NOTICES.

Barclays Bank, Limited, announce that they have opened a new branch at 72 Cheapside, E.C. 2, under the management of Mr H. C. Allaway. It is also announced that their agency at Reepham has now become a full branch, under the control of Norwich local head office, and that Foulsham Agency, which has hitherto been sub to Bank Plain, Norwich, is now sub to Reepham. It is also announced that they have transferred their office from temporary premises in East street to new premises at 54-56 High Street, Littlehampton, under the management of Mr Charles Steedon.

We are asked to state that a circular issued by Lieut.-Col. Sir Brodrick Hartwell, Bart., dated September 24, offering certain shares for sale, has been posted to the public without the consent of Barclays Bank, Limited, whose name appears thereon, and that all moneys sent to them in respect of this offer for sale will be returned.

Mr T. M. Wormald, J.P., chairman of Wormalds and Walker, Limited, Dewsbury, has been appointed a director of the Lancashire and Yorkshire Bank, Limited.

A new branch of the Bank of Liverpool and Martins, Limited, is to be opened in Clifton street, Blackpool, on October 6, under the management of Mr William Waring.

Mr R. B. F. Randolph, manager of the Pall Mall office of the Guaranty Trust Company of New York, resigned from the company on September 30th to accept the position of vice-president of the Anglo-London and Paris National Bank in San Francisco.

The Midland Bank announces the opening of a new branch at 215 High Street, Hounslow, Middlesex, under the management of Mr H. C. Geer. Additional offices have also been opened at Sturry, near Canterbury, Kent, and Llangerniew, near Abergele, Denbighshire.

Mr James Watson Dickinson, who has been manager of the London office of the Queensland National Bank, Limited, for 34 years, retired on 30th ultimo. He has been appointed to a seat on the London board of directors. Mr John William Drury, hitherto accountant, has succeeded Mr Dickinson as manager.

The Standard Bank of South Africa, Limited, announce the opening of an agency at White River, near Nelspruit, in the Transvaal.

Lloyds Bank, Limited, announce that a sub-branch of the bank is now open at 72 High Street, Wroughton, under the management of Mr J. E. G. Bowen and Mr C. M. Dron, of the Swindon branches. Attendance will be given at the sub-branch on Fridays from 10 till 3.

(b) Directors state that, owing to requirements of Finance Act regarding companies paying dividends free of tax, they have decided to pay the dividend on ordinary from commencement of current financial year at rate of 20 per cent., less tax, instead of 15 per cent., tax free.

CANADIAN NORTHERN RAILWAY.—Directors of Canadian Northern Railway Company announce that earnings for half-year ended June 30, 1924, are insufficient to enable them to declare any interest to be payable on 5 per cent. Income Charge Convertible Debenture stock on Nov. 2nd next.

FEDERATED RUBBER GROWERS.—George Spencer Moulton and Co. have again made a profit, but there has been a continuation of the loss in Wood Mine. Limited, owing chiefly to the adverse state of the foreign exchanges and the disposal of the balance of the stock of canvas tires, now completed. As Wood Mine ceased. The former company has not paid a dividend, and consequently, the directors cannot recommend any dividend on the preference or ordinary capital. The preference dividend is in arrears as from March 31, 1921.

KAYE, ELLISON, AND CO.—It is proposed to pay the preference dividend to June 30, 1923—namely, £8,000—immediately after the annual meeting. Directors do not consider it advisable, during present critical time in the steel trade, matter will be dealt with at the earliest favourable opportunity. Meeting, Sheffield, October 14th, 6.30 p.m.

MANN, BYARS, AND CO., warehousemen and manufacturers, announce that the dividend on the preference shares for the six months ending September 30th, proposals for reorganisation of capital, recently approved by the company, have been sanctioned by the Court.

STOCK CONVERSION AND INVESTMENT TRUST announce the following distributions:—The year's annuity of 6d per share on the 450,782 shares (the same as a year ago; payment of 2-1/2d per share to them on account of arrears (the same), on the ordinary shares (the same); payment of a dividend of 8 per cent. on the ordinary shares (the same).

Reports and Notices.

Captain Bernard Eckstein has been appointed a director of the Sudan Plantations Syndicate, Limited.

J. W. Vickers and Co., Limited, general advertising offices, 5 Nicholas Lane, E.C. 4, announce that their telephone numbers are now Royal 6328-30 (three lines).

Owing to rebuilding operations, the Marine and General Mutual Life Assurance Society has taken temporary offices in Mansion House street, London, E.C. 2.

The directors of Tate and Lyle, Limited, regret to announce that Mr Lionel Alfred Martin has decided to retire from the board of directors of the company as from the close of its financial year, September 30, 1924. Mr Martin, who has recently recovered from a severe operation, has been connected with the sugar trade since 1872, and with the firm of Henry Tate and Sons since 1888.

TREASURY BONDS NEW SERIES.—The *London Gazette* states that the issue of 4 per cent. Treasury bonds, 1933, of the current series will terminate on Saturday, October 11th. Bonds issued after that date will be designated Series "D." The first dividend on holdings of these bonds will be due on April 15, 1925, and in the case of each bond will represent interest to that date from the date of the bond. In all other respects Series "D" bonds will rank *pari passu* with bonds of the current series; the series will be consolidated after the close of business on March 16, 1925.

GOVERNMENT STOCKS, &c.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the September, 1924, instalment of the debt service in accordance with the arrangement of May 25, 1912.

BANKS.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.—This bank was incorporated on October 17, 1922. The capital authorised is £200,000; capital subscribed and fully paid is £151,545. The net profit for the half-year ended June 30, 1924, amounted to £5,896, and, adding £343, the balance brought forward from the year ended December 31, 1923, there is a sum of £6,239 at the credit of profit and loss account. Out of this sum, the directors have decided to pay an interim dividend at the rate of 8 per cent. per annum, less income-tax, which will absorb £4,666. The allocations for preliminary expenses and reserve fund will be left over until the accounts for the whole of the financial year to December 31, 1924, are ready for submission to the shareholders. The dividend will be paid on all shares issued on or before June 30, 1924, and dividend warrants will be posted on September 30, 1924, to shareholders on the register. Coupons No. 2 of the share warrants to bearer should be presented at the bank for payment of the dividends on them.

COMMONWEALTH BANK OF AUSTRALIA, LIMITED.—The balance sheet figures of the Commonwealth Bank of Australia for the half-year ended June 30, 1924, show that, as compared with the close of the previous half-year, deposits in the general banking department reveal an increase of 2½ millions, and stand at £31,914,902, while the savings bank deposits, at £41,071,099, have increased by about £750,000. Coin and cash balances at £6,316,047, are 1½ millions lower, but Australian notes have increased by 5½ millions, and stand at £8,922,111. Money at short call in London (£9,720,000) shows an increase of nearly three millions in the six months, while British Colonial and Government securities, £30,097,448, have increased by about half-a-million. As regards the Commonwealth note issue managed by the bank, the notes in circulation are £56,890,225 (an increase of about 4½ millions during the six months), against which gold coin and bullion are held to the extent of £24,441,277, with Government securities, &c., £32,448,948. The profits for the six months amount to £127,339, about £4,000 greater than for the previous half-year. Of these profits one-half is applied to the Australian National Debt Sinking Fund, the other half being passed to the reserve fund, making the total accumulated profits held by the bank £4,529,330. In addition to this, the profits of the Note Issue Department, amounting to £552,821, for the half-year, have been paid over direct to the Commonwealth Treasury. The Commonwealth Bank of Australia, it may be added, is wholly owned and guaranteed by the Commonwealth Government.

RAILWAYS.

BAHIA BLANCA AND NORTH-WESTERN.—The boards of the Buenos Ayres Great Southern Railway Company, Limited, and the Buenos Ayres and Pacific Railway give notice that the agreement for the transfer of the lease of the Bahia Blanca and North-Western Railway, from the Buenos Ayres and Pacific Railway to the Buenos Ayres Great Southern Railway Company, which had been already approved by the Argentine Senate, received the sanction of the Chamber of Deputies on September 30th, and will become effective as soon as the law is promulgated, and the necessary arrangements are completed for the working of the line by the Buenos Ayres Great Southern Railway Company.

BARRI LIGHT RAILWAY.—The net earnings for the year ended March 31, 1924, less Indian income-tax and super-tax, amounted to £55,666, or, adding the exchange adjustments of £946, £56,612. After providing the interest on the debenture stock, £5,600, and the interest and sinking fund instalment, &c., on the "Latur extension" debentures, £5,655, there is left £45,357, which, with the balance of £10,541 brought forward from the previous year, makes £55,898 at credit of net revenue account. The directors have transferred £9,506 to credit of reserve account for the equalisation

of dividends, &c., which account now stands at £175,000; £3,500 to taxation reserve account as a provision for corporation profits tax and income-tax, and £1,000 to the staff provident fund as a special bonus. The total dividend on the ordinary shares is 12 per cent. for the year, and £10,692 is carried forward.

GREAT WESTERN OF BRAZIL.—The directors of the Great Western of Brazil Railway are advised by cable that the Brazilian Government has authorised an increase in tariffs estimated to increase the gross receipts of the railway by 50 per cent., which increase will be put into force on or about November 1st next. Further negotiations are proceeding with a view to rehabilitate the financial and physical position of the railway.

RUBBER.

BATU RATA (SUMATRA) RUBBER.—This company gives in it report an interesting table of crops and dividends year by year from the season 1912-13 to 1923-24. From this table we gather that the 1912-13 crop was 112,045 lbs. The crop has risen to 556,645 lbs for season 1919-20, but is 415,607 lbs for 1923-24, against 416,503 lbs for 1922-23. The ordinary dividend is 5 per cent., against 10 per cent. for 1922-23. For the year 1916-17 the company paid 22½ per cent. dividend. The net profit of £6,266 compares with £10,163 in preceding year.

WAY-HALIM (SUMATRA) ESTATES.—The report for year ended March 31, 1924, shows a net profit of £2,075, against £2,497 in preceding year. Nothing is paid on the ordinary shares, against 5 per cent. in preceding year. The sum of £1,000 is placed to estates amortisation account, and £3,460 is carried forward, subject to corporation profits tax.

MISCELLANEOUS.

BENGAL IRON COMPANY, LIMITED.—The net profit, after payment of debenture interest, for year ended March 31, 1924, amounts to £200,459, against £214,228 in preceding year. The ordinary dividend is again 7 per cent., payable in equal instalments on October 16th and April 16th next. A balance of £45,074 is carried forward, against £22,468 brought in. It is pointed out that during the year the company's works have been fairly well employed, though market prices for its products have been somewhat low. Total assets are £3,163,412. Cash is at £145,350. The company has an ordinary issued share capital of £1,575,000 in £1 shares, and £500,000 in 7½ per cent. cumulative preference shares £1. Seven per cent. debentures issued amount to £600,000. Reserve account is £65,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were generally favourable to agricultural pursuits during the week, and were able to push ahead in preparing the land for autumn sowings. Supplies of native wheat are coming along more freely at the Statute markets, but a good deal lacks condition, while unsuitable for milling purposes. Prices, however, ruled firm in sympathy with the general position, and the better grades range from 12s 6d to 13s per 112 lbs, free on rail. Imported descriptions are sparingly offered, and prices hardened sharply in sympathy with higher forward offers. No. 1 Northern Manitoba quoted 71s, No. 2 ditto 69s 9d, No. 2 hard winter 63s 9d to 64s, all ex ship, with choice white Karachi, landed, held for 65s, and Plate 66s, all per 496 lbs. In the floating and forward section prices marked a further substantial rise, owing to strong buying orders by United Kingdom and Continental millers, while stimulating advices from North America proved a strengthening factor. A liberal business transpired, including steamers of choice white Karachi, November, 62s 9d, Rosafe, 63½ lbs, loading, also October at 61s 6d to 62s, Barusso, 63½ lbs, January-February, 58s 7½d net, No. 2 hard winter, early October-November, 65s 3d, white Pacific, afloat, 61s, October-November 61s 6d, No. 1 Northern Manitoba, October, 66s 6d, Australian, January, 62s 10½d, and Rosafe, 63½ lbs, new crop, January-February, 59s 1½d per 480 lbs, c.i.f. Maize was also accorded better support, and prices moved in sellers' favour. Plate steamers, September-October, sold at 44s 6d, October-November 44s 7½d, November-December, 45s 1½d, December-January 45s 9d to 46s 6d, and No. 2 white flat African, expected late October, loading, at 47s 9d per 480 lbs, c.i.f. terms. Flour ruled firmer in sympathy with the wheat position, but business rather quieter at the higher limits. London standard straight run quoted 50s, patents 52s to 53s, town whites 50s per sack, delivered in Metropolitan area. All English country straights 44s to 45s per sack, delivered at London stations. Imported also tend firmer, with a steady demand for spot parcels. Manitoba patents range from

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes on October 2nd as follows:—Pig-iron: There has been a little business doing in pig-iron, as some consumers seem to be under the impression that prices have gone as low as they possibly can. There is still, however, a lack of confidence, and transactions are very small. No. 3 Cleveland G.M.B. is quoted 80s 6d, and East Coast mixed numbers hematite 80s per ton, but buyers with firm orders could no doubt get on at less figures. Manufactured iron and steel: There is very little new business doing, and specifications are coming forward very slowly for material already bought. However, works complain that they cannot continue much longer unless there is some improvement in the market. Home prices are unchanged as follows:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel

rails, £9. Iron ore: The price of best Bilbao Rubio remains nominally at 21s 6d, but there are sellers of odd cargoes at something below this figure. Meantime buyers are holding off the market, as they have sufficient stocks in hand to keep their furnaces going for the time being.

Our Sheffield correspondent writes:—The depression of the iron and steel markets continues to spread, and the position and prospects of these industries locally is so bad as to justify the feeling of despair which is affecting those engaged in them. The time for the customary autumn revival has passed, and something like a miracle is required to secure a moderate volume of trade during the coming winter. Four blast furnaces have just been put out of commission in the Lincolnshire district, and if buying does not soon improve one or two others there will have to follow suit. There are stocks of pig-iron at most of the furnaces, and with the object of turning these into money the material is being offered at very low figures. The ordinary market quotations remain the same, and are unremunerative. Costs will be relieved by the reduction of 3s 9d per ton and upwards on the prices of coke, but makers seem determined to retain this advantage as a set-off to their losses, and therefore it will not be passed on to the consumer at present. Buying of pig-iron and billets is limited to small parcels, and consumers cannot be persuaded to place forward contracts. The rolling mills have numerous orders on hand, but these are so small individually that the output of a week's working does not reach half the normal tonnage. Business in cold rolled strip, hoops and sheets continues brisk, and the motor industry is taking a substantial weight of steel and tools. Engineering is looking up in parts. Trade in high-grade steels has fallen flat after some months of expansion, and the booking of orders for tools has declined. In crude iron and steel Belgian

TRUSTEE DEPARTMENT.

The Bank has Power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. Full particulars can be obtained from the Managers, Trustee Department, 54 Lombard Street, E.C.3 (entrance 58 Lombard Street), or from any of the Branch Managers.

EVERY DESCRIPTION OF BRITISH & FOREIGN BANKING BUSINESS TRANSACTED.

6th October, 1924.

The boot section is fairly well employed, although the "boom" written so glibly about in one of the London daily papers has not been discovered by sellers of leather in Northampton. The Shoe and Leather Fair opens at the Agricultural Hall, Islington, on Monday next, when over 500 exhibitors will be in evidence.

TEA.—Indian auctions during the week amounted to 49,500 packages, which aroused active biddings at mostly dearer prices. Common and medium kinds advanced ½d to ¾d per lb, with extreme prices paid for the finer lots. Pekoe sold, 1s 7½d to 2s 7½d; broken orange, 1s 7½d to 2s 10½d; choice, 3s 6d to 4s 6d. Ceylon sales of 18,550 packages soon cleared to a brisk inquiry, common and medium ruling ½d to 1d higher, and fine from 1d to 2d per lb dearer on the week, the attractive quality of the latter being much appreciated. Pekoe sold, 1s 7½d to 2s 5½d; broken orange, 1s 10½d to 2s 9d per lb in bond. China teas are very firm, being mostly dearer, with a good demand. In auction, some 5,830 packages Java and Sumatra were offered and met a strong demand, prices being ½d to ¾d per lb higher for all useful medium teas, while fine parcels were disposed of at extreme rates. Pekoe sold, 1s 4½d to 1s 8d; broken ditto, 1s 4½d to

The full Report and Accounts (with plan of Workings) may be obtained from the London Secretaries, A. MOIR AND CO. No. 1, London Wall-buildings, London, E.C.2.

[illegible]

CANNED GOODS.—Sardines continue to be very firmly held, but business restricted owing to small available supplies. Portuguese $\frac{1}{2}$ -flats quoted 3s 7 $\frac{1}{2}$ d to 3s 9d; clubs, 3s 10 $\frac{1}{2}$ d to 4s; 12 oz, 6s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Lobsters scarce, and realise high prices. Salmon moves off quietly owing to the high

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

prices ruling, while forward offers are on a limited scale. 1 lb flat reds, labelled, 58s to 60s; ditto, tall, 47s to 48s; 8 lb tall pink, 26s to 26s 6d; cases of 96 ½ lbs, 28s to 30s per case. Canned Fruits: Prices remain firm in view of continental demand, while home trade requirements are on a fair scale. Reports from California indicate smaller supplies owing to lack of moisture. Singapore pines, 48 ½s, best quality, 5s 4½d to 5s 6d; cubes, 24 2½s, 10s 6d to 10s 9d; slices, 48 1½s, 5s 3d to 5s 6d. Californian apricots, 2½s, 8s to 11s; ditto, 1½s, 5s 3d to 5s 6d. Pears, 2½s, 13s 6d to 16s 6d. Peaches, 2½s, 9s 9d to 11s 6d; 1½s, 6s 6d. Fruit salad 2½s, 19s to 20s; ditto, 1½s, 10s 6d per dozen tins. Canned meats: There was a better inquiry with regard to corned beef, and market presented a firm tone. Tongues, lunch and ox, are moving off slowly. Quality of Danish is much appreciated, especially for high-class trade. Condensed milk-market quietly steady. Packers contend that prices are not remunerative, especially for skimmed.

MISCELLANEOUS.—Coconuts quoted 20s per 100. Coir yarn: Ceylon, £21 to £37 10s; Cochin, £20 to £45. Ceylon bristle, £22 to £29; cinnamon leaf oil, 5½d; Citronella: Ceylon, 3s 0½d; Java, 5s 7d. **OILSEEDS.**—Linseed generally firmer with a better demand. Calcutta, afloat, sold, £22 18s 9d to £23 10s; September-October, sold, £23 5s to £23 12s 6d; October-November, £23 5s to £23 12s 6d. Plate, afloat, £21 2s 6d to £21 12s 6d; September-October, sold, £21 5s to £21 7s 6d to £21 12s 6d; October-November, £21 5s to £21 12s 6d; January-February, £20 to £19 17s 6d and £20 12s 6d. Rapeseed dearer on improved Continental buying. Toria, September-October, sold, £23 15s; and real bold Ferozepore, ditto, £23 2s 6d. Cottonseed firmer, though slightly irregular at times, owing to fluctuating advices from Alexandria. Egyptian, black, new, October, sold, £13 10s; November-January, £13 7s 6d. Sakellaris, November-January, £12 10s. Bombay, December-January, £10 17s 6d. Gingelly seed quiet. Chinese, new crop, October-November, £27 15s. Groundnuts firmer. Coromandel, machine-dried, September-October, £28 10s; Chinese decorticated, f.a.g., December-January, £25; East African, September-October, £28 7s 6d. Soya beans quieter. Manchurian, October-November, £13 16s 3d; December-January, £12 7s 6d. Castor seed firm, but

quiet. Bombay, September-October, £31 5s; Calcutta, ditto, £30-5s per ton.

OILS.—Linseed irregular, but firmer. Spot, net, naked, 44s 6d; October, 43s 6d; October-December, 43s 6d; January-April, 43s. Rape steady. Crude, spot, 48s 6d, refined, 51s 6d. Castor-oil firmly held. First pressure, spot, quoted 73s; second pressure, 71s; and pharmaceutical, 78s per cwt. Hull, with London 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 43s; Bombay, 41s; common edible, 49s; deodorised, 51s. Chinawood firm, with a good demand for spot parcels. Hankow, spot (barrels), 85s; October-November, 80s. Coconut steady. Ceylon, spot, 48s 6d; October-November, 46s 9d; Cochin, ditto, nominally 58s. Soya firm. Oriental, barrels, September-October, 46s 6d; bulk, 43s. Cod steady. English, spot, 34s to 35s. Groundnuts firm. English, crushed, naked, spot, 53s; deodorised, barrels, 62s. Turpentine irregular. American, spot, 65s 3d; October-December, 65s 9d; January-April, 67s 6d. Rosin firm for pale grades. American, grade B, 14s 3d; G, 14s 9d; WG, 17s 9d; WW, 19s per cwt. French WW, 18s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

THE MONEY MARKET.

MONEY was comparatively easy at the beginning of the week, then became more difficult to find, after repayments to the Bank of England had been completed, and yesterday was plentiful again. Discount rates were perhaps a shade easier, with a fair supply of bills and a keen demand on Continental, and especially French, account for

January paper. Banks bought November Treasuries at rates ranging down to $3\frac{3}{4}$ per cent., and Decembers at $3\frac{1}{2}$ per cent. Three months' Bank bills were taken at, and a shade under, $3\frac{1}{4}$ per cent. The week's batch of Treasury bills were placed at a slightly lower rate than had been expected.

	Oct. 10, 1924.	Oct. 3, 1924.	Sept. 26, 1924.	Sept. 19, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	3 $\frac{1}{4}$	3 $\frac{1}{4}$	3 $\frac{1}{4}$	3 $\frac{1}{4}$	..

The Bank return showed an increase, which is unseasonal and difficult to explain, of over two millions in the note circulation, and a corresponding decrease in the Reserve. Government securities rose by 5 millions, while Other declined by nearly 7 millions; Government disbursements brought the Public deposits down by 6 $\frac{1}{2}$ millions, and Other were 3 millions higher on balance. Currency notes outstanding were increased this week by £1,101,700 to £288,600,900, which includes £1,368,000 for notes called in, but not yet cancelled. The fiduciary issue is £237,782,900, or £10,408,000 below the maximum.

The monthly statement of the London clearing banks of their average weekly balances for September, which is printed in full on a later page, shows only small changes as compared with the August figures, as may be seen from the following table, which summarises the figures of the nine English banks:—

	Dec., 1923.	Mar., 1924.	June, 1924.	July, 1924.	Aug., 1924.	Sept., 1924.
Capital and reserves	116.3	118.7	119.2	119.4	119.4	119.4
Acceptances	96.1	99.2	85.3	79.0	75.7	75.5
Deposits (incl. undiv. profits, &c.)	1,673.1	1,603.2	1,651.9	1,642.9	1,616.9	1,612.4
Total Liabilities	1,885.5	1,821.1	1,856.4	1,841.3	1,812.0	1,807.3
Coin, notes, balance at bank, and cheques in course of collection	254.2	230.2	249.1	236.7	234.0	235.3
Money at call	111.3	93.5	108.1	98.3	101.7	107.9
Investments	363.8	361.7	349.3	348.1	346.0	340.1
Discounts	276.3	224.0	245.0	259.3	234.5	225.3
Loans and advances	756.5	785.5	791.7	791.6	792.0	794.8
Cover for accept., premises, &c.	123.4	126.2	113.2	107.3	103.8	103.9
Total assets	1,885.5	1,821.1	1,856.4	1,841.3	1,812.0	1,807.3

The most prominent alteration is a reduction of £9 millions in bills discounted, which is offset by an addition of £6 millions to money at call, and nearly £3 millions to advances. Investments show a decline of nearly £6 millions, and this may partly account for the decline of £4 $\frac{1}{2}$ millions shown in deposits.

THE STOCK MARKETS.

The Stock Exchange has, naturally, been dominated by political influences this week, a shrinkage in the volume of business having occurred without any marked decline in prices. British Government stocks are easier, on the whole, but business in foreign Government securities has been of a restricted character. Home railway stocks have recovered to some extent after a decline early in the week, while movements in foreign rails have been irregular. Among plantation shares, rubber and coffee remain firm, but tea has declined. Nitrates are still a strong market. Banking shares have been a strong feature, but profit-taking by recent purchasers has been responsible for a reaction in insurance shares. Industrials have been quiet, declines being registered in iron and steel and shipping securities, though the brewery market continues to be firm. Current influences have been unfavourable to activity in South African mining shares, but those of tin companies have registered a further improvement, in spite of a decline in the price of the metal.

THE COMMODITY MARKETS.

A feature of interest in the markets this week has been the slump in raw cotton rates as a result of the report on the American cotton crop. At the London wool sales prices were fairly well maintained on balance, but there were some withdrawals. Pig-iron prices are weaker. Some orders have been placed in the manufactured iron and steel trade for shipbuilding, but there is no sign of any genuine improvement in the outlook. The rubber market was reasonably firm, and a fair amount of busi-

ness effected. Wheat at Liverpool on the Baltic Exchange received much attention on account of American advices, and prices moved upward. Other details of markets, together with prices, will be found on later pages from our special correspondents.

FOREIGN EXCHANGES.

The foreign exchange market was again characterised by great quietness during the early days of the past weekly period beginning October 3rd, but developed considerable activity during the last two or three days. This coincided largely with the approach and culmination of the political crisis at home, and affected particularly the sterling dollar exchange. There was also a marked break and considerable activity in the franc, but this is merely a coincidence, and is due to other factors. The dollar rate opened on the 3rd at 4.46 $\frac{1}{2}$, relapsed slightly to 4.46 on the 4th, at which level it remained on the 6th. After being slightly weaker on the 7th, it recovered to 4.46 $\frac{1}{2}$ on the 8th, advanced sharply to 4.47 $\frac{1}{2}$ -4.48 on the 9th, and to-day (10th) stands at 4.48 $\frac{1}{2}$ -4.48 $\frac{1}{2}$. New York has been decidedly bullish of sterling during the political crisis, and is believed to have been a large seller of dollars and Continental currencies lately, whilst buying sterling steadily at the same time. The franc opened the week at 84.65, and remained at about this level, though showing signs of weakness, until the evening of the 6th. On the 7th it started to slide, touching 85.30, and the rate continued its downward course to 86.10 on the 8th, at which time there appears to have been a removal of the official intervention which has hitherto been successful in keeping the rate at about 85 or a little better. On the 9th the bomb cast by the civil servants into the middle of the Budget estimates by demanding a scale of salaries which would have added £20,000,000 to the Budget deficit, shattered the rate still further to 87.10-87.20. This weakness continued to-day (10th), when it opened at 87.50. At the moment of writing it stands at 87.60. The Brussels rate followed Paris in rising from 92.35 to 94.30 yesterday and 94.60 to-day (10th), but here the weakness is not so marked. The lira developed unexpected weakness, the rate rising from 101.05 on the 6th to 103.45 on the 9th, and 103.50 to-day (10th); a reflection, probably, of further internal political uncertainty, of which little or no evidence has as yet reached this country. The peseta has regained firmness and comparative stability with the continued improvement in the military situation in Morocco, and stood at 33.45 or thereabouts, with little fluctuation, during the week. For some time past Switzerland has maintained a rate with a tendency to harden against this country, at a time when the movement is usually in the other direction, and this has been the cause of considerable inquiry and remark. It is now suggested that it is due to official efforts to bring the Swiss franc back to gold parity with the dollar; an interesting suggestion which, however, requires more time before it can be accepted as entirely meeting the case. Lisbon, after a long period of stagnation at about 1 $\frac{1}{2}$ -1 $\frac{1}{2}$, hardened against the £, the rate moving on the 8th to 1 $\frac{1}{2}$ -2, and to-day to 2-2 $\frac{1}{2}$, it is said owing to a combination of currency shortage at the end of the harvest and large exports of silver, together with increases and additions to the Government stamp duties. None of the other Continental exchanges call for much remark. Berlin is unchanged at 18.8 billions, Copenhagen rather weak at 25.50, and Christiania also weaker at 31.25. Riga, Reval, and Warsaw remained without movement; the Stockholm rate went a little worse to 16.80-16.85, and Bucharest improved from 850 to 825 during the week. All the South American exchanges improved, with the exception of Valparaiso, which remained unchanged; Rio from 6d to 6 $\frac{1}{2}$ d, Monte Video from 47d to 48d-48 $\frac{1}{2}$ d. Excepting Japan, the Eastern exchanges were all steady to strong, Hong Kong advancing from 2s 5d to 2s 5 $\frac{1}{2}$ d, and Shanghai from 3s 5 $\frac{1}{2}$ d to 3s 5 $\frac{1}{2}$ d-3s 6d. Singapore was 1s 5 $\frac{1}{2}$ d to 1s 6 $\frac{1}{2}$ d, with the advance in silver and on large sales of Indian cotton to Japan and elsewhere. These latter, it is said, on the other hand, were the cause of the weakness of the yen, which declined from 1s 9 $\frac{1}{2}$ d to 1s 8 $\frac{1}{2}$ d during the week. Silver prices reached the highest levels of the year at 35 $\frac{1}{2}$ d on the 7th, which is 2d above the highest quotation in 1923. Not only was there a

shortage of supply, but there was no speculative activity in the direction of selling. In addition to India and China, the Continent has been lately a buyer of silver on a large scale in the aggregate, largely owing to the movement to replace paper with metal currency, and high price levels seem likely to be maintained.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the four days ended October 4th:—

(000's omitted.)		£	
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	5,600	From Revenue	12,304
Interest, &c., on Debt	21,685	Amount borrowed	12,466
Sinking Fund	150	Decrease in Exchequer balances	2,940
Sundries	275		
	27,710		27,710

Revenue for the four days ending October 4, 1924, was £12,304,000, as compared with £15,893,000 for six days ending October 6, 1923. Customs and Excise receipts were lower, at £1,254,000 and £865,000, against £2,528,000 and £1,294,000 respectively. The yield from Property and Income-tax was well maintained, at £5,050,000, against £5,807,000 for the longer period. Ordinary receipts were £492,000, against £389,000, but special receipts only brought in £81,000, against £954,000. The four days' operations increased the National Debt by £12,466,421, and caused the following changes:—

(000's omitted.)		£	
	£		£
Public Department Advances	23,450	National War Bonds repaid	5,808
Bank of England Advances	10,500	National Savings Certificates	50
		Treasury Bills	15,559
		Sundries	67
	33,950		21,484

The floating debt was increased by £18,105,000 to £792,281,500.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE END OF THE GREAT EXPERIMENT.

THE first Labour Government has fallen, and Mr MacDonald has chosen an immediate appeal to the country. He could, as we suggested last week, have found a way of surmounting Wednesday's crisis. Had it not been for the looming of defeat on the Russian question so closely ahead, we can hardly believe that he would have put Party so far before Country as to prefer a general election to the institution of an inquiry, whether Parliamentary or judicial, into an affair which has aroused an uneasiness, by no means confined, as Mr MacDonald affects to think, to party politicians or the stunt Press. But, seeing no way out of the deadlock on the Russian question, and therefore assuming an autumn election to be inevitable, the Premier may well have felt the advantages of an immediate election to have outweighed those of postponement. On national grounds, when an election is once seen to be approaching, there is something to be said for getting it over quickly and thereby shortening the period of uncertainty which clogs the wheels of business; Mr MacDonald has decided on the earliest possible date, namely, Wednesday, October 29th, and thereby avoids collision with the Municipal Elections which are due to be held on November 1st. On the lower ground of tactics Mr MacDonald's decision can be

readily understood. A climb down on the withdrawn prosecution issue followed by three weeks of waiting for execution would not have been an inspiring prelude to an appeal to the country; while a firm stand on the prosecution issue was calculated to instil the fighting spirit into the advanced section of his followers. Wednesday's debate and the passing of the Liberal amendment demanding an inquiry by a majority of 166 were really an anti-climax. For the previous day at the Labour Party Conference the Premier had definitely burnt his boats by delivering a defiant and fighting speech, which clearly showed his determination to select the Campbell prosecution issue as the occasion of his defeat. The die was cast, the guns of the section in the Cabinet which favoured accommodation spiked in advance, and the door banged before Mr Asquith's eminently reasonable offer to accept any form of satisfactory inquiry and to forego Liberal representation on the inquiry body.

In his address to the Party Conference on Tuesday the Premier endeavoured to throw upon the opposition parties the responsibility for the coming election. In our view he entirely failed to shift the responsibility from his own shoulders. As regards the actual crisis itself the country may not be disposed to attribute the entire blame to the Government. But to judge the question of responsibility we have to look back over the whole Parliamentary stage of the past eight months. When Mr MacDonald entered upon his "high adventure" last February his initial speeches appeared to reveal a thorough perception of all the implications of the experiment of a Minority Government under the three party system. But the promises of his early speeches were never fulfilled. The experiment could only have succeeded to the full if the Parliamentary machine had been worked with skill, foresight and tact. When Mr MacDonald took office he had before him a wide field of scarcely controversial effort open to him to explore. From the start he received, as he himself admitted, an exceptionally large measure of forbearance and fair play from opponents both in the Press and in the House. There was a general determination to give him and his Government every reasonable chance to make good use of a unique, if restricted, opportunity for service. If those who manage the Party's affairs in the House had chosen to follow the obvious path of consultation and contact with the Liberal Party, they could have built upon this foundation of goodwill a stable position, which would possibly have lasted for several years. But from the early days the task of contact and consultation—unpalatable, perhaps, but essential for any Minority Government—was conspicuously neglected; and the neglect which became more and more conspicuous as the last session advanced, meant clearly that it could only be a matter of months before the Government rushed upon an unnecessary defeat. This is the underlying cause of the present crisis. We do not blame Mr MacDonald, whose dual burden as Premier and Foreign Minister compelled him to leave to his lieutenants the conduct and leadership of the House of Commons. In this his lieutenants, especially Mr Clynes, failed him sadly. Thanks to their failure the new experiment has for months past been heading straight for the rocks. If all the implications of Minority Government had been accepted by those responsible for the handling of the position in the House of Commons, Wednesday's crisis would never have occurred, nor, we believe, would the Government have steered blindly to disaster on the Russian issue.

We shall not know until the ballot boxes are opened whether Mr MacDonald has served his party well by preferring dissolution to resignation. But from the broader viewpoint of national interest there is a great deal to be said against his decision. The three party system, under which no single party has an independent majority, has, we believe, come to stay. We shall in all probability have a series of Minority Governments. This system has its obvious disadvantages, but it is in our view greatly preferable to the alternative of insincere coalition. Moreover, the system is capable of being worked successfully. But it cannot achieve success if the country is to be plunged into a general election at frequent intervals. The present House of Commons is comparatively fresh from the Constituencies, and may be taken roughly to represent their present wishes. For no new issue of first magnitude has

arisen. If, then, one party fails to carry on the Government, there is much to be said for the view that at least one of the other parties—particularly the largest party in the House of Commons—should be allowed the opportunity of trying its hand before resort is had to the arbitrament of the polling booth. We think, therefore, that, while the main responsibility for the Government's fall rests upon the Government itself, Mr MacDonald's decision to appeal to the country is open to serious question.

We hold no brief for the Labour Government and are counted among the most hostile critics of some of its views. But we regret both the occasion and the date of its fall. Favoured, no doubt, with a good fortune that was denied to his predecessors, but with a persistence and vision for which he is entitled to the thanks of the country, Mr MacDonald has achieved the great goal of a Reparations Settlement, and has furthered the cause of world peace. He has brought us to a stage at which the world looked to him with confidence for further signal service. In the electoral struggle these successes will be weighed in the balance against the failure to make headway in the great domestic problems, concerning which his promises at the last election were so far-reaching. We cannot pretend to forecast the verdict. But we do consider that, by his mistaken method in regard to the Russian question, and through the Parliamentary failure of his colleagues, he has thrown away a unique opportunity for continued public service within the limits of sane and safe progress dictated by the numerical position at Westminster. He now appeals to the country to remove those limitations and restore him to power independent and unfettered. That is an entirely different proposition, and we believe that the country in its wisdom will refuse to grant him his request.

There are other causes for regret at this premature election. Once again the contest has come upon us before Parliament has instituted a system of voting designed to make the House of Commons an accurate picture of the people's will. The continued failure to effect electoral reform in this direction is a growing menace to the prestige of the Parliamentary system. For the omission the Liberal Party must share the blame, for had it been able to achieve unanimity in its own ranks on a more equitable voting system, it could surely have found opportunity to secure that the change would have reached the statute book. But of infinitely greater importance are the possible consequences of an electoral campaign on the position in Europe and in Ireland. Happily, the passage of the Boundary Bill has been assured. But the fall of the Government that passed it will be powder and shot to the enemies of Irish peace. Then, again, there is a fear that the political crisis here will lend wings to the suspicion which, thanks to the deplorable efforts of certain British newspapers and publicists, has gained wide currency on the Continent, and especially in Central Europe, namely, that Great Britain dislikes the Dawes Scheme and will put obstacles in the way of its fulfilment. We trust that the leaders of all parties will go out of their way to emphasise with all their strength that this country, whatever Government may be in power, will honour the London Agreement both in the letter and in the spirit, and will bend its utmost endeavours towards making a success of the new régime in Europe.

PROTECTION—A CHANGE OF TACTICS.

AFTER having gone to the country a year ago on the direct issue of a general protective tariff, and come down heavily, Mr Baldwin is not anxious to supply Liberal and Labour opponents with the destructive ammunition which was used against him last November. But he is compelled by what are called party exigencies to give the Protectionists something. One cannot flourish a protective tariff before the country one year as a certain cure for unemployment, and, less than twelve months afterwards, confess that the remedy may be worse than the disease. So if it were only to save the face of himself and his followers, Mr Baldwin would be obliged to remain a professed believer in Protection. He is per-

sonally more than this; he is a convinced believer, and so are many among his principal supporters. But after the lesson of his defeat he sees the folly of any more frontal attacks on Free Trade as the fiscal policy best suited to the conditions of Great Britain. The attacks will go on, but, as in the late war, the tactics will be changed. Instead of bombardments and assaults, we are to have the infiltration of prepared positions. There is nothing new about infiltration as applied to fiscal policy. The retention of the McKenna duties after the war, the Safeguarding of Industries Act, with its key industries, its tariffs against countries with collapsed exchanges, and its provisions against "dumping," were measures of infiltration. So was the proposed extension of Imperial Preference agreed to by the late Government at last year's Conference. Mr Baldwin's rash blunder of a general tariff has by now lost much of the ground taken by the Protectionists in the previous six years, but he and his party are not downhearted; they are going to try again on the lines which yielded their earlier successes. A general tariff will not be a direct issue in the Election of next month, but we shall get again tariff infiltration should Mr Baldwin and his men return to power after Christmas.

He is, fortunately, a plain, blunt man who says what he means and means what he says. And this is what he said at Newcastle recently. "I want to repeat what I have said on several occasions, that at this forthcoming Election the general tariff is no part of our programme. We do not stand for it, but we hold ourselves at liberty to safeguard any efficient industry in which unemployment may be caused by unfair competition of any kind, to safeguard that industry by such a measure of safeguarding as, after careful study and consideration, may seem to us the most effective instrument for that purpose. That has all along been our policy since I declared it last January. It is a policy to which most people, irrespective of party, in this country would to-day give their assent. It is the policy for which we stand, and it is an essential policy, having regard to the fact that we support the findings of the Dawes Report, the Commission which we ourselves called into being, and, indeed, to support the Dawes Report, and not be prepared to take those steps that I have indicated would be an act of lunacy." Nothing could be clearer than that. The general tariff is in suspense—for the Election of this year and the Parliament which results from it, though not necessarily for any longer period. But the policy of the so-called Safeguarding of Industries Act is to continue in force, and in the words of one of Mr Baldwin's supporters, "is to be speeded up and made more productive of tariff results." If the Conservatives or Unionists, or whatever party label is now correct to describe Mr Baldwin's followers, come back as a possible Government, we shall see again intensified the scramble for the protection of interests, and the wire-pulling in Government Departments, which such a policy involves.

They will still have the Safeguarding of Industries Act in being as a foundation upon which they can construct their new and "effective instrument" for saddling this country with protective tariffs. Many people think that this Act is dead. That is not so. One portion of it, the temporary changes allowing orders to be made against goods coming from countries with collapsed exchanges, was allowed by the present Government to expire last August. But all the rest of the Act remains: Part. I., with its enormous list of Key Industries, and its duties of 33½ per cent., remains in force for two years longer; and the dumping clauses remain as permanent legislation, though no orders have yet been made under them. If there should be an anti-Socialist reaction strong enough to put the Conservative-Unionists, together with Constitutionalists like Mr Churchill, in power once more, enough of the Act is left to serve as a basis for their protectionist operations.

One curious feature about the mentality of Protectionists, as typified by Mr Baldwin, is their eclecticism. They seem positively to dislike trade with many European countries. Mr Baldwin at Newcastle cheerfully handed over Russia as a field of trade—for what that country may be worth—to Germany as Russia's "natural exploiter." And he produced once more the strange theory

that our "natural markets" are anywhere except in Europe. He allows this quality of naturalness to the Dominions, South America, and the East, though why the Latins of South America and the Mongols of China should be "natural" customers of ours rather than the Latins of Europe, the Scandinavians, or the Slavs, has never been explained. It has again and again been pointed out—and we repeat it now—that Europe still buys a third of our exports, as large a proportion as Europe bought before the war. The percentages were 33.7 in 1923, as against 34 in 1913. We buy from Europe one-third of our imports, as compared with 40.2 per cent. before the war. The whole of the dominions, including India, take very slightly more from us than a crippled Europe still takes, and the proportion of our trade with the Empire is actually less than it was ten years ago, in spite of the alleged benefits of preference. Mr Baldwin's "natural markets" of South America and the East are taking now, and took before the war, about half of what Europe takes. All his "natural markets" put together bought last year just 52.31 per cent. of our exports (as compared with 55.3 per cent. in 1913), and sold to us 41.5 per cent. of our imports (as compared with 37 per cent. in 1913). If it was not for the purchases of despised Europe, "unnatural" though its conduct may be, our toll of unemployed in the staple industries would be at least twice the present lamentable figures. The whole theory of natural and unnatural markets is, of course, nonsense, and has no existence in the minds of practical men of business.

MONETARY IMPROVEMENT IN EUROPE.

"For the majority of countries given, the years 1922 and 1923 have been a period of price stabilisation." So says a League of Nations Memorandum on "Currency, 1913-1923," lately issued from Geneva, at the price of 10s. It has been drawn up on the same lines as that published last year, with the important addition of a series of notes concerning the methods by which the various index numbers are compiled. It is well and clearly written, and it is, like its predecessor, stuffed with a banquet of facts and figures such as should gorge the appetite of the most voracious student of statistics. It deals with currency, circulation, prices, exchanges, &c., for all the world, from China to Peru, incidentally mentioning that the currency of Salvador was put on to a gold basis in 1919, and that Venezuela, "where even during the war gold never went completely out of circulation," quoted its exchange at a premium in November last. But it is the improvement in afflicted Europe that naturally compels most attention, especially from the point of view of those who hope that this improvement may be greatly assisted and furthered by the political settlement that has lately been achieved, as far as the agreements of statesmen can secure it.

In the matter of price stabilisation, then, it is gratifying to find that 1923 has repeated the record of its predecessor. But though this is the general conclusion, it appears that there has been a good deal of difference in the aims which the various countries have pursued. "In Austria, Danzig, Germany, Hungary, Lithuania, and Latvia, after the application of the new monetary law in 1922, though not in 1921, and also in Esthonia, a policy of exchange rather than of price stabilisation has been pursued. Attention has been concentrated rather on the external than the internal purchasing power of money. The policy of those countries, on the other hand, whose exchanges are in measurable distance of parity, whose price indices range, for instance, between 160 per cent. and 185 per cent., has not been so clear. They were not faced, however, with the necessity of choosing between the alternatives of either allowing their exchanges to improve and maintaining stable prices, or allowing prices to rise up to the level of the outside world, as fixed by a constant exchange rate. They had reached, that is, the stage at which constancy in the one was likely to be accompanied by constancy in the other factor." The mere reaching of this stage, and staying in it, is surely a considerable achieve-

ment, in view of the political instability and apprehensions that have marked the period. The Memorandum admits, with admirable candour, that the division into years is not altogether satisfactory, since the years do not coincide with the periods in which boom, slump, and quiescence in prices occurred. But after entering all these cautions and caveats, the improved stability of prices in the past two years remains a very striking fact. "In China, Finland, Italy, Palestine, Sweden, Switzerland, and the United States of America the average deviation in 1923 was less than 2 per cent.; while in Canada, Denmark, India, New Zealand, Spain, and South Africa it was less than 2 per cent. in both 1923 and the previous year. Particularly important to the world in general has been the marked stability of prices in the United States, in spite of their ever-increasing stocks of gold." Certainly it was most important, but many people in the countries which are struggling to restore their currencies to parity with America's believe that their task would have been a good deal easier if the policy of the Federal Reserve Board, in sterilising the continued additions to America's gold store had not been quite so successful. One consequence has been that, in spite of the reduction in price fluctuations, there has been a tendency for the discrepancy between the American index and those of other countries to increase—to take our own example, there was, at the end of 1922, no discrepancy between our index number and America's; but at December, 1923, owing to the slight upward reaction here, there was a discrepancy of 8 per cent. The high ideal set up and acted on by the United States has thus made the task of recovery to par rather more difficult for her poorer neighbours, whose monetary policy is complicated by unemployment problems.

As was to be expected, this stabilisation of prices is attributed, as a matter of course, by the League of Nations Memorandum to the stabilisation of monetary conditions. A table showing the note circulation, as a percentage of the circulation of 1919, brings out the important fact that in the great majority of countries both inflation and deflation of the note circulation had ceased by 1923. Moreover, "of the 34 countries given, only in Russia, Germany, Portugal, and Greece were the banks of issue being directly used during this year for the purposes of covering Governmental deficits. To these four should be added Hungary and Poland" (which figure in a different table), but "of these six countries all except Portugal and Greece have by now (April, 1924) taken definite measures to render the note issue independent of the Government finances." Thus it seems that history has justified the faith of those who preached the simple and commonplace, but persistently ignored doctrine, that if only Governments would learn to balance their Budgets, or finance deficits by real loans raised from investors, and forswear the use of the printing press, currency matters would soon be on the mend. It used to be argued that when once a country was involved in the vicious circle, such reform was impossible. But, in fact, when the vicious circle has whirled round long enough, it compels reform by ceasing to provide the delusive benefit that led to its introduction. As the Memorandum says, "the growing distaste for a currency the possession of which entails an inevitable loss to the holder, rendered it increasingly difficult for the (German) Government to cover its deficits by the printing press..... The conditions obtaining in Germany in the autumn of 1923 thus rendered a currency reform inevitable, because it had become almost impossible to find anyone on whom to impose the tax which inflation entails."

When we turn to the section of the Memorandum that deals with exchange, we find that there was a very general tendency for European exchanges to deteriorate during the year 1923, "and indeed, with the single exception of Latvia, in no case was the December average for this year above that for 1922." This apparent decline, however, is to a certain extent deceptive, arising merely because December averages only are taken, and because the dollar happened to have appreciated temporarily at the end of 1923. In the case of sterling, it will be remembered that we were suffering in England from a "flight from the pound" on a quite considerable scale, owing to an indiscreet utterance by a member of the Government about a policy of

inflation for the relief of unemployment, followed by political crisis and fears as to what might happen if the Labour Party came into office. In spite of these accidents, however, the annual averages for 1923 are still reassuring, for they show that in the case of many important countries—including Sweden, Holland, England, Czechoslovakia, and Finland—the mean exchanges for 1923 were closer to parity than during 1922.

A very interesting and important point is brought out by the Memorandum's section on gold—namely, the increasing preference shown by many countries for interest-bearing foreign assets as cover for note issue rather than gold. Thus, Siam has, since 1917, gradually converted the whole of its exchange reserve into readily realisable assets. India has directed her policy towards holding the gold standard reserve almost exclusively in the form of sterling securities; and "the statutes of all the new central banks in all countries in which a currency reform has lately been carried out treat gold and liquid foreign assets as of equal value as cover for notes..... This growing preference for interest-bearing assets over gold..... constitutes, without doubt, one of the most important of monetary tendencies at a time when the international distribution of gold is continually becoming more and more unequal." Perhaps the Memorandum slightly exaggerates the importance of the countries which have allowed their monetary policy to be dominated by this tendency; but it is evidently very prevalent, and must cause some heart-searchings in the United States, whose reserves "at the end of 1923 exceeded the total domestic stocks in Europe by almost 45 per cent., and amounted to nearly one-half of the total gold reserves of the world, exclusive of foreign holdings, which are largely double-counted."

WAGES IN THE BUILDING INDUSTRY.

(BY A CORRESPONDENT.)

THE terms of settlement of the recent dispute in the building industry provide for the stabilisation of rates of wages for a period of nearly eighteen months. It is opportune, therefore, to examine the present position of wages in the industry, with reference to the changes which have occurred during the last ten years. Under the existing system rates of wages are fixed on a national basis, the various towns and districts in Great Britain, so far as they are covered by the organisations of employers and operatives, being allocated to certain grades. For each grade uniform rates of wages for skilled men and labourers respectively have been fixed by the National Wages and Conditions Council. This grading scheme provides for sixteen grades outside London, with intervals of $\frac{1}{2}$ d per hour in the case of craftsmen, between the rates. To several of the grades, however, more particularly those for which the lowest rates have been fixed, no towns are at present allocated. The number of towns in each grade, according to information published by the Ministry of Labour, is as follows, the rates of wages shown in brackets being those for craftsmen and labourers respectively:—

Grade A (20d, 15 $\frac{1}{2}$ d)	185	Grade B 1 (17 $\frac{1}{2}$ d, 13 $\frac{1}{2}$ d)	77
" A 1 (19 $\frac{1}{2}$ d, 14 $\frac{1}{2}$ d)	1	" B 2 (17d, 13d)	40
" A 2 (19 $\frac{1}{2}$ d, 14 $\frac{1}{2}$ d)	24	" B 3 (16 $\frac{1}{2}$ d, 12 $\frac{1}{2}$ d)	80
" A 3 (18 $\frac{1}{2}$ d, 14d)	61	" C 1 (16d, 12 $\frac{1}{2}$ d)	17
" B (18 $\frac{1}{2}$ d, 13 $\frac{1}{2}$ d)	21	" C 2 (15 $\frac{1}{2}$ d, 11 $\frac{1}{2}$ d)	5

The weighted average of the rates fixed under this scheme is 18.4d per hour, equivalent to 71s 3d per week on the basis of a 46 $\frac{1}{2}$ -hour week in the case of craftsmen, and 14.0d per hour, or 54s 3d per week in the case of labourers. The latter rate, it will be seen, is about 76 per cent. of that applicable to the skilled workers. The average of the hourly rates at the end of 1920, when wages were at their highest level, was 25.8d per hour in the case of craftsmen, and 22.7d per hour in the case of labourers, the latter being 88 per cent. of the skilled men's rate. A comparison of these figures with those relating to the present date does not, however, tell the

full story of the movement in wages. During the period of falling wages, from 1921 to 1923, the operatives in the lower-paid districts succeeded in a very marked degree in improving their position relatively to those in the higher-paid towns. At December, 1920, the national grading scheme had not been adopted, but the various towns had been allocated by the Area Joint Councils to grades which corresponded with those subsequently adopted by the National Council. The following table, which relates to about 500 towns, shows in a striking way the extent to which the position of the lower-paid towns has improved since the end of 1920:—

Grade.	Percentage of Towns in Each Grade.		Grade.	Percentage of Towns in Each Grade.	
	Dec., 1920.	Sept., 1924.		Dec., 1920.	Sept., 1924.
A	40	36	B2	2	8
A1	..	..	B3	..	16
A2	..	5	C	15	..
A3	19	12	C1	..	3
B	..	4	C2	17	1
B1	..	15	C3	7	..

It will be seen that, although a small proportion of the grade A towns have been de-graded, there has been a considerable up-grading in the case of towns formerly graded C to C 3.

On the other hand, it will be noticed that the average rate of wages of unskilled labourers has been reduced since 1920 from 88 per cent. of the average for skilled men to 76 per cent. As a result of the successive increases in wages during the war period the ratio of the rates for the two classes had departed considerably from the normal, and it was obvious that steps should be taken to restore the position. This was accomplished by arranging reductions in wages in 1921 of greater amounts for labourers than for the craftsmen.

Turning now to a comparison between present rates of wages and those prevailing in 1914, we find a considerable development in the levelling up of the rates in different towns and between different classes of skilled workers. On the latter point it may be remarked that before the war rates of wages were usually fixed independently for the various occupations in a town, and it was rarely found that all the skilled workers received the same rate, whereas to-day no distinction is made, in the great majority of towns, between the different occupations. Information is not available for the whole of the 500 towns for 1914; but an analysis of the rates in about half that number produces the following result:—

Bricklayers.		Painters.		Labourers.	
Rate.	Percentage of Towns.	Rate.	Percentage of Towns.	Rate.	Percentage of Towns.
d		d		d	
10 $\frac{1}{2}$	13	9 $\frac{1}{2}$	5	7	18
10	11	9	16	6 $\frac{1}{2}$	24
9 $\frac{1}{2}$	15	8 $\frac{1}{2}$	17	6	19
9	18	8	19	5 $\frac{1}{2}$	14
8 $\frac{1}{2}$	14	7 $\frac{1}{2}$	14	5	9
8	12	7	13	4 $\frac{1}{2}$	4
7 $\frac{1}{2}$	4	6 $\frac{1}{2}$	5	4	12
7	6	Other	11		
Other	7				

The rates of wages prevailing in the same towns at September, 1924, are as follows:—

Percentage of Towns.		Rates of Wages		Labourers.	
		Bricklayers and Painters.			
55	20	d		d	
13	18 $\frac{1}{2}$			15 $\frac{1}{2}$	
15	14			14	
17	17 $\frac{1}{2}$			13 $\frac{1}{2}$	
		Other		Other	

These figures indicate clearly the extent of the levelling up of the rates between different towns, and, by way of example, between two skilled occupations.

The average rates of wages for the 250 towns in 1914 were 8.9d, 8.0d, and 6.1d in the case of bricklayers, painters and labourers respectively. For the same towns the averages for September, 1924, are 19.0d, 19.0d, and 14.5d, showing increases of 113, 138, and 138 per cent. It should be noted, however, that the increases in hourly rates between 1914 and 1924 included certain advances

granted in order to maintain weekly wages at a uniform level after reductions in hours of labour, and that the percentage increases in weekly full-time rates of wages would be appreciably lower than those in hourly rates.

THE AMERICAN PRESIDENTIAL CAMPAIGN.

(BY A CORRESPONDENT.)

AMONG the political experts of the United States the general conclusion at the present time is that only President Coolidge has a chance of obtaining a clear majority of the 531 votes available in the Electoral College. But Mr Clinton Gilbert, an experienced appraiser of political situations, and a Republican in his sympathies, writing recently in the *New York Evening Post*, would only claim as certain for Coolidge 295 votes, and Senator Simeon Fess, of Ohio, also a Republican, keeps his estimate at the modest total of 247. Even Mr Gilbert's estimate leaves a perilously small margin for the Republicans, and impartial authorities reckon that Davis and La Follette between them cannot possibly fail to secure less than 266 votes. Davis is certain of 160 votes from the States of the "Solid South," and now that Governor "Al" Smith has agreed to run again for his present office, he is likely to bring the 47 votes of the State of New York to the Democrats, which, without any other gains, would give them a total of 207 votes. Senator La Follette is conceded Wisconsin, Minnesota, the two Dakotas, and Montana, making a total of 39 votes, and his chances of at least doubling that number from other States like Iowa, Nebraska, and Kansas are excellent. In any event, it seems unthinkable that between them Davis and La Follette can secure 20 votes over and above those conceded to them, which would make a majority for Coolidge impossible.

Under such circumstances the absorbing speculation in American political circles is what will happen when the Electoral College finds itself unable to deliver a President to the American people. Twice before in American history such a contingency has developed. In 1800 Thomas Jefferson and Aaron Burr received an equal number of votes in the Electoral College, and the terms of the original Constitution threw the election to the House of Representatives. In it the Federalist party, under the guidance of Alexander Hamilton, whose feud with Burr culminated in a duel and his own death, gave their votes to Jefferson and ensured his election, Burr becoming Vice-President. But this contest revealed some flaws in this part of the Constitution, and in 1803 the twelfth amendment, which now regulates the procedure, was adopted. It retains the original scheme for the choice of a President by the Electoral College, but it also provides that if no person secures a clear majority of the College "then from the persons having the highest number, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States."

The new alternative plan was tested out for the first and only time exactly 100 years ago in the election of

Head Office: 41 LOTHBURY, LONDON, E.C. 2

1824. General Andrew Jackson, popularly known as "Old Hickory," got a plurality of the popular vote, but neither he nor his three competitors, John Quincy Adams, Henry Clay, and W. H. Crawford, secured a majority of the votes in the College. The election then went to the House of Representatives, and there Clay, who was Speaker, induced his followers to support Adams, with the result that the latter, receiving the votes of 13 States as against Jackson's 7 and Crawford's 4, was elected. Clay became Secretary of State in Adams' Cabinet, but the transaction damaged his prestige, and is generally alleged as one of the chief reasons why the ablest American politician of his generation failed to reach the White House.

The operative results of the 12th Amendment can thus be summarised:—1. If the Electoral College fails to give any result, the word "immediately" in the amendment decrees that the choice must devolve upon the present House of Representatives, not the one to be elected in November. 2. The balloting in the House will be by States, each State having a single, and States which cannot give a majority to one candidate because their representation is equally divided will be unable to vote. 3. A majority of all the States, namely, 25, will be required for a choice. 4. If the House has not made a selection by March 4th, any Vice-President chosen by the Electoral College will automatically become President, and if none has been chosen, the Senate must select one.

Now, Congress does not meet till February 10th, and it will have at its disposal only 22 days to provide the country with a President, for he must be inaugurated on March 4th, or the whole machinery of the Government of the Republic will be thrown into confusion. It will be a hectic three weeks of intrigue and manœuvre, but several known factors govern the situation, and make some forecast of the outcome possible. The House must choose between the three highest candidates according to the original election returns, and these will undoubtedly be Coolidge, Davis, and La Follette. La Follette has no chance in the present House, for he can only command the votes of two States, Wisconsin and North Dakota, and is not definitely certain of the latter. Then five States will have their vote sterilised because their delegations contain an equal number of Republican and Democratic members. Forty-one States will, therefore, be left to determine the result, and of their delegations, 21 contain a Republican and 20 a Democratic majority. Coolidge would, therefore, be 4 votes short of a clear majority, and Davis 5; and even if La Follette threw to either of them his 2 votes, a majority would not be available.

Meanwhile the Senate, with its present personnel, would be trying for the first time in its history to elect a Vice-President. On the assumption that a Republican vacancy now existing is filled by a Republican, the political colour of the present Senate shows 46 Republicans, 42 Demo-

crats, and eight followers of Senator La Follette, including the two Farmer-Labourites. Here, again, both the old parties fall short of a clear majority, and the situation may well be at the mercy of La Follette and his supporters. The choice is restricted to the two highest candidates for the Vice-Presidency shown by the College, and it is reasonably certain that General Dawes (Republican) and Governor Bryan (Democrat) will remain in the field.

Now it is almost unthinkable that the Progressive group will vote for General Dawes, who has been turning his chief batteries against them and assailing them as Socialists, "Reds," and destroyers of the sacred Constitution. He could only be elected if a group of Conservative Democrats like Senator Bruce of Maryland, who dislike the name of Bryan and all it signifies, were to support him. But the chances of electing Governor Bryan, if the choice came to the Senate, would be so good that no Democrat would dare to contemplate such treachery to his party as making a gratuitous gift of the Presidency to the Republicans. Governor Bryan, like his more celebrated brother, William Jennings Bryan, has always been more or less of a Radical. He has given Nebraska very progressive government, has many points of contact and sympathy with La Follette and his followers, and, being a Westerner, is familiar with the problems in whose solutions they are specially interested. Despite his skull-cap and other eccentricities, he is a shrewd and capable politician, who has hitherto been overshadowed by his brother; but the Progressives in the Senate would find little difficulty in voting for him and justifying their course to their constituents. Indeed, Senator La Follette would think it a mighty jest to put, after all these years, a Bryan in the White House, with William Jennings—the *bête-noire* of the "big business" interests of the East, at his elbow. The Progressives must vote for somebody, or there would be no President when March 4th arrived, and chaos would ensue till the Supreme Court had given a decision authorising Congress to pass a law saying who should be temporary President until a new election could be held. If, therefore, the election goes to Congress, Governor Bryan is rated the highest to-day, and Republican papers are already alleging that the Progressives have concluded a secret bargain to put him in the White House, with a guarantee that he will choose a Radical Cabinet and pursue Radical courses. The banking and industrial interests will strain every nerve to avert such a result, so calamitous in their eyes, and the suggestion is being hazarded that if the election goes to Congress, and a deadlock is threatened in the House of Representatives, powerful pressure will be exercised upon the Republican leaders to allow a Republican member from each of the "sterilised" States to abstain from voting. Such action would give five additional States to the Democrats, and bring to the White House Mr Davis, in whose conservatism and general friendliness Wall Street and its allies have complete confidence. But the result of such a manoeuvre, exposing as it would the cynicism and similarity of outlook of the two old parties, would give a tremendous impetus to the Progressive movement, and probably ensure its immediate organisation upon a permanent basis.

THE PRICE OF WHEAT.

(BY A CORRESPONDENT.)

THE House of Commons had matters on its Agenda last Wednesday of greater popular interest than the answer of the President of the Board of Trade to an inquiry respecting the price of wheat. None the less, the pronouncement of Mr Sidney Webb merits the most careful consideration. The Northern Hemisphere, in his opinion, had a bare sufficiency of wheat, but last year at this time it had a superfluity. Prices to-day, therefore, were not abnormally dear so much as those of a year ago had been abnormally cheap.

Reference to actual figures go far to justify the President of the Board of Trade, whose intellectual integrity forbade a facile depreciation of the recent rise in prices as unfortunate or uncalled for. The precise price of

wheat in the pre-war year was rather under than over 8s per cwt, and a year ago it stood at 10s, when the cost of living showed an index number of 175. Eight to ten being as 100 to 125, the price of wheat was, on the face of it, far lower than the general situation justified. That this view was the true one was shown by the heavy fall, 235,000 acres, in the home wheat acreage for 1924. The main factor was the Canadian crop. The great overseas producers of wheat always have a far greater margin of possibilities than the older, settled lands. English farmers would go out of business if they reaped only 20 bushels to the acre, but when the Canadian harvest attained that standard the world wondered. It was four bushels above the average, and this on 22 million acres was 88,000,000 bushels. Every bushel of this was surplus wheat, and by this date last year it was waiting, eagerly soliciting, buyers at Mark Lane and elsewhere. To-day the general index number, 175, would mean wheat at 14s per cwt, and that in September was the price.

What has happened since Michaelmas is that wheat, while making only 12s for English new crop (which is out of condition through the damp weather), commands 16s for good dry foreign, and it is this rise of fine Canadian, good Australian, Argentine, and Indian which has been adduced by Mr Webb.

The attention of the public has been more immediately directed to the price of flour, which has been advanced to 26s 6d per bag, the price a year ago being 19s only at this date. Millers are described as "crying out before they are hurt"; more accurately, they might be said to be acting as though all their wheat were costing them 16s per cwt, which is not the case. The present official straight-run flour, by no means a top grade, contains at most 25 per cent. of this dearest wheat; its quota of English costs only 12s to 13s per cwt. This latter needs conditioning, but expenditure on that process is not heavy. Every mill, more or less, has its conditioning appliances and arrangements. The cost of the wheat does not, it may fairly be said, of itself justify the present charge for flour. The millers' defence lies in another direction.

The cause of flour rising 1s 6d per bag, a serious increase, on October 8th was the publication, on the 6th, of the stock returns for London. These are ascertained quarterly, and the returns collected on October 1st, representing stocks to meet the early winter, are especially important. Only 25,000 quarters of wheat were disclosed, or just one-fourth of a reasonable reserve, one-eighth or tenth only of what, with forty-seven million people to feed, a really prudent administration might be expected, were it a State affair, to keep in hand. It is, however, "no concern" of the Government in this country; on the importing firms of London, therefore, the burden of replenishing the granaries must fall. That they would rise to the occasion nobody, happily, doubted, but that they would charge well for their enterprise few doubted either. The millers have put up flour 1s 6d per bag at a bound, because they foresee having to pay in November and December at least 1s 6d per cwt more for that portion of their wheat coming from overseas. And the new English will at least cost the extra sum involved in conditioning.

Is the new price of wheat, which means a 10½d loaf, likely to last? The President of the Board of Trade was careful. He pointed out that he was only prepared to speak of wheat in the Northern Hemisphere. The harvests of the Southern Hemisphere begin to be reaped in the first week of December in Queensland and the Corrientes (Northern Argentina), and conclude in the last week of January in New Zealand and the Valdivia district of Chile. Both Australasia and South America have remarkably settled harvest weather, and by Christmas the markets know what the Southern Hemisphere has in the way of surplus. The present promise is high. Australasia should have ten million cwt more wheat to ship in 1925 than in 1924, and South America should have fifteen millions more. Both regions report an increased wheat acreage, and this, of course, greatly increases the probability of increased output. November and early December are, however, critical periods in both producing areas, answering to our June and early July, but the main danger—in contrast with ours, which is rain and lack of heat—is that of heat

and drought. Not for many years have the prospects of Antipodean harvests had their present importance. Speculation is already afoot; new crop Argentine wheat for January shipment has been offered at 14s 6d, and 14s has been paid; new crop Australian, also for January shipment, has been offered at 15s 6d, and 15s per cwt has been paid. The first will be here in later February, the second should arrive before the close of March. It is these new crops which will fix the price of bread in Great Britain for the earlier half of 1925; at present the outlook is for their fixing it a little in buyers' favour as compared with 10½d as a price for November and December.

Notes of the Week.

Ireland and the Political Crisis.—Although the threats to the life of the Labour Government have been interpreted by enemies of Irish peace as deliberate attempts to find a way out of implementing the Treaty of 1921, our prophecy of last week, that whatever course the crisis might take, the passage of the Irish Bill to the Statute Book was assured, has proved to be justified. The House of Lords has passed the Bill without amendment (though with criticism), and the Royal Assent was given on Thursday. The debates in the Upper House produced one surprise. Lord Grey appeared in the unexpected rôle of a champion of Ulster's plea, that the Bill to set up a Boundary Commission constitutes a breach of pledges given to Northern Ireland—a breach comparable to that which would be committed if our obligations to the Free State under the Treaty were not implemented. While sharing to the full in the general regret at the necessity for this week's legislation, we have previously stated our view that, while the new Bill completely fulfils our obligations to the Free State both in the letter and the spirit, it does not represent a breach of faith with Ulster. We may admire Lord Grey for so frankly stating the opposite opinion, for that opinion, incidentally, runs counter to those of his political party; but we find nothing convincing in his arguments. But if Lord Grey surprises us with this opinion, he surprises us doubly with the thesis that he builds upon it. He thinks "there is much to be said for the course" of saying to the Free State:—"We are very sorry, but we cannot fulfil our obligation to you." Lord Grey faces the consequences, and frankly avows that he is not afraid of them. "I do not see," he remarked, "what we have to lose with the Free State being a Republic." Lord Grey, we cannot doubt, is as eager for an Irish settlement as anyone, and he sees that that can only come through an agreement between Irishmen themselves. But does he really think that such agreement will be brought nearer by a British policy that would set Mr de Valera in the saddle? That would be the first result if Lord Grey's advice were to be taken, and we fear, as it is, that these views, expressed with the weight which all utterances of this statesman carry, will afford substantial encouragement and assistance to the extremist factions, both of the North and of the South. In our view, Lord Grey's attitude towards the Boundary Bill is based on unsound foundations, while the policy which he advocates is strangely devoid of that quality of statesmanship for which he himself has deserved and achieved so great a reputation.

