of precipitating a general strike.

Rather striking figures are presented in a survey of labour wages during the past ten years, just completed by the National Industrial Conference Board. In 23 leading manufacturing industries, covering on the average 700,000 employees, wages show an advance of 127.3 per cent. since July, 1914. Taking the relation of the changes in earnings to the change in the cost of living from the common base of July, 1914, the figures show that the wage-earner in these industries is 27 per cent. better off to-day than he was in July, 1914. Among the hourly wage increases in some of the manufacturing industries during the past decade may be noted 122 per cent. in the automobile trade, 141 per cent. in iron and steel, 158 per cent. in rubber, 125 per cent. in boot and shoe, and

166 per cent. in Northern cotton mills. Industries other than manufacturing show similar increases, namely, anthracite mining, 191 per cent.; first-class railroad, 135 per cent.; building, 108 per cent. without bonuses, and agriculture 89 per cent. Excepting building and mining industries, all wages are now below the high peak of 1920. Less striking, but still of considerable significance, is the change in employment, which in identical manufacturing plants throughout the period advanced 12 per cent. between July, 1914, and June, 1924. This is a noteworthy expansion when it is recalled that employment in June of this year was at a low ebb, being 25 per cent. lower than in June, 1920.

After further bullish demonstrations in the stock market, which carried the average price of representative industrial shares to 105.57, a new high record since 1920, and the average price of rails to 92.65, a new high record for this year, the market generally reacted sharply. Severe declines in many issues eliminated weak speculative and top-heavy accounts, and apparently strengthened the technical position, because in the past day or two fresh buying for the rise has developed, cancelling a substantial portion of the recent slump. Trading, however, is largely professional. Although money continues in abundant supply, rates for time loans against Stock Exchange collateral are $\frac{1}{4}$ to $\frac{1}{2}$ of 1 per cent. higher than a week ago, and the entire money market displays a somewhat firmer undertone, which may or may not be due to the usual month-end requirements. Partly as a result of this firmer tendency, bond prices generally have declined, the heaviest losses being sustained by speculative issues.

FRANCE.—BUDGET PREPARATIONS—WHEAT AND SUGAR CROPS—IRON AND STEEL OUTPUT—THE LAW AND THE USE OF THE CHEQUE.

(FROM OUR CORRESPONDENT.)

PARIS, September 3.

THE French Parliament will remain on holiday for some weeks yet, but it is understood that from Monday next Ministers will begin the work of preparing the Budget for the coming financial year. A strong effort is again to be made this year, it is announced, to ensure that the Budget shall be voted by both Houses before December 31st, so that it may come into operation with the beginning of the new financial year, and thus avoid the necessity for the monthly votes on account which have been the rule (with only little exception) for several years past. Much curiosity is already being expressed as to what M. Clementel's proposals are likely to be in regard both to suppression of some of the existing taxation and the finding of new sources of revenue. On the face of it, the Finance Minister's task is not likely to prove an easy one. He is a prisoner, to some extent, to the reckless promises made by the new majority at the last Election, which included more or less definite pledges to suppress the double décime or 20 per cent. increase of taxation, which enabled the Poincaré Government at a stroke to bring the Budget for the present year to within sight of a balance, and to abolish the turnover tax. Reports are current that a strong effort will be made to carry out the letter of the first of these promises, although not the spirit of it, by skilfully recasting the incidence of a number of imposts in such a way that, although technically abolished, the double décime will be for all practical purposes entirely retained. As an instance of the manner in which this may be effected, it is pointed out that, so far as the income-tax is concerned, all that would be necessary would be a comparatively simple manipulation of the abatement allowances and other factors, which, while apparently reducing the scale of payment to the extent of the double décime, would really leave the total yield at the same figure as before.

The promised abolition of the turnover tax was based on the thesis that this tax is responsible to an unwarranted extent for the high cost of living, and for this view there is good foundation. It is now yielding between three and four milliards a year, however, and will be extremely difficult to replace. At present, as is known, this tax, which originally stood at 1.1 per cent. *ad valorem*, is

levied at every stage in the commercial ladder, beginning with the purchase of the raw material and ending with the sale of the finished product to the consumer. In effect, therefore, it constitutes an impost not of 1.1 per cent., but in many cases of something like 5 per cent. on the retail price of the commodity. The suggestion is made that, instead of being abolished entirely, this tax should be reduced to a less onerous figure, which should be exacted at one point only in the journey of any given commodity from the original producer to the consumer. A statement issued to-day from apparently inspired sources announces that no modification of either the turnover tax or the double décime will be considered before the estimates of expenditure for the coming year have been completed.

Reports on the wheat harvest which are now available indicate that the total yield this year in France proper will be in the neighbourhood of 80 million quintals, or about five million more than last year. In Algeria, however, which was able to export wheat last year, the crop is seriously short, and French North Africa will need about 5,000,000 quintals of imported grain to meet requirements during the coming year. As a consequence, France will have to purchase about the same quantity of foreign-grown wheat as in 1923, in spite of a much larger area having been sown than last year. The price situation may be summed up in the facts that at this time last year, when the franc stood at 83.25, wheat was quoted here at 86f 50c, whereas last week, with the franc at practically the same rate, the quotation was 106f 75c. The difference is alleged to be largely due to the constantly rising cost of labour and fertilisers. Bread is now at the highest retail price ever known in France, and is expected to rise still higher.

The sugar beet crop this year is above the average, both in acreage and in quality. The latest estimates fix the total yield from the new crop at 750,000 tons of refined sugar, as compared with 400,000 tons in 1923. This means that for the first time for many years France will find the home crop equal to requirements, and that the beet industry has been the first completely to recover from the effects of the war.

The production returns just issued by the Comité des Forges show that the number of blast furnaces in operation on August 1st was 133, or two less than on July 1st. Thirty-five plants were ready to start up, the balance of 52 being either under reconstruction or repair. The total output of pig-iron during July was 636,468 tons, or 2,705 tons less than in June, and 46,211 tons below the total for May, which returned the highest figures ever registered. The output of steel during July amounted to 564,876 tons, or 9,955 tons more than in June, but still 33,551 tons below the total for May. Out of the total output during July, the liberated territory of Lorraine contributed 252,080 tons of pig-iron (against 251,436 tons in June), and 194,808 tons of steel (against 189,573 tons in the previous month).

The Chambers, before separating, passed a very useful piece of legislation which has for object the removal of one of the great obstacles that has hitherto militated against the payment of bills of exchange by cheque. An enormous proportion of the payments made at the end of every month in this country has for many years been liquidated in cash, on the presentation of bills which mature as a rule on the last day of the month. The vast majority of holders of bills have hitherto refused to accept cheques in payment, because, in the event of the cheque not being honoured on presentation, the holder would not only have parted with his bill, but would have lost the opportunity of protesting the bill (which the law stipulates must be done in the event of it not being paid on the day following its due date), as cheques, in the ordinary way, require at least 24 hours for clearance. The new law, which was promulgated last Friday, strengthens the position of the holder enormously. First, it extends from 24 hours to five or eight days the period in which a bill which has been paid by cheque may be protested, the period being longer or shorter according to whether the cheque is drawn on a bank in the same town or elsewhere; secondly, it compels the debtor, in the case of his cheque being dishonoured, to restore the bill to the holder; thirdly, it confirms a ruling already established by the French courts to the effect that payment by cheque is not equivalent to the substitution of

Every Description of Home and Foreign Banking Business transacted

a new obligation to that constituted by the original bill.

The result of the new law will not only be to remove the risks hitherto run by persons who consented to accept cheques in payment of matured bills, but enormously to encourage the use of cheques in making payments, and also the "banking habit," to which an enormous proportion of the French people, including many quite important firms, still appear to have a rooted objection. Incidentally, the new law will contribute largely towards enabling the quantity of paper money in circulation to be reduced. It is to be hoped this reform will be followed by the abrogation of the absurd rule laid down for French Government departments, which forbids them to accept cheques whose dates show they have been drawn prior to the day on which they are presented as payment. The Ministry of Finance has been trying for some years past to encourage payment by cheque, but this excellent policy is not aided by the rule which makes it necessary for cheques to be presented on the date on which they have been drawn.

GERMANY.—REPARATIONS SETTLEMENT—FINANCES—CURRENCY—INDUSTRY—JULY FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 2.

THE passage through the Reichstag of the Dawes Bills has caused general relief, and the optimistic sentiment in industrial, financial and Bourse circles, which continued even at the most doubtful moments last week, has been greatly strengthened. The immediate advantages which Germans expected for themselves—leaving the doubtful question of ultimate advantage to Ally countries unsettled—are beginning to show themselves. Industry is becoming more active. The expected foreign credits seem to be on their way. Several groups of American financiers have had representatives here for weeks past, and one of these is reported to have signed a contract for a large credit on the morning after the Reichstag vote. A smaller American credit is stated to have been given to one of the "D" banks. According to the *Deutsche Handelsdienst* news bureau, certain German agents who have been seeking credits in London have no authority from the concerns which they profess to represent, and are likely by their methods to do harm to legitimate negotiators. Little doubt is felt that the 800 million mark Loan will be subscribed. The Commerz-und-Privat Bank expresses the fear that the use of part of this loan for increasing the cover of Reichsbank note issues might lead to a gold inflation, which would diminish the buying power of the currency. The Bank comments that the weakest point of the Reparations settlement lies in doubt as to the obtaining of markets for industrial products, in view of the general diminished buying power of Europe, and of the foundation of competitive industries in Ally countries since 1914; and adds that Germany's position is strong only in the chemicals, potash, and optical branches. Only in the most favourable production and selling conditions can the interest on the Reparations industrial bonds be paid.

The Federal finances are at present the most promising of the three sources of Reparations payments. The monthly averages of receipts since the beginning of the financial year indicate that the estimated year's revenue from taxes and customs of 5,243 million gold marks will be more than realised. Direct taxes and taxes on busi-

ness are likely to yield 1,000 millions more than estimated, and customs and excise 100 millions more. The first were to yield 4,108 millions; on basis of April-July receipts they would yield 5,028 millions. The second were to yield 1,099 millions; on basis of April-July results they would reach 1,183 millions. Estimates and year's probable receipts on basis of the four months of individual taxes are (in millions of marks):—

	Estimates.	Probable Receipts.
Income-tax	1,344	2,002
Corporation income-tax.....	145	280
Sales tax	1,440	1,839
Customs	160	257
Tobacco	360	467
Beer	126	186
Traffic tax.....	230	243

Against this the sales tax is to be reduced from 2½ to 2 per cent., and the property, sugar, and spirits taxes have so far yielded less than was estimated. Nevertheless, the prospects of raising the standard payment (1928-29) of 1,250 millions out of taxation, apart from the traffic tax, are good.

The Cabinet has decided to reduce railway freight rates. Details of the reductions have not been published. Rates are considerably higher than in 1913, and have risen relatively more than prices. Receipts per ton kilometre were 5.6 gold pfennigs in May, 1924, against 3.6 pfennigs in 1913. The index figures (100 in 1913) on July 22nd were freight rates, 169; seven commodities, 157. In detail for the chief commodities:—

	Freight Index.	Price Index.
Grain	155	174
Meats, fats, &c.....	160	149
Hides and leather	210	214
Textiles	237	132
Coal and iron.....	169	157

The official *Wirtschaft und Statistik*, putting present German freight rates for seven chief commodities at 100, puts Swiss rates at 153, Swedish 116, Dutch, Hungarian, and Polish 74, Austrian and Czechoslovak 66, French 49, Italian 45, Belgian 38. The *Frankfurter Zeitung's* wholesale price index for August 28th shows 132.49, against 131.09 on the 14th. The index for manufactured goods is 136.62; ten home-produced commodities 111.63; ten imported commodities 128.57; retail food prices 124.47. The Gold Discount Bank's return for August 31st shows discounts £6,471,912, and rediscount liabilities to abroad, £7,334,685. The Reichsbank's return for August 23rd shows a further increase, to 507,004,000 gold marks, in the gold reserve. Discounts and loans both in paper and Rentenmarks declined, as did also the note circulation. Wages are slowly rising. The average weekly wage of skilled workmen in July was 34.55 gold marks, against 30.47 gold marks in April, 27.31 gold marks in January, and 34.35 gold marks in 1913, the real wage being 87.1 per cent. of that of 1913. The average weekly wage for unskilled workmen is 27.24 gold marks, against 24 gold marks in 1913, the real wage being 98.3 per cent. of that of 1913. The difference between skilled and unskilled wages is again increasing, thus tending to return to pre-war conditions. The highest weekly wage both in the skilled and unskilled classes is earned by miners, the lowest by textiles employees.

The feeling in industry is distinctly hopeful, and it is confirmed by increasing activity in retail selling. The iron and steel branches continue to improve; the Solingen cutlery branch also reports better business, and the furniture branch is more active as the result of increased building. There is, however, so far no sign of any very marked animation, and last week's statistics for Berlin industries show a further slight increase in the number of unemployed. The Leipzig Autumn Fair, which began yesterday, promises fairly good business; as usual, there are a great many new technical devices, but lack of money tends to check business. Over 1,000 visitors have come from Poland, very many from Spain, and, for the first time, French and Belgians have come in large numbers. The impending removal of the internal Customs barrier has encouraged buyers. The coal trade is still badly depressed. Stocks of unsellable Ruhr coal have increased to large dimensions. In August work was reduced by 830,000 shifts. The improvement in iron and steel con-

tinues, and scrap-iron is much in demand. The Stinnes interests have acquired control of the Berlin Aktiengesellschaft fuer Automobilebau, having relinquished their interest in the Adler automobile concern. The same interests are extending their activities in iron in South Germany and Czecho-slovakia. The Becker Steelworks Company, which has been in difficulties, and shows a deficit of 12,750,000 gold marks in its new gold mark balance-sheet, is reported to have obtained financial help from a Dutch concern. The company expanded greatly during the war. The important Roehling iron and steel concern of Voelkingen reports that it has of late been working at a heavy loss, and it threatens to close down.

Foreign trade figures for July show an export surplus of around 17 million gold marks. Imports totalled 556,244,000 gold marks, against 753,121,000 gold marks in June, exports 573,362,000 gold marks, against 475,248,000 gold marks. Imports in the first seven months of 1924 were 5,037,929,000 gold marks, exports 3,400,641,000 gold marks. July imports and exports by groups were (in thousands of gold marks):—

	Imports.	Exports.
Livestock	3,173	809
Food and drinks.....	151,414	48,895
Raw materials	198,032	40,749
Half-finished materials	45,999	36,438
Manufactured goods	140,730	445,369
Gold and silver	16,896	1,102

As compared with June, there was a large decrease in imports of raw materials, which may be put down to the business stagnation, and also in finished goods, and a large increase in exports of manufactures, which in June totalled only 383,013,000 gold marks. Exports in all of the other five groups also increased. Exports of machinery were 25,442 metric tons, against 20,374 tons in June.

The Bourse last week showed resisting power against the threat of failure with the Reichstag bills; only on Thursday was there any set-back worth mentioning, and Friday was firm. On the whole week stock averages fell not more than 1 or 2 per cent., and paper mark loan quotations rose. There was considerable foreign buying. For this week many buying orders were given, also largely foreign, conditionally upon the passage of the Bills, and a boom was expected. On Monday stocks and bonds were very firm, and after a reaction due to profit-taking, closed at the highest point of the day; but to-day, while loans were very active and rose, War Loan reaching over 1 billion paper marks per 100 marks nominal, or 1 per cent. of its original gold value; industrial stocks were neglected, and late in the day stocks were distinctly weak. Day money moved between three-eighths and five-eighths per mille per day. The failure of the Bourse to react more markedly to last week's settlement is probably due to the big rise of securities while the London Conference was under way. Paper mark loans to-day and at the end of 1923 (quoted in milliards of paper marks per 100 marks nominal):—

	Dec. 31, 1923.	Sept. 2, 1924.
War Loan	50	1,040
Fours	400	1,475
3½ %	250	1,500
Threes	1,250	1,800
Colonial Fours	1,550	6,000
Prussian Threes	300	1,800

Last week saw heavy buying of municipal loans by natives and foreigners, in expectation of partial restoration. Some Bavarian pre-war loans sold in extra-bourse trading with 9 and 10 gold marks per 100 marks nominal. The Munich Municipality has issued a warning, which shows the danger of indiscriminate speculation in local securities. One of its post-war loans, which was subscribed in badly depreciated marks, rose to a quotation which represented twice as much gold as the borrowing municipality obtained; Munich, proceeded the warning, has no intention to repay her loans at that price. Federal Forced Loan was also bought to-day at a gold price exceeding the value paid in by the subscribers.

The issue of gold mark balance-sheets, which will first cast light on the real condition of joint-stock companies, is progressing. A hundred and one companies, mostly of minor importance, have, after scaling down,

as a rule heavily, their inflated paper mark capital, fixed their total new gold mark capital at 224,092,000 gold marks, against 178,377,000 gold marks in 1913. Five private railways show a decrease in their balance totals from 79,621,000 gold marks in 1913 to 61,307,000 gold marks, but an increase in their capitals from 30,232,000 gold marks to 49,221,000 gold marks. The capital increase, despite big declines in values of assets, is made possible by the reduction in the total of mortgages, bonds, and short-term debts to about one-sixth. The new gold mark balance-sheets do not show the companies' burdens of Reparation bonds, which have not yet been apportioned.

UNION OF SOUTH AFRICA.—GENERAL AND RAILWAY BUDGETS—THE GOLD STANDARD—NEW LOCAL AND LONDON LOANS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 6.

MR HAVENGA, the new Minister of Finance of the Hertzog Ministry, in introducing the Budget, said that as barely a month had elapsed since the new Government took office, neither members nor the country would expect material changes in financial policy. Last year's revenue of £24½ millions was nearly £400,000 above the original estimate. Customs, "that elastic source of revenue which has on former occasions more than once come to the rescue of a despairing treasurer," produced an increase of £427,000, postal and telephone revenue one of £130,000, Government ownership of diamond mines of £152,000. Altogether, there was an increase of £1,051,000. Among decreases, totalling £692,000, one of £206,000 in income and super-tax was most prominent, excise fell £143,000 short of the estimate, while decreases of £73,000 and £27,000 were shown in excess profits tax and diamond export duty respectively. The Minister went on to explain that if mining taxation, which showed an increase over the estimate of £368,000, were excluded, the income-tax position appeared much worse. General income-tax and super-tax were £418,000 below estimate, partly owing to the smaller "carry over," which has been reduced to £900,000. Expenditure was swollen by £324,000 on locust destruction, while the pensions vote increased owing to special contributions. "But even in normal years the figure will be nearly in that vicinity."

For the first six months of the year, overseas trade has been well maintained, imports increasing £5½ millions, or by 20 per cent., while exports have increased £1½ millions, or by 4 per cent. Thus the balance of trade is becoming more normal. Importations of motor cars are more than double those for the corresponding quarter. I would point out that American manufacturers have an enormous hold on this market, while the Ford Company is a pioneer in erecting cars in South Africa. For the first half of the year the mineral production was £28½ millions. This indicates an advance of £5 millions for a whole year, of which about two millions would be due to higher currency premium, one to increased production of gold, and two millions to increased production of diamonds. The output of coal continues at the enhanced rate of a million tons a month. "The improvement in mineral production has come opportunely, tending to compensate for decreased agricultural production as the result of drought and locusts.....It is due in part to increased gold production owing to lower working costs."

Satisfied that the restoration of the gold standard was essential to the well-being of the Union and of the mining industry, they frankly recognised, in view of the intimate commercial and financial relations with the United Kingdom, they could not act independently. British measures of deflation appeared to be stimulated by the Dawes report, and "while a few months ago the early return to the gold standard seemed almost impossible, it seems possible this year.....there was (? a) little possibility that the Union may be obliged to take independent action to protect her own interests." The exact nature of the action to be taken, and its effect upon various interests and industries in the Union, were technical questions requiring consideration by experts, and a commission would be appointed to go into them as soon as the session was

TEA — RUBBER — COCONUTS.

ADVANCES UPON OR PURCHASES MADE OF DEBENTURES AND SHARES OF EASTERN PLANTATION COMPANIES. RECONSTRUCTION ISSUES UNDERWRITTEN. 1-4, GREAT TOWER STREET - LONDON, E.C.3.

over. The country expects to know what action is proposed.

For the year 1924-25 the estimated expenditure is £24,365,000, or £372,000 more than the original figure, owing to increased provision for locust destruction, unemployment relief, the new labour department, and water boring. Revenue on the existing basis of taxation is set down at £24,328,000, or £447,000 more than the original estimate presented by the former Minister of Finance, the Hon. Henry Burton.

The floating debt is about £19 millions, excluding about four and a-half millions of Savings Certificates, a large figure even allowing for the £11½ millions due to the Custodian of Enemy Property. The Government has therefore decided to issue a local 10-year loan. Instead of making it repayable at the option of the Government after five years, it is to be fixed for ten years. Its issue synchronises with the maturity of the first Union Loan certificates. The Minister patted himself on the back for "a step to a more conservative policy by establishing a sinking fund." But the annual contribution, one sees from the prospectus, is only 1 per cent. of the amount subscribed together with the income arising, so the accumulation will not amount to a very large proportion of the accruing liability. Both Cape Town and Port Elizabeth are also offering loans of varying currency, also at 5 per cent., and also at par. The Union Government contemplates issuing a stock loan in London late in the year.

The Railway Budget was introduced the following day. For the year to March 31, 1925, the railways, harbours, and steamships are estimated to yield a revenue of £24,120,000, a decrease of £309,000, owing to surrender of £500,000 by reduced rates and lesser agricultural traffic consequent upon drought and locust ravages. Expenditure is the restoration of increments to staff, operation owing to the restoration of increments to staff, operation of elevators, and increased allowance for depreciation, a round £1,500,000 instead of a charge of 7 per cent. on the revenue, a principle which the new Minister has discarded.

The use of motor transport is to be developed, bringing remoter districts into touch with the everyday markets of the Union. But so conservative are some of our legislators that Mr Louw "feared that the general introduction of motor lorries would seriously militate against the interests of those who lived on horse transport." Thus does the history of 35 years ago repeat itself, when President Kruger appeased similar objectors—in that case to steam traction—by calling the original reef railway, built between Roodepoort and Boksburg by the Netherlands Railway, as the "Rand Tram." The Nationalist-Labour Government had adopted the policy, at any rate as far as immediate needs are concerned, "of retaining for local manufacture as much of our requirements as possible, the decision of the former Minister in respect of 25 third-class saloons having been reversed." These are now to be built in South Africa instead of overseas, at a cost of £96,250, or an increase over the overseas quotation of £19,000. Fifty-nine first-class saloons are to be built later. Furthermore, the preference accorded to South African manufacturers is being increased from 5 per cent. to 10 per cent., as is done in the case of other departments. Thus an ardent free-trader in Mr J. W. Jagger has been succeeded by an enthusiastic protectionist in Mr C. W. Malan! The railways are going to spend £6,860,000 on capital account, the largest items being £1,550,000 on new lines, £1,414,000 on electrification, and £1,172,000 on harbour improvements.

The market for gold shares is firm, but with little activity. Government Areas are £6 15s, being strongly favoured on account of immunity, in terms of the lease, from any fresh taxation, the safeguard of the Government inspection, and the regularisation of dividend, as, owing

to the incidence of the participation formula, the major portion of any decline in profits owing to the "fading" of the currency premium on gold, which is being much discussed at the moment, falls upon the Union Treasury, conversely as the Government netted about 10d out of every shilling of premium, when that was considerable. A Government report shows that upwards of £6 millions has been spent on compensation to miners' phthisis sufferers since the inception of legislation in 1911.

NEW ZEALAND.—BANKING RETURNS—IMPORTS AND EXPORTS—TAXATION COMMISSION—RAILWAY STRIKE DEBACLE.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, July 21.

THE banking returns for the June quarter, with the return of imports and exports, show a considerable easing of the financial situation, due happily to the best possible cause, a slackening of the heavy volume of imports that caused concern at the end of 1923, and threatened to bring difficulty and strain again towards the end of 1924. Earlier in the year it was pointed out in the *Economist* that the trade returns for the March quarter were abnormal, and that no reliance was to be placed upon the great increase in the value of exports disclosed therein. The figures for June quarter bear out those statements, export values being £12.9 millions, as against £16.1 millions for the same quarter of 1923. This drop of over £3 millions, despite high wool prices, is proof that the bulk of the wool values came this year in the March quarter. However, the expected fall in export values has happily been more than counterbalanced by an even heavier fall in imported goods, which amounted only to £10.8 millions in the June quarter of 1924, as against £15.9 millions in the June quarter of 1923. This decrease of importing liabilities must considerably relieve any prospect of strain such as appeared possible earlier in the year. The banking returns show that the position is almost unchanged from the March quarter, and this is fairly satisfactory, even though the usual seasonal recovery in the June quarter did not occur this year.

The Commission on Taxation has presented a unanimous report, which has just been laid on the table of the House. Only summaries of the report are available as yet, but the main lines are clear. The Commission was composed of four leading business men, and was presided over by a judge of the Supreme Court. Evidence, mainly of business men and some farmers, was heard in all the main centres of population. The unanimous report of the Commission is that taxation should be reduced, and that in the reduction, the method of assessment should be changed as rapidly as convenience and revenue allow, from the present basis of the corporate income of companies, to the income of individuals. During the transition period a low, flat rate of corporation tax is suggested to supplement the individual income-tax.

Consistently with the recommendation to base assessment upon individual incomes, the Commission proposes to abolish the direct taxation of land, and make farmers subject instead to income-tax. This recommendation is not likely to meet with the same chorus of approval as the former, since the taxation of land values was one of the fundamental principles of the experimental legislation of New Zealand in the 'nineties. It is not clear that the Commission's assumption, that capital invested in land must be treated as any other investment is treated, is altogether tenable. The dropping of the graduated tax would be equivalent to a bonus on land values, which would, of course, be particularly valuable at the present time to farmers. But the graduated land tax on unimproved value was one of the chief weapons against aggregation, and has long been an article of faith among radical legislators. It is probable that the proposal to abandon it may provide an issue such as has been lacking for many years upon which a new alignment of political parties may be made. The leasehold system of land tenure has been largely abrogated by the granting of the freehold to a large number of the leaseholders; the abandonment of the tax on unimproved value would involve the definite reversion to the principles of land-

holding in vogue prior to 1893, when the Liberal-Labour Government came into power. The only remaining plank of their land legislation—the State advances to settlers—is, however, still popular, and working on a much larger scale than ever before.

Minor recommendations of the Taxation Commission provide for the levying of taxation at ordinary commercial rates upon Governmental and municipal trading ventures; but this, again, is not likely to command unqualified assent. Much more likely to do so is the proposal to levy income-tax upon the Crown leaseholders, who at the present time pay neither land nor income-tax.

The railway strike, mentioned in an earlier communication to the *Economist*, ended in the complete submission of the union, upon which the Cabinet referred the matters in dispute to the Arbitration Court, reinforced by two assessors for the men and the department respectively. The whole conduct of the strike was unfortunate, and showed bad leadership. The actual *casus belli* was the refusal of the chairman of the Railway Tribunal to consider wages apart from the other questions that the Tribunal had been set up to investigate. The strike was called suddenly in order to cause inconvenience during a holiday period; but the Government was strong enough to withstand the first assault, and the end of the strike was a *débâcle* for the union leaders. There were said to be signs of the men returning to work, when, after the Cabinet had rejected the offer of a new Tribunal named by the men, the strike was called off unconditionally. In the subsequent washing-up the men have lost their 44-hour week, and the union has had to cancel its affiliation with the Alliance of Labour. The Arbitration Court has heard evidence, but has not yet made a pronouncement on the wages question. The men have, therefore, lost almost every point, and are probably much worse off than they would have been if the strike weapon had not been used so hastily.

ROUMANIA.—TARIFF REVISION—LIVING COSTS—PETROLEUM PRODUCTION AND EXPORTS—TRADE FIGURES.

BUCHAREST, August 18.

THE new import tariff rates, which became effective at the beginning of this month, show, in general, striking increases over the rates of the June, 1921, tariff. The new schedule is computed on a gold basis, with a present co-efficient of 30 paper lei to 1 gold lei—although at current exchange rates the co-efficient should be 40. Furthermore, the rates announced are declared to be the minimum, and that imports from countries which do not accord "most-favoured nation" treatment to Roumania, will be subject to maximum rates three times greater than the minimum. In a statement explaining the reasons for increasing the tariff, the Minister of Finance gives first place to the protection of home industries, stating that "during the past three years (since exchange depreciation destroyed the protection afforded by the tariff of June, 1921) the greatly increased importation of a number of commodities that can be manufactured in the country has impelled our industrial leaders to demand an upward revision of the tariff." The Minister added, however, that it has not been the intention to increase rates to the point where they would affect the internal price level. Whatever might have been the intention in this respect, the result has been that retail prices were raised even before the new rates actually became effective.

The industries and commodities for which special protection is sought under the new tariff are, briefly (and according to the statement of the Minister of Finance), the following:—Wool, hair, and articles manufactured therefrom—rates increased about 100 per cent.; textile and kindred industries, including tow and twine—rate or binder twine increased from 15 lei to the equivalent of 2,010 lei per 100 kilograms; paper, increased 300 per cent.; agricultural implements and such other machinery as is manufactured in the country, increased by as much as 500 per cent.; vehicles (but not including automobile and motor-cycles) and chemical products, increased several hundred per cent.; paints and varnishes, slightly increased leather, harness, and shoes, increased about 100 per cent. cement, from 35 lei to 60 lei per 100 kilograms; with sul-

stantial increases in the rates on most of the edible products that can be produced in the country. Without the stimulus of the new tariff, and in spite of the earnest attempts which the Government have made during recent years to control the price of basic commodities, the *Argus* index of living costs for the end of July shows that the internal purchasing value of the lei is now approximately on a parity with its external value—i.e., one-fortieth of the gold value.

The preliminary figures on crude oil production in the first half of 1924 show a total of 857,325 metric tons (approximately 6 million barrels), against 761,104 tons for the same period of 1923, 666,126 tons in 1922, and 550,405 tons in 1921. At the present rate of increase the total production for 1924 will probably exceed the 1,800,000 tons obtained in the years immediately preceding the war. New drilling in the first half of this year has averaged more than 10,000 metres per month, and the number of wells now in production exceeds 1,000. Of the companies in which British capital is chiefly interested, the Royal Dutch-Shell "Astra-Romana" is credited with a production of 236,070 tons in the first half of 1924, against 205,550 tons for the first six months of 1923; the "Steaua-Romana" 125,284 tons, against 110,436; and the Phoenix Oil and Transport Co. 63,297 tons, against 54,581. The Standard Oil Co.'s "Romano-Americana," on the other hand, has declined from 122,884 tons in 1922 to 80,151 tons in 1923, and to 79,556 tons in the first half of 1924. The export of petroleum products during the first five months of the present year totalled 135,347 tons, against 139,739 tons for the same period of 1923. In other words, somewhat less than 20 per cent. of crude production is now being exported from Roumania as refined products, whereas more than 50 per cent. was exported before the war. The increase in crude production, therefore, is more than absorbed by the requirements of the home market for finished products. It is still very uncertain what effect the recently enacted mining legislation will have on the operations of the foreign-controlled companies, but it is stated that the "Romano-Americana" is seriously considering the discontinuance of its operations in Roumania—at least, as a producing company. The American Minister left Bucharest a few days ago to report fully to his Government at Washington regarding the probable effect of the new Mining Act on American capital invested in this country.

The Government's preliminary figures on exports (by groups) are given as follows:—

	From Jan. 1 to May 31, 1923.	1924.
Agricultural products (metric tons)	632,512 ..	674,880
Petroleum products (metric tons)	139,739 ..	135,347
Lumber (exclusive of firewood)—		
(Metric tons)	298,443 ..	265,401
(Cubic meters)	24,137 ..	14,437
Livestock (head)	43,431 ..	47,575

Exports have been greatly impeded during recent months (so it is claimed) by the sanding-up of the mouth of the Danube at Sulina, and much of the blame for this has been charged to the "C. E. D." (European Danube Commission), local interests claiming that the Commission has been neglectful of its obligations.

Letters to the Editor.

GERMAN REPARATION DELIVERIES AND THE BRITISH MINERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article, "The Settlement and Its Effects," you appear sceptical as to the repercussions of the forced German coal deliveries upon the British coal industry. Your contention is that "if large quantities of Reparation coal are delivered to France, it is perfectly true that Great Britain will sell her less than before the war; but against this, Germany has always been a British market, and it is probable that we shall increase our sales to that country."

Although agreeing with you as to the above, may I nevertheless point out to you an effect of the German coal

HARRISONS & CROSFIELD, LTD. 1-4, GREAT TOWER STREET, LONDON, E.C.3. AGENTS AND SECRETARIES OF TEA, RUBBER, AND OTHER PRODUCE ESTATES AND COMPANIES.

deliveries which is often overlooked? The German coals, being delivered to Belgium and France against Reparations, cost these countries practically nothing, and the French and Belgian Governments will sell their German coals at any price below the figure at which they are accounted for in Reparations, rather than forgo any of these coals and so lose the whole of their value. Where this takes place, it has practically the same effect as a Government bounty in favour of the importation of German coals into France and Belgium. This policy tends to depress prices and explains the recent complaints of Belgian producers against the competition of German coals, although the present Reparations deliveries to Belgium do not exceed the pre-war importation of German coals into Belgium. It is clear that the present methods of selling the German Reparations coals must also have a disturbing effect upon the normal marketing of British coals abroad, and it appears to me that in this respect the opposition of the British miners to the coal Reparations deliveries is justified.

A way out of the present difficulty might be found, not by reducing the German deliveries to Belgium and France, but by an arrangement, leaving the German collieries free to sell their coals into Belgium and France, without any Government interference. Part of the sale price (for instance $\frac{1}{2}$) would be paid by the buyer to the German producer, the balance (in this instance $\frac{1}{2}$) being paid by the buyer to the Belgian or French Government, and credited against Reparations. This would tend to ensure the sale of German coals at a figure more in sympathy with ruling market conditions and leave the economic factors more free play than at present.—Yours truly,

Lokeren, August 31st, 1924.

G. VAN DRIESCHE.

THE ADULTERATION OF LEATHER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My attention has been called to a quotation from your issue of June 14, 1924, forwarded to this office by the head of the Hide and Leather Division of the U.S. Department of Commerce, relative to what you know as the Adulteration Act of 1923 of South Africa, and expressing the feeling that your tanning industry is much agitated over this question. The article goes on further to say that "In America the practice is still followed by sole leather tanners to add glucose and barium to their product," and while expressing the idea that even though seriously agitated, the British tanners are not guilty of such bad practices, but the American tanners habitually follow such sinful ways.

The unconscious humour of your correspondent is not missed on this side, but fortunately I would say for the whole American leather industry, which I have the honour to represent, that the American tanner is, and has been for some time, singularly free from the reproach which your correspondent thrusts at him. You will be interested to know that United States Government Standard Specifications, which represent a good average of American production, are very high. We are not worried about "adulteration acts," but just at this time we are spending thousands of dollars annually upon research so as to find out how to make our leather better, and not how to adulterate it more. The results are in evidence with every day's transactions. American sole leather is conceded to be of a higher standard to-day than ever before. Barium is an unknown article of use in American sole leather tanneries.

American leather, in the shape of shoes or other manufactured articles or as simply leather, is favourably known all over the world. It needs no defence. In our endeavour to improve our product we are fitting ourselves for more world competition than ever. We welcome reasonable

and constructive criticism, and after that we will let the facts speak for themselves.

In justice to a great industry, may I ask that you give this equal prominence with the statement from your correspondent in Bermondsey?—Very truly yours,

FRASER M. MOFFAT, President.

41 Park row, New York, August 7th, 1924.

RAILWAY CONSTRUCTION AND THE STATE.*

THE method of securing that a country shall be adequately provided with railway communication has now only an academic interest for the chief countries of Western Europe. India, however, has 40,000 miles of railway, and is held to require at least 60,000 more; the question there is still open, and India is the real subject of Mr Jagtiani's book. Originally a thesis for the degree of Master of Science in the University of London, it deals with the origin and growth of the railway systems in England, Prussia, and India. In England capital was abundant and private enterprise supreme, and it has provided an efficient railway system, though at a greater cost and perhaps less adequately than what might have been effected by a well-considered scheme propounded beforehand by the State. Competing lines have been constructed with a greater expenditure of capital, and ultimately at a permanently greater cost in rates and fares to the public, than the construction of one line would have involved; the agricultural districts have had too little provision made for their needs, direct communications and the industrial districts perhaps too much; the idea that monopoly would be averted by the sanction of competing lines has proved illusory; speculation has been encouraged, and has led to heavy losses, and railway extension has fluctuated with the hot and cold fits of the investing public. In Prussia, where capital was relatively scarce and private enterprise more than correspondingly weaker, a mixed system was adopted, the history of which Mr Jagtiani sets out very fully. Private enterprise constructed the more profitable lines, largely with British capital: the State co-operated by guaranteeing interest, or else by constructing the lines which private capitalists would not undertake, partly out of a special tax on the privately-owned railways, and thus it obtained a share in the management. Nationalisation came mainly as a remedy for delays in construction, owing to the financial troubles in the 'seventies, and also for high rates and defective management, and Mr. Jagtiani holds that it has proved satisfactory, especially in providing local lines. In India private enterprise was wholly lacking, and capital was attracted by guarantees of interest, at first on terms very onerous to the Government and hurtful to the efficiency of the railways. Relying on it, they spent lavishly on construction and neglected development of traffic, and were hampered by the dual control exercised by their own boards and the Government. The gradual progress towards the existing system of guarantees supplemented by direct State construction is elaborately recorded by Mr Jagtiani, but it cannot be summarised briefly. The guarantees appear to have been an inefficient stimulus to new construction, and the action of the State is dependent on the demands on the yearly Budget for other purposes, so that progress is uneven and unsatisfactory. Following the Acworth Committee, Mr Jagtiani insists that railway revenue and expenditure should be dissociated from the Budget—a course just rejected by a Committee of the Indian Legislative Assembly, though not entirely for financial reasons. He maintains that "railways should breed railways"; a railway being essentially a monopoly, the profitable railways may fairly be taxed to assist in the construction of lines which may not show an actual profit, but of which the total benefit to the community cannot be measured by their dividends. The book is commended by the high authority of Sir William Acworth, and we echo his hope that the author will extend his studies in railway history. Mr Jagtiani dismisses

the English method as "uneconomic," and holds that the alternatives are "a well-considered guarantee system and a well-regulated State system." But it may fairly be remarked that in the early days of British railways State interposition would have been not only impossible, but unimaginable.

A DISCOURSE ON VALUE.

MR G. B. DIBBLEE is always a stimulating writer, some of his stimulus being usually supplied through the process of exasperation. In his new book,* as in his "Laws of Supply and Demand," he pours out a great deal of erudition, produces a large number of interesting and original assertions, and makes highly effective use of the rare advantage that he possesses, among economic writers, in the shape of facts gained from actual experience of business life; but at the end of it he is likely to leave the average reader, albeit refreshed and encouraged by the writer's confident optimism, vaguely doubtful as to his meaning and purpose. For example, in a characteristic passage in the preface he tells us that "the population of the existing world can be exceedingly rich in a comparatively short period, whenever various sections can cease their disputes about the partition of rewards and work together on an organic instead of a mechanical system." They should consequently aim at the ascertainment of values, in other words, the interpretation of ideal modes of living in the use of various commodities. "The higher the ideal, the better will be the choice of objects for expenditure. Expenditure must not aim at reckless quantity, but at healthful and, if one may say so, spiritual enjoyment. We cannot live with so few goods as formerly on the shores of Galilee, but we can do with a great deal less than what is now considered necessary in the great cities of the world." Mr Dibblee, no doubt, knows quite well what he means when he says that our productive system should be "organic" instead of "mechanical," and implies that it would therefore be much more effective; but the student may be excused if he asks for more light. And if we are all to be "passing rich on thirty pounds a year" by doing with a great deal less goods and indulging in spiritual enjoyment, the ordinary man, while admiring and admitting the truth of this high doctrine, will naturally observe that this is not what is usually meant by being "passing rich." In criticising the Austrians for their indifference to moral issues, Mr Dibblee observes that "in the seven reasons given by Wieser for which mankind attaches value to a commodity, he never mentions the conception of a higher life, which for me lies behind the purchase of a match or a penny paper." And yet on a later page, after a very interesting analysis of the minds of the men who have made great fortunes, he says that they are, universally, truly expert in one subject, and that is, "the proper appreciation of values. They do not follow the example of the clever man, who gives the public what he thinks it ought to want, but they first ascertain what large masses of men really want, and they take all risks in supplying it in the largest possible quantities," &c. If this is the "proper appreciation of values," Wieser does not seem to have been far wrong. And has Mr Dibblee ever bought a single match?

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, September 7. ACCOUNT, September 8.

The influence of the signature of the Peace Pact is beginning to exert its force in various financial directions, and the Stock Exchange finds that one result is the uprising of a greater confidence, in the minds of investors and speculators, than has been noticeable for a long time past. At the same time, so many alarms and excursions have followed the previous, and unsuccessful, efforts at the establishment of peace, that a certain natural hesitation is felt in regard to the latest issue of international negotiations, in spite of their happy termination.

For this reason the purely investment markets continue in a quiet condition, interest stirring more actively amongst industrial branches. The Consol market is exceedingly placid, fluctuations in War Loan and other gilt-edged stocks

being insignificant and occasional. Thanks to the absence of new issues, the investment money which goes on automatically accumulating is turned into existing securities, of which, so far as the Consol market is concerned, a reasonable supply is on offer to meet the present moderate demands.

The foreign market is witnessing a repetition of the wild gamble in German and Prussian bonds which was a feature in January last. Prices have been rushed up in violent fashion. Arbitrage houses declare that most of the buying is German, and comes through Amsterdam. Prices stand substantially higher on the week, while French bonds are dull, the French railway issues moving on a line of their own and at advancing prices. Chinese bonds are very weak, in consequence of the revolution that has now openly developed. Portuguese issues made upward progress on the theory that the British-held bonds will be "sealed" some time this month, and that this will give these particular securities a better standing than they have hitherto enjoyed. Egyptian and Turkish bonds are quiet: private advices from Alexandria speak as though the trouble were over for the time being, but those from Cairo are less confident.

London Midland and Scottish ordinary stock has again reached three figures, this being a feature of the Home Railway market, where, in spite of good traffics, there is not much general business afloat. Undergrounds are inclined to sag, owing to the possibility of the Exhibition not being reopened next year. Argentine Railway stocks make a good showing now the dividend time is at hand. The Argentine exchange also helps the market, and a feeling of optimism is abroad. Other foreign railway stocks are hard. Grand Trunk Pacific Debenture holds its recent rise.

Rubber shares are stagnant, but the tea share market bristles with points of interest. The boom culminated on Monday with top prices in the present movement. This was succeeded by a shake-out on Tuesday, but prices again went ahead towards the end of the week, in consequence of the high prices realised for tea at the Mincing lane sales. The market is broadening out daily, and excites a most unusual amount of popular interest. The oil market is better in places, though movements continue to be somewhat erratic for want of public dealing: Thursday's reduction in petrol is not a bull point.

Amongst tobacco shares United Tobacco South spurred strongly, partly on dividend hopes, partly on the market being caught short of shares to meet a little buying which sprang up. The insurance group shows improvements on balance, but the recent buoyancy has subsided to some extent. Firm-

ness characterises the banking and the shipping markets. In textiles, the Manchester division are giving their favourites a rest, but the iron and steel descriptions are better, on support from the North, although at the beginning of the week prices were adversely affected by the unexpected calling-up of the remaining 8s per share due on Bolckow Vaughan partly-paid. Nothing of consequence has occurred in the electric supply group. London Electricity Supply shares are not likely to move until Parliament deals, at the end of October, with the postponed questions which surround the future of the industry. Cable and wireless stocks are steady, and the hotel list holds its own, while brewery stocks go quietly ahead. Some of the Chinese industrials are weak. Mexican utilities, on the other hand, present a better appearance upon buying of stock said to emanate in the first place from New York. London tramway shares strengthened, thanks to the Traffic Bill.

The Kaffir Circus has taken a turn for the better, the Cape evidently having recovered from its apprehensions of threatened labour disturbances on the Rand. Discussion is concerned with the prospects for the price of gold, as to which there is a noticeable conflict of opinion. Diamonds are better, and Paris has been buying some of her favourite copper shares. Tanganyikas stand out with conspicuous strength, both ordinary and preference being in favour. Animation in Rhodesians is considerably less than the activity in Canadian mining shares, the attractions of the latter having received advertisement from excellent results published by the Vipond Consolidated. Mexican mining shares are a little better, too, and the Middle East has not yet ceased buying the tin shares of companies in the peninsula and its vicinity. West African and Cornish tin are somewhat neglected, while other shares in the miscellaneous mining markets present no features of special interest.

COMPANY MEETINGS, &c.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

IMPROVED DEMAND FOR WEST AFRICAN PRODUCTS.

Mr J. H. Batty (chairman of directors), presiding over the annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, at Liverpool, on Friday, the 29th ultimo, said there had been an improved demand for products exported from West Africa, and the quantities exported had materially increased. The outlook was certainly more encouraging. In 1923 there was a striking increase in the exports from Nigeria of palm oil, palm kernels, and ground nuts. There were no less than 90,000 tons of palm oil, 225,000 tons of palm kernels, and 60,000 tons of ground nuts exported, and it was anticipated that, although these figures constitute a record, they should see them materially exceeded in the present year. It was satisfactory to report that palm oil was coming more under the category of an edible fat, and during the past 12 months very considerable quantities had been absorbed for edible purposes. He looked to a great future for palm oil in supplying the world's needs in this direction.

TAXATION AND TRADE COMPETITION.

He was glad to say a great deal had been done in the past year towards the reduction, and wherever possible the removal, of excessive taxation. It was eminently satisfactory that in every instance where relief had been given there had been an almost immediate improvement in trade and increased revenue. However, there was no disguising the fact that competition was very keen, and a large proportion of the trade was done on an inadequate margin of profit; therefore, though the volume of business was increasing, they must not look to profits increasing in ratio whilst the present competition continues.

The chairman referred to the loss the corporation had sustained by the death of Mr Edwin Beazley, one of the directors; the appointment of Sir Hugh Clifford, Governor of Nigeria, to be Governor of Ceylon, whom Mr Batty described as one of the greatest Governors they had ever had on the West Coast; and of the prospects the corporation have of finding oil in payable quantities at Half Assinie in the Gold Coast Colony.

FREIGHT AGREEMENT BETWEEN WEST AFRICAN LINES.

He also referred to the freight agreement between the West African shipping lines, and said that experience had probably shown them that it was only by such mutual understanding they could obtain an adequate return on the capital employed. This example may give cause for reflection to other interests in the trade. A final dividend on the ordinary shares of 4 per cent., less tax, was declared, making, with 4 per cent. interim already paid, a total dividend for the year of 8 per cent.

The retiring directors, Messrs J. H. Batty, A. A. Cowan, and Major-General Grey, were unanimously re-elected; and the auditors, Messrs Harwood Banner and Son, were re-appointed.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in Treasury Bonds and Treasury Bills dated from Sept. 8—Sept. 13 were opened on Sept. 5, 1924, and the total amount applied for was £51,165,000. For bills at three months dated Monday to Saturday at £99 1s 0d, about 25 per cent., and above in full. The amounts allotted were as follows:—In bills at 3 months, £40,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Aug. 1, 1924.	£ ..	£ ..	£ ..	£ ..
Aug. 8 ..	35,000,000	44,460,000	3 13 5-11	101 11-11

THE FERRYBURN NAVIGATION COLLIERY CO., LIMITED, announces that in view of present high costs due to the new wages agreement, also the big drop in coal prices, the directors have thought it wisest not to pay an interim dividend on the ordinary shares in respect of last half-year's working, so as to provide for probable loss during the current half-year.

KENNEL'S MINES.—The directors of the Huronian Belt Company announce that they will pay the dividend of 8 per cent. and bonus of 4 per cent. declared by Kennel's Mines in respect of shares "marked" by them on and after Sept. 23rd, at rate of exchange fixed by committee of London Stock Exchange—namely, 4s 4½d per dollar.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 4th, is as follows:—Pig-iron: We cannot report any improvement in the pig-iron trade. There is very little business doing, and stocks have continued to accumulate. No. 3 G.M.B. is quoted at 83s per ton f.o.t. or f.o.b., makers' works. The hematite trade is still very depressed; two more furnaces have been put out of blast, partly owing to accident and partly to the slump in trade. Mixed numbers East Coast hematite are quoted at 92s per ton. Manufactured iron and steel: New business is very scarce, and keen competition prevails for the few orders that are being placed. Semi-finished steel from the Continent can be delivered here much cheaper than our cost of production. Prices remain unchanged.—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Business is confined to odd cargoes, for which lower prices must be accepted. Sellers of best Rubio are still quoting 22s 6d, c.i.f. Tees, but this price could no doubt be shaded for prompt business.

Our Sheffield correspondent writes:—No movement has developed this week to ameliorate the distressful conditions in which the trade in open-hearth steel is being carried on. The position is now one of extreme gravity, and justifies the anxiety felt throughout the trade. The volume of output and buying and selling reached its lowest point a fortnight ago, but an increase in the local unemployed list which has since been recorded indicates further contraction. Most of the additions to the recipients of relief come from the branch of trade mentioned above. There are few inquiries for billets and similar material, and no new contracts worth mentioning have been placed for a long time. On the other hand, suspensions of delivery have been advised, and some contracts cancelled. It is not surprising that such conditions are straining very seriously the financial position of the large steel companies. Hopes are entertained of an early settlement of the strike, which has stopped three-fourths of the local open-hearth steel output. Business is moderate in railway material, steel sheets, and cold rolled strip. Prices continue to fall in the fuel market, more particularly for secondary qualities, cobbles, nuts, and slacks, and big concessions are offered to secure export orders. The market is in a thoroughly unsatisfactory state. Best qualities of house coal are scarce with high prices. Quotations for steam coal are nominally 20s for Yorkshire and Blythes, and 22s for Durhams at pits.

Our Glasgow correspondent writes as follows:—A dull tone pervades the pig-iron market here, and notwithstanding the reduced output owing to the smaller number of furnaces in operation, business is on a small scale, but as foundries and engineering works in Scotland are fairly well off for work, the demand should come away when work in the building trades gets into full operation. In the steel and iron trades only a small amount of business is passing. Some plate-makers are fairly well employed on ship-plates, but these are mostly firms associated with particular yards. Output is still far short of capacity, but there is a distinct feeling that the present indications of better trade conditions will materialise before the autumn is over. Structural steel is in steady request for export, and also for local engineers, who have some very good contracts on hand. Bar-iron makers are doing a restricted trade of the hand-to-mouth variety. Export demand for re-rolled steel bars is fairly steady, and black sheet makers have plenty of work on hand, with a regular flow of inquiries from all markets. An exception to this may be mentioned in the thin sheet trade for Japan, which has been considerably restricted on account, it is understood, of heavy purchases made in America by the Japanese. There is, however, a steady demand for the thicker gauges for this market. Galvanised corrugated sheets are being bought for November delivery. Works are full up in some instances till almost the end of the year. The 48,000 ton order for Argentine Government, which has been hanging about the market

for over six months, with terms and conditions attached that no British firm could accept, has now been definitely placed with U.S.A. works. Among new contracts is one for a 4,500 ton motor vessel, to be built by Messrs. Barclay, Curle and Co., and provided with Diesel type engines by Messrs. Kincaid and Co., Limited, of Greenock.

Our Cardiff correspondent writes:—There has been a noticeable scarcity of new business on the Cardiff coal market this week. Salesmen have made repeated efforts to resist the "bearing" tactics of buyers, but with little success, and in practically all sections prices, although reduced, are for the most part nominal. Many collieries are working short time, but even then it is found difficult to dispose of the limited outputs. Forward inquiry is on a greatly restricted scale, while the prospects of the trade are viewed with misgiving. Rumours recently circulating in regard to the reopening of the Cambrian pits, which were closed down two weeks ago, are now stated to have been incorrect, and no negotiations have yet taken place between the workmen and the management. The returns for the week ending August 30th show an appreciable expansion in

FRENCH LINE

Regular Express Passenger Service

Carrying the French, American and British Mails, and sailing regularly from

PLYMOUTH
DIRECT TO
NEW YORK

IN UNDER SIX DAYS.

The route that cuts off the corner.

NEXT SAILINGS.

September 6	-	ss. "FRANCE."

the South Wales coal export trade, particularly heavy shipments being recorded to South America. The following are the current approximate quotations:—Best Admiralties, 28s to 29s; second Admiralties, 26s 6d to 27s; best dries, 26s to 26s 6d; Western Valleys, 25s to 25s 6d; Eastern Valleys, 23s 6d to 24s 6d; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 13s 6d to 15s; coking smalls, 16s 6d to 17s; big vein large, 52s 6d to 55s; machine-made cobbles, 60s to 62s 6d; French nuts, 58s to 60s; stove nuts, 55s to 57s 6d; rubbly culm, 12s 6d to 12s 9d; coke for export, 50s to 52s 6d; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 27s to 29s; pitwood, ex ship, 30s to 30s 6d. Business on the Welsh tinplate market this week has been moderately active, and prices remain firm. The signing of the reparations agreement has led to an increased Continental demand, while substantial sales are again reported to the Far East.

METALS.

Tin commenced the week with a firmer tone on higher Eastern cables, though offers were fairly well absorbed. Later, however, some irregularity was noticeable, and part of the advance was lost on sellers becoming more prominent. Standard, cash, sold at £258 5s to £258 15s, and three months £259 to £258 10s, £262 to £259 5s to £260. Eastern advices reported sales on the basis of £264, c.i.f. At Thursday's session prices opened easier, but improved towards the close, though on balance 5s 6d to 5s 9d per ton lower. Standard, cash, sold at £255 to £254 15s to £255 15s, and three months £255 to £256 to £255 15s. At the close the tendency was firmer though somewhat irregular. Standard cash sold at £256 10s, and three months £258 to £257 to £258 10s. English ingots quoted at £258 15s to £259 5s. Copper also opened firmer, due to sellers being reserved in their offers, and a good demand for distant positions. Standard, cash, £63 15s to £64, to £63 15s to £64 1s 3d to £64, and three months £64 15s to £64 17s 6d to £64 13s 9d, £65 2s 6d to £64 18s 9d. Active trading ensued on Thursday, but prices moved in favour of buyers. Standard, cash, sold at £63 12s 6d to £63 10s, and three months £64 10s to £64 12s 6d. Copper continued in good demand on following day, while rates were irregular and the turn easier. Standard cash sold at £63 2s 6d, and three months £64 7s 6d to £64 2s 6d to £64 10s. Electrocs £68 to £68 10s, best selected £67 to £68 5s, strong sheets £94, wire bars £68 10s per ton. Lead firmer, and quoted at £33 2s 6d to £32 2s 6d, as to position. Spelter quiet at £33 to £32 15s 6d, according to position. Aluminium steady. Home quoted at £125, export £130. Antimony, English Regulus, £44 10s to £50.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The outstanding topic of interest is the sale held at Brisbane this week. A substantial advance in values was generally expected, but the actual rise is beyond what most people imagined it would be. There seems to have been keen and general competition, and the result is that the new selling season in the colonies has opened on a very high level. It will be difficult for importers to do much with wool at Brisbane rates until the Bradford market has come more into line, but there are indications that the levelling up process is already at work. All tops have been sharply advanced this week, and in some cases topmakers have withdrawn quotations entirely. For a really good 70's warp top sellers are now wanting 8s 4d, and 78d is the general market quotation for warp 64's; the latter price represents an advance of 4d in the last four weeks. For super 60's sellers are wanting 60d to 70d; 56's average are quoted at 50d, 46's, carded, at 20d, and 40's, prepared, at 28d. The sharp upward movement is holding up new business to some extent, but a fair turnover has been done during the week, and spinners are "nibbling" all the time, especially as they are carrying light stocks for the most part. The demand for yarn certainly shows a slight improvement, but business is "spotty," and some firms are much better off than others. The chief difficulty is to make prices commensurate with the cost of production, and although yarn quotations are being advanced in sympathy with the rise in wool and tops, the actual selling prices are still well below what they should be. Rather more business is being put through in piece-goods, both home and export markets having been more active during the week. Prices are firm, with a distinct hardening tendency.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Everybody expected that the Brisbane sale would open strong, but some of the costs cabled to Bradford have staggered even the "bulls," being anywhere from 3d to 4d a lb. more for 64's than has been made even during the strong market of the past fortnight. It must be obvious to most users that the manufacturing end of the industry is not likely to follow these values just at present, if ever. There is plenty of confidence in the raw material, but it is nearly all amongst those interested in wool and not amongst users of yarn and piece-goods. One or two of the largest mills in Yorkshire and Scotland have advised some of their customers not to purchase heavily at present, but to wait until nearer Christmas, and there are a number of topmakers in Bradford who would certainly sell merino tops for January and February on the basis of this week's Brisbane costs, even though several of the largest firms have sold all the merinos that they have available, and

have closed their books until they know what wool can be bought at and what supplies are likely to be available. The season that is now opening is expected to produce for sale in Australia at least 200,000 bales more than last year. If only half of this quantity is merino, users will be better off than they were in the 1923-24 season, even though during that time they had the addition of 80,000 bales of B.A.W.R.A. wool. During the past fortnight or three weeks the market has risen rapidly, and Bradford and the Continent have absorbed a fair amount of wool re-offered from Boston, which appears still to be the cheapest market for combing classes, as it has been for the last few months. Less wool, however, is now being re-offered from America, and prices have stiffened very considerably. American worsted mills are said to be badly placed for new business, but the woollen section is a good deal better off. It seems as if in America, as in this country, the woollen side of the industry is likely to have a much more successful winter than the worsted, as neither topmakers, spinners, nor manufacturers are happy with the season beginning on the present high level. Another sign that present-day values in merinos are considered too high to be healthy might be found in the policy of most topmakers during the past fortnight or three weeks, which has been to dispose of all the stock they had, much of which had been held through many hopeless months.

MANCHESTER, September 4.

Trading in the market has been on a reduced scale compared with last week. Producers, owing to the recent larger turnover, have presented a stiffer front to customers, and buyers have not been inclined to pay fuller rates. A lull in business, therefore, has come round. There is still much uncertainty as to future values in the raw material. Cloth inquiry for India has kept up fairly well, but there has been less activity in grey shirtings, and only a moderate turnover in bleaching and printing materials. Trade for China has been adversely affected by the disturbances abroad. Fewer orders have been booked for Egypt. Some encouraging lines have been reported in poplins for the United States. Distribution in home trade goods has been of fair extent. Some manufacturers, especially in grey staples, are wanting longer delivery terms for fresh contracts. Quotations in American yarns remain firmer, and a fairly healthy demand has been met with in small lots for quick delivery. There has not been much activity in Egyptian spinnings. Some useful lines have been booked in yarns for India, and in extra hards for the Near East.

The NET COST

SEVENTY-SIXTH ANNUAL REPORT OF THE COMMERCIAL BANKING CO. OF SYDNEY, LTD.

(INCORPORATED IN NEW SOUTH WALES.)

Presented to the Shareholders at an Ordinary General Meeting held at the Head Banking House, George Street, Sydney, on Friday, 25th July, 1924. The Directors submit to the Shareholders a Balance Sheet showing the Liabilities and Assets of the Bank on the 30th June, 1924, and present the following Report:—

The balance at credit of Profit and Loss, after adding the amount brought forward, and deducting Interim Dividend at the rate of 10 per cent. per annum, paid on 22nd January, 1924, rebate on current bills and accrued interest on fixed deposits, reducing premises accounts, paying Land, Income and other taxes, providing for bad and doubtful debts, and making an addition of £15,000 to the Officers' Provident Fund, amounts to

out of which the Directors recommend the following appropriations:—
To Payment of a Dividend for the past Half-year at the rate of 10 per cent. per annum out of the Year's Profits ... £173,042 5 10
" Transfer to Reserve Fund ... 120,000 0 0
" Balance carried forward ... 89,885 18 6

In terms of Article 94 the Hon. Sir Thomas Hughes, M.L.C., and Mr. Owen Esmond Friend were appointed Directors to fill the vacancies caused respectively by the resignation of Mr. Owen Esmond Friend in November last and the resignation of the Hon. James William Macarthur Onslow in January last. Sir Thomas Hughes and Mr. Friend are now eligible for election, and have given notice of candidature. This Meeting is called upon to elect a Director, consequent on the retirement in terms of the Articles of Association of Mr. George Judah Cohen, who is eligible for re-election, and has given the requisite notice that he is a candidate for the Office. It rests also with this meeting to appoint Auditors for the ensuing year. During the year branches of the Bank have been established at Barellan, Bull and Wyong, in New South Wales.

GEORGE J. COHEN, Chairman.

GEORGE J. COHEN, Chairman. H. H. MASSIE, General Manager. L. A. PARKER, Secretary. Sydney, 14th July, 1924.

We hereby certify that we have examined the bills, compared the balances and counted the coin in the Head Office of THE COMMERCIAL BANKING COMPANY OF SYDNEY, LIMITED, and have compared the returns of the Branches, and have found the same as specified in the foregoing Balance Sheet.

The following resolutions were carried unanimously:—That the Report and Statements of Account be received and adopted, and ordered to be circulated among the Shareholders. That Mr. George Judah Cohen be re-elected a Director and that the Honourable Sir Thomas Hughes, M.L.C., and Mr. Owen Esmond Friend be elected Directors of the Bank. That Messrs. Harrington B. Cowper and Justin J. Brennan be appointed Auditors for the ensuing year. That the Shareholders, having heard with regret of the intention of the General Manager to retire from the management of the Bank, place on record their high appreciation of the services which Mr. Massie has rendered to the proprietors since his appointment to the Bank staff forty-six years ago, and they hope that he will long enjoy his well-earned rest. That the thanks of the Shareholders be presented to the Directors, General Manager and Officers of the Bank for their very satisfactory management of the affairs of the Institution.

H. H. MASSIE, General Manager.

PROVINCE OF MANITOBA. 4½% REGISTERED STOCK, 1923.

Notice is hereby given that the TRANSFER BOOKS of the above Stock will be CLOSED from the 15th day of September, 1924, to the 30th day of September, 1924, both days inclusive, for the preparation of the Warrants for the half-yearly interest due 1st October, 1924.—For the Union Bank of Canada,
W. F. SPARHAM, Manager.
6 Princes street, E.C.2.
4th September, 1924.

PROVINCE OF ONTARIO 4% REGISTERED STOCK, 1947.

For the purpose of preparing the Interest Warrants due 1st November, 1924, the BALANCES will be STRUCK on the evening of the 1st October, 1924, after which date the Stock will be transferred ex-dividend.—For Bank of Montreal,
G. C. CASSELS, Manager.

THE MONEY MARKET.

MONEY became scarce again at the beginning of the week, chiefly owing to the absence of maturing Treasury bills in the hands of the market. The usual withdrawals by banks for balance-sheet purposes and transfers of funds through taxation channels consequently had rather more than their normal effect, and though applications to the Bank of England were not necessary, the market had very little margin to spare. There was a little Continental

inquiry for bills, just sufficient to check the upward tendency of discount rates:—

	Sept. 12, 1924.	Sept. 5, 1924.	Aug. 29, 1924.	Aug. 22, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed an increase of just over a million in the Reserve, almost entirely due to the reflux of notes from circulation. Government and Other securities declined by half-a-million and 3½ millions respectively, and the total deposits were thus three millions lower. Public deposits rose by half-a-million, and Other deposits declined by 3½ millions. Currency notes outstanding were reduced this week by £673,900 to £288,761,500, which includes £1,373,066 for notes called in but not yet cancelled. The fiduciary issue is £237,938,400, or £10,252,500 below the maximum.

The monthly statement of average weekly balances of the London Clearing Banks for August, printed in full on a later page, shows a drop of £26 millions in deposits, as compared with July. In the table below we summarise the aggregate figures for the nine English banks:—

(Million £.)

	June, 1923.	Dec., 1923.	Mar., 1924.	June, 1924.	July, 1924.	Aug., 1924.
Capital and reserves	116.3	116.3	118.7	119.2	119.4	119.4
Acceptances	73.8	96.1	99.2	85.3	79.0	75.7
Deposits (incl. undiv. profits, &c.) ..	1,637.7	1,673.1	1,603.2	1,651.9	1,649.9	1,616.9
Total liabilities	1,827.8	1,885.5	1,821.1	1,856.4	1,841.3	1,812.0
Coin, notes, balance at bank, and cheques in course of collection ..	240.7	254.2	230.2	249.1	236.7	234.0

Investments	355.5	365.8	361.7	349.3	348.1	346.0
Discounts	270.8	276.3	224.0	245.9	259.3	244.5
Loans and advances	746.9	755.5	785.5	791.7	791.5	792.0
Over for accept., premises, &c.	100.6	123.4	126.2	113.2	107.3	103.8
Total assets	1,827.8	1,885.5	1,821.1	1,856.4	1,841.3	1,812.0

Cash has declined by £2½ millions, but money at call is higher by £3½ millions. Discounts are lower by about £25 millions.

THE STOCK MARKETS.

Towards the end of the week talk of political issues forcing a General Election caused some uneasiness in the Stock Exchange. But, generally speaking, the recent general firmness has been maintained. In the absence of new issues, gilt-edged stocks are benefiting from the normal accumulation of investment resources. But the trend of the markets continues more in favour of speculative sections than of purely investment stocks. The gamble in German and Prussian bonds has again been vigorous, and the Stock Exchange maintains that the big buying is coming from German sources via Holland. Home Rails, after early signs of strength, fell back into neglect, but Argentine rails are very firm and active. Once again tea shares have been a main feature, boom conditions prevailing. Rubber shares have at last shown some improvement, while brewery and tobacco shares are rising markets. Public interest in the Kaffir market is at a low ebb, and the oil share market is very dull.

THE COMMODITY MARKETS.

Business is restricted in the wool trade, and it is likely to continue so until the position of the raw material has been tested at the London wool sales, which take place next week. The feature of interest in the cotton trade has been the further decline in raw material rates. There has been no improvement in the coal markets; the pig-iron trade is quiet, makers, it is stated, experiencing difficulty in finding an outlet for their products. Tin and copper were better. Wheat was firmer on lower Canadian crop estimates. Sugar prices were stabilised at recent higher values. Tea continues in demand. Rubber advanced on moderate inquiry. The hide market is firm. Vegetable oils and oilseed maintain their position.

FOREIGN EXCHANGES.

The foreign exchange market was again very quiet, and inclined to be featureless throughout the week; but, whilst the seasonal demand for sterling and dollars was maintained on a slightly smaller scale, the franc came a little more into the picture at the end than has been the case of late. America and Germany were, it seems, both purchasers of francs to a considerable extent, and this brought a rally when the general tendency appeared to be one of further weakness. Paris opened at 83.50 on the 5th and fell to 84.50 on further purchases of sterling and dollars on stock market account, finishing the day slightly better at 84.20-30. On the 6th further dollar purchases put the rate as high as 84.70 (even 85 was touched for a short time), and there were fairly wide fluctuations in both directions, considering the cramped state of the market. There was no change early this week, but on the 9th a sensible improvement set in, which continued until yesterday. The raising of the Bank of France's rate for advances is a strengthening factor. In considering the future of the franc, which is certainly made brighter by the renewal of the dollar credit given by J. P. Morgan and Co. last March, it would perhaps be wise to take up an attitude of some reserve, with one eye on Geneva. Sterling rates against the dollar seemed rather inclined to follow the franc, probably on sentimental grounds as much as anything else, although other factors, chiefly seasonal buying of dollars, obscured this tendency, so that it did not become visible until later. Opening at 4.45½-46 on the 5th, sterling fell sharply to 4.43½-44 on the 6th, and at opening on the 8th to 4.42½-43. Reaction set in on the 9th, when sterling improved to 4.45-45½, followed by another decline on the 10th to 4.44½-45, but the factors mentioned appear to have exerted their influence on the following day and yesterday, when sterling improved again to 4.45-45½ and 4.45½-46 respectively. The Belgian franc opened at 89.20, but did not follow Paris in its downward course to quite the same extent, moving only to 89.25 on the 6th and 89.62 on the 7th. When Paris started to improve, however, the Belgian franc reacted in sympathy to 89, but later lost its advantage, and finished relatively rather weaker at 89.37 on the 11th and 89.25 yesterday. The lira was slightly weaker at 102 on the 6th, but improved later to rather better than its previous levels, and reacted, also in sympathy with the franc, to 101.60 on the 11th, where it remained yesterday. The peseta remained hesitating, as might have been expected with Spain's troubles in Morocco. Of the other Continental exchanges, Berlin remained unchanged at 18½-19, and Christiania at 33.38-42; Stockholm and Helsingfors moved only slightly between 16.76-16.73 and 177½-177 respectively, and followed the dollar, Switzerland doing the same between 23.66-23.68. Copenhagen suffered from some comparatively violent reactions, and wound up rather weaker, but better on balance at 26.35-40 yesterday. Of the Baltic States, Esthonia remains at 1,820-1,880, after temporary weakness at 1,850 on the 8th. Latvia finished slightly stronger at 22.93, after having improved to 22.82 on the 9th and 10th. The leu continued its recent improvement, and moved from 850 to 830 on the 11th and 820 yesterday chiefly, it is believed, because of heavy sales of foreign currencies by Roumanian exporters. Of the South American exchanges the Brazilian milreis was slightly better on balance at 5½, and Buenos Aires showed steady improvement during the week from 42½ to 42½. This is probably seasonal, and due to export movements of meat, wool, and other commodities to Europe. In the East the rupee maintained its strength, and was generally harder on balance, closing at 1s 5½d yesterday. The Chinese exchanges were also firmer, Hongkong moving from 2s 4½d to 2s 4½d, Shanghai from 3s 3½d to 3s 5½d during the week, these movements coinciding with the enhanced price of silver. Japan was rather weaker at the close at 1s 9 31-32d, having declined from 1s 10 3-32d at the beginning of this week. In the silver market there was much more activity, military operations in China causing a considerable demand from that quarter. Supply being short owing to the movement of the dollar cutting off sales from America, the price was forced up to 35d, the highest level since June. If military operations in China

continue on any scale, a firm market seems probable, specially as it would appear that bear influences recently at work have been caught short, and are finding it difficult to cover.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 6th:—

(000's omitted.)		(000's omitted.)	
EXPENDITURE.	£	REVENUE.	£
Apply Services	6,513	From Revenue	10,875
Interest, &c., on Debt	13,399	Amount borrowed	10,431
Banking Fund	1,152		
Unclaimed	212		
Unclaimed in Exchequer Balances ..	30		
	21,306		21,306

There is little change in the revenue figures as compared with a year ago. The total receipts for week ended September 6th amounted to £10,875,200, against £10,770,900. Property and Income-tax yielded an increased revenue, amounting to £4,558,000, against £3,976,000. Customs produced £2,234,000, against £2,654,000; and Excise £938,000, against £1,112,000. Special Receipts brought in £500,000, against £216,200. The week's operations increased the National Debt by £10,431,200, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
EXPENDITURE.	£	REVENUE.	£
Bank of England Advances ..	+ 3,750	National Savings Certificates ..	150
Public Department Advances ..	+ 5,394		
Treasury Bills	+ 890		
Sundries	+ 47		
	+ 10,581		150

The floating debt was increased by £10,539,000 to £779,122,500.

FINANCIAL YEAR, 1924-1925 (April 1 to September 6).

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RUSSIAN LOAN.

THERE are some things that improve upon acquaintance. But the Russian Treaty is not one of them. It is in every way desirable that in dealing with foreign nations the country should speak with one voice, but it has already become increasingly evident that this hasty and ill-considered agreement is destined to become an apple of discord in the political arena in the next few months. Since the text of the Treaty was issued, various stories, more or less authentic, have been put into circulation of the way in which the final agreement was patched up after a breakdown of the negotiations had actually been announced. We will not attempt to judge here whether this astonishing episode represented a surrender by the Bolsheviks—as Mr MacDonald claims—or the capitulation of the Prime Minister under pressure from the left wing of his party—as the Russians claim—for this matter will doubtless be brought under the searchlight of question and answer in the House of Commons. But whatever the truth may be, the circumstances give the Treaty a bad start by labelling it as the result of backstairs diplomacy rather than a carefully planned decision representing the judgment of the country. Moreover, in the

intervening weeks the political parties have begun to take position on the question. The I.L.P. demands that the Government should stick to every letter of the document, and stand or fall by it, while the Liberal Publication Department, in a document which obviously has the support of the leaders of the party, denounces the Treaty as a "sham" and a "fake." It is difficult to see how the Liberal leaders can go back upon this view, and it looks on the surface as though a political crisis is inevitable when Parliament meets. But no one wants an election this autumn, and it is, therefore, possible that the gift of compromise may descend upon the heads of embarrassed politicians and a way be found out of what at present looks like a deadlock. For our own part, we have already expressed our views on the Treaty, and have no doubt that the financial chapter, if it retains its present form, ought to be rejected summarily by the House of Commons, in spite of the serious disadvantage entailed in disowning the signature of a British Prime Minister.

It will indeed be difficult for Mr MacDonald to withdraw from the position he has taken up, for even if he were willing to do so, a large section of his followers hold strong views on the issue. Many supporters of the Labour Party, who fully realise that Communism is not a practicable method of running society, and recognise the ghastly failure of the experiment in Russia, nevertheless feel intense sympathy with a country which has broken with what they regard as the injustices of the existing economic order, and believe that, though Russia may have failed in her first experiment, she may eventually point the way to a more practicable form of Socialism. In any case, they feel an instinctive sympathy with any revolt against capitalism. To all such, the opposition to the Treaty will readily be represented as a nefarious plot on the part of capitalist wire-pullers to overthrow their most dangerous enemy.

Except for the fact that capitalism is on the defensive, and not the offensive, this view is not far from the truth, and the controversy will be a bitter one, just because there will be these opposing principles at the back of the minds of most of the protagonists. The practical view, however, does not present itself in these terms. The Western world has long passed the stage when any responsible section of opinion wishes to boycott Russia because of the economic theories and practice of its Government. It is neither practicable nor sound in principle that any other country should attempt to dictate to Russia how it should organise its internal affairs. At the same time, Russia urgently needs not only to trade with the rest of the world, but also to encourage Western capital and enterprise to come into Russia and help her to restart her economic life. On the other hand, the world needs—though a good deal less urgently—to trade with Russia. The problem, therefore, is to find a working basis upon which to develop trading relations which have already begun in a small way. Let us consider for a moment the stage which has already been reached in Russia.

It is well at the outset to remember that the economic life of Russia was in the first place smashed by the Great War. This was a war of machinery depending upon transport and the highly complex organisation of supplies for millions of men torn from their ordinary environment. Russia, who was left almost entirely to her own resources, proved unequal to the task primarily through the breakdown of her transport system and her inability to furnish her armies with food and munitions. But the Great War and the civil war which followed are only partly responsible for the condition to which Russia sunk. The ruin was completed by the Bolshevik revolution. In the report of the League of Nations on the condition of Russian agriculture published in 1922 in connection with the great famine, it was pointed out that the disaster was due not merely to drought, but to the fact that in the preceding years the cultivated area of Russia had dropped to not much more than half of the cultivated area before the war. Moreover, the area that was sown was being cultivated much worse than before the war. The reason for the falling off was that the Bolshevik organisation of the country put an end to capitalist cultivation, and took away the incentive from the peasant cultivator to maintain his production. The slowing up of production in the country was accompanied by the gradual cessation

of economic life in the towns, and the great cities of Russia became in effect dead cities.

In the summer of 1921 the new economic policy was introduced permitting freedom of exchange of goods. Since that time economic life has been slowly reviving on lines which have been gradually approaching the methods of other nations. The taxation of the peasant has been based upon principles which permit him to benefit from his own labour; but in trading and in industrial matters the State remains an active participant. We have no space here to describe present-day Russia; but, briefly, it may be said that under this composite system international trade is slowly reviving so far as the exchange of consumable goods is concerned. It is true that recent figures do not show any recovery in exports from Great Britain to Russia in the first half of 1924, as compared with a year ago or even two years ago, but imports from Russia are growing, and this is the first step towards revival of trade. This revival of imports from Russia is due to the fact that Russian organisations can now get credit to finance overseas sales of current production, and as this trade slowly grows British and other institutions will be willing to extend the period of their credit from a few weeks to a few months or even a year.

But Russian conditions require the reconstruction of her capital equipment, and when it comes to lending money to Russia for enterprises which involve the locking up of resources for a long period of years the Russians are unable to give security which commands confidence in the financial world. It is at this point that the advocates of a Government guaranteed loan intervene, and urge that the British Government should step in where financiers fear to tread. The difficulty, however, is that such loans imply very much more definite support of and confidence in the present régime than do the credits that are to-day being made, and, apart altogether from the root objection to the Ponsonby plan that it asks Russia only to recognise her obligations in so far as we pay her to do so, there are very serious objections to lending money to the Soviet Government at all.

There are very few cases in which it is ever desirable for a Government to encourage its investors to lend money to foreign Governments. If this is done at all, it is usually from some ulterior motive. For example, the loan of large sums of French capital to the Tsarist Government in the years preceding the war were closely connected with the Franco-Russian alliance, and the effect of these loans was to strengthen Russia's preparations for war. In the chaotic state of Europe since the war there have arisen some special reasons which may make it desirable for Governments to encourage the flow of capital into special channels, but where this is done it is an inevitable condition that the lending States require the country which is to be helped to fulfil certain terms, partly political and partly financial. Thus the Austrian agreement provided for her territorial integrity, the balancing of her Budget, and the carrying out of numerous financial reforms—steps which make her a credit-worthy country, and enable her to enter into normal economic trading relations with the rest of the world.

None of these conditions are fulfilled in the case of Russia. Moreover, as Mr Aylmer Maude pointed out in the *Times* of Wednesday, the evolution of Russia in the last few years has been a conflict between the tendency to restore freedom of contract as it applies in the Western world and those who are struggling to retain as much of the Soviet system as possible. If the British Government assists the Soviet Government to get the capital it needs, it will postpone the date when the change is to be made.

But even if we could safely assume that the present degree of security of contract in Russia is maintained, that there will be no further confiscation, and that the present loans will be safe from repudiation, the plan of lending large sums of British savings to the Soviet Government is very undesirable. It is no new thing for Russian officials sitting in their Government offices to sketch out plans for reorganising half a Continent. Those who had to deal with Russian war requirements know well the magnificent volumes of statistics produced from Russian Government offices, which could work out with the greatest precision—on paper—the nation's requirements in every commodity, from shells, steel rails, and agricultural

machinery to clinical thermometers. But these plans had little relation to reality. The same officials are at work to-day, and the results of their labour are to be seen in Soviet official publications. The imaginative statement of Russia's capital requirements put forward at the Hague Conference in 1922 is a case in point. If a loan of, say, £30 millions was made to Russia, we have no confidence whatever that the bureaucracy would make the best use of it in allocating it among large numbers of rival claimants. Moreover, in this connection the proposed loan is clearly the beginning only, and we should like to know whether the Soviet Government would use it to complete one or two big undertakings, or to make a beginning with a large number. If the latter, would it be assumed that a further loan was to follow on the same terms, or that the present operation would be sufficient to tide over the time until long-termed credits can be raised on ordinary commercial terms on the money markets of the world? Our own view is that, as soon as Russia can give real security for long-termed credits, they should flow to Russia on the principle that each undertaking should provide the specific security for the capital it needs, and that it should be open to the lenders to apply commercial tests in each case. It may well be that a restricted degree of assistance in the form of a British Government guarantee might be added to long-termed credits to Russian undertakings, but, if so, it should be done on the principle of the Trade Facilities Act, under which each case would be considered in London strictly on its merits.

With all these considerations weighing against the proposition we do not believe that there is any chance of the House of Commons sanctioning a British guarantee for a Russian loan. Quite apart from all question of Russia's present position and policies, the objections are very strong, and we even doubt whether, even in the case of the German loan, which is an indispensable step in the plan for European recovery, the Government could obtain Parliamentary sanction for lending their guarantee to the operation, if such a proposal were on foot, which, of course, it is not. We would put one final question to Mr MacDonald, and it is this. Would he have ever dreamt of guaranteeing a loan to Russia (or to any country in Russia's present economic and financial position) had it not been that the Labour Party sympathises with the struggles towards a Socialist régime which the present Russian Government is making? There is, we believe, only one answer possible.

THE PROGRESS OF BELGIUM.

In last week's *Economist* we noted "prosperity" in France as one of the dominant notes of the description of her condition given by the Commercial Counsellor to the British Embassy in Paris. Now, from a communication that has been forwarded to us, and is stated to be based on very high authority, we are able to infer satisfactory progress in the finances of Belgium, the Ally who in currency values, in policy, and in economic experience seems to march in step with France. As all the nations are constantly telling one another, while most of them omit to put the precept into practice, the first essential of sound finance is a balanced Budget, and very definite progress towards this end has been certainly achieved by Belgium. On the revenue side, "fiscal receipts," which were 383 million francs in 1913 and 566 millions in 1919, were over 1,000 millions in 1920, over 2,000 millions in 1923, and were estimated at 2,788 millions for 1924. The actual results for the first four months of this year, however, have exceeded, by 227 millions, a third of the estimate for the full year, and it is therefore taken to be probable that the final figures will show a surplus over estimates of 600 to 700 millions. Moreover, the Government is about to lay before the Chambers fiscal proposals from which additional revenue of 200 millions is expected. On this basis a total of 3,500 millions for fiscal receipts is considered a safe estimate for 1925; and besides "fiscal receipts" there are other ordinary revenues estimated for 1924 at 528 millions. It may be objected that it is easy to

expand revenue, on and in paper, in a time of currency depreciation; but if this is true, as it undoubtedly is within limits, it is still more true that the business of contracting expenditure is made much more difficult, and so on this side of the Budget balance-sheet Belgium's achievement is all the more remarkable. State expenditure, which stood at 530 millions in 1913, and at 9,492 millions in 1920, is estimated for 1924 at 5,405 millions, a reduction of 43 per cent. from the highest point. These figures include all budgetary expenditure of every kind, except the expenses of the "régies"—railways, post, and telegraphs, &c.—which are dealt with in a separate Budget, and will be, in the current year, covered by the receipts of the enterprises which require them. In the 5,400 millions of expenses for 1924 there are included 3,380 millions of ordinary expenses, about 430 millions (under the extraordinary Budget) of productive expenditure on "capital account," and about 1,600 millions of expenses corresponding to reparation of war damage as provided by the Treaty of Versailles. This last-named item of expenditure has been brought down to this figure from 5 milliards, which was its first total, and 3 milliards, at which it stood during several years. It includes 700 millions of inevitable charges (war pensions and the service of loans specially contracted for reparations) and 900 millions of damage remaining to be made good, and these 900 millions will only be expended in so far as payments from Germany will provide them.

There is thus a good deal of practical achievement in support of the view, expressed by the communication from which we have taken these figures, that the near approach to completion of the reparation of war damages, the growth of normal receipts, and the reduction of public expenditure give an assurance that Belgium will shortly enter on a period of debt redemption. It is calculated that for 1924 ordinary receipts, at 3,830 millions, and ordinary expenditure, at 3,370 millions, will leave a balance of 460 millions. The "reparations budget" involves an inevitable charge, as has been shown, of 700 millions, and 900 millions that will only be paid if provided by Germany; and it is anticipated that the receipts which may be expected on this account, added to the surplus on the ordinary Budget, will be amply in excess of the 700 millions inevitable charge. In 1925 there should be 200 millions of fresh revenue, from the proposals shortly to be submitted, and the surplus on the ordinary Budget should exceed 650 millions, while the creation of a Caisse Nationale des pensionnés de guerre is expected to effect a reduction by 100 millions of the charges of the State. If these expectations are realised, the permanent charges of the Reparation Budget will be fully covered by ordinary Belgian receipts; and the payments from Germany and the value of her deliveries of coal, dyes, &c., can then be devoted entirely to the payment of the war loans remaining to be liquidated, and to the amortisation of existing debt.

If the situation of Belgian public finance thus appears to be making satisfactory progress towards soundness and stability, it has to be noted that the general economic position of the country was described in somewhat conservative

terms in the Report lately published by the Department of Overseas Trade, from the pen of Mr J. Picton Bagge, Commercial Secretary to the British Embassy in Brussels. He bore witness to the maintenance throughout the whole of the year 1923 of the improvement in Belgium's industrial activity first noticed in the autumn of 1922. Unemployment, less than in pre-war years at the end of 1922, had been practically wiped out and a certain amount of foreign labour had had to be imported; and the railway goods receipts, the shipping returns, and the figures of manufactured exports had all given evidence of active industry and enterprise. This satisfactory position was ascribed by Mr Bagge chiefly to the large export demand favoured by the depreciation of the franc, and in a minor degree to the elimination of German competition; and he thus found himself faced by the question whether the improvement was durable, or was caused purely by the artificial and temporary advantage given to Belgian exporters by the depreciation of the franc, "the dominant factor in the lower cost of production"; and though he thinks that in the case of the plate-glass industry the improvement may be durable, since automobile construction, especially in the United States, has produced a phenomenal demand, he finds that, in general, durability is more than doubtful. From the fact that, in spite of the undeniable scarcity of labour, permits to reside in the country are required by every foreigner entering employment, and are only issued provisionally and for short periods, it is inferred that those responsible for the administration of labour questions foresee that the present intensive export demand may cease as soon as the peculiar exchange conditions, which obtained when he wrote, are no longer assisting it. At the same time, the re-entry of the German metallurgical works into the world's markets was another circumstance which had to be foreseen and was already making itself felt. The attitude of industrialists also indicated scepticism as to the staying power of the prosperity that they enjoyed. They were accumulating no stocks, and were solely accepting and executing orders for immediate or early delivery. Moreover, Mr Bagge noted that even with her exports thus artificially stimulated, Belgium had an adverse balance of foreign trade which was far from being covered by invisible exports. To liquidate this balance, as he points out, she has either to purchase foreign currencies with paper francs or to borrow abroad. In August, 1923, a loan of 400 million French francs was floated in Paris. Last week, as our readers will remember, a Belgian loan for \$36 millions was successfully floated in New York. In our monthly Trade Supplement, published with the *Economist* of August 23rd, the figures of Belgian trade for the first six months of 1924 showed an adverse balance of 1,852 million francs.

It is thus clear that, although Belgium's public finances are in promising and improved shape, the trade position is not yet all that those interested in her welfare would desire. Active official propaganda, however, is being carried on for the development of export trade, and the Government's agricultural policy is designed to decrease imports of foodstuffs. If, as we hope and believe, a con-

siderable expansion of world-trade follows settlement in Europe, Belgium's artificial prosperity, due to exchange depreciation, may well be replaced by a sounder and more firmly based activity.

THE FIRST STAGE AT GENEVA.

(FROM OUR SPECIAL CORRESPONDENT.)

GENEVA, September 9.

THE important Assembly discussion on security and armaments, if it has resolved nothing definitely for the present, has at least cleared the air and brought out the essentials of the problem to be faced. The speech by Mr MacDonald was the most constructive yet delivered in any Assembly of the League, and the French Prime Minister wisely eschewed the empty delight of making points which some of his excited compatriots were urging him to do. What he did was to underline what there was of agreement between himself and Mr MacDonald, and moderately to develop the French view of the necessities.

To the minds of many people here the most significant and striking element of the discussion has been the rally to Mr MacDonald's powerful advocacy of the development of compulsory arbitration. France, Czechoslovakia, the South American States, the neutral States, Italy, and, in fact, nearly all States whose representatives participated in the debate, either welcomed warmly or expressed their readiness to develop the idea. It is not perfectly clear, but I am disposed to think that M. Herriot's acceptance of it is to be bound up with satisfaction on security (according to his view of the word); that is to say, arbitration, security, disarmament, are linked up in one whole. There seems no reason why this combination should not be made, but the declarations of Mr MacDonald placed more emphasis on the compulsory arbitration end of security, while the declarations of M. Herriot placed it rather on the practical guarantee end.

Mr MacDonald says compulsory arbitration, wisely developed, and adhesion to the compulsory jurisdiction clause of the Permanent Court of International Justice (made clearer and more explicit), will, if adopted and faithfully carried out, provide the basis of real security, which is the removal of conflicts from the sphere of arms to the sphere of arbitration. The French thesis, which was expanded in a speech of remarkable ability by M. Politis, the Greek representative, is that precise provision must be made for failure to submit to arbitration, or to carry out arbitration awards. To this Mr MacDonald replied in advance that the British Government stood by the Covenant, and in making this declaration he went out of his way to underline the fact that Article XVI., which is the main Article containing League sanctions, is of a much stronger character than it is sometimes supposed to be; Lord Parmoor quite definitely asserted the British Delegation's agreement to the principle that refusal to refer a dispute to arbitration or to accept an award might be taken to involve at least financial and economic sanctions.