The Break-down of the Egyptian Conversations.—Zaghloul Pasha left England last Tuesday without making any announcement as to the result of his conversations with Mr MacDonald, but the information has been supplied in a despatch of the same date from Mr MacDonald to Lord Allenby, the British High Commissioner in Egypt, which has been published as a White Paper. On all the points reserved for discussion at the time when Great Britain withdrew her protectorate and recognised the independence of Egypt in 1922, the Egyptian Prime Minister appears to have shown himself completely intransigent. He has demanded the with-

drawal of all British forces from Egyptian territory; the withdrawal of the British financial and judicial advisers; the cessation of British control over Egyptian foreign policy; the abandonment of the British Government's claim to protect foreigners and minorities in Egypt; and the abandonment of its claim to share in any way in the protection of the Suez Canal. Mr MacDonald raised the question of the Canal straightaway, inasmuch as its security is of vital interest to the British Empire, both in peace and in war, and the break appears to have occurred over this question before that of the Sudan was discussed in detail. As regards the Canal, presumably, the *status quo* will automatically continue until some agreement is reached—that is, the British garrison will remain in its present strength and its present quarters in Egypt until some alternative method, satisfactory to both parties, has been found for the military protection of the Canal. It would be reasonable for the Egyptians to contend that this object, vital though it is to the British Empire, need not be, and ought not to be, secured by the cantonment of British troops in all and every part of a juridically independent country, and it is incumbent on the Committee of Imperial Defence to determine, in the light of the best technical advice, what is the narrowest zone to which the British garrison can be confined in Egypt without prejudice to the security of the Canal itself. We must make it clear that our anxiety for the protection of the Canal is genuine, and that it has no ulterior motive—that it is not, in fact, a pretext for keeping the Nile Valley under our military control. On this point, Mr MacDonald, in his despatch, has given the most positive assurances, and he rightly says that there is no reason why accommodation is impossible, given goodwill. Here we can rest on the *status quo* and leave it to time to bring the political leaders of Egypt into a more accommodating frame of mind. The *status quo* will not, however, continue automatically in the Sudan, for there the British and Egyptian Governments are not the only two parties. The most important party are the Sudanese, and the Egyptian officials and other residents in the country have now for some time been engaged in an organised attempt to make the *status quo* unworkable by undermining the loyalty of the Sudanese population towards the present régime. Mr MacDonald's reference to this situation is the gravest passage in his despatch. "His Majesty's Government," he writes, "have no desire to disturb existing arrangements, but they must point out how intolerable is a *status quo* which enables both military and civil officers and officials to conspire against civil order; and unless the *status quo* is accepted and loyally worked until such time as a new arrangement may be reached, the Sudan Government would fail in its duty were it to allow such conditions to continue." The Prime Minister seems to contemplate a situation in which the Sudan Government will be forced to suspend the condominium in practice, and to carry on with the services of British and Sudanese alone, and it is hard to believe that the Egyptians will be consulting their best national interests if they force this drastic remedy upon us. If once the Egyptian element is eliminated from the Sudan Administration at this stage, is it likely that it will ever recover its position in it? The Egyptian personnel does not occupy the highest and most difficult posts for which the Sudanese will not be qualified for a considerable time to come; they fill those subordinate positions in which a native Sudanese staff could most easily replace them. The moral is that a reasonable attempt to find an accommodation on the several points at issue between the British and Egyptian Governments is as much to Egypt's interest as it is to ours.

The Defeat of the Communists.—"Communism as we know it has nothing practical in common with us. It is the product of Czarism and war mentality." No sentence in the Prime Minister's presidential address at the Labour Party Conference evoked louder and more spontaneous cheers from all parts of the Queen's Hall than this. It showed how little the Communist fraction counts inside the mass of politically organised Labour, in spite of the advertisement that has been recently given to it. During the last eight months the Communists' propaganda has,

on their own showing, been going on with exceptional activity; they had hoped to gain by the opportunity for destructive criticism afforded them by the position of a Labour Government in office with a minority of votes. As a matter of fact, Communism has gone back continuously ever since 1921. This year's Conference, indeed, registered a defeat more complete than anyone had foretold. Not only was their renewed application for affiliation rejected by a greater majority than in any preceding year—3,185,000 to 193,000, against 2,880,000 to 366,000 in 1923. More than that, the Executive's second resolution, moved by Mr Frank Hodges, excluding members of the Communist Party from endorsement as Labour candidates, local or national, was carried by 2,456,000 votes to 654,000, after a debate in which all the honours went to the speakers for the motion for exclusion, who argued not on tactics, but on fundamental difference of principle and on a reasoned opposition to the use of force. The Conference went further. It carried its own decision to its logical end, and, by a majority of 256,000, accepted a resolution in the name of the Sutton Labour Party, excluding Communists from membership of the Labour Party. This last decision was something of a surprise, and the smaller majority was due partly, no doubt, to this fact, and partly, one may hazard, to a recognition of the problem that will be at once presented in the application of such a test—a difficulty that arises, to some extent, in relation to candidates. It will, however, accelerate the process of defection from the Communist ranks, which had already been induced by resentment of the stiffer dictation recently announced from the headquarters of the Third International. Anyhow, the formal position is now clear enough. The accusation of "Bolshevik" no longer lies against the Labour Party; it has shaken its skirts clear of its awkward allies. There can be no recurrence of such incidents as those of the Woolwich bye-election of 1921, or, more recently, of the Kelvingrove bye-election of 1924. Of course, it is admitted by members of the party with most experience, that it is one thing to exclude members of the Communist Party, another to exclude Communists. Reliance, however, is placed on the fact that furtive and secretive movements have never had much hold on British politics. Whatever be the case abroad, here a party which has to hide its name, and conduct its activities in the dark, is not likely to gain new adherents. It would seem, therefore, that for the time being, at any rate, a definite check has been put on Communist progress in Great Britain.

The Stock Exchange and the Election.—Stock Exchange markets are regarding the present political crisis in a manner much more placid and philosophical than eleven months ago, writes a Stock Exchange correspondent. At that time a shiver of apprehension ran throughout most of the markets. A Labour Party had never been in power before, and although Mr Bonar Law had coquetted with the question of capital levy, and Mr Winston Churchill had given railway nationalisation an unexpected benison, the fear of the Labour Party doing something dramatic in both these directions seized upon the Stock Exchange mind, and depressed security prices. Business suffered, last year, a severe check during the month which intervened between the dissolution of Parliament and the General Election, but, so far as can be seen at present, is not likely to undergo much disturbance this time except from the natural and inevitable effect that will be produced by a diversion of public interest from financial into political channels. Home Railway prices started to go better upon the Dissolution being announced. Gilt-edged stocks are good throughout. There is a hard tendency in most of the investment markets. A few areas, such as the tea market, for instance, where a bull account exists, have come under the ban of the political situation, but the Stock Exchange views with composure the probable prospect of the Election's outcome. It is thought in the House that the Labour Party will be returned again, but with a working majority not greatly increased, and that, if this should turn out to be the case, the political

position will be much the same after the Election as it stands to-day. There are no dealings in Majorities at present, but a little market has sprung up in the seats which the Labour Party is likely to secure, and the price of these was called, at the opening of the business, 200 to 210. The middle price is about a dozen seats more than the Labour Party commands at present, and if the Election materialises upon the lines such as this quotation indicates, Stock Exchange opinion maintains that no great damage is likely to accrue to the country by reason of a General Election, which is regarded more as a nuisance than a necessity.

Coal Trade Finances.—The financial position of the South Wales mining industry goes from bad to worse, writes our Cardiff correspondent. The joint audit for August shows a further loss of £230,021, or 1s 3.63d per ton on an output of 3,531,916 tons. This the third successive month in which the industry has been worked at a loss, the deficit in June having amounted to 1s 4.9d, and in July to 0.01d per ton. The owners, therefore, were unable in respect of the August trading to obtain a penny of the standard profit provisionally provided for under the new national agreement. The deficiency, according to the terms of the agreement, amounted to £497,220, and this addition brings the total deficiency carried forward to the large sum of £2,180,026. The wage certified as payable, subject to the retention by the owners of their share of the surplus available after meeting the cost of the standard wages and their standard profit, is only 16.08 per cent. on the 1915 standard rates, but the wage actually payable under the minimum wage clause is 42.22 per cent. on those standard rates, and it is the liability of the owners to pay this minimum wage that explains the absorption by wages of the owners' standard profit of 15 per cent. of the standard wage, their 12 per cent. of the surplus available after paying the standard wages and other costs, and the net loss of £230,021. The output was lower in August than in July, and the costs appreciably higher. The tonnage raised was 867,000 less than in July, and nearly 370,000 tons less than in August, 1923. The wages cost per ton was 13s 5½d, compared with 13s 1d in July, and other costs 6s 7d, compared with 5s 10d; while the average price realised at the pit head was 18s 9.05d, compared with 18s 11.26d. The reduced output and the higher costs were due chiefly to the holidays, and to the irregular working of the pits in consequence of the depression in trade. There has been only one other month since December, 1922, when the revenue of the industry was less than it was last August, and only one month when the costs of production were higher.

Home Crops.—The monthly agricultural report of the Ministry of Agriculture and Fisheries states that, owing to the bad weather, the corn harvest was much delayed, and in the north and in Wales quite half of the corn was still in the fields at the end of September, and some remained uncut. In the eastern half of the country practically all had been secured before the end of the month. Root crops would benefit from more sun, and drier conditions would be beneficial to live stock. Forecasts of the production of this year's crops have been revised in accordance with the later information, and the revised figures are set out in the table below. It is to be borne in mind, however, that these forecasts are based on estimates made at the beginning of October, and are consequently subject to modification.

	1923.	1924.	Production, 1923.	Forecast, 1924.
	Acres.	Acres.	Cwts.	Cwts.
Wheat	1,740,000	1,545,000	30,431,000	27,171,000
Barley	1,327,000	1,314,000	19,301,000	20,036,000
Oats	1,978,000	2,037,000	27,059,000	28,156,000
			Tons.	Tons.
Potatoes	467,000	452,000	2,758,000	2,648,000
Turnips and swedes	862,000	832,000	10,879,000	11,325,000
Mangolds	403,000	390,000	6,944,000	7,493,000

In the east potatoes have not suffered much from the rains of the past month, and disease, though present, is not very prevalent. There is a good deal of disease in the west, and reports of rotting are fairly frequent from Wales. The yield over the whole country is forecast at 5.9 tons per acre, the same as last year.

Free State and Compensation.—Our Dublin correspondent writes:—As many inaccurate statements have obtained currency as to the payment of compensation for damage sustained during civil strife in the Free State, it may be as well to give the true figures. The matter is best dealt with under two headings, the first covering the pre-Truce (in the Anglo-Irish conflict) period, and the second covering the post-Truce period. In respect of the pre-Truce period, the British and the Free State Governments undertook each to compensate its own supporters in respect of personal injuries sustained (including cases of loss of life), whereas in respect of property losses each side undertook to pay for the damage done by its supporters. Under this first heading 11,600 awards have been made involving about £6,300,000, and of these 11,000 have been discharged by payments amounting to £5,500,000. Awards conditional on rebuilding account for £550,000, which are being worked off as rebuilding proceeds. The payment of £250,000 in respect of the residue of unconditional awards will be completed within the next few weeks. All the foregoing cases represent awards by the Compensation (Ireland) Commission. Certain other awards of the Law Courts—1,100 in number—have also been discharged by payments amounting to £550,000. The Free State share of the above payments is stated to be upwards of £3,000,000. The post-Truce period, dealt with under a recent Act passed in May, 1923, is represented so far by 4,000 decrees or reports of judges. Sums amounting to upwards of £630,000 have been paid, while awards to which a reinstatement condition was attached, to the extent of £600,000, are awaiting the progress of rebuilding before being discharged.

American Cotton Crop.—Our Manchester correspondent writes:—Late on Wednesday there was a striking fall in American cotton prices in the Liverpool market. This was due to statistics published by the United States Government on the crop. In trade circles a condition of about 52 per cent. was expected, indicating a yield of 12,200,000 bales. The report, however, gave 53.5 per cent., indicating an output of 12,499,000 bales. It was also announced that the amount of cotton ginned up to October 1st was 4,526,000 bales, against 2,633,000 bales a fortnight earlier, and 3,232,000 bales up to September 25, 1923. These figures were considered exceedingly favourable, and there was a rush to sell, which resulted in a decline in the Liverpool market of over 1d per pound in a few minutes. There are now some people who believe that prices will again be brought down to 1s per pound. At noon on Thursday the quotation for January futures in the Liverpool market was 13.56d. Further crop developments are very largely dependent upon the existence or absence of frost in the belt during the next few weeks. As things stand at present the growth this season, with linters, should be about 13,300,000 bales, against less than 11,000,000 bales last season. The slump in values has had a rather disturbing effect upon trade in yarn and cloth in the Manchester market, but in the long run the lower range of prices should be beneficial, as there is more probability of foreign buyers providing big contracts at comparatively low rates, but free buying is not likely to take place until there is more stability in prices. The annual report of the Liverpool Cotton Association for last season, published this week, contains a mass of interesting statistics. One thing stands out very prominently, and that is the much smaller consumption of American cotton in this country than several years back. During the last four years out of the total supplied only 13.83 per cent. has been exported to Great Britain, against 21.20 per cent. in the previous five years, and 41.23 per cent. in the five-year period 1885-90. Since that time, spinners in the United States have increased their con-

sumption from less than 33 per cent. to nearly 54 per cent. Lancashire spinners, however, are using larger quantities of Egyptian, East Indian, and Peruvian cottons.

The Quarter's Shipbuilding.—Lloyd's Register Shipbuilding returns for the quarter ended September 30th show that the tonnage under construction in Great Britain and Ireland—1,468,408 tons—is about 48,000 tons less than at the end of June, 1924, but about 197,000 tons more than it was twelve months ago. The average tonnage building during the twelve months immediately preceding the war was 1,890,000 tons, i.e., 422,000 tons more than the present total. A considerable decrease is shown in the tonnage commenced during the quarter, namely, 252,745 tons, as compared with 375,210 tons during the second quarter of 1924. The tonnage launched during the quarter—360,219 tons—is only 4,299 tons lower than that for the June quarter, which is the highest reached during the last 2½ years. The tonnage of motorships building at the end of September in Great Britain and Ireland reaches 387,670 tons, equal to nearly 36 per cent. of the steam tonnage under construction. The total merchant tonnage building in other countries—1,112,604 tons—is about 12,000 tons more than at the end of June, 1924. The figures for the leading countries abroad are:—Germany and Danzig, 408,617 tons; France, 137,210 tons; Italy, 132,457 tons; Holland, 88,643 tons; Denmark, 77,899 tons; and Sweden 69,240 tons. It is shown that 278,008 tons were commenced abroad and 192,372 tons were launched during the quarter, an increase of 34,114 tons in the tonnage commenced and of 28,706 tons in the tonnage launched. The total world tonnage under construction—2,581,012 tons—is 865,546 tons below the highest pre-war record reached on June 30th, 1913, viz., 3,446,558 tons. There are at the present time under construction in the world 35 vessels of between 10,000 and 20,000 tons each, and 8 of 20,000 tons and upwards. Twenty out of the 35, and all the larger vessels, are building in Great Britain and Ireland. The returns show that there are at the present time 43 steamers and motorships, each of over 1,000 tons, with a total tonnage of 290,220 tons, under construction in the world for the carriage of oil in bulk. Of these tankers, 22 of 133,820 tons are under construction in Great Britain and Ireland, and 11 of 95,500 tons in Germany. The tonnage of vessels now building in the world which are to be fitted with internal combustion engines amounts to 939,899 tons, while the tonnage of steam vessels under construction is 1,621,569 tons. The motor tonnage thus equals nearly 58 per cent. of the steam tonnage, showing the remarkable development which is taking place in the adoption of this system of propulsion. Of the combined tonnage building in Germany, Denmark, and Sweden, nearly 78 per cent. consists of motorships. The world figures include 85 motorships each of between 5,000 and 10,000 tons; 7 of between 10,000 and 15,000 tons; and 7 of between 15,000 and 22,000 tons.

The Civil War in China.—A great battle appears to be imminent on the front south-west of Shanghai. From a purely military point of view the result can hardly be doubtful, for the Chekiang troops, though evidently better drilled and handled than their opponents, are not only outnumbered, but are likely to be attacked by the Fukien army

in their rear. But there is always the possibility of sudden negotiations leading to a compromise, and of divisions among the victors or in the Chih-li party, which the Tuchuns of Kiangsu and Fukien professedly support. The chief interest is at present in the extreme north and south. Chang-tso-lin, having come to an agreement with the Russian Soviet Government, has fulfilled the agreement concluded with it in May by the Peking Government to give it control of the Chinese Eastern Railway, and has thereby secured Soviet support. He is held at Shanghai by the troops despatched by Wu Pei Fu, but is attempting an advance further West; his opponents are short of winter clothing and supplies, and the Peking Government has arranged for the issue of \$4,200,000 Treasury Bonds secured on the surplus of the Customs revenue. Meanwhile, the Moscow Press, no doubt under official inspiration, argues, in the familiar manner of Continental Anglophobes, that, as Wu Pei Fu four years ago defeated the Anfu party which was pro-Japanese, Japan must assist Chang-tso-lin, his present chief opponent, and the champion of Chinese nationalism against the menace of "British Imperialism." (The issue of Treasury bonds, being sanctioned by the British head of the Chinese Customs Administration, will doubtless be cited as confirming this view.) In the south, Sun Yat Sen, having failed to raise an army to assist in the defence of Chekiang, is stated to be about to leave Canton in a Russian vessel, possibly to join Chang-tso-lin in Manchuria. Since the issue of his remarkable manifesto early in September, in which he demanded the British naval measures taken to protect Canton from bombardment, he also has posed as a victim of "British Imperialism," and it is now announced that—probably under Soviet suggestion—he is attempting to negotiate with the Japanese Government. The Soviet effort to represent the Chinese conflict as one between Chinese nationalism and Western "capitalism" is only what might have been expected; but it is hardly likely either to detach Japan from her allies or to facilitate the discussion—now, however, postponed indefinitely—of the Anglo-Russian Treaty and loan.

Spain and Morocco.—The relief last week of Sheshuan and the successful withdrawal to Sok-el-Khamis of the outlying posts in the Beni Aros region north-east of Larache, have strengthened the position of the Spanish Directory, and improved the outlook in Spanish public finance. They constitute an important stage in the contemplated contraction of the Spanish zone and the pacification of the tribes under a Spanish Protectorate. The intended extent of the retirement has not yet been revealed; at present the hostile tribes seem still disposed to regard the withdrawal as a sign of weakness and to press for complete independence; the remains of a disaster near Sok-el-Khamis will probably confirm them in this attitude; and they appear to be well supplied with arms and with means to buy more. If Sheshuan, for example, is entrusted by Spain to the guardianship of a friendly tribe, it may soon become a centre of tribal warfare; the Spanish Government will have to support its native allies, and warfare will break out afresh. The nature of the country gives immense advantages to the native guerrillas over the Spanish regular troops; and any disaster to the latter must react unfavourably on Spanish internal politics and on the peace of the outlying parts of the French zone. The Spanish Government is charged with want of skill in dealing with its native allies; and the officers of the army are believed to hold that retirement affects their prestige. The Spanish Directory, therefore, has still a difficult task before it. We can only hope that its efforts at pacification may succeed.

A Proposed Belgian Free Port.—With the tightening of tariffs in post-war years there has come an increase in the number of free ports in protectionist countries. The latest proposal for easing the restrictive effect of a protective policy on trade comes from Belgium. A scheme, it is re-

ported, has been prepared for converting Zeebrugge into a free port, and is being put forward for legislative confirmation. This port, it will be recalled, is the continental terminus of the train-ferry recently established from Harwich. Apparently its development as a centre for American trade is anticipated if the port and a surrounding zone can be relieved of the incubus of Customs restrictions and payments in the same way as has been done at some other continental ports. Discharge and handling of goods and the establishment of manufacturing industries in the free zone is foreshadowed, the object being to facilitate American trade throughout central Europe. Extensive dredging at the port and also railway expenditure would be involved to carry out the scheme. These proposals, like all free port schemes, incidentally and perhaps unconsciously demonstrate the dependence on free exchange of any country not able to maintain a self-contained existence independently of trading intercourse with other lands. The object of all the free ports is to facilitate and encourage imports, exports and shipping generally, as well as to allow of the application of manufacturing processes to raw materials, and the re-export of the resulting products. The establishment of a coastal zone free from the delays and vexations as well as the expenditure of money always attendant on the imposition of tariffs is, in effect, the transformation of a part of a protectionist country into a free trade area. A free port is a working model of the advantages of free trade. Hamburg grew as a free port during centuries of trade into the greatest German shipping centre. Bremen, too, has been and is a free port. In Copenhagen a free area was established in 1894. Since the war free ports have been made in Sweden at Stockholm, Gothenburg, and Malmö. Spain and Italy rely on their free ports, Trieste, in particular, having a great traffic in its free zone. So now Belgium, too, is considering a way of partial escape from the throttling effect of tariffs on trade.

Port of London Authority.—A deficit of £257,400 is shown in the accounts for the year ended March 31st last of the Port of London Authority, and is explained in the report as being due partly to the strikes of dockers in the summer of 1923 and in February, 1924, which entailed a heavy loss on the whole Port, "and partly to the Authority, in their desire to stimulate trade, having reduced charges to a level which has since proved uneconomic." It is added that a revision of charges has been made in order to adjust the position. The following table shows how the financial results for 1923-24 compare with those of recent years:—

	For Year Ending March 31.					
	1914.	1920.	1921.	1922.	1923.	1924.
Total revenue	£ 3,434,453	£ 8,305,801	£ 10,043,731	£ 7,929,874	£ 6,319,295	£ 5,542,971
Total expenditure	2,217,822	5,531,726	7,101,601	5,801,217	4,682,425	4,516,076
Balance of rev.	1,216,631	2,774,075	2,942,130	2,128,657	1,636,870	1,026,895
Fixed charges	932,786	1,600,323	1,944,180	1,575,293	1,400,990	1,284,328
Surplus revenue	283,845	1,173,752	997,970	552,728	235,880	Dr 267,439
Brought forward	89,637	349,384	383,347	896,044	1,448,772	1,573,252
Written off, &c.	373,482	1,523,136	1,381,317	1,448,772	1,684,662	1,315,819
Carried forward	281,578	1,139,789	485,273	...	111,400	...
	91,904	383,347	896,044	1,448,772	1,573,252	1,315,819

The reserve fund reached the statutory maximum of £1,000,000 on March 31, 1922, and since that date the interest on investments has been credited to net revenue account. Investments stand in the balance-sheet at £2,081,000, being valued at market prices, and interest brought in £73,100. Port stock issued amounts to £28,590,500, a million of 5½ per cent. stock having been redeemed in July, 1923. The balance of borrowing powers unissued amounts to £9,056,700. Capital expenditure during the year was £124,400. The net register and deck cargo tonnage of shipping that entered and left the Port of London and paid river tonnage dues during the year ended March 31st last was 30,748,768 tons, an increase of 720,631 tons, or 2.4 per cent. as compared with 1922-23. From the table below, which gives the values of total imports and exports (excluding coastwise goods),

of the six principal ports it will be seen that London maintains its leading position:—

	1921.	1922.	1923.	Inc. or Dec. in 1923.
London (including Queenborough)....	£ 606,856,886	£ 564,333,772	£ 579,095,902	+ 2.6
Liverpool	528,012,834	484,200,149	532,990,145	+ 10.1
Hull	91,922,735	101,844,091	102,034,446	+ 0.7
Manchester (including Runcorn)	86,515,435	92,023,169	94,095,116	+ 2.3
Southampton	66,813,302	64,039,112	72,619,877	+ 13.4
Glasgow	94,701,689	81,174,625	80,299,380	- 1.1

During the year ended March 31st last, the Authority landed or received 2,293,180 tons of import goods for warehousing or for immediate delivery, a decrease of 120,464 tons, or 5.0 per cent., as compared with the tonnage dealt with in the preceding twelve months. The export traffic handled on the dock quays amounted to 615,349 tons, an increase of 53,805 tons.

Conditions in Hong Kong.—The following communication, written early in September, reaches us from a correspondent in Hong Kong:—It seems impossible to avoid reference to some fresh disturbance in Canton whenever one surveys the state of trade of this colony. The strike on the Shameen had no sooner been settled, or, rather, brought to a termination, than the strained relations between Sun Yat Sen and the merchants of Canton assumed a decidedly hostile aspect. The latter in no way approved of the Shameen stoppage, undoubtedly engineered by the Bolshevik faction, and as soon as the strikers were back at their posts there was quite a brisk movement of treasure and securities from the native city to the foreign settlement for safe custody. Within a day or two a further complication ensued. Sun Yat Sen, in his rôle of autocrat, seized a consignment of some 4,000 rifles, together with a large supply of ammunition, which had been shipped from Germany to the order of the Canton Merchant Volunteer Corps, an organisation recognised by Sun Yat Sen himself. This corps is the outward and visible sign of an increasing spirit of revolt on the part of the civilian population against the tyranny of the militarists. For some time past the villages and towns of Kwantung have been raising and equipping armed guards on the lines of the old English train bands, and recent events have given the movement a stimulus which prompted its leaders to obtain more serviceable weapons. Hitherto the scattered detachments of the Volunteer Corps have been composed of villagers with little stomach for fighting, but with a natural antagonism towards the marauding bands of soldiers belonging to the various armies over-running the country. For some time past the development of the corps has proceeded apace, and has called for a more business-like administration as well as additional rifles. With Sun Yat Sen as the patron of the force, no difficulty arose over obtaining a permit to import the required munitions. When, however, the arms actually arrived, having been transported by a Norwegian steamer which successfully ran the gauntlet at Colombo, but avoided Hong Kong, Sun calmly seized the ship and its cargo on the plea that the import permit had been obtained by false pretences. The merchants boiled with indignation, but their protests were of no avail, and when Sun threatened to ban the Volunteer Force and all connected with it, the commandant and his chief assistants at once fled for safety to Hong Kong. This was an ill-advised move, as, of course, it strengthened Sun's position considerably. With no means of employing force, the merchants resorted to the general strike, and throughout Canton and the neighbouring towns business came to a standstill. Although the plan was not a complete success, it led to negotiations being opened between Sun and the merchants through the mediation of one of Sun's mercenary generals. A so-called settlement has been arrived at by which the merchants pay Sun \$500,000, and in return receive the rifles, but at the moment there is a certain amount of haggling, and the transaction is not yet complete. Business has, however, been resumed, much to the relief of everyone here, for while the general strike

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
70 Federal Street.

BUENOS AYRES: HAVANA:
501 Bartolome Mitre. Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in
America. Resources of \$300,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

lasted it was impossible to move cargo to the distributing centres of Kwantung. With the five weeks' stoppage on account of the Shameen strike, and a further hold-up after a very brief resumption, it is no wonder that the godowns here are full up. It cannot be said that the outlook for this market is at all promising. With civil war pending in the North, and threatening to draw in the two big militarist leaders Wu Pei Fu and Chang Tso Lin, there is no telling how the situation may react upon Canton. Sun Yat Sen appears to be a shadow of his former self, and is nothing more than a puppet who for the moment fits in with the schemes of the generals in the South. To what extent the Soviet Envoy, Borodin, is entangled is not known, but there are many signs that the Bolshevik element is a growing one. There is also account to be taken of the merchant class, and their exploits of the last week or two show that they are not to be ignored, and may yet make their opinion respected in the camps of the War Lords. A few days ago the Colony was shocked at the news of the death of Mr. A. G. Stephen, chief manager of the Hong Kong and Shanghai Banking Corporation, while at home on furlough. During the 10 years he was at the head of affairs in Shanghai not only had he to cope with the difficult problems of the Chinese Revolution and its aftermath, but he came in for the disorganisation of finance and trade brought about by the Great War. It was this experience which earned Mr. Stephen the reputation of being a sound practical banker, no empty title as those who passed through the big slump can testify. Mr. Stephen loomed large in the public life of this Colony and he had for some time been one of the two unofficial representatives on the Executive Council.

The Progress of Jugo-Slavia.—The Serbo-Croat-Slovene kingdom, briefly designated as the S.C.S. State or Jugo-Slavia, having deflated and thereby stabilised its currency, is readjusting its finances and developing its resources, communications, and foreign trade. According to the Report (recently issued by the Overseas Trade Department, and dated last April) from the Commercial Secretary to the British Legation at Belgrade, the deflation, maintained by the refusal of the State Bank and the Government to issue more notes, has incidentally produced a shortage of currency, which has been intensified by the locking-up of capital in building operations and by the tendency of the peasants to hoarding, and so has embarrassed the smaller banks, raised the rate of interest on short loans to 30, 40, or 50 per cent., and thereby caused unemployment and hampered trade. The rate, however, will fall as the dinar appreciates, and the financial outlook is, on the whole, encouraging. The Estimates for 1923-24, adopted without change for 1924-25, greatly exceed those of 1922-23; the excess is ascribed to a desire to avoid supplementary estimates, and to the increased pay of State employees and expenditure on railway extension. The position has been complicated and obscured by votes on account, caused by Parliamentary delays in passing the Budget, and by the alteration in the financial year. But increases in railway rates, direct taxes, stamp duties, and the yield of the State monopolies are providing a revenue exceeding the additional expenditure. The land-tax has been raised by 500 per cent., and the Government aims at increasing direct and reducing indirect taxation, but the taxation is not yet uniform throughout the kingdom, and the peasants are relatively

under-taxed. Reparations seem to be coming in satisfactorily except for the hindrance set up by the occupation of the Ruhr region. The export figures are imperfect; the harvest last year was good, but a fall in wheat prices kept the export down. The production and export of fruit was large—the plum crop (the principal item) especially good. The estimated exports of cattle (to Austria mainly, and, secondarily, to Italy) and of swine (to Vienna and Prague chiefly) were largely exceeded. The value of the eggs exported was probably 500,000 dinars. Of raw silk, 2,500,000 kilogrammes are produced annually, and sold mainly in Zurich. Of beet sugar, if the existing factories worked to their full capacity, 60,000 tons might be exported annually. In many ways the State aids, or proposes to aid, the producers—in grading cereals, in drying plums, in encouraging the use of fertilisers (almost ignored by Serbia), and the improvement of livestock; in treating the silk cocoons in its own factories, in its assistance to the distressed wine industry, and in insurance against damage to crops by hail, and aid to the peasant sufferers. The export of timber is important and greatly increasing. So, apparently, is the output of minerals, and there are promising indications of oil. Roads are being improved, partly by labour conscription, railways extended, in part out of current revenue. Foreign visitors are to be attracted by a State tourist agency, and arrangements have been made with Greece for a free zone at Salonika, and adequate communications therewith. Exports should soon greatly exceed imports. The latter come chiefly from Austria, next in order from Czecho-Slovakia, Italy, and Germany; the British share in both, though small, has increased considerably in recent years. Textiles and yarns, the chief British import, are subject to severe Italian competition; but there are possibly openings for British machinery and metal goods, and for a few motor vehicles if sent on "sale or return." But the importance of personal intercourse with customers is emphasised, and credit must be given. A new and protective tariff is in preparation, and several commercial treaties have either been negotiated or are projected. Three Consular Reports are appended, respectively on Zagreb (Agram), Bosnia-Herzegovina, and Gruz (Gravosa); the last-named describes the development of what has become the chief Adriatic port of Jugo-Slavia.

South Africa's Foreign Trade.—The following are the figures of merchandise imported into South Africa during this year, up to the end of July, with comparative figures for last year:—

	1924.	1923.
January	£ 4,603,183	£ 4,079,379
February	4,313,034	3,711,566
March	4,866,123	4,435,881
April	5,255,770	4,493,726
May	5,044,092	4,461,120
June	5,103,810	4,161,725
July	5,504,831	5,045,001
Total for seven months..	34,690,843	30,388,398

GOVERNMENT SUPPLIES IMPORTED.

	£	£
January	590,979	274,316
February	526,699	125,761
March	340,044	377,618
April	506,259	204,770
May	518,689	243,243
June	573,533	301,623

EXPORTS (SOUTH AFRICAN PRODUCE ONLY).

	£	£
January	7,772,059	6,722,397
February	6,862,576	5,273,029
March	6,101,557	6,418,168
April	5,826,146	5,027,107
May	6,192,336	5,656,656
June	5,149,560	5,714,231
July	4,470,350	3,634,304

Total for seven months.. 42,374,584 38,445,892

The figures for the last three months are preliminary and unaudited figures. General imports (apart from Government supplies) have increased by £4.3 millions, and exports by just under £4 millions in the first seven months of the present year.

Harrisons and Crosfield.—The upward movement in the rubber industry is happily reflected in the report and accounts of Harrisons and Crosfield, Limited, now published. A comparison of results for the last pre-war year and for a number of years past reads as follows:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Net profit.....	£ 134,269	£ 200,571	£ 249,204	£ 164,456	£ 149,138	£ 192,711	£ 242,475
Brought forward	23,879	37,530	36,147	37,873	44,525	45,114	66,526
Preference dividend ..	158,148	238,101	285,351	202,339	193,663	237,825	309,001
Prof. ord. div. (10%) ..	27,500	36,165	37,230	37,800	37,800	37,800	37,800
Management shares ..	30,000	37,500	80,000	100,000	100,000	100,000	100,000
Reserves, &c.	30,000	37,177	45,344	5,941	1,250	2,500	20,988
Deferred ord. shares ..	35,118	41,024	24,922	—	—	12,000	22,000
Carried forward	35,530	50,088	59,982	14,073	9,499	18,999	47,497
		36,147	37,873	44,525	45,114	66,526	70,706

Turning to the balance-sheet, stocks at £424,724 compare with £326,951 a year ago. Loans to companies are down from £262,734 to £96,751, but investments are up from £1,445,109 to £1,563,277. Total assets at £3,571,736 show little change from £3,582,694, the figures recorded for the previous 12 months. In a circular sent out with the report, attention is drawn to the fact that at the time of payment of any further dividend on the deferred ordinary shares in excess of the fixed 10 per cent. per annum, the holders of the deferred ordinary shares shall have the option to apply for the allotment to themselves or their nominees, at par, of deferred ordinary shares to the extent of one-half of the further dividend, less income-tax. Shareholders have one month in which to exercise the option.

Clerical and Medical Life Assurance Society.—This excellent life office has celebrated this year its centenary, and produces a report for 1923-24 worthy of the occasion. The new life business done of £1,324,691 net, though less than the bumper figures of 1919-20 (the best year known in the history of life assurance), exceeds the new business of any other year. The net premium income increased by £41,184 to £609,492, and the life assurance fund showed an increase of £467,267 to £7,961,035. The funds earned a net rate of interest of £4 13s 2d, slightly less than the £4 14s earned in 1922-23, though higher than in any previous year. Death claims, as usual, were low, the amount payable being no more than 62 per cent. of that expected under the mortality tables. Working expenses and commissions were again lower at 15.06 per cent., as compared with 15.27 per cent. in 1922-23, and 16.36 per cent. in 1920-21. The assets of the society have been examined and revalued. There was a profit on securities realised of £8,763, and the value of the Stock Exchange securities (of which a complete list is published) is stated to exceed the book values by £185,501.

British-American Nickel.—Our Ottawa correspondent writes:—The affairs of the British-American Nickel Corporation, which is now in hopeless liquidation, are attracting considerable attention in Canada, and are also, it is reported, the subject of a special investigation in Norway, Norwegian investors having lost some 12 million dollars. It was a war-time enterprise, and on the ground that it would afford a competitive lever against the operations of the nickel combine, the British Government was induced to venture some three million dollars in it. War orders gave it a brief temporary prosperity, but soon after peace came both the Murray mine, which it developed, and the expensive plant which it erected at Deschenes, near Ottawa, were closed down. Last year some fresh capital was secured and operations were restarted under new management with, it is said, 1½ million dollars in the Treasury. All this sum is said now to have been frittered away, and trade debts of considerable magnitude piled up. The National Trust Company, as trustee for the debenture-holders, is offering the properties for sale under a receivership, and it is doubtful if any bids will be secured. Competent authorities hold that the nickel-copper ores at the mine grade too low for profitable mining and smelting, and the *Financial Post* of Toronto declares that the Murray mine had been carefully examined by the experts of other nickel companies and rejected, because the ores were too low in grade, before the new company took it over. It states that the

British-American ores run little better than 2 per cent. nickel-copper, of which rather less than 1 per cent. is copper. The International ores average about 5½ per cent., and the Mond ores 4½ per cent., so that while 14 tons of International ore and 20 tons of Mond can produce a ton of nickel matte, 40 tons of British-American ore were required. The tremendous amount of fuel required and other factors gave a cost of production that made competition hopeless. Altogether it is calculated that some 17 million dollars will have been dissipated in the enterprise, and since the British Treasury has provided three of these it would be interesting to discover just exactly what representations induced the British Government to risk public money in the project, and what are the views of the present Treasury authorities upon a scandal which has aroused great indignation in Norway.

Venezuelan Oil Concessions, Limited.—Why the accounts of the Venezuelan Oil Concessions, Limited, for the year ending December, 1923, could not have been completed and issued in nine weeks, instead of after nine months, was a very proper question asked but not answered at the shareholders' meeting of the V.O.C. Holding Company, Limited, held on Tuesday last. The accounts are now practically valueless. Nor did Mr Walter Samuel add much to the existing knowledge in his speech as chairman of the Holding Company. Their programme, he said, was a large one. The Concessions Company was producing from seven wells at present, situated at La Rosa, on the east side of the lake, and was drilling a large number on the west side as well as on the east. Production had risen this year from 284 tons in the first four weeks to 59,418 tons in the four weeks ending September 20. The monthly production had now reached 60,000 tons, and was steadily increasing. This extensive drilling programme has necessitated complementary expenditure on pipe-lines, water-lines, tank farms, pumping-stations, and wharfage, on a large scale, but it would not be unreasonable to expect, now that the sale and purchase of oil agreements with the Caribbean Petroleum Company have been revised in the company's favour, that the dividend-paying stage will be emerging next year. This will automatically mean dividends for the V.O.C. Holding Company, which now holds 942,153 shares out of 943,000 in the Venezuelan Oil Concessions, Limited. Mr Walter Samuel stated that the Caribbean was the only company in Venezuela to-day which had in actual operation the facilities for shipping oil from the Maracaibo Lake to deep-water ocean ports. That is true, but the Lago group, with which is associated Lord Inverforth's shipping and oil interests, is building shallow-draught tankers in the Belfast yards of Messrs Harland and Wolff for service next year on the Maracaibo Lake. The competition of this group of American oil companies in the Venezuelan fields is becoming a real stimulus to the operations of the V.O.C. and the Royal Dutch-Shell group. This fact, and the probability that the Royal Dutch-Shell group have increased their participation in the Holding Company to the point of control, certainly make rosier the prospects of the outside shareholders in the V.O.C. Holding Company.

Oversea Correspondence.

LEAGUE OF NATIONS—THE RATIFICATION OF THE PROTOCOL.

(FROM OUR CORRESPONDENT.)

GENEVA, October 7.

By unanimous vote the Assembly recommended to all Governments the ratification of the Protocol, and eleven States immediately signed it. Another resolution recommended the adherence to the compulsory jurisdiction clause of the Court Statute, and perhaps the most important fact of the Assembly is the signature of this clause by France without reservation in substance. It is, of course, subject to ratification, and on conditions of reciprocity for a period

of 15 years, with power of denunciation should the Protocol on Arbitration, Security, and Reduction of Armaments lapse. It is also subject to the condition that one of the parties may bring a relevant dispute before the Council of the League for pacific settlement, and that during such proceedings neither party may take action against the other in the Court. But there is no reservation regarding the limitation of cases which may be raised under this clause, as was at one time mentioned as a possibility. This means that if France ratifies, and if England also signs and ratifies the clause, there is no chance of France taking separate action again on the Peace Treaties against the opinion of England, unless her right to do so is legally upheld by the Court. As the clause is signed on a basis of reciprocity, no State could cite France before the Court without also having adhered to the clause. While there has been some discussion upon the fact that France, Belgium, Czecho-Slovakia and Poland have already signed the Protocol—a fact which has been used to convey the impression that England has been seduced into an evil course—I do not believe there has been a single reference in the English Press to France's signature of the optional clause. The time seems to have come when liberal-minded people in England should not be blinded by a sense of moral superiority to the possibility that M. Herriot is not always governed by naked vice or by vice cloaked in seeming virtue.

Furthermore, those who have said that it was hopeless to expect American co-operation in a League Conference on disarmament, and that the League should have left it to America, were, as I suggested last week, premature in their assumptions. An announcement comes from the White House that America will be represented in the Conference next year, provided she is not previously bound to any conditions, and Mr Davis, the Democratic candidate, has emphatically announced that under a Democratic administration America would participate in any disarmament conference to be summoned. Therefore, America is prepared to make some contribution, whatever it may be, to the problem as such, and is beginning to show herself able to rise above small prejudices which many of her professed admirers in England are so ready to attribute to her. So far as Germany is concerned, I believe she will adhere to the Protocol if England does.

The Council has already set machinery going for the preparatory work of the Disarmament Conference, and has constituted itself a committee, with the assistance of representatives of the various technical organisations of the League. The necessary material, much of which is already collected, is to be sorted, and the first meeting of the committee will take place on November 17th, so that by the time the next ordinary session of the Council is held in the beginning of December, some progress will undoubtedly have been made. It is a big task, for it comprises not only the eventual presentation of some plan to the Conference, which will no doubt depend a good deal upon what forces are voluntarily notified to the Council by various States as available in case of need, but also a plan for the operation of the financial and economic boycott in case need arises for its employment.

In view of the American tendencies, it seems likely that she may also be invited to participate in the preparations, as she has already done in the preparation for the Conference to be held on the Trade and Traffic in Arms. It is early to see what the ultimate attitude of America will be towards the Protocol itself, but she will no doubt realise that war cannot be abolished by resolution. She will also probably realise that materially the arrangements made to satisfy the Japanese are more likely to be to her advantage than to her disadvantage, on the assumption that she has no intention of starting a fight. Why should she—or Australia, for that matter—object to an effort at conciliation by the Council on a matter legally of domestic jurisdiction, but acutely disturbing international peace? An effort without any powers whatever of imposing a decision, an effort purely and simply to reach agreement between parties in order to avoid an outbreak of war. All it implies is public discussion by an international body with the hope of avoiding war. Circumstances threatening war can in no event be kept secret. There is also the provision of the Washington Agreement for a meeting of the Signatory Powers in case of any Pacific

emergencies, and the League Japanese proposal does not really go further.

It is to be hoped that, so far as England is concerned, the Government will make haste to give a lead to public opinion on the provisions of the Protocol. Some pretty patchwork has been made of it in one or two quarters by linking up on one point several articles which quite distinctly apply to other points, and there is one consideration which perhaps has not been fully considered in the discussions on the sanctions part of the Protocol. Great Britain has, as a matter of fact, during the last century undertaken in various instances, from motives either of national or international necessity, such tasks as might devolve upon her under the Protocol. Time after time she has used her Fleet to keep the peace, either in her own name or in the name of several powers, because her Fleet happened to be on the spot, and, in cases like the international army during the Boxer Rebellion, she has shared in international action. There is another point. The signatories of the Protocol can at least deal faithfully with the smaller States. If a great State disturbs international peace, it will be extremely difficult in any event for Great Britain to remain disentangled, either in Europe or in the Pacific, and it is certainly arguable that the sanctions in the Protocol would make it a very adventurous undertaking for any State to break its obligations. There are also a variety of safeguards, by Armistice conditions, &c., against a State sneaking into an aggressive war and claiming it to be defensive.

FRANCE.—PAY OF CIVIL SERVANTS—FOREIGN WHEAT REQUIREMENTS—SUGAR—IRON AND STEEL OUTPUT—COAL.

(FROM OUR CORRESPONDENT.)

PARIS, October 8.

THE Herriot Ministry, who recently fulfilled one of their election promises by according to all classes of public servants the right to enrol themselves in trade union organisations—which by implication also confers on them the right to strike, if they should think fit—have speedily found themselves placed in a difficult position by reason of their policy. The civil servants, after refusing to accept the increased scale of pay which a departmental committee, after discussing the question with their representatives, proposed to recommend should be adopted, have now put a pistol to the head of the Government and, if not in so many words, placed the latter in the position of extracting another three milliards from the pockets of the taxpayers to meet their requirements—or take the consequences. The effect on the Budget proposals, as detailed in this column last week, must necessarily be serious. The outstanding fact in the situation thus created is that it is generally agreed that the demands of the employees of the State are by no means unjustified. The present minimum salary prevailing among the lower grades of the civil service is 3,800f a year, plus an allowance of 720f a year in consideration of the increased cost of living, making a total of 4,520f a year. At this figure it has remained since the beginning of 1919, although the cost of living has doubled since that period. The commission which has been considering the matter proposed that the minimum figure should be increased by 680f a year to a total of 5,200f. The men insisted that the new minimum salary should be fixed at 6,780f, whereupon the Government proposed to fix the figure at 5,600f. At a congress held on Sunday and Monday resolutions were passed by which the civil servants pledged themselves to accept nothing less than 6,000f, and this has since been notified to M. Herriot personally. The Ministry of Finance asserts that if this demand is granted the national expenditure will be increased by at least 2,000 millions a year for salaries alone, or by between 3,000 and 4,000 millions if the automatic increase of pension allowances, &c., be included. Public opinion agrees that the pay of the public servants is undoubtedly inadequate, and therefore it appears probable that the additional money will have to be found.

The disappointing wheat harvest has caused a good deal of attention to be directed recently to the question

of what volume of foreign purchases this country will have to make to meet her requirements during the next twelve months. At the present moment, French purchases of foreign wheat, through one cause and another—one of them being the measures just taken regulating the milling and the selling price of flour—have practically come to a standstill. There is a danger, obviously, that this situation may have a serious effect on the securing of sufficient supplies in the near future, and also on the situation of the franc. In view of all the factors, there can be little doubt that the franc will again be unfavourably affected in the near future, but it is difficult to see why this drop should be of a very serious character. So far as wheat is concerned, France last year had to purchase abroad about 11½ million quintals at an average price at the port of entry of about 100f per quintal, for which this country had to pay in foreign currency rather over 1,000 million francs. During the coming year the deficit that will have to be met by foreign wheat will amount, so far as can be seen, to about 20 million quintals, which will have to be paid for at a rate that will work out at between 115 and 120f per quintal at the least, in view of the world shortage and other factors. This year, therefore, instead of paying about 1,000 millions for foreign wheat, this country will be called on to purchase foreign currency under this heading to the total of between 2,300 and 2,400 million francs. In brief, France will have to spend about 1,500 million francs more this year on foreign wheat purchases than she did last year.

This must be discounted, however, by the fact that, in compensation, this country during the coming 12 months will be called on to purchase very much less foreign-grown sugar than she did last year. In 1923-4 the total French sugar crop amounted to about 450,000 tons, whereas this year it will amount to at least 650,000 tons, and perhaps may exceed that total. To meet requirements France needs about 750,000 tons, as is shown by the fact that last year she had to purchase some 300,000 tons of foreign sugar. At 300f per ton this involved the purchase of foreign currency to the extent of, say, 900,000,000f. As the price of sugar has now fallen to around 200f, the 100,000 tons or so that will have to be purchased elsewhere during the coming year will involve an expenditure of only 200,000,000f, or 700 million less than last year. The increased sum spent on foreign wheat, therefore, will be neutralised by about 50 per cent. by the reduction in expenditure on foreign sugar purchases. If, as may reasonably be assumed, a substantial proportion of the additional, say, 750 millions that will still have to be sent abroad is recouped from increased exports, it may fairly be argued that, in spite of the substantially larger wheat deficit, the general situation, after all, remains practically the same.

Figures issued by the Comité des Forges giving the total output of steel and iron during August indicate that the drop in production during June and July has now been very largely recovered, and that the upward trend has been resumed. The total output of iron during August was 655,829 tons (as against 658,397 tons in May, which was the highest since the war began), and of steel 581,713 tons (as compared with 598,427 tons in May). The output of iron during the first half of 1924, which amounted to 3,786,179 tons, was 60.6 per cent. more than during the corresponding period of 1923. Steel production during the same period totalled 3,395,261 tons, or 49.4 per cent. more than during the first half of 1923. Exports of steel during the six months were 1,040,864 tons, compared with 515,977 tons in the first half of last year.

Coal production figures for August indicate that the total output of the French collieries is still steadily on the up grade. The total output during the month was 3,691,142 tons (for 25 working days), against 3,784,079 tons (for 26 days) in July. The average daily output continues to rise, as will be seen from the following figures:—Daily average in 1913, 136,147 tons; in January, 1923, 121,064 tons; in July, 1923, 128,592 tons; in January, 1924, 144,680 tons; in July, 1924, 145,541 tons; in August, 147,645 tons. The total output for the first eight months of the year was 29,488,613 tons. The restoration of the devastated mines in the Nord and the Pas de Calais has raised the daily output in that area from 80,108 tons in January last to 85,431 tons in

August. The deficit in relation to the daily average in 1913 has now been reduced to 5,866 tons per working day. The daily production of the collieries situated within the French pre-war frontiers is now only 6,268 tons less than in 1913. The Lorraine mines during August furnished a total of 17,766 tons per working day. Labour shortage is still proving an obstacle; nevertheless, recruiting of foreign labour has enabled the total number of miners employed to be increased from 242,566 in January, 1923, to 296,010 in August last. The output of metallurgical coke by the plants at the collieries during August was 223,700 tons, as against 224,633 tons in July.

GERMANY.—TARIFF—FINANCES—CURRENCY AND CREDIT—INDUSTRY—HOUSING—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 7.

GENERAL public sentiment is moving ever more against plans, which seem to have considerable official backing, for revision of the 1902 Customs Tariff in the direction of extreme Protection. The French request, which was expected, for a prolongation of the term of duty-free import from Alsace-Lorraine is, however, not well received. The textile industry considers itself threatened; and the iron and steel interests, while inclined for a private pooling of French ore with native coal, hold that Germany's position is economically so strong that she need not make concessions under a French pressure which is fundamentally political. Organs of the Ruhr heavy industry proclaim that without an agreement, Germany, having access to foreign ores, can do without minette, while France will find it hard to get along without German coke, and is bound, if she does not come to reasonable terms, to suffer from an excess of industrial production. Manufacturers in certain finishing branches continue to press for heavy duties. They claim that the normal duties, at whatever level they may be determined, should be increased by the cumulative amount of the 2 per cent. sales tax, which acts as a premium to importers, that is, by anything up to 10 per cent. The Government, however, regards the sales tax as a temporary impost, which will be abolished in at most a few years, whereas the tariff must be fixed for a long term of years. The great rise in breadstuff prices has prejudiced the official plan for restoration of the pre-war food duties, which, when introduced at a time of much lower prices, seemed to be certain of success; and the effect of the rise is increased by very bad crop reports, particularly from the west. The present estimate is that the harvest will be 20 per cent. less than that of 1923. The Foreign Trade Association has proclaimed for general most-favoured-nation treaties, but points out the obstacle to this in the French law of July 29, 1919, authorising only reciprocity agreements, with exclusion of general most-favoured-nation treatment, under which law French agreements have been made with Austria, Czecho-Slovakia, Spain, Poland, and Finland. Apparently, under the law mentioned, most-favoured-nation treatment could not be accorded to Germany. If Reparations deliveries are omitted, German sales to France in the first part of this year were wholly insignificant, as a result of the application of the French maximum tariff, whereas French sales to Germany were very large; and in textiles, formerly an English domain, France led in sales to Germany. There is no sign that the Marx Cabinet will make special concessions to Allied countries merely for political reasons, but it is nevertheless plain that any considerable increase in the rates of the autonomous tariff would not be popular here unless the theory that the tariff can be used with effect in bargaining for mutual concessions is proved by the result of the negotiations to have been correct.

In the first half of the financial year, April-September, revenue received totalled 3,494,975,372 gold marks, expenditure 3,345,649,212 gold marks. The surplus was 149,326,160 gold marks, or, including 230,844,179 gold marks spent on redemption of Gold Loan, about 380 million gold marks. Of expenditure, 1,696,153,962 gold marks was for general administration, 1,210,190,390 gold marks subventions to states and municipalities,

ALL BRANCHES OF
INTERNATIONAL BANKING

BANKERS TRUST COMPANY

HEAD OFFICE, NEW YORK
16 WALL STREET

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendome

7,626,118 gold marks outlay in foreign currency for execution of the Peace Treaty, and 200,834,563 gold marks for Reparations account. The total of the floating debt on September 30th was in Reichsmarks, 479,646,944 billion paper marks; in Rentenmarks for Treasury bills, 76,955,000 Rentenmarks.

Interest rates move slowly downward. Day money in Berlin and other financial centres has of late become much dearer than month loans, a condition which is not normal. The Gold Discount Bank continues to report a decline in the demand for credit. Discounts on September 30th were £6,395,376, rediscount liabilities £6,226,093. The Reichsbank's return for September 30th shows another considerable increase in the gold reserve, which is now 577,919,000 gold marks; and a large increase, connected with the quarterly settlements, in credits and circulation. Discounts, advances and investments rose from 2,061.9 trillion paper marks to 2,302.4 trillions; paper mark circulation rose by 268 trillions to 1,520 trillions, and Rentenmarks circulation by 174,200,000 Rentenmarks. The directorate of the Reichsbank has been reappointed for the reconstructed bank. The capital market shows no great change. Increases of company capital in September totalled 20,118,000 gold marks, against 22,355,000 gold marks in August; and issues by new companies 8,458,000 gold marks, against 8,716,000 gold marks. There were no issues of debentures or loans, but a number of municipalities resolved to borrow and obtain the necessary State sanction. The totals of transactions by savings banks and co-operatives are increasing rapidly, also the clearings of the post-check service.

General prices are still rising. The cost-of-living index number for October 1st was 119, against 117 in the preceding week; the wholesale index on September 30th, 131.5, against 130 a week before. The "Frankfurter Zeitung's" wholesale index for October 2nd shows 139.45, and has risen from 128.52 since July 17th. Although all groups of commodities shared in the rise, the main rise was in food products—from 117.07 to 144.52. In Berlin rye has of late quoted dearer than wheat, which is without precedent. The Reichswirtschaftsrat lately found that the increase in the number of middlemen is largely responsible for higher prices. The number of registered trading firms in Berlin in 1923 was 60,000, against 31,000 in 1913. This is probably an outcome of the currency depreciation, which, as long as credit was granted, made it easy for non-producers to live by selling for cash and paying debts to producers or to the banks in worse money than the debts were contracted in. Also the social-economical revolution created a great number of middlemen—persons of the impoverished rentier classes, who engaged in petty trade operations because they lacked the necessary training for productive occupations.

The industrial situation improves very slowly. Bankruptcies in September numbered 817, against 855 in August and 1,173 in July. The Prussian Trade Ministry's monthly report shows an increase in the demand for paper and cloth, while the dyes branch is dull. The iron and steel branch is again inactive, and prices tend downward. Steel and rolling mills have markets for only about 50

per cent. of their output if working at full capacity. Only for tubes and wire goods is there any considerable demand, and the prices obtained for these are low. The building market is weaker. The American \$5,000,000 credit to the Ruhr is reported to be complete; and it is stated that a considerable number of other American industrial credits come automatically into force as soon as the Reparations Loan is successfully floated. Reports from Norway state that German firms have made bids at very much lower prices than native and competing foreign firms. Railway statistics show a sharp drop in traffic since the credit crisis began in the spring. Goods carried in June were 17.29 million metric tons; April, 21.5 million tons; monthly average for 1923, 20.02 million tons; 1922, 33.25 million tons; 1913 (without Alsace-Lorraine), 40 million tons. The figures since January, 1923, are imperfect. Receipts per ton-kilometre in June were 5.7 gold pfennigs, against 1.7 gold pfennigs in 1923; and 3.6 gold pfennigs in 1913. The output of Ruhr coal, despite the bad market, is increasing, being in the last reported week 396,000 tons a day, against 321,000 tons in August, and 232,000 tons in January.

Statistics collected by Berlin municipality show that about 20,000 houses in Berlin are now in foreign hands, almost all having been purchased since the war. With few exceptions, these are flat-houses, with probably an average of 15 dwellings. Good modern houses were mostly bought by foreigners from high exchange countries, whereas old buildings in working-class parts fell into the hands of Austrians, Poles, Czechs, and other low exchange nationals. Of late foreigners have hardly bought at all, and a great many houses—about 900 between September, 1923, and June, 1924—have been sold back to Germans, despite the fact that an increment tax of 30 per cent. is levied. The building of new houses has somewhat increased, owing to the devotion to this purpose of five-sixteenths of the rents tax imposed since February, and included in the increased gross rents.

Loans recovered very considerably last week, but as there has been no change in their status, the recovery seems to have been merely a reaction against the panic sales of the preceding week. Industrials rose last week, but this week, so far, have been dull and weak. The issue of gold balance-sheets continues. Multiplication of the present Bourse quotation by the scaling-down factor shows that shares of very few companies will start with quotations over par. In a list of 35 leading companies which have already issued gold balances, only three would quote above par, and the great majority between 40 and 60. The scaling-down of a 1,000-mark share in this list varies between to 500 gold marks and to 5 gold marks. The reintroduction of dealings in stocks for future settlement is being considered.

AUSTRIA. — POLITICAL SITUATION — REDUCED TAXES—NATIONAL BANK—MONEY RATES.

(FROM OUR CORRESPONDENT.)

VIENNA, October 1.

THE fact that the decision of the League of Nations regarding Austria represents a compromise between the requests of the Austrian Government and the claim of the General Commissioner has relaxed the tension in the political situation. The Government has been allowed to raise public expenditure in the Budget for 1925 to 495 million gold kronen, in addition to which the amount of 50 million gold kronen can be spent for public investments. As, in the meantime, the recovery of the Chancellor has allowed him to take up his duties, and the Social Democrats do not wish to take any part in the responsibilities of the Government during the present economic crisis, things will remain as they were for the time being. The political unrest, which was temporarily caused by the metal workers' strike, and rendered more acute by intrigues of the Communists, has quickly passed.

The excessive taxation in Austria was admitted by the League of Nations, and therefore not only the Bank turnover tax and the tax on exchanges will be lowered, but also the company tax will be reduced from 36 per cent. to 25 per cent. It is also intended to further the issue of industrial bonds by taxation facilities. The Finance

Minister hopes to cover the falling off in revenue due to these reforms by the increased income derived from the new Customs tariff. In addition to this, economies will be introduced in the administration of the Treasury and of the Post and Telegraph services. It is further intended to convert the administration of the State Salt Works and Forests into independent companies, similar to the State Railways, which will have to carry on without any State subsidy.

The industrial situation has taken a turn for the worse owing to the strike of the metal workers, which lasted over a week, and came to an end with the complete defeat of the employers, who were obliged to grant to the workmen an increase in their wages of 10 per cent. to 15 per cent. Although the employers declared themselves ready to grant this increase, only after the Government and the Municipal Council of Vienna promised them taxation facilities, it is feared that this new burden will make it impossible for the industries to compete on foreign markets, especially against German industries, the competition of which is felt more and more.

The number of unemployed shows an increase of 12 per cent. as compared with last month (74,366 in September, against 66,420 in August), and it is to be expected that their number will grow owing to the dismissal of workmen in the engineering industry and of bank employees.

The policy of the Austrian National Bank was a point for lively discussion during last month, and the severe criticisms made in the report of the League of Nations' Financial Committee led to the resignation of its president, Dr Reisch, which, however, was not accepted by the Government. In the meantime, the position of the bank has somewhat improved; the total of bills discounted, which amounted to 3,273 milliard kronen on August 15th, decreased to 2,904 milliard kronen by the end of September. During the same period the gold reserve was raised from 3,289 to 3,666 milliard kronen, and the bank-note circulation reduced from 7,615 to 7,292 milliard kronen, so that the gold security of the bank-notes was raised from 37.6 per cent. to 40.6 per cent. If the decrease of bills discounted continues, the bank may soon be able to reduce the bank rate. The opposition against the increase of the bank rate from 12 per cent. to 15 per cent., which was carried through in August against the intention of President Reisch, is gradually becoming stronger. It is generally pointed out that this measure has rendered the economic crisis more acute, and has brought many industries into difficulties.

The small demand for money on the Stock Exchange and the stagnation in trade has led to a certain easiness on the money market; week-to-week money was offered at $\frac{1}{8}$ per cent. per week, and first-class firms succeeded in getting month-to-month money at the rate of 16 per cent. to 17 per cent. per annum. It is worth noting that for the first time first-class banks and firms were able to discount their bills on foreign markets at much lower rates than the official rate of the National Bank. In order to encourage foreign capitalists to place their money in Austria, the National Bank has agreed to guarantee to any receiver of foreign credits the possibility of repaying the credit in the currency in which it was received. At negotiating in Vienna for the placing of large loans for several Austrian municipal councils, such as Graz, Linz, Innsbruck, and Salzburg.

CANADA.—CROP CONDITIONS—AGRICULTURE IN THE WEST—THE RAILWAY RATE MUDDLE—SALE OF ENEMY HOLDINGS OF C.P.R. STOCK—COMMERCIAL TREATY WITH HOLLAND—AGITATION FOR MORATORIUM IN SASKATCHEWAN—NEW OIL WELL.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 28.

THE crop surveys of the *Manitoba Free Press* are always regarded with respect by the grain trade, and its mid-September report upon the three prairie provinces is more optimistic in its forecast of the volume of the 1924 wheat crop than the Government and other recent estimates. It ventures to predict 51,647,658 bushels for Manitoba,

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEWART, Chief Manager.

473,516,744 for Saskatchewan, and 70,694,479 for Alberta, or a total of 295,858,791 for 21,525,899 acres sown, which is an average of roughly 14 bushels per acre. It places the oat crop at 238,000,900 bushels (26 bushels per acre), barley at 51,079,892 (18 bushels per acre), rye at 11,276,544 bushels (17½ bushels per acre), and flax at 7,595,370 bushels (6 bushels per acre). The volume of the wheat crop, though far short of last year's abundant yield, will, if the *Free Press* forecast is correct, be well above the decennial average, and its cost of production will be the lowest since 1914. But the *Free Press* report indicates that the quality has been seriously affected by frost, and the average grade will be low for many areas. Again, the oat crop is easily the most unsatisfactory for many years, both in respect to yield and quality, and many areas will not have sufficient seed oats next spring. Rye, however, is a very good crop, especially in Manitoba, but flax has not fared well. Maize, which is purely a fodder crop, and is becoming increasingly popular in the West, has been badly hit by the frost, but there are excellent crops of sweet clover and alfalfa, and there need be no fears of any scarcity of winter forage.

The *Free Press* calculates that the West should have available almost 200 million bushels of wheat for export, but this estimate is probably too high, and in view of the prevalent freight rates and rising prices for livestock, many farmers will probably decide that it is more profitable to transform their lower grades of grain into meat on the farm and export their produce on the hoof. The profits of the crop will be very irregularly distributed, but in view of adverse reports about crop conditions in France, Russia, and other countries, the Winnipeg market has a very bullish tone, and the prospects are that the aggregate returns of the prairie farmers for 1924 will not be lower than for 1923. Happily an increasing number of them have now other strings to their bow than grain growing. The days when the western provinces imported large quantities of dairy produce from the East and New Zealand have gone by, and at present they are shipping every week large quantities of early poultry to the markets of Eastern American cities, and making good profits by the business. The cattle situation is still unsatisfactory. The removal of the British embargo has not yielded the anticipated results, largely owing to the onerous costs of transportation, and western cattlemen still cast yearning eyes upon the American Government. Recently the King Government opened negotiations with Washington with a view to securing special arrangements for the admission of Canadian cattle to the U.S. market on easier terms than now exist, but no reply has so far been vouchsafed to the communication sent, and the chief, but rather dim, hope now lies in the victory of Mr. Davis in the Presidential election.

The Canadian Government has accomplished part of its autumn financing by placing \$90,000,000 one-year 4 per cent. notes with a New York banking group, headed by the Chase Securities Company and Blair and Co. Associated with them were other financial institutions in different sections of the Republic, including the Equitable Trust Company, the First National Bank of Boston, the Continental Trust and Savings Company of Chicago, and the First National Bank of Los Angeles. One significant feature of the transaction lies in the fact that the Canadian Government on this occasion passed over its usual financial agents, the J. P. Morgan firm. The actual cost to the Government will be nearer 4½ than 4 per cent., but the issue was subscribed in a few hours when offered to the public at virtually par. The proceeds of the loan will be used to retire Treasury notes which bear 5½ per cent. interest—an appreciable saving. There still remains to be provided for Victory bonds maturing in November to the tune of \$107,000,000. The general expectation is that there will be an offer of a domestic loan bearing 4½ per cent., as against the 5½ per cent. of the issue to be retired. Quite generous terms of conversion are likely to be offered, and as financial houses report a shortage of high-class bonds in Canada, the issue should be quickly taken up.

The Dominion Railway Commission recently devoted several days to hearing representations from different parties about the complicated and confusing railway situation which has arisen as the result of the restoration of the force of the Crows' Nest Pass agreement last July.

In view of the decline in the volume of traffic, which will be accentuated in the coming months by the shortness of the western crop, the officials both of the C.P.R. and the Canadian National Railways protest that the Crows' Nest Pass rates have dangerously impaired their revenues, that the agreement by which they are enforced is obsolete in view of changed conditions, and that the time is now ripe for a wholesale revision of the freight rate structure to meet a different situation. Against this counsel for the three western provinces, boards of trade in the West, and other interested bodies have argued that the C.N.P. agreement is a sacrosanct charter of transportation rights for the West, and that the proper course is to make all railway rates west of the Great Lakes conform to its terms. The railways contend that such a decree would involve them in financial difficulties. The province of British Columbia, moreover, is taking advantage of the opportunity to press for adjustments of the special rates in force through the Rocky Mountains in order to divert more traffic from the prairies to its seaports. The Railway Commission has reserved its decision, but if it sustains the plea of the railways, a strenuous political battle will loom up over the C.P.R. agreement which can only be abrogated by the authority of Parliament.

The Federal Government has just disposed in the New York market of some 38,000 shares of C.P.R. stock which before the war were owned by enemy nationals, and have been held in trust by the custodian of alien property. No public offering was made, but the stock was disposed of privately to a syndicate of New York financial houses, headed by Hayden, Stone, and Co. The price realised was about 145 per share, and the total sum about 5½ million dollars, which will be applied to the liquidation of Canadian claims against Germany and her Allies. Most of the stock fell into the hands of American investors, and there has been some criticism that the Government did not make an effort to sell it through British and Canadian channels, and divert it into the hands of British subjects.

The Government have also concluded a fresh commercial treaty with Holland, by whose provisions each country accords to the other the most-favoured nation treatment. The recent revision of the Dutch tariff would have produced serious discrimination against Canadian products if this new arrangement had not been made.

Sponsored by a new agrarian organisation called the Farmers' Union, and fanned by the failure of the crops in many central and northerly districts of Saskatchewan, there has been developing in that province a vigorous demand for a debt moratorium which will give struggling farmers a reasonable time to meet their obligations and prevent undue pressure by their creditors. The Farmers' Union has been engaged in competitive rivalry with the older agrarian organisation, the Grain Growers' Association, which it accuses of being too conservative, and it made strenuous efforts, but without success, to secure control of the Saskatchewan wheat pool. Negotiations between the two are now afoot for an amalgamation between the two bodies, and if this takes place the pressure upon the Saskatchewan Government for a local moratorium will be intensified.

Oil-drilling operations in the Canadian West have been very disappointing in their results so far, but they are still proceeding in various localities. It is now reported from Wainwright, Alberta, that British Petroleum Company's No. 4 well shows a good flow of petroleum of a high grade, rising from a 10 ft sand that has been encountered at about 2,000 ft. A field test shows 18.6 degrees gravity,

and the oil gives indication of containing a high percentage of lubricants; it is heavy, resembling the products of the Mexican fields. However, similar discoveries before have raised great hopes only to see them fade, and further reports must be awaited before the existence of a great new oil-field can be proclaimed.

AUSTRALIA.—COMMONWEALTH BANK BILL— QUARTERLY BANKING RETURNS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 22.

THE Commonwealth Bank Bill, which has passed through both Houses of Parliament, has been opposed by the Labour Party, which originally established the Commonwealth Bank as a Socialistic measure, the appointment of a board representative of producing and trading interests being specially objected to. From the statements of leading members of the party, it is probable that in case of the return of Labour to power the arrangements of the present Bill will undergo further change. The Government has emphasised their intention of making the Commonwealth Bank a central bank, though without ceasing to be a trading bank, but the Labour party regard it not as a central bank but as an active competitor against the other banks. The country members desire that the Commonwealth Bank should give more support to country interests, and the Government has promised to deal with the subject of rural credits by separate legislation at the earliest possible moment, perhaps this session.

The quarterly average returns to June 30th of banking liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show a slight decrease in deposits as compared with twelve months ago, but an increase of £7,862,140 in advances, &c., of which £5,478,929 is in Australia and £2,383,211 is in New Zealand. As regards Australia, the real increase in general advances is somewhat greater, the Commonwealth Government having paid off an advance of £6,000,000 made some years ago to finance the war gratuity. The increase has followed the active demand for accommodation from borrowers, partly for country production, partly for the extension of the cities, and partly arising out of large imports. Looking behind the two latter causes, a stimulus has been given to certain forms of activity in towns by the large expenditure of borrowed money by the various Australian Governments, and the activity so produced helps to stimulate private demand for banking accommodation, notwithstanding the strong efforts of the banks to keep this tendency under control. The cash holdings of the banks show a decline both as compared with the previous quarter and with a year ago, due largely to the flow of cash from the ordinary banks to the Commonwealth Bank during the June quarter, when heavy taxation receipts swell the balances of the Commonwealth Government and those of the State Governments which keep their accounts with the Commonwealth Bank. This disturbing feature does not arise in New South Wales and Victoria, where the State Governments remain with the ordinary banks. The following is a comparison of the principal averages (exclusive of the Commonwealth Bank) for the quarter ended June 30th with those for the previous quarter and the corresponding quarter last year:—

	June 30, 1923.	March 31, 1924.	June 30, 1924.
Deposits—	£	£	£
Australia	237,827,126	244,274,262	236,761,456
New Zealand	52,091,994	51,693,551	51,606,632
Total	289,919,120	295,967,813	288,368,088
Advances (in Government securities)			
Australia	202,514,707	212,446,077	207,993,636
New Zealand	47,523,808	50,496,157	49,907,019
Total	250,038,515	262,942,234	257,900,655
Cash Items—			
Coin and bullion (Aust. & N.Z.) ..	27,167,147	27,877,587	27,874,215
Australian notes	25,026,558	24,778,237	22,914,278
Legal tender notes of other banks (New Zealand only)	418,791	448,308	295,876
Total cash	52,612,496	53,104,132	51,084,369

As the figures do not include London liabilities and assets, the movements do not balance. During the past twelve months the capital, reserve funds, and undivided profits of the banks have increased by over £5½ millions. The principal averages (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	June 30, 1923.	March 31, 1924.	June 30, 1924.
Deposits	32,377,574	29,940,516	29,904,577
Savings bank deposits ..	38,068,002	38,739,378	38,242,489
Discounts, loans, &c.	14,035,678	13,935,591	11,999,358
Government and municipal securities	37,479,846	39,464,547	39,537,851
Coin and bullion	2,046,847	2,226,862	2,107,557
Australian notes	3,750,438	3,990,336	9,084,343

POLAND.—TRADE DEPRESSION — EXPORT DIFFICULTIES — ADVERSE TRADE BALANCE — FINANCES.

(FROM OUR CORRESPONDENT.)

WARSAW, September 29.

THE severe trade depression from which Poland has been suffering for several months has not yet reached its worst. The number of unemployed registered by the Labour Exchanges is steadily increasing, and has risen from 94,600 on May 1st to 159,820 on September 1st. This depression, like all disturbances, caused by a debauch of the currency, is of a very protracted nature. The ordinary difficulties, which are a characteristic feature of such an aftermath of inflation—the lack of new circulating capital and a high level of prices—have been accentuated in Poland by special political reasons.

The occupation of the Ruhr had a very beneficial influence on Poland's export trade. Upper Silesia's coal industry was benefited, in the first instance, by the barrier which was erected between the Ruhr and the unoccupied provinces of the Reich. The exports of coal from Upper Silesia to Germany rose rapidly during the early months of last year. After June they began to decline, and have now reached a comparatively very low level. In the near future the situation is unlikely to improve, and there is even a great probability that the difficulties of Upper Silesia's export trade will become greater. It is generally believed that the initiation of the Dawes scheme in Germany will have a detrimental effect on Upper Silesia's iron industry, whose principal market is the Reich. The restriction of railway building in Germany will necessarily affect this branch of Poland's industry.

The foreign trade statistics for the first four months of this year illustrate the changed situation. Since March the trade balance has swung against Poland, as may be seen from the following comparison:

	Exports.		Imports.		Excess of Exports (+) or Imports (—).
Monthly average, 1922....	54.6	70.4	15.8		
January, 1924	99.6	93.0	6.6		
February, "	96.8	80.9	15.9		
March, "	112.6	107.2	5.4		
April, "	113.2	123.2	10.0		
May, "	121.4	140.0	18.6		

The figures for the following months are not yet available, but it seems certain that the adverse tendency of the trade balance has remained.

The changed economic conditions are also reflected in a decrease of the State revenues, as shown below:—

	Revenue.		Expenditure.	
January, 1924	137.4	132.0		
February, "	123.2	104.1		
March, "	130.1	117.8		
April, "	130.6	112.8		
May, "	108.1	107.7		
June, "	108.0	153.2		

The yield of direct taxes decreased from April to June by 5.9, indirect taxes by 6.3 millions. The greatest disappointment has been caused by the Capital Levy, the backbone of Mr Grabski's financial reform. Its yield fell from

46.6 millions in March to 17.9 in April, 4.3 in May, and 3.8 in June. It seems that the yield of the levy does not exceed one-third of the estimated amount. In July and August there has been some improvement in the yield of direct and indirect taxes, but the increase is hardly sufficient to compensate for the deficit caused by the unsatisfactory results of the Capital Levy.

Though the trade depression has partly thwarted Mr Grabski's plans, it would be wrong to overlook the great progress which has been accomplished during his administration. The total revenues during the first six months of the year amounted in 1922 to 264.7, in 1923 to 237.3, and in 1924 to 737.4 million zlotys. They were this year more than three times greater than in 1923.

DENMARK.—EXCHANGE AND PRICES—TRADE BALANCE—AGRICULTURAL EXPORTS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, September 27.

LATELY the exchange situation has shown indications of more confidence than early in the summer, and the improvement is looked upon with satisfaction, especially as the outcome will undoubtedly be a steady down of prices if the improvement should prove lasting. The official price index for July (the semi-annual cost of living index of the Statistical Department) was 214 points, or 5 points higher than in January, and almost at the same time it became known that the wholesale price index of the *Finanstidende* showed a rise of 13 points during July—viz., from 220 to 233.

A reaction, however, set in in August, the index figure showing a drop from 233 to 231 during that month. The drop during August concerns three commodities only—viz., potatoes, cotton-yarn, and iron—while most of the other commodities have either maintained their price or shown slight rises. That the drop in wholesale prices is not more pronounced must be ascribed to rises in the markets abroad. But now much will depend upon the developments of the exchange. The *Finanstidende* points out that during August the gold-value of the Danish krone has risen still further, the dollar rate showing a drop from 624 to 611, and continues:—"But more is needed if a drop in the cost of living is to be attained, or even a continued rise avoided, and it is therefore to be hoped that the downward movement will be further accelerated during the present month. The chances for this should not be so bad, as agricultural exports bring large payments to the country every day, while at present the stocks of feeding-stuffs, &c., are presumably ample." In this connection it should be mentioned that on September 26th the dollar rate had dropped to 581.00, a further decline from the rate of 611 early in the month.

The figures for trade with foreign countries during July have just been published, and show that developments have been very favourable for Denmark, exports and imports showing that balance which has been desired for so long. The total imports during the month have amounted to 177,000,000 kr and the exports to 165,000,000 kr, to which must be added a further amount of 12,000,000 kr for re-exports. Consequently there was no excess of imports during the month, and it is correctly presumed that the other items of the financial balance are such that the final result is a surplus in favour of Denmark. During the first seven months of the year the import surplus has been 148,000,000 kr, or just over 20,000,000 kr a month. During this period the imports have amounted to 1,327,000,000 kr, and the exports 1,179,000,000 kr, of which 98,000,000 kr represent the re-exports of foreign goods. In 1923 the corresponding figures were:—Imports, 1,127,000,000 kr; exports, 909,000,000 kr total, of which 76,000,000 kr for re-exports. During the period January-July, 1923, the import surplus was accordingly 218,000,000 kr, or just over 30,000,000 kr per month.

Regarding the separate items of the commercial statistics, it should be mentioned that the imports of mineral fuel during the period January-July, 1924, have amounted to 110,000,000 kr, as against 84,000,000 kr during the corresponding period last year. This increase has some connection with the increasing industrial activity. Par-

1-4, GREAT TOWER STREET - LONDON, E.C.3.

ticularly interesting are the figures for agricultural exports, which are the following:—

EXPORTS of DANISH GOODS (in Million Kr.).

	January-July, 1923.	1924.
Live stock	48.2	90.3
Pork, meat, &c.	274.2	289.6
Butter, cream, milk, and cheese ..	279.8	383.5
Eggs	59.8	77.5
Total	662.0	840.9

Accordingly, the increase on these four items amounts to about 179,000,000 kr. The quantities in question will appear from the following table:—

EXPORTS of DANISH GOODS.

	January-July, 1923.	1924.
Pork (in million kilos)	95.9	115.3
Butter in casks or boxes (mil. kilos)	64.2	73.3
Fresh eggs (million scores)	21.8	22.7

In this respect a rather considerable increase is likewise apparent, and naturally the agricultural exports have been of the greatest importance as a set-off against the adverse conditions which affected the krone rate during the first part of the year.

GREECE.—THE REFUGEE LOAN—EXCHANGES AND POLITICS—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

ATHENS, September 23.

THE Council of the League of Nations has approved, at the request of the Greek Government, some technical and financial amendments to the Geneva Protocol of September 29, 1923, concerning the settlement of Greek refugees. The financial amendments relate firstly to the amount of the loan or loans to be issued for the purpose. This was originally fixed at £6 millions. It was evident, however, from the first that this sum was insufficient. The working of the settlement scheme has proved the necessity of increasing the sum to be disbursed. Consequently, the authorised amount of the loan or loans has now been fixed at £10 millions. Greek banks will participate up to 25 per cent. of the amount to be raised. Another modification of the Protocol concerns the power of the Greek Government to issue other loans. According to the original text of the Protocol, the Greek Government had undertaken not to pledge, without the consent of the International Financial Commission at Athens, any of its revenues for the service of loans, except for the purpose of meeting its external obligations or of obtaining loans destined exclusively to improve the financial position of Greece, so as to prevent depreciation of the revenues assigned to the Refugee Loan. The amendment now gives a free hand to the Greek Government to issue in the future any internal or external loans, guaranteed by the surplus remaining from the proceeds of the revenues assigned as security to the Refugee Loan, after the service of that loan has been effected. Only in case other revenues of the State were to be pledged for the issue of loans the agreement of the International Financial Commission will be required, that the hypothecation of such revenues will not be prejudicial to the interests of the bondholders of the Refugee Loan.

It is expected that the loan will be raised in November, immediately after the issue of the German loan. The revenues assigned for its service constitute an ample guarantee. In fact, their proceeds amounted to over £1,900,000 in 1923, and, according to estimates, will exceed £3 millions in 1924. This guarantee, the high yield of the loan (not less than 7 per cent.), and the moral support given by the League of Nations in view of its benevolent purpose, promise that the loan will be oversubscribed.

After remaining for some time stable around 250 drachmæ, the rate of exchange on London has hardened since yesterday, on rumours of a Ministerial crisis. A movement towards a coalition Government between the two principal political parties of the Assembly is being observed. The recent political events have weakened the position of the present Government, which, however, has been always considered as a temporary Cabinet.

Increases of salaries to public employees will result in an increase of expenditure of nearly 500 million drachmæ. It remains to be seen how this expenditure will be met. Provisional returns for the financial year 1923-1924 show actual State revenue up to May 30, 1924, of 3,769 millions drachmæ, and expenditure of 4,225 millions, as against an estimated revenue of 3,941 millions and estimated expenditure of 6,979 million drachmæ.

Books and Publications.

THE MECHANISM OF THE TRADE BALANCE.*

THIS book is intended primarily as an inductive verification of the general theory of the mechanism of international trade, as explained by Mill and other "classical" economists; and its treatment of Canadian matters (as the author tells us) is incidental to the main purpose. Canada was chosen as the field of inquiry because it was desirable for the purpose in view to consider the case of a country (a) in which external trade was important relatively to internal trade and industry; (b) in which there was compactness and unity of industrial and commercial structure; and (c) in which marked changes were taking place in the rate of foreign investment. All these conditions applied to Canada, and as regards (c) in particular there occurred a great inflow of capital rising from a few million dollars in 1900 to almost \$500,000,000 in 1913, and amounting over the whole period under consideration to over \$2,000,000,000. As a consequence, an inductive study of Canada's international trade during this period becomes largely a study of the adjustment of Canada's trade balance, currency and banking systems, price levels, and industry in general to a heavy import of foreign capital.

In Part I. of the book the author submits to very close scrutiny all the various items in the Canadian trade balance, and endeavours to represent statistically the movements in each item during each year of the period. As is inevitable in an analysis of this kind, some of the figures rest upon slender foundations, but so far as we can judge, all the available data have been drawn upon; and we think that the work has been done about as well and thoroughly as it could be done.

Part II. comprises a detailed analysis of the mechanism of adjustment of the balance of indebtedness. The author examines in order the operation of variations in the exchanges, gold movements, changes in relative price levels, and changes in commodity imports and exports. According to Mill's theory, the extension of loans to foreign countries results immediately in an export of gold with a consequent fall in prices in the lending country and rise of prices in the borrowing country. This change in relative price levels stimulates exports, checks imports in the lending country, and in this way brings about an excess of exports over imports equal to the loans abroad. As regards the initial movement of gold postulated by Mill, Professor Viner finds that in considering the case of Canada account has to be taken of the "outside reserves" of the Canadian banks, by the use of which the latter can control and regulate the movement of gold into and out of Canada, largely irrespective of the balance of payments. But if the outside reserves are regarded as equivalent to gold in Canada, then the Canadian process of adjustment of international balances approaches more closely that set forth *a priori* in the generally accepted theory.

* "Canada's Balance of International Indebtedness, 1900-1913." By Jacob Viner, Ph.D., Harvard University Press, 1924.

It is probable, however, that the Canadian variation from the typical method, by preventing sudden inflows and withdrawals of gold, operated to bring about a steadier and smoother adjustment of price levels and trade balances in the face of huge and irregular borrowings abroad than would have been possible if gold movements into and out of Canada were as automatic and free as they are elsewhere. The outside reserves, in other words, acted as a shock absorber in so far as Canadian financial and economic conditions were concerned. They appear, on the other hand, to have accentuated by their sudden contractions the financial difficulties of New York at critical moments.

On the question of relative price movements in borrowing and lending countries, the author shows, in so far as the inductive method permits of definite results, that the increasing flow of capital into Canada was accompanied by a relatively increasing price level in Canada as compared with other countries. The rise was most pronounced in the prices of domestic commodities and services, least pronounced in the prices of import commodities, and intermediate between these two in the prices of export commodities; thus operating to stimulate imports and to check exports and so to adjust the Canadian commodity balance of trade to the capital borrowings. These results are consistent with the classical theory, and, as he points out, even demanded by that theory if it is completed so as to take into consideration sectional as well as general price levels.

Professor Viner's work as a whole is the most considerable attempt which has yet been made to link up by inductive study the mechanism of the adjustment of the international balance of indebtedness with deductive theories. He has also given us a most valuable study of the Canadian trade balance as it was before the war, and a considerable insight into Canadian financial, monetary, commercial and industrial conditions.

TOWARDS A WHITE AUSTRALIA.*

THIS book is the product of a year's work, which gained for its authoress a research scholarship at Melbourne University; but a year is not long enough both to collect such a mass of material and to make it easily readable, and the book must appeal mainly to the professed student of Australian history. It is, however, a conscientious and comprehensive presentation, based chiefly on public documents and debates in the Colonial Parliaments, of the various projects for developing the resources of Australia by Asiatic and Melanesian labour, and of the growth of the opposition till its embodiment in the legislation of the Commonwealth. Miss Willard's account of the attempt to introduce Chinese and Indian coolie labour into the various colonies is far too detailed to summarise here; the objections became visible with the Chinese immigration to the goldfields, and were strengthened with every fresh arrival of coloured immigrants, until the opposition was extended to all Asiatic labour about 1890. Indian indentured coolies might perhaps have been permanently admitted but for the safeguards demanded by the Government of India; the Chinese formed separate communities, tended to penetrate from the tropical to the non-tropical regions, and had a far lower standard of life than the British worker. Even the attempt of a shipping company in 1878-79 to employ Chinamen on their ships trading with tropical parts failed before Labour and popular opposition, and brought the company to disaster, and the alleged needs of the Northern Territory did not avail to sustain the plans for its development by Asiatic immigration. Difficulties arose with the British Government on several grounds—economic principles, British traditions, discrimination against British subjects, and the treaty rights of China and Japan, but the opposition was sustained by the example of California, and comprehensive restriction laws were passed by several of the colonies after an international conference in 1896. Next year, at the Imperial Conference, a compromise (imitated from the Natal plan) was effected with the Colonial Office. It practically secured the exclusion of all coloured labourers by a language test, and this method was finally adopted by the Commonwealth Parliament in 1901. With some modifications, it has been maintained to the present time, and is to be extended to the islands of which Australia is

* "History of the White Australia Policy." By Myra Willard M.A., Sydney. Melbourne University Press, 1923. (London) Macmillan and Co., Limited. Pp. 217, 10s 6d net.

the mandatory Power. Labour hostility, usually regarded in England as the chief motive force in the exclusion, has counted far less, as Miss Willard explains, than other and more general objections. Throughout the controversy the chief of these has been the possible submergence of the British-Australian people by hordes of alien immigrants, incapable of assimilation, likely to imperil public health and democracy, and certain to set up the worst evils incidental to absentee proprietorship and uncontrolled "capitalism." The Chinese were apt to evade the restrictions on their entry by borrowing the naturalisation papers of their compatriots; they sold their votes, and "repeated"; they lived apart; they occasionally introduced smallpox and leprosy; their habits were filthy, and they did not bring their women. The feeling against them was practically unanimous, and based on 50 years' experience; and some, though not all, of the objections held good against other Asiatic labour also. Kanaka labour, which has a chapter to itself, was also not open to all of these; but the terrible record of the atrocities in recruiting, and of the immigrants' sufferings on some of the plantations, sufficed to justify its exclusion.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, October 22.	ACCOUNT, October 23.
------------------------	-------------------------

Politics have become, of course, the dominating factor in Stock Exchange markets. The defeat of the Government was not unexpected, but the House dislikes the idea of another General Election as much as it did that of a year ago, having regard to the disturbance which this creates in business circles, and the diversion of public interest from ordinary matters to those of politics. Consequently, the effect of the political crisis has been to bring about a shrinkage in the volume of business, but it affected prices only to a slight extent. Speculation is rife as to what is going to happen next.

British Government stocks are easier on the whole, but the gilt-edged list is by no means bad in tone. The closing of the subscription lists for the Queensland Loan last Wednesday morning, when they might have been, under the terms of the prospectus, kept open until Thursday evening, had a good effect. The price opened at "par," and rose to $\frac{1}{4}$ premium. Large subscribers received 60 per cent. Lively attention is fastened upon the forthcoming German loan, details of which are expected to be made public very shortly.

German Government bonds have been a little better, while French issues moved irregularly. There is not much doing

in foreigners, however. Brazilian bonds continue to be well supported. Egyptian and Turkish bonds weakened; Austrian Sixes are better.

Home Railway stocks, after a further bout of depression, braced up to a slight extent, although the public are paying scant attention to the stocks. Undergrounds went back, on the assumption that the Exhibition, if it opens next year, will be on a very much smaller scale than that which is about to close at the end of this month. Mexican Rails have fallen, but Argentines are a firm market, thanks principally to the rate of exchange and the declaration of a dividend on Entre Rios first preference, which pays off one year's arrears of back dividend, in addition to the full distribution in respect of the year just ended. United of Havana moved curiously, advancing sharply one day and falling equally abruptly next upon dividend anticipations in both cases. The dividend, making 7 per cent. for the year, disappointed optimists. Brazilians are holding their recent rises. Taltals are better, thanks to a good report.

The rubber market remains firm, in spite of a little reaction in the price of the produce. Tea shares have been sold fairly heavily, and the group shows a long list of declines. The effervescence has departed from tea speculation at present, but coffee shares keep good, the excellent announcement from the Dumont Company serving to assist prices in this section. The banking market is one of the firmest, a good deal of money coming in for London, for foreign, and for colonial banking shares. Nitrates have also maintained their strong appearance, though with a little setback here and there. Textiles are somewhat uninteresting. Amongst shipping stocks, P. and O. went below its 300 line. Royal Exchange Insurance, another of the giants, gave way after a long and rapid rise, other insurance shares also being affected by a mild attempt to take profits by some of the recent purchasers. Iron and steel shares moved downwards on balance, the losses proving very slight. Tobacco shares were disposed to droop, each reaction finding, however, support at lower figures. Dunlops are not quite so good as they have been, though rather more interest is stirring in the motor market, owing to the approach of the annual Show. Sudan Plantations have fallen, most Egyptians, in fact, being dull in consequence of the indeterminate character of the visit just concluded by Zaghlul Pasha to this country. The brewery market is good, Watney's decision to distribute £800,000 of undivided profits as a 50 per cent. capital bonus being a strengthening factor. Gas and electricity issues have gone back a shade.

Politics, the Jewish fast on Wednesday, and the incidence of this week's Stock Exchange settlement, are quoted as three reasons for sluggishness in Kaffirs. Prices are not bad, but the alterations are insignificant. Chartered moved up a few pence, and Cam and Motors have been in demand. Tin shares improved, in spite of a decline in the price of the metal. The favourites continue to be those of the Middle East group, West Africans attracting little public notice, and the Cornish shares being still somewhat neglected. Ashanti Gold Fields have spurred. Amongst Mexicans, Tomboys stand out with a sharp rise upon the unexpected declaration of a dividend of 9d per share, tax-free. A few Canadians are better, and the recently introduced Chosen Syndicate shares were advanced upon statements that good developments have recently occurred on the property.

NEW ISSUES.

Queensland Government 5 per Cent. Inscribed Stock, 1940-1960.—This is an issue at 97½ per cent. of £4,000,000 Queensland Government 5 per cent. inscribed stock, 1940-1960, the proceeds of which will be used for expenditure on railways, main roads, advances to local authorities, and for other public works and services. If not previously redeemed, the loan will be repaid at par on October 1, 1960, but the Government reserve the right of repaying it at par, in whole or in part, at any time on or after October 1, 1940, subject to three months' notice. The prospectus reminds us that His Majesty's Treasury are not directly or indirectly responsible for "the payment of the stock." This stock, when held by persons not domiciled in Queensland, is not subject to any taxes, duties, or levies by that State. This is an interesting issue, the yield offered indicating a belief that bygone financial discussions have been laid to rest.

Continental and Industrial Trst., Limited.—Capital authorised and issued, £1,000,000, divided into shares of £10 each. Of these, 50,000 are fully paid and 50,000 partly paid. The company was incorporated on May 17, 1924, with an authorised capital of £500,000, divided into 50,000 shares of £10 each. The company carries on largely in Central Europe the business usually carried on by a trust company. On September 15, 1924, the company increased its capital to £1,000,000 by the creation of 50,000 additional shares of £10 each to rank for dividend *pari passu* with the existing shares. 1 per cent. commission has been paid on the subscription for 65,120 shares. The directors have power to raise or borrow money for the purposes of the company, provided that they shall not without the sanction of a general meeting of the company raise or borrow any sum of money which will make the amount raised or borrowed by the company and then outstanding exceed the nominal capital for the time being of the company; such power has not yet been exercised. These details are taken from an advertised statement, but a balance-sheet would assist us in arriving at the value of the undertaking as an investment proposition.

Caledonian Trust Company, Limited.—Authorised and issued capital £1,000,000, divided into £600,000 4½ per cent. cumulative preference stock and £400,000 ordinary stock. In February, 1917, the company created £500,000 4 per cent. debenture stock, of which £463,300 was issued and is outstanding. In September, 1924, the company created a further £400,000 4 per cent. debenture stock. This, with the unissued balance of £36,700 of the original stock, the company have agreed to sell at 78 and pay a commission of ½ per cent. Both issues of debenture stock rank *pari passu*, and are constituted by trust deeds dated February 22, 1917, and October 6, 1924. They are repayable at par in liquidation, but redeemable at 105 per cent. (a) in company's option on December 31, 1940, or at any time thereafter on six months' notice by the company, or (b) in winding up for reconstruction or amalgamation. Borrowing powers are limited by trust deed to the amount of the subscribed capital for the time being. Application for leave to deal, it is stated, in the £900,000 4 per cent. debenture stock will be made to the committees of the Stock Exchanges in London, Glasgow, and Edinburgh. This is possibly an excellent security, but we fail to see why the usual information is denied to the public.

Gillette Safety Razor Company, Limited.—Capital common stock (no par value) 2,000,000 shares, of which 350,910 have been issued. Details of this undertaking, published for public information only, show that this company was incorporated in September, 1917, under the laws of the State of Delaware, U.S.A. At a meeting held on October 6th, the shareholders unanimously adopted a resolution increasing the authorised share capital from 500,000 shares (of which 350,910 shares were in issue) to 2,000,000 shares of common stock. This is of no par value, and follows a practice which, though not familiar here, is often adopted in America. Since 1917 net earnings have made steady progress, the 1918 figures having been \$5,252,100. Profits are shown year by year from 1918 to 1923. Many people appreciate the products of this undertaking; this may lead them to make further inquiries, the answers to which are not revealed in the advertised statement.

The Crittall Manufacturing Company, Limited.—Authorised capital £450,000, divided into 200,000 ordinary and 250,000 8 per cent. cumulative participating preference shares, all of £1 each. This is an issue at par of 140,000 8 per cent. cumulative participating preference shares of £1 each. The company—which manufactures metal casements, doors, ornamental bronze work, &c.—has been formed to take over (with effect as from June 1st last) a company of the same name dating from the year 1889, the whole of the purchase consideration for which will be satisfied by the allocation to the vendors of 61,050 preference shares and 176,650 ordinary shares, credited as fully paid. In addition to the fixed 8 per cent. per annum, the preference shares rank equally with the ordinary shares for a further 2 per cent. per annum, after the latter have received 8 per cent. No debenture debt (other than to

bankers) or further shares ranking in priority to or *pari passu* with the present authorised preference capital can be created without the holders' sanction. The proceeds of the present issue will be used for factory extensions. Surplus assets are given as £258,394. The average of profits for ten years ended May 31, 1923, is given, but this is not a very satisfactory method of showing earnings, especially in view of the fact that the period includes the years of war. Profits are given for one year to May 31, 1924, before making allowance for certain charges, as £52,513. Preference shareholders have limited voting powers. The products of the company should find a ready market, and, providing management be efficient, the company should follow a reasonably prosperous course.

The Oxford Gaslight and Coke Company.—This is an issue by tender of £79,498 5 per cent. perpetual debenture stock at the minimum price of £95 per £100, yielding £5 5s 3d per cent. The total authorised capital is £393,892, of which £163,835 remains to be issued. The authorised loan capital is £196,946, of which £161,416 remains to be borrowed. Net revenue for its financial year ended June 30th last was £28,776, of which the interest on existing loan capital and that now being issued will amount to £5,916. Thus the cover as far as services are concerned is ample. A reasonably sound offer.

Western Maskeliya (Ceylon) Tea Company, Limited.—Share capital £80,000, in shares of £1 each, all of which are now offered for subscription at par. The company has been formed to acquire as from October 15, 1924, four tea estates, situated in the Lower Maskeliya district of Ceylon. The total area is 1,402 acres. The total cultivated area is 1,089 acres, including 1,011 acres under tea in bearing and 50 acres under rubber in bearing. It is estimated that for the period ending June 30, 1925, total crops of 315,000 lbs tea and 10,000 lbs rubber will be secured. The purchase price payable by the company is £48,000 in cash, and it is estimated that after preliminary and other expenses have been paid there will remain £19,990 available for working capital, difference in exchange, &c. It has been pointed out that costs are based on the rupee at 1s 5d, against the current exchange of over 1s 6d. The directors include names known to the industry.

SAO PAULO.

PRESIDENT'S MESSAGE TO CONGRESS.

STAMPING OUT GERMS OF DISORDER.

BRAZIL'S SOLIDARITY PROVED IN SUPPRESSION OF REBELLION.

POLICY OF ENERGETIC DEVELOPMENT OF RESOURCES.

WE REPRODUCE BELOW THE MESSAGE PRESENTED TO THE LEGISLATIVE CONGRESS ON AUGUST 12 LAST BY DR. CARLOS DE CAMPOS, PRESIDENT OF THE STATE OF SAO PAULO:

The exceptional circumstances in which we find ourselves render it advisable and needful beyond all doubt that I should personally give you a clear and frank explanation of how matters stand, otherwise my message to-day would, indeed, have been a different one.

I would have liked to have congratulated myself, the State, and yourselves with the greatest satisfaction and confidence with regard to the last and auspicious session of your present Legislature, recognising that, owing to your well-directed efforts, to the wise provisions of which you have given so many ample proofs, it is upon you that the traditional and future progress of Sao Paulo depends. In addition, offering you the loyal and unlimited co-operation of the Government which had just assumed power for its new period of four years, and telling you, finally, all that was essential and necessary to be done within such a short administrative period to deal with the problems affecting the Government of this State. Nothing more would have been needed, since my predecessor had already left behind him in a brilliant and substantial report, duly published and distributed with all its correlative reports, detailed information and highly useful advice on the previous Administration and its chief corollaries.

A BARBAROUS ADVENTURE.

The recent barbarous events, however, which have taken place in this capital and in the interior of the State have willed it that the first message which I have the honour of laying before your august Legislative Assembly should be shorn of its normal and serene characteristics.

That is why I appear before you sombre and heavy-hearted, but unshaken in my purpose, to speak to you of treachery, crime, disgrace, and punishment.

This ignominious armed adventure is rendered all the more notorious by the fact that it was treacherously launched by a shameful conspiracy of envy and ambition against Sao Paulo. It was purposely chosen to be the theatre of such uncalled-for deeds as it is a great centre of social and political strength, and at the same time the metropolis of vast wealth. It was, therefore, a suitable place, as it served as the most convenient shelter and refuge for the double object which these brigands had in view.

There was nothing lacking in their evil designs. Their treachery

was a long and premeditated one, cruelly carried out in cold blood by Brazilians and Paulistas false to their traditions and to their nation. They were citizens without any idea of civic honour; soldiers without a spark of patriotism, and members of the police force false to the oaths which they had sworn to fulfil and safeguard.

EFFECT OF REVOLUTION.

The crime was perpetrated with cannon and machine guns against peaceful, industrious, cultured and harmless citizens. There was the sacrificing of human life, the destroying of property, the disorganising of labour. Terror and anarchy were spread in its path, with attempts to overthrow old-established and existing institutions of law, justice, right, order, and all principles of authority. In short, the very honour and credit of the State and of the nation.

The consequent disaster burst over our land, with its sad accompaniment of death and mourning, and left famine, orphans, and sickness. It paralysed all activities, led to economical and financial shocks, with the outbreaks of sedition, intrigue, calumnies, and discords. They have dragged the history of Sao Paulo through the mud.

Hence the punishment which this picture portrays—after the style of Dante, of bitterness, despair, and desolation—one which was meted out to these unpardonable criminals. This sad adventure of corruption, violence, and vituperation commenced with the capture of the barracks of Luz at an advanced hour of the night by the military forces from the Santa Anna barracks, in conjunction with the police cavalry, which had previously revolted under some of its officers and insubordinates of the army. Thereupon, after stealing arms and munitions by force, fraud, and false promises, they gathered together under the flag of insurrection several of the infantry of the public forces, and attacked the Campos Elyseos (inhabited by the President of the State and his family), the Law Courts, the Central Police offices, and the residence of the commander of the State forces, who was surprised and imprisoned. In view of the immediate and at every moment growing strength of the defences of the Presidential Palace by its customary guard, which was subsequently increased and better prepared by the gallant efforts of the brave major who was the adjutant of the President, and to whose help there later on hastened other brave officers and soldiers who were able to answer the first call—the revolutionaries proceeded to bombard the building with guns, which they had brought from Quitauna, without attaining their object.

They succeeded in doing considerable damage to the College of the Sacred Heart of Jesus and to private houses in the neighbourhood, where they assassinated scores of women and children.

ORGANISING DEFENCE.

After that they proceeded to the assault of the Law Courts and the Central Police offices, which by that time had become important centres of the Government forces, under the orders of the brave Secretary of the Law Courts, who never for a single moment abandoned his post, and was indefatigable in the energetic and decisive steps which he took from the first to the very last day of the fighting. These forces were also under the command of Colonel Pedro Dias de Campos, who very soon showed what a brilliant officer he was, and also gave proofs of the marvellous competency and efficiency with which he was endowed. His gifts were subsequently recognised by the High Command of the Loyalist forces.

For four days and nights on end the patriotic resistance, which was generously supported by a great number of the friends of the President and of the Secretary of Justice, by politicians, Paulistas, and representatives of the various social classes, was kept up by the staff of the two Government offices and other public functionaries, at the two above-mentioned points which the revolutionaries were endeavouring to conquer.

When, however, thanks to spies, the communications between the Campos Elyseos were intercepted and destroyed, and the Palace of Justice was bombarded, thereby disconnecting it with the other points of defence, the Government decided, in agreement with Generals Estanislau Pamplona and Carlos Arlindo, and the staff officers, who had been constituted for these provisional operations, to transport itself to the suburb of Guyauña. Here they joined up with the contingents from Rio and the High Command, which latter was luckily entrusted to the illustrious General of Division, Eduardo Socrates.

LOYALTY OF ADMINISTRATION.

As a matter of fact, the President and the Secretary of Justice remained there issuing manifestoes and circulars, and took all the necessary steps in their power. They kept in constant communication with the President of the Republic, with the Ministers of War and Justice, with Santos, and, later on, with the interior, by means of a field telegraph, and also with the other Departments of the State, all of which with marvellous calmness and firmness maintained themselves on the side and in the service of the Government. They complied with all things and for all purposes, and did everything that was asked of them.

After this resistance, and with the object of joining the legal forces, the police, who had so ably supported the Government forces, marched off in perfect order, and took up strategical positions, all of them within the capital. These the revolutionists were never able to capture.

It is only just that we here place on record the assistance given by the troops, who kept faithful to the Government of the Union, and who arrived in the city for that purpose—namely, the garrison from Port Itaipús, and the one from the "Minas Geraes." They were sent by the worthy Admiral Penido, who was in command of the squadron stationed in Santos. In addition, there was a contingent from the 4th Battalion of Sharpshooters from Saint Anna, and nearly all the cavalry from Pirassununga.

From that moment onwards, by the most praiseworthy efforts of the Central of Brazil, we progressed. With ever increasing

security and success there continued to be mobilised and brought into touch with the enemy—who had purposely hidden in churches, factories, and schools—all the loyal troops. Their numbers were increased by numerous bodies of police from Rio de Janeiro, Minas Espirito Santo, Paraná, Santa Catharina, and Rio Grande do Sul and by valiant patriotic battalions formed in the Federal capital until, finding themselves hemmed in on all sides by a circle of iron and fire—and already vanquished in advance, their ranks thinned Exhausted and disheartened, this armed band of revolutionists—as furtively as they had entered—abandoned this capital and fled into the interior of the State.

REBELS DEFEATED.

As they are being pursued by a part of the Loyalist troops day after day the rebels are becoming more and more demoralised and allowing themselves to be captured. They are losing their officers, men, and munitions of war and provisions, as well as guns. To this object the contingents of General Azevedo Costa have contributed in no small measure. They were organised to act in conjunction with the civic elements which have been got together by the Vice-President, Colonel Fernando Prestes, by the late President Washington Luis, by the Senator Ataliba Leonel, and by the Deputies Julio Prestes, Fernando Costa, Hilario Freire, Eduardo Lorena, Deodato Wertheimer, and Colonel J. Diniz Junqueira. All of them are devoted to the defence of our land and to the Republican institutions.

Before this flight—one which we had already foreseen, and was daily expected by all those who could appreciate the utter futility and evident injustice of this black conspiracy and the weakness of its ephemeral and reprehensible methods—the rebels threw away their masks of pseudo-regenerators of the political customs of the country, and unceremoniously set about trying to rob the country of all the securities, all the specie, and especially the public and private moneys which they were able to discover and get hold of. They thereby stamped upon their insipid white flag the real symbol and object of their armed invasion into the territory of Sao Paulo.

BRAZIL'S SOLIDARITY.

In the midst of all this horror, of all this vileness, there stood out, we are glad to say—so that the noble spirit of Sao Paulo should not succumb—that sentiment for which to-day it is so grateful. It feels more the disgrace which has been inflicted upon it rather than the material losses which it has suffered. In the first place, it showed the unanimous solidarity of the people of Brazil, who gathered around the President of the Republic, looking up to him as the natural exponent of this most glorious hour. It was a solidarity evinced by the significant moral support given by all the Federal entities, as well as by the powerful and all-compelling assistance of the military, police, and patriotic forces of the Union and of the neighbouring States above referred to, whose bravery, devotion and efficiency can only be compared with the high sense of national adhesion and devotion to the Republic such as has never before been seen. Moreover, we must not forget the demonstration of piety and philanthropy which so much contributed to ennoble those who—Ministers of the Most High—in their charitable prayers, and the faithful who accompanied them, obtained so many blessings for Sao Paulo. Those who, rich and poor alike, never once refused to the needy the help and the means at their disposal; those who, professionally or spontaneously, contributed

with their science or with their care and attention in favour of the sick and wounded; all of them real ministers of religion, of charity, of medicine, and of the hospitals, vied with each other in their devotion and zeal in endeavouring to allay the sufferings of mind, the poverty and pain of the victims of this most horrible catastrophe.

MARTIAL LAW DECLARED.

As was only natural, among the exceptional measures which were adopted, and which were the most rigorously needed for the immediate re-establishment of the general order—that order which had been so profoundly disturbed—the legislative Congress of the Republic passed a resolution entered down in its minutes, and with a most significant majority, declaring a state of siege for Sao Paulo. It is in this capital and in the interior that the effects of this extraordinary measure have been felt, but only in extremely suspicious cases.

It is also to be noted that the Federal Government and the State Government, each in its own respective capacity, is taking all the necessary proceedings to thoroughly investigate these criminal events, and while justice is preparing for the trial and punishment of the responsible parties, I, for my part, have already issued the necessary decrees dismissing, for the sake of the public service, the civil functionaries, and expelling those members of the police force who have been implicated in these most disgraceful events, as being unworthy of belonging to the honourable ranks of the loyal servants of Sao Paulo.

Were it not that it is the supreme duty of the powers duly constituted by the classes, organised on the basis of honesty and labour by all those citizens who are conscious of the duty they owe to their Brazilian and Paulist citizenship—as regards the inevitable and immediate punishment of the delinquent—it would have been better to have effaced from our memory this black and hideous abasement of conscience which henceforth shall be dead to all human dignity.

It contaminated everything that came into contact with it. Briefly, these may be mentioned: The intangible spirit of general discipline which ensures the proper working of the organisms necessary to the common existence of mankind. The productive and happy tranquillity of an intelligent people conscious of their peaceful and progressive existence. The internal and external prestige of the State and of the country in its federative and international independence. Fraternal patriotism, which is the strongest foundation of Brazilian unity. The thousand and one influences that go towards the cementing of family love. The factors of municipal devotion, of State adherence, and of fidelity to the Union. In a word, all things which find their ultimate expression in love for the Fatherland.

SEVERITY NECESSARY.

It behoves us, therefore, for the sake of our national honour, to stamp out once and for all with a ruthless hand this pernicious germ which has tried to sow such poisonous seeds, and whose attacks threatened to enslave the Brazilian community. It shall be so in the interest of the noble aspiration and objectives of the majority; for the sake of our national solidarity; in answer to the indignant and just clamours which rise from the whole of Brazil; for the sake of the blood of the innocent victims; and in accordance with the dictates of all human laws as to the punishment of crime,

and even in the name of the Divine law which exacts the punishment of the guilty.

It will be only in this manner, when peace has been restored to our country, still sore from the effects of the great torture we have experienced, and while rendering the most reverent homage of tender regrets for those who perished and suffered in the heat of battle and its inevitable consequences, that we shall be able to resume our work of reconstruction, having eliminated from our midst the disintegrating and anarchist elements, which in such a treacherous and criminal manner came to upset the life of the country.

Thank God the damage is not irreparable, and can be remedied by our unshaken efforts, our incalculable resources and possibilities.

Let inexorable justice pronounce its verdict, and purge the social and political atmosphere. The Paulistians will know how to resume the normal course of their labours and of their ever-increasing prosperity and greatness.

The Government has the absolute conviction of having complied with its duty of resistance to the treacherous attempt—even to the point of cutting its throat—and in a like manner does it feel sure of being able to comply in every way with the claims and requirements established by law. Such will be its greatest preoccupation, and already it has taken the necessary urgent measures for public order and safety, for all the necessary supplies of life, and for all the guarantees to enable the public securing the full exercise of all its activities.

TO DEVELOP RESOURCES.

I can also promise you that the Government administration will devote all its efforts throughout all the branches of Government Departments in order to develop in every possible manner the resources of the State. This you will very shortly see by the special messages which I will send you on each one of these topics.

Some time ago, addressing myself to the Paulistians from the public platform during my political campaign—when I was putting up for the elevated post in which to-day I find myself—I gave assurances in all good faith that I would, with preference, always guide my actions by the dictates of tolerance.

I do not go back on my words, nor will I change my course, but "tolerance" does not spell "weakness," pusillanimity, or accommodating condescensions. There are certain classes of tolerance which are equivalent to complicity, as we ourselves have noticed in the case of the present revolt. For my part, I will not shirk the opinion or the duty of classifying them as they deserve.

The late tragic movement has come to put this part of the programme to the test. Let it be so. The fight was costly in life and treasure; the consequences are grave; therefore most severe will be the means of repression.

What I can and must affirm, however, is that unconditionally I pledge my intelligence, my forces, and my life in the integral and faithful carrying out of the Government mission which has been entrusted to me, whatever may be the consequences.

Allow me, therefore, gentlemen of the Congress, to solemnly repeat before you the promise I have undertaken of properly serving the great destinies of Sao Paulo and of the Republic.

CARLOS DE CAMPOS,

President of the State.

Sao Paulo, August 12, 1924.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

GRATIFYING RESULTS OF CENTENARY YEAR.

The one hundredth annual general meeting of the Clerical, Medical and General Life Assurance Society was held, on the 10th instant, at 15 St James's square, London, Mr Francis E. J. Smith (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The report and accounts which we have the pleasure to lay before you to-day deal with the year which ended on June 30th last, and the date marks the completion of the first 100 years of the society's existence. During the first year of our existence we saved £165. To-day, our life assurance fund amounts to nearly £8,000,000, and the excess of our income over our expenditure in 1924 has been £467,000.

The policies granted during our first year were 52 in number, and the sums assured amounted to £44,300. To-day, we record a new business thirty times as large, and the total amount of assurances on our books is about 19½ million pounds.

You will see that the net new life business of £1,324,000 is substantially ahead of last year. In fact, the new business of our centenary year is the largest in our history, with the exception of the abnormal year 1920, when the disbandment of our Army brought back a vast adult population to civilian life, and when the war conditions had made the public realise, as never before, the advantages of life assurance.

You will see that our premium income now exceeds £600,000, and showed the large increase during the year of £41,000. This, as befits a centenary year, is much the largest growth we have experienced in any one year.

RATE OF INTEREST EARNED.

The rate of interest earned represents a very satisfactory net yield of £4 13s 2d. When comparison is made with the average rates earned before the beginning of the present quinquennium, it will be found that for more than a generation prior to the war the net rate which the society was able to earn upon its investments was always less than 4 per cent., and that during the later nineties it sometimes fell below 3½ per cent. Remembering the scale of bonuses which the society was able to declare, based on the interest earnings of those past days, I feel sure that our policyholders and agents will rejoice to see the well-sustained interest earnings of the current quinquennium.

You will see that the death claims announced during the past year have shown an increase over the previous year, but with the expansion of the society's business an increase in the amount of the death claims was inevitable. What really matters is not the amount, but the character of the claims, and, regarded from this point of view, the mortality experience last year has fully sustained the high average reached during the first two years of the quinquennium.

Within the last year or two, both the Government and the Institute of Actuaries, whose president this year is our actuary, a fact upon which we congratulate him and ourselves, have published new tables relating to the mortality of annuitants. A year ago, anticipating the production of a new standard table, your directors felt that the time had come to give effect to the lower rates of mortality which now exist. An investigation made by our actuary disclosed such an improvement in the rates of mortality as to justify a substantial reduction in the rates of premium charged for new assurances. We brought these new tables into use last October. Our agents and connections at once recognised the attractive character of the rates we are now charging, and I have little doubt that the expansion of our new business shown this year has been largely brought about by this course.

THE ACCOUNTS.

I turn now to the accounts, and I will deal first with the Stock Exchange investments, which now reach a total of about £3,876,000. Our total holding of British Government securities is now a little over £2,400,000, which is about £130,000 more than last year. The Indian Government securities are a little higher than last year, and now stand at £463,000, including £100,000 5½ loan, which falls to be repaid in 1932, and Indian Railway Annuities, which are peculiarly suitable for an insurance company. We have substantially increased our holding of Colonial Government securities, which last year had dwindled to £112,000, mainly owing to the maturing of short-dated stocks. Foreign Government securities amount now to £128,000, and other foreign securities to £4,450, so that the total amount which we have invested outside the limits of the British Empire is less than £133,000, a figure which represents about 1½ per cent. of our total funds. You will notice that on June 30 the market value of our Stock Exchange securities was £185,501 in excess of the book value. A year ago the excess was £224,000, of which we have realised nearly £9,000. On balance, therefore, there has been a small fall in values during these 12 months; but, after all, £185,000 represents a very comfortable

margin. And I find that a revaluation made three months later shows that the margin had risen to just on £200,000. There is a Greek figure of speech called "Meiosis," which means saying less than you mean. I am quite sure every member of the board would say that our bonus, then, will not be less than the last; and I think they would offend against the canon I have quoted. The question is, how much better will the bonus be in 1926 than our bonus in 1921? Well, our valuation rate assumes 2½ per cent. interest; we have made, on an average, during the first three years of our quinquennium £4 11s 7d net after deduction of income-tax. Let that fact speak for itself.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Oct. 13—Oct. 18 were opened on Oct. 10, 1924, and the total amount applied for was £60,710,000. For bills at three months dated Monday to Friday at £99 1s 4d, about 74 per cent., and above in full; Saturday £99 1s 7d and above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.				
Sept. 5.....	40,000,000	51,165,000	3 15 6.37	nil
Sept. 12.....	35,000,000	48,335,000	3 15 3.27	nil
Sept. 19.....	35,000,000	51,165,000	3 13 1.09	nil
Sept. 26.....	40,000,000	63,960,000	3 12 4.7	nil
Oct. 3.....	40,000,000	59,345,000	3 14 3.99	nil
Oct. 10.....	35,000,000	60,710,000	3 13 9.13	nil

Tenders will be received on Oct. 17, 1924, for Treasury Bond and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

NOTICES.

We regret to announce the death of Sir James Hope Simpson at the age of 60. Appointed general manager of the Bank of Liverpool in 1903, Sir James retired from the general management of the Bank of Liverpool and Martins some twelve months ago, but retained his seat on the board until the time of his death.

On and after Monday, October 13th, all stocks except 5 per cent. War stock will be transferable at 18 Finsbury circus, E.C. 2. The business of the Power of Attorney Office of the Bank of England will continue to be conducted temporarily at the head office in the late Bank Stock Office.

The Midland Bank announces the opening of a new branch at 11 Stamford New road, Altrincham, Cheshire, under the management of Mr H. W. Knott. An office has also been opened at 3 High street, Wroughton, near Swindon.

Barclays Bank, Limited, announce that they have opened a new branch at Old Hall street, Liverpool (to be known as Cotton Exchange Branch), under the management of Mr Harry Jackson.

The Tokenhouse Yard (registered) office of the Bank of London and South America, Limited, will be transferred, at the close of business to-day, to temporary premises at 25-31, Moorgate (first floor).

We learn that the London and Foreign Banking Corporation, Limited, which was recently organised for facilitating overseas trade by the granting of export credits, guarantees, acceptances against goods, &c., thus assisting reciprocal trade, and creating international credits, has acquired the business of the old-established London accepting house of Messrs Arthur H. Brandt and Co. The business of Arthur H. Brandt and Co., which was established in 1899, will be continued on the same lines as in the past, and the offices of the London and Foreign Banking Corporation, Limited, will be transferred to 39 Lime street, E.C. 3.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of September was 63,797 barrels, equal to approximately 9,100 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 10,500 tons.

BRITISH BURMAH PETROLEUM.—Production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of September amounted to 58,121 barrels.

GENERAL PETROLEUM COMPANY OF TRINIDAD.—Estimated gross production of crude oil for the month of September was 7,785 barrels, equal to approximately 1,112 tons, and the oil delivered to the United British Refineries, Limited, amounted to about 1,450 tons.

KERN RIVER OILFIELDS.—Total production during September amounted to 145,182 barrels, or approximately 20,740 tons, including:—St Helen's Petroleum Company, Limited, 35,143 barrels (5,020 approx. tons); Kern Trinidad Oilfields, Limited, 31,846 barrels (4,549 approx. tons); Kern Romana, Limited, 2,457 barrels (351 approx. tons); Kern Mex Oilfields, S.A., 30,201 barrels (4,314 approx. tons).

STEAUA ROMANA, BUCHAREST.—Production for the month of September was 24,110 tons, as compared with 18,384 tons during September, 1923.

UNITED BRITISH OILFIELDS OF TRINIDAD.—Combined production for the week ending October 1, 1924, amounted to 875 tons.

(c) The directors have capitalised £50,000 by declaring out of reserve a special bonus of 5s per share, and simultaneously making a call of 5s per share.

BURMA RAILWAYS.—Final dividend of £1 5s per cent, together with a bonus of £2 10s per cent, both subject to income-tax, on account of surplus profits to be distributed with the guaranteed interest of £1 5s per cent, less tax, payable on January 1, 1925, making in all a return of £8 10s per cent, for the year 1923-24 (being the same as for the preceding year).

ENTRE RIOS RAILWAYS.—In view of the improved cash position, the net revenue of the past year has been supplemented by utilising £40,000 of the first preference stock dividend fund, and the payment of a further dividend of 8 per cent. (less tax) is proposed on the first preference stock. This payment will reduce the arrears of the first preference stock to 6 per cent.

MADRAS AND SOUTHERN MAHARATTA RAILWAY.—Dividend and bonus for the half-year ending December 31, 1924, payable January 1, 1925, of £5 per cent., comprising guaranteed interest £1 15s, and surplus profits £3 5s, which will make, with the dividend and bonus of £3 10s per cent, paid in July last, a total of £8 10s per cent. for the year (dividend 6 per cent, bonus 2½ per cent), compared with £7 10s per cent. in each of the two previous years. Income tax will be deducted on the £5 dividend, at the rate of 3s 5d in the £, being 4s 6d in the pound on the guaranteed interest, and 2s 10d in the £ on the surplus profits.

COLONIAL BANK.—The net profit for the half-year ended June 30th amounts to £46,210, against £42,615 for half-year ended June 30, 1923. The dividend is at the rate of 8 per cent. per annum, less income-tax, absorbing £27,900. The relief to shareholders in respect of repayment of Dominion income-tax for the year ended March 31, 1924, is £4,650. The sum of £27,133 is carried forward.

NATIONAL BANK OF AUSTRALASIA, LIMITED.—The shares representing the fractional interests in the issue of 46,250 £10 shares (fully-paid) at £12 per share and 62,500 £8 shares (paid to £5) at £6 per share have been sold. The average price realised was as follows:—£15 2s 8d for the £10 (fully-paid) shares; £7 8s 1d for the £8 shares (paid to £5). The net profit realised over the issue price of £12 and £6 respectively is £2 10s 8d for each £10 (fully-paid) share and £1 6s 7d for each £8 share (paid to £5), and will be distributed to the individual shareholders concerned in the proportion to their fractional share allotment when the next dividend is paid.

INSURANCE.

SALVATION ARMY ASSURANCE SOCIETY.—The number of policies, ordinary branch, issued during the year ended June 30, 1923, was 3,353, assuring the sum of £310,475, and representing a new annual premium income of £19,471. The premium income for the year amounted to £175,066, and the claims to £84,695. Of this amount the sum of £64,512 was paid on matured endowment policies. The premium income of industrial branch amounted to £58,996, and the claims were £161,584, of which the sum of £41,025 was paid on matured endowments, and £120,559 on claims arising through deaths. Total funds for ordinary branch amount to £1,114,880, and industrial branch £1,573,855, making total funds £2,688,735. For year ended June 30, 1923, total assurance funds amounted to £457,240.

RUBBER AND TEA.

BAJOE KIDOL RUBBER AND PRODUCE.—The net profit for year ended March 31, 1924, is £32,691, against £32,165 in preceding year. The ordinary shareholders receive 15 per cent., against 12½ per cent. for preceding year. The sum of £23,354 is carried forward, against £23,387 brought in. The issued capital is £218,160 in £1 shares. There are no debentures. Total assets amount to £336,614. Cash is at £35,249. The company has £46,834 invested in 4½ per cent. treasury bonds at cost, £17,044 in 5 per cent. War Loan at cost, £7,599 in 3½ per cent. Conversion Loan at cost, and £19,732 in 6 per cent. Dutch East Indies loan at cost.

KAMUNING (PERAK) RUBBER AND TEA.—The net profit for year ended June 30, 1924, amounted to £13,811, against £21,735 in preceding year. The ordinary dividend is 1d per share, free of income-tax, equivalent to 5.37 per cent. gross, allowing for income-tax at 4s 6d in the £, which will absorb £8,375, leaving £10,238 to go forward. The reserve fund has been increased to £85,000 by transferring £24,395 from appropriation account.

KINTYRE TEA ESTATES.—The net profit for year ended June 30, 1924, is £10,212, against £14,090. The ordinary dividend is again 15 per cent. for the year. A balance of £9,287 is carried forward, against £8,256 brought in.

NEW DUMBULA CO., LIMITED.—The directors have decided to recommend to the shareholders that part of the company's reserve should be capitalised and distributed in the form of bonus shares amongst the shareholders in the proportion of one fully-paid new share for every four shares. This will utilise £19,739, and leave a balance standing at reserve of £10,000. The report just issued shows a net profit of £54,029, against £44,517 in preceding year. The ordinary dividend has been raised from 50 per cent. to 60 per cent. for the year.

MISCELLANEOUS.

BRITISH CYANIDES COMPANY, LIMITED.—The report for year ended April 30, 1924, reveals a net loss of £24,991, against a net profit of £17,205 in preceding year. An interim dividend on the preference shares, paid December 15, 1923, absorbed £1,425. A debit balance of £11,568 is carried forward, against a credit balance of £14,847 brought in to the accounts. The report states that the sum of £43,696 has been charged against reserve account, being the cost of the shares in the British Potash Company, Limited, in liquidation, which are now of no value. This makes the reserve account now £6,304. The company has an issued capital of £393,422 in ordinary and preference shares. There are no debentures.

FREDERICK HOTELS, LIMITED.—The net profit for year ended June 30, 1924, after payment of debenture interest, amounted to £64,369, against £61,995. The ordinary shareholders receive 10 per cent., the same as for preceding year. The sum of £45,144 is carried forward, against £38,900 brought in. The Hotel Burlington, Dover, was closed on October 1st, and the business of the hotel transferred to the Lord Warden Hotel, the lease of which has been assigned to the company by the Gordon Hotels, Limited. The directors have sold the company's interests in the Hotel Bristol, Beaulieu-sur-Mer, to the Gordon Hotels, Limited, who took possession on October 1st.

DENABY AND CADEBY MAIN COLLIERIES.—The report for year ended June 30, 1924, shows a net profit, after payment of debenture interest, of £21,514. During the year, £18,993 not included in trading profit has been received in respect of compensation for cancelled agreements and added to reserve. A further sum of

£61,064 has been appropriated out of the year's profits, bringing the reserve fund up to £100,000. The ordinary shareholders receive 8 per cent., less tax, absorbing £96,000, leaving £26,987 to go forward, against £26,552 brought in. Total assets are £2,564,787. Cash is at £292,802. Investments at cost stand at £309,268 in the balance-sheet. With regard to liabilities, the company has an ordinary issued capital of £1,200,000 in £1 shares, £200,000 in preference shares of £10 each, and £800,000 in 6 per cent. debenture stock.

KAYSER, ELLISON, AND CO., LIMITED.—The net profit for the year ended March 31, 1924, is £14,561, against £5,853 in preceding year. It is proposed to pay the preference dividend to June 30, 1923, viz., £3,000 immediately after the annual meeting. The directors do not consider it advisable to recommend the payment of the whole of the arrears of preference dividend, but this matter will be dealt with at the earliest favourable opportunity. Stocks have been very carefully taken at cost or market value. The company's plant is still only partially employed, but it has been kept in a state of efficiency, and ready at any moment to take advantage of any improvement in trade.

MANCHESTER LINERS, LIMITED.—This well-known shipping concern has an issued capital of £902,920. Ordinary shares of £1 each amount to £445,200, and there is a 5 per cent. cumulative preference share capital of £457,720 in £1 shares. There are no debentures. Reserve fund stands at £500,000. Total assets are £2,043,418, of which £1,849,189 is in one item, as follows:—Steamships and office premises at cost, less depreciation, and investments at cost. The other two items are:—Cash, £85,304; and sundry debtors and claims of underwriters, £108,925. The company has maintained its net profit, being £63,160 for year ended June 30, 1924, against £65,812 for previous year. The ordinary dividend is 10 per cent., free of income-tax. The sum of £58,631 is carried forward, against £62,877 brought in.

RONEO, LIMITED.—This well-known concern has had a good year. The ordinary dividend for the year ended June 30, 1924, is 7½ per cent., against 5 per cent. for preceding year. The net profit amounts to £60,446, against £20,968. The sum of £19,768 is carried forward. There has been a steady increase in the business of the company during the past year, which increase is still maintained.

TATA IRON AND STEEL.—The following information has been cabled respecting the balance-sheet for the financial year ended March 31, 1924:—Gross profit, before charging debenture interest, loan interest and depreciation, Rs. 74,93,000; brought forward, Rs. 2,53,927—Rs. 77,46,927. Applied as follows:—Debenture and loan interest, Rs. 43,61,000; depreciation, Rs. 30,00,000—Rs. 73,61,000; carried forward, Rs. 3,85,927.

WINNIPEG ELECTRIC COMPANY.—With reference to circular letters of British Empire Trust Company, Limited, of February 18th and March 20, 1924, regarding 5 per cent. refunding mortgage stock of this company, the resolution passed at the meeting of the holders of the above stock on March 17, 1924, has now been confirmed in Canada. As a result, the stock will be known in future as "refund mortgage stock," and the rate of interest will be increased from 4½ per cent. to 5 per cent. as from April 2, 1924.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With improved weather conditions farmers were able to make good headway with farmwork, also threshings; consequently supplies of native wheat were on a larger scale both here and at provincial centres. Prices remain firm in sympathy with the position of imported, and a steady trade resulted at 13s to 13s 6d per strong, and prices further hardened, with a good general demand. No. 1 Northern Manitoba quoted 73s 6d, No. 2 ditto 72s 6d, No. 2 hard winter 65s 9d, all ex ship terms, choice white Karachi 66s, and Plate ditto 67s per 496 lbs. In the floating and forward cargo section, prices further hardened under stimulating foreign advices, combined with an active demand both on home and Continental account. Steamers of Australian January shipment sold at 65s to 65s 4½d, choice white Karachi October 64s 1½d, ditto early November 64s 4½d, Rosafé 64½ lbs October-November 66s, No. 2 hard winter October-November 64s 7½d, ditto 63½ lbs January-February 63s, No. 1 Northern Manitoba afloat 68s 6d per 480 lbs. Maize cargoes also firmer, and a good business transpired in Plate steamer's October-November at 47s 3d to 47s 4½d, and November-December 48s 3d to 48s 6d per 480 lbs. Barley in better request, and cargoes of Persian October-November sold at 43s 3d, Morocco October-November 42s 3d to 42s 6d, and Azoff Black Sea October-November 44s 6d per 400 lbs. Flour firmer, but trade generally quiet at the advance, as many large users have booked ahead at the comparatively lower prices recently ruling. London standard straight run officially raised to 53s per sack delivered in London area. Patents quoted 55s to 56s, town whites 53s. Imported firmer, with moderate inquiries. Manitoba patents quoted 49s 6d to 52s 6d, and Australian 47s to 47s 6d per 280 lbs ex store. Barley steady. Californian quoted at 69s-72s, Chilean brewing 66s per 48 lbs ex-ship. Karachi ex-ship 46s 6d, Danubian landed 46s, No. 4 Canadian Western ex-ship 45s, American malling 48 lbs ex-ship 44s 6d, all per 400 lbs. English quoted at 13s 3d to 23s 6d per 112 lbs free on rail. Maize again dearer. Plate ex-ship quoted at 46s 6d, landed 48s 3d, Bessarabian landed 48s 9d, and Odessa ex-ship 46s 6d per 480 lbs. Oats firm for spot parcels. Plate ex-ship 31s 6d, landed 34s, Canadian Western No. 2 ex-ship 37s 6d, white American 38 lbs ex-ship 33s per 320 lbs. English quoted at 10s to 11s per 112 lbs free on rail. Oatmeal firm. London-made, flaked 21s, rolled oats 20s 6d, medium and fine cut 20s 6d, coarse and medium pinhead 20s 6d, ordinary Scottish oatmeal

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 9th, is as follows:—Pig-iron: Prices are weaker. No. 3 Cleveland G.M.B. is now quoted at 80s per ton, and mixed numbers East Coast hematite at 88s per ton. These further reductions, however, have not brought out buyers to any extent, and what little business is doing for home consumption is practically confined to immediate requirements. Manufactured iron and steel: Some orders have recently been placed for shipbuilding material, but there is yet no sign of any genuine improvement in trade. Manufacturers complain that prices are unremunerative. Quotations are still maintained as follows:—Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Sellers are offering best Ribao Rubio ore at 21s 6d per ton, c.i.f. Tees, but there is very little business doing.

Our Sheffield correspondent writes:—No improvement can be reported so far as pig-iron and crude steel are concerned, trade being stagnant. Orders are still confined to oddments, and the absence of inquiries of any importance indicates a general indisposition to buy forward, so that there is little prospect of much recovery during the remainder of the year. Home consumption of steam coal tends to shrink. The best classes of house coal are scarce, and producers are obtaining very high prices for them. Durham foundry coke is now 35s at ovens for beehive, and 30s for "patent" quality. South Yorkshire steams are worth round about 20s at pits.

Our Glasgow correspondent writes:—The export market for pig-iron still shows up very poorly, the demand being reduced to nearly vanishing point. The total shipments for the week from Glasgow harbour were 1,249 tons. Makers, however, are hopeful for better things from the home trade, as the engineering and foundry industries generally are reported to be well placed as regards work in hand. Prices for ordinary brands have not suffered any further fall. In the steel trade the general depression is scarcely relieved by the few small orders on local and export account that have come to hand, and makers are producing on the basis of an output considerably below capacity. The shipyards have good tonnages in hand, but very few fresh orders have been received recently to replace the completed vessels.

Our Cardiff correspondent writes:—Sized and dry steam coals have been the only descriptions to show any strength on the Cardiff market this week. The causes of the firmness of these particular qualities was explained in last week's report, and, if anything, the market for them was stronger. For steam descriptions the demand was very inactive, and bituminous qualities also lacked support. Hardly any of the colliery companies have been able to keep all their pits fully employed throughout the week.

The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; seconds, 25s to 26s; best drys, 27s to 27s 9d; black veins, 24s 6d to 25s; Western Valleys, 24s to 24s 6d; Eastern Valleys, 23s 6d to 24s; best bunker smalls, 14s 6d to 15s; ordinary cargo smalls, 12s 6d to 14s; coking smalls, 14s 6d to 15s 6d; anthracite big vein large, 52s 6d to 55s; red vein large, 35s to 36s; machine-made cobbles, 57s 6d to 60s; French nuts, 57s 6d to 60s; coke for export, 50s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 26s to 28s; pitwood, ex ship, 27s 6d to 28s 6d.

METALS.

Tin opened with a quiet and easier tone, sellers being more in evidence. Subsequent movements, however, were attended by some irregularity, but prices ruled firmer on balance on buyers

becoming more prominent and stimulating advices. Cash sold at £242 10s to £241 10s to £240 15s to £244 10s, and three months £245 10s to £244 10s to £240 10s to £244 5s to £246 5s. Eastern cables reported sales on the basis of £250 5s c.i.f. At Thursday's session the tendency was in buyers' favour, due to adverse cables from the East. Cash sold at £242 5s to £241 10s, and three months £245 to £243 10s to £244 10s to £243 15s. Tin firmer at the close. Standard cash being dealt in at £243 to £242 15s to £244 10s, and three months £243 15s to £247 to £246 10s. English ingots quoted at £245 10s to £246. Copper displayed quieter features, and prices moved in buyers' favour. Standard cash sold at £62 2s 6d to £62, and three months £63 5s to £62 18s 9d. On Thursday prices moved in a downward direction. Cash sold at £61 17s 6d, and three months £62 17s 6d to £62 18s 9d to £62 16s 3d. Copper closed the week with a steadier tone. Cash sold at £62 2s 6d to £62, and three months £62 18s 9d to £63. Electro's £65 15s to £66 5s. Best selected £65 15s to £67. Strong sheets £92, wire bars £66 5s per ton. Lead firmer at £34 10s-£33 10s, as to position. Spelter firm at £33-£32 17s 6d, according to position. Aluminium: home quoted £125, export £130. Antimony: English quoted at £54 10s to £55.

MANCHESTER, October 9.

The feature of interest in the market this week has been the slump in raw cotton rates as a result of the bearish Government report on the American crop. Before the statement was published there was an active demand in yarn and cloth and a fair amount of business done, but towards the close of the week the tone has become very unsettled, and buyers have been less inclined to give out orders. Cloth inquiry for India has continued on a large scale, and an encouraging turnover has taken place. Not much can be done at the moment in grey staples for China, but useful lines have been put through in fancies. For several minor outlets steady buying has taken place in printing and finishing qualities. Quotations in American yarns have not fallen to the same extent as the drop in the raw material, and the undercurrent of demand continues healthy. A fair amount of trade has been done in Egyptian counts. The lower range of values should be of benefit to Lancashire when there is greater steadiness in prices.

(1.) Comparative Statement of the Cotton Trade.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Developments in London and in Australia have tended to exert a restraining influence on business, and the market to-day is decidedly quiet. The difficulties experienced for some time past in arranging credits for the purchase of wool in Australia have been brought to a head, and it is understood that the selling brokers, at the request of the banks, are arranging to curtail the selling programme. The idea seems to be to bring temporary relief by restricting the quantity of wool to be offered before Christmas, and, of course, this will mean that the season in Australia will be prolonged beyond the period originally intended. Buyers and users here are not unduly disturbed at the turn of events, and the general impression seems to be that a solution will be found by the interested parties. The slight ease in values at the London auctions during the last ten days has also had its effect on this market, and business is now being conducted on hand-to-mouth lines. Quotations for merinos show a reduction of at least 1d on the week, and a buyer with actual business to place could certainly obtain further concessions.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A very different aspect has come over the wool markets of the colonies and of all European centres. During the earliest sales of the new season in Australia and the first fortnight of the sales in London prices were on a level that had not been reached since 1920, but for once it seems as if the manufacturing end of the industry has been quite right in arguing that such values could not last. They have made similar statements for the last three years, but the raw material has always proved them wrong.

Already, with the new selling season only a month old, there are money difficulties. Buying brokers are having to ask clients from whom they solicit orders to arrange their own credits, and the restriction of these threatened by the banks a month ago has become a reality. Although there are very big needs in consuming centres, considerations of finance are making it impossible for mills to buy in the near future everything they need. The restriction of credit will probably continue to act for some months as a deterrent to wild buying, and will also probably result in the selling season being extended into next April.

The London sales closed this week with values generally quite 5 per cent. below the highest point. The first and second weeks of the series were the dearest, and it is doubtful if the rise over July rates was ever fully quoted; certain greasy fine crossbreds and several classes of lambs' wool have at times been 20 and even 25 per cent. above the last series in London. On the whole, clothing wools have never had the same strong competition at advancing rates as combing types. Most scoured merinos and crossbreds, it only long enough for woollen trade use, closed at about 5 per cent. above the July level, and not always so much.

VEGETABLE OILS.

A feature of the week's trading has been the further hardening of the value of linseed oil, largely in sympathy with dearer seed, and following a good trade demand encouraged by a temporary easing of prices. There was a sharp advance at Hull to £44 per ton naked spot and all positions to January-April. Cotton oils have also been a better trade, and a good demand has had the effect of steadying prices, crude Egyptian being held for £44, ex Hull mill, and ordinary refined for £46, while soya and other soft oils, following the trend of the market, are 10s to 20s dearer.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains firm and steady, and although tanners complain of the high cost of raw material, they clear the home market regularly week by week. Prices realised at the Bermondsey auctions on Thursday were:—Best ox and heifers, 9½d to 7½d, with seconds ranging in value from 8½d to 6½d. Cows sold at from 7½d to 6½d, with bulls unchanged from the previous week's prices. Calves were a very firm market, all weights and classes advancing from 1d to ½d per lb. Best light calf are now fetching 15½d per lb, with the heavier weights selling at 8½d. Wools made from 7s 6d to 15s 6d, and hogs from 8s 3d to 18s per skin.

The centre of the leather world this week has been at the Agricultural Hall at Islington, and this function has been well attended by traders from all parts of the United Kingdom and the Continent. A good deal of sole leather was on offer, and large clearances were effected at asking prices. Tanners were very firm, and 8/10 lbs bends in dry hides, and 10, 12 in wet salted, have sold well. Offal has also been in good demand, and many tanners had little to offer. Split hides for export have moved off better, whilst the demand for rough leather from American and Continental buyers has been a feature of the Fair. Rough E.I. kips were very dear, and importers had little to offer.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 10.