This is a great step for a British Government to make, for although Lord Parmoor seems to forget that Article XVI. also envisages the ultimate use of force, no British Government could very well participate in a financial and economic blockade of any other State without using the British Navy, and, in fact, an economic and financial blockade quite clearly raises a state of war. I believe the French would be satisfied with a definite declaration that any country refusing to arbitrate or to accept an arbitration award becomes automatically in a state of war with all the other countries in the League. I do not believe they would accept compulsory arbitration without it.

There are those who, not without reason, feel that if this Assembly rises with some definite step towards compulsory arbitration, more will have been done for security and reduction of armaments than has been achieved in the last 100 years; and it is a great fact that the Jurists Committee of the Assembly is definitely charged with studying this side of the matter. It is

fundamental. If it could be achieved even separately, it would obviously increase security, and the reduction of armaments might be left as a natural and gradual sequel.

Neither the great significance of this, nor, it is true, the difficulty of giving precision to it, has been fully realised. It is undoubtedly linked up with the other question of enlarging the membership of the League, or, at any rate, ensuring the collaboration of the great States still outside. One gathers that Germany would have acted upon Mr MacDonald's definite invitation if M. Herriot had been a little warmer in his observations in this respect, but no one believes for a moment that, while the French Premier finds it difficult to be too open-hearted, he or the French Delegation would place obstacles in the way of a normal application from Germany for a normal admission through the normal procedure. It is quite reasonable for the French Government to say "no privileges," but it is quite unreasonable to say that this implies refusal to consider Germany's membership of the Council. What France asks is that Germany should do what the Covenant says, namely, give general assurances of her intention to fulfil her international obligations and to submit to a consideration of her armaments position as definitely provided for in Article I. of the Covenant. But for Germany's admission I think we shall have to await either the next Assembly or a special Assembly summoned beforehand.

The first stage has been reached in the general deliberations on security and armaments. The Committees of the Assembly have a very big task in considering the arbitration proposals and in coming to some conclusions which may form the basis of a detailed study leading to a general armaments conference, if possible within the next twelve months. The Assembly is not likely to rise with cut and dried plans, but if it can reach some agreed basis of discussion for the international conference, it will have achieved a good deal, and it is important that the principal participants in the debate have made it quite clear that the International conference is to be summoned and organised by the League of Nations—in Europe. It is essentially a European problem first of all. It is scarcely conceivable that America can object, and the criticisms which have been telegraphed from America to some of the English papers are clearly based on one-sided American considerations arising out of the momentary political situation in America itself. Mr MacDonald has at least shown that in his often expressed desire to develop and push forward the League he is also prepared to show a little courage in standing by the League. America can, if she will, contribute enormously to the arbitration side of the problem, but on the armaments side she can offer nothing but benevolent advice, unless she is prepared to lay down conditions in regard to debts, or to accept obligations of some sort.

Meanwhile, it is no use blinking the fact that there are many divergencies of views to be reconciled. But those who speak as if failure to produce final results at this Assembly will mean the final discredit of the League, understand neither the fact that the League is only the 54 States which comprise it, that it is the only way of a general solution, that the whole matter bristles with difficulties of a definitely practical nature, and that in attempting to accomplish what has never been attempted on so broad a scale before, it obviously needs time and attention. Would anyone have thought it possible that within four or five years of the greatest war in history, arousing the greatest passions, the vast majority of the nations of the world would be assembled together giving practical consideration to the adoption of the principle of compulsory arbitration, and would anyone suppose, further, that progress to such a stage would have been possible without the continuous study, effort, and influence of the League? It is strange to find, too, that the Assembly of the League should be regarded as working under the special advantages of a new era developed at the London Conference. It is true that it represented a great change in the relations of Germany and France, but what is persistently ignored or overlooked is that the London Conference was the last stage in the precise application of the methods previously adopted (certainly in less important respects) by the League. Those who laud London and belittle Geneva forget that Geneva gave London the cue. It was not until the Allies at long last followed the practice adopted by

the League in Austria and Hungary that any progress whatever was made in the settlement with Germany.

The great anxiety is that the British Delegation will not be equal to its task. Mr MacDonald kicked off the ball and left his weak team to shoot the goals. They have against them a brilliant French Delegation, to which it is neither helpful nor to the credit of the British Government that there should be opposed to it mainly the obstinacy of Lord Parmoor. Despite the great significance given to this meeting by the presence of Mr MacDonald, M. Herriot, M. Theunis, three other Prime Ministers, 15 Foreign Secretaries, and a number of former Prime Ministers and Foreign Secretaries, it is still a matter of perplexity to everybody here that the British Government should have considered its present Delegation either an adequate one for the task or one representing the expression of the British Government's wholehearted adhesion to the League. It is an extraordinarily interesting, and at the same time critical, moment.

POSITION OF THE PAPER TRADE.

Now that the paper trade is making a tardy approach towards more normal conditions, it may be interesting to take stock of some events that have happened in this great industry during the past 70 years. Fortunately, the foreign trade records give us considerable help, more particularly in relation to the raw materials used. As regards the finished products, the Board of Trade has made so many re-classifications of imports and exports that it is difficult to carry back accurate comparisons for more than 35 years or so.

It is, of course, well known that imports of paper are very large. Some of our popular newspapers, with enormous circulations, have established their own mills in Scandinavia and Newfoundland, and this alone probably accounts for quite a large proportion of our present imports. For example, in 1920 shipments of paper landed here were worth, at the swollen values then prevailing, about 30½ millions sterling. Of this amount no less than 17½ millions came from Norway, Sweden, and the British Possessions (mainly Newfoundland), leaving 12½ millions as the contribution from all the rest of the world. Out of the 17½ millions, 4½ millions came from British Possessions, and all this may be reckoned as the output of mills in British ownership. The remaining 12½ millions, from Norway and Sweden, is largely the product of British-owned factories, though it is impossible to hazard a guess at the proportion. It would, however, be safe to say that more than a quarter of our total imports come from British factories established abroad, and that it is possible the proportion may be nearer to a half than to a quarter.

Bearing this in mind, let us glance at the import and export records for the last 35 years:—

BRITISH OVERSEAS TRADE IN PAPER OF ALL KINDS.

5-Year Averages.	Gross Imports.	Exports.	Excess of Imports.
£	£	£	£
1889-93	2,162,000	1,646,000	516,000
1894-98	3,130,000	1,487,000	1,643,000
1899-03	4,573,000	1,642,000	2,931,000
1904-08	5,390,000	2,108,000	3,282,000
1909-13	6,722,000	3,246,000	3,476,000
1914-18	6,225,000	3,555,000	2,670,000
Single Years.			
1919	13,021,000	4,231,000	8,790,000
1920	30,244,000	12,810,000	17,434,000
1921	11,601,000	7,726,000	3,875,000
1922	12,374,000	6,748,000	5,626,000
1923	13,592,000	8,770,000	4,822,000

* Playing cards and other miscellaneous goods have been added to imports in 1910 and after. These have apparently swollen the figures by ½ million to nearly a million a year.

† Account, note, and exercise books have been added to exports in 1920 and after, which may go far towards balancing the additions made to imports since 1910.

The enormously inflated values of 1920 must not be forgotten. In that year the quantity imported was not much different from the quantity registered in 1923. Yet in the

three years the value had fallen from 30½ millions to 13½ millions. On the other hand, the quantity exported in the same period had risen very materially, though the value dropped from 12½ to 8½ millions sterling. This, however, will be shown more clearly later, when we compare pre-war and post-war values.

The point to be noted now is that the excess of imports over exports amounts to about the value above estimated for the production of British-owned factories established overseas. The estimate was ¼ to ½ of the imports—the mean between the two extremes being ¾. Last year, it will be observed, the excess of imports was very nearly one-third of the total imports. We may, therefore, say that the products of these British factories in the colonies and Scandinavia account for virtually the whole of the excess of imports over exports. This was not true of 1920; but, as we shall now see, exports have grown materially, while imports have shrunk since that year.

The following table shows both quantities and values for 1903, for the last pre-war year (1913), and for the four post-war years to 1923:—

PRE-WAR AND POST-WAR VALUES.

	Gross Imports.			British Imports.		
	Thous. Cwts.	Thous. £	£ per Cwt.	Thous. Cwts.	Thous. £	£ per Cwt.
1903.....	7,259	4,941	0.7	1,146	1,796	1.6
1913.....	12,882	7,692	0.6	3,499	3,679	1.0
1920.....	12,940	30,244	2.3	2,350	12,810	5.5
1921.....	6,783	11,601	1.7	1,463	7,726	5.3
1922.....	11,079	12,374	1.1	2,454	6,748	2.7
1923.....	12,629	13,592	1.1	4,348	8,770	2.0

Comparing 1920 with 1923, we see that imports have fallen by more than 300,000 cwts, while exports have risen by nearly 2,000,000 cwts. The relation between the two has become much more satisfactory. Indeed, our shipments last year at 4,348,000 cwts were considerably larger than in 1913, and more than 1,000,000 cwts larger than they have ever been for any other year in the history of the trade. It may be added that down to 1909 the quantity of British-made paper sent abroad had never in any year reached 2,000,000 cwts.

The comparison since 1920, however, is the more reliable, since this is not affected by the additions made to imports in 1910 and to exports in 1920. That comparison is in every way satisfactory.

Now let us consider values per cwt. From these it is clear that the export trade is, roughly, of 100 per cent. higher grade than the import trade. This was the proportion both in 1913 and in 1923. But in the interim there had been a noticeable divergence. As compared with 1913, the boom of 1920 sent up values of exports more than fivefold, while those of imports were raised not quite fourfold. In 1921 there was little reduction (4s per cwt) in exports, but a drop of 12s per cwt in imports. Since then, however, exports have come down by £3 6s per cwt and imports by another 12s per cwt. Doubtless this has meant a severe struggle for our paper-makers, but the result is seen in the doubled exports of last year, creating a "record" in the quantity shipped. And this year promises to be even better than last, so far as volume of exports is concerned.

There can hardly be a doubt that prospects for the paper manufacturer are improving, though he is unquestionably feeling the stress of competition, and will probably feel it more keenly still when European affairs are cleared up and the whole Continent gets to work in good earnest. But that will be a matter of time, for it cannot be expected that the machinery of international production and exchange, even with full success for the Dawes scheme, will be set going again as by the wave of a magic wand.

The foregoing statistics have only given us a view of the paper-maker's contest with foreign competitors. We have now to estimate the growth of the home trade, which he principally supplies, and which has undoubtedly expanded enormously during the past generation or two. Fortunately the foreign trade returns will help us, even in this quest. Part of the raw materials used in the trade is imported. Records of the imports of these, both in quantity and value, can be readily secured for the past

70 years, and in the following table they are reduced to quinquennial averages:—

IMPORTS OF PAPER-MAKING MATERIALS.			
Five-Year Averages.	Tons.	£	£ per Ton.
1854-58.....	11,000 ..	245,000 ..	22.3
1859-63.....	21,000 ..	395,000 ..	18.5
1864-68.....	85,000 ..	752,000 ..	8.9
1869-73.....	138,000 ..	1,272,000 ..	9.2
1874-78.....	174,000 ..	1,497,000 ..	8.6
1879-83.....	264,000 ..	2,023,000 ..	7.6
1884-88.....	366,000 ..	2,325,000 ..	6.3
1889-93.....	442,000 ..	2,473,000 ..	5.6
1894-98.....	579,000 ..	2,892,000 ..	5.0
1899-03.....	721,000 ..	3,409,000 ..	4.7
1904-08.....	864,000 ..	4,053,000 ..	4.7
1909-13.....	1,097,000 ..	5,121,000 ..	4.7
1914-18.....	802,000 ..	8,751,000 ..	10.9
1919-23.....	1,089,000 ..	16,959,000 ..	15.6

A glance at the tonnage figures shows that there has been nearly a hundred-fold increase during the 70 years. Expressed otherwise, the increase is 9,800 per cent. How enormously the home trade must have expanded in order to use up this vast increase in the supply of raw materials can easily be imagined. Doubtless some of the material is now used by the artificial silk trade, but that is a development of comparatively recent years, and it will be seen that there had been almost a 70-fold increase, even before the beginning of the present century.

The extremely high value of these materials in the 'fifties and early 'sixties of last century is very noticeable. In those days imports were mostly of rags. In 1861 there were 20,000 tons of rags worth £17 a ton, and less than 1,000 tons of other materials worth about £8 a ton. By 1868, however, the proportion had changed to 18,000 tons of rags and no less than 96,000 tons of other materials. In 1923 there were rather less than 16,000 tons of rags and 1,353,000 tons of other materials—chiefly wood pulp. A statement of the imports for the last four years, with variations in the price, may be interesting:—

IMPORT PRICES OF PAPER-MAKING MATERIALS.			
	Tons.	£	£ per Ton.
1913.....	1,229,000 ..	5,816,000 ..	4.7
1920.....	1,276,000 ..	33,250,000 ..	26.0
1921.....	674,000 ..	13,843,000 ..	20.6
1922.....	1,110,000 ..	9,611,000 ..	8.7
1923.....	1,369,000 ..	11,542,000 ..	8.4

The quantity of imports last year was a "record," the two previous records having been in 1920 and 1913.

A glance at the first table is quite sufficient to show why it was that paper went up in 1920 to over five times the pre-war price, and why even last year's price was nearly double that of 1913. The fall that has taken place since 1920 is highly satisfactory, but it is to be hoped that it will go much further in the next few years. There is some hope of this, for the imports for the first seven months of 1924 have averaged about 7.7 pounds per ton. Cheaper paper means cheaper books and news-sheets for the general public, and is of great importance to a number of industries which use it largely for packing and wrapping purposes.

CANAL COMPANIES' RESULTS.

It is our intention in the course of this article to review briefly the accounts of a few representative canal companies. We recognise that it would require many pages to deal with the economics of canal transport. But we shall rest satisfied if these lines bring into relief the patent fact that canals, when run under modern economic conditions, are capable of rendering efficient service to the community, and at the same time of returning a satisfactory yield to patient investors of the conservative type. In proof of this we refer sceptics to the statistics and figures of the Manchester Ship Canal.

The following brief description of the undertakings dealt with may be of interest:—The Birmingham Canal Navigations, to give the company its full title, is an amalgamation of four concerns who constructed the system under Acts of Parliament passed between 1768 and 1818. The total mileage is approximately 160 miles. The Grand Junction runs from

Braunston, Northamptonshire, where it connects with the Oxford Canal, to Brentford, Middlesex, and the total mileage, including the branches, is 189 miles. The Manchester Ship Canal, whose traffic is far in excess of those of the other four companies, was opened in 1894, and is 35½ miles in length, though the company also owns the Bridgewater Canals, which are 51½ miles long. The Regent's Canal and Docks Company's undertaking consists of the Regent's and Hertford Union Canals, with a mileage of 10½ miles, and the Regent's Canal Dock at Limehouse. The Sharpness New Docks and Gloucester and Birmingham Navigation Company, which was incorporated in 1793, owns the Gloucester and Berkeley Canal and the Worcester and Birmingham Canals, 46 miles in all, and leases the Droitwich Canal and the Droitwich Junction Canal, and owns a controlling interest in the Severn and Canal Carrying Company.

Our first table shows the gross receipts of these concerns:—

GROSS RECEIPTS.						
	1913.	1919.	1920.	1921.	1922.	1923.
Birmingham..	£ 191,345	£ 296,039	£ 306,221	£ 254,792	£ 236,516	£ 233,956
Grand Junction	101,680	146,877	145,619	128,960	144,993	138,735
Manch. Ship..	1,077,018	1,976,591	2,448,848	1,861,132	1,964,813	1,984,476
Regent's.....	81,275	105,795	127,840	111,286	113,086	113,264
Sharpness....	85,308	109,478	97,017	71,764	89,575	88,810

Taken on the whole, gross receipts last year of all the companies show very little difference from those of 1922. The Birmingham, Grand Junction, and Sharpness exhibit minor reductions, but, on the other hand, slight increases occurred in the takings of the Manchester Ship and Regent's Canals. Compared with 1913, however, the figures all show expansion, the largest proportionate advances being recorded by the Birmingham and Regent's undertakings.

Our next table shows the expenditure on operations:—

EXPENDITURE.						
	1913.	1919.	1920.	1921.	1922.	1923.
Birmingham..	£ 88,061	£ 193,330	£ 224,579	£ 194,258	£ 149,551	£ 145,929
Grand Junction	50,275	100,573	100,939	76,512	84,598	83,329
Manch. Ship..	720,941	1,342,081	1,659,006	1,324,514	1,186,326	1,194,103
Regent's.....	38,992	66,123	89,899	71,182	73,415	64,106
Sharpness....	33,523	78,549	60,656	53,901	49,435	48,218

With the exception of the Regent's, all undertakings are maintaining expenditure at a high rate, but in the case of this company a substantial reduction is noticeable. The Birmingham has effected a considerable reduction since 1920, the figures of £224,579 then recorded falling to £149,551 in 1922 and £145,929 in 1923.

Our third table gives the net profits realised:—

NET PROFIT AFTER PAYMENT OF DEBENTURE INTEREST, &c.						
	1913.	1919.	1920.	1921.	1922.	1923.
Birmingham..	£ 68,532	£ 57,698	£ 33,090	£ 23,646	£ 46,906	£ 56,130
Grand Junction	45,405	38,849	36,509	44,146	51,825	48,818
Manch. Ship..	34,742	314,970	465,425	203,511	398,134	464,766
Regent's.....	15,495	17,752	16,092	15,504	20,848	20,057
Sharpness....	19,573	4,574	9,904	8,371	14,067	14,888

A study of the foregoing figures discloses an interesting fact. In 1913 the Birmingham, on an expenditure of £88,000, obtained net profits of £68,500, but in 1923, with expenditure nearly doubled at £145,900, the net profit was actually £12,400 below that of the earlier year at £56,100. In the case of the Grand Junction, a similar position is shown. Expenditure in 1913 absorbed £50,300, and income totalled £45,400, but last year, with outgoings of £83,300, the net revenue was only £48,800. The Sharpness Company also participated in this movement, but the Regent's provides an exception, net profits in 1913 aggregating £15,500 on an expenditure of £39,000, while in 1923 profits are struck at £20,100 and expenses at £64,100.

On going closer into the accounts, first and foremost for consideration comes the Manchester Ship Canal. A further improvement in results is shown in the report of this undertaking for the year 1923. There was an

increase in the weight of sea-borne traffic on which Ship Canal tolls were paid of 1,026,077 tons as compared with the previous year, and an increase of £52,253 in the receipts from Ship Canal tolls, ship dues, &c. The gross receipts of the whole undertaking, including the Bridge-water Canals and the railways, amounted to £1,984,500, an increase of nearly £20,000, and expenditure, at £1,194,100, showed an increase of nearly £8,000. Arrears of dues and tolls accrued during the years 1916 to 1922, payable as a result of the judgment which the company obtained against traders on the Weaver Navigation, brought in £56,400, and the net income shows an increase of £77,000 at £869,900. After payment of rentals and other fixed charges, there is a balance of £510,100; of this, £50,000 is placed to reserve for contingencies and repairs, the dividend on the 3½ per cent. corporation preference stock requires £37,100, and dividends of 5 per cent. on both preference and ordinary shares, £387,500, leaving £35,500, or £10,000 less, to be carried forward. A year ago the ordinary shares received 4 per cent., and two years ago 1½ per cent. The surplus from the working of dock labour was less by £10,650 than that of the previous year. According to the report, the reduction made by the company in charges for labour services more than absorbed the savings effected by wages reductions. The result of the working of the company's railways for the year showed a credit balance of £29,300, an increase of £4,800 in comparison with the previous year.

The other canals are not of such outstanding importance. Birmingham Canal Navigations, with a total capital of over £3,000,000, had a balance available for dividend of but £58,333, and in its report stated that the additional sum of £39,250 required to make up the dividend of 4 per cent. would be provided by the London Midland and Scottish Railway under the terms of the London and Birmingham Railway and Birmingham Canal Arrangement Act of 1846. Incidentally, in the accounts of this undertaking we find the auditor's certificate a model of brevity. "Examined and found correct" precedes the signature of the firm of accountants. Students of accountancy methods might compare this with the auditor's certificate attached to the accounts of the Manchester Ship Canal. The Regent's Canal still adheres to its half-yearly reports and accounts, and here again we notice the cryptic auditor's certificate, "Examined and found correct." In this case we must confess that the statistics are ample, while the previous half-year's accounts are appended for comparison. Our next undertaking, among other matters of interest, is remarkable for the length of its title. The directors of "Sharpness New Docks and Gloucester and Birmingham Navigation Company" state that the "improvement noted in the last report has not only been maintained, but the volume of traffic has slightly increased. Although the quantity of timber imported was not quite up to the previous year, the grain trade showed a most welcome revival, there being an increase of nearly 100 per cent. compared with 1922. Further reductions in charges have been of necessity made, in rather greater ratio than costs, but the financial position is practically the same as last year."

The following table shows a record of dividends during the past few years:—

DIVIDENDS.						
	1913.	1919.	1920.	1921.	1922.	1923.
Grand Junction, ord. stk. ..	% 3	% 3½	% 3½	% 3½	% 4	% 4
Manchester Ship, ord. £10..	nil	2½	5	1½	4	5
Do pref. £10.....	nil	4½	5	3	5	5
Regent's, ord. stk.....	1½	1½	1½	1½	1½	1½
Sharpness, ord. stk.....	nil	nil	nil	nil	nil	nil
Do 5% "A" pref.	5	5	5	5	5	5
Do 5½% "B" pref.	5½	nil	nil	nil	nil	2½
Do 5% "C" pref.	2½	nil	nil	nil	nil	nil

Dividend distributions are not on a generous scale. Indeed, it brings home to those in control of the older concerns the necessity for holding inquiries into methods with a view to locating the root cause of the trouble. Obviously a return of 1½ per cent. on ordinary stock from one undertaking, and of "Nil" from another concern of such stabilised characters, are reflections of some of the

BANK ESTABLISHED IN 1864.

obstacles to be overcome before canal transport comes into its own again.

The following are the principal items in the latest balance-sheets:—

	Capital.		Balance of Capital Account.	Reserves.	Cash and Investments.	Debtors and Loans, Less Creditors.
	Deben- ture.	Ord. & Pref.				
Birmingham ..	£ 797,400	£ 2,439,575	Dr. 265,844	£ ..	£ 36,224	£ 31,695
Grand Junction	150,000	1,223,700	..	30,093	40,569	20,017
Manchester Ship..	8,432,300	9,061,230	Dr. 496,511	44,280	349,965	260,515
Regent's	842,284	1,358,100	4,632	4,667	28,041	2,555
Sharpness	620,658	633,283	..	103,087	30,403	49,774

There is little need for comment on the balance-sheet figures, but it is well to observe that in the case of the Birmingham, which has a combined share and debenture capital of £3,236,900, there is no reserve fund.

Our final table will enable the investor to see at a glance how these securities have fluctuated in value over a period of years, and the yield obtained therefrom to-day:—

	Amount.	Share or Stock.	Highest Price 1898-1922.	Price July 30, 1914.	Price End Aug., 1923.	Price End Aug., 1924.	Yield.
Birm'ham Canal, cons.	£ 2,439,575	Stock	146½	99	82½	81½	£ s d 4 18 3
Grand Junction, ord...	1,130,000	10	152½	90	76	72½	5 9 6
Manchester Ship, ord.	4,000,000	10	7½	1½	9½	7½	5 13 0
Do 5% pref.	4,000,000	10	7½	1½	8½	8½	6 4 8
Regent's Canal, ord...	1,358,100	Stock	72½	25½	24½	29½	4 4 0
Sharpness New Docks, &c.....	303,782½	"	24½	8	6	17	Nil
Do pref. "A," 5% (cum.)	109,500	"	123½	80	60	72½	6 18 9
Do pref. "B," 5½% ..	100,000	"	110	58½	35	60	4 11 9
Do "do" "C," 5% ..	120,000	"	99	37½	..	29	Nil

It will be noticed that in some cases prices have fallen from the highest levels recorded. In the case of Manchester Ship Canal, a wonderful record of progress is revealed which that enterprising concern has well merited.

THE PUBLIC DEBT OF EGYPT.

THE public debt of Egypt owes its origin to Said Pasha, who left a funded debt of £3,260,000, and a floating debt of about £10 millions. His successor, Ismail Pasha, increased these figures to £55,332,000, and some £21 millions respectively, and by 1875 had exhausted the assignable assets of the country, and was forced to borrow on Treasury bills at usurious rates of interest. The unsatisfactory state of the finances disclosed in March, 1876, by Mr Cave, who had undertaken an enquiry at the request of the Khedive, so alarmed the Powers that they insisted on assuming control. Accordingly, on May 2, 1876, a decree instituted the Commission of the Debt, which has continued to our day, with various changes in its constitution, as the Caisse de la Dette Publique. It is worth while recalling that international control in Egypt

was due to default on the debt, preceded the British occupation of 1882, and is not affected by the declaration of March, 1922.

At first the Commission consisted of representatives of France, Austria, and Italy only; the British Government steadfastly declined to interfere by officially nominating a commissioner, and when in 1877 Sir Evelyn Baring (Lord Cromer) arrived to fill that post, he came on the private nomination of Mr Goschen. From its inception the chief functions of the Commission were to receive on behalf of the bondholders the revenues assigned for the service of the debt, and from them to pay the coupon and administer the sinking fund. The power of the new Caisse was strengthened by two contemporaneous events. On January 1, 1876, a decree of the Khedive instituted special tribunals, the mixed courts, to which the Powers delegated their capitulatory rights of jurisdiction, in civil cases, and in November an arrangement was concluded with the following provisions:—(1) Certain short loans, £4,293,000 in all, were deducted from the unified debt, and made the subject of a special agreement; (2) The loans secured on the Khedivial Dairas (estates), £8,815,000 in all, were also arranged for separately; (3) a 5 per cent. preference stock, the privileged debt, was created, with a capital of £17 millions; (4) the rest of the debt was consolidated in the unified debt of £59 millions; and (5) the Caisse de la Dette was declared to be permanently constituted till the complete amortisation of the debt.

At this time, then, the debt was as follows:—

Unified debt	£59,000,000
Privileged debt	17,000,000
Short loans	4,293,000
Daira debt (with charges)	9,512,900
	89,805,900

Even the substantial concessions made were insufficient to extricate Ismail from his difficulties, and in 1878 a Commission of Enquiry was granted full powers to investigate the finances, which were in a state of the utmost confusion. Their first-fruits were the cession to the State of certain Khedivial estates, on the security of which a loan, the Domains Loan, was negotiated through the Rothschilds for £8½ millions at 5 per cent. This brought the total indebtedness of the country to over £98 millions, with an annual charge of £6 millions. Further enquiry showed that Egypt was unable to meet this obligation, and in the end the Commission recommended that the debt should be liquidated. This was done in 1880, and the following changes were made:—

(1) New preference stock to the amount of £7½ millions was created to wipe off various arrears; the service of the Privileged Debt was fixed at £1,187,404, and the revenues of the railways, telegraphs, and port of Alexandria were assigned as security, with a charge on the revenues assigned to the Unified Debt in case of deficit.

(2) The interest on the Unified Debt was reduced from 6 to 4 per cent., at which it has since remained, and an additional amount of £1,958,235 was created for the conversion of the balance of the short loans mentioned above.

(3) The commutation by certain landlords of a moiety of their land tax—the Mukabala—was annulled, and a sum of £150,000 was to be set aside as compensation.

Scarcely was this liquidation put into operation when it was nullified by the events of 1882, and the Sudan campaign; and the Powers concluded a convention at London in 1885, by which Egypt was empowered to raise £9,424,000 at 3 per cent., on the revenues affected to the service of the Privileged Debt, and guaranteed by the six signatory Powers; and a German and a Russian commissioner were added to the original four of the Caisse de la Dette.

In 1888 a loan of £2,330,000 at 4½ per cent. was issued, and in the same year the sinking fund was partially suspended to create a reserve fund of £2 millions. Two years later this loan was converted into preference stock; new Privileged Stock of £1,300,000 was created; and the old Privileged Debt was converted from a 5 to a 3½ per cent. basis, with a bonus of 9 per cent. of new stock. By these operations the capital of this debt was increased by £7,103,200. The resulting economies were to be paid into a special reserve fund.

In 1898 a convention between the Government and a

syndicate arranged for the sale of the Daira Estates through the latter, the repayment of the Daira Loan, and a division of the net profits equally between the two parties. The £6.3 millions of this debt were accordingly entirely repaid in 1905. The existing balance of the Domains Loan of 1877 was also repaid in 1913 from the proceeds of the sale of lands.

New Privileged Debt of £1,734,200 was created for the improvement of the railways in 1900; but since then no further capital debt has been created, though obligations equivalent to a public debt of about £2.6 millions at 6 per cent. have been undertaken to finance the acquisition of the Port-Said and Ismailia and the Kena-Aswan Railways, and the construction of Aswan Dam.

The improving credit of the Government and the Anglo-French Agreement of 1904 enabled several steps to be taken by which the relations between the Government and the Caisse de la Dette were simplified, and the control of the former over its own revenues was increased. The principal financial results were:—

(1) The service of the debt as a whole was secured on the land tax of all Egypt, except the province of Kena, and the previous pledges were merged with the general revenues of the State and relegated to the second place.

(2) The Caisse was given a reserve fund of £1,800,000—sufficient for six months' charges—and a working capital of £1,250,000, but in return surrendered to the Government the very considerable balances then in their hands.

(3) The Ministry of Finance was empowered to retain any surplus after providing for the service of the debt.

On the outbreak of war the German and Austrian Commissioners lost their seats on the Caisse; the Caisse protested against the legislation that legalised the pound sterling in place of the sovereign at 975 millimes, since this affected the value of the coupons, which are payable in gold; and the Government contested their liability to pay the Turkish tribute, since they were no longer vassals of Turkey. On the latter point the decrees undertaking to pay the tribute to the Bank of England and to Messrs Rothschild are clear: the one, dated May 30, 1894, undertook to pay £329,249 4s 1d sterling in gold annually till October 15, 1955; the other, dated March 20, 1891, £280,622 18s 4d till 1951.

The position of the debt at the end of 1923 was as follows:—

Debt.	Capital. £ Sterling.	Charge. £s.	Redeemable.
Guaranteed debt 3%	5,368,900	307,125	July 15, 1910
Privileged debt 3½%	31,127,780	1,062,235	" "
Unified debt 4%	55,971,560	2,182,906	" 1912
Totals	92,468,640	3,552,266	
Expenses (estimate, 1923-4)		44,501	
Turkish tribute		664,826	
Various annuities		354,916	
Total annual charge		4,616,509	

The two last items are not payable through the Caisse; those which are amount to £3,596,767. To meet this there is pledged the land tax of 13 provinces, amounting to close on £5 millions, and subsidiarily the general revenue, which in 1923-4 was estimated at nearly £35 millions. There is a reserve fund in the hands of the Government amounting to close on £12 millions, and in the Caisse of over £3 millions. The security is ample, but besides that there are the various Government properties, the ports, railways, domains, &c., and, finally, their contingent right to the Suez Canal, which in the ordinary course will revert to the State in 1968.

Egypt has a population of 13.4 millions; her total debt may be capitalised at about £105 millions, or under £8 per head, and the annual charge is only 344 millimes, or, say, 7s per head. These cannot be called heavy burdens; the country can assuredly pay the interest and sinking fund without difficulty; whether she will depends on the good faith of her rulers, which it is not open to us to question. Furthermore, the bondholders are still represented by the Caisse, whose hold over Egyptian finances has not been abrogated, but as Lord Lansdowne reminded us in 1904, held in abeyance "so long as the punctual payment of the interest on the debt is assured."

Notes of the Week.

The Irish Boundary.—The two-and-a-half years old letter from Lord Birkenhead to Lord Balfour, which the latter has sent to the Press this week, is important, because it is a contemporary document. But, in fact, it carries us no farther, for it adds nothing to Lord Birkenhead's speeches made at the time, with which it appears to be entirely consistent. The views expressed therein as to the disputed Boundary clause of the Treaty we accept at their face value, just as we must also accept at their face value the contemporary statements of the late Mr Michael Collins, which read very much more into the clause than does Lord Birkenhead. The difference in interpretation may be taken as genuine and sincere, and it is not without significance that Mr Lloyd George, who was, of course, Prime Minister at the time, endorses Lord Birkenhead's letter. Nor is it difficult to explain the difference. When the Treaty negotiations were going on both sides were honestly striving to reach agreement, and both deserved full credit for a great work of accommodation. But obviously both parties knew that if the Treaty was to have any chance of being ratified, each must place the most favourable interpretations upon the meaning of the agreement according to wishes and views of those whom they had to persuade. Mr Collins could hardly say in Dublin that no serious rectification of the frontier was intended; nor could Lord Birkenhead tell the Conservative party that large surrenders of territory by Ulster were contemplated. In the event, Lord Birkenhead laid stress on the narrower interpretation, and carried with him all but the Die-hards; while Mr Collins, by emphasising a wider interpretation, just managed to secure ratification in Dublin. Each believed in his own interpretation; neither surely can have shut out from his mind the inevitability of eventual trouble over the Boundary clause. But it is equally likely that both were content to leave this in the background, trusting to the hope that, before that trouble arose, the Free State would have successfully wooed Ulster into a willingness to approach the wider problem of a united Ireland. This hope loomed large, as we know, in the minds of Mr Griffith and Mr Collins, and Lord Birkenhead puts the same hope into words in his letter to Lord Balfour. Had Mr Griffith and Mr Collins lived, the hope might, perhaps, have been realised. But fate willed otherwise, and we are now faced with a deadlock, which directly involves not only the future of Ireland, but also the good faith of Great Britain. To us it seems that the commonsense interpretation of the clause lies in between the two conflicting views. Lord Birkenhead and Mr Lloyd George would not have accepted the Treaty if they had read the clause to mean huge transfers of territory. The Free State leaders could not have faced their own people had they taken the clause to be trifling in its meaning, and the wording of the clause itself, especially the reference to "wishes of the population," seem definitely to imply something more than mere trumped-up deviations of boundary walls. As Lord Birkenhead believed in March, 1921, we believe to-day, that "the Tribunal, not being presided over by a lunatic, will take a rational view of the limits of its own jurisdiction, and will reach a rational conclusion." The Tribunal, we know to-day, is to be presided over not by a lunatic, but by Mr Justice Feetham, an eminently sound, judicial, impartial person, who has taken considerable pains to acquaint himself fully with every aspect of the matter in dispute. Sir James Craig still persists in his refusal to appoint a Commissioner, and, although all men of goodwill will strive to find a way out, it looks as if legislation to implement the disputed article will become a deplorable necessity.

Overseas Trade in August.—The returns of overseas trade in August do not reflect the seasonal decline in business as a whole, which has lately been responsible for a marked increase in the numbers unemployed in this country. Although August, 1924, comprised one-and-a-half fewer working days than August, 1923, the trade figures for the month reveal an all-round expansion, after all allowance has been made for rather higher prices, particularly on the import side. A summary comparison of

value figures for August and for the first eight months of this year and the last reads as follows:—

MONTH OF AUGUST.

	1923.	1924.	Increase or Decrease in August, 1924.	
	£	£	£	%
Imports	88,420,981	102,196,492	+ 13,775,511	+ 15.6
British exports	60,103,360	66,288,294	+ 6,184,934	+ 10.3
Re-exports	6,128,781	8,970,029	+ 2,841,248	+ 46.4
Total exports	66,232,141	75,258,323	+ 9,026,182	+ 13.6
Excess of imports over total exports	22,188,840	26,938,169	+ 4,749,329	+ 21.4

FIRST EIGHT MONTHS.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	704,009,640	808,556,483	+ 104,546,843	+ 14.8
British exports	502,286,237	526,036,385	+ 23,750,148	+ 4.7
Re-exports	78,747,448	93,272,789	+ 14,525,341	+ 18.4
Total exports	581,033,685	619,309,174	+ 38,275,489	+ 6.6
Excess of imports over total exports	122,975,955	189,247,309	+ 66,271,354	+ 53.9

The rise in imports during August, as compared with a year ago, is common to most commodities, food imports accounting for about £3 millions of the increase, raw materials for £6 millions, and manufactures for £4½ millions. Raw cotton was valued at £5,449,696, as against £3,524,158 a year ago, and raw wool at £3,407,040, against £2,303,403, the 1924 figure in this case reflecting the steep upward trend of prices which has lately affected the wool markets of the world. On the export side, while textiles make a favourable showing, coal and coke show a significant drop, coal shipments declining from £8,314,710 in August, 1923, to £5,732,629 last month, exports to the four countries chiefly affected by the Ruhr occupation last year—Germany, Holland, Belgium, and France—falling from £4,935,108 to £2,210,037. Quantity figures for the first eight months of the last three years, in the case of some of the leading import and export groups, are shown below:—

EIGHT MONTHS ENDED AUGUST 31.

	1922.	1923.	1924.
IMPORTS.			
Wheat	41,268,034 cwt	36,931,968	41,765,530
Raw cotton	8,554,655 cents	6,424,287	8,301,934
Sheep's and lamb's wool	8,637,309 "	5,961,482	5,936,607
Iron ore	2,161,000 tons	4,177,702	4,246,339
Iron and steel manufactures ..	526,783 "	894,433	1,546,488
EXPORTS.			
Coal	38,393,844 tons	53,156,546	41,693,690
Iron and steel manufactures ..	2,061,664 "	2,847,190	2,665,354
Machinery	247,424 "	286,334	299,019
Cotton yarn	141,570 thous. lbs	92,543	112,003
Cotton piece goods	2,672,455 thous. sq yds	2,752,898	2,981,417
Woollen tissues	80,268 "	98,005	113,903

The expansion in textile exports is noteworthy. Exports of iron and steel manufactures have tended slightly to decline this year, concurrently with an increase in imports from abroad. It would not be surprising if the present slight recession in industrial activity in Great Britain were to bring about a certain contraction in the volume of our overseas trade during the next two or three months.

The Conflict in China.—The struggle between the Tutchuns of Kiangsu and Chekiang has developed into a conflict between the supporters of central and those of federal government. Chih-Hsih-Yuan, the Kiangsu Tutchun, is backed by Tsao-Kun, the President of the Republic, and by the Peking Government, and, what is more important, by Wu Pei-Fu, the ablest and most successful of the military leaders, and the commander-in-chief of the best troops in China, including those of Feng-Yu-Hsian, the "Christian general," who have definitely come in to support the Centralist cause. Lu Yuan-Hsiang, the Tutchun of Chekiang, represents, with Chang Tso-Lin in Manchuria and Sun Yat-Sen at Canton, the supporters of autonomy, especially in fiscal matters, for the provinces, either singly or in groups. Chang Tso-Lin has denounced the Centralist attempt to occupy China by force, and threatens, and probably intends, to march southwards; and though he cannot reach the seat of war in time to make his intervention effective, his advance may compel Wu Pei-Fu to divert troops to protect Peking. Sun Yat-Sen threatens to advance northward, attacking the Fukien army, which is threatening Chekiang in its rear; but he has quarrelled with the Cantonese, he is threatened by various rivals, and his consciousness of impotence, and perhaps his accessibility to Bolshevik influence, are exhibited by his absurd ascription of the present struggle to British intrigue. The fighting, on a line a few miles south of Shanghai, has been fierce for China, and some of the Powers now concerned to protect their subjects have indirectly promoted it by allowing the export of munitions to the combatants. Shanghai is protected by European, American, and Japanese marines and warships, and the only danger to its foreign residents lies in the possible influx of refugees—either defeated soldiery or civilian Chinese escaping from the labour conscription imposed by both the contending generals. Intervention has been suggested by the United States Government, primarily to secure adequate protection for foreigners throughout China, and, secondarily, to restore peace. But it can only take the form of an invitation of the Chinese leaders to a round-table conference, which might possibly effect a compromise. The Four-Power Treaty of 1921 does not become operative unless controversy arises between the signatories or unless their possessions are threatened by some other Power; but its existence justifies them in offering friendly mediation. A Conference might conceivably suggest a solution on the lines laid down by Sir John Jordan in the *Observer* last Sunday, including the readjustment of fiscal relations between the provinces and the Central Government, and a further readjustment of the Customs tariff, so as to put an end to the like duties levied by the provincial Governments, which set up unauthorised exactions and involve much interference with traffic. Were the Peking Government recognised and adequately supported by the whole of China, the Consortium might enable it to pay off the armies by a new loan. But it is doubted whether Wu Pei-Fu would take part in a conference, and these possibilities are still remote.

The New Order in Chile.—Chile, like Italy and Spain has now, by a *coup d'état* performed this week, acquired a quasi-military Government. The Congress, in which the elections last March had made the Liberal Party predominant, had failed to pass the Budget, and so to provide pay for the public services, but the Lower House had passed a Bill for the payment of its members, which is prohibited by the Constitution. The President had been urged to veto the Bill, but his veto requires to be countersigned by a Minister, and the Cabinet had resigned. Meanwhile, prominent Army officers had got into open conflict with Congress, and a combination of generals and admirals offered their services to President Alessandri as successors to the outgoing Ministers. Though himself a Liberal, he accepted the offer, more or less compulsorily, and the new Cabinet was sworn in on the evening of September 5th. He took refuge for a night in the American Legation, and has departed to Buenos Ayres, nominally "on leave." General Altamirano has become Vice-President, and has formed a Ministry apparently of civilians. The new Ministers, who control the Army and Navy, are not likely to meet with much opposition. All of them are men of

the highest reputation and character, and the change is virtually the substitution of non-partisan rule for that of professional politicians. General Altamirano, the new Prime Minister, promises radical changes in the administration, the stabilisation of public finance, the abolition of party politics, and honest government. We may be excused for smiling at the third item on this programme. Meanwhile, foreign investors are showing little sign of alarm. The position of the public finances had already been greatly improved by the income-tax established early this year by general consent; but the late Government had "Labour" sympathies, and "Labour" in Chile, which is not at present strongly organised or military, might have been encouraged by it to emulate the extravagant demands of the Labour Party in Argentina. Votes are purchased, quite openly, by both sides in Chilean elections, and a Government so elected is no great loss. Leading local officials have been changed, and some Liberals arrested, but there seems to be little opposition to the new Ministry, and Chilean securities have been only slightly affected by the change. We can only hope that the new Ministers will carry out their promises and justify their "bloodless revolution" by preparing Chile for real popular government.

Mexico and Great Britain.—The "Correspondence respecting the withdrawal of Mr H. A. C. Cummins from Mexico" (Cmd. 2225, 9d) is well worth reading as an illustration of the present situation in Mexico and as a story of a woman's endurance and courage. In his despatches to Lord Curzon and Mr Ramsay MacDonald, Mr Cummins expressed himself very freely and very unfavourably with regard to President Obregon's Government, and, if that Government knew his real opinion of it, it had a very good reason for desiring his withdrawal. But his Notes to it, which were assigned as the ground for his expulsion, are perfectly courteous and proper; and he tells Lord Curzon that he has received hints from President Obregon's supporters that his own private interests would be furthered if Great Britain were persuaded to grant recognition, and that the Government expected that a British Labour Ministry would do so. Thus, as recognition was not accorded, the Mexican Government, as it seems, invented a reason for his expulsion. Apart from this question, the correspondence shows that President Obregon's Government, having promised land to its helpers in suppressing the de la Huerta rising, was constrained to fulfil its promises to these and prior claimants at once; that, though compensation was promised to the landowners, the bonds intended for payment had never been paid, or even printed, and at present would have been almost worthless; that Mrs Evans's estate had been so improved by irrigation and other work done by her and her husband, that from being comparatively worthless it had come to be worth some £70,000; that the expectant holders (mostly her own employees) were inclined to be loyal to her, and were not very eager for her land, except a few incited by agitators promoted to local office; and that the officer in charge of the Federal troops sent to protect her was expressly ordered not to interfere with the distribution of part of her land, which was being carried out by force. She and a brave young American, Mr Camp, succeeded in postponing it, though Mr Cummins, fearing for her life, strove to persuade her to withdraw, but without success. The result, after this correspondence closed, was her murder. The whole story has made it more difficult than ever for Great Britain to recognise President Obregon's Government. Possibly President Calles may be more amenable, but the reports of his attitude do not encourage such hopes.

More Reparation Appointments.—The post of General Secretary to the Reparations Commission, vacated by Mr Macfadyen on his appointment as Controller of Combined Revenues under the Dawes scheme, is to be filled by Mr S. A. Armitage-Smith, C.B., formerly Secretary of the British Delegation. His post will be taken by Mr Goodchild. The Commission announces that the Committee of Guarantees, provided for under the Treaty of Versailles, and especially in Berlin in connection with the London Schedule of Payments, 1921, will cease to function during the application of the Dawes plan. The Commission also

announce that they have appointed the Committee of Control provided for by the Geneva Agreement in connection with the Reparations of Hungary.

American Cotton Crop.—At the beginning of the week the United States Government published a further report on the cotton crop for this season. The condition on September 1st was given as 59.3 per cent., against 64.9 per cent. a fortnight earlier and 67.4 per cent. on August 1st. It was stated that the condition indicates a crop of 12,787,000 bales, exclusive of linters. These figures, writes our Manchester correspondent, were scarcely equal to expectations, and there was some surprise in the markets when, as a result of selling pressure, prices gave way about $\frac{1}{4}$ d per pound. The fact of the matter is the markets at the moment are technically weak, and bearish sentiment is very pronounced. It is now possible, with some degree of accuracy, to analyse the position of American cotton supplies and consumption during the next twelve months. The carry-over at the end of last July was estimated at 2,320,000 bales. If linters are added to the present forecast, the output for the season should be about 13,500,000 bales. This means that available supplies for the current season will be about 15,800,000 bales. It is rather difficult to estimate the probable requirements of users. Last season the consumption, owing to bad trade, especially in the United States, was comparatively small, at 11,240,000 bales, as in the previous twelve months the amount used was 12,630,000 bales. It is reasonable to anticipate some improvement in industrial conditions in the near future, and tentatively the consumption may be put down at 12,000,000 bales. There is a possibility, therefore, that at the end of this season the carry-over will be about 3,800,000 bales. According to some private cables recently received in Manchester, there is a possibility of the crop this season being much larger than indicated by the Government reports. It is this fear of bigger supplies and lower prices which is holding back trade developments in manufactured articles. Buyers are exercising considerable caution in placing orders with spinners and manufacturers. It is believed, however, that before very long there will be signs of prices grounding, and when it is realised that the bottom in values has been touched, a buying movement of considerable volume is anticipated, as dealers in manufactured goods in distributing centres abroad have become very bare of stocks.

English Agricultural Conditions.—Reporting on agricultural conditions in England and Wales at September 1st, the Ministry of Agriculture states that the very unsettled weather of August has delayed farm work. Haymaking is not yet finished in many districts, and comparatively little corn has been stacked, whilst in the later districts corn has ripened slowly. The cleaning of root crops has been very difficult. At the end of the month dry, sunny weather was badly needed, not only for the harvest, but for the growth of roots and for livestock. In the earlier districts the great bulk of the crops have been cut, but only a comparatively small proportion have been stacked. Some sprouting has taken place, but the low temperatures have been an advantage in this respect, and little damage had occurred up to the end of August. The wheat ears are generally well filled, and forecasts of the yield are for a crop of about 17½ cwt per acre, or nearly $\frac{1}{2}$ cwt above average. Where cut, spring barley and oats have become discoloured to some extent, and many of the crops still uncut have been beaten down by the rains. Barley is forecasted at 15½ cwt per acre and oats at 14 cwt, in each case from $\frac{1}{2}$ to $\frac{3}{4}$ cwt per acre above average. Owing to the rank growth of "seeds," the sheaves will be difficult to dry, and in many cases barley has been left loose on this account. Beans and peas are mostly cut, and some have been carried. Those still out are suffering from the wet, and there is a tendency for peas to shed. The yield of beans is again forecasted at 16.2 cwt per acre, but peas are now only expected to yield 14.7 cwt per acre. Both these yields are above average, beans by $\frac{1}{2}$ cwt and peas by nearly $\frac{1}{2}$ cwt. The forecasts given last month of the production of this year's corn crops have been revised in accordance with the later informa-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

tion available, and the revised figures are set out in the table below. These forecasts are based on estimates made at the beginning of September.

	Acreage.		Yield.	
	1923. Acres.	1924. Acres.	1923. Cwts.	1924 (Estimate). Cwts.
Wheat....	1,740,000 ..	1,546,000 ..	30,431,000 ..	27,055,000
Barley....	1,327,000 ..	1,316,000 ..	19,301,000 ..	20,003,000
Oats.....	1,978,000 ..	2,035,000 ..	27,059,000 ..	28,490,000

In the east and north potatoes have done fairly well, except those on heavy land, but in the west they have suffered from the wet, and light yields are expected. On present appearances, the average yield per acre over the whole country is forecasted at 5.8 tons, which is much the same as last year. The estimated total production, 2,643,000 tons, is some 115,000 tons less than the small crop of 1923. Roots generally have grown well during August, but dry, sunny weather would now be beneficial, especially for mangolds, as the roots are still small. The great bulk of the hay crop was secured in good condition, except in the late districts, more particularly in the north and in Wales. The yield of seed hay is estimated at 33 cwt per acre—5 cwt above average, and that of meadow hay at 23½ cwt—2½ cwt above average. Good second cuts will be obtained should weather conditions become favourable. Despite the wet and cold weather of August, hops made good growth on the whole. The total production is likely to be appreciably greater than last year. The total crop of cooking apples is light and below average, but the fruits are large and well grown, except where damaged by scab and capsids. Good average crops are being obtained of French and runner beans and spring cabbage. All root crops are promising. Onions promise average crops, though some damage by mildew is reported. Tomatoes under glass have ripened rather slowly, but crops are average on the whole; outdoor tomatoes have set well, but will not ripen unless more sun supervenes. Celery, broccoli, autumn cauliflower, brussels sprouts, and savoy are doing well. Over most of the country the supply of labour is sufficient for requirements, but in some districts farmers could have employed more casual workers if they had been available.

Nobel Industries.—Shareholders will be pleased to learn the results achieved by Nobel Industries, Limited, for the year ended December 31, 1923, and the directors are to be congratulated upon the way in which they have been able to steer their barque through the sea of industrial depression. Profits are shown, less note and debenture interest:—

	1920.	1921.	1922.	1923.
Gross profit.....	£ 827,073	£ 809,242	£ 1,157,137	£ 1,178,443
Net profit	788,807	604,264	942,901	1,032,489
Brought forward	230,389	757,498	463,349	509,018
Available for shareholders	1,019,196	1,361,762	1,406,250	1,541,507
Preference shareholders..	261,698	269,243	284,986	297,902
Ordinary shareholders ..	nil	279,170	413,301	493,474
Balance of note issue written off.....	..	..	148,945	..
Reserves	..	350,000	50,000	100,000
Carried forward	757,498	463,349	509,018	650,130

In the latest balance-sheet the creditable financial operation redeeming the note issue and substituting the debenture issue is reflected. Profits shown above are struck after £30,000 premium payable on redemption of the 8 per cent. notes has been deducted, and also after writing off one-thirtieth of the cost of the debenture issue—namely, £2,977. The ordinary shares obtain 8 per cent., as against 7 per cent. a year ago, and after placing £100,000 to special investment reserve account, £650,130 is carried forward, as against £509,018 brought in to the accounts from the previous year. The balance-sheet is not a model of lucidity, although we have offered to us much detailed work. The cost of the debenture issue is shown, after paying the year's quota, as £86,333. Out of figures under "Assets" totalling £23,731,436 the sum of £21,494,444 represents investments in other concerns. These are given in two items, (1) cost of shares in constituent companies, £17,452,015, and (2) other industrial investments" was below the figures given. The position would be made clearer if investments comprised under (1) were subdivided into (a) non-quoted shares in constituent companies at cost, and (b) quoted shares in companies at cost, together with quoted values in brackets. The reduction affected by the substitution of the debenture issue for notes is certainly an excellent point in the company's favour, the loan capital falling from £3,000,000 to £1,762,432. Further, the rate of interest—5½ per cent., as against 8 per cent.—contributes directly to better ordinary dividends. Amounts due to constituent and associated companies are higher, at £3,891,251, as against £3,123,442, but cash is shown as £990,226, as against £849,320 a year ago. Amounts due from constituent and associated companies are £610,174, as against £819,956. The balance-sheet will be found fully analysed in our usual column, but most of us after perusing it will sigh and wait patiently for the full story to be told in amplified accounts, which will reveal actual assets and liabilities. In the case of a company with assets of nearly £23½ millions, we should, in the ordinary course of events, express some anxiety if we found a reserve of £400,000 only recorded, other circumstances being equal. Here, of course, the figures of the constituent companies hold the key to the situation.

Calico Printers' Profits.—A decline is recorded in the accounts of the Calico Printers' Association for the year ended June 30, 1924, and accordingly the directors have wisely refrained from offering a bonus to shareholders, contenting themselves with maintaining the ordinary share distribution at 10 per cent. Of the £205,724 set aside for reserves, £50,000 goes to the employees' benefit fund. Results since 1906 are shown in the following table:—

Year Ended June 30.	Gross Profit.	Maintenance and Depreciation.	Net Profit, Less Debenture Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	£	%
1906.....	682,160	200,120	354,040	150,000	201,074	4
1907.....	776,752	224,711	424,041	150,000	276,476	6½
1908.....	383,612	212,237	93,375	..	150,805	nil
1909.....	448,880	207,565	163,315	Dr 50,000	150,805	nil
1910.....	723,953	201,615	394,338	200,000	201,073	2½
1911.....	612,630	208,860	403,771	185,000	226,208	3½
1912.....	463,904	205,020	130,884	Dr 80,000	226,208	3½
1913.....	718,851	216,174	374,677	150,000	226,208	3½
1914.....	443,786	210,276	105,510	Dr 50,000	150,805	nil
1915.....	210,818	261,994	Dr 179,176	Dr 200,000	nil	nil
1916.....	1,104,732	312,345	664,387	300,000	351,878	2½
1917.....	1,268,058	562,340	577,719	300,000	251,342	5
1918.....	1,271,559	573,606	569,953	310,000	251,342	5
1919 and 1920.....	3,040,392	1,567,432	1,216,961	350,000	603,221	10
1921 and 1922.....	2,418,777	1,659,200	503,532	50,000	552,952	7½
1923.....	1,525,514	597,306	800,208	400,000	402,147	12½
1924.....	1,191,524	522,739	540,786	205,724	351,879	10

Maintenance and depreciation continue to absorb a heavy portion of profits, especially when compared with the previous year. The company has substantial liquid assets. Out of total assets amounting to £7,849,149, cash and bills represent £900,114. Stock-in-trade is £1,695,875, as against £2,054,403 in the previous balance-sheet; while sundry debtors, investments, and other debit balances at £4,263,432 compares with £3,908,072. We pointed

out in these pages a year ago that it would add to the usefulness of the balance-sheet from the shareholders' point of view if those responsible could see their way to further sub-division of this item, which represents more than half the total assets of the association. At present it is impossible to ascertain what proportion represents amounts owed to the company on trading account, or how "investments" are divided between shares in subsidiary concerns and more liquid securities. A summary of the balance-sheet is given on the usual page.

Porcupine-Davidson Surprise.—Our mining correspondent writes:—Following closely on the heels of the Esperanza incident, referred to in our issue of August 16th, comes a somewhat similar débâcle in connection with a Canadian mining enterprise, the Porcupine-Davidson Gold Mines, registered in Ontario during August, 1921, to acquire the property of another Canadian company. The purchase consideration was £625,000, payable in cash, but the vendors agreed to subscribe for £175,000 in preferred and £450,000 in ordinary shares. In April, 1922, 800,000 of the preferred shares, which have participating rights, were offered for sale here at par. The prospectus was accompanied by reports on the part of two well-known mining engineers, Lieut.-Colonel R. C. Feilding and Frank C. Lorrington, and Mr G. E. Bent, the general manager. It is not quite clear whether Mr Lorrington's observations were the outcome of a personal examination, but Lieut.-Colonel Feilding referred to his visit and to assays taken by himself. The exploratory work done in drilling, shaft-sinking and driving was considered to have given such conclusive evidence that an estimate could be made as to the ore reserves—these, at date, were computed as 171,500, value \$2,486,100 gross. In his report for 1922, the general manager stated that the drilling results indicated the existence between the 500 feet and the 1,000 feet levels of additional ore, raising the total to approximately \$10,000,000, or about \$10 per ton. To a large extent these estimates represented "indicated" or "probable" ore; nevertheless, they seemed to have a measure of foundation. It therefore came as a shock to those interested to learn this week that there had been posted up in the Stock Exchange an official communication intimating that two of the directors, who also acted on the board of the vendor company—had resigned, and that an expert, who had just completed an examination of the property, had made a preliminary report to the effect that assay values of his sampling were unpayable, and he could, therefore, not confirm the three engineers' reports upon which the property was bought. Doubtless one or both of the engineers responsible for the original estimates will make a statement as soon as the full text of the expert's report is available, if not before. It is quite possible that the disparity in the conclusions arises from the erratic nature of the deposits. The greatest mistake of all consists in the building up of so substantial an edifice of conjecture upon so slight a foundation.

Transvaal Gold Output.—The production of gold from the mines of the Transvaal in August was 809,571 fine ounces, and compares with 829,437 ounces in July, and 769,371 ounces in August, 1923. The following table gives the monthly outputs since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January..	714,182	676,059	670,503	651,593	639,728	764,469	796,768
February..	659,759	636,728	625,330	558,137	671,123	701,970	760,617
March ..	696,281	712,379	707,036	671,123	639,728	764,469	796,768
April	717,000	691,944	686,979	681,362	511,338	743,651	768,923
May	741,317	724,995	699,041	687,776	699,786	786,564	809,003
June	727,696	702,379	715,967	678,480	675,897	755,309	773,063
July	726,199	725,497	735,099	689,555	730,635	754,306	829,437

UNITED STATES.—EXTENSIVE FOREIGN FINANCING—BOND MARKET FIRMER—CRUDE OIL AND GASOLINE.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 3.

FURTHER evidence of the vast accumulation of funds in this country seeking employment is found in the quick flotation here of the \$30,000,000 Kingdom of Belgium external loan 25-year 6½ per cent. gold bonds. The entire issue was subscribed for before the subscription books were formally opened and immediately closed to-day. A syndicate, headed by J. P. Morgan and Co. and the Guaranty Trust Company of New York, offered the bonds at 94 per cent. and accrued interest, to yield more than 7 per cent. The bonds are issued under a contract whereby the Belgian Government covenants that if in the future it shall issue by public subscription any loan having a lien on any specific revenue or asset, these bonds shall be secured equally and proportionately with such a loan. Provision is made for monthly sinking fund payments, beginning October 1, 1924, at the rate of \$1,200,000 annually, to be used to purchase the bonds if obtainable at not exceeding 100 and accrued interest, any unexpended portion of the monthly sinking fund payments at the end of the month to be credited against the next payment. According to a statement published here, and prepared from information supplied by M. Theunis, Finance Minister of Belgium, the proceeds of these bonds will be used to retire \$18,500,000 five-year 6 per cent. gold notes and \$8,559,445 6 per cent. Treasury notes, both due January 1, 1925; to that extent the present bond issue, therefore, does not increase the outstanding debt of Belgium.

At least three other large foreign loans are likely to be brought out here within the next few months, and, including the Belgian loan, just floated, will reach a total of approximately half-a-billion dollars. A Canadian Government loan of some \$200,000,000 is expected to be announced shortly, of which about one-half will be offered in New York, according to Toronto advices, and the remainder in Canada. Then there is the forthcoming German loan, of which \$100,000,000 is expected to be offered in this country, while France, as previously mentioned in this correspondence, is likely to undertake financing on an extensive scale in the United States before long, the amount of the French loan being variously estimated at \$100,000,000 to \$150,000,000. Owing to the great plethora of available funds in the United States, even these big pieces of new financing are likely to be absorbed quickly, provided they are offered at prices which will afford a reasonably attractive investment yield.

After a rather drastic decline in prices during the past fortnight, the bond market has again turned upward, and in the past few days has recovered much of the previous loss. Most of the recent liquidation of United States Government issues was apparently institutional selling, for trading decreased in volume as prices slumped. Most of those obligations scored a moderate net gain last week. The general list rallied vigorously following the announcement of the acceptance by the German Reichstag of the Dawes plan agreement reached at the London Conference. European Government bonds were conspicuously strong. Belgian 7½'s, for instance, advanced from a low level of 106½ and closed at 109, while French 7½'s, after falling to 100½, regained all of their loss and recorded for the

General Manager W. A. WORMAN, F.I.A.

week a gain of ¾ at 103½. French 8's rose from their low level last week of 104, and closed at 106½. The rally in these issues was representative of the upturn in prices, not only in the foreign list, but in the bond market as a whole. So long as money continues so plentiful, with rates abnormally low, it seems unlikely that the bond market will suffer more than temporary reactions.

Domestic production of crude oil continues to increase. The output gained 8,050 barrels daily in the week ended August 23rd, when it averaged 2,037,700 barrels, according to statistics of the American Petroleum Institute. In the week ended August 25th last year production was at the rate of 2,242,400 barrels daily. Oil imports for the week ended August 23rd of this year were at the rate of 277,857 barrels daily, against 154,714 in the preceding week. Owing largely to the heavy production of crude, resulting in lower prices, which give refiners cheaper raw material, gasoline prices have declined sharply, despite record consumption; for the first six months of this year the latter showed an estimated increase of about 21 per cent. over the corresponding period of 1923. Recent cuts in gasoline prices in the East following previous reductions by the Standard Oil Company of Indiana in its territory, the average tank wagon price for 30 leading cities of the United States has fallen to a new low record for this year at 15.21 cents a gallon, or approximately 3 cents below the price prevailing six months ago. The present average price compares with last year's low level of 12.7 cents a gallon and high of 21 cents.

FRANCE.—M. HERRIOT AND THE BUDGET—THE EXCHANGE POSITION—FRENCH BANKING AND THE GERMAN LOAN—REPARATION DELIVERIES AND BRITISH COAL.

(FROM OUR CORRESPONDENT.)

PARIS, September 10.

M. HERRIOT is allowing himself no real holiday, and has already thrown himself into the work of preparing the Budget for 1925. The estimates drawn up by the various Ministries have already been carefully gone over by the Finance Minister and his assistants, with the result, it is reported, that before they reached the hands of M. Herriot reductions in their demands had been effected to the amount of 723,000,000f. Since then further cuttings down, totalling 326,000,000f have been made in various directions, making a total reduction of 1,049,000,000f in the credits to be submitted for consideration by the Finance Commission. Whether this and other proposals which are in contemplation will enable the Government to carry out its election pledges (1) to suppress the additional 20 per cent. (or *double décime*) which was imposed in respect of most of the existing taxation by the last Parliament, and (2) to get rid of the much-discussed tax on turnover, remains to be seen, but the general opinion is that the utmost that can be done for the relief of the taxpayer in these two directions will be to bring about certain plausible modifications in both these forms of taxation, which, while disguising their outward appearance, will still enable the Treasury to avoid having to impose new taxes to replace them. Simultaneously, the Government is devoting close attention to the question of the high cost of living which, with bread—although its sale price is periodically fixed by prefectorial decree—now standing at a higher price than ever known before

(if 30c per kilogramme), has now become a problem of critical importance.

The exchange situation, again, although it is regarded at present by experts here as far more satisfactory than foreign critics estimate it to be, appears likely to undergo a change for the worse in the near future. There is undoubtedly a widespread desire here that the franc shall remain stabilised in the neighbourhood of 80 to the pound. Any suggestion that it should be brought back to anything like par, or even to the neighbourhood of 40 or 50, is regarded as madness. French exports have undoubtedly benefited enormously from the fact that manufacturers here have been able to quote in depreciated francs, while French imports from high exchange countries have been automatically reduced to the minimum of requirements. Quite apart from economic considerations, however, French opinion regards any marked improvement in the franc as likely to prove positively disastrous from the point of view of the national finances. Such an improvement, it is argued, must inevitably be accompanied by a sharp fall in wages and in profits, whereas there would be no corresponding diminution in the annual interest charges on the colossal French internal debt. The present heavy taxation would consequently become an impossible burden, and national bankruptcy might become inevitable.

It is curious to note that Frenchmen, in this connection, seldom make even a passing allusion to the enormous debt France owes to Great Britain and the United States, or to the effect any scheme for their liquidation might have upon the franc. Most people here, as a matter of fact, although they freely recognise the indebtedness of this country to her Allies, so far as the principle of the thing is concerned, insist that it is just as impossible for France to liquidate her inter-Allied debts as it has been found impossible to find a means of extracting the payment of her reparation debt from Germany. M. Loucheur, it may be remembered, has more than once enunciated this doctrine, in so many words, and particularly in a speech delivered at Lyons. On that particular occasion, M. Loucheur was misrepresented as having said France would not pay her inter-Allied debts, whereas his actual statement was that she could not do so.

There is a certain amount of nervousness in banking circles here as to the effect the forthcoming German loan may have on the franc. I was informed in private conversation a day or two ago that it is regarded as probable that the new issue will result in a drop in the exchange value of the franc of something in the neighbourhood of ten points, as against sterling. The technical argument is based, of course, on the fact that the German loan is to be made in gold. It is understood that one of the objects of the recent visit to Paris of Mr Mellon, the Secretary to the United States Treasury, was to sound financial leaders here as to their intentions in regard to the forthcoming German loan. The visit was ostensibly a private one, but Mr Mellon had conversations both with M. Clementel and M. Robineau, the Governor of the Bank of France, and also, I am informed, with other financial leaders. He found a strong distaste for French participation in the loan, and to combat this feeling he argued that French participation, to however small an extent, would go a long way towards overcoming such sentimental feeling as is entertained against the loan in the United States itself, to whom all concerned are looking to absorb the bulk of the issue. The counter-argument used by the French bankers was to the effect, to put it in plain language, that France has already done more than her share towards "putting Germany on her feet again" by shouldering the burden of raising the 100,000,000,000 which Germany has not paid for the restoration of the devastated areas. The further argument was advanced that since 1871 no German loan has ever been quoted on the French market, and that it will be difficult, if not impossible, to overcome French dislike for loans in gold marks. Mr Mellon made various ingenious suggestions for overcoming these prejudices, one of which was that if the French banks would underwrite not more than 5 per cent. of the total loan (40,000,000 gold marks, or \$10,000,000) the scrip for this purpose might be issued in dollar denominations, so that France, theoretically, would be lending to America, rather than direct to Germany. So far as can be gathered, no definite decision has yet been come to as to whether this country will or will not participate in the

loan. The indications, however, tend to show that the French banks are now rather inclined to take up the \$10,000,000 which Mr Mellon suggested should be allotted to them. In any case, the final decision will rest with the Government itself.

The French case in favour of Germany being compelled to continue to make Reparation payments in kind—particularly in coal—as well as in cash, is ingeniously set forth in a statement issued here, which is based on the argument that, owing to the peculiar distribution of the French industrial regions, it is greatly to the advantage of the British mining industry, as well as to France, that German deliveries of Reparation coal should be kept to as high a level as possible. The English belief that France and other continental countries absorb more British coal in proportion to the extent to which German Reparation coal deliveries are reduced is pronounced to be fallacious. The real fight for the European coal market, it is pointed out, lies between Great Britain and Germany. All the German coal stocks which remain after Reparation deliveries are satisfied are available, therefore, to compete against British coal; consequently, the smaller the quantity of coal required for Reparation payments, the larger the stock is which is available to be thrown on the foreign market in competition with British coal. In the Central European countries the German coal barons have the coal market to themselves, and are able to make a sufficiently high rate of profit to justify them in undercutting their British competitors elsewhere. The geographical situation of France is such that her industries in the east, from Strasbourg to Lyons, are necessarily dependent on German coal, whether it is received from Germany in the ordinary way of trade, or in the form of Reparation deliveries. As a market for British coal, that part of France, it is argued, does not exist. On the other hand, as a glance at the map will show, Germany is in a position to compete on level terms with Great Britain in selling coal, by way of Antwerp and Rotterdam, to any of the French ports, from Dunkirk to Bayonne, or from Cette to Nice, while it has the consumers from Strasbourg to Lyons at its mercy. Germany has also the monopoly of the supply of metallurgical coke to the Lorraine iron and steel area, which is dependent solely on the Ruhr for its supplies. The more coal Germany has to deliver in the form of Reparations, it is therefore argued, the less she will be able to utilise for the purpose of underselling the output of the British collieries.

GERMANY.—POLITICS—FINANCES AND CURRENCY —WAGES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 9.

THE Cabinet has been brought into a somewhat difficult position by its promise to communicate to foreign Governments its repudiation of national responsibility for the war, as admitted in the Versailles Treaty. Past Cabinets repeatedly repudiated responsibility without even provoking foreign comment; but the new plan, adopted in order to propitiate the German Nationals, to embody this in direct communications to the Allies was seen here from the first to be at best fruitless, and at worst provocative. The Cabinet will now have to find some way out. The Geneva declarations have attracted a good deal of attention. The League of Nations, however, has a bad public; and except in the Left Press not much enthusiasm is shown in the coming Reparations Loan flotation, not only for itself, but because the result will indicate the general attitude of international capital. It is expected that the Loan will be fully subscribed if issued at an effective interest rate of around 8 per cent. Very large sums are being applied for in New York by would-be German private borrowers; but the prospects of such transactions will probably only be revealed after the 800 million mark loan has been issued. In the meantime, it is reported that negotiations for a credit of 10 million dollars to the Ruhr industry have been practically concluded, on condition of a guarantee by German banks. Money here is cheaper, the rate for three months' loans, where these can be had at all, having fallen to around 15 per cent. a year. The capital market is reviving. New companies

in August issued shares of nominal value 8,716,000 gold marks, against 4,326,000 gold marks in July; and existing companies raised their capital by 22,355,000 gold marks, against 19,547,000 gold marks. No loans or bonds were issued.

The impending reduction of railway freight rates, reported last week, will, it is stated, be by between 10 and 15 per cent., and will probably be accompanied by a reduction in coal prices, which were last reduced 20 per cent. on July 1st. The coal congestion is as serious as ever, and markets must be found. The Finance Ministry's return for the last ten days of August shows receipts 228,610,292 gold marks, expenditure 217,760,764 gold marks, of which 224,152 gold marks were for redemption of the Gold Loan, and 53,558,609 gold marks for reparations deliveries and liabilities. The last item is for the first time separately booked. In the five months April-August, receipts totalled 2,806,993,730 gold marks, expenditure 2,740,615,678 gold marks, of which 229,753,981 gold marks were for redemption of Gold Loan, 103,412,609 gold marks for Reparations deliveries and liabilities, and 6,734,825 gold marks for expenditure in foreign currencies on execution of the Peace Treaty. The subventions to States and Municipalities totalled 1,020,147,659 gold marks, so that the cost of federal administration proper was only 1,380,566,604 gold marks. The Government has issued an ordinance providing for the partial restoration of insurances. The Third Taxation Decree of last February, which regulated private claims, recognised in principle the *Aufwertung* of depreciated insurance claims, but left the details for later settlement. The new ordinance creates an *Aufwertung-Fund*, to be managed by a trustee, to which will flow all the insurance companies' investments (in the main mortgages) that have been partially restored (to 15 per cent. of the original value) under the February Decree, and also further contributions from the companies in so far as their financial positions allow of such. The trustee will prepare a plan for division of the *Aufwertung-Fund*. Claims will be calculated according to the gold value of premiums at times of payment. In general claims will not be paid until 1932, before which the 15 per cent. of mortgages and bonds is not payable.

The Reichsbank's return for August 30th shows a further increase of the gold reserve by 9,480,000 gold marks to 516,484,000 gold marks, the source of the increase being, as usual, sales of exchange held abroad. The part of the gold reserve held in Berlin remains unchanged at 439,401,000 gold marks. The month-end settlements caused a big credit demand. The total of loans, discounts, and investments rose by 148,400,000 billion marks to 1,997,200,000 billion marks, and the paper note circulation by 262,672,475 billion marks to 1,391,895,246 billion marks. Rentenmark circulation rose by 152,800,000 Rentenmarks to 1,865,000,000 Rentenmarks. The Gold Discount Bank's returns of late show little changes. Total of discounts on August 30th was £6,220,417; total of rediscount liabilities abroad, £7,429,079. The wholesale index number on September 2nd was 121.6, against 120.9 one week earlier; the cost-of-living number, 115, against 114 in the four preceding weeks.

Concerning industrial wages may be added to what was stated last week: In the metal industry in twenty towns in July the nominal wage per hour for skilled workmen was 64 pf, or 97 per cent. of the pre-war wage; for unskilled workmen, 47 pf, or 104.4 per cent. of the pre-war wage. In the wood branch (skilled) the hourly wage was 71 pf, against a pre-war 61 pf; unskilled, 60 pf, against 52 pf. In the building branch, skilled, 76 pf, against 71 pf. pre-war; unskilled, 64 pf, against 56 pf.

The improvement in industry is slow. The number of publicly supported unemployed in unoccupied territory on August 15th was 355,848, against 328,111 on August 1st. Figures of later date from individual towns show no or only slight declines. The Leipzig Fair ended rather disappointingly. Home buyers showed great reserve, and in general bought only enough to cover their minimum demand. Among foreigners, Poles and Spaniards bought well, but Holland, Switzerland, and Scandinavia gave relatively few orders. From Hamburg is reported an improvement in the freight market, the increased demand being mainly for grain vessels. Bankruptcies seem to have passed the maximum. For August were reported

ROTTERDAMSCH BANKVEREENIGING.

Including its affiliated institution the Nationale Bankvereeniging, Utrecht, the Rotterdamsche Bankvereeniging is represented in about 100 places in the Netherlands.

792, against 1,185 in July. The pre-war monthly average was about 800 tons. Coal production in July was 11,272,997 metric tons, against 3,443,274 tons in July, 1923. In the first seven months of the year production was 62,772,031 tons, against 42,220,233 tons in the same months of 1923, and 82,453,165 tons in the same months of 1913, in the present area of the Republic. The Prussian Trade Ministry's monthly report gives a fairly favourable account of the industrial movement. The iron and steel branches have only slightly improved; the chemical and paper branches not at all, and the rubber branch a little. The improvement in textiles is marked, particularly in the woollen branch. A large demand for woollen goods from England, France, and Italy is reported. The cotton and linen branches report smaller improvements. The boot and shoe branch shows no material improvement, but great activity prevails in the clothing, millinery, and allied branches. In the heavy metals branch the improvement is confined to ingots, slabs, bars, and wire rods.

ITALY.—POLITICAL UNEASINESS—THE SUMMER SLUMP IN STOCK EXCHANGE QUOTATIONS— BIG CAPITAL INCREASES—POOR WHEAT CROP.

(FROM OUR CORRESPONDENT.)

TURIN, September 2.

JULY and August were troublous months in politics and economics for Italy. In politics, there is not in sight a ray of hope of a solution of the Matteotti crisis. Two decrees which suppress the liberty of the Press, giving to the local agents of the Government (prefetti) the power to prohibit future issues of obnoxious newspapers, have not quieted the unrest of public opinion, which is bent on obtaining justice against all guilty parties. The parliamentary opposition is determined not to return to the House after the autumn recess, unless conditions of absolute liberty are restored to all parties. Fascism in power, however sure of its two-thirds majority, is planning constitutional reforms; universal suffrage is, it seems, to be substituted by a sort of professional representation, where trade, industry, agriculture, liberal professions groupings will have a voice.

All these may be simply rumours, which keep the political world uneasy guessing the future. In the business world unrest also prevails. In a previous letter I gave figures illustrating the stock exchange fever, which culminated at the end of May. Recently the fever has subsided. Bachi's general index number for State securities (taking as the basis 100 the quotations for December, 1918), which had increased continuously from 96.4 in December, 1923, to 109.5 in May, 1924, fell to 106.9 in June and 105.8 in July. Quotations for the end of August do not show a noticeable advance. As usual, fluctuations were greater for "variable dividend" securities. From 85.67 in December, 1923, these had advanced to 114.34 in May, 1924; in June they fell to 110.82, in July to 107.62. Navigation, hemp and flax, cotton, motor-cars, sugar, land and houses were foremost in the fall. Operators were obliged to liquidate speculative holdings at a great loss. The end of August account saw many forced sales on the stock exchanges. Bull positions were almost cleared out, and new engagements reduced almost to nothing. If the political uncertainty were not repressing any sustained speculative endeavour, the autumn months would probably see another frantic rise.

Banks and financial circles are interested in the rise, in view of the big increases of capital which are in contemplation. In the first half of 1924 there were constituted 845 new joint-stock companies with a capital of 510.4 million lire, and 650 old companies increased their capital by 2,389.9 million lire. Only 246 companies with a capital of 288.9 million lire were wound up; 187 reduced their capital by 259.5 million lire. In the aggregate the number of joint stock companies rose by 583 to 8,335; and their capital by 2,289.4 million lire to 26,111 million lire. The movement has not spent itself; perhaps a total of 1,000 million lire increases of capital are planned at present. A very big figure, which is an indication of a great abundance of new capital in the country. The balance-sheets of three foremost Italian banks (Banca Commerciale Italiana, Credito Italiano, and Banco di Roma) have increased their liabilities from 13,925.3 to 14,963.1 million lire between February 29 and June 30. The increase is wholly due to increased deposits.

The black spot in our economic situation is the indifferent agricultural crop prospects. The wheat yield, which was 6.1 million tons last year, is calculated for 1924 at only 4.8 million tons, a big decrease, which will cause a corresponding increase of wheat imports. In part, the low yield is due to diminished sowings—4,550,000 hectares in 1923 against 4,743,640 in 1922. Agriculturists were discouraged last year by the low prices quoted for internal wheat at sowing time. Owing to the abundant internal crops, mills were able to buy from agriculturists at prices much below those ruling in the international markets. To-day, owing to scarcity of yield, internal prices are higher: 110-120 lire per 100 kg, against 85 last year. But the international level is higher still—perhaps from 130 to 140 lire at Genoa. The prospect of imports of from 2.5 to 3 million tons at those prices is already hardening foreign exchanges.

INDIA. — SUGAR PRODUCTION — MERCANTILE MARINE—CURRENCY AND EXCHANGE—TRADE PROSPECTS—WAGON MANUFACTURE.

(FROM OUR CORRESPONDENT.)

CALCUTTA, August 21.

THE importance of increased sugar production in India must be sought not only in the retaining for her own cultivators and traders of the 20 crores per annum now paid to foreign producers, but in the release, for utilisation in other markets, of the 500,000 tons which India now buys from abroad—though well able, with improved methods of cultivation and manufacture, to satisfy her own requirements, and even leave a surplus for export. The practical possibilities are indicated by the Indian Sugar Bureau, which points out that the great problem before India is to increase the production of factory-made sugar. Already the efforts made by the official experts have shown that it is possible to increase the yield of cane in the white sugar tract in North India by over 50 per cent., and that these canes can do equally well both in years of short rainfall and heavy precipitation. These canes are now being given out to cultivators in the tract, and it is believed that in five years they will bring about an increase in the production of sugar in this area by 100,000 tons. "No other country," as the Sugar Bureau says, "has such advantages, and no other country worth the name would be content to sit and watch another nation make a fortune out of her. The prosperity of Java is in many ways the direct outcome of India's apathy."

"First things first" is an economic adage Indian economists and statesmen, in their impatience, are apt to overlook. In relation to sugar production, India's opportunity is unique—subject only to adequate capital and efficient direction. Can the same claim be made, notwithstanding the ponderous recommendations of the official Mercantile Marine Committee, for the immediate establishment, mainly by reservation of the coasting traffic, of an indigenous mercantile marine? The question is the more pertinent, inasmuch as the recommendations in question predicate heavy official subsidies—if not, indeed, the enforced purchase by the Government of India of one of the shipping lines now operating. How is it proposed to finance this scheme? The Finance

Member has been petitioned by Indian traders and legislators to eliminate sterling loans as far as possible from his programme. This year he acted on that advice. He asked for 15 crores. He has been given 13½ crores, just sufficient to finance railways and irrigation works. Even the most enthusiastic advocates of Indian shipping would hesitate to urge that the present and contemplated outlay on these two items should be curtailed. The question is, indeed, one of relative urgency. Furthermore, Indian railways normally yield substantial profits, utilisable either in relief of taxation or for further development. American and Canadian experience suggest that State shipping, in present conditions, is inevitably, and to a disastrous extent, unprofitable, and would involve, for India, a return to the period of deficit budgets from which she has recently, and with so much difficulty, escaped. Unless these objections can be proved illusory, shipping subsidies—altogether apart from the relative merits of private and State enterprise—will, it is felt, be extremely difficult to defend.

India, at present, is indeed ill-equipped to supply additional capital for shipping, or any other new industrial enterprises, commercial or industrial, and is best occupied, until prosperity revives, in consolidating the advance made in other fields. Whatever the causes, money remains extraordinarily "tight," every indication pointing to as much difficulty occurring in financing trade next busy season as in the season recently terminated, when, despite large advances by the Government of India to the Imperial Bank, the Bank rate rose to 9 per cent. and remained above its normal level far beyond the usual period. It is easy to call for wider banking facilities, but to carry that determination into practical effect will take years. Notice has been given of private Bills, for introduction at the next Assembly, aiming at the reversion of the official exchange ratio to the former standard of fifteen rupees to the sovereign. This may be desirable, but those who assume that it would imply a lower Bank rate forget that an 8 per cent. Bank rate was common when the old rate of exchange was operative, viz., before the war. In other words, previous experience carries the lesson that the exchange rate and the Bank rate have very little connection. What is possible is that there has been excessive contraction of currency; in other words, that the need of every progressive country for a steady increase in its currency, not in the busy season alone, has been overlooked in some quarters. The Government of India makes much of the 24 crores advanced last year, but it forgets the 62 crores by which, in the four preceding years, the volume of currency had been deflated. This is the complaint made in the financial Press.

The strong objections raised to the policy of deflation are not theoretical or gratuitous. They are urgent and practical, and are heavily accentuated by the considerable stimulus to Indian trade to which any genuine settlement in Europe is expected to lead. To any appreciable expansion of manufacturing activities in Europe, an enlarged demand for the raw materials, which only India can supply in the requisite quantities, is a preliminary. Without unrestricted access to Indian products, Germany's effort to enhance her exports, as involved in the acceptance and enforcement of the Dawes Report, is not likely to make much headway. Foodstuffs, such as tea, wheat, rice, &c., will probably be in equally strong demand. All this means a heavy drain on banking resources, which it is the duty of the Government of India to support by issuing currency to the full extent of the country's manifest needs. As the former automatic methods of expanding currency are temporarily in suspense, official control is no longer partial or qualified; it is complete and absolute.

When the largest wagon manufacturing works in India, a few weeks ago, was temporarily closed for lack of orders, the Railway Board met with sharp criticism. Subsequently, tenders for 2,300 wagons, to be manufactured in India, were called for, and orders for these, it is understood, have now been allotted, the three firms affected all being located in or near Calcutta. A tariff on imported wagons being deemed undesirable, the Tariff Board recommended the grant of a bounty to wagon manufacturing firms, the sum payable not to exceed, in the aggregate, 7 lakhs of rupees; and this concession has overcome the difficulties encountered by Indian producers in competition with British exporters, who in the last

three years have quoted abnormally low prices rather than lose a valuable connection. That the railway finances of India have benefited by this close pursuit of trade goes without saying, but the Indian wagon industry survives, and, under domiciled British direction, but with a good deal of Indian money involved, is likely to expand, rather than contract, in the next few years.

AUSTRALIA. — COMMONWEALTH BUDGET—OVERSEAS TRADE—INTERNAL BORROWINGS—WOOL SALES PROGRAMME.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 7.

THE Commonwealth Budget for the financial year ending June 30, 1925, presented by the Treasurer, Dr Earle Page, on July 31st, shows an estimated surplus of £26,032, after giving effect to reductions of taxation to the extent of about £2,000,000, principally by raising the Federal income-tax exemption from £200 to £300. By this and minor alterations 260,000 persons will be relieved altogether from Federal income-tax, and 180,000 other taxpayers will obtain a reduction of tax, the amount payable by individuals who remain in the field of income-tax being reduced by 10 per cent. The number of individual payers of Federal income-tax (as distinguished from companies) will thus be reduced to about 200,000, against 464,298 for 1922-23 and 752,699 for 1921-22. The announcement has been favourably received by the public. Before the Budget, much discussion was going on as to the proper treatment of the accumulated surplus of £10,015,758 as at June 30, 1924, of which £2,587,184 arose in 1923-24 and the balance in earlier years. The Government, however, has dealt with this by applying £4,915,755 to debt redemption (in addition to about four millions from sinking fund moneys derived from revenue), and by allocating £3,500,000 to defence purposes, £500,000 to main roads development, and £500,000 to a scheme for marketing primary products. The estimates for 1924-25 may thus be compared with the results for 1923-24 as follows:—

	1923-4.	1924-25 (Estd.)
Revenue	58,692,665	56,928,375
Expenditure	56,105,481	56,902,343
Surplus for year	2,587,184	26,032
Balance brought forward	7,428,574	600,003
Balance carried forward	10,015,758*	626,035

* Reduced to £600,003 by above-mentioned allocations.

These figures are shown after deducting £7,466,625 for 1924-25 (against £7,324,538 for 1923-24), paid by the Commonwealth to the States out of taxation collected by the former.

There is special reason for applying a large proportion of the accumulated surplus to debt redemption, rather than to more liberal remissions of taxation, seeing that the Customs revenue for 1923-24 was swollen to the extent of about six millions by heavy imports, which have been stimulated by public borrowings in London. The total Customs revenue, which amounted to £21,731,210 in 1920-21, £17,328,310 in 1921-22, and £22,597,306 in 1922-23, rose to £25,177,882 for 1923-24, being equivalent to over 17 per cent. on imports of all kinds. For 1924-25, however, the Customs revenue is estimated at £23,675,000. Even this means that imports will require to be at a high level, and while various Australian borrowings in London during the last few months give some basis for this expectation, it is obvious that a curtailment of external borrowings in the future, which would necessitate smaller imports, would correspondingly affect the Commonwealth revenue. This appears to be recognised by the Government, and the Treasurer stated that the remission of taxation on incomes is rendered possible only because a large Customs and Excise revenue is being received.

The Commonwealth public debt at June 30, 1924, was £415,600,098, of which £55,385,628 has been lent to the States for public works, soldiers' settlement, and similar purposes. The total includes £89,270,922, due to the British Government, which is being reduced by annual payments. The war debt is £351,997,515 out of the above 415 millions.

APPROVED ISSUES UNDERWRITTEN.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

The Commonwealth trade returns for the twelve months ended June 30, 1924, show increases of £8,812,018 in total imports and £1,697,260 in total exports. A comparison for the last three financial years is as follows:—

	1921-22.	1922-23.	1923-24.
Imports—			
Merchandise	103,030,950	131,733,323	140,545,283
Gold	35,486	24,512	24,570
Total imports	103,066,436	131,757,835	140,569,853
Exports—			
Merchandise	124,363,296	115,642,121	116,719,564
Gold (inc. prem.)	3,483,239	2,228,026	2,847,843
Total exports	127,846,535	117,870,147	119,567,407

The excess of imports for 1923-24 was £21,002,446, against an excess of imports of £13,877,688 for 1922-23, and an excess of exports of £24,780,099 for 1921-22. During 1921-22 and 1922-23, however, the exports included part of the wool purchased by the British Government and paid for at an earlier period, so that as regards payments the figures for those two years were less favourable in reality than in appearance. As regards 1922-23 and 1923-24, it is necessary to provide not only for the excess of imports, but also for interest and other payments to be remitted abroad, which may be estimated at over 25 millions per annum. So far these amounts have been balanced by the Bawra remittances, representing the Australian wool-growers' half-share in profits on resales of wool purchased by the British Government, and by the large fresh borrowings effected during the last few years. Loans floated in London during the first half of 1924 will operate in the same direction, and with the prospect of a heavy gross value for the new wool clip at present prices, the position of exchange remains favourable to Australia. But in face of the annual remittance of over 25 millions to be made, the position is open to considerable modification if fresh London borrowings are reduced.

Imports have shown divergent movements. Apparel and textiles amounted to £33,946,834 for 1923-24, against £39,157,593 for 1922-23, or a decrease of £5,210,759. Against this there is an increase of £8,543,900 in metals, metal manufactures and machinery, inclusive of motor cars, this group amounting to £43,747,194 for 1923-24, against £35,203,294 for 1922-23. The following is a comparison of some of the principal exports for the last three financial years:—

	1921-22.	1922-23.	1923-24.
Wool and tops	47,977,243	57,138,764	56,197,676
Wheat and flour	34,164,036	12,991,550	19,292,769
Butter	7,987,558	6,133,864	4,919,653
Frozen beef, mutton & lamb ..	4,007,542	6,116,652	2,473,002
Copper	704,988	664,124	467,844
Lead	1,730,341	2,561,616	3,323,463
Tin	284,357	320,691	447,757
Zinc	237,175	846,054	1,057,737
Zinc concentrates	586,329	1,461,016	1,171,439
Silver	854,840	1,117,145	1,080,872

Allowing for Bawra wool included in 1922-23 exports, the wool exports for 1923-24 showed some increase in value, notwithstanding the smaller clip.

A programme for wool sales in Australia has been arranged up to Christmas for a total of 850,000 bales out of a total estimated clip to be offered in Australia of approximately 2,000,000 bales. The September quantity is 155,000 bales, October 236,000 bales, November 261,500 bales, and December 197,500 bales. This is subject to readjustment if necessary, while the exact arrangements after Christmas will depend upon the financial situation.

The Commonwealth and the six States have made an arrangement by which the former will conduct all borrowing within Australia on behalf of the latter during 1924-25, the amount being a little over £10,000,000. This is to be completed by about the end of January, and the

way will thus be cleared for preparations for the Commonwealth conversion loan to provide for the $\frac{4}{5}$ per cent. War Loan of £68,813,000 maturing in Australia on December 31, 1925.

Letters to the Editor.

GERMAN ISSUES OF CHINESE BONDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There seems to be some doubt in China as to the method of repayment of the German issues, so in response to inquiries from the Far East I have ascertained from the Chinese Legation in this country that the following scheme is proposed, and I pass the guidance on to your readers:—

Tientsin-Pukow, 1908.—Interest due October, 1917 (that is, after the declaration of war), will be paid October, 1924; interest due April, 1918, will be paid April, 1925, and so on. Payment on drawn bonds due 1919 will be made in April, 1926, and payment on drawings after 1920 will be similarly made.

Tientsin-Pukow, 1910.—Interest due November, 1917, will be paid November, 1924, and soon. Payment on drawn bonds 1921 will begin in 1928, drawings in 1922 in 1929, and so on.

Hukuang, 1911.—Overdue interest since 1917 will be paid at once, but drawn bonds of this issue will not begin to be paid till 1929.—Faithfully yours,

CHARLES WATNEY.

A WORLD SURVEY.*

SURVEYS of the world in cross-section perform a useful function at a time when the face of the world has just been transformed by a sudden upheaval like the European War; yet such works have their technical limitations, and Mr Bowman's book displays the weaknesses of the class to which it belongs. It is neither a pure study in the present operation of geographical environment upon contemporary human society, nor is it an exhaustive digest of the diplomatic and military transactions which have redistributed the territory and resources of the world among the different nations during the last dozen years; nor, again, does it give the full historical background of any one of the problems with which it deals, though it sketches in a feature here and there with somewhat arbitrary differences in the degree of detail. In fact, it is a momentary *aperçu* rather than a possession for ever, but to leave our description at that would be to give no idea of the interest and value of the book. In order to appreciate Mr Bowman's work, a European should read it backwards—beginning with the supplementary chapter on "The Situation of the United States," which is the principal new feature of this revised edition, and then working back through the chapters on Latin America, the Pacific, and the Far East, until he reaches (without necessarily working through) the opening sections which treat of Europe and the Near and Middle East.

The survey begins with Western Europe, partly because, by a tradition of several centuries standing, that region has been regarded as the pivot of world affairs, and partly because it is on the eastern fringes of Europe

that the greatest political and territorial changes have been brought about by the World War; but, in adopting this conventional arrangement of his material, Mr Bowman reserves his best wine for the last. Not that these chapters on the Old World are incompetent or inadequate. On the contrary, they show the same sound learning as the rest of the book. Yet it is inevitable that an American writer should treat of this region with a certain remoteness and lack of intimacy which will cause most European readers to prefer the publicists of their own continent, however partisan or even polemical they may be. In dealing with the problems of Europe, even the most sympathetic and well-informed American observer is hampered by a psychological barrier, for Europe is the city of destruction from which the ancestors of every living American citizen broke away, in whatever generation they crossed the Atlantic, and from whatever European stock they came. This is one of the profound sentimental bases of the American national consciousness, and the shrinking from Europe which it produces—an inhibition temporarily overcome during 1917-19, only to be followed by a more violent reaction—is an impediment to an intimate understanding of European affairs.

This American attitude towards Europe, of which Europeans are well aware, has created, however, a misconception among the European public in regard to America's outlook upon the world as a whole, and it is as a corrective to this misconception that Mr Bowman's book will be of special interest to European readers. Impressed as we are with our own paramount importance, we assume that, because the Americans shrink from scalding their fingers in our witches' cauldron, they are indifferent to everything beyond their own borders. Mr. Bowman, who ought to know his own countrymen, presents us with quite another picture. His main theme is that, if the American people have been preoccupied with their own internal affairs for the past 150 years, that is simply because they have had the unique but transient opportunity of developing a virgin continent. This mighty conquest of Nature is now almost at an end. Very soon the territory of the Union will be settled almost as thickly, and its resources exploited almost as intensively, as those of the older civilised regions, and then the American people, with their pioneer spirit and exalted standard of living, their accumulated energies and multiplied wants, will cross their borders and not only look but act beyond them—not, perhaps, in Europe, whose dust they or their ancestors have shaken off their feet, but most certainly in Latin America and in the Pacific. Thus, when Mr Bowman writes of these regions which affect the immediate interests of his country, he writes with the same zest and certainty that a Frenchman displays in dealing with Central Europe, or an Englishman with the Middle East; and at the same time he is sharply critical of his fellow-citizens. On the one hand, he blames them for their slowness in abandoning the self-centred outlook of the last phase in their history, at a time when it is fast becoming impossible to satisfy the national ambitions and the national needs within the four borders of the national territory—vast though it may be. On the other hand, he points out how rapidly (though unconsciously) the United States is already turning her activities outwards in the form of increased foreign trade and investments, and how, in the nearer regions of Latin America, this extension of economic interests is rapidly resulting in an extension of political control. He dwells on the alarm and hostility which this expansion of the United States is producing in the Latin American world as a whole, and he is evidently perturbed lest his countrymen may be swept by a sudden and unexpected wave of imperialism if some foreign Power crosses a path on which they have entered without yet being aware whither it leads. Thus, while Mr Bowman's first purpose is to portray to Americans the new world which has been created in Europe by the war, he will be at least as successful in illuminating for European readers another new world of which they hardly suspect the existence—a world in which the Pacific is the central ocean, the United States and Japan the rival Powers, China and Latin America the prizes, the competition of white and coloured races, the formidable substitute for our family quarrels of nationality, and Europe—the Antipodes!

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, September 24. ACCOUNT, September 25.

The trend of Stock Exchange markets runs in the direction of favour being shown to speculative investments rather than to purely gilt-edged stocks, though the latter continue to be absorbed with a steadiness which causes prices to harden. Supplies of stock are readily taken by accumulating money which has, at the moment, no particular temptation in the shape of new issues to divert it from existing securities. The War Loan, Conversion and other British Government funds are better on the week. There is some demand also for the newly issued Colonials, although New South Wales Fives, on which a call of 95 per cent. is due at the beginning of next month, are still somewhat heavy.

The gamble in German and Prussian bonds is being carried on with great vigour. Prices are rushed up and down in extraordinary fashion. The Stock Exchange market still maintains that the really big buying comes from German sources, via Holland, and it is claimed that blocks of bonds are taken off the market every week and paid for in cash. French bonds fluctuate narrowly, though the railway descriptions keep strong. A number of Chilean prices have fallen a point or so. Chinese and Mexican bonds are better, the Mexican Irrigation issue being five points higher. The two series of Chinese 8 per cent. Notes put on several points upon a statement, read as being hopeful, from the Legation.

Home Railway stocks, after being a better market, fell back disconsolately in consequence of the complete absence of public interest. People are afraid of Labour politics and diminished

earning power. Grand Trunk Pacific 4 per cent. debenture stock continues to make headway, and Canadian Northern Income debenture stock has improved, in sympathy with the rise in Trunk Pacific. Mexican Rails are a little lower. Brazilians have spurred, San Paulo being remarkably strong. The Argentine Railway market presents a very firm appearance. Rises have been secured by most of the leading stocks, a fair amount of speculative business coming into the market.

Rubber shares are decidedly better, on the assumption that American stocks of the material are running low. The market of the moment, however, is that for tea shares, where boom conditions have prevailed. Prices have been rising hand-over-fist day by day, and the knowledge that the autumn interim dividends will be satisfactory adds fuel to the flame of optimism. On contango day last Tuesday it was shown that the bull account could not be called excessive, and the majority of recent buyers have been ready to pay for their shares. Thursday's settlement proved the largest that the market has ever handled. Some of the coffee descriptions are good, with Dumonts outstandingly better.

Another rising market is that for the less marketable tobacco companies' shares, including Copes, R. and J. Hill, Albert Bakers, Carreras, Picardos, &c., where prices have gone ahead. On the eve of the Dunlop scheme, prices of the company's shares gave way to a slight extent. A few of the artificial silk companies' shares show noticeable strength. Grouts and Hinde and Hardy rising substantially, though Courtaulds are neglected. Various textiles are up on the week. Hudson's Bays are better, and Egyptian shares found a few cautious supporters. The insurance market keeps on the upward path. Banking shares are very quiet, and the shipping group presents no special feature. Various brewery stocks and shares stand higher, and hotels have been on the rise, expectation looking for increased dividends owing to the influx of Exhibition visitors. There is a tendency, not very pronounced, to buy nitrates. The iron and steel group is hesitating, the movements being insignificant and irregular. Two or three of the gas stocks are better, in accordance with the usual seasonal inquiry at this time of the year, while the electricity supply list remains dormant for the time being.

Johannesburg apparently takes a less serious view than it was disposed to do a fortnight or so ago of the Labour outlook on the Rand, but public interest in Kafir shares has sunk to a minimum. A few Rhodesians are better, under the leadership of Cam and Motors. An unpleasant incident was a sharp fall in Porcupine Davidson shares, upon unfavourable reports from the engineers. Esperanzas have dropped to a nominal price, on the latest information from the board. The Canadian-Mexican markets are showing a mild amount of activity, but part of the previous strength was lost upon a profit-snatching attempt to sell by some of the earlier buyers. The tin markets are quiet, prices holding their ground without noticeable fluctuations. Indian mines are not particularly good, and Russians remain reactionary. Shares in companies mining copper, lead, and other baser metals have been marking time.

BROKEN HILL SOUTH.—For the four weeks ended Sept. 6th, 19,950 tons of crude oil and 10,071 tons of de-leaded slimes residues were treated and produced 3,290 tons of lead concentrates, assaying 61 per cent. lead and 20 ozs silver per ton, also 5,252 tons of zinc concentrates, assaying 44 per cent. zinc.

BURMA CORPORATION.—During August 21,549 tons of ore were mined; 21,100 tons of ore were milled in the treatment plant, producing 10,502 tons of lead concentrates, 10,519 tons of lead-bearing material were smelted in the blast furnaces, producing 4,251 tons of hard lead for treatment in the refinery; refinery products were 4,240 tons lead and 449,000 ozs silver. Of silver production, 500 ozs were recovered from the treatment of copper matte. Experimental zinc plant produced 1,515 tons zinc concentrates, assaying 10.6 ozs silver, 7.8 per cent. lead, and 45.5 per cent. zinc. In addition to above, 300 tons of copper matte were produced from the treatment of 1,353 tons copper ore and accumulated smelter by-products.

ELECTROLYTIC ZINC.—Production during four-weekly period ended Aug. 20th, 3,560 tons zinc product for shipment to Port Pirie for realisation, containing 550 tons lead, 58,000 ozs silver. The above production includes 115 tons of zinc used at company's works at Risdon.

NEW GUINEA COPPER.—Cable:—From Aug. 19th to Sept. 1st smelted 1,730 tons ore, producing 424 tons matte, containing 68 tons copper and 110 ozs gold. Figures for August, 3,006 tons ore, producing 750 tons matte, containing 120 tons copper and 194 ozs gold. Stoppages during month, seven days.

NORTH BROKEN HILL.—August: 36,810 tons of crude ore were treated, producing 6,640 tons lead concentrates, averaging 63.6 per cent. lead, 29 ozs silver per ton, and 7.1 per cent. zinc; also 5,955 tons zinc concentrates, averaging 47.8 per cent. zinc, 6.8 per cent. lead, and 8 ozs silver per ton.

SAN FRANCISCO.—August:—Ore treated, 14,047 tons; lead concentrates produced, 2,184 tons; zinc concentrates produced, 2,405 tons; estimated net smelter return on lead, \$136,875 (U.S. Currency); on zinc, \$57,372; total, \$194,247; operating expenses, \$83,340; estimated operating profit, \$110,907; capital expenditure, \$25,557.

SOUTH AMERICAN COPPER.—During August 3,688 tons of ore were produced; 2,931 tons, with approximately 800 tons of quartz flux added, were smelted, producing 433 tons copper matte, assaying 30 per cent.

THE SULPHUR CORPORATION.—During the four weeks ended Aug. 23, 1924, 2,726 tons of function ore and 1,130 tons of slimes were milled at the Central Mine, producing 612 tons of lead concentrates (including 50 tons from de-leading plant), which assayed 39 ozs silver, 56 per cent. lead, together with 696 tons zinc concentrates, assaying 12 ozs silver, 9 per cent. lead, and 46 per cent. zinc per ton, and 80 tons of special slimes, assaying 19 ozs silver, 17 per cent. lead, and 17 per cent. zinc per ton.

ZINC CORPORATION.—August:—Lead concentrator treated 18,439 tons of ore, producing 3,907 tons of lead concentrates and 1,876 tons of zinc concentrates. Estimated gross profit with lead at \$24 per ton, \$14,508. Increase (or decrease) for each \$1 fluctuation in price of lead, \$2,497.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the Economist, 3 Arundel street, Strand, London, W.C.2.

OIL OUTPUTS.

BRITISH BURMA PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of August amounted to 59,379 barrels.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during August amounted to 144,169 barrels, or approximately 20,596 tons, including St. Helen's Petroleum Company, Limited, 39,306 barrels (5,187 approx. tons); Kern Trinidad Oilfields, Limited, 26,418 barrels (3,774 approx. tons); Kern Romana, S.A., 30,808 barrels (4,401 approx. tons); Kern Mex Oilfields, Limited, 2,471 barrels (353 approx. tons).

MEXICAN EAGLE OIL COMPANY, LIMITED.—The London financial agents of the Mexican Eagle Oil Company, Limited, are advised that the production for the week ended August 30, 1924, was 99,000 barrels. About 9,200 barrels daily were shut in owing to congested storage.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for week ending Wednesday, September 3, 1924, amounted to 864 tons.

(b) British Gas Light.—This dividend was paid on a larger capital. Last year's dividend of 11 per cent. absorbed £47,452.
* Half-year.

guarantee the plus values against eventual diminution in consumption.

(a) (b) (d) (e). In addition to these amounts, import duties equivalent to £99 in the case of (a), to £6,197 in the case of (b), to £11,737 in the case of (d), and to £36,098 in the case of (e), were paid in gold at the Piræus Customs.

RUBBER.

CALEDONIAN (CEYLON) TEA AND RUBBER.—The net profit for the year ended June 30, 1924, amounts to £14,993, against £16,253 in preceding year. The ordinary dividend is 20 per cent., against nothing for preceding year. The sum of £1,985 is carried forward. The tea crop amounted to 589,555 lbs., against 510,562 lbs. in 1922-23. The rubber crop was 145,455 lbs., against 178,681 lbs. The net prices realised for produce actually sold was 15.26d per lb for tea, against 13.76d per lb in preceding year. Rubber 11.92d per lb, against 10.72d per lb. Cost of production was: tea, 8.18d per lb, against 8.35d per lb, and rubber 7.23d per lb, against 6.16d per lb.

TALI AYER RUBBER.—The net profit for year ended April 30, 1924, amounts to £10,751, against £10,623 in preceding year. The dividend on the ordinary shares is 4 per cent., against 7½ per cent. in preceding year. The sum of £16,039 is carried forward, against £17,289 brought in. The crop harvested amounted to £679,496 lbs.

MISCELLANEOUS.

BOLCKOW, VAUGHAN, AND CO., LIMITED.—The directors have decided to make two calls of 4s each on shareholders registered in the company's books on August 27, 1924, in respect of the ordinary £1 shares with 12s paid on each. The first call is payable on September 29, 1924, and the second on December 29, 1924. All transfers must be accompanied by call letter and shall be fully paid.

BRITISH GAS LIGHT COMPANY, LIMITED.—The net profit during the year ended June 30, 1924, amounted to £50,911, compared with £48,184 for the preceding period. A final dividend at the rate of 4 per cent. is recommended, making 7½ per cent. for the year on the ordinary stock. This dividend absorbed £49,697. The dividend of 11 per cent. paid in preceding year absorbed £47,452, being paid on a smaller capital. After paying the dividend the balance to be carried forward is £46,929, against £52,715 brought in.

BURT, BOULTON, AND HAYWOOD, LIMITED.—The report just issued, for period ended June 30, 1924, points out that for the first time in the history of the company, and in accordance with the new articles of association, the directors present to the shareholders an annual report and balance-sheet instead of a half-yearly one as heretofore, also for the first time a profit and loss account is issued to the shareholders. Since the last report the share capital of the company has been increased by the issue of 92,000 ordinary shares, and there has also been an issue of £300,000 6 per cent. first mortgage debenture stock to take the place of the bank loan appearing in the balance-sheet. Most branches of the company's business show satisfactory results, although, as was expected, the fall in prices, strikes, and a restricted demand have acted adversely on the deals trade. Net profits earned during the year, after writing off £20,000 to depreciation, amount to £72,928. The dividend is 8 per cent., free of income-tax, for the year. The sum of £30,000 is carried to reserve, and £17,241 is carried forward.

ILLINGWORTH, MORRIS, AND CO., LIMITED.—The net profit of this well-known undertaking for year ended May 31, 1924, amounts to £32,393, against £27,402 for preceding year. There is no dividend for ordinary shareholders, who received 10 per cent. in the preceding year. The directors are placing £28,932 to a special reserve, against the net debit balances of subsidiary companies

which have not made profits this year. The sum of £21,234 is carried forward, against £45,175 brought in to the accounts.

NIGER COMPANY, LIMITED.—The forty-fourth ordinary general meeting of this company will be held at Cannon street Hotel, Cannon street, London, E.C. 4, on Friday, September 19, 1924, at noon, for the general business of the company. The meeting is convened in compliance with the articles of association, but, owing to the alteration of the company's financial year, the directors' report and accounts will not be ready for submission to the shareholders on the above-mentioned day. After other business has been disposed of, the chairman will, therefore, move that the meeting be adjourned until a day to be fixed by the directors.

SHEFFIELD FORGE AND ROLLING MILLS, LIMITED.—Report for year ended June 30, 1924, shows a debit balance on working of £12,912, which compares with a debit balance of £18,475 in preceding year. The debit balance carried forward is £26,421. Some interesting particulars are given in the report concerning conditions during the year. The adverse results are attributed to high cost of production. Output has been low, and prices most unremunerative. Economies have been effected during the year. Plant has been maintained in a high state of efficiency, and when trade again becomes normal, will be ready to meet all demands made upon it.

free on rail. Millers' offers firmer. Broad bran quoted at 6s, middlings 9s 9d, fine ditto 11s 3d, bags included, ex mill; light oats 6s 9d, powdered oat husks 8s 9d, feed oatmeal 11s 3d, ground oats 14s 3d per cwt, free on rail. Oatmeal firm, with a good spot demand. London made, flaked 19s 6d, rolled oats 19s, medium and fine cuts 19s, coarse and medium pinhead 19s, ordinary Scottish oatmeal 19s 6d per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 11th, is as follows:—Pig-iron: There is still no change to report in the pig-iron trade, which is very quiet. No. 3 G.M.B. is quoted at 82s 6d per ton f.o.b. or f.o.t. makers' works. The hematite trade is still extremely quiet, and makers are having great difficulty in finding an outlet for their products. Mixed numbers East Coast hematite is quoted at 91s per ton. Manufactured iron and steel: Conditions are extremely quiet, and the same competition takes place for what few orders are put out. Prices remain unchanged, as follows:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Sellers of best Rubio are still quoting 22s 6d c.i.f. Tees, but this price is a nominal one, and for actual business would no doubt be shaded.

Our Sheffield correspondent writes:—The acute depression in open-hearth steel has not lifted in the slightest degree during the present week, and the position could be described without exaggeration as a state of collapse, as buying has been at a standstill for a long period. Three-fourths of the furnaces are still idle, in consequence of the strike, yet no scarcity of billets and other semi-steel has resulted, and the makers not affected by the dispute are working at greatly reduced capacity. The market has, in fact, gone to pieces, and there is no explanation of the situation. Foreign competition is rather less than more severe than in the past. No substantial quantities of foreign steel are coming to this district. The pig-iron market is also depressed, but there are signs of a coming improvement. The high-grade steels are selling more freely, and large quantities are going into the manufacture of tools. A movement towards revived activity in the lighter and finished branches of the steel trade, which set in soon after Easter, continues to spread, and some firms cannot obtain enough skilled labour. The expensive tool steels are selling more freely than at any time since the war. Brisk business is being done in steel castings, files, building goods, cold rolled strip and steel sheets. The demand for motor and railway steel is considerable, but below the capacity of the works to supply. The output of cutlery is large, but mainly of the cheaper grades, and orders for sterling silver have fallen to a very low ebb. Conditions in the coal market continue depressed, very little demand existing from the Continent. The cheaper grades are almost a drug, and prices keep dropping. Best qualities of house coal are scarce and dear. Best Yorkshire hards command 20s to 21s per ton at pits. Prices of slacks and nuts are irregular and tending downward.

Our Glasgow correspondent writes:—The pig-iron market is undoubtedly passing through a period of deep depression, and whatever be the cause, there is little or no encouragement at present to cherish hopes of an early revival. The improved political situation abroad has not yet had the expected stimulating effect on trade. No doubt the benefits will come in due time, but so far as regards the iron and steel industry there has been little improvement in sentiment discernible. Meanwhile, orders of the day-to-day variety are enabling makers to keep going, and in a few branches there is quite a fair trade being done. Bar-iron makers, for instance, are better off for work than for some time, and the demand in the light sheet trade is not appreciably slackening, orders from Japan and India being more in evidence and for galvanised sheets delivery of even small lots is difficult to obtain earlier than November. The heavy steel makers are working considerably below capacity, specifications being very scarce. Clyde shipyards have nearly double the amount of work on hand that they had this time last year, and as engineers and structural concerns are well supplied with orders there is likely to be a fair run of orders for the iron and steel works. An awakening of the export demand is required, however, to brighten the prospect. Ship plates remain nominally at £10 5s per ton for local delivery, and for export as low as £9 5s has been quoted. The market for scrap is very weak, and values are declining. For bundled scrap buyers are offering 75s, but sellers are inclined to hold out for at least 80s. The shipments of pig-iron from Glasgow Harbour for the week ending September 16th totalled 1,011 tons, of which 611 tons were on foreign account. For the corresponding week of last year the figures were 814 and 722 tons respectively.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the Cardiff coal market. So far as any new tendency has been observed, it has been towards still easier conditions, for quotations for spot deliveries have been lower, particularly for small coals. The financial position of the collieries in July was better than it was in June, but it remained so unsatisfactory as to yield the collieries no profit. In June there was a loss of £241,198 on the whole of the coalfield, representing a deficit per ton on the output of practically 1s 5d, while for July the official figures show that the proceeds of the industry, amounting to £4,164,789, were £72 less than the amount paid out in wages and absorbed by other costs. The owners, therefore, were unable to retain a penny of their standard profits, and the total deficiency carried forward into the August audit amounts to as much as £1,682,806. So disheartened are the colliery owners by

these results, and the workmen by irregularity of their employment under the increased minimum wage, that the two sides are apparently indifferent as to the fate of the proposed new wages agreement. This agreement ought to have become operative last May, simultaneously with the national agreement, but various causes have delayed its conclusion, and a week ago the miners' representatives refused to sign on account of differences on the question of the procedure to be adopted with a view to the removal of the anomalies in the wage rates of certain classes of day workmen created by the raising of the minimum from 28 per cent. to 42.22 per cent. on the 1915 standard rates. The miners are to consider what action they will take in regard to this particular matter at a meeting to be held next week.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 26s 6d to 27s; best drys, 26s to 26s 6d; black veins, 25s 6d to 26s; Western Valleys, 25s to 25s 6d; Eastern Valleys, 23s 6d to 24s 6d; best bunker smalls, 15s 6d to 16s; ordinary cargo smalls, 13s to 14s 6d; coking smalls, 15s 6d to 16s 6d; anthracite big vein large, 52s 6d to 55s; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 55s to 57s 6d; rubble culm, 12s 6d to 13s; coke for export, 50s to 52s 6d; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 27s to 29s; pitwood ex ship, 29s to 29s 6d. In the tinplate trade the minimum prices have been raised from 23s to 23s 6d per basis I.C. box, f.o.b., and tinplate bars by 3s. 6d. to £8 12s 6d f.o.b., less the usual rebate of 7s 6d per ton to the manufacturers who are parties to the stabilisation agreement. The works are fully employed, and the export trade active.

METALS.

Tin easier at commencement, due to lower advices from the East and America, combined with selling pressure, though later some irregularity was noticeable, and values improved. Standard cash sold at £250 15s to £252 15s to £252 5s, and three months £256 10s to £254 10s to £251 to £254 10s to £253 12s 6d. Eastern cables reported sales on the basis of £256 15s c.i.f. At Thursday's session, rates, after opening easier, improved on buyers becoming more prominent, though sales were on a fairly good scale. Standard cash sold at £251 15s to £252 10s to £252 5s, and three months £253 to £251 10s to £254. Closing business ruled in buyers' favour, standard cash being dealt in at £250 10s, and three months £253 to £251 to £251 5s. English ingots £250 10s. Copper in good demand, but prices fluctuated slightly, while generally moving in buyers' favour. Standard cash sold at £63 1s 3d, though chief interest was shown in three months' at £64 2s 6d, while finally at £64 8s 9d to £64 to £64 3s 9d to £64 to £64 2s 6d, while finally at £64. Values opened firmer, but top points were not maintained on Thursday. Standard cash sold at £63 7s 6d to £63 2s 6d, and three months £64 5s to £64 7s 6d to £64 2s 6d.

Trade with Mexico

MEXICO is potentially one of the richest countries in the world. In development of its trade lies your opportunity.

The National Railways of Mexico are the prime movers—in both senses of the word—in the re-opening of European Trade with Mexico.

Their system spreads a vast network of trade arteries from the Gulf of Mexico clear across to the Pacific, and from the United States border takes a southward sweep, feeding the Capital and all the interior.

Mexico can absorb supplies and pay for them.

The time is ripe for enquiry. You will receive reliable, well-informed guidance upon request.

Dictate a line to

E. J. BRAY,
General European Agent,

NATIONAL RAILWAYS OF MEXICO
(Government Administration).

Palmerston House, Bishopsgate, London, E.C.2.

Copper steady at final market, with active trading. Standard cash sold at £63 7s 6d to £63 6s 3d, and three months £64 5s to £64 7s 6d to £64 2s 6d. Electros £67 15s to £68, strong sheets £64, wire bars £68, best selected £66 15s to £68. Lead firmer, and quoted at £33 5s to £32 10s, as to position. Spelter firmer at £33 6s 3d to £33, according to position. Aluminium, home £125, export £130. Antimony, English £49 10s to £52.

MANCHESTER, September 11.

The feature of interest in the market this week has been the further decline in raw material rates. Bearish sentiment has been very pronounced, and buyers have refused to give out orders of weight, there being extreme caution in all directions. Spinners and manufacturers have not given way in price to the same extent as the fall in the raw material. Cloth inquiry for India has been of fair extent, but business for the most part has been confined to small lots. Only retail lines have been mentioned for China. A moderate trade has been done for most of the minor outlets East and West, but home trade buyers have limited their purchases. American yarn quotations have been generally firm, and when spinners have sold there has been an improvement in the margin, but the turnover has been comparatively small. There has been very little activity in Egyptian yarns. Export numbers have been rather quieter, but useful contracts have been secured for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business in wool and tops has been rather more restricted during the week, high protective prices having had the desired effect. It is obvious that sellers are not anxious to add to their commitments until the raw material position has been tested in London next week, and as stocks of fine wool and tops are almost negligible, the motto in a good many cases seems to be "safety first." Several large top-makers are out of the market entirely for the time being, and in other cases quotations are manifestly designed to hold off buyers. Another all-round advance has been made in quotations during the week, and warp 64's tops now stand at 6s 8d, a rise of 6d per lb in four weeks. Super 60's are about 2d dearer on the week at 6s; 50's average are firm and unchanged at 4s 2d; 48's carded have advanced ½d, and are now quoted at 3½d; and the same rise is seen in 46's at 2½d; while 40's prepared are also ½d up at 28½d per lb. Most people are now waiting for a new lead from Coleman street Wool Exchange, and the general expectation is that values will show an advance of at least 10 per cent. compared with the July auctions. There is certainly more doing in yarns, and spinners are advancing their quotations all round, but it is still impossible to sell on anything like to-day's basis of wool and top prices. Cheap stock lots, however, have disappeared, and the tendency is decidedly against the buyer, with a prospect of still higher prices in the near future. Manufacturers are also in a much better position, and have recently booked some good orders both on home and export account. Here, also, prices are gradually rising, but they have a long way to go before they will harmonise with current prices of wool.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Next Tuesday will see the beginning of the fifth series of London sale is Coleman street, when expectations are running high regarding the probable course of values. The interval has been somewhat sensational, values having advanced considerably since the close of the last sales in the same centre. As the movement of top values during an interval usually has an important bearing upon wool values, the following figures will be of interest:—

Description.	July 15, 1924.		Aug. 2, 1924.		Aug. 28, 1924.		Sept. 10, 1924.	
	Per Lb.	d	Per Lb.	d	Per Lb.	d	Per Lb.	d
70's warp	72	..	75	..	80-81	..	84	..
64's average	69	..	71	..	75	..	80	..
60's	60-61	..	62	..	66	..	69	..
56's	43-44	..	45	..	48	..	50	..
46's carded	26½	..	27-27½	..	28½	..	29½	..
40's prepared	25½	..	26-26½	..	27-27½	..	28	..

The way merinos have gone has surprised everyone, but that can be taken as evidence that in Bradford stocks are exceedingly low, a good many firms being so situated that they are not disposed to sell anything in face of the unexpected happening. To-day many firms will not quote. They are simply waiting the advent of the sales to see how values move before naming a price for tops in Bradford, and although some firms are asking as high as 6s 10d for warp 64's, I very much doubt that any more than 6s 8d has yet actually been made. However, no one is so much concerned to-day about top values as what wool is likely to fetch next week, and everybody is expecting an all-round advance of 10 per cent. both in merinos and crossbreds. It would almost seem as if there is more room for crossbreds to advance than merinos, and we think

THE PSYCHOLOGICAL THEORY OF VALUE

By G. B. DIBBLEE, M.A.

Demy 8vo. 12/6 net.

MANCHESTER GUARDIAN.

"Mr. Dibblee's new book is of first-rate importance because it refuses either to despair of theory with the exponents of merely descriptive economics, or to shirk the difficulties of a complete analysis with the dominant school of theorists."

Mr. Dibblee, if his interests are philosophical, has an experience of actual business that few economists possess. He draws on his experience to illustrate his theory and summarises his theoretical results in frequent phrases that illuminate his experience. His book should be read by all serious students of economics."

CONSTABLE & COMPANY, LTD.,

10/12, ORANGE ST., LONDON, W.C.2.

it is high time the trade ceased rushing values at the beginning of a Colonial selling season. The slightest disturbance of confidence would bring values back sharply, and Roubaix-Tourcoing spinners and manufacturers are just as much surprised with the wool position as the West Riding. No one will deny that Sir A. Goldfinch's observations regarding a wool shortage have been verified fully, but one wants to know if to-day's high values are not going to restrict consumption somewhat, for certainly the impoverished communities of the Continent cannot afford to pay for clothing made out of merino wool at present values. It would have suited the trade infinitely better for wool values to have remained at last July prices rather than undergo another stiff advance, hence I think that the time has arrived when no one should force the pace. I regard wool values as safe, but every higher point reached means an increase of danger.

The quantity of wool available is about 182,500 bales. This is a very large quantity for a September series, but there should be no difficulty in the whole lot being lifted, and a straight edge made for the arrival of the forthcoming new clip. Already there is talk of a fair weight being carried forward to the final auctions of the year in order to make a decent offering, but if a strong market is encountered, I think owners should sell. I regard the present as a sellers' market, and there can be no excuse for carrying wool forward at values which are likely to prevail.

A sheep-breeders' conference has been held this week in Bradford, over 70 pastoralists who were paying a visit to the West Riding being present. Important questions affecting wool growers and users came up for discussion. I fully endorse the view that as very many Colonial pastoralists visit the old country, a conference of this nature could be held annually to the advantage of the entire industry.

VEGETABLE OILS AND OILSEEDS.

Market conditions have been generally stable, and prices of vegetable oils have, as a rule, been sustained. Raw linseed oil, in sympathy with dearer seed, hardened to £42 per ton, naked, ex Hull mill, but has since eased slightly, £41 15s being quoted for spot and £41 10s for August delivery. Neither home nor export demand has been substantial. Cotton oils have been in good request all round, crude Egyptian in particular being a good market up to £42, technical refined £45, and common edible £46 10s ex Hull mill. Crude soyabean oil has improved to the level of crude cotton oil. Palm kernel oil has been in better demand, and is dearer at £43.

In the oilseed section, linseed prices have fluctuated with the varying weather reports from Argentina. New crop Plate to Hull has been done at £19 15s and £19 17s 6d January-February, while London has been a buyer of Calcutta at £22 12s 6d, August-September shipment. Cottonseed has eased off, and a good trade in Egyptian has been done at the lower level. Soyabean has also commanded more interest, both here and on the Continent, £13 17s 6d being paid for seed on passage, and £13 7s 6d October-November loading.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains steady to firm, and tanners are anxious as to their position in view of the demand for cheap leather. Best ox sold at the Bermondsey auctions on Thursday from 7d to 9d, and seconds from 7d to 8d per lb. Calf were again firmer in the lower grades, and advanced 1d, but best sold at last week's prices, viz., 7d to 15d per lb. Values are fairly firm in imported hides, and from 8d to 8d has been paid for frigorific ox by British tanners; Germany is reported to be in the market for cows, whilst the United States has again showed a renewed interest in South American hides. Cables from New York report the Chicago position as steady, with best heavy packers making 16 cents and native cows 14½ cents—an advance of ¼ cent on last prices of the latter class.

Business in sole leather is quite good, although merchants are not in a speculative mood, holding that prices must be lower. Shoe manufacturers and repairers are, however, buying freely, and as stocks are low in the Northern and Western yards, tanners are very firm on prices. Shoulders and bellies are very firm, whilst the trade in rough leather seems to be steadily improving.

Business in upper stock is better, as there is a consistent call for willow and box calf at firm prices. Much fear is felt in regard to further German competition, and that this is based on fact is proved by the news that yet another Northampton chrome tannery is advertised for sale this week. Glacé kid in best and low grades is selling, but patent is easily first favourite. Dressed leather of various kinds is also going to the United States.

The boot trade remains good except for women's shoes, but little new business is now expected until the advent of the Shoe and Leather Fair in October, when many overseas buyers will be present.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 12.

SUGAR.—A moderate clearance was recorded in spot parcels at recent higher level of prices both with regard to British and foreign makes. The undertone of the market is one of stability in face of comparatively small supplies to handle. White Javas are arriving at

a steady pace but good quantities continue to be taken overside, having been disposed of previously on export account so that no augmentation to existing stocks results therefrom. Leading continental producing countries still offer reservedly and in the case of Czechoslovakia, fabricants are encouraged in the matter of holding back owing to climatic conditions not being favourable for ripening of roots. Dutch sugars for shipment are held above buyers' views. Of British makes, Messrs. Tate and Lyle's cubes quoted 45s 9d to 46s 9d; crushed, 44s 3d; nibs, 46s 9d; granulated-stoved, 43s 7d; fine and coarse grain, 41s 4d; No. 1, 41s 12d; No. 2, also London and T.L., 37s 10d; caster, finest, 45s 12d; A, 44s 7d; B, 43s. Glebe granulated, spot, London, 40s 3d; Greenock, October 15th, 39s 6d. White Java, spot, London, 36s 6d; afloat steamers, 22s 3d; November-December, 21s 10d, f.o.b., Hamburg. Polish crystals, spot, 33s 6d early September shipment, 27s 6d, c.f. and i. terms. Belgian Ghent. Dutch granulated, November, 22s 9d, f.o.b., Rotterdam. W.S.R., ditto, 23s 3d, f.o.b., Amsterdam; Dutch, spot, 39s. Cuban basis, 95 per cent., September, 21s 6d, c.f. and i., U.K. White Java and Hungarian crystals, November-December, 22s 9d; January-March, 22s 9d; White terminal market presented quiet and easy features. October, sold, 23s 6d; December, 21s 4d to 21s; March, 20s 10d to 21s and 20s 6d; May, 20s 9d per cwt.

COFFEE.—The market continues very firm for all the finer mild descriptions, which are sparingly offered and wanted, particularly by the home trade. Some bold sizes of mountain-grown Jamaica, sold, 190s to 221s 6d, peas fetching 223s, Bold colony, Colombian, 157s; peas, 188s to 190s.

COCOA.—There was only a moderate clearance in spot parcels at late rates. Accra, F/F grade, October-December, sold 34s 6d to 34s, f.o.b. terms.

TEA.—Indian auctions totalled 49,886 packages, which met with active support and were well distributed. Medium and good medium teas realised steady prices, fine being firm to 3d per lb. Pekoe sold, 1s 5d to 1s 11d; broken orange, 1s 5d up to 3s 9d. Ceylon sales of 21,000 packages. A good demand prevailed, and fine qualities were firm to occasionally sold, 1s 6d to 2s 2d; broken orange, 1s 8d to 2s 8d per lb in bond. 5,340 packages, Java and Sumatra, auctioned, met an active demand at 1d to 1d per lb advance. Pekoe, sold, 1s 3d to 1s 6d; broken, 1s 2d to 1s 11d; pekoe souchong, 1s 3d to 1s 6d; orange, pekoe, 1s 6d to 1s 11d; broken orange, ditto, 1s 4d to 1s 11d, with one lot of flowery broken orange from Sumatra, 2s 3d per lb in bond.

RICE.—Business proceeds quietly, but Eastern shippers are firm in their demands, owing to firmness of rupee exchange rate. Two stars, spot, 17s; S.Q. double bags, to Cuba, held for 16s 7d. Italian and Spanish quiet, but steady. Egyptian crop prospects favourable, and an outturn of about 200,000 tons is indicated. Japanese peas, spot, 20s 3d; September-October, 20s 4d. Madagascar butter beans, spot, 35s to 36s cwt. Rangoon bran firm, and October-December sold, £7 13s 9d to £7 15s per ton, ex ship, London-Liverpool.

SPICE.—Pepper steady, with fair inquiries. Black Singapore, L.S., October-December, 54d; f.a.q., ditto, held for 5d. Lampung, L.S., October-December, 43d; Muntok, ditto, October-December, sold, 94d; f.a.q., ditto, 81d. White Singapore, f.a.q., sold, 84d lb. Tellicherry, September-October, 52s; Aleppy, 50s cwt. Cloves steady. Zanzibar, spot, 1s to 1s 1d; October-December, sold, 9d per lb. Tapioca quiet. Singapore flake, spot, 38d; fine Java, 4d lb. Singapore, September-November, to Havre, quoted 28s 6d; Penang seed, to London, 21s 6d. Sago flour, August-September, quoted, 15s; September-November, sold, 15s 3d. Desiccated coconut steady. Halves, spot, 41s 6d; September-October, 40s 6d cwt.

JUTE.—Steadier. Firsts, August, Continent, sold, £34 10s to £35 10s; August-September, £34 7s 6d to £35 5s; September-October, £34 10s, £34 5s, and £35 5s. Hessians quiet, but fairly steady. 10 oz, spot, Dundee, sold, 39s; September-October, sellers, 37s 3d; November-December, 35s; January-March, 33s 6d. 8 oz, spot, 29s; September-October, 29s; November-December, 28s; January-March, 27s per 100 yards. A twills spot, 130s; September-October, 115s; October-December, 110s; B, spot, 91s; September-October, 91s; October-December, 90s; sugar, spot, 106s; October-December, 106s; flour, October-December, 116s; bran bags, 56 by 28, October-December, 63s 6d per 100 bags.

HEMP.—Manila again sparingly offered, and market firm, 500 bales, J, August-October, sold, £46; K, September-November, £45; L, sellers, £45; M, £44; G, quoted £55; streaky threes, £57. New Zealand H.P.F., September-November, £41; fair, £39. African sisal No. 1 Tanganyiki, September-November, £47; Kenya, £46 per ton.

SHELLAC. quiet. T.N., spot, 310s; October, 322s 6d; December, 292s 6d per cwt.

COPRA quiet, and market easy. F.M.S. Straits, June-August, Rotterdam, quoted £30 15s; July-September, £30 11s 3d; August-October sold, £30 10s 9d; September-November, £30 7s 6d. Dutch E.I., August-October, £30 6s 3d. Others quiet on about former terms. Palm kernels, August-October, Liverpool, quoted £21 5s; September-November, £21 7s 6d; October-December, £21 8s 9d; and October-December, to Hull, £21 17s 6d per ton.

RUBBER steady, with a moderate inquiry. Plantation, spot, crepe and sheet, also September, sold, 1s 1d to 1s 2d; October, 1s 2d to 1s 2½d; October-December, 1s 2½d to 1s 2¾d; January-March, 1s 2¾d to 1s 2½d. To New York: Standard estate sheet, September-October, buyers, 1s 2½d, c.f. and i. Fine hard Para, spot, 1s 2½d; soft fine, 1s 1½d; ball, 9d lb.

EGG PRODUCTS.—Market firm. Hen albumen, spot, sold, 4s 10d; September-October, buyers, 4s 9d lb; hen liquid yolk, spot, 80s to 82s 6d cwt.

FRUIT (Dried).—Market remained steady, with a moderate trade in force. Currants steady. Pyrgos, 4 bags quoted 45s to 46s; Patras, 48s to 50s; Gulph, 52s; Panariti, 56s; Vostizza, 60s to 64s; Australian, new, 4 cases, fair, 48s to 52s; good, 55s; fine, 60s. Raisins: Cape, new, 44s; ditto, fine, 50s to 52s. Sultanias: Greek, 4 cases, 48s to 53s; Smyrna, September shipment, 39s, c.f. and i.; Australian, 4 cases, 50s to 58s. Figs: Genuine naturals in bags, September, 24s. Manchurian, afloat, £13 17s 6d; October-November, sold, £13 5s to £13 10s. Castor seed firm. Bombay, August-September, £30 5s; Calcutta, ditto, £29 7s 6d per ton.

TALLOW.—Messrs Colchesters and Woolner write on September 10th as follows:—The tallow market was firm during the week, and prices were 6d dearer to-day for all kinds. The comparatively high prices now asked for South American supplies have induced buyers to take more interest in Australian varieties for shipment. At auction to-day 1,241 casks tallow were offered, and 773 were sold. Quotations are:—Australian mutton: Fine, 47s 6d; good to fair, 46s 6d to 45s; dull to dark, 42s 9d to 41s 6d; hard, 47s. Australian beef: Fine, 47s 6d; good to fair, 4s 6d to 43s 6d; dull to dark, 41s 9d to 41s; sweet, 47s 3d. Present shipment from Australasia: Good mixed, 45s 6d. Present shipment from South America, 46s to 44s 6d. The market letter is unchanged. Town tallow, 41s 6d per cwt. Rough fat, per 8 lbs, 44d; melted stuff, 31s per cwt. Quotations are:—Town, 40s 6d, net cash, naked, ex works. Country: Frail casks, 41s; home melted, shipping casks, net, f.o.b., good coloured, 43s 6d; fair to dull, 42s to 41s. Bone fat: White, none; pale, none; benzine, 37s; melted stuff, 37s, f.o.b.

Preliminary Announcement for information only.

SCOTTISH UNITED INVESTORS LIMITED

(Incorporated under the Companies Acts 1908 to 1917.)

Share Capital - £800,000,

80,000 Shares of £10 each.

which are offered for subscription at par payable as under:

10 0 per Share on Application.	
£1 10 0 do. on allotment.	
£3 0 0 do. on 27th October, 1924.	
£3 0 0 do. on 24th November, 1924.	
£2 0 0 do. on 31st December, 1924.	
£10 0 0	

Subscribers may pay in full on allotment or on any instalment date, and discount at the rate of 3% per annum will be allowed on such pre-payments.

The number of Shares to be placed "firm" has been restricted to 50,000. This number has already been applied for and will be allotted in full.

The Shares allotted in terms of this prospectus will, as and when fully paid up, be converted into Preference and Ordinary Stock as from 1st January, 1925, in the proportion of sixty per cent. of the former and forty per cent. of the latter; that is to say, each Share will be converted into £6 of Preference Stock and £4 of Ordinary Stock. The Preference Stock will be entitled to a cumulative Preferential Dividend at the rate of 5 per cent. per annum as from 1st January, 1925, and to priority as to Capital, but will have no further participation in profits or assets. The Preference and Ordinary Stock will be transferable in sums of £1 or multiples thereof.

The Bank return showed an increase of £634,000 in the Reserve, mostly due to the reflux of notes. Government securities expanded by £1,230,000, while Other declined by £2,047,000. On the liabilities side, Public deposits declined by £463,000, and Other increased to the extent of £301,000. Currency notes outstanding were reduced this week by £1,309,800 to £287,451,700, which includes £1,371,500 for notes called in, but not yet cancelled. The fiduciary issue is £236,630,200, or £11,560,700 below the maximum.

THE STOCK MARKETS.

Public interest in the stock markets has this week been centred mainly in the gilt-edged market and in home industries, the possibilities of a General Election before the end of the year having failed to affect the strength of the former. The gambling in German bonds has subsided somewhat, and the foreign market generally has been quieter than of late. Home rails have had a dull week, prices being lower all round, but Argentine rails have maintained their firmness on the declaration of the anticipated dividends. Rubber shares have been fairly good, but tea shares have reacted a little after their recent strength, while business in oils has been confined to the professionals. The feature in the industrial section has been the strength of shipping shares on the improvement in the freight position, but the iron and steel market is flat. Mines have been dull.

THE COMMODITY MARKETS.

Our Cardiff correspondent this week describes the depression in the South Wales coal export trade as severe. There is a slightly better feeling in the pig-iron trade, but business is still very restricted. Our Sheffield correspondent states that depression is acute in all the chief centres of the industry. Tin relapsed on selling pressure, and though copper experienced a good demand, prices also gave way. In the cotton trade the market continues to be brighter, owing to the recent increase in the demand for yarn and cloth; spinners and manufacturers are in a stronger position. At the wool sales prices advanced all round. Wheat ended the week dull with quotations low. Business in sugar is quiet, but tea was in demand. Jute was higher, while rubber moved steadily upwards.

FOREIGN EXCHANGES.

The foreign exchange market was again very quiet, business being much restricted, and the demand for foreign currencies was perhaps the smallest experienced for some time past. Consequently, there are no very frequent or wide fluctuations to record, and the only feature it is possible to select for mention in an almost featureless market was the comparative strength of the sterling rate against the dollar, which at one time reached 4.48½. Paris opened stronger at 82.80-83 on the 12th, as a result of the Morgan loan, but closed the day weaker at 83.35. It improved, however, to 83.00 on the 13th, but weakened slightly subsequently to 83.80 on the 14th, recovered to 83.60 on the 17th, and again relapsed on the 18th to 83.90. At the time of writing, to-day (19th), there is no indication of any reaction, this morning's rate being 84. Belgian francs followed the above movements in sympathy, though they did not improve with Paris on the 13th. Opening at 89.25-50 on the 12th, they weakened gradually to 89.90-90.10 on the 18th, and stand to-day (19th) at the same figure. The £ opened rather weak at 4.45½ on the 12th, but showed signs of recovery from its previous relapse, and finished up last week on the 13th considerably better at 4.46½-¾. A reaction set in on Monday, however, and sterling weakened to 4.45½-4.46, after having been firm at 4.47 earlier in the day. This latter rate was again reached and maintained early on the 16th,

the closing rate of the day being even better at 4.47½. This firmness was continued on the 17th, with sterling at 4.47½-¾, the level of 4.48½ being reached during the day, and both Germany and Japan are reported to have sold fair parcels of dollars on these two dates. There was some weakness on subsequent days, with sterling at 4.46½-¾, and this tendency is continued to-day (19th), the rate being 4.46-4.46½ at the time of writing. Early in the week most of the Continental exchanges showed a tendency to move in our favour, though Madrid was an exception. Opening at 33.76 on the 12th, the peseta improved to 33.68 on the 13th, 33.66 on the 15th, but then fell off to 33.69 on the 16th, 33.79 on the 18th, and finished a trifle weaker on balance, though at a slight improvement on this last figure, at 33.78 to-day. Switzerland, on balance, was also firmer at 23.65 on the 18th, as against 23.68 on the 12th, and this tendency is continued by to-day's rate of 23.61-23.66. Holland, at 11.61½ on the 18th, and 11.61-11.61½ to-day is a little firmer than its opening rate of 11.62½-¾ on the 12th. Italy is weaker on balance at 101.80-90 yesterday and 101.85-102 to-day. The Scandinavian exchanges showed no changes calling for detailed comment, though Helsingfors was rather weaker at the close at 178½-¾, as against 177½-¾ on the 12th. The Baltic exchanges were equally devoid of life, and little or no dealings appear to have taken place in them. Berlin remains pegged at its previous rate of 18½-18¾ billions, at which it has now stood for several weeks past, and Warsaw shows the increasing stability of Polish finance by its steadiness at about 23.15-23.30. The leu showed a slight falling off at 850-880 to-day (19th), as compared with 830-845 on the 12th. This only brings it back, however, to the favourable level of the early days of this month, after the marked appreciation in this currency had set in. Of the Eastern exchanges, the rupee was rather weak about the 12th and 13th at 15 13-32-¾d, but gathered strength at the close, standing at 15 5½d-1s 5 19-32d on the 18th and 19th. Hong Kong showed firmness at 2s 4½d-2s 5½d on the 18th, after a slight relapse to 2s 4½d-2s 5d on the 13th. Shanghai is steady at 3s 5d-3s 5½d, but relapsed to 3s 4½d to-day (19th) on news of fighting in the neighbourhood and possible threats to the port. Singapore shows no change at 2s 4 1-32d-2s 4 5-32d. The yen closed rather weaker at 1s 9½d on the 18th, after opening at 1s 9½d-1s 10d on the 12th, and it still stands at the first-mentioned level to-day (19th). Of the South American currencies, none calls for any remark except the Argentine, which, opening on the 12th at 42½ (pence to the peso) improved to 43 on the 13th, 43½ on the 15th, and 43½ on the 16th and 17th. After a slight reaction to 42½ on the 18th, it recovered to-day to 43-43½, and shows every sign of remaining firm at this figure. It is probable that the strength and steady appreciation of this currency are due not only to good exports of Argentine products, normally shipped at this time of year, but to large shipments of gold to the United States in settlement of Argentina's public debt. The silver market was on the whole quiet, though the high price recorded last week of 35d brought in speculators. Profit-taking reduced prices somewhat to about 34½d for a time, but this reaction was probably too great, and subsequent buying from both the Continent and America brought about a recovery to 34½d, at which level there seems every prospect of the market remaining steady.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 13th:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	5,950	From Revenue	9,660
Interest &c., on Debt	958		
Sinking Fund	500		
Sundries	458		
Increase in Exchequer Balances	104		
Reduction of Debt	1,690		
	9,660		9,660

The total revenue amounted to £9,659,800, against £11,384,800 in the corresponding period. Customs receipts at £1,825,000, compare with £2,432,000. Excise yielded £1,171,000, against £1,545,000. Property and Income-tax brought in £3,442,000, against £3,722,000. Special receipts amounted to £500,000, against £14,000.

The week's operations reduced the National Debt by £1,690,000, and caused the following changes:—

(000's omitted.)		£	
Treasury Bills	+ 5,260	National Savings Certificates ..	50
		Bank of England Advances ..	3,750
		Public Department Advances ..	1,950
		Sundries	1,200
	+ 5,260		6,950

The floating debt was reduced by £410,000 to £778,712,500.

FINANCIAL YEAR, 1924-1925 (April 1 to September 13).

£		£	
Total Expenditure ..	337,575,270	Raised by Revenue ..	319,496,203
		Decrease in Balances ..	4,092,709
		Amount borrowed ..	13,986,358
Total	337,575,270	Total	337,575,270

ESTIMATES for YEAR 1924-25.

£		£	
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts ..	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

OUR OBLIGATIONS UNDER THE COVENANT.

THE discussions in Geneva have taken an unfortunate turn in concentrating attention on the question whether the British navy is to be used to enforce the decisions of the Council of the League. As our Geneva correspondent points out on a later page, there is no likelihood of anything being done in the crude form originally proposed, and there is no ground for the hasty fear that the right to call on the British navy will be unconditionally conceded to the League. Alarm on this point arose partly from the inadequate reports of the Geneva discussions. But even when full allowance is made for imperfect reports, the discussion has clearly been unfortunate for a number of reasons. In the first place, the whole question, being one of paramount importance to this country, ought to have been thoroughly thrashed out in Parliament, so that the Government could have entered upon the discussion with full knowledge of the trend of Parliamentary and public opinion. Then again, the concentration of the discussion upon the use of the British navy suggests the idea of one world policeman only. Britain certainly will not undertake any such burden as is suggested unless a similar undertaking is incurred by other nations in proportion to their strength. In any case there are, of course, only a limited number of fields in which naval action is efficacious.

The present suggestion is that the British fleet should be made available to support decisions of the Council of the League. On this point confusion exists in the public mind. Is the idea that the navy should be used to enforce arbitration, to carry out the findings of a court of law, or to back the recommendations of the Council of the League? It is not in the least likely that the fleet could be called upon to enforce the last-named class of decisions either if carried by a majority or by a unanimous vote. The whole discussion, and the confusion to which it has given rise in the public mind, reveal lack of knowledge of the constitution of the League and the terms of the Covenant. It is therefore desirable to repeat that there are several forms of provisions aiming at preserving peace, all of which have analogies in measures in vogue in this country for the settlement of industrial strife. In the first place there is conciliation by the Council. Members of

the League undertake not to go to war without first bringing the matter for discussion before the Council, which must report within six months. Even after this report the members agree to refrain from war for a further period of three months. In other words, this form of procedure relies for its efficacy upon publicity and delay. The Council, it should be carefully noted, does not necessarily adjudicate on the simple question of right and wrong, its function being rather to suggest a compromise or reasonable solutions. In brief, the process is one of diplomacy, not of law. It is not going too far to say that the majority of international disputes call for diplomatic settlements and not for legal decisions. Under the Covenant the Council cannot enforce its decisions upon any member, but if its report is unanimously in favour of one side rather than the other, and if the disputants reject the Council's proposals and go to war, then the members of the League are bound not to take sides against the party to whom the Council's report is favourable.

If, however, the parties agree, the matter may be referred to arbitration, and the Covenant enumerates certain classes of disputes as being suitable to arbitration, namely, "disputes as to the interpretation of a treaty, as to any question of international law, as to the existence of any fact which, if established, would constitute a breach of any international obligation, or as to the extent and nature of the reparation to be made for any such breach." But the members are not compelled to resort to arbitration in these cases. A court has, however, been set up in case they should agree to arbitrate.

The statutes of the Permanent Court provide, however, optional clauses under which those who care to sign may undertake in advance that they will carry these "justiciable" disputes to the Court if ever they become involved in them. One of the problems engaging attention at Geneva to-day is that of sharpening up and defining more clearly these "justiciable" disputes, so that all nations may subscribe to these clauses and undertake to resort to arbitration. It has, however, to be observed that, even if this is done, there will remain the cases to which conciliation by the Council, and not arbitration, is the appropriate remedy.

As regards the use of force or pressure, our signature to the Covenant already binds us in certain definite respects. Under Article 10 we are under obligation to "undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League. In case of any such aggression, or in case of any threat or danger of such aggression, the Council shall advise upon the means by which this obligation shall be fulfilled." The most precise statement of the sanctions required by the Covenant is, however, under Article 16, which provides certain action if any member resorts to war in disregard of its undertakings under Articles 12, 13, and 15—that is to say, if it does not in any case bring the matter to the Council or to the Court of Arbitration in cases where it is agreed to do so. Such disregard is automatically construed as an act of war against all members of the League, who, thereupon, undertake to sever commercial and financial relations and to impose an economic blockade. No specific provision is contained as to how this blockade is to be enforced, but it is the duty of the Council "to recommend to the several Governments concerned" what military measures they should take. The obligation to apply these economic sanctions under this article does not arise merely if the parties are unwilling to accept the solution proposed by the Council, the duty of the members in such a case being limited to the negative action of not siding with the party in the wrong. They arise solely if one of the disputants goes to war without first trying peaceful methods of settlement. The two questions at issue in Geneva are whether these obligations should be extended so as to involve enforcement of these decisions; and, secondly, whether any definite military undertakings should be given in support of the economic penalties described.

The above are the main obligations to which we are already bound by the Treaty of Versailles. If the United States had signed the Covenant, these obligations would not have caused serious doubt in any mind in this country.

But with the League incomplete, there is less assurance either that the League Council's decisions will be the right ones, or that in supporting them we shall find ourselves in harmony with the mass of civilised world opinion.

On the other hand, we have no sympathy with the view of certain journals who think that because the arbitration machinery set up at The Hague before the war completely failed to stop the world war that similar plans, such as those embodied in the Covenant, will fail now. Our conclusion is the opposite one, that because it failed before the war it is more imperatively necessary than ever that the machinery should be made effective. To make it serviceable, the terms of the mutual obligations of members of the League need to be made more specific; and, so far as we as a nation are concerned, we agree that Europe, and particularly France and Belgium, have the right to know what the signature of Great Britain and the British Dominions to the Covenant exactly implies, and whether we are prepared to enlarge our undertakings. For our part, we think the answer is that opinion is not yet ripe, nor confidence in any international tribunal as yet sufficiently strong, to say that we and other nations will rally to enforce either the decisions of the International Court or the recommendations of the Council of the League. We do think, however, that in general terms we should show that we are ready to use not merely economic, but military pressure, to insist that the machinery of the League must be put into action, and that in all disputes either conciliation or arbitration on questions of international law must in the first instance be resorted to.

Hitherto these questions have been discussed with the shadow of the war heavy upon us. After five years Europe is beginning to consider in cold blood the problem of its international rights and duties, and to examine what restrictions can in practice be placed upon the powers of individual nations to start conflagrations which may bring ruin upon all. The question whether we should concert precise measures before or after disputes are taken up by the Council is a very important and practical one. But it is a minor matter compared with the principle on which we and other European nations must make up our minds—namely, in what cases, under what circumstances, and to what extent we are prepared to intervene to ensure respect for international undertakings. It is, therefore, of the greatest possible importance that everyone should study the terms of the Covenant, and of any proposed amendment of it, for it is destined to become the basis of all future diplomacy. For this reason, it is also very undesirable that rash or hasty commitment should be made, for if we make haste slowly it will be the more certain that the commitments entered into will be faithfully observed when times of crisis arise. It is only if this certainty exists that these undertakings can become the foundation of international security. We may add that the Government is quite right in insisting that these undertakings are linked with the duty of disarmament, for it is clearly a much bigger undertaking for any country to intervene to help to restrain an aggressor in a world of nations which are armed to the teeth, than to take action if standing armies and navies are on a reasonable basis, and if every country needs time to put itself into a dominating military position.

We regret particularly that Great Britain's interests, the greatest of which is that stable peace should be established, are not in more skilled hands at Geneva at the moment. This question of our League representatives is an urgent matter, to which we hope the Prime Minister will give his immediate attention. Although we are inclined to think that some extension and definition of our commitments should be made, it is, in any case, essential that no such step should be taken until the matter has been thoroughly thrashed out in the Imperial Parliament, and considered not only so far as it concerns this country, but also from the point of view of the Dominions. In our view, it would be a great pity if the results of the present discussions are put into the form of protocols to be presented to the various countries for ratification or rejection. It would be far more serviceable at this stage if the proposals as now framed at Geneva were first submitted to the nations and Governments for discussion and observation.

THE RESTORATION OF BELGIUM.

(FROM A CORRESPONDENT.)

In the *Economist* of last week there appeared an article in which was examined the "Progress of Belgium" towards financial and industrial recovery. It happens that I have just returned from a month's visit to Belgium, in the course of which I have carefully gone over all the towns and areas which suffered devastation or serious injury during the war. I have been in Ypres and Dixmude, Ostend, Antwerp, Malines, and Louvain, and can give first-hand testimony of the extent to which the industrious people of Belgium have repaired the ravages of war. There are now at this moment no "devastated areas" in Belgium, and a few years hence it will be difficult for a casual visitor to discern any traces of the war except those which have been retained as permanent memorials.

Let me begin with Ypres, where not only the ancient Flemish city, but more than a hundred square miles of fertile territory, was smashed and churned up, and turned into a barren waste. It was a waste worse than barren, for it was strewn everywhere with the debris of war. Every house and village was destroyed, every tree was blasted, every yard of the soil was pitted with shell holes. The moment the war ended, even before the Armistice had been concluded, the Belgians got to work and began to clear up the frightful and unholy mess. They were out there digging in the Flanders plain while the guns were still booming in the Argonne.

I came into the Ypres area by road, travelling by car by way of Thorout, and until we reached Staden—the low eminence which was the principal German observation post behind the lines—a stranger from Mars could not have suspected that the land through which we were running had ever seen war in its roughest form. He might have been surprised to see so many bright new farms, with barns and sheds and homesteads all roofed with light red tiles. He might have thought it strange that no trees—except here and there a tenacious sprouting trunk—appeared to be more than six years old. But until he reached the top of Staden, and saw beside the road one thing that was old in a land brand new—a wooden grey worn Calvary—and beside it a concrete gun emplacement, there was nothing which would have cried to him of war.

From Staden I looked over the plain of Ypres to the famous hills beyond—to Kemmel and the Monts de Flandre—and received my first big shock of surprise. I looked for a scarred waste, the waste which one had seen in aeroplane photographs many a time, a lifeless waste like that of the moon seen through a strong telescope. I saw instead of this a fair green countryside, exactly like from the distance any other countryside in August in the fertile land of Flanders. And as I went on by the Forêt d'Houthulst—a wilderness of naked tree trunks—past Poelcapelle, and came to the scene of the first gas attack in April, 1915, the wonder grew. All these villages and farms, whose names ring, and ever will ring in British ears, all these Poelcapelles and Paschendaels, these Langemarcks and Zonnebekes, have sprung as by magic out of the mud into which they had been churned. They have all been rebuilt, their inhabitants have come back, and with the dauntless industry of their race, have cleared and dug and sown. Much of the land, it is true, will take years to recover its fertility. There are broad patches where nothing grows now except rough grass. Yet crops there are also, potatoes and oats, and roots, and men are reaping now where shells and gas rained six years ago.

I entered Ypres by the Menin road, and found myself in the midst of streets. Real streets, bordered by tall houses, which, though new and raw, were not uncomely. There has been no attempt to reconstruct the old Flemish Ypres, or to adopt a town planning scheme. The old lines of roads have been followed, and facing them now are large solid erections in brick and tile; hotels, restaurants and cafés, and shops in profusion. Well-fitted, well equipped shops, too. In the Grande Place the new tall houses look down upon the shored up scraps of the famous Cloth Hall, and the walls of the shattered Cathedra.

dral. These ruins, patched and strengthened so that they may not be a peril in a modern city, are to remain as a memorial for ever. But everything else is new.

It is easy, and rather cheap, to say that the Ypres of 1924 is a vulgar upstart of to-day, having no relation to the Ypres which went down in the war. But what most impressed me about it was the courage displayed in its re-creation. The Belgians, when they came back to it in 1918, found a heartbreaking chaos. It took three years merely to clear away the masses of tumbled debris, and to relay the foundations. The re-draining of the area was by itself a colossal task. Every drain, every water and gas-pipe, was smashed to bits. It would have been much easier to have left the site to the rats and owls. But Belgium is a small country, very thickly populated. It cannot spare great areas, however sacred we may think them. So the new Ypres has arisen, and all the land around, over which British and Germans fought and re-fought during four years, bears its poor crops of to-day, and will bear its rich crops of to-morrow.

And it is the same in all the other areas of major and minor devastation. Between Ypres and Dixmude there is no trace of war, except the significant newness of the farms and houses, and the prevalence beside the roads of saplings. Dixmude, smashed by us almost as thoroughly as Ypres was smashed by the Germans, has been entirely rebuilt. The Yser basin, flooded under the stress of war's necessities, has been restored to cultivation. Far away from Ypres, Louvain, of which more than 2,000 houses were burned by the Germans in a fit of panic in August, 1914, Louvain has arisen from its ashes. From the Place des Martyrs by the station to the Hotel de Ville (unharmed) all has been rebuilt. The University, its immensely valuable library gone for ever, is in course of reconstruction on the original lines. It is quite small, smaller than a single College at Oxford or Cambridge. At Malines, which came within the war zone, the damaged Cathedral of Cardinal Mercier shows scarcely perceptible signs of reparation. And it is the same with Ostend by the harbour, and with Antwerp. Everywhere I went fields and restored houses and bridges told the same story of Belgian industry and courage.

There were devastated areas in Belgium, but they are devastated no longer. And it was not until the labour of restoration had been completed that the Government and people of Belgium could direct their undivided attention towards the recovery of trade and the balancing of their national Budget.

PUBLIC FINANCE IN NEW ZEALAND.

DWELLERS in Albion will learn with surprise—and not a little envy—that in certain happy Isles on the other side of the world successive Finance Ministers have not merely been able substantially to ease the taxpayers' burden without any upset of budgetary equilibrium, but have in five years devoted to desirable social developments an amount almost equal to the whole of the Government's current annual income without any appreciable increase in the National Debt. If to this be added that the Debt is itself largely represented by revenue-earning assets, the full strength of New Zealand's financial position will be apparent. The story of these achievements is narrated in the financial accounts for 1923-24 presented to the Dominion Parliament by Mr. Massey on July 23rd last.

In cold figures, the following is a condensed statement of the national balance-sheet for the last two financial years:—

(000's omitted.)

REVENUE.	Year ended March 31.		EXPENDITURE.	Year ended March 31.	
	1923.	1924.		1923.	1924.
Customs.....	£ 6,032	£ 7,238	Interest	£ 7,904	£ 7,878
Beer Duty	612	632	Sinking Fund & Funded Debt Reduction	996	1,004
Stamp and Death Duties	3,581	3,344	Pensions	2,481	2,331
Posts and Telegraphs	2,705	2,681	Postal and Telegraph Expenses	2,113	2,118
Income-tax & Land Tax	5,373	5,203	Railway expenses	4,946	5,153
Railways	6,720	6,954	Education	2,515	2,605
Other Revenue	2,556	1,903	Other expenses	5,309	5,059
Total	27,579	27,960	Total	26,264	26,148

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.
THE TRUST SPECIALISES IN PLANTATION FINANCE.
ADVANCES MADE UPON APPROVED SECURITY OF
ESTATES, SHARES OR DEBENTURES.
TRUSTEESHIPS UNDERTAKEN.

14, GREAT TOWER STREET - LONDON, E.C.3.

For the year 1924-25 revenue is estimated at £27,857,620 (allowing for tax remissions totalling £1,000,000) and expenditure at £27,505,060, leaving a balance of £352,560 for supplementary estimates, which, in addition to normal requirements, will be required to cover increases in pay arising out of the regrading of public employees' salaries.

The debt position as at March 31st last was as shown:—

	Amount.	Gross Annual Charge.
Held in—	£	£
New Zealand.....	104,632,868	4,554,057
Australia	2,106,600	86,828
London	114,876,893	4,977,563
	£221,616,361	9,618,448
Annual sinking funds.....		739,442
Repayment of Imperial funded debt		307,718
Total gross charge		10,665,608
Estimated recoveries from trading and other accounts		2,108,111

Net annual charge at March 31, 1924..... 8,557,497

The following review of Mr. Massey's speech is contributed by our New Zealand correspondent:—The delivery of the Budget has given fairly general satisfaction. The very strong financial condition of the Dominion is apparent throughout the statement of the finances, and though it closes on a note of warning against extravagance, the tone of the Minister's speech is one of quiet and justifiable optimism. In the course of economic recovery from the difficulties that followed the sharp fall of prices in 1920, the Dominion revenue is still buoyant, and shows a further increase in 1923-4 of £380,927, despite a remission of 20 per cent. in the income-tax and the removal of the super-tax upon the unimproved value of land. Most of this increase, however, is accounted for by the great volume of imports in 1923-4, the Customs revenue showing an increase of no less than £1,205,923. It is one of the ironies of the Dominion's economic position that the heavy importations that caused strain upon the banking mechanism should so relieve the public finances. From the other side the irony has even more point. The Minister has based his estimates for the forthcoming year largely upon the expectation of an even greater revenue from the Customs duties, and hinges upon that expectation his proposals to reduce taxation still further by concessions of approximately £1,000,000 to the taxpayers. The trade returns for the first quarter of the new financial year, however, show a decrease of imports from £16 millions to approximately £11 millions, with a corresponding shrinkage in Customs revenue. It is too soon to tell yet whether that shrinkage will be maintained in succeeding quarters, but the estimate is clearly hazardous.

The reductions in expenditure carried out in previous years have been more than maintained, and the year's accounts show a further net decrease of expenditure which is gratifying. Upon the strength of these sustained decreases and the buoyancy of the revenue the Minister is able to promise further reductions in taxation, but has not indicated what form they will take. It is generally understood, however, that the Land and Income-tax will be chosen for reduction, even though the Government is 'unable to carry out in full the recommendations of the Royal Commission whose report was commented upon recently in the columns of *The Economist*.

The management of the Public Debt since the war has been hinged upon the accumulation during the boom of very large surpluses, which still provide the Government with substantial credit balances to work upon. The policy of the Government is not to reduce debt by the direct application of these surpluses; but to provide from them much of the expenditure needed to meet demands for such urgent problems as housing, re-settlement of discharged soldiers, and other revenue-earning investments. An

astonishing amount of assistance has been rendered in this way by the Government without increasing the net total of the Public Debt. The financial operations of a New Zealand Government are intricate and hard to follow, since there are so many lending departments, and the cross-operations by means of which the advances to settlers and workers department uses accumulated surpluses or balances of other departments are apt to be confusing. But the net result has been that the Public Debt is almost stationary, while at the same time considerable outlay upon development work has been possible. The figures for the Public Debt are as follows:—

Year Ended	Gross Debt.	Sinking Funds.	Net Debt.
March 31.	Mil. £.	Mil. £.	Mil. £.
1922	219.1	10.7	208.4
1923	219.0	11.9	207.1
1924	221.6	13.0	208.6

Against these figures must be set the expenditure of £26.6 millions for the settlement and housing of discharged soldiers. Over 22,000 soldiers have been assisted in this way. At the same time very large amounts have been borrowed cheaply upon the credit of the State and re-loaned upon the principle of amortisation re-payments to large numbers of individual citizens. For the last financial year alone 9,648 new borrowers received loans amounting to over £8 millions. The machinery of State advances has, in fact, done a great deal to solve the housing problem in the Dominion, and to solve it in the right way, by making it possible for workers to own their own homes, and pay for them in the course of a period varying from 20 to 36 years. During the last five years the number of houses erected with State assistance of this type to become the property of the borrowers was 30,459, and the amount involved was almost £19 millions. In addition, sums amounting to £13 millions were lent on mortgage by various departments, all of which is in addition to the amount spent upon soldier settlement. That this expenditure could have been made without adding to the net debt is proof of the great resources and buoyant prosperity of the Dominion.

The State advances scheme seems to show very little at which even the most carping critic of State assistance may cavil. The Department simply borrows upon the community's credit, and gives individual citizens the benefit of the cheap rates of interest. There has been a slight profit over and above the working expenses of the Department, the people are settled in houses of their own, and as the regular repayments of interest and principal steadily increase the Department's margin of security there is little danger of losses.

The advances to soldier settlers are, however, on a much less satisfactory basis, having been undertaken in a boom period, and in consequence involving substantial losses, part of which have already been written off. The accounts show arrears of interest and principal amounting to £751,524 and arrears of rent amounting to £487,100. In another part of the Budget it is stated that "the principal officers of the Lands Department are at present very fully occupied in connection with the pressing duty of revaluing discharged-soldier settlers' holdings," and this is made an excuse for the delay in promoting closer settlement, which seems a doubly unfortunate result.

One must, however, regard the probable loss upon advances to the soldier settlers as the Governmental counterpart to the losses that have been made in recent years by the farmers, and be thankful that the matter is no worse. On the whole, the proud review of development with which Mr Massey closes his Budget is the best reason for future confidence. To take only the main export items in the last ten years, during which population has increased by 18 per cent., the following impressive figures may be quoted:—

DECADE INCREASE, 1915-24.

Export.	Volume.	Value.
	%	%
Wool	17	35
Frozen meat	18	103
Butter	236	418
Cheese	136	288

These figures explain why a population of 1,300,000 has over 700,000 depositors in the Post Office Savings Bank with deposits amounting to over £44 millions.

INDIA'S FOREIGN TRADE.—I.

(BY A CORRESPONDENT.)

How far Mr Gandhi means to attempt a boycott of "foreign" goods as distinct from "British" is not made clear by his recent declaration in favour of Protection. He has declared himself as being strongly opposed to the boycott of "Empire" goods, such action, he considers, being "wholly indefensible"—*tempora mutantur!*—but apparently he has made no declaration of his policy regarding "foreign" goods. In view of the possible attitude towards these which he and his followers may adopt, it may be of interest to notice some particulars of India's foreign trade, which is to a great extent centred in the five principal ports, Calcutta, Bombay, Madras, Rangoon, and Karachi. Calcutta's trade as the centre of the jute manufacturing industry is naturally very extensive. The publication of inland trade statistics has been discontinued, but in 1921-22—the last year in which these were published—the total volume of Calcutta's trade for the year amounted to 7,979,000 tons, of which 6,253,000 tons were inwards and 1,726,000 tons outwards, while river steamers and boats brought in an additional 1,227,000 tons. Bombay, with its cotton spinning and weaving mills, had during the year 1922-23 an import trade of the value of Rs.123,445,332, while exports were valued at Rs.93,571,311. Taking the same period for Madras, the value of the import trade at this port amounted to £15,420,770, while exports were £9,152,826. The chief industry of Rangoon is rice milling, but a large export trade is carried on in timber and oil. The total value of imports into Rangoon during 1922-23 was £23,888,044, and of exports £36,217,003. The value of imports from Karachi for the year 1922-23 was £24,682,296, and of exports £22,566,688. In normal years the balance of trade is in favour of India, the value of exported produce and merchandise considerably exceeding the value of imported goods. If a boycott of "foreign" goods as distinct from those of "British" origin was successful, the countries most affected would be Japan and the United States of America. Taking an average for the five years ending 1923, the percentage of India's import trade of her three chief customers—excluding the United Kingdom—is as follows:—Japan, 9.6; the United States, 9.1; Java, 7.0. Japan's percentage for the year 1918-19 was 19.8, but this has declined to 6.2 last year, while the percentage of the United States for the same period also shows a decline from 9.5 to 5.7, though the imports from both these countries are still far in advance of pre-war figures. It is of interest to note that, while the import trade from Japan and the United States shows a decline, the percentage of trade from Germany shows an increase, the figures for 1922-23 being 5.1 per cent., as compared with 2.7 per cent. in the previous year and of 6.9 per cent. in 1913-14. Of other foreign countries, it may be noted that while the percentage of imports from France and Italy have during the last few years steadily decreased, the percentage of Belgium's trade is higher than before the war. The only other countries able to show an increase in exports to India last year were China and the Straits Settlements. Statistics have just reached this country showing the condition of India's foreign sea-borne trade for the three months ending June 30th last, during which period there was a favourable balance amounting to Rs.4.32 crores compared with Rs.15.93 crores in the corresponding period of last year. For the four months ending July 31st the total revenue realised was Rs.14.20 lakhs, as compared with Rs.12.20 lakhs for the same period in 1923. Import duties contributed Rs.11.35 lakhs, and export duties Rs.1.55 lakhs, while Excise duties on cotton manufactures were Rs.60 lakhs, on kerosene Rs.32 lakhs, and on motor spirit Rs.26 lakhs. Increases were noticeable in import duties on cotton yarn and piece goods, sugar, liquors, metals (other than iron and steel), and motor cars and cycles, while decreases occurred in machinery, railway plant, mineral oils, matches, and tobacco. The three principal categories of imports into India fall under the headings of—

(1) Cotton manufactured goods, principally from the United Kingdom.

(2) Machinery, the total value of importations increasing from Rs.24 crores in 1920-21 to Rs.35½ crores in 1922-23, the share of the United Kingdom increasing dur-

ing this period from 79 to 83 per cent., while the share of the United States decreased from 17 to 13 per cent.

(3) Sugar.—India is the third largest importer of sugar in the world, her chief source of supply being Java, with a yearly average of 625,000 tons, and Mauritius with 61,000 tons. A yearly average of about 15,000 tons of sugar-beet is imported from Belgium. Other imported articles include iron and steel, railway rolling stock, wheat, coal, mineral oils, motor-cars, silks, liquors, and hardware. Under this latter heading the percentages last year of both the United Kingdom and the United States show a decrease, while hardware imports from Germany have increased from 3 to 10 per cent.

It requires but little knowledge of India's needs, and of her own resources in their present stage of development, to see how dependent she is upon imports, and how vitally necessary they are for any internal commercial expansion. If a successful boycott was imposed upon them it is difficult to see by what methods this need could be met. For 50 years prior to the Great War exports from India exceeded imports into the country, the percentage of excess varying from an average of 29 per cent. for the first half of the period, to an average of 19 per cent. for the 20 years ending March 31, 1914. In 1919 a very great change was manifest, the total value of imports exceeding exports by £58,932,425. Taking an average of four years ending 1923, the total imports were £217,057,955, and of exports £205,075,739, while the "foreign" share of these imports was about 40 per cent. If a boycott upon imported goods is attempted, it is only natural to infer that the countries of origin of these goods will retaliate by boycotting exports from India to their countries. The result of any such action would be disastrous to India, for she is absolutely dependent upon imports not only for any possible expansion of trade, but for the maintenance of her existing industries. If these should cease through any action taken by foreign countries in retaliation for the boycotting of their goods, it would be quite beyond the power of India to supply the deficiency and meet her own requirements, and the result would be not merely commercial stagnation, but an outbreak of misery and poverty unexampled in the history of the country. It is, therefore, to be hoped that Mr Gandhi and his followers will carefully consider the probable result of any boycott of goods from foreign countries, and realise the foolishness of such a suicidal policy.

THE INTERNATIONAL LAW CONFERENCE AT STOCKHOLM.

(BY A CORRESPONDENT.)

DURING the whole of last week the Riksdagshuset at Stockholm—the Swedish Parliament House—was a cosmopolitan place. Representatives of nearly all the countries of Europe, of the United States, and of several of the States of South America had come together for the thirty-third conference of the International Law Association. They had assembled to talk practical business, as well as to constitute a temporary clearing-house for all kinds of ideas about the best way to regulate and improve the organisation of international society. There were judges of various degrees of rank, advocates, bankers, shipowners, underwriters, average adjusters, and representatives of commercial organisations. Of whatever race, they all met together freely on common ground, as it were, and, if there was no one language common to all, the matter of speech was, nevertheless, so managed that there was an open and ready exchange of views. A touch of distinction was given by the presence of the King of Sweden and other members of the Swedish Royal family at the inaugural session. This opening gathering took place in another building—the historic Riddarhuset, or Hall of the Nobles—and was necessarily somewhat formal. Thereafter, in the Riksdagshuset, those assembled for the conference divided themselves into two main groups. One of these was a general meeting for the discussion of a varied programme of topics, while the other, in a separate chamber, formed a maritime section, which went independently into the affairs with which it concerned itself, until, at the end of the week, it reported results to the concluding sitting of the full conference.

The chief business of the maritime section was the revision and enlargement of the rules of general average, a

matter, on the face of it, as dry and technical as could be found, and yet closely interwoven, in its everyday applications, with the main currents of international trade and shipping. Importers, exporters, shipowners, marine insurance men, bankers and commercial lawyers all come into touch from time to time with questions involving what is known as general average, though the complexities and intricacies of that subject are mainly handled, in practice, by the average adjusters, the members of a profession numerically somewhat small, and inclined to regard itself as a close corporation of mystery men. Really, the adjusters are very acute, capable and useful members of the business community. The general average statements which the adjusters prepare are the means of distributing, amongst the various interests concerned in a maritime adventure, extraordinary losses, which for the common safety have, in the first instance, been thrown upon or borne by one particular part of the property, whether cargo or ship, involved in the adventure. The business of the adjusters is to work out an equitable apportionment, for the purpose of which contributions are exacted from all, to make good the loss borne in the first instance by one. The system of general average seems to date back to days of small ships, when to make good to the owner of some particular cargo or ship's gear, jettisoned for the common safety, a rough and ready levy on what reached port was made to adjust matters. It probably originated before our system of marine insurance, but it has continued as a kind of mutual marine insurance alongside the practice of taking out policies to cover directly the risks of sea carriage. In modern times of large steamships carrying heavy mixed cargoes the working out of the adjustments has become a highly technical business. Elaborate investigations and valuations are required, which in not a few instances take years to complete, and a complicated machinery of deposits, guarantees, refunds of excess, and so on has been developed. General average losses and expenses may include not only those resulting from jettison—that is, throwing overboard—but also expenses of entering a port of refuge, salvage, and other matters. The problem of how far various kinds of expenses are to be deemed consequential on what is termed a "general average act," and therefore to be brought into the adjustment, has been worked out differently in the various maritime countries of the world. Moreover, there are numerous divergent national laws of general average. In most instances the charter party or bill of lading stipulates that general average is to be adjusted according to standard international clauses, which are incorporated by reference as the York-Antwerp Rules, 1890, but where those rules do not apply (and they do not cover all cases) the national law applicable has to be ascertained and followed.

These are the circumstances to the improvement of which, in the interests of oversea commerce as a whole, the Stockholm Conference applied itself. The same International Law Association that has been undertaking the reform of the law of general average drew up the international Rules of 1890, which, as just mentioned, are now in general use, so that it was the body to which the further work naturally fell. Complaints of the heavy expense of working out the complicated adjustments called for by modern conditions have been heard, and yet business men have been reluctant to abandon the Rules with which they have been familiar. The Rules of 1890 have, on the whole, worked well, too, though they deal only with specific points of practice. They contain no statement of principles, and, for the settlement of matters which they do not cover, they let in the national law, so that international uniformity has so far been only partially attained. In effect, the adjuster's individual discretion often determines the matter. This is usually well exercised, but the current state of affairs means that the adjusters remain "mystery men," who pursue their own practices, which certainly vary from country to country, as well as within countries.

In taking up the question of the revision of the rules of general average, the object of the International Law Association was to improve the methods of business. The preliminaries of reform have been under way for some years, and have been the work of men of many nationalities. The purpose in view has been to simplify the rules to be applied, as well as to revise them in detail, having

regard to changed conditions of sea transport. The conservatism of business men, and their somewhat partial trust in reforming lawyers, have made the task more difficult, and perhaps hindered its more complete achievement; but it may be said that, broadly, the objects sought have been attained as the result of the Conference. Representatives of business interests have throughout co-operated with the jurists. There has, as Sir Norman Hill, the chairman of the maritime section of the Conference, pointed out, been no question of dictating a code of general average. The one idea has been to find out and express the wants of commerce. The York-Antwerp Rules of 1890 have been, as the result of the work of the Conference, revised, and will be available, in their new form, as the York-Antwerp Rules, 1924, for voluntary incorporation in shipping documents, as the existing Rules of 1890 have been. The new Rules include a statement of principles to be applied in circumstances not specifically covered, and these general principles take the place of the concluding rule of the current series, now omitted, which referred the settlement to whatever national law might apply if the Rules did not cover the point.

So the rules of general average have been revised, added to in the way of provision for certain specific matters, and further supplemented by the insertion of a short series of preliminary rules defining principles. These preliminary rules are designated by letters of the alphabet, so that the familiar numbers of the existing rules have not been altered, the additional rules dealing with specific points of practice being added at the end of the numbered rules.

It remains to be said that, in one sense, the method of adjusting and distributing loss does not matter. Economically the burden of the losses in question, wherever they first fall, will adjust itself, and will have its effect on prices, shipping freights, or marine insurance premiums, but it is certainly important that methods of adjustment carried out by deliberate human action should be simplified and made, as far as possible, certain and uniform throughout all the channels of international trade. Possibly it is too late to consider the sweeping away of general average altogether. It has become too ingrained in practice, and too much the subject of vested interests, to allow of what logically would be the most complete and desirable reform, namely, its abolition, and the covering of the risks and losses with which it deals by means of direct insurance. From the practical standpoint, therefore, the settlement at the Stockholm Conference of the York-Antwerp Rules, 1924, may be welcomed as a contribution to the easier settlement of business difficulties, and, consequently, the easier conduct of business itself.

For the rest, the Conference discussed questions of nationality, of international courts of justice, aviation, foreign judgments, systems of evidence, territorial waters, codification, commercial arbitration, bankruptcy in its international aspect, problems connected with the League of Nations, and other matters, which, all together, constituted too full a bill of fare to admit of anything like complete digestion. The purpose of the International Law Association, however, is in part to convince a wider public than its own members of the importance of the part played by international law in many kinds of human activities. The number and variety of topics examined, even incompletely, is, therefore, justifiable, inasmuch as the pursuit of that purpose may thereby be helped.

LONDON PROPERTY COMPANIES.

ALTHOUGH still burdened by restrictive legislation, scarcity of labour, and the high costs of materials, the position of property is becoming slowly stabilised in this country. The difficulty of attempting to interfere with the law of supply and demand has been well exemplified in the history of housing control for the last few years. The little group of companies which we have brought together for the purposes of a review covers various fields of activities in the estate and property world. Most of the companies tell their objectives in their titles. Thus the Artizans' Labourers and General Dwellings Company provides houses for what were formerly termed the working classes. It has block buildings throughout inner

London, and small houses in various suburbs. City Offices, and City of London Real Property Company, Metropolitan Association for Improving Dwellings, do not need any further introduction, while Warner Estate and Wembley Park Estate are types of the companies which came into existence in suburban districts with the object of providing villas at reasonable rents.

It does not need a strong flight of imagination to envisage the favourable position in which many property companies now find themselves, with properties taken into their accounts at cost, and erected at a period when building costs were at a specially low ebb. To erect similar buildings now would cost in most cases well over double the amount then expended. How favourable the position really is for many concerns may be judged from a perusal of a circular issued in November last by the City of London Real Property Company. Properties which formerly stood in the balance-sheet of the company at £3,871,064 were revalued last year, and a new price of £10,718,034 set against them. Thus the new price levels had been very generous in this direction. Of course, it may be argued that this is an exceptional case, as the properties owned are situated in the City itself. This increase in values, however, must be taken into consideration by anyone who holds the view that prices of to-day are fairly well stabilised for some years to come.

Our first table shows gross receipts and net profits, after payment of debenture interest, in the past three years:—

Name of Company.	Gross Receipts.			Net Profit After Payment of Debenture Int. rest.		
	1921.	1922.	1923.	1921.	1922.	1923.
Artizans', &c., Dwellings	£ 339,950	£ 345,989	£ 338,014	£ 121,663	£ 128,954	£ 145,870
City of London Real Property	77,168	80,622	80,688	13,668	15,890	17,382
Consolidated London Properties	437,571	520,243	574,743	369,640	450,083	484,792
Law Land Company	132,218	136,239	147,141	20,311	26,020	26,200
Metropolitan Association for Improving Dwellings, &c.	194,726	198,624	202,041	39,317	43,659	47,899
Metropolitan Industrial Dwellings	40,131	39,856	38,294	6,909	7,706	8,053
Pinners Hall (Austin Friars) ..	55,945	51,420	55,945	13,545	15,451	15,896
Warner Estate	20,307	21,198	21,225	11,485	11,784	11,829
Wembley Park Estate	169,667	172,569	170,336	29,068	39,919	43,312
	6,039	5,378	6,562	3,264	3,156	4,718

It will be observed that profits show a steady rise in the three years; this increase has generally been obtained by lower expenditure.

Our next table shows the principal assets and liabilities during the past three years:—

Name.	Principal Liabilities.			Principal Assets.			
	Share Debt and Loan Capital.	Creditors.	Reserves.	Properties.	Debtors.	Investments.	Cash.
Artizans' &c., Dwellings—							
End 1921	£ 2,939,230	£ 50,552	£ 324,021	£ 3,317,345	£ 419	£ 67,885	£ 11,271
End 1922	2,939,230	46,413	350,417	3,297,266	647	54,492	32,791
End 1923	2,939,230	40,411	381,999	3,295,235	947	95,72	30,437
City Offices—							
End 1921	£ 630,650	£ 24,993	£ ..	£ 651,796	£ ..	£ ..	£ 1,608
End 1922	630,650	23,094	..	645,796	..	..	1,528

City Offices begins a reserve fund with £3,000. This company, however, takes care to draw shareholders' attention to various sinking funds; indeed, for the matter of that, most well-managed property companies possess substantial leasehold reserve sinking funds as a provision against expiring leases. The Law Land having reached the limit laid down for reserves, namely, £200,000, has increased its authorised limit to £300,000. In a small way this company makes a bonus issue each year.