SUGAR.—Business was conducted on generally quiet lines, consumers displaying but little interest, with British makes receiving chief favour. Messrs Tate and Lyle's cubes quoted 41s 9d to 42s 9d; crushed, 40s 3d; granulated, stoved, 40s 1½d; fine and coarse, 38s 4½d; No. 1, 38s 1½d; No. 2, also London and T.L., 37s 10½d; caster, 39s 6d to 41s 7½d; yellow crystals, 34s 10½d; and granulated, month forward, 37s 9d. White Java, spot, 34s 9d to 35s. American granulated, 37s; Dutch, J quality, 36s 3d. Czecho, granulated, October, 22s; November, 21s; November-December, 20s 9d f.o.b. Hamburg. Belgian granulated, ready, 22s 6d; October, 21s 6d; November-December, 20s 6d f.o.b. Antwerp. Czecho, beet 88 per cent., November, quoted 16s 6d f.o.b. Hamburg. White Terminal market steady, with moderate support accorded. October, sold 21s 10½d; November, 20s 3d to 20s 1½d; December, 19s 10½d to 20s, and 19s 10½d; March, 20s to 19s 7½d; May, 20s to 19s 9d.

COFFEE.—The market continues to steadily harden under sustained buying, particularly on home-trade account, and supplies on offer remain very small. Bold sizes of mountain-grown Jamaica sold, 182s to 210s. Costa Rica, good middling, 166s; Kenya ditto, 148s 6d to 150s.

COCOA.—There was a fair spot demand at full to rather dearer rates. Fine Grenada sold, 60s; Ariba, 92s 6d; Accra, 38s 6d to 42s 6d. Accra F/F grade, December-January, sold, 37s 3d, f.o.b. terms.

TEA.—59,600 packages Indian were catalogued in auction this week, and common to low medium parcels met a brisk market at ½d to ¾d per lb advance, medium being slightly irregular, but not altered on balance, while all the finer teas fetched extreme rates. Pekoe sold, 1s 7½d to 2s 1½d; broken orange, 1s 9½d to 3s 0½d; choice up to 5s. Ceylon sales of 13,600 packages cleared to active competition at full to again higher rates. Fine sorts well sought after. Pekoe sold, 1s 8½d to 2s 5d; broken orange, 1s 0½d to 2s 10½d per lb in bond. There is a sustained call for China descriptions, and prices move against buyers. Java and Sumatra auctions of 5,000 packages were soon cleared to a brisk demand at a full range of prices. Common and finest kinds in particular attracted attention. Pekoe sold, 1s 7d to 1s 8½d; broken ditto, 1s 3½d to 2s 0½d; pekoe souchong, 1s 6½d to 1s 7½d; orange, 1s 8d to 1s 9½d; broken orange, 1s 8d to 2s per lb in bond.

RICE remains generally slow but firm, while influenced by strength of exchange rate of the rupee. Two Stars, spot, London, 16s 9d; October-November, 16s 4½d; January-February, 15s 9d, c.f. and i., London. Spanish and Italian also firm, but quiet. Japanese peas, September-October sold, 25s 1½d to 25s 4½d; November-December, 25s 6d to 25s 9d. Madagascar butter beans, spot, 43s to 44s per cwt.

SPICE.—Pepper firm, with a steady demand for forward positions. Black Singapore L.S., October-December, quoted 5½d; Lampung, October-December, 4½d; Muntok, October-December, sold 9½d; January-March, 9½d to 9½d. Pimento, spot, 4d per lb, and October-November quoted 33s per cwt, c.f. and i., U.K. Cloves firm. Zanzibar, October-December, sold 10½d to 10½d per lb. Tapioca quietly steady. Sago flour dearer. Sarawak, October-December, buyers, 16s 1½d. Desiccated coconut firm. Spot halves, 41s 6d per cwt.

JUTE reservedly offered, and market firm closing lower. Firsts, September-October to November-December, sold £39 5s to £38 10s. Market strong at a further advance for Hessians and twills. 10 oz Hessians, October-December, sold, 37s 10½d; January-March, 36s 6d to 36s 7½d; 8 oz, January-March, done, 29s 3d to 29s 4½d 100 yards. B twills, January-March, 106s 100 bags.

HEMP.—With no revival in consuming demand, the market for Manila wore a dull and slightly depressed tone. J grade, October-December value, £56; January-March, sellers, £55; K, October-December, £55 10s; L, £55 10s; M, £53 10s. African sisal: No. 1 Tanganyika, afloat, sold, £48; October-December, buyers, £49 10s, c.f. and i. New Zealand quiet, on about former terms.

SHELLAC firm. Fair T.N., spot, 325s; December, 300s; March, 292s 6d cwt.

COPRA.—Market remains generally quiet, though steady, as sellers do not press for business. F.M.S. Straits, July-September, Rotterdam, quoted £31 2s 6d; August-October, sold, £31; September-November, £30 18s 9d; October-December, £30 16s 3d to £30 17s 6d. Dutch East Indies, August-October, £30 15s; October-December, £30 12s 6d. Ceylon, October-November, sellers, £32. South Sea Islands, F.M.S. quality, ditto, £30 7s 6d. Palm kernels steady, quiet. October-December, to Liverpool, quoted £22 15s ton.

RUBBER.—Market generally firm, and a fair amount of business was effected. Standard plantation, crepe and sheet, spot, also October, sold, 1s 3d to 1s 3½d; November, 1s 3½d; December, 1s 3½d to 1s 3½d; January-March, 1s 3½d; April-June, 1s 3½d. To New York, standard estate sheet, November-December, 1s 3½d per lb, c.f. and i. terms. Wild quiet, unaltered.

EGG PRODUCTS.—Market remains quiet, but sellers adhere to steady asking prices.

ESSENTIALS.—Market very quiet, and quotations in most instances nominally unaltered.

FRUIT (Dried).—There is a fair selection of currants available, which is meeting with a better demand. New crop, Amalia, ½ cases, 46s to 47s; Patras, ditto, 49s to 50s; Gulph, 52s to 54s; finest, 57s; Vostizza, 65s to 68s; fine lots, 70s to 71s. Sultanias quietly steady.

LEAGUE OF NATIONS

MONTHLY BULLETIN OF STATISTICS.

A synopsis of the economic position of all the leading commercial countries in the World in

Old crop, Smyrna, 53s to 55s; fine, 60s; new, fair quality, 51s to 53s; finer, up to 63s; very fine Cretans, 87s 6d to 95s; fine Carabourra, 80s; Australian, 1/2 cases, 44s to 46s; fine, 50s to 52s; old crop, Greek, 41s. Figs: Genuine naturals, in bags, 36s to 40s. Dates remain quiet of sale. Hallowee, first-tide, quoted 22s; Khredrowie: 19s; Siar, 15s 6d, landed terms, London. Evaporated fruits: Californian standard apricots, 75s to 78s; choice, 87s; extra ditto, 96s; peaches, old crop, choice, 48s; new ditto, extra choice, 57s; fancy, 65s; plums, Oregon, size 30/40, 65s; 40/50, at 54s; Californian, 80/00, at 36s cwt.

CANNED GOODS.—Market firm on spot, with only small supplies available, with forward prices steadily advancing. Portuguese 1/2-flats quoted 3s 9d to 4s; clubs, 4s to 4s 3d; 12 oz, 5s 9d to 7s 6d; 18 oz, 10s to 12s per dozen tins. Lobster very scarce, with extreme rates obtainable. Salmon: Prices are firm, but general course of trade proved rather quiet. 1 lb flat reds, labelled, quoted 55s to 60s; ditto, tall, 47s 6d to 48s 6d; 1 lb tall pink, 25s 6d to 26s; cases of 96 1/2 lbs, 24s to 30s per case. Canned Fruits: Very quiet, but prices steady. Singapore pines, 48 1/2s, best quality, 53 1/2d to 5s 6d; cubes, 24 2 1/2s, 10s 6d to 10s 9d; slices, 48 1 1/2s, 5s 3d to 5s 6d. Pears, apricots, 2 1/2s, 8s to 11s; ditto, 1 1/2s, 5s 3d to 5s 6d. Peaches, 2 1/2s, 13s 6d to 16s 6d. Peaches, 2 1/2s, 9s 9d to 11s 6d; ditto, 1 1/2s, 6s 6d. Fruit salad 2 1/2s, 19s to 20s; ditto, 1 1/2s 10s 6d per dozen tins. Canned meats in moderate request, and corned beef firmly held.

MISCELLANEOUS.—Coconuts quoted 20s per 100. Coir yarn: Ceylon, £21 to £37 10s; Cochiti, £20 to £45. Ceylon bristle, £22 to £29; cinnamon leaf oil, 5 1/2d; Citronella: Ceylon, 3s 0 1/2d; Java, 5s 7d.

OILSEEDS.—Linedseed generally firmer with a better demand, but new crop Plate somewhat irregular. Calcutta, afloat, sold, £24 5s; September-October, £24 5s; October-November, £24 7s 6d; October-November, £24 7s 6d. Plate, afloat, £22 5s; October-November, £22 5s; November-December, £22 5s; January-February, sold, £20 15s to £21 10s, £21 2s 6d, and £21 10s. Rapeseed dearer, and sellers reserved. Toria, October-November, quoted £24 5s; and real bold Ferozepore, ditto, £23 10s. Cottonseed firmer, with a better demand. Egyptian, black, new, October, sold, £13 15s; November-January, £13 10s. Sakellaris, November-January, £12 16s 3d. Bombay, December-January, £11 7s 6d. Gingly seed dearer. Chinese, new crop, October-November, £29 7s 6d. Groundnuts quiet. Coramandel, machine-dried, October-November, £28; Chinese decorticated, f.a.q., December-January, £25 7s 6d; East African, October-November, £28 10s. Soya beans firmer. Manchurian, October-November, £14 2s 6d; December-January, £13. Castor seed firm, but quiet. Bombay, October-November, £31 10s; Calcutta, ditto, £30 5s per ton.

OILS.—Linedseed irregular, but firmer. Spot, net, naked, 45s 6d; October, 44s 9d; October-December, 44s 9d; January-April, 44s 9d.

Rape firmer. Crude, spot, 50s, refined, 53s. Castor-oil steady. First pressure, spot, quoted 73s; second pressure, 71s; and pharmaceutical, 78s per cwt, Hull, with London 2s per cwt extra. Cotton quiet. Crude Egyptian, spot, 43s; Bombay, 41s; common edible, 49s; deodorised, 51s. Chinawood firm, with a good demand for spot parcels. Hankow, spot (barrels), 87s; October-November, 82s. Cocoa-nut steady. Ceylon, spot, 48s; October-November, 47s; Cochiti, ditto, nominally 60s. Soya firm. Oriental, barrels, September-October, 47s; bulk, 42s 6d. Cod quiet. English, spot, 34s to 35s. Groundnuts firm. English, crushed, naked, spot, 54s; deodorised, barrels, 62s 6d. Turpentine easier. American, spot, 64s; October-December, 64s 6d; January-April, 66s 3d. Rosin firmer. American, grade B, 14s 9d; G, 15s 3d; WG, 18s; WW, 19s 6d per cwt. French WW, 28s 3d per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on October 8th as follows:—The tallow market was firm during the week, and prices were 1s dearer to-day. There has been a good inquiry from Continental buyers, and the home trade has not been idle. At auction to-day 818 casks tallow were offered, and all were sold. Quotations are:—Australian mutton: Fine, 49s 3d; good to fair, 48s 6d to 47s 6d; dull to dark, 45s to 43s; hard, 49s. Australian beef: Fine, 49s 6d; good to fair, 48s to 46s; dull to dark, 44s 3d to 42s 3d; sweet, 49s 3d. Present shipment from Australasia: Good mixed, 48s. Present shipment from South America, 47s 6d to 46s 6d. The market letter is dearer for tallow, 1s; stuff unchanged. Town tallow, 44s per cwt. Rough fat, per 8 lbs, 5 1/2d; melted stuff, 33s per cwt. Quotations are:—Town, 43s 6d, net cash, naked, ex works. Country: Frail casks, 44s; home melted, shipping casks, net, f.o.b., good coloured, 46s 6d; fair to dull, 45s to 44s. Bone fat: White, none; pale, none; benzine, 39s; melted stuff, 39s, f.o.b.

hardened slightly, and purchases have been reported of November Treasuries at $3\frac{1}{2}$ per cent., and Decembers at a shade over. Three months' bank bills could still be placed, but with rather more difficulty, at $3\frac{1}{4}$ per cent. Yesterday's Treasury bills were placed at a rate a shade over $3\frac{1}{4}$ per cent.

	Oct. 17, 1924.	Oct. 10, 1924.	Oct. 3, 1924.	Sept. 26, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	3 $\frac{1}{2}$	3 $\frac{1}{4}$	3 $\frac{1}{4}$	3 $\frac{1}{4}$	..

The Bank return showed a decline in circulation and a corresponding increase in the reserve of just over a million. Repayments by the Government and borrowing by the market reduced the Government securities by $2\frac{1}{2}$ millions, and added $4\frac{1}{2}$ millions to Other. There was thus an increase of three millions in the deposits, of which one went to Public and two to Other. Currency notes outstanding were reduced this week by £1,511,000 to £287,090,000, which includes £1,367,200 for notes called in but not yet cancelled. The fiduciary issue is £236,272,800, or £11,918,100 below the maximum.

THE STOCK MARKETS.

The predominant influences in Stock Exchange markets this week have been the German Loan and the General Election campaign. Dealings in the scrip of the German Loan, which was subscribed many times over, it is understood, on Wednesday morning, are expected to start next week at about 2 premium. There is no great excitement over the possibilities of the election, and investment markets have been particularly strong in tone, $3\frac{1}{2}$ per cent. Conversion and Funding loans leading the way. The new Queensland loan is quoted at nearly 2 premium. Home Rails are a much better market, and the foreign railway section is good on the whole. Rubbers have improved on a further hardening in the price of the commodity, but oil shares, dealings in which are still mainly professional, have been irregular. Industrials are fairly steady, and some of the shares in the motor list have strengthened as a result of the opening of the show at Olympia, while Kafirs have hardened a little on buying from the Cape.

THE COMMODITY MARKETS.

A slight improvement on the Cardiff coal market is chronicled this week, and quotations for some coals have even slightly advanced. Business in pig-iron is still quiet, nor are prospects of improvement very hopeful. The reduction of 10s per ton in steel ship and boiler plates, joists and angles, it is hoped, may attract orders. Tin moved upward, and copper was firm. Business in the cotton trade has been adversely affected by the further downward movement in raw cotton rates. Jute advanced sharply, while hemp displayed a firm tone. Further details of markets will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

Although there was a little more activity at the beginning of the week, business on the Foreign Exchange market died away again, and dealings remain restricted. The dollar rate has shown remarkable firmness, rising at one time on the 14th to as high as \$4.50 $\frac{1}{2}$. From this largely sentimental movement there was later some reaction to the rate of \$4.49 quoted yesterday morning, comparing with \$4.49 $\frac{1}{8}$ a week ago. To a large extent this strength of sterling at so unusual time of the year would appear to be mainly due to the freedom with which America is at the moment lending abroad, but election prospects would also appear to be playing a passing part, and the success of Labour at the polls would almost certainly involve a reaction. The forward rate is $\frac{1}{8}$ to $\frac{1}{4}$ cent per month below spot. The Paris rate, on further rumours of a loan in America and on a better Bank of

France return, shows some improvement on the preceding week's high figures, the rate yesterday morning being 85.50, as compared with 86.35 on the 10th. At the same time the position remains unsatisfactory, and is not likely to be improved either by the surrender of the Government on the question of civil service salaries or by the prospects of a large internal loan on very unfavourable conditions. Brussels has shared in this improvement, moving over the period from 93.75 to 93.15. In Paris, forward quotations are 13 to 15 centimes per month above spot, in Brussels 5 to 7 centimes above. Italy has also shown some improvement from last week's sudden depreciation, the rate being quoted at 102 $\frac{1}{2}$, as compared with 103.15 on the 10th. Of the gold stabilised currencies, Berlin, Vienna, and Warsaw show little change, while Budapest remains on a constant ratio to sterling at 345,000. Among the neutral centres, Switzerland remains roughly near parity with the dollar, while Amsterdam at 11.48 $\frac{1}{4}$ has moved very slightly in our favour, as also has Stockholm at 16.88. Madrid, on the other hand, has improved from 33.46 $\frac{1}{2}$ to 33.41 $\frac{1}{2}$. Renewed banking trouble in Norway has been responsible for a rise in the Christiania rate from 31.36 $\frac{1}{2}$ to as high at one time as 32.05. It has now improved again to 31.72 $\frac{1}{2}$, and the situation does not appear to be as serious as was at first feared. Copenhagen also, after its recent improvement on the rise in price of agricultural products, had a sharp reaction from 25.52 $\frac{1}{2}$ to 25.98 $\frac{1}{2}$, but here, too, it is not believed that the rise will be allowed to go very far. In Eastern Europe Prague and Bucharest are much the same as last week, but in Belgrade the dinar shows a slight reaction. In the East the rupee has moved up 1-32d to 1s 6 $\frac{1}{2}$ d, the Indian Bank rate having again been raised. After its recent reaction, the yen showed some improvement to 1s 8 $\frac{1}{2}$ d, on a better trade position, but there has again been a slight reaction to 1s 8 $\frac{1}{2}$ d, as compared with 1s 8 $\frac{1}{2}$ d a week ago. After reaching the high figure of 36 $\frac{1}{2}$ d on the 9th, a record for the year, silver prices fell away again, although Continental demand and bear covering prevented the fall from going very far, and a good undertone is provided by the cessation of hostilities in China. The Hong-kong quotation has in sympathy fallen away from 2s 5 $\frac{1}{2}$ d to 2s 5 $\frac{1}{4}$ d, and Shanghai from 3s 6 $\frac{1}{2}$ d to 3s 5 $\frac{1}{2}$ d. In South America the main exchanges, after showing some weakness, have strengthened again. Rio stands now the same as a week ago at 6 3-32d, and Buenos Aires also the same at 45 $\frac{1}{4}$ d, while Monte Video has fallen away slightly from 48 $\frac{1}{4}$ to 47 $\frac{1}{4}$. Valparaiso, on the other hand, has appreciated slightly from 40 to 39.90 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 11th:—

EXPENDITURE.		RECEIPTS.	
	£		£
Supply Services	7,221	From Revenue	10,152
Interest, &c., on Debt	2,995	Amount borrowed	1,022
Sinking Fund	614		
Sundries	246		
Increase in Exchequer balances	98		
	11,175		11,175

Revenue for the week ended October 11, 1924, was slightly higher at £10,152,000, against £10,093,000 for the corresponding period of 1923. Customs were lower at £2,076,000, against £2,324,000, but Excise receipts yielded £1,377,000, against £1,329,000. Motor vehicle duties increased by £227,000 to £371,000. Property and Income-tax brought in £3,359,000, against £3,123,000, but Excess Profits Duty was lower at £460,000, as compared with £500,000. Post Office receipts amounted to £1,000,000, being double the sum brought in during the corresponding week last year. Ordinary receipts were £64,064, or £79,000 lower than those of last year. Special receipts produced £10,152,000, against nothing last year. The week's operations increased the National Debt by £1,022,500, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
	£		£
Public Department Advances	238	Bank of England Advances	7,350
Treasury Bills	8,617	National War Bonds repaid	250
		Telegraph Money	250
		Sundries	82
	+ 8,855		- 7,832

The floating debt was increased by £1,607,500 to £793,889,000.

FINANCIAL YEAR, 1924-1925 (April 1 to October 11).

	£		£
Total Expenditure ..	399,278,292	Raised by Revenue ..	370,964,721

		Surplus	4,024,000

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RIDDLE OF THE POLITICAL TRIANGLE.

In some respects the General Election now being fought out resembles that which took place eleven months ago. Both came, to all who are not within the inner circle of politics, like a thunderbolt from a blue sky. Both could have been avoided had the Prime Minister in each case so wished. This year, as last, the minimum legal margin is allowed between dissolution and polling day. But there the resemblance ceases. In November, 1923, Mr Baldwin went to the country on one great and definite issue—namely, whether the fiscal policy of the country should be revolutionised in the search for a remedy for unemployment. Other problems, of course, came to the fore, especially the Labour proposal of a capital levy. But at least the contest was mainly fought on a subject on which the electorate had on previous occasions been intensively educated, and the lack of time for re-education did not prove so favourable to the fiscal revolutionaries as was expected. Moreover, last year the public understood clearly the main standpoints of the three parties. The Conservatives stood for a general tariff and no capital levy; the Liberals for the maintenance of Free Trade and no capital levy; Labour for the capital levy, Free Trade, and a glittering programme of social and Socialistic legislation. The choice was as clear as it can be at any General Election. But to-day there is none of this clarity. The plain man is still wondering why Mr MacDonald followed Mr Baldwin's example of political high diving, and he is not convincingly enlightened by Mr MacDonald's own explanations, which seem, briefly, to be that the two opposition parties, goaded by jealousy of Labour's efficiency in office, concocted a wicked plot to make that office untenable. Thus, the average elector, at the outset of his attempt to understand the election and all about it, is confused; and he may be pardoned if his confusion grows as he proceeds with his attempt. Plunged into the details of the Campbell prosecution and the Prime Minister's nice differentiations between "guaranteeing" and "lending," he must soon find himself wondering whether the politicians have merely trumped up a fight over obscurities, and hard put to it to discover what are the great national interests at stake in the election, and what are the three distinct attitudes of the three parties who are fighting for his vote.

With so much confusion in the air, the brevity of the time allowed the electorate to disentangle threads of policy is a serious matter. But the leaders of the three parties have done their best by issuing with an unexampled promptitude their manifestos to the nation. A brief summary of these will be found in a later column. The first thing to be noticed is that the two great bones of last year's contention are relegated to the background. The capital levy, instead of being a financial necessity and panacea, has become no more than a fit subject for inquiry. This retirement is apparently the firstfruits of the education provided by eight months of office. On the Conservative side, the general tariff is frankly dropped, but Im-

perial Preference and safeguarding of industry are still in the shop window. We may accept without any sort of reservation Mr Baldwin's renunciation of a general tariff for the life of the next Parliament; but we must repeat, as we pointed out last week, that if he were returned to power his election address gives him sufficient scope for infiltrating the bastions of our fiscal system and for building a foundation on which a full-blown tariff system might thereafter be constructed. Having read Mr Baldwin's manifesto with the utmost care, we cannot regard the tariff controversy as wholly ruled out from the present election; and those who believe, as we do, that the system of free imports is essential to this country's economic health, will keep their Free Trade armoury well prepared against a danger which, though it has receded, has not passed away.

Thus the two stars of last year's performance are, as it were, waiting in the wings, and the stage is crowded with lesser characters. Let us glance for a moment at the programmes, and try to select those that are worthy of a full share of the limelight. The task is not an easy one. There is no new proposal in the Labour manifesto, which is naturally based largely on a eulogy of Labour's performance in office, and passes on through a list of measures affecting the mines, the taxation of land values, transport reorganisation, &c. (all of which the Labour Government would have passed but for the "wicked plot" to turn them out), to a peroration reminiscent of the revivalist pulpit. The Conservative programme only breaks new ground in minor directions, and is in effect an appeal for a stable Government as a bulwark against Labour extremists. The Liberal manifesto opens with a long defence of the party's performance in the last Parliament, but embodies one new feature, namely, proposals as regards coal and power, based on the results of the inquiry conducted by Mr Lloyd George. The party gives prominence again to the land question, and strangely enough is the only party to include electoral reform in its platform. We trust that the neglect of the other parties to mention this vital question is an oversight, which will be rectified; for it is essential that the next Parliament should amend the present position, under which the numerical strength of a party in the House of Commons may be altogether out of proportion to the number of votes cast for it in the country. Those who believe that we must get back to the two-party system naturally regard electoral reform as of slight importance. But for our part we are convinced that we cannot return to that system; that the existence of at least three strong parties will continue; and that the accurate reflection in the House of Commons of the expressed will of the electorate has, under these circumstances, become an absolutely indispensable condition of the successful working of party Government.

The more one looks at these party programmes the more clearly one sees that this election should have been avoided. There is no great new principle at stake; there is no problem of first-class magnitude that was not before the electorate eleven months ago. Moreover, as we have shown, there is no clear cut issue. From this state of affairs several unfortunate results must follow. Firstly, the campaign will develop more of the elements of a class struggle than we have seen before—labour and anti-Labour, Socialism and anti-Socialism. That is the most deplorable of all the aspects of this unsatisfactory contest. Secondly, with the lack of a clear cut issue, with several red-herrings in prominence, and with our obsolete voting system still in force, it will be more than usually difficult to derive any distinct guidance or mandate from the result of the polls. We have, indeed, been plunged in a political morass, and can only hope that the experience will chasten all our political leaders, and convince them that the nation requires and demands their concentration on the problem of how the system of Parliamentary Government can be adapted to the new circumstances. It surely cannot be beyond the power of a country, whose institutions have been a model for so many lands, to adapt itself successfully to the change in party representation. The first experiment is certainly discouraging; but it need not have failed, and the reasons for its failure should teach salutary lessons. Meanwhile, if there is one consoling feature about the election, it is this: the programmes no longer glitter with promises of "a new heaven and a

new earth while you wait"; even the Labour manifesto is mild compared with that of last year; and all the programmes have enough common ground, both in the sphere of foreign politics and in that of domestic problems, to provide plenty of scope for a second attempt at Minority Government. The only thing that seems certain about the election is that one of the three parties will be called upon to attempt it. We hope that all three are carefully studying the task, its dimensions, its implications, and its responsibilities, in the light of the experiment of 1924, which has been brought to an untimely end, from which a little vision and common sense might so easily have saved it.

THE GERMAN LOAN.

THE rapid oversubscription on Wednesday of the London section of the German External Loan for 800 million gold marks may be described as the triumph of common sense over sentiment. The daily tirades against the loan in certain sections of the Press have been peculiarly ineffective, and an international loan to Germany, for so long the sport of rumour, is now an accomplished fact. Although the main credit still lies with those who drew up the Dawes Scheme which formed the basis for the London Agreement of August last, those responsible are to be congratulated upon the expedition with which the loan negotiations, some of which must have been of a delicate nature, have been carried out and the prospectus produced. The heavy oversubscription to the London issue will help to disperse the feeling which has apparently been spreading on the Continent of late, that Great Britain will only give the minimum of assistance in bringing the Dawes Scheme to fruition, and this, together with the rapid success of the issue of \$110 millions in New York, where the lists were closed within a quarter of an hour of the opening, marks an important step forward in the process of European rehabilitation.

The exact amount which is being raised has not been officially stated. Germany is to have "an effective sum of the equivalent of 800 million gold marks," to which has to be added the expenses of issue, negotiation and delivery, as well as a substantial allowance for issue at a discount of 8 per cent. New York has subscribed \$110 millions, and London £12 millions sterling, and it is understood that £3 millions will be issued in both France and Switzerland, £2½ millions in Holland, and £1½ millions in Belgium. These will be in sterling, as will also a small amount to make up the total, to be issued in Germany, but sterling bonds issued abroad will not be saleable on the London Stock Exchange for a period of at least two years. Italy will participate to the extent of 100 million lire, and Sweden to the extent of 25.2 million kronor. The bonds, which bear interest at 7 per cent., are to be bearer, and are redeemable by 1949.

On the matter of security, the London Conference of August last came to an agreement that the service of the loan should have "absolute priority as regards any resources of Germany so far as such resources may have been subjected to a general charge in favour of the said loan," but until Wednesday last, when the prospectus appeared, some doubt existed as to the exact nature of the security for the bonds which would be offered to investors. The "statement" appended to the prospectus, however, shows that the security is as satisfactory as could be desired. The service of interest and amortisation is:— (1) A direct and unconditional obligation of the German Government chargeable on all the assets and revenues of that Government. (2) A specific first charge on all payments provided for under the plan of the Dawes Committee to or for the account of the Agent-General for Reparation payments, such charge being prior to Reparation and other Treaty payments, which in turn have a specific precedence over the existing German debt. (3) A first charge by way of collateral security on the "controlled revenues," i.e., the gross revenues of the German Government derived from the Customs and from the taxes on tobacco, beer and sugar, the net revenue of the German Government from the spirits monopoly, and such tax (if any) as may hereafter be similarly assigned by the German Government in accordance with the terms of the

final protocol of the London Conference. The Reparation Commission have postponed in favour of the charges created in respect of the loan all Reparation and other charges upon the payments to the Agent-General for Reparation payments, including charges in respect of deliveries in kind or payments therefor, whether direct or through the operation of any Reparation Recovery Act or Decree.

Thus, though there is no direct Allied Government guarantee, as in the case of the Austrian loan of June, 1923, the investor is offered security of the highest order. Moreover, the service of the loan is amply covered. The amount required for interest and sinking fund, on the basis of present exchange rates will not exceed about 91½ million gold marks. The payments to the Agent-General for Reparation payments have been fixed at 1,000 million gold marks for the first year, and are expected to increase thereafter until they reach 2,500 million gold marks for the fifth and subsequent years. The annual gross receipts of the controlled revenues are estimated at not less than 1,000 million gold marks. Further, the German Government may not create any further charge upon the controlled revenues ranking in priority to or *pari passu* with the charge created in favour of the bondholders of this issue. The Agent-General for Reparation Payments is to be one of the trustees for the bondholders, and it is provided that funds which have to be sent abroad shall have an absolute right of remittance, which will have priority over Reparation or other payments.

These excellent safeguards and provisions contrast in a striking manner with the nebulous terms outlined in that indifferent result of an afterthought—the Russian Treaty. The two nations stand out in striking contrast. Germany recognises our institutions and economic system. She makes an earnest attempt to gain our confidence by emulation and frankness. Representatives of Russia approach the question of a loan not as supplicants for help, but as those conferring favours; in Russia the people are wed to an economic policy which at some angles is at variance with the views held by its representatives abroad. Indeed, if the economic policy prescribed in Russia were strictly adhered to Russia would not seek to borrow in London. The Russian people know this, and the Russian people know also that the British investor is not blind to this fact. Therefore, in the midst of this cloud of doubt and insecurity—with the knowledge that the British investor can no longer be regarded as a patient milch cow—a guarantee of the British Government is looked upon as a safe road out of a morass of difficulties. Incidentally, the Premier's point that the Government does not actually lend the money, but only guarantees it, betrays rather a naïve simplicity where City matters are concerned. A contingent liability is none the less a liability, and the difference between guaranteeing and actually providing the funds is a question of theoretic interest rather than practical finance.

The Russian attitude to international financial relations is well illustrated by her treatment of the question of foreign balances. When Russia decided to take the new road to happiness and prosperity, she confiscated the balances of foreigners in her hands. These foreigners, in return, naturally set off balances in hand held on behalf of the Russian Government, and in some cases balances of Russian nationals, where it was thought that in sending them to Russia such balances would fall into the hands of the Russian authorities. Immediately the Treaty was signed foreigners holding these balances were advised that they would be expected, under the terms of the Treaty, to hand over any such sums. But a scornful gesture was made to the suggestion that Russia should as a *quid pro quo* hand over balances in Russia which she had confiscated in the early years of her new life.

The City of London, by its eagerness to obtain the underwriting and to subscribe to the German loan, has shown that it recognises in the Dawes Plan the only practical road to economic recovery in Europe. But without co-operation on the part of the borrowers in giving real security and an undertaking "to adopt all appropriate measures for carrying into effect the Dawes Plan and for ensuring its permanent operation," there would have been a very different reception for the loan. Until Russia recognises that London will not accept an entirely

new code of business morals, her efforts to obtain any substantial amount of money here cannot be successful; for we refuse to believe that whatever Government may be in office at Westminster next month will be able to persuade the House of Commons to grant the guarantee of the British Government to a loan unless Russia entirely changes her attitude.

INDUSTRIAL PROFITS.

OUR statistics for the past quarter of the profits of industrial companies show a continuation of the movement which has been in progress over the past twelve months—namely, a slackening in the rate of increase in net profits. Twelve months ago we analysed the reports of 209 companies, and showed that their aggregate net profits had increased by over 65 per cent., as compared with the earnings of the same companies in their preceding financial year. During the past three months the number of profit and loss accounts analysed has been 214, and these disclose aggregate net profits, after payment of debenture interest, &c., of £18,069,800, an increase of but 2 per cent. over the profits of the same companies in their preceding financial year. As may be seen from the table below, there has been a steady decline quarter by quarter since this time last year in the rate of increase in profits:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase.
		1922-23.	1923-24.	
1923.				
Third quarter	209	£ 10,469,118	£ 17,317,482	65.2
Fourth quarter	312	23,382,776	26,043,934	11.4
1924.				
First quarter	419	37,155,048	40,382,901	8.7
Second quarter	466	49,794,417	51,292,944	3.0
	1,406	120,801,359	135,037,261	11.8
Third quarter	214	17,667,060	18,069,800	2.3

To arrive at the true significance of these figures they must be read in conjunction with the next table, which sets out the quarterly increases or decreases in net profits since the beginning of 1918. It must be remembered, of course, that the effects of trade booms and depressions take a little time to make an impression upon these statistics, since accounts are not immediately published at the expiry of the period to which they relate. Unfortunately, indeed, a long time is in many instances allowed to elapse before accounts are presented, and this fact is inclined to blur the picture presented by our figures. It is, however, possible to trace the post-war boom and depression fairly clearly:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
First quarter	5.8	10.4	26.9	35	43.4	41.4	8.7
Second quarter	5.8	5.1	37.8	8.4	33.7	22.1	3.0
Third quarter	12.3	3.4	41.9	42.4	23.5	65.2	2.3
Fourth quarter	4.7	10.5	27.1	52.9	3.9	11.4	..

A somewhat exaggerated appearance is given by the percentage figures for 1923 of the recovery which occurred after the slump, but the percentage increases in that year are, of course, based upon very low profit figures.

Turning from the general to the particular, we show below how several different groups of companies whose reports have appeared during the past three months have fared in their latest financial year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Sept. 30.		Increase.	Decrease.
		1923.	1924.		
Breweries	19	£ 4,952,132	£ 5,585,687	12.9	..
Gas	10	188,103	177,598	..	5.6
Hotels	3	146,996	140,337	..	6.659
Iron, coal, and steel ..	19	2,106,178	1,426,838	..	679,340
Land, mortgage	15	358,779	701,683	95.6	..
Oil	4	36,789	19,325	..	..
Rubber	42	639,312	866,662	35.6	..
Shipping	5	646,885	803,023	24.1	..
Shops	4	580,987	568,991	..	2.0
Tea	2	95,446	110,379	15.6	..
Telegraph	2	474,736	257,858	..	45.7
Textiles	9	2,745,915	2,007,243	..	738,672
Trust companies	8	396,525	332,669	..	63,856
Waterworks	8	24,832	28,512	14.7	..
Miscellaneous	65	4,346,363	5,073,645	16.7	..
	214	17,667,060	18,069,800	2.3	..

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.

EVERY DESCRIPTION OF EASTERN PLANTATIONS FINANCE AND INVESTMENT BUSINESS CONDUCTED. DEBENTURE TRUSTEESHIPS UNDERTAKEN.

1-4, GREAT TOWER STREET - LONDON, E.C.3.

A prominent feature of the table is the decline of over 32 per cent. in the profits of 19 iron, coal and steel companies. Twelve months ago 14 companies in this group showed a large increase in profits, the increase being fairly general. This year's figures do not show much change in most cases, the decrease being accounted for by heavy declines in the case of four of the larger concerns. The decline in the textile company group also follows a substantial increase twelve months ago. The rubber group makes a good showing, and a large increase is shown by the land, mortgage and financial group.

In the next table we show the method of distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1923.				
Third quarter	£ 17,317,482	£ 9,653,962	£ 3,039,838	£ 4,623,682
Fourth quarter	26,043,934	16,422,429	4,593,984	5,027,521
1924.				
First quarter	40,382,901	24,069,835	7,291,653	9,021,413
Second quarter	51,292,944	31,153,288	11,465,061	8,674,605
	135,037,261	81,299,514	26,390,526	27,347,221
Third quarter	18,069,800	10,737,274	3,295,099	4,037,427

The proportion of profits reserved in the past quarter, either in the form of specific allocations or by additions to balances carried forward, is above the average for the four preceding quarters, but well below the figure for the corresponding quarter of last year, when ordinary shareholders received a considerably smaller percentage of profits than in the past quarter. The distribution adopted by each of the groups in the past three months was as follows:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	To Reserve, &c.
Breweries	£ 5,585,687	£ 3,772,941	£ 530,305	£ 1,282,441
Gas	177,598	162,437	8,251	6,910
Hotels	140,337	108,045	6,125	26,167
Iron, coal, and steel ..	1,426,838	901,329	201,386	324,123
Land, mortgage	701,683	372,046	157,949	171,688
Oil	19,325	706,444	..	154,663
Rubber	866,662	332,257	72,006	398,760
Shipping	803,023	286,500	157,500	124,991
Shops	568,991	60,213	1,076	49,090
Tea	110,379	394,278	17,500	153,920
Telegraph	257,858	1,023,306	403,301	580,636
Textiles	2,007,243	215,843	64.9	22,878
Trust companies	332,669	23,723	2,904	1,885
Waterworks	28,512	2,377,812	1,637,893	1,058,440
Miscellaneous	5,073,645	10,737,274	3,295,099	4,037,427

The shipping group heads the list in the matter of reserve allocations, the percentage of profits held back from shareholders being nearly 50 per cent. At the other end of the scale we have the telegraph companies—Marconi International Marine and Marconi's Wireless—reducing balances in hand in order to pay dividends. The gas, water, and investment trust companies set aside only very small proportions of their profits, but otherwise the figures are fairly satisfactory.

As regards earnings on capital, we show below the ratio to total ordinary and preference capital of net profits, and of amounts reserved in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1923.			
Third quarter	£ 195,420,900	£ 17,317,482	£ 4,623,682
Fourth quarter	255,094,800	26,043,934	5,027,521
1924.			
First quarter	390,545,000	40,382,901	9,021,413
Second quarter	517,002,000	51,292,944	8,674,605
	1,358,062,700	135,037,261	27,347,221
Third quarter	186,170,600	18,069,800	4,037,427

The ratio of profits to capital for the past quarter is better than it was twelve months ago, but is below the twelve months' average, while the position is reversed in the case of reserve allowances.

The average rates paid on debenture, preference, and ordinary capital in each quarter since the beginning of 1921 have been as follows:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.
1st quarter	4.43	4.70	4.61	4.62	5.0	5.3	5.7	5.3	10.5	8.5	9.2	9.6
2nd quarter	4.61	5.00	5.08	5.17	5.6	5.0	5.4	5.5	12.6	8.8	9.9	10.1
3rd quarter	4.45	5.21	4.90	4.77	5.0	4.5	4.3	4.9	9.7	7.6	7.8	9.0
4th quarter	4.52	4.83	5.03	..	5.1	5.6	5.4	..	7.6	8.6	9.6	..

The average rate paid on ordinary capital in the last quarter is considerably higher than at this time last year, but is otherwise the lowest since the fourth quarter of 1922.

The final table gives the average rates paid by each of the groups, together with the average rate of ordinary dividend shown in our article a year ago:—

	Deben- ture Capital.	Rate of Interest.	Prefer- ence Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.
Breweries	10,755,130	3.9	10,840,735	4.9	25,200,728	14.9
Gas	801,960	4.5	118,850	6.9	2,642,366	6.1
Hotels	467,451	5.0	125,000	5.9	1,032,829	9.9
Iron, coal, and steel	3,140,235	5.0	5,175,035	5.9	12,202,079	7.5
Land, mortgage	4,630,652	4.5	2,852,955	5.5	5,474,512	6.8
Oil	385,077	5.8	1,564,340	4.6	1,394,214	7.3
Rubber	481,033	6.1	121,955	4.6	9,644,976	7.3
Shipping	nil	..	2,225,000	3.3	6,494,540	5.3
Shops	1,100,000	5.1	2,650,000	5.9	2,265,260	12.7
Tees	71,180	6.0	20,000	5.4	268,351	2.3
Telegraph	1,557,120	6.4	250,000	7.0	3,942,791	10.0
Textiles	6,117,694	4.4	7,815,551	5.2	9,334,986	11.0
Trust companies	884,583	6.8	1,578,680	6.0	4,022,987	5.4
Waterworks	87,841	5.1	54,509	5.3	367,039	6.5
Miscellaneous	8,431,853	5.6	31,994,867	5.1	34,721,395	6.4
	38,912,819	4.8	67,387,575	4.9	118,783,013	9.0

Eight of the sixteen groups show small increases in the average rate of ordinary dividend, but the brewery group, which pays the highest rate, records a reduction of 1.2 per cent. The increase in the case of the textile group is noteworthy in view of decline in profits recorded above.

CAPITAL ISSUES AT HOME AND ABROAD.

For many years past the *Economist* has given each week as complete a summary as possible of capital issues on the London money market, supplemented by quarterly analyses of the totals under various headings and comparisons with earlier periods. During the past twelve months, also, some indication of the volume of similar issues abroad has been afforded by a table appearing regularly in our "Monthly Supplement," reproducing certain figures collected by the League of Nations and covering 14 foreign States. The widely varying methods of compilation adopted in different countries tend, however, to make comparison as between one State and another extremely difficult, or even impossible. The extent of the ground covered by the statistics for any one country, again, is frequently misunderstood, and very misleading impressions are apt to be given when the figures are pressed into service in support of preconceived ideas on such a question, for instance, as the desirability of "rationing" issues of capital destined for employment abroad. In our monthly tables an attempt is made to indicate the limitations of the different figures by means of footnotes, but obvious considerations of space preclude us from going into very much detail. In the present article, therefore, we propose to examine the returns for each country, and indicate more exactly the basis on which each set of figures rests.

For convenient reference we reproduce below the greater part of our most recently published monthly table, which

appeared on page 27 of our "Monthly Supplement" dated September 27 last:—

CAPITAL ISSUES—(000,000's omitted.)

Period.	United Kingdom.	Austria.	Czechoslovakia.	France.	Germany.	Italy.	Netherlands.	Poland.	Roumania.	Sweden.	Switzerland.	India.	United States.
Monthly Average.	£	Kronen.	Koruna.	Francs.	Marka.	Lire.	Gulden.	Marki P.	Lei.	Kronor.	Francs.	Ruppes.	Dollars.
1913.....	16.3	..	..	..	103	21	..	..	..	..	..	..	137

The figures for the United Kingdom, which are our own, may be taken first. In the past these figures have not infrequently been quoted by various writers as measuring the whole of the new capital raised in the United Kingdom during any given period. Such an impression is wholly erroneous, as will be seen from the following summary of what the figures do, and do not, include. They comprise issues on the London market, including British Government borrowings, under such headings as Treasury Bonds, issued by public tender, National Savings Certificates (sales less repayments), Local Loans Stock, &c. Treasury Bill issues, and Ways and Means Advances are not included. Local authority borrowings on the London market, at definite prices and rates of issue, do, and local borrowings without limit, or by tender, do not, come within the scope of our figures. As regards both Government and local authorities, conversion operations are excluded, the figures given showing "new money" in every case. Actual receipts are shown throughout, the price of issue being taken into account when the calculation is made.

Our returns of capital issued by limited companies, and other industrial and trading concerns, are drawn almost entirely from publicly-advertised prospectuses, "offers for sale," or Press announcements, the exception being the totals "to shareholders only," which are obtained from the "Stock Exchange Official Intelligence." Private applications for funds, capital obtained by private syndicates, money loaned from banks, or on mortgage—none of these is, or could possibly be, included; most sections of British industry are never publicly financed, but obtain their necessary new capital privately from the resources of those who are connected with them, from their friends, or from their own accumulated earnings. Early in the present century the Lancashire cotton trade was practically re-equipped with new machinery without any but a small fraction of the cost being reflected in new issues on the London market. On the other hand, the amount raised by foreign and colonial loans and public issues in London represents probably a very large proportion of our total exports of capital, so that comparison between the figures for home and foreign borrowings is bound to give an exaggerated impression of the latter's importance.

Particulars as to the methods adopted in calculating the totals for the foreign states shown in our table above are given in the League of Nations "Bulletin," No. 8 of 1923. From replies to a questionnaire circulated to the various Governments, it was ascertained that the German, Austrian, Italian, Roumanian, and Czechoslovakian figures applied only to authorised share issues of joint-stock companies in the respective States. The series for France has been drawn up by the "Association Nationale des Porteurs Francaise de Valeurs Mobilières,"

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
70 Federal Street.

BUENOS AYRES: HAVANA:
501 Bartolome Mitre. Pedro Gomez Mena Bldg.

Accepts funds from banking correspondents for investment in designated American Securities, Bank Acceptances, U.S. Government Bonds, etc.

Special Representative:
24, OLD BROAD STREET, LONDON.

and includes all issues of shares and bonds publicly offered for subscription on the French market by French or foreign companies, towns, provinces, colonies, colonial undertakings, the Crédit National, and "groupements de sinistrés." The Netherlands figures, drawn up by the Government, include issues by the State, local authorities, and all corporate bodies, for amounts exceeding 100,000 florins. The mortgage deeds of mortgage institutes and Treasury bills are, however, excluded, as are issues effected in the Dutch market on behalf of foreign companies and States. The latter qualification does not apply to issues for the Dutch colonies. The figures for the United States, drawn up by the *Journal of Commerce*, include all issues of shares and debentures, bonds, notes, &c., for amounts exceeding \$100,000 effected by domestic corporations and foreign corporate capital issues floated in the United States. Government, State, municipal, and other public emissions are not included, and no distinction is drawn between long and short-term obligations. Those relative to British India deal only with the authorised capital of new joint-stock companies. In the case of Switzerland, the Swiss Bank Corporation includes in its statistics all Government and other public issues, as well as those of companies. Loans of the Confederation and the Federal Railways, which are the Swiss equivalent of short-term Treasury bonds, taken up by the banks without resort to the general public, are omitted from the total. The Polish figures rest on a somewhat complicated system of analysis. They comprise all the share issues of new joint stock companies—(1) having their registered offices on Polish territory formerly belonging to Russia and Austria; (2) having their registered offices in Polish territory formerly belonging to Prussia in the event of their field of operations extending over the whole of Poland; (3) the issues of Polish branches of new foreign joint stock companies when their registered head office in Poland is within the territories which were formerly Russian or Austrian.

The meaning of the term "date of issue," varies in different countries. Broadly speaking, in the case of the British, American, French, Dutch, Swiss, and Danish statistics, the material date is that on which the new capital is actually offered for subscription, while as regards the other countries on the list, the date on which is granted authority for the issue is taken as relevant for the purpose of compilation. In Great Britain, Switzerland, Germany, and the United States, again, the issue price is, as a general rule, the figure used for statistical purposes, while in the case of the other countries the nominal value (which may be much higher or lower than the issue price) is used. Uncalled capital, i.e. in the case of partly paid shares, is not included in certain of the figures, including those for Great Britain, Switzerland, and Holland, while in others, such as those relating to France, the United States, Italy, Germany, Poland, and India, no distinction is made between called and uncalled capital. The statistics for Great Britain, Switzerland, Holland, France, the United States, Denmark, Roumania, and Germany do not include issues of "bonus" shares, for which no payment is made by the recipients.

As regards conversion operations, also, there is much difference of practice. The returns for Great Britain, Holland, and France include only that part, if any, of such a flotation which is subscribed for with new money, while the Swiss and American figures include the gross total. The German statistics include shares distributed to replace shares of another kind, while the Italian, Swedish, and Roumanian take such readjustments into account only when, and so far as, the total amount of the capital is altered.

These considerations show how great is the necessity for caution in making international comparisons of the volume of new capital. From what has been said, the most serious source of error would appear to result from the omission, in many cases, of all particulars relating to Government issues, especially when the dominating influence of State financial policy on the post-war history of most European States is taken into account. The effect of ignoring such issues is to make the figures for the particular countries concerned in many cases an understatement of the actual situation. On the other hand,

the practice adopted in some other instances, of showing what in this country is known as "authorised," rather than "issued" capital, tends to give an exaggerated impression of the rate at which new capital is being created, by calling attention to amounts which may possibly be issued in the future, only a part of which, however, represents "effective" demand in the present.

DISTILLERY COMPANIES' PROFITS.

WE have recently examined the financial position of breweries, see *Economist*, May 24, 1924 (page 1045), and September 27, 1924 (page 485), and now present our readers with a picture of the leading distilleries. Amongst distilleries the trend is towards amalgamation. Buchanan-Dewar, Limited, is probably the most important of these; with a total issued capital of £8,767,038, shares are held in James Buchanan and Co., John Dewar and Sons, and W. P. Lowrie and Co. to the value of £4,103,072. Booths absorbed John Watney and Co., of Wandsworth, having previously acquired the business of Samuel Mart and Co. The Distillers Company has taken over the ordinary shares of the Distillers' Finance Corporation of Belfast; its nominal capital, in consequence, is increased from £4,000,000 to £6,000,000. Only as recently as September, Messrs Macdonald, Greenlees, and Williams (Distillers), Limited, came into the London market with an "offer for sale" of cumulative preference shares at par. This company has an authorised share capital of £600,000, in £1 shares. This is divided into 400,000 7 per cent. cumulative preference, all of which have been, or will be, issued, and 200,000 issued ordinary shares. There is a debenture issue of £83,333 outstanding. This company is also a combination of three businesses interested in whiskey. Our first table shows the net profits of a number of distillery companies over the past three years:—

Name.	Net Profit (after Payment of Debenture Interest).			Carried Forward.		
	1921-22.	1922-23.	1923-24.	1921-22.	1922-23.	1923-24.
Booths	£	£	£	£	£	£
Buchanan-Dewar	..	64,041	48,893	..	11,800	6,277
Dailuaine-Talisker	..	958,740	1,102,657	..	96,589	98,516

Longmorn-Glenlivet	32,876	42,512	70,327	20,383	23,546	16,537
Scottish Malt Distillers	..	6,255	7,498	..	15,339	11,982
Walker, John, and Sons	49,949	49,941	49,971	12,641	18,369	11,982
William Longmorn and Co.	14,063	10,082	11,734	4,285	5,307	6,040

Booths have not had an unsatisfactory year; gross profits are returned as £167,985 for 1923, as against £133,697 for 1922. The report observes that "the whole of the publicity and advertising has this year been charged to working expenses." Buchanan-Dewar makes a profit of £1,102,657 on a capital of £8,767,038—a comfortable return. Dailuaine-Talisker, on a paid-up and issued share capital of £193,935, net £38,235. The Distillers Company can show profits of £677,914 on a capital of £5,835,000, while Highland Distilleries, with a modest share capital of £127,500, record earnings of £70,327. John Walker and Sons, for its first year as a public company, records a net profit of £798,246, with a share capital of £2,760,000, and loan capital of £2,000,000; the directors, in their report, state that "the sales for the

period under review, both at home and abroad, have been the largest in the history of the business."

Our second table shows the principal liabilities and assets of a number of distillery companies:—

We have already referred to the amount of the increased capital of Booths and the Distillers Company, and, with these exceptions, changes in capital do not call for special note. The reserve column in some cases admirably reflects the prosperity which has overtaken the industry. In the matter of investments it will be noticed that recent expansions have been along the line of acquiring share interests in other undertakings rather than merging assets and liabilities. Sooner or later, however, we venture to predict that a demand will arise for more information about the controlled undertakings. Directors will then have to face the question of merging or publishing consolidated accounts showing assets and liabilities in detail.

Our final table shows dividends for past three years, also some comparative prices of ordinary shares, and present yields:—

	Dividends on Ordinary Shares.			Price of Ord. Shares.		
	1921-2.	1922-3.	1923-4.	End Oct. 15, 1923.	Oct. 15, 1924.	Present Yield.

* £10 shares. † Free of income-tax. ‡ Paid on larger capital of £4,000,000.

Booth's Distillery (which changed its name to Booth's Distilleries in August, 1924) ordinary shares are of the rather unusual denomination of 13s each. Dealings in the ordinary shares of John Walker and Sons have recently commenced, and are now shown each day in the Supplementary Official List. The shares of Buchanan-Dewar have just been granted a quotation in the London Official List.

The outlook for distilleries as an investment proposition is difficult to determine. Considered from the export aspect, there appears to be an excellent demand the world over. According to some authorities, spirit consumption at home was lower in 1923 than 1922. There is a sign which no doubt our readers will appreciate at its proper value—that the public in recent years have been asked to take a larger share of financial interest in the distillery industry.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

It is possible to record a distinct improvement in the Lancashire cotton industry during the past three months. Certain aspects of the situation are still very unsatisfactory, but there is no doubt whatever that most spinners and manufacturers are more favourably placed. In the middle of the summer sellers of yarn and cloth were weak when tested, and buyers had matters all their own way. Recently order lists have been extended, and producers are now able to hold out for prices which in most cases show a margin of profit. A disappointing feature is the fact that the spinning mills engaged on American cotton are still running short time. The present scheme began last March, and provides for the factories to work only 26 1/2 hours per week instead of the usual 48 hours. The Masters' Federation is watching the turn of events very closely, but, so far, they have not been prepared to recommend an increase in working hours. In an irregular way, however, there is now a larger output, and this is reflected in the bigger forwardings of raw cotton from Liverpool to the mills.

An event of the quarter has been the downward movement in prices for American cotton. On June 30th the quotation for fully middling American on the spot in Liverpool was 17.04d. There was a rising tendency towards the end of July until 19.17d was posted on the 30th. From the beginning of August the basis of the Liverpool contract was altered to middling descriptions, the quotation on the first of that month being 18.18d. By the 19th the price had fallen to 15.85d, with 15.27d on the 26th. After a slight reaction there was another easier tendency until 13.22d was reached on September 23rd. An advance took place to 15.25d on October 6th, but the figure on Wednesday last (October 15th) was 13.39d. The cotton crop season in the United States has surprised most people in the trade. Early in the summer it was feared that the output would again be comparatively small, in spite of the record acreage. The weather conditions in the belt, however, have been very favourable, and we are now assured of a much bigger output than in the three previous seasons. The latest Government estimate is 12,500,000 bales, but many people believe that the actual growth will not be far off 13,000,000 bales. This compares with only 10,200,000 bales in 1923-24. At the time of writing the prospects are particularly bright, and, in the circumstances, lower values are anticipated. With regard to Egyptian cotton the quotation for fully good fair Sakellaris on the spot in Liverpool on June 30th was 23.05d. There was a smart advance towards the end of July, which carried the price to 26.15d on the 30th, and 26.25d was posted on August 15th. A rather easier movement then showed itself to 24.05d on September 16th. Since then values have been rather stronger, the figure on Wednesday last (October 15th) being 25.05d. Three months ago it was expected that the Egyptian crop for this season would be of record dimensions, and there was talk of 8,000,000 cantars. Recently, however, the plants have deteriorated, and it is feared that the growth will not be more than 6,750,000 cantars. The low estimate of the Egyptian Government of 5,944,000 cantars is discredited.

In the Manchester cloth market there has been more activity during the past quarter than in any similar period for a long time back. Comparatively few buyers have been prepared to place big contracts, but numerous small orders have been secured which, in the aggregate, have reached encouraging dimensions. Producers, therefore, have been enabled to clear their stocks, and most active outlet has been India, and a healthy trade has been done, especially for Calcutta and Bombay. Recent shipments have been larger; during the nine months ended September the exports of piece goods to India from this country were 1,250,639,000 square yards, against 1,073,865,000 square yards in the same period of 1923. A revival of demand has shown itself in grey shirtings, and makers are better supplied with work than

for a long time back. Extensive purchases have also been made in light bleaching descriptions, and the industrial situation in Blackburn and district has improved. Printing cloths have also attracted more attention, and firms in Burnley and district are busier. The freer buying for India has been assisted by the appreciation in the value of the rupee, and the trade situation abroad is healthy as a result of the monsoon season being satisfactory. As can easily be understood, no trade development of any importance has taken place in China. Business has been thoroughly upset by the civil war, and for several weeks the auctions in Shanghai have been suspended. Some orders have been placed in white shirtings, but merchants on the other side have not been inclined to do anything more than keep up assortments. The news to hand during the last few days with regard to the political situation has been much more favourable, and demand now tends to broaden. There is ground for believing that if a stable Government could be formed in China, trade would revive quickly as stocks of textiles are comparatively low. The general demand for numerous minor outlets East and West has been more encouraging, and particular mention may be made of the persistent demand in fine fancy materials for the United States. In similar goods a steady business has also been done for European countries. An improvement has shown itself in the turnover for Egypt, the Near East, and South America. Inquiry in cloths suitable for home consumption has recently broadened, and the wholesale establishments in the North of England are more optimistic as to the demand from the country during the next few months.

The following is a comparative table of cloth exports from the United Kingdom, the figures being given for the nine months ended September in each year:—

	Yards.	£
1913	5,350,278,900	73,659,119
1922	3,068,278,700	106,637,069
1923	3,097,216,600	104,072,046
1924	3,341,388,800	114,899,318

Since the end of June there has been a striking change in the position of spinners of yarn made from American cotton. It is evident that the strong support given to the short-time scheme has at last brought beneficial results. The big stoppage of production at the end of August due to the annual holidays at Oldham had the effect of stocks in first hands being cleared. When work was resumed demand was more active, and spinners took advantage of the situation to put up their prices and improve their margin of profit. Since then the better state of affairs has been well maintained, and although the organised curtailment of output scheme is still in force, and costs of production are relatively high, the prices ruling in most counts and qualities are remunerative. The situation is somewhat artificial, in view of the fact that the mills are working only three days a week instead of five and a-half. The Masters' Federation, however, is determined to move slowly, and not increase production until there are definite signs that more yarn is required. With regard to the Egyptian yarn section, the trade demand has been healthy from week to week, and most spinners are stronger in point of engagements than for a long time back. It is very difficult to obtain early delivery of many counts and qualities. The mills in this department are running full time.

The following is a comparative table of shipments of cotton yarn from the United Kingdom, the figures being given for the nine months ended September in each year:—

	Lbs.	£
1913	154,761,700	11,022,055
1922	158,363,900	20,763,425
1923	104,530,000	15,263,209
1924	123,319,700	20,836,107

The wages agreement between the employers and the trade unions has now expired, and it is open for either side to put forward an application for a change in list rates. It is understood, however, that neither the masters nor the operatives intend to take any action at the present time. Current wages are 95 per cent. above list rates, and 90 per cent. higher than in July, 1914. Some allowance, however, must be made for the reduction in working hours, and actual wages are about 61 per cent. above the pre-war level.

The improvement in the trade position mentioned above has been very welcome, and undoubtedly most spinning and manufacturing concerns are doing much better than three months ago. In numerous instances, however, adverse balances are heavy, and it is feared it will be a long time before many companies are able to declare a dividend on the ordinary share capital. It must be remembered that the freer buying has been on sound lines in order to meet the urgent requirements of customers. Speculative operations so far have been within a small compass. The next move in the situation will be towards increased employment for the operatives engaged in the mills spinning American yarns, and it may be taken for granted that the short-time scheme will be revised at an early date. Unless some action is taken by the Masters' Federation, some of the members will break away from the movement and ignore the recommendation. With regard to piece goods, there are no indications of markets abroad having satisfied their requirements.

AN ANALYTICAL DIGEST OF THE GENERAL ELECTION IN DECEMBER, 1923—II.

CONTINUING our digest, the first part of which appeared in our issue of September 27th, we present a series of tables dealing more closely with the rivalry of parties in the counties of Great Britain, as shown by the results of the General Election last December.

TABLE showing the COUNTIES in which each of the THREE PARTIES Obtained More Seats than the other TWO PARTIES in December, 1923.

Liberal Counties.	Liberal Seats.	Other Seats.	Conservative Counties.	Con. Seats.	Other Seats.	Labour Counties.	Labour Seats.	Other Seats.
Devon	7	4	Warwick	14	3	Lanark	16	6
Somerset	5	2	Kent	12	3	Glamorgan	13	3
Cornwall	5	0	Surrey	12	0	Durham	10	8
Leicester	4	3	Hampshire	10	3	Monmouth	4	2
Wiltshire	4	1	Middlesex	9	8	Northampton	3	2
Inverness, Ross, and Cromarty	3	0	Sussex	8	1	Cumberland	3	2
Bedford	2	1	Gloucester	6	5	Fife	3	1
Buckingham	2	1	Worcester	6	0	Stirling & Clack- mannan	3	0
Carmarvon	2	0	Lincoln	5	4	Dumfries	2	0
Huntingdon	1	0	Suffolk	4	2	Berwick and Haddington	1	0
Caithness and Sutherland	1	0	Hertford	3	1	Linlithgow	1	0
Argyll	1	0	Dorset	3	1			
Banff	1	0	Oxford	2	1			
Galloway	1	0	Cambridge	2	1			
Dumfries	1	0	Hereford	2	0			
Orkney and Shet- land	1	0	Westmorland	1	0			
Anglesey	1	0	Morey and Nairn	1	0			
Cardigan	1	0	Roxburgh and Selkirk	1	0			
Flint	1	0						
Merioneth	1	0						
Montgomery	1	0						
Pembroke	1	0						
Brecon & Radnor	1	0						

A glance at the map of Great Britain will show over how much larger an area the Liberals predominate than do the Conservatives, notwithstanding the fact that the latter party are supposedly the representatives of the landed interest. Although the Liberals dominate in 23 counties, or grouped counties, they only obtained 48 seats from such counties, whereas the Conservatives, dominating in 18 counties, obtained 102 seats; and the Labour party, dominating in 11 counties, gained 59 seats. It is noteworthy that the first three of the Labour counties are among the ten most important of Great Britain. Middlesex, Warwick, and Kent, dominated by the Conservatives, hold the eighth, ninth, and eleventh places in order of population, but the Liberals do not outnumber the two other parties in any of the twelve leading counties.

TABLE showing the COUNTIES in which HALF the MEMBERS were RETURNED to one or other of the Three Parties.

Labour.	Labour.			Liberal.	Liberal.			Conservative.	Conservative.		
	Lib. Seats.	Con. Seats.	Lib. Seats.		Lib. Seats.	Lib. Seats.	Con. Seats.		Con. Seats.	Lib. Seats.	Lib. Seats.
Essex.....	10	8	2	Midlothian & Peebles....	4	3	1	Cheshire....	7	5	2
Stafford.....	9	5	4	Berkshire....	2	1	1	Shropshire....	2	1	1
Derby.....	5	4	1	Renfrew.....	2	2	..	Ayr and Bute	2	..	..
Norfolk.....	4	1	3	Forfar.....	2	2	..	Perth and Kinross....	1	1	..
Ayr and Bute	2	2	..	Carmarthen....	1	1	..				
Renfrew.....	2	2	..	Forfar.....	1	1	..				
Forfar.....	2	2	..	Denbigh.....	1	1	..				
Carmarthen....	1	1	..	Perth and Kinross....	1	..	1				
Denbigh.....	1	1	..								

Of the 13 counties and grouped counties shown in the table, six are equally divided between two parties, viz., Renfrew, Forfar, Carmarthen, and Denbigh between

Labour and the Liberals, Ayr and Bute between Labour and the Conservatives, and Perth and Kinross between Conservatives and Liberals. Of the 104 seats, 43 are held by Labour members, 32 by Conservatives, and 29 by Liberals. Essex and Staffordshire, which hold fifth and sixth rank in the list of the chief counties, are at present held strongly for the Labour party, and Cheshire, standing twelfth on the list, is equally favourable to the Conservatives.

TABLE showing the PARTY PREDOMINANCE in the COUNTIES which are not included in the two previous tables.

Seats held by—	Lab.	Con.	Lib.	Seats held by—	Con.	Lab.	Lib.
In—				In—			
Lancashire	23	21	22	London	29	22	11
Yorkshire	23	20	14	Nottingham	4	3	2
Northumberland ..	4	3	3	Aberdeen and Kinross	2	1	2
	50	44	39		35	26	15

In these great counties in which party predominance scarcely appears (except, perhaps, in the case of London) the Conservatives hold 79 seats, the Labour party 76, and the Liberals 54.

In 1923 the Liberals won seats in Warwickshire, Buckingham, Berkshire, Sussex, Hertford, Shropshire, and Huntingdon, in which counties neither Liberals nor National Liberals were represented in the 1922 General Election. In fifteen other counties they gained more seats than were won by Liberals and National Liberals in November, 1922; but in thirteen counties they won fewer seats in 1923 than in 1922. In twenty counties they won an equal number of seats in both years. The following table shows these results:—

TABLE comparing the SEATS WON or LOST in the COUNTIES by LIBERALS in December, 1923, with those WON by LIBERALS and NATIONAL LIBERALS in November, 1922.

	1922	1923	Gain		1922	1923	Gain		1922	1923	Loss
Lancashire	Lib	Lib	14	Hertford	Lib	Lib	1	Argyll	Lib	Lib	1

Hampshire	Lib	Lib	1	Barnstaple	Lib	Lib	1	Stafford	Lib	Lib	1
Warwick	Lib	Lib	1	Barnstaple	Lib	Lib	1	Stafford	Lib	Lib	1
Buckingham	Lib	Lib	1	Barnstaple	Lib	Lib	1	Stafford	Lib	Lib	1
Berkshire	Lib	Lib	1	Barnstaple	Lib	Lib	1	Stafford	Lib	Lib	1
Sussex	Lib	Lib	1	Barnstaple	Lib	Lib	1	Stafford	Lib	Lib	1

The table shows that the Liberals gained seats in 22 counties; the chief gains were in Lancashire (14 seats), Devon and Somerset (5 and 4 seats respectively), and Cheshire (3 seats). Nine other counties each yielded two seats, and four counties one seat each. In 20 counties there was no change in the number of seats held by the Liberals; in 14 counties they lost seats; but Derby was the only county in which the loss exceeded one member. For the Scottish Universities the National Liberal of 1922 was returned as a Liberal in 1923.

TABLE Comparing the SEATS WON or LOST by CONSERVATIVES in the COUNTIES in December, 1923, with those WON in November, 1922.

	1922	1923	Loss or Gain		1922	1923	Loss or Gain		1922	1923	Loss or Gain
London	44	29	-15	Derby	2	4	2	Glamorgan	2	2	-2
Lancashire	38	21	-17	Durham	4	4	0	Roxburgh & Selkirk	1	1	0
Yorkshire	24	20	-4	Nottingham	4	4	0	Moray & Nairn	1	1	0

Lincoln	5	5	0	Shropshire	4	2	-2	Huntingdon	1	1	0
Lancark	5	5	0					Cornwall	1	1	0

London still returns a majority of Conservatives, although they are 15 fewer than in 1922. In Lancashire the Conservatives lost 17 seats; in each of the counties of Middlesex, Essex, Devon and Somerset they lost five seats; in

Yorkshire and Cheshire they lost four in each county; in Warwick, Leicester, and Berkshire they lost three seats in each county; in nine other counties they lost two seats in each; and in ten counties they lost a seat in each county. In 14 counties they retained the same number of members in 1923 as in 1922. They won two seats in Derbyshire and one in each of the counties of Worcester, Dorset, Aberdeenshire, Roxburgh and Selkirk, and Moray and Nairn, and one seat at Cambridge University.

TABLE Comparing the SEATS WON or LOST by the LABOUR PARTY in the COUNTIES in December, 1923, compared with those WON in November, 1922.

	1922	1923	Gain or Loss		1922	1923	Gain or Loss
Yorkshire	21	23	2	Gloucester	1	2	1
Lancashire	18	23	5	Nottingham	1	2	1
London	9	22	13	Midlothian	1	2	1
Lancark	16	17	1	Fife	1	2	1
Glamorgan	11	13	2	Cumberland	1	2	1
Essex	10	10	0	Stirling & Fife	1	2	1
Stafford	9	9	0	Kent	0	2	2
Durham	11	10	-1	Leicester	1	2	1
Middlesex	2	5	3	Ayr and Bute	1	2	1
Derby	4	5	1	Dumfriesshire	1	2	1
Norfolk	1	4	3	Cheshire	1	2	1
Monmouth	4	4	0	Forfar	2	2	0
Northumb'nd	6	4	-2	Renfrew	2	2	0
Northampton	0	3	3	Warwick	0	1	1

The Labour party won seats in 1923 in Northampton, Kent, Warwick, Somerset, Suffolk, Shropshire, Berkshire, and Berwick, in which counties they had no representation in 1922. In 17 other counties they increased the number of their seats. In Northumberland they lost two seats and in Durham one, and in Carnarvon their only seat. In eleven counties they won the same number of seats each year. These analyses may be of some slight assistance in enabling our readers to assess the respective prospects of each of the chief parties in the elections of 1924.

Notes of the Week.

The Party Programmes.—We summarise below the main points of the programmes of the three largest parties at the forthcoming election, the parties being given in order of their strength in the House of Commons at the Dissolution:—

CONSERVATIVE.

- To "safeguard employment . . . in any efficient industry imperilled by unfair foreign competition by applying the principle of the Safeguarding of Industries Act or analogous measures."
- To encourage mutual trade in the Empire by Imperial Preference.
- Limitation of armaments, but the conditions of Imperial defence to be re-examined and a careful scrutiny made of the commitments proposed in the latest scheme of the League of Nations.
- Agriculture.**—Maintenance of wage-regulation, promotion of facilities for acquisition of small holdings, development of rural industries, and investigation of the cost of foodstuffs by a Royal Commission.
- Examination of new housing schemes and methods and improvement of slum areas.
- Contributory scheme for old-age and widows' pensions.
- Education.**—Co-operation between local authorities and the Board of Education, to promote measures for reduction in size of classes, improvement of sanitary conditions of schools, development of central schools, agreed salary scales for teachers, adult education, religious liberty.
- Reforms affecting status of women and children.