It is not a matter of surprise to find "cash" items somewhat on the low side in our table, and this trend will be accentuated as conditions become more normal. While repairs and renovations were being held over for prices to fall, an accumulation of liquid assets was perhaps inevitable, but from its nature, a property company simply returns a slight trickle of revenue very steadily over a long period of years. Our column of capital, with one notable exception, is remarkable for its steady evenness. The Warner Estate records a change on account of a reduction in temporary loans. It will be noticed that the Law Land has increased its property item from £1,358,318 to £1,403,393. This increase is solely on account of expenditure in connection with new property.

Our concluding table shows the dividends for the past three years, also comparative prices of ordinary shares and stocks and present yields:—

Name.	Dividends Last 3 Complete Years.			Prices of Shares or Stock End of August.			Present Yield.
	1921.	1922.	1923.	1921.	1922.	1923.

† Free of income-tax.

In order to make the dividend on City of London Real Property strictly comparable, we have taken the amount of ordinary dividend as being paid on its present capital of £8,000,000. This table also indicates that property companies have enjoyed steady progress during the past few years. The Law Land having distributed, in addition to a dividend of 6 per cent., a bonus of three £1 ordinary shares for every 100 shares held, its £1 ordinary shares show a return at the par quotation of about 9 per cent.—a very generous yield from such an efficient and conservatively controlled concern.

Notes of the Week.

Ulster's Refusal.—At a meeting held on Tuesday the Cabinet of Northern Ireland finally decided not to appoint a representative on the Boundary Commission. The statement in which this decision was conveyed to the Press was of a polemic nature, and maintained the position that in signing the Treaty of 1921 Mr Lloyd George and his Government infringed the rights of Northern Ireland as conceded by the Act of 1920. It therefore becomes incumbent upon the British Government to propose legislation to carry out its Treaty undertakings in relation to the Boundary Commission, and Parliament will meet on September 30th for this purpose. There is little room for doubt that the Government will obtain sanction for its Irish Bill; but Ulster's refusal, although expected, has brought the Irish problem once more into a state of great anxiety. There are, it is true, several elements of hope. Sir James Craig is still ready to discuss a settlement with Mr Cosgrave, and a party of Members of Parliament drawn from all parties has returned from Ireland convinced of the existence of a general desire for a settlement by conference; and the pacific desires of the Dublin Government are beyond doubt. But, as usual, the danger comes from extremists. In the Free State there are formidable anti-Treaty sections, who are watching for any weakness on the part

of Mr Cosgrave, on which to base a denunciation of the Treaty and a fresh campaign for complete separation. Nor is Sir James Craig by any means without embarrassment from intransigents. We are, therefore, faced by a dilemma. A conference would obviously have more hope of success if it met now with a virgin field of discussion than if it met after the Boundary Commission had pronounced a decision which one party finds completely unacceptable. But it is equally obvious that Mr Cosgrave, owing to the forces at work in the Free State, cannot enter into conference until he has insisted upon the Free State's rights under the Treaty, and has compelled the British Government to implement its undertakings and vindicate its good faith. So now for the next few weeks the course of affairs is fairly plain. The British Government will redeem its word. The Commission will sit, and will produce a decision of which Ulster will take no cognisance, and which is hardly likely to satisfy the Free State. The only way out of a dangerous deadlock would appear to be through negotiation for a united Ireland. But, unfortunately, there is a danger lest the passions which will rise higher and higher in the next few weeks will make any such *dénouement* even more difficult than at present. There is, therefore, good reason for pessimism and anxiety. But we cling to the hope that the debates in the British House of Commons may indicate a "bridge" on which men of goodwill in Northern and Southern Ireland may meet.

The Conflict in China.—The contest for the control of Shanghai has come to a sudden and unexpected collapse. It had been carried on with more persistence and many more casualties than are customary in Chinese warfare, and the Chekiang troops, though outnumbered by their Kiangsu opponents, appeared to have held their positions and even gained a slight advantage. But they were threatened with attacks in their rear from Fukien and Anhwei, and two divisions went over to their Kiangsu opponents. Lu Yung Hsiang and the Chekiang army are reported to be retreating on Shanghai, where the foreign concessions are well protected by European, American, and Japanese warships, and by the local Volunteers. The chief interest of the struggle had already shifted northwards, to Peking and Manchuria. Chang Tso-Lin, having again formally denounced Wu Pei-Fu and the Peking Government, had begun to move southwards from Mukden on Peking, and the troops under Feng Yu-Hsian, "the Christian General," had been diverted from the Shanghai conflict for the defence of the Chinese capital. The outposts of the armies of Wu Pei-Fu and Chang Tso-Lin are stated to be in contact near Shanhaikwan, half-way between Mukden and Tientsin, and a war council held in Peking on Wednesday has appointed Wu Pei-Fu commander-in-chief of the forces defending the Peking Government. Mr W. W. Yen, who has had an American education and held professorships in the United States and Shanghai, has become Prime Minister for the third time; but the power is entirely in the hands of the military chiefs. Chang Tso-Lin, however, would have had great difficulty in forcing his way southwards, and he may now defer his advance to a more convenient season. So may Sun Yat-Sen, who had been preparing to organise an advance northward in aid of the Chekiang forces. The insecurity of his own position is exhibited indirectly by the letter in another column from our Hong-kong correspondent, and directly by his own confession of the failures of his administration and the inducements—in the shape of local self-government and remission of taxation—which he offers for the support of the population under his rule. His resort to Bolshevik advisers will not recommend him to them, and his Yunnanese troops are probably unreliable.

Control of Building Materials.—One of the chief topics of the autumn session will be the Government's proposals embodied in a Bill dealing with the prices and supply of building materials. The Bill provides, firstly, that in cases where the Minister of Health represents that any article used in connection with the building of working-class houses is at too high a price, the Board of Trade shall have power to investigate "prices, conditions of supply, costs, and profits." If they are satisfied that the prices are unreasonably high, or that restrictive conditions are being imposed upon supply, the Board of Trade is empowered to make orders fixing or regulating prices, or to intervene to prevent the restrictive conditions. Full powers are given in regard to these investigations to demand information and to inspect books. The information obtained is, however, to be kept secret unless the information has to be given in court, or if the parties agree to publication. Secondly, if, after investigation, it appears that the supply of such materials is being unreasonably prevented, the Minister of Health may take over stocks, or the output of factories, or may even take possession of the lands and buildings in which production of these articles is carried on, and may carry on the business himself. He must, however, return these premises if and when he is satisfied that the supply will no longer be unreasonably restricted. Compensation is to be paid for direct loss suffered by reason of this interference, but the compensation is not to make any allowance in respect of loss of profits that would have accrued if the Minister had not taken possession of the premises. These provisions are much wider than any hitherto contemplated in connection with trusts or with profiteering, and will certainly be very strongly criticised. For a Bill which contains such sweeping powers, the draft is little more than a summary, and in its present form full of ambiguities both in regard to compensation as well as in other clauses. In our view, the Bill proceeds along the wrong lines. We entirely agree that the first step in matters of this kind should be investigation; but the second should be not the fixing of prices, but the publication of the facts if the inquiry itself does not produce the desired remedy. Publicity and the pressure of opinion was regarded by the Committee on Trusts of 1918 as the first and most desirable form of pressure against excessive profits, and with this view the Labour representatives on the Committee, including Mr Sidney Webb, entirely concurred. The fixing of prices and the commandeering of works is a very drastic remedy which Parliament is unlikely to entrust to the Department concerned on the strength of information which is not to be disclosed. Even during the war, when the suspension of ordinary economic influences made it more practicable than at present to fix prices, this power was in the main exercised with the help and co-operation of the best brains in the business world. It is a very different matter to have them fixed by Ministers and Civil Servants at times when competition is in full swing. In any case, the proposal bristles with difficulties, for it is apparently intended to apply it only to the use of material required for the building of working-class houses. Manufacturers of bricks, castings, cement, wall-paper, and a host of other products would come within the scope of the Bill for part of their output only, and it is difficult to see how a portion of production can be so controlled without leading to the requisitioning of a certain proportion of all the industries concerned. We have every sympathy with attempts to check the strangling of competition by monopolistic organisations, whether in the building or other industries, and the State should possess carefully thought-out powers for this end. But this is a very different matter from a partial intervention, which will probably produce a shortage of supply of these commodities for other purposes, and lead to two prices in the same market. But, after all, perhaps our ill-starred attempts to interfere with the laws of supply and demand in housing have as their natural corollary the necessity of making similar efforts in associated industries.

Employment in August.—The extent of the August increase in unemployment is shown by the figures published this week in the *Ministry of Labour Gazette*. The trade union percentage of unemployed, representing

mainly skilled workers, rose from 7.4 at the end of July to 7.9 at the end of August. Monthly movements of this percentage over a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	1.0	2.4	2.9	6.9	16.8	13.7	8.9

November ..	2.0	0.5	2.9	3.7	15.9	14.2	10.5	..
December ..	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Excluding coal miners.

The trade union figures for July and August are, however, not so bad as they appear. Owing to the strike in the building trade, the figures for that industry, in which unemployment was at a very low level, were eliminated from the totals for July and August, thereby making the general percentage for those months somewhat misleading as to general trade union employment. If the building trades are excluded from the June figures as well, we get the following proper comparison of the trade union unemployment percentages for the past three months:—June, 7.6; July, 7.4; August, 7.9. On this basis the August increase over June is only 0.3, and not 0.7, per cent. Among the 11½ millions of workers covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed rose from 9.9 at July 28th to 10.6 on August 25th. This compares with 11.4 per cent. a year ago. The live register of the Employment Exchanges showed between these dates a rise of exactly 100,000 in the total of unemployed. Of the increased number, 72,000 were men. Of these over 38,000 were accounted for by the iron, coal, steel, and engineering trades. A feature of the figures is an improvement in the cotton trade.

Cost of Living.—For the third month in succession the *Ministry of Labour Gazette's* index of the cost of living rose in August by one point. Thus at September 1st the cost of living for an average working-class family was estimated to be 72 per cent. above the level of July, 1914, as compared with 71 per cent. above that level a month earlier. Monthly movements in this index figure over a number of years are shown in the following table:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)								
Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.	
January ..	85-90	120	125	165	92	78	77	
February ..	90	120	130	151	88	77	79	
March ..	90	115	130	141	86	76	78	
April ..	90-95	110	132	133	82	74	73	
May ..	95-100	105	141	128	81	70	71	
June ..	100	105	150	119	80	69	69	
July ..	100-105	105-110	152	119	84	69	70	
August ..	110	115	155	122	81	71	71	
September ..	110	115	161	120	79	73	72	
October ..	115-120	120	164	110	78	75	..	
November ..	120-125	125	176	103	80	75	..	
December ..	120	125	169	99	80	77	..	

The rise in the percentage in August was almost entirely due to increases in retail food prices. For food alone the average increase over the pre-war level was 66 per cent. at September 1st, as compared with 64 per cent. on August 1st and 68 per cent. a year ago.

Iron, Steel, and Coal Output.—The monthly statistics of the National Federation of Iron and Steel Manufacturers show that the production of pig-iron in August amounted to 588,900 tons, compared with 615,600 tons in July and 599,800 tons in August, 1923. The number of furnaces in blast at the end of the month was 173, a decrease of two since the beginning of the month, and the lowest

number in blast since December, 1922. The production includes 187,400 tons of hematite, 183,700 tons of basic, 155,800 tons of foundry, and 33,800 tons of forge pig-iron. The output of steel ingots and castings amounted to 527,500 tons, compared with 689,300 tons in July and 567,500 tons in August, 1923. The low output in August is to a considerable extent due to holidays. The production of coal for the four weeks ended August 30th was 19,031,400 tons, which compares with 19,382,400 tons in the four weeks of July, the output for August Bank Holiday week dropping from over 5 million tons to 3,446,100 tons. For the week ended September 6th the production was 5,180,400 tons.

Cotton Mill Shares.—The recent substantial fall in raw cotton prices and the improved prospects for spinners in Lancashire, writes our Manchester correspondent, has stimulated demand in mill shares, and during the last few weeks the market in Oldham and Manchester has been much more active. Brokers have experienced a larger demand, and prices have hardened. The following list of comparative quotations shows the rise that has taken place in the shares of leading companies. In each case the shares are of the nominal value of £1, with 10s paid up:—

	July 30, 1924.		Sept. 17, 1924.		Advance.	
	s	d	s	d	s	d
Argyll	2	3	3	7½	1	4½
Belgian	0	7½	1	6	0	10½
Boundary	1	3	3	1½	1	10½
Briar	2	3	4	6	2	3
Butterworth Hall..	1	1½	2	4½	1	3
Cairo	5	0	6	9	1	9
Cavendish	0	6	1	7½	1	1½
Commercial	2	9	4	9	2	0
Crown	4	6	6	3	1	9
Fern	5	1½	7	6	2	4½
Ivy	1	7½	3	0	1	4½
Melbourne	5	3	6	4½	1	1½
Monarch	5	7½	7	7½	2	0
Ram	1	4½	2	7½	1	3
Swan	8	10½	10	3	1	4½
Warwick	2	4½	3	4½	1	0

Compared with a month ago the margin of profit for spinners is distinctly better. The mills engaged on American cotton are still working only 26½ hours per week, instead of the usual 48 hours, but it is believed that the Masters' Federation will recommend the running of longer hours at an early date. Spinners are being hampered at the moment by the poor selection of raw cotton in this country, but in this connection the position is expected to improve within the next few weeks, when supplies will certainly move forward more freely from the United States.

The New Zone for Petrol Prices.—In commenting upon the fall in the price of petrol in our issue of September 6th, we expressed the hope, if not belief, that a further reduction would be made in the London districts where the turnover is large and the costs of distribution lower than in other centres of consumption. We therefore particularly welcome the reduction of 1d per gallon which the three big petrol distributing companies made applicable on September 16th to London and adjacent districts, in effect, to the South-east corner of England, taking a line drawn from Aylesbury eastward through Bishop's Stortford to Burnham-on-Crouch, and southward through Reading and Guildford to Worthing. Within this zone the standard brands of the big companies are now 1s 6½d and 1s 4½d per gallon. There is no suggestion of a price war in this latest move, and we have reason to believe that further "zone-ing" throughout the country is unlikely. It seems that the big petrol companies are making an exception to the rule of the uniform price in the case of London and the South-east merely as an act of self-defence. "Pirate" merchants, who do not serve the public generally, have naturally taken advantage of the policy of the uniform price—at a time when petrol is plentiful—by undercutting in districts where they need incur little expense or trouble in distribution. The three big petrol companies, who have spent millions in providing a country-wide service of distribution, must perforce protect their investments, that is, maintain the turnover that remunerates the capital

invested in distribution plant and equipment. It is a sign of healthy, if uneconomic, competition. The country is probably over-equipped for the wholesale distribution of petrol.

Rubber Developments.—A Stock Exchange correspondent writes:—Hard upon the heels of the rise in tea shares, a rise which suffered something of a check upon a good deal of selling by people who deemed it discreet to take big profits, there has come a rally in rubber shares, and prices have moved up considerably during the past few days. It is natural that tea and rubber shares should move together, the two industries being connected fairly closely in certain respects, one of which is that people who follow the fortunes of the tea industry very often make a study of rubber conditions as well. The fact of tea prices having mounted to a level which gave cause for a halt on the part of investors, rendered cautious through comparing current prices with those of six months ago, caused the speculative investor to be more favourably inclined to look at the prospect held out by rubber shares, particularly as this seems to offer a certain amount of scope for improvement. An article in the *Economist* a fortnight ago, page 375, upon the rubber trade in America, and written by a New York correspondent, attracted a wide circle of attention. The arguments which your correspondent put forward to support his contention that the long-anticipated shortage is now becoming apparent received endorsement from good authorities on this side. So far as the share market is concerned, history has repeated itself. There was the same violent rush to buy shares; the same vivid jump in prices; the same disclosure of shortage of supply in the market with which previous movements of this kind have familiarised the public and the Stock Exchange. On former occasions there has been too great an eagerness shown to buy shares at any price, with the invariable result that people paid more than they considered they ought to have done. As soon as shares came to market, attracted by the rise which occurred, the backwash of reaction has led to prices being dropped almost as abruptly as they advanced. On a mild scale, the same thing has happened this week, but it cannot be said that the public have lost their heads. Your New York correspondent gave chapter and verse, from official rubber statistics published in the United States, to show why a real danger of shortage in the supply of rubber could be expected. He added, however, that big buyers, by continuing to refrain from making purchases, allowed a few small sellers to mark down the nominal quotations for raw rubber. This may occur in Mincing lane. Rubber has gone up with a jerk to 1s 2½d per lb., but the eyes of the cautious, looking back upon disappointing experience, are afraid to colour too rosy the immediate prospect. Six weeks have gone out of the current three-monthly period within which rubber must average at least 1s 3d per lb if the standard production is not to fall to 50 per cent.—against the present 55 per cent.—on November 1st next. Meanwhile stocks are being diminished at the same time that it becomes increasingly probable there will be another 5 per cent. reduction in output a few weeks hence, with United States demand developing in volume. Where are the increased supplies to come from? asked your correspondent in New York. The Dutch, Chinese, and Brazilian rubber is not likely to prove sufficient. The cry for removal of restriction has been heard, but, all the circumstances considered, it is not taken very seriously. The shareholder who looks ahead, and recognises the future possibilities, is now trying to buy shares at cheap prices to average those acquired higher up. But there are not many people who care to sell. The supply is limited to the scanty amount available in the market, and to the shares of such proprietors who take the view that the latest rise in rubber is no more than another flash in the pan. These sellers maintain that the present little blaze of excitement in Mincing lane will fizzle out as the United States manufacturers tap unexpected sources of supply. Thus there are two opposing camps, but the optimists possess a much greater numerical strength.

L.M.S. Conversion Scheme.—A letter to proprietors of London, Midland, and Scottish Railway ordinary stock from the chairman of the company should finally remove any doubts entertained by holders as to the advisability of accepting the offer for conversion made by the "London, Midland and Scottish Stock Conversion Trust," to which reference was made in the *Economist* of August 23rd (p. 310). The chairman of the railway company states that the use of the name "London, Midland and Scottish" by the promoters of the Trust Company is "entirely unauthorised" so far as the railway company is concerned, and must not be taken to indicate that the latter approves of the proposals. Indeed, he goes on to say that in the opinion of the board of the railway company, proprietors of L.M.S. ordinary stock will be well advised to decline the offer for the following reasons:—

(a) The promoters of the Trust base their views of the capital value on the London and North-Eastern Railway stock, but there can be no comparison between the London and North-Eastern second preference stock and the preference stock of the Trust. The one is a trustee stock, the other cannot ever rank as such.

(b) Judging by the difference between the market value of the London Midland and Scottish ordinary stock and the stocks of the Stock Conversion and Investment Trust, Limited (one of the trustees of the new Trust), which were issued for a small amount of the former London and North-Western ordinary stock, any capital appreciation will be negligible.

(c) The charge for management expenses and the deduction of £2 10s from the £100 preference stock to be issued means that the stockholders are asked to submit to a reduction of 4s 6d in their yearly income received from each £100 stock.

(d) Stockholders who transfer their railway holdings to the Trust will receive in exchange stock of less stability, and certainly one of considerably less marketability.

(e) Stockholders who convert their stock will lose their voting power.

In conclusion, he remarks that if at any time the railway company decides that it would be in the interests of the proprietors to split their stock, they will take steps to obtain the authority of Parliament to do so.

Co-operative Trade and Trade Union Membership.

A correspondent writes:—Despite the general depression in industrial centres, the banking and the trading turnover of the Co-operative Wholesale Society for the six months ended June 28th has shown an upward movement—particularly on the Tyneside and in Lancashire and Yorkshire. The total sales of the society were £34,941,331, of which £11,334,293 were supplies from the society's own productive works. These represented increases of 8 and 9 per cent. respectively as compared with the corresponding period of 1923. The profit was the substantial amount of £1,141,012, from which interest has been paid on capital and £250,860 applied to the depreciation of property. That leaves £355,985, which with £150,000 brought forward gives a sum of £505,985 for disposal. This the directors recommend should be allocated by way of a dividend of 2d in the £ on the purchases, which will take £264,856; £76,343 in writing off fixtures, and carrying forward £164,016. It would therefore appear that the payment of dividends, which was resumed at the beginning of the year, is now likely, as in the case of the Scottish C.W.S., to continue. The operations of the C.W.S. Bank have correspondingly increased, and the deposits and withdrawals for the half-year totalled £273,270,505, an advance of £24,890,525. The most notable feature in the banking development has been the steady growth of trade union accounts. These now number 8,722, out of 18,120 current accounts. Most of the distributive co-operative societies act as agents for the C.W.S. Bank, and facilitate the deposit and withdrawal of the funds of local trade unions. Further evidence of the close association between the co-operative and the trade union movements is afforded by the attitude of the society towards its employees. In January, 1919, the business meeting adopted a resolution making membership of a trade union a condition of employment. Since then the directors have endeavoured to carry this out, and in the majority of cases the employees have joined; but some have failed to carry out the instruction. The matter has been raised from time to time, and while societies have been pressing the directors to adopt drastic action, petitions have been received from sections of the employees appealing

against the rigid enforcement of the resolution. In order therefore, to bring the knotty problem to a definite issue, the delegates at the forthcoming business meeting will be asked to adopt the recommendation "that managers, buyers, heads of departments, principal and confidential assistants, and employees over 60 years of age, be exempted from the scope of the 1919 resolution regarding trade union membership." But "that, in the case of all other eligible employees, continuing membership of one or other of the trade unions eligible for affiliation to the Trade Union Congress shall be a condition of employment by this society, and dismissal shall follow non-compliance therewith accordingly." This will doubtless be endorsed by the societies as affording a satisfactory concession to the older men. The rate of subscription to trade unions and the fact that members joining at an advanced age are not likely to obtain any tangible benefits, has led to many of the older employees naturally resenting the compulsory character of the resolution adopted by recent meetings. Managers, too, are not wanted within the ranks of the unions; they, too, do not want to be forced into action of which they disapprove from the disciplinary point of view. These facts were not taken into consideration by the delegates who, in 1919, sought the enforcement of a condition of employment that has caused considerable irritation. It is hoped by all parties concerned with the business side of co-operation that the proposed recommendation will afford a means of allaying the irritation and enable the members and employees to take advantage of the trade revival that is promising fuller employment and better business.

The Dunlop Scheme.—The scheme for the reorganisation of the capital of the Dunlop Rubber Company, prepared by the investigation committee, has now been placed before the shareholders. It was stated in the circular issued in June last that the accounts for the year to August 31, 1921, revealed heavy losses, and subsequent profits up to June 30, 1922, have been applied to reducing the adverse balance. There still remain items, however, which are considered to stand at figures in excess of present values, and in order to bring the capital more into line with the value of the assets further adjustments are necessary. The deficiency, which amounts to £11,353,667, it is stated, would normally fall upon the ordinary shareholders, but the special circumstances of the case are considered to warrant some sacrifice on the part of preference shareholders. The plan formulated is as follows:—The ordinary shareholders are asked to write down their shares to a nominal value of 6s 8d per share. The preference shareholders are to surrender their rights of participation in surplus profits. The "C" preference shares are to be reduced from 20s to 16s, though the rate of interest is to be raised from 8 to 10 per cent. The preference dividend arrears are to be liquidated by a cash payment of £1,126,250; this operation to be rendered possible by the issue of £800,000 short-term second debentures. The reduction in the share capital effected by the writing down is to be made good by the creation of 31,582,628 new ordinary shares of 6s 8d each, which will be held in reserve. By the appropriation of forfeited share account and of the balance of profits for the eighteen months ended December, 1923, the transfer to goodwill of £130,000, and the writing down of the capital, the deficiency of £11,353,667 will be met. These proposals may in parts possess vulnerable points of attack. It is, however, again a brave attempt to reconcile conflicting interests. It is obvious that valuable energies are being expended in getting the Dunlop house into order which could be put to highly profitable use in an aggressive industrial policy.

Metal Price Movements.—The non-ferrous group of metals this week has had to face considerable selling pressure. This was due to the disappointing trade demand, the unsettled political outlook and a series of bear raids. Tin at the opening displayed considerable weakness. Prices early in the week broke very violently, and standard cash at one time was down to £232, representing a loss of about £30 from the best of the present month, and nearly £70 under the top figure paid

in March. Forward tin sold down to £234, but later the tone improved, although the market was still somewhat unsettled. The unexpected bear raid dislodged a lot of tin, and thus the market is all the better for the shake-out of the weak holders. At the fall there was a good deal of American buying, and with Straits shipments for all September likely to turn out quite moderate, an early recovery is looked for. Copper moved downwards in unison with the general movement, but the market was very active at the decline, and later trade began to harden up again. The European demand so far has been disappointingly small, but possibly next month will see some improvement. There has been a lot of cheap second-hand electrolytic copper on the market in New York, and the undertone has been very sensitive. Lead has been easier, with anticipations of much metal having to be taken up. The importations have continued on a very full scale, and trade buying is very moderate at the moment, although more business should come along in the late autumn. The spelter position is rather puzzling in view of the firmness displayed in the States. Prices this week kept firm at first, but later fell away again, and the galvanisers did very little. The general fall in the non-ferrous markets should attract buyers, and once the selling pressure is exhausted there will be a sharp recovery. Statistically all the metals are very sound, and very little buying would be required to start a good upward movement again.

British Celanese.—The balance-sheet of the British Celanese Company (formerly the British Cellulose and Chemical Manufacturing Company) for the year ended February 29, 1924, does not make very pleasant reading. The greatest satisfaction which shareholders can obtain is the fact that the previously existing debit balance of £491,782 has been increased only by £74,046 during the year. It is difficult to understand why there should be much grounds for satisfaction over this. A total deficit of £565,827 is now recorded. Although the prospectus of this concern, issued in March, 1920, held out promise of early success, and the board had "exact knowledge of the cost of manufacture," we ventured to point out at the time that the company had yet to prove that it could "produce artificial silk on a commercial basis." The report dwells upon the fact that "the special advertising and propaganda programme undertaken for the purpose of popularising the 'Celanese' products have been charged to revenue." In view of the fact that "goodwill, patents, and patent rights" continue to stand in the balance-sheet "at cost," £1,886,945, it is certainly a wise step not to add to the amount. Indeed, it might be a reasonable course to attempt to reduce it. Moreover, since the last balance-sheet was issued liabilities have been increased. In the place of £300,000 first mortgage debentures is now an issue of £700,000, while sundry creditors are up from £119,109 to £180,052, although debtors are only up from £74,862 to £78,497. The balance-sheet is fully analysed on another page.

Naraguta.—Our mining correspondent writes:—The results of this Nigerian tin proposition for the year ended March 31st last fall below what might have been expected, in view of the enhanced level ruling for the metal during a portion of the period. The explanation is that the better price received for the concentrates sold was to a large extent offset by an appreciable reduction in the output, due mainly to the prolonged drought. Thus the net profit of £22,200 is only £4,500 up. In respect of 1922-23 the directors pursued a conservative policy as regards the distribution of profits, paying no more than 5 per cent. Now a final dividend of 5 per cent. is declared for 1923-24, making a total of 10 per cent., and leaving a somewhat reduced balance to be carried forward. With this balance dividend will be disbursed 2½ per cent. interim on account of the current year. There would, consequently, seem little hope that the total for 1924-25 will exceed that of 1923-24, although a recovery in the output is expected. In these circumstances it is a little difficult to explain the quotation of the £1 shares even at the reduced price of 24s. On the basis of 9 per cent. dividend the yield to the shareholder (allowing for the 7½ per cent. included in the

price) is only 8 per cent., whereas the return on a base metal share should be 12 to 15 per cent., to cover the risk attaching to fluctuations in the price of the product. The manager reports in favourable terms on the mining position, and estimates the proved ore reserves at the substantial amount of 10,000 tons of 70 per cent. ore. He adds that the whole of this should be profitably recovered, providing the price of metallic tin is not less than £200 per ton for any considerable period. This condition appears likely to be fulfilled.

Oversea Correspondence.

LEAGUE OF NATIONS.—THE WORK OF THE ASSEMBLY—ARBITRATION, SECURITY AND ARMAMENTS—MOSUL QUESTION—AUSTRIAN BUDGET.

(FROM OUR CORRESPONDENT.)

GENEVA, September 16.

THE substance of the problems of arbitration, security, and reduction of armaments is now being examined in close detail by several sub-committees. It is early yet to give definite lines of progress, as it is unwise to indulge in premature abuse or premature exaltation concerning the tentative approach from various sides towards solution. A good deal of nonsense has appeared in the English Press, but there certainly has been progress, and no great obstacle to agreement has yet arisen. One sub-committee is discussing hopefully the points arising out of the compulsory jurisdiction clause of the Statute of the Permanent Court of International Justice, and the possible forms of arbitration on questions not comprised in this compulsory jurisdiction clause; another sub-committee is studying in detail the problems of security and reduction of armaments in so far as they can be taken separately, and there is a joint committee of these two sub-committees, so that the whole work may be co-ordinated. It looks as if some general plan may be ready by Monday, but some further information may be available earlier than that.

Broadly speaking, what they are attempting to do now is to secure either a resolution, or preferably a protocol, closing all the doors in the Covenant to any possibility of resort to arms by reference to some form of compulsory arbitration, and this resolution or protocol would also comprise in general terms the sanctions and reduction of armaments to follow. Assuming that agreement is reached on the broad grounds of arbitration and sanctions, this will probably be dependent upon later agreement at the International Conference on Armaments, thus following the principle laid down at an earlier Assembly, that security shall be dependent upon reduction of armaments. It is not clear yet what the British Government is prepared to do about the Fleet, but it may be safely assumed that it is not going to bind itself to be at any and every service of the League without very clear definition of the conditions. In any case, I do not believe it will give a promise of any particular kind beforehand, and France knows it. It is quite certain, also, that there is no truth in the suggestion that the British Government is considering, or is likely to consider, placing its Fleet at the disposal of the League on the majority decision of the Council. What looks like happening is that if any party to a dispute elects to refer it to the Council in the ordinary way, and if the Council fails to reach unanimous agreement, provision will have been made in the present discussions for reference to some other body of an arbitral character. Points like this show the danger of partial assumptions. What the British Government says in general is: "We stand by our Covenant obligations, and you must believe in our word."

There is still a good deal of speculation about an application from Germany, and M. Stresemann is reported to have sent a representative to explore the ground, but an application now seems to be a very outside chance. The Turkish Delegation has arrived for the Council's consideration of the Mosul question which may come up this week, and has allowed it to be understood that it will press for a plebiscite—a very difficult operation amongst populations of the kind such as exist in the

Mosul vilayet. Another extremely important point which may be taken by the Council shortly is the organisation of the method of carrying out the League's right of investigation into the armaments in ex-enemy countries as soon as the Allied control ends. What is important in this connection is that the League should avoid to the utmost degree appearing to be doing the work of one set of Powers against another set, and this appearance can only be completely avoided if, when a general plan for the reduction of armaments is agreed upon, a similar system of investigation is applied all round. The right of investigation in some form or other is included in most of the plans for reduction of armaments now under consideration, but it will be infinitely better if, in dealing with the immediate question of organising the right of investigation in ex-enemy countries, the Council does it in such a form as to apply to all countries when the time comes.

I understand agreement has been reached on the figure at which the Austrian budget shall be balanced, and the Council will be taking the subject for final decision to-day or to-morrow. The Assembly devoted a morning's discussion to the scheme for the financial reconstruction of Hungary, which has made so admirable a beginning, and a unanimous resolution was passed noting with great satisfaction the active association in the work of many countries whether by the signature of the Protocols or through the issue of the loan.

UNITED STATES.—TEXTILE TROUBLES—JULY RAILROAD EARNINGS—COTTON REPORT—COMMODITY PRICES—MAINE ELECTION.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 9.

FURTHER evidence of the severe and prolonged depression in the textile industry, particularly in New England, is found in two recent developments. One is the passing by the American Woollen Company, the dominant factor in woollen and worsted goods in this country, of the regular quarterly dividend of $\frac{1}{4}$ per cent. on its common stock, due at this time. The other is the default by B. B. and R. Knight, one of the largest and best-known cotton goods manufacturers, on the September 1st interest on its first mortgage 7 per cent. bonds, which are outstanding to the extent of \$7,393,000.

To those familiar with conditions in the woollen goods trade and industry, however, the dividend omission referred to was no surprise. Business has been, and still is, far below normal, with the result that the present year is one of the worst ever experienced by the American Woollen Company.

Owing to the close relations between the American Woollen Company and the Republican party, the passing of the dividend in the midst of a Presidential election campaign has created quite a stir in political circles. Both Democratic and third party interests have eagerly grasped this development, and are using it as a campaign argument against the Republicans, claiming it is tangible evidence of the breakdown of the present tariff law. Republican managers themselves are apparently perturbed somewhat by the company's action. Whether or not the latter has or will have any decided bearing on the political situation it would be difficult to say definitely. It is doubtful, however, whether foreign competition has been much of a factor. Unseasonable weather this year is probably responsible in large measure for the meagre demand for woollen and worsted goods, especially lightweight lines. Unusually low temperatures prevailed last spring, with the result that clothing manufacturers and distributors suffered an exceptionally poor trade for that season, and there is reason to believe rather heavy stocks were left on their hands.

Comparatively less surprise was occasioned by the announcement that B. B. and R. Knight, Inc., which operates seventeen cotton goods mills in Massachusetts and Rhode Island, had been unable to meet the September interest on its first mortgage bonds. That unfavourable conditions have prevailed for many months in the New England cotton goods industry was pretty generally known. The omission of third-quarter dividends by fully

one-half of the Fall River mills plainly reflected the acute depression. The default by the Knight mills is rather far-reaching. It makes necessary a reorganisation of the big Consolidated Textile Corporation, of which the Knight concern is an important part.

The combined net operating income of Class I. railroads amounted to \$74,027,600 in July, as against \$84,866,400 in the same month of last year, showing a decrease of \$10,838,800, or 12.7 per cent., but approximately \$8,500,000 larger than in June of this year. The July net represented that month's proportion of an annual return at the rate of 4.31 per cent., on a total property valuation of \$19,745,000,000, as compared with a return of 4.93 per cent. on a valuation of \$19,175,000,000 in July, 1923. In both cases the valuation figures are based on the Interstate Commerce Commission's tentative valuation for rate-making purposes as of the end of 1919, plus capital expenditures for subsequent calendar years. Gross earnings of the carriers in July, totalling \$481,296,200, according to the Bureau of Railway Economics, showed a decrease of some \$54,700,000, or 10.2 per cent., from July a year ago, while operating expenses of \$369,711,000 were \$45,037,000, or 10.9 per cent. less. During July 27 railroads were operated at a loss, of which 10 were in the Eastern and 17 in the Western district; in June 38 roads reported operating deficits. Freight traffic in Eastern territory was almost 20 per cent. smaller in volume than in July of last year. For the first seven months of this year, the aggregate net operating income of all first-class railroads in the United States reached \$465,616,601, representing a decrease of \$66,095,989, or 12.4 per cent. from that of the corresponding period of 1923. The seven months' net was equivalent to the seasonal proportion of an annual return at the rate of 4.67 per cent. on property valuation, as against 5.50 per cent. in the 1923 period. It is considered likely that earnings for August will show improvement. For the week ended August 23, 982,248 cars, a new high record for this year, were loaded with revenue freight, that number showing an increase of 29,360 cars over the preceding week, but a decrease of 87,667 from the same week of last year. The largest gains last month were in the movement of coal and miscellaneous freight, although traffic in grain and grain products was heavier than a year ago.

Commodity prices, on the average, continued to rise during August. The advance was not so extensive as in July, although most of the different groups showed gains. Two groups which were conspicuously strong in July, namely, breadstuffs and textiles, declined in August, reflecting apparently the better crop reports and higher estimates last month of prospective harvests. Bradstreet's index number as of September 1st is \$12.8095, showing a gain of 1.4 per cent. over that of July 1st, but a reduction of only eight-tenths of 1 per cent. from September 1st of last year. During August, nine out of thirteen groups of commodities advanced, including provisions, metals, fruits, hides and leather, naval stores, live stock, drugs and chemicals, coal, coke, and miscellaneous products. Among those showing declines were textiles, breadstuffs, oils, and building materials. Of the 106 commodities used in figuring the index number, 41 advanced last month, 21 declined, and 44 remained unchanged.

The cotton crop suffered less deterioration last month than the average for August in the past ten years, according to the Department of Agriculture, whose latest report places the condition of the crop on September 1st at 59.3 per cent. of normal. The department now predicts a total yield of 12,787,000 bales, which is 169,000 bales less than its estimate based on the condition of the crop in the middle of August, but 2,658,000 bales more than last year's actual crop. The loss indicated by the department's report was much less than the trade generally had expected, with the result that the cotton market on Monday, following publication of this condition percentage and crop estimate, broke more than 1 cent a pound. The violent slump carried the New York price for spot cotton down to 24.60 cents a pound, representing a decline of nearly 7 per cent. since the first of this month, and about 35 per cent. from the peak level of last December. What apparently happened was that speculative interests who had been holding cotton on the chance that the Government report might, sooner or later, make a drastic reduc-

tion in the prospective yield, were surprised by the unexpectedly favourable showing in this week's report, and hastily unloaded. In some years, notably in 1920, the Government's final estimate was much larger than the September forecast. That may or may not happen this year, but with the actual carry-over as of August 1st larger than expected, the present outlook, based on the latest report, is that the cotton goods industry will have plenty of raw material to meet its requirements during the coming year, unless consumption should reach unexpected proportions.

The stock market suffered a steady and extensive decline last week, the average price of representative industrial issues falling more than \$4 a share, and that of leading rails nearly \$2, with much heavy losses in certain individual stocks, which for special reasons were depressed by extensive liquidation, and for aggressive short-selling by bearish operators. American Woollen common, for instance, broke about 18 points in two days following the announcement that the quarterly dividend had been passed. Selling pressure is now less in evidence, and there has been some recovery this week from the lowest levels. The market was deprived last week of support from many interests who held off pending the outcome of the election in the State of Maine yesterday. The result, which became known to-day, has apparently strengthened the confidence of those who hope for and predict the re-election of President Coolidge, and this better feeling has been reflected in both stock and bond markets. As cabled reports have probably indicated, the Republican party elected its entire ticket in that State, and won by an unusually large majority over the Democratic candidates for Congress and for the Governorship. The State legislature also remains Republican.

FRANCE.—BUDGET—REVENUE RETURN—EIGHT MONTHS' TRADE—THE BANK'S POLICY.

(FROM OUR CORRESPONDENT.)

PARIS, September 17.

THE Budget for 1925, which it is universally agreed must be so drafted as at least to prepare the way for replacing the national finances on a sound basis, is proving a much harder problem than the new Herriot Ministry at first appeared to realise. It now appears to be generally recognised that not only must the lavish election promises of reduced taxation inevitably be left unfulfilled, but that, on the contrary, the screw must be turned still tighter on the hapless taxpayer. It is admitted by even the Government's supporters, although no public statement has yet been issued to that effect, that there is not the remotest prospect of the 20 per cent. all-round increase in taxation imposed by the last Poincaré Budget being taken off, and that it is extremely doubtful whether even the hated turnover tax, instead of being suppressed, will not have to be changed in an upward direction.

The Finance Act for the present financial year provided for a total estimated expenditure of 29,659,000,000, and for a total revenue of, in round figures, 27 milliards, thereby involving an estimated deficit of 2,000 millions. The yield from taxation for the first eight months of the year, which has largely exceeded Budget estimates, has amounted to 17,195,696,000, of which 15,870,584,000 was derived from ordinary and permanent resources, the balance being represented by 1,081 millions from still outstanding arrears from the special tax on war profits (which expired many months ago), and nearly 39 millions from the liquidation of war stocks. The results of the first two-thirds of the financial year, therefore justify the belief that the eventual deficit will not be more than the two milliards anticipated last spring.

The Government, it is reported, has definitely decided that, come what may, the Budget for 1925 shall be rigorously unified, and shall include, without exception, all revenue during the coming financial year and all expenditure, even to the extent, so far as the disbursements on

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world by placing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

the devastated regions are concerned, of the interest charges in respect of the additional debt to be contracted during the next twelve months. M. Herriot has himself promised that he will tolerate no additional expenditure without revenue being provided to meet it. In these circumstances, increased taxation appears to be inevitable, and there is some alarm as to what particular heresies the Radical, Socialistic-Radical, and Socialist majority now in control propose to rob.

In view of the large amount of additional money that will have to be found, if the Government (as they appear likely to do) carry out their latest decisions, a strenuous effort has been in progress during the past fortnight for the purpose of cutting down all kinds of departmental expenditure. This effort is reported to have resulted in a reduction of last year's estimates by about 1,500 millions. This will make little difference to the general situation, however, as the Government finds itself practically compelled to carry out its undertaking to increase the pay of the vast majority of its servants. To this, if the means to do so can be found, no section of the community will raise objection. The French public servants are notoriously underpaid, and no class in the nation (with the exception, perhaps, of the small *rentiers*) has suffered such undoubted hardships in this respect since the war began. The vast majority of them, in spite of so-called "extra allowances for the increased cost of living," are to-day in receipt of lower pay, proportionately speaking, than they were in 1914. The extra expenditure that will be involved by this act of justice will amount, at the minimum, to 1,200 millions. The deficit to be met from some source or other, if the Budget for 1925 is to be made to balance, will therefore amount to at least 3,000 millions.

The revenue returns for August show that the total yield from taxation of all kinds (exclusive of that from posts, telegraphs, and telephones, which is now included in a separate Budget) amounted to 1,788,508,000, as compared with 2,529½ millions in July, 2,122 millions in June, and 1,968½ millions in May. The drop was partly

due to the fact that August is the holiday month, and partly to the artificial increase in June and July owing to the rush of taxpayers in their desire to avoid the threatened surcharge of 10 per cent. provided for in the last Budget Bill as a penalty for recalcitrants. The abnormally high revenue during July represented the greatest sum ever received in taxation in a single month. Of the total revenue of 1,788½ millions received during August, 1,690 millions was from "normal and permanent" taxation. The total revenue from indirect taxation and State monopolies during the month was 1,435,582,000f, or 68,177,500f in excess of Budget estimates. Of this excess, 53,919,000f was represented by the continued unexpectedly high yield from the turnover tax, which in August produced 334,017,000f, or 76½ millions more than in August, 1923. The effect of the poor situation of the franc is again strikingly shown by the fact that the revenue from Customs duties during August was only 125,665,000f, or over 42 millions below the amount expected from this source. The influence of high taxation and other factors on the purchasing power of the wealthier classes is shown by the poor return from the luxury tax, which last month yielded only 392,000f, barely one-third of the total expected from it, and actually nearly 100,000f less than during August last year.

The foreign trade returns for August show that for the third month in succession there was again a surplus of imports over visible exports, whereas during February, March, April, and May exports each month considerably exceeded imports. August figures were:—Imports, 3,071,943,000f; exports, 2,967,146,000f; deficit, 104,797,000f. This deficit, of course, was more than compensated for by "invisible exports" connected with expenditure by tourists, which is always at its height during August. The comparative figures for the first eight months of 1924 and 1923, in spite of the falling off during the past three months, reveal a balance of exports amounting to 1,218,584,000f:—

	First Eight Months of		Increase in 1924.

Total.....	19047,575,000	27,263,159,000	+ 8,215,584,000

These figures indicate that since the beginning of the year the value of French exports has increased by 44 per cent., as compared with those of the corresponding period of 1923, while imports have increased by 30 per cent. The bulk of the increase in exports, or 6,304,000,000f (equivalent to 62 per cent.) was in manufactured goods. In tonnage there was an increase of 3,064,043 tons in the exports, and of 2,656,767 tons in imports.

The decision of the Bank of France last week to raise the rate charged for advances on securities from 7 to 8 per cent. was directly due to an ingenious new form of speculation which was proving damaging to French credit, and also tending to increase the note circulation. It had been noticed for some time past that many capitalists were again taking advantage of the fact that, in consequence of the drop in the quotations for Rentes and certain issues of short-term bonds, these now yield something in the neighbourhood of 8 per cent., whereas the Bank has been in the habit of making advances on securities of this kind at 7 per cent. Money obtained by taking advantage of these conditions was being extensively used for Bourse speculation, the profits from which furnished a substantial addition to that of 1 per cent. secured by making use of the Bank's accommodating methods. A similar situation arose some time ago, and was brought to an end by similar means to those now adopted. The Bank's discount rate remains unchanged at 6 per cent.

GERMANY.—POLITICS—PRICE POLICY—FINANCES—INDUSTRY—AGRICULTURE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 17.

THE Marx Cabinet has got itself into a difficult position, and it is hardly likely that it will continue without some change in its composition until the Reichstag reassembles next month. The notification to the Powers of the denial of responsibility for the war has been postponed. The pretence is maintained that it will nevertheless be made within, as Dr Stresemann's organ says, "visible time." Dr Stresemann now holds that it would be impossible to enter the League of Nations without first making the notification; but entry into the League of Nations does not seem to be near. The episode has weakened the Cabinet, and at the moment of weakness the German-Nationals have come forward with their demand for Ministerial posts, so creating the anti-Socialist "Bürgerblock." The Nationals declare that they have a right to participate in the carrying through of the Reparations agreement, they having been partly responsible for its sanctioning. The former Chancellor, Dr Wirth, and other non-Socialist Left politicians, condemn the "Bürgerblock" in any form. The Social-Democrats, believing that a General Election would strengthen their numbers, are trying to upset the Cabinet. The Nationals declare that if their terms are not granted they will resort to sharp opposition. As the Cabinet is in conflict with the Socialists on the Food Duties question, Nationalist opposition might bring about a Government defeat.

The Government has taken a number of measures, some of them promised months ago, to bring down the price-level. The aim is partly to counteract the increased price of food, but in the main to increase the competitive ability of industry. Such of the measures as would normally have required new legislation have been put through by decree under the emergency Article 48 of the Constitution. The Sales Tax has been reduced from 2½ to 2 per cent. Taxes which hinder industrial capital transactions have been reduced. The stamp duty on new issues of shares (Gesellschaftssteuer) has been reduced from 7½ to 5 per cent. The pre-war rate was 3 per cent. The stamp duty on debenture issues has been reduced from 4 to 3 per cent.—pre-war rate 2 per cent. Railway freight rates, including the special coal rate, are reduced 10 per cent., and the supplement for transport in covered wagons is reduced from 10 to 5 per cent. It is officially stated that the restoration of the railways in occupied territory has made these reductions of rates financially possible. Telegraph, telephone, postal-order, and post-check fees will be reduced. Silesian coal prices are reduced on an average 10 per cent., and with the restoration of the Westphalian Coal Syndicate, Ruhr coal prices will be reduced by at least 10 per cent. In the credit question the following measures are promised. The Reichsbank will increase by 10 per cent. the ration of credit to industry which was fixed on April 7th. For commercial bills the discount term is prolonged to three months. This will probably lead to a general increase in the use of three months' bills, which hitherto the commercial banks have fought shy of on the ground that they were not rediscountable at the Reichsbank for longer than six to eight weeks. The Reichsbank will also in future discount bank acceptances. Pressure will be brought to bear on the commercial banks to return to normal commission charges. The exchange restrictions, which create much work for the banks, and are adduced as an excuse for the high commissions, will, with certain exceptions not yet stated, be abolished.

These measures are expected to influence prices considerably. Already the interest rate has fallen much, averaging for month-term money in Berlin last week about 17½ per cent. per year, against 27 per cent. in early July, and 72 per cent. at the beginning of May. In Hamburg in early May the rate for such loans rose to 107 per cent. The Reichswirtschaftsrat's inquiry into the prices of textiles brought out the fact that high interest rates were factor of wages was relatively smaller than before the war.

The latest cost-of-living index number is 116. Concerning salaries of clerical and technical employees in the steel and iron industries, the following official data

are published:—Essen, average monthly salary of a clerk, aged 26, 105 gold marks; head book-keeper, 230-257½ gold marks; engineer qualified for difficult independent work, 185 gold marks; engineer in high and responsible position, 230 gold marks. Women clerical employees are paid 90, sometimes 100, per cent. of the salaries of men with the same training. Salaries are somewhat higher in small centres, where the competition to obtain work is not so keen. English apprehensions on the score of very heavy competition from this country are considered exaggerated. German production costs may perhaps be kept very low; but neither the volume of German production nor conditions in the world market make possible a sudden great increase of German exports. It is certain that if Germany can at all create the export surplus necessary for Reparations, she cannot do it except by increasing very largely the whole volume of her trade; with her present import trade, the calculated export surplus would be quite impossible. Professor Gustav Cassel, last week, told a business assembly in Lubeck that to attain a 2,500 million gold-mark export surplus, imports would have to be raised to 12,500 million gold marks, exports, therefore, to 15,000 million gold marks. The figures for 1923 were respectively 6,081 million gold marks and 6,079 million gold marks.

Revenue receipts in the first ten-day term of September totalled 119,973,100 gold marks; expenditure, 97,459,600 gold marks, of which 53,457,700 gold marks were for general administration; 35,000,000 gold marks for subventions to states and municipalities; 893,900 gold marks redemption of Gold Loan; and 7,804,100 gold marks for cost of Reparations deliveries. Gross revenue receipts in August totalled 592,033,933 gold marks, of which 464,613,174 gold marks were for direct taxes and stamp duties, and 126,796,355 gold marks for Customs and Excise. Revenue in the first five months of the financial year, April-August, was 2,689,985,382 gold marks, of which 832.8 millions were from income-tax and 760.8 millions from sales tax.

It is reported that the American potash credit, to a total of 6 million dollars, has been completed, and that a condition is the recognition of German potash bills as first-class discountable paper in New York. The American Ruhr credit is believed to have become perfect by the creation of the Coal Syndicate. This has been at last attained, but only by means of State intervention. In the final negotiations companies and firms representing 90 per cent. of output came to an agreement, including the Thyssen and some other interests which had hitherto held out. The total coal sales represented in the old syndicate were 112½ million metric tons. The Ewald, Rombach, Graf Bismarck, and nine other concerns, including three which are controlled by French or Belgian capital, remained outside the agreement. The Ministry for Industry has now declared that all the outside concerns are compulsorily made members of the syndicate. The term of the new syndicate is for five years. The coal situation is still unfavourable, and stocks at the pits' mouths increase. The general industrial situation improves very slowly, if at all. The last Berlin Labour report shows a stoppage in the increase of unemployment. In the Rhine Province 135,000 unemployed receive public support; but here also the lowest point seems to have been reached. On the bourse there is a good deal of vague talk about an industrial improvement. Relatively favourable reports are published about the rubber industry, which has attained pre-war dimensions, although its proportionate share in the world's output has declined. Imports of rubber, nearly all of which was raw materials, in 1923 totalled 22,863 metric tons, against 32,551 tons in 1913; exports were 19,411 tons, of which 18,032 tons were finished goods, against 29,439 tons, of which 19,706 tons were finished goods, in 1913. The year 1913 was, however, an exceptionally good year, and the 1923 figures exceed considerably those of 1912 and 1911.

Reports on the crops are less favourable. The quality of part of the grain crops is reported to be indifferent, and part of the spring crops had not ripened up to the first week of this month. The area under crops of all kinds this year was 28,244,409 hectares, against 28,075,072 hectares in 1923, and 29,208,424 hectares within the present political frontiers in 1913. Although the total area has de-

clined little, there are great differences for individual crops, in general the bread grains having lost heavily. In 1924 the area under winter wheat was less than in 1913 by 14.7 per cent., spring wheat 9.4 per cent., winter spelt 48.6 per cent., winter rye (the most important crop) 21.1 per cent. The area under oats declined 10.1 per cent., potatoes 2.8 per cent., sugar beet 11.4 per cent. The areas under turnips, rape, flax, and lucerne increased largely. The area under bread grains in 1924 was 29 per cent. of the whole cultivated area, against 34 per cent. in 1913.

The bourse last week and early this week was slack, with a slight improvement yesterday. The present main influence on speculators is the severity or otherwise with which companies scale down their capital in compiling their new gold mark balance-sheets; and rumours of drastic scaling down dominated the market last week. The small holders of shares feel themselves injured by this policy. The *Frankfurter Zeitung's* index shows a fall of stocks in the week September 5-12th from 601.83 to 519.5, and of paper mark loans from 9.99 to 9.41.

AUSTRIA.—THE COMMISSIONER AND THE FINANCE MINISTER—FINANCIAL AND ECONOMIC POSITION—BALANCE OF TRADE—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, September 1.

THE representatives of the League of Nations have arrived in Vienna and are again investigating the financial and economic conditions of this country in order to decide whether the increase of expenditure in the "Normal Budget" as asked for by the Austrian Government can be recommended to the League. On account of this, political activity, which during the summer months has been very quiet, has revived earlier than usual. A point for very lively discussion was the last report of General Commissioner Zimmerman, whose severe criticisms on the policy of the Treasury and the National Bank were felt by many parties to be unjust. The Austrian Finance Minister particularly is of the opinion that the financial situation is much better than represented by the General Commissioner, and also that his criticisms on the National Bank are uncalled for. The President of the National Bank, Dr Reisch, has joined in the discussion, and has addressed an open letter to the General Commissioner in which he energetically defends the policy of the National Bank. The decisions which the delegates of the League of Nations in Vienna will arrive at will probably also have political consequences. If it proves impossible to eliminate the differences between the Austrian Treasury and the General Commissioner and secure the increase of the Budget, a reconstruction of the Cabinet is hardly to be avoided.

The difference of opinion between the General Commissioner and the Austrian Finance Minister regarding the situation of the State Finances may be explained by their different standpoints according to their respective positions. While the Finance Minister expects that the good result in revenues obtained last year will continue, the General Commissioner is of the opinion that the population is over-taxed, and therefore the revenue will decrease. He is in favour of lowering taxation and making up the loss in the revenue by cutting down expenditure. The Budget for the year 1924 now shows, after its last revision, a total revenue of 8,679 milliards, against an expenditure of 9,845 milliard kronen, so that the deficit amounts to 1,166 milliard kronen. According to a recent statement by the Finance Minister, the estimate for 1925 will show a reduction in the revenue of 951 milliard kronen, and a reduction in expenditure of 1,535 milliard kronen. This estimate will contain investments amounting to 818 milliard kronen. It is doubtful if the League of Nations will consent to these.

The financial crisis through which Austria has passed during recent months seems to have come to an end. During August no bank failed, but some small firms which had continued their activities hoping for a revival on the market, have closed down. The fact that the Anglo-Austrian Bank has paid no dividend on its ordinary

shares for the past business year, and continuously decreases its business activities in Austria, has created a bad impression in financial circles. The industrial situation is not uniform, but cannot generally be judged as bad. The brewery and electrical industries, some metal goods factories, and some agricultural machinery factories, are fully employed, whilst the coal and steel industries are rather badly off. A revival of German competition is generally feared, inasmuch as the working day there has been extended from eight to nine and ten hours.

The balance of trade shows a further deficit, imports during the first half-year 1924 amounting to 1,045.7 million Goldkronen, and exports to only 528.9 million Goldkronen, so that the deficit amounts to 516.8 million Goldkronen. Last year the deficit was only 310.3 million. The following table shows the most interesting items referring to foreign trade in 1923 and 1924:—

(In Million Goldkronen.)

	First Half-year.			
	Imports.		Exports.	
	1923.	1924.	1923.	1924.
Live stock	48.9	54.9	7.3	3.1
Foodstuffs and drinks	214.1	256.9	8.3	9.4
Mineral fuel	88.8	107.4	1.0	0.6
Other raw materials and partly manufactured goods	153.1	232.5	78.6	108.2
Finished goods	258.9	394.0	358.3	407.6

During last month the National Bank increased the bank rate from 12 per cent. to 15 per cent., and left no doubt that this measure was mainly due to the advice of influential English financial circles. The National Bank and the Treasury expect from this measure a stronger influx of foreign capital, and also hope that Austrian capitalists will invest moneys which hitherto have remained idle. The increase of the Bank rate has roused varying comments. Some people defend it, while others are of the opinion that however high the Bank rate is fixed it does not necessarily increase the capital available, but that, in the first place, the return of confidence is necessary. As a matter of fact, new sources of capital abroad which remained closed for some time have been re-opened.

Although the tension on the stock market has been somewhat relieved in the month under review, business was spasmodic, and at times the turnover was hardly worth mentioning; the reason for this is partly the lack of new buyers, partly the restrictions against bear selling. In general, however, the level of quotations remained steady. There was only a heavy slump in the shares of the companies founded by a company promoter, who founded during last year a number of various companies—such as glass, porcelain, chemicals and electricity companies—which, being badly financed, were not able to withstand the financial crisis. The total number of shares issued by him amounts to about 40 million, and were mostly acquired by small investors. The money market was remarkably easy, the money rates moving between $\frac{1}{2}$ and $\frac{3}{4}$ per cent. per week.

SOUTH CHINA.—A HONGKONG STRIKE—ANTI FOREIGN CAMPAIGN—DR SUN YAT SEN'S ACTIVITIES.

(FROM OUR CORRESPONDENT.)

HONGKONG, August 5.

THE past month has seen no improvement in the unhappy condition of trade in South China. Despite a period of quietness in the civil war zone, and the absence of any serious piracies or bandit outrages, fresh troubles have cropped up to interfere with commerce generally. Floods in the districts bordering the Canton River delta have been the worst for many years, and have caused much loss of life and damage to crops, while a strike of all Chinese employed on the foreign settlement of Canton (both domestic servants and office workers) has led to a suspension of business, particularly affecting the export of silk.

This strike has lasted three weeks, and still continues. It has caused much concern here principally on account of its anti-foreign character, and there is a certain amount of apprehension as to what it may lead to. Possibly the dispute may be settled without much further delay and pass into oblivion. On the other hand, it may be the starting-point of a campaign to oust the foreigners, and particularly the British, from the markets of South China. The strikers are mere pawns in the hands of a few well-known labour agitators, who, with the tacit approval of Dr Sun Yat Sen, are endeavouring to work up an outburst of anti-foreign feeling. Dr Sun has several Russians on his staff, and there seems little doubt that the Labour Union has derived a certain amount of financial assistance from Moscow.

The trouble revolves round the framing of new regulations for the closer control of persons, other than residents, using the Shameen, as the foreign concession of Canton is called. A provisional set of regulations was drawn up by the British and French Municipal Councils last April and submitted to the Chinese Chamber of Commerce, with the idea of eliciting any points which might occur to the Chinese mind, and also to allow publicity to be given to the proposals. Owing to the dilatory methods of the Chamber, no agreement had been reached when an event occurred which brought matters to a head. This was the unsuccessful attempt to assassinate the Governor-General of Indo-China while the guest of the French community at a hotel on the British portion of the Shameen. This outrage was responsible for the death of several French residents, and naturally caused a great deal of excitement. Statements were made in the heat of the moment which caused further friction between the Chinese authorities and the foreign community, and in the end all Chinese employed on the Shameen deserted their posts at the command of the Labour Union. In most cases the strikers left unwillingly, under the threat of loss of life in the event of their disobeying the Union's orders.

The foreign residents accepted the situation philosophically, and made every preparation for a siege, which now turns out to have been quite justified. Negotiations were opened up by the Labour Union within a few days of the commencement of the strike, and the municipal councils consented to discuss terms. In fact, the councils went to an extreme length in conceding the demands of the other side, which, curiously enough, included no representative of the strikers, and all outstanding points had been agreed to with the exception of the last. This was a demand that the Chinese police constables should be reinstated. The council demurred, and protested that these officials had deserted their posts and could not be regarded as on the same footing as the other strikers. The union retorted that the constables had taken no oath and were ordinary employees. A long argument ensued, and finally the Labour leaders put forward an offer which showed little regard for the interests of their protégés. All that was required was that the police should be reinstated, but if the council wished to dismiss them next day no objection would be raised. The council obviously could not be a party to such a bargain, and negotiations were broken off. This was a blow to the organisers of the strike, who had counted on a successful issue, and had prepared to celebrate the victory by marching on to the Shameen with bands playing and flags flying.

All this happened some two weeks ago, since when no further change in the situation has been reported. Some of the strikers have come down to Hongkong, where living is cheaper, and certainly more comfortable. Those who remained behind are having a wretched time owing to scarcity of food and lack of the strike pay which was lavishly promised. The Canton Government does nothing openly, but it is surmised that their policy is to prolong the strike in order to give time for the anti-foreign agitation to gain ground. Propaganda of a distinctly Russian flavour is being broadcast, and the translations which appear in the papers here show it to be childish nonsense. It is difficult to refute, however, because there is no medium of counter propaganda, the Canton Press being under the strict censorship set up by Sun Yat Sen.

The deadlock which prevails is exasperating to the foreign merchant, but to the Chinese community it is doing untold harm. The cessation of business on Shameen means that the Chinese merchant cannot sell his

silk, and the producer has no funds to pay his employees. This all reacts on the prosperity of the province, and the Chinese stand to lose far more than the foreigners.

A graver aspect of the affair is the open violation of Treaty Rights, which gave to the foreigner full freedom to trade in the Treaty Ports without interference. During the past year or two one incident after another has occurred showing that breaches of these agreements may be made by the Chinese without fear of any penalties being imposed. True, there is invariably a protest lodged by diplomatic representatives, followed by an exchange of notes; but the fact that the Central Government has no authority outside Peking is poor comfort to the harassed merchant. Residents in the Far East fully realise that the Foreign Powers are busily engaged in setting Europe on its legs, but they do feel that the time has come when a show of armed force would perhaps bring some of the Tutchuns to their senses and awaken them to their responsibility for the protection of the foreigner in their midst.

Letters to the Editor.

THE PROPOSED RUSSIAN LOAN.

TO THE EDITOR OF THE ECONOMIST.

SIR.—All the arguments hitherto levelled against the Russian treaties seem effectually to culminate in the article, "The Russian Loan," published in your issue of September 13th, and containing a number of definite statements either bearing directly on the treaties, or on present-day conditions in Russia, which, at first sight, would seem to go a long way towards discrediting the British-Soviet settlement.

I venture, however, to maintain that a large number of these statements are based on a complete misrepresentation of actual fact. Thus, in stating the terms for the loan to Austria, your article points out that the assistance extended to that country was made conditional upon her carrying out numerous financial reforms, including the balancing of her budget, and it maintains that none of these conditions are fulfilled in the case of Russia.

I will not enlarge upon the fallacy—as it must seem to many—of a parallel between Russia and Austria as economic and political entities, nor will I stress the all-too-obvious fact that whilst Austria was, at the time when outside financial assistance was solicited, vanquished and prostrate, Russia has neither been defeated, nor is she any longer in the throes of economic disruption. It must be pointed out, however, that Russia was the first country amongst those whose financial system was completely shattered by inflation, to stabilise her currency, and place her budget on a sound basis, and that she alone of all countries did this without any outside help. Whether this stabilisation is to prove permanent is, after all, in a certain measure dependent upon the good sense of the members of the world's family of nations. If Great Britain persisted in the policy of economic ostracism towards Russia, if she scrapped the new agreement as suggested, she would be the first to suffer from the consequences of her shortsightedness.

As to the charge brought against Russia of turning out voluminous and unreliable statistics, I will not here attempt to disclaim this statement at any length, but I venture to hope that this statement is not entirely founded upon proofs as gratuitous as those advanced in your article. To call Russia's capital requirements, as put forward at the Hague "imaginative," and especially to regard them as incongruous with the sum at present required, as is implied in the article which appeared in your last week's issue, and was definitely stated in the recently published Liberal pamphlet on the Russian treaties, is surely to ignore the essential difference of the objects of the 1922 conferences, and that of 1924, and to overlook the change of circumstances in Russia itself.

For it must be remembered that the real point at issue both at Genoa and the Hague was the economic rehabilitation of Europe, for the achievement of which nothing short of the complete economic rehabilitation of Russia to the pre-war level was then deemed adequate.

At that time, too, financial assistance to Russia, who had just embarked on the period of reconstruction, was contemplated on an international scale.

Now, however, the objects aimed at are no longer the same; they are confined to the restoration of full economic intercourse between Great Britain and Russia, to the mutual advantage of both, whilst Russia herself has in recent years made very considerable progress towards the restoration of her economy.

As for the statement that no confidence can be felt that the Russian bureaucracy will make the best use of a loan in allocating it amongst large numbers of rival claimants—a charge so unfair can only be founded on an insufficiently careful reading of the treaties themselves. For in Article 12 of the General Treaty it is definitely stipulated that "the amount, terms and conditions of the loan and the purposes to which it will be applied shall be defined" in the second treaty, which is provided for in Article 11.

In conclusion, I may perhaps be forgiven for turning to the criticisms made in the first part of your article, and based on the report of the League of Nations in 1922, on the conditions of Russian agriculture, wherein, as you say, it was pointed out that the disaster of the famine was due not merely to the drought, but to the fact that in the preceding years the cultivated area of Russia had dropped to not much more than half the area cultivated before the war—a perfectly true statement in itself. But whilst ample weight and currency is given in explanation of these circumstances to reasons both real and imaginary, one of the root causes which led to the deplorable state of affairs in Russia is entirely overlooked.

The fact is that agricultural methods under the Tzarist régime were extremely primitive. The areas sown depended greatly upon the supply of animal manures, since artificial manures were all but unknown. The war, and then persistent attacks by "White" forces, with the assistance of foreign interventionists, caused havoc in the peasants' economy by ruthless requisitioning and the slaughtering of cattle.

The appalling reduction in the numbers of cattle, with the consequent shortage of animal manure, was one of the chief reasons of the peasantry's failure until recently to cultivate a sufficient area for the requirements of the country.

In thanking you in advance for the hospitality of your columns,—I am, Sir, your obedient servant,

S. M. KAZARINE.

Authors' Club, 2 Whitehall court, S.W. 1.

September 17th, 1924.

[Mr Kazarine's remarks about "ostracising" Russia are irrelevant. From the business standpoint, Russia has ostracised herself by repudiating all the rules of the game. She entirely fails to re-establish her position by the conditional concessions which she makes to her creditors' claims in the proposed treaty.—Ed., Econ.]

THE ADULTERATION OF LEATHER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the letter on the above matter from Mr Fraser M. Moffat, of New York, which appeared in your issue of September 6th, and note that he takes exception to my statement that American tanners weight their leather by artificial means. Well, better late than never, for I have seen American sole leather sides in Bermondsey warehouses, and in Northampton and Leicester, simply covered on the grain side with a whitish "spue," or efflorescence, which on analysis turned out to be glucose and epsom salts. It is quite possible—as Mr Moffat says—that barium is not used for weighting purposes by American tanners, but he knows as well as the writer that American sole leathers are usually "doped" with glucose and other substances to add to the weight of the material.

As a matter of fact, American tanners make no secret of this system of adding weight to leather, it being a recognised practice. The addition of glucose on a small scale is perhaps necessary in a dry climate like that of America, as it keeps the leather mellow, but when such loaded leather comes to this country and encounters the humidity of the British climate, the weighting becomes at once apparent. Some years ago, at a meeting of the leather trade in London, a truthful American tanner told

his audience that he "doped his leather as much as his customers would stand." I have also seen analyses of American sole leather which showed a high percentage of adulteration, but as our tanners seem to have beaten American sole leather almost out of our own market, I hear little complaint of adulteration now of added weight—for obvious reasons.

I do not for a moment wish to infer that British tanners are averse to "loading" their sole leathers; they are past-masters in the art of getting in uncombined tannins which add to the weight of the leather, but, as a whole, they do not use either glucose or Epsom salts for the purpose. I am pleased to hear that "American sole leather is conceded to be of higher standard than ever before"; perhaps this is because our American friends have seen the error of their ways! Years ago American hemlock tanned sole was the best of its kind in the world, but as hemlock bark became scarce and dear, the waterproof and wear-resisting qualities gradually fell off in other American tannages; so much so that very little American sole leather is now imported into this country.

—Yours faithfully,

"YOUR BERMONDSEY CORRESPONDENT."

London, September 17th, 1924.

Books and Publications.

THE FINANCIAL SITUATION OF FRANCE.

THE contrast in recent years between the public and private economy of France has been very striking. Here is a country whose industries flourish, whose transport system is under extensive development, and whose unemployment is practically non-existent—in June of this year only 643 persons received unemployment relief; yet her Budget fails to balance, her national debt piles up, and her currency, debilitated by the needs of the Treasury, shivers in the wind of speculation and trembles at the breath of the seasons. Vast new resources have added to her private opulence. France has acquired the iron ore and the developed industries, textile and metallurgical, of Alsace-Lorraine. The devastation of the war has been, for all practical purposes, completely repaired. Her factories, enlarged and newly equipped with the best devices of modern invention, have leaped forward in efficiency since the war. Her surplus wealth enables vast schemes of electrification to be planned and carried out on 6,000 miles of her railways; her ports are being enlarged; her canals and inland waterways extended and improved; even her roads receive favourable notice. For two years her industry, hampered only by shortage of labour, has worked at full blast; and employment for many thousands of foreigners has been found within her frontiers. Yet the boundary between private and public affairs once traversed, the scene changes from affluence to poverty; the inhabitants of the latter domain move in paper rags; their future is uncertain and their present harassed.

The causes of this unhappy state of the French national finances have been often discussed. The latest study* of their origin lays bare the circumstances in which they arose. The story is a melancholy one of hesitation and difficulty.

Before the war the taxes of France were chiefly levied on outward signs of prosperity. Such marks are most obvious and most significant amongst an agricultural population, and fiscal systems which employ such criteria operate somewhat unjustly in epochs of industrial development. Reform was therefore desired even before 1914, and plans for its institution were laid before the tempest of the war broke loose. The troubles which began in August, 1914, delayed and circumscribed the sweeping improvements originally intended, but some, even during the years of war, were carried through, and after victory a sweeping reform was concluded in 1920. This reform based the French system of taxation on real wealth; it assessed personal incomes and gathered its revenues from the individual. Businesses were not neglected; a turnover tax and a business profits tax were forged; their power and their yield are great.

Unfortunately, the delay of this reform caused the fiscal

system to sustain great hardships during the early years of the war. Expenditure increased by leaps and bounds, but revenue in 1914-15-16 declined even below the level attained in 1913. Then an improvement set in, which has persisted steadily. The gap between expenditure and revenue was widest in 1918, when a deficit of nearly 50 milliard francs was incurred; since then, expenditure, except in 1920, has diminished, and revenue has constantly increased. At the end of 1923 the fatal result of this depressing history was recorded. France then had spent, since 1913, 426 milliards; she had levied in taxes only 126 milliards; her internal debt had attained the total of 300 milliards; and her foreign borrowing had aggregated about 140 milliards—i.e., her total debt amounted to some 440 milliards of francs. In the past, hopes of financial relief have been largely pinned on the receipt of Reparations from Germany, and French statesmen have repeatedly made repayment of their foreign debt contingent upon these; but the most sanguine economists no longer expect this straddle-back method to operate to the world's entire satisfaction.

M. Germain Martin presents a full, clear detailed analysis of French financial methods and reforms. He traces the history of the changes which have come about since 1914, and explains the difficulties of finance during the war. His criticism is acute and far-reaching. Especially interesting is his exposition of the methods of the Treasury. The short-term bonds which it issued, especially the Bons de la Défense Nationale, enabled currency to be economised, and thus operated in fact, though not in intention, to increase the supply of currency. He explains how the note issue of the Bank of France came to be expanded. His customary perspicacity flags when he examines the factors which operate on the value of the franc, and he does not seem to be clearly cognisant of the exact workings of those deep irresistible forces which maintain, raise, or depress the purchasing power of a currency. Nor is his exposition of the economics of reparations satisfactory.

These are the chief flaws which mar an otherwise admirable book. Nevertheless, it cannot be whole-heartedly recommended for study by any except experts especially concerned with the detailed development of French finance. The book is far too long for the general reader—it extends to over 850 quarto pages. Most meticulous attention is bestowed, even upon minutiae. Furthermore, its format is unfortunate; instead of being printed, it apparently has been multigraphed from a written copy, and the cursive script, uneven as it is in size, proves very fatiguing to the reader. In spite of these impediments to popularity, M. Germain Martin's book deserves to be examined by all concerned to possess clear ideas about French financial history; whilst exhaustive students of that extensive, intricate, bewildering subject will be grateful for so lucid, so learned, and so competent a guide.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
September 24.

ACCOUNT,
September 25.

THE growing belief that there is likely to be a General Election some time within the next three months fails to exercise any restraining effect upon the business which is increasing daily in the Stock Exchange markets. The broad trend of public interest flows into two channels, the one towards British Government stocks, and the other towards industrials. Mining markets are neglected, and oil shares are left very largely to the hands of the professionals.

The strength of the 3½ per cent. Conversion stock is one of the outstanding features of the week. It is pointed out that the 4½ per cent. Conversion is a little cheaper so far as yield is concerned, but demand insists upon having the 3½ per cent., and the price has risen sharply. The War Loan moved up to 102½, and other British Government stocks, especially Funding, exhibit a strong appearance. Gilt-edged stocks, as a whole, are better, and the withholding of new issues acts as a tonic to prices in this department.

The violence of the gamble in German bonds has subsided to a noticeable extent. The big lines of stock which had been previously changing hands are less dealt in, and the speculators are now the chief actors in this drama. French bonds move up and down within narrow margins of price. There is not a great deal doing in foreigners. Speculation toys with the possibility of the price at which the new German loan will be forthcoming. Some people guess 6 per cent. at 80, others 7 per cent. at 90; but these are, of course, merely personal estimates.

Home Railway stocks have disappointed recent hopes of improvement by a fresh falling away in their prices. No one is taking any active interest in them, and the chance of a General Election is held to be a bear point, if anything, for the Home Railway industry. Grand Trunk Pacific debenture has also gone back, and Mexican Rails are heavy. Argentines keep fairly firm, the declaration of the anticipated dividends on Buenos Ayres Western, Buenos Ayres Great Southern, and Central Argentine stocks serving to keep the market in a good humour. Brazilian railways, together with Brazilian Government, traction, and coffee issues, are generally higher. Brazilian warrants, however, gave way on the passing of the interim dividend.

Rubber shares have developed further activity, the statistical position being held responsible for a sudden inrush of public inquiry, accompanied by a certain amount of willingness to buy shares. The tea market, after looking somewhat glum, cheered up towards the latter part of the week, though speculation has fallen off, as compared with a fortnight ago, to a noticeable extent. The oil market remains professional, as already noted. Shipping shares have been awakened by the better state of affairs in the freight market, and many rises in shipping stocks stand out as a feature of the week. The iron and steel market is flat, owing to renewed fears of German competition and to the passing of the Pearson and Knowles preference dividend. This depression has also affected colliery and similar shares. Brisk rises occurred in a few of the tobacco shares, upon amalgamation and other rumours, but the rises have tempted selling, and the best prices were not held. Courtaulds dropped to 50s 6d, before recovering a sixteenth. The textile market, as a whole, is a good one. Celanese are unfavourably affected by the report, showing another loss in respect of the year recently ended. Gas stocks are better, continuing their seasonal rise,

while the proposed absorption by the Gas Light and Coke Company of the Brentford Gas, has aroused lively interest. Banking and insurance shares keep firm, on the whole. The Dunlop proposals for reorganisation of the company are expected to be passed at the meeting next week, and the shares are steady. The wireless and cable groups show no fresh developments, but the strength of Automatic Telephones has been qualified by the issue of new shares at 21s 6d. Cable Construction shares remain a quiet market after the reaction which overtook prices, following upon their breathless rises. The electricity supply group marks time, holding its prices as the time draws near when Parliament shall again consider the questions which surround the future of the undertakings.

Kafirs are in very quiet case, and there is scarcely anything stirring in the market. It appears as though labour unrest were settling down at the Cape. Amongst Rhodesians, the fall in Cam and Motors is almost the only movement of consequence during the week. Tin has given way very heavily, the fall dragging in its train the prices of Malayan and West African tin shares, though the reaction in these has been comparatively slight. Porcupine Davidsons and Esperanzas both keep in the neighbourhood of 6d. Copper shares are somewhat irregular, and in the miscellaneous sections of the mining market the dealers complain, with justification, that the public interest has diminished to a very low ebb.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Melbourne and Metropolitan Tramways Board.—Issue of £700,000 5 per cent. stock, 1944, at 98 per cent. The stock is repayable at par on October 1, 1944, and the Board reserves no power to anticipate that date. The proceeds of the loan are required mainly for the conversion of cable lines to electric traction. The Board is a statutory body, charged with the operation of tramways in the capital of Victoria and in 27 adjoining municipalities, and controls 125 miles of track. During the year to June 30th last traffic receipts amounted to £1,870,300. After meeting debenture interest there was a surplus of £125,700. The capital outlay to the end of the year was £5,103,000, against which debenture and other liabilities, including contracts for work in progress, aggregated £2,367,800. In addition to the £700,000 now offered here, £1,000,000 is being raised in Australia. Should revenue at any time not produce sufficient to meet charges, the Board has power to levy a rate on the area served to make up the deficiency, but it has never yet been compelled to do so. The capital value of the rateable property within the jurisdiction of the Board is estimated at £240,000,000. The population of the area served by the tramways is 668,000, and the extent of such area 192,000 acres. The Board consists of seven members appointed by the Governor in Council of Victoria. Holders of the stock not domiciled in Victoria are not subject to the taxes of this State. A good investment in its class.

Scottish United Investors, Limited.—We are informed that the lists for the Scottish United Investors, Limited, prospectus were closed on September 16th at 11 o'clock, the shares having been largely over-applied for.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

NOBEL INDUSTRIES, LIMITED.

DEVELOPMENTS AT HOME AND ABROAD.

SIR HARRY MCGOWAN ON THE POSITION.

The 5th ordinary general meeting of Nobel Industries, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Sir Harry McGowan, K.B.E. (chairman and managing director), presiding.

The secretary (Sir Josiah Stamp, G.B.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I will open my survey by dealing first with our chief line of manufacture, blasting explosives and accessories. You will be glad to learn that during the past few years we have been, and still are, rapidly consolidating our position in these important products. The home trade, as you are doubtless aware, is an important part of our business, and while one must always expect criticism by consumers, we know from day to day contact with our customers that they are satisfied with the service we are giving them and with our selling prices. I hold that they have every reason to be satisfied, because our present-day selling prices compare most favourably with those ruling prior to the war. This I would emphasise has been rendered possible only by the policy of concentration of manufacture and scientific research adopted by your company, which have enabled us to reduce our selling prices in the home market on many occasions during the past three years. I would remind you that these prices stand on their own merits, unassisted by tariffs or other artificial aids. We know and fully appreciate the risks attached to the miners' calling, and leave nothing undone to ensure that the highest quality explosives are produced at our various factories throughout the country. Furthermore, we spend large sums of money annually in our efforts to reach still higher standards.

THE CANADIAN COMPANY.

Leaving the home market, you are aware that we possess a large interest in Canadian Explosives, Limited, a company formed some years ago in conjunction with influential American manufacturers. This company owns factories in Eastern and Western Canada, and with its associated concerns supplies the major part of the requirements of blasting explosives and accessories in that great Dominion. I returned about a fortnight ago from Canada, and am happy to say that that company has a highly efficient organisation, is doing well, and that its prospects are excellent. Canadian mining developments are progressing steadily, and we can look forward with every confidence to the future of the explosives trade in Canada.

In South America our business is on a satisfactory basis. The Chilean Explosives Company, to which I referred last year, is now operating, and while we have met with the usual difficulties incidental to the starting up of any new factory, especially so highly technical as that for explosives, we anticipate that your Chilean company will in due course become the main source of supply of explosives for the nitrate oficinas in Chili and the great copper and other mines in Chili, Bolivia, and the neighbouring countries.

SOUTH AFRICAN DEVELOPMENTS.

Culminating in a visit I paid to South Africa towards the end of last year, together with some of my colleagues, important negotiations were completed, as a result of which the Cape Explosives works, owned wholly by De Beers Consolidated Mines, were merged with Nobel's interests in South Africa into a new company under the title of African Explosives and Industries, Limited—the shareholders of the new company being ourselves and the De Beers Company. The new company possesses two large explosives factories, one near Cape Town, and one near Johannesburg, and also a factory near Durban, where are produced fertilisers, insecticides and cognate articles.

We have established excellent relations with the various groups of mines on the Rand, which, as you know, are large consumers of explosives, and contracts have been arranged with those groups covering a large percentage of our output over a long period of years on terms satisfactory both to us and to those important consumers. From a mining point of view the South African market holds out great possibilities. Its mineral fields are many and

valuable, and, apart from the established gold-mining on the Rand, most mining people hold the view that base metals will be found in large quantities in other parts of South Africa. In countries further north, such as Tanganyika, Kenya, Uganda, &c., I see a growing outlet for explosives in railway and public works construction. There is no reason to anticipate anything but a satisfactory outcome from the consolidation of interests in that important area, and from the manufacturing and other economies which must flow therefrom.

After our work in South Africa was finished, one of my colleagues proceeded to Australia, and the result of his efforts has been still further to strengthen our position and prepare for our future activities in that extensive field.

PROSPECTS IN EUROPE.

As regards the European Continent, the friendly arrangements which exist with the French, Belgian, and Spanish manufacturers continue to work satisfactorily.

Some three years ago, although world-wide conditions, particularly those obtaining in the Balkans, were somewhat obscure, we realised that in many important fields mining and industrial developments must come in the near future, and we therefore decided to invest money in the explosives industry there. Knowing the advantages from psychological and political points of view of association with local interests, we considered it wise to have the co-operation of those interests in our local ventures. In pursuance of that policy, we acquired interests in explosives and fuse factories in Czechoslovakia, Hungary, and Roumania, and I am glad to say that all those factories are now operating profitably and to our entire satisfaction. Not only do we benefit by our capital participation in those companies, but the associations thus created also provide direct contact with the Government in those countries, which should result in remunerative business in certain of the products of our home factories.

Russia up till now has not attracted us, but if one day that vast country recovers, and things do begin to improve, we shall not be behind in looking for further outlets for our products there.

In the Far Eastern countries, such as India and China, we are well established, and business there has been well maintained.

The picture I have given you will show that in the explosives and accessories part of our business throughout the world we are on solid foundation.

THE METAL INDUSTRY.

That section of our business which is next in importance is the metal industry. You will appreciate the difficulties attendant on the change from warlike conditions to peaceful pursuits that applied to those of our companies engaged in that branch. However, by application of scientific factory administration, we are now producing a superior quality of goods as compared to pre-war days, and I am pleased to say that the companies producing rolled metal and other metal products are, in consequence, in excellent shape, and doing a steadily increasing volume of business over the whole range of products. In particular, our metallic ammunition reaches the highest standards, and is much appreciated by Government authorities, and we receive nothing but commendation for the quality of the ammunition now sent out. It is expected that this end of our business will continue to contribute largely to the revenue of Nobel Industries.

Allied to the metal end is the sporting ammunition branch of our business. This is a field where research has wide scope, and we are continuously spending large sums of money to improve the quality of our products. Complaints reach us from time to time from sportsmen as to the selling prices of sporting ammunition, but every effort is being made to reduce costs of manufacture, which can be reflected in selling prices. To assist us in this direction, I would impress on users of ammunition the desirability of confining their orders to British-made goods. It is not necessary for me to point out that volume is an important factor in costs of production, and support given to Continental makes of ammunition must necessarily lessen our chance of reducing costs.

The Sunbeam cycle and motor-cycle, the Amac carburettor, and the Rotax motor accessories continue to hold a pre-eminent position in their respective fields, despite highly competitive conditions, and are finding increasing favour in the export markets. The same may be said of our manufacture of artificial leather.

INVESTMENTS.

Now let me give you a short general survey of the position of our chief industrial holdings:—

General Motors Corporation.—During my recent visit to the States I spent much time with the officials of that company, and while its trade, in common with industries generally in the United States, has suffered something of a setback since the beginning of April, there was a noticeable improvement from the beginning of July, slow but gradual, and the remaining part of this year holds

The Anglo-South American Bank Limited.

THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,
54 Offices in the principal countries of
LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York), and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

out better prospects to the motor industry in America than were anticipated a few months back.

The slack time experienced recently has enabled the management to introduce some important improvements impossible in boom times, when the factories are working to full capacity. The quality of the General Motors' products is continually being improved, and I found nothing but the greatest confidence in the future of the company.

One satisfactory feature of the position is that this temporary depression did not force motor manufacturers to reduce prices; on the contrary, the prospects of the future are such that the market accepted substantial advances in selling prices on practically every car of consequence. The more one investigates the position, the more one realises that the motor industry of America is rapidly assuming stable conditions.

Our holdings in the Dunlop Rubber and British Celanese Companies remain unaltered, and more details as to the latter will be given when I address the shareholders of that company a week hence. All I can say at this stage is that the company's position shows a decided improvement. The improved position of the Dunlop Company has been fully explained by its chairman at the recent meeting of shareholders.

Taken as a whole, our other investments are progressing satisfactorily. In a company with many ramifications like ours, there naturally must be some investments not doing as well as we would like; but in our case these are relatively unimportant, and have an inappreciable effect on the fundamental strength of our company.

FINANCIAL POSITION.

After dealing with the balance-sheet of the company, the Chairman continued: I now propose to complete the picture by reviewing the position of the Merger as a whole, and giving you a consolidated statement, as at December 31, 1923, of our assets and liabilities as they appear if those constituent companies and Nobel Industries, Limited, are regarded as a single business. This consolidation covers the assets and liabilities of 29 companies as against 34 last year, several having dropped out owing to the completion of voluntary liquidations. As you are aware, the unification of the business in the interests of economy and the elimination of redundant capacity or unsuitable units, was undertaken immediately after the Merger was formed, and the liquidation of some of the companies was the natural outcome. Several such liquidations remain to be completed.

The total assets (not including cost of debenture issue) amount to £23,541,935, as against liabilities of £4,959,658, giving a surplus belonging to Nobel Industries of £18,582,277. Against that must be set Nobel Industries share capital issued, £15,922,513, giving a surplus above share capital at December 31, 1923, of £2,659,764.

The surplus above share capital at December 31, 1922, was £2,363,658. I informed you in previous years that this surplus was then subject to, and sufficient to cover, three kinds of contingencies: (1) Prospective deficiencies due to liquidations of redundant factories, &c.; (2) estimated possible depreciation in the values of minor unquoted investments in industrial undertakings; and (3) differences between the market value of quoted securities at that time, and their cost to the company or its constituents.

Under the first two heads, before arriving at the surplus, effect has actually been given in the figures to various provisions which were in contemplation in previous years. The differences under the third head amounted to less than in previous years, so that the net surplus, apart from the obvious increase above shown, has less to be set against it in the way of possible contingencies at December, 1923, than as at December, 1922, and the comfortable margin of actual asset value over and above the share capital which existed in 1922 has substantially improved.

GENERAL OUTLOOK.

With the recovery of the world's trade which should result from the progressive settlement of the European problems, I foresee development in countries hitherto somewhat backward, and nothing will be left undone by us to ensure that we take full advantage of opportunities as they occur not only in the Empire, but in other parts of the world.

We must show enterprise in this matter, but that enterprise must be supported by efficiency. To be successful in competition low selling prices are necessary, and therefore the first essential is low cost of production. It gives me great pleasure to tell you now that over the past four years, as a result of keen striving on the part of each one in our organisation, I see continuously gratifying results in the direction of efficiency and consequent reduction in costs of our various products. In this connection we must never slacken, and we are spending considerable sums of money annually in research to ensure that the progress in the efficiency of our manufacturing operations is maintained in the forefront.

Some people hold the opinion that a merging of similar interests destroys initiative. It may be true in regard to some industries,

but it has not proved to be so in ours. A careful study of costs and efficiency results prevents slackening of effort on the part of any of us, and when properly administered, I feel sure Merger operates, not merely to the advantage of the shareholders, but even more so to benefit the country at large.

I feel convinced that the salvation of this country must lie in the direction of financial merging of those industries which have a surplus of productive capacity over consumption, as it is only by scientific concentration in the most efficient elements, and by making the most efficient and progressive the standard for all, that we can hope to withstand the serious competition which will ensue when Continental countries recover.

So far we are quite satisfied with the present year's trading, and I see no reason to suppose that the complete year's figures for 1924 will be less satisfactory than those for 1923.

In these circumstances, your directors will consider at an early date whether the time is not opportune to adopt a policy of the payment of an interim dividend on the ordinary shares, and it is possible that towards the end of this year we may be able to make a declaration on the subject.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Ralph W. Anstruther, Bt. (deputy-chairman), seconded the resolution, and it was carried unanimously.

ILLINGWORTH, MORRIS, AND CO., LIMITED. BRIGHTER PROSPECTS.

The annual general meeting of Illingworth, Morris, and Co., Limited, was held, on the 16th instant, at the Cannon Street Hotel, London.

Mr I. Ostrer (acting chairman), in moving the adoption of the report and accounts, expressed regret that Col. Morris had found it necessary, on account of advancing years, to retire from the board, and stated that Mr Walker George Waldron had been invited to take his place. He felt sure that Mr. Waldron's appointment as a director and chairman would be of great benefit to the company. Shareholders would recollect at the time that the capital was increased from £1,500,000 to £5,000,000 certain most important negotiations had reached an advanced stage, and the increase was definitely necessary to enable those negotiations to be completed. Unfortunately, outside factors intervened, and consequently the board considered it wise to drop the negotiations. Additional capital would only be issued under circumstances calculated to strengthen the company's position, and consequently benefit the shareholders.

Although the factories had been well employed during certain periods, a considerable amount of short time had been experienced, and only by the greatest enterprise and care had they been able to show a substantial balance on the right side. Now that the Reparations problems appeared to be solved, they would be able to look forward with confidence to the future earnings of the company. He believed that the wool trade of the country was improving, and this company should at least have its share, as the prospects for the present year appeared to be much brighter, the trading of the past five months showing marked improvement.

Mr F. W. Turner (joint managing director), in seconding the motion, said he was glad to see that, in spite of the enormous difficulties with which they had had to contend in the past year, they had as good a balance-sheet to present as the chairman had explained in detail. Few people outside the trade itself could have the slightest idea of what the worst spinning industry had had

to face during the past twelve months. It had had to contend with the continued rise in prices of raw materials, unfavourable exchanges, higher rates of wages compared with other countries, plus shorter hours worked, and prohibitive tariffs, while on the top of all these things they were faced a year ago with a certain reduced raw wool clip from the chief source of their supply, namely, Australia. During this difficult period they had centred their efforts on improvement of the various organisations, both from the selling and the manufacturing points of view. At the present time they had at least 25 per cent. more machinery running than they had a year ago, and were in a far more favourable position with regard to their order-books. So far as the current year was concerned, they would, he felt sure, have a much better result to place before the shareholders.

The resolution was unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Sept. 22—Sept. 27 were opened on Sept. 19, 1924, and the total amount applied for was £51,165,000. For bills at three months dated Monday to Wednesday at £99 1s 7d, about 64 per cent., and above in full; Thursday £99 1s 10d, and above in full; Friday £99 1s 5d, and above in full; Saturday £99 1s 7d, about 64 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.

Reports and Notices.

The City offices of the *Daily Express* and *Sunday Express* have been removed to 5 Drapers' gardens, E.C.

The Royal Exchange Assurance announces that the agreement approved at the extraordinary general court, held on August 20th last, for the acquisition of a majority of the shares of the State Assurance Company, Limited, has now become absolute.

Messrs Coutts and Co. will pay on and after October 1st the coupons of the Peruvian Corporation first mortgage 6 per cent. debentures at the rate of £4 per cent. per annum, in accordance with the resolution passed at a meeting of holders on March 12, 1896.

Advices from Toronto state that Mr H. B. Wills has felt compelled, owing to continued ill-health, to resign the presidency of the Keeley Silver Mines, Limited, Vipond Consolidated Mines, Limited, Canadian Lorrain Silver Mines, Limited, and other subsidiary companies in the group. Mr F. H. Hamilton, chairman of the Huronian Belt Company, Limited, has been appointed to succeed Mr Wills as president of these companies.

GOVERNMENT STOCKS, &c.

MANCHESTER CORPORATION BILLS.—The tenders for £500,000 Manchester Corporation bills were opened on September 15th at the Bank of England. The total amount applied for was £2,080,000. The amounts allotted were as follows, viz.:—In bills at 12 months, £500,000. Tenders were accepted as under, viz.:—For bills at 12 months, at £95 18s 9d, about 75 per cent.; above, in full. Average rate per cent.:—12 months' bills, £4 os 7-35d.

4% TREASURY BONDS, SERIES "C."—The Bank of England give notice that bond certificates of the above issue may now be exchanged for definitive bonds. The bond certificates should be lodged at the Loans Office, 5 and 6 Lombard street, E.C. 3, and must be left three clear days for examination prior to the issue of the bonds.

BANKS.

BANK OF NEW ZEALAND.—The following circular has been issued to shareholders on the London register, and to shareholders on the colonial register domiciled in Britain. "With a view to assisting the Government of the Dominion in its efforts to finance farmers who are at present protected under the Mortgages Extension Act, the bank has arranged to issue the balance, £1,125,000, of its authorised capital, and with the amount to take up for the use of the advances to settlers department, a Government loan, with a currency of ten years, and bearing interest at the rate of 5½ per cent. per annum. The issue of capital will be made at par on April 1, 1925, and so far as ordinary shareholders are concerned in the proportion of one new share to four existing ordinary shares. The Government under the Act of 1920 will receive one-third of the whole issue. Shareholders will be further advised shortly when the necessary formalities in reference to the issue have been complied with.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 18th, is as follows:—Pig-iron: There is a slightly better feeling in the pig-iron trade, but business is still very restricted, and only small quantities are being bought by home consumers, whilst the export trade is on a very reduced scale. No. 3 Cleveland G.M.B. is 82s per ton f.o.b. or f.o.t. makers' works, whilst mixed numbers East Coast hematite can be bought at 90s per ton. Manufactured iron and steel: Owing to the stagnation in shipbuilding, upon which this district is mostly dependent, the local steel works are not

very busy. Some of them are idle, whilst others are only working part time. Makers still adhere to the following quotations:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Deliveries are coming forward against old contracts, but what little new business there is is confined to odd cargoes based on the price of best Bilbao rubio ore at 22s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The tendency in iron and steel is still in a downward direction, and depression is abnormally acute in all the chief centres of the industry. Bad as the position was a week ago, more ground has been lost since. No weight of forward business in open hearth billets and manufactured mild steel for a long time, and the hand-to-mouth purchases of which can now be satisfied by a small proportion of existing plant. The quietude of steel trade is reflected in the stagnation of hematite pig-iron on the north-west coast, where two more blast furnaces have just been put out of commission. Nine furnaces out of 25 are now working in this area. There is keen competition everywhere for the small amount of business offering, and prices are irregular. Not much Continental steel is coming into the Sheffield district, as users here require for their purposes material of a high and reliable quality. Makers of railway steel are not working much above half capacity. Orders from British railways, who are obtaining all their requirements in the home market, are of considerable volume, but much of the Indian and South American business has gone to Continental firms, whose depreciated exchanges enable them to underquote British prices very considerably. Unemployment continues to increase in the local heavy steel branches. Several firms are fairly well booked for high-grade crucible steels, but this branch is still more or less stagnant. Users of these special and expensive steels on the Continent cannot buy much, because the prices have reached a prohibitive level. A considerable proportion of the factories producing tools for the engineering, building contractors, and shipbuilding trades are working to almost full capacity, but a falling off of orders is reported this week. The cutlery and plate branches are generally unremunerative, notwithstanding a large output. Production figures for August record a reduction of 27,000 tons of pig-iron, and 162,000 tons of steel compared with July, and the totals are the smallest for two years. The loss is partly due to stoppages of work during the holidays. The coal market is encountering bad conditions, and prices are irregular and low except for the best qualities of house coal, which are scarce and dear. Blast furnace coke is a drug on the market, but the iron foundries are buying on a substantial scale. South Yorkshire hards are worth about 21s at pits. Quotations for small and second quality fuels are nominal, and depend upon the prospects of business resulting.

Our Glasgow correspondent writes as follows:—The pig-iron market is still very depressed, and the trade shows an extraordinary lack of vitality, rather unusual at this season. Export inquiry has almost disappeared, and shipments are only a fraction

of what is customary. The shipments for the week ending September 13th totalled only 175 tons, as compared with 2,492 tons in the corresponding week of last year. In the steel trade very little improvement is observable. Consumers deal only in small lots and refuse to buy ahead or to make contracts, and works are keeping going on the meagre business that can be picked up in this way. Prices for the home trade are maintained at the previous levels, but export specifications are sought after, and severe cutting is going on. Semi-finished steel is round about £8 per ton, as against offers of German steel, which have been going about at £6 5s per ton delivered Glasgow district. It is understood that a large proportion of the plates for shipbuilding contracts in Clyde yards has come from the Continent, hence the disappointment at the steel works. Of course, if foreign competition can only be met by the use of the cheapest possible materials, the shipbuilder cannot be blamed for buying in the cheapest market. The only important fresh business reported as having been placed locally this week is an order for an oil-tank steamer, 394 feet in length, which the Greenock Dockyard Company have received from the Vacuum Oil Company, London. The vessel is specially designed for carrying the special grades of oil, and the machinery will be supplied by Messrs Rankin and Blackmore, also of Greenock. Sheet makers continue to receive specifications for the thinner gauges, but early delivery is generally sought in vain, works being all full up to well on in November. Heavier sheets are, however, somewhat easier in demand. Japan has practically ceased to be a buyer of thin sheets. There is no falling off in the number of inquiries and orders for galvanised sheets for all markets.

Our Cardiff correspondent writes:—There has been no mitigation this week in the severity of the depression in the South Wales coal export trade. In so far as there has been any change at all, it has been in the direction of increased trade restriction, and prices of practically all qualities of coal have been easier. Moreover, there appears no prospect of an early improvement; indeed, greater competition is anticipated in the foreign markets. In Europe to-day the only good coal market is that of France. In Germany and Belgium, as well as in the United Kingdom, collieries are being closed down owing to the lack of demand, and in all the principal coalfields of Europe there are complaints of intense foreign competition. At the Bristol Channel ports apprehensions are felt regarding the possibilities of the rivalry of German coal in the overseas export trade. This week it was reported on the market that contracts involving about one million tons had been placed by France and South America for German coals to be delivered over the next 12 months, but while it has been impossible to verify these reports, it is anticipated that Germany will make a great effort to secure overseas outlets for their surplus outputs until the inland demand in that country has again become normal. The financial position of the industry in South Wales is worse than it was in June, when the industry suffered a loss of over £240,000. In July the loss was a great deal smaller, but in August the value of the coal exported from the Bristol Channel ports was £507,000 less than in July, and as the working costs in that month, owing to the holiday and the increased irregularity of work in the coalfield, were abnormally high, it is feared that the loss suffered by the collieries in that month will exceed that in June. Under the proposed new wages agreement there will be no change favourable to the colliery owners. The workmen have refused to make concessions for the purpose of a more extensive adoption of double-shift working, and for all practical purposes the new agreement, if and when it is signed, will be identical with the old one. The completion of the agreement has been further delayed by a difference which has arisen between the employers and the workmen in regard to anomalies in day wage rates created by the new allowances under the national agreement. The following are the current approximate quotations:—Best Admiralties, 27s 6d to 28s; second Admiralties, 26s to 26s 6d; best dries, 26s to 26s 6d; black veins, 25s to 25s 6d; Western Valleys, 24s 6d to 25s; Eastern Valleys, 23s to 24s 6d; best steam smalls, 15s to 15s 6d; ordinary cargo smalls, 12s 6d to 14s 6d; anthracite big vein, large, 52s 6d to 55s; machine-made cobbles, 60s to 62s 6d; stove nuts, 55s to 57s 6d; rubble culm, 12s 6d to 13s; coke for export, 50s to 52s 6d; inland blastfurnace coke at ovens, 30s to 35s; patent fuel, 27s 6d to 28s 6d; pitwood, ex ship, 29s 6d to 30s. In the tin-plate trade the tone continues firm, with makers asking for prices slightly in excess of the recently increased minimum prices. The Far East has been buying actively, but the home demand is not so strong. The shipments of tin-plates and galvanised sheets last week were heavier than they have been for some time past.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

Business continues to ebb in the Cumberland and North Lancashire hematite pig-iron market, and trade is now in a very bad way. Two furnaces have been damped down at Barrow, and

though the number in blast between Workington and Carnforth is only nine, the production is in excess of demand, and iron is having to be put into stock. The suspension of operations at the rail mills at Workington and Barrow is accountable for the large falling off in the local consumption of iron, while Midland needs, always the most important in the open market, have become more meagre, and those of Scotland and the Continent almost non-existent. Users are buying only small parcels for early delivery. No forward sales at all are being effected. The position has seldom been so cheerless. Prices, because they are nominal, do not accurately represent the severity of the depression. Bessemer mixed numbers are quoted at £5 10s at Sheffield and £5 15s at Birmingham, but these figures are, of course, being shaded even in respect of comparatively modest orders. Special and semi-special qualities of iron are in weak request, and ferro-manganese is dull at £13 10s export. Prospects in the steel rail trade are discouraging, and the iron ore industry here is adversely affected by the quietude in the iron trade. Production is low, with best sorts of low phosphoric ore 21s 6d to 23s 6d, and ordinary kinds 16s 6d to 17s 6d.

Scotch competitors have practically deprived Cumberland owners of their position in the Irish market. Little coal is being shipped across Channel from this country. Prices are 3s to 4s per ton higher than those quoted by rivals. Best round is 25s f.o.b., house nuts 22s 6d, steam nuts 21s. The make of coke here for the local smelters of ordinary iron is smaller. The price, 24s 6d to 25s 6d, according to carbon content, will drop 1s 6d under the ascertainment in the iron trade. East Coast coke supplies to the blast furnaces are now only 3,700 tons per week.

METALS.

Tin relapsed sharply on heavy selling pressure, combined with lower Eastern cables, though offers were well absorbed. Standard cash sold at £239 10s to £231 15s to £232 10s, and three months £243 to £243 10s to £233 10s to £234 15s. Eastern cables reported sales on the basis of £235 10s, c.i.f. At Thursday's session values moved in an upward direction, though top points were not maintained. Standard cash sold at £236 to £234 15s to £236 to £235 12s 6d, and three months £238 to £237 to £238 5s to £237 15s. An easier tendency was apparent at the close, standard cash being dealt in at £234 5s, and three months £236 10s to £234 10s to £236 5s to £235 10s. English ingots quoted at £234 10s. Copper in good demand, but prices gave way under pressure to sell while influenced by adverse American cables, but values registered a partial recovery later. Standard cash sold at £62 18s 9d to £62 5s, and three months £63 17s 6d to £63 18s 9d to £63 to £63 7s 6d. Business was on a smaller scale on Thursday, with rates somewhat irregular. Standard cash sold at £62 10s to £62 6s 3d, and three months £63 5s to £63 7s 6d. No material alteration occurred at the final market, standard cash being sold at £62 7s 6d to £62 5s, and three months £63 5s to £63 7s 6d to £63 6s 3d. Electrodes, £66 10s to £67. Best selected, £65 15s to £66. Strong sheets, £93. Wire bars, £67 per ton. Lead steady, with a good demand, and quoted at £33 2s 6d to £32 10s, as to position. Spelter easier at £32 16s 3d to £32 11s 3d, according to position. Aluminium, home, quoted at £125, export £130. Antimony.—English special brands, £49 10s to £52 10s.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—After the strong demand for wool at Brisbane and Sydney this month all sections of the trade were quite prepared to see a keen and rising market in London this week. In fact, the auctions have proceeded on the lines generally expected, and it was in anticipation of a sharp advance in wool values that topmakers here put up their quotations a week or two before the auctions opened. Nevertheless, it has again been necessary to revise rates, in view of the scarcity of stocks of fine wool and tops, and in most cases quotations to-day show a further appreciation. Good warp 64's are about 2d dearer on the week at 82d, and a similar rise is seen in super 60's at 74d. In crossbreds the advance is not so pronounced, but most qualities are anything from ½d to 1d dearer. Average 56's now stand at about 50d to 51d, 46's carded at 30d, and 40's prepared at 28½d. These new rates are naturally checking business to some extent, and in the case of merinos it is obvious that many topmakers are still largely protective in their quotations. However, they base their policy on the way in which wool is moving, and it does not look as if there will be any lower prices for some time to come. Spinners are certainly doing better, both as regards new business and also in getting particulars more freely, and prices are gradually creeping up. The advance, however, has not yet been nearly sufficient to wipe out the disparity between tops and yarns, and buyers are not disposed to do much forward buying at current rates. The position in the yarn trade is improving, and the same may be said of the piece trade; but in both cases settled conditions on the Continent and stabilised exchanges are needed in order to bring about a sound basis.

 NEW YORK

'Phone : Regent 3270.

Heavy importation is also the strong feature of the hardwood market, the amount of lumber that has come from the United States this year being remarkable, and importers and merchants in this section of the trade find pleasure in the fact that the domestic demand and mills' prices in the States are increasing, which means, it is hoped, a lower importation and a better chance of prices keeping firm on the spot market this side.

Market conditions on the whole have been steady, and the volume of business moderate to fair. Raw linseed oil has met with a good trade demand, and at £41 10s for September delivery, with a small premium for spot oil, closes slightly below the highest. Cotton oils have not been so active, and crude Egyptian offers freely at £42 15s, and technical refined at £45 per ton naked, ex Hull mill. Palm kernel oil is a fair market, and crude soya oil is firmly held for higher figures. Rape oil, on scarcity, is dearer.

Business in Bermondsey shows a decided improvement, and even the most pronounced pessimists are obliged to admit this. Shoe manufacturers are sending along orders for all kinds of sole leathers, and bends are quoted from, say, 14d per lb to as high as 30d for the best grades. Some flutter has been caused in merchanting circles by the news that certain tanners are grading and stamping their bends—a procedure which obviously does not appeal to the middle men—who have been accused, by buyers of “hissling” with tanners’ selections.

HEMP.—A buoyant market again resulted, a good demand being resolutely met. Japanese interests still absorb large quantities in local Manila market. J grade, September-November, sold, £48 10s to £49; K, £47 15s to £48; L, £47 10s; M, £46 10s; Cebu 2, £38 10s; 3, £33; Daet L, £45; M, £44; G, quoted £58; streaky threes, £63. Mexican sisal resumed business of considerable dimensions, transacted for prompt shipment. G.W., September-October, at £40, c.f. and i. U.K., Continental ports. African sisal, No. 1 Tanganyika, September-November, quoted £46 10s to £47; and Tanganyika ditto, £45 10s to £46 per ton, c.f. and i.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

THE MONEY MARKET.

THE approach of the end of the quarter brought stringency back, and the market found itself obliged to have recourse to the Bank of England. At the same time anticipations of a flood of officially created credit to provide for Conversion Loan interest and maturing National War Bonds on October 1, stimulated the demand for bills, which were still highly attractive in the matter of date of maturity. The market was thus affected by cross-currents, and busi-

ness in discounts was difficult with the three months' rate at $3\frac{1}{16}$ per cent.

	Sept. 26, 1924.	Sept. 19, 1924.	Sept. 12, 1924.	Sept. 5, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/ Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	1 (Jly. 5, '23)
Market rate 3 months' bills	$3\frac{1}{16}$	$3\frac{1}{16}$	$3\frac{1}{16}$	$3\frac{1}{16}$	..

The Bank return showed an increase of nearly £200,000 in the Reserve, due to the return of notes from circulation. Other securities increased by $2\frac{1}{2}$ millions, and Public deposits by 3 millions, and Other deposits were nearly a million lower. The latest currency notes return again reveals a reduction in the amount of notes outstanding, which at present amounts to £285,592,400, against £287,451,700 in the preceding week. Notes called in but not yet cancelled amount to £1,370,300. The fiduciary issue is £234,771,000, or £13,419,900 below the maximum.

THE STOCK MARKETS.

This week has seen a spread of interest in the stock markets on the part of the public, especially in the industrial sections. The gilt-edged market remains good, the political situation being regarded with composure. There has been a little revival of the activity in German bonds, while a spurt in Mexican Government securities was the feature of the foreign market towards the end of the week. Home rails have been neglected, but Argentine rails improved on good traffic returns and an improvement in the exchange. Rubber and tea shares have both been good markets, and oils show some improvement, following a jump in Mexican Eagle Oils. A long list of improvements is recorded in the iron and steel list, and brewery stocks have risen a little, but the mining markets are out of popular favour.

THE COMMODITY MARKETS.

In the cotton trade business has been unsettled owing to wide fluctuations in raw cotton rates, a substantial advance being followed by a reaction. The raw material in the wool trade continues to dominate the position, and both in the primary markets and in London prices were well maintained. The expected improvement in pig-iron has not materialised during the week; indeed, the depression is worse. Foreign competition in manufactured iron and steel is noticeable. Wheat moved in erratic manner. Higher prices for tea are recorded, but jute values were subdued after the recent animation. Rubber was steady, with a moderate inquiry. Other details of markets, together with prices, will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchange market was again quiet, but showed a little more life than it has during the past few weeks, rather more business being transacted. The feature of the week was the strength and steadiness of sterling against the dollar, which at the time of writing is well maintained. Lancashire is, however, eagerly watching the price movements of the new cotton crop, and, should the longed for ideal of 12d cotton be realised, or closely approached, it is understood that very big purchases would be made involving large orders for dollars. These hopes, or fears, are, however, dashed for the time by the recent reaction of October futures from 12.4d (lowest) on the 23rd to 13.2d on the 24th, on the last Bureau report indicating a smaller crop than previously forecast. Opening the week at 4.46, sterling improved to 4.46 $\frac{1}{2}$ on the 20th, fell back slightly to 4.46 $\frac{1}{4}$ on the 22nd, and 4.46 $\frac{1}{2}$ on the 23rd. On the 24th, however, it appreciated suddenly to 4.47 $\frac{3}{8}$, and remained at this level on the 25th. This improvement is said to be due to the transfer of French credits from America to this country. At the time of writing sterling stands at 4.47, a satis-

factory improvement on balance during the week. Paris, after a slight recovery at the end of last week, showed signs of drift early this week, and has weakened steadily since. The rate moved from 84 on the 19th to 83.90 on the 20th, but has fallen steadily from 84.25 on 22nd to 84.80 on the 25th, and on Friday touched 85. The Belgian franc has fared even worse, largely, it is believed, owing to too long a postponement of purchases of sterling and a sudden simultaneous demand from several quarters. After improving a fraction to 89.95 on the 20th, the Belgian franc has gone from bad to worse at 90.45 on the 22nd, 93.10 on the 25th, and even touched 93.75 on this latter date. To-day (26th) it is recovering slightly, and stands at 92.60-92.75 at the time of writing. The lira has experienced very slight fluctuations, and at 101.80 stands at practically the same level at which it opened the period under review. Amsterdam is better on balance at 11.57 $\frac{1}{2}$, but calls for no particular comment. Switzerland is decidedly harder at 23.50 than at the beginning of the week, when it stood at 23.62. The peseta was weakish and hesitating at about 33.75 at the end of last week, but hardened gradually to 33.56 on Thursday on the announcement of a definite Spanish policy in Morocco, and the absence of further set-backs in the field. It has now again improved sharply to 33.40. Helsingfors and Stockholm weakened slightly with the dollar on balance during the week from 177 $\frac{1}{2}$ and 16.74 to 178 $\frac{1}{2}$ and 16.80 respectively. Christiania is slightly better at 32.05, and Copenhagen at 25.98, though this is a reaction from the even better level of 25.90 on the 24th. Berlin is again steady at about 18.7 billions; and Warsaw, Riga, and Reval also remain unchanged. The leu is steady at 860-890, a little worse than the level 855-875 to which it had fallen at the beginning of the week. Of the South American exchanges, the milreis is rather harder at 5 $\frac{3}{8}$ -5 $\frac{1}{16}$. Buenos Aires, as a result of the favourable factors mentioned last week continuing to operate, was very firm throughout, and was harder on Friday at 43 $\frac{1}{2}$. Of the Eastern exchanges, the yen has shown weakness throughout, and has now fallen to 15 9 $\frac{1}{2}$ d, as compared with its opening level of 15 9 25-32d. The rupee has been firm and steady at 15 5 $\frac{1}{2}$ d throughout. For the first time since March 4th, when no applications were made for them, India Council drafts are to be on offer in this country next week to the extent of 50 lakhs. At the same time the favourable trade balance and the strength of the rupee has enabled the Council to cover their sterling requirements by the purchase of December Treasury Bills. Hongkong, Shanghai, and Singapore are all steady, Shanghai being rather stronger at 3s 5d. The silver market maintained its firm tone, and prices advanced as a result of bear covering to 35d, the higher level of 35 $\frac{1}{2}$ d being reached on the 23rd. The continuance of the demand caused by military operations, combined with little selling from America and elsewhere, indicate the probable continuance of firm conditions and hardening prices.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 20th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	7,475	From Revenue	15,306
Interest, &c., on Debt	690		
Sinking Fund	350		
Sundries	319		
Increase in Exchequer Balances	301		
Reduction of Debt	6,170		
	15,306		15,306

Revenue totalled £15,305,200, against £15,120,700 for the corresponding period of last year. Customs yielded £1,585,000, as compared with £2,775,000. Excise brought in £7,138,000, against £6,516,000. Estate, &c., duties produced £1,140,000, against £700,000. Property and Income-tax brought in £2,309,000, against £2,626,000. The week's operations reduced the National Debt by £6,170,000, and caused the following changes:—

(000's omitted.)	
Treasury Bills ..	— 50
National Savings Certificates ..	— 150
Public Department Advances ..	— 5,900
Sundries ..	— 70
	— 6,170

The floating debt was reduced by £5,975,000 to £772,737,500.

FINANCIAL YEAR, 1924-1925 (April 1 to September 20).

£		£	
Total Expenditure ..	346,409,254	Raised by Revenue ..	334,801,403
		Decrease in Balances ..	3,791,493
		Amount borrowed ..	7,816,358
Total	346,409,254	Total	346,409,254
ESTIMATES for YEAR 1924-25.			
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts ..	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a survey of the real trade balances of several countries.

WORLD PEACE AND BRITISH OBLIGATIONS.

THE two months of August and September, which are traditionally supposed to be empty of political interest, have, in fact, been fuller than any two months since the signing of the Versailles Treaty. The penurious reporter who counts upon filling a few columns with records of the appearances of the sea serpent and other myths has had a bad season, for newspaper space has been overcrowded with realities—so crowded, indeed, and in many respects so confusing, that it is as well to glance back for a moment at the course of events. For some years it has been a commonplace that the two nuts that must be cracked before Europe could regain conditions of stability and confidence were the problems of reparations and security. As regards the former problem, the masterly report of the Dawes Committee paved the way for the London Conference, which achieved a success beyond expectation. By the consent of the Allies and Germany a new régime, which, if carried out with tact, determination, and goodwill, should slowly bring Europe back to the paths of sound finance and prosperity, is actually in the process of initiation. But in order to achieve agreement on the reparation problem, Mr MacDonald and M. Herriot agreed to rule out of the London discussions the even knottier problem of security. This problem was reserved for discussion by the League Assembly at Geneva. Both Premiers visited Geneva and made pronouncements which revealed the gulf between the British and French views remaining to be bridged over. They departed from Geneva and left the delegates of the nations faced with the task of bridge-building. Upon this task they entered with a hope and enthusiasm ignited by the spectacle of a reparations settlement, and fanned into flame by the eloquence of Mr MacDonald and M. Herriot. The task was one which the Assembly as such was obviously unsuited to attack. Of necessity it divided up into commissions and sub-commissions, whose proceedings vanished into the mists of conjecture; and it is not too much to say that the public in this country has been completely bewildered by a shower of incomplete and contradictory reports. One point, however, quickly emerged. The delegates whose supposed agenda was the disarmament question enlarged the scope of their endeavours to the immense work of re-drafting a section of the Covenant of the League, and of concerting measures designed not merely, or perhaps even primarily, to provide safeguards against war in the European cockpit of dispute,

but to banish war, so far as may be humanly possible, in all circumstances and in all continents for all time. With knowledge of the terms of the Covenant amazingly scanty, the public became more bewildered than ever, and the natural suspicions engendered by inadequate news and still more inadequate understanding of the points at issue, were transformed into real and active apprehension by the early reports that the British navy was to be promised to the League as its principal policeman for the maintenance of the peace and the restraint of recalcitrant nations.

The Assembly has now sat for nearly a month, and its deliberations are said to be nearing a close, but it cannot be said that the fog has cleared, although one or two points, perhaps, are made clearer by our Geneva correspondent, whose comments on the proceedings are printed on a later page. Some main points of doubt, however, remain, and even the publication of a draft protocol has been followed by fundamental differences in its interpretation among those who have helped to frame it. There are four questions on which the British public wish to be more clearly informed. What is the exact meaning of what our delegation has conditionally promised in the name of Britain? How far do these promises increase the obligations which our signature to the Covenant already entails? Will the Assembly disperse with a clear and unambiguous idea of the interpretation which the British Government puts upon the protocol which will eventually be submitted for ratification to the individual Parliaments of the nations? Finally, even supposing this protocol is ratified, does it really make disarmament agreements easier or not? We confess that at the moment the data for a full answer to these questions are insufficient, and we have to disentangle what we can. Various declarations of Mr Henderson, unless he is belied by reporters, appear to be quite contradictory. At first Mr Henderson pronounced that by signing the new protocol we should be committed to nothing more than we are already committed to by the Covenant. Military sanctions against an aggressor would still be optional. Dr Benes took an opposite view, interpreting the new protocol to make military efforts by members of the League against a Covenant-breaker definitely compulsory; and finally, Mr Henderson veered round towards Dr Benes' view. Nations, he appears to have said, *might* pledge themselves to use all their military resources, and he would strongly recommend to the British Parliament that Great Britain should give such a pledge.

This obviously brings us face to face with a very serious problem. It looks as though the British delegates, whose conduct of the proceedings throughout has entirely failed to inspire confidence, will leave the delegates of other nations to return home with the idea that, whatever other nations may do, Britain will bind herself to use the Navy against a declared aggressor. We imagine that this belief might very strongly influence the views taken by other Governments of the new Protocol; and it is in our view as dangerous as it is premature for such an impression to be given at this stage to other Governments. Obviously, so vital a question demands the most mature consideration and discussion, not only here but in the Dominions. It may be that no Anglo-French agreement on security was possible without "sanctions" pledges of a far-reaching nature. But it is the reverse of helpful to hold out hopes of a pledge which may not mature. For that to happen would be to set back the whole security discussion indefinitely. We yield to no one in our desire to see the dangers of war reduced to a minimum by international acceptance of arbitration and international co-operation through the strengthening and perfecting of the machinery of the League. In the approach to this goal Great Britain must be ready to play her part, to make sacrifices and undertake duties in due proportion as the other nations will do so. We outlined, indeed, last week, the direction in which we might accept an extension of our obligations under the Covenant. But we must repeat emphatically that public opinion will not sanction a pledge of the use of British armed forces—presumably the Navy is chiefly concerned—unless equally binding and explicit pledges are forthcoming from the other great nations. In any case,

even if all the necessary conditions are fulfilled, no such pledge could be given until the whole question has been thrashed out thoroughly not only domestically, but in consultation with the Dominions. For to give such a pledge would involve hosts of important problems in connection with the relations between the Mother Country and the Dominions, of naval disposition and policy, and of an Imperial foreign policy. We wish we could feel certain that our delegates would leave Geneva without giving contingent promises, the non-fulfilment of which would once more afford ground abroad for the old cry of "Perfidie Albion!"

The hope of the League Assembly is that the new Protocol will have been ratified by next May—surely a somewhat optimistic hope—and that a disarmament conference summoned by the League will follow. We are not certain that the cart is not being put before the horse. If some countries are giving pledges that their armed forces may be used as preservers of the world's peace, while others are not, the problem of international disarmament, already immensely difficult, will take on further complications. Moreover, if a disarmament agreement could have preceded, instead of following, the Geneva negotiations, the organisation of preventatives of war might have been easier. For in a world of sternly restricted armaments it would be easier for the great Powers to give pledges of the use of armed forces than it is to-day. Then again, it will be difficult, if not impossible, for the United States to participate in a disarmament conference summoned by the League, membership of which she declines as resolutely as ever; whereas in the ordinary course of affairs events might have quickly led up to the summoning by Washington of such a conference.

Thus, though much is still dark, which will come to light later on, we cannot at the moment feel happy as to the stage which the Geneva discussions appear to have reached. And in examining the new Protocol and the Covenant it has all the time to be remembered that three great nations remain outside the League. The Covenant was framed in the belief that the United States would accept it; it contains several clauses, which take on an entirely new significance in view of her abstention. For instance, in the case of a war between two members of the League, one of whom has been named as the aggressor, we and the other members would be bound to do our best to prevent America from trading with the aggressor nation. Again, if America declared war, let us say, on Japan, having refused to submit the dispute to the League, we should be bound to co-operate at least in the institution of an economic boycott of America. These are just two instances which emphasise the extreme care and caution with which the whole problem of extending our Covenant obligations should be approached. As regards German entry into the League, which we have always regarded as an essential step towards League efficiency and European peace, a step forward has been taken. The German Cabinet has agreed to the principle of applying for admission, but, instead of applying direct, has addressed notes to the leading Governments to sound them with regard to the degree of welcome which such an application would receive. We can understand that, before making such application, the German Government wished to make quite certain that she was not courting a rebuff. But in this case the procedure has been manifestly maladroit, for a correct estimate of the atmosphere of the present Geneva Assembly would have satisfied the German Government that acceptance was beyond all question. Germany's more cautious procedure has delayed her entry.

THE FUTURE OF THE COAL INDUSTRY.

AMONG the studies of individual British industries included in the volume entitled "Is Unemployment Inevitable?" recently issued by a committee of economists and business men, that relating to coal, appearing over the signature of Mr Wallace Thornycroft, is perhaps the most arresting. Coal production and distribution is easily the most important single industry in the country; its location often in out-of-the-way places raises social questions peculiar to

itself; on the efficiency and cheapness of its operation a large proportion of the industries of the country depends; and the export section of the trade makes the largest single contribution of any industry to our means of buying overseas our necessary food and raw materials, and provides far the largest bulk of outward freight for our ships. On the other hand, its history and conditions are responsible for the fact that the State has intervened more definitely to control its operations than in the case of any other British trade. At present coal seems destined more than ever to be mixed up in politics, for it is to be the chief commodity by which Germany will pay Reparations. These payments will undoubtedly raise very difficult problems for the industry generally. For these reasons Mr Thornycroft's detailed statistics and analysis are peculiarly valuable.

We have from time to time set out the facts in regard to wages and production costs as revealed by the periodical assessments in the industry, and we do not propose to repeat these facts here. We are concerned rather to call attention to two outstanding features. The first is the distribution of the output, which shows three distinct phases, and the second, the changing character of the export side of the trade. Before coming to these points, however, we may remind our readers that while total output has practically recovered to the 1913 level, this figure represents a drop in proportion to the increasing population of the country. There is also a serious fall in the production per person employed. The position is as follows:—

	1913.	1923.
Coal raised million tons	287	279
Persons employed.....	1,110,000	1,150,000
Coal raised per person per annum tons	259	243

These last two figures show an important drop in output per head, amounting to 6 per cent. On the other hand, the length of the working day has been reduced by a considerably larger percentage. We have no sound figures of the number of shifts worked in 1913, but if the number of shifts per head were the same as in 1923, the figures given indicate that the output per man-hour has increased, largely as a result of the increased application of electric power underground, the electric equipment of the collieries having doubled since 1913, as shown by the figures published in the returns to coal mines inspectors. This increase, however, has not been sufficient to make good the loss of the number of hours worked. Earnings per head have increased from £81 18s in 1913 to £134.6s in 1923, the wages cost per ton of coal raised having risen from 6s 4d to 11s 1.62d, and the average value of the coal raised has risen from 10s 1.52d to 17s 11.32d.

The consumption of coal in the country falls into three groups:—(1) Coal consumed in homes, including the homes of the miners, by gas works, railways and electric power stations; (2) coal consumed in industry; and (3) coal used for export and ships' bunkers. A relatively small proportion is used in the mines.

To Mr Thornycroft's estimate of the division of the output between these various uses in 1903, 1913, and 1922, we have added a final column giving estimates for 1923. The table shows total quantities, and also the same figures in relation to the population of this country:—

	1903	1913.	1922.	1923.
Population, in millions	40.25	46.03	47.5	47.7
	Mil- lion Tons.	Cwts. per Head.	Mil- lion Tons.	Cwts. per Head.
Total coal raised	230	114	287	125

The amount required for domestic and similar uses is practically constant. Of the total production, less than 6 per cent. was used in house fires in 1913, and about 8 per cent. in 1922. The amount required for industrial uses varies as trade is active or the reverse. In 1913, a year of good trade, it accounted for 33 per cent. of the whole, and in 1922, a fairly slack year, for 28 per cent.

Of all industries, the iron and steel trades are by far the most influential coal consumers. On the assumption that two tons of coal are expended in producing one ton of pig-iron, and another couple of tons go to the making of one ton of steel, we may construct the following table:—

	1913.	1922.	1923.
Coal used for industrial purposes	97	69	87
Production of { Pig-iron	10.3	4.9	7.4
{ Steel ingots and castings	7.7	5.9	8.5
Coal used in iron and steel production.....	36	22	32
Coal used for other industrial processes ..	60	47	55

The general public, when considering questions relating to the coal industry, usually has in mind the relatively small proportion of the whole bought and paid for by private individuals. It accepts price increases with as good grace as possible, and is, on the whole, in sympathy with any efforts the miners may make to secure a higher standard of living. It does not usually reflect that some of the worst consequences of increased coal prices fall on industry as a whole, and may thus result in increased charges for a wide range of commodities. The demand for domestic coal (including the requirements of railways, gas works, &c.) varies directly with the population, and is more or less insensitive to changes in price, but the considerable proportion of the annual output taken by British industry is seriously affected when prices rise.

The second aspect of the industry is concerned with the export situation. The relevant figures are as follows (those for 1923 and 1924 being approximate):—

	1913.	1922.	1923.	1924 (on Basis of First 7 Months).
To Africa	5.35	3.49	3.60	3.89
„ America & the W. Indies ..	7.13	7.84	5.45	5.01
„ Asia	.89	1.56	.46	.58
„ Australasia & E. Indies.....	.06	.13	.07	.04
„ France, Germany, Bel- gium and Netherlands ..	25.78	31.48	46.93	29.27
„ Rest of Europe.....	34.17	19.69	21.43	23.99
Total	73.40	64.20	77.96	62.78

These figures bring out the enormous extent to which the satisfactory state of the export coal industry in 1923 was due to the Reparation situation. If what may be called the Reparation countries are excluded, the rest of the world took only 32 million tons in 1923, against 33 million tons in 1922 and 48 million tons in 1913. Possibly these countries might have been willing to take more British coal in 1923 had not the demand from markets affected by the Ruhr occupation had such a strong call on available supplies. From April 1, 1923, exports of coal to the Irish Free State have been included for the first time in the foreign trade figures, but this factor does not affect the general argument. The figures reflect partly general world stagnation in trade, partly increasing use of fuel which reduces the demand for British coal for distant coaling stations, and partly alternative sources of power, as for example, water power in Norway, Sweden, Switzerland, and Italy. The figures for these particular countries are instructive. They fell from 16.5 million tons in 1913 to 10.5 millions in 1922, and rose to 12.3 millions in 1923. To some extent the absence of Reparation coal for Italy is no doubt responsible for part of the recovery in 1923, but the figures suggest that the demand for coal has not to a vital extent been superseded by the use of water power. They do show, however, very forcibly that competition in the coal-using markets is going to be very acute—a lesson which the whole study emphasises.

The position of the coal trade may be shortly summarised (by saying that one of its three divisions—the home "domestic" trade—provides it with a very steady market, and one protected in the sense that it is difficult for the home consumer rapidly to modify the form in which he obtains heat and light, while he cannot easily be supplied from abroad. A second and larger section feeds British industries, which are limited in the price they can pay for coal by foreign competition in their products. To some extent the coal industry can exert pressure on these trades, for they may often have to be kept going at a

very low profit or at a loss to avoid being put out of business altogether; but the pressure that can be exerted is of a limited kind, and cannot last indefinitely. The third and largest division of the trade has to face the full force of foreign competition directly, and its successful development entirely depends upon the efficiency and cheapness of production. The prospects of this section cannot be said to be as bright at present as they were some years back. Our coal trade with the African coast is now only one-tenth of its volume 25 years ago, with Central America and the Pacific ports of the United States, less than one-tenth; with India, one-half; with the Far East, one-third. These markets are now being supplied chiefly from native sources, or from producing areas nearer home than Great Britain. Oil fuel is an increasingly powerful competitor of coal in the world's mercantile marine—in the world's navies it has already supplanted its older-established rival. The necessity for eliminating all uneconomic costs—in coal production its transport and distribution—was never more imperative than at the present time.

THE AMERICAN PRESIDENTIAL CAMPAIGN.— MR LA FOLLETTE'S CHANCES.

(BY A CORRESPONDENT.)

WITH election day only two months distant, the Presidential campaign in the United States has now reached a stage of keen earnestness and a floodtide of oratory and electioneering literature is submerging the land. There are invariably more than two candidates for the Presidency, but only at distant intervals since the Civil War has the supremacy of the two great historic parties, the Republicans and the Democrats, been seriously challenged. This year, however, Senator Robert M. La Follette, of Wisconsin, the most commanding and significant personality on the progressive side in American politics, is confronting them with the most serious threat that they have faced since Roosevelt organised the abortive Progressive movement of 1912. Although the success of his venture must inevitably mean the construction of a new party on a permanent basis, Senator La Follette does not attempt it for the present, but styling himself an Independent Progressive, merely seeks to draw away strength from the older parties; the calculation is that such a strategy will more readily secure the backing of organisations like the American Federation of Labour, whose present leaders are strongly averse to the submergence of its identity in any political body. And the strategy has justified itself, for Mr Samuel Gompers and his highly conservative associates, who have strenuously resisted the formation of an American Labour party, have given Mr La Follette their blessing and placed their resources at his disposal. A

Communist element persists in prosecuting the candidature of Mr W. Z. Foster, a capable agitator, but the great railway brotherhoods, the various Labour parties which have sprung up in different States, and the official Socialist party have all lined up behind Mr La Follette and straw polls taken by the Hearst papers in important cities indicate that he will secure the preponderating share of the Labour vote. Undoubtedly the successes of the British Labour party have exercised a powerful influence upon the minds of the urban workers of the United States, and converted them to a new belief in the efficacy of political action as a remedy for their grievances. Senator La Follette is also the political heir of the Non-Partisan League, an agrarian body which, in the last decade, has caused the old parties great trouble in the North-Western tier of States, and he is being backed by a number of powerful farmers' organisations and co-operative bodies. But his support is not confined to manual workers in the cities and farmers; the advocacy of his cause by able weeklies like the *New Republic* and the *Nation* ensures the adherence of the element of progressive intelligentsia which followed the Rooseveltian crusade in 1912. In the faculty rooms of the Universities he has an ardent support which would be more effective if not restrained from vocal expression by the sort of plutocratic tyranny so brilliantly described by Mr Upton Sinclair in his book, "The Goosestep," and the younger generation of university graduates offers him many sympathisers. Nor do men of wealth recoil from the new adventure. In Minnesota Mr La Follette's campaign manager is Mr John F. Sinclair, a successful banker, whose writings on the European situation have attracted wide attention. In California, his local chairman is Mr Rudolph Spreckels, a millionaire sugar magnate, and ex-Senator Clapp, a veteran Republican, and Mr Frank P. Walsh, the well-known Kansas City lawyer, who acted as chairman of President Wilson's Committee on Industrial Relations, have declared themselves in his favour.

Nor is the Wisconsin senator devoid of powerful and effective support in the daily Press. The Labour movement in the United States supports a number of daily papers which are at his command; but much more important is the backing, almost unexpected, of the Scripps-Howard chain of papers, which serve some 30 cities, and have a combined circulation of 2,000,000 per day. Their owners are enormously wealthy, but they have resisted the pressure of self-interest which impels most of their class to support Coolidge or Davis, and are giving the Progressive movement very effective aid. The even more powerful Hearst Press has not given La Follette its open endorsement, but it is pursuing a policy of very benevolent neutrality and its steady criticism of the Republican and Democratic parties and programmes is bound to be helpful.

Senator La Follette has been very fortunate in the running mate who has been nominated for the Vice-Presidency. Senator Burton Wheeler, of Montana, is a member of an old Boston family, who became a successful lawyer, and imbibed radical notions in the West; elected to the Senate in 1922 on the Democratic ticket, he soon attained a national reputation for his part in the exposure of the Teapot Dome scandal. He found himself actively co-operating with Senator La Follette and his followers during this controversy, and has now bolted from his old party and definitely thrown in his lot with them. Senator Wheeler is a very good platform speaker, and he is at present directing his fund of vigorous energy to the sort of whirlwind political campaign which the American voter likes, and which Mr La Follette's weight of years makes impossible.

MANY Republican papers and orators have copied the trick of the *Morning Post*, and invariably describe La Follette and his followers as the Socialist party. It is true that the Socialist group, which has in recent elections mustered at Presidential elections between half a million and a million votes, are ranged behind the Wisconsin senator, but by British political appraisal he would only be described as an advanced radical. He has long specialised on transportation problems, and is a convinced advocate of the nationalisation of the American railways. He was an early advocate of woman's suffrage, and has been a consistent champion of a variety of labour causes. He has steadily opposed the use of injunctions in labour

disputes, and no politician in the United States has taken such an advanced position in regard to limiting the abuse of the power of the Supreme Court to declare federal laws like the child-labour statute unconstitutional. He favours a constitutional amendment which would enable Congress to pass and validate a law which the Supreme Court had nullified on technical legal grounds if a two-thirds majority could be obtained in his favour. His pacifist attitude during the war earned him the execration of the mass of the American people, but it has now been largely forgiven, and will reap political dividends from the strong German vote. His championship of the cause of Irish freedom will also win him many Irish votes, and it is significant that Judge Cohan, a well-known Irish leader in New York, has commended his candidature. On the tariff issue Senator La Follette used to be reckoned unsound, but he has in late years modified his Protectionist views. He is not an ardent enthusiast for the League of Nations, which he is inclined to view as an instrument controlled by the international financiers, his pet bogies, but he is in favour of the fullest international co-operation and general disarmament. In his prime he was reckoned one of the three most effective political speakers in the United States, but ill-health and age have impaired his powers, and most of the active campaign work must be left to his lieutenants. The keynote of his campaign appeal was struck in his Labour Day address early in September, from which the following salient passages are taken:—

"Since the Civil War the Government has bestowed privileges and fostered through administrative favouritism a new system, under which a few men are enabled to live on the fruits of the labour of others. It is a system appearing in a form which Lincoln never dreamed. It is a system against which I have fought continuously for the last 30 years.

"The message of the Republican and Democratic parties to-day is a message of despair. In it the American people find no ray of hope for relief from the burdens which oppress them.

"But the people have found a great hope, and that hope is the Progressive movement. We have enlisted in this movement to restore this Government to the service of the public, to secure to the labourer and producer in all lines a greater share of the product of his toil, while protecting the consumer against the trust-fixed prices on all he buys, and to drive out of the Government at Washington the corrupting influences now so dominant there."

It remains to be seen whether an appeal of this character, supplemented by the popularity and prestige attaching to a long record of able service in the cause of popular reform, will avail to break down the innate conservatism of the American voter, which has tied him by traditional loyalties to two parties almost indistinguishable in their outlook and programmes. By common consent the issue of the election depends largely upon the volume of support which the Progressive insurgency is able to attract. At present the policy of the Press and orators of the old parties is to belittle the new intrusion, and profess that its effects can only be seriously dreaded in Wisconsin and Minnesota. But the real political experts know better, and the Republican managers seem to have reached the conclusion that La Follette is a more dangerous enemy than Davis. They have been considerably heartened by the result of the election in Maine, which, for some strange reason, is always held two months before the general poll. Maine is known as a rockribbed Republican State, and all the Republican candidates were returned by about the normal majorities. But no supporters of La Follette were in the field, and for any appraisal of his strength the result is worthless. It seems, however, quite certain that throughout the country La Follette can rely upon the support to an unprecedented extent of all the discontented racial and economic groups. If he can poll the vote normally represented by those groups, he ought to fulfil his followers' hope of carrying twelve or fourteen States west of the Mississippi, and three or four east of it. But even if he only realises half these hopes he will prevent either Coolidge or Davis obtaining a clear majority in the electoral college, and the election will be thrown into the House of Representatives, where another deadlock will be inevitable. It will then be transferred to the Senate; the Democrats and Progressives would certainly combine

to thwart the selection of General Dawes, and in the end some compromise which would put either Senator Wheeler or Governor Bryan, the vice-Presidential nominee of the Democrats, in the White House would be arrived at. But for the moment political visibility is still low, and one thing only is certain, that Senator La Follette has broken down the dikes in the American political world, and the waters are out. The prospects of the old parties will be the subject of another article.

INDIA'S FOREIGN TRADE.—II.

(BY A CORRESPONDENT.)

THE export trade of India dates back to very early times, and as long ago as the first century, spices, precious stones, and fine cotton fabrics were exported from the country. The trend of this trade has always been towards the West, and in the years immediately preceding the War 50 per cent. of India's exports went to European countries. Naturally, therefore, the upsetting of Europe's economic life had a paralysing effect upon industrial India, from which—though recovery has been considerable—she has not yet completely emerged. Given freedom from political unrest, with its unsettling influence upon commercial conditions, there is no reason why pre-war standards should not be surpassed in the future. India, from an industrial point of view, in spite of what British enterprise and capital have accomplished, is still very largely an undeveloped country, containing vast stores of potential wealth and great possibilities of industrial expansion. The present value of India's export trade, including re-exports, is £205,075,739. In 1913-14 37 per cent. of this trade was with the British Empire in the proportion of 23 per cent. with the United Kingdom and 14 per cent. with the British Dominions. In 1922-23 the percentage was 39, 22 per cent. of this being United Kingdom and 17 per cent. British Dominions imports. Before the War Germany was the chief recipient of India's trade, raw jute exports from Calcutta and rice from Burma being her largest purchases. France imported ground nuts, while a large quantity of cotton was shipped to Japan. Taking a five-year average since the Armistice, the most remarkable feature connected with Indian exports is the recovery of Germany as a purchaser. Trade with Russia and Austria has practically ceased; Japan holds about the same position as in 1913, while increased exports go to the United States and China. In considering some of the principal exports, we notice, first of all, *Jute and Jute Manufactures*. Jute cultivation is confined almost entirely to the Ganges-Brahmaputra delta, in the Presidency of Bengal, and the Province of Assam, with the adjoining Indian State of Cooch Bihar. A small quantity is also cultivated in Bihar and Orissa. The total area under jute in 1923 was 2,313,000 acres—a considerable increase over the two previous years, but a decrease upon the area sown in 1914, which amounted to 3,352,200 acres. In 1913-14 the total yield for export was 4,303,326 bales, the three principal purchasers being: The United Kingdom, 1,626,067 bales; Germany, 886,928 bales; and the United States, 659,366 bales. In 1921-22 the total export was 2,619,036 bales, distributed to India's three chief purchasers as follows: Germany, 806,473 bales; the United Kingdom, 508,676 bales; and the United States, 371,963 bales. In 1922-23 the quantity exported was 3,236,548 bales, as follows: The United Kingdom, 874,597 bales; Germany, 792,232 bales; the United States, 510,710 bales. For this latter year the value of raw jute exports was £15,018,976, and of jute manufactures £26,996,101. Taking an average of the last five years, the exports of *Raw Cotton* represent no less than 41 per cent. of the total value of raw materials exported from India. The average yield per acre in India is very low, being only between 75 and 100 lbs, as compared with an average per acre in the United States of 200 lbs, and in Egypt of 360 to 400 lbs per acre. The total area under cultivation in 1922-23 was 21,077,000 acres, with a yield of 5,181,000 bales, as compared with an acreage of 18,451,000 yielding 4,485,000 bales in the previous year. Out of a total export of 12,007,940 cwts in 1922-23, Japan took 5,789,300 cwts, Germany 939,600 cwts, while Belgium was the third best customer with 900,220 cwts, and the United Kingdom came seventh with

a total of 682,620 cwts. The value of raw cotton exports in 1922-23 was £47,316,225, and of cotton manufactures £8,708,125.

Rice is another large export from India. The total world production of cleaned rice has been estimated at about 90,000,000 tons, of which India's share is 35 per cent., and though her export seldom exceeds 5 per cent. of her total production, she is nevertheless the largest exporter of rice in the world. The total area under rice in 1922-23 was 80,577,000 acres in British India, and 1,000,000 tons in the Indian States. A feature of this industry, which compares very unfavourably both with Japan and Egypt, is in the yield per acre, which in British India is about 8½ cwts, as compared with 21 cwts in Japan and 22 cwts in Egypt. The principal countries to which rice was exported, with their percentage, during 1913-14 were: Ceylon, 13.8; Holland, 13.7; Germany, 13.1; the Straits Settlements, 11.8; while the United Kingdom came sixth with a percentage of 6.7. During 1922-23 Ceylon received 17.4, Germany 16.3, the Straits Settlements 8.3, with the United Kingdom fifth with a percentage of 3.8. The value of rice exported from India during 1922-23 was £23,133,212, of which the share of the United Kingdom was £858,249, as compared with a total in 1913-14 of £17,599,582, of which the United Kingdom's share was £1,129,677.

Cotton Manufactures.—About two-thirds of India's cotton is exported raw, the rest being manufactured into yarn and cloth in the Indian mills, the chief centre of this industry being Bombay, in which Presidency 200 out of the total 289 mills in existence are situated. Last year there were in India 137,238 looms and 7,245,119 spindles. Cotton manufactures form 22 per cent. of Indian manufactured goods exported, and 6 per cent. of the total export trade of the country. The chief destinations of export are naturally those where Indian immigration exists. As an example of handloom weaving for export, reference may be made to the Madras "Handkerchief" trade, exports from which amount to a yearly average of £145,000, the United Kingdom and the United States being the two principal countries which receive these goods. Cotton carpets are increasing both in popularity and extent of manufacture. These carpets fall into three categories—bed, floor, and prayer carpets—and in Cawnpore an increasing export trade in the first of these is being carried on with the United Kingdom and the United States.

Wheat.—India produces one-tenth of the world's supply of wheat, the acreage under this crop last year being 30,725,000 acres. In 1914 India was the third largest producer of wheat, but in the percentage of exports to production she ranked fifth. Last year 87 per cent. of India's export of wheat came to the United Kingdom.

There are many other articles exported from India to the United Kingdom which space precludes mentioning, but a brief reference may be made to the trade in

Linseed.—This plant is identical with the flax of Europe, but a feature of its cultivation in India is that it is grown entirely for its seed, and not for its fibre. The average production of seed per annum prior to the War was over half-a-million tons, 75 per cent. of which was exported, but since that date the quantity available for export is about five million tons a year. In 1913-14 38 per cent. of exports went to the United Kingdom, 28 per cent. to France, and 11.5 per cent. to Germany. In 1922-23 the United Kingdom received 52 per cent. of the exports, France 18 per cent., Italy 11 per cent., while Germany's share was 1 per cent.

PROSPECTS OF ARTIFICIAL SILK.

(BY A CORRESPONDENT.)

ARTIFICIAL silk—or "art" silk, as the drapers have begun to call it—has been much before the public recently, and determined efforts have been made to raise a scare as to what foreign competition is going to do at some future time to our allegedly supine producers. The "new" industry, it appears, is to be placed in a position of grave danger (at some future time) by schemes darkly concocted in certain Continental countries that have not hitherto shone very brightly in producing "art" silk.

Let us see what justification there may be for all this pother. In the first place, the Chardonnet process, in which cotton was the raw material, was patented in this country as far back as 1885—nearly 40 years ago. The industry is thus not so very new after all, and as regards foreign competition, we have imported the manufactured article for some sixteen years past at the least, and probably for much longer. It is true that imports in recent years have grown rapidly, but so have exports, and we shall find later that there is little ground for anxiety as to the present state of the trade.

The original process of manufacture, in which cotton was used as the basis, has now been supplanted by other processes, which mainly make use of wood pulp. In all processes the method of manufacture, though highly complicated and scientific, is roughly the same. The wood pulp, by varied mechanical and chemical treatment, is reduced to an extreme degree of pulverisation. It then goes through further processes, which leave it as a mass of very "sticky" material, or "viscose." This is afterwards forced through fine jets into a solution which causes solidification of the threads as they trail out. The material is then ready for dyeing and manufacture into those charming "silk" stockings, neckties, blouses, and other goods that crowd our drapers' and outfitters' establishments. It is thus that the trunks and limbs of trees are turned into clothing for the trunks and limbs of humanity, and the transformation is certainly a standing marvel illustrating the skill and resource of our chemists and manufacturers.

For it should not be overlooked that hitherto England has been foremost in the development of this industry. Extensive works were established at Coventry in the opening years of this century, and the material rapidly became popular with the masses. Not only did home sales grow apace, but shipments to overseas markets followed suit, and became sufficiently important to attract the notice of the Board of Trade in 1908, when exports were first recorded at nearly £46,000. Large increases were registered in each succeeding year, until in 1914 the value of our shipments was nearly £631,000. The War, of course, profoundly affected the trade. Home demands were so great that our own producers (owing to shortage of labour and materials) were quite unable to meet them, and imports bounded up from £24,000 in 1914 to £465,000 in 1916, and over £1,000,000 in 1919. Let us see, now, how the foreign trade looks when viewed in perspective over the last 15 years:—

OVERSEAS TRADE IN ARTIFICIAL SILK.
(In Thousand £, 000 omitted.)

	Imports.	Re-Exports.	Net Imports.	British Exports.	Excess of Imports.
5-year avgs.—					
1909-13	19	11	8	220	212
1914-18	238	20	218	815	597
Single years—					
1919	1,097	158	939	1,494	555
1920*	640	173	467	3,007	2,540
1921	1,200	138	1,062	1,706	644
1922	2,559	290	2,269	2,624	355
1923	4,425	382	4,043	3,460	583

* Manufactures (except apparel) added in 1920 and after to both imports and exports.

In the first place, it is to be noted that the above table covers during the last four years manufactures of artificial silk, as well as the silk itself. It appears to be in these articles, and notably piece goods, that foreign firms have been most successful. Unfortunately, particulars have not yet been published for 1923, but for the three years to 1922 the various sections of the trade showed the following results:—

(In Thousand £.)

	1920.	1921.	1922.
"Art" silk.....Net imports	307	493	945
British exports.....	824	756	1,320
Piece goods.....Net imports	38	438	1,235
British exports.....	1,770	767	892
Other goods.....Net imports	122	131	90
British exports.....	413	183	413

It will be observed that in 1922 the trade in piece goods showed an excess of imports amounting to no less than £343,000. This, however, was much more than neutralised by an excess of exports in other manufactures

of £323,000, and in "art" silk itself of £375,000. The enormous increase in the piece goods landed here is very striking, and it certainly looks as if this is the section in which our producers are most vulnerable. In "Other Goods" the position is entirely satisfactory.

At first glance, these tables appear partly to justify recent jeremiads about the industry, but further examination will correct that impression. Since the war, our prices have mostly been higher than those of our foreign competitors, and home requirements were so great that British makers did not feel called upon to "cut" prices sufficiently to check the imports. Last year's experience, however, awakened them to the necessity of doing something, and prices this year have been so far modified that for the eight months to August, exports nearly balance the net imports. Indeed, for August itself exports were £411,000, against net imports of £405,000, and there seems to be a strong probability that the year will end with a substantial excess of exports.

It is evident, however, that a keen struggle is going on between home and foreign producers, and perhaps the best way of showing how the contest is progressing is to divide the last eight months into two periods, thus:—

ARTIFICIAL SILK (Thousand £.)

1924 (4 Months' Totals).	Imports.	Exports.	Net Imports.	British Exports.	Excess of Imports.
January-April	1,360	184	1,176	1,123	53
May-August	1,750	242	1,508	1,510	2

The tide seems to be flowing in favour of the British firms, and if the promise of August is maintained, results for the full year should be quite satisfactory. There seems to be little ground for doubt concerning the future. Our leading firms are well equipped as to plant, and abundant financial resources for further extensions. Recent developments include the planning of a huge new factory, to cover 40 acres and employ some 4,000 persons, and the company which is responsible for this has always followed so sound a financial policy that it is able to do such things out of reserved profits alone. This is the kind of management that is calculated to place an industry on an impregnable basis. Shrewd conservatism in finance, coupled with the most skilled scientific research and managerial organisation, will eventually triumph, and give to the British factories a position in world trade as commanding as that of Lancashire in the great cotton industry.

Foreign imports there will always be, and it is good that this valuable spur should never be lacking. To it we owe the present schemes for extending and improving our own means of production, which were shown to be essential by the growth of our purchases from abroad. Let us see from which countries these purchases were made, noting, incidentally, the extent of the Italian threat:—

ORIGIN OF IMPORTS OF ARTIFICIAL SILK (including MANUFACTURES).
(In Thousand £.)

From—	1920.	1921.	1922.
Switzerland	241	353	854
Germany	35	324	786
Belgium	190	141	321
France	41	217	216
Holland	18	43	157
Italy	47	18	128
United States	66	90	58
Other countries	2	14	39
	640	1,200	2,559

Seven countries are here included, in the order of their importance as suppliers to our market. Switzerland heads the list, and Italy—the bogey with which so sensational an attempt has been made to frighten us—comes last but one. Italy supplied in 1922 only 5 per cent. of our total imports of these goods, while Switzerland sent 33 per cent. and Germany 30 per cent. Germany, indeed, appears to be the most serious competitor. Her forests are probably an ample source of the raw material. At all events, she is in that respect more favourably placed than any of the other countries, save the United States, which for other reasons seems to be virtually out of the running. We have long had experience of the ability of Germany in those industries which pre-eminently require the application of scientific research, and this, joined with her ready access to the raw material, appears to indicate her as the competitor to be watched in future

BREWERY PROFITS.

In our issue of May 24, 1924 (page 1045) we examined in detail the reports of 14 brewery concerns, most of which made their reports up to September 30th or December 31st. We now propose to proceed further with this subject by examining the position of 10 important breweries that have recently issued their reports, making them up in most instances to June 30, 1924. The two articles together can be said to give a fairly up-to-date picture of the financial position of breweries. Our first table shows the net profits during the past three years, also the amount carried forward of these leading brewery undertakings:—

Name of Company.	Net Profits, after Payment of Debenture Interest.			Carried Forward.		
	1921-22.	1922-23.	1923-24.	1921-22.	1922-23.	1923-24.
Arthur Guinness, Son, and Co.	2,252,477	2,046,911	2,389,625	702,288	594,198	713,822
Barclay, Perkins, and Co.	176,961	181,129	162,063	34,463	41,592	44,956
Bass, Ratcliff, and Gretton	386,063	389,223	463,058	55,748	61,571	93,429
Chester's Brewery	104,219	111,679	108,135	59,836	67,410	68,289
Hoare and Co.	119,456	186,379	207,658	4,987	5,146	7,541
Mitchells and Butlers	412,801	404,471	414,433	220,419	220,772	243,808
Threlfall's Brewery	278,874	288,527	358,582	232,553	244,563	263,314
Watney, Combe, Reid, and Co.	614,613	690,718	702,627	194,494	215,373	185,203
Whitbread and Co.	177,788	175,085	168,812	289,580	319,532	342,489
William Hancock and Co.	45,137	42,399	56,173	14,589	16,288	12,510

The net profit of Arthur Guinness, Son and Co. has been arrived at for the year ended June 30, 1922, by taking the profit and loss total of £2,925,755, and then deducting £528,767, balance of income-tax to June 30, 1922, and £144,511 corporation profits tax. This makes net profit for that year £2,252,477, as shown in our table. The same principle is followed for the year ended June 30, 1923, the disposable total for that year being £2,730,026, from which £547,127 is deducted for income-tax, and £135,988 for corporation profits tax, making net profit £2,046,911. In the accounts for June 30, 1924, the two items mentioned are deducted from sales of the company's products, and therefore do not have to be taken from the disposable total at profit and loss, which for that year is £2,389,625. Our figures of net profits, therefore, can be said to be strictly comparable. Barclay Perkins record a decrease which is practically a general shrinkage in accounts. Chester's Brewery also show a decline, and we glean that Whitbread and Co., although failing to supply us with a detailed profit and loss account, have not had such a good year as that of the previous twelve months.

In our next table we analyse the chief assets and liabilities over the past three years:—

Name of Company.	Principal Liabilities.			Principal Assets.				
	Total Share & Deb. Capital.	Re-serves.	Cred-itors.	Pro-perties, Plant, &c.	Stocks.	Invest-ments.	Cash.	Debt's
Arthur Guinness, ord. stk.	7,000,000	3,630,122	4,738,695	5,876,157	7,873,994	592,646	1,609,744	1,187,248

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG. STOCKHOLM. MALMÖ.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr. 182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

It is perhaps surprising to find that the company with the largest capital is Watney, Combe and Reid. This is accounted for by an ordinary and preference stock capital of £6,510,424, and a 3½ per cent. perpetual first debenture stock of £4,416,877. Guinness, the second in size in our table, has an ordinary and preference stock capital of £9,500,000, but there are no debentures. Watney's total assets are £14,297,072, as against Guinness's £17,707,130. The prosperity of Guinness's, however, is strikingly revealed when it is considered that it can earn £2,389,625 with its capital, as against Watney's comparatively modest £702,627. On the whole, share capital has remained fairly steady. The steady growth in reserves reflects the prosperity of the industry. Guinness's decline is, of course, made up by its capital increase, the issue being by way of bonus shares. Whitbread and Co. show no reserves, but a balance of £342,489 is carried forward. The increase in capital and properties of Hoare and Co. is on account of the purchase of the Lion Brewery. In most other cases "properties" show little change. It is remarkable to find that Watney's properties have increased from £10,688,010 to £11,726,275 by the purchase of the Isleworth Brewery, and that yet its capital is slightly lower.

Our final table shows the ordinary dividends during the past three years, also comparative prices and present yields:—

The brewery share market has recently displayed considerable activity, and prices have moved upward. Evidence of prosperity is apparent if a glance at prices over the past three years be made.

The future for public houses was dealt with by Mr W. Waters Butler, in an interesting speech, made at the annual meeting of Mitchells and Butlers, Limited. We have received, he said, approval from all quarters of "our artistically designed and well-equipped licensed premises which we have erected, and are erecting in our trading area." Mr Butler continued, "I can assure you the return on the capital expended in such new premises is at present a meagre one, but we are building for the future, feeling confident that our policy of the closing down of redundant, badly constructed premises, which offer poor service to the public, and the substitution of more up-to-date premises, not only will tend to strengthen the defence of the industry by the public, for whose needs they are erected, but also advance the sobriety of the nation, which the trade is as eager to promote as the most ardent true temperance reformer."

AN ANALYTICAL DIGEST OF THE GENERAL ELECTION IN 1923.

THE main reason of late years for extending the suffrage has been to obtain to the greatest possible degree a Parliament which, so far as the House of Commons is concerned, shall represent public opinion. For two years in succession more than twenty millions of voters have been called upon in Great Britain to record their votes upon two of the most important issues that ever presented themselves at a General Election. At each of these elections, which were held in midwinter, more than fourteen million votes were polled. Many voters had to travel a considerable distance, and probably the inclemency of the weather hindered many thousands from going to the poll. But at each election about one-fourth of the registered electors did not vote, and an analysis of the polling in the 550 contested constituencies leaves the student of statistics in perplexity as to the reason why the electors of Cumberland, Devonshire, Somerset, and Wiltshire should show such civic spirit as to poll not less than four-fifths of their electorates, whilst Durham, Lancashire, and Cheshire only polled three-fourths of their electors, and Middlesex, Essex, Sussex and Surrey did not poll even two-thirds. Experienced politicians, from Mr Baldwin downwards, are inclined to attribute these results to the zealous work of Labour organisers, on the one hand, and to the lack of such zeal on behalf of the Conservatives.

In 1900 there were only 9 Labour members elected, and the total number of votes polled by Labour candidates was 118,003. How the Labour party has grown is shown in the following table:—

TABLE I.—Containing 12 COUNTIES of GREAT BRITAIN which each Return from 14 to 66 MEMBERS to the HOUSE of COMMONS.

Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.	Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.
Lancashire ..	66	22	21	23	Stafford	18	6	9	3
London	62	22	12	28	Middlesex	17	1	14	2
Yorkshire	67	23	20	24	Warwick	16	13	2	1
Lancark	22	16	6	..	Glamorgan	16	2	12	1
Essex	20	10	8	2	Kent	15	2	12	1
Durham	18	10	4	4	Cheshire	14	2	7	5
Total of above ..	245	104	88	53	Total of above ..	97	33	49	15

Mr Hopkinson, who sits for Mossley, is included among the Conservatives, and Mr T. P. O'Connor among the Liberals, who sit for Lancashire; and Mr Mosley, who sits for Harrow, among the Labour members. We have compiled these tables on the basis of the number of members per county, and although a generalisation is dangerous, it may be broadly said that the above table includes the counties with the greatest density of population, and the three succeeding tables groups of counties of progressively scattered populations.

The twelve counties shown in the table contain the bulk of the manufacturing districts of Great Britain, and return 342 members to the House of Commons, or considerably more than half. Of these 342 members, the Conservatives claim 137, the Labour Party the same number, and the Liberals 68. In other words, these 12 counties have two-fifths of their representatives in the Conservative ranks, two-fifths under the Labour banner, and one-fifth are Liberals. As regards the display of civic spirit on the part of the electors in these counties, we may state that 21 of the 61 contested constituencies in Lancashire polled over four-fifths of their registered electors; Yorkshire polled as high in 10 of her 52 contests; Durham and Stafford each polled as well in four constituencies, Glamorgan in five, and Cheshire in two cases.

TABLE II.—Containing 16 COUNTIES of GREAT BRITAIN which each Return from 6 to 13 MEMBERS to the HOUSE of COMMONS.

Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.	Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.
Hampshire ..	15	..	10	3	Sussex	9	..	8	1
Surrey	12	..	12	..	Norfolk	8	4	1	3
Devon	11	..	4	7	Midlothian and Peebles	8	3	1	4
Gloucester ..	11	4	6	1	Leicester	7	2	1	4
N'umberland ..	10	4	5	1	Somerset	7	1	1	5
Derby	10	5	4	1	Worcester	6	..	6	..
Lincoln	9	1	5	3	Stafford	6	1	4	1
Nottingham ..	9	3	4	2	Monmouth	6	4	2	..
Total of above ..	85	16	48	21	Total of above ..	57	15	24	13

The 16 counties set out in Table II. return 142 members to the House of Commons, of whom 72 are Conservatives, 39 are Liberals, and 31 belong to the Labour Party. Great zeal was shown by the electors of Devonshire, who in six out of their ten contests polled over four-fifths of their electorates. Somerset followed suit in three of her seven contests, and Lincoln, Leicester and Monmouth also polled over four-fifths of their electors in two contests each.

The Isle of Wight is included in the list of Hampshire seats. Surrey and Worcestershire stand out conspicuously as returning Conservatives in every constituency. But the zeal displayed in the two counties was very different. Whereas the electors of Worcestershire polled over four-fifths of their electors (85.8 per cent.) in Worcester, and nearly four-fifths at Dudley and Stourbridge (78.8 and 78.6 per cent.), the highest poll in Surrey was that for Guildford (67.6 per cent.), and in only three other constituencies did the polls reach 60 per cent.

TABLE III.—Containing 25 COUNTIES of GREAT BRITAIN which each Return from Two to Five MEMBERS to the HOUSE of COMMONS.

Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.	Counties of Great Britain.	Total Seats.	Labour Seats.	Con. Seats.	Liberal Seats.
Cumberland	5	3	2	..	Oxford	5	..	3	2
Wiltshire	5	3	2	..	Bedford	5	..	1	4
Northants	5	3	2	..	Buckingham	5	..	1	4
Cornwall	5	..	4	1	Inverness, Ross, and Cromarty	5	3	..	2
Hertford	5	1	2	2	Stirling and Clackmannan	5	3	..	2
Aberdeen	5	1	2	2	Cambridge	5	..	2	3
Dorset	4	1	2	1	Hereford	4	..	2	2
Shropshire	4	1	2	1	Perth and Kinross	4	..	1	3
Berkshire	4	1	2	1	Dumfries	4	..	2	2

Renfrew	4	1	2	1	Carmarthen	4	..	1	3
Forfar	4	1	2	1	Denbigh	4	..	1	3
Pife	4	1	2	1	Total of above ..	58	18	19	21
Total of above ..	58	18	19	21	Total of above ..	30	7	9	14

The 25 counties and grouped counties shown in Table III. return 88 members to the House of Commons, of whom 35 are Liberal, 28 Conservatives, and 25 members of the Labour Party. All the five members for Cornwall are Liberals, as are all three members for Inverness, Ross, and Cromarty, and the two members for Carmarvon, as well as four out of the five members for Wiltshire. On the other hand, the Conservatives claim four of the five Hertfordshire seats and three of the four Dorsetshire seats. All five Cumberland constituencies polled over 83 per cent. of their electorates, and four of the five Wiltshire constituencies polled over four-fifths of their registered electors.

TABLE IV.—Containing 19 COUNTIES, and GROUPS of COUNTIES, of GREAT BRITAIN which each Return ONE MEMBER to the HOUSE of COMMONS.

	Labour.	Con.	Liberal.		Labour.	Con.	Liberal.
Westmorland	..	1	..	Roxburgh & Selkirk ..	..	1	..
Huntingdon	..	..	1	Orkney and Zetland ..	..	..	1
Argyll	..	..	1	Anglesey	..	..	1
Berwick and Radcliff ..	1	..	..	Cardigan	..	..	1
Caithness and Sutherland ..	..	..	1	Flint	..	..	1
Banff	..	..	1	Merioneth	..	..	1
Galloway	..	..	1	Montgomery	..	..	1
Dumfries	..	..	1	Pembrokeshire	..	..	1
Linlithgow	1	..	..	Brecon and Radnor ..	..	..	1
Moray and Nairn	..	1	..	Total of above ..	0	1	8
Total of above ..	2	2	6	Total of above ..	0	1	8

The outstanding feature of Table IV. is the fact that of the 19 members elected by these single-membered counties, 14 are Liberals. Table III., which contains the counties returning from two to five members, also shows a large majority of Liberal members (35 out of 88). It appears, therefore, that in the great cities and towns where popular enthusiasm can be most easily aroused the Labour Party and the Conservatives in almost equal degrees dominate the masses, and that Liberalism has its strength mainly where the population is scattered, and electors have to a greater degree to think matters out for themselves, and arrive at the old conclusion that the middle path is usually the safest.

Notes of the Week.

The Emergency Session.—The Emergency Session of Parliament which opens on Tuesday next has been called for the sole purpose of passing a Government Bill to implement this country's undertaking under the Irish Treaty to set up a Boundary Commission in spite of Ulster's refusal to participate. Ostensibly Ireland is the only item on the menu. But the re-assembly of the politicians at Westminster will doubtless afford an opportunity for gaining clearer ideas on several other factors in the immediate future of domestic politics. The skilled observer will perhaps be able to glean sufficient from the lobbies to enable a clearer estimate to be made of the course that the Government will follow over the Russian Treaty, and how much or little ground there is for Mr Churchill's hint that a General Election may come in a few weeks. Mr Churchill seems at last to have plunged definitely into the Conservative sea, on whose brink he has stood shivering for so long; for he has been adopted as Conservative candidate for the Epping division, and appeared on Thursday at a purely Unionist demonstration in company with Lord Balfour and Sir Robert Horne. But as he plunges he casts a glance back at his late Liberal companions, and tells them how easy it is for them to plunge too. The Conservative leaders, Mr Churchill tells us, in effect, have so completely dropped the Tariff plank out of their platform that no ground for fiscal controversy between them and the Liberals remains. We do not know on what particular statement by which Conservative leader Mr Churchill bases this comfortable belief. All that can legitimately be read into the statements of Mr Baldwin in the House of Commons last session is that a severe defeat at the polls has induced the Conservatives to relegate the proposals for a general tariff to cold storage for the moment; while there are prominent members of the Conservative party, such as Mr Amery, who are frankly and avowedly undaunted in their ardour for Protection. It must, moreover, engage the attention of all Free Traders that Mr Churchill, almost in the same breath in which he says that the Tariff campaign is dead, recommends as a cure for industrial evils what few people besides Mr Churchill would describe as "the convenient, flexible, and well-understood" machinery of the Safeguarding of Industries Act. We are confirmed in our belief that Free Traders will be wise to keep their powder dry. But for the moment it is not the fiscal, nor even the Russian, but the Irish question which fills the political stage. We anticipate that the Government will have no difficulty in passing their Bill through both Houses of Parliament. The passage of the Bill is essential for the vindication of good faith with the Free State. But we can hardly hope that the proceedings in the House of Commons will greatly help towards a solution of the Boundary problem. That solution can only be hammered out by Irishmen of the North and South, not by Englishmen. The Boundary Commission will sit, and will eventually report. Their report may or may not point the way to an agreement. But it is only through a simultaneous growth of the spirit of accommodation, both in Dublin and Belfast, that Ireland can hope for escape from the present deadlock. But although Great Britain cannot at this stage help towards solution, she is in many ways as vitally concerned in it as the two Irish parties themselves.

The Anglo-Egyptian Conversations.—Mr MacDonald has scored a distinct success in persuading Saad Zaghlul Pasha to enter upon the conversations which began in London on Thursday—and this without raising any false hopes of radical alterations in the basis of British policy. The crux remains the status of the Sudan. The British Government have made it clear that they will not resign either the juridical rights or the *de facto* position which they possess in that country as a result of its reconquest from the Mahdists and the subsequent Anglo-Egyptian Convention of 1899. On the other hand, Zaghlul Pasha has only consented to negotiate on the understanding that he does so with a free hand—particularly in regard to the four points which the British Government reserved when they recognised the independence of Egypt in 1922,

the most important of which was the Sudan. Zaghlul Pasha is pledged to his countrymen to secure the complete independence of Egypt and the Sudan as a united country. It is for this that he has stood since 1919, and for this that he is solidly supported at the present moment by the Egyptian nation. In coming to London in these circumstances, he has perhaps reached the crisis of his long and distinguished political career. It must be evident to Zaghlul Pasha himself that he cannot in these negotiations achieve the realisation of his full uncompromising programme or anything like it. *A priori*, the negotiations seem doomed to end in an *impasse*, but the history of the Irish negotiations (not to speak of many controversies that have been settled by the Council of the League of Nations) shows that this situation often stimulates statesmen of resource and goodwill to discover a mutually acceptable solution. Will Mr MacDonald and Zaghlul Pasha together prove equal to the emergency? Much depends on the uncertain factor of Zaghlul's own personal hold on the Egyptian people. Will the Egyptians overthrow their idol—as wholeheartedly as they have raised him up—if he fails to achieve in all completeness the miracle which they expect of him? Or is their confidence in him so complete that they will approve as beneficial to the nation any settlement acceptable to him? And in the latter alternative, what are Zaghlul Pasha's own minimum terms? After all, the present status of the Sudan is provisional, and ought logically to remain so for a long time to come, since the country and its inhabitants are both in the early stages of development. Certain concrete points of vital importance, such as the allocation of Nile water, can be settled at once without prejudicing the future in other spheres, and if they are satisfactorily disposed of forthwith, as they can be, that will clear the air. But to settle the political destinies of the Sudanese people at this stage by their definitive incorporation either in Egypt or in the British Empire would be a flagrant breach of the trust which Egypt and Great Britain hold conjointly. Both Powers are under a moral obligation to exercise their authority over the Sudanese in the spirit of a mandate, until the population under their tutelage is in a position to stand on its own feet. When that time eventually arrives they may elect to merge themselves in Egypt or to federate with her, or to enter the British Commonwealth on some definite and permanent footing, or to remain independent of both Egypt and Great Britain, while maintaining close relations with both these neighbouring Powers (for Great Britain would still remain the neighbour of the Sudan in Kenya and Uganda, which control the headwaters of the White Nile). Meanwhile, Great Britain has neither the right nor the desire to oust Egypt from her share in the condominium, and Egypt will be extremely ill-advised if she withdraws from it in a temper. On the other hand, if she elects to maintain her trust, she must administer it in loyal co-operation with her British partner, and for the benefit of the population concerned. The Convention of 1899 may still provide a sufficient basis for Anglo-Egyptian co-operation, or it may prove preferable to replace it by another instrument which would take account of the changes during the past quarter of a century. In either case, we see no reason why a provisional settlement in the mandatory spirit should not be achieved.

The Civil War in China.—Though the Chekiang troops have held out longer than was expected last week, they are so outnumbered by their opponents and so weakened by dissensions among their leaders, and by wholesale defections, that their collapse cannot be very far off, especially as a section of them are not natives of that province, but were raised by Lu Yung-Hsiang in Shanghai, whence he originally came. Meanwhile Sun Yat-Sen cannot safely move northwards from Canton, where his authority is threatened by various rivals, while his misadventures have gone far to deprive him of local support; and it seems very doubtful if Chang Tso-Lin will be able to force his way towards Peking by the railway from Shan-haikwan, along which Wu Pei-Fu is hurrying troops to resist him, or through the hilly country to the west of the line. If, therefore, the Tuchuns of the Northern and Central provinces can hold together in support of the

Peking Government, its authority may be re-established and unity and peace restored throughout the Chinese Republic, except, for the present, in Manchuria and the extreme South. Unfortunately, it is by no means certain that they will hold together, and unless they do so the Powers can do nothing for China. Efforts are being made by the various contending parties, we believe, to borrow money in London, and probably elsewhere, but there seems very little chance of their success. And any form of intervention by foreign Powers at present might easily set up a general anti-foreign reaction.

Indian Railway Reform.—The Government of India has achieved that separation of the Railway Budget from the general Indian Budget which was the chief reform recommended by the Acworth Commission in 1921. The tendency in India has long been towards State ownership of the railways, coupled in some cases with the delegation of management to companies formed for that purpose and controlled by the Government; but this conjunction, as the Acworth Report pointed out, involves some anomalies, and is apparently transitional—though the Nationalist members of the Legislative Assembly seem to have expected its revival. But, if railway management is conducted or controlled by the Executive, the railway revenue and expenditure must not be directly dependent on the Indian Budget, otherwise the needs of railway extension, and even of improved equipment, are limited by the demands of the Government for other purposes, and by the Budget outlook for the near future. The reasonable demands of the railway managers for increased expenditure have been cut down in order to spend on other objects which seem more urgent, and, as any portion of the railway grants unspent during the year reverts to the Exchequer, the railway authorities cannot plan extensions or renewals which may take several years to complete. The inevitable results, as the Acworth Report points out, have been a shortage of rolling stock, a permanent way unfit, through postponement of repairs, to support even the normal traffic, delays in construction of extensions, and loss of interest on the capital expended on lines of which the completion has been postponed in view of more pressing financial needs. Passenger trains have been overcrowded, the despatch of freight delayed, sometimes for months, the development of the resources of the country—especially of coal-mining—has been hindered, and various abuses have grown up, notably that of illicit payments to the railway officials to get goods forwarded out of their turn. A Committee of the Legislative Assembly was recently appointed to arrange for the separation of the Budgets; but the native members insisted on conditions which were obviously the outcome of Swaraj. The compromise just effected, and published in substance on Monday, provides that the Budgets shall be separated, that the lines which are commercially profitable shall contribute 1 per cent. per annum on their capital to the general railway revenue, that the higher posts in the railway administration shall be filled, as opportunity offers, by native officials, who will be trained for the purpose, that stores are to be bought by the Railway Purchase Department (and therefore, presumably, in India if possible), and that any transfer of a State railway to company management may be annulled by the Legislative Assembly. (According to one account the arrangement is for three years only, but it seems likely to be renewed.) These changes may not always make for increased economy or efficiency, but the separation of the Budgets, with the consequent freedom of the railway administration to plan comprehensive schemes of extension and improvement, and to devise methods of raising money for them, is fully worth the cost of the concessions made to Indian Nationalism.

The League and Austria.—One important decision of the Council of the League of Nations refers to financial control in Austria. Agreement, writes a Geneva correspondent, has been reached to fix the level of budget equilibrium at 545 million gold crowns, of which investments amount to 50 millions, so that the ordinary expenditure is fixed at 495 millions, instead of 350 millions, which was the original estimate of the League's Financial

Delegation in 1922. The present level of expenditure is 622 millions. The fact is that the original figure was taken as an absolutely safe margin in the estimated yield of taxation, and the Financial Committee, after investigation on the spot, was unanimously satisfied that the higher figure could now be safely adopted. If certain measures, which in the opinion of the committee are sufficient to stabilise the situation, are taken by the Austrian Government, the control during the next 12 months will be a very great deal reduced, and the Commissioner-General will be concerned not with details of expenditure, but only with the general budget arrangements of the State. The full control was originally arranged for a minimum of two years, and the prospect is that it may be greatly modified for another period of 12 months, after which it may be removed. There will remain, of course, the control of the revenues for the repayment of the loan and of the issue of the unused portions of the loan to cover any deficits.

Lancashire and Foreign Competition.—A deputation of over 40 representatives of Lancashire Cotton interests waited upon the Prime Minister in order to give him their views as to the probable effect upon the export trade in cotton goods which would result from the according of special customs facilities in Germany for the products of Alsace-Lorraine, in the event of a Franco-German agreement on the question being concluded. Dr Alfred Réé, President of the Manchester Chamber of Commerce, said that they came to the Government without knowing precisely what the Franco-German Treaty would contain, but referred to the general conviction that French goods had been getting through as Alsace goods and paying no duty. Before the war Alsace supplied the German market, but in the French market her goods paid duty as ours did. Now that Alsace is part of France, he added, she has the open door to the French market and the vast field of the French colonies in Africa and the East at her feet. "That is the difference between pre-war and post-war conditions." The combined French and Alsatian cotton industry, he claimed, would threaten Lancashire in all markets of the world, a possibility which is "intensely disquieting to British exporters of cotton goods in every one of our markets." This alarm, however, does not appear to be general, for at the annual meeting of the Calico Printers' Association last week, the chairman, Mr Lennox B. Lee, in referring to the recent sale of the company's works in France, said: "Our reasons were that, as far as the print trade is concerned, we regarded the commercial outlook in France as uncertain. In the first place, France by acquiring Alsace has increased her productive capacity in the matter of calico printing out of all she has absorbed. In the second place, the French cost of production before the war was greater than that of this country, and it probably will be so again directly the franc is stabilised. Therefore it is difficult to see how France can maintain a large export trade, which is the only alternative to closing down machines. These considerations satisfied us that it would be wise to sell the property if a will have noticed that negotiations have been set on foot having for their object the extension of the period agreed in the Treaty of Versailles during which Alsace may export goods into Germany free of duty. If these negotiations are successful, the difficulties for the French print trade, which I have just indicated, will be postponed; but your directors are of opinion that, even if the period is increased, they will reappear on the termination of such extension." In his further remarks, Mr Lee dealt at considerable length with the question of foreign competition and laid stress on the necessity for price reduction in order to secure business. High production costs were at present the stumbling block, the cost of labour in the cotton trade being 150 per cent. above the pre-war level, while national taxation is up by 300 per cent., and local taxation by 125 per cent. He admitted, however, that in the long run this country would reap the benefit of following the path of sound national finance and be at an advantage as compared with countries which still continued to borrow to meet their deficits.

American Cotton Crop.—Our Manchester correspondent writes:—On Tuesday last the Bureau of Agricultural Economics of the United States Government published a further official report on the cotton crop for this season. The condition as on September 16th was given as 54.4 per cent., against 59.3 per cent. on September 1st, and 64.9 per cent. on August 16th. The indicated crop on the basis of the present condition figure is 12,596,000 bales, exclusive of linters. The statistics were worse than expected, and resulted in a smart advance in prices in New York and Liverpool, until a rise of about a penny per lb was registered. The higher rates, however, have not been maintained, and, owing to extensive selling, prices on Thursday declined practically to the level existing before the Bureau report. In trade circles there is some disposition to discredit the Government figures, as they are not in keeping with the majority of private advices. In any case, if the official report is taken as correct, there is every probability of an output of American cotton this season, including linters, of 13,250,000 bales, against less than 11,000,000 bales for 1923-24. Cotton users throughout the world, therefore, are assured of plentiful supplies. Growers in the Southern States of America have not yet begun to sell freely, and when they do take such action prices are bound to give way. Spinners are purchasing as little as possible, and the Masters' Federation in Manchester this week has decided not to recommend spinners of American cotton to increase the working hours in the mills, which will continue at 26½ per week against the usual 48 hours. The wages agreement between the Lancashire cotton employers and the trade unions has now expired, and it is open for either side to propose a change in list rates. Action, however, on the part of the masters or the workpeople at the present time is very unlikely. Current list rates are 90 per cent. higher than in July, 1914, but if allowance is made for the reduction in working hours from 55½ to 48 in 1918 the operatives for a full week can now secure an advantage in wages of about 61 per cent. on the figures existing in 1914.