LABOUR.

- Ratification of the Russian Treaties.
- Housing.**—"Generous financial assistance" to local authorities and building industry, to provide houses to let at low rents, a separate dwelling for each family, and a continuous policy of slum clearance.
- Continuance of policy aiming at "giving every child equality in education," and insisting on higher qualifications and salaries for teachers.
- National ownership and organisation of coal-mining industry, electric power production, and railway and canal system.

- "Drastic" reform of the Poor Law system.
- Taxation of land values.
- A Royal Commission on licensing reform.
- Bulk importing and distribution of foodstuffs, and building materials.
- Strengthening of Trade Boards, reduction of excessive hours of labour, improvement in Workmen's Compensation Acts.

LIBERAL.

- Land Policy.**—Complete alteration in present system of land tenure, town land values to contribute to maintenance of town amenities, conditions of leaseholds to be revised, compulsory purchase of land for housing, disappearance of the slums.
- The State to acquire all mineral rights, and provide assistance in building of "super-power" stations.
- Education.**—A ten-year programme of educational advance, including better schools, smaller classes, improved qualification and remuneration of teachers, and more secondary schools and vocational institutions.
- Trade and Industry.**—"The party holds unshakably by its policy of Free Trade," and advocates co-operation of all engaged in industry, extension, and co-ordination of the Insurance Acts, a comprehensive scheme of contributory insurance against old age, breakdown of the breadwinner's health, widow- and orphanhood.
- Examination of the liquor question by experiments on bold and democratic lines.
- Electoral Reform.**—"Effective measures to secure a real correspondence between Parliamentary representation and electoral strength."
- Housing.**—"The reserve of unemployed labour to be utilised to build houses for the people."
- Establishment of economic and commercial relations with Russia, but on lines other than those of present Treaties with the Soviet.
- Mutual disarmament and promotion of international peace.

The Unemployment Figures.—Election polemics are not as a rule marked by a very strict regard for the finer points of statistical accuracy, but the present Government's treatment of the unemployment figures is somewhat exceptional. Replying to an accusation that during Labour's term of office an appreciable accretion has taken place in the ranks of the unemployed, the Lord Chancellor, in the absence of his colleagues this week, took occasion to declare that the "true comparable figures" showed a decrease, as follows:—January 28, 1924 (the earliest date after the Labour Government took office), 1,320,518; September 29, 1924, 1,199,316. How far these may be said to be "true comparable figures" is an open question. The *Ministry of Labour Gazette* for February last gives an almost identical figure (1,322,000), but points out that January 28th was the last full day of the railway stoppage caused by a partial strike of locomotive men, and that a week later the total had fallen to 1,248,000. Thus 74,000 of the 121,000 decrease for which the Labour Party apparently desire to take credit may be written off at once. Lord Haldane goes on to say, however, that the real decrease is greater than the figures show, because "those for September 29th included a large number of persons (at least 75,000) who would not have been on the registers for unemployment owing to the arrangements in force when the Labour Government took office." The political correspondent of the *Times*, on Wednesday, went further, and made a statement—the authority for which was not given, but which, *prima facie*, would appear to have emanated from official sources—to the effect that the present total includes about 30,000 persons who came on the live register owing to a change of regulations in February, a further 30,000 because those working on short time are now included, and another 70,000 as a result of the admitting to benefit of new classes under an Act passed in August last. We have on earlier occasions found it necessary to point out the pitfalls prepared for outside observers by the continual shifting of the basis on which the official unemployment figures rest. From the beginning of July the weekly totals have shown a steady increase from 1,009,000 to 1,092,000 early in August and 1,216,000 on October 6th. In other words, the apparent increase has amounted to 207,000 since the

beginning of June, or 124,000 since the middle of August. The apparently heavy increase in the last two months has been put down in some quarters to the repeal of the McKenna duties. Leaving out of account the short-time factor, however, it is obvious that if allowance is made for about 70,000 persons brought in as a result of new legislation, the rate of increase has, as a matter of fact, slowed down appreciably as compared with the summer months. An authoritative statement by the Ministry of Labour as to the exact figures involved would be very welcome.

The Iraq Boundary Dispute.—The danger of an armed conflict between British and Turkish forces on the Iraq frontier, which was imminent at the end of last week, has happily been removed by the agreement of both Governments to seek a further ruling from the Council of the League of Nations as to what *status quo* is to be observed pending a final settlement. In accepting this Turkish proposal, the British Government have made a concession, for, pending the new decision which the Council has been asked to give, the present *status quo* is to continue—that is, the territory occupied by the Turks as a result of their recent military advance is to remain provisionally in their hands. This concession is obviously statesmanlike, however, since the *status quo* line, wherever exactly it may be drawn, is itself no more than a provisional demarcation during the inquiry which the Council instituted by its decision of September 30th, and the results of which the Turkish as well as the British plenipotentiaries at Geneva agreed to accept in advance. This common agreement to accept the Council's verdict on the principal issue was the key to a peaceful solution of the controversy, and either party would have been gravely to blame if it had precipitated a conflict in order to gain a transient advantage on a secondary matter. The British Government, by its concession, have avoided placing themselves in this position, whereas the Turkish Government, by ordering their troops to advance beyond their previous lines while the whole question was *sub judice*, have laid themselves open (as is realised by the weightier organs of the Constantinople Press) to the imputation of levity and rashness, even if their interpretation of the *status quo* were eventually to be upheld by the Council's legal advisers. The principal issue—that is, the determination of the line along which the permanent frontier between Turkey and Iraq is to run—cannot be settled until the three neutral commissioners of the Council have had time to report; and meanwhile the Council has been asked by both parties to define the *status quo* which, at the Council's request, they respectively pledged themselves to observe on September 30th. Ismet Pasha, in a note which the Council received from him last Monday, contends that the *status quo* which was referred to on September 30th means the actual situation on that date, when the Turkish troops, as a result of their recent advance, had arrived at their present positions. The British Government, on the other hand, interpret the *status quo* as that which prevailed on July 24, 1923, when the Lausanne Treaty was signed. It will be remembered that, in Article 3 of the Treaty (which provided for the reference of the boundary dispute to the Council of the League, failing direct agreement between the two parties within a certain period), it was laid down that, "pending the decision to be reached on the subject of the frontier, no military or other movement shall take place which might modify in any way the present state of the territories of which the final fate will depend upon that decision." There is no doubt that this was the *status quo* which the British Government had in mind when it accepted the Council's decision on September 30th, for Lord Parmoor referred verbally to Article 3 of the Lausanne Treaty on that occasion. Since the Turks interpret the decision otherwise, it remains to be seen what view the Council takes of the matter. Meanwhile, it must be repeated that the British Government have shown themselves wise, and the Turkish Government unwise, in the attitude which they have taken up respectively on this minor and temporary matter pending the settlement of the larger issue of the definite frontier.

Overseas Trade in September.—At first sight the September trade returns look rather discouraging, for as compared with September, 1923, imports are nearly £18 millions higher and little over a million less than in August of this year, although as a rule there is seasonal decline in imports at this period of the year. At the same time British exports are half a million below the figure for September last year, and £3 millions less than they were a month ago. The decline in British exports which is entirely due to the coal and iron and steel trades, is offset by an increase of £1½ millions in re-exports, but the excess of imports at £28 is nearly £17 millions higher than at this time last year. The figures for September and first nine months are set out below :—

MONTH OF SEPTEMBER.

	1923.	1924.	Increase or Decrease in September, 1924.	
	£	£	£	%
Imports	83,171,920	100,895,230	+ 17,723,310	+ 21.4
British exports	63,836,144	63,282,876	- 553,268	- 0.9
Re-exports	8,110,443	9,565,535	+ 1,455,092	+ 17.9
Total exports	71,946,587	72,848,411	+ 901,824	+ 1.3
Excess of imports over total exports	11,225,333	28,046,819	+ 16,821,486	+ 150.1

FIRST NINE MONTHS.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	787,091,155	909,355,367	+ 122,264,212	+ 15.5
British exports	566,122,381	589,319,261	+ 23,196,880	+ 4.1
Re-exports	86,857,891	102,838,324	+ 15,980,433	+ 18.4
Total exports	652,980,272	692,157,585	+ 39,177,313	+ 6.0
Excess of imports over total exports	134,110,883	217,197,782	+ 83,086,899	+ 61.9

The advance in imports, however, is to a considerable extent a matter of higher prices. Grain and flour imports, for example, are 2 million cwt. higher at 18,316,300 cwt., but the value has increased from £7,836,600 to £10,702,200. Similarly raw wool imports increased by less than 30 per cent. in quantity, but by 136 per cent. in value. Food imports account for an increase of nearly £8 millions, raw materials for an increase of £3¼ millions, and manufactured goods for an increase of over £6 millions, practically the only items on the import side to show decreases being rubber and tobacco, rubber imports falling from 266,500 cwt. to 100 lbs in September last year to 127,900 cwt. last month, while the value thereof dropped from £1,641,100 to £659,700. On the export side coal accounts for a decline of over £2 millions, while coke and manufactured fuel is down by £583,400, and iron and steel and manufactures thereof by £872,500. There are also declines of half a million in woollen and worsted goods and in chemicals and dyes. Cotton manufactures, however, show an increase of £1¼ millions, and exports of fish show an improvement of half a million. The increase in re-exports is accounted for mainly by raw cotton, hides and skins and tin. Quantity figures for the first nine months of the last three years, in the case of some of the leading import and export groups, are shown below :—

NINE MONTHS ENDED SEPTEMBER 30.

	1922.	1923.	1924.
IMPORTS.			
Wheat	72,845,997	75,988,014	87,059,156
Raw cotton	9,153,995	6,193,962	6,282,781
Sheep's and lamb's wool	9,155,567	7,052,915	9,012,663
Iron ore	2,460,387	4,538,254	4,717,688
Iron and steel manufactures ..	597,336	1,010,833	1,753,659
Motor spirit	246,762	249,242	323,290
EXPORTS.			
Coal	45,476,573	59,472,942	46,792,096
Iron and steel manufactures ..	2,340,832	3,181,175	2,929,162
Machinery	282,483	320,953	337,923
Cotton yarn	158,364	104,530	123,320
Cotton piece goods	3,068,279	3,097,217	3,341,389
Woollen tissues	89,896	111,694	126,246

The pronounced decline in coal exports is accounted for by the Ruhr occupation last year, and it will be observed that the total for the nine months of 1924 is in excess of that of the same period of 1922. Iron and steel and

manufactures thereof have declined on the export side, but show a substantial increase in imports; in the case of the latter, Belgium, of the few countries shown in the monthly returns, is the most prominent. The import and export figures for each separate group are set out on a later page.

Iron, Steel, and Coal Output.—The figures just issued by the National Federation of Iron and Steel Manufacturers show no improvement as yet in the condition of the iron and steel industry. Pig-iron production in September declined by 19,700 tons to 569,200 tons, and while steel production rose from 527,500 tons in August to 645,000 tons in September, it must be remembered that the August figure was exceptionally low, owing to the holidays. The number of furnaces in blast at the end of September (170) was three fewer than at the end of August. Furnaces active have now been steadily declining since May, 1923, when they numbered 223. Part of the explanation of the falling production lies in the decline of the export trade, for exports in September amounted to only 263,800 tons, compared with 301,100 tons in August; this is the lowest figure reached since 1922. Of the total exports, 52,000 tons were galvanised sheets, 42,500 tons tin plates and sheets, and 35,400 tons pig-iron and ferro alloys. Imports, on the other hand, rose from 173,700 tons in August to 207,200 tons in September. Imports are now at a higher rate than before the war. The only consolation that can be derived from the high figure of imports lies in the fact that the greater proportion of the material is in semi-finished form, which is further worked up in this country. The September imports included, for instance, 52,900 tons of billets, blooms, and slabs, and 33,600 tons of sheets and tin-plate bars. The output of coal in the four weeks ending September 27th averaged 5,107,000 tons per week, compared with an average of 5,195,000 tons per week in the three weeks of August not affected by the holidays. Exports of coal amounted to 5,098,400 tons, or slightly more than in August, of which 1,154,900 tons went to France, 580,100 tons to Italy, 468,600 tons to Germany, 351,200 tons to Denmark, and 334,100 tons to Sweden. Exports of metallurgical coke amounted to 179,000 tons, compared with 163,900 tons in August.

Stock Exchange Views of the German Loan.—A Stock Exchange correspondent writes:—In the few days that elapse before the Stock Exchange market will start in the new German scrip, it may be of interest, possibly of service, to set out some of the arguments which have been debated, and very hotly debated, on the floor of the Stock Exchange, in connection with the issue of the loan. There are many brokers who have received from their clients strings of orders, mostly to buy, in the scrip when dealings shall begin. It is expected that the opening price will be about 30s premium, though the quotation will be governed largely by the extent to which the stags have entered the issue, and the avidity which they may exhibit to snatch a small profit. In the first place, the political economist looks ahead, and in doing so regards this German Loan as a valuable contribution to the solution of the problems which vex the question of Peace settlements. As a prop to the peace of Europe, an encouragement to international trade, with a consequent quickening of employment at home, and a stirring of industrial channels in many directions, the loan is held to be an operation of practical value. The financier, taking a more circumscribed view, maintains that it is cheap, inasmuch as Germany has now escaped from four of her most pressing liabilities, to wit, the Army, the Navy, internal mortgages, and the interest (save in worthless marks) upon her internal loans, while the security for the issue consists in an excellent system of railways and the industry of 65 million people. The speculator points out that Germany has certainly cheated and hoodwinked her creditors in the past, notably over what he describes as the deliberate depreciation in the mark, but, as the bonds pay 7½ per cent. on the money, and as Germany can be counted upon to pay so long as it pays her to pay, the high yield offered by this national loan compensates for the risk involved in subscribing to it. The rush on the part of the New York investor is referred to as showing what appreciation the loan attracts

from people who are farther removed from the scene of the war, and who have not suffered to the same extent as the other Allies. On the other hand, sentiment plays a principal part in arousing a bitter feeling of opposition to the loan. People who have lost sons, partners, brothers, friends, have raised protests against lending money to the enemy by whom their relations and others were slain, but if it be asserted that sentiment plays a part in finance, the experience of the past week in connection with the German loan will show that this theory is not tenable. Nevertheless, a Stock Exchange man who lost his only son in the war justified an application for the German loan on the ground that, having but a modest amount of money, he was obliged to take advantage of any opportunity for making more that might come his way. And there are yet others who admit quite candidly that, though there were a certain profit to be obtained through subscription to the loan, or by purchase of the stock when dealings commence, they would refuse to touch that profit, owing to the feeling that still remains as an aftermath of the war. The *Economist* is no place for the ventilation of sentimental considerations, but these, as well as purely financial factors, are bound to weigh upon the future of the loan, and its popularity in the market. Time has a wonderful way of dealing with wounds, and, regarded from the merely prosaic standpoint, the loan at its issue price will appeal as being cheap to those who subscribe with a clear appreciation of the risks that unknown political developments attach to it.

The Chinese Civil War.—Rapid changes have taken place this week in the situation in China. The sudden collapse of the Chekiang army and the flight to Japan of Lu Yung Hsiang, its general, have been followed by the defection of a division of the victorious Kiangsu army, and by preparations to resist the advance into Chekiang of the Fu-kien troops. Negotiations, however, are reported between the leaders, which will probably result in the suspension of hostilities by some sort of compromise which will leave the forces of Wu Pei-Fu free to resist the advance of Chang tso-lin on Peking. The latter's troops are still held back at Shanhaikwan, and are attempting to make their way through the mountainous country further west; but complications may arise if the necessities of either belligerent should lead to interference with the rights of the numerous Japanese settlers in Manchuria. A Japanese Note to Chang tso-lin and the Peking Government, while affirming Japanese neutrality, has intimated that these rights must be respected; and it is possible also that the cession by Chang tso-lin of the Chinese Eastern Railway to Russian control may involve Japan in controversy with Soviet Russia. But the Japanese Government is not likely to injure its own interests or those of its allies by taking any steps tending to defer a return to peace in China. War material, indeed, is coming to Chang tso-lin from French sources, apparently with the connivance of the Japanese officials at Dalny, and in contravention of the arms embargo of 1919; but, on the whole, the outlook is more hopeful. The serious fighting in Canton between the Merchants' Volunteers and the Labour Party, the latter probably organised by Bolshevik emissaries, and between the Volunteers and Sun Yat-Sen's forces, has terminated in the defeat of his opponents, but his hold on Canton is evidently shaken, independently of the advance of the forces of Chen Chiung-Ming, his former adherent and present rival. With Sun Yat-Sen overthrown and peace secured in the Shanghai region, lately the seat of war, the way would be open for a definite defeat of Chang tso-lin and the restoration of peace in the Chinese Republic.

"Sheltered" and "Unsheltered" Wages.—Reference was recently made in our columns to the disparity of wages in various industries. From time to time, however, striking examples come to light of differences in the rates of wages of workers engaged in one particular occupation in the same district, but employed by different authorities. A recent instance is contained in an award issued by the Industrial Court on the question of the wages of engineers employed by the

London County Council. In 1922 the bonus paid to men in the general engineering industry was reduced, by three equal instalments, from 26s 6d to 10s a week. The men employed as engineers by the London County Council, however, have had two of the instalments restored, and are thus receiving 11s a week more than those in precisely similar occupations in the outside industry in which the employers find it impracticable, under present conditions, to grant any increase in wages. Within the last few months the engineers employed at Woolwich and in other Government establishments, who also suffered a reduction of 16s 6d a week in 1922, have been granted advances of 6s in the case of skilled men and 5s in the case of semi-skilled men and labourers. Another example of disparity is found in the railway workshops, where the engineers are receiving a bonus of 16s 6d a week, or 6s 6d more than men in the employment of engineering firms. As distinct from these cases of rates of wages in excess of those prevailing in the engineering industry generally, we find the engineers in the Rotherham steelworks on strike to enforce the observance of the rate of the engineering district rate. These examples illustrate the fact that when, as in these cases, it is possible to eliminate factors, such as the relative strength of trade unions and the relative skill of typical classes of workers in one trade as compared with another, the degree of "shelter" enjoyed by particular groups of workers continues to be an important factor in the payment of wages. Variations in wage levels arise, in some cases, solely from the condition that the ability of the employer to pay is limited by the operations of the market in which he is a competitor, while in others the employer is not subject to competition, and is therefore able to pay wage rates more in conformity with the amounts required to maintain the pre-war standard of living.

Discounts and Advances.—Although the inclusion of Treasury bills with bills discounted in bank balance-sheets tends to obscure the movements in commercial bills, a correspondent suggests that a distinct change in the method of financing business has been in progress since the war. "The tendency has been for manufacturers and merchants to arrange their finances rather by advances than by bills of exchange, with the result that the latter have become a less reliable indication than formerly of the amount of business in progress." Advances are not such a clean and compact form of finance as bills, but they have the advantage for the borrower of giving somewhat greater freedom of action. From the banking point of view advances offer a better interest return than bills. The usual charge for an advance is 1 per cent. over Bank rate, as against, say, 4 per cent. for a commercial bill. On the other hand, an advance which may be subject to renewal is less liquid than a fine bill, and represents a less favourable reserve for the bank. A certain proportion of banking advances are, of course, renewed as a matter of policy. The trade slump has made it impossible, or at any rate inexpedient, to call them in. The shrinkage in the volume of bills was specially noted earlier in the year by the chairmen of the Indian banks. It is now largely the custom of merchants in India to draw against their shipments by telegraphic transfers rather than by bills of exchange. Conditions are rather different from those existing in this country, as the telegraphic transfer, which is an immediate operation, avoids the risk of loss through fluctuation of the rupee. The tendency to replace bills by some other form of the transfer of funds is, however, interesting as an illustration of prevailing tendencies.

High-Priced Colonials.—Colonial and Corporation stocks, which ordinarily fall into the list of securities available for trustee investments, become automatically removed (for the purposes of new buyers) from such a group when the prices of the stocks go over par in such cases as those in which the loans have less than fifteen years to run. It is a moot point whether or not the prospective buyer may take into account the interest accumulated in the price. For instance, some people argue that it is permissible for trustees to buy a 5 per cent. stock standing

at 102 if the purchase is effected three months after an interest payment has been made. In strict trusts, it is generally held that trustees cannot be blamed for refusing to take any risks whatever in the matter of investments which they are called upon to make. A number of Colonial trustee stocks are now no longer eligible for present buyers, owing to the prices at which the securities stand, and a brief list of some of the stocks which fall into this category may be of service. The quotations will possibly appeal to certain of the present stockholders as being sufficiently tempting for them, the proprietors, to take advantage of the current levels. At the same time, there are many investors, not bound by trust clauses, to whom an immediately good rate of interest from gilt-edged stock outweighs the disadvantage of the practical certainty that redemption at par will be effected at the earlier of the dates when two are given. This list illustrates the Colonial stocks which are on offer in the market at the present time, but which also can be sold with equal readiness if the holders consider it judicious to realise:—

Description.	Dividends Due.	Redemption Date.	Latest Price.	Yield.	With Redemption.
New South Wales 6½%	1 F. & A.	1930-40	107	£ s d 6 1 6	£ s d 5 4 0
Do 6%	1 M. & N.	1930-40	103	5 16 6	5 5 0
New Zealand 6%	1 F. & A.	1936-51	110	5 9 0	4 18 0
Nigeria 6%	15 A. & O.	1936-46	107	5 12 0	5 3 0
South Australia 6½%	1 F. & A.	1930-40	107	6 1 6	5 4 0
Do 6%	1 M. & S.	1930-40	104	5 15 0	5 2 6
Str. Settlements 6%	1 J. & D.	1936-51	109	5 12 0	5 2 6
Tasmania 6½%	1 F. & A.	1930-40	107	6 1 6	5 4 0
Union of S. Africa 6%	1 M. & N.	1930-40	104	5 14 6	5 2 6

The standard of yield on gilt-edged stocks at the present time is reasonably gauged by the 3½ per cent. Conversion Loan, which stands at 77½ and pays 4½ per cent. on the money. The newer 4½ per cent. conversion stock can be bought at 98, giving 4½ per cent. on the money. The yield on the 5 per cent. War Loan, allowing for accrued interest, is 5 per cent., and on Consols, which is always regarded as an irredeemable stock the return at the present price comes to 4½ per cent.

Agricultural Adversity and Diversity.—More than three years have passed, writes an agricultural correspondent, since the repeal of the Agricultural Act decisively started farmers—according to their own account—on the road to ruin. Notwithstanding the distribution of some £18,000,000 from the Exchequer as a solatium, it is quite true that many occupiers of farms who had unwisely bought their holdings were very badly hit by that ill-fated experiment in agricultural legislation. In some cases, no doubt, they were financially shipwrecked, and escaped with but little salvage from the wreck. For that class there was, in fact, little hope of substantial relief. They were the victims of untoward circumstances and misplaced hopes. And for many of those others, who had not crippled themselves by the purchase of their farms at "boom" prices, the times have been very troublous. Almost everything they had to sell met with continuously falling markets. From 1920 to 1923 the index number of prices of agricultural produce fell from 292 to 157. It is true that the prices of fertilisers and feeding stuffs, as well as wages of labour, have fallen in an equal, or even greater, ratio, but the difficulty of making immediate adjustments of business to so rapid a shifting of price levels is probably more serious in farming than in any other industry. It may be, and indeed frequently is, said that the economic conditions which have troubled farmers have affected every other business, and in some cases even more disastrously. It is unfortunate that those who plead the farmers' cause often appear to overlook this fact, and to suggest that they are suffering from some special malignity of fate or some peculiar oppression by the State. A correspondent of the *Times*, for example, describing himself as "Farmer," has stated that "farmers are now struggling for their very existence—the lists of bankruptcies are sufficient proof." It is true that the number of bankruptcies

of farmers in 1922 was relatively high—403. In the "nineties" the average annual number was about the same. The increase of farmers' bankruptcies in 1922 as compared with 1921 was 40 per cent., while the increase for all other classes was 36 per cent. But even this relatively high figure represents only about 0.15 per cent. of the farmers in Great Britain. If this were a true measure of agricultural adversity, the general position could not be described as desperate. The use of this argument is a typical instance of the ill-considered statements which farmers think good enough to impress the public. In the business of farming, more than in any other, the large majority of those who "go under" do not actually pass through the bankruptcy court. Another common mistake is the failure to discriminate. The diversity of agriculture in this country is extraordinary and, for so small a territory, unique. To refer to British farming as a homogeneous industry is wholly misleading. In the first place, two-thirds of the agricultural holdings in England and Wales are small holdings, i.e., of not more than 50 acres. Little more than 3 per cent. (in exact figures 12,923) are above 300 acres. Of the small holdings, which number 273,530, a certain but unknown proportion are intensively cultivated as market gardens, but the vast majority are "one-man" holdings farmed by the occupier and his family, and employing little or no other labour. There is practically no economic affinity between the small holder and the large farmer, and conditions which may benefit one may be disastrous to the other. Even among the larger farmers there is great variety of interest. The grass-land farmer and the arable farmer have little in common. The barley-grower and the stockowner look with different eyes on the price of feeding barley and its free importation. The sorrows of the potato-grower leave the dairy farmer unmoved, and the man whose chief source of revenue is wheat finds small comfort in the fact that the price of milk keeps relatively high. In short, farming is not one industry, but a collection of industries. It follows that no scheme for helping agriculture can be effective or fair unless it is discriminating.

Loans for Public Works.—Local authorities were, as usual the largest borrowers under the Public Works Loan Act, 1875, during the financial year ended March 31st last. The annual report of the Board shows that the total amount of loans approved by the Commissioners out of the Local Loans Fund did not differ greatly at £10,177,113 from the total of £9,718,728 in the previous year. The amount actually advanced during the period was smaller. The Commissioners made 1,524 advances out of the fund, for sums of £6,569,486, compared with 1,816 advances, for £13,647,162. Of the total, £5,599,917 was advanced on the security of local rates and £969,569 on property. The amount granted during the year to local authorities was £3,903,816, of which over £3 millions has been granted since the passing of the Housing Act, 1923. The comparison is with £6,297,277 in the previous year. The amount actually advanced in this way was only £3,457,612, against £11,439,575, and the net decline of over £7 millions in the loans advanced was entirely accounted for by the falling off in advances under the Housing Acts. Loans under the Public Health Acts were higher by nearly a quarter of a million at just under £1½ millions. No loans were granted to private individuals for the erection of working-class dwellings, against £1,200 in the previous year. A lower interest rate prevailed on the loans made, the average being £4 15s 8d per cent., against £5 7s 2d per cent. in the previous year.

The Outlook in Peru.—President Leguia's Message to the new Congress, summarised in Tuesday's *Times*, gives a very hopeful account of the financial and economic conditions in the Peruvian Republic. It states that the Budget deficit has fallen in a year from £1,000,000 to £10,000; that the Post Office, under the management of the Marconi Company, is making a profit, that large railway extensions are being undertaken, that the irrigation works now in progress (under engineers from the United States) will reclaim 250,000 acres for cultivation,

that the port of Callao is to be improved, and that he is confident of a satisfactory settlement of the frontier dispute with Ecuador, and of that over the possession of Tacna and Arica with Chile; that the country is tranquil and the army loyal. Unofficial statistics recently published as to the increased production of cotton and minerals to some extent confirm the President's forecast, but his view of the economic position is regarded by well-informed British observers as unduly optimistic. His estimate of the deficit, in particular, is probably much too low; the revenue depends mainly on the prices of cotton and sugar, which are determined by causes outside Peru; the financial administration leaves something to be desired, for the service of the internal debt is apt to be somewhat behindhand, and that of the internal loans considerably more so; and, as a British official report pointed out last year, the prosperity of the country, and especially of the capital, depends largely on the expenditure of the Government. The wealth of the country is immense, and largely untouched, and the country needs foreign capital, and internal peace. President Leguia is confident that he can secure the latter, but the process may be costly, and it is too soon to regard its success as assured.

Uruguayan Railways.—The report for the year ended June 30th last of the Central Uruguay Railway Company of Monte Video, Limited, and of its three extension systems shows a substantial improvement in net profits, in spite of a slight increase in the ratio of expenditure to gross receipts. The results for the combined system for a number of years past are set out below:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
1912-13	£ 1,243,393	£ 669,008	£ 574,385	53.81
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87
1922-23	1,989,203	1,172,769	816,434	58.96
1923-24	2,102,656	1,252,765	849,891	59.58

A further expansion in goods and live stock traffic was mainly responsible for the increase of 5.70 per cent. in gross receipts. Expenditure is up by 6.82 per cent., but deducting charges not directly relating to actual railway operations, such as contributions to renewal funds, Pension Law, &c., the working expenditure shows an increase of only 6 per cent., which is not unsatisfactory in view of the increased traffic. Of the increase in direct expenditure, salaries and wages accounted for £31,500, fuel for £4,800, and general material for £12,900. The coal bill on the main line was reduced from £93,700 to £67,500, and the oil bill increased from £76,900 to £111,100. Coal consumption fell from 34,300 tons to 24,200 tons, while oil consumption increased from 21,800 tons to 35,400 tons. The tonnage of goods traffic handled on the combined system increased by 168,600 tons, or 23.56 per cent., the bulk of which was accounted for by wheat and maize, the tonnage of the former carried increasing by over 100 per cent. The separate figures for the main line and the three extensions read as follows:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
Central Uruguay	£ 1,471,174	£ 947,292	£ 523,882	64.39
Eastern Extension	317,350	146,122	171,228	46.04
Northern Extension	164,450	78,114	86,336	47.50
Western Extension	149,681	81,237	68,444	54.27

The expansion in net profits of the Eastern and Northern Extensions was 2.28 and 1.84 respectively, while those of the Western Extension rose by 16.01 per cent., gross receipts advancing by 7.97 per cent., and expenditure by only 2.01 per cent., the ratio dropping from 57.44 to 54.27 per cent. Owing to the depreciation of the Uruguayan

currency, exchange operations in remitting funds to England, at an average of 19 per cent. below par value, entailed a loss of £167,400, as against £155,600 in 1922-23. This has been written off against revenue. After paying fixed charges and the 5½ per cent. preference dividends, the main line accounts show a balance of £145,300, out of which £20,000 is transferred to general reserve and a dividend of 5 per cent., as against 4 per cent. a year ago, is paid on the ordinary stock, leaving £45,300, or £2,000 more, to be carried forward. The Eastern Extension pays a dividend of 8½ per cent., as against 7½ per cent. a year ago, and the Northern Extension 5½ per cent., against 5 per cent.

Bolckow, Vaughan's Report.—The fifty-ninth annual report of Bolckow, Vaughan is not a very happy statement of affairs. The profit for the year is shown as £84,677, and to this is added £150,000 transferred from income-tax reserve. From this is deducted certain losses and "special" depreciations amounting to £71,978. Interest on borrowed money absorbs £59,046, and debenture interest £140,000. A half-year's preference dividend to December 31, 1923, has been paid; this took £11,802. After bringing into the accounts £24,816 from the previous year, a debit balance of £23,332 is the net result. A summary of results since 1906 is appended:—

	Gross Profit.	Depreciation and Extension, &c.	Deb. Int. and Pref. Div.	Balance.	Written Off Cap. Expenditure.	Ordinary Div.	%
1906-7	£ 683,010	£ 135,734	£ 45,545	£ 501,731	£ 150,000	£ 274,630	10
1907-8	444,201	140,523	48,220	255,458	80,000	164,778	6
1908-9	322,035	173,740	51,311	96,984	nil	137,315	5
1909-10	390,485	135,317	55,477	199,691	nil	164,778	6
1910-11	403,664	173,472	56,618	173,574	nil	164,778	6
1911-12	318,821	159,887	56,119	102,815	nil	137,315	5
1912-13	642,235	161,850	54,568	425,817	160,000	274,630	10

1923-24	...	...	210,847	Dr 23,332	nil	nil	nil

* After allowing for War taxation.

The report should be carefully read by shareholders, especially as the directors have decided to call up the uncalled balance of 8s per share on the 1,860,900 ordinary shares. We are told that "Possibly a reduction in the book value of the investments as a whole would be desirable." It is stated that "a thorough reconstitution of the board and the appointment of a managing director have been discussed, and the directors are of opinion that steps in both these directions should be taken." The report finally adds that "the coal and steel industries are passing through a period of abnormal depression, and the company has endeavoured to meet these conditions by restricting its output. The works have been maintained in a thoroughly efficient manner, and the company is ready to cope successfully with an increased trade as soon as national and world conditions lead to a resumption of orders which would keep the works more fully employed. No period in the long history of the company—extending to nearly 60 years—has been so fraught with difficulties as the last three years. The company's experience is not singular, but is shared by many similar enterprises in this country. It can be confidently asserted, however, that your company's undertaking is well equipped, and fully able to take a prominent part in the obtaining of business and in the execution of orders, once a revival in trade is discernible." In view of the fact that directors and shareholders alike are fully alive to the necessity of minutely examining every item in the balance-sheet, we do not think any useful purpose would be served by criticising these figures.

United Steel Companies.—A slight improvement is noticeable in the revenue for the year ended June 30th of the United Steel Companies, Limited. The report is not a document which will convey much comfort to shareholders, the directors again recommending "that the resources of the company should not be depleted by the distribution of any dividends." It is stated that "since

the close of the company's financial year, the conditions affecting the steel trade of the country generally have been more unsatisfactory, foreign competition in particular having increased considerably." Two of the company's largest works in the middle of August were brought to a standstill by a strike which, on October 11th, had not been settled. A comparison of results for the past six years is set out below:—

	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Gross revenue.....	£1,164,585	£930,521	£711,146	£388,034	£504,633	£530,301
Administration expenses and income-tax	48,133	38,007	81,485	..	156,601	159,792
Interest	209,820	146,853	146,254	148,026	156,601	159,792
Net profit	906,632	745,661	483,407	240,008	348,032	370,509
Brought forward	..	64,674	80,381	308,293	440,743	666,149
Reserve and written off	906,632	810,335	563,788	548,301	788,775	1,036,658
Preference dividend.....	41,822	119,369	32,021	79,890	122,626	133,577
Ordinary dividend	79,024	79,051	55,336	27,668	..	..
Carried forward	721,112	507,042	168,138	..	..	..
	(10%)	(10%)	(3%)	(5%)	(10%)	(10%)
	64,674	104,873	308,293	440,743	666,149	903,081

The balance-sheet (fully analysed in another column) of this combination of companies is one to which we have previously drawn attention. Assets are just over £16½ millions, of which nearly £6½ millions consist of shares in associated companies, while advances of over £2½ millions have been made to associated concerns. The directors in their report do not suggest that there is any high capitalisation of the combine, which was formed at a time of swollen values. It is, however, very desirable that assets should be carefully examined with a view to reassuring shareholders.

Aramayo.—Our mining correspondent writes:—In the early part of this week the shares of the Aramayo Mines in Bolivia Company were marked up by 15s to £4 15s-£5 on the proposal to issue to the shareholders two bonus shares in respect of every five held. The announcement explained that this measure had been decided upon "in consequence of the acquisition of the new mining properties in Bolivia and the general development of the company," and that the amount involved—6,000,000—will be charged against the profit and loss. It may be recalled that the report for 1923 showed a surplus of 11,963,100f, after providing for the bonus of 15 per cent., which brought the distributions in respect of that year up to a total of 35 per cent. Of this surplus, 2,774,300f was represented by the new properties and about 1,000,000f by the balance of exchange account, which during the year had been very substantially reduced owing to the appreciation in the Bolivian exchange. The proposed increase in the capital will, of course, neither provide the company with any extra resources nor enlarge the interest of the respective shareholders. It is a book-keeping transaction which far from warrants the addition which has been made to the market value of the undertaking. On the basis of the past two years' results, the company would pay 22½ per cent. on the expanded capital. When the value of the "rights" has been deducted from the shares, the market quotation will presumably stand at something like £3 10s. On these factors the prospective yield indicated is about 6½ per cent. The conclusion is that—barring the possibility of an appreciable expansion in the earnings—holders of shares would probably find it advantageous to secure the present enhanced price.

Transvaal Gold Output.—The production of gold from the mines of the Transvaal in September was 799,422 fine ounces, which compares with 809,571 ounces in August, and 739,504 ounces in September, 1923. The following table gives the output for each month since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January..	714,182	676,059	670,503	651,593	639,728	764,469	796,768
February..	659,759	636,728	625,330	558,137	704,970	704,970	760,617
March ..	696,281	712,379	707,036	671,123	761,586	761,586	796,871
April	717,000	694,944	686,979	681,382	743,651	743,651	768,923
May	741,317	724,995	699,041	687,776	629,786	786,564	809,003
June	727,696	702,379	715,957	678,490	675,697	755,309	773,053
July	736,199	725,497	735,099	699,555	730,635	754,306	829,437
August ..	740,210	706,669	702,083	711,526	752,490	769,371	809,571
September	708,206	696,558	684,173	691,026	747,069	739,504	799,422
Total (9 months)	6,440,850	6,278,208	6,225,201	6,020,608	4,686,763	6,779,730	7,142,465
October ..	679,764	723,723	662,472	707,825	778,159	793,942	..
November	658,701	677,970	633,737	704,236	764,476	780,639	..
December	641,245	660,191	632,215	681,947	790,712	776,849	..
Total (12 months)	8,420,500	8,330,091	8,153,825	8,114,516	7,020,110	9,133,060	..

In the table below are given the numbers of natives employed at the end of each of the past eight months by members of the Witwatersrand Native Labour Association and Contractors:—

	Feb., 1924.	Mar., 1924.	Apr., 1924.	May, 1924.	June, 1924.	July, 1924.	Aug., 1924.	Sept., 1924.
Gold mines	182,055	176,483	173,022	172,586	174,198	174,347	175,770	177,406
Coal mines	15,958	15,763	15,800	15,863	16,042	15,674	15,486	15,458
Diamond	3,419	3,170	2,762	2,863	2,999	3,155	3,025	2,362
	201,432	195,416	191,584	191,312	193,239	193,076	194,281	195,226

The number of natives employed at the gold mines continues to increase.

THE Board of Trade have appointed a committee to consider and report on what steps can be taken to bring about the growing of flax seed and flax in the United Kingdom on a commercial scale. The secretary to the committee, to whom all communications should be addressed, is Captain S. E. J. Brady, M.B.E., Board of Trade, Great George-street, London, S.W. 1.

THE University of London announces that Mr Henry Higgs will deliver a course of six public lectures on "The British Budget," at University College, on Wednesdays, at 8, beginning October 22. The lecturer will deal with the preparation and execution of the Budget, and the various factors controlling it. The lectures are open to the public without fee or ticket. A syllabus can be obtained on application, enclosing a stamped addressed envelope, to the Secretary, University College, London, W.C. 1.

Oversea Correspondence.

UNITED STATES.—AMERICAN BANKERS CONVENTION—COMMODITIES STILL ADVANCING—AUTOMOBILE PRODUCTION—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 7.

MANY important and timely matters were discussed and acted upon by the American Bankers' Association at its fiftieth annual convention in Chicago last week, which was attended by a larger number of the members of that representative organisation than ever before. At the opening session outstanding features were the congratulatory message from President Coolidge and the annual address of Walter W. Head, president of the association. The latter noted as distinctly encouraging features at present the promise of renewed agricultural prosperity for the current year, and the tendency toward political, economic, and social stability in Europe. He called attention to the increasing financial burden of government in late years, at the same time pointing out that State and local taxes have increased at an even greater rate.

As usual, the various resolutions adopted by the association were characterised by conservatism. Briefly summarised, the more important resolutions, after calling attention to the fact that financial conditions throughout the United States are exceptionally strong, declared that the time had arrived for a thoroughgoing return to a free play of private enterprise and private initiative under unhampered competitive conditions, and that Government influence and political interference in business should be reduced to a minimum. Hope was expressed that the Government would participate officially in some of the conferences which will shape the course of commercial affairs of the world for decades. Such participation the association considered necessary for the protection of America's future markets and for the protection of American investors. In this connection, the belief was expressed that American financial interests should adopt a favourable attitude toward such loans as the international loan to Germany. The American Bankers' Association, in one of the resolutions adopted, took the position that there was no more justification for Government paternalism for the farmers than for any other class; it approved, however, efforts to bring about the orderly marketing of crops.

Other resolutions recommended that changes in and development of the Federal Reserve system should be committed to experts friendly to the system. The association advocated further tax revision along scientific lines, deprecated the unwarranted attempts to nationalise the railroads, and deplored the heavy burdens imposed upon them by continuous investigations and legislative interference. The fact that industrial conditions have become more stabilised than they were was noted with much satisfaction, but the belief was expressed that in certain industries liquidation of wages corresponding to that which has occurred in many lines must take place before business is again on an even keel.

After some discussion the Bankers' Association, in a rather perfunctory manner, adopted the report of its executive council, which endorsed the so-called McFadden Bill submitted to Congress, but objected to the branch banking provisions of that measure as it now stands. Modifications were urged to the effect that branch banking be allowed within cities located in States which now give this privilege to their own banks; that no permission be granted for State-wide branch banking by national banks; and that no further extension of city branch banking be allowed, even in the event that such banking shall be permitted in States that do not now allow it, but may hereafter permit it through the enactment of new laws. The resolution recommending these changes was not adopted unanimously, and it is evident that many members are not satisfied with the proposed modifications which country bankers especially seem to regard as merely nominal concessions to them in the form of future restriction. They appear to be sceptical about such "soothing" proposals, which they fear will not protect them sufficiently from efforts in Congress to broaden the branch banking powers. Present indications are that a bitter controversy will develop when this subject again comes before Congress. Meanwhile, a campaign of education is planned, the results of which cannot be foretold.

Offerings of new securities by domestic corporations—public utility, industrial, and railroad—and to some extent by foreign, mostly European, interests continue to pour into the American investment market in enormous volume, and are still absorbed not only readily but, in practically all cases, rapidly. The recent issue of \$50,000,000 Pennsylvania Railroad 40-year 5 per cent. secured gold bonds, priced to investors at 98½ per cent. and accrued interest to date of delivery, to yield approximately 5.10 per cent. to maturity, is a further striking illustration of the remarkable and undiminished absorptive power of the market. This offering was over-subscribed before the subscription list was opened. As in numerous other instances, the subscription books were opened but immediately closed. One of the latest foreign flotations here is that of the Nord Railway Company of France. An underwriting syndicate, consisting of J. P. Morgan and Co., the Guaranty Company, the Bankers' Trust Company, and Harris, Forbes, and Co., are offering \$15,000,000 of the Nord company's 6½ per cent. bonds, due October 1, 1950, at 88½ to yield 7.50 per cent.

For the third month in succession the average of commodity prices in this country during September showed an advance, and by a singular coincidence the percentage of gain was identical with that recorded for August. Bradstreet's index number, as of October 1st, was \$12.9987, which represented a rise of 1.4 per cent. over September 1, and followed upturns in August and July of 1.4 and 3.2 per cent. respectively. Of the thirteen groups of commodities used in the compilation, eight advanced last month, including substantial gains in provisions and textiles and smaller advances in breadstuffs, hides and leather, live stock, coal and coke, and chemicals. The five groups showing declines were fruits, metals, oils, naval stores, and building materials. Thirty-four products rose, while 24 declined, and 48 remained unchanged. From this year's low point, reached on July 1st, the October 1st index showed an advance of 6.3 per cent., but the gain over October 1 of last year was less than 1 per cent. The drop from the high point of 1923 touched on April 1 was 6.7 per cent., while the upturn from the low level of 1921 on June 1 was 22.4 per cent. As compared with the peak for all time—namely, that reached on February 1, 1920—the latest index number represented

a decline of 37.7 per cent., but it was 49 per cent. above the August 1, 1914, level.

Returns for August show the second successive monthly increase in the total production of automobiles and trucks from the low point reached last June. The output of automobiles reached 251,631 cars, as against 237,668 in July and 217,935 in June, while 27,484 auto trucks were produced, as compared with 25,235 in July and 27,882 in June. These figures, reported by the Department of Commerce, reveal a gain in the production of all such vehicles during August of 6.4 per cent. over July, and of nearly 13 per cent. over June, although the August total was 19 per cent. below that of August, 1923. For the eight months of this year the total output of passenger cars and trucks amounted to 2,540,180, as compared with 2,704,541 for the corresponding period of 1923 and 1,674,094 in 1922, representing a decrease of 6 per cent. from last year, but an increase of 51.7 over the first eight months of 1922.

There has been a seasonal increase lately in coal production in this country. For the week ended September 13th the output of soft coal reached 9,531,000 tons, according to the Geological Survey, representing a gain of 20 per cent. over the Labour Day week, and of 27 per cent. over the first week of August. During the first 217 days of this calendar year, 312,102,000 net tons of soft coal were produced, as compared with a total of 388,212,000 tons for 1923. Production of anthracite has also increased sharply. For the week ending September 13th, it totalled 1,820,000 tons, or 25 per cent. more than in the preceding week. In the Labour Day week of 1923, it will be recalled, labour troubles seriously curtailed the output, while at that time in 1922 production was below normal, although the general strike of that year had been terminated. The present production of anthracite is about at the same rate as in 1921.

FRANCE.—BUDGET AND CIVIL SERVICE PAY—WHEAT REQUIREMENTS—REVENUE—FOREIGN TRADE—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, October 15.

It is now considered probable that the Chambers will re-assemble on either November 4th or 11th, consequently Ministers and the Finance Commissions of both Houses are extremely busy threshing out the details of the various departmental estimates on which the Budget for 1925, which will form the *pièce de résistance* of the autumn session, will be based. Rumour insists that the work of preparing the Budget is proceeding more slowly than had been hoped for.

The problem set before the Herriot Ministry, which came into power hopelessly pledged to reduce taxation, is to devise some means of accommodating the proverbial quart (of expenditure) in the traditional pint pot (of revenue), and so far as can be gathered the means is yet to seek. The task has been rendered all the more difficult by the dogged determination of the entire French civil service—strong in their newly conferred right to form themselves into trade unions and to adopt syndicalist methods—to extract increases of pay from their employer, the Government, which will mean an increase of the estimated expenditure under this head, during the coming year, of between 3,000 and 4,000 million francs, instead of the 700 millions which the Government anticipated having to furnish. That the civil servants are in earnest in their demand was proved by the fact that last Thursday evening, when the hour for ceasing work came, practically the whole of the superior clerks and heads of departments at the Ministry of Finance itself, held a mass meeting in the large hall outside M. Clementel's own cabinet, and passed resolutions which a representative deputation immediately laid before their chief.

The Government propose to fix the new base salary at 5,800f, and to reduce the increased cost to the country by cutting down the number of public officials of all classes by 20,000. M. Poincaré, it may be remembered, stated some two years ago that substantial economies were to be effected by reducing the number of civil servants by 50,000, and subsequently by another 15,000. As a matter of fact, although the last two Budgets were largely based on these

factors, no civil service post has yet been suppressed, nor apparently is it likely to be.

Revised estimates of the wheat harvest have now been published in the *Journal Officiel*, which indicate that this country will have to purchase much less foreign-grown corn to meet her requirements during the coming year than had been expected. The Minister of Agriculture, basing his calculations on the threshing work already done, estimates that the yield from the 5,427,730 hectares under wheat this year will prove to have been 76,839,890 quintals, while the crop of maslin (two-thirds wheat and one-third rye) is estimated at 1,302,160 quintals, and of rye at 10,128,600 quintals. If these calculations prove correct, it appears that the amount of foreign wheat that will have to be purchased will not be greater than last year.

The revenue, after the slight falling off in August, due to exceptional circumstances, of which the holiday period was one, is again coming in with gratifying volume, the total receipts from all sources during September having been 2,015,527,000f, as compared with 1,788½ millions in August, 2,529½ millions in July, 2,122 millions in June, and 1,968½ millions in May. Revenue from normal and permanent resources during September totalled 1,920,434,600f, the difference of 95,092,600f having been drawn from exceptional revenue (of which 53,958,000f was derived from overdue payments of the now expired special tax on war profits). The total revenue for the first nine months of the year from normal and permanent sources has amounted to 17,791,019,100f, as compared with 14,136,658,400f during the corresponding period of 1923, an increase of 3,654,360,700f. The difference, roughly speaking, represents the 20 per cent. increase in taxation (the *double décime*) imposed by the Finance Act, which came into operation last spring. Indirect taxes and State monopolies during September yielded a total of 1,498,716,000f, or 153,007,700f more than had been expected, according to Budget Estimates. Revenue from these sources during the first nine months of the year has amounted to 14,368,402,500f, or practically 15 per cent. more than was expected when the Budget Estimates were drawn up. The tax on turnover during September yielded nearly 323 millions, or 15 per cent. more than was expected from it, and 25 per cent. more than it produced in September, 1923. Registration duties produced over 326½ millions during the month, or about 15 per cent. above the Estimates, and nearly 104 millions more than in the corresponding month of last year. Direct taxation yielded 394,185,800f in September, of which 365½ millions was derived from income-tax. Income-tax during the first nine months of 1924 has produced 3,075,706,000f, or 765 millions more than in September last year.

The foreign trade returns for September, which have been issued to-night, indicate that the depression of the past three months has apparently come to an end, and that business, so far as foreign exchanges of commodities are concerned, is again on the upward grade. Exports during September had a total value of 3,184,332,000f, or an increase of 217 millions over the previous month, while imports, which had a total value of 3,156,970,000f, registered an increase of 85 millions over those of August. The unfavourable balance of trade recorded in July and August disappeared in September, and was replaced by a surplus of exports amounting to 132 millions. The total value of exports and imports during the first nine months of the year, as compared with the corresponding period of 1923, are shown in the following table:—

	First Nine Months of		Increase in 1924.
	1923.	1924.	
	Francs.	Francs.	Francs.
Imports—			
Foodstuffs	5,222,335,000	6,573,290,000	+ 1,350,955,000
Raw materials	1,415,729,000	1,837,185,000	+ 4,219,906,000
Manufactured goods	3,141,347,000	3,691,070,000	+ 549,723,000
Total	225,209,961,000	29,201,545,000	+ 6,680,584,000
Exports—			
Foodstuffs	2,235,752,000	2,835,751,000	+ 599,999,000
Raw materials	6,547,273,000	7,758,497,000	+ 1,211,224,000
Manufactured goods	11,600,739,000	18,455,924,000	+ 6,855,185,000
Postal parcels	1,147,666,000	1,397,319,000	+ 249,653,000
Total	21,531,430,000	30,447,491,000	+ 8,916,061,000

The figures indicate that imports have increased by about 30 per cent., while exports have risen by 41½ per cent. The visible balance of exports over imports during the nine months has amounted to 1,245,946,000f, as compared with a surplus of imports during the corresponding period of last year totalling 989,531,000f. The comparative figures show a net balance in favour of this country of 2,235 million francs in respect of the two periods of nine months. In weight, exports during the past nine months have shown an increase of 3,627,232 tons, and imports of 2,341,799 tons, as compared with the corresponding period of 1923. Both imports and exports of raw materials increased substantially in September, as compared with the same month last year, but imports of foodstuffs were over 72,000 tons less.

The index figure of wholesale prices for September, which has now been issued by the *Statistique Générale*, represents a rise of nine points, and brings the situation, for all practical purposes, back to that of 1920, when prices reached their highest point in this country. The average index figure for 1920, calculated on the base of 100 as representing the mean of prices during the period 1901-1910, was 589, which corresponds approximately to 500, as calculated on the base of 100 in 1914, which is the method now adopted. The figure for September is 496, against 487 in August and 491 in July. Although the rise has been uniform for both foodstuffs and raw materials, vegetable foods have gone up 17 points and animal foods 17 points, while sugar, &c., is returned at 23 points lower. In raw materials, textiles have risen by no fewer than 32 points, while minerals and metals show a fall of 16. The index figure for retail prices in Paris at the end of September has simultaneously shown a further sharp rise, and is returned at 374, as against 366 for August and 360 for July, which was the lowest figure returned since the year began, the highest being in March, when 392 was returned. Retail prices in Paris may therefore be regarded as having been equivalent in September to an increase of 274 per cent. on those of 1914, as compared with 265 per cent. at the end of 1923.

GERMANY. — POLITICS — TARIFF — CURRENCY — PRICES — INDUSTRY — BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 14.

THE Reichstag, which reassembles on October 21st, will very likely confine itself to listening to a final Cabinet declaration and announcement of dissolution. Attempts, almost hopeless from the first, have been made during the past weeks to gather both Socialists and German-Nationals into a national Cabinet. These failed. The People's Party regards itself as bound by its promise to get the Nationals into the Cabinet at all costs, but the other two parties in the present Coalition, the Centre and the German-Democrats, have rejected this plan for a so-called Right bloc. The Centre, therefore, to-day unanimously voted for retention of the present minority Cabinet, and the Democrats take up the same attitude. The People's Party leaders declare that if the Right bloc cannot be created, the Reichstag must be dissolved and that the Cabinet must resign; and this solution at present seems the most likely. The success of the Reparations Loan is considered secure. Success will probably have a considerable effect upon the relations of international finance to German private business. The laws concerning the new bank, the private note bank, the Rentenmarks liquidation, and the coinage have been declared to be in force, and since October 12th the operation of the railways has been in the hands of the new "Reichsbahngesellschaft."

The discussion as to the tariff and the new commercial treaties continues. Trade journals protest against the conclusion of treaties for long terms, declaring that the treaties now being negotiated will inevitably be "in the spirit of Versailles," and that as commercial conditions in the world are in a state of transition, agreements concluded to-day may prove unprofitable under the different conditions of a few years hence. Official utterances continue to be in favour of a moderate tariff, and there have been more demonstrations from commercial and social quarters against high duties, and in particular against

the proposed restoration of the food duties. The director of commercial policy in the Ministry of Industry declares that the French law of 1919, adduced as a reason why most-favoured-nation treatment cannot be accorded to Germany, is the obstacle to an agreement with France. This official expresses disbelief in the possibility of framing a homogeneous policy by the Ally countries in the German Treaties question. "In the question of special treatment for Alsace-Lorraine," he adds, "negotiations will naturally be conducted with France concerning the position of industry in both countries. There can, however, be no question of favouring French industry by granting special treatment to the numerous (French) branch concerns founded in Alsace-Lorraine and the Saar district. . . . The programme of the German Government is not High-Protectionist." The official added, somewhat ambiguously, that the Government's aim is to progress from protective duties (*Schutz Zoll*) to a sort of Customs-Protection (*Zollschutz*), out of which, after alteration of the general political and economical situation, a system of Free Trade, in collaboration with other States, could be developed. In some quarters most-favoured-nation treatment on a basis of mutuality is being opposed on the ground that, since 1913, a great many countries have made themselves independent of German manufactures, which are the only goods worth mentioning that Germany can export; and that reciprocal most-favoured-nation treatment would mean letting foreign goods into Germany, while German manufactured goods would be excluded from foreign markets as a result of this new independence.

The new Reichsmark is now theoretically in existence under a decree of the 12th. The old Reichsmark (paper mark) notes remain legal tender for a term of three months after they have been called in, 1 billion old being equivalent to 1 new. The Vice-President of the Reichsbank, Herr von Glasenapp, has been replaced by Privy Councillor Kauffmann, a member of the Directorate since 1908, whose speciality has been exchange questions. The Reichsbank's return for October 7th shows a new increase of 16,746,000 gold marks in the gold reserve, of which all but 26,000 gold marks was acquired abroad. A small quantity of gold has of late been bought in Sweden; the rest, it seems, in New York. During the week discounts, loans, and investments declined slightly, from 2,302 to 2,268 trillion marks, and note circulation by 1,495,772 billion marks to 1,519,014,882 billion marks. The Gold Discount Bank's return for October 7th does not show the great increase in credits which was expected as a result of the reduction of its discount rate from 10 to 8 per cent. Discounts and cheques total £6,564,742, against £6,395,376 a week earlier. The Reichsbank's rationing of credit is, it is stated, to be continued.

The Prussian Government has issued regulations for foreign borrowings by the municipalities. The contracting of municipal loans abroad is to be limited to the smallest sum possible. In general, credit is to be sought at home. Competition in foreign borrowing is to be avoided, and therefore the right to borrow abroad is to be confined to such local bodies as can collaborate. These are (in addition to the municipal credit concerns, including the giro-centrals) the provinces and the larger urban and rural municipal districts. Contracting of foreign loans by small municipalities is forbidden. Loans must be only for productive purposes. Repayment may be promised only in German currency, that is, in the new Reichsmark; undertakings to pay interest or principal in foreign currencies are prohibited. The municipalities are forbidden to pledge their properties as security. In view of the record of municipalities in regard to their old loans, these conditions are likely to make all foreign borrowing impossible.

There are signs of a general crisis in insurance, particularly in the fire branch. The Ritzau Insurance Concern, and some of less importance, have gone into bankruptcy, and more failures are expected. Speculative foundations and competition for business at unprofitably low premiums have characterised German insurance for some time past.

The rise in prices continues. The cost-of-living index number on the 8th was 121, against 119 on the 1st; the wholesale index number on the 7th 133.7, against 131.5 on September 30th. The minimum cost of food per week

for a family of two adults and one child, which was 8.23 marks in 1913, was 8.80 marks on September 17th and 9.09 marks on September 24th. Industry is rather more active. The number of publicly supported unemployed on October 1st was 519,000, against 588,000 on September 1st. Orders from abroad in September exceeded those of August by about 15 per cent., the gaining industries being the locomotive and railway car, potash, heavy machines, metals, paper, cellulose, and textiles. Considerable French and Belgian orders have been received for special machines, and orders for railway materials have come from the Balkans and the Russian frontier States. Shipping arrivals in Hamburg in the first nine months of 1924 totalled 11,297,190 tons, against 11,644,065 tons in the same period of 1923.

The Bourse last week was extremely dull, and inclined to be weak for stocks, while loan quotations also sank. In the first two days of this week stocks were more active, and, on the whole, firm, the influence being apparently the settlement of the loan question. The "Frankfurter Zeitung's" stock quotations index for the 10th was 523.93, against 563.37 a week earlier, and 824.50 on January 4th. A favourable effect was created by the announcement that the companies composing the Aniline Concern have decided to scale down their capital in compiling their gold mark balance-sheets at the moderate rate of 5 to 1. The seven companies in question had a pre-war capital of 226,800,000 marks, all ordinary shares, which was raised during the inflation years to 3,529,700,000 marks, plus 220,660,000 marks preference shares. The new capital will be 705,940,000 gold marks. The great question of "Aufwertung" continues to induce speculation. The two questions most in evidence before the Reichstag "Aufwertung Commission" are (1) resumption of interest on Federal Loans, and (2) revision of the mortgage provisions of the Third Taxation Decree of February. For the first purpose some elaborate schemes have been submitted, all having it in common that money for payment of interest is to be extracted from someone's pocket without the need for new taxation. These plans have been rejected by the Government. The revision demanded of the mortgage law is that the 15 per cent. restoration conceded where mortgages were not paid off, or where repayment was accepted with a reservation, shall be extended to all mortgages paid off after July 1st, 1922, even when the mortgagee accepted the repayment without reserve, and consented to the removal of the mortgage record from the real estate register. Many mortgagees who accepted repayment in almost worthless paper marks reserved their right to benefit from any possible later restoration of mortgages, such as actually took place, but the majority made no reserve. The confusion caused by these demands and by the uncertainty has very unsettling effects on business. No citizen is any longer sure whether a big debt may not be suddenly imposed on him by act of the Legislature, and no would-be lender on security of real estate can any longer rely upon the land register as proof that a property is free from prior encumbrances.

INDIA. — CURRENCY AND EXCHANGE — GOVERNMENT STORES — RAILWAY FINANCE — COTTON EXCISE DUTY — TRADE PROSPECTS.

(FROM OUR CORRESPONDENT.)

CALCUTTA, September 25.

ALL endeavours to convert the Finance Member to the view that India would derive substantial benefits from immediate official reversion to the pre-war ratio in exchange have failed egregiously. Sir Basil Blackett prefers to step more warily. The 2s ratio, he asserts, is not only ineffective but harmless; last busy season the proposed rate of 1s 4d gold could have been reached only by the contraction of the currency, whereas advocates of this rate demand, for business reasons, further expansion of currency, viz., to ensure adequate finance for abounding trade without forcing the bank rate to unduly restrictive levels. Beyond these domestic factors there is, despite the Reparation settlement, a continuing instability in the international outlook, the final reaction of which upon Indian exchange cannot yet be calculated. We may

assume, therefore, with some confidence that no fundamental change in official policy upon this issue will occur, or rather be notified, before the next Budget statement at the beginning of March. Concerning currency, the commercial community is satisfied that, within its powers, the Government of India will do its utmost in the approaching months of heavy export to make the path of trade as smooth and level as can be expected. This does not preclude the recurrence of a 9 per cent. bank rate before trade again begins to slacken, but an effective method of eliminating that long-standing feature of the Indian busy season has yet to be discovered. It has been discussed for 30 or 40 years, and we are as far off a solution as ever.

Following criticisms of apparently diminished enthusiasm in purchasing official stores from indigenous producers, the Government of India has announced that it is intensifying its efforts to implement the promises associated with the establishment of the Indian Stores Department, but that the rate of progress in this direction is necessarily conditioned by the necessity of perfecting the administrative and inspection arrangements, without which "local purchase" could not function efficiently. Since the adoption of the Steel Tariff Bill, it has been evident, in fact, that quite a new spirit was animating the Government of India in handling this particular problem, with the result of a large increase in rupee orders, and a very welcome stimulus to local manufactures, notably engineering. In the next few months we may expect to see this new policy carried a stage further, railway companies in particular being pressed to rely upon Indian products to the utmost extent consistent with efficiency.

Legislative endorsement of the Acworth Committee's scheme for separation of railway finances from the general finances of the country remained uncertain until the final debate. It is impossible to over-estimate the improvement in efficiency likely to ensue. This reform has been urged for many years, and while self-contained would be greatly reinforced by adoption of another long-standing demand, viz., the establishment of a Ministry of Communications controlling railways, the major ports (in which should be included Chittagong, Vizagapatam, and Cochin), posts and telegraphs, river navigation, &c. Not unexpectedly, the Legislative Assembly utilised its powers concerning "separation" to render it conditional upon continuous State management of the lines (the East Indian and G.I.P.) shortly to be taken over, further Indianisation of the railway staffs, and increased local purchase of railway stores. As it will be many years before a domiciled company would be able to raise the rupee capital needed to take over a first-class railway, the first stipulation was easy to concede. Indianisation of the railway staff is proceeding rapidly, and will be raised to 75 per cent., according to present arrangements, as competent men become available. It was further recommended by the Assembly that "the purchase of stores for State railways should be undertaken through the organisation of the Stores Department of the Government of India."

An active Press campaign, inspired by the Bombay Millowners' Association, culminated this week in the adoption of a resolution by the Legislative Assembly reaffirming its detestation of the obnoxious cotton Excise duty and demanding its early abolition. This resolution will not accelerate abolition; it leaves the position unchanged. The objections to the impost now rest mainly on political and historical grounds; as a hindrance to the cotton industry, the raising of the import duty to 11 per cent. has removed its sting. In the leading Bombay newspaper it was frankly admitted that "the removal of the Excise would mean an average extra 6 per cent. dividend to shareholders"—no doubt a very desirable consummation, but hardly susceptible of description as an objective of urgent public importance. An alternative suggestion that the yield of the duty (about 1½ crores) should be divided between the mill and hand-loom industries, for research, &c., has attracted some attention, and more may be heard of it at a later stage. A crore of rupees allocated to the hand-loom industry, for expenditure under the supervision of the textile experts attached to each of the Provincial Governments, would not only help to modernise its methods and improve its outturn, but would also be appreciated by Indian opinion on grounds of sentiment.

An official member, in a recent Assembly debate, remarked: "I asked all the large importers of dyes in Bombay what their estimates were, and they told me that the village dyers of India consume five times to ten times the amount of dyes used by all the factories and mills in India put together. That is commercial opinion." The continued vitality of the hand-loom industry could not be more clearly indicated, but it needs a larger measure of State aid, whereas abolition of the Excise duty would deprive it of the only protection against mill production it now possesses.

In recent years the jute forecast has been appallingly inaccurate. This year, owing to revised methods of compilation, devised in consultation with the trade, it is believed that the final forecast of 80 lakhs of bales is approximately accurate. Prices are up 50 per cent. on last year, and as mills here require 55 lakhs, and are rapidly securing this quota, some foreign consumers are likely to go short. Cotton also promises to be again a bumper crop, lower prices ensuring full demand alike from Indian mills and from abroad. Crops generally are good, and India could do an enormously enhanced trade this year if European demand returned to its former levels.

NEW ZEALAND.—LOWER TAXES—THE LAND TAX—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, September 8.

THE most important public statement of policy during the last few months was that made last week by the Minister of Finance concerning the reductions that he expects to make in taxation during the forthcoming year. The continued surplus of the public finances and the generally favourable economic outlook at the present time have made the business community look for such reductions, and in his Budget speech Mr Massey had forecast the taking off of approximately a million pounds of taxation. Details of that reduction have been disclosed in the statement just made. There is to be a further reduction of 20 per cent. in the land-tax, and a further 13½ per cent. from the income-tax, which, with the 20 per cent. reduction previously made, will bring rates to two-thirds of what they were two years ago. The import duty upon tobacco is also to be reduced, and something is to come off the amusements-tax, the total reductions being estimated to amount to over £900,000.

It would appear that the direct taxpayers are being very generously treated. The recommendations of the Land and Income-Tax Commission have been treated rather cavalierly, and there is apparently no present intention to alter the basis of taxation. Within the last few years farmers have been relieved of income-tax, and have had a substantial reduction in their land-tax. As a result of these concessions, the burden of taxation on the farming community is much less than upon other sections of the people. It is true that even the lessened burden weighs heavily upon those farmers whose finances are crippled by the existence of large mortgages upon land bought at inflated values; but the reduction is more in the nature of a bonus on land values, or rather an offset to the reduction in land values that might be expected to result from a lower level of prices for farm produce than a remission of taxation to the working farmer. It is difficult to see how the productivity of the country will be increased by such remissions as have been given on the land-tax.

This land-tax, though levied upon the unimproved value of the land, has never, except for two or three post-war years, been a penal tax operating to break up large estates. From its introduction in 1891, to 1915 it was in substitution of, not in addition to income-tax, so that it merely became an alternative method of assessment for income-tax, and, except for some psychological results at the very beginning, did little or nothing to break up the great estates. After 1915 farmers were made liable to income-tax in addition; but as the war prices brought prosperity, this double assessment did no more than intercept some of the war profits for the State.

came, however, land valuations had in many cases been revised to the level of boom values, and the heavy land taxation, in addition to high income-tax, did for a year or two have a penal effect. So the Committee of 1922 reported that it had become unprofitable to farm land in large areas, which was the original object of the Act of 1891, never till 1922 effective. The following year farmers were relieved of income-tax. The Commission of 1924 recommended the abolition of land-tax altogether; but the farmers prefer to keep it, since they are, as a matter of fact, better off under it than they would be under the general income-tax.

The export season just ended is very well reflected in the trade statistics for the past seven months ending July 31, 1924. Nearly all the chief exports have fallen in value, but the abnormal level of wool prices has kept the level of exports above the similar period for 1923. It is a rather uncomfortable thought that the prosperity of the Dominion should depend so much upon the maintenance of a high level of values for one product.

The imports, which were heavy at the beginning of the year, slackened considerably during the second quarter, being five millions less than in the second quarter of 1923, but have since mounted up again and appear to be still mounting. This heavy importation is also an uncomfortable sign, especially when the nature of the imports which caused the expansion is considered. The chief items responsible have been coal, increased from £189,000 to £495,000 mainly because of lessened home production; electrical machinery, from £821,000 to £1,329,286; motor vehicles, from £1,232,973 to £2,065,012; and wheat, from nothing to £643,000, because of the failure of the local wheat harvest.

The increased imports of coal and wheat speak for themselves; the import of motor vehicles has reached very large proportions in recent years, and there is some ground for believing that prosperous New Zealand has become something of a dumping ground for the small car manufacturers of Britain and the United States, in their difficulties arising from over-expansion. The large imports of electrical machinery are usually defended as not only necessary but profitable for the immediate development of the Dominion; but there is considerable room for doubt as to whether the vast schemes now being pushed ahead for hydro-electric development in every part of New Zealand will not in the end show very heavy capital losses in many cases. Where construction expenses are heavy, and the construction is undertaken far in advance of the requirements of the countryside, the burden of interest, depreciation, and operating expenses may mount to such a figure that either the settler finds the power too costly for him to use, or the supply must be heavily subsidised out of taxation. In either case, it may easily happen that the development of the country is actually retarded by the interest charges as much as it is accelerated by cheap power. This has happened before in the history of New Zealand, and what happened with railways in the seventies seems likely to happen again with hydro-electric schemes at the present time.

ARGENTINA.—CROP PROSPECTS—GOLD SHIPMENTS—EXCHANGE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, September 19.