The Stock Exchange and Bucket Shops.—A Stock Exchange correspondent writes:—In a recent issue fresh evidence was produced of the manner in which the bucket-shop is raising an energetic campaign throughout the country for the purpose of encouraging speculation, the result of which is practically certain to attain the end desired by the advertisers, though not that which is presented to their readers. The difficulty of getting official cognisance taken of these swindlers' efforts is apparent to the thousands of people who receive the circulars. Private enterprise, as already mentioned, is left to raise the voice of caution in season and out of it. Some way, or ways, however, may reasonably be sought for a widened circle of assistance. The New York Stock Exchange carries the war into the bucket-shops' own country, and Canada is now following suit. In both countries the outside firms of bucket-shop dealers, who describe themselves in very much the same way as those of our own country, grew to such a pitch of impudence and number that the official Stock Exchanges felt compelled to take action. For the past two or three years the New York Stock Exchange has been engaged in a vigorous and intensive effort to stamp out the evil which honeycombed the country. Not only does the constant evidence of such swindling affect the public itself; it must react forcibly upon any Stock Exchange, seeing that a large number of the public have very vague ideas concerning the difference between the members of a recognised Stock Exchange and outside people who describe themselves as stock and share dealers, bankers, and such-like. The Stock Exchanges, therefore, have a twofold interest in doing what is possible for the education of the public in the matter of Stock Exchange transactions. In the first place, the official body, standing for what is honest and fair, holds a responsibility towards the public in the way of protecting the latter from insidious attacks; and, in the second place, its own business is directly threatened by the growth of a feeling amongst the public that all stock and share dealers are very much alike. In New York, the president of the Stock Exchange, and other experts on the subject, have been delivering lectures, and have embarked

upon a propaganda campaign that has been carried all over the States. In Canada a fresh effort has arisen for countering the activities of financial pests who are clever enough to keep just outside the range of the law. On this side even recent weeks have seen the dissemination of bucket-shop literature to an extent which suggests that outsiders find the public an easy prey to their beguillings. The London Stock Exchange has a duty to the public in this matter, and is alive to its responsibility, although the difficulties of knowing in what direction effective action should be taken against the outsiders are clearly manifest. The committees of the various Stock Exchanges throughout the country can act only indirectly. They will probably regard it as un-English to expect their chairmen and other highly-placed officials to lecture in the American style, or to take direct steps against the bucket-shops. They could, however, venture upon a wider measure of publicity, and could demonstrate, in various ways, the folly of dealing with people whose actions are free from any liability to responsible bodies, and who are not governed by the strict rules which control the official Stock Exchanges. These rules, in many cases, enforce upon Stock Exchange members a standard of honour and strictness of dealing which stand above the law of the land. Other methods will perhaps suggest themselves. Probably the bucket-shop, like the poor, will always be with us unless the Stock Exchange is given monopoly of the business. Monopoly, however, infers a Charter and a possible loss of liberty. Whether it would be to the advantage of the Stock Exchange to be granted a Charter is a very moot point.

British Timber Ports Congestion.—A circular which has been issued by the Baltic and White Sea Conference comes as a reminder that congestion and delay to shipping in certain British ports, which was the subject of much complaint twelve months ago, has by no means been entirely remedied. In the timber trade especially there has, it is pointed out, been delay during recent weeks at such ports as London, Hull, and West Hartlepool. In London dispatch has not been so slow as last year, and there is a prospect of fair dispatch being maintained. Moreover, the Port of London Authority has—so the Baltic Conference circular observes—a large improvement scheme in hand at the docks, where timber is discharged, on the lines suggested by the London Committee of the Chamber of Shipping's Port Facilities Committee. The report of the last-mentioned committee was referred to in the *Economist* of May 31st—four months ago—and the remark was then made that the part of the report dealing with our metropolitan port was apparently not complete. Despite the lapse of time, the official publication of this part of the report is still awaited, and having regard to the interest necessarily attaching to the views of the practical men on the committee, the long delay in issuing this remaining section of the report is much to be regretted. As to Hull, a state of serious congestion is reported in the Baltic Conference circular to have improved, but at West Hartlepool considerable congestion of wood carrying vessels was continuing, though not to the same extent as last year. A comparison is drawn between British and Continental ports, the facilities at the latter being stated to be such that

the maximum traffic in the timber trade, which is seasonal, can be dealt with, while at British ports the dock authority—in the two instances specially mentioned the London and North-Eastern Railway Company—provides only for the average timber traffic, or less than that. Though the railway company, as dock authority, is restricted in the new facilities which it can provide by the effect of the Railways Act, 1921—a point passed over by the Baltic Conference comment—the state of things to which attention is called is disquieting, and certainly the situation calls for close attention on the part of those concerned, with a view to bringing about such improvement as may be practicable.

The Revival in Homeward Freights.—The month now closing has been a very good one for shipowners. Late in August the demand for grain tonnage began to show more activity, but early in September the number of orders in circulation grew by leaps and bounds, and altogether a very large business has been recorded. Steamers have been wanted chiefly from Canada and the Northern Range-Gulf ports, and it is estimated that fully 150 vessels have been arranged for. This would represent about 4,750,000 quarters of grain, or 1,000,000 dead-weight tons of shipping. Bearing in mind the semi-stagnation that had been in evidence for such a long period, this is a really satisfactory development, and British steamers have secured the bulk of the business. The U.S. Shipping Board decided early in the month to put an extra ten steamers into the grain trade from the Gulf of Mexico, and some of them have been taken up by charterers for carrying grain to Hamburg. The freight money paid is 19 cents per 100 lbs, but in view of the heavy cost of working this State-owned tonnage, it is hardly likely that the voyages will pay, whereas vessels in private ownership are coming out on present market rates. There has been a steady upward movement in freights. Grain from Montreal to the Continent, which was no better than 13 to 14 cents per 100 lbs last month, has risen to 17 cents Antwerp-Rotterdam and 18 cents Hamburg. Steamers can be placed for Sweden at 23 cents, and from the Northern Range 15½ to 16 cents is quoted to the Antwerp-Rotterdam range and 17 cents to Hamburg-Bremen. This steady absorption of tonnage for grain has cleared a lot of stale shipping from the markets and given a firmer tone to the general situation. Steamer space for October is already becoming very scarce, and shipowners are confident that they can maintain their position. In the East all loading centres report a shortage of tonnage, and the Australian market has been keenly interested in steamer space for the new crop wheat. The Mediterranean and Bay ports have been rather quiet, but rates are hardening a little, and there is a fair demand for Continental discharge. The oil tanker market is now showing more interest, and several tank steamers have been fixed from the Gulf to this side at 27s. The cut in the price of bunker fuel oil will help shipowners working oil-burning tonnage after the present contracts have expired. A feature has been the keen demand for tonnage for German coal from Antwerp-Rotterdam. The outward coal market from this country is also a little better, with a good demand for South America. British merchant shipping is thus better employed, and all freights show a very fair improvement on the month. Thus the autumn shipping season has started very well, and in well-informed quarters a continuance of the demand for steamer tonnage for European discharge is looked for right up to the close of the year.

Scottish-American and Tankers.—The accounts of Tankers, Limited, for the year ended March 31st last show a profit of £3,800, after paying the interest on the mortgages in favour of the builders amounting to £51,100. This raises the balance at credit of profit and loss account to £66,600. The balance-sheet is still in a state which calls for comment. The first item—the cost of steamers, at £3,861,719—conveys little to us. It is stated that depreciation has been written off to March 31, 1921, to the extent of £60,000. This brings the item down to £3,801,719. We think that the investing public would be glad to know the exact market value of those steamers. The phrase, "including adjustment for cancellation of

two other vessels," is ambiguous unless we are shown what the cancelled order cost the company. The auditors are cautious in giving their certificate. They state that "no provision has been made for depreciation on steamers, tugs, and barges for the year ended March 31, 1924," and that, "in our view the aggregate value of the investments is considerably less than the figure appearing in the balance-sheet." These investments appear as £1,019,313. Incidentally, steamers are mortgaged to secure bills amounting to £1,129,375. The directors state that they are of opinion that the "fleet is too highly valued, and should be written down to approximately replacement value." They also intimate that investments are being carried at "too high a valuation," and state that proposals have been formulated for capital reconstruction; they will be submitted to the shareholders for consideration. We welcome this belated announcement. The ordinary shares of Tankers, Limited, are held by the Scottish-American Oil and Transport Company, Limited. This latter company has just issued its report and accounts. These are succinct; ordinary shares at par in Tankers, Limited, amount to £1,196,964. This sum also is the figure of share capital of the holding company. Cash in hand is shown as £2,011, as against a reserve of £2,000 and creditors, £11. Simple accounts, but subject to a change when reconstruction takes place.

Union Cold Storage.—The remarkable progress made during the past decade by the Union Cold Storage Company continues to be upheld in the latest accounts to hand. Here are figures of profits and distribution covering a period of years:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Gross profits	£ 137,094	£ 293,424	£ 306,360	£ 467,393	£ 558,785	£ 581,589	£ 726,904
Deb. interest, &c.	31,727	62,333	58,133	74,118	85,423	85,423	72,830
Net profit	105,367	231,091	248,227	395,275	473,362	496,166	654,074
Brought forward	23,806	46,454	61,066	71,717	87,497	104,028	109,922
Reserve & depreciation ..	126,173	276,545	299,293	466,992	571,496	602,194	763,996
Prof. dividend	43,185	76,679	78,771	87,539	108,687	133,472	138,826
Ord. dividend	46,109	118,800	118,800	281,556	328,800	328,800	395,830
Carry forward	36,879	51,066	71,716	87,497	104,028	109,922	127,840

As will be observed, the 10 per cent. distribution on ordinary capital is maintained, in spite of the fact that the ordinary capital is now £1,000,000, as against £300,000 a year ago. Nor are these figures the full story. In addition to the sum of £138,826 transferred to depreciation reserve and recorded above, there has been further reserve £75,000, and to reserve for equalisation of dividends £125,000, being a surplus resulting from sale of investments. The premium of £82,500 arising from the issue of preference shares has also been placed to reserve. The balance-sheet analysed in another column records some extraordinary changes, which no doubt many of us understand. But a few words in the directors' report might enlighten others not so well versed in these matters. The assets are up from £15,225,590 to £22,314,308, while share capital, which in the previous accounts stood at £4,780,000, is now £8,780,000.

Johannesburg Consolidated Investment.—Our mining correspondent writes:—The impression that the report for 1923-24 of this important Kaffir finance house would make a good showing, proves to have been well founded. The net profit amounts to nearly three-quarters of a million sterling, as against a little over half a million in respect of the preceding period. Enhanced receipts from the company's extensive gold and diamond interests include the special distribution of 2s per share made by the Randfontein Estate Company before its absorption of the Central undertaking. In considering the dividend question the directors have obviously realised the desirability of strengthening the cash position of the company. Accordingly £150,000 is transferred to reserve, increasing that entry to £400,000, and the dividend is raised by 2½ per cent. to the record total on the present capital of 15 per cent., tax free. Even now the cash surplus shown does not fully cover the dividend. The principal features of the balance-sheet are the increase in the "stocks and

shares" item, and the disappearance of the "loans to South African companies"—the one, no doubt, being largely a corollary of the other. Cash shows a large increase, and creditors a substantial reduction. Appended is a summary of the accounts for the past three years:—

	1922.	June 30, 1923.	1924.
Stocks and shares	3,930,960	3,666,030	4,036,270
Mining properties and advances ..	282,390	393,110	272,660
Real estate and buildings	407,150	388,590	357,410
Loans on mortgage	158,860	141,230	197,050
to S.A. companies	342,870	284,340	150,720
at short call	219,260	390,280	..
Sundry debtors and dividends	426,670	305,880	358,440
Cash	96,850	369,560	608,970
Sundry creditors	1,213,890	1,079,580	869,630
Net profit	273,990	503,840	746,250
Dividend	296,250	493,750	592,500
Rate per cent., tax free	7½%	12½%	15%
To reserve	..	..	150,000
Carried forward	162,150	172,240	175,990

Two interesting items of information are given with reference to the subsidiary companies. One is the intimation that the New State Areas is expected to reach the dividend stage next year. Another, that the Witwatersrand Gold Mining Company has recently leased from the Government a considerable number of Knights Deep claims, "which will substantially add to the life of the mine." With reference to the company's interests broadly, the directors state that the gold produced by the group in the twelve months ended June 30th last reached the record total of £11,000,000. Moderate profits continue to be earned by the coal properties. As to the position of the diamond industry, those interested directly or indirectly will note with satisfaction that the improvement in the demand for the stones is "well maintained," with the feature of a good demand of late for American account. Unfortunately, the sales of rough stones continue to be affected by the offers of cut diamonds from Russia. Various posts which have become vacant are not being filled, doubtless with a view to economy. On the basis of the past year's dividend "Johnnies" shares give the attractive yield of rather over 8½ per cent., tax free.

Modder East.—The report just issued by this Far Eastern Rand proposition may be regarded as marking the end of a particular régime. Since the date to which the accounts are made up the finances have been reorganised, and a new programme is in process of performance. Harking back a little, it may be recalled that some two years ago the decision was taken to deal only with the higher-grade material—this for the purpose of providing funds for the repayment of the debentures. As a result, the year's profit jumped up from £37,700 to £262,250. Last year a very natural reaction occurred, the working surplus figuring at £151,700. At the end of June last only £40,000 remained of the original debenture issue, and this has since been repaid. One important point in the position is that the company has hitherto crushed at a hired mill, the scale of operations being thereby restricted and the costs increased. To provide the company with a plant of its own, and cover the necessary incidental expenses, an issue has been made of £465,465 6½ per cent. debentures, until the end of 1928, and convertible into shares at par; at the same time the capital was scaled down to a corresponding amount. As the outcome of last year's work the ore reserves were lightly increased in quantity, their value being maintained. It appears that the new plant is to be of the "all-sliming" variety, and should be completed by the end of 1925. Until it starts, the shareholders must make up their minds for a reduction in the earnings.

A Free Trade Conference.—Under the auspices of the International Committee to Promote Universal Free Trade, an International Conference will be held at the Caxton Hall, on September 29th, and the two following days. The proceedings will be opened by an introductory paper by Sir George Paish, in support of the following resolution:—"That the removal of the existing high tariff barriers is essential to that great expansion of international trade needed to maintain the solvency of the greater part of the world, and to permit of the liquidation

of the vast international debts existing between all nations, and specially between the nations of Europe." Among the papers to be read and discussed are, "The Influence of Restrictions on Trade in Rendering Difficult the Payment of International Debts," by M. Yves-Guyot; "International Indebtedness in the American Tariff," by Mr F. W. Hirst; and "Steps Towards International Free Trade," by Dr Edoardo Giretti.

THE annual dinner of the News-vendors' Benevolent and Provident Institution will be held at the Hotel Cecil, London, on November 4th.

THE London School of Economics announces public lectures on "The Study of International Politics," by Philip Noel Baker, M.A., on October 7th; on "The Place of Industrial Law in English Jurisprudence," by the Right Hon. Sir Henry Slessor, K.C., H.M. Solicitor-General, on October 10th; and on "Sources of the Law," by Edward Jenks, M.A., D.C.L., on October 15th. The lectures are at 5.30 p.m. Admission free and without ticket.

Oversea Correspondence.

LEAGUE OF NATIONS—THE DRAFT PROTOCOL AND THE DISCUSSIONS.

(FROM OUR CORRESPONDENT.)

GENEVA, September 23.

THE completed proposals in the form of a Protocol drawn up by a sub-committee are now before the Armaments Committee of the Assembly, and the public discussion began yesterday afternoon. The straightforward explanation given by Mr Henderson puts to rest the many misunderstandings which have been spread abroad during the private discussions of the Sub-Committee, and the position is now clear.

What is first of all important to emphasise is that this Protocol is now subject to detailed discussion in the Armaments Committee, which has to present its final report to the full Assembly. After the Assembly has taken its decision, the Protocol is then subject to the consideration of the Governments of States, members and non-members of the League, and to ratification by the Parliaments. The International Conference on the Reduction of Armaments, provisionally fixed for June 15th next year, is not to take place (at any rate on that date), unless three of the permanent members of the Council and 12 other States have ratified, and even so, the Protocol is not to come into force until a scheme for the reduction of armaments has been agreed upon by the Conference. If the reduction plan agreed upon is not subsequently executed, the Protocol lapses, the conditions of non-execution to be settled by the Conference itself. This surely provides sufficient safeguards to prevent any country from being rushed into exaggerated commitments; the British Delegation have made it clear beyond cavil that they regard the proposals as absolutely indivisible, and that such undertakings as they have given depend entirely upon an agreed plan for reduction of armaments. It is thus obvious, as Mr Henderson showed, that even when approved and ratified, the Protocol will be no more than a beginning. Disarmament is incomparably the most difficult task to which any assembly of nations can set its hand, and if and when the Protocol comes into force there will still be difficulties of every kind to overcome. At the same time, its adoption will have opened a new vista of social progress unequalled in history.

The Protocol is a remarkable document, and whatever the ultimate consequences may be, it will be hard for the members of the League to go back on it. The first stage is an attempt to provide satisfactory means by which international disputes of every kind can be peacefully settled. It includes adhesion to the compulsory jurisdiction clause of the Statute of the Permanent Court of International Justice, with or without reservations, and all that is implied by the British reservation is that in fighting for the maintenance of the Covenant Britain will

not lay herself open during such operations to compulsory jurisdiction on her maritime methods. In this respect Britain changes nothing; she simply declines to go further in the way of compulsory jurisdiction.

This clause of the Court Statute applies to justiciable questions only. There are further provisions by which every dispute not taken, under this clause or by agreement of the parties, before the Court, is to be settled by arbitration. These provisions are intended to complete the Covenant by removing cases in which resort to war is permitted. As hitherto, disputes which do not go to the Court will in the first case be dealt with by the Council. If the Council fails to secure settlement, an effort is made to persuade the parties to agree on an arbitral tribunal. If this effort fails, and one party is willing, an arbitral tribunal is nevertheless to be set up either by eventual agreement between the parties or by the Council itself. If neither of the parties desires arbitration the Council is to continue to deal with the matter itself, and if its decisions are unanimous they are to be accepted and carried out. If the Council fails to reach unanimity it is then obliged to submit the matter to an arbitral tribunal nominated by itself and the members of the League undertake to accept and to execute the award given.

What follows if any State fails to execute the award, or resorts to war? It is not proposed that the carrying out of an award shall be imposed upon a recalcitrant State by force. What happens is that the Council, as at present, will propose (according to the provisions of Article 13 of the Covenant), the means by which the execution of the decision may be obtained. The belief is that the immense moral pressure of the League as a whole will be sufficient. If the second case arises, namely, if a State resorts to war against an award, the Protocol does not go beyond what is already stated or implied in the Covenant. Financial and economic sanctions remain obligatory upon members of the League, and for the rest the States undertake to give "loyal and effective co-operation" in support of the Covenant. As Mr Henderson put it: "We are determined to join hands and assist each other loyally and effectively in punishing an aggressor. It is obviously altogether impossible to foresee the exact contingency which may arise. The extent of the co-operation must depend upon the actual circumstances. . . . But it would be no use to bind ourselves to do a variety of things which may not be required. We must and can rely on the good faith of the members of the League to decide themselves how their effective co-operation can best be given if and when the necessity arises." That is to say, the economic and financial blockade, coupled with an undertaking to take measures to ensure the safety of communications for a victim of properly defined aggression, and to enable it to receive raw materials and supplies, are definite, and detailed proposals are to be worked out by the League organisations as to how such measures are to be co-ordinated and carried out. The armed forces to be employed if recommended by the Council are still to be left to the discretion of the States' members themselves, who may, if they choose, inform the Council beforehand of the forces they would be prepared to subscribe in such an event. There is no idea, and never has been any idea, of placing troops or ships at the disposal of the Council to use as they think fit. "There is no intention whatever," as Mr Henderson put it, "of converting the Council of the League into a council of war, and imposing upon it the burden of conducting military campaigns or naval operations." In this connection partial treaties may be accepted by the Council as falling within the general scheme. They are to be registered and published by the League; they are to be open for signature to any State, and their coming into operation is to be absolutely dependent upon the declaration by the League that such and such a State is the aggressor. This arrangement is frankly regarded by the French as a transitory one, and in any event the arrangement does seem to remove the essential objections to partial treaties. Encouragement is given to the establishment of demilitarised zones, and provisions are made for some kind of investigation and control, if necessary, during the period of arbitration.

These are the main outlines of the scheme. Assuming

that all goes well, the ultimate consideration is whether these provisions as they stand will secure the reduction of armaments upon which their coming into force depends. It also raises the other problem as to whether they consolidate unreasonable treaty conditions now in existence. Both are difficult questions to answer, but there are some who consider that the arbitration proposals themselves, with the sanctions, which do not, strictly speaking, go beyond the Covenant, are well worth putting into force, even if they do not immediately result in reduction of armaments. The experiment in trial might be counted upon to increase the sense of security of the States of Europe, and gradually and naturally lead to progressive reduction of armaments. To many, the tightening up of the peaceful procedure methods of the Covenant is a far greater step towards peace than any of the other provisions, for it is fundamentally the peaceful settlement of outstanding political questions and the development of a new political outlook which govern armaments.

Would the proposals consolidate the unreasonable features of the Peace Treaties? It is natural to suppose that Court or arbitration tribunal consideration of any such questions would have as their basis the properly ratified treaties, but that does not necessarily mean consolidation. What it means is what is already implied in the Covenant by the famous Article 10, namely, that no State is entitled to satisfy its aspirations by warlike action. The Covenant provides for the possible reconsideration of inapplicable treaties, and it is obvious that such adjustments must be done gradually as the States of Europe approach more reasonable relations and a saner political outlook. In any case, would it not be utterly impossible in these days to come to any international arrangement involving the possibility of a general reconsideration of all the Peace Treaties? Not only would it be unacceptable, but it would probably be a very great danger to the peace of the world. Such things must be dealt with as and when opportunity arises, and step by step with the development of a truer realisation of the necessities of international life. It is a curious thing that those who express anxieties, not always friendly, lest too great a burden may be placed upon the shoulders of the League, should so frequently be those who also suggest that the League should undertake the tremendous task of revising the Peace Treaties. It would be the surest way of killing it with one fell blow, and of creating chaos.

However, it is no use being blind to the fact that momentous considerations are raised by the discussions now going on, and not the least useful result should be to turn people's minds to a closer appreciation of the problems at issue. It has already brought some exalted minds at least to read the Covenant, and to find in it problems they had never before envisaged. We are getting down to business.

UNITED STATES.—MORE FOREIGN LOANS—CROP YIELDS—AUGUST FOREIGN TRADE—U.S. STEEL'S ORDERS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 16.

DURING the past fortnight additional foreign loans have been floated in this market. The proceeds from three of the new offerings will be used for European railroad construction or improvements. The largest of these issues consisted of \$10,000,000 Paris-Orleans Railroad Company 7 per cent. external sinking fund gold bonds, due 1954—with one exception the biggest dollar issue of French railroad bonds ever placed in the American market. The bonds were priced to investors at 92½ to yield over 7.60 per cent. According to advices received by the bankers, the railroad company is electrifying 430 miles of track, this work to be completed in 1927. The company's entire electrification project, it is understood, will cover some 2,450 miles of track, and is said to be the largest ever undertaken. The French Government guarantees to provide, if necessary, funds sufficient to enable the railroad company to pay interest on these bonds, and to set aside sinking funds to retire the whole issue by maturity. Another flotation consisted of \$3,000,000 seven-months' 6 per cent. Treasury gold notes of Yugoslavia, maturing

March 31, 1925, which were offered at par and accrued interest. The third foreign loan mentioned was secured by the Paris-Orleans and Mediterranean Railroad Company of France, which borrowed \$2,200,000 from a group of New York, Philadelphia, and Boston banks. The advance was made by these institutions through the purchase of the railroad's six-months' 5½ per cent. collateral notes, secured by deposit of its 10-year notes. As in the case of the Paris-Orleans bonds, interest and sinking fund payments on these notes are guaranteed by the French Government. Among other foreign loans recently marketed here was an issue of \$5,000,000 Government of Argentina six-months' 4 per cent. Treasury gold notes, due March 1, 1925, offered at par. Further flotations for the account of various foreign interests are likely to be announced in the near future, but interest here centres largely in the prospective German loan. In banking quarters, it is hoped that the German loan will be brought out before long, in order to take advantage of the highly favourable conditions now existing in the American investment market, which may possibly become somewhat less favourable when domestic business and other requirements assume larger proportions than at present.

During August most crops in this country showed further improvement, with the result that the September 1st report of the Department of Agriculture gave increased estimates of prospective yields. Corn was a conspicuous exception. The indicated loss in that crop was 63,000,000 bushels, bringing the promised yield down to 541,000,000 bushels, or 17 per cent. below that of 1923 from a somewhat larger acreage. The indicated spring-wheat yield, which was generally supposed to have increased considerably, gained only 22,000,000 bushels, according to the Government's estimate, although the total wheat crop now appears to be 837,000,000 bushels. This would be 144,000,000 bushels, or 20 per cent. more than was forecast on June 1st, and 51,000,000 bushels greater than a year ago on an 8 per cent. decrease in acreage. Oats gained 10,000,000 bushels, potatoes 14,000,000 bushels, and cotton 400,000 bales last month. The following summary of the Agricultural Department's September 1st report gives the indicated harvests in bushels this year and last, together with the size and date of record crops (000,000 being omitted):—

	Forecast 1924.	Crop 1923.	Past Records..	Year.
Winter wheat	589	572	760	1919
Spring wheat.....	247	213	356	1918
All wheat.....	837	786	1,025	1915
Oats.....	1,486	1,300	1,592	1917
Barley.....	194	198	256	1918
Rye.....	66	63	103	1922
Rice.....	32	33	52	1920
Corn.....	2,513	3,054	3,208	1920

Foreign trade returns for August, issued by the Department of Commerce, show that merchandise imports in that month were valued at \$270,000,000, as compared with \$275,437,993 for the same month of 1923, while exports had a total value of \$331,000,000, against \$310,900,000 approximately in August a year ago. Last month's increase in exports over July was apparently due mainly to the larger outward grain movement. While the excess of exports in August was not heavy, amounting to only \$61,000,000, it nevertheless exceeded the export surplus in that month of 1923 and 1922, and also in any year before the war. For the first eight months of this year exports have exceeded imports in value by nearly \$240,000,000, as against an import excess of some \$127,000,000 in the corresponding period of 1923. Last month's gold imports, \$18,100,000, were about one-half the average for the seven preceding months, and, in fact, the smallest for that month since 1920.

On August 31st unfilled orders on the books of the United States Steel Corporation totalled 3,289,577 tons, as compared with 3,187,072 on July 31st, and 5,415,000 approximately at the end of August, 1923. The showing for August of this year is interesting and significant, because the gain of 102,505 tons over July 31st is the first increase in the total of unfinished business reported by the corporation at the close of any month since last February, when the aggregate of forward orders amounted to about 4,913,000 tons; from that total there

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

was a steady shrinkage each month until August, owing to the fact that the corporation's mills in that period operated largely on old orders, and shipments exceeded incoming business. The exhibit for the past month was far better than the trade and financial district had expected, and indicated that the volume of new business booked, particularly in the last half of August, was much larger than had been supposed. It is calculated that United States Steel operated last month on the average at about 56 per cent. of capacity, shipments approximating 750,000 tons for the month, and incoming business 850,000 tons. The corporation's plants are now said to be running at about 58 per cent. of capacity, and it is understood that new orders received since Labour Day (September 1st) have equalled, or slightly exceeded, production.

FRANCE.—BUDGET ESTIMATES—TAX EVASION MEASURES—COST OF LIVING PROPOSALS—PRICES—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

PARIS, September 24.

THE preparation of the Budget Estimates is now well advanced, and on Tuesday next the Finance Minister, M. Clementel, will appear before the Finance Commission of the Chamber for the purpose of explaining the main lines on which the Budget for 1925 will be based. It is now practically certain that the new Budget, for the first time for several years, will embody the whole of the permanent expenditure of the State, which for the coming year will be met solely by taxation and the normal Budget resources. The total amount of expenditure will be in the neighbourhood of 30,000,000,000, as compared with 29,659 millions (including both the "Ordinary" and "Recoverable" Budgets) in 1924, which involved an estimated deficit, it will be remembered, of 2,000 millions; 24,000 millions in 1923, 26,450 millions in 1922, 27,518 millions in 1921, and, in round figures, 5,000 millions in 1913. The Finance Minister has already pledged himself that the new Budget shall be balanced, if possible, independent of all payments that may be received during the year from Germany on Reparations account, and that any money that may be received under the operation of the Dawes plan shall be devoted exclusively to the reduction of the public debt.

The decree setting forth the regulations under which will operate the system known as the *bordereau de coupons*, which was designed by M de Lasteyrie for the purpose of preventing fiscal evasion, has just been published in the *Journal Officiel*, and is meeting with a good deal of fearful but hopeless criticism on the part of the large section of the public who object to any form of fiscal inquisition. The necessity for additional means to repress evasion of taxation in France, where practically every member of the body politic derives part of his income from investment, has long been obvious. It is notorious that a very large proportion of the income-tax declarations are grossly understated, and the new *bordereau de coupons* may be regarded as merely a first step in the direction of bringing about a stricter distribution of the nation's burden of taxation. The new system, to describe it as briefly as possible, institutes the provision of a personal and individual register, which must be produced by each person before he can be paid any interest that may have accrued in respect of any securities owned by him. This register must contain a list of the whole of the securities possessed by him, and a copy of the entries

therein must be inscribed in the books of the bank through which his interest is paid to him. The income-tax authorities have the right to call for the production of this register, for the purpose of comparing it with the holder's income-tax declarations. In principle, the *bordereau* must be produced before any interest coupon can be cashed.

The effort which the Government is now making to devise means to bring down the high cost of living—which so far as retail prices in France are concerned is expressed by an index figure of 366, as compared with 164 in Great Britain—has been received by the public in general almost with a feeling of apathy. This is undoubtedly due to the fact that, owing to the high wages and general prosperity at present prevailing, the high prices of commodities are not proving really onerous to the poorer classes. The crux of the situation is the high price of bread, which is now fixed, as stated recently, at the highest figure ever recorded in France. In this direction the Government has attempted to cope with the difficulty by fixing in each district the maximum price at which flour for breadmaking purposes may be sold. The weak spot in the proposal is that the price of flour obviously depends on the price of wheat, in regard to the fixing of which nothing has so far been done. Hence the net result of the new step has been that, whereas the bakers alone have hitherto been under the discipline of fixed prices, they have now been joined by the millers, and the wheat merchants, on whom both depend, are still, for all practical purposes, free to charge an excessive price. Owing to the advantage that has been taken of the circumstances attending the present shortage in the world's wheat crop, the reduction of the French import duty on wheat by 50 per cent. has had no appreciable effect on the situation of the miller, the baker, or the consumer. The thorniest portion of the problem lies in the disappointing prospects for this year's French wheat harvest. In view of the fact that the shortage is certain to be much more serious between now and the 1925 harvest, it is obvious that any question of fixing wheat prices is at present impossible.

The dominant principle of the Government's "cheaper food" policy, therefore, consists in taking steps to reduce consumption as much as possible. To this end it has been decreed that bakers shall close their shops one whole day every week, in the hope that the public will find stale bread less palatable, and eat less. In view of the high price of butcher's meat, the experiment of fostering the use of frozen beef and mutton (which has already proved more or less a failure here) is again to be attempted, and the suggestion is made that the Government shall itself import large quantities direct from the producing countries. The question of reducing transport rates, in order to furnish the public with cheaper fish, is also being studied. The import duties on cheese, hams, bacon, fresh pork, condensed milk, fresh and salt butter, oatmeal, and preserved vegetables are to be reduced to their pre-war rates, by the suppression of the co-efficients (varying from 2 to 2.5) that were applied to them after the war to render them consistent with post-war commodity prices. The high prices which the public is now prepared to pay for meat, and the increased consumption of this form of nourishment that has been registered since the war, are advanced as explanations of the fact that in many parts of the country land which was formerly devoted to wheat-growing is now being utilised for grazing purposes.

The index figure for wholesale prices for August, which has now been published by the *Statistique Générale*, is returned as 487, as compared with 491 at the end of July, and 475 at the end of June (the base being 100, representing wholesale prices in July, 1914). The detailed figures are as follows:—

Classification.	No. of Categories.	August.	July.	June.
General index number	45	487	491	475
Foodstuffs, general figure	20	431	436	428
Vegetable foods	8	408	416	421
Animal foods	8	427	423	406
Sugar, coffee, cocoa	4	492	514	492
Raw materials, general figure	25	536	539	517
Minerals and metals	7	474	479	456
Textiles	6	672	677	650
Various	12	491	493	474

The retail prices index figure for Paris for August, covering 13 categories of common necessity (all of which, with the exception of petroleum, are of French origin), is returned as 366 (on the base of 100 in 1914), as compared with 360 in July and 370 in June. The drop in July was due for the most part to the fall in the price of potatoes. These Paris figures do not cover rent, clothing, or heating and lighting. The index figures representing the expenditure of a workman's family of four persons (as drawn up by the regional committees which are outside the control of the administration, and given under all reserve by the Statistical Department), including food, lighting, heating, rent, clothing, and sundries, are returned for Paris (for the second quarter of 1924) at 366.

The returns indicating the output of the French collieries during July, which are now available, show that the total amount of coal produced during the 26 working days in the month was 3,784,079 tons, as compared with 3,496,496 tons for the 24 working days of June. The total daily output in July averaged 145,541 tons, as compared with 144,680 tons in January, 1924; 128,592 tons in January, 1923; and a monthly average of 136,147 tons in 1913. These figures do not include the output of the Lorraine collieries, which during July furnished an additional output of 17,356 tons per working day, bringing the daily average for the whole country up to 162,899 tons.

GERMANY.—LEAGUE OF NATIONS—FINANCES—CREDIT—PRICE MEASURES—NEW TARIFF—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 23.

THE Cabinet to-day issued a communication on the League of Nations question which brings matters little forward, inasmuch as it declares only in principle for joining. A declaration in principle against joining was, of course, not to be expected. It is understood that the feelers put out in London as to the granting of Germany's conditions did not result fully satisfactorily—or definitely. The communication merely says that Germany "aspires" (*erstrebt*) to join the League, and that in this she starts from the assumption that the questions handled by the League—the protection of minorities, regulation of Saar district conditions, and general disarmament in connection with the execution of the military control—will be dealt with under German collaboration, Germany's collaboration to be that of a Great Power with equal rights. The communication does not specifically say that Germany must be a member of the Council, and the wording seems to be purposely vague. The Foreign Ministry is to inquire from the members in the League whether "the necessary guarantees" for a German application for membership will be given.

The French adoption of the Reparations Recovery Act provokes much opposition, and newspapers state that it will be the subject of a protest. The position of England in this matter is quite different, though the British reversion to 26 per cent. was also not liked here. It is not possible to say how far the Ultimatum Settlement of May, 1921, with which the plan started, is still valid; but it cannot be held to be valid where it conflicts with the Dawes Settlement; and this settlement provides a method of Reparations collection which is inconsistent with the 26 per cent. deduction by France. The transfer system, a particular and vital feature of the settlement, is prejudiced; and there is nothing to prevent all Reparations-claiming countries imitating France, and wrecking the transfer system altogether. The Hansa Bund declares that the extension of the 26 per cent. system to France means a reduction in Germany's exchange incomings from the first of 300-350 million gold marks a year, and holds that the Transfer Commission should itself intervene in defence of its functions.

The Cabinet announces an abatement of taxes for such

farmers as suffered a loss of more than 50 per cent. of their crops. All the chief industrial, trading, and banking associations have petitioned the Government to reduce the tax on capital issues beyond the reduction reported last week, also the transfer stamp duty on dividend securities, and to abolish altogether the tax on sales and purchases of exchange. The first of these reductions is championed with the argument that the coming increases of company capital will be necessary in order to replenish the gold capital of industrial concerns as soon as the real position of these is divulged by the gold-mark balance-sheets now under preparation. Even after the conceded reductions, German Bourse taxes are much higher than foreign. It is reported that the Government intends to institute a Post-Office Savings Bank system.

Credit conditions continue to improve. The Gold Discount Bank has reduced its rate from 10 to 8 per cent. In announcing this, the Reichsbank president expressed doubt whether the Reichsbank's rate can be reduced within visible time. The increase of Gold Discount Bank credits, however, does not threaten the mark currency, and the demand, measured by the resources of the bank, is small. In London there have been, so far, no rediscounts, and in New York and Switzerland only small sums, totalling not more than 10 million gold marks. The Reichsbank has a very large holding (amount, however, unstated) of exchange, and has taken over 100 million gold marks of Gold Discount Bank bills. The "Other Assets" of the Reichsbank, which contain exchange holdings, increased from 212 million gold marks on April 7th to 937 millions on September 15th, and on August 7th reached a high point of 993 millions. The Reichsbank announces that in buying foreign bills it will no longer charge 2 per cent. over the bank rate of the foreign country in which the bills are payable, but only the foreign country's rate, in so far as that is 5 per cent. or higher.

The official wholesale index number rose in the week Sept. 9th-16th from 124.7 to 128.6. The "Frankfurter Zeitung's" wholesale index for the 18th shows 134.27, and the "Berliner Tageblatt's" for the 17th 132.6. The former journal's index number for food is 131.11, textiles and leather 169.36, minerals 123.89, miscellaneous 118.48, manufactured articles 138.76. Breadstuff prices have continued to rise. The official policy of facilitating credit is criticised in some quarters as unlikely (in view of its possible effect on circulation) to attain the announced aim of bringing down prices, though it has been proved that the enormously high interest rates of the summer kept prices up. The Minister of Industry announces that the policy of lowering prices must be continued. The Association of Employers states that social burdens on industry (insurance, &c.) now amount to 8.7 per cent. of wages, against 4.3 per cent. before the war. Wages themselves are a proportionately smaller factor in production cost. The Reichswirtschaftsrat's enquiry shows that in cotton-spinning they are 42.7 per cent., against 63 per cent. in 1914, in wool-weaving 8.8 per cent., against 15.5 per cent., shirt-making 19 per cent., against 29 per cent., men's clothing 15 per cent., against 18.3 per cent.

The new tariff in connection with the negotiations for Commercial Treaties with Ally questions is being discussed. Manufacturers as a whole have no very clear policy. As the 1902-6 autonomous tariff is based on weight, the rise in gold prices is naturally adduced as a reason for an all-round increase, apart from changes necessary for particular classes of goods. Some of the High-Protectionists make extravagant demands, citing the rise in gold prices, the higher production cost, the higher interest rates, the higher transport rates, and the innovation of the Sales Tax as separate good reasons, though all are properly included in the first. The tariff now under consideration is sharply criticised by all except High-Protectionists. The project submitted by the Government to the Reichswirtschaftsrat in June provided for summary increases of the pre-war duties by between 30 and 80 per cent., but this was unanimously rejected on the ground that a specialised, not a summary, reform of the tariff was necessary. The new plan, this week before the

Reichswirtschaftsrat, imposes very high duties, also more or less schematically. Rates for luxuries are enormously, sometimes seven-fold increased; certain fish, now duty free, have duties of 50 gold marks a double-centner. But also the rates for many necessities are greatly increased, and some at present duty-free chemicals have rates of 100 gold marks per double-centner; for certain alkaloids also now duty-free, even 1,000 gold marks. For textiles the proposed duties are about 100 to 200 per cent. above the present. Heavy rates are imposed on internal-combustion motors. For a net weight of 25 kilogs or under is a duty of 400 gold marks per double-centner; net weight, 25 kilogs to 3 double-centners, 350 gold marks per double-centner; over 3 double-centners, 250 gold marks per double-centner. For motor-cars with a net weight of 22 double-centners or under, the duty is 300 gold marks per double-centner; weight 22 to 32 double-centners, 200 gold marks per double-centner; over 32 double-centners, 150 gold marks per double-centner. The rate for motor-cycles is 350 gold marks per double-centner. The avowed aim of the new tariff is, of course, to supply means of pressure upon foreign countries; but it seems that the proposals have frightened some foreigners—the *Vossische Zeitung* states that as a result of it Belgium proposes to postpone the putting into force of her relatively favourable tariff for Germany. The Reichswirtschaftsrat passed a resolution to-day in a sense contrary to the above proposals. "International trade," runs the resolution, "has in many countries taken a High-Protectionist character since the war. This system is contrary to the exigencies of the international exchange of commodities. It has diminished the consuming power of the world-market and increased unemployment in all countries. For the restoration of international economic relations it is necessary that this High-Protection system be replaced by a trade policy in the sense of the unanimous resolution of the Genoa Conference, facilitating international trade. The Reichswirtschaftsrat, therefore, demands that in the coming Commercial Treaty negotiations the Government shall proceed on basis of moderate Protection. . . . As before the war the Commercial Treaties must be on the basis of general and unqualified Most-Favoured National treatment."

The foreign trade balance in August was again active, by an amount provisionally stated at between 120 and 140 million gold marks, as against an active balance—the first of the year—of 17 million gold marks in July. Details have not yet been published.

Stocks last week about maintained their level, and were yesterday a little higher, but to-day again weak. Discussion on, and agitation in favour of, partial restoration of municipal loans proceeds actively, and it seems likely that something will be done. Advocates, however, all submit schemes carefully devised to prevent foreign buyers making profits. The City Treasurer of Berlin recommends that only persons who held bonds at the close of 1919 should be compensated, they being easy to trace owing to the Capital Flight Law provision that interest on bonds should be paid only if the bonds were deposited in a bank. At the same time, the need for borrowing abroad is urged as a reason why the municipalities should restore their reputations for honesty. German municipal bonds were mostly bought by foreigners in 1920, and the plan is to prevent these foreigners getting any compensation, while Germans will get some. This is inexcusable, because, as the *Frankfurter Zeitung* points out, the cities have enormous income-earning properties, including not only the ordinary public utilities, but also lands and industries from which their taxpayers enjoy the benefits. Practically all these properties were acquired at the cost of outside lenders. At present municipal bonds sell as high as 6 per cent. of their nominal gold value; those of South German cities at 8 to 10 per cent.

HOLLAND.—OPENING OF PARLIAMENT—BUDGET OF 1925—THE NEED FOR ECONOMY—NEW TAXES—DIRECT AND INDIRECT TAXATION.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 20.

THE third Tuesday in September is always an important day for the Netherlands. On that day the new session of Parliament is opened, when the policy for the coming year is outlined. At the same time the Budget estimates for the coming year are submitted. Both events this year were of particular interest, primarily because the present Government will be exposed to a general election during the coming year; secondly, because there was an eagerness to know how far the policy of economy and new taxes had influenced the new Budget.

As to the general situation, the Government gave as their opinion that the economic crisis has reached its worst point, and that a slight improvement in trade, agriculture, and industry is noticeable. New bills were announced in the domain of finance, to which reference is made below, also in that of social insurance and of the navy. As to the financial situation, the Government hold out the prospect that, if the new financial bills become operative, the ordinary expenditures and receipts for the year 1925 will balance.

The deficits or surpluses of the ordinary service for the preceding years have been as follows (in million guilders):—

	(Deficit —, surplus +.)
1914	10.1
1915	15.5
1916	20.2
1917	36.3
1918	4.3
1919	22.2
1920	0.7
1921	12.8
1922	33.2
1923	49.1
1924	(Preliminary figures.)

For 1924 the deficit was originally estimated at 64.3 million florins. In the meantime various measures have been taken for reducing the deficit, among others the increase of the excise on beer, the introduction of an import duty on beer and tea, and a tax on bicycles.

On the expenditure side the reduction of salaries of civil servants has reduced the original figures. It is expected that as a result of these measures the deficit will be decreased by 20 million florins. There then still remains a deficit of about 44 million florins. The Minister of Finance expects the receipts from taxes to exceed the estimate by 20 millions. Thus the entire deficit for 1924 will decrease to about 24 million florins. Very probably the estimate of the Minister, however, has been made with great caution. The receipts from taxation, expected by the Minister to be for the entire year 1924 20 million florins more than the estimate, have for the first eight months already surpassed the estimate by 23 million florins (there has been received 287.6 million florins, as against an estimate of 264.6 million florins), so that the total deficit for 1924 will in all probability shrink still more.

The estimate for 1925 shows the following expenditures. At the same time the increase or the decrease for the various headings is shown, in comparison with the estimate for 1924:—

Accounts.	Ordinary Service.		
	In Guilders.	More.	Less.
1. The Royal House	1,625,000	..	75,000
2. General Directorate	1,929,201.96	..	111,100.53
3. Foreign Affairs	4,101,118	..	179,981
4. Justice	27,278,833.50	..	1,048,023.50
5. Interior Affairs and Agriculture	20,227,478	4,180,823	..
5A. Instruction, Art, and Sciences	143,999,074	..	11,017,890
6. Navy	42,574,617	..	2,033,609
7. Netherlands Debt	107,370,340.05	14,058,205.50	..
7A. Finance	63,081,768.37	342,877.18	..
8. War	58,902,579	..	2,795,567
9. Public Works	88,189,680	..	15,003,176
10. Labour, Commerce, and Industry	40,294,239	..	1,308,148
11. Colonies	5,636,099	..	467,750
12. Sundries	50,000	..	..
Less	605,260,027.88	18,581,905.68	34,040,245.03
	..	..	15,458,339.35

Against this total of 605.2 million florins, the receipts are estimated at 590.0 million florins, which is 31.3 million florins more than the estimate for 1924.

From this consequently a deficit of about 15 million florins is to be figured. It must, however, be noted that from January 1st next a further reduction of salaries of civil servants will become operative, of which no account has as yet been taken. Further, the postal service will in all probability supply an increased income, so that the total deficit drops to about 8 million florins. On the other hand, the Government subsidy for old age insurance amounting to about 12 million florins must be added, so that the final deficit will amount to 20 million florins. To cover this deficit two financial bills have been attached, namely, the Tariff law, and the increased excise on tobacco; from both measures together the Government expects to obtain the entire amount of 20 million florins.

If everything goes off as expected the Budget for 1925 will balance. This, however, does not mean that conditions are now in a perfect and healthy state. The Minister himself points out the normal and unavoidable increase in various expenditures. The pension burden for 1924, e.g., has been 4 million florins higher than in 1923, and this will again be 5 million florins higher in 1925 than in 1924. Furthermore, the sharp increase in the service of the Netherlands debt is attracting attention. More serious, however, is the fact that the balancing of the Budget has been obtained on a much too high level of expenditure. In 1913 the expenditures amounted to 197.5 million florins, in 1920 they had risen to 613 million florins, in 1922 to 630.8 million florins (the top), and since then have been reduced only very gradually to the present amount of 605.2 million florins. That means that the Budget now stands on a level only slightly under that of the "boom" period. First and foremost, therefore, it is necessary to strive to reduce the expenditures, the more so because the burden of taxation has become much too heavy a drain on new capital resources. Exact comparative figures for taxation are so far only known for 1921. They then, however, already amounted to 139.20 florins per head of population, as against 33.24 florins in 1910. In that period, therefore, they increased more than four-fold, and since then the increase has continued. The Minister is, however, seeking the remedy only in changing the burden of direct taxation to indirect taxation. In this connection the above-mentioned tariff bill and the bill for the excise-increase on tobacco are deserving of note. Moreover, a tax on luxuries is to be proposed. The proportion between indirect and direct taxes will therefore be altered in favour of the latter.

According to the "Memorandum on Public Finance," issued by the League of Nations in July, 1923, the relation of direct and indirect taxation in Holland and Great Britain is as follows:—

Country.	Percentages.	
	Direct Taxes.	Indirect Taxes.
The Netherlands	52	48
Great Britain	58	42

These figures show the situation as it was before it was decided to increase the taxes on tea and on beer in the Netherlands, and to reduce the taxes on sugar, tea, and dried fruits in Great Britain. The percentage of indirect taxation must, therefore, be increased considerably for the Netherlands, and decreased for England. After the adoption of the new tariff bill, and the increase of the excise duty on tobacco, the comparison will show a still stronger divergency.

ARGENTINA.—NATIONAL FINANCE—RAILWAY DEVELOPMENT—LAND LEGISLATION—GENERAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, August 25.

HIGHLY satisfactory though the current year has proved for every form of Argentine production, yields being heavy and prices high, there is, nevertheless, a widespread feeling of uncertainty, which, if traced to its original source, would appear to arise from the growing realisation that until the national finances are set in good order on a permanent foundation, business cannot be considered safe from disagreeable surprises. The fault lies with

Congress rather than with the Executive Power, which has done much in the shape of introducing new measures still awaiting discussion by the legislators. A quorum is rarely obtainable in either the Senate or the Chamber of Deputies, and the same studied indifference to the affairs of the nation is shown by the Parliamentary committees appointed to report on the respective measures coming within their particular province. Thus the committee on legislation, though 14 times convened during the actual session, has never met as yet, while considerable doubt is expressed as to whether the Budget Committee have so much as considered the 1924 figures, presumably because the 1923 Budget was prorogued until such time as the 1924 Committee Report was passed by the Deputies, or, failing that, until the end of the current financial year. The Minister of Finance has just published the Budget estimates for 1925 as covering the outlay of the various Ministries. Ordinary expenditure is put at \$588,316,787 paper, with a further amount to be met by bonds, &c., for \$76,865,181 paper. A total of 665 millions rather belies the much-announced intention of the Government to insist on economy, but, indeed, one cannot well see where, outside the horde of bureaucratic appointments, real economy can be effected. The Republic is progressing in so many directions, and the duties that fall upon the national authorities have increased so much, in complexity as in extent, of recent years that they cannot go back on anything they have undertaken. Public works, education, transport and roads, port and harbour facilities, the administration of justice and the correction of crime, immigration and intensive development of the natural wealth of their immense territory; these, and a hundred other worthy objects must go forward, as every Argentine and every foreign resident of experience knows and admits. It is not sufficiently recognised abroad that the Argentina of to-day is a highly civilised, highly complex, social State, wherein the advantages of civilised, orderly government may be considered to be available throughout the length and breadth of the land. And to carry on the work of government on the scale this implies, funds must be forthcoming. The 1923 Budget was the heaviest hitherto known, being actually \$635,000,000 paper, and closed with a deficit of \$35,000,000. That for 1925 is \$30,000,000 higher, and the 1923 allocation for meeting the service of the Public Debt is brought up by a further \$23,500,000 paper to the enormous total of \$148,763,250 paper. Figures such as these surely show that very grave danger is incurred by the *laissez-faire*, *laissez-aller* of the legislators, which forces the Government to continue the hand-to-mouth system of renewals and arrangements that still marks the management of the constantly-recurring floating debt.

National Treasury bills to a total of some \$120,000,000 paper have been recently renewed at 4 to 4½ per cent., and a New York loan of \$20,000,000 U.S., which fell due on August 25, has been met by a further issue of bills for a similar amount, the term being six months and the rate 5 per cent. per annum, plus ½ per cent. commission. As regards the first-mentioned rates, these are lower than the market, which may be called anything from 6 to 7 per cent., and even higher, with a firmer tendency. Apparently no new National Treasury bills are being negotiated, the few cases in which payment is insisted on being met out of Treasury funds, which for some months past have benefited by the influx of the payments accruing under the various pension laws, of which more anon.

Last month mention was made of the authority granted by the National Government to the State Railway Department for the borrowing of ten million dollars paper to meet urgent claims, and the fact that five million had been found by the local branch of an American bank at 5½ per cent. per annum was stated. Down to the moment of writing no one has been found to advance the other five million save at exorbitant rates, while private discounters are making hay for themselves by charging 8 and 9 per cent. for advances on small debts of the department. The latest step has been taken by the Minister of Public Works in the shape of a note to the Transport Committee of the Chamber of Deputies, asking that an amount of \$82,000,000 paper be added to the Budget estimates for the State Railways, and that facilities be granted for consolidating the floating debt of the Department. According to *La Prensa*, wherein these particu-

lars are published, this addition would bring the amount of the general railway plan to \$477,000,000 paper, while the \$82,000,000 paper would be applied as follows:—\$18,000,000 to meet deficits in exploitation, \$22,000,000 for past due debts and purchase of material for lines actually built, and the balance to meet pending credits called for by new construction now in hand.

A further measure of importance has been introduced during the month which affects the owners of large tracts of Argentine land. It is designed to stimulate colonisation by the parcelling out of the great spaces at present unoccupied; the Government to be empowered to expropriate 50 per cent. of the land owned by a single individual if such land is sought after by colonists, though such expropriation will not take place if the actual owner has already so disposed of a similar proportion of his property. The rentable value, the last previous sale price, and the taxable value of the land will all be taken into account when estimating the price at which such expropriation will take place, and the Government will be empowered to give notice of a year in the case of those lands for which, owing to their position, soil, means of communication, and other advantages, there is shown to be a real demand for the purposes of colonisation. This is but the barest outline of what may become a step of far-reaching importance. It is true that to-day the parcelling out of the land is the greatest stumbling block to intensive colonisation, as well as to intensive cultivation in general, and there is even reason to hope that the mere passing of the measure would in itself be effective towards bringing about a voluntary subdivision of estates that, in a sense, have for far too long lain fallow. For the greatest need of present-day Argentina is a steady influx of settlers; with wage-paid workers and parasitic small traders, resident in Buenos Aires and the other cities, she is already too liberally supplied.

Exceptionally high quotations for all cereals were registered during the second week of August, following the sharp rise in U.S. quotations, but though \$16 wheat and \$24 linseed have not been maintained for very long, prices are still satisfactory with wheat at \$15 paper per 100 kilos, spot, export type; linseed, \$23.45 spot and \$23.90 for October delivery; maize, \$10.10 spot. At mid-August it was estimated that there were still 1,000,000 tons wheat to ship, 2,500,000 tons maize, and 250,000 tons linseed, which will keep the export business moving well on to the time of the new harvest. What that will be like it is yet too early to say. One can but recommend that all extreme reports be set aside as improbable. There has been hard frost, and there is need of rain, but neither the one nor the other has as yet done much damage; indeed, in the case of wheat the cold weather is by some reported to have exercised a slowing strengthening effect which promises well for the harvest. Freights are steady at 23s up-river loading for September to U.K.-Cont. Bahia Blanca prompt U.K.-Cont. was done at 26s. for a small steamer, but the average rate has been round about 23s to 24s from the Southern port. Maize shipments to New York from Rosario have been booked at \$4.50 gold for parcels. The future tendency depends wholly on the amount of unfixed tonnage coming to the Plate.

HUNGARY.—GENERAL CONDITIONS—FINANCE AND CURRENCY—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 21.

BUDAPEST is in many ways an uncommonly pleasant city during the early autumn, and the League of Nations' plan for Hungary is attracting the attention it deserves. To these two facts we owe a succession of distinguished visitors, who, sometimes combining business with pleasure, have chosen this year to endure the extra six hours in the

Gentleman who has very successfully represented leading British Banks abroad and is familiar with local conditions on the Continent and in North and South America, and well acquainted with leading bankers in various countries and in London, is open to undertake the REPRESENTATION ABROAD of a British firm of Bankers or Financial Group, an American Bank in Europe, or Foreign Banks in London. Highest Credentials and references to prominent London Bankers. Replies, which will be treated as confidential, to—
Box 23, THE ECONOMIST, 3, Arundel Street, Strand, London, W.C.2

train from Vienna, in order to gather some impression of the progress of reconstruction. Most of them seem to have found conditions a good deal better than they expected. The outward evidences of poverty and distress are few, and the general temper of the people is quiet and fairly hopeful. Of course, there are complaints. The wheat harvest, after promising uncommonly well, was disappointing, and in some districts disastrous. The Bourse is stagnant, and seems likely to remain so, and the numerous amateurs and professionals, who for a long time past have relied upon it for a living, are naturally chagrined. There is a great deal of talk about unemployment, which might develop in the course of the winter into unrest. Prices are undoubtedly high, and though the general index has taken a downward turn, there is great resentment because local products, such as sugar, are often cheaper in neighbouring countries than here in their country of origin.

But there is a lining to all these clouds. Though wheat may be poor compared to what was hoped, it is not likely to fall far below the average crop of post-war years. Sugar beet is being grown over an immensely increased acreage, and two-thirds of the crop should be available for export—a comfortable item of some two million pounds in the balance of payments. The potato crop is unusually good, and maize, which means hogs, is more than satisfactory. As for unemployment, though the statistics are deficient, it is safe to say that the correct figure would be nothing even approaching to 50,000. The Socialist statistics account for rather more than 30,000, and if the 5 per cent. which is "normal" in England were normal here, we should not be entitled to complain even of 100,000. Prices may be high, but food prices relatively to other articles are low, and if retail business is generally slack, this is largely due to the persistence of bad habits among traders themselves, who will not recognise that the race against inflation is over. On the whole, Hungary has very little to grumble about economically. The main trouble is, and always was, financial.

The fact that the currency is now stabilised, and stabilised on sterling, seems already to have penetrated the popular understanding, and though stabilisation has perhaps not yet had time to produce its full effects, there is growing confidence. Shopkeepers are beginning once again to give credit, and deposits are said to be dribbling back into the banks. It is a pity that no satisfactory figures of bank deposits are published. The rate of interest for weekly money (which was once at the fantastic level of 16 per cent. a week) has now fallen to something between $\frac{1}{4}$ and $\frac{1}{2}$ per cent., and it is difficult to see why it does not fall still further now that the speculative uses to which it was formerly put have lost all interest. There is really no lack of short money, and if there were, the local supply could be supplemented with foreign credits, which are now so plentiful that they often go a-begging. On the other hand, if money from abroad were offered for a few years instead of for a few months it would meet with an overwhelming demand.

On September 17th the National Bank raised its rate of discount from 10 to 12½ per cent. This step came as a surprise, and was a good deal criticised in the Press, where a rise in Bank rate is regarded as tending to raise commodity prices. In competent circles the surprise was due not so much to the rise taking place now, as to its not having taken place a month before, when rates in Vienna were advanced to 15-17 per cent. A wide divergence between the two centres, which are still held together by many financial and some sentimental links, was regarded as being somehow anomalous; but the difference of 5 or more per cent. was allowed to persist, and produced, apparently, no evil consequences. Eventually, the advance in rates seems to have been brought about by the increasing discounts of the Central Bank, accompanied by a fall in the proportion of cover, in spite of a shrinkage of the note issue. The Bank return for September 15th shows that the metal reserve amounted to 56.2 per cent. of the combined note issue, and sight liabilities less, as permitted by the statutes, the State debt.

Whether the rise in Bank rate will have anything but a psychological effect seems questionable, for Bank rate is now altogether out of relation with the effective rates of interest. On deposits for six months the banks pay 15

per cent. (plus $\frac{1}{2}$ per cent. tax), and the cost of bank money to trade and industry, though rather less than it was until recently, is still decidedly over 20 per cent. It is quite evident that no competitive business can afford to pay such rates in the long run. At present the National Bank is, to all intents and purposes, the only internal source of credit in the country, and the printing press is used to supply the needs of trade, just as it was used to supply the needs of the Government. The amount of currency in circulation is probably not excessive. For a population of eight millions it still amounts to not much more than ten million pounds. But in Hungary the seasonal fluctuation is powerful, and we are at the beginning of the period during which expansion has to be expected. It will be interesting to see whether in the New Year there is a corresponding contraction, or whether, as in Austria, the movement persists. It is not likely that Hungary will have the opportunity of suffering from a "gold inflation"; she may, therefore, be driven by necessity to find the real solution of her interest rate problem.

The position of the State finances looks to be very satisfactory. Both direct and indirect taxes are coming in unexpectedly well, and the results month by month are proving better than the estimates. The State's main trouble is with its officials, who are certainly underpaid and far too numerous. The railways for several months past have been working without a deficit, but their operating expenses are an absurdly high proportion of their gross receipts. It seems to be universally agreed, however, that all the problems of State finance may safely be left for solution to the Commissioner-General.

Letters to the Editor.

THE PAPER TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I draw your attention to the article in your valuable journal of September 13th, dealing with "The Position of the Paper Trade"? In this comprehensive article you have undoubtedly, I think, made a slight error in the output of mills of British ownership. The writer is well acquainted with Scandinavian paper mills, especially Norwegian, and can say without fear of contradiction that your article must be considered inaccurate in asserting that any proportion worth mentioning of the imports of paper from Norway and Sweden can be considered the product of British-owned mills.

In Norway there is perhaps only one mill of British ownership, and this mill specialises in export to China and South America. In Sweden it is doubtful if there are any mills of British ownership.

Norway is a very young country, and only since 1910 has appeared as an independent country in international diplomacy. Since that time, however, she has also concentrated on making herself economically independent, with so much success that at the present moment there is in the paper industry, practically speaking, no foreign ownership of mills whatever. This movement culminated in 1918-9 with the purchase by a Norwegian company of the last and greatest of foreign-owned paper mills. A series of concession laws have made it difficult, if not impossible, for foreign capital to own mills, or even to control them.

Your journal is widely read in Norway and Sweden, and your articles are accepted as reliable, and your reports subjected to little or no criticism. I have, therefore, thought it best to draw your attention to what appears to be an erroneous statement with regard to the ownership of paper mills in Norway and Sweden.—Yours faithfully (for and on behalf of the Union Paper Agency Limited),

EDGAR L. FIFOOT, Managing Director.

TICKET, October 8.	ACCOUNT, October 9.
-----------------------	------------------------

THE end of the first half of the Stock Exchange financial year finds markets tolerably active, with public interest increasing every day in, particularly, the industrial sections. The boom in tea shares has been one outstanding feature; another, an all-round rise in Mexicans. A general recovery amongst iron and steel shares has occurred, and the rubber market shows signs of awakening vitality. The political situation is regarded with composure, nor does the prospect of a General Election in the early winter serve to check the readiness of the buyers to accumulate stock. Only in the mining markets is there but little doing.

The strength of the War Loan is due to the consideration of the current price carrying four months' interest, and the pressure to buy Conversion 3½ per cents. is attributed to an idea that the Government have in preparation a scheme for further conversion of the 5 per cent. War Loan upon an extensive scale. The last offer of Conversion was made, of course, through the medium of the 4½ per cent. stock, and doubtless the same security will be offered in whatever may be the next form of Government arrangement. The gilt-edged market keeps good, although the animation amongst indus-

trial shares tempts some of the holders of the best-class stocks to realise these, and to embark upon the more venturesome policy of buying the popular shares of the moment.

The advent of the new German loan is thought to be not far away, and this revived a certain amount of attention in German bonds, though prices gave way abruptly upon the latest phase of German politics. Recent big buyers are doing very little. Movements in French issues have been narrow. Brazilian bonds are again higher. Mexican Government bonds spurted strongly, taking with them the prices of Mexican Railway, Utility and mining issues.

Home railway stocks have few friends, and the tendency of the market is downward. The death of Mr Lionel L. Roberts, a prominent jobber in the home railway market, gave rise to a unique tribute of respect to his memory on Thursday, when the home railway market adjourned for half-an-hour during the time of his funeral.

Grand Trunk Pacific debentures have fallen back a little after their recent big rise. Brazilian railways are better; Argentine Railway stocks mildly buoyant, on the improvement in exchange and the excellence of the traffics. Nitrates arouse no particular interest.

Rubber shares have strengthened, although the check imposed upon the rise in the raw material serves to subdue optimism. The tea boom continues its course, and prices all along the line have risen materially during the current week. The advances cover the differing classes of shares, from the giant Consolidated Tea and Lands to recent issues such as Assam Consolidated, where the price fell at one time to 5s discount before it started to rise to a guinea. There is a large turnover in tea shares every day, but the account settled on Thursday may have been rather less than that of the previous fortnight. A reaction in prices on Thursday afternoon was regarded as a healthy sign that some people were taking good profits.

In the oil market a dramatic jump in Mexican Eagles arrested attention and stimulated imagination. A sheaf of rumours promptly arose to account for the violence of the rise, which added three million pounds to the share value of the ordinary capital within the course of a few days. Other oil shares are better, as a consequence of the advertisement which the market has received. Courtaulds spurted again, together with Bradford Dyers, on an interesting (and wholly unconfirmed) rumour to the effect that some kind of agreement might be reached between the two companies. Other textiles have advanced, and Celanese issues have emerged from the depression which overtook them upon publication of the report showing a loss for the past year. The meeting this week was considered satisfactory.

The iron and steel market exhibits a long catalogue of improvements, maintenance of the Armstrong interim dividend being regarded as an indication of hopefulness. The rise in shipping shares has made a little further headway. Brewery stocks are better, and John Walker ordinary shares, introduced a few days ago at 50s, quickly rose to 55s. A string of rises amongst industrial shares of other sections testifies to the growing interest of the public in Stock Exchange markets. Trust companies' stocks are again higher, and amongst insurance shares, another rise in Prudential "B" stands out prominently. Bank of New Zealand shares display marked strength in the banking group, where others, however, are disposed to ease off a trifle here and there. Gas stocks are better, Brentford Gas gaining several points upon the absorption of the company by the Gas Light and Coke Company, whose stock has also risen. In the land market, Hudson's Bays received support, though Egyptians, owing to the uncertain political outlook, have been a dull market. Rises in tobacco shares were resumed, while the stores group remains quiescent.

Mining markets, apart from Mexican shares, are out of popular favour. The slump in the price of tin, the metal, followed as it has been this week by a substantial recovery, has rendered the public cautious in dealing with tin companies' shares, but the Middle East descriptions are mostly better, and there has also been a little buying of West Africans. In the Kaffir Circus, the movements on the week are insignificant; in the Rhodesian market, Cam and Motors provided the professionals with plenty of excitement, as the price fell heavily and then recovered the loss. Mexicans are decidedly better, upon excellent developments reported by the Mexican Corporation. Canada is abstaining from speculation in her own mining shares, with the result that business in these has fallen away to a minimum. The attractions of industrials are leading speculation into their markets to the exclusion of interest in most of the mining shares.

We are informed that Mr Arnold Hirwain Wethered has ceased to be a member of the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

City of Auckland 5 per Cent. 1924 Consolidated Loan.—This is an issue of £400,000 in debentures to bearer at £97 10s per cent. The principal is repayable at par on October 1, 1957, the average yield, including bonus on redemption, works out at £5 3s per cent., the flat yield being £5 2s 6d per cent. The proceeds of the loan will be used to repay maturing loans of £46,000 and to provide further funds for street improvements, waterworks extensions, tramway extensions, drainage, and other purposes. A sinking fund of 1 per cent. per annum will be provided. In the last 13 years the annual rateable value of Auckland has risen from £623,313 to £1,840,131, and its revenues from £182,533 to £1,319,214, the population having increased from about 102,000 to about 170,000. The public debt of the city is £5,207,797, the interest charge on which amounts to £257,140 and the sinking fund charge to £66,623. Against its indebtedness the city has an accumulated sinking fund of £783,398. In the prospectus figures are given showing the excellent progress made by the port in the last three years. A fair offer in its class, but we should like to see some comparative figures of municipal debt per head of inhabitants in Australasian cities.

The National Cotton Printing Works Company.—Incorporated under the laws of Brazil. Authorised and issued share capital consists of 60,000 shares of Rs.200\$000. At the exchange rate of 6d to the milreis, this is equal to £300,000. This is an offer for sale of £300,000 of 8 per cent. first mortgage registered debentures of £100 each at 98 per cent. It is stated that firm offers have already been received and accepted for £121,000 of these debentures. The flotation is a Brazilian undertaking, with cotton spinning, weaving, dyeing, and printing mills at Sorocaba. It also owns about 90 per cent. of the capital of a subsidiary undertaking, which has a mill at Sorocaba. It is stated that the profits of the affiliated companies for the last three years have averaged over £113,000 per annum. The proceeds of the present issue, after redeeming a small amount of outstanding debentures of the company and its subsidiary, and paying the balance of the purchase money for the shares of the latter undertaking, will be used for the provision of additional machinery. The debentures now offered are to be redeemed by 1947 at 103 per cent., the company reserving the right to redeem at 103 any outstanding debentures on or after March 15, 1936, subject to six months' notice. Surplus assets are sufficient to cover the loan, while profits are ample for meeting services. But it is well to consider the whole position of sterling mortgages in relation to Brazilian undertakings. Moreover, political considerations must not be overlooked.

Belvoir Estates, Limited.—Authorised capital £500,000, divided into 200,000 cumulative preference shares of £1 each (45,000 of which have been issued and are credited as fully

paid up) and 300,000 ordinary shares of £1 each, all fully paid. This is an offer for public subscription of 10,000 7 per cent. cumulative preference shares of £1 each, presumably at par. The company has been formed to acquire from the Duke of Rutland and the Marquess of Granby freehold lands in Leicester, Lincoln, Nottingham, and Derby, "having an area of upwards of 19,000 acres, and certain investments of a market value exceeding £600,000, and chattels, in consideration of fully-paid shares in the company, and a cash consideration, payable by instalments." A consideration sum is given of £496,163, to be paid in 40 instalments of £12,404, and £646,397 is to be satisfied by the issue of 40,000 preference and 299,993 ordinary shares, all of £1 each. The prospectus states that "the revenues of the company are amply sufficient to meet the dividends on the cumulative preference shares." Although we do not doubt the truth of this assertion, it is customary when an attempt is made to attract attention in the investment world to be a little more explicit about details of past earnings or revenue. In the articles of association provision is made to compel shareholders holding less than "5 per cent. of the issued capital" to transfer such holdings at "their fair value." In this case it is fixed at 25s per share. There are two directors—namely, the Duke of Rutland and the Marquess of Granby. If we remember aright, the Duke of Plaza Toro had no assets beyond his goodwill and title; but here we have very substantial assets.

Southend Waterworks Company.—Total capital already issued £1,345,191, consisting of £584,447 ordinary stock, £484,521 preference stock, and £276,223 debenture stock. This is an offer for sale by tender of £41,666 13s 4d 4 per cent. perpetual debenture stock and £125,000 5 per cent. irredeemable preference stock, the minimum price for the former being 77 per cent. and for the latter 92 per cent. The proceeds are required for the general capital purposes of the undertaking. After January 1, 1925, the present issue will rank *pari passu* with the £184,423 8d 4 per cent. debenture stock already issued. After April 1, 1925, the new stock will rank *pari passu* with the £384,321 similar stock already issued. The prospectus shows that the net profit for the year 1923 amounted to £61,408, after providing for interest charges on loans and debenture stock. At minimum prices these offers are not without attraction.

Folkestone Waterworks Company.—This is an offer for sale by tender of £50,000 5 per cent. perpetual debenture stock of the above company; the minimum price of issue is 97 per cent. The proceeds will be utilised principally for a repayment of a banker's loan incurred for extensions of the works, plant, mains, &c., rendered necessary by increasing demands for water. The net revenue of the company for the year ended June 30th last was £17,061, and as the interest on the debenture stock (including that now being issued) only requires £3,459, it is well covered. The two classes of ordinary shares are receiving the maximum dividends of 10 and 7 per cent., and the undivided profit carried forward after payment of the last dividends was £9,405. A fair offer of its class, but the rate is not attractive in view of the narrow market.

The Beverley Tea and Rubber Estates, Limited.—Authorised share capital £100,000, divided into 1,000,000 shares of 2s each, of which 500,000 are issued and fully paid. This is an issue of £25,000 7 per cent. convertible debenture stock at par. The company owns 2,300 acres in the Morawate district of Ceylon, of which about 500 are already under all the properties, and will be "redeemable" at 103 after end of 1930, however, holders will have the option of converting into shares at par. The tea crop last year was 158,600 lbs, unrestricted, the estate is estimated to be capable of an output of from 150,000 lbs to 175,000 lbs. The trading profit last year was £4,900. The proceeds of the issue are required to plant another 500 acres with tea and to erect a tea factory, &c. No are a speculative risk, but support will probably be forthcoming from those already interested in the concern.

The Foundation Company, Limited.—Authorised and cumulative participating preference and 100,000 ordinary shares, details are advertised of a concern which carries on the business of general engineers and contractors. The undertaking is of American origin, the company having purchased the goodwill incorporation took place early in 1922 as a private company. It was subsequently converted into a public company. The preference dividend has been paid, half the remaining profits goes to a reserve fund until £100,000 has been accumulated. The shares, and what is left is to be distributed on the ordinary and ordinary shares as if they were one class of capital. The preference shares have priority as to capital, and any assets

over after the ordinary shares have been refunded are divided between the preference and ordinary on the same basis as the residue of the profits. It would be difficult to discover an announcement of a public company which could convey less information as to past trading results.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

BRITISH CELANESE, LIMITED.

PAST YEAR'S DIFFICULTIES.
WORKING COSTS LOWERED.

GREAT IMPROVEMENT IN CURRENT YEAR.

The fifth ordinary general meeting of the British Celanese, Limited, was held, on the 25th instant, at the Cannon street Hotel, London. The chair was occupied by Sir Harry McGowan, K.B.E. (chairman of directors).

CHAIRMAN'S SPEECH.

When I last had the pleasure of addressing you, I was able to refer in encouraging terms to the progress then being made and to the general outlook. The period referred to was the first few months of the financial year under review. Shortly after my speech, however, several factors began to operate against this company. We had not at that time established our position in the yarn trade, nor had we put our knitted or woven fabric on the market—in fact, we were very largely dependent on our sales of cord. Our factory costs were, on the smaller output, relatively high, and were affected by the changes and extensions we were making in our factory capacity. Shortly after the date of my speech there was a general stagnation in the textile trades, during which the English markets were flooded with cheap and inferior cord from the Continent. This led to the cutting of prices, which, situated as we were, largely dependent on our cord product, was a serious matter. For the second half of the financial year, therefore, our entry into the profit-making stage was retarded by market conditions, and you may be sure that, with our growing potentialities for larger business, our disappointment at the delay in making that capacity effective was very great. Convinced as we were of the inherent qualities of our product, we knew that its superiority was bound to tell with the trade and the public in due course. But a period of depression and reluctance to buy is not favourable to a product proving its own superiority, and we were confronted with the necessity of making the merits of our materials known to the public, and particularly of establishing our yarn trade with the fabric makers. As we firmly believed in the material ourselves, we had every confidence in the result of the propaganda we then embarked upon. In the year under review we spent £37,000 in advertising, which has been charged to revenue. The results have been satisfactory. Our sales of yarn, which we regard as our basic product, have steadily developed, so that for September of the present year they are five times what they were in September of the year under review. The expansion of our business has led to the lowering of costs, and the profits so far made in the present year are substantially greater than the total losses made in the year we are now considering.

I am glad to say that in completed productive capacity and actual output, in variety of product and ranges of uses, in reduction of costs, in actual sales and market demands and in financial position, substantial progress since we last met can be recorded.

May I take these aspects in order?

PRODUCTIVE CAPACITY AND VARIETY OF PRODUCTS.

I told you last year that the extensions then being carried out would enable us to produce from $4\frac{1}{2}$ to 8 tons of yarn per day

according to denier. Low denier means a fine yarn which yields a higher price, but which takes a longer time to make a given weight. Since that time we have carried out such improvements in our factory that we now have a capacity for 50 per cent. more of the low denier, which is the more profitable.

I referred above to yarn as our basic product. By that statement I meant that our chief business was to make and sell yarn to the fabric trade, but we long ago decided the best method of doing this was to demonstrate to the world the fine quality of the knitted and woven fabric made from it. With this purpose in view we installed a circular knitted fabric plant, which has now been running successfully for some months. The goods made are appreciated by the public, and the orders are now in excess of capacity. This plant is being increased by 50 per cent., and the machinery for this extension is being installed as rapidly as possible. We believe that the enhanced demand for our yarn is in a considerable measure due to the high appreciation in the trade of this circular knitted fabric, which is known as Celanese Tricot.

With the same object of demonstration we installed a woven fabric plant with a capacity of 1,000 to 2,000 lbs per day, according to the character of the fabric. About two-thirds of this plant is now running, and the remainder will gradually be brought into commission. As soon as the finishing plant now being installed is at work, the plant will be pushed to its full capacity, and this woven fabric will be offered to the trade. From the success of the small quantities we have had finished in outside factories, we are confident of the result of the woven fabric branch of our enterprise.

If you carry your minds back a year ago to the time when our chief product was knitting cord, you will begin to realise that your enterprise has made vast strides in the interval. At the same time, a steady demand continues for our cord. A very interesting development in the use of our yarn is its combination with cotton and wool by independent fabric makers. "Celfect," consisting of twisted threads of cotton and Celanese, has already established a very important sale, chiefly in the stocking trade.

FACTORY PROCESSES AND COSTS.

We are glad to tell you that during the last few months our working costs have shown substantial improvement, due partly to increased output, but also to our workpeople becoming more familiar with the various processes, and to improvements suggested by experience. So far as one can see at the moment, it will be the end of the present year before the bulk of these improvements and alterations are completed, which, while they are being carried out, prevent the maximum capacity being reached. The difficulties formerly experienced in dyeing our material have largely disappeared. We have extended our dye-house, and produce 80 per cent. of our own dyes. Our dye-house is open to the trade, and we invite their experts to come and learn our methods. We do not wish to compete with the makers of dyestuffs, but, on the contrary, we encourage them to study our methods and produce their own dyes. These developments on our part have given

us a good control of the dyeing question, and have largely removed the former dyeing difficulties. Our dyes are fast, and we have covered successfully all the shades.

SALES.

Our sales organisation was faced with all the difficulties incident to placing a new material on the market, but confidence, patience, and courtesy have carried us a long way, and a vigorous advertising propaganda has made Celanese widely and favourably known. The cost of this publicity, which in itself exceeds the trading loss of the year under review, has been charged to revenue.

FINANCIAL POSITION.

You will have seen from the balance-sheet that our outstanding debentures have increased from £300,000 at February, 1923, to £700,000 at February, 1924. As you know, the proceeds of these debentures have been expended in increasing our spinning capacity and in the installation of our knitted and woven fabric plants. We have reduced our loans from £85,000 at February, 1923, so that at the present time our only outstanding loan is one of £50,000 to H.M. Government, which is not due until December, 1925.

On the assets side you will notice that cash is £78,000 as against £102,000, and it will be gratifying to you to know that the position to-day is better than either of these figures indicates, as we are financing a much larger turnover than was the case at the earlier periods, and have paid every account due and have no bills outstanding, so that the position is much stronger than in previous years.

OUTLOOK.

In my last report I stated—"Of our ability to make profits under reasonable trade conditions I have no doubt whatever, and all our statistical records bear out this opinion, shared as it is by the entire board." This opinion as to our ability to make substantial profits has been confirmed by the results of the past few months. We fully realise that the building up of a great business calls for our untiring effort, and that new conditions constantly arise to be faced and overcome in all business enterprises. We have every confidence that we will achieve it, and that this company will soon take its place among the great enterprises of this country.

If the British consumer would confine himself to British proprietary articles of known quality—such as Celanese, Celfect, &c.—we should have all the advantages in our costs of production which increased and steady volume of manufacture confers, and it would help us to reduce our costs to the benefit of the public and of our shareholders alike. The British consumer need have no hesitation in acting thus patriotically. In buying "Celanese" I beg of you to distinguish it from artificial silk as generally understood hitherto. In "Celanese" one gets an article which has all the charm of feel and softness which appertains to real silk, with the addition of certain advantages, such as regularity and far higher insulating properties. It is not affected by extremes of climatic heat or cold, and all these qualities combine to make "Celanese" garments the most comfortable wear for all seasons, safeguarding the wearer, as they do, from discomforts in consequence of sudden chills or extreme heat. From the manufacturer's point of view "Celanese" has very important advantages—it has a high elasticity factor, enabling it to be worked perfectly in textile machinery, and, what is most important, it has absolute regularity of strength and uniformity.

We have not shown our fabrics here to-day, as we did last year, because we have a very good display of them at the British Empire Exhibition at Wembley. Our stand is to be found in the Palace of Industries by passing through the Nobel Industries Stand, out of which it leads, and I hope all shareholders who have the opportunity will visit our display there.

THE DUNLOP RUBBER CO., LIMITED.

CAPITAL REDUCTION SCHEME APPROVED.

A series of meetings of the holders of the different classes of shares in the Dunlop Rubber Company, Limited, was held, on the 26th instant, at the Hotel Cecil, London, W.C., for the purpose of considering, and if thought fit approving, resolutions authorising the revised scheme of capital reorganisation, particulars of which have already been published. The Right Hon. Sir Eric Geddes, G.C.B., G.B.E., chairman of the company, presided.

The Chairman said:

The object of our meeting to-day is to pass the revised scheme of capital reorganisation, which carries the unanimous approval of the committee appointed at my suggestion, and composed of representatives of the various classes of shareholders with whom we have been in consultation.

We had several conferences with the committee, and have endeavoured to meet as far as we could the divergent interests which they represented, but in the end we found it possible to submit to

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

you a revised scheme acceptable to all, details of which are before you in the circular and notice convening this meeting.

The scheme to which you are now asked to give your consent is a fairly simple one. The basic principles of the previous scheme are retained in the new proposals, but there is a certain alteration in detail which I shall endeavour to explain. The net arrears of preference dividends accrued up to December 31, 1923, which will now be paid, is £760,000, thus discharging 95.13 per cent. of the arrears in the case of the "A" preference shares, 88.2 per cent. in the case of the "B" preference shares, and 84.5 per cent. in the case of the "C" preference shares.

Originally, £780,000 ordinary shares were provided for these arrears, but now we are proposing to pay £760,000 in cash instead.

RIGHTS OF PREFERENCE SHAREHOLDERS.

The rights of the preference shareholders are hardly interfered with, except that all three classes are asked to forgo their contingent rights to additional dividends, but the "C" preference shares, being the junior security, are asked to contribute something towards the deficiency in capital account by being written down to 16s per share (instead of 15s as originally proposed); the rate of dividend they receive will be raised from 8 per cent. to 10 per cent., which, in effect, leaves their present income unimpaired. As the "C" preference shares are still entitled to rank for £1 in the event of winding up, I think I can say that the only tangible concession asked for from the "C" preference shareholder is the forgoing of their contingent rights in the same way as we are asking the "A" and "B" shareholders.

I think the present scheme fully meets the views of those ordinary shareholders who desired to retain in its entirety their equity in the company, but this could only be done in one of two ways, either by taking the sum required to pay the preference arrears out of the existing cash resources of the company, or by raising fresh funds for the purpose. It is necessary to ask your authority, therefore, to increase the borrowing powers of the company to the extent of £1,000,000, so that we may be able to rely on having ample funds available, as and when required, to meet the demands of the developing and growing business of the company, but the cash position of the company as we find it to-day is sufficiently good to enable us for the moment to pay the £760,000 arrears of preference dividend out of our own resources, so that an immediate issue of further stock for this particular purpose will not be necessary.

Although it does not arise on this particular point, I may mention that your board have well in mind the possibilities of further increase to the equity coming to the ordinary shareholders by a financial operation whereby our existing 8 per cent. debentures may be converted into some stock bearing a lower rate of interest. The exact time for such an operation is impossible to forecast at the moment, and therefore I need not further labour this subject.

POSITION OF ORDINARY SHAREHOLDERS.

The two members of the committee representing the ordinary shareholders, though endorsing our proposals, express the view in their circular that the ordinary shares need not have been written down to the extent proposed, but I can assure you that in arriving at this much debated figure of 6s 8d, your board has very carefully considered the question from every angle. The various properties you possess were subjected to minute examination item by item, and acting on the best advice we could obtain in each case, we have formed the opinion that the balance-sheet as now submitted is a true statement of the value of your tangible assets, and we

could not, consistently with our duty to you and to ourselves, recommend them being shown in your balance-sheet at a higher figure, and not because having once committed ourselves to these figures we do not wish to depart from them, but because we have heard no arguments convincing enough to justify the adoption of such a course.

In a company of this magnitude there is, of course, always one item open to considerable discussion, and that item is goodwill. In the consolidated balance-sheet which was circulated with my speech of the last meeting, this figure was shown as £351,416. No one would argue that this amount formed any basis for measuring the actual goodwill of the Dunlop Company in the various markets of the world. Owing to the fact that the "C" preference shares are now only written down to 16s per share instead of 15s as originally proposed, and in order to retain the ordinary shares at the 6s 8d level, it has been necessary to increase this item—i.e., goodwill, by £130,000, so that in the consolidated balance-sheet set out in the circular dated September 15, 1924, you will find that this item of the assets has been increased from £351,416 to £481,416, representing a figure which stands there more as a balancing item than as an indication of the value of "Dunlop goodwill."

With regard to the increased borrowing powers which you are asked to approve in resolution No. 6 (b). It is not the intention of the board to raise this money until it is actually required, and that may not be for some time, and obviously the precise amount and form which such an issue would take cannot be definitely determined until the date of the appeal is nearer, but you may rest assured that the issue will be made on the most favourable terms possible and with the least expense, and that our shareholders will be duly considered.

There is no present intention of issuing for cash any new ordinary shares, but if at any future date such an issue should take place, we shall follow the usual custom of making the offer first to our ordinary shareholders.

GROWING SALES.

I am not going to prophesy, as the rôle of a prophet is always a ball in the world, and British made, so far as this country is concerned remain as at present—viz., the volume of sales and prices—the rate of profit revealed in the last accounts submitted to you will not only be maintained, but improved upon in spite of keener competition.

The increases in the sales of the company's products are being more than maintained, and the volume of business this year is again substantially higher than it was last year, which was a record year.

The increased volume of business is being done with a very much reduced inventory, and without any additional selling expense, and the spread of overhead generally is reflected in our trading results. But we want still further increased sales to get even better results. I wonder if all the 50,000 Dunlop shareholders could not help us a little. If our Sales Department could count on 50,000 shareholders advocating and buying the best tyre and golf ball in the world, and British made, so far as this country is concerned, I am sure we would be taking on thousands of extra hands at Fort Dunlop, and making more profit.

But the development of business is not confined to this country. The sales in France are higher than they were last year, and we have every reason to look for further increases as our quality in France is equal to Dunlop standard quality, and is being more and more appreciated.

The output and sales of the German factory are increasing, and satisfactory prices are being obtained.

REMARKABLE EXPANSION.

Our general export business shows a most remarkable expansion, and I am glad to say that this is fairly well spread over all our markets. In some markets prices are undoubtedly too low, but your board has adopted as a policy the maintenance of its position in these markets on competitive terms.

Since we last met, I have had an opportunity of again visiting the large and important Dunlop factory at Buffalo, in which you have such a big investment, and I can at once say how gratified I was to find such a splendid spirit of enthusiasm and enterprise there. The quality of the product made in Buffalo is equal to the quality made in Birmingham, and you know what that signifies. The sales in America are increasing, and I came away full of hope for the ultimate success of this venture.

There are no accounts before you to-day, but I feel sure you would like to have some information as to the cash position of the company. You will remember that at June 30, 1922, bank loans amounted to £2,019,000, with cash and bills of £217,000. By December, 1923, the position showed great improvement, but to-day our investments in War Loan, deposits, and bills amount to a total of nearly two and a quarter million pounds—a result which I am confident will give you considerable satisfaction.

The scheme was approved by the requisite majority at the extraordinary general meeting, and also at the class meetings which were subsequently held.

SALE OF BILLS AND TELEGRAPHIC TRANSFERS ON INDIA.

The Secretary of State for India in Council offers for sale on Tuesday, September 30, 1924, bills of exchange and telegraphic transfers (immediate and deferred) on the Government of India, to the amount of 50 lakhs of rupees, payable at Calcutta, Madras, Bombay, and Karachi. This and any subsequent sales will, until further notice, be regulated by the following conditions:—

1. Dates of sales and the aggregate amount to be offered on each occasion will be announced in a notice exhibited at the Bank of England.

2. Tenders will be opened at the Bank of England on Tuesdays at 1 o'clock. They must be made on forms which can be obtained on application at the Chief Cashier's Office at the Bank of England.

3. Any tender may be for the whole of the amount shown in the announcement, or for any portion thereof which in the case of a bill is not less than Rs. 10,000, and in the case of a transfer (immediate or deferred) is a multiple of Rs. 1,000 and not less than Rs. 1 lakh. The amount of the tender or tenders submitted by or on behalf of any one person, firm, or company must not in the aggregate exceed the amount shown in the announcement. Tenders which appear to the Secretary of State in Council to be submitted in direct or indirect infringement of this rule will be rejected.

4. Each tender must state the rate of exchange at which the applicant is prepared to purchase the amount for which he tenders therein or any less amount that may be allotted. The rate of exchange must be expressed in pence, or in pence and a fraction of a penny, per rupee; any fraction must be either one thirty-second of a penny or a multiple thereof. No announcement will be made of the minimum rate at which tenders will be accepted.

5. Tenders for immediate telegraphic transfers will rank for allotment with tenders at 1-32d lower for bills and deferred telegraphic transfers. When a *pro rata* allotment is made, no bill will ordinarily be granted for a less amount than Rs. 5,000, and no telegraphic transfer for a less amount than Rs. 1 lakh. Applicants tendering both for bills and transfers may, if they wish, insert in their tender for transfers a request that if that tender be not sufficiently large to secure an allotment of one lakh of rupees it may be increased to the necessary extent by reduction of their tender for bills.

6. On Tuesday afternoon tenderers will, on application at the Chief Cashier's Office, be informed whether any allotment has been made to them.