THROUGHOUT the whole pastoral and agricultural region of the Republic there is at present a feeling of thankfulness for the copious rainfall, which came at the eleventh hour. A little linseed may be lost, but wheat is not only safe, but in unusually fine condition, while for the sowing of maize the land is now in excellent state, and pasturage everywhere in good grass. One must live in a country having its export trade wholly dependent on the fruits of the earth to realise how a week's steady rain, following six weeks' drought, can change the commercial aspect of affairs and promote general optimism, even admitting that harvest is still distant and the potential danger of locusts ever present. The first

official estimate of areas sown has been published, and reads as follows:—

	1924-5.	Average Annual Sowings.
	Hectares.	1914-24.
Wheat.....	7,100,000	6,594,994
Linseed	2,300,000	1,647,679
Oats.....	1,070,000	1,051,012
Barley.....	255,000	225,715
Rye.....	150,000	100,902

From the comparison it will be seen that only in linseed has there been any marked increase in the area sown, taking the ten-year average—a fact which bears out the arguments in favour of greater sub-division of the arable land contiguous to the railways and its employment as a means of attracting permanent immigration of a productive category. Between 1914 and 1923, inclusive, according to the figures of the Ministry of Agriculture, the net gain of immigrants permanently settled here has been but 106,963. This is due in some measure to the fact that from 1914-1918 more people left the country than entered it. Last year's balance in favour was 148,990 immigrants, the best result of the decade, but nothing to what Argentina can take annually to the mutual advantage of all concerned. This is generally recognised, hence much is hoped from the Government's colonisation scheme detailed in last month's "Correspondence."

There is no actual legislative progress for the month to be recorded. The Government proposal to prorogue the 1923-24 Budget, with such modifications as are necessary in respect to sundry clauses covering issue of bonds for public works, has been approved by the Budget Committee of the Chamber of Deputies, and will probably be adopted, thereby giving ample time for the discussion of the 1925 estimates at some future date. And although Congress will sit daily until the end of September, there seems small likelihood of the various novel projects being discussed, much less made effective, during the actual session. Meanwhile the hand-to-mouth treatment of the national finances continues. A purchase of material for locust defence work having to be made in the States, a six months' loan for the necessary sum, \$5,000,000 gold, has just been arranged with the group of bankers who, to all intents and purposes, seem to be acting as the American financial agents of the Argentine Government, Messrs. Blair and Co. and the Chase Securities Corporation. Treasury bills of \$1,000 each have been drawn to the above amount, and discounted at 4 per cent. per annum, free of all charges. Presumably this operation will be met at its due date by gold shipment, directly or indirectly affected to that end, this opinion being strengthened by the procedure and explanation given regarding the latest extraction of gold from the Conversion Office. A Government decree authorises the extraction of \$2,126,800 gold by the Banco de la Nacion for shipment to the Chase National Bank, New York. This sum, it is explained, is to make up the shortage in payments made out of funds originally set aside to meet the charges on the reconditioning of the two Argentine battleships now in the States, which funds were partially used to meet charges in connection with the service of the external debt. Interest, it is added, was saved by so doing, and the operation is perfectly licit. Nevertheless, when one remembers that the charges of the external debt are, so to say, a constant, this addition of five million gold here and two million gold there is disconcerting. Conservative Argentine financiers feel that the mechanism of the dual currency is being thrown out of gear, and that with intent to confuse the issue. For these gold shipments by the Government would be just as feasible were the emergency legislation which prohibits the free movement of the Conversion Office rescinded. The argument that a gain in exchange results to the Treasury under present conditions, and that no such profit would be apparent if gold shipments were open to all, is unsound, seeing that the gold is not State property, but unquestionably belongs to the public who hold the paper currency of the Republic, which represents the gold. Where the real danger lies is in the fact that, while the Banco de la Nacion has the right to re-discount its portfolio at need with the Conversion Office, the Government

has also the right to ship gold, and is shipping it in dribbles, which threaten to increase in quantity in a comparatively short space of time. On its August balance-sheet the cash percentage of the Banco de la Nacion—cash in hand against total deposits, clearing balances excluded—is a shade under 14 per cent. For a State bank with general deposits of \$1,275,000,000 paper, or well over a third of the total bank deposits of the Republic—spread, be it remembered, among thirty distinct institutions—the maintenance of such a percentage shows plainly that the Banco de la Nacion is relying on the right above mentioned, even though it be but as an emergency measure. Aply directed though this institution must be considered, its position as the Government bank, coupled with the absence of any direct influence on either the money market or the exchange movement, tends to render its balance-sheet, so to say, top-heavy; the more so seeing that in the last resource it is always the Banco de la Nacion that must find ready-money at short notice, as has occurred yet again in the case of the State railways.

In the local money market rates during the past thirty days have been firmer, the banks showing less inclination to compete for first-class business, 6 per cent. to 8 per cent. being a fair indication of the range, and the tendency hardening. Exchange has during the same period moved in favour of Argentina, sterling being 43½d and American dollars \$124.50 Arg. gold per \$100 U.S., a rise of roughly 5 per cent. compared with last month's quotations. Heavy exports, plus the gold shipments of the Government, explain the improvement of the Argentine dollar, and there is now a general belief that the balance of trade will, when 1924 is closed, be found to have turned in favour of the Republic. It is too soon for the expression of an opinion as to this optimism. One may, however, point out that the Customs revenues to date show an increase of over 20 million dollars paper when compared with last year's figures at the same time of year, which implies heavy imports. Moreover, that exchange, as it approaches parity, will lead to bigger Argentine remittances from various sources is reasonable to suppose. Continental rates have seen much selling of both lire and pesetas, Italy being 18.40 lire per \$ gold and pesetas 6.15. Political conditions are viewed unfavourably by local holders of Italian stocks, numerous on this market. Cereal prices are somewhat weaker on the improved crop prospects, with spot wheat for export at \$14.60 paper per 100 kilos, linseed at \$22.40, and maize \$10.60, all Buenos Aires quotations. Freight rates are firm, and October chartering has been reasonably brisk at 24s 6d up river range to U.K./Continent, while new season charters, February-March loading, are being booked at from 25s to 26s, according to size of carrier. Berth rates for grain parcels to U.K. are quoted 19s 6d, with 19s Continent and 21s Scandinavian ports.

CZECHO-SLOVAKIA. — STATE FINANCE — MONEY MARKET TENSION — SUGAR CROPS — PRICES.

(FROM A CORRESPONDENT.)

PRAGUE, October 5.

THE disagreement between the Socialists and the Agrarians, which threatened to produce a political crisis in Czecho-Slovakia, has been settled. The Socialists have obtained their State Insurance Act, and the Agrarians concessions in the form of a small duty on imported grain. Such is the agreement arrived at by the Committee of Five—the Petka—and Parliament will ratify it when it reassembles this month. M. Svěhla's Coalition Ministry, which came to power just two years ago, still takes "Economy" as its watchword. While in 1922 national expenditure amounted to 19.8 milliard Czech crowns, for 1924 it is estimated at 17 milliards, with a still further reduction promised in the new Budget, public information regarding which is not yet to hand. As to the future, the Government, while realising that taxation is far too high—it is 1,260 Czech crowns per capita—offers little hope of a reduction. Direct taxation will certainly not benefit, except that the present very complicated system will be much simplified. The metallic money in circulation amounts to 123 million crowns, in the form of one-crown, fifty, twenty, ten, five, and two heller pieces.

This amount will soon be increased by the issue of five-crown pieces. The Czech-Italian Commercial Treaty, which has just been concluded, will especially benefit the Czech glass trade, and negotiations are now proceeding with Austria and Poland for similar commercial treaties.

The tension on the money market remains unchanged. The transactions for a new loan in the United States are progressing favourably. Recent business on the Bourse has been much affected by the bankruptcy of Castiglioni at Vienna. For Castiglioni was vice-president of the Czech Union Bank (Ceska Banka Union) and a big shareholder therein. The Vienna and Prague papers debate very much as to whether he was an actual shareholder or merely the representative of Italian capital. Whichever be the true version, the bankruptcy of this "faiseur d'affaires" has had a very disturbing effect in Prague. Castiglioni was interested in four big Czech industrial enterprises, and his whole aim seems to have been to control the Central European exchanges as he would. This bankruptcy should clear the way to normal conditions in Central Europe, and much capital formerly concentrated only in speculation should now be free for productive industry and credit. The amalgamation of many of the Czech banks into a few small groups is rumoured, and the amalgamation of the Czech Discount Bank of Prague with the Czech Discount Bank of Brno is regarded as a lead.

Favourable weather conditions have helped towards a good harvest in grain and hops, and the quality of the sugar-beet is high, especially in Slovakia. The Czech Sugar Company has increased its dividends by 70 crowns per share, and a continued improvement for the remainder of the year is to be relied upon. This company made large profits from its purchases of raw sugar at Krasnova Dvur a short while ago. But it is firms like that of Messrs Schöller, who not only manufacture the sugar, but possess their own sugar beet areas, who are expected to do exceptionally well, for while the price of the beet is 26 crowns per metric quintal, when purchased from the farmer, if grown in their own fields, it costs the firm but 12 crowns per quintal.

The increase of wholesale prices in terms of gold parity (July, 1914 = 100), according to the Statistical Institute of the Government, is as follows:—

June, 1923.	June, 1924.	July, 1924.
141.8	140	139.8

The wholesale index figure for the last three months recorded is:—

June, 1924.	July, 1924.	August, 1924.
901	965	997

While the following are the figures for retail prices:—

Group I.	January, 1924.	April, 1924.	June, 1924.	July, 1924.
Foodstuffs, fuel	917	907	923	909
Group II.	January, 1924.	April, 1924.	June, 1924.	July, 1924.
Textiles, earthenware, ..	1,053	1,055	1,050	1,045

In some of the larger industries—such as coal-mining—there are indications of dissatisfaction with present rates of wages, and complaints are heard as to the employers' disregard of the workers' councils, but only in the china trade (centred mainly in and around Karlsbad) has there been a strike.

Letters to the Editor.

GREEK REFUGEE LOAN.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your last week's issue your Athens correspondent comments on the revision recently agreed in Geneva of the League of Nations Protocol for the Settlement of Greek Refugees. The precise terms of the revised text with regard to the raising of loans by Greece (other than the Refugee Loan) are of considerable importance. As a member of the League of Nations Finance Committee, whose duty it was to advise the League on the revision, I should, therefore, be glad if you would find space for the actual text, which runs as follows:—

NEW TEXT.

ARTICLE VI.

"The Greek Government undertakes not to create any charges on its revenues by way of security for any loans

not intended either for productive purposes or for carrying out its obligations under the Treaties of Peace. Should the case arise of a loan for one of these objects, then—

"(a) The Greek Government may create a charge of inferior rank upon the residue of surplus revenues assigned to the refugees' loan in conformity with Article V., paragraph 2.

"(b) As regards revenues other than those assigned to the refugees' loan in conformity with Article V., paragraph 2, the Hellenic Government undertakes not to create charges thereon unless the International Financial Commission shall have recognised that the nature of the revenues on which it is proposed to create a charge is such as not to compromise the yield of the revenues assigned to the refugees' loan."

The essential words (italicised) "for productive purposes" are not clearly brought out in your correspondent's paraphrase, from which it might be thought that Greece could consistently with the Protocol issue loans for any purpose whatever. This is not the case; and in the interests of the Refugee Loan it is very desirable that the real position should not be misunderstood.—Yours faithfully,

O. E. NIEMEYER.

Treasury Chambers, Whitehall, October 14, 1924.

BANK RATE AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—A year ago in your Banking Supplement you commented on the fact that, concurrently with decreases in Bank rate, bank deposits had been contracting. "These facts," you said, "taken with the previous record, which showed deposits continuing to expand long after the 1919 and 1920 rises in Bank rate had, if the theory so eloquently expounded by Prof. Cassel and Mr. Hawtrey were to be relied on literally, demanded their contraction, seem to justify the scepticism with which it is usually received by practical bankers."

On that occasion I made no comment. But in your Banking Supplement of this year you quote this passage over again, and lest it become a hardy annual, I feel bound to enter a protest.

I cannot, of course, speak for Prof. Cassel, but, so far as my own views are concerned, you are entirely mistaken in attributing to me any such theory as that implied in the passage quoted. What I have contended is that changes in Bank rate can be relied upon to affect the volume of trade borrowing, and through it the amount of the consumer's income and outlay, and therefore the level of prices. But it is a mistake to suppose that this involves a proportional change in the volume of currency and bank deposits, or that such a change is a necessary link in the chain. So far as I can see, your assumption that it is so seems to proceed from the crude and discredited form of the quantity theory of money, which taught that a change in prices cannot occur without a proportional change in the volume of purchasing power. I hoped I had made clear in Chapter III. of my "Currency and Credit" within what narrow limits the quantity theory is in my opinion true.

The proportion of prices to volume of purchasing power may be affected by many disturbing factors. One of the most potent (especially during the last few years) has been the influence of the state of credit upon rapidity of circulation. Rapidity of circulation is increased when credit is expanding and prices are rising, and is diminished when credit is contracting and prices are falling. These tendencies may be great enough to counteract almost entirely the effect of an expansion of credit in increasing the volume of purchasing power, or that of a contraction of credit in decreasing it.

The continued high level of bank deposits in 1921 in face of a high Bank rate and collapsing prices is to be explained by the exceptionally low rapidity of circulation characteristic of those conditions. As to more recent statistics, I will content myself with saying (1) that it is very unsafe to draw conclusions regarding credit movements from data taken at so long an interval as a year, and (2) that the terms "high" and "low" applied to Bank rate are essentially relative. A Bank rate of 4 per cent. may count as high in one set of circumstances, and in a different set may count as low. Indeed, 6 per cent.

may be low when inflation is raging; 3 per cent. may be high when excessive deflation is at work.—Yours faithfully,

R. G. HAWTREY.

18 Elm Park-gardens, S.W. 10,

October 14, 1924.

[If, as Mr. Hawtrey contends, "changes in Bank rate can be relied upon to affect the volume of trade borrowing," it seems strange, as our Banking Supplement pointed out, that the volume of deposits—which must surely be affected by that of trade borrowing—has consistently moved in the wrong direction for his doctrine.—Ed., *Economist*.]

Books and Publications.

LAND ECONOMICS.*

THIS is the introductory volume, although published second in point of time, of a series described as "a standard course in real estate," outlined by a Joint Commission representing the National Association of Real Estate Boards, and other bodies. The Institute for Research in Land Economics and Public Utilities is responsible for the preparation, Dr Ely being director of the Institute and Mr Moorhouse a research instructor on its staff, both being also associated with the University of Wisconsin. It is to be followed by a number of other volumes dealing with various aspects of the subject which it is its purpose to outline and expound.

The authors claim to be opening a new field of economic inquiry. It is not, of course, suggested that the importance of land has been neglected by economists, but the idea which underlies the establishment of the Institute of Land Economics, and is the justification for this book, is that the subject of land has been usually treated, so to speak, in compartments, and that it requires to be studied more comprehensively and with a wider grasp of its various relationships. This is suggested by the statement in the preface that "the senior author has studied land problems from different angles for many years, and he has concluded that these problems are basic to more economic activities than it is commonly believed." "Land economics" is, therefore, not, as might be hastily assumed, another term for "agricultural economics." The subject is much wider. It includes all the functions of land, including its use for agriculture, mining, forestry, houses, factories, &c., and attempts to correlate the different factors which are applicable to its diverse utilities. Thus this treatment of the elements of the subject embraces, in addition to general principles, chapters dealing with urban land utilisation, agricultural land utilisation, forest and mineral land, property rights in water, land values and valuation, the social ends of land utilisation, policies of land settlement and development, and policies of land taxation.

The scheme and general arrangement of the book are admirably clear and well-considered. The subject is lucidly stated and logically expanded. The arguments are supported by a wealth of illustrative facts and figures, and there is plentiful evidence of careful research and the mastery of relevant material. Much of the discussion is very germane to current problems. The relative advantages and disadvantages of public and private ownership, for example, are acutely analysed. The principles applicable to the value of land under varying economic and social conditions are clearly explained, and although this particular field is already well-tilled the authors succeed

* "Elements of Land Economics." By Richard T. Ely, LL.D., and Edward W. Moorhouse, M.A. (New York) The Macmillan Company. 178 net.

in giving it a fresh aspect. The public or social interest in the utilisation of land to its best advantage is explained in detail. The powers of the Government to interfere with private rights of property are classified under the two categories of "police" regulations and the right of "eminent domain." It is noted incidentally that 38 per cent. of the total area of the United States is owned by the Federal and State Governments. The advocates of Land Nationalisation might find in the United States data for their consideration.

The general interest of the community in the proper and most suitable utilisation of land is insisted upon, but in regard to agricultural land the importance to the nation of ensuring that the natural fertility of the soil is maintained—that the land is not robbed—appears to be somewhat overlooked. The authors distinctly favour the ownership of farms by the occupiers, a system which, whatever its merits, admittedly involves some risk of the dissipation of the national wealth in the land by incompetent or reckless owners.

The authors in the elaboration of their argument are apt to restrict themselves to land problems as they arise in the United States, and to refer almost exclusively to American conditions. This, perhaps, is justifiable in a work which is, no doubt, primarily intended as a text-book for students in American Universities. The book is, nevertheless, valuable and suggestive for English students of the subject with which it deals.

CHINA IN TRANSITION.*

EVERY year this massive volume expands in size, and includes new matter and several fresh subjects, so that an index is provided in the present issue to those dealt with in former years, but now crowded out. This year's volume contains, like its predecessors, a mass of interesting and detailed information respecting the physical features of the Chinese Empire, its geography and geology, fauna and flora population, central and local government, army and navy, commerce and finance, industry, education, communications, and religions; but several of the chapters are rewritten, and some are entirely new. Among the former are those on education and public justice; of the latter we may specially note an extremely interesting account, by a Chinese Professor at the University of Peking, of the Chinese Renaissance, which began in the seventeenth century and has developed into the reforming modernism of the twentieth. Another new chapter deals with Labour in its primary form, closely resembling that of mediæval Europe, and in the new form given it by the industrial revolution. Labour agitation, energetically promoted by foreign agency, is still an exotic; the Chinese operative cannot afford to sacrifice his job to doctrinal considerations; the darker features of industrialisation, such as the employment of child labour, are promoted by the workers themselves, in spite of the efforts of European employers to mitigate them; an improved dietary will make the workers more efficient, and the employers are preceding them in improving the conditions of their employment. Another very valuable new chapter deals with the recent international relations of the Republic, including the negotiations with Soviet Russia; and there is an illuminating (and depressing) account of recent politics, which in their latest development appear to consist mainly of the intrigues of the party politicians against the military power of Wu Pei Fu, and of his success in frustrating them. This chapter serves as a useful check on the tendency of foreign observers to interpret Chinese events by Western standards, and the political and military position contrasts markedly with the progress in other fields of activity—in the improvement of public health, for example (largely promoted by bacteriological research conducted by Chinese doctors), in education (much influenced, in its higher grades at any rate, by American models), and in industry, agricultural science, and trade. An encouraging account is also given of the work of the committee appointed last year to investigate and readjust the national finances; and the book

* "The China Year-Book, 1924-5." Edited by H. G. W. Woodhead, C.B.E. (Tientsin) Tientsin Press, Limited. (London) Simpkin, Marshall, Hamilton, Kent, and Co. Pp. xxxiii.-1280. With Railway Map. 42s. net.

leaves the impression that the good sense and intelligence of the Chinese people will carry the Republic through its difficulties, in spite of self-seeking and incompetent politicians and warring Tuchuns.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, October 22. ACCOUNT, October 23.

THE issue of the new German Loan and the General Election campaign have been the two outstanding factors of consequence in Stock Exchange markets this week. That the German Loan would be a success, financially regarded, was a foregone conclusion to the eyes of those who saw in advance the extraordinary interest which its advent aroused amongst the public. The political situation provided a surprise in the way whereby triangular contests are being abandoned in many constituencies. This had the effect of quickening the expectation that the Unionists will come back stronger than before. Moderate dealings are taking place in the Stock Exchange in Labour seats, the present quotation for which is about 180, this representing the estimate of the speculator as to the number of seats which Labour will win in the General Election. The idea that the Unionist membership will be strengthened has brought about a strong tone in many markets, investment and speculative alike.

The War Loan will be quoted ex dividend at the end of the month, and the price rose to 102½. Conversion 3½ per cent. enjoyed, with the Funding Loan, something of a jump,

on heavy purchases in a market none too well supplied with floating stock. The new Queensland Fives, issued at 97½, the price of which started about par, advanced to 11½ premium, and other gilt-edged stocks show corresponding strength. Several new loans are mentioned as likely to make an early appearance. The Japanese issue will probably be out on Tuesday next.

It is expected that dealings in the new German scrip will start on the basis of 2 premium. The success of the new loan was held at first to be a bull point for existing German bonds, but the impression received no support, and Germans, after being run up, reacted substantially from the best. There is nothing much doing in the French loans. Austrian Sixes keep dull, but Hungarian 7½ per cents. have recovered a trifle. Russian bonds are nearly all a point lower, and Brazilians, after giving way on a decline in the value of the milreis, recovered as the rate of exchange braced up.

Home railway stocks are a much better market than they have been of late, material rises occurring in Great Western, Metropolitan, and some of the others. The Mexican Railway group is also better, there being practically no stock to meet a modest demand. Argentine Railways hold their improvements, and foreign rails as a whole keep a good market.

Rubber shares have gone ahead again, the price of the produce strengthening to a shade over 1s 4d per lb, and interest being piqued by what is regarded as the practical certainty of the standard output being reduced to 50 per cent. from November 1st. Oil shares, still largely controlled by professional operations, are somewhat irregular; Lobitos, Anglo-Ecuadorians, and Mexican Eagles spurred; Venezuelans at length crossed £3 per share. The reduction of the dividend in Kerns led to a fall in the price of the shares. The tea market is, comparatively speaking, quiet. People have been selling in consequence of the dwindling attention paid to the market by the public, and, although prices of tea itself are high, the breeze of speculation has died down, and left share prices drifting. Textiles, hotel shares, iron and steel, stores, manufacturing, and a number of similar industrials are mostly better on balance, now that it appears as though there is a chance of the Continental chaos being replaced by order, and by greater stability in foreign exchange.

The shares of the Gillette Razor Company have been introduced on the basis of \$62 for the shares of no nominal denomination. Electricity supply shares, which have been dull for the past few weeks, are disposed to stiffen in price. The shipping market is exceedingly quiet. Insurance shares hardened in a few cases. Austin Motors, Rovers, and a few others in this section display strength, in consequence of the opening yesterday of the Motor Show. United Dairies went ahead, thanks to a good dividend, and British Oil Cakes came into demand at higher prices. Wireless shares are quiescent.

The Cape has come in a buyer of its Kaffir favourites, and Government Areas, Modders, and others in this group show rises on the week. The British public are inclined by reason of this mild recovery to pay a little more attention to South African shares, and the market is not so dormant as it has been recently. Amongst Rhodesians, Chartered stand out with a quiet rise; in the diamond section, De Beers went a little over 12, anticipation looking for a strong demand at Christmas-time for stones. Mexican mining shares are generally harder, and amongst tin shares a few West Africans strengthened. Movements in Malaysians have been rather uninteresting. Copper shares swung between narrow limits.

German External Loan, 1924.—This is a loan consisting of bonds of various issues to yield in the aggregate an effective sum of the equivalent of 800,000,000 gold marks, plus the expenses of issue, negotiation, and delivery, the amount offered here being £12,000,000 in 7 per cent. sterling bonds. The issue price was 92 per cent. Payment of capital and interest is not subject to deduction for any German taxes, present or future, and will be made in sterling at the Bank of England, London. A sinking fund will be provided, and that portion applicable to the British issue will be applied in the purchase of bonds when their price is below par (exclusive of accrued interest), or by drawings at par when the price is at or above par (exclusive of accrued interest). Bonds not previously redeemed will be repaid at par on October 15, 1949. Certain of the portions of the loan issued in other countries will be in sterling bonds, and application for the quotation of these on the London Stock Exchange will be made two years hence. The loan, further reference to which will be found in a leading article, was rapidly over-subscribed.

Ayrshire (Local Authorities) Electricity 4½ per Cent. Redeemable Stock, 1945-1955.—Issue of £750,000 4½ per cent. stock at 96 per cent. The stock will be redeemed at par on November 11, 1955, unless it shall have previously been cancelled by purchase in the open market or by agreement with the stockholders, but the board will have the option of redeeming at par the whole of the outstanding amount at any time on and after November 11, 1945, on giving three months' notice. The issue will rank *pari passu* with other loans of the board, and is secured on the whole revenues and property of the board, including all funds, the rates or charges which the board have power to make from time to time for the supply of electric power, and the precepts which the board have power to issue to the constituent authorities, viz., the County Council of Ayr, the Town Council of the burgh of Ayr, and the Town Council of Kilmarnock, to meet any deficiency in the net revenue of the board for the financial year. The revenue of the board from electricity supply for the year ended May 15, 1924, was £150,886. The net debt of the board is given as £904,962. A penny rate will produce £9,209; the total gross annual revenue of the various local authorities concerned is £833,054, excluding the revenue from electricity undertakings. On the whole, this appears to be a well-secured stock.

The Scottish Central Investment Trust, Limited.—Share capital £1,000,000, divided into shares of £10 each, of which 75,000 are now offered to the public at par. Each share will be converted, as from January 16th next, into £6 of 5 per cent. cumulative preference stock and £4 of ordinary stock. This company has been formed to carry on the usual business of an Investment Trust Company. The prospectus states that "the fundamental principle of such a company is the employment of its funds in the acquisition of a large number of carefully selected investments. Each shareholder thus obtains, according to his interest in the company, the advantage of widespread distribution of his capital in a way which is not otherwise open to the investor of moderate means." The power of the company to borrow by way of bonds, debentures, debenture stock, or otherwise is limited in the aggregate to the amount of issued share capital and the amount of the reserve funds as appearing in the company's last balance-sheet prior to the time of borrowing. In addition, the company may borrow from its bankers sums not exceeding 10 per cent. of its issued share capital. Not more than one-twentieth part of the combined issued share and debenture capital, or more than one-tenth of the subscribed share capital, whichever is greater, can be invested in any one security, and no investment can be made upon which there is unlimited liability. The company, no doubt, will be mainly supported by those who have knowledge of the directors.

Gray, Dunn, and Co.—Authorized share capital £250,000, divided into 150,000 7 per cent. cumulative preference and 100,000 ordinary £1 shares. There are no debentures or debenture stock. Issue at par of 100,000 7 per cent. £1 cumulative preference shares. The ordinary share dividend is to be fixed at 10 per cent. until a satisfactory reserve has been accumulated. The company has been formed to acquire the business of Gray, Dunn and Co., which was established in Glasgow in 1853 to carry on the manufacture of biscuits and cake. The growth of the biscuit industry necessitated removal in 1862 to larger premises, which have subsequently been further enlarged. The auditors certify that these land and buildings are worth £41,235, and the plant, machinery, &c., are valued at £27,938, making a total of £69,173, while office and warehouse fittings, horses, motor-cars, bakery utensils, &c., are reckoned at £11,478. The purchase price is fixed on the valuation figures, with in addition £85,315 in respect of stocks and goodwill, the latter being taken at £60,000. The consideration is payable as to 25,000 preference shares, the whole of the ordinary shares, and £40,067 in cash. The balance remaining from the issue of preference shares is £59,032. Profits are shown for five years from January, 1920, during which period they fluctuated between £49,049 for the twelve months ended January, 1923, to

£34,450 in the following year. For the half-year to July 19th last profits are returned at £18,928. The preference shares have been underwritten for a commission of 2½ per cent. and an overriding commission of 1½ per cent. Preliminary expenses are estimated at £12,000, which is payable by the new company. This appears to be a reasonable issue, which should appeal to local investors.

The Britannic Estates, Limited.—Authorized and issued share capital £100,000. Information concerning this company is published in the Press in order to comply with Stock Exchange regulations. The directorate includes Sir Charles Greenway. Incorporated as a private company in December, 1921, with a share capital of £100,000, the company has acquired from the Anglo-Persian Oil Company freehold premises in Finsbury-circus and elsewhere in London. In 1921 the company issued £650,000 6½ per cent. first mortgage debentures and £850,000 7 per cent. thirty-year notes. It has now created £750,000 of 5 per cent. first mortgage debenture stock, issued at 94½ per cent., subject to a commission of ½ per cent., and paid in full on October 1st last, the proceeds of which have been applied primarily to repay the above-mentioned £650,000 of 6½ per cent. debentures. The new 5 per cent. first mortgage debenture stock is secured by a trust deed in favour of the Metropolitan Trust Company, Limited, constituting a first mortgage on the freehold and leasehold premises specified in the schedule to the trust deed. The debenture stock is repayable at par on September 30, 1954, with an option to the company to redeem at par on or after October 1, 1939, on three months' notice. The stock is unconditionally guaranteed as to principal and interest by the Anglo-Persian Oil Company, Limited. Apparently a well-secured debenture.

COMPANY MEETINGS, &c.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED. RECORD RECEIPTS FOR THE YEAR.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 17th instant, at Winchester House, Old Broad street, London, Viscount St. Davids presiding.

The Chairman, in moving the adoption of the report, which stated that the year had been a record one in receipts, although the tonnage was less than in the record year of 1920, dealt first with the general position in Argentina. First of all, the population before the war was increasing rapidly, but when the war came immigration stopped, and a great number of people left the country, particularly Italians, to serve in the armies of their own countries, so that when the war ended, the population of Argentina was certainly not greater than when the war began. Immigration had begun again, and the population of the country was just upon 10 millions, of which 1,900,000 were in Buenos Ayres itself. The population had also largely increased by natural growth. Last year the natural increase was nearly 185,000, so that between immigration and natural increase the population went up 346,000. The bulk of the immigration went to the cotton districts, and cotton was doing well. Then, again, the immigrants were nearly all of the Latin race, and were wine drinkers, which would help the wine business of the Cuyo provinces.

Two years ago they agreed to the transfer of the Bahia Blanca line to the Southern Railway, subject to the approval of the Government. That approval had now been given. As to how it would affect this company, he would say at once that in good years giving up the Bahia Blanca line would be a loss to them, but in bad years it would be a great gain.

With regard to the Pacific, it was the newest of the big systems. When they went there the country was to a great extent uninhabited, but the population had been growing up. Because there was very little population, there were big estancias. These produced very little for a railway, and they wanted to see them broken up. The breaking up of the big estancias was going on very slowly, but still it was going on. Every year he heard of one or two being broken up, and though it was a slow process, it would be a continuous one, and would benefit them more from year to year for many years to come.

On the Argentine Great Western, in the irrigated districts, the progress had not only been continuous, but it had been faster, and he might say that the money they had spent on tiny branches and sidings had already done an enormous deal to accelerate that progress. They produced business over the whole system, and had been financially successful from the very beginning. On those little branches in the irrigated area progress was certain to be continuous year by year.

About the immediate future, first of all up to date they had got on top of the last two good years a traffic increase of £366,000. He had always told shareholders that this time of the year was too early to be sure of the wheat crop, but they had a bigger area under

wheat, and up to now it was all looking well. They had a large area being ploughed for maize, and they had the cattle industry in a far more flourishing position than it was twelve months ago. When he spoke to them twelve months ago in that room, Argentine exchange was 38½, whereas to-day it was 45. They had all these good features on the top of an increasing population and increasing development. Unless they had some quite unforeseen disasters to the harvests, he was quite confident as to the result of the present year.

The report and accounts were unanimously adopted.

HARRISONS AND CROSFIELD, LIMITED.

A SUCCESSFUL YEAR.

POSITION OF THE TEA AND RUBBER INDUSTRIES.

Presiding, on the 15th instant, at the sixteenth ordinary general meeting of Harrisons and Crosfield, Limited, the chairman, Mr H. Eric Miller, opened his address with a tribute to his predecessor, Mr Heath Clark, who recently retired from the board after devoting 43 years to the interests of Harrisons and Crosfield.

Mr Miller then dealt with the accounts, and stated that the total profit of £242,475 was only a few thousand pounds less than the largest profit the company had ever shown, and was the result of a general improvement in business throughout almost the entire organisation.

POSITION OF THE TEA INDUSTRY.

Regarding the tea industry, Mr Miller remarked that the generally optimistic view expressed by the chairman a year ago, regarding the view of the tea-producing industry, had been more than justified. Tables showing an estimated production of 798,000,000 lbs and consumption of 794,000,000 lbs in 1924 were read, and Mr Miller then said: "Until June it was thought probable that there might be an increase in the Northern Indian crop, but, as the season progressed, it became apparent that the crop would be rather smaller than last year. This development tended to stiffen the feeling of the market, and influenced by various considerations, such as the adverse climatic and political conditions which have caused a reduction in the exports from China, the abnormal floods in Southern India, and signs of some increase in the demand from Russia, more confident operations on the part of buyers in all parts of the world have ensued. In weighing up the various factors, there can be no question as to the strong position in which the tea-producing industry is now established."

RUBBER.

Turning to the rubber industry, Mr Miller said: "During the years 1923 and 1924, the reduction in world stocks of crude rubber will have amounted to about 85,000 tons, and I consider that stocks are now no more than sufficient to enable the trade to carry on without impediment. It is years since we had such a healthy market, governed mainly by trade buying and an absence of outside speculation."

Mr Miller gave statistics showing the average annual rate of progressive increase in world consumption during the past 14 years to be 13 per cent., and pointed out that the per capita consumption of rubber in the U.S.A. is 5½ lbs per annum, against less than ½ lb in Europe.

RESTRICTION.

Referring to restriction, he said: "The whole problem was how to tide the industry over until the world could take the increasing quantity of rubber which the estates were capable of producing. Had the industry been allowed to drift until sufficient of the weaker members of it had gone to the wall, it would have meant a senseless sacrifice, not only of the capital honestly adventured in

the industry, but of a vast number of native labourers who derive their livelihood from it."

SUPPLY AND DEMAND.

"The world's absorption during 1925 may be conservatively estimated at 450,000 tons. The output of the non-restricting areas, including wild rubber, cannot be estimated at more than 190,000 tons. Hence at least 260,000 tons will be required from the restricted areas, and this represents about 65 per cent. of their standard production. By giving every possible encouragement to the further development of the use of rubber, and by continuing to regulate exports to meet the real needs of the world, a prosperous future for the rubber-producing industry will be assured."

The report was adopted unanimously, and a final dividend of 15 per cent. on the deferred ordinary shares was declared, making 25 per cent. for the year.

FREDERICK HOTELS, LIMITED.

ANOTHER RECORD YEAR.

The twenty-sixth ordinary general meeting of the Frederick Hotels, Limited, was held, on the 16th instant, at the Hotel Great Central, Marylebone road, London.

Mr Ronald Peake (the chairman) said that when he addressed the shareholders a year ago he was able to report that the year then being reviewed was the best in the history of the company. He was pleased to say that the year now under consideration again showed an improvement. They had catered for more visitors, increased their turnover, and earned a greater gross and net profit. The net profit for the year had amounted to £64,368, and the directors proposed to place £10,000 to reserve fund, to pay the preference dividend for the year, to pay 10 per cent. on the ordinary shares, and to carry forward £45,143, as compared with £38,901 brought in. The improved results were mainly due to the London hotels, which continued to increase in popularity. In the accounts under review three months of the period of the Wembley Exhibition were included, but during that period their London hotels would have been full in any case, so that the benefit from the Exhibition would be more marked in the current year's accounts.

During the year, agreements had been entered into with the Gordon Hotels, Limited, by which they had assigned to this company the lease of the Lord Warden Hotel at Dover, and had purchased this company's interests in the Hotel Bristol, Beaulieu, Limited. It had long been apparent that Dover could not support two first-class hotels, such as the Burlington and the Lord Warden, but that if one of them were closed down the other could be run with a reasonable chance of success, and, as a result of negotiations, this company took over the lease of the Lord Warden on October 1st. The Burlington was closed on the same day, and the connection transferred to the Lord Warden Hotel. The Lord Warden, being a smaller hotel than the Burlington, could be more economically worked, and the directors hoped to run the hotel at a profit. They would take the earliest opportunity of disposing of the Burlington.

During the past year the mortgage of £30,000 on the freehold of the Hotel Russell had been paid off.

Business, as far as it had gone this year, had been exceptionally good. The London hotels had largely increased their turnover over the corresponding period of last year, and the country hotels had also done well. Business at the Hotel Majestic, Harrogate, had, of course, been affected by the fire, but as they were insured against loss the profit at that hotel should not be materially affected.

The report and accounts were unanimously adopted.

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital - £10,000,000 | Issued Capital - £8,734,660

Reserve Fund - £4,000,000 | Paid-Up Capital - £4,367,330

The Bank, in addition to 6 branches in SPAIN, has, with its AFFILIATED INSTITUTIONS

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

64 offices in the principal countries of LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK (Incorporated under laws of State of New York) and BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

GOODE, DURRANT, AND COMPANY, LIMITED.

SATISFACTORY YEAR—INCREASED PROFIT.

The 26th ordinary general meeting of Goode, Durrant and Co., Limited, was held at the registered office of the company, No. 27 Milton street, London, on the 17th instant, Mr J. Albion Williams, chairman of the company, presiding.

The secretary (Mr D. M. Jackson, A.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman suggested that the directors' report and the audited balance-sheet for the year ended July 20, 1924, should be taken as read. This having been agreed to, he proposed the adoption of the directors' report and balance-sheet, remarking that at the previous meeting held on October 19, 1923, he had spoken of the very difficult conditions that had existed during that period, and for the year under review at the present time the general conditions of trade had been no less difficult than in the previous year. In spite of this, the balance-sheet and report showed an increased profit amounting to £61,403 8s 4d, as against £56,755 19s 7d, and the directors considered that this result was satisfactory.

He also reported that tenders were being received for the further extension of the company's factories, which were urgently needed to cope with the growing trade, and that according to latest cable advices received from Australia the prospects of both agricultural and pastoral areas in Western and South Australia were exceedingly good, and the directors were hopeful for the coming year.

Mr W. E. Pennick seconded the resolution, and it was unanimously resolved that the directors' report and the audited balance-sheet for the financial year ended July 20, 1924, be received and adopted.

DIVIDENDS AND ALLOCATIONS.

The Chairman proposed, Mr Gait seconded, and it was unanimously agreed that dividends at the rates of 7 per cent. per annum on the preference shares, and 10 per cent. per annum on the ordinary shares, including the interim dividends paid in April last be declared and paid; that the sum of £20,000 be placed to the credit of the general reserve fund, making the total reserves £260,000; that the sum of £3,000 be added to the superannuation fund for employees, making that account £8,250, and that the balance of £7,661 12s 10d be carried forward to next year.

The Chairman proposed, Mr Emms seconded, and it was unanimously resolved that Mr Henry Heale and Mr Frederick Simonett be re-elected as directors of the company.

On the motion of the Chairman, seconded by Mr W. E. Pennick, it was unanimously resolved that Mr Wilfrid Stow (who has been a local director of the company in Perth, Western Australia, since September, 1915) be elected a director of the company.

On the motion of Mr Gait, seconded by Mr Rose, Messrs Newman, Ogle, Ashworth and Co. were appointed as the auditors to the company for the ensuing year.

Hearty votes of thanks to the chairman, and to the staffs in London and the various branches, concluded the proceedings.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

	40,000,000

SIDNEY TURNER, Accountant-General.

India Office, October 13, 1924.

Messrs Samuel Montagu and Co. write on October 15th as follows:—

GOLD.

The moderate amount of gold available here this week has been taken for India and the trade. The following figures show the United Kingdom imports and exports of gold during the month of September, 1924:—imports, £414,246; exports, £642,297.

SILVER.

The price of silver for cash delivery continued to advance, and touched 36 1/2d on the 9th inst.—a fresh record for the year. The quotation for forward delivery remained unchanged at the same figure. On the next day the market boiled over, and prices began a fall that carried them to 35 1/2d for both cash and forward delivery on the 13th inst. At this figure, bear covering and Continental demand combined to impart a steadier tone, though, probably owing to the imposition of limits, the tendency to react has not as yet had much play. The collapse of the Chekiang army and the flight of its leader may prove a factor in the market by removing obstacles to the free transit of commodities, of which at the present time exports ought to be active—this possibly may be taken as a bull point.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

NOTICES.

Ralph Cockayne Assheton, Esq., D.L., J.P., of Downham Hall, Clitheroe, has been elected to, and has accepted a seat on the board of directors of the Union Bank of Manchester.

Lloyds Bank, Limited, announce that a sub-branch of the bank is now open at High street, Wickwar, under the management of Mr T. A. Arden, of the Wotton-under-Edge branch.

Barclays Bank, Limited, announce the opening of a new branch at Beaufort street, Brynmawr, under the management of Mr R. L. Butterworth, who is also manager of Ebbw Vale branch. Their Beaufort office, hitherto sub-branch to Ebbw Vale, will become sub to Brynmawr, and the days and hours of business altered to Mondays and Thursdays, 10.15 a.m. to 2.30 p.m.

The Bank of Montreal advise that a branch of the bank will be opened at Guadalajara, Mexico, on or about October 20th, and at Monterrey, Mexico, October 27th.

The board of directors of the Banca Commerciale Italiana in Milan have decided to submit to an extraordinary general meeting of shareholders, to be convened shortly, a proposal for an increase of capital from £400 to £500 million lire, to be offered to present shareholders, in proportion of one new share for every four old shares held. The price and terms will be announced at the meeting.

The P. and O. Banking Corporation, Limited, have opened a sub-branch at Canton.

It is announced that the firm of Arthur H. Brandt and Co. is now associated with the London and Foreign Banking Corporation, Limited, of 39 Lime street, E.C. 3. The style of the firm remains unchanged, and the business will be continued as heretofore.

The directors of the Midland Bank, Limited, have the pleasure to announce that they have elected the Lord Kysant, G.C.M.G., to a seat at their board.

INTERNATIONAL LIGHT AND POWER.—There has been allocated the sum of £20,079 for the payment of 15 months' arrears of preference dividend. Since the close of the year under review a further payment has been made of one year's preference dividend, making a total of 27 months paid since December last, and leaving only 15 months in arrears up to the date of the accounts.

OWEN OWEN, LIMITED, have decided not to pay an interim dividend this half-year upon the "A" and "B" preference shares.

SAN PAULO COFFEE.—Final dividends of 5 per cent. are proposed on the preferred and deferred shares, making 15 per cent. for the year on both classes of shares, leaving a balance of £22,346 to be carried forward. The preferred shares are entitled to a cumulative dividend of 7 per cent., and to half remaining profits, after deferred shares have received 7 per cent. For 1922 the dividend on both classes of shares was 7 per cent. respectively.

UNITED STEEL COMPANIES.—No dividend is being paid on the 6 per cent. cumulative preference shares, and it is now in arrears as from January 1, 1922.

NORTH BROKEN HILL, LIMITED.—For the month of September the production was as follows:—35,870 tons of ore were treated, producing 6,660 tons lead concentrates, averaging 62.8 per cent. lead, 28.3 ozs silver per ton, and 7.7 per cent. zinc; also 5,730 tons zinc concentrates, averaging 47.3 per cent. zinc, 6.6 per cent. lead, and 8 ozs silver per ton.

SOUTH AMERICAN COPPER.—During September 4,360 tons of ore were produced, 3,806 tons of ore, with approximately 1,100 tons of quartz flux added, were melted, producing 484 tons copper matte, assaying 31 per cent. Matte as drawn from furnace averaged 35 per cent. reduced to 31 per cent. by fuming in sand mould; to prevent this steel moulds are being provided. Operations still much hindered by barely sufficient water for vigorous smelting programme.

ZINC CORPORATION.—September: Lead concentrator treated 18,464 tons of ore, producing 3,862 tons of lead concentrates and 3,863 tons of zinc concentrates. Estimated gross profit with lead at 244 per ton, 215,553. Increase (or decrease) each £1 fluctuation in price of lead, 23,541.

Reports and Notices.

Lt.-Col. the Hon. Clive Bigham, C.M.G., C.B.E., has been appointed a director of the National Provident Institution to fill the vacancy caused by the death of Lord Ailwyn.

Messrs C. L. Kettridge and Co., incorporated accountants, have opened branches of their business at 7 Avenue Edward VII., Shanghai, and at 714 Standard Bank Building, Vancouver, B.C.

Messrs John Gibbs, Son, and Smith, of 11 Copthall court, London, E.C.2, announce that they have taken into partnership Mr John Fraser Rutherford.

Messrs C. M. Lampson and Co. announce that Mr Samuel C. Cole has retired, after 38 years of devoted service, and will therefore no longer sign for the firm. Mr William E. C. Drewett is authorised to sign for the firm by procuration.

RAILWAYS.

BUENOS AYRES GREAT SOUTHERN.—Gross receipts for year ended June 30, 1924, amounted to £10,899,175, against £9,586,880 in preceding year. Working expenses amounted to £6,562,843, against £5,942,967. Net receipts amounted to £4,296,331, against £3,643,913. Exchange loss on remittances was £755,733, against £401,293. The dividend on the ordinary stock is again 7 per cent. for the year.

CENTRAL ARGENTINE.—The gross receipts for year ended June 30, 1924, amounted to £11,360,047, against £10,655,819 for preceding year. Working expenses amounted to £7,520,674, against £7,210,763. Net receipts are £3,839,373, against £3,445,056. The ordinary and deferred stockholders again receive 6 per cent.

BANKS.

ANGLO-SOUTH AMERICAN BANK.—The net profit for year ended June 30, 1924, amounts to £425,908. The sum of £337,661 is brought forward from previous year, making a total of £763,569 available. The dividend for the year is 10 per cent., less tax, absorbing £338,468. The sum of £425,000 is added to the staff pension fund, while £50,000 is applied in reduction of bank premises account, and a balance of £350,101 is carried forward.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 16th, is as follows:—Pig-iron: Business, on the whole, is still quiet, with very little prospect of any improvement now until the result of the General Election is known. Meantime, makers are endeavouring to maintain 80s as the nominal price of No. 3 Cleveland G.M.B., although something less than this would be taken by second-hands. The hematite position is also lifeless, and whilst mixed numbers East Coast hematite is still quoted by some makers at 88s, business could not doubt be done at 87s per ton. Manufactured iron and steel: With the exception of a fairly large order for steel plates received by one of the local works, trade is only moderate, but with the reduction of 10s per ton in the home price of steel ship and boiler plates, joists and angles, it is hoped that some further orders will be placed. Quotations are now as follows:—Steel ship plates, £9 15s per ton; steel ship angles, £9 10s per ton; iron bars, £12 10s

per ton; steel rails, £9 per ton. Iron ore: The position shows very little, if any, improvement, and the sellers' price of best Bilbao Rubio remains at 21s 6d per ton c.i.f. Tees.

Our Glasgow correspondent writes:—Reductions in pig-iron prices have not resulted in any appreciable increase in orders. There is very little moving, and even on a restricted output makers are finding difficulty in disposing of stocks. There is, however, slightly more interest in the market this week, and values having reached bottom, an early improvement is hoped for. The shipments from Glasgow last week totalled almost 520 tons, of which about 480 tons were on foreign account; for the corresponding week of last year shipments were 1,813 and 1,604 tons respectively. In the steel trade a few small export lines have been secured, but works still complain of lack of tonnage. The outstanding event of the week in this branch is the reduction in the nominal home prices. For eighteen months the basis for ship plates has been £10 5s per ton, and in many quarters the opinion has been expressed that a reduction is long overdue. The revised prices are as follows:—Ship plates, £9 15s per ton; boiler plates, £13 per ton; angles, 7 united inches and up, £9 10s per ton. Sheet makers on Tuesday followed with 10s per ton reduction on 1 1/2 and heavier, 15s per ton on 18-20 gauge, and 20s per ton on lighter than 20 gauge. Inquiries for sheets have not been quite so numerous. Japan is still holding off, and galvanised corrugated sheet makers, although well booked, report a slackening of demand. Bar iron makers are steadily employed, but on a basis considerably below capacity. It is reported this week that the Glasgow firm of Messrs. Melville, Dundas, and Whitson are the contractors for the new silk works to be constructed at Woverhampton for Messrs. Courtaulds, of Coventry. It is understood the cost of this contract will be about one and a half millions.

Our Sheffield correspondent writes:—The downward trend of pig-iron does not appear to have run its course, as there has been a further reduction since our last report. Prices have also fallen since coke prices were reduced, but in this respect the market has probably reached bottom. Derbyshire foundry iron is now quoted at £4 2s 6d at furnaces. Matters could scarcely be worse in the open hearth steel department, as no forward contracts have been booked for a long period, nor are there any signs of a revival of buying. The figures relating to railway material were down. Imports registered an increase on the month of about 30,000 tons, mostly pig-iron and billets. The tool steel branch, which tapered off in August, has not yet recovered. Business is brisk in both the home and export markets in tools used on the land and for contractors' work, and the building trade is providing a great amount of work for makers of tools, stove grates, rain water goods, water fittings, and various light castings. The cutlery and plate branches, too, are busier to-day than for two years or more. Nothing very cheerful can be reported of the coal and coke industry, as, despite the reduced production, stocks at

accumulating at many of the pits, and prices of second-class fuel are in a state of disorganisation. Shipments to the Continent have dropped to a small volume, whereas the former overseas buyers of British coal are taking increased tonnages. Gas and house coal are quiet. The home consumption of coke has shrunk with the stoppage of numerous blast furnaces, but there is a rather better demand for foundry coke. The coal market quotations are merely nominal as a rule. Best South Yorkshire steams are worth about 20s, but parcels of nuts and smalls are being offered at cut rates. Blast furnace coke is 16s 9d per ton at ovens upwards, and the two qualities of foundry coke at 35s and 30s at ovens.

Our Cardiff correspondent writes:—This week there have been indications of an improving undertone on the Cardiff coal market. Prices have been steadier, the volume of exports slightly greater, and inquiries a little more active. The quotations for dry steam and sized coals have even slightly advanced, while the best Admiralty large descriptions have experienced less difficulty in obtaining their minimum prices than for some weeks past. Very few contracts have been entered into over next year. Collieries have been more disinclined than in any other post-war autumn period to sell ahead except at prices appreciably above the current market quotations, and contractors have been hopeful that they would be able to compel the collieries to meet them. The action of one or two of the French railways in asking for tenders over next year has stimulated other inquiries, but while none of these have yet resulted in any considerable business they have introduced into the market a feeling of greater confidence. The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; second, 25s to 26s; best drys, 27s 6d to 28s; black veins, 24s 6d to 25s; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 23s 6d; best bunker smalls, 14s to 15s; ordinary cargo smalls, 11s 2s 6d; coking smalls, 14s 6d to 15s; anthracite big vein, large, to 13s; coking smalls, 14s 6d to 15s; 36s; machine-made cobbles, 50s to 52s 6d; French nuts, 58s 6d to 60s; stove nuts, 57s 6d to 60s; 55s to 58s 6d; French nuts, 58s 6d to 60s; coke for export, 50s; inland blast-rubblly culm, 11s 9d to 12s 3d; coke for export, 50s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 26s to 28s; pitwood, ex ship, 26s 6d to 27s.

CANNED GOODS.—Market firm on spot, with only small supplies

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

Telephone: 7802-7803 City.

THERE has been a good deal of disturbance this week owing to the after effects of the lock-up due to the German loan. A small amount was borrowed from the Bank of England on Tuesday, and on Wednesday, when a large sum was due for repayment, part of it had to be renewed, in spite of assistance in the form of purchases of December Treasury bills. Discount rates have been hard; there was a moderate demand for bank bills on Continental

account, Germany being now added to the list of European buyers, but three months' bills were not taken freely at $3\frac{1}{2}$ per cent. Yesterday's batch of Treasury bills was placed at a slightly lower rate than had been anticipated, but the result did not affect the market.

	Oct. 24, 1924.	Oct. 17, 1924.	Oct. 10, 1924.	Oct. 3, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2	2	2	2	1 (Jly. 5, '23)
Market rate 3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

The Bank return showed an increase in the Reserve of £548,000, of which £544,000 was due to the return of notes from circulation. Other securities declined by £1,455,000, but there was a small increase in Government securities. Public deposits rose by £2,702,000, and Other deposits were £3,381,000 lower on balance. Currency notes outstanding were reduced this week by £1,871,600 to £285,218,300, which includes £1,366,400 for notes called in but not yet cancelled. The fiduciary issue is £234,401,900, or £13,789,000 below the maximum.

THE STOCK MARKETS.

Buoyancy has been the keynote of the stock markets this week, and although scarcity of supply of stock has been partly responsible for some of the sharp rises which have occurred, there has been quite a considerable amount of business transacted. Gilt-edged stocks have been good under the lead of Five per Cent. War Loan, but Home Rails, though slightly better, have received only moderate support. Interest in the foreign market has centred in dealings in the new German loan, which opened on Tuesday at $2\frac{1}{2}$ premium, and quickly rose to over 5. The rise to nearly 15 6d in the price of the raw material has produced great activity in rubber shares, and the oil market is stronger on talk of a rise in the price of crude oil. Industrials generally have been active, but business in mining shares has not been very large.

THE COMMODITY MARKETS.

Business in the cotton trade during the week has been rather irregular; in some quarters there is an expectation of lower values. Wool is firm, but buyers of piece goods still act with caution. The pig-iron market is adversely affected by the General Election, and our Middlesbrough correspondent states that ironmasters are not prepared to make further losses by reducing prices. In manufactured iron and steel recent reductions have not brought on much business, except for constructional steel. Our Sheffield correspondent writes that the outlook is regarded as brighter for the iron and steel industries. Towards the end of the week the wheat market developed weakness. Linseed oil is easy. Tea was inclined to be easier. Further details of the commodity markets will be found on later pages from special correspondents.

FOREIGN EXCHANGES.

The coincidence of elections in Great Britain, the United States, Germany, Sweden, and Jugo-Slavia seems to have restricted business for a time to the narrowest limits, so that extreme dullness characterised the foreign exchange market during the week. Apart from the continued strength of sterling against the dollar, and the absence of any appearance of resistance in the French franc, the most conspicuous feature of the week was perhaps the sharp appreciation of the Roumanian leu. Opening at 4.48 $\frac{1}{2}$, the dollar rate advanced sharply to 4.50 on Tuesday, and 4.51 on Wednesday. There was subsequently a reaction against these rather high levels, which seem to have been hardly justified by any of the known material factors, and the rate moved back to 4.49 $\frac{1}{2}$ on Thursday. Yesterday this tendency continued, and the rate was quoted at 4.49 $\frac{1}{2}$. The slight improvement on balance during the week, and the maintained strength of

sterling against seasonal precedent, may be attributed to the continuance of American bullishness on our election prospects, and of further American investments in British securities on account of the better rates obtainable here as compared with at home. As against this, there was a certain buying of dollars in connection with the American section of the German loan. Paris opened on a weak note at 85.80; an improvement to 85.55 was followed by reaction, and yesterday the quotation was 86.10. The further rumours of an internal loan, which became more precise as time went on, seem unlikely, if true, to bring about any improvement, as they appear to agree, chiefly in one particular, the arduous conditions under which it must be obtained. Brussels was slightly weaker at 93.70 yesterday, as against 93.35 at the beginning of the period under review, and the same tendency is traceable in the lira at 103.60, as against the opening rate of 102.90. Although both moved in sympathy with the French franc, the absence of the same causes of weakness as have affected Paris enabled them to break away, and there seems to be no reason, under present conditions, why they should be affected in a similar degree. Madrid only moved slightly from 33.44 to 33.46, although there was a reaction to 33.52 for the day only on Wednesday; Christiania recovered from last week's set-back, due to her banking troubles, and is better on balance at 31.48. Sweden has remained sluggish at about 16.86-16.90 throughout, and Berlin, Warsaw, and Vienna are all practically unchanged. The leu appreciated sharply from 815 to 780, but reacted, probably on profit-taking, to 790 on Thursday. Renewed strength was shown yesterday with the rate at 780. This tendency is probably due to the favourable figures of export of Roumania's grain harvest, coupled with the local sale of foreign currencies obtained for such export. None of the other European currencies call for remark, except Amsterdam, which improved sharply on Tuesday to 11.41 $\frac{1}{2}$ from 11.46 $\frac{1}{2}$ the previous day, as a result, it is stated in some quarters, of transactions connected with the German loan. At 11.44 yesterday the rate is better on balance for the week. The South American exchanges were featureless throughout, Buenos Aires remaining at about 44 $\frac{1}{2}$ -45, Monte Video at 47 $\frac{1}{2}$ -48, and Valparaiso at 39.30 all the week. As regards the Far East, the rupee was firm throughout at 1s 6d, or a little over, and shows little sign of weakening. The Hong Kong rate is a shade lower at 2s 5d than at the opening; Shanghai rather better at 3s 5 $\frac{1}{2}$ d, and Singapore unchanged at 2s 4 $\frac{1}{2}$ d. The yen is a little better on balance at 1s 8 $\frac{1}{2}$ d, having remained fairly steady at about this level throughout.

The silver market has seen a little more movement, but though there have been almost daily fluctuations, these have been small, and the general tone is steady. Continental buying for minting purposes seems to have fallen off, as a result of high-price levels, but both buying and selling took place on China account. With India inactive, and with less demand anticipated by the bazaars, future prospects seem a little uncertain, though falling rates would probably bring buyers quickly into the market again with steadying results.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 18th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	8,530	From Revenue	17,446
Interest, &c., on Debt	5,541		
Sinking Fund	500		
Sundries	427		
Increase in Exchequer balances	371		
Reduction in Debt	1,977		
	17,446		17,446

The Revenue for the week was £17,446,000, as compared with £17,214,780 for the corresponding period of last year. Customs were down at £1,189,000, against £2,003,000, but Excise was higher at £8,971,000, against £8,386,000. Receipts from stamps were up by £700,000, having reached the figure of £990,000. Property and Income-tax was well maintained at £3,676,000, as compared with £2,673,000, but Super-tax, at £350,000, was lower than the corresponding figure for last year by £10,000. Ordinary Receipts amounted to £210,000, against the sum of £272,780 for last year, while Special Receipts were nil, against

£900,000. The week's operations reduced the National Debt by £1,976,891, and caused the following changes:—

(000's omitted.)	
Treasury Bills	4,000
National Savings Certificates	200
Public Department Advances	2,700
Bank of England Advances	3,250
National War Bonds repaid	200
Sundries	27
	+ 4,200
	— 6,177

The floating debt was reduced by £1,940,000 to £791,949,000.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of German unemployment statistics since the Armistice.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

FREE TRADE IN THE ELECTION.

BEFORE our next issue appears, the deluge of oratory with which the country is being flooded, and much of which, though emanating from the platform, is, unfortunately, of the street corner variety, will have ceased, and we shall know how far the constitution of the House of Commons has been changed by this unwanted and unnecessary appeal to the electorate. As the National Reform Union points out in a manifesto issued this week, when Mr Baldwin appealed to the country eleven months ago, there was at least the satisfaction of obtaining, at the cost, perhaps, of a million sterling, a decisive verdict from the electors upon a question of enormous importance—the tariff question. But now we have no clear-cut issue. Of the programmes of the three parties, that of the Liberal Party is the least indefinite, and, at any rate, puts forward a constructive land policy and new proposals as regards coal and power as an alternative to Socialism. The Labour Party has no new proposals, but their programme is not lacking in promises of all sorts of palliatives with which it is hoped to catch the ear of the unemployed elector, while the Conservatives have made not "tranquillity," but "stability" their slogan. We are conscious that any reference to the Protectionist past of Mr Baldwin and his associates—and more especially to his disastrous plunge into a general tariff a year ago—is regarded as tactless and even indelicate in the best Conservative circles. Whenever in a humble voice we venture to refer to these evidences of instability—in the recent past—we are sternly told that the past is past, and that Protection is no longer an issue of the election. The dominant issue is now claimed to be the desire of the country for a "stable" Government which the plungers of a year ago alone are able to provide if returned in sufficient force. On the principle that reformed rakes make the most faithful of husbands, the Conservatives and Unionists ask for a renewal of the confidence given to

Mr Bonar Law in 1922 and thrown away by Mr Baldwin in 1923. Having plunged upon Protection once with disastrous results, are we, they blandly ask, likely to try the expensive game a second time?

The truth, which cannot be concealed, is that the party of Mr Baldwin is as much in love with tariffs and Imperial preference and food taxes as it was twelve months ago. Nothing is changed except the means by which the end may be achieved. The frontal attack, the claim that tariffs alone can cure unemployment, has been given up, but the tariffs remain as a goal to be worked for by sapping and mining the Free Trade policy of this country. Mr Baldwin, made cautiously by experience, talks mildly of safeguarding efficient industries by special measures against unfair foreign competition, and waves the flag of Imperial Preference. To Mr Baldwin's hints of "safeguarding," the North-Western Free Trade Union has made an apt retort. "By the means he seeks authority to apply," it points out, "he cannot safeguard the employment or standard of living of the 130,000 coal-miners who are working directly for export, or of the 300,000 additional coal-miners whose product goes to the making of iron and steel and other manufactures that are exported. The means he proposes to employ will do nothing for the iron and steel workers, two-thirds of whose output, directly or indirectly, is for the foreign market; for the cotton operative, who exports three-quarters of his produce; for the engineering worker, 60 per cent. of whose output goes abroad; or for more than half the workers in shipbuilding, woollen and worsted, chemicals, and a dozen other industries, in all of which there is a preponderance of exports; or for shipping and transport workers, whose livelihood depends essentially on freedom of trade. Still less can his policy confer any benefit, even a sectional benefit, on the workers in industries which are not subject to foreign competition at all, the 700,000 building operatives, the 600,000 railway workers, the host of workers in public utilities, gas and electricity supply, the food trades, printing and publishing, the shopkeeping and other distributive trades, Government and municipal service. Only a small fraction of the community could benefit, even in the unlikely event of the policy succeeding in its aims. On the other hand, the taxation of imported foodstuffs and raw materials which the policy necessarily involves, would handicap the export industries and lower the standard of life in the industries that are not subject to foreign competition, with no compensating benefits." Most of the candidates who own Mr Baldwin as their leader say as little as they may about safeguarding "efficient industries." The Empire is a subject less harmful to their prospects. But in Birmingham, the Mecca of the modern Tariff Reformers, the true gospel is preached with all the old Chamberlain rigour. Mr Neville Chamberlain is nowadays the leading prophet. For him victory means the re-establishment of the McKenna duties, a new Safeguarding of Industries Act, and the Imperial Preference proposals of 1923 with all their new food taxes which the country rejected when Mr Baldwin appealed to it last November. The Birmingham School has not abated a jot of its demands for a tariff and it has upon the Conservative leaders at least as decisive an influence as the extremists of Glasgow have upon the Labour Ministers. It was that Birmingham influence which caused the Lords to throw out the Lloyd George Budget of 1909, and which drove Mr Baldwin into the abyss of dissolution in 1923. In Birmingham the raw truth may be told; elsewhere the tariff gospel needs to be watered to suit local tastes. But should the electors, in their desire for stable Government, give Mr Baldwin a working majority over the two other parties, Birmingham pressure would soon stretch Mr Baldwin's safeguarding of industries to dimensions indistinguishable from those of a general tariff. And the working classes of this country, upon whom rising food prices already press hardly, would find themselves called upon to subsidise comparatively wealthy Dominion food producers in the sacred name of Imperial Preference. Upon this most important subject Mr Baldwin on Thursday delivered two "pledges," totally inconsistent the one with the other. He declared that the Unionist Party stood by its Imperial Preference pledges to the Dominion representatives last summer—with the long Conference

list of new food taxes—and then a few minutes later pledged himself that there would be no taxation of food if the Unionist Party were returned to power. He appears to reconcile these mutually exclusive "pledges" in a fashion understood only by Tariff Reformers. To the plain man a food tax is a food tax, for whatever purpose it may be imposed.

Under our present political organisation the sober middle opinion of men and women, millions of them, in this country, is inadequately represented. The bulk of the electors are neither reactionary Protectionists nor predatory Socialists. They approach in opinion most nearly to the doctrines of that Liberal Party which, before the disastrous split of 1916, was the strongest and most stable political force in these islands. Now, though Liberal in sentiment, the majority of the electors do not "find salvation"—in the old phrase—in the support of Liberal candidates. For the moment, though small in numbers, and maybe threatened with reduction at the coming election, the Liberals alone stand between Protective tariffs on the one side and Socialist experiments on the other. We have just seen a Labour Government kept in office by Liberals, and finally thrown out by Liberals. Presently it is possible that we shall see a Conservative Government kept in office by Liberals and prevented by Liberals from indulging its lusts for Protection and food taxes. The country would be in a sorry plight should the Liberal Party cease to exercise its balancing and moderating influence. We should then have to choose between an industrial system handicapped by tariffs and food taxes, and an industrial system "nationalised" towards inevitable bankruptcy.

THE NATION'S SAVINGS.

It will be generally acknowledged, though definite proof is practically unobtainable, that the general standard of living in this country is higher than it was before the war. It certainly will not be disputed that the standard rose very considerably during the war and in the years which immediately followed it, but it is difficult to gauge how far the level then reached has been maintained. There has possibly been a slight lowering during the past two or three years, but so far as can be gathered from general observation, the decline has not brought the standard down to the pre-war level. If that is the case, it presumably follows that, in the absence of any increase in the national income, this higher standard has been secured at the expense of savings. We know of no accurate index of the annual amount of national savings. There are, however, certain figures which to some extent throw light upon the point.

Firstly, certain deductions can be drawn from the premium income of life assurance companies. According to the Board of Trade figures, the premium of British Life Assurance companies has shown a steady increase, from £48½ millions in 1913 and £50½ millions in 1914 to £78½ millions in 1921 and £80½ millions in 1922, while it is estimated that the total for 1923 reached £82½ millions. Some small modifications have to be made in these figures for our purpose. Firstly, a deduction must be made in respect of claims paid, but it does not seem unreasonable to assume that the allowance required here is only a small one, on the ground that most of the receivers of insurance payments on the death of the insured treat them as capital, except in the case of industrial assurances for the payment of funeral expenses and insurances against death duties. But in the main the figures we have quoted represent a certain type of new savings, and they show an increase which is practically equal to the increase in the level of prices. They represent a ratio to the national income, estimates of which were given in the *Economist* of October 4th, of 2.16 per cent. in 1913 and 2.1 per cent. in 1923. Too much store, however, cannot be set by the similarity of these percentages, for we are inclined to think that the habit of life insurance is increasing, and therefore an increasing proportion of the national savings

might have been expected to be finding its way into life insurance. It does not, therefore, follow that because this form of saving has increased at a normal rate the total savings have increased, nor yet that the entire savings of those who follow this method of saving have increased at the normal rate.

A second series of figures which may be used as a pointer are the figures of new capital issues. In the table below we set out our annual figures, excluding issues by the British Government:—

	Million £'s.)		
1909	178.5	1919	211.4
1910	242.9	1920	330.0
1911	191.7	1921	186.1
1912	210.8	1922	204.1
1913	196.5	1923	193.9
1914	180.0	1924 (9 months)	125.0

The figure for the post-war period is a little higher than that of the pre-war quinquennium, but this is accounted for very largely by the total for the boom year 1920, the figures for the past two years being slightly below representative pre-war years. New capital applications, of course, do not necessarily represent a net addition to the nation's savings. A certain, though unascertainable, proportion is subscribed by foreigners, particularly in the case of foreign loans raised in London. Again, some proportion of an issue of shares may be taken by people already in ownership of the business concerned, though we endeavour to exclude cases of this kind in the compilation of our statistics in order to arrive as closely as may be to the actual amount of new capital offered to the public. In 1919-20 the fact that the British Government spent £326 millions more than it received and covered the deficit by borrowing, helped to swell the total of the nation's savings. Since then, however, the Chancellor of the Exchequer's surpluses have amounted to £426 millions, which, together with payments of £169 millions to Sinking Funds, was used in reducing the National Debt, and the repayments thus made supplied funds for reinvestment. Thus, while the figures of new issues given above are slightly higher than those for pre-war years, allowance has to be made for the fact that £100 millions was found by taxation. This means that voluntary savings, through the medium of new issues, are slightly less than before the war, whereas they should show an increase of some 75 per cent. if the rate of saving was being maintained.

The third series of figures from which we may obtain some indication of the movement of savings is the analyses of joint-stock company profit and loss accounts which we undertake every three months. In the last pre-war quinquennium the aggregate net profits of the companies whose reports were analysed amounted to £275 millions, of which £67 millions, or 24.3 per cent., was placed to reserve. In the post-war period the net profits of a substantially larger number of companies amounted to £565 millions, of which £124 millions, or 22 per cent., was reserved. In the pre-war period the ratio of reserve allocations to ordinary and preference capital was 2.3 per cent., and in the post-war period 2.8 per cent., the latter figure being due to an exceptionally high proportion set aside in 1920. For 1923 the figure was 2.0 per cent., while that for the quarter ended September 30th last was 2.2 per cent., as shown in our article last week. Thus, according to our figures, the companies whose figures are available are setting aside to reserve very much the same proportion of profits as before the war.

The general conclusion to be drawn from these three sets of figures, which we put forward with all due reservation, is that the total amount of the nation's savings has not increased in proportion to the rise in prices; for while life assurance premiums and savings by public companies through their reserves have kept pace with the increase in prices, the subscriptions to new issues, which represent a much larger amount than either of the other two categories, have not increased at all. In other words, while savings generally in terms of money have increased in total amount since pre-war days, the ratio to the national income has not been maintained. It is difficult to say whether the national savings ought to be increased to the point at which the pre-war ratio is restored. It is estimated that before 1914 we were saving about 15 per cent. of the national income, which was added to the

nation's capital, some of it going to swell our investments abroad which were not brought home, but went on accumulating at compound interest overseas. These did not directly contribute to the national well-being, and it is difficult to say definitely to what, if any, extent they were assisting the nation's productive power. It is, indeed, quite possible that not only the standard of living, but also our competitive position in world trade can be maintained with a lower ratio of savings to income than before the war. It is impossible to say how fast capital is increasing in the world as a whole, or at what rate our industrial equipment should be expanded to keep pace with this increase.

CONDITIONS IN THE HOSIERY TRADE.

A DIRGE has recently been chanted, in quarters where such lugubriousness is not usually found, over the present state of the hosiery trade. It is alleged that there is a "partial slump," due to foreign imports produced at starvation wages, and to a concerted effort by America to "capture the British market" in certain grades of goods. Such efforts have doubtless been made in the past, and will be made in the future, and they are not limited to the hosiery trade. They have, however, usually met with but partial success, due in most cases to temporary neglect on the part of British manufacturers. Let us see how the hosiery trade has fared in the general fight.

Here are the figures for cotton and woollen hosiery during the last 60 years:—

OVERSEAS TRADE IN COTTON AND WOOLLEN HOSIERY OF ALL KINDS (except Gloves). (In Thousand £.)

5-Year Averages.	British Exports.	Net Imports.*	Excess of Exports.
1844-68	936	..	..
1869-73	1,220	..	..
1874-78	1,194	186	1,008
1879-83	1,401	164	1,237
1884-88	1,525	368	1,157
1889-93	1,388	362	1,026
1894-98	1,188	328	860
1899-03	1,331	614	717
1904-08	1,738	1,307	431
1909-13	2,318	2,192	126

Single Years.	British Exports.	Net Imports.*	Excess of Exports.
1914-18	3,030	2,010	1,020
1919	4,801	2,236	2,565
1920	9,694	3,163	6,531
1921	3,428	1,413	2,015
1922	6,075	2,025	4,050
1923	6,153	2,709	3,444

* Net imports of woollen hosiery are included only in 1904-08 and subsequently.

In considering the statistics for 1923, we have to bear in mind that trade with the Irish Free State has been included in the returns since April 1st of that year. This may affect the comparison somewhat, but it cannot alter

seriously the broad fact that British exports are now 165 per cent. over the pre-war level, while net imports are only 23 per cent. above it.

It will be seen that down to the beginning of this century there had been a fairly constant decline in the excess of exports over imports. This is unduly increased by the inclusion of woollen imports during the last ten years before the war, and if this factor were allowed for, little decline would be shown for that period. Indeed, it may be said that in the 15 years before the war a distinctly stronger situation in the home trade was noticeable. Since the war, the enormous fluctuations in prices have to be remembered. After making all allowance for this, however, the record since the close of the struggle is eminently satisfactory for our producers. And, as we shall see later, the record for the present year to date is more satisfactory still.

A remarkable fact, however, is that our makers have never achieved in the cotton branch of the trade anything like the success achieved in the woollen branch. In woollen goods foreign competition has been met by them with comparative ease, but in cotton goods they have failed for long periods at a stretch, though their position now cannot be said to be so bad as it was immediately before the war. Here are the trade's records, split into the two branches:—

OVERSEAS TRADE IN HOSIERY OF ALL KINDS (not including Gloves). (In Thousand £.)

5-Year Averages	Woollen Hosiery.			Cotton Hosiery.		
	British Exports.	Net Imports.	Excess of Exports.	British Exports.	Net Imports.	Excess of Exports.
1854-58 ..	304	..	..	..	..	..
1859-63 ..	355	..	..	..	..	..
1864-68 ..	315	..	..	621	..	..
1869-73 ..	276	..	..	944	..	..
1874-78 ..	292	..	..	902	186	716
1879-83 ..	313	..	..	1,068	164	904
1884-88 ..	642	..	..	883	368	515
1889-93 ..	819	..	..	569	362	207
1894-98 ..	795	..	..	393	328	65
1899-03 ..	924	..	..	407	614	207
1901-08 ..	1,251	289	962	487	1,018	531
1909-13 ..	1,739	422	1,317	579	1,770	1,191
1914-18 ..	2,070	249	1,821	960	1,761	801
Single Years						
1919	2,797	52	2,745	2,004	2,184	180
1920	6,800	515	6,285	2,894	2,648	246
1921	2,877	239	2,638	841	1,174	333
1922	4,984	160	4,824	1,091	1,865	774
1923	5,004	201	4,803	1,249	2,508	1,359

In the woollen section of the industry our manufacturers evidently had little trouble in beating their competitors. It is difficult to see why they should not have been able to do the same in the cotton section. Yet in this they steadily went backward during all the thirty years preceding the great war. Possibly the cotton goods, being cheaper, are less profitable; or possibly the home demand ran more in favour of the woollen than the cotton articles. Whatever may have been the reason, our producers do not seem to have paid sufficient attention to cotton hosiery before the war, and it is to be hoped that this neglect will be remedied. There are plenty of people who deliberately

choose cotton underclothing, not because of its cheapness, but because their sensitive skin cannot bear the irritation caused by a woollen covering next to it. If we add the demand on this score to that caused by considerations of economy, we shall readily realise why it was that last year 2½ millions' worth of cotton hosiery was imported for consumption in this country.

Of course the position is now much better than it was immediately before the war. In the five years to 1913 exports were only 33 per cent. of the net imports. In 1923 the proportion had risen to over 45 per cent.

Home producers, however, should not conclude that this justifies them in taking things easily. Germany is the country to be watched, since she sent us in 1913 over 80 per cent. of the cotton hosiery imported in that year. And Germany is as yet far from having got back into her stride. She will find it extremely difficult to do so, hampered as she will be by enormous Reparation obligations. Yet she will have to make the utmost efforts to that end, and if our factory owners order their arrangements on the supposition that they will have to meet competition from Germany as keen as it was before the war, they will not go far wrong, or will probably be erring (if at all) on the safe side.

Before proceeding further, it will be well to compare pre-war and post-war prices, and some remarkable contrasts between exports and imports are thus brought out. Here are the figures relating to stockings and hose—the only goods for which complete records of quantities in pre-war times exist:—

PRICES OF STOCKINGS AND HOSE.

	Exports.			Imports.			Import Price of Materials.
	Thous. Doz. Pairs.	Thous. £	Per Doz. Pairs.	Thous. Doz. Pairs.	Thous. £	Per Doz. Pairs.	
Cotton							
1913..	722	199	5/6	1,001	353	7/1	7d per lb
1923..	811	550	13/7	1,843	621	6/9	17d
Wool							
1913..	2,364	961	8/2	16	8	10/	10½d per lb
1923..	3,648	3,496	19/2	60	36	12/	15d

This is a very striking comparison; and, when interpreting it, the vast variety in the quality of goods it covers should be kept constantly in mind. It will be seen that the import price of cotton stockings and socks in 1913 was 7s 1d per doz. pairs, or, say, 7d per pair. This price would, of course, be equal to nearly 1s per pair in retail shop windows. But before the war it was a common sight in the poorer suburbs of London to see men's half-hose of German manufacture ticketed as low as 3d and even 2½d per pair. Of these very inferior goods, the import value would certainly not exceed 2d per pair. Presumably they were only bought by the poorest of the poor; and their sale could not have been very large, or the imports in 1913 would not have reached the comparatively high average of over 7d per pair—which, be it noted, compared with 5½d only for the exports in that year. But with the very high price ruling for raw cotton in 1923, the demand for these low-grade articles would naturally be stimulated largely. Their import value last year would probably range between 4d and 5d per pair, and as the value of all imports averaged 6½d per pair, these very cheap socks would seem to have formed the bulk of them.

And now let us get back to the position of the industry as a whole. We have already seen that in 1923 this was decidedly better than in 1913. How does 1924 compare with 1923? Here are the figures:—

OVERSEAS TRADE FOR NINE MONTHS TO SEPTEMBER.
(In Thousand £.)

	Woollen Hosiery.		Cotton Hosiery.		Total.	
	1923.	1924.	1923.	1924.	1923.	1924.
Imports	160	260	2,099	1,834	2,259	2,094
Re-exports	16	15	110	123	126	138
Net imports	144	245	1,989	1,711	2,133	1,956
British exports	3,722	3,883	897	1,026	4,619	4,909
Excess of exports	3,578	3,638	..	..	2,486	2,953
Excess of imports	..	..	1,092	685	..	..

Plainly, the industry is meeting foreign competition better this year than last, and that not in woollen hosiery only, but in cotton as well.

In conclusion it should be mentioned that a considerable section of the hosiery trade now comprises goods made of other textiles than cotton or wool. These have only been separately recorded in the trade returns since 1920, and the figures for 1923 have not yet been published. It may be that this section would not show up so favourably as we could wish. If so, it would be regrettable. England was a leader in the production of artificial silk, and in the manufacture of stockings and other goods from this material our hosiery firms should have the lead also.

THE AUSTRALIAN EXCHANGE PROBLEM.

AUSTRALIA is expecting a heavy export season. At least 90 per cent. of the wool clip will be exported, and prices are expected to be high. Foreign buyers, therefore, will want the banks to make them advances against letters of credit on London, as it is the custom for wool growers to be repaid in full (through the brokers) within a fortnight or so after the wool is sold. The wool sales have been in progress for some weeks, and the heaviest months will be November and December, at the time when credit will also be required to finance wheat and butter exports. Already, since the end of September, the premium on the Australian pound for the purpose of remittance has been twice increased by the Australian banks. Moreover, the official rates quoted do not accurately represent the position, for we understand that most transactions of any size have for some time past been made at still higher rates. The immediate outlook, therefore, for a return to a more normal state of affairs is not hopeful, especially since borrowing by Australian Governments in London—the large scale of which is one of the causes of the present exchange difficulties—does not yet appear to have ceased. The situation is naturally giving rise to a great deal of discussion in Australian financial and commercial circles. A Sydney correspondent, in describing some of the latest measures which have been taken or proposed in order to remedy the currency situation, including the passage of the Commonwealth Bank Act (to which reference has already been made in these columns), shows that opinions are strongly divided on the subject. He writes as follows:—

What has been done to meet the present exchange difficulties? The Notes Board has offered to issue £5,000,000 additional notes.* Dr Earle Page stated in the House of Representatives on September 4th: "Advances of notes up to £5,000,000 in the aggregate will be made available to the banks as required, and will bear interest at a rate not exceeding 2 per cent. above the highest rate allowed by the banks on fixed deposits, repayment to be made as to £3,000,000 not later than June 30, 1925, and as to £2,000,000 not later than July 31, 1925. Any bank receiving assistance under this arrangement will be required to lodge cash or approved securities in London against the advances made here, the bank to receive the interest actually collected in respect of such cash or securities, while held by the Notes Issue Board." The banks have accepted this offer; the additional notes will tend to raise the price level, and so may stimulate the demand for sterling on the part of importers.

Meanwhile the Federal Parliament has passed the Commonwealth Bank Act. The intention of this Act, in the words of its sponsor, Dr Earle Page, is to change the Commonwealth Bank from a mere "Governmental institution in competition with the private banks" into an effective Central Bank which shall be "the keystone of the financial arch of Australia."

It is doubtful whether this end will be achieved in the near future. Already the Commonwealth Bank has some measure of control. It has on several occasions made advances fairly freely at lower rates than those of the

* A Times Sydney telegram suggests that this amount is to be increased to £20 millions.

other banks, which have then been constrained to lower their own rates. During the 1923-4 export season it assisted the other banks, by making advances out of existing credits; this was made possible through the co-ordination of the resources of the Treasury with those of the bank. Already some of the other banks do settle their balances through the Commonwealth Bank.

But, apart from the "capital" provision, the Act does little to strengthen the bank's position. It is an open secret that the bank at first met with considerable hostility from the other banks, which it has quietly and gradually been overcoming. It will be some time yet before the bank obtains anything like the prestige of the Bank of England, for example. It will take time to induce the other banks to keep larger balances with it, and to regard them as "cash."

The "discount rate" provision will not be of much importance for some time. In the first place, there are now comparatively few bills to be discounted. The habits of the community have changed in the last twenty years or so; and bank overdrafts, cash discounts, and high stamp duties have caused the supply of bills to dwindle to insignificant proportions. The Government may issue more Treasury bills, through which contact between the Commonwealth Bank and the other banks may be established, but that lies in the future. At present such an issue would involve either increased borrowing at an inauspicious time or conversion of "fixed" into "floating" debt at a higher rate of interest. In the second place, if there were enough bills, and if the other banks did make a practice of re-discounting them in time of need, it is doubtful whether the rate could be kept effective, except at intervals.

It is true that, although there are few bills, the Commonwealth Bank may make advances to the other banks against securities, and so control credit. But this would not be so desirable as re-discounting, and, in any case, the Commonwealth Bank already has this power; and the Act does not increase it. Nevertheless, in the near future, the board of directors of the Commonwealth Bank will have complete control of currency and some control of credit. What will be their policy? An attempt to estimate the opinion of informed Australians may be of some interest in this connection.

Proposals such as those of Mr J. M. Keynes, for "a managed currency," have received little support. Devaluation, which has been suggested in the past, has few advocates now that the Australian pound is so nearly equivalent to 113 grains of gold. On the whole, it may fairly be said that the general opinion is in favour of a return, sooner or later, to the pre-war gold standard. But, as in England, we are not prepared to face the evils of relatively rapid deflation in practice. Nevertheless, opinion is to some extent divided as to policy in the near future. For the sake of clearness it will be convenient to state two opposing views in a somewhat extreme manner.

The first view is held by those who consider stability of the price level to be the most important aim. They would like also to keep the English exchange stable at par, but if this is impossible without inflation, they would rather see sterling at a discount than the price level here increased. For, they urge, England and Australia have, in fact, quite separate and distinct currencies, although the paper unit of each is called a "pound"; hence, they say, there is no great cause for alarm if the English exchange does not happen to be at the pre-war par. They rightly expose the popular error that, when an Australian exporter receives £97, say, in exchange for £100 in London, he "loses" £3. They see no reason why we should "inflate" because England does; they are quite prepared to return to a gold standard before England; and they think it would be foolish to lose the "lead" which we have over her in this matter.

The other view is held by those who consider that it is more important to keep the English exchange stable and near par, even if this involves some inflation. They stress the intimate commercial and financial relations which exist between the two countries. A great deal of our public and private borrowing is done in England, and in terms of English pounds. Again, about half the foreign trade of Australia is with Great Britain. It is

desirable to have a stable exchange, otherwise a great deal of uncertainty as to the future may exist, and tend to discourage industry and trade. Further, if we kept our pound stable with sterling, we should be attaching it to a currency with a long and honourable history. Some weight may also be attached to our close political relations with England and the rest of the Empire. As to a speedy return to the gold standard, they point out that this would mean tying our currency to that of the United States; that it would not ensure stability of prices; and that one great advantage of the gold standard—relative stability of exchange with other gold standard countries—will only become of much importance when England returns to gold. They therefore hope to follow England "back to gold," rather than to precede her.

The English Treasury appears to favour the second view. In a memorandum laid before the Imperial Economic Conference, it explained how Australia could keep the English exchange at par. "A central bank of issue may undertake to issue its notes against sterling and convert them back into sterling at a fixed rate, and/or it may itself take measures for expanding and contracting credit as the state of the exchanges may require."

On the whole, the Federal Government appears to favour the first view. "Circumstances may arise," said Dr Earle Page, "under which a considerable deviation from par may become necessary. In the first place, it would not be proper to take the Australian pound to the English pound if the latter were depreciated by a policy of inflation. Secondly, care must be taken to protect Australian industry from the excess of imports which might be induced by the manufacture of credit." With these reservations, "the Government concurs" in the resolutions passed by the Imperial Economic Conference, advocating an exchange standard. Later in the same speech, we learn that "until definite steps can safely be taken towards resumption of gold payments, the proper policy is to aim at issuing just enough paper to maintain stability of the general price level."

Yet the Government realise that "unfettered discretion must be given to the Central Bank." The Act undoubtedly does this, and the determination of future policy will rest entirely with the new board, which is yet to be appointed.

ARGENTINE RAILWAYS.

At the meeting of the Central Argentine Railway, the chairman of the company gave some impressions of his recent visit to Argentina. He stated that during his conversation with him, he found the President of the Republic and the members of the Cabinet "were to the utmost of their capacity seeking to control the country's expenditure without at the same time retarding or discouraging the fulfilment of its wonderful destiny among the nations of the world. It might be thought that this was mere optimism. His conclusions, however, were based on observations not of one or two trips, but of contrasts between the Argentina he first knew when he went there in 1890 to inaugurate the line to Tucuman and what he had seen on his various visits culminating in the one this year. Wherever he went during his visit there was palpable evidence of progress, development and well-being.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG. STOCKHOLM. MALMÖ.

THE BANK AFFORDS EVERY FACILITY FOR BANKING
BUSINESS WITH SCANDINAVIA.

The 'estanciero' was recovering from the crisis which overtook him after the war. The Government was sound, and unquestionably welcomed the influx of new capital. The outlook in general, in a word, could not be more promising."

Viscount St Davids also sounded an optimistic note at the annual meeting of the Buenos Ayres and Pacific on October 17th. First of all he pointed out that the population before the war was increasing rapidly, but when the war came immigration stopped, and a great number of people left the country, particularly Italians, to serve in the armies of their own countries, so that when the war ended, the population of Argentina was certainly not greater than when the war began. Immigration had begun again, and the population of the country was just upon 10 millions, of which 1,900,000 were in Buenos Aires itself. The population had also largely increased by natural growth. Last year the natural increase was nearly 185,000, so that between immigration and natural increase the population went up 346,000. The bulk of the immigration went to the cotton districts, and cotton was doing well. Then, again, the immigrants were nearly all of the Latin race, and were wine drinkers, which would help the wine business of the Cuyo provinces.

These remarks will no doubt assist our readers when perusing the accounts and reports of the four great Argentine railway companies. These accounts, it should be borne in mind, cover the year ended June 30, 1924. First of all we submit for notice a record of dividend distribution over recent years:—

Company.	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
B.A. and Pacific, ord. ...	% nil	% 2	% 5	% nil	% nil	% 7	% 7
Do 5% 2nd non-cum. pref. ...	5	5	5	nil	5	5	5
B.A. Great Southern ...	5	4	7	4	4	7	6
B.A. Western ...	5	2	6	4	4	6	5
Central Argentine, ord. Do deferred ...	5	nil	6	nil	nil	6	6

The only change on the year's figures is that of 6 per cent. for Buenos Ayres Western, as against 7 per cent. a year ago. The reason for this reduction is mentioned later. On the whole the progress recorded for 1922-23 is well maintained.

In the next table the results for 1923-24 are set out:—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Gross receipts	9,130,939	10,859,175	4,935,470	11,360,047

* Buenos Ayres Western.—Allowance made in this item for £342,809, which represents exchange loss on remittances, which the company have charged against net revenue account. For 1922-23 the loss amounted to £195,420, and was charged against general revenue fund.

A year ago we recorded in our table a net increase of £2,968,578 for the Pacific, £3,394,445 for the Southern, £1,850,666 for the Western, and £3,195,436 for the Central. Thus a very satisfactory all-round increase is revealed, with the exception of the Western. In the latter company an exchange loss on remittances amounting to £342,809 caused net receipts to be reduced from £1,844,712 to £1,501,902, as against a comparative figure of £1,570,265 for the previous year. This loss is reflected in the drop in the dividend distribution.

The next table distinguishes the receipts from passenger train traffic and goods traffic, giving a comparison with the figures for 1922-23:—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1923-24.	Inc. or Dec.	%	1923-24.	Inc. or Dec.	%	1923-24.	Inc. or Dec.	%
B.A. Pacific ..	1,852,428	— 92,711	— 5	4,816,802	641	0	6,669,239	— 458,705	— 7
B.A. Gt. Sthn. ..	3,693,593	+ 187,258	5	5,364,094	410	1	9,057,687	+ 1,272,294	14
B.A. Western ..	1,424,675	+ 124,779	9	1,734,207	+ 167,240	10	3,158,882	+ 252,288	8
Central	3,305,780	+ 131,702	4	4,176,275	+ 570,979	14	7,482,055	+ 704,229	9

The Western shows that receipts on account of passenger services increased by over 8½ per cent. goods just over 4, and livestock traffic nearly 8½ per cent. The most important growth in total receipts is that recorded by the Great Southern; the gross receipts of this undertaking were £10,859,175, as against comparative figures of £9,586,880. The changes in total receipts are compared in the table below with those of recent years:—

PERCENTAGE CHANGES IN TOTAL GROSS RECEIPTS.

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
B.A. Pacific ..	— 12.7	+ 19.2	+ 19.0	+ 30.8	— 16.4	+ 8.9	+ 16.1	+ 5.29
B.A. Gt. Sthn. ..	— 16.8	+ 1.8	+ 25.6	+ 30.1	— 8.4	+ 3.6	+ 13.9	+ 13.3
B.A. Western ..	— 13.0	+ 14.8	+ 30.3	+ 41.0	— 21.1	+ 1.1	+ 13.3	+ 6.3
Central	— 6.6	+ 17.8	+ 12.0	+ 41.0	— 0.2	+ 3.1	+ 12.8	+ 6.6

Three lines show a decrease in the ratio of expenses to receipts, but a slight increase is recorded for the Pacific undertaking:—

RATIO OF EXPENSES TO RECEIPTS.

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
B.A. and Pacific ..	63.63	65.80	71.51	69.69	65.68	71.24	63.26	64.28
B.A. Gt. Sthn. ..	58.56	76.16	77.96	69.19	84.33	74.34	61.99	60.44
B.A. Western ..	58.82	75.68	75.08	69.48	78.72	76.18	66.18	62.62
Central	58.54	73.93	84.60	67.66	79.82	78.26	67.66	66.20

While gross receipts of the Pacific amounted to an increase of £458,705, or 5.29 per cent., working expenses increased £383,874, or at the rate of 7 per cent., thus showing a working percentage of 64.28 per cent. This is accounted for by the fact that the management has taken advantage of the increased receipts to put a larger amount into maintenance and upkeep of the line.

The next table shows a classification of expenditure:—
(00's omitted.)

	Running Expenses.		Maintenance.		General and Miscellaneous.	
	1922-23.	% of Revenue.	1922-23.	% of Revenue.	1922-23.	% of Revenue.
Pacific	£ 3,006,434	34.6	£ 1,100,833	12.7	£ 210,955	2.4
Great Southern ..	3,163,530	33.0	3,320,930	35.1	2,295,821	24.1
Western	1,546,033	16.6	1,671,422	17.8	1,033,209	11.1
Central	3,946,837	41.8	3,940,642	41.8	2,676,423	28.5

The Pacific states that expenditure on fuel has gone up owing to its higher price, and more coal was consumed on account of increased engine mileage, but the Central mentions that they made a saving of £84,000 arising out of falls in fuel prices.

Our final table shows the aggregate gross and net receipts for the first 15 weeks of the year 1924-25:—

	Present Mileage.	Gross Receipts.		Net Receipts.	
		Amount.	Inc. or Dec.	Amount.	Inc. or Dec.
B.A. Pacific	3,362	£ 2,333,000	+ 366,000	£ 968,000	+ 318,000
B.A. Gt. Southern ..	3,948	2,859,000	+ 489,000	1,437,000	+ 262,000
B.A. Western	1,882	1,437,000	+ 323,000	519,000	+ 262,000
Central Argentine ..	3,305	3,306,000	+ 270,000	..	..

Stockholders of the Southern and Western will receive with regret the decision of the directors to cease publication of net receipts in the usual weekly traffic returns. This is a step, in our opinion, in the wrong direction. These weekly traffic receipts are valuable data which assist stockholders in following closely the progress of the undertaking, affording, as they do, a useful barometer of the year's results. It was thought that when the Southern and Western gave these figures the other two lines would perforce have eventually followed in their steps. But now a retrograde step has been taken.

THE STOCK EXCHANGE AND THE PUBLIC.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Stock Exchange now regards itself as a profession, and the Chairman of the Committee, speaking at a public dinner in the Spring, quoted what he described as the opinion of a well-known authority in raising a Stock Exchange career from being a business to that of a professional standing. The sense of members as a whole is against permission being granted to individual advertisement. There are, of course, many firms who see no objection to such a course being followed as is adopted by business people who wish to bring their claims prominently before the public notice. Apart from the point of etiquette, one great disadvantage that would at once appear if individual advertisements were allowed to Stock Exchange members is the fact that the people with the long purses would stand to benefit very considerably as compared with those with a capital too modest for them to embark upon any publicity worth the name. The Stock Exchange as an institution spends a few hundreds annually in announcing that its members are not allowed to advertise, and that lists of members can be obtained upon application to the secretary. These lists of members are of little use to the ordinary man who wants to do business through a member of the Stock Exchange, but who does not know how to get into touch with one. He may come across a name in these lists of someone whom he knows, but the probability points in the other direction. Nor is it always deemed advisable or convenient to consult a friend with a view to obtaining introduction to a Stock Exchange member. On the other side of the counter there stands the broker, member of a Stock Exchange, who will readily undertake any orders, small or large, and who is sufficiently appreciative of his capacity as a servant of the public for him to wish to help the smaller man with a view not only to obtaining business for himself, but also to protect the hard-earned savings of the little capitalist from being raided by unscrupulous weapons employed by the outside broking fraternity. Yet, if a man walks into the office of the broker to whom he is a stranger, and says that he wishes to sell stocks and shares, the broker cannot tell whether the certificates which the prospective client produces are genuine or not. The client may offer bankers' references, but these, as a rule, are not regarded as being of any great value. The broker has, for all practical purposes, to shoulder the responsibility of his prospective client's securities being genuine, and for the sake of earning a few pounds commission—or it may be only a few shillings—he naturally refuses to take the risks which dealing for a stranger inevitably involve. There is not so much danger in buying shares, though here also the risk attendant upon receiving cheques is plain. The Stock Exchange is apt to complain that banks receive more than their fair share of brokers' remuneration. At the same time, the House does nothing to help the man who wants to do business direct with a member. The client desires to gain that personal contact which invariably leads to business being done better than is likely to be the case when a sheaf of orders comes from a banker to a broker who has no personal interest in the individuals for whom the transactions are to be effected.

The Stock Exchange Committee have this week passed a Rule, subject to confirmation at their meeting on November 3rd, which affords an important concession to the public in the matter of commission. According to the present rule, a broker is allowed, at his discretion, to charge one commission only on the purchase and sale of the same stock for the same client in the same account. The proposed addition will give him powers to extend the concession to the settlement following that in which the original bargain is done. The speculator who buys 100 Courtaulds next Monday will be charged 6d a share brokerage, the bargain being done for the November 6th account, but can carry over the shares or sell them for the account ending November 20th without his broker being under the necessity to charge him another commission, if, in the discretion of the broker, the latter cares to make such a concession.

THE FIRST NATIONAL BANK OF BOSTON

Collections effected and documentary credits established in all parts of the United States for banking correspondents abroad.

Special Representative:
24, OLD BROAD STREET, LONDON.

The modification is one that has been urged for a good many years past. It was put forward vigorously by a former member of the Committee, who gained a certain amount of support, though not sufficient to enable the alteration to be carried when the change was mooted. A certain amount of opposition to the amendment has already arisen in the Stock Exchange, nor can it be said definitely that there is every prospect of the new rule being confirmed on November 3rd. The brokers on the Stock Exchange Committee represent, on the whole, that class of investor to whom a concession of commission will make little difference. It is the average broker, who works hard on the floor of the House and who is not supported by what may be called the big business from banks, issuing houses and insurance companies, who will welcome a change that is likely to result in a considerable expansion to his normal business. The objection which some purists will oppose to the change is that it may have the effect of increasing the mere speculation which, on paper, is damaging to the reputation of such an institution as the London Stock Exchange. Carried to its logical conclusion, the stern discountenance of speculation would circumscribe markets, would make business more difficult, and undoubtedly lead to the necessity for prices being widened in the margins between buying and selling. No one with the interests of the public at heart would want to fan a speculative—much less a gambling—flame, and, as the best interests of the Stock Exchange are those of the public, it follows that what is best for the one must be most beneficial to the other. At the same time, it is impossible to close the eyes to the fact that speculation is indeed the breath of Stock Exchange life, nor need this be regarded from the narrow standpoint of what is profitable to Stock Exchange members. Rather it deserves consideration from the angle of the public benefit in helping to render markets liquid, in protecting the public from the blandishments of bucket shops, and of keeping within businesslike bounds that spirit of speculation which, so long as the world lasts, is certain to remain a strongly-rooted element in human nature.

The concession, which it is suggested should be permitted in the way of remitting Stock Exchange commission, is in its wider aspect a step towards the attraction of business to the Stock Exchange and to the safeguarding of clients from the temptation to gamble with irresponsible outsiders who are bound by few rules other than those of their own making. If the Rule is passed, its incidence may not lead to any immediate increase in the volume of business. The advertisement which the Stock Exchange will receive, through the acknowledgment of the Committee's readiness to save the public expense in Stock Exchange dealings, cannot fail to counteract the charge frequently levelled at the House, that its commissions are too high, and that nothing is ever done to help the public in any way through concessions in the shape of brokerage which is allowed to be remitted. The rule will retain the words "at the broker's discretion," and it should be pointed out that this discretion will govern every transaction. When the Stock Exchange has taken steps to meet the public in this manner, it will be appropriate for the Inland Revenue to reconsider the question of reducing the stamp duty of 20s per cent. *ad valorem*, which acts as a severe burden upon investment. Before the war the rate was 10s per cent., and it became doubled as a war-time measure. Reversion to the previous rate of 10s per cent. would make so considerable a difference to the expense of buying registered stocks and shares that

the result might easily be a doubling of the volume of business transacted, which, in its turn, would mean larger receipts to the Government from income-tax, contract stamps, and telegraphic and other such communications.

The brokers in the House, it may be interesting to add, outnumber the jobbers by about 240, which, incidentally, answers the oft-propounded question as to which is the more profitable branch of Stock Exchange business, broker or jobber. A broker's career is safer, its work more arduous, its expenses greater. The jobber makes money more rapidly when his particular market is popular, but he has to endure long periods of inactivity, and consequent modesty of income, when public attention neglects the stocks and shares in which he deals.

Notes of the Week.

The Russian Treaty.—So far as can be gathered from the speeches of candidates for next week's election, the prospects of a ratification of the Anglo-Soviet Treaty by a British House of Commons seem as remote as ever. Labour candidates, it would appear, are not, as a whole, making the Treaty as important a plank in their platform as might have been expected. Mr Ponsonby, who described himself as "the villain of the piece" in a speech at Huddersfield on Wednesday, offered a defence of the Treaty which strikes us as being peculiarly ineffective. In the meantime Russia maintains its intransigent attitude. The Moscow Parliament has this week been busy debating the subject, and, according to Press telegrams, has passed a resolution declaring that the Treaties represented the limit of concession beyond which the Soviet Government must not go. Propaganda for home consumption takes an even more impossible line. The Russian correspondent of a daily contemporary gives some interesting quotations from a pamphlet by Kameneff, of which 25,000 copies are said to have been recently published in Moscow. This document states that "the Treaty was signed only after we ensured the complete recognition by the British Government of all fundamental principles and economic reforms introduced by us in our Soviet Union," and adds that the Treaty means that "the British Government has pledged itself to compensate and pay in full our creditors if we default." Then, again, "We have consented to pay a slightly larger interest than usual on the understanding that from this extra interest the British holders of old Russian bonds and old owners of property in Russia will receive a small compensation. It is not we who will pay our British creditors, but the English themselves." This sort of thing should help Mr MacDonald to realise his mistake in thinking that there is any great difference between guaranteeing a loan and actually making it. The pamphlet goes on to say that although Russia has agreed to come to a future agreement with Great Britain regarding her claims on Russia, "you may be sure that our own counterclaims will cover, with a nice balance in our favour, the old war debts and other obligations of Russia. In the Treaty the settlement of these claims and counterclaims has been postponed. When they will be discussed I do not know, nor, I believe, do the English know themselves." Such remarks as these, which emanate from the Vice-president of the Soviet Government, only strengthen the conviction that the Treaty cannot be accepted by this country in anything like its present shape or until Russia's attitude is entirely reversed.

The German Elections.—On Monday last President Ebert signed a declaration dissolving the Reichstag, and the elections will take place on December 7th, thus making possible simultaneous elections for the Prussian Diet. The Cabinet of Herr Marx came into office at the end of November last, succeeding that of Herr Stresemann, but the Reichstag now dissolved was elected in March of this year. Our Berlin correspondent writes:—"In the anomalous condition of party politics the dissolution must be regarded as a Cabinet appeal for continued minority support of a minority administration, for Dr Marx has not resigned, cannot expect a majority for his three Coalition parties which together number only about one-third of the

Reichstag, and has no prospect of taking other parties in. The last of several plans for widening the present Cabinet Coalition of Centre, People's Party, and German-Democrats was to admit the German-Nationals. This the People's Party continued to require, but they were foiled by opposition from the German-Democrats, who saw in such a solution germs of a reversal of the domestic and international policy pursued during the past year. Only the Social-Democrats, who expect gains, are really pleased by the dissolution. The dissolution was not unavoidable, and the time chosen, with the Reparations plan only formally initiated, with important negotiations for private credit pending, and with the Tariff and Commercial Treaties questions hardly touched, is not propitious. The failure of the negotiations for strengthening the Coalition brought no new fact into the relations of Cabinet and Reichstag. The Minority Cabinet, which had existed since the Socialists seceded in November, 1923, managed to get through work; and its success with the Dawes Bills indicated that when vital matters are at stake, the German-Nationals would probably always shrink from going to the extreme of opposition. The new elections may conceivably increase the strength of the three middle parties forming the present Coalition, but the biggest possible gain would not make the Cabinet independent of other parties. Neither the German-Nationals, who with their Allies the Agrarians (*Landliste*) have 110 seats out of 472, nor the Socialists, who have 100 seats, can possibly gain an absolute majority. Cabinet troubles are, therefore, likely to continue."

The Fall of Mecca.—The most satisfactory feature in the present situation in Arabia is that the British Government is not involved. As it happened, a treaty was actually in course of negotiation between Great Britain and King Hussein when His Hashimite Majesty was overtaken by disaster. But for Hussein's intractability, that treaty might have been signed at an earlier date, yet it is hardly conceivable that we should have committed ourselves on paper to supporting him against his rivals in the Arabian Peninsula. In any case the treaty will now presumably remain in suspense until the situation clears, and the fact that our hands are free is the more fortunate because both the Kingdom of the Hijaz and the rival principality of Nejd are by way of being our allies. In fact, writes a correspondent, so *liés* were we with both parties on the last occasion when they fought, that His Majesty's Government found themselves assisting each against the other. That, however, was only a few months after the close of the war, and the war, which ruined the rest of the world, brought rich harvests to Arabian princelings. Owing to an accident of geography, their support was eagerly solicited by both groups of belligerents, and the gold so jealously hoarded in England and Germany was poured into Arabia, whose chiefs were too sophisticated or too unsophisticated (who knows which?) to accept payment in paper, and much preferred solid sovereigns which could be converted into useful objects like amulets or chased dagger-handles. At that time King Hussein was receiving subsidies in gold and rifles from the Foreign Office, and the Amir Ibn Sa'ud from the India Office, and the two departments—to long restrained by the proprieties of English life from joining battle across their quadrangle in Whitehall, enjoyed the spiritual satisfaction of fighting one another vicariously—and that at the most solemn moment of the Peace Conference—in the heart of Arabia. Only the British taxpayer (had he known) would not have rejoiced, for he was paying impartially for the mercenaries hired and the munitions expended on both sides. Truly, his right hand knew not then what his left hand was doing, but now we may at least congratulate ourselves that Ibn Sa'ud has conquered and King Hussein been beaten at their charges and not at ours. This time, no outside influence has weighted the scales, and in equal combat Ibn Sa'ud has proved himself, as had long been expected, to be infinitely the strongest of the Arabian Powers. Several years ago he annexed the North Arabian Principality of Jebel Shammar, and, now that the Hijaz has succumbed, he is left without a rival except for the Yemenite Imam of Sanaa. Already, however, Ibn Sa'ud has stretched out a long arm southwestwards, and, should

the Yemen also fall into his power, he would be the first statesman since the Prophet Muhammed who had united the Arabian Peninsula from within. Indeed, the Wahhabis, who are "Protestant" reactionaries towards a primitive Muslim ideal, have been building up their power by much the same means as the founder of Islam—a fervent religious faith guided into political channels and organised for success in this world in the form of a militant fraternity. The next step for the Wahhabis, if they followed in the footsteps of their early Muslim predecessors, would be to burst the bounds of Arabia and embarrass the task of all sorts and conditions of mandatory Powers. How quickly the Mosul frontier and the Mesopotamian oilfields and the new motor route through Palmyra from Beirut to Baghdad would be buried under the avalanche of united Arabian tribesmen! But fortunately the West, which has given all these hostages to fortune in the Middle East, has also discovered weapons for protecting them. Even in his own country, the desert fighter is out-matched by the aeroplane and the armoured car, and the vast open spaces, which used to give the victory to the rider on horses and camels, now exposes him defenceless to the swifter movements of machines. The Wahhabis discovered this not long ago, when they raided Trans-Jordan; and so we can afford to leave Arabia to herself, for we shall find little difficulty in guarding the borders of the desert and the soil against the Prophet's successors.

Employment in September.—The trade union percentage of unemployed, according to figures given in the *Ministry of Labour Gazette*, rose from 7.9 per cent. at the end of August to 8.6 per cent. at the end of September. Monthly movements in this percentage over a number of years are as follows:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.

* Excluding coal miners.

These figures should be read in the light of certain qualifications mentioned in *The Economist* last week (see page 607). Among the 11½ million workpeople insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at September 22nd was 10.8, as against 10.6 at August 25th, and 11.7 in September, 1923. The live register of the employment exchanges showed between these dates a rise of 53,000 in the number of unemployed, of which 39,000 were men. The principal industries showing a decline in employment in September were coal, iron, and steel. In the cotton, wool textile, building, and pottery trades some improvement was reported.

Cotton Trade Short Time.—Our Manchester correspondent writes:—"In Lancashire trade circles some surprise was expressed when it was announced on Tuesday last that the Master Spinners' Federation had decided to recommend an increase in the working hours in the mills using American cotton from 26½ to 32 hours per week from November 3rd. Only about ten days ago Mr F. Holroyd, the president of the Federation, issued a strong manifesto appealing to the members to support loyally the short time scheme, and it was not expected that any revision in the working hours would be made just at present. The decision, however, is partly due to representations from the Manufacturers' Association to the effect that their members were not being supplied adequately with yarn, and that cloth contracts are being lost owing to manufacturers not being able to obtain sufficient supplies of twist and weft. So far back as last February it was decided to restrict American yarn output by working the factories only 26½ hours per week instead of the usual 48. Out of

the 56,000,000 spindles in Lancashire about 36,000,000 are engaged on American cotton, and the decision to increase production will mean bigger wages for nearly 100,000 operatives. The Master Spinners' Federation will continue to review the situation from week to week, and they will be prepared to recommend a further extension of working time when it is warranted by a further improvement in the trade position.

Cost of Living.—A further increase in the cost of living is shown in the *Ministry of Labour Gazette's* index for September. On October 1st the cost of living for an average working-class family was approximately 76 per cent. above that of July, 1914, as compared with 72 per cent. a month ago and 75 per cent. at this time last year. The monthly movements of this figure since 1918 are shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January ..	% 85.90	% 120	% 125	% 165	% 92	% 78	% 77
February ..	% 90	% 120	% 130	% 151	% 88	% 77	% 79
March	% 90	% 115	% 130	% 141	% 86	% 76	% 78

December ..	% 120	% 125	% 169	% 99	% 80	% 77	% ..

The rise in September was due to increases, largely seasonal, in the prices of food. For food alone the average increase over the pre-war level was 72 per cent. on October 1st, as compared with 66 per cent. a month ago and 72 per cent. a year ago.

The Civil Warfare in China.—A fresh turn has just been given to the Chinese kaleidoscope. During Wednesday night Feng yu-hsiang, the Christian General, hitherto supporting Wu Pei-fu and the Peking Government, quietly occupied Peking with the consent of its garrison, cut all communications, and issued a proclamation denouncing the civil war and proposing a round-table conference of the rival leaders; he also deposed President Tsao-Kun. This revolution follows on other indications of a desire for peace. On the Shanghai front further conflict had been arrested by the characteristically Chinese method of buying off the defeated Chekiang troops for \$20 per head (with a higher price for officers) and free transit to their homes. Thus one of the disturbed areas was at least provisionally pacified, and Shanghai saved from attack or from an inrush of destitute and desperate refugees. Chang-tso-lin's advance will now be suspended, and the new Peking Government will profit by the issue of Treasury bonds, secured on a portion of the Customs revenue assigned for the service of the German Boxer Indemnity—an issue which, though sanctioned by Sir Francis Aglen as head of the Customs Administration, implies no sort of foreign intervention. Even had Chang-tso-lin eventually been victorious, it is held by Mr J. O. P. Bland (writing in Wednesday's *Times*), and by other competent British observers, that he would merely have substituted a more stable successor for the present weak Peking Government. Meanwhile, Sun Yat-sen's quarrel with the Canton Merchant Volunteers developed last week into a fierce battle in the city, in which the Volunteers were routed and utterly broken up. Many shops and warehouses were set on fire by Communist looters, possibly under Bolshevik influence, and the damage done is estimated at £5,000,000; but such estimates are usually excessive. The sufferers are being relieved by the Chinese merchants of Hong Kong, and the foreign settlement is protected by a small body of British-Indian troops. The conflict, however, must intensify the local hostility to the rule of Sun Yat-sen and hasten its end, already foreshadowed by the advance of the forces of Chen Chiung-Ming, his rival, who controls a large section of the province of Kwangtung. The possibility of foreign intervention is receiv-

ing increased attention in the Press. It is clear that the Powers concerned will not intervene if they can avoid doing so, except to protect the lives and property of their subjects in any local disturbance; and Japan has warned both the Peking Government and Chang-tso-lin to respect the rights of her nationals in Manchuria and Mongolia. The issue of Treasury bonds is a purely Chinese affair; the supply to Chang-tso-lin from France and Japan of "commercial aeroplanes" and munitions appears not to have been sanctioned, directly or indirectly, by their Governments, and the deportation to Japan of Hsu-shu-tseng, by order of the Diplomatic Corps at Peking, was made possible by his presence in the foreign settlement at Shanghai. Part of the Japanese Press and public is stated to advocate intervention, and Sun Yat-sen may seize the Canton Customs, and thereby endanger the claims of the foreign bondholders, or local conflicts may necessitate the despatch of foreign troops and set up unexpected complications. But any intervention not purely local, or not limited to the protection of foreign subjects, would rouse the anti-foreign feeling of the Chinese people and make the situation infinitely worse. The Chinese people is weary of warfare, and will welcome any stable Government.

Spain and Morocco.—The final stage seems at last to have been reached in the long and exhausting conflict between the Spanish army and the tribes of the Riff. It has opened with the assumption of the posts of High Commissioner and Commander-in-Chief by the Marquis de Estella, who also retains the Presidency of the Spanish Directory; and he has issued a General Order declaring that the honour and prestige of Spain are at stake, that the tribes are ceasing to hold together, and that many of them desire peace. Spain must be freed from the problem of Morocco, and he proposes to solve it by withdrawing the many small garrisons from the outlying posts, which cannot be held, and creating a fortified zone, supported by strong bases, and near the coast. Within this zone there will be roads and railways, and the natives in it will probably come to appreciate the benefits of civilisation; outside it they will be left alone, but they will be admitted into it to trade, if unarmed. The examples of French Morocco and Iraq encourage hopes of their ultimate pacification; but the hostile tribes will make the withdrawal of the garrisons as difficult as possible, and will regard it as proof of Spanish defeat. The Marquis de Estella, however, believes that gun-running has ceased, and that the tribes have obtained their arms chiefly from their prisoners (some five hundred of whom they still hold captive), and their money from the ransom paid by Spain and from the price given by a British syndicate for a mining concession, which Spain cannot recognise as valid. Whether it will ever take effect under the new conditions is an interesting subject of speculation, but there can be little doubt that the new Spanish plan will succeed in the end. The Spanish army may reasonably feel that its prestige, which the Marquis de Estella had been thought to have compromised, is secured; the Spanish people appear to accept the continuance of the war as a painful necessity, and will be encouraged to make the necessary sacrifices by the knowledge that the need for them must soon cease. A rapid conclusion of the conflict would relieve the national finances of the chief strain upon them, would help the Spanish nation on its way towards disarmament, and would probably strengthen the hold of the Marquis de Estella on the Directory and of the Directory on Spain.

The Debt Clearing Office.—The fourth annual report of the Controller of the Clearing Office (Germany)* shows that considerable progress has been made in the payment of claims. British debt claims to the number of 102,000 and amounting to £76 millions were lodged with the Department, and of these claims amounting to £64½ millions have been finally disposed of. German claims amounting to £63 millions were notified by the German Clearing Office, of which £48½ millions have been settled finally. The residue still to be dealt with comprises the more complicated claims involving inquiry into the facts, which are largely in dispute, and the determination of ab-

* H.M. Stationery Office. 1s 6d net.

struse questions of commercial and Treaty law, and some considerable time will therefore elapse before these outstanding claims are finally adjusted. Property claims lodged amounted to £67 millions, of which £43 millions have been either agreed as to amount by the German authorities, adjudicated upon by the Mixed Arbitral Tribunal, or withdrawn by the claimants. The remainder are still under discussion. The total sum paid by the Clearing Office to British creditors and claimants up to September last was £71¼ millions, of which nearly £69 millions was paid to creditors or claimants in the United Kingdom and Ireland. The two principal causes which operate to prolong the life of the Clearing Office are (1) the unavoidable delay in obtaining awards from the Mixed Arbitral Tribunal owing to the congested state of its list, and (2) the fact that the Treaty contains no specific provision for finally disposing of contested claims under Article 296, as the Clearing Office has no power to require a creditor whose claim has been contested to refer it for adjudication to the Mixed Arbitral Tribunal. The Clearing Office was very concerned to find a remedy for these two evils. To obviate the delay in obtaining awards of the Tribunal, it was suggested that additional Divisions should be appointed, but apart from the expense which such appointments would entail, there are obvious objections to the indefinite multiplication of Divisions, which would lead inevitably to confusion and a possible conflict of jurisprudence. In June last an invitation was sent to the German Government to send delegates to London for a general discussion as to the appropriate measures to be adopted to expedite the Clearing procedure. This invitation was accepted, and the discussions took place at the Clearing Office and extended over several days, and in the result an agreement was come to which, it is confidently expected, will attain the desired object of hastening matters towards a conclusion. Claims by British nationals on Austrian property have already been met to the extent of 6s 8d in the £, and a further substantial dividend is due this month. No further dividend in the Hungarian section since the first dividend of 1s 6d in the £ in 1923 has been paid, but it is hoped that the funds available will enable a further dividend to be paid before the close of the year. The report states that the work of classifying claims in the Russian department has been continued, and information has been supplied for the purposes of the Anglo-Soviet Conference, and it is significantly added that "the future work of this department depends upon the Treaty, recently signed, as a result of this Conference."

Housing in Vienna.—An Austrian correspondent writes:—As in most old cities, there has always been a housing problem in Vienna, where, as is usual on the Continent, the majority of the people live in tenement houses. In 1917, the last date for which exact statistics are available, there existed in Vienna in these houses 554,545 flats for a population of round about two millions. Of these flats, more than half, viz., 275,456, consisted of no more than one room, one kitchen, and a small ante-room, while 213,125 contained three rooms and one kitchen, or two rooms and two smaller rooms (called Kabinete) altogether. Thus nearly 90 per cent. of the available living space for the population of Vienna consisted of flats containing no more than four rooms. The houses in which sometimes as many as 50 of these flats are crowded together are old fashioned, having been built at a time when sanitary arrangements, fresh water supply, and the means of proper ventilation were not known. These conditions can only be compared with those prevailing in some of the worst mining villages in Great Britain. The rent of these flats varied from anything between 6 and 12 gold crowns (i.e., 4 to 10 shillings) per month. Generally speaking, the workman or craftsman in pre-war Vienna had to spend about one-quarter of his wage on rent. During and after the war, four reasons contributed to make this state of affairs well-nigh unbearable. The Rent Restriction Act, passed shortly after the outbreak of the war, rendered rents practically negligible as inflation went on and wages rose accordingly. Secondly, there was a great influx of fugitives into Vienna, and in addition the number of marriages increased rapidly. Thirdly, the rise in the social status of the workman found its first expression in his demand for

better living conditions aspiring to those formerly enjoyed by the middle classes (of which about 70,000 enjoyed the use of three rooms or more). Lastly, building activities which during the period 1909 to 1913 had added from 6,500 to 13,900 flats per annum to the total, dropped to nil during the war, and showed no hope of revival after the peace, as the rate of interest and the new level of costs made only luxury buildings profitable. After demobilisation, attempts were made to solve the housing shortage by a sort of self-help system, people forming building societies of their own and starting to erect single houses for themselves. The Social Democratic Party of Austria having assumed office in the Municipality of Vienna in 1919, soon realised the costliness of this method of building, and after close investigation decided to produce a building programme of its own. It was decided to build within five years, on land belonging to the municipality, 28,000 flats from 3-4 rooms, and to put these flats in blocks which, erected in proper surroundings, should also contain club rooms, nurseries, baths, and communal kitchens, which, under the guidance of an expert staff, would give to the inhabitants of these flats the advantages of family and communal life. Assuming the cost of one flat to amount to about 200 million crowns, the cost of the complete scheme involves something like £15,000,000, which the Municipality has to find out of income. Austria can only hope to compete in the world markets if the cost of living remains as low as possible, and the abolition of the Rent Restriction Act, by which rents are at present kept at 150 times their pre-war value (the depreciation of the crown amounts to 14,000 times), would at once result in a tremendous rise in wages. Therefore as there can be no discrimination in rents, the flats in these new houses could only be let at rates corresponding to rents paid for similar accommodation elsewhere. It was argued that those who were already in the possession of flats, and were protected by the Rent Restriction Act, should by reason of this protection first be called upon to contribute towards the cost of finding accommodation for their less fortunate brethren. Consequently, a special tax on flats was introduced, by which from 40 to 1,900 times (rising to over 3,000 in special cases) the rent had to be paid to the municipality. In 1923 this tax yielded 40 milliard crowns, but as expenditure amounted to 591 milliards, recourse had to be had to taxes apparently levied for other purposes, amongst which the famous Social Welfare Tax alone (assessed on the wage turnover) yielded 400 milliards. According to the official budget for this year, the total expenditure of the municipality amounted to 3,300 milliard crowns. In order to secure the supply of raw material at adequate prices, the municipality acquired considerable amounts of shares of, or went into partnership with, most of the firms supplying anything from cement to light castings. It also acquired an influence in the leading building companies. The building contracts are allotted by public tender, the municipality allowing only very small profits. There are no agreements between the municipality and the workmen, the contractor being made liable for all delay in the execution of the contract.

Tin and Tinplate Control.—The tin market has again been strong, owing in part to the shortage of supply for next month and to heavy buying for American account. The U.S. tinplate mills are actively engaged, and one order for tinplates booked recently for the canning trade runs into over 1½ million boxes, or 80,000 tons. This in itself would require more than 1,000 tons of metallic tin. The steel plate for this large order will be rolled this year, and will help the American steel trade. The tinplate market in this country has been seriously upset by the importation of American tinplates. This business is being done through London and Liverpool merchants, and is the outcome of the dispute between the South Wales sales agency and the merchants. The former claims to handle 50 to 60 per cent. of the total South Wales tinplate output, and an attempt has been made to keep merchants' commission down to 1 per cent. while regulating the selling price of plates. The merchants contend that their commission does not give them sufficient margin, and that they ought to have a free hand, especially in selling forward or when the market looks like falling. During

LONDON PARIS
26 Old Broad Street 3 & 5 Place Vendome

the last week or two some fairly big lines of American tinplates have arrived at Liverpool, Manchester, and London, and they have been readily absorbed by the tin-box manufacturers. The price works out at under the Welsh figure for similar plates, and this is somewhat surprising seeing that the freight from the States to this country on tinplates is round about \$9 per ton. So far the bulk of the American plates coming in have been "wasters," but it is feared that "primes" will follow. In the circumstances, the selling agency is now inclined to adopt a more conciliatory attitude towards the big merchant group outside the "combine," and it is understood that a meeting will be held shortly. The merchants are prepared to suggest 2 per cent. commission and a free hand in the matter of selling, otherwise the dispute must go on. The importation of large quantities of cheap Continental sheet and tinplate bars has further complicated matters, and some of the tinplate mills outside the combine are already taking their bars from foreign sources, while others are giving notice. Despite the glowing reports issued about the state of the Welsh tinplate trade, many of the works are short of specifications, and unless these are forthcoming shortly, it will mean that more mills will have to close down. Offers have recently been made of plates for export at low rates, but no business has resulted, and there is no doubt that the trade is in a somewhat disturbed condition. The exports for the nine months to September 30th were at the rate of 48,200 tons per month, against 41,200 tons for 1913.

East Indian Palm Oil.—In his address to the shareholders of the Colonial Bank on October 16th, Mr Chas. F. Wood, the chairman, said that it was 18 months since he first referred to the menace to the Nigerian palm oil industry arising from the scientific cultivation of the oil palm in the Dutch East Indies. The menace is perhaps still small and insignificant, but it is increasing and deserves attention, although Nigeria is likely to be less affected than some of the other West African countries, since the Nigerian staple crop is groundnuts. In 1923 there were 62 oil palm plantations in the East Indies, of which 13 are in Java and 49 in the "external possessions," and of these latter 33 are on the east coast of Sumatra. It is reported that no less than 27,000 acres were planted in 1923, and the output of palm oil, which reached nearly 4,000 tons in 1922, was maintained in 1923, and is likely to be exceeded for 1924. The exports of the oil from Medan alone for the first six months of this year were 2,200 metric tons. The yield of oil from a given area is said to be higher than in West Africa, the quality better, and the palms come to maturity more quickly. Very little reference has so far been made to the production of palm kernels and palm kernel oil. The oil palm was first introduced into the East Indies in 1848, when four young trees were received at Buitenzorg. Government experiments in its cultivation were successfully carried out from 1859-64, but progress was slow until about 1911, when the first oil-palm plantation was laid out on a large scale. Whether the East Indian production will readily develop into a serious menace for West Africa seems doubtful, or at all events remote. It

may be safely asserted that the large British firms interested in the West African oil-palm have by no means neglected scientific plantation work, and the evolution of superior types by all the means known to the scientific plant breeder. This particular kind of research in one of the most interesting fields of economic botany has been pursued in West Africa for many years. Moreover, the world's demand for palm oil, both for edible and technical purposes, is on the increase, and it is doubtful if the comparatively small production of the East Indies can adversely affect the African trade for some time to come, if at all. At the same time, these developments are of interest and worth watching, if only for the purpose of reminding the West African producers that they must not slacken their efforts to maintain the quality of their products.

United Dairies.—Although the directors of the United Dairies, Limited, publish meagre information as to the progress of the undertaking, the report and accounts which are now before us record a further increase of trade and development. The following table shows the remarkable progress made by this concern during the past six years:—

Year Ended June 30.	1919.	1920.	1921.	1922.	1923.	1924.
Prof. capital ..	£ 1,344,508	£ 1,555,284	£ 1,652,564	£ 1,881,674	£ 1,893,243	£ 2,059,339
Ord. do.	1,086,173	1,726,052	1,798,677	2,027,125	2,038,403	2,121,397

It will be recalled that for some years past this company has been mainly engaged in absorbing dairy businesses and companies, issuing its own shares in exchange, and if the above figures really do represent the progress of the company, this policy of expansion may be justly claimed to have proved itself. Out of profits £100,000 has been allocated to reserve; in the balance-sheet the reserve is given as £250,000. But as assets are now £6,143,054, it is to be hoped that a secret reserve is hidden away in the subsidiary companies. A sum of £30,000 has been devoted to founding scholarships at certain agricultural colleges for the benefit of sons of milk producers. The report states that during the year the company acquired the majority of the shares of the Belgravia Dairy Company, Limited, an old-established business, with branches in London and Brighton. In June last the company made an issue of 250,000 preference and 150,000 ordinary shares, the latter at a premium of 12s per share—this premium amounting to £90,000 will be carried to reserve less the expenses of the issue. As the premium was not payable until September 1st, the full figures relating thereto do not appear in the balance-sheet. As far as we can gather, this concern is in a very prosperous state, but until we have seen consolidated accounts setting out the assets and liabilities of the associated companies, it is impossible for us to arrive at the measure of progress.

Saguenay Pulp and Paper.—Our Ottawa correspondent writes:—Many British investors are interested in the fate of the Saguenay Pulp and Paper Company, and its subsidiary and allied companies; for some time they have been involved in serious difficulties, and their position has been complicated by their relations to the Becker firm in London. Plans, however, for the reorganisation of the Saguenay Company are well under way, and it is understood that the present bondholders will be offered first mortgage bonds of a new company in exchange for their present holdings, and behind their security will rank junior securities representing fresh cash investment in the company. There are outstanding \$5,500,000 old bonds, and about \$7,000,000 new bonds are to be issued at 6 per cent., the extra bonds being required to effect an exchange for bonds of various subsidiary corporations, including the Chicoutimi Pulp Company. One of the chief obstacles to reorganisation has lain in an issue of \$2,500,000 collateral

trust bonds ranking after the first mortgage issue, which are held as security by three banks, two in Canada and one in England. The banks are reported to have agreed to accept preferred shares in a new company on condition that they retain control of the common stock. The banks involved have been negotiating with a group of experienced pulp and paper operators, who are now ready to take over the management of the company and give it the benefit of their operating experience. In the reorganised company, authority will be taken for an increase at some future date of the first mortgage issue in order to provide capital for the installation of newsprint machines, as the Chicoutimi concern has excellent opportunities for newsprint industry. The Chicoutimi mills resumed operations a short time ago on pulp contracts received from Britain and the U.S., and are now running on a reasonably satisfactory basis. It should be noted, however, that prior to the first mortgage issue there will be outstanding a mortgage on the Chicoutimi freehold estates, the timber property which supplies the raw material for the Saguenay and Chicoutimi companies, and the obligations of the Chicoutimi Port Company, but the latter is now paying its way.

Cam and Motor.—Our mining correspondent writes:—The shares of this Rhodesian proposition were recently the subject of much speculative excitement, and the issue of the annual report has been awaited with an unusual degree of interest. The document in question has now—somewhat belatedly—made its appearance. It shows record results, both as regards profits and ore reserves; the figures, however, proved scarcely up to market expectations. Last year, the somewhat increased quantity of 195,600 tons was milled for a revenue of £476,800, as against £375,400 in 1922-23. On the present occasion, £44,500 is brought in from premium reserve, or rather more than was derived from this and another special fund during each of the two preceding periods. The dividends totalled 27½ per cent., leaving the slightly reduced balance of £13,300 to be carried forward. Out of the profits of the twelve months ended June 30, 1923, an initial dividend of 7½ per cent. was disbursed. At 834,000 tons value 55.2s per ton, the ore reserves score a further moderate increase in both quantity and value. The estimate is framed conservatively as regards tonnage, and the gold is calculated at normal price; but on this basis the "profit in sight" may be computed at 35s per share. The difference between this and the current market price cannot be regarded as an excessive payment for the possibilities of the future. At the same time the yield on last year's dividends is only about 10 per cent. Hence, taking the position altogether, an expansion in the earnings or a fresh spell of good developments would be required to justify any advance upon the present market quotation of the shares—albeit the latter is some 27s below the highest point touched some few months ago. There would appear to be the prospect of a gradual increase in the profits, which have lately been adversely affected by certain temporary conditions of working; while the plant should be capable of dealing with a larger tonnage than heretofore.

Two Base Metal Companies.—The advance which has taken place in the price of zinc and lead is strikingly reflected in the results of the Electrolytic Zinc and North Broken Hill companies, cabled summaries of whose annual reports have been issued this week. During the twelve months ended June 30, 1924, the first-named undertaking produced 44,770 tons of electrolytic zinc (an average of 123 tons per day), as against 31,280 tons in 1922-23; also increased quantities of lead and silver, with some cadmium and copper. The gross profit totalled £456,800, compared with £401,800 in 1922-23 and £93,800 in 1921-22, and was arrived at after allocating the increased amount of £100,000 to depreciation. In respect of the year, 9 per cent. was paid on both classes of capital, as against 8 per cent. on the preference and 4 per cent. (initial) on the ordinary for 1922-23. As at the current price of 27s 6d the return on the preference shares represents no more than 6½ per cent., it is obvious that some allowance is made for larger distributions in the future. Such

appear to be in prospect. Important new works and improvements, upon which £600,000 has been expended during the past year, are now practically ready to commence operations. An increasing tonnage is being derived from the company's own mines in Tasmania. In comparing the latest results of the North Broken Hill with those of 1922-23, it is necessary to bear in mind the circumstance that in the meantime the company has absorbed the British Australian undertaking. Even so, the profit and loss account shows a balance of £685,800, after providing £50,000 for depreciation, as compared with £284,800 for 1922-23, after amortising only £20,000. Three dividends, totalling 11s per share, have been disbursed in place of 6s, and the increased balance of £309,900 goes forward. At £799,150 the surplus liquid assets show a marked increase. Moreover, this amount does not include shares and debentures in other companies, valued in the balance-sheet at £440,450. The strength of the position has been reflected in an upward movement in the shares.

Conditions in Japan.—Cable advices from Tokyo state that the general tone of the money market remains easy, and consequently new issues have been floated at lower rates. Short loans, however, were a shade higher compared with September. Although the quotations of foreign exchanges are still weak, the downward tendency appears to have been arrested for the present, and the anxiety concerning overseas trade occasioned by the civil war in China has gradually abated. The activity in raw silk has continued. There was an advance in the price of rice for future delivery, as anticipations of an increased crop have not been realised. The first official report estimates the new crop at 58,000,000 koku (that is 1½ per cent. below the average crop per annum for the past five years). The share market has continued dull.

The first ordinary meeting of the present session of the Institute of Actuaries will take place on Monday next, 27th inst., at 5 p.m., at the hall of the Institute, Staple Inn. An inaugural address will be delivered by the President, Mr A. D. Besant, B.A.

MR. EDGAR CRAMMOND, a director of the British Shareholders' Trust, Limited, will deliver a lecture at the Institution of Civil Engineers, Great George-street, S.W.1, on Tuesday next, the 28th inst., at 6 p.m. The subject of his address will be "The Economic Position of Great Britain."

Obersea Correspondence.

UNITED STATES.—GERMAN LOAN FLOTATION—STEEL ORDERS INCREASING—SILVER.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 14.

FROM the heavy advance applications received for the American portion of the German loan, it was evident that the opening of subscription lists to-day would be merely a formality. Such proved to be the case. The books were opened at 10 o'clock this morning and closed a few minutes later. Demand for the bonds from all sections of the United States reached enormous proportions; investment houses did not exaggerate in describing it as a "riot." Demand for the bonds was indicated not only by the immense total of actual subscriptions, but also by transactions on the New York Stock Exchange this morning, where the initial sale consisted of a block of \$5,000 "when issued" at 94½—an advance of 2½ over the offering price. Trading continued active throughout the session, and after reacting to 92½, the price displayed renewed strength, rallying close to the early level. Much of the buying on the exchange represented covering of firm orders accepted by some houses for the bonds before they realised fully how popular the issue would be, and that the big oversubscription would result in the scaling down of amounts

applied for, since it is a foregone conclusion that the offering will be allotted. Owing to the tremendous supply of funds in the United States seeking profitable employment, the flotation of the German loan caused no disturbance whatever in the financial situation here. The stock market, it is true, suffered substantial recessions to-day when it became known that the German loan had been heavily oversubscribed. The selling was a continuation of the liquidation that started last week, and bore the earmarks of a vigorous bear drive by speculative interests, who apparently based their attack upon election uncertainties. It should be borne in mind, too, that much of the rise in the stock market since last June was in anticipation of a settlement of European economic problems and the flotation of a German loan. With the acceptance of the Dawes plan and the enormous demand for the German bonds testifying to the marked progress made in that direction, the stock market, as usual, sold off after discounting the actual event.

Indications are that further American loans to European interests on an extensive scale will follow the big German bond flotation. Simultaneously with the official publication of details and formal offering of the \$110,000,000 German bonds in the United States came the announcement that a new corporation, to be known as the American and Continental Corporation, and having an initial subscribed capital of \$10,000,000, had been organised by a group of strong financial interests here to make American capital available for the financing of European industrial enterprises. The new institution, which has been formed under the auspices of the International Acceptance Bank, Inc., and Kuhn, Loeb, and Co., with Dillon, Read, and Co. and associates, has an authorised capital exceeding \$25,000,000. One of the outstanding features of this corporation is that it will have an advisory board of representative banks and bankers in the countries whose industries are to be financed. These foreign bankers will virtually become partners in the different financial undertakings in order "to secure not only their advice, but also a mutuality of interest," to quote from the statement issued on behalf of the new corporation. Since the latter's immediate problem, it is pointed out, lies in Germany more than in any other European country, a group of prominent German banks and bankers has been formed there to act in this capacity. It is proposed that in due course important interests in other countries will become associated with this enterprise in a similar capacity.

At the end of September, unfinished business on the books of the United States Steel Corporation totalled 3,473,780 tons, the largest amount of forward orders reported at the close of any month since last May, and representing an increase of 184,203 tons over August 31st. On September 30th a year ago, the corporation's unfilled orders stood at 5,035,750 tons. The gain last month was not as large as the trade had expected, but, considering general conditions in the steel industry, and the fact considerable forward business appears to be held back pending the Presidential election next month, the showing is regarded as favourable. It is a much larger increase than was recorded in August, and is pretty conclusive evidence that the steel trade in this country turned the corner some time ago, and is steadily, though gradually, improving. The corporation's plants operated at about 61 per cent. of capacity on the average during September, and shipments were estimated at more than 800,000. On that basis, incoming business approximated one million tons. The September rate of operations compares with 56 per cent. capacity in August and only 44 per cent. in July. New orders booked last month were about double those of July. Railroad orders accounted for a large portion of the September business. Some 22,000 new cars were purchased last month by the carriers, which will require about 350,000 tons of steel, of which the Steel Corporation probably received orders for more than half. Several sizeable rail orders were booked by the corporation's plants, while its export business approximated 100,000. Although steel buyers are operating conservatively, if not cautiously, owing to election uncertainties and doubt concerning prices as a result of the change in the system of price-basing caused by the discontinuance of the so-called Pitts-

burgh plus system, October orders received thus far are said to have reached satisfactory volume, and substantial inquiries are pending which seem likely to be closed during the current month. Present indications point to another increase in the corporation's unfinished business at the end of October.

The further vigorous advance in the price of bar silver in this market, totalling nearly 2 cents an ounce last week, attracted much attention. The recent rise is the most rapid that has taken place in many months, and carried the price to the highest level reached for over a year, namely, 72½ cents. The upturn is attributed largely to the heavy demand for the white metal from the Orient and various European countries, exports of silver having exceeded imports every month this year. A contributory factor, probably, is the reported shortage, temporarily at least, of domestic supplies, which is said to have been caused partly by commitments made by American producers to foreign Governments for deliveries that fall due this month, besides other contracts entered into. The quantity of silver, therefore, available to meet new requirements seems to be smaller than heretofore, apart from holdings of brokers and speculators, which it would be difficult to estimate with any degree of accuracy. Within the past few days the price has reacted somewhat from the peak. The top figure of 72½ cents compares with last year's high point of 68½ cents, and with the 1923 and 1924 low points of 62½ and 62½ cents respectively.

FRANCE.—BUDGET DEFICIT—A NEW LOAN—EXPORT TAXES—INVESTMENT OF LEGAL RESERVES.

(FROM OUR CORRESPONDENT.)

PARIS, October 22.

THE week has been filled with excursions and alarms, most of which have centred round more or less unfounded reports as to the Government's intentions with a view to meeting the deficit which it is certain will exist at the end of the current financial year. This deficit is generally spoken of as "about four milliards." Most of this, as is known, is a legacy from the previous Government, which frankly announced, when forcing its Budget for 1924 through the Chambers, that the estimated revenue would in no case be likely to balance the estimated expenditure for the year. In his programme-speech at the Radical and Socialistic Radical Congress at Boulogne on Sunday, M. Herriot fixed the actual amount of this deficit at 4,183 millions, but he was also candid enough to state that 1,408 millions of this was due to exceptional expenditure that will not recur in 1925; therefore, the real deficit to be provided for in the next Budget will not be more than 2,775 millions.