7. Payment for bills and transfers must be made before the Tuesday next after the day of allotment.

8. Applicants to whom an allotment of bills has been made will be furnished with a form to be filled up with the particulars of the bills desired, which must be left at the Chief Cashier's Office before 12 o'clock on the day preceding that on which the bills are required; the bills will be delivered next day on payment in cash not later than 2 o'clock.

9. When a telegraphic transfer has been allotted the necessary telegram authorising payment in India on demand will be sent on the day on which payment for the transfer is made at the Bank of England. Immediate transfers will be payable in India on the day following the issue of the telegram; deferred transfers will be payable 16 days after the issue of the telegram.

10. Subject to further notice no "intermediate" bills or telegraphic transfers will be offered for sale by the Secretary of State in Council.

11. The Secretary of State in Council reserves the right of rejecting the whole or any part of any tender, and of departing in any respect without previous notice from the foregoing terms should circumstances render it expedient.

Messrs Samuel Montagu and Co. write, on September 24th, as follows:—

GOLD.

Owing to the large amounts of gold shipped direct from Durban to India, the supplies in London this week were exceptionally small, and practically none was available for the Eastern markets. Exceptionally large gold movements are taking place just now in London and New York, though the movement in each case is within a mile. The transfer is

owing to the central banking institutions changing their quarters. The Bank of England is temporarily moving its gold reserve from Threadneedle street to Finsbury circus, and the Federal Reserve Bank in New York from Nassau street to a new permanent home in Maiden lane. The Commercial Intelligence Department, Calcutta, announces that India's foreign trade during August last was as follows:—

Imports, private merchandise	Lacs of Rupees.
Exports, private merchandise, including re-exports	20.65
Net imports of private treasure	25.15
	5.55

The balance of trade, including enfaced rupee paper, &c., is Rs. 83 lacs against India, as compared with Rs. 3.20 lacs in favour of India in July. The following figures relate to the United Kingdom imports and exports of gold during the month of August, 1924:—Imports, £1,794,529; exports, £3,272,548.

SILVER.

The tone of the market has been good, and prices during the last few days have moved steadily upward. Quotations for both deliveries touched 35½d yesterday. This price is only 1½d below the record for the year for cash delivery—35½d on May 31st. As a quotation for forward delivery, it is the highest since October 9, 1922. Bear covering from China and India has been the principal cause of the good tendency. America has been a sluggish seller, but China has put some silver on the market. The underlying reason for recent bear covering has been the civil war in China, which has restricted the movement of goods and the fulfilment of contracts. The Continent has not figured as a substantial factor.

Combined revenue.

rities. The exact figures have not yet been agreed, but full provision is made in the accounts, leaving a small balance to be carried forward, in addition to the net profit for the year of £6,293, making a total carry forward of £8,762. The sum of £31,314 has been allowed for depreciation. The depreciation reserve account now stands at £130,206. No dividends are being paid on the preference and ordinary shares.

HENRY BRIGGS, SON AND CO.—This well-known colliery concern of Normanton, Yorkshire, made a net profit of £168,274 for year ended June 30, 1924, against £184,769 in preceding year. The ordinary dividend is again 15 per cent., free of income-tax. The sum of £65,000 is transferred to reserves, and £39,974 is carried forward, against £35,062 brought in. The ordinary capital is £655,750 in £1 shares. There are no preference shares or debentures.

LEACH'S ARGENTINE ESTATES, LIMITED.—The profit on trading for year ended March 31, 1924, amounted to £257,136, as compared with a loss on trading of £130,867 in preceding year. The directors do not feel justified at the present time in recommending a larger distribution on account of the arrears of the cumulative dividend on the preference shares than 12 per cent., they have divided on the preference shares (leaving 6 per cent. outstanding as at March 31, 1924), and have allocated the balance to reserve. An interim payment of 3 per cent. was made in March last, and it is proposed that the balance of 9 per cent. be paid after the forthcoming general meeting. Climatic conditions were more favourable than for the previous year, and the total sugar production of Argentina for 1923 amounted to 257,000 tons, compared with 209,100 tons yielded by the 1922 crop. The company manufactured 18,245 tons of sugar, compared with 8,577 tons in 1922 and 11,616 tons in 1921. The company's average cost of production was considerably less than for the previous year, and the average selling price was higher. In pursuance of the provisions of the trust deed, debentures to the amount of £44,900 were drawn for redemption in March last.

LONDON, MIDLAND, AND SCOTTISH STOCK CONVERSION TRUST.—In accordance with the terms of the trust deed (Section 41), a meeting of all stockholders of the above trust will be held at Winchester House, Old Broad Street, London, E.C. 2, on Monday, September 29, 1924, at 12 o'clock noon, to receive the report of the trustees.

PARTINGTON STEEL.—In their report for the year ended June 30, 1924, the directors of the Partington Steel and Iron Company, Limited, state that the profit for the year, after making all necessary provision, amounts to £4,802, which, with the amount brought forward, £261,685, makes £266,487 available. Dividends on the 6 per cent. preference shares were paid on December 31, 1923, and June 30, 1924, amounting to £21,000. The directors recommend that no dividend be paid for the past year on the ordinary shares and the 6½ per cent. preference shares, and that the balance of £245,487 be carried forward. The last dividend on the ordinary shares was 10 per cent. for year ended June 30, 1921.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.—The net profit of this important coal and iron concern, after payment of debenture interest, amounted to £29,681 for year ended June 30, 1924, as compared with £89,819 for the preceding year. The ordinary shareholders receive no dividend, against 5 per cent. for preceding year, while holders of the preference shares receive no final dividend for the year. The directors explain that, in view of the great uncertainty surrounding the immediate future of the steel trade, they have decided to conserve the resources of the company. They are carrying forward £101,754, against £84,183 brought into the accounts.

RIO NEGRO (ARGENTINA) LAND COMPANY, LIMITED.—The accounts for the year ended June 30, 1924, show a profit of £57,856, to which has to be added £26,940, balance at June 30, 1923, making a credit to revenue account of £84,796. Out of the balance of £84,796 the directors have transferred £25,000 to general reserve, and recommend a dividend for the year to June 30, 1924, of 10 per cent., less income-tax, absorbing £30,000, carrying forward a balance of £29,796. The company has not paid a 10 per cent. dividend on its ordinary shares since the year ended June 30, 1920. For year 1920-21 it paid 7 per cent., for 1921-22 5 per cent., and for 1922-23 8 per cent.

ROYAL BREWERY, BRENTFORD, LIMITED.—The trading profit for year ended June 30, 1924, amounts to £108,082, against £117,447 for preceding year. The net profit, after payment of debenture interest, is £51,056, against £61,164. The dividend on the ordinary shares is again 7½ per cent., less tax. The amount carried forward is £40,604, against £48,275 brought in. It is interesting to note that the £45,000 6 per cent. "B" mortgage debenture stock was redeemed on September 30, 1923, and the amount reserved in the accounts for redemption of it has been added to general reserve, which now stands at £85,000.

SALAR DEL CARMEN NITRATE SYNDICATE, LIMITED.—We are informed that the syndicate has been successful in purchasing, at the recent Government sales, two additional plots of nitrate bearing lands adjoining the existing properties. The purchase price, including incidental expenses, will amount to approximately £62,000, and this sum is being provided out of accumulated funds of the syndicate. The contents of the new area are estimated by the Chilean Government experts to be 1,756,200 metric quintals (3,817,826 Spanish quintals), and the board are satisfied that the purchase is a most advantageous one in every respect.

SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED.—The net profit for year ended June 30, 1924, amounted to £120,738, against £123,300 for preceding year. The ordinary dividend is unchanged at 7½ per cent. The reserve fund is strengthened by £25,000, and £48,891 is carried forward, against £44,542 brought in.

TARAPACA AND TOCOPILLA NITRATE.—We are informed that at the Chilean Government's sale of nitrate grounds, held in Santiago on the 15th instant, this company acquired a plot adjoining its oficina "Santa Fe," at 71 cents Chilean gold per metric quintal. This plot, according to the Chilean Government reports, verified by the company's experts, contains 3,755,020 metric quintals of nitrate, the purchase consideration for which amounts to some £200,000.

TRAFFORD PARK ESTATES, LIMITED.—This well-known Manchester concern secured a net profit, after payment of debenture interest, of £35,881 for year ended June 30, 1924, against £45,992 in preceding year. The ordinary dividend is maintained at 6 per cent. The sum of £19,807 is put to reserve, and £67,208 is carried forward, against £90,134 brought in.

BROKEN HILL PROPRIETARY.—Four weeks ended September 10th.—Iron and Steel Works, Newcastle: Coke ovens produced 27,597 tons of coke, 312,931 gallons of tar, and 388 tons of sulphate of ammonia. Nos. 1 and 3 blast furnaces and 416 tons ferro-manganese. Open hearth furnaces produced 25,474 tons. Blooming mill produced 24,748 tons. 28-in mill produced 14,588 tons. 18-in mill produced 6,353 tons. 12-in mill produced 3,018 tons. 8-in mill produced 1,466 tons. Rod mill produced 42,863 tons. Steel foundry produced 697 tons of castings. Iron Knob treated 8,053 tons of crude ore, producing 650 tons of lead concentrates. Silmes flotation plant produced 1,197 tons lead concentrates and 1,140 tons of siliceous concentrates.

MOUNT LYELL.—During the four-weekly period ended September 17th there were smelted:—Mount Lyell ore, 621 tons; North Lyell ore (direct to smelters), 198 tons; concentrates, 1,985 tons. The converters produced 396 tons of blister copper, containing:—Copper, 393 tons; silver, 8,426 ozs; gold, 105 ozs. The mill 13 days, and produced 2,266 tons of concentrates. Furnace ran.

MOUNT MORGAN.—For the four weeks ended September 16th treated 5,761 tons secondary products. Produced 551 tons blister copper, containing 595 tons copper tons concentrates, containing 314 tons copper, and 3,859 ozs gold. In addition to above production have made on hand 70 tons copper and 1,044 ozs gold. Intermediate smelter products and temporary higher percentage of copper in the ore.

WORKING PROFIT, TRANSVAAL.—We are informed that the total estimated working profit of the gold mines of the Transvaal for the month of August, 1924, amounted to £1,185,208 for the Witwatersrand district, £12,356 for the outside districts; total, £1,197,564. The estimated working profit in July, 1924, was £1,258,115 for the Witwatersrand district, £10,370 for the outside districts; total, £1,268,485.

OIL OUTPUTS.

THE CALTEX OIL COMPANY advises having received the following cable from Mexico:—"August production, 6,582 barrels, or 1,041 tons."

THE CORN TRADE

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

	1924-1925.	1923-1924.	1922-1923.	1921-1922.
Estimated sales of home-grown wheat—				
1 week to Sept. 20	Cwts. 176,726	Cwts. 486,691	Cwts. 353,278	Cwts. 449,295

Mark Lane, Friday Evening.

The weather has remained unsettled, with further rains, but farmers were able to make fair progress with harvesting and threshing operations, while also preparing the ground for autumn sowings. Large quantities of native wheat are now coming forward, and prices firm in sympathy with the position of imported. Prices range from 11s 6d to 12s 8d per 112 lbs, free on rail, as to quality. Imported varieties have further advanced in value owing to higher forward offers and reserved sellers, consequently business was on a restricted scale. No. 1 Northern Manitoba quoted 6s 6d, No. 2 ditto 6s 6d, No. 2 hard winter 6s, Australian 6s 6d, all ex ship, and choice white Karachi 6s 6d landed terms, all per 496 lbs. In the floating and forward cargo section prices further hardened in view of stimulating cable advices from the United States, and improved inquiries both by home millers and Continental operators. Sales include: Barusso 63½ lbs new crop January-February to at 55s 4½d to 55s 6d, No. 2 hard winter early October 56s 3d to at 55s 4½d, No. 2 also No. 3 Northern Manitoba October-November 58s 9d 57s, No. 2 also No. 3 63½ lbs loading 58s 7½d, saifer, and 57s 6d respectively, and ditto January 60s to 61s 3d, and Australian December 60s 3d, and ditto January 60s to 61s 3d, and steamers January 60s 6d per 480 lbs c.i.f. Maize cargoes, after a quiet interval, experienced a better demand, and prices tend firmer. Plate steamers afloat sold at 43s, October also November-December Plate steamers afloat sold at 45s 3d per 480 lbs. Flour in moderate request, but prices ruled firm, with a hardening tendency. London standard straight run quoted at 49s, patents 51s to 52s, town whites

49s per sack delivered in Metropolitan area. Imported steady. Canadian patents range from 45s 6d to 48s as to quality, and Australian 44s per 280 lbs ex store. Barley maintained. Canadian 65s-66s, and Chilean brewing 64s, both ex ship per 448 lbs. Karachi ex-ship 45s 6d, Danubian ex-ship 45s, Russian landed 47s 6d, American malting (48 lbs) 44s 3d to 44s 6d ex-ship to arrive all per 400 lbs. English quoted at 14s-24s 6d per 112 lbs, free on rail. Maize steady. Plate ex-ship 42s 9d to 43s, landed 44s 6d, Bessarabian landed 45s 3d per 480 lbs. Oats quiet. Plate ex-ship 28s 9d, landed 30s, No. 2 Canadian Western ex-ship 33s 9d per 320 lbs. English quoted at 9s 4d to 10s per 112 lbs free on rail. Millers' offers generally firmer. Broad bran quoted at 9s 6d, middlings 9s 9d, fine ditto 11s 6d, bags included, ex-mill. Light oats 7s, powdered oat husks 9s 3d, feed oatmeal 12s 3d, ground oats 14s 9d per cwt free on rail. Oatmeal firm, with a good spot demand. London-made flaked 20s 6d, rolled oats 20s, medium and fine cut 20s, coarse and medium pinhead 20s, ordinary Scottish oatmeal 20s per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 25th, is as follows:—Pig-iron: Unfortunately the expected improvement in pig-iron has not materialised during the past week. In fact, the depression has got worse. More blast furnaces have been stopped, and others are only being kept going temporarily. Ironmasters will decide periodically whether they can keep their works in operation or stop. Prices are easier. No. 3 Cleveland G.M.B. pig-iron is quoted 81s 6d per ton, and mixed numbers East Coast hematite at 90s per ton, but business is quite possible at lower prices. Manufactured iron and steel: Works are doing their utmost to keep going, but orders are coming forward very slowly, and the foreign competition makes business very difficult. Still, however, the quotations are unchanged, as follows:—Steel ship plates, £10 5s.; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Sellers still try to maintain 22s as the price of best Bilbao rubio c.i.f. Tees, but odd cargoes have been sold at 21s 6d.

Our Sheffield correspondent writes:—The trend of business in crude iron and steel continues in a downward direction, as buying has backed off further and the absence of confidence is widespread. While nominally unchanged, prices are easier, and anyone having an actual order to place has no difficulty in squeezing a bargain out of the seller. Agricultural engineers have experienced their worst season as regards both the home and export markets. Most of the firms engaged in this industry have taken up other branches of engineering work. There is a fair demand for oil engines, and the Staveley Coal and Iron Company is installing the largest gas engine in the world. It will be driven entirely by waste gases from blast furnaces, and employed to develop electric alternating current. The local finished trades,

particularly hand tools, are generally well employed. Overseas requirements have been increasing for several months, but the home demand has quietened somewhat just lately. The cutlery trade generally is unremunerative, with firms here and there earning a profit. Matters would have been much worse but for a substantial increase in buying from the Colonies. The export of cutlery, so far, this year has nearly doubled the record of the corresponding period of 1923. Depression is widespread in the coal market, despite a rather better inquiry for steam fuels. There has been a sharp drop in exports to Belgium, France, and Germany as the result of the altered situation in the Ruhr. High-class house coal continues scarce and dear. There are prospects of a further reduction in coke prices. Current quotations per ton at pits are:—Yorkshire steams, 20s 6d; Derbyshire ditto, 19s 6d to 20s; Blyths, 19s 6d; Durhams, 23s.; rough slacks, 12s 6d to 13s 6d; smalls, 6s to 8s; coke, 24s.

Our Glasgow correspondent writes as follows:—There is little of an encouraging nature to report regarding iron and steel markets this week. Shipbuilding orders have fallen off, and engineering and other industries are only covering immediate requirements. Continental competition is again becoming very pronounced, and unless steel makers can shortly see their way to modify their prices to home consumers, which they have maintained for so long, still more will be heard of German and Belgian plates and sections coming in. Semi-finished steel from Belgium is now freely offered in this district at £6 per ton delivered, and transactions at even slightly below this figure have taken place within the last few days. Pig-iron output continues at a very low level, with prices somewhat weaker. Bar iron is not being ordered in quantities sufficient to keep works going, but re-rollers are slightly better off. Inquiries from the Far East are coming forward, and with good crop prospects reported from India an improvement in demand from that quarter is hoped for during the next few months. Sheet makers are booked well ahead, but export specifications are being keenly competed for by British and Belgian works, and orders now being booked are at less profitable prices than was the case recently. Galvanised sheets still hold firm in price, with steady demand both for home structural jobs and for foreign markets. The North British Locomotive Company have just secured a contract for 15 locomotives for the Buenos Ayres Great Southern Railway Company.

METALS.

Tin ruled easier during the early part of the week, due to selling pressure and lower cables from the East, but later on, buyers becoming more prominent, the decline was fully recovered and a firmer tone ensued. Cash sold at £228 to £224 to £232 10s, and three months £233 to £223 to £235 10s to £234 15s to £235 5s. Eastern advices reported sales on the basis of £230 10s c.i.f. At Thursday's market tendency was again firmer, with business on a liberal scale. Standard cash sold at £232 10s to £234, and three months £232 to £235 10s to £237 5s to £236 15s to £237. Further sales occurred in the East at £231 5s, c.i.f. Tin continued in good demand at easier rates on Friday, with some irregularity forward. Cash sold at £234, and three months £236 to £237 to £235 10s to £236 10s to £235 15s. English ingots quoted at £234 15s to £235. Copper: Market generally displayed quiet features. With sellers more in evidence, and some reserve on the part of consumers in view of lower American advices, prices tended in a downward direction. Standard cash was dealt in at £62 2s 6d to £62 3s 9d to £62 2s 6d, and three months £63 5s to £63 to £63 2s 6d. Active trading took place on Thursday at firmer prices. Standard cash done at £62 5s, and three months at £63 3s 9d to £63 5s to £63 3s 9d. Copper closed steady. Standard cash quoted at £62 5s to £62 7s 6d, with business in early October at £62 7s 6d, and three months at £63 10s to £63 6s 3d. Electro's £66 10s to £66 12s 6d, strong sheets £93, wire bars £66 12s 6d, best selected £65 10s to £65 15s per ton. Lead firm at £32 15s to £32 10s as to position. Spelter maintained, and quoted at £32 13s 9d to £32 16s 3d, according to position. Aluminium, home quoted at £125, export £130. Antimony, English, £54 10s to £55.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The raw material continues to dominate the position, and both in the primary markets and in London demand is keen and prices are well maintained under the influence of strong home trade and Continental competition. In Bradford, also, wool is the chief centre of interest, and a fair amount of business is being done, though it is frequently difficult to negotiate on account of the high prices ruling.

Merino tops have reached a level to which users have to think twice before committing themselves, but although in many cases top-makers' quotations are frankly protective, that seems to be the only way in which they can gain time to safeguard themselves. It is doubtful if the extreme prices now quoted for merinos can be made, but there is a general impression among topmakers that users will be compelled to follow the market, and that cheaper wool will not be available for some time to come. Warp 64's tops are now quoted at from 82d to 83d, and super 60's are again 1d dearer on the week at 75d. There is a firmer tendency in crossbreds, and 56's average are harder at 51d. A rise of 1d in 46's carded brings the quotation up to 31d, and 40's prepared are 1d dearer at 29d per lb. There is not so much change in spinners' quotations, but new business is rather more plentiful, and prices are all very firm and against the buyer. It is still impossible, however, to sell yarns at prices based on the current cost of wool and tops. Crossbred yarns are again receiving more attention, and some fair weights have been booked for export to Germany. There is not much change in the piece goods trade, but orders are coming to hand rather better, though manufacturers are experiencing the greatest difficulty in making higher prices.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales are making excellent progress, and no complaint whatever can be made regarding the movement of values. Some thought that the opening advance had been a little overdone, but succeeding sales have fully confirmed it, selling brokers apparently being well satisfied with what is taking place daily. It is no uncommon thing for selling brokers to state that prices, if anything, are in sellers' favour, a clear indication that values are fully up to expectations. Among second-hand parcels of merinos there are still some withdrawals, but we certainly think there is no need for it. Unless the wool has been badly bought in the colonies it should show a profit, and surely to-day's values suggest that they should be accepted for both imports and growers' clips. Some very handsome profits are now seen on most of the second-hand lots, and the optimism of the majority during the time they have held, and for which there seemed to be little justification, has been well rewarded. Everybody is glad to see a nice sprinkling of new clip wools from Queensland, and we do not remember the Carandotta clip being offered in Coleman street for some considerable time.

The 600 bales of this mark offered last Tuesday met with a splendid reception, the major portion of the lots falling to Continental bids. The top line of grease combing touched 40d. It was a little dusty, but showed excellent quality, and sold splendidly, the combing selling at prices ranging from 40d down to 30d, broken 35d, pieces up to 29d, bellies 28d, and locks 15d, with the weaners touching up to 33d. The clip had been splendidly classed. It was of good 70's, Continental style, and the prices realised cannot but please the owners. We think the reception that is being given to pieces, bellies, and locks could hardly be better. The advance in this description is often 10 to 15 per cent., prices being paid to-day which seemed impossible in July. Some very good figures are forthcoming for high-class New Zealand and West Victorian merinos, and there can be nothing wrong with a market when 68d is paid for somewhat fatty New Zealand scoured merino. Of course, wool at this price is of good quality, soft handle, and free from fault, but the prices being paid this series for really good scoured merinos are phenomenal. There is no question at all about London to-day being sensibly in advance of Colonial selling markets. The opinion is unanimous that 64's tops out of Coleman street wool this week will cost fully 7s. We hope that the confidence shown in merinos will not prove to be misplaced.

Large daily offerings of crossbreds are being made. The Continent is giving good support, chiefly to Australian classes, while the home trade is purchasing most readily of New Zealand wools. We still cannot see much more than 7½ per cent. advance for the bulk of the slipe crossbreds, but most greasy classes are now fetching anywhere from 10 to 15 per cent. more compared with July. It has to be a very superior line of slipe halfbred lambs to fetch more than 38d, an average price being about 1d less. Among New Zealand fine crossbreds, chiefly good 56's, the top side of 30d is now readily forthcoming; in fact, most crossbred lots can be called a full 2d more than last series.

THE COTTON TRADE.

(Continued from page 514.)

sold, 21s, c.f. and i., London. Japanese peas, September-October, sold, 22s. Madagascar butter beans, good quality, spot, 42s per cwt. Bran firm.

JUTE.—After recent marked animation, affairs were more subdued. Firsts, August, Continent, sold, £38 15s; August-September, £38 to £37 10s; September-October, £37 10s; November, and December, £37 15s, £36 10s to £37. Hessians steady. 10-oz. January-March, 34s 9d; 8 ditto, 28s 3d 100 yards. B twills, spot, sold, 100s; September at 98s per 100 bags.

HEMP.—Manila grades advanced sharply again, due to persistent buying orders from all quarters, coinciding with a lack of sufficient selling offers. J grade, October-December, sold, £53 10s to £55 10s; K, £53 to £55; L, £51 to £52; M quoted £52 10s; G, £59; streaky 3, done, £64; Cebu, No. 2, quoted £40 10s; ditto 3, at £36; Daet L, £49; ditto, M, £46. New Zealand, H.P.F., October-December, quoted £42 15s; fair, £40 10s. Mexican sisal withheld from sale. African stronger, and No. 1 Tanganyika, October-December, quoted £47. Kenya, £46 10s; Italian P.C., October-December, quoted £88. Among soft fibres, Indian meet an active demand. Sewnee, January-March, sold, £47 15s; No. 2, Benares, November-January, £37 10s; Itarsi, January-March, £48 15s; Philibit, ditto, £44 10s. Bristle fibre quieter. Ceylon, October-December, quoted £26 per ton.

SPICE.—Pepper steady, quiet. Black Singapore, L.S., October-December, quoted 4½d; Lampung, October-December, 4½d; Muntok, ditto, 4d. Zanzibar cloves, 9½d, October-December. Pimento, spot, 4d lb. Tapioca quiet. Penang seed, September-October, Continent, sold, 22s; Singapore flake, ditto, to Havre, sellers, 28s 3d. Ginger very firm. C.F.W.R., Ceylon, spot, quoted 95s; Japanese, limes, sold, 95s to 97s 6d; African quoted 82s 6d cwt. Desiccated coconut quiet. Fine cut, spot, 41s; medium, 40s 6d. Sago flour, August, sold, 14s 10½d to 15s; September-November value, 15s 3d cwt.

SHELLAC.—Market steady. T.N., spot, 320s to 325s; December value, 297s 6d cwt.

GAMBIER quiet. Block, September-October, sellers, 68s cwt, c.f. and i., U.K.

COPRA met with moderate support. F.M.S., Straits, June-August, Rotterdam, seller, £30 10s; August-October, £30 7s 6d; September-November, sold, £30 2s 6d to £30 3s 9d; October-December, at £30 3s 9d; Dutch East Indies, August-October, done £30 1s 3d; September-November, £30 1s 3d. Ceylon, September-October, sold, £31 1s 3d; October-November, £31. Others unaltered. Palm kernels, October-December, Liverpool, quoted £21 12s 6d ton.

RUBBER steady, with moderate inquiries. Standard plantation, crepe and sheet, spot, also October, sold, 1s 2½d to 1s 2½d, 1s 2½d; November, 1s 2½d to 1s 2½d; October-December, 1s 2½d to 1s 2½d, 1s 2½d; December, 1s 2½d to 1s 2½d; January-March, 1s 2½d to 1s 2½d, 1s 3½d; April-June, 1s 3d. To New York, standard estate sheet, October-November, done 1s 2½d to 1s 3½d; crepe ditto, 1s 3d to 1s 3½d per lb. Wild sorts quiet on former terms.

FRUIT (Dried).—The market for currants presents quiet features. New crop parcels begin to work in but only in small quantities. Old crop, ½ cases Pyrgos, cleared at 43s for good; ½ cases Gulph, 52s; ½ cases Vostizza, 50s to 60s. New crop, ½ cases Zante, 53s to 54s; fine colour Gulph, 58s. As usual at this early period of the season, no interest is evinced in Valencia raisins, despite reasonable price levels, while other growths, such as Australian and Cape, go to fill the gap for the present. Valencia, ½ cases, 80s to 127s 6d; Australian, ½ cases, 42s to 48s; Cape, 41s to 47s. Sultanates steady, but quiet. Old, Smyrna, quoted 56s to 59s; fine, 62s; new, fair quality, 51s to 53s; finer, up to 63s; Australian, ½ cases, 48s to 53s; old crop, Greek, 41s. Figs: General run of quality very satisfactory, with comparatively high prices quoted, and which packers contend are not remunerative. Dates remain very quiet, with quotations for shipment somewhat nominal. Evaporated fruits: Californian standard apricots quoted 75s to 78s; choice, 87s; extra ditto, 96s; peaches, extra choice, 57s; new crop, fancy, 65s; plums, Oregon, size 30/40, quoted 67s; 45/50, at 54s; Californian, 80/90, 36s.

CANNED GOODS.—Reports of "catch" unsatisfactory and very small consignments being shipped, while spot stocks are getting cleared. Portuguese ½-flats quoted 3s 7½d to 3s 9d; clubs, 3s 10½d to 4s; 12 oz, 6s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobster stocks cleared, and very high prices now current for future contracts. Salmon: Forward prices are much higher, with little offering. Spot parcels also dearer. 1 lb flat red, labelled, 58s to 60s; ditto, tall, 47s to 48s; 1 lb tall pink, 26s to 26s 6d; cases of 96 ½ lbs, 28s to 30s per case. Canned Fruits: Prices firm, owing

principally to continental demands, home trade meantime being very slow. Singapore pines, 48 1½s, best quality, 5s 4½d to 5s 6d; cubes, 24 2½s, 10s 6d to 10s 9d; slices, 48 1½s, 5s 3d to 5s 6d. Californian apricots, 2½s, 8s to 11s; ditto, 1½s, 5s 3d to 5s 6d. Peaches, 2½s, 13s 6d to 16s 6d. Peaches, 2½s, 9s 9d to 11s 6d; 1½s, 6s 6d. Fruit salad, 2½s, 19s to 20s; ditto, 1½s, 10s 6d per dozen tins. Canned meats met a generally quiet demand at about late rates.

MISCELLANEOUS.—Coconuts quoted 20s per 100. Coir yarn: Ceylon, £21 to £37; Cochin, £24 10s to £44. Ceylon bristle, £23 to £30; cinnamon leaf oil, 5½d; Citronella: Ceylon, 3s 0½d; Java, 5s 7d.

OILS.—Linseed irregular. Spot, net, naked, 43s 3d; September, 42s; October-December, 42s; January-April, 41s 3d. Rape steady. Crude, spot, 48s 6d, refined, 51s 6d. Castor-oil firmer. First pressure, spot, quoted 73s; second pressure, 71s; and pharmaceutical, 78s per cwt, Hull, with London 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 43s; Bombay, 41s; common edible, 49s; deodorised, 51s. Chinawood firmer. Hankow, spot (barrels), 85s; October-November, 80s 6d. Coconut quiet. Ceylon, spot, 48s; September-October, 46s 6d; Cochin ditto, nominally 58s. Soya quiet. Oriental, barrels, August-September, 46s 3d; bulk, 42s 6d. Cod steady. English, spot, 34s to 35s. Groundnuts firmer. English, crushed, naked, spot, 53s; deodorised, barrels, 60s. Turpentine easier. American, spot, 65s 9d; September-December, 66s 3d; January-April, 68s 3d. Rosin firm. American, grade B, 14s 3d; G, 14s 9d; WG, 17s 9d; WW, 19s per cwt. French WW, 18s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

OILSEEDS.—Linseed generally steady. Calcutta, afloat, £22 17s 6d; September-October, sold, £22 12s 6d to £22 15s; October-November, £22 12s 6d to £22 17s 6d. Plate, afloat, £20 17s 6d; September-October, sold, £20 12s 6d to £20 17s 6d; October-November, £20 17s 6d; and January-February, £19 2s 6d to £19 15s. Rapeseed firm. Toria, September-October, £23 5s; and real bold Ferozepore, ditto, £22 10s. Cottonseed firmer, with a fair demand owing to "bullish" American Bureau report. Egyptian, black, new, October, sold, £12 18s 9d to £13 5s; November-January, £13 1s 3d. Sakellaris, November-January, at £12 5s. Bombay, December-January, £10 7s 6d. Gingly seed quiet. Chinese, new crop, October-November, £28 2s 6d. Groundnuts steady. Coromandel, machine-dried, September-October, £27 5s; Chinese decorticated, f.a.q., December-January, £24 15s; East African, September-October, £27 15s. Soya beans firmer. Manchurian, October-November, £14 2s 6d; December-January, £12 10s. Castor seed firm, but quiet. Bombay, September-October, £31 5s; Calcutta, ditto, £29 15s per ton.

TALLOW.—Messrs Colchesters and Woolner write on September 24th as follows:—The tallow market was firm during the week, but prices were barely maintained to-day. Parcels available for immediate shipment were more sought after than supplies coming along for later delivery. At auction to-day 1,452 casks tallow were offered, and 1,025 were sold. Quotations are:—Australian mutton: Fine, 48s; good to fair, 47s to 45s; dull to dark, 44s to 42s; hard, 47s 9d. Australian beef: Fine, 48s; good to fair, 47s 6d to 45s; dull to dark, 43s 9d to 41s 6d; sweet, 48s. Present shipment from Australasia: Good mixed, 45s 6d. Present shipment from South America, 46s 6d to 45s. The market letter is unchanged. Town tallow, 43s per cwt. Rough fat, per 8 lbs, 5d; melted stuff, 33s per cwt. Quotations are:—Town, 42s 6d, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 45s 6d; fair to dull, 44s to 43s. Bone fat: White, none; pale, none; benzine, 38s; melted stuff, 38s, f.o.b.

37 Avenue de L'Opera.

THE MONEY MARKET.

MONEY was in very strong demand during the first two days of the week, owing to the usual quarter-day requirements and the large number of Treasury bills to be paid for. The amount borrowed from the Bank of England on the last day of September, however, was no as large as had been expected. Perhaps owing to this circumstance relief on Wednesday through Government interest payments did not produce much effect, and though a small amount due to the Bank was repaid, money was

uneven and difficult to find, owing to the many cross-currents in the market, among which bank balance-sheet arrangements were prominent. Since then the supply of credit has become plentiful, and the demand for bills was rather keener, at $3\frac{1}{8}$ - $\frac{3}{4}$ per cent. for January paper and $3\frac{1}{8}$ per cent. for December.

	Oct. 3, 1924.	Sept. 16, 1924.	Sept. 19, 1924.	Sept. 12, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

The Bank return showed an increase of £1,621,000 in the Reserve, almost entirely due to the return of notes from circulation. Other securities reflected the market's very moderate borrowings, with an increase of four millions, and the Public deposits were nearly four millions higher, showing that the dividend payments had not, at the close of business on Wednesday, exercised their full effect. Government securities were nearly two millions lower, and there was no appreciable movement in Other deposits. Currency notes outstanding increased this week by £1,906,800 to £287,499,200, which includes £1,368,900 for notes called in, but not yet cancelled. The fiduciary issue is £236,680,300, or £11,510,600 below the maximum.

We are informed that Mr Dudley Ward, of the British Overseas Bank, Limited, has been nominated as the British director on the board of the "German Industrial Debenture Bank," constituted for the administration of the five milliards of gold mark debentures to be placed on German industrial enterprises in accordance with the Dawes scheme, a post for which he is admirably fitted by his previous experience not only in this country, but also in Germany.

THE STOCK MARKETS.

Gilt-edged stocks have for the greater part of the week been firm, but towards the close there were signs of weakening in view of the possibility of a General Election before the close of the year. The underwriting of a new Queensland $5\frac{1}{2}$ per cent. loan at $97\frac{1}{2}$ also acted as a slightly depressing influence. There has been some revival in German and Prussian bonds after the heavy fall, and Brazilians show an all-round rally. Home rails are listless, but foreign rails, as a whole, are better on balance. Rubber shares are quiet, though prices keep firm, and the same remark applies to tea shares, while oils are fairly good, but without support from the general public. In the miscellaneous section shipping shares have moved but little, but hotels are better, and Harrods have been active in the stores list. The approach of the Motor Show, which is to be held at an earlier date than usual, and further cuts in prices, have drawn attention to motor shares. Mines are still neglected.

THE COMMODITY MARKETS.

Reports from the majority of our trade correspondents, which appear on later pages, are not very favourable in tone. The cotton trade, however, has been booking orders at higher rates, but the advance in prices at the London auctions has disturbed the wool trade, and operations are being carried on within narrow limits. Iron and steel are very quiet, while no improvement has been registered in the coal trade. A slightly better demand is reported in certain sections of the leather trade, while normal conditions prevail in oils and oilseeds. Tin prices have moved up, and copper and lead are steady.

FOREIGN EXCHANGES.

On the foreign exchange market business has again been very quiet, and rates, on the whole, have been dull. There was some recovery in the middle of the week, but this was followed at once by a slight reaction to somewhere about earlier levels. The dollar rate has dropped from $\$4.47\frac{1}{8}$ to $\$4.45\frac{1}{8}$ on the week, after being up again to $\$4.46\frac{1}{8}$ at one time on Thursday. There is a general feeling that the rate would have been lower apart from the continuance of transfers from New York to London on French account. Forward quotations are $\frac{1}{2}$ to $\frac{3}{8}$ cent per month above spot. The franc also has shown a slight upward movement, from 84.05 to 84.77 $\frac{1}{2}$, any tendency towards improvement being at once utilised for the accumulation of dollars and sterling. Brussels has remained high, moving from 91.95 to 92.42 $\frac{1}{2}$. In Paris, forward rates are about 6 centimes per month below par; in Brussels, 3 to 6 centimes per month below. The intention to press on financial reforms in France is a satisfactory feature, but in the meantime the Bank of France return shows an increase, both in note circulation and in advances to the State. The lira has been very steady, moving only from 101.80 to 101.85. Among neutral centres, Amsterdam shows a sharp drop from 11.57 to 11.52 $\frac{1}{2}$, and Switzerland from 23.49 to 23.30. Madrid, in spite of the recent Spanish successes in Morocco, stands at 33.64 $\frac{1}{2}$, as compared with 33.19 a week ago. In Northern Europe, Stockholm has moved from 16.78 to 16.74 $\frac{1}{2}$, while Christiania and Copenhagen have both appreciated, the one from 31.85 $\frac{1}{2}$ to 31.52 $\frac{1}{2}$, the other from 25.87 $\frac{1}{2}$ to 25.67 $\frac{1}{2}$. Helsingfors at 178 has also moved $\frac{1}{2}$ mark against us. In Central Europe, Berlin at 18 $\frac{3}{8}$ shows little change. Vienna has moved with the dollar from 317,500 to 316,500, while Budapest remains stabilised on sterling at 345,000. In Poland the zloty shows little movement at 23.30, but Bucharest has again improved somewhat from 875 to 865. In the East, the rupee has appreciated from 15 $5\frac{1}{4}$ d to 15 $5\frac{1}{8}$ d, while the yen is slightly cheaper at 15 9 $\frac{1}{2}$ d, as compared with 15 9 $\frac{1}{8}$ d. The silver market shows very little movement, but there are slight indications that America is beginning to sell a little more freely. The silver "schilling" has now been introduced in Austria, but those issued are said to have already disappeared from circulation. It is clear that the habit of hoarding, once acquired, will die hard. Of the silver exchanges, Hong Kong has fallen from 2s 5d to 2s 4 $\frac{1}{2}$ d, and Shanghai from 3s 5d to 3s 4 $\frac{1}{2}$ d. In South America, Buenos Aires has shown decided firmness, moving up from 43 21-32d to 44 $\frac{1}{8}$ d, while Monte Video has also risen from 45 $\frac{1}{2}$ d to 46 $\frac{1}{2}$ d. Rio, to some extent, has also shared in this improvement, standing yesterday at 5 29-32d, as compared with 5 35-64d a week ago; while Valparaiso has appreciated from 41.60 to 39.90.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the ten days ended September 30th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	9,519	From Revenue	13,708
Interest, &c., on Debt	3,192	Amount borrowed	3,071
Sinking Fund	350		
Sundries	1,022		
Increase in Exchequer balances	269		
	16,779		16,779

Revenue during the ten days ended September 30, 1924, amounted to £13,708,000, against £11,633,200 for the eight days ended September 30, 1923. Customs yielded £2,490,000, and Excise £1,269,000. Estate, &c., duties brought in £1,710,000. Property and Income-tax yielded £4,757,000. Special Receipts amounted to £1,001,700. The ten days' operations increased the National Debt by £3,071,000, and caused the following changes:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Treasury Bills	21,735	National War Bonds repaid	46
Sundries	2,053	National Savings Certificates	150
		Public Department Advances	20,571
	23,788		20,717

The floating debt was increased by £1,439,000 to £774,176,500.

FINANCIAL YEAR, 1924-1925 (April 1 to September 30).

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE POLITICAL STORM.

THE special session of Parliament, summoned solely for the purpose of dealing with the Irish Boundary problem, has produced a first-rate political crisis entirely unconnected with Irish affairs. Before the session was thirty-six hours old each of the Opposition Parties had framed direct votes of censure upon the Government, either of which, if passed by the House of Commons, might bring Mr MacDonald's Government down. Of the two threats to the life of the first Labour Government the more immediate, but possibly less menacing, arises out of the prosecution, begun but dropped, of the Editor of the *Workers' Weekly*. This Communist organ printed an article on July 25th which was deemed capable of interpretation as an incitement to mutiny, and, at the instigation of the Attorney-General, proceedings were instituted. In the absence of the editor of the paper, a charge was preferred against a man called James Campbell, who was acting in his place, and subsequently withdrawn, as the Attorney-General explained, because Mr Campbell's "responsibility appeared to be very limited," and his character and war record excellent. The allegation made in Conservative quarters is that Sir Patrick Hastings allowed political pressure to interfere with his administration of justice. Whether any ground exists for such allegations we cannot judge until Sir Patrick has delivered his defence in the debate next Wednesday, when Sir Robert Horne will move a vote of censure on the Government. But even if we assume that Sir Patrick is entirely guiltless of so heinous a dereliction of duty, it is quite obvious that he has blundered, and blundered seriously. To initiate a prosecution and then to drop it is not only damaging to the prestige of the Government, but also opens the floodgates of suspicion. If there was no case against the obscure organ in question, the facts should have been properly sifted in advance, and no action taken. If an offence was committed meriting prosecution, then the charge should have been pressed home. For if an offence was committed, someone is responsible, and the fact that its editor is indisposed and absent from his post does not absolve any newspaper from responsibility for its utterances. Nevertheless, unless it can be proved that the Cabinet is definitely implicated, we should regard the resignation of the Law Officers (for the Solicitor-General was, by Sir Patrick's admission, consulted in the matter) as the appropriate penalty for the blunder. This view is apparently shared to some extent by the Liberal leaders, who will not support the Conservative vote of censure, but will move an amendment demanding an inquiry by a Select Committee into the whole affair. For this amendment, it appears, the Conservative Party might vote, if the chances of carrying their own vote of censure were hopeless. We have here a situation in which two courses are open to Mr MacDonald. He may placate Liberal opinion by agreeing to inquiry, or by offering the Attorney-General's head on a charger; or he may take the Liberal amendment as being tantamount

to a vote of censure, resist it, meet defeat, and precipitate a general election.

Under ordinary circumstances we should have expected a Prime Minister, with so short a tenure of office behind him, with a general election so recent, and with so many important and unfinished tasks in his hands, to throw a blundering law officer to the wolves rather than to commit hari-kari and plunge the country into the disturbance of an election. The Campbell case does not appear to justify the latter course, and the Prime Minister may decide in this sense. But circumstances are far from ordinary. If the Government chooses to save its own life on Wednesday, the reprieve is likely to be a short one. When the House re-assembles, if it does re-assemble, on October 28th, the Government will be faced by a motion in the name of Mr Asquith for the rejection of the financial chapter of the Russian Treaty. This motion crystallises the objections of the financial world to the loan guarantee and is so framed as to be certain of the combined support of the Opposition Parties, and, unless the Government performs a somewhat remarkable *volte face*, the end of the present month would see an overwhelming defeat on a fundamental question of policy, to which resignation or dissolution would be the only reply. All the present indications therefore point to an early election. But, as Mr Baldwin remarked, "in politics one can never tell," and if Mr MacDonald plays for safety in the Campbell affair, it is possible that he might employ the four weeks of recess in erecting a bridge over what looks at the moment an almost unbridgeable chasm. That is the sole, and very slender, hope that the country will be spared an autumn election which nobody wants, and which may easily hamper the recovery of trade for which we were beginning to look. If Mr MacDonald's choice lies between next Wednesday or the end of the month as the hour of decisive defeat, there are various tactical considerations that come into play. Defeat on the Campbell affair might not be regarded by the Crown as adequate grounds for dissolution, and the reins of Government, together with some tactical advantage in the general election—which could not, in any case, be long delayed—might pass into the hands either of Mr Baldwin or Mr Asquith. To such circumstances, we imagine, Mr MacDonald would prefer a defeat on the Russian Treaty and a straight appeal to the country.

The measure of the political crisis that has so suddenly arisen is that the Irish Boundary question, the *raison d'être* of this fateful little session, has taken a back seat in the public mind. But the purpose of the session has been fulfilled. The Irish Bill has passed all its stages in the House of Commons, and the Lords are unlikely to take the responsibility of obstruction. The debates, which on the whole have been maintained on a high level, have made it more abundantly clear than ever that the Government were bound to pass this legislation in order to set up the Boundary Commission, to implement in good faith the obligations which Great Britain undertook in signing the Treaty of 1921. The activities of the enemies of the Free State—notably of Mr de Valera—have revealed the necessity that British good faith should be vindicated beyond question and without delay. Fortunately, whatever course the new crisis at Westminster may take, the passage of the Irish Bill to the Statute Book is assured. Even if the Labour Government meets with decisive defeat on Wednesday, the Opposition parties are apparently willing that it should retain office long enough to see that passage actually effected. Whether the debates have contributed anything material towards the ultimate solution of Ireland's problem, it is difficult to say. They have at least cleared the air of some misconceptions and misunderstandings. The speeches of the Prime Minister, Mr Lloyd George and Mr Thomas have removed from most impartial minds the suspicion that in keeping faith with Dublin we were breaking faith with Belfast, and have, we think, weakened public sympathy in this country with Ulster's refusal to appoint a member of the Boundary Commission. No one, either abroad or at home, can, we believe, read the eloquent and appealing speech of the Colonial Secretary without feeling conviction that the sole aim and desire of the British Government and people is to keep faith in spirit and letter with all sections in Ireland, and to do all that in them lies to help Irishmen to solve the problems

which they alone can solve. The creation of such an impression is a service to British prestige, and we may even hope that it will assist in the production in Ireland herself of an atmosphere more conducive to that spirit of conciliation, which alone can fulfil Mr Thomas's hope "that Ireland will in the future be a united Ireland and an asset to the great Commonwealth of Nations."

NATIONAL INCOME AND TAXATION.

In an article last week on the Future of the Coal Industry, we gave some comparative figures of home production and consumption of coal, the coal trade being one of the few cases in which reliable statistics of output are available. In the absence of a Census of Production, these figures can be used as one of the bases upon which an estimate of the total volume of the nation's production can be estimated. They show that the total consumption of coal at home in 1923 was 180 million tons, as compared with 187 million tons in 1913, a reduction of just under 4 per cent. Allowance has to be made, however, for the development, during the ten years, of economy in fuel consumption in various directions, such, for example, as the growth in the use of electricity—the London electricity supply companies alone supplied 298 million Board of Trade units in 1922, as compared with 188 millions in 1913. Then, again, modernised equipment has enabled a reduction to be made in the consumption of coal per ton of product in the iron and steel trade. Other indices may be produced, including coal consumption in the iron and steel trades, which is put at 90 per cent. of the 1913 figure. Another index is the general merchandise carried on British railways, excluding coal and ore, the weight of which upsets the figures in a combined total. The figures for Great Britain were 67½ million tons in 1913 and 62½ million tons in 1923, a decrease of some 7½ per cent. Some of this decline is, of course, due to the development since 1913 of road transport for certain classes of goods. For the purpose of estimating the volume of production, the carriage of general merchandise on the railways in 1923 may be put at 93 per cent. of the 1913 figure, which compares with 88 per cent. for 1922. The production of cereals—wheat, barley, and oats—was up to the pre-war figure in 1922, but 4 per cent. below in 1923. The volume of foreign trade, especially of exports, shows a substantial decrease as compared with 1913, exports being 74.5 per cent. and imports 93 per cent. of the 1913 figure. It has to be borne in mind, however, that the 1913 figures represent the highest point of a trade cycle, the volume of exports having expanded steadily from 1910 to 1913.

From these and similar figures for previous years an index of national production has been calculated as follows, on the basis of 100 in 1913:—95 for 1920, 80 for 1921, 86 for 1922, and 95 for 1923. It may be thought at first sight that the figure of 95 per cent. for 1923 looks too high, even allowing for the increase of population in the ten years, because of the substantial reductions in working hours. It is true that hours of work have been reduced in many occupations, but it can be safely asserted that in the majority of cases this has not been followed by a corresponding reduction in output. To some extent an improvement in output per hour may result from the ability of the worker to produce more in a shorter working day, but a still more potent influence is the great mechanical development and improvement during and since the war. The output per man-hour in all the metallurgical groups of trades is better than it was ten years ago, and in many other industries we learn from inquiries that reduction of hours has not produced anything like a corresponding reduction in output—in some cases there has been no reduction at all. Whether the aggregate result of the reduction of hours has been to lower output, or whether there has been no change, it is impossible to ascertain without very exhaustive investigation, but it seems fairly safe to assume that while production per head per hour is better than before the war, this improvement has not been quite sufficient to make good the loss of working time. A further factor which has to be taken into considera-

tion is that of the number employed. The employable population may be estimated to have increased since 1913 by 6½ per cent.; the percentage unemployed a year ago was 11.3 per cent., which gives 94½ per cent. in employment—i.e., 88.7 per cent. of 106½. In 1913 the unemployment percentage was 2 per cent., so that the numbers in employment in the two years were in the ratio of 94½ to 98, which gives a percentage of numbers employed in 1923 equal to 96 per cent. of those in 1913, disregarding, of course, reduction in hours of labour. These figures, we think, substantiate the estimate of a figure of 95 per cent. of 1913 for the volume of national production in 1923.

From this figure it is possible to make an estimate of the national income in recent years, correcting the figures to allow for the change in prices. The average of all prices in the national income probably follows the index number for retail prices more closely than that for wholesale prices, but a figure midway between retail and wholesale will give a reasonably accurate index for this purpose. We thus arrive at the following results:—

	Production Index.	Price Index.	Net National Income, Mln. £.	Total National Income, including Interest on Internal Debt and War Pensions, Mln. £.
1913	100	100	2,200*	2,200
1920	95	250	5,225	5,600
1921	80	200	3,510	3,900
1922	86	166	3,140	3,500
1923	95	166	3,470	3,800

* Excluding Southern Ireland.

In order to estimate the total national income available for taxation, interest on the internal debt and war pensions has been added, these items, though not, of course, an addition to production, being a claim upon a share of the total of the nation's production, which is taken by taxation from the producers of income and paid either to holders of the debt or to pensioners. The ratio of tax revenue collected in the various years to the above estimate of total national income is shown in the table below, in which we also set out some similar figures for the United States:—

	RATIO OF TAXATION TO NATIONAL INCOME.	
	Great Britain.	United States.*
1913	7.1	6.4
1920	18.4	12.1 (1919)
1921	22.0	16.7
1922	22.2	12.1
1923	18.8	11.6

* Including Federal, State, and local taxes.

The British figures relate only to Imperial taxation, but the American statistics, which have been produced by the National Industrial Conference Board of New York, cover all taxes. The ratio of taxes to national income in the United States has fallen more rapidly from the high point of 1921 than it has in this country. But where-in 1922 to £718 millions in 1923, that of the United States rose from \$6,961 millions to \$7,716 millions, so that there must have been a considerable expansion in the national income of America in 1923. It may be of interest to respondent estimated the French national income at 140 milliard francs. Taxation in France last year amounted to 22.6 milliards, giving a ratio of 16 per cent., which will rise substantially in the current year if the recently introduced tax reforms are carried through.

THE RECONSTRUCTION PLAN IN HUNGARY.

(BY A CORRESPONDENT.)

In its essentials, the reconstruction plan in Hungary is drawn up on the Austrian model: a foreign loan to enable the Budget to be balanced and inflation to be stopped; a bank of issue, independent of the Government, to maintain the currency at a stable value in exchange; fiscal reforms, commercial agreements, and political protocols. Experience in Austria confirmed these outlines and suggested only modifications in detail.

The New York Trust Company

Capital, Surplus & Profits - \$28,000,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

One such modification has proved to be of considerable importance. As in Austria, the control of the Commissioner-General is exercised by way of monthly budget estimates and closed accounts. But closed accounts can only be furnished after the lapse of some considerable time, and this fact enabled the Austrian Government, when receipts proved to have been better than the estimates, to build up important reserves whose existence, so far as the Commissioner-General was concerned, never came to light until the closed accounts were rendered. It therefore happened that the Commissioner-General was releasing funds from the international loan for the purpose of covering current monthly deficits which could and should have been covered by the surplus receipts of previous months. The efficacy of his control was thereby reduced, since the supplies which he could cut off were not, so to speak, marginal supplies at all, but could be replaced from other sources.

The solution found for this difficulty in Hungary has been to establish a system of Central Exchequer—a measure which on other grounds was desirable in itself. Until recently in Hungary, as in many other countries, the responsibility for distributing and collecting public funds devolved upon a vast number of separate financial authorities who rendered their accounts to the Central Treasury at considerable intervals of time. The Central Treasury was consequently, as a rule, in complete ignorance of its own position on balance, and quite unable to exercise any effective supervision of budgetary receipts and expenses.

The first two months of the control period, which began on May 1st, were devoted to making a complete settlement of the past, so that the new financial year might be begun on January 1st with a clean slate. The State was heavily in arrear, and one last bout of inflation, amounting in all to 110 millions of gold crowns (rather less than five millions sterling) was permitted before, with the foundation of the National Bank, the Government was refused further access to the printing press. As from July 1st the Exchequer system also came into operation. All offices engaged in the collection of revenue were required, from that date onwards, to pay their receipts immediately into a special account opened at the National Bank, without any deduction whatsoever. Expenses are met by crediting, at the beginning of each month, all authorities entrusted with the disbursement of public funds with the amounts which, in the Budget approved by the Commissioner-General, they are expected to require in the course of that month. The Commissioner-General, who receives a daily return of exchequer receipts, is thus in a position to know, at the end of each month, approximately how the actual receipts

compare with the expenses; and closed accounts, though still of some interest, have lost a great deal of their importance from the point of view of control.

One other respect in which the execution of the Reconstruction programme differs in Hungary and in Austria is that Hungarian currency is stabilised, not on gold, but on sterling. The rate chosen for stabilisation (346,000 crowns to the £) is such that when sterling reaches parity in New York, Hungarian crowns will automatically reach parity in Vienna. In the meantime, the share capital of the National Bank and the Hungarian tranche of the Reconstruction Loan, both of which were issued in terms of gold, will have lost about 10 per cent. of their nominal value in Hungarian currency. But the prospect of a relative fall of 10 per cent. in Hungarian commodity prices as compared with countries on a gold basis is not unwelcome, and the knowledge that a fall of this kind is in prospect exercises a restraining influence on those who might otherwise be inclined to borrow crowns.

Austrian experience during the reconstruction period will perhaps differ considerably from the experiences of Hungary, if only because Hungary is, and must remain, predominantly an agricultural State. Pledged revenues, in the one case as in the other, are yielding very considerable surpluses in excess of the estimates, but—in Hungary, at any rate—this is more due to cautious estimating than to an increasing capacity to pay. Up to the present Hungary has been spared that influx of foreign capital which led in Austria to an inflation of security values for which Austria, and not the foreigner, had in the end to pay. The Bourse in Budapest remains lifeless, and it certainly is not the Stock Exchange demand which prevents the cost of weekly money from falling even below the rate of ¼ per cent. a week which is now ruling. The interest rate problem is common to both countries alike, and the discounts of the National Bank of Hungary at present show an ominous tendency to rise continuously because the National Bank is the cheapest, if not the only, source of bank credit. But it is too early yet to say whether it will be necessary in Hungary, as in Austria, to remind the National Bank that its first duty is to ensure the maintenance of the value of the currency.

One last difference between the two reconstruction plans may be mentioned. Hungary still has to pay a certain fixed and limited amount annually in respect of Treaty charges. Her obligation is to pay this sum, and she is absolved when it has been paid in any given year. Its distribution among those entitled to receive payments from Hungary under the Treaty is no concern of hers. But the question of priority between the different claimants has not been settled, and claims are met as they fall due. The difficulties to which this system promises to give rise suggest that perhaps the one respect in which the Hungarian reconstruction plan falls short of the Austrian, is the failure definitely to postpone reparations till reconstruction has been accomplished.

OUR INDEX NUMBER.

A SHARP rise in many commodity wholesale prices during September has raised our Index Number to the highest point recorded since the end of September, 1921, the actual advance on the month being 103 points, which brings the total up to 4729. The bulk of this increase is accounted for by the foodstuffs groups, most items in which are higher on balance. In other directions, apart from American cotton and small movements in the minerals section, changes have mostly been in an upward direction. In the table below we show the latest figures for each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Oil, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	382	616	464	553	2868	116.6
Dec., 1915	897	446	731	711	848	3634	165.1
Dec., 1917	1286	686	1684	839	1348	5893	268.2
Nov., 1918	1289	782	1848	903	1389	6212	282.6
Mar., 1920	1508	914	2974	1246	1709	8352	379.6
Dec., 1921	1344	805	1284	1216	1275	5924	269.3
Dec., 1921	921	636	1106	762	931	4357	198.0

June 1923	815	773	1177	773	761	4301	195.5
Dec., 1923	853	815	1382	774	755	4580	208.2
Mar. 1924	897	843	1313	805	780	4640	210.9
June "	914	736	1347	764	769	4531	205.9
July "	951	732	1423	777	773	4657	211.7
Aug. "	941	744	1385	781	774	4626	210.8
Sept. "	1003	777	1395	762	790	4729	214.9

In primary foodstuffs, home-grown wheat, rice, and beef show trifling declines, but all other items moved upwards, the largest increase being recorded by barley, supplies of which fell short of the demand for malting purposes. Further increases in flour have taken place during the month, while potatoes, though in good supply, have also fetched higher prices. In other foodstuffs there is an all-round increase, a seasonal advance in butter being the principal feature. In the textiles section, American cotton fell substantially, and there was a small sympathetic decline in yarn and cloth, but Egyptian cotton rose a little, and with the exception of a slight drop in flax, other textiles were all higher. American cotton prices fell steadily until the publication in the third week of September of the official crop forecast, and although the latter produced advances both in New York and Liverpool, the upward movement proved to be only temporary, and the general expectation of a 13 million bale crop has not been seriously shaken. With regard to the manufacturing side Messrs Robt. Barbour and Brothers write in their monthly report: "Of the various sources from which support has been supplied throughout the month, India has been by far the most active. Inquiry has covered a wide range of fabrics, and Calcutta, Bombay, Madras, and Karachi have all shared in it. The smaller markets of the Far East have provided a miscellaneous business, and a considerable demand has been forthcoming from Egypt and the Near East. Transactions for South America have been on the cautious side, and China's contribution has naturally been below normal and will most probably remain so as long as the fighting continues." Strong demand, both on home and continental account, pushed up prices at the fifth series of colonial wool sales, competition being keen.

Depression in the iron and steel trade is reflected in a further weakening in the price of pig-iron and steel rails, while a reaction in tin has also contributed to the drop of 18 points in the minerals section. In the miscellaneous section oils, oil seeds, tallow, and indigo have moved up. In the next table we show the changes in the index number of each separate commodity in comparison with the figure for the end of August, the figure 50 representing

in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	109	+ 14	Cotton, A	123	+ 20	Copper	52	- 4

Sugar, cane	127	+ 4	Iron bars	95	- 4			
Sugar, beet	135	+ 5	Coal, steam	136	- 4	Total	4,729	+ 103
Butter	109	+ 10	House coal	88	- 1			
Tobacco	116	+ 10	Lead	136	- 1			
			Tin	91	- 7			
Other foods	777	+ 33						

These changes raise the percentage increase over July, 1914, from 80.4 to 84.4 per cent. Recent movements in this figure and in similar percentages for the individual groups are shown in the final table, in which the indices for July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.6
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
Dec., 1922	149	200	193	152	146	166.2
Dec., 1923	148	231	225	167	136	178.6
Mar., 1924	155	240	213	173	141	181.0
June "	158	210	219	164	139	176.6
July "	164	208	231	167	140	181.6
Aug. "	162	211	225	168	140	180.4
Sept. "	173	221	226	164	143	184.4

At the end of September last the increase in the total over 1914 was 67.6 per cent. Cereals and meat then stood at 142, other food at 222, textiles at 197, minerals at 158, and miscellaneous commodities at 134. It will thus be seen that during the past twelve months there has been a considerable "levelling up" as between the various groups.

CEMENT PRODUCTION IN INDIA.

(FROM A CORRESPONDENT.)

AN application is now before the Indian Tariff Board which, if accepted, will deprive British exporters of cement of their largest market. It can hardly be contended that in this case coming events have not cast their shadow before, inasmuch as in 1919, in the course of a voluminous report, the British Trade Commissioner took pains to point out that "the prospects for cement manufacturers in India are particularly good, and the effect of local production in reducing the quantities imported is likely to be very marked." His advice was that "British makers, however, should protect their interests by manufacturing in India, and so contributing to the development of Imperial resources." Meanwhile, the multiplication of Indian cement factories has proceeded so rapidly that their full capacity for output is about double India's present consumption. Hence bitter tears and lamentations, and the joint and individual pleas of the Indian cement producers, now under official consideration, that the only patriotic and businesslike course is to protect this over-developed industry by shutting out foreign competitors. The consumer, in other words, is to pay for the short-sightedness of the producer. Cement was being produced at a reasonable profit prior to the establishment of the flock of new companies which arrived on the scene during the post-war boom, and, had not over-production occurred, the industry would have remained profitable in present conditions, notwithstanding the drop in prices. In the industrial field in India, where one sheep leads others will follow, even though it be over a cliff. One cement concern having been detected earning large profits, half a

dozen new companies were floated within a twelvemonth. Machinery was costly, but what of that? Capital was easy to secure, shares in new companies soared to high levels immediately after issue, and there was a general assumption that the purchasing power of post-war India was virtually without limit.

We know the sequel. In the case of piece-goods, the burden was left to Lancashire and the banks. In the case of cement, recourse is to be had to the unfortunate consumer, who is to be deprived of the standard British product in order to secure the doubtful privilege of paying a higher price for Indian cement than it can obtain in open competition with the imported product—notwithstanding the charges the latter has to face in the way of freight, plus an import duty equivalent to 15 per cent. *ad valorem*. One cannot help thinking that if the Indian cement industry obtains a higher tariff, the Government of India, notwithstanding its protectionist principles, will be establishing a very dangerous and unsound precedent. The real remedy for Indian cement companies is financial reconstruction. If a higher tariff is conceded, caution in floating new industrial enterprises in India—never a marked characteristic among company promoters in that country—will completely disappear. If over-capitalisation occurs, or over-production—or working costs are too high—financial and technical reforms, however urgent or essential, will be neglected in favour of the specious plea that a great "national" industry is in danger, and that a public subsidy, in one form or another, offers the only method of salvation.

Certain facts are fairly clear, and are admitted in the evidence tendered by the cement companies' representatives to the Tariff Board, which that body has published in pamphlet form for the consideration and criticisms of consumers, and others interested. Some of these facts may be briefly indicated. It is admitted that the full capacity of the Indian factories is very largely in excess of the demand, not only to-day, but, as far as can be calculated, for many years ahead. In 1912 Indian consumption of cement was 100,000 tons. In 1923 it was 340,000 tons, of which importers supplied 113,000 tons, and Indian producers 227,000 tons, the full capacity of Indian factories, however, being approximately 600,000 tons. How this latter figure is to be worked up to, so as to reduce their costs of production to a reasonable level, the Indian factories have not been very successful in demonstrating. They have, indeed, quoted alluring figures concerning the rapid growth of cement consumption in the United States, Canada, Japan, &c., but without convincing disinterested observers who know India that a corresponding expansion is likely to occur in Indian conditions. Indeed, recent figures of Indian consumption, as a guide to normal consumption, are rather misleading, being influenced largely by abnormal demands, by public and private undertakings, arising out of the large arrears of construction work traceable to the war-time period. We are also not likely to see any further enterprises in the near future demanding such large quantities of cement, as, for instance, the Bombay development scheme or the Calcutta docks extensions, the supplies for which have already been contracted for. On irrigation works, cement is, even at present prices, too expensive in many cases, and has been rejected in favour of hydraulic lime. Doubtless, on present prices, the Indian demand will continue to expand; but will it expand if a higher tariff forces prices to a higher level? To that suggestion Indian factories tender a somewhat ingenious reply. They say, in effect: "Owing to the established reputation of British cement in the Indian market, we are compelled, despite the equally high standard of the Indian product, to sell at 10 to 15 rupees per ton lower than the British companies in order to secure orders. Consequently a tariff which shut out the foreign product, and enabled us to obtain this extra 15 rupees per ton, would benefit us without involving any rise in price to the consumer. He would get Indian cement instead of British, but he would pay no higher price, and would get quite as good value for his money." It is further maintained that, with larger outputs, costs of production would fall, and that this factor, combined with the levelling-up of price to the figure now paid for British cement, would facilitate, if it would not exactly guarantee, the earning of profits. It is not, however,

LEGAL & GENERAL

ESTABLISHED 1836 General Manager H. A. WORMAN, F.I.A.

suggested, even by the cement companies, that a higher tariff, though essential, would solve the entire problem. Propaganda throughout the country to promote a larger utilisation of cement is one of the supplementary measures strongly advocated, while there are also proposals involving, on the one hand, in some cases, the writing-down of capital, and on the other, the establishment, behind the projected tariff wall, of a "combine," the objects of which would be to induce the companies to demarcate areas of operation, fix maximum outputs for each, introduce uniform prices, and reduce the costs of working. An export programme is also suggested, but as freight rates are not under Indian control, that programme would be much harder to carry into effect than to outline.

There is not space in this article to allude to all the points involved, but the main issues, it is hoped, have been made fairly plain. The Tariff Board, in a Press *communiqué* which serves as a preface to the evidence already tendered, observes significantly: "The present duty on imported cement is Rs9 a ton, being 15 per cent. on a tariff valuation of Rs60 a ton. The manufacturing firms have asked that a specific duty of Rs25 a ton should now be imposed. If imported cement were imported duty free, the price at the ports would not, apparently, exceed Rs50 a ton, and the proposed duty is therefore approximately equivalent to an *ad valorem* duty of 50 per cent. The applicants have informed the Board that the principal market for cement in India is at the great ports, that is, primarily at Calcutta and Bombay, and also at Madras, Rangoon, and Karachi. The consumption of cement up-country is smaller than in the ports, but, except in Burma, where cement is not manufactured at present, the Indian manufacturer is in a better position to hold his own, the advantage he possesses varying according to the distance from the port. The manufacturers anticipate that the proposed duty of Rs25 a ton will suffice to retain the whole of the Indian market for Indian cement. It is intended, therefore, to be practically prohibitive."

It may be worth while adding, concerning the proposed "combine," that one witness, in his evidence before the Tariff Board, remarked: "We were all agreed except one company. But I think they are short-sighted, and I think it would be to the advantage of all. There are schemes like that worked out."

If a prohibitive tariff is imposed, an Indian cement combine will be established as the immediate sequel.

THE QUARTER'S NEW CAPITAL.

THE normal slump in new capital flotations is exhibited in our figures of new issues during the quarter just ended, the total for the period amounting to £29 millions, which compares with £69.6 millions in the preceding quarter. It is, however, slightly larger than in the corresponding three months of 1923, when a total of £25.4 millions, including £4.9 millions raised by the British Government, was recorded. In the past quarter, loan operations by the Government, apart from Temporary Advances on Ways and Means and Treasury Bill sales, have not only not added to the total, but are responsible for a debit item of £871,000, the net repayments of National Savings Certificates exceeding sales of 4 per cent. Treasury Bonds

by that amount. In the table below we classify the quarterly figures since the beginning of 1919:—

(In Million £'s.)

	Total	British Govt. and Colon.	Foreign Govt. and Colon.	British and Foreign Govt. and Colon.	Foreign Railways.	Mines & Finance, Exploration.	Rubber.	Oil.	Balance (Mainly Home Industry).

* In 15 months after April, 1920, £60,000,000, mostly Housing bonds.

In only one week of the quarter did sales of Savings Certificates exceed repayments, the net sum repaid being £1,250,000. Treasury Bonds sold in the first three weeks of July amounted to £378,600. Of other issues, four-fifths of the quarter's total were raised in the month of July. In the comparative table below, the issues of the quarter and of the past nine months are sub-divided under several heads:—

Description.	Total, First Half-year, 1924.	Third Quarter, 1924.	Total Nine Months to September 30.
	£	£	£
British Government Loans	10,542,900	Dr 871,400	68,577,000
Colonial Government Loans	25,231,000	nil	25,231,000

Docks, harbours, and shipping	1,750,000	612,300	1,635,100
Banks and insurance	11,850,000	4,990,500	9,313,400
Miscellaneous	105,584,000	29,032,000	206,682,600
			134,616,000

Foreign Government loans account for nearly £7 millions, this being the amount subscribed through the London market to the Hungarian 7½ per cent. loan issued at 88 in July. Colonial municipalities are responsible for just over a million, Melbourne Tramways Board and the City of Auckland having issued 5 per cent. stock in September, the former for £686,000 and the latter for £390,000. Foreign railways again appear in the list, after an interval of twelve months, with an issue last week of ten-year 5 per cent. notes for £955,000 by the Buenos Aires Western Railway. De Beers Mines and Modderfontein East account for the total of nearly a million under the heading of South African Mines, while in the Exploration, Financial, and Investment Trust group there have been ten issues, nine of which were made by investment trust companies, the tenth being made by the Northern Exploration Company, a Rhodesian concern, for £65,100. In the Oil section, an issue of £1,350,000 was made by the V.O.C. Holding Company to shareholders only, in the form of ordinary £1 shares at 45s. Issues by two colliery concerns make up the total in the iron, coal, and steel group, and there were four issues in the electricity section, the largest being for £1,496,250 by the County of London company in the form of 5½ per cent. one-year notes at 90½. In the shipping group an issue of £4 millions in 6 per cent. preference shares by Harland and

Wolff, and of £250,000 in 7½ per cent. preference shares by the Town Line, make up the total. In the bank and insurance section, the Union Discount Company and the National Bank of Australasia made issues to shareholders only of £300,000 and £162,000 respectively. The main items in the miscellaneous group are issues of £1½ million in 6½ per cent. debentures at par by the Lautaro Nitrate Company, and £1,584,000 in 6½ per cent. debenture stock at 99 by the *Daily Sketch* and *Sunday Herald*.

From the final table, which gives the destination of new capital raised in London for the first nine months of a number of years, it will be seen that this year's figure is not only substantially below that of the corresponding period of last year, but is also less than in 1912 or 1913:—

DESTINATION OF NEW CAPITAL.

Foreign countries—Government.....	35,501,800	56,948,000	46,478,800	55,110,800	59,569,300	41,088,000
Other.....	9,584,500	24,021,500	5,905,000	13,066,600	25,561,900	22,979,900
	69,411,000	43,756,700	15,973,900	37,505,000	17,802,700	11,569,900
Grand total.....	151,030,700	150,321,400	186,465,100	510,694,400	206,682,600	134,616,000

The bulk of the decline as compared with last year is accounted for by British Government loans, which are less by £59 millions, issues for other purposes at home being £14 millions higher than in 1923 and nearly double the total for 1913. The Dominions have taken substantially less than last year, Government loans in this category having dropped by nearly £16 millions. Foreign Governments, however, have raised nearly as much as in the first nine months of last year, which included over £11 millions for the Austrian Government loan. The amount raised by other foreign borrowers, however, is substantially less than last year, and compares in a striking manner with the pre-war figures. The recent criticism that Britain is overdoing her lending to countries outside the Empire is, in fact, substantially refuted by these statistics.

THE NEW PROTOCOL.

(FROM OUR CORRESPONDENT.)

GENEVA, September 30.

By the time these lines appear in print the Assembly will have concluded its final consideration of the Protocol which will probably be placed before it in final shape tomorrow. It would have reached this stage earlier had it not been for a serious development due to the action of the Japanese Delegation wishing to extend the basis of the Covenant and of the Protocol somewhat beyond the principle that when any dispute is declared by the Court to be a matter of domestic jurisdiction for one of the parties involved, the matter then drops out of the sphere of international action through the League. This covers the principle of State sovereignty which has been very jealously guarded all along by the States' members, but the attitude of the Japanese Delegation has been that as the aim of the Protocol is to put an end to private wars, at any rate some elasticity must be given to the provisions regarding matters of domestic jurisdiction. Quite clearly the Japanese have in mind the subject of emigration. While it is clear that States like Australia and America are entitled to develop their legislation in their own way, it is in this sense, may also be a matter of international concern in the sense that it may lead to a serious international situation. There has, therefore, been some sympathy for the Japanese attitude, but at the same time a realisation of the extreme danger of extending the matter too far.

The problem has been of considerable gravity and really came down to either satisfying the Japanese, or leaving

them as non-signatories of the Protocol, with liberty of action in case of necessity. What the Japanese said was that if the League really wishes to end war, it must retain the right to exercise conciliatory influence when a conflict arises between two States on a subject which concerns the sovereignty of one of them. That is to say, if the Court decides that a certain question is a matter of domestic jurisdiction, it would still be the duty of the Council to endeavour to secure a settlement by conciliatory means. This is covered in more general terms by Article XI. of the Covenant which permits any State to bring to the attention of the League "any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends."

It is on this basis that, after some days of intensive negotiation which have caused much agitation in various quarters, a solution has been reached this evening. It is agreed that a Court pronouncement that a dispute is one of domestic concern for one of the parties shall not prevent consideration of the situation by the League under Article XI. of the Covenant, i.e., if peace is threatened. It is also agreed that a state refusing to accept a Court decision that a dispute is a matter of domestic concern shall not be presumed to be the aggressor if war breaks out—as it would ordinarily be according to the Protocol—if it has submitted the question to the League under Article XI. after the decision has been delivered. That is to say, if war breaks out after a Court decision, and after further reference to the League under Article XI. by the plaintiff State, the League will have to discover which is the aggressor. Both States would be in the same position with no presumption for or against either. This seems a fair arrangement at first sight, and without time for thinking through it.

The Dominions have been taking part in the discussions, and some of them have made their position clear; others will have the opportunity of doing so if they so desire. It may be a reasonable condition that such obligations will not be accepted by Great Britain unless other great nations join in, but the discussions in some British quarters in relation to the United States rather lose sight of the fact that Article XVI. of the Covenant obviously means something. In the first place it is perfectly clear that it means the automatic institution of financial and economic boycott against a Covenant-breaking State, itself an unsatisfactory provision in this form, and certainly made more satisfactory by the provision of the Protocol that before the boycott comes into operation a State must be properly declared an aggressor by refusal to arbitrate or by the various other criteria laid down in the Protocol. The point is that under Article XVI. as it stands, as well as in the Protocol, Great Britain is under an obligation to institute a boycott against a Covenant-breaking State. It is rather late in the day to say that America's non-membership of the League has changed the situation, and though quite obviously it is a very serious practical question to be considered by British people, there it stands at present unless and until some action is taken to displace it. To many it would seem difficult in such circumstances as would involve drastic action against a State, for an American Government in the face of the world to insist upon carrying on single-handed its relations with a defaulting State. It is, of course, possible.

British opinion in some quarters is also disposed to be a little too pessimistic about the prospect of America attending a Disarmament Conference summoned by the League. She has already attended many League Conferences; she has assisted, through her Minister at Berne, in the preparation of a Convention for the control of the traffic in arms; and she has officially intimated her willingness favourably to consider an invitation to attend a Conference to be summoned by the League on this subject. American observers consider it would be extremely difficult for an American Administration to decline to participate in a general conference on disarmament merely because it has been summoned by the League of Nations. What is absolutely certain is that the great majority of European States have not the slightest intention of disarming unless they have some equivalent

security, either in the form of the sanctions outlined in the Protocol, or in some other form, and if America is not prepared to contribute to this (as it is fairly evident that she is not), her influence on any possible scheme of reduction would be a purely moral one. Moral persuasion is no substitute for States determined to do their utmost to maintain their security.

The coming months provide an absolutely essential opportunity for full exploration of this and many other aspects of the discussion, into which it is impossible to enter fully. It is an enormous subject, to be analysed with great care, and it is my personal opinion that it is the height of optimism to imagine that the Disarmament Conference will take place in June next year. It would be deplorable, however, if some of the progress made on several headings were not crystallised into the European system, obviously with such additional safeguards as may ultimately prove necessary. One of the most urgent safeguards seems to be the inclusion of Germany, if not in the League, at least amongst the signatory States of the Protocol.

The Council has settled its plan of organisation for the right of investigation into the armaments of ex-enemy countries as soon as inter-Allied control ceases. A panel of experts is to be drawn up from States represented on the Council, and on each particular occasion when the right of investigation is to be exercised a selection will be made containing a representative at least of all the States represented on the Council at the time, provision being made that a neutral and a neighbouring State signatory of the Treaty shall in any case be represented. The investigation may be made on a surprise basis, and States subject to such investigation under Peace Treaties are not to be represented on any of the commissions set up to carry out the work. This, of course, is an immense step forward on the system of inter-Allied control, but it cannot be finally considered to be satisfactorily within the League spirit until similar conditions are applied to all States members of the League, an eventuality which must be looked forward to as one of the results of the Disarmament Conference when it takes place. Ex-enemy States might then justifiably claim that one or other of them should be eligible for representation for investigation in other countries, and the distinction within the League between one set of Powers and another would finally disappear.

Notes of the Week.

Japan and the New Protocol.—The new Arbitration Protocol, which is discussed above by our Geneva correspondent, was unanimously passed by the Assembly on Thursday. The overcoming of the last minute Japanese objections by certain modifications in the text, may be regarded with unmixed satisfaction from the European point of view. Immediate practical measures for the prevention of war are a matter of life and death to Europe; these measures might have been arrested, or at least very seriously embarrassed, by the opposition of Japan, who is one of the four Great Powers represented on the Council of the League, and the concessions given to Japan in order to secure her adherence are not calculated to make the mutual relations of European countries more difficult. In Europe, where there are no colour lines and no empty spaces, it is through the external, and not through the internal, policies of States that disturbances of the peace are likely to arise, and these external possibilities of conflict are grave enough in all conscience to tax the resourcefulness of European statesmanship. To the good European, the price demanded by Japan is not too heavy to pay, but for Great Britain, with only one foot in Europe and the other overseas, good Europeanism is not enough, and the comments on the concessions to Japan which have been made in the Australian and the American Press indicate already the trouble which these concessions may cause us in regions outside Europe where we are also vitally concerned. The opposition of the Japanese delegate to the previous draft of the Protocol was perfectly legitimate from the Japanese point of view. Had the Protocol gone through in that form with Japan's adhe-

sion, the Japanese Government would have declared itself, by its own act and by anticipation, to be the aggressor in any conflict which might arise between Japan and some other State of the Pacific Basin on the subject of immigration, and in the Pacific this subject, while juridically a domestic question, is also a vital international issue, involving both the strongest racial sentiments and the most important economic issues. The civilised and congested Oriental peoples of the Pacific can never willingly agree that under-populated "White-Men's Countries" should be closed to Oriental immigrants, especially on the ground of their racial inferiority; and, on the other side, the Americans and the peoples of the British Dominions can never willingly admit that the composition of their population, which will determine their national destiny, is not exclusively a matter for internal control. On this occasion at Geneva a diplomatic bridge has been thrown across the gulf between the Australian and Japanese points of view, but the incident has not helped the cause of the League, either in Australia or the United States, and it is incumbent on British statesmanship to avoid situations in which the Dominions and America are ranged on one side and India and the Far Eastern countries on the other, with Great Britain in the uneasy rôle of mediator. This is just one of the aspects of the Protocol which call for the exhaustive consideration of this country and the Dominions. But, in spite of all the difficulties that still lie ahead, we may hail this work of the 1924 Assembly as an unexpectedly large achievement, and a decided step on the road towards international co-operation for peace.

Mr Baldwin and Tariffs.—With the threat of a general election staring us in the face, it is important that the country should know precisely the position which the Conservative Party has reached on the fiscal question. Last week, at Glasgow, Mr Winston Churchill, who, we presume, is just now as studious in his pursuit of orthodox opinion as a new boy at a public school, told us that a general tariff had been dropped out of the Conservative platform, but having said this he went on to advocate an extension of the Safeguarding of Industries Act, to which he apparently set no limits but those of expediency. His new headmaster, Mr Baldwin, followed, in his Newcastle speech on Thursday, on very similar lines. He said:—"I want to repeat what I have said on several occasions, that at this forthcoming election the general tariff is no part of our programme. We do not stand for it, but we hold ourselves at liberty to safeguard any efficient industry in which unemployment may be caused by unfair competition of any kind, to safeguard that industry by such a measure of safeguarding as, after careful study and consideration, may seem to us the most effective instrument for that purpose. That has all along been our policy since I declared it last January." Mr Baldwin is a little more careful than his new pupil. An industry, if it is to be safeguarded, must be "efficient" and threatened by "unfair competition," and the measures of "safeguarding" must be the subject of "careful study and consideration." To such a policy, Mr Baldwin thinks, most people in this country, irrespective of party, would give their assent. If Mr Baldwin wishes to obtain the assent of those who suspect and condemn all attempts to undermine the fiscal system of this country, he must be very much more explicit. As it stands, the passage quoted is liable to a wide variety of interpretations. Does he merely contemplate State action to tide over a difficult time for a great industry suddenly faced with a great and unforeseen emergency? Or will he support a wide extension of the Safeguarding of Industries Act, with all its faulty machinery, and give hosts of industries the hope, if he is returned to power, of artificial assistance from a Government sympathetically disposed towards the tariff remedy? In other words, has he dropped the idea of a general tariff for the idea of a piecemeal tariff? Finally, in dropping the general tariff for this election (the italics are ours), does he carry all the Conservative leaders with him, including Mr Amery? If the country is really to be thrown into a general election, we trust that Mr Baldwin will take an early oppor-

tunity to make himself clear beyond a peradventure on all these points.

The Labour Party Conference.—A Labour correspondent writes:—"When the date of the Annual Conference of the Labour Party was shifted from the normal June to October, the intention was that it should occur at a time when, Parliament being in recess, Labour M.P.s could attend without trouble. Now, however, it looks as though the meetings, which open on Tuesday morning, will take on the character of an election conference. Anyhow, there will be exceptional interest in the fact that the Prime Minister, who is chairman of the Labour Party, and therefore of the Conference, has, in his presidential address, delivered on the Tuesday, an opportunity of making a party pronouncement, and of setting the issues of the Election, if there is to be an Election. Obviously the Prime Minister's speech and the possibility of a near election will dwarf all other matters down on the Conference agenda. Too many of the actual resolutions partake of that character, so beloved at party gatherings, of the washing, in public, of dirty linen. Few of them are serious, either in themselves, or in what they seem to imply; the Labour Party has always been a body of critics, which sharpens the axe it wields against the enemy on the body of its friends; no discussion, however acrimonious at the time, on any of them ought to be taken as implying that there is, in the Party, any such serious division as would count at all in the event of an Election, or even to weaken the support which the Party as a whole gives to the Government. The most important substantive resolution is that excluding Communists from candidatures. There will be noise about this; one can foretell, accurately enough, where it is coming from, but it will be noise only. The resignation of such prominent Communists as Mr Walton Newbold and Miss Ellen Wilkinson from the Communist Party shows what is likely to happen.

Britain, Turkey, and Iraq.—While the news from Geneva in regard to this question is distinctly encouraging, the local situation in the disputed area remains serious. At Geneva, the Council of the League has decided this week to appoint a commission of three representatives from countries not even remotely concerned in the dispute, who are to make a recommendation to the Council after a thorough investigation, including, if necessary, any inquiry on the spot. The British delegate agreed at once to accept in advance whatever award the Council might make on the basis of their commissioner's report; and Fethi Bey, the Turkish delegate, has now given a pledge to the same effect, as well as an undertaking that the provision contained in the Treaty of Lausanne—that both parties should abstain from violating the existing *status quo* pending a settlement of the question by direct agreement, or else by the League procedure—will be observed by Turkey as well as by Great Britain. These are conciliatory gestures on the Turkish side, for the programme with which Fethi Bey came to Geneva was that a plebiscite should be taken to decide the attribution of the entire Mosul Vilayet, and not merely that an inquiry should be instituted by the League to determine the line along which the frontier between Turkey and Iraq shall run. Moreover, as regards the maintenance of the *status quo*, it costs us comparatively little to observe her pledge, since we claim no territory (for Iraq that is) in Turkish occupation, whereas all the territory claimed by Turkey was in British and Iraqi occupation at the moment when the Lausanne agreement was negotiated. Still, the fact that the mutual pledge of provisional non-aggression in this area, which both parties gave at Lausanne, bears more hardly upon Turkey than upon Great Britain, gives Turkey no excuse whatever for violating her engagement, and this principle has been recognised by Fethi Bey in the rational and conciliatory atmosphere of Geneva. It remains to be seen whether his assurances will be endorsed by Angora, and acted upon by the Turkish officials and troops along this wild Kurdish frontier. Undoubtedly, the *de facto* line of demarcation between Iraq and Turkey (that is, the northern boundary of the terri-

tory under British and Iraqi control at the date of the Lausanne Agreement) has been violated by Turkish regular troops during the last few days. The Christian population of the mountainous zone, just within this line, has been driven from its villages, and casualties have been inflicted on the Turkish invaders by British aeroplanes. Though the fighting seems to have ceased, the Turkish troops remain on the wrong side of the line, and their recall is a necessary preliminary (as Fethi Bey has realised) to any satisfactory solution. At the same time, it is important for us to realise, on our side, that this *de facto* line possesses only a provisional validity (conferred upon it by the Anglo-Turkish agreement at Lausanne that it should be maintained pending a settlement), and that neither the commissioners of the League Council nor the Council itself are under any obligation to take it as the basis of their award. In this area, no line of demarcation at present exists which possesses any permanent international sanction. The armistice of October 30, 1918, between Turkey and the Allies empowered the Allies to occupy, until the conclusion of peace, the ex-Ottoman territories which they occupied already; but the Turks claim that the greater part of the Mosul Vilayet, including the city of Mosul itself, was occupied by the British forces after the armistice, and it is this contention which partly accounts for their determination to get this province back. It is true that almost all the Mosul Vilayet was assigned to Iraq by the Sèvres Treaty, but that Treaty has admittedly lapsed. The Vilayet was also included in the territory over which a mandate was conferred on Great Britain by the principal Allied Powers, but the boundaries of the mandated area in this quarter were designated by Great Britain herself, and their validity is impaired by the precedent of the boundary between Turkey and the French mandated area in Syria, where the line originally designated by France was afterwards modified—first in the Franklin-Bouillon Agreement, and finally in the Lausanne Treaty itself. Theoretically, the Council of the League is free to draw the frontier between Turkey and Iraq along any line it chooses between the Persian frontier on the east and the French mandated area on the west, and it can hardly be expected to draw it wholly in our favour.

The Half-year's Accounts.—The figures of public income and expenditure for the first six months of the current financial year are on the whole satisfactory, and so far as it is possible to judge at this distant date, bear out the Chancellor's estimates of revenue and expenditure for the full year. Revenue for the half-year amounts to £348,509,400, which compares with £365,829,900 in the corresponding period of 1923-24, a decrease of £17,320,500. The decline for the full year was estimated in the budget at £42,860,000, of which £30 millions were accounted for by customs and excise. Up to date these two items show decreases of £13,450,000 and £6,127,000 respectively. Income-tax receipts for the full year were expected to decline by £4,331,000, but for the six months the decrease is only £235,000, while super tax receipts, for which an increase of £360,000 was estimated, have already expanded by £3,910,000. Death duties also show an increase of £4,790,000 for the half-year, against a budget estimate of a decline of £1,800,000 for the twelve months. Revenue from stamps has declined by £550,000, the year's allowance being £570,000, while the drop of £1,690,000 in Corporation Profits Tax is almost exactly half the year's estimate. Miscellaneous special receipts, for which a decrease of £6,800,000 was estimated, have declined by £4,412,100. Receipts from Post Office operations have produced £1,300,000 more than last year, the year's estimate being for an expansion of £700,000. Total expenditure for the six months was £360,492,000, which compares with £362,832,800, a decrease of £2,340,800, Mr Snowden's estimate for the full year being for an increase of £1,186,000. There has been a saving of £1,006,500 on the Supply Services, which is more than accounted for by the Civil Services, while Consolidated Fund Services are down by £1,334,300. Interest, &c., on the National Debt has taken £2,667,200 more, but sinking fund payments are £5,316,700 less at £14,290,400, and Road Fund, payments to Local Taxation Accounts, and pay-

ments to Northern Ireland Exchequer have each taken about half a million more. The deficit at June 30th last was £38,859,000, but this has now been reduced to £11,982,600. The first quarter, of course, included payment of a half-year's interest on 5 per cent. War Loan and an instalment of the service on the American Debt, items which will appear again in the third quarter. The floating debt is practically unchanged as compared with March 31st last, and the excess of expenditure has been met from the half-year's issue of £13½ millions of 4 per cent. Treasury Bonds. National Savings Certificates to the extent of £2½ millions have been repaid, and just over a million has been taken from Exchequer balances. The budget estimate was for a surplus of £4 millions, but Supplementary Estimates already voted bid fair to absorb this, and there seems every probability that further estimates will be asked for before the close of the financial year. While it is just possible, therefore, that revenue estimates may be slightly exceeded, there is no prospect that the Chancellor will find himself next April with one of the large "unexpected" surpluses which have been the order of the day in recent years.

Railway Wages.—The question of wages in the railway service has again come to the forefront through the demand for an all-round increase for the traffic grades of 10s a week. Under the Agreement of March, 1920, two sets of rates of wages were fixed, one being current rates, which have since been varied under the cost of living sliding scale arrangement, and the other consisting of minimum basic rates, below which there was to be no reduction, irrespective of the fall in the cost of living. The latter rates are approximately 100 per cent. above the pre-war average rates for each grade. The operation of the sliding scale has resulted in reductions in the wages of the majority of the workers to the level of the agreed minima, and, owing to the fact that in many cases the minimum was reached when the cost of living index number was appreciably higher than it is at present, increases in wages would only be justified by a sharp rise in future index numbers. There are, however, some grades, including porters and permanent-way men, who are now in receipt of wages 3s to 7s in excess of their appropriate minimum rates. The following table shows a comparison between the present rates of wages and the averages for 1914 for certain important grades:—

	Rates in 1914.	Rates at Oct., 1924.	Percentage Increase.
Passenger porters—			
London	20s ..	47s ..	135
Provinces	18s ..	45s ..	150
Ticket collectors	23s to 37s ..	54s to 58s ..	115 to 135
Guards	22s to 31s ..	50s to 65s ..	110 to 127
Goods porters—London ..	23s ..	50s ..	117
Industrial	22s ..	49s ..	123
Rural	19s ..	46s ..	142
Permanent way labourers			
London	24s and 25s ..	51s and 53s ..	112 and 113
Industrial	22s ..	49s ..	123
Rural	20s ..	47s ..	135

In the case of engine-drivers, a precise comparison is not practicable owing to the system of mileage payments, but is probably that the percentage increase is somewhat less than those relating to lower-paid workers. It will be seen that the railwaymen have already succeeded to an appreciable extent in improving upon their relatively poor position of 1914. The present demand for a further increase in wages is a matter for serious concern, not only on account of the resulting burden of increased charges on industry generally, but also because of its bearing on the

problem of wage disparities. An increase in wages such as that proposed, following increases in the building and certain other sheltered industries, would still further widen the serious gap which exists at present between wages in such industries and those in the exposed trades.

Capital for the Russian Oil Industry.—The Russian oil industry provides a fitting test of the arguments we advanced in our issue of September 13th against a Russian loan. M. Serebrowski, the President of Azneft, which is the administration in charge of the Baku oilfields, has just concluded a visit to the oilfields of the United States. The object of his visit was to study American operating methods, and to make additional purchases of drilling and refinery equipment. Asked whether or no American capital would be an asset in solving the oil problems of Russia, M. Serebrowski, it was stated, "was emphatic in his reply that outside capital was no longer needed." He expressed "confidence in the ultimate success of the nationalisation of oil resources by the Soviet Government," and he was "very enthusiastic as to the future of Russian production." Nevertheless, he was in America partly to buy oil machinery. What, then, does the Russian oil industry really want? How would the question be affected by the ratification of the Anglo-Russian Treaties? It seems pretty clear what M. Serebrowski wants. M. Serebrowski is head of one of the local administrations which are responsible for the actual operations—for producing and refining the crude oil—but are subject to the All-Russian Naphtha Syndicate on matters of policy. Clearly, M. Serebrowski and the other local directors do not want to have operations taken out of their hands and given back to the former owners on any terms. They have succeeded in raising the production of the Russian oilfields since the Revolution until it is now 66 per cent. of the 1913 production. For the operating year which ended on September 30th, the local administrations estimated an increase in output of 17 per cent. over that of the previous year. The following table shows the steady improvement that has been made in the last three years:—

TOTAL PRODUCTION OF CRUDE OIL IN RUSSIA.

	Poods.
1922.....	287,804,000
1923.....	320,602,000 (increase of 11%)
1924 (estimated).....	375,000,000 (17%)

(60 poods = 1 long ton).

But what the Russian oil industry lacks is transportation facilities—pipe-lines, tank cars, tank steamships—as well as more modern drilling and refining machinery. No great increase in production can be expected without the means to bring the oil from the fields to the export terminals. Stocks of both crude and refined oil have recently accumulated because neither pipe-lines could deliver nor refineries handle the greatly increased output. Grozny is still without a pipe-line connection to the Black Sea. According to M. Serebrowski, an additional pipe-line will be constructed next year from the Baku fields to Batum, and the refineries will be enlarged to deal with an additional 8,400,000 poods per month. Further, the tanker fleet is in urgent need of reconstruction, and drilling outfits of the latest type, particularly rotary machines, must be purchased to replace the antiquated and worn-out machinery now employed. The Russian oil industry needs, therefore, long-term credits for the purchase of oilfield and refinery equipment, of tank steamers, pipe-lines, and railway tank cars. What security can it offer which would command confidence? The oil properties have been nationalised without payment of compensation to the former owners. The workmen receive about half their pre-war wages, while the local selling prices of kerosene are higher than pre-war prices. Yet for 1923 the official balance-sheet of the Azneft administration showed a deficit of 11 million roubles, without allowing anything for depreciation of the producing properties. This sort of thing would not give security for a loan by the ordinary commercial tests. It is significant to hear of the experience of the Barnsdall Corporation, an American oil concern. This corporation had a drilling contract with the Azneft administration for the drilling of certain wells at Baku, 20 per cent. of the production from these wells to go to the Barn-

dall Corporation, and the remainder to Azneft. The corporation claims that after drilling 2,300 feet to within 10 feet of the oil, the work was stopped and the Azneft administration has refused to allow the operations to be resumed. This was after 12 months' work and a considerable expenditure of money. Does this sort of thing command confidence for a loan? In the oil fields, as in other branches of industry in Russia, there has been a conflict in the last few years between those desiring to restore freedom of contract and trade and those desiring to retain the Soviet system. If the British Government guarantees a loan to Russia, it will assist the latter side and postpone, as we have said, the date when the change is to be made. This applies peculiarly to the oil industry. It is obvious that a British loan would diminish what chances the former owners ever held of having their oil properties returned to them for exploitation on any terms.

International Cotton Statistics.—The half-yearly returns, published by the International Cotton Federation, relating to cotton consumption and mill stocks, show that the world used 469,000 bales less of American cotton during the half year ended July 31st than in the previous six months. For the season of 1924 the world consumption of American cotton was 10,955,000 bales, against 12,666,000 bales in 1923. It may be mentioned that Mr. Hester, of New Orleans, a well-known authority, estimated the consumption last year at 11,241,000 bales. Indian cotton consumption has declined, but Egyptian has increased slightly. The countries showing increases in consumption are Russia, Italy, Czechoslovakia, Spain, Austria, Poland and China. Of the other countries, the United States shows the greatest reduction of 526,000 bales. The table relating to mill stocks of cotton discloses considerable reductions in all cottons with the exception of Indian. Supplies of American cotton held at the mills of the world on July 31st were 1,043,000 bales less than on February 1, 1924, and 667,000 bales less than on July 31, 1923. The total world mill stocks of all cottons on July 31st last were 3,545,000 bales, against 4,088,000 bales on February 1, 1924, and 3,932,000 bales on July 31, 1923. The number of spindles under construction in Europe is only 274,000, but India alone is adding 191,000 and Japan 183,000. China has decreased her spindleage from 3,380,000 to 3,300,000. The Federation has issued interesting statistics relating to the amount of short time worked during the past six months in the leading countries of the world. It is recorded that Czechoslovakia, Belgium, Switzerland, Spain, Japan, and China worked longer hours during the half-year than in the previous six months. Great Britain increased the short-time run by just over half a week. Spain, Holland (owing to the lock-out), Poland, Finland, Denmark, and Norway also show increased short-time working. No figures are available for the United States, but it is pointed out that of the 37,786,000 spindles in America, only 28,710,359 were active last July. The spinning spindles in Great Britain are given as 56,750,000, and of these just over 20,000,000 are engaged on Egyptian cotton. From another source some particulars have been available this week of the Egyptian cotton season for 1923-24, which ended on August 31st. During the twelve months Great Britain increased her imports from 403,045 bales of 750 lb to 450,012 bales. On the other hand, shipments from Egypt to the United States declined from 211,417 bales to 106,795 bales. Germany increased her takings from 19,092 bales to 41,564 bales. The total exports from Egypt last season were 927,328 bales, against 945,328 bales in the previous twelve months.

Index of "Free" Shipping Freights.—The marked recovery in the shipping industry during September finds expression in our index of "tramp" freights which, following the slight rise recorded in August, showed a substantial advance. Compared with August, the figure for September, namely, 128.56, represented an increase of 5.8 per cent. The movements of the various groups in the index are indicated in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100

September ".....	117.90	138.94	123.20	124.93	122.19	144.22	128.56

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	108.62	+ 1.88	S. America—outwards.....	94.75	+ 5.02
Bay—outwards.....	130.27	+ 3.67	" homewards.....	152.16	+ 1.50
" homewards.....	119.35	- 12.91	India—outwards.....	122.10	- 5.62
Mediterranean—outwards.....	136.39	+ 5.11	" homewards.....	127.77	+ 17.54
" homewards.....	104.13	- 7.61	Far East, &c.....	122.19	+ 8.88
North America.....	138.94	+ 10.84	Australia.....	144.22	+ 16.03

Exceptional liveliness in the homeward markets, due chiefly to seasonal movements, was a characteristic feature of the month. European grain requirements, to replenish depleted stocks, were on an almost unprecedented scale, and produced remarkable activity in the North American department, with the result that an enormous amount of tonnage was absorbed, and rates steadily advanced. The River Plate also continued to transact a considerable amount of business at well-sustained values; chartering for the new season's crop at Australia proceeded briskly, with freights showing a very material improvement; while tonnage was again in strong demand in the Far East and North Pacific. Outward coal freights to the Plate and Mediterranean also displayed an upward tendency, and with a little better inquiry, rates for ore carriers from the Bay and Mediterranean, though lower on the average, were inclined to harden towards the end of the month. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	(1913 = 100.)	1921.	1922.	1923.	1924.
January.....	194.59	..	131.60	..	114.05
February.....	164.54	..	135.76	..	112.73
March.....	162.17	..	135.53	..	115.23
April.....	147.48	..	129.46	..	115.45
May.....	158.42	..	125.12	..	114.55
June.....	165.73	..	117.45	..	106.82
July.....	169.87	..	114.52	..	103.39
August.....	170.60	..	113.16	..	100.16
September.....	154.47	..	110.37	..	103.04
October.....	141.85	..	114.42	..	107.86
November.....	136.47	..	119.43	..	111.21
December.....	134.66	..	117.39	..	111.81
Mean for year.....	158.40	..	122.02	..	109.69

On the whole, the outlook for the shipping industry appears to be distinctly reassuring, and unless unforeseen circumstances arise to check the remarkable activity displayed in the homeward markets, owners should be able to find remunerative employment for their vessels for some time to come.

The Swiss Hotel Industry.—A Swiss correspondent writes:—The beauty of Swiss scenery has, since the beginning of the XIXth century, attracted millions of foreigners whose ever-increasing number caused the so-called hotel industry to be created and developed. Its growth was rapid after 1850, that is, after the railways began to run in all directions, even in the remote valleys of the Alps. Regular hotels for the accommodation of foreigners did not widely appear before 1840. There was an hotel on the Righi as early as 1814, but the first hotels were opened at Vevey and Montreux in 1820, at Zermatt in 1839, at Lucerne in 1845, at St. Moritz in 1870. After 1870 the hotel industry rapidly developed into one of the

most important in Switzerland. In 1880 there were 1,002 hotels, with 58,137 beds, and occupying nearly 10,000 employees; in 1894 there were 1,708 hotels, with 88,634 beds, and a staff of nearly 20,000 persons; 18 years later, in 1912, the number of hotels had increased to 3,585, with a total of 168,625 beds, and a staff of over 43,000 persons. The hotel industry was very hard hit by the war and the subsequent economic crisis; many hotels were compelled to close down, and their number may be now estimated at 3,500, with some 40,000 employees. Considering the number of persons employed, the hotel industry came third before the war, after the machine industry, which occupied 65,000 persons, and the watchmaking industry, which occupied 46,500 hands, and the capital invested in Swiss hotels reached 1,500 million francs (£60 millions), or 1-30th of the national fortune. The hotel industry is, of course, not the only one to profit by the influx of foreign visitors, which indirectly benefits the transport undertakings, mountain railways, shops of all sorts, the food trade, kursaals, &c. Altogether, perhaps, 300,000 persons get part of their living from the tourists. The good seasons in the years 1900 to 1914 encouraged the Swiss capitalists and banks to invest important sums in the hotels, so that the crisis which began when the war broke out was very deeply felt in many quarters. Swiss hotels passed through hard times during the war, and their troubles were aggravated during the years which followed the armistice. The Federal Government was then requested to grant a subsidy in order to keep the hotels running, and to save the whole industry from impending ruin. The "Société fiduciaire suisse pour l'hôtellerie" was then formed, and the Federal Council put at its disposal a sum of 5 million francs (£200,000) with the object of financially helping the most hard-hit hotels. Up to the end of 1923 the "Société fiduciaire" had succeeded in saving 124 hotels, with a total of 11,864 beds, by reducing their debts by 35 per cent., and enabling them to carry on; it also lent money to 98 hotels, which it is now controlling, but it closed down about 20 others, the position of which was really hopeless. It transformed some of them so as to let them to industrialists and turned others into flats. Thanks to the efforts of the "Société fiduciaire," and also to the fact that the two last winter and summer seasons were exceedingly good, the Swiss hotel industry has been saved from complete disaster. In 1922 two-thirds of its 3,500 hotels were on the point of closing down. The Federal Council had, as early as 1914, prohibited until the end of 1925 the building of new hotels. The time has now come to reconsider that measure, and while some people are of opinion that the prohibition should be extended for another period of five years, some others, who are opposed to any State control, ask that it should be abrogated. The Government proposes the maintaining of the prohibition,

but to modify it so as to authorise the building of new hotels when it is found they are needed, and when the Cantonal Governments concerned approve of it. This question will be discussed by Parliament in a few weeks, as well as a proposal for granting a new subsidy of 3 million francs (£120,000) for the "Société fiduciaire." The latest information shows that this year will be a record year for the Swiss hotels. The long-expected influx of tourists has restored hope and confidence among those connected with the hotel industry, and it has also given a new and encouraging impetus to home trade which needed it very badly.

International Trade in the First Half-Year.—The data employed in the following analysis have been taken chiefly from the figures given in the monthly report on the state of trade issued by the *Economist*, but they have been supplemented from other sources where necessary. The countries for which figures are available have been grouped into British and non-British, and the monthly values of the exports and imports have been reduced to sterling with the help of the rate of exchange for each month. The countries are the following:—British group: United Kingdom, Australia, Canada, India, New Zealand, South Africa. Non-British group: Belgium, Bul-

£1,502,300. The 4½ per cent. debentures have been reduced by £48,900 to £388,500, while the ordinary and preference capital remains at £3,490,000. An analysis of the balance-sheet appears in another column.

New Modder and Others.—Our mining correspondent writes:—The annual statements are now available of the three other companies of the Central Mining group whose accounts are made up to June 30th—that of the Modder East appeared and was commented upon last week. Of the present trio by far the most important, of course, is the New Modderfontein. The showing made by this company is so persistently good that one is almost tempted to wonder whether such results can continue indefinitely. Fresh records were again set up in the tonnage crushed, the gold recovered and the profit earned. It is noteworthy, in regard to the latter point, that the price of gold last year averaged only 92s 7d per ton, as against the maximum of 112s 7d in 1920-21, when the working surplus came out at slightly under £1,700,000. Some increase could have been made in the dividend, but the directors were content to leave the rate at the enhanced level paid in respect of 1922-23. The quantity of ore opened up, although not quite so high in value as before, was more than equivalent to that extracted; the present total represents fully six years' supply for the mill, allowance made for sorting. Assuming that the remainder of the ground gives corresponding results, the life of the mine may be calculated at not less than 15 years, and the "profit in sight" as more than equivalent to the market valuation of the undertaking. We summarise the results of the three companies for the past three years:—

	Year ended June 30th		
	1922.	1923.	1924.
NEW MODDER.			
Ore crushed	947,000	1,340,000	1,348,000

Ore reserves	1,650,260	1,651,600	1,006,400
Value	6-9	6-5	5-9

The other two companies have, on the whole, a less satisfactory story to tell. The Main Reef crushed a somewhat increased tonnage at a reduced cost, thus rather more than

garia, Denmark, Esthonia, Finland, France, Germany, Greece, Italy, the Netherlands, Sweden, Switzerland, the United States, Egypt, Japan. Amongst them they accounted for the following percentages of the international trade of the world in 1920 and 1921:—

	1920.	1921.
British group	27.6	26.1
Non-British group	52.0	47.4
In all	79.6	73.5

Their combined trade may therefore be taken as representative of that of the whole world. The results of this survey are condensed in the following table:—

Month, 1924.	British Group.		Non-British Group.		Combined.	
	Exports.	Imports.	Exports.	Imports.	Exports.	Imports.
January	128	141	209	224	337	365
February	133	130	218	258	351	388
March	132	142	225	259	357	401
April	111	121	233	264	344	385
May	127	160	227	264	354	424
June	113	124	198	242	311	366
Half-year ..	744	818	1,310	1,511	2,054	2,329

As compared with the same period in 1923, these figures show rises of 18.9 and 14.3 per cent. in exports and imports respectively, but some of this rise must be attributed to the fall in the value of sterling as compared with commodities. The average of the index numbers of the *Economist* and the Board of Trade was 161 for the first half of 1923 and 168 in 1924, an increase of 4.3 per cent. Applying this correction to the relative figures for exports and imports, we obtain 14 and 10 per cent. as the real increase in exports and imports respectively from 1923 to 1924. This is encouraging, but optimism must be tempered when we regard the monthly figures; the sustained and gradually increasing briskness of the first five months was followed by a slump, especially in exports, in June, which is the more significant that it is not confined to a few countries, but is nearly general. It may be hoped that the agreement over the Dawes scheme and better agricultural conditions in the United States will lead to an improvement over the second half of the year.

William Beardmore and Co.—Depression in the iron and steel and shipbuilding industries, "coupled with the serious dislocation of work in the shipyards owing to the prolonged dispute with the boilermakers," are mainly responsible for a net loss of £68,100 disclosed in the report of Wm. Beardmore and Co., Limited, for the year 1923. This figure is arrived at after adjustment of reserves not now required. No definite settlement has yet been arrived at with Inland Revenue authorities as to the company's liability for Imperial taxation, but the directors state that they are satisfied that the reserves against such liability are ample. The dismal financial history of the company for the past three years is shown below:—

	1921.	1922.	1923.
Brought forward ..	711,909	752,797	762,564
Net profit	127,288	96,167	Dr 68,071
Pref. dividend	839,197	848,964	694,493
Ord. dividend	nil	86,400	86,400
Carried forward	752,797	762,564	608,093

No depreciation has this year been written off the value of buildings, plant, and machinery, as the value placed upon them "is substantially below their present-day value." They stand at £5,503,100, an addition of £23,900 having been made during the year. Loose plant and tools show an increase of £121,200 at £498,200. Stocks also show an increase of £185,800 to £1,326,400, but debtors have been reduced by £123,800. On the liabilities side there is an increase of £427,100 in loans, which now stand at

offsetting a fairly appreciable decline in the average yield. A special clean-up in connection with a change in the treatment method brought the working profit up to £226,800. Despite the doubling of the previous year's dividend, an increased balance remained to go forward. It is the mining position which leaves much to be desired. Of last year's development footage, only 40 per cent. could be classed as payable, and the ore reserve position was only maintained by the lowering of the pay limit in accordance with the reduced costs, and taking as much as 33 per cent. of the ore milled from reclamation, &c. As they stand, the ore reserves represent little more than 1½ years' supply. Those interested will, however, note that recent results have been more encouraging. In the case of the Nourse, the profit last year fell off somewhat, due to additional expenditure upon development. So far, however, from the position being improved in this respect, the quantity of ore opened up fell considerably short of that extracted, and values further declined. The shrinkage of well over half a million tons indicated by the latest ore reserve statement is due partly to this and partly to the circumstance that blocks of ore included in the preceding estimate proved not to carry the values placed upon them. A slight reduction in yield during the current year is forecasted by the consulting engineers. The margin of profit being small, it is to be hoped that compensation may be found in reduced costs or an improved supply of native labour.

The Statistical Position of Tin—The standard tin market moved up to over £240 for three months' delivery at the opening of the month, thus taking the price of the commodity back again to the level reached about the middle of last month. The monthly visible supply figures have turned out better than operators had looked for, and this with the fact that the German loan arrangements are well advanced should impart a much stronger tone to the market. The supplies for all September amounted to 7,117 tons, against 8,710 tons in the previous month, the shipments from the Straits having been only 4,710 tons. This makes world supplies for the twelve months ended September 30th last 105,699 tons, out of which the Straits furnished 72,182 tons, and 15,258 tons was Banka. The deliveries for last month came to 8,119 tons, against 7,782 tons in August. The United Kingdom users took a little more, and so did the American consumers, but the Continent still kept back. The total deliveries for the year ended September 30th were 103,761 tons, out of which the United States took 66,330 tons, the United Kingdom 18,165 tons, and the Continent 12,123 tons. The world's visible supply of tin now stands at 19,388 tons, against 20,390 tons in the previous month, and 17,450 tons a year ago. There has thus been a decline of 1,002 tons on the month, and the statistical position of the commodity must be regarded as very sound. There is, it is true, 1,938 tons more tin in sight than there was a year ago, but the Eastern "pooled" stocks have this year been largely dispersed and marketed, and there is very little left to be sold at the present time. Standard tin last March rose to close on £300, and dropped to £201 in May. Since then it has been up to over £260, and the outlook over the next few months is regarded as very favourable for producers. The stocks in the United States are estimated at about 4,000 tons, and there is 5,250 tons in the United Kingdom at the present time. These supplies are on the full side; thus the buying movement may not start for a few weeks yet. A great deal depends on the attitude of the Continent later in the month, and how far the buying for that account develops.

The Administrator of Austrian Property (Cornwall House, Stamford street, London, S.E. 1) announces that a fourth dividend of 4s 4d in the £ will be paid to all creditors who are entitled to participate. The first distribution of the dividend will be made on October 15, 1924. An individual notice will be sent to each creditor as and when he becomes entitled to participate.

Oversea Correspondence.

UNITED STATES.—INVESTMENT DEMAND—EASY MONEY—CANADIAN NOTES OVERSUBSCRIBED—TRADE BETTER, BUT IRREGULAR.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 23, 1924.

New financing through bond and stock issues by railroad, industrial, and public utility corporations continues on a big scale, and has been augmented recently by flotations for foreign account, United States Government, and to some extent municipal requirements. Despite the enormous sum in the aggregate absorbed by such offerings, there is no noticeable reduction in the vast amount of surplus funds in this country seeking investment; nothing, in fact, to indicate that the market for new securities is nearing the saturation point. Conditions unusually favourable for the raising of new capital, for both domestic and foreign account, seem likely to prevail here for some time, at least until money rates show a definite tendency to recover from abnormally low levels. There is no sign, at present, of such a development. On the contrary, the money market generally, notwithstanding some increase in stock and bond dealings, crop-moving demands, and the gradual expansion of business in various lines of trade and industry, has shown further ease in the past week. While the volume of business and production in numerous directions is growing (more slowly than had generally been expected), there is still a very noticeable lack of demand for funds for commercial purposes. Apparently a good deal of liquidation is taking place in all sections of the country, reflecting largely the thawing out of accounts long frozen, particularly in agricultural districts, and this process is apparently offsetting to a considerable degree the call for fresh accommodation. The dominant influence, however, responsible for the further easiness of money is the great supply of credit created by gold imports. Statistics published this week show that the stock of gold coin and bullion in the United States has been increasing steadily for the past four years at the average rate of about \$40,500,000 a month. The total stock, which amounted to \$2,688,744,140 on September 1, 1920, now stands at \$4,531,150,497, according to the latest compilation. As one authority points out, this great increase of nearly \$2,000,000,000 in the gold stock is the major influence in causing the present ease in money rates and in the surplus credit supply, especially at New York, which had received by far the greater portion of gold imports during the past four years.

Further evidence of the remarkable absorptive power of the American investment market is found in the quick placing here last week of the \$90,000,000 one-year 4 per cent. gold notes of the Canadian Government, due September 15, 1925, which the Dominion sold to a banking group headed by the Chase Securities Corporation and Blair and Company, Inc. There was apparently keen competition among American banking groups to underwrite this exceptionally large offering—a fact which in itself testifies to the extreme easiness and abundance of money in this country. Advance applications for these notes reached an aggregate about double the amount offered, with the result that subscription books were closed immediately after the formal opening.

An idea of the enormous amount of new securities floated in this country in recent years and now being placed here may be obtained from data presented to the Investment Bankers' Association by President John W. Prentis at the convention of that association in Cleveland this week. Approximately \$4,000,000,000 of securities were sold by the members in 1921; \$5,000,000,000 in 1922 and 1923, and \$3,000,000,000 in the first six months of the current year. More than \$17,000,000,000 of securities have been placed in this period by members of the organisation (which includes States), and sales are now running at the rate of \$6,000,000,000 a year, so that 1924 promises to be the highest year in this respect ever experienced. Detailing

the classes of securities sold since 1921, Mr. Prentis said that about \$1,200,000,000 were those of foreign Governments; more than \$900,000,000 were farm loan securities floated for the benefit of American farmers; \$4,000,000,000 were municipal, State and county bonds for building roads, hospitals, schools, public improvements, paying soldier bonus, and for other like purposes. The remainder, approximately \$11,000,000,000 were securities of railroads, public utilities, and industrial corporations. The following table shows at a glance the totals of new capital issues placed by members of the association during the past 3½ years (000 omitted):—

	1921.	1922.	1923.	6 Mths., 1924.
Foreign government securities ..	\$ 379,270	\$ 431,305	\$ 242,845	\$ 320,940
Foreign industrial	15,150	81,695	24,100	19,180
Farm loan	121,940	386,415	392,505	129,500
Domestic, state, county, and municipal	1,235,693	1,147,740	1,040,576	811,889
Domestic rails	655,288	651,531	518,249	236,307
Domestic public utilities	671,085	980,433	1,138,396	431,756
Domestic industry	1,049,384	1,989,622	1,580,394	1,236,890
Canadian municipal	75,982	206,119	49,408	28,967
Total stocks and bonds	4,203,793	5,244,862	4,986,474	3,215,430

Trade and industry generally continue to expand moderately, but irregularity prevails in various lines. Perhaps the most noticeable increase in the volume of business is found in retail distribution of seasonal merchandise, which has been stimulated by the advent of cooler weather, notably trade in fall wearing apparel and heavyweight knitted goods. Jobbers and wholesalers, as a rule, are also enjoying better trade, but the improvement has not yet been reflected in all primary markets. In the iron and steel industries, buying of cars, rails, and other steel products is more active in the West than in eastern markets, which have been comparatively slow lately. Price movements have been very irregular in the past week or so. Corn, for instance, has declined sharply. Cotton has fluctuated widely, severe breaks being followed by violent rallies. Steel has dropped in price, while pig-iron has ruled fairly steady. Building throughout the country is becoming more active; the returns for August from most cities show expenditures for which permits were issued reached \$242,423,965, according to *Bradstreet's* compilation, as against \$229,244,346 in July of this year and \$240,508,554 in August a year ago. Of all the leading industries, textiles—particularly cotton goods—are the slowest to improve. Conditions in New England textile manufacturing centres are decidedly unsatisfactory, so much so that wages are being reduced in some cotton goods mills. Thus far no labour trouble has resulted in that section, but there is considerable talk of a strike being declared by union workers should the lowering of wages become general.

FRANCE.—BUDGET PROPOSALS—NEW TAXES—FURTHER BORROWING.

(FROM OUR CORRESPONDENT.)

PARIS, October 1.

THE methods by which M. Clementel, the new Finance Minister, proposes to raise the record sum of practically 32½ milliards to enable the Budget for 1925 to be brought to a balance were disclosed yesterday, when he explained the main proposals of his scheme in a speech of three hours' duration before the Finance Commission of the Chamber. His proposals, of course, have yet to stand the fire of criticism by the Commission before receiving consideration by the Senate and the chamber; therefore, it is possible that, as in previous years, the Minister's plans may undergo considerable modification before the coming Finance Bill becomes law.

Speaking generally, M. Clementel proposes to introduce no new taxation that will affect the taxpayers as a whole, but aims at securing the additional money required this year from certain sections of the community alone; the working classes, as might be expected from a Radical Socialist Ministry, if they are not given the benefit of the

London, E.C.3

reduction of any of the old burdens, are exempted from new ones. The principal characteristic of the new Budget, apparently, will be that it will put an end to the system of two distinct Budgets which has been in operation for the past five years, by incorporating the old "Special Budget of Recoverable Expenditure" in the ordinary Budget. The whole of the expenditure for the year is to be met from normal sources of revenue, and an end is thus to be put to the vicious system of borrowing. The Budget proposals for 1925, reduced to their simplest expression, may be set forth as follows:—

	Francs.
Estimated revenue	32,456,000,000
" expenditure	32,481,000,000
" surplus	25,000,000

The total estimated expenditure is composed of 24,779,000,000 of ordinary expenditure and 7,677,000,000 of expenditure of kinds which have hitherto been regarded as recoverable from Germany, but which the present Finance Minister has decided to regard henceforth as having to be met, for the time being, from ordinary taxation. In comparison with that for 1924, the coming Budget shows an increase of 1,183 millions in ordinary expenditure, and of 1,614 millions in what has hitherto been regarded as "recoverable" expenditure, or a total increase of 2,797 millions. To meet the total estimated expenditure of 32,456 millions, the Finance Minister estimates that the revenue from present taxation during 1925 will amount to 29,854 millions, leaving a deficit of 2,602 millions to be found from other sources. This amount he proposes to secure by:—

	Francs.
New taxation	1,777,000,000
Recettes d'ordre	50,000,000
Reparation payments by Germany	800,000,000
	2,602,000,000

The appearance in the Budget for 1925 of the amount that should be received from Germany during the year must be regarded, M. Clementel points out, as exceptional,

so far as the utilisation of money from this source for the purpose of meeting general expenditure is concerned. In future, in his opinion, the increasingly large amounts which France is expected to receive from the operation of the Dawes plan should be devoted to reducing the outstanding war debt, in order to inaugurate a policy of systematic financial restoration.

The proposed new taxation takes many and varied forms. The tax on turnover is to be extended to include all export sales, which have hitherto been exonerated from this impost. To the argument that this step will prove detrimental to French foreign trade, the Finance Minister replies that the exemption from this tax which French exports have hitherto enjoyed has been regarded abroad as a form of dumping, and has caused certain countries to impose extra import duties on French goods. Part of the yield from this tax is to be utilised to constitute a fund for insuring and re-insuring exportation credits. Slight fractional increases are proposed in the duties on Bourse operations, while new taxes of five centimes per 1,000 are proposed on exchange operations, and one centime per 1,000 on insurance premiums.

A much more important new tax proposed is one on the increased capital values of real estate and buildings acquired since January 1, 1919. This will be of a progressive character, starting with increased values of over 10 per cent., below which figure they will be exempt. A similar progressive tax is proposed in regard to increases in the sale price of business undertakings. Businesses which have been resold at enormous profits within a year or so after purchase—of which thousands of instances have been recorded during the past three or four years—M. Clementel considers should be severely dealt with for fiscal purposes. The official fees paid to company directors for their attendance at meetings are also, it is proposed, to be more heavily taxed.

Two of M. Clementel's proposals are certain to be bitterly fought by the classes aimed at. One consists of the members of the liberal professions, who it is suggested do not at present meet their fiscal obligations to an extent which might be expected from them. One reason for this is that doctors, barristers, &c., either keep no books at all, or else keep them so irregularly that their records do not afford the revenue authorities means to check the accuracy of the income-tax declarations filed by them. The Minister proposes that in future the revenue officers shall have the right to assess members of this class on the basis of the visible evidence which they give of their financial situation (such as their scale of living, the amount of rent and other expenditure), and that this class of taxpayers should be compelled to keep at least a record of all receipts and disbursements.

The second class attacked is an even more important one, from the political point of view. M. Clementel proposes that in future the agricultural classes, who at present are assessed for income-tax on a ridiculously low basis, shall pay at approximately the same rate as those who derive their incomes from commercial undertakings, with the proviso that all incomes of less than say 20,000 francs a year which are derived from agricultural undertakings shall remain assessed at the present nominal figure. The Minister also proposes certain further measures for the prevention of "tax dodging," and that, with the same object in view, agreements shall be come to with various foreign countries, notably Belgium and Switzerland, in order to enable the revenue authorities to reach capital concealed abroad.

As a means of rendering the tobacco and match monopolies more productive, it is proposed that these shall be placed on a better industrial footing by the adoption of modern methods of exploitation. In order to assist in reducing the cost of living, which is being seriously considered by the Government, it is proposed by the Finance Minister that the turnover tax in respect of transactions connected with wheat and flour and salt tax shall be abolished.

The Minister was exceptionally firm in his insistence that for the future there must be no more borrowing to avoid the imposition of new taxation, but rather spoiled his argument by informing the Commission that, after all, the Government are of opinion that it will be necessary to issue just one more loan, a "liquidation loan," as he

termed it, which will be utilised for the purpose of raising money to wipe out the deficits that have arisen from former budgets. With that exception, he said, borrowing in future will be confined to loans for the consolidation of the floating debt and for the completion of the restoration of the devastated regions.

The experts at the Ministry of Finance now estimate that the amounts still remaining to be paid in respect of war damages are much less than have previously been reported, as the revision of some of the claims that has recently been carried out has resulted in substantial reductions. Measures are to be introduced into the Finance Bill which will give *sinistrés* the choice between various methods of settlement, which it is expected will reduce still further the amount still unpaid. Taking everything into account, it may be estimated that the annual charge for interest on the capital that has still to be raised to complete the payment of war damages will not be more than 1,500,000,000 francs. When it is realised that the Budget for 1925 includes provision to meet part of this sum, which will become due for payment before the end of next year, it will be seen that future budgets will not be seriously swollen progressively for this cause. Other things being equal, it is now becoming clear that, so far as the devastated regions are concerned, the worst is over.

GERMANY.—LOAN COLLAPSE—POLITICS—FINANCES—PRICES—FOREIGN TRADE IN AUGUST—INDUSTRY AND CREDIT.

(FROM OUR CORRESPONDENT.)

BERLIN, September 30.

THE collapse of the speculation in loans overshadows other events of last week. Very heavy losses—which it is believed, however, will not cause any serious payment difficulties—have been suffered, and very large profits have been made by speculators who got out in time. The rise this year in loan quotations far exceeded the records of speculative stocks; Forced Loan, the most extreme case, rose actually 10,000 per cent. between January and August. Apart from home losses, the matter is important, because a great many foreigners, in spite of warnings, bought considerably, and it is feared that the collapse may injure Germany's credit, prejudice the Reparations Loan, and frighten off intending givers of credit to industry. The German Government is not responsible. It declared repeatedly, and enacted in law, that no "Aufwertung," or restoration, would be even considered until "Reparations are fully paid," and it gave no promises even for that remote date. Probably its weakness in granting partial "Aufwertung" of long-term private debts after it had been declared that it would do no such thing, encouraged speculators to hope for an amendment of the law regarding Loans; and certain Reichstag parties, by making reckless promises to public creditors during the May elections, and by keeping up the comedy in the "Restoration Committee" of the Reichstag, encouraged speculators' unrealisable hopes. The collapse took place last week, not because the Government's announcement in any way aggravated the position of loan-holders, but because, by promising a very limited relief, on a pure charity basis, to certain victims of the loan depreciation, it put a seal on its often-repeated decision against general "Aufwertung." The promise is that loan-holders who were original subscribers, and who are destitute, will get pensions at the rate of 2 per cent. a year on the subscribed sums, but not in any case exceeding 1,000 gold marks a year. These pensions are not transferable, and, except within narrow limits, not inheritable, and then only by destitute heirs. The necessary funds will come from the yield of inflation-gains taxation. Had this concession, now made under strong pressure, been announced a year ago, it would probably have sent loan quotations up, because it would have been taken as a first sign of liberality towards bondholders; but, coming at a time when exaggerated hopes had already been discounted in

the Bourse quotations, it inevitably brought a crash. Comparative quotations at the beginning of the year, and at the close of the last two weeks, were:—

(In Billions of Paper Marks per 1,000 Marks nom.)

	Dec. 31, 1923.	Sept. 19, 1924.	Sept. 26, 1924.
War Loan	0.050	1.148	0.485
Fours	0.409	1.500	0.725
3½ per cents.	0.250	1.490	0.660
Threes	1.250	2.025	1.285
Colonial Fours	1.550	10.600	4.500
Forced loan	0.0006	0.025	0.011
Prussian Threes	0.300	1.760	0.900

At the end of last week practically no buyers were to be found, and much lower rates than the above were quoted in unofficial dealings after Bourse hours. Yesterday there was a slight recovery. The question of municipal loans is still open, but the Finance Minister expresses doubt whether the municipalities are in a position to concede general "Aufwertung." While the cities have valuable profit-earning properties, created out of borrowings, their revenues as a whole depend upon subventions from the Republic, and are at present based on the assumption that their debts are practically repudiated; partial recognition would, therefore, reopen the question of the financial relations between the Republic and the local governments. Other developments make it doubtful whether the Government would not have done better to adhere to its first decision of 1923, that no debts, private or public, should be restored. Fairness was not attained by the 15 per cent. grant to private debenture and mortgage creditors, because other classes of losers from the depreciation got nothing, and now all classes with grievances are demanding redress. The savings bank depositors are unsatisfied with their treatment, and the insurance companies, mortgagees for large sums, demand that they be compensated where mortgages, before the limitary date, were paid off for a fraction of their original gold values, whereas the present law, in principle, grants the 15 per cent. only when they were paid off for practically nothing or not paid off at all. The controversy has brought new unsettlement into business, which had begun to adjust itself to the supposedly final conditions of the Third Taxation Decree of February.

The German Nationals still desire to enter the Cabinet, but reject Dr Stresemann's declaration that, if they do, the present policy of the middle parties must continue to dominate. The prospect that the League of Nations may prolong the operation of Art. 276 of the Peace Treaty is badly taken, in particular because of the vague wording "with or without alteration," which seems to give power to make the conditions severer than they are. The Article has been, and still is, being violated by German laws and administrative actions, and there is no use prolonging it unless it is to be enforced. The Ministry of Finance's return for the second ten-day term of September shows revenue 230,387,700 gold marks, expenditure 160,530,500 gold marks. Revenue from April 1st to September 20th totalled 3,266,636,527 gold marks, expenditure 3,107,887,727 gold marks, whereof 230,844,179 gold marks went on Gold Loan redemption. The Minister of Finances warns against the belief that the finances are wholly satisfactory, pointing out that the redemption of the Loan was made possible only by receipts from certain non-recurring taxes. The Ministry has declared in principle against the Sales Tax as being injurious to business, and foreshadowed a further reduction, and ultimately abolition.

The Cabinet has promised a continuation of the price-cutting policy. So far this has had no effect on the indexes. The official wholesale index number on September 23rd was 130, against 128.6 a week before, and a low point of 115 in July; the cost of living index number for the 24th is 117, against a low point of 104 in February. Prices of important commodities have, however, fallen very much. The Pig-iron Syndicate has reduced rates (except for Luxemburg foundry iron) by 6 to 8 gold marks per metric ton, according to district. Coal prices are below half their maximum rates of 1923, which, however, was attained during the inflation time, when there was a coal tax, and when to gold marks prices payable in paper marks was always added a big "depreciation risk premium":—

AND INVESTMENT BUSINESS UNDERTAKEN.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

	Gold Marks. Sept. 24, 1923.	Gold Marks. Dec. 18, 1923.	Gold Marks. Oct. 1, 1924.
Standard Ruhr (Foerderkohle) ..	38.46	24.44	15.00
Foundry coke	58.49	37.90	25.00

The "Foerderkohle" price in January, 1914, was 12 to 12.75 marks. Metal products formerly price-fixed by the Steel Syndicate have also fallen, being, in gold marks:—

	Mar., 1924.	Oct., 1924.
Ingots	116	90
Blooms	124	96.97
Billets	130	105
Bars	150	112
Thick sheets (5 millions and over) ..	160	132
Thin sheets (under 1 million)	190	157

These are approximate prices; in actual trading there are great disparities. The Foundries Association has reduced the prices of construction and machinery castings by 1.50 gold marks per 100 kilos.

Foreign trade in August shows a large export surplus. Against an export surplus, the first of the year, in July of 17 million gold marks, the August surplus was 140 millions, the main cause being a heavy drop in imports, although exports also slightly increased:—

(In 1,000 Gold Marks.)

Imports—	August.	January-August.
Livestock	4,945	52,606
Food and drinks	152,426	1,337,545
Raw materials	148,317	2,351,892
Half-finished ditto	42,371	529,277
Manufactures	89,141	1,154,171
Gold and silver	11,023	60,906
Totals	448,223	5,486,397
Exports—	August.	January-August.
Livestock	1,957	5,378
Food and drinks	50,398	249,922
Raw materials	43,855	254,674
Half-finished ditto	37,054	254,647
Manufactures	454,718	3,215,224
Gold and silver	1,430	10,135
Totals	589,392	3,989,980

The main declines in imported raw materials were in textiles (flax excepted), hides, and coal, which was only 520,000 metric tons. Iron imports declined from 36,731 tons to 10,960 tons, and half-finished iron and steel from 9,690 to 1,067 tons. The decline of 56,000 tons in imports of manufactures was in almost all branches. Imports of rolled iron and steel and of iron and steel wares (other than machinery) fell from 57,914 tons in July to 30,918 tons. The export figures, according to groups, show little change. Textile finished goods increased by 10,440,000 gold marks; dyes exports declined by 8,900,000 gold marks. Exports of leather goods, furniture, furs, musical instruments, and toys increased. Exports of rolled iron and steel and iron and steel goods (machinery excepted) increased by 7,100,000 gold marks. Machinery exports were 24,224 tons, against 25,442 tons in July. Machinery exports have increased considerably as compared with the first months of the year, but remain far behind the 39,895 tons which was the monthly average of 1922. The trade figures, despite the export surplus, supply no cause for optimism, in view of the need for payment balance purposes of a large increase of exports of finished goods of high value, involving also an increase in raw material imports.

The condition of industry is only slowly improving. There is new dullness in the heavy iron and steel branches, and the coal superfluity continues. The number of publicly supported unemployed, now given for the whole Republic, was 588,000 on September 1st, and 577,000 on the 15th. In Berlin industry there is a marked improvement. Considerable orders are being received from Russia, where the Aniline concern is establishing large consignment depots, the deliveries not to be under 2,000,000 kilos of coal tar dyes in the first year. The movement against

high import duties is increasing. At a recent meeting last week of the Union for Social Policy, a number of representatives of business and social science declared that Germany depends, even more than before the war, upon the international division of labour, and that to increase the cost of living by State measures is undesirable. The bankruptcies report shows that 90 per cent. of recent failures were of concerns founded since 1918. The rate of interest is still falling. An attempt is being made to reduce the great disparity between rates charged by different classes of credit-givers and in different districts. Dissatisfaction is felt with the results of the autumn fairs; it is considered that the fair movement has been somewhat overdone.

CANADA. — HARVESTS — UNEMPLOYMENT SITUATION — THE FEDERAL REVENUES — RISING PRICES — FACTORS IN THE GENERAL POSITION — EFFECTS OF EUROPEAN SETTLEMENT.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 15.

HARVESTING operations are now in full swing throughout the prairie provinces, and wheat from the earliest fields is already moving towards the seaboard. In Manitoba, where the harvest is more than half completed, the yield promises to be well above the average, and the samples are reported to be good. Rain has retarded harvest work in some districts, but only the very late fields will now be exposed to any danger from rust or frost. From Saskatchewan during the early days of September came ominously numerous reports of damage from frost and high winds; in some areas the latter shelled out a large part of the oat crop, and did substantial harm to wheat. Cutting is now fairly general in Saskatchewan, and while the crop has shown a great improvement in the past month, it falls far short of the hopes of the farmers, many of whom, especially in the more northerly districts, will be faced with a difficult winter. In Alberta ripening of grain has proceeded very rapidly, and except in the districts north of Edmonton, where there has been too much rain, the binders are everywhere busy. There will be no bumper crop, but it will be larger than the average for the five years preceding 1923. British Columbia has enjoyed a spell of very warm weather, which has ripened her fruit crop and good yields of apples, plums, peaches, and pears are now being garnered. In the Eastern provinces the grain crops have, save in very backward districts, been already harvested and threshed, and on the whole the yield is rated satisfactory. Prices both for grain and livestock are better than last year, and the farmers will therefore have more purchasing power.

But, despite this fact, the business outlook for the winter is far from satisfactory. Merchants at the various summer resorts have done well out of the seasonal influx of visitors, many of them being Americans with ample purses, but there is general complaint about the stagnation of business in the cities. Harvest operations have absorbed much less labour than usual, and neither the railways nor the lumber camps are prepared to undertake much work this autumn and winter, with the result that unemployment at this early date is already serious in many urban centres. Indeed, so serious is the situation that the Government convened last week in Ottawa a special conference of representatives of various bodies to discuss the problem and explore solutions. The conference recommended that all governments should advance as much as possible their programmes of new public works; it was also agreed that emergency public works would probably have to be started, and it was urged that municipalities should pay 50 per cent. of their cost, and the Federal and provincial Governments 25 per cent. each. A resolution demanding very stern restrictions upon immigration was also carried.

But it is plain that the Federal Government cannot afford any large expenditure upon public works, in view of the revenue situation. There has been a slight increase in the income-tax returns, but the Customs and Excise revenue for the five months ending August 31st was only \$99,855,414, which is a decrease of 26 million dollars from the \$125,967,740 collected during the parallel period

of 1923. Already in five months the revenue shows more reduction than Mr Robb allowed for during the whole fiscal year, and in August alone the decrease in the Customs and Excise items exceeded 6 million dollars. Nor are the prospects good for a recovery during the winter months.

Another disturbing feature is the rise in the cost of living lately visible. The index number of wholesale prices compiled by the Dominion Bureau of Statistics, and covering 236 commodities, shows a rise of 4.8 points in August, the figure being 158 as compared with 153.2 in July. Sixty-six price quotations were higher, 32 were lower, and 138 were unchanged.

If this trend continues, and the unemployment situation becomes serious, it can be prophesied with certainty that, as soon as the turn towards fresh prosperity in the United States, which is now visible, gathers momentum, there will be a revival on a large scale of the southward exodus which has been checked for the last three months. Altogether, the economic condition of Canada presents some baffling features. The Canadian dollar is now slightly over par in New York, and last week \$26,000,000 of Canadian National Railway 30-year 4½ per cent. bonds, which were offered in the New York market at 96, and therefore would yield 4.75 per cent., were snapped up so speedily that the books were closed by the underwriters at 11.30 a.m. on the morning of the issue. Accordingly, the national credit seems to stand good in the eyes of the nearest independent observers, and the presumption would be that Canada's prosperity could bear favourable comparison with that of the adjacent Republic. But anyone who has had the opportunity of the writer of visiting within the same fortnight leading cities on both sides of the international boundary cannot fail to be struck with the difference of temper and atmosphere visible. South of the forty-ninth parallel there has been a serious business depression during the summer months, but it is rated a temporary episode, and there is a general note of optimism and confidence about the future. North of the boundary pessimism about the economic and financial outlook and general misgivings about the future of the Dominion are rampant. Taxes are much lighter south of the boundary than north of it, and while prices are lower, wages are higher. How, it is asked, can Canada hope to hold her population as soon as a demand for labour revives in the United States, as it will, and how if she cannot hold her present population, can she hope to make profitable and efficient use of the huge physical plant which she has accumulated, and secure enough returns from production to meet her fixed charges of different kinds? It is customary in some quarters to fix a large part of the responsibility upon Canada's heavier war debt in proportion to her population, but the explanation will not suffice. There are two more serious factors, the more important being the excess of physical equipment referred to above. About the year 1908 development plans were being sponsored by politicians and entrepreneurs of various kinds on the basis that Canada by the year 1925 would have a population of 15 million people. 1925 is reasonably near, but the population does not exceed 9 millions. The result is excessively heavy costs for a number of services; few countries have to face such a heavy aggregate transportation bill, and it is reflected in the high price of commodities of all kinds. Secondly, the country is overburdened with government, and afflicted with an army of officials far beyond its needs. Most of the elements of great potential prosperity are available, huge and varied natural resources, a hardy and industrious population, and good markets, but still it seems to delay its advent. The sight, will be beneficial, but Canadians themselves must undertake some economic and administrative surgery to remove some of their present disabilities, or they will continue to bewail recurring deficits at Ottawa, and a perennial southward exodus.

Canada expects to get some share of the orders which it hoped will flow from Europe to America as the result of the acceptance of the Dawes plan. Germany is known to be in the market for large quantities of silver for coinage purposes, and some percentage of her requirements will be drawn from the mines of northern Ontario.

Her importations of iron ore from the mines of the British Empire Steel Corporation at Wabana, Newfoundland, are also likely to be resumed. But in milling circles there is considerable alarm at the news that the German Government, to pacify its agrarians, may impose a heavy duty on imports of both wheat and flour. During the last fiscal year Germany imported Canadian flour to the value of \$10,313,280, and after Britain, proved herself Canada's most valuable customer. Indeed, Canadian flour was well on its way to oust American flour from its hold on the German market.

UNION OF SOUTH AFRICA.—CAPITAL IN THE MINING INDUSTRY—GOVERNMENT'S PROTECTIVE POLICY—DIAMOND PRODUCTION AND SALES—MONEY-COST OF MINERS' PHTHISIS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, September 3.

THE Union Mines Department issued a formidable array of capital statistics as at the end of last year. Of gold mines, the issued capital is £58,152,200. The Rand area is responsible for £52,815,000; producing gold mines have a capital of £44,000,000, of which £24,400,000 is in receipt of dividend, last year's total being £8,460,000, besides £331,200 in liquidation dividends paid by five companies. Some 6½ millions have been embarked on gold mines which are not working, and just over two millions on developing mines. Gold mines in the so-called "outside districts" have an issued capital of £5,337,000, of which two and three-quarter millions have been embarked in dormant mines, and £350,000 in developing concerns. Rather less than a million is in receipt of dividends. Taking the Rand figures so as to avoid undue complexity, the total issued capital, £33,200,000, was in respect of property equipment, &c., and £19,600,000 for cash. Debentures figure at £11½ millions issued, but the net amount redeemable has been reduced to less than four and three-quarter millions. It is a little disconcerting to see that £3,320,000 is in respect of mines, which, though producing, are not dividend-paying. These issues have been made by some six companies, of which three are new producers in the Far-East Rand. Randfontein (£1,165,660 in debentures) has since re-entered the dividend list. Rand companies have received over 17 millions in premiums, of which about nine and a-half have been written off. Temporary advances amount to rather over three millions. Just 16½ millions have been transferred from appropriation account. The book value of mining property is £29½ millions, and that of shafts and mine development just over £22 millions. On equipment £1,500,000 was spent during the year, making the net value £31½ millions, thus constituting it the major item in the industrial balance-sheet. The mines have about a million of investments, while cash and other assets total £9 millions. The total balance-sheet figure is £102½ millions. Coal mines of the Transvaal have an issued capital of just upon £5 millions, and base mineral mines of rather more than half that sum. The nominal capital of the Transvaal mines of all classes is £71 millions, of which £5 millions are uncalled, while the outstanding debentures are £5½ millions.

Diamond mines in the Cape Colony represent nearly £6 millions, and other concerns about a million, they are also the principal factor (at just under two millions) in the £3,600,000 of the Orange Free State. Natal's four millions is almost exclusively in respect of coal mines. The issued capital of all mines in the Union is £80,646,500, and the outstanding debentures £7,500,000. The specification of the former shows that £28,707,000 was for cash, and £51,940,000 for property, equipment, shafts, &c. The net premium on shares is just under £8 millions, while temporary advances approach £6 millions. Funds transferred from appropriation account are slightly over £21 millions; in addition to the figure shown above for the Rand, the diamond mines have so treated £3,350,000. The net value of mine equipment is £39 millions.

The Government has just reconstituted the Board of Trade and Industries, which is to consist of three mem-

HARRISONS & CROSFIELD, LTD.
1-4, GREAT TOWER STREET, LONDON, E.C.3.

WITH BRANCHES AND ASSOCIATED COMPANIES THROUGHOUT THE FAR EAST AND IN NORTH AMERICA, AUSTRALIA AND NEW ZEALAND.
THE COMPANY ACTS AS AGENTS FOR MANUFACTURERS AND OTHERS, AND INVITES CORRESPONDENCE WITH THE VIEW OF DEVELOPING FOREIGN TRADE.

bers and a chairman. It is impossible to have every interest represented, as there are hundreds of interests all asking for representation. In the course of debate in the House of Assembly, the Minister of Mines and Industries said that existing tariffs were "meant to be revenue-raising machinery; the object [of Clause 2] was that the tariff should be based on scientific lines, so as to answer the needs of industry and be in accordance with the policy for which the Government stood." The Board would go into the whole question of dumping, and make the law so clear that questions of interpretation would not arise. Mr Beyers, as a lawyer, is surely an optimist if he thinks so! Mr J. W. Jagger (formerly Minister of Railways) declared that the Minister was creating a Board of one particular way of thinking. "As for the idea of a scientific tariff, the Minister was a child in these matters, and nobody had yet succeeded in framing a scientific tariff free from anomalies." The Minister, in winding up the debate, declared that reasonable protection was not inconsistent with the interests of the farming industry. The Government was not out for the spoliation of our primary or mining industries. "There was no doubt that the time had arrived for real protection in order industrially to develop South Africa. Germany and other countries had been built up on protection. We don't want to run protection mad, but must have a certain meed of protection. Local patriotism was needed to abolish the feeling that everything imported from abroad was superior to the local product." I would add that equal or better quality of the local article is every whit as necessary, many "lines" are deficient both in "get up" and quality.

During the first six months of the year the production and sales of diamonds were as under:—

	Production.		Sales.		Value Realised per Carat.
	Carats.	Value.	Carats.	Value.	
Transvaal	437,169	£1,127,538	403,751	£1,069,938	53/
Cape	639,493	£2,361,142	471,807	£1,756,513	74/5
Orange Free State	138,755	£437,386	143,819	£457,014	63/7
Union S.A.	1,215,416	£3,926,066	1,019,378	£2,833,465	64/5
Whole year 1923	2,053,096	£6,038,207	2,584,270	£7,733,368	59/10

It will be seen that production in carats was about 20 per cent. in advance of the sales, whereas sales last year, as well as in 1922, were considerably in excess of production. Of the total production, 147,877 carats valued at £1,078,425 came from alluvial sources, the Bloemhof, Christiana diggings in the banks of the Vaal River, yielding 81,405 carats, valued at £583,877. The average value of alluvial stones was 145s 10d per carat, compared with 53s 6d for the mines' production. The Kimberley mines produced 556,163 carats, valued at £1,820,656, or about 65s 6d per carat; and the Premier Diamond Mine 348,359 carats, valued at £525,435, or just over 30s per carat.

Some non-contentious amendments have been made to the Miners' Phthisis Act. From the inception of this legislation £6,600,000 has been paid, while there is a further gross liability of £9,000,000 (the present value of which is about £5,000,000). The contribution of the mines is £200,000 a quarter, the method of assessment by raising the factor of silicosis rate from 35 to 50 per cent., the factor of earnings being reduced accordingly from 45 to 30 per cent., the remaining 20 per cent. being raised as now on the basis of normal income-tax. This should reduce the levy on modern mines, which usually have low silicotic rates. Widows who remarry are to receive a lump sum of £120, instead of losing all benefits. Ultimately there will be a saving of £1,500. A consolidating measure is to be brought in next year.

SWEDEN.—THE BUSINESS OUTLOOK—TRADE BALANCE—LABOUR AND UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 16.

As a rule, the holiday season is followed by a very busy time. At present, however, quietude is maintained, the reason for which is rather difficult to explain. At first, when the European agreement was signed, hopes were stimulated for a short time. But fears of results from the Dawes plan subsequently produced their effect on Swedish trade. It does not look, however, as if the fear of future German competition, &c., is as important for us as it is for other neutral countries. We have always had German competition here in certain branches, and expect we always shall have, but anything similar to the dumping period we had some years ago, when the German exchange was so exceedingly low and the Swedish crown above par, we do not expect to see again. The labour problem here is difficult, the worst aspect at present being the growing tendency to break agreements. Every now and then various sections, although their agreements are still in force, go on strike when they find the moment most convenient. Should this continue, it will be most alarming. The Swedish workman as a rule is a well-paid man, in most branches his wages have risen more than the cost of living. Unemployment, now practically non-existent for labourers, normally increases towards winter-time, and may be greater than expected, owing to the dull outlook at the ironworks and in the timber trade. Frequently of late it has been reported that ironworks and saw-mills are closing down or dismissing workmen, because the prices obtained are so bad, and the outlook so poor. The timber shipping, which usually is very lively at this time of the year, is much less than normal. The pulp market, on the other hand, is better off, and sales are frequently made at firm prices. Owing to the reduced timber export, freights are low, but up to the present the amount of laid-up tonnage is practically nil, which shows that Sweden in this respect is more favourably situated than some countries.

Reports concerning the crops are on the whole not very favourable. The results are expected to be below average. The good weather during the summer has not been able to restore the damage caused by the long winter and rough weather during the spring. The quality of the crops is, however, expected to be good. July seems to have been the turning point of prices in general, and the upward movement of a good many commodities is notable. Whether this is only a temporary movement, whether prices will stabilise or fall again, is difficult to say, but it is not impossible that costs in general will remain steady, or slightly increase. The monthly index issued by the Board of Social Welfare (including foodstuffs, light and fuel) shows an increase from 159 for July to 163 for August.

The trade balance for August, of which preliminary figures now are available, shows an export surplus, which is estimated at five or six million crowns. However, the final trade figures for the whole year cannot possibly show an export surplus, as the import surplus at the present moment is round about 150 million crowns. The import of corn is still considerable, and the import of textiles is greater than during July, although considerably less than in August, 1923. The import of mineral oils shows a reduction both compared with July this year and August last year, while the total import for this year is bigger than it was for same period last. Imports of coal and coke are higher. On the export side, timber exports of this year are considerably below the quantities for same period last year. The contrary is the case with pulp and paper. Iron ore exports show about the same figures as they were at this time last year.

NORWAY.—WAGE SETTLEMENT—THE PUBLIC DEBT—OCTOBER ELECTIONS—TRADE POSITION.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, September 10.

The salient point in the economic life of this country during the last few weeks is the settlement of the workers' wage question. The agreement came off rather smoothly

as a compromise, in which, however, the workers were the chief gainers. Everybody saw clearly that concessions on the part of the employers were necessary, because the cost of living had been rising considerably, but the concessions exceeded what most people had thought feasible for the industries to concede.

The Industries' Fair in this city has just been closed for this year, and perhaps for ever. The interest taken in it both by the commercial world and by the public has been dwindling, and the feeling seems to be gaining ground that there is little advantage in it, and that it will never serve any purpose like the fairs at Leipzig or Lyons. While in 1921 there were 406 exhibitors, 11,000 buyers and 80,000 visitors, the numbers this year were 204, 7,000 and 60,000 respectively.

According to a recent publication of the Finance Department, the Norwegian State debt at present amounts to about 2,008 million kroner. Of this about 1,718 millions form the funded debt, and about 290 millions the floating debt. Somewhat less than half of the funded debt is borrowed in the home market, while the rest consists of foreign loans. Practically the whole of the floating debt consists of inland loans, a great part of which will now be funded. The increase of the Public Debt since 1914 is indeed considerable, and it is undeniably a heavy one for a small nation of little more than 2½ million people. But it must be remembered that, calculated as it is, according to the present exchange values of the £ and the money value as compared with pre-war times, it is hardly more than 750,000,000 kroner, and given normal development of the country's resources, and careful management, the debt will be promptly discharged both as to capital and interest. It must also be borne in mind that the country has acquired important assets for this money, such as railways, water power, &c.

Parliamentary elections take place every three years in this country. This coming October being an electoral month, the campaign is now in full swing, and it is quite evident that the contest will be a very fierce one. At the suggestion of the famous ex-Premier, Chr. Michelsen, of Bergen, the late Premier, Mr Berge, has been nominated by the Conservative-Liberals as the first representative from that important town, which is also the domicile of the present Premier, who has been nominated by the Radicals as their first representative. Another ex-Premier, Mr Knudsen, who was at the head of the Government during the greater part of the world-war, is, though a man of 76, canvassing the extreme north of the country. That four Premiers or ex-Premiers are already in the field shows the importance of this year's elections.

Meanwhile, business generally is quite satisfactory, and foreign trade not below the mark. The wood trade, though, is slack, and the forest-proprietors will hardly find it possible to increase their prices for timber, and will even, perhaps, have to make concessions to the manufacturers of wood pulp, cellulose, and paper. The exchanges keep very steady, with a slight tendency in favour of this country.

SPAIN.—FOREIGN TRADE—RECONSTRUCTION—MOROCCO.

(FROM OUR CORRESPONDENT.)

MADRID, September 20.

The following statistics are now available, and afford an opportunity of comparing Spanish foreign trade in 1923 and 1922:—

Imports.	(In Thousand Pesetas.)		Increase (+) or Decrease (—)	
	1922.	1923.	in 1923.	
Live animals.....	18,572 ..	29,204 ..	+ 10,632	
Raw materials	971,815 ..	966,909 ..	— 4,906	
Manufactures	1,399,954 ..	1,621,712 ..	+ 221,758	
Food	648,750 ..	441,715 ..	— 207,035	
	3,039,091 ..	3,059,540 ..	+ 20,449	
Exports.	(In Thousand Pesetas.)		Increase (+) or Decrease (—)	
	1922.	1923.	in 1923.	
Live animals.....	3,630 ..	885 ..	— 2,745	
Raw materials	329,404 ..	369,883 ..	+ 40,479	
Manufactures	281,022 ..	343,034 ..	+ 62,012	
Food	781,456 ..	877,917 ..	+ 96,461	
	1,395,512 ..	1,591,719 ..	+ 196,207	
Adverse balance	1,643,579 ..	1,467,821 ..	— 175,758	

Foreign business has been a little more active in 1923, and the adverse balance has decreased by 175 million pesetas, but the gap between exports and imports is still enormous at 1,468 millions. The demand for foreign money to pay for imported goods is nearly double the demand for pesetas to pay for our exports. Although this position is considerably modified by invisible exports, such as the remittances from emigrants in America, tourists, &c., there remains undoubtedly a large economic balance against Spain, which is one of the permanent influences acting against the peseta.

The Government, following the report of the Commission appointed to study it, have dismissed the proposal submitted by the Seite (Sociedad Española de Industrias y Traccion Electrica) for reconstruction plans involving capital expenditure of 3,000 million pesetas. The Spanish Federation of National Industries, which had strongly opposed the plans of the Seite, has submitted to the Government an alternative proposal for the development of railway construction and public works. They propose that the Government should capitalise the annual grants in the Budget under the head of "Promotion of Industries." A sum of 5,000 million pesetas could be obtained in that manner, and would be devoted to the execution of an extensive system of railways and public works, according to the plans already studied by the official departments. The issue of capital might be effected in Treasury bonds by the increase of the funding debt, or by the creation of a special debt devoted to public works. The difficulty here is whether the market would be able to provide the 625 millions per year necessary to complete the work within eight years, as proposed. The national savings would not be sufficient to cover that amount besides meeting the immediate Government requirements for expenses in Morocco, the Budget deficit, and current industrial issues. It would be necessary, therefore, to have recourse to foreign capital, but that is precisely what the Spanish industrialists want to avoid. The new proposals have therefore very little chance until the economic position is straightened by a definite solution of the Morocco muddle, which might allow a permanently balanced Budget.

As a practical outcome of the new railway organisation, the Government have approved (and the concession is already granted) the construction of a narrow-gauge railway from Ontaneda-Burgos-Soria-Calatayud to establish direct communication between the Cantabric Sea (at Santander) and the Mediterranean (at Valencia). The length is 415½ km, with a maximum cost of 348½ million pesetas, on which the Government guarantees a minimum interest of 5 per cent. Other railways whose construction is contemplated are the line Avila-Peñaranda, to shorten the distance from Madrid to Salamanca and Portugal, and the line Puertollano-Cordoba, still more necessary, as it will shorten the distance between Madrid and the largest towns in the South—Cordoba, Seville, Cadiz, Malaga, and Algeciras. The concession of all the telephone services in Spain has been granted to the Compañia Telefonica Nacional de España, organised by the Banco Urquijo and the Banco Hispano Americano, in connection with the National City Bank of New York and with a telephone company of the U.S. of America. There were only two other competitors—Siemens and the Ericsson Company, Limited, of Sweden, whose proposals were disregarded.

But all the movements towards the economic reorganisation of Spain are always thwarted by periodical outbursts in Morocco. The present rising in the West of the zone has been more extensive and sudden than the previous ones, and the situation was very grave at the end of August and in the first fortnight in September. But the mobile columns were able to extricate themselves by falling back to Tetuan. The Tetuan-Tangiers road has been cleared, and operations on a large scale are being initiated to the south in the direction of Shesuan. It may be that there is some hard fighting ahead, but the rising may very likely vanish as rapidly as it started. Then it is expected that the directory will adopt the policy already announced of reducing the military occupation to lines nearer the coast. The position in Morocco has naturally acted as a very depressing influence on the peseta since the middle of August.

Letters to the Editor.

THE PRIVATE SALE OF NEW SECURITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It would be interesting to have an authoritative expression of City opinion on the practice, now becoming increasingly common, of privately placing new securities which otherwise would be the subject of an offer to existing security holders or to the public at large. Up to the present none of the recognised authorities on the mechanism of long-term financing have made known their views, but the subject is well worthy of careful consideration.

The procedure has been made possible by the Stock Exchange rule, under which an official quotation can be applied for after the private negotiation of the sale of the securities in question has been advertised in at least two papers with that object in view. It involves the disclosure of a minimum of information—a concession which is sometimes extremely useful—usually including, among other things, the price at which the securities in question have been disposed of. But the chief advantage to the issuing concern, whether a company or public body, lies in the inexpensiveness of the issue. Quite apart from the avoidance of underwriting commissions, which may be taken as balanced by a lower price received for the security, comparatively little advertising cost is involved, while the trouble and expense of allotment are replaced by a mere matter of registration and subsequent transfer, in the case of registered stocks and shares, to the ultimate bona-fide investor.

On the other hand, this method of raising new money carries with it certain disadvantages, which must not be overlooked, to the existing security holders. In the first place, the issue may well escape their notice altogether, or be made entirely without their knowledge and consent, even though it may substantially affect their equity. In the case, for example, of a company issuing new debenture stock, the ratio between the share capital and bonded debt of the concern may be altered to such an extent as considerably to impair the security of the accustomed return on the capital invested, as well as the value of the rights in the event of a winding-up. Then, again, this form of issue gives existing holders no opportunity to obtain the new securities at an advantage over the general public—a privilege which many shareholders, rightly or wrongly, hold to be one of the incidental perquisites of their status as interested parties in the success or failure of the concern. This consideration is rendered more important by the possibility that a new issue, whether of the same or a senior class to those already outstanding, may in certain circumstances materially reduce the market value of existing securities. The effect on the latter may be all the more pronounced in that the private sale of the securities may not be followed by their rapid and widespread disposal among individual purchasers, while concentration in a few hands may lead ultimately to a marked slump, not only in their own value, but in that of all the other securities issued by the same company or body. Such an outcome, be it noted, would exert a reflex effect in placing the issuing concern at a disadvantage in any future financing it might find necessary to undertake.

As to the public, not already holders of securities of the issuing authority, certain disabilities are suffered, quite apart from those already indicated. In the first place, it is directly opposed to the economical utilisation of the savings of the community that the knowledge of any issue should not be as widely and rapidly spread as is the case when the ordinary procedure of a public offer is adopted. It is a further disadvantage that the private sale tends to the concentration of holdings in a few hands, and so to defeat the ends to be attained by a wide dispersal of capital and debt. And, finally, in unscrupulous hands, the method of private placing might lead to the disposal of the securities to individual investors at prices considerably in excess of those dictated by the judgment of the public, aided by full knowledge of the financial position of the issuing concern, regarding the adequacy or insufficiency of the yield and security offered.

On the other hand, disposal of securities by private negotiation and subsequent resale to investors through stock market channels avoids the disappointment and irritation so frequently associated with partial allotments in connection with attractive public issues, the relative desirability of the securities being immediately expressed in their market quotations. Furthermore, the procedure gives the investor the protection, such as it is, of Stock Exchange rules in making his purchase of the security—a safeguard which may be superior in some respects to that comprised in the prospectus rules of English company law, and in still more cases to that involved in the customary disclosures contained in an "offer for sale."

The investing public would be greatly assisted in their choice of suitable outlets for their capital by expert discussion of these and other aspects of a comparatively new development in high-grade company and public financing.—Yours faithfully,
W. F. CRICK, B. Com.

Books and Publications.

THE CONSUMERS' CO-OPERATIVE MOVEMENT IN FRANCE.*

THIS volume contains an excellent account in short compass of the growth and present position of the consumers' co-operative movement in France, and affords interesting comparisons with the corresponding movement in this country. The first French co-operative stores were founded in 1865, some 21 years after the Rochdale experiment, but they collapsed in 1870, and had no successors until 1880, and it is from that year that the starting point of the movement virtually dates. In 1885 the first French co-operative congress was held under the joint presidency of that redoubtable co-operator and economist M. Charles Gide and of M. de Boyve, and the movement seemed to be making some progress. But unfortunately in 1890 a split occurred between the Socialist co-operators and the bourgeois co-operators, a split which greatly weakened the whole movement until 1912, when the two groups of societies came together again on the basis of political neutrality. At that time, therefore, the French co-operative movement was far behind the British co-operative movement. Many of the societies were still in or little beyond the "heroic" stage, in which all the work of the store was done gratuitously in their spare time by members of the council of administration officiating in turn. Many had a capital of less than 500 francs, and only 32 societies had sales exceeding 1,000,000 francs. The M.D.G. (Magasin de Gros, or Co-operative Wholesale Society) had only been formed in 1906 by the Socialist societies, and made little progress until 1916.

A tremendous development of the movement set in during the war. Membership of the co-operative societies and sales grew amazingly, the former from 881,000 in 1913 to 2,498,000 in 1920, and the latter from 321 million francs to 1,838 million francs. Organisation was revolutionised by the employment of responsible paid managers, and by the federation of local societies in large regional unions, with regularly elected councils of administration, a managing director, and expert officials.

The French co-operative movement, like that of this country, is organised under two parallel central authorities. The M.D.G., as already stated, corresponds to our C.W.S., and is the commercial centre, while the brain of the movement lies in the Fédération Nationale des Co-opératives de Consommation, which corresponds to the Co-operative Union in this country. The large technical reforms of co-operative organisation since 1914 are said to be largely due to its initiative and propaganda. The M.D.G. has developed greatly since 1916, and has begun to produce in its own factories, but as yet on nothing like the scale of its English counterpart. An interesting development is the formation of a co-operative bank as a separate institution. One wonders whether the banking department of our own C.W.S. might not with advantage be established also as a distinct entity.

* "Les Co-opératives de Consommation en France." By Prof. Bernard Lavergne. (Paris) Armand Colin. 5 fr.

The whole movement has certainly made enormous strides. To some extent this has been owing to causes which applied generally throughout Europe. But there have also been causes peculiar to France, notably the removal of the impediment represented by the split in the movement during 1890-1912, and also the fact that the French Government encouraged the co-operative societies during the war, and made considerable use of them in fixing prices of necessities. In this respect the French Government was wiser than our own Government, which paid no attention to the co-operative societies, and even alienated them by its administrative actions framed largely by or in the interests of ordinary capitalist businesses. Our co-operative societies felt that they were unfairly treated, for example, in the matter of foodstuffs distribution and by military service tribunals. It is mainly the feeling that fair play is only to be secured by looking after themselves that is driving them into the sphere of politics. French experience might, we think, be regarded as a warning against lightly entering into the political arena, at any rate under the wing of any particular party.

REDUCTION OF SHARE CAPITAL.*

THIS is a second edition of Mr Simonson's book, and brings the law on the subject up to date. Applications to the Courts for orders confirming the reduction of the share capital of joint-stock companies are probably more frequently made at present than ever before. Successful companies may find it desirable, and unsuccessful companies often find it necessary, to reduce their capital. It is the unsuccessful companies which are chiefly responsible for the increased number of applications, and this is due, no doubt, to the extraordinary economic conditions following the Great War. The book contains tables of cases and of statutes, followed by chapters on reduction of share capital, and an appendix with forms and precedents. The index is unusually full, and affords a good and useful key to the contents.

* "The Law Relating to the Reduction of the Share Capital of Joint Stock Companies." By Paul F. Simonson, M.A. Oxon. Barrister-at-Law. (London) Sweet and Maxwell, Limited. 10s 6d net.

THE A B C'S OF BUSINESS.*

THIS little treatise is written in an admirably clear and simple manner. It bears throughout the mark of the master mind, and is easy and pleasant to read. The subjects discussed and explained include, amongst others, the misunderstanding of money, wages and wealth, the elements of banking, business consequences of the war, speculators and markets. Things are not always what they seem; thus the man who buys futures seems to be speculating in a commodity, but he is really doing exactly the opposite. He is eliminating from his business all risks due to fluctuations in the commodity with which his business is concerned. On this subject the author says:—"Nothing can prevent fluctuations in the price of commodities, but this highly ingenious method has been found for keeping them out of the manufacturing business and distributive trade, so as to allow these businesses to be conducted with safety, on narrow margins of reasonable profit, and in the enjoyment of good bank credit. These market operations in futures conducted by business men for the purpose of hedging themselves against speculative risks are more or less complicated, are carried on in strange terms of language, are transacted by comparatively few people, and are therefore but little understood by the American public. We are mostly of the belief that dealing in futures has no higher or more laudable purpose than shooting craps, and our statesmen now one takes the trouble to explain to them the truth about are elected." Anyone of average intelligence can understand this book. It should be read and passed from hand to hand by the working man, who should know about the elements of business; and about economic laws which were enacted by no legislature; which cannot be repealed; and which are self-enforcing laws with severe punishments for disobedience.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET, October 8. ACCOUNT, October 9.

EVIDENCE increases daily of the manner in which the public interest is occupied in stocks and shares. Political affairs at home and abroad make little difference to the volume of business which is flowing into the markets. People are paying very scant attention to mines, but money is going steadily into gilt-edged stocks and into industrials. The hectic buying of tea shares has subsided to some extent, but the dividends now being declared by tea-producing companies serve to keep the market hard, as a whole.

The cheapness of the War Loan, now within three weeks of the price being quoted ex dividend, has found general appreciation, and the quotation has moved up in consequence. Other British Government funds are firm in price. There is a little languid speculation as to whether the present Government will make any effort in the immediate future to convert a further portion of the 5 per cent. War Loan. The City of Auckland placed its recent 5 per cent. loan with ease, and the scrip is at a premium. A new Queensland 5 per cent. issue at 97½ was readily underwritten. It caused a slight reaction from the best amongst gilt-edged stocks.

In the foreign market a revival of gambling in Germans and Prussians is something of a feature. Prices rose sharply after having undergone a severe fall, and the manner in which the bonds are absorbed is mystifying to the Stock Exchange and its clients. French bonds move within uninteresting limits. Mexican Government bonds advanced, on fresh talk of a loan said, this time, to have been arranged by a private firm in the United States to Mexico. Chinese bonds have been weak. Brazilians show an all-round rally.

The Home Railway market is left to itself, hardly a ripple of interest being taken in any of the stocks. Prices have given way, on Election anticipations. Argentine rails hold their improvements. It is notified that the Argentine Government has given its sanction to the transfer of the Bahia Blanca from the Buenos Ayres and Pacific to the Buenos Ayres Great Southern Railway. Brazilian railway stocks strengthened noticeably. San Paulo has increased its interim dividend. The Great Western of Brazil has obtained permission to increase its rates. Mexican rails, after showing a little strength, fell back again. Foreign railway stocks are, as a rule, better on balance.

The rubber market stands in the position of a good man struggling with indifference. Prices have stiffened here and there, but the scarcity of supply of floating shares renders it difficult for the public to take any active hand at anything like prices which have recently ruled. The tea market keeps good, as a whole, though business has fallen off to a large extent. Shares in companies connected with coffee have advanced, the Agua Santa Coffee Company announcing an unexpectedly good dividend. In the oil market, Mexican Eagles maintained most

of the breathless rise which was started last week, and Shells have been moving fairly rapidly, though not to any great extent. The oil market is still without support from the general body of the public.

Textiles keep firm. No confirmation has been received of the rumour that Courtaulds and Bradford Dyers contemplated some kind of agreement of interests. Scarcely a change has occurred in the shipping list. Amongst insurance shares, Consolidated Assurance, after their long fall, rallied considerably upon a more favourable view being taken of the dividend prospects. The banking market is steady. Several hotel shares are better, the increase in the Carlton dividend serving to emphasise the good impression produced by the Hotel York report. Dunlops went ahead after the cheerful statement of the chairman at last week's meeting. Other motor shares are beginning to show a little activity in view of the approaching Show, an interest which is assisted by the cuts in prices of cars and the talk of a possible further reduction in the price of petrol. Gas stocks improved. Electric lighting shares are dormant. Mexican Utilities added further to their material gains of the past fortnight. The nitrate market is inclined to be better, a few rises occurring in the popular shares. The brewery market, after its continuous rise, suffered something of a check. Accompanied by a crop of rumours, newspaper shares spurted briskly towards the end of the week. The wireless and cable groups are stronger, the feature being the strength of Radio shares upon their being listed this week in New York for the first time. Harrods and Harrods (Buenos Aires) have gone ahead.

There is hardly anything doing in Kafirs, and the list of prices swings aimlessly up and down. Chartered have been a better market, hopes being entertained of another dividend following, early next year, upon the 6d per share net payable this month. Tin shares have been moving with the price of the metal, the fluctuations in which are so meteoric as to puzzle the ordinary operator in mining shares. The mining groups, as a whole, however, are so neglected that some of the jobbers declare their serious intention of moving into other parts of the House where there is more business being done.

The Stock Exchange has declared an interim dividend of £3 per share, less tax, on its own shares. The rate is the same as that of a year ago. House shares, £25 paid, stand at 102.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

South Suburban Gas.—Offer for tender of £100,000 5 per cent. ordinary stock at a minimum price of £101, to rank *pari passu* with the existing ordinary stock, of which there is £1,087,795 paid up. There is also outstanding £368,837 in 5 per cent. perpetual debenture stock, and £101,200 in 7 per cent. redeemable debenture stock. Dividend on the new stock will begin to accrue from November 1st next, and the dividend to December 31st will be paid in March next. Dividends are subject to the operation of the sliding scale, payments for the past two half-years being at the rate of 6½ per cent. per annum. The prospectus states that the business of the company, which ranks fifth amongst metropolitan and suburban gas undertakings, is increasing year by year, the sales of gas for the half-year ended June 30th last showing an increase of 6.82 per cent. over the corresponding period of last year. Tenders must be delivered by or before noon on October 14th next.

Mondego Tin Dredging.—Capital, £150,000, in 600,000 ordinary shares of 5s each, of which 200,000 are now offered for subscription. The company has been formed to acquire eight mining concessions, embracing 1,200 acres, granted to the Mondego Valley Tin Syndicate in 1917 by the Mines Department of Portugal. The purchase price has been fixed at £75,000, payable in ordinary shares, and the cash to be subscribed being intended for the purchase of plant and working capital. The vendors have expended between £7,000 and £8,000 in acquiring and prospecting the properties. It is stated that proved reserves of 15,600,000 cubic yards, with an average content of 1.7 lbs of concentrates (65 per cent. metal), have been proved, which at £200 per ton for metallic tin, represents a value of £1,400,000. Profits are estimated at £52,800 per annum. Preliminary expenses, exclusive of brokerage and commission, are put at £3,500. This is, of course, a purely speculative proposition.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

ROYAL INSURANCE COMPANY, LIMITED

ALL CLASSES OF INSURANCE EFFECTED

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

THE ROYAL BANK OF IRELAND, LIMITED. SATISFACTORY RESULTS OF THE YEAR. PRUDENT POLICY JUSTIFIED.

The eighty-eighth annual ordinary general meeting of the Royal Bank of Ireland, Limited, was held, on the 26th ultimo, in the bank's offices, Foster place, Dublin, Mr M. Barrington Jellett, J.P. (the chairman), presiding.

The Chairman said: It is with considerable gratification that I preside at this meeting to-day, and that we, the directors, are able to put before you such a satisfactory statement of accounts, which accounts have been in the hands of the shareholders for the usual time, and I think we might take them as being read.

The accounts under review contain a full year's working of the branches taken over from the Belfast Banking Company, Limited, which are situate in the Free State. I am glad to say that the results have fully come up to our anticipation.

TRIBUTE TO STAFF.

At this stage of the proceedings I desire to take the opportunity to thank the staff of the bank on behalf of myself and co-directors for the wholehearted support and interest shown for the welfare of the bank during the past year. In my opinion good results cannot be obtained without the active co-operation and goodwill of the staff.

Turning to the balance-sheet, it will be seen that there is a decrease of approximately £300,000 in the current and deposit accounts. The decrease in this item has been experienced by all banks in common.

The conservative course which we adopted a few years ago has borne fruit, and we are satisfied that this policy is the prudent and wise one, and is in the best interests of the bank and its shareholders.

If you refer to the directors' report accompanying the balance-sheet, you will see that we rebuilt certain of the branches during the year, which greatly enhances the value of our property, also that two new branches were opened during the period under review.

GENERAL OUTLOOK.

While the conditions of things in the country, we are glad to say, are more settled than they were a year ago, the outlook at the moment is an anxious one. In this connection may I say it is our opinion taxation in this country is excessive, and far too high, and is working against and impeding progress, but it is a source of no little gratification that this fact is realised by the Minister of Finance, as is shown in his recent speech. The country will require all the relief possible in this direction, and I venture to hope before we meet again a forward step will have been taken to bring this about.

I now beg to move the adoption of the report and statement of accounts, and will call upon Major Cusack, our deputy-chairman, to second the resolution.

Before putting the resolution I shall be pleased to hear any shareholder, and to endeavour to the best of my ability to answer any question.

Major Cusack formally seconded the motion, which was passed unanimously without discussion.

On the motion of the Chairman, seconded by Major Cusack, it was resolved that a dividend at the rate of 12 per cent., less income tax, for the half-year ended August 31st last, be declared, and paid on and after October 1st.

Mr M. Barrington Jellett and Mr J. M. Sweetman, K.C., retiring directors, were unanimously re-elected.

It was resolved that Messrs Kevans and Son and Mr P. H. Grierson be re-elected auditors for the ensuing year, and that their remuneration be 250 guineas and 200 guineas respectively, free of income-tax, the increase of 50 guineas each to date from September 1, 1923.

VOTE OF THANKS TO DIRECTORS AND STAFF.

Mr M. K. Roche proposed that the best thanks of the shareholders

be given to the directors and to the staff of the bank, both at the head office and branches, for their excellent conduct of the business during the past twelve months. He said that he was sure that the chairman and his co-directors felt thoroughly proud of the bank being in a position to render such a balance-sheet. He had been for a long time a shareholder, and never expected that such an excellent balance-sheet would be presented. Considering the times that they had passed through, and the times that they were going through, the balance-sheet was more wonderful still.

Mr W. S. Hayes, who seconded the motion, said that in addition to the substantial balance there were also substantial dividends. He could personally testify to the attention that the chairman and the other directors had given to the affairs of the bank, and to the anxiety and willingness of the officials to serve its interests.

The motion having been passed,

The Chairman acknowledged the compliment on behalf of himself, his co-directors, and the staff. He did not think he could say too much, he added, of the loyalty of the staff. He had alluded to it in his opening speech, but he wanted to reiterate what he had said. He did not think that the bank could have succeeded so well without that loyal co-operation of the staff. He hoped that next year the directors would be able to put before the shareholders a better balance-sheet. (Hear, hear.)

Mr O'Connor asked had the directors considered a proposal for the bank's own note issue.

The Chairman replied that they were not able to do anything in that direction as they were governed by their charter.

Mr O'Connor: I think the home Government might facilitate you.

The Chairman: You may rest assured that if we can do anything that will make the bank progress we will not be behind in it. The meeting then concluded.

THE ANGLO-SIAM CORPORATION, LIMITED.

STRONG FINANCIAL POSITION. BONUS INCREASED TO 10 PER CENT.

The twenty-seventh annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held, on 30th ultimo, at the registered office of the corporation, 5 St Helen's place, London, E.C., the chairman, Mr J. M. Ryrie, presiding.

In moving the adoption of the directors' report and the accounts for the year ended March 31, 1924, and after referring to the profit and loss account, the Chairman dealt at some length upon the sources from which the profits had been derived, and remarked that, in the absence of any real revival in trade, the results disclosed were on the whole satisfactory, and so much so that the directors were able to recommend an increased bonus of 10 per cent. on the ordinary shares; but at the same time he reminded the shareholders that this was largely the result of the conservative policy adopted in the past.

STRONG POSITION.

After dealing with certain variations in the balance-sheet, the Chairman claimed that this showed a strong position, and informed the shareholders that since the close of the financial year further investments had been made in British Government and other bonds.

Continuing his remarks, the Chairman mentioned that the last section of the forest tramway was now under construction, and that although this undertaking had been costly, it had proved a successful system of extracting timber.

CURRENT YEAR'S PROSPECTS.

The outlook for the current year was then dealt with, and the

Chairman remarked that, although the outlook generally was obscure, he thought the shareholders had every reason to feel confident, more particularly as good deliveries of timber at Bangkok were expected again this year, whilst the corporation was ready and in a position to take advantage of any improvement in demand.

In reference to the exchange value of the tical, the Chairman mentioned that although rumours of a further reduction had been current, no change had taken place since last year, and, whilst recognising the difficulties of the Finance Minister, he expressed regret that the Siamese Government do not see their way to dispose of these rumours one way or another, as few factors interfere so much with the course of legitimate business as a want of confidence in exchange.

INDIAN BUSINESS.

In India, in spite of reports of a good monsoon, Mr Ryrie said he did not look for more than moderate results, and in reference to business generally with India, he remarked that in face of keen competition and the speculative lines on which a large part of this trade is carried on, the corporation must, he was afraid, be satisfied with a comparatively small turnover. In referring to the sterling value of the rupee and the agitation in favour of a return to the old fixed rate of 1s 4d gold, the Chairman said he did not expect the Government of India to change their policy until the American dollar has less influence upon the market price of gold.

DIVIDENDS AND BONUS.

The directors' report and statement of accounts for the year ended March 31, 1924, were adopted, and final dividends of 3½ per cent. on the preference shares and 12½ per cent., together with a bonus of 10 per cent., on the ordinary shares were declared, making a total distribution of 30 per cent., less tax, on the ordinary shares for the year. Mr J. M. Ryrie, Sir R. J. Black, Bart., and Mr Henry Bateson were re-elected directors, and Messrs Turquand, Youngs, and Co. were appointed auditors for the current year.

A resolution in regard to certain minor alterations in the articles of association was passed, and an extraordinary general meeting has been convened for 21st instant to consider this resolution, and if approved, to confirm it as a special resolution.

UNION COLD STORAGE COMPANY, LIMITED.

GRATIFYING RESULTS.

The twenty-seventh annual meeting of the Union Cold Storage Company, Limited, was held, on the 30th ultimo, at Winchester House, London, E.C.

The Chairman (Mr Roger P. Sing) said that at last year's meeting he informed the shareholders that they had just completed the most important development in the history of the company by taking into their organisation several large retail distributing businesses. This step had proved most valuable, and the consequent development of the business could only be described as very satisfactory. They had had the benefit of the trading results of the newly acquired businesses only from June 30, 1923. The company to-day had a much larger number of establishments than any other trading company or banking institution in Great Britain. Their constant endeavour was to render more and more efficient service, and during the past year they had probably made more progress in that direction than in any previous period.

COLD STORAGE BUSINESS.

He was unable to report much improvement during the year in connection with the company's cold storage business. During the war far more cold storage accommodation was provided both by themselves and their competitors than was now necessary for the

The Anglo-South American Bank Ltd.

efficient handling of the goods requiring cold storage. The result was that there was a considerable surplus of accommodation throughout Great Britain, and they had consequently found it essential to close several of their stores at different periods.

BALANCE-SHEET ITEMS.

From the balance-sheet it would be seen that the balance of working accounts amounted to £726,904, which, with the amount brought in from the previous year, gave the record total of £836,826. The directors recommended the payment of the usual dividend of 10 per cent. on the ordinary shares, and there would then remain £127,840 to be carried forward. The depreciation reserve account stood at £2,570,015, which figure showed a substantial increase on last year, and they had purchased and cancelled £63,797 debenture stock out of the reserve fund. The 1923 accounts now submitted were a matter of considerable gratification to the directors, and he took it that the shareholders would be equally pleased with them. He never liked to prophesy, but enough of the year 1924 had already elapsed for him to say with some confidence that the 1924 report would be equally gratifying.

The report was unanimously adopted.