For the present year, however, there is an actual deficit of 4,183 millions, and this the Government propose to liquidate by means of a special internal loan. What the nature and terms of this loan will be has formed the subject of consideration at more than one recent Ministerial Council, but down to the present no definite decisions have been come to. Reports appeared in several of the newspapers on Friday to the effect that the Government proposed that the loan should take the form of ten-year 5 per cent. bonds, redeemable with bonuses equivalent to 50 per cent. of their nominal value. The effect of this report was to produce an enormous volume of selling of all descriptions of existing Rentes, which brought the Three per Cents. down to 50, a lower quotation than they have reached for over a quarter of a century. The 1920 6 per cent. Rente dropped from 76.40 to 74.45, and the 1920 Redeemable Fives from 78.50 to 74.80. Hasty denials of the erroneous statements were sent out from official quarters, in the shape of a statement to the effect that, although a loan of "about four milliards" had been decided on in principle, neither the type of loan nor the date of issue had yet been fixed. The Finance Minister has since announced that the real object of the contemplated issue is to meet the immediate wants of the Treasury, and that he is considering adopting a new form of security that shall be as attractive to the investor as certain issues of short-term bonds have recently proved to be. Some of those bonds yield as much as 10 per cent., and in view of

the public liking for this form of investment, it is highly probable the new issue will take the form of ten-year bonds, carrying only 4 or 5 per cent. of interest, but reimbursable at a heavy premium on maturity, on being drawn for redemption. It is highly probable the new issue will be made early next month, as soon as possible after sanction can be obtained from Parliament, which will reassemble, it is now announced, on November 4th.

The perturbation caused by the exaggerated reports as to the new loan was complicated by the fact that negotiations with American bankers were known to be pending, with a view to the issue of a new loan to this country in the United States. Mr Pierpont Morgan has now arrived here, and has been in conference with the Finance Minister on the question, but it is understood that no immediate decision is expected, as there is no urgent necessity for one. The French railway companies have been granted sufficient delay before they will be required to repay the advances made to them, that it is certain ample time will be available for the necessary negotiations for the new loan to take place without undue haste. It is understood the amount of the new American loan to this country will be about \$200,000,000 in amount, and that it will be devoted to improving French credit. In any case, although it has not yet apparently been decided whether this country will endeavour to attain the object in view by means of a loan from the United States bankers, it may be taken for granted that the only obstacle really in the way of such a loan is the one of terms. So far as can be gathered, Mr Morgan and his friends are at present asking for rather more than the French feel inclined to pay for the accommodation.

The Finance Minister's proposal to extend the tax on turnover to export sales, in order to raise a portion of the additional money required to meet the coming year's expenditure, has met with a good deal of opposition from the trading community, the argument, of course, being that such an impost must inevitably tend to reduce the advantage which French exporters now enjoy by reason of being able to pay labour and other production costs in depreciated currency. After conferring with the officers of the association known as Councillors for Foreign Trade, which is recognised by the Government as having the right to speak on export questions, M. Clémentel promised to ask the authority of Parliament to allocate a portion of the extended tax itself to a new national institution which is shortly to be created for ensuring foreign credits for French exporters. On this understanding, and subject to an undertaking being given that certain products shall still remain exempt from the extended tax, the exporters' representatives have passed a resolution expressing approval of the Minister's proposal. Their view is that the imposition of the tax on exports will bring about the repeal of measures which certain countries have taken against French merchandise (and which others propose to take), on the ground that its exemption from this tax amounts to a form of bounty, and that the burden of the new tax will be more than compensated for by the assurance of their foreign credits. The Finance Minister anticipates that the extension of the tax on turnover to exports will yield an additional 400 millions a year to the revenue.

Of the total additional revenue of 1,500 millions, which, according to his statement to the Finance Commission of the Chamber, the Minister expects to secure by his new proposals, 200 millions is to be drawn from the exaction of interest payments in respect of unpaid tax on war profits, the recovery of which has been the subject of legal proceedings; 145 millions from a revision upwards of the assessments for income-tax on industrial and commercial profits; 115 millions from the suppression of the right of certain taxpayers to calculate their assessments according to the fixed regulations of the revenue authorities and not on their real value; 100 millions from the super-tax on unearned increment in connection with the sale of property and business undertakings since 1920.

The most ingenious and interesting proposal put forward by M. Clémentel is, perhaps, that limited companies shall be compelled in future to invest their "legal reserve funds" in French public funds. Under the terms of the law of 1867, limited companies are obliged to set aside

5 per cent. of their profits, before any distribution to shareholders, for the purpose of constituting what is known as a "legal reserve." This stipulation ceases to be obligatory when the reserve in question is equivalent to one-tenth of the share capital. The object of the provision is, of course, to furnish both shareholders and creditors of the company with an automatic guarantee against loss. The proposal, which the Finance Minister announces his intention to embody in the form of one of the articles in the forthcoming Finance Bill, has been received with a good deal of unfriendly criticism. In some quarters it is stigmatised as a skilfully dissimulated form of capital tax (although it is difficult to see the accuracy of such a conclusion), while even so serious a journal as the *Temps* insists that it is equivalent to "a fresh attack on the rights of property." Other equally serious journals, such as the *Information*, are warm in their approval of the proposition, one going even so far as to assert that its chief fault is that it does not go far enough, as it ought to be accompanied by the increase of the legal reserve from 10 per cent. (as at present) to the equivalent of 20 per cent. of the nominal capital. The total capital of the limited companies existing in France at present is estimated at about 30,000 million francs, from which it is calculated that M. Clémentel's proposal, if passed into law, will result in about 3,000 millions of Rentes being absorbed for the constitution of the legal reserves of the companies. The stabilising effect of such a volume of permanent investment in the public funds needs no comment. In view of the present low quotations of the Rente, and of the belief that the premier French security, now that the country has apparently passed through the worst of its financial troubles, will slowly but surely improve, the argument that the investment will prove an excellent one to any company which is compelled to make it appears to be fairly sound.

GERMANY.—FINANCES—CURRENCY AND CREDIT—PRICES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 21.

THE Finance Ministry's return for the ten-day term October 1st-10th appears without the yield of Customs, spirits, tobacco, beer, and sugar, these having been paid to the account of the Commissioner for pledged undertakings. The account, therefore, shows revenue of only 146,335,633 gold marks, against expenditure, 195,000,004 gold marks, and a deficit of 48,664,371 gold marks. The total gross revenue in September was 609,207,831 gold marks, against 592,033,933 gold marks in August. In April-September, which is the first complete half financial year since the currency stabilisation, revenue was 3,299,193,213 gold marks, viz. :—

Direct taxes—	Gold Marks.
Permanent	2,617,238,788
Non-recurring	30,726,640
Customs and Excise.....	2,647,965,428
Other taxes.....	645,531,021
Various receipts.....	4,967,369
	729,393
	3,299,193,213
Yields of the chief taxes were—	
Income.....	1,002,208,057
Turnover	914,515,362
Property	178,232,154
Corporation (Income)	143,978,183
Railway traffic—	
Passenger	86,498,693
Freight	84,590,334
Bourse transfers	60,601,916
Tobacco	231,125,478
Customs	136,512,148
Beer	101,403,390
Sugar	90,974,073
Wine	38,815,548
Spirits monopoly	36,528,625

The state of the finances must be considered satisfactory. Whereas in the four and a-half months intervening between the Rentenmark's creation and the end of the financial year 1923-24, there was a deficit of 754,400,000 gold marks, covered out of Rentenbank credits, the first half of the new financial year shows a surplus of

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

149,326,160 gold marks, or, including expenditure on redemption of gold loan, 380,170,339 gold marks. The estimated revenue for the half-year was 2,602 millions, and it has been largely exceeded. Monthly receipts from taxation averaged 27 per cent. more than was estimated. The total expenditure on the ordinary Budget was 2,898 millions, and it materially exceeded the estimate of 2,471 millions, but most of the difference was caused by an increase over the estimate in the subventions to the States and municipalities, which increase resulted automatically from the increase in yield of taxes.

The Reichsbank has adopted the new Reichsmark (gold mark) in its accounts. Already in its cash transactions the Rentenmark and the paper mark in units of one billion are treated in the same way as new Reichsmarks.

The new Reichsmark notes in denominations of 10, 20, 50, 100, and 1,000 marks will soon be issued. The banks represented in the Berlin "Stempelvereinigung" have decided in future to carry Reichsmark accounts only. Future bills and cheques are to be drawn in Reichsmarks, and old bills and cheques in Rentenmarks, and billions of paper marks will be treated as if in Reichsmarks. The Gold Discount Bank, it is understood, will give no exchange credits to new customers, but will prolong existing credits, gradually calling them in. The Discount Bank's return for October 15th shows discounts of £6,422,049, against £6,564,742 a week earlier. The Reichsbank's additions to its gold reserve between April 23rd and October 7th total 152,904,000 gold marks. Interest rates are slowly declining, but long-term loans are still hard to obtain. From New York come numerous reports of credits concluded or impending, and of attempts to boom German securities generally. The leading American bankers, no doubt, look well after their own and their clients' money, but there is evidence that the improvement in Germany's credit is being exploited by less reputable American financiers to plant worthless securities on the public; and for this Germans, though they also may have offered very doubtful securities to New York, are not responsible. American financial newspapers print advertisements by brokers or bucket-shop keepers offering German bonds and stocks which have practically no value, while securities which have some (if in absence of gold mark balance-sheets are unknown) value are offered as bargains at prices more than 100 per cent. higher than they can be bought at in Berlin. The *Frankfurter Zeitung* of October 17th gives some instances of the false statements by which these speculations are recommended.

Wholesale prices, after rising since July, have gone slightly back. The official index number for October 14th is 132.2, against 133.7 on the 7th, and an average of 115 in July. The cost of living index number is still rising, being 123 on October 15th, against 121 on the 8th. The Foreign Trade Association has petitioned the council of the new Railway Company to reduce freight rates. It calculates that if German rates for seven chief commodities are 100, French are only 49, Italian 45, and Belgian 38, while Hungarian and Polish, which are considered high, are only 74, and Austrian and Czech 66. On the question of Commercial Treaties, the same association protests against the notion that Germany should try to exploit the difficulty which England as a Free Trade country has in retaliating in order to refuse concessions to English exporters to Germany. The real interest of the Continental states, says the association, should rather be to go as far as possible in liberal treatment of English

goods, in view of the great advantages which a Free Trade country in general presents to exporters. This is only one of several recent utterances by representative bodies against a narrow trade policy. The Government has decided to remove the import prohibitions from further classes of goods. At present about 300 out of 900 classes in the tariff are import forbidden, and it is expected that 100 classes will be freed. Next month negotiations will begin in Moscow for a definitive Commercial Treaty with Russia. The ratification of the recently-concluded trade agreement with Austria is endangered by the dissatisfaction of certain German interests with the duty rates conceded. The Motor-Car Traders' Association has protested strongly against the prohibitive rates in the pending general tariff scheme.

The condition of industry changes slowly for the better. Home sales of textiles are checked by the extremely high retail prices, and only inferior quality goods are in demand. The paper market has improved, and export in newsprint paper has increased. The iron and steel branches are still very dull, with low prices. Only for high quality coal is there a good market. It is declared that English coal may be driven out of Hamburg if railway rates, as demanded, are further reduced. The Rhenish-Westphalian steel interests have been negotiating since the middle of the month for a revival of the Steel Syndicate. The present Stahlbund is practically extinct. The Stahlwerksverband, which before the war was weakened by reducing its authority to the heavy "A" products, was not renewed in 1919, owing to the steel scarcity then prevailing, and to the belief that this condition would continue. To-day production, if works were operated to full capacity, would far exceed demand. The proposed syndicate, which this time would embrace all steel products, would ration production, reducing it in proportion to the capacity of the works, but would not, it is expected, fix prices directly or have a selling monopoly. Most of the big works have of late created their own trading organisations. The initiative for the syndicate came from the Thyssen interests, which until lately opposed the syndicate idea in all forms, and it is supported by Rhenish Steel, the Gutehoffnungshuette and Kloeckner companies, and by about nine-tenths of all the interests concerned. Subordinate syndicates would be formed for different steel products. The Westphalian trade Press favours the notion of an international steel syndicate, in which at present Belgium seems to be most interested, but does not believe that the foundation is practicable until pending tariff and commercial treaty questions are settled, and complains of alleged French demands for too great a share.

The Bourse last week continued inactive, but the undertone was firm, and stock and loan quotation averages slightly rose. Yesterday the Berlin Bourse struck as a protest against the high transfer tax. To-day stocks were weakish under the influence of the Reichstag dissolution, but in spite of the relegation of the Aufwertung question to a new Reichstag, speculation in loans continued.

CANADA.—FEDERAL GOVERNMENT FINANCE— TERMS OF NEW ISSUES—SOUTHWARD EMIGRATION—LUMBER BUSINESS—GRAIN MARKETS—RISE IN PRICES—PULP AND PAPER TRADE—GENERAL BUSINESS CONDITION

(FROM OUR CORRESPONDENT.)

OTTAWA, October 11.

THE Federal Government has successfully completed its financing for the present year. In the last week of September it placed with the chartered banks of Canada \$35,000,000 worth of two-year 4 per cent. bonds, and, through a syndicate of Canadian financial houses, also successfully floated a domestic loan of \$50,000,000 worth of 20-year 4½ per cent. bonds. These bonds were issued to the public at 97, which would make them yield 4.73 per cent., and they were oversubscribed within three hours. Purchasers of new bonds are allowed to make payment on October 15th with Victory bonds maturing November 1, 1924, after detaching the interest coupons due November 1st. Such purchasers will receive in cash the difference between the face value of the maturing bonds and

the price of the new bonds, which is equivalent to a bonus of \$3 per \$100 in cash, as well as of one half-month's interest. The new issue is now selling at 98. These funds, added to the loan lately raised in New York, will provide for all but a fraction of the maturing obligations, and it is understood that the Finance Department feels itself in a position to make up the deficiency in cash. The success of the domestic issue is highly gratifying to the Government, and reveals an unexpected reservoir of funds available for investment at low interest rates, but in some quarters it is rated a bad sign that so much money should be ready to find refuge in Government bonds in a young country with vast natural resources which ought to offer unlimited opportunities for profitable investment in development enterprises of various kinds. The argument is made that industrial and other enterprises are being strangled by excessive taxation, and that the various Governments must strain every nerve to offer to the Canadian taxpayer some of the measure of relief which has been given in the United States since the war.

Unfortunately, the decline visible in the Federal revenues does not promise much hope of immediate relief, and the continuance of the southward exodus, which diminishes the number of taxpayers available to share the burden, is again causing disquietude. Claims were made in the spring that it had been checked and that many Canadians were returning from the United States, but they seem to have been erroneous. At any rate, the figures of the U.S. Immigration Department show that during the half-year ending June 30, 1924, more than 96,000 Canadians paid the head tax for entry into the United States, and in June itself, when work is normally most plentiful in Canada, the number was only a little short of 20,000. Add to these the numerous people who slip over the frontier without paying the head tax, and during the current calendar year the total loss of population to the United States may easily reach 300,000, which is a most serious drain upon a population of nine millions.

The lumber business is suffering from a severe slump. The volume of domestic construction in the past year has been small, and, owing to the cessation of the building boom in the U.S., the American demand has been reduced to very modest dimensions. The result is that many firms—especially in B.C.—have larger stocks on hand than they have had since 1914. Prices are very low, and few companies are planning to make their normal fresh cut this winter, confining their operations chiefly to the salvaging of timber from burnt-over areas.

Wet, inclement weather in the prairie provinces has hampered threshing operations, and the movement of wheat to the Lake ports, although it has gained momentum in the last week, is still very slow. However, the lateness of the crop has proved very fortunate, for prices have been mounting rapidly, and No. 1 Northern on the Winnipeg Exchange is now well above the \$1.50 which in the summer was regarded as a goal merely to be dreamed of, not attained. Since most of the farmers have still their wheat unsold, they will reap the benefit of the rise, and it will be particularly welcome, because reports from country elevators to their head offices indicate that the percentage of wheat affected by frost is proving larger than was anticipated in many districts. The steep rise in prices is a very fortunate development for the co-operative grain pools, as they will inevitably obtain from the farmer considerable credit for the increased returns, and in a "bull" market their marketing problems will be simplified.

The pulp and paper boom seems for the moment to have passed its peak. The exports of pulp and paper for the month of August, valued at \$10,905,420, show a decline of almost half a million dollars compared with the July figures, and a fall of more than a million and a half dollars compared with August, 1923. For the first eight months of the current year, the exports amounted to \$91,393,867, as compared with \$92,920,867 for the corresponding period of 1923.

Now that the holiday season is over, the stock markets have been fairly active, and good dividend-paying stocks are in steady demand by permanent investors. The buying power of the farming community in Eastern Canada is undoubtedly greater this year than last, and is reflected in an expansion of orders from country stores

keepers. Few manufacturers, however, are able to report any real improvement in their plight, although the normal autumn business is providing a certain increase in orders, but a good deal of unemployment is inevitable this winter in all the larger cities. As the result of the grain movement, car-loadings of revenue freight have taken an upward turn after showing a decline for many weeks, but railway revenues are still far from satisfactory, and both by the C.P.R. and the C.N.R. great economies are being enforced. Prices still show a tendency to rise, largely, however, as the result of the rise in grain prices, which affects many other commodities.

UNION OF SOUTH AFRICA.—GOVERNMENT'S WHITE LABOUR POLICY—WAGES—INDIA TAKING GOLD —WORKING COSTS AND YIELDS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 1.

THE increase in the scope of white labour as compared with native and coloured labour has been much discussed of late. Johannesburg Municipality, in conjunction with the Government, is employing up to 1,000 indigent whites at a wage of 7s. 6d. per day, or little more than one-third the standard wage paid to organised labour. This means that many "border-line" jobs are now being done by whites instead of, as is usual, by natives, and the natives are already starting to complain of being elbowed out, not because of inefficiency, but owing to the political craze of employing white men at the behest of the Nationalist-cum-Labour Government.

Mr. Tielman Roos, Minister of Justice, made the mischievous statement the other day that white men for whom there was no work in the mines should nevertheless be forced upon the industry, and indulged in talk about a more stringent ratio being applied to the mines than the accepted 10.5 natives to one white, if the companies did not voluntarily find employment for more whites. We are threatened with yet another Commission on this question and observance of mining regulations. In practice the ratio is rather more favourable to whites than the figure quoted. Sir Evelyn Wallers, President of the Chamber of Mines, at yesterday's quarterly meeting, pointed out the "amazing confusion of thought between what is relief work and what is ordinary industrial employment on economic lines. To provide unemployment, relief work is the business of Government and public authorities, and every member of the public must contribute to its cost."

A day's pay for men on the mines averages 20s per shift, or £300 a year, and underground contractors over £450. It is estimated that the former figure is 50 per cent. higher than the average paid to white men in other industries. Compared with 1914, the mines are now paying 14 per cent. more.

The President declared that the three independent investigations of three commissions, the Economic of 1914, the Brace Mining Industry Board, and the Statutory Conciliation Board which considered the wages of mechanics, constituted "overwhelming endorsement" that the wages paid by the industry were reasonable and fair, and crystallised the policy of the mining houses in the following sentence: "The gold mining industry stands on the results of those investigations, and, therefore, the proper and straightforward course for me to pursue in the best interests of all concerned is to state in clear terms that the industry is unable to agree to any increase in the general level of wages paid by it."

The slightly more attractive terms (one penny an ounce lower price) offered to Indian purchasers of gold have resulted in a large increase in shipments. No less than 1,472,400 ozs have been shipped there since July, and for several weeks past practically no gold has been sent from Cape Town to London. Only gold of high degree of fineness, as attained by the Rand Refinery, is suitable for the Indian market. Sales and payments are still made in London, as South African trade with India is far too small to carry the financial transactions necessary for the sale of so large a quantity of gold.

The outstanding feature of the August analysis of the Chamber of Mines was the reduction in working costs by

4d per ton to 19s 1d, which is exactly a florin above the average in 1914, but it must be remembered that the present figure includes miners' phthisis assessment, while leave pay, which had not been instituted in the earlier period, now represents 5 per cent. of the white wages bill. The Barnato group charges the cost of gold realisation, merely a nominal item ten years ago, to working costs, and this, spread over the whole Rand tonnage, would be equal to nearly 3d per ton. Moreover, there is now a more general tendency to charge as much work as possible to current expenses rather than to capital, in some instances for the sufficing reason that capital funds are not available. Were it possible to have the figures on a strictly comparative basis, one imagines that costs would probably be no higher than in 1914, despite the fact that the mines are, so to say, "ten years deeper." But this is as it should be, as there have been enormous advances in practice, in rock drills underground, and tube mills (expansion) and corduroy tables and all sliming above. At West Springs, for the second month's notification, costs were only 19s 1d per ton, corresponding exactly with the Rand's average. The Gold Fields group has always been remarkable for its low costs. Simmer and Jack reduced its rate to 15s 8d, and Robinson Deep to 17s 4d. But Government Areas' figure of 16s 8d included realisation charges, equal to 1s 3d per ton, a net rate of 15s 5d. Considering that the net price of gold was only 88s 3d per ounce, a premium of exactly a dwt for each ounce, or 5 per cent., representing a decrease of 2s 3d per ounce on the month, the profit of £1,186,200 for the Rand companies, equal to 9s 10d per ton, must be regarded as highly satisfactory.

It is officially estimated (by the Government mining engineer) that the mines of the Union this year will contribute over four and a half millions sterling to the revenue of the Union and provincial administrations. The comparative figures for the two years are:—

	1922-23.	1923-24 (Est.)
	£	£
Gold mines.....	1,885,865	1,343,396
Share of profits.....	..	1,235,000
Income-tax.....	..	109,250
Provincial taxes.....	..	..
Diamond mines.....	668,995	727,000
Export duty.....	..	602,049
Share of profits.....	..	197,715
Income-tax.....	..	1,785
Employers tax.....	..	89,281
Collieries—Mines.....	100,976	3,759
Base metal.....	3,759	6,805
Totals, inc. other items	2,794,624	4,571,411

In the previous ten years the mining industry contributed £34,572,617 to the country's revenue, making a total of nearly £42,000,000 in fourteen years. It will be observed that Government ownership revenue from four or five mines on the Far Eastern Rand is estimated to exceed the income-tax from all profitable and dividend-paying gold mines by over £100,000.

HOLLAND.—EAST INDIES AND THE BUDGET.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 18.

HOLLAND is at the present time living in the period of budgets. After the budget of the Dutch Government, those for the municipalities are gradually coming in, and just recently the budget for Netherlands East India has also been submitted. This last particularly is of an international interest, because Netherlands East India is becoming more and more a country into which investments from all parts of the world flow.

Careful investigation shows that the Dutch share in the plantation of rubber in Netherlands East India amounts to 35.4 per cent., that of England to 40.4 per cent., while Belgium, France, and America each take for their share 5 to 6 per cent., and Japan 3.6 per cent. This situation, however, has not been confined to rubber only. The plantation of tea, it is true, is still for the greater part in Dutch hands (60 per cent.), but about 30 per cent. already is English. It is, indeed, not unlikely that by recent transference of many Dutch tea plantations in Java to English

owners and by the extension of British tea plantations in Sumatra, the Dutch preponderance in tea plantations has disappeared. Only the old plantations, such as sugar, tobacco and coffee, are still preponderantly Dutch. But even in coffee England already has a share of 13.3 per cent. This, however, only concerns the plantations. If the total capital investment is considered—which, according to estimate, amounts to 3,000 million guilders—then the Dutch share amounts to 73 per cent., that of China (Chinese established in the Netherlands East Indies) to 10½ per cent., and of England to 9 per cent. In addition there is also the Netherlands East India bonded debt. Of this debt amounting to about 1,300 million guilders at the end of 1923 more than 500 million was taken up in dollars and pounds.

The following are the Budget estimates for 1925:—

	Total. Florins.	In N.E. India. Florins.	In Holland Florins.
Expenditure	690,309,415	530,233,183	160,076,232
Revenue	652,400,143	640,626,243	11,773,900
Deficit	37,909,272	..	148,302,332
Surplus	..	110,393,060	..

Separated under the principal headings the draft Budget for 1925 is as follows:—

	Total. Florins.	Ordinary. Florins.	Extra-ordinary. Florins.	Fleet Extension. Florins.
Expenditure...	690,309,415	635,290,864	46,504,416	8,514,135
Revenue	652,400,143	637,707,143	9,593,000	5,100,000
Deficit	37,909,272	..	36,911,416	3,414,135
Surplus	..	2,416,279	..	..

The total is in round figures about 46 millions more favourable than for 1924, that for the ordinary budget almost 24 millions and for the extraordinary budget nearly 23 millions.

The estimate for 1925 is in line with the continued efforts towards retrenchment, which are reflected in the expenditure figures shown below:—

Year.	Total.		Ordinary.		Extraordinary.	
	Million Guilders.	Per- centages	Million Guilders.	Per- centages	Million Guilders.	Per- centages
1921....	1,059	100	825	100	194	100
1922....	856	81	746	91	91	47
1923....	717	68	646	79	62	32
1924....	715	68	647	79	60	31
1925....	690	65	635	77	47	24

Since 1921, which was a top year for all groups of Government control, 1925 therefore shows for the total expenditure of the Budget a decrease of 35 per cent., for the expenditure on behalf of the ordinary service a decrease of 23 per cent., and for those of the extraordinary services a decrease of no less than 76 per cent.

As to the revenue, the estimate includes, besides some proposals of minor importance for increasing the receipts, a proposal for a tax on goods handled in the ports, for the purpose of bringing about as far as possible a better balancing of the financial conditions of the various ports. The net surplus expected from this tax is estimated at 2,700,000 fl; against this, however, a decrease in receipts of port charges is figured to amount to 429,000 fl. A revision of the income-tax for corporations is proposed in the Budget of the current year.

In future the Indian debt will require about 28½ million florins more than at present. An annual expenditure of about 115 million florins for the Indian public debt is far too great a burden; for 1925 this would mean that more than one-sixth of the revenue would be required for this purpose, while, at the same time, in view of present circumstances and prospects, the Budget must be considered to be fixed above the level of normal conditions.

In the large increase of the ordinary receipts, taxes have played a proportionately greater rôle than other sources of income. While the revenue has risen from 311.4 million florins in 1913 to 652.4 million florins for 1925, or 105 per cent., the receipts from taxes in these years has increased from 102.9 million florins to 270.3 million florins, or about 163 per cent. The result of this is, of course, indicated in the rapidly increased burden of taxation.

JUGO-SLAVIA.—FINANCIAL POLICY—HARVEST—TRADE.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 6.

In his declarations on financial and economic policy, the new Minister of Finance, Dr Spaho, emphasises the intention of the Government to increase national productivity not so much by artificial stimuli as by providing the internal peace and quiet necessary for economic life. The chief care of the Government will be to provide one unified tax law, since the various provinces still pay taxes according to inherited laws, under which the burden of taxation is very unequally distributed. This law, and the gradual increase of the import agio until it equals the depreciation of the dinar are to provide the chief new financial resources for the greater expenditure of the 1925-6 Budget. This Budget will be larger than the present one, partly because the needs of the various Ministries have increased, and partly because pensions and bonuses for the disabled and State dependents have been raised. Laws to this effect are ready, and will be submitted to Parliament when it assembles on October 9th. The Government will also prepare a new Customs tariff, which it considers will meet present needs better than the old one. The Minister, however, does not expect a rise in the price of imported goods as a result, because the new tariff should be counteracted by the rise of the dinar. No artificial measures will be taken to increase the value of the latter; for this the Government relies on increased export. An attempt will be made to pay off part of the State's debt to the National Bank.

In accordance with his declared opinion that investments should not be met from the ordinary budgetary receipts, the Finance Minister has signed the second instalment of the Blair loan, to the amount of 3 million dollars, and giving Blair the option to issue another 2 millions. This money will be used for the completion of the railway lines undertaken by the last Government.

Harvest results are very satisfactory, except for wheat and fruit. The wheat yield will be only 14½ million quintals, as compared with 16½ last year, while the fruit crop will be fully 25 per cent. less. Oats and barley have yielded 3 million quintals each and rye 1,400,000. The maize harvest is a record one, and the yield on an area of just under 2 million hectares is 30 million quintals. The beet crop is double that of last year, with 880,000 tons, and the tobacco yield 25 million kgs. The total export capacity for the twelve months beginning September 1, 1924, is calculated at 10,400 million dinars, as compared with 8,500 million dinars during the preceding year. The export surplus of the chief articles is reckoned thus:—Wheat, 150,000 tons; rye, 1,400 tons; barley, 16,000 tons (maximum); oats, 7,000 tons; and maize, 300,000 tons. Much of the last-named will be used to make up the deficiency of wheat and as fodder, since cattle-rearing is getting more intensive.

The volume of trade, particularly export, is increasing, as may be seen from the statistics below:—

EXPORT.						
	1923.		1924.		Increase %.	
	Tons.	Mil. Din.	Tons.	Mil. Din.	Tons.	Value.
July	233,032	547.2	335,940	686.3	44.16	25.24
August	309,210	706.8	389,674	854.7	26.02	20.91

IMPORT.						
	1923.		1924.		Export 1924 Same Period.	
	Tons.	Mil. Din.	Tons.	Mil. Din.	Over Import	Excess of Export
First quarter	1,913		1,928		2,062	134
Second quarter ..	1,883		1,891		2,114	223

Thus the trade balance for Jugo-slavia in 1924 is obviously active, as it was also during the last quarter of 1923.

The other two most important economic events worth mention are the resumption of reparation deliveries, of which Jugo-slavia's share for September is fixed at 3,335,000 gold marks, and the lowering of export duties, on wheat to 16 dinars, on rye and maize to 10 each, while on flour it has been altogether rescinded.

After a slight weakening during the political crisis and the summer months, the exchange is becoming firmer under the influence of an improved internal political situa-

tion, a continued active trade balance, and a very busy export season. The dinar has improved from 368 to the £ in the middle of June to 320 in the middle of September, around which it has maintained itself now for over three weeks. The fact that the National Bank has an increased fund of metal covering (475 millions, as compared with 443 millions at the beginning of May), that the Government has changed very little of its 3 million dollars from the Blair loan, and that the country is in the middle of a very heavy export season should all be in favour of the maintenance of the present improvement of the dinar.

Letters to the Editor.

BANK RATE AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In commenting on my letter, which appeared in your issue of October 18th, you contest my statement that "changes in Bank rate can be relied upon to affect the volume of trade borrowing." I confess that in reading your Banking Supplement it never occurred to me that this was the point on which you intended to express disagreement. If it was, you might have easily filled columns with the names of those who uphold the theory you set out to attack, and I do not know why you selected Professor Cassel and myself for mention.

If changes in Bank rate cannot be relied on to affect the volume of trade borrowing, they cannot be relied on to do anything whatever.

In regard to the point to which you refer in your comment, that the volume of deposits ought to be affected by the volume of trade borrowing, I will offer the following observations:—

In the first place, changes in the outstanding amount of trade advances and discounts correspond, not to the changes in the volume of trade borrowing taken by itself, but to the net changes after allowing for repayments. When borrowing is stimulated and trade becomes active, the repayment of advances is accelerated, and the amount outstanding may be little if at all increased. When borrowing is checked and trade becomes depressed, the repayment of advances is delayed and the amount outstanding may be little, if at all, diminished. On the other hand, it is with the gross and not the net amounts of borrowing that price movements are most closely associated.

Secondly, banks hold other assets besides trade advances and discounts. An increase in the former, which allows of an increase in deposits independently of any increase in the latter, is a well recognised symptom of a trade depression.—Yours faithfully,

R. G. HAWTREY.

SHELTERED AND UNSHELTERED WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I make a comment on the article entitled "Sheltered and Unsheltered Wages," which appeared under "Notes of the Week" in your issue of October 18th?

I read the paragraph with considerable interest, and while I believe that the inferences drawn are perfectly correct, I should like to qualify the statement in one respect.

When you speak of eliminating factors such as the relative strength of trades unions and the relative skill of the different classes of workers, it is rather implied that the only variable left to be considered is degree of "shelter" enjoyed. This may be true with regard to some of the instances you mention, but I suggest that very probably, as far as the L.C.C. is concerned, "shelter" is not the only cause for the increase of 11s.

The point to which I wish to draw attention is the opportunity, or lack of opportunity, which L.C.C. work compared with outside engineering work provides for the application of payment by results. May I take an example from a case known to me personally?

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED
ALL INSURANCE
EXCEPT MARINE
Head Office
10, FLEET ST. LONDON E.C.4
ESTABLISHED 1836 General Manager W. A. WORMAN, F.I.A.

The standard minimum rate for engineers in this locality is 56s, but for engineers at the works in question is 70s 6d. The particular trade is not a "sheltered" industry, and the reason for the difference in its engineers' rates and those for the rest of the locality is due to another cause. The majority of engineers employed locally are in works where piecework is possible and very largely adopted. Those who are working piecework (i.e., very largely the best men in the trade) are picking up at least 71s. Unfortunately, in the works to which I refer, engineers, apart from those permanently attached to specific departments, are almost entirely engaged on installation, alteration, and repair work. For this any really operative system of payment by results is impracticable. Therefore, unless they are to lose many of their best men to proper engineering works, where they can pick up the extra money that piecework yields, it is necessary to make the rate of remuneration under day-work conditions correspond in some measure with the remuneration paid for piece-work conditions.

I suggest that this cause may operate to a considerable degree as far as the L.C.C. is concerned, and that, though it in no way falsifies the accepted explanation of differences of wages in "sheltered" and "unsheltered" industries, it is advisable to be careful, in making specific comparisons, to consider whether it is an important factor.—Yours truly,

L. J. CADBURY.

Books and Publications.

TOWARDS DISARMAMENT.

AN excellent preparation for the Disarmament Conference projected for 1925 is provided by four documents issued by the League of Nations.* Six subjects are dealt with altogether. We number them for convenience.

I. In conformity with the resolutions passed by the Assembly last year, the members of the League were invited by the Council to limit their expenditure on armaments, pending the elaboration of the scheme for a general reduction, to the sums provided in the Budgets of the current fiscal year, subject, however, to their obligations as members of the League and to any exceptional features of their situation. Thirteen States replied. Roumania declined, in view of the constant threats to her security, chiefly, no doubt, from Soviet Russia; Latvia, Liberia, and Czechoslovakia promised limitation; the other Governments were generally favourable, but pleaded exceptional circumstances—Portugal that she must make up arrears; Spain the demands for Morocco; Estonia and Jugo-Slavia that they had to build up their defensive systems; Poland that her Budget would not be normal till 1927; and then her circumstances must determine her attitude; Great Britain declined, naturally enough, to bind herself for an indefinite period.

II. The question of the reduction of naval armaments on the lines of the Washington Treaty was referred early this year to a conference of naval experts at Rome. Two

* 1. A 40, 1924, ix. (3d). 2. A 36, 1924, ix. (4d). 3. A 16, 1924, ix. (1s). 4. A 30, 1924, ix. (2s 6d). (London) Published for the League of Nations by Constable and Co., Limited.

Peter Walker (Warrington) and Robert Cain and Sons, Limited.—Authorised share capital £5,000,000. There are 2,000,000 8 per cent. £1 cumulative preference shares, all of which have been issued, and 3,000,000 ordinary shares of £1 each, of which £2,270,000 have been issued. First mortgage debentures have been authorised for £2,500,000, of which £2,000,000 have been issued bearing interest at 7 per cent. This is an offer for sale of 1,000,000 fully-paid 8 per cent. cumulative preference shares of £1 each at 20s per share. The company was formed in October, 1921, to acquire the properties and undertaking of Robert Cain and Sons (including the share capital—free of debentures—of Harding and Parrington).

son, Limited), as well as the whole of the ordinary share capital of Peter Walker and Son, Warrington and Burton, Limited. On the formation of the company the vendors of Robert Cain and Sons, Limited, accepted £2,000,000 in 8 per cent. preference shares as part of the purchase price, and it is a moiety of these shares which now becomes available to investors, owing to family reasons, following the death of Sir William E. Cain, Bart. The balance-sheet is made up to September 30th in each year, and for the two completed periods since the amalgamation for which figures are available there was available for distribution £407,545 and £392,225 respectively, while the preference dividend requires £160,000 a year, surplus assets amount to £4,431,971, after making allowance for the debenture issue. But these include goodwill and investments, the latter of which are taken on an unstated basis of valuation. Dividends of 10 per cent. and 9 per cent. per annum have been paid on the ordinary shares, and £20,000 has been placed to reserve. An interim dividend of 4 per cent., actual, has been paid in respect of 1923-24 on the ordinary shares. Considering that this is an "offer for sale" and not a prospectus, the information given is unusually plentiful. The 8 per cent. dividend, however, is an indication that the risks are slightly higher than those prevailing in some other industries.

Perfetti Nitrate Company.—Incorporated under the laws of the Republic of Chile. Share capital issued and fully paid, £700,000. This is an offer for sale of £150,000 7½ per cent. first mortgage registered debentures at 98 per cent. They are repayable at 103 per cent. by ten annual drawings, the first drawing to take place on September 30, 1926. The company has the right to redeem the debentures, or any part thereof, at any time on six months' notice at 103 per cent. The debentures will be constituted by a trust deed, providing for the creation of first specific mortgages under Chilean Law on the five nitrate oficinas owned by the company, together with the lands and nitrate grounds belonging to the oficinas, comprising an area of 20,455 acres, situated in the Provinces of Tarapacá and Antofagasta, Chile, together with buildings, fixed plant, and other immovables thereon. Assets are valued at £792,664, and liabilities are returned as £75,075, making a net surplus of £717,589. Net profits are given for six years. These, after providing for interest charges, depreciation, &c., are stated to have averaged £44,683 per annum. During the period the oficinas were managed and worked by another company, to whom large payments were made out of earnings, to cover the cost of management and interest upon sums advanced for working capital, thereby reducing the net profits to the Perfetti Company over a period of six years by £139,387. It is proposed to use part of the proceeds of this issue in paying off liabilities and the balance for general purposes, including the purchase of new plant and machinery, and in meeting the cost of overhauling and bringing up to date where necessary the existing plant and machinery. A speculative proposition, not, however, without attractions.

The Aldershot Gas, Water, and District Lighting.—Authorised stock capital £682,630, of which £50,000 "A," £10,000 "B," £158,042 "C" consolidated stock, and £428,130 preference stock have been issued, with a further £440 in respect of premiums, making a total of £646,613. The authorised loan capital is £327,206, of which £62,042 of 4 per cent. debenture stock, £21,100 6 per cent. mortgage bonds, and £100,625 7 per cent. mortgage bonds have been issued, bringing the total issued loan capital, with £1,707 in respect of premiums, up to £185,475. Messrs A. and W. Richards invite tenders for £60,000 of 4 per cent. consolidated preference stock. The minimum price of issue has been fixed at 70, at which the yield is £5 14s 4d per cent. Purchasers will receive in February next two months' dividend in respect of the period ending December next. Thereafter, dividends will be paid half-yearly. The net revenue of the company for the year ended December last is returned at £29,983, of which the interest on the loan capital absorbs £10,794, leaving £19,189 available to meet dividends on the ordinary and preference stocks. After payment of dividends in respect of 1923, the surplus remaining, at £12,420, was carried forward. The reserve and special purposes funds together amount to £13,504. The new capital is required for extensions to the plant, works, and mains. The issue will appeal to conservative local investors.

Amari (Nigeria) Tin Mines, Limited.—Capital, £50,000 in 500,000 shares of 2s each. This is an offer for subscription of 200,000 shares to shareholders in the Keffi Consolidated Tin Company. The company has been formed to acquire and work two tin areas in Northern Nigeria. The property being acquired originally belonged to the Keffi Tin Company, Limited, and was subsequently taken over by the Keffi Consolidated Tin Company, Limited, which undertaking ceased work upon it in 1922. During the period from July 1, 1918, to February 28, 1921, 287 tons of tin were produced, realising £55,632. The estimated ore reserve at the early part of 1922 was 27,000 tons. The purchase price has been fixed at £11,500, payable wholly in cash. The vendor company, in conjunction with Messrs Francis Wood and Co., have sent out

an expert to Nigeria to endeavour to obtain further prospecting licences. In the event of this visit proving successful, this vendor company is to be allotted 2,500 fully-paid shares, and Messrs Francis Wood are to take another 12,500 shares, while a further 160,000 shares are reserved for option to these two undertakings. The issue has been underwritten at a commission of 6 per cent. and an overriding cash commission of 1½ per cent., while Messrs Francis Wood and Co. have agreed to act as brokers to the issue for a fee of 500 guineas.

The Dallas Dome Wyoming Oilfields Company.—Incorporated under the laws of the State of Delaware, U.S.A. This company was incorporated mainly with the object of acquiring the Derby Dome (Wyoming) Oil Company (Inc.), registered under the laws of the U.S.A. The purchase consideration payable by the Dallas Dome Wyoming Oilfields Company for the property and assets of the Derby Dome Wyoming Oil Company (Inc.) was the issue of 1,043,730 priority shares of \$1 each credited 75 cents as paid up and 115,970 deferred shares of \$1 each credited fully paid in the Dallas Dome Wyoming Oilfields Company. The subscription of 600,000 priority shares has been underwritten in consideration of the payment of 10 per cent. for underwriting and 1½ per cent. for the over-riding commission, together with the right to call for two years from April 11, 1924, all the unissued partly-paid priority shares at 1s per share and the right to take up at par (4s per share) all the unissued reserve deferred and priority shares for a like period. These details are taken from an advertisement in the Press, published to comply with Stock Exchange regulations. From our point of view, the information is insufficient if the object of the advertisement is to give information such as one ought to find in a prospectus.

Leatherhead Gas and Lighting Company.—Sale by tender of a number of £10 shares as will, together with premiums, yield £10,767, also £9,050 4 per cent. debenture stock in lots of £50, being the balance of additional authorised capital. The minimum price of issue is £11 10s per £10 share, and £70 for each £100 4 per cent. debenture stock. Share capital amounts to £72,942, and loan capital £18,900. The undertaking would have been well advised to take expert advice in drawing up this document. Facts which should be made known are missing.

Gray, Dunn, and Co., Limited.—We are informed that the lists were closed at 10.5 a.m. on October 20th, the capital asked for having been largely oversubscribed.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

MR R. J. HOSE ON HOME AND FOREIGN CONDITIONS.

ADJUSTMENT OF REPARATION PROBLEM.

POSITION OF NATIONAL FINANCES.

FINANCIAL AND ECONOMIC CONDITIONS IN SOUTH AMERICA.

The thirty-sixth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 21st instant, at Winchester House, Old Broad-street, London, E.C.

Mr R. J. Hose (the chairman) presided.

The notice convening the meeting and the report of the auditors having been read,

The Chairman said:—Gentlemen, at each of our meetings during the past two or three years I have had to refer to the continued serious disturbance to international economic and political relations brought about by the non-settlement of the all-important question of Reparations, and it therefore affords me very considerable gratification to be able to point to a proposed adjustment on a sound basis of this most pressing problem as the outstanding event of the past year. The removal of this obstacle from the path of European reconstruction has been due to the fact that the labours of the First Committee of Experts have borne fruit in the Dawes Report, which was ultimately agreed upon by the Allies at the London Conference, and was later accepted by Germany.

THE GERMAN LOAN.

As one of the most important provisions in the report is that covering the flotation, under Allied auspices, of a loan of £40,000,000 sterling to be devoted to the rehabilitation of German finances, it appears consistent with the spirit of the agreement that the funds required are being subscribed in suitable proportions by the various countries intimately concerned. The service of both interest and amortisation of the loan is a direct and unconditional obligation of the German Government, chargeable upon all German assets and revenues, and is a prior lien on all Reparation payments. The issues which have been made in this market and elsewhere have met with generous response, and this bodes well for the success of the entire Reparation scheme, which must otherwise have been ineffective. There were, no doubt, a large number of our countrymen, as well as nationals of our Allies, who, mainly from a sentimental point of view, were unwilling to invest their money in the bonds offered for subscription. Whilst this attitude must be viewed with the greatest sympathetic comprehension, it can only be emphasised that if one part of the Dawes Plan were accepted, then the whole had to be agreed to, in order that it might be assured of ultimate success.

It is a fundamental principle of sound finance that, whenever a country contemplates seeking a loan in a foreign market, this must be based upon the restoration of the credit of the prospective borrowing nation, which must, indeed, in every case, place its financial house in order, and provide those who supply the funds with reasonable ground for regarding their money as adequately secured. These essential conditions appear to have been complied with in the case of the German International Loan, and would also naturally have to be fully observed by any other country which may contemplate seeking loan accommodation, either in the London market or elsewhere.

STABILITY OF THE FRANC.

In view of the steps which have been taken towards the rehabilitation of German finances, it is eminently desirable that in order to provide for the restoration and development of the national industries of France, the stabilisation of the franc should be undertaken as soon as possible on a basis consistent with the undoubted fundamental economic wealth of that country. In this connection, it is extremely encouraging to note that, according to current reports, negotiations are apparently proceeding in the United States for the conclusion of a loan intended to secure funds for this purpose. Similar measures, having for their object the stabilisation of the Belgian and Italian currencies, are equally desirable, especially in view of the fact that German currency is now on a gold basis. There appears every justification for such operations, and in view of the result of the war, the flotation of these loans should be even more easy than in the case of the International Loan to Germany.

EFFECT OF MORE NORMAL CONDITIONS.

The beneficial effect of more normal conditions in Europe, will be more widely felt than is perhaps generally appreciated, for the lack of purchasing power has spread its effect throughout the world, and there can be no doubt that this factor has adversely

affected trading conditions even in those far-distant countries in which we operate. As a case in point, it may be mentioned that Germany was formerly a very large purchaser of nitrate of soda, which, as you know, is produced exclusively in Chile. Germany also imported in normal times very considerable quantities of Argentine products, and it is quite possible that the depreciation in the exchange values of the currencies of the two South American countries I have mentioned has been in no small degree due to the impoverishment of their former European customers. The depreciation in the sterling values of the Argentine and Chilean pesos during the past few years has been very severe, as will be seen from the following comparison:—

	Exchange Rate at June 30,				
	1920.	1921.	1922.	1923.	1924.
	d	d	d	d	d
Argentina	57½	43½	44½	41½	41½
Chile	13½	6½	6½	6½	5½

Assuming our conclusions in this matter to be correct, we may confidently attribute to the improvement in the European outlook some part at least of the recent favourable movement in these exchanges. The latest rates represent recovery since the date of our balance-sheet, the Chilean peso being to-day worth 6 1/32d and the Argentine 44½d.

RECOVERY IN BUSINESS CONDITIONS.

A further factor which has recently exercised a very favourable influence upon the exchanges of the leading countries of South America is the recovery which has latterly occurred in business conditions there, especially in the export trade, and this is particularly true in the case of Argentina. The crops of cereals from the last harvest in the Republic were very abundant, and shipments of grain during 1924 have been maintained up to a date at a volume for which one has to go back to 1920 to find an equal, this movement having been assisted by reports of short crops in North America and the damage to European harvests caused by the recent adverse weather conditions. In addition, the Republic has effected during the current year shipments of frozen meat in excess of any previous record. It is now generally anticipated that, by the end of this year, a very substantial balance of trade in favour of Argentina will be established, whereas during the past three years an import surplus has been recorded.

CONDITIONS IN ARGENTINA.

The latest news of conditions ruling in Argentina is summarised in the following cable advices which we have just received from our Buenos Aires branch:—

“Labour conditions are quiet, except for the Port strike, which is, however, presumably about to be settled. Cereal prospects have improved, although growing crops have been affected by frosts and drought. Pasturage is feeling the want of rain. Good prices are ruling for cattle, and fat stock is not too abundant. The progress in the dairy-farming industry is maintained, although exports are on a reduced scale, owing to the rise in exchange. The wool clip in Patagonia is reported good, although rain is also needed in that district. The hides market is steady. Wine stocks have been reduced, and prices are high. Stocks of textiles are normal, and competition is keen. The building trade continues very active. Railway prospects are favourable. The petroleum industry is making better progress. Money is in good demand, but quotations of bonds remain high.”

CHILE AND MEXICO.

The export trade of Chile is also on an expanding scale, especially as regards nitrate of soda, copper, iron ore, cereals, and wool, and this, combined with the greater confidence inspired by the new Government, and the prospect of an improved national financial position, has doubtless been responsible for the recent rise in the exchange value of the peso. In Mexico, the existing Government proved more successful than the majority of its predecessors in being able to suppress a serious and widespread rebellion, while our advices from Peru indicate that the commercial and economic position there is sound, by reason of the increasing magnitude of her exports of cotton, sugar, and petroleum. In Spain the question of taxation has been satisfactorily settled during the past year, and you will be pleased to know that it is now based on reciprocal

terms, whereby as England permits foreign banks to establish themselves in this country under the same conditions as English concerns, we are allowed to operate in Spain under practically the same terms as Spanish institutions.

HOME AFFAIRS.

After thus very briefly summarising the prospects in the countries abroad in which the bank chiefly operates, I will now turn to home affairs, and would first of all express my gratification, which I am sure is shared by the whole business community, at the abolition of the corporation profits tax in the last Budget. With regard to the national finances of Great Britain, the first six months of the fiscal year ended on September 30th last, and in that period the expenditure amounted to £360,000,000 and the revenue to £348,500,000, there being thus a deficit of some £12,000,000 sterling, which compares with a small surplus in the corresponding period of the preceding year of nearly £3,000,000. In this connection, however, it will be recalled that the 1923 Budget resulted in the somewhat extravagant surplus of about £50,000,000, and, in view of the fact that the major portion of the revenue is usually collected in the period October-March, the present position may be regarded as satisfactory, and as merely reflecting the reductions in taxation provided for in the present Budget. The total of the floating debt outstanding on September 30th was £774,176,500, this being £20,000,000 lower than the figure of a year previously. The reduction since March 31st last, however, amounts to only £299,000, and this slowing up in deflation has doubtless assisted in preventing sharp fluctuations in the general index number of wholesale commodity prices.

THE GENERAL ELECTION.

It is unfortunate that, at a time when more normal conditions are being restored in many directions, the business of the country should be disturbed by another General Election, and the hope may be expressed that, whatever Government may take office as a result of the present appeal to the electorate, it will do so under circumstances giving promise of some degree of stability. A development of considerable importance from a business point of view which has occurred under the recent Labour régime has been the inauguration of official committees, one of which was appointed to inquire into all questions relative to the National Debt, and the other to report upon conditions and prospects of British industry and commerce. The information collected by these committees will no doubt be of lasting benefit to whomsoever may be called upon in the future to control the national policy of this country. In addition, a measure was adopted by the Government in April last to fund a part of the very large total of internal debt left as a legacy of the war, an offer being then made to holders of 5 per cent. War Loan to convert their holdings into a longer-dated security, and, as a result, fully £150,000,000 of War stock was exchanged into a 4½ per cent. conversion loan.

I do not propose to review in detail at the moment the conditions ruling in the various countries where the bank operates, as to attempt to do so would occupy a considerable period of your valuable time. Moreover, the particulars which I should have to give you are perhaps somewhat difficult in parts to follow when merely heard, and we are therefore following the course adopted in past years of sending you shortly a special booklet containing my complete address, to be read at your leisure.

THE YEAR'S PROFIT.

You will see from our statement of accounts that our net profit is about £426,000, as compared with £436,000 last year. The reasons which I gave for the very heavy falling off in the previous year again apply to the period now under consideration, for, as I have already mentioned, the principal currencies depreciated considerably between the dates of June 30, 1923, and 1924. Had it not been for the loss incurred by reason of the remittance of our earnings from places abroad at these lower levels, our profits for the year would have been somewhat higher than on the previous occasion.

The figures in our balance-sheet are affected on this occasion by the exclusion of those of the offices in Paris and New York, formerly included therein, and I have to explain that, for certain valid reasons, we found it desirable to establish, at the beginning of this year, a separate institution in the former place (I referred last year to the arrangements we had made in New York) under the name of the Banque Anglo-Sud Américaine, Société Anonyme, for the purpose of carrying on our business. This change will enable us to conduct operations in Paris on a wider basis and at a decreased cost, and we already feel the beneficial effect thereof.

In comparing our figures with those of the previous year, I must therefore ask you to bear this fact in mind, and, indeed, were the figures made up on the previous basis, the total of our balance-sheet liabilities and assets would show an increase of more than £3,000,000, instead of, as in the published accounts, a diminution of £3,000,000. The transactions also affect very considerably the item of holdings in foreign and auxiliary banks, which has gone up by £600,000. This is not actually an increase, but represents

the amount of our investment in these two companies, i.e., the Banque Anglo-Sud Américaine, Société Anonyme, Paris, and the Anglo-South American Trust Company, of New York, which formerly was the capital of our own offices, and therefore did not appear in the balance-sheet as a separate item. I may add that we hold the whole of the capital in the Paris concern (as in New York), with the exception of the qualifying shares necessary for directors.

BALANCE-SHEET FIGURES.

The figures in the balance-sheet do not show any other very important variation, but I am pleased to note that the acceptances on account of customers have increased from £3,000,000 to £4,800,000. This is an item to which we attach very much importance, because it represents the financing of shipments of produce and other commodities, a department of our business which is not only valuable in itself, but shows the trend of international business. Our cash with bankers and with auxiliary banks is £11,000,000, whilst we hold in British Government securities £10,500,000, and these two items together represent 46 per cent. of our total liabilities to the public. The gross profits have decreased from £1,800,000 to £1,600,000, this being very largely due to the depreciation of exchanges, to which I have already alluded, and the same cause results in the charges having shrunk by about £100,000, while income-tax and rebate are lower than formerly, with the result that our net profits are £10,000 less than they were a year ago. We propose to utilise them in the distribution of a dividend of 5s per share, less income-tax, making a total of 10 per cent. for the year; adding £25,000 to the staff pension fund, applying £50,000 to bank premises account, and carrying forward the balance of £350,100.

AFFILIATED INSTITUTIONS.

I have dealt with our auxiliary institutions in Paris and New York, and I should now like to refer briefly to the position of the other banks in which we have a capital participation. Generally speaking, these have made favourable progress, despite the various adverse factors in trading conditions.

Our affiliated institution, the British Bank of South America, Limited, maintained at 10 per cent. the dividend for the last financial year ended December 31, 1923. In some countries where the Commercial Bank of Spanish America, Limited, operates, the liquidation of indebtedness on the part of clients has not been so rapid as might have been expected, and the board of that institution is recommending that the working profit—a little less than that of last year—be carried to contingency account.

The results of the Banco de A. Edwards y Cia. have again been of a satisfactory nature, and the dividend for the year ended June last was maintained at 16 per cent., while further substantial allocations were made to its reserve funds. The net profit of the Banque Générale Belge for 1923 was higher than that of the preceding year, and this institution has declared a dividend of 12 per cent., as against 10 per cent. for 1922.

As you will doubtless have seen from Press reports in May last, an arrangement has been arrived at, satisfactory to all parties, whereby this bank and five others, representing the majority of holders of the “B” shares of the British Overseas Bank, Limited, have disposed of their holdings. Our interest in the concern has therefore terminated.

SEVERE COMPETITION.

The competition in banking, which one had hoped would, as a result of the events of the last ten years, have been less severe, has, unfortunately, after an interval during which more reasonable margins were obtainable, become so severe that it may safely be said that we have to work in some directions on a lower margin than ever, and, with the inability to reduce working charges to a pre-war basis—in view of the much higher cost of living which still prevails—we are hard put to it to reduce our ratio of expenses to profits to that which formerly obtained, and this condition, I find on looking at the balance-sheets of many of our neighbours, is also applicable to their case. We have therefore given very serious attention to the adoption of means which will accomplish something more in this direction, and, in view of the fact that our affiliated institution, the British Bank of South America, Limited, and ourselves both had branches in certain places, we have made arrangements with them to combine the offices in Rosario, Montevideo, and Manchester, with the result that, at all events, the bulk of the combined businesses at each of these places should be retained at a considerable reduction in working costs, and I hope that we shall find evidence of this when I meet you a year hence.

The depreciation in our capital at the date of the balance-sheet now before you was £332,964, as compared with £326,405 in the previous year, but the improvement in the values of the Chilean and Argentine pesos during the last three months enables me to tell you that, valued at to-day's prices, the capital abroad has recovered almost the whole of the difference between these two figures.

I now have the pleasure to move the following resolution:—

"That the report and balance-sheet as distributed be adopted, and that a final dividend of 5s per share, less income-tax, be and is hereby declared payable on 27th inst."

Sir Robert Harvey, vice-chairman: I have great pleasure in seconding the chairman's proposition.

The Chairman: Has any shareholder any observations to make or any questions to ask?

There being no response, the Chairman then submitted the resolution, which was unanimously carried.

RE-ELECTION OF DIRECTORS.

The Chairman: I have much pleasure in moving "That Mr Andrew Geddes, the retiring director, in accordance with the articles of association, be and he is hereby re-elected." I cannot make this proposition in the usual formal way without saying to you that as an old colleague, as an official of the bank, and, later on, a colleague on the board, I have so great a respect for Mr Geddes that I esteem it a great privilege to move this resolution.

Mr H. W. Patrick seconded the resolution, and it was unanimously carried.

Sir Clarendon G. Hyde: Ladies and gentlemen, it is with great pleasure that I rise to move the re-election of our chairman. Mr Hose combines in himself those rare qualities of shrewdness, caution, and courage which, coupled with knowledge and experience, are necessary for the conduct of a successful bank. I have much pleasure in moving "That Mr Robert John Hose, retiring director, in accordance with the articles of association, be and he is hereby re-elected."

The resolution was seconded by Mr A. G. Gumpert, and carried with acclamation.

The Chairman: I thank you on my own behalf—and, perhaps, my friend Mr Geddes will allow me to thank you on his behalf—for this vote of your confidence.

Mr J. B. Waters: I beg to move "That Messrs Price, Waterhouse, and Co. be, and they are hereby, reappointed auditors for the year ending June 30, 1925, at a fee of £750."

Mr W. A. Wilson seconded the resolution, which was unanimously agreed to.

TRIBUTE TO THE STAFF.

Baron Emile Beaumont d'Erlanger: Ladies and gentlemen,—It is now my privilege, and a privilege which I highly appreciate, to propose a vote of thanks to the staff of the bank in London and abroad. Connected as I have been for a great many years with

this bank, I know full well that it is to the staff that you are mostly indebted for the great progress in its prosperity. It is an arduous task for the managers of this bank to have to choose the staff, for they are disseminated all over the world and in distant parts, and we have to put our confidence and trust in men who are separated from us by so many thousands of miles. Therefore, they have to take great responsibility, and have to exercise the greatest prudence in the management of the branches which are entrusted to them.

How successful the management has been over a long number of years in selecting its staff I leave to your own appreciation, and I can only say that the confidence we have placed in these men and the confidence you have placed in them is revealed by the fact that you have paid to them to-day the greatest compliment you could have shown them by not asking a single question at this meeting, and I hope you will associate yourselves with us in this hearty vote of thanks to the whole of the staff in London and abroad.

Mr J. A. Goudge: I beg to second that resolution. The resolution was carried unanimously.

MR CREED'S RESPONSE.

Mr E. W. Creed (manager of the Antofagasta branch): Ladies and gentlemen,—Being on leave after many years' absence from this country, it is a great honour and privilege to me to be able to respond to the vote of thanks so well proposed and so gracefully received. Your kindly acknowledgment of the efforts of the staff on such occasions as these is, I assure you, very keenly appreciated by the whole of the staff, and also it is evident that you understand our difficulties, especially of those who are working abroad far away from the head office. This appreciation of our work at the present time is particularly gratifying when the outcome of our labours has not perhaps been quite so satisfactory as on previous occasions.

My own experience of the staff is that they have always taken a great pride in the progress of the bank, and in carrying out the policy laid down by our chairman and his colleagues—a policy, we all realise, which has resulted in the continued expansion of our business and in the creation of our present organisation. This organisation, I hope, will enable us, when that great increase of business which we all expect takes place, to compete successfully and obtain our fair share of such business. It is also a pleasure to me to testify, apart from the natural loyalty that the staff has to the bank, to a feeling of real co-operation that exists between the administration in London, the staff at head office, and the staff at the branches. Your expression of appreciation of their work

will, I am sure, be an encouragement and stimulus to them in the future. Ladies and gentlemen, I thank you very much.

THANKS TO DIRECTORS AND MANAGEMENT.

Mr A. J. Widderson: Ladies and gentlemen,—It is with much pleasure that I rise to propose a hearty vote of thanks to our directors and the management for the services they have rendered to us during the past year. A period of anxiety and difficulty in trade which has now lasted for many years, and the disproportion between earning power and the present ratio of expenses, to which the chairman has alluded, make it the more agreeable to contemplate a balance-sheet which allows of a payment of a dividend of 10 per cent. per annum and to the appropriation of £50,000 to the writing down of premises. There seems to be every prospect of a moderate and gradual revival in trade which may bring us into position to earn profits even on a higher basis, and I am sure we may rely as hitherto on those at the helm, acting with prudence, and at the same time with courage, to avail themselves to the utmost of the opportunities that are presented. I have much pleasure in proposing a hearty vote of thanks to the directors and management for the services they have rendered, and I think special thanks are due to our chairman for having so ably presided over to-day's proceedings.

Mr M. E. Duffett: As an old shareholder, I have very much pleasure in seconding the vote of thanks proposed to our directors and management, and particularly to our chairman. We have been passing through a very serious time in commerce during the last 12 months, but our directors and the chairman have successfully piloted us through it, and we are now advancing, as many of us think, into a new era, an era of constitutional government and a stable Government, and if we are correct in this anticipation, I do not think we need hesitate to look forward to a continuance of the prosperity of the Anglo-South American Bank.

The resolution was carried unanimously.

The Chairman: Ladies and gentlemen,—It is very encouraging to receive every year the approbation of the shareholders for the services we are able to render. I thank Mr Widderson for his special reference to myself. I can assure you that without the aid of all my colleagues I should not be able to accomplish so much. On their behalf, on my own, and on behalf of the managers also, I thank you very much.

The proceedings then terminated.

THE UNITED STEEL COMPANIES, LIMITED.

RESULTS OF A DIFFICULT YEAR'S TRADE.

POSITION AND PROSPECTS OF THE INDUSTRY.

HIGH COSTS AND FOREIGN COMPETITION.

The seventh ordinary general meeting of the shareholders of United Steel Companies, Limited, was held, on the 20th instant, at the Royal Victoria Hotel, Sheffield.

Mr A. O. Peech (the chairman), who presided, said: Ladies and gentlemen,—As the directors' report and the balance-sheet have been in your hands for some time, I assume that it will be your pleasure to take them as read.

You will have seen from the report that, taking all the circumstances of the year into account, the directors are not dissatisfied with the results, and, in truth, to have obtained a total net profit, solely from trading, of £670,083 in face of the conditions of the past year is no mean achievement.

CHANGES IN THE BALANCE-SHEET.

Before dealing at length with trade conditions generally, I propose to comment on the changes which have taken place in the balance-sheet during the year. Taking the liabilities first, the share capital is, of course, unaltered. Debenture capital and mortgages and secured loans together show a reduction of £40,484, accounted for by repayments of "A" debentures and reductions of mortgages by this amount. The sinking funds held against "B" and "C" debentures have been increased by the usual instalments, and by accrued interest, together amounting to £35,678, the effect of which is therefore, that the debentures, mortgages, and secured loans have together been reduced by £76,162 during the year. Since the inception of the company the total debenture indebtedness has been reduced by over £280,000. Creditors and credit balances and advances by associated companies I shall deal with when I come to the corresponding figures of the assets. Reserves for capital purposes show a slight reduction of £8,505, due to the application of some small amounts for specific purposes during the year. The profit and loss account has been dealt with in the directors' report, and I need only repeat that, after making the usual provisions and reserves, the surplus at June 30, 1924, amounted to £903,081 16s 4d. I shall refer later to this item.

ASSETS.

Turning now to the assets, land and minerals, plant, &c., shown at £4,190,294, is £15,549 less than last year, this being the net

amount of depreciation and sales, less additions during the year. Wagons: We have increased our wagon stock during the year by the addition of 1,000 new wagons for use at the collieries. Owing to increased output, these further wagons were very necessary, and they were financed on the usual terms applicable to such transactions.

With regard to investments, which consist of shares in associated companies taken at cost, you will notice some alteration from the 1923 figure. It has been thought advisable, in order to consolidate holdings, to transfer to Frodingham the one-half share of the Appleby capital previously included in this item. The other half-share was already held by Frodingham, and as the physical operation of the two works is so interlocked, it is, in the opinion of the board, better that they should be under one control. In connection with developments at our Cumberland works, we found it advisable to form a new subsidiary company, called United Coke and Chemicals Company, Limited, and a sum of £75,000 invested in it is included in the figure now appearing at June 30, 1924.

With regard to advances between the parent company and its subsidiary companies, advances to these companies have decreased by £148,000, while advances by them have decreased by £370,000. These figures, of course, represent the net effect of the transactions of the year, and are largely the result of repayments made by the parent company.

The items of stocks, debtors, and debit balances, cash, and creditors and credit balances, which are all of a fluctuating character, if grouped together, show an increase in these net assets during the year of £374,562. The last item amongst the assets, representing the investment of sinking funds, shows an increase of about £36,000. I think that I have now dealt with such individual items as call for comment in the balance-sheet.

CUMBERLAND AREA.

It has been my practice at these meetings to mention briefly the position at the various works of the combine. In the Cumberland area we cannot say that the trading position has shown any very notable improvement. As you probably know, we depend largely at those works upon foreign orders, chiefly for rails, railway sleepers, &c., and Continental competition has been very strong during the whole year, and business obtainable has been very small. Fortunately there has been a good outlet for iron, permitting us to operate a substantial portion of the blast-furnace plant, the collieries, and coke ovens fully, and the iron ore mines to a substantial extent. In this connection you will be glad to know that our optimistic anticipations with regard to our Beckermat ore mine have been more than realised, for since I spoke to you last year further developments have proved ore to be even more abundant than we expected.

With regard to the Workington dock extensions, I am pleased to say that work has proceeded fairly steadily throughout the year, and the contractors have informed the Dock Board that they expect to complete the dock by May, 1925. As you know, it is anticipated that this will effect considerable economies, both with regard to the import of raw materials and the export of finished products.

In the Lincolnshire area, our Frodingham works have been fully employed during the year with good results. Happily, we have there very excellent facilities for manufacture and ample supplies of raw material under exceptional conditions as to cost of production. These factors have been very helpful during the past year, and, of course, will continue to be so in the future.

APPLEBY AND SHEFFIELD WORKS.

Our Appleby Works are very much in the same position as they were last year, and the extension work on the new steel plant is still at a standstill. The production of iron at the furnaces has been substantial during the year, and the company have also had a considerable output of tarred slag for road-making.

At our Sheffield works, comprising the Steel, Peech, and Tozer works, at Ickles and Templeborough, and the works of Samuel Fox and Co., Limited, at Stocksbridge, the position is probably fairly well known to most of you present here to-day. The year started well, with a moderate amount of business on hand in the heavy trades, and this continued on a moderate level until about March, 1924, when the outlook changed considerably for the worse. During the following three months orders were scarce, and prices were seriously affected by the increase in Continental competition.

It is satisfactory to note, however, that, taking the year as a whole, there has been a distinct improvement in the volume of business done in the higher quality steels for which the Sheffield works are famous, and this leads to the hope that this class of trade will again absorb the major portion of the output of these works.

STRIKES AND UNEMPLOYMENT BENEFIT.

As you have seen from the directors' report, and as is common knowledge locally, the entire works at Ickles, Templeborough, and

The Anglo-South American Bank Limited.

Head Office: 62, Old Broad Street, London, E.C.2.

Authorised Capital	-	£10,000,000	Issued Capital	-	£8,734,660
Reserve Fund	-	£4,000,000	Paid-Up Capital	-	£4,367,330

Northern District Office	-	-	-	69, Market Street, Bradford.
Lancashire Branch	-	-	-	19, Spring Gardens, Manchester.

The Bank, in addition to 6 Branches in SPAIN, has, with its
AFFILIATED INSTITUTIONS,

**THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,**
54 Offices in the principal countries of
LATIN AMERICA.

AUXILIARIES:

ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York), and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

Stocksbridge were shut down from the middle of August until the middle of this month. Despite every possible effort on our part to avoid a stoppage of the works, a strike occurred. A small minority of our men, mostly engaged on maintenance work, ceased work, regardless of the fact that the vast majority had, by negotiation through their responsible leaders, amicably reached a national settlement.

Allegations were made that we had broken agreements. That these allegations were entirely unjustified was amply and fully proved by the decision of the umpire, given in detail on September 27th, on the claims before him for unemployment benefit for the strikers under section 4 of the new Unemployment Insurance Act.

It would appear that the immediate effect of this recent legislation will be not only to prolong strikes, but it will also tend to delay the possible settlement of industrial disputes. Where stoppages, such as this, are begun without due regard to the actual facts and circumstances, they are bound in the present conditions of trade to cripple British industry still further, and to make matters more difficult for everybody—both employers and employees.

NEW SIDINGS.

During the past year new sidings have been in course of construction connecting the Templeborough and Ickles Works of Steel, Peech, and Tozer, Limited (and also the works of the United Strip and Bar Mills, Limited), with the London, Midland and Scottish Railway, which sidings were opened for traffic on August 1st last. Up to this time these works were connected by railway only with the London and North-Eastern Railway, and the amount of traffic required to be dealt with has in recent years been so huge that it has not been possible for the London and North-Eastern Railway adequately to cope with it. These works are already feeling the benefit of having the direct access to the London, Midland and Scottish Railway provided by this siding, and it is confidently anticipated that great advantages will be obtained in the future. Not only will the distance to be covered by both inwards and outwards traffic be shortened in many cases and cost and delay eliminated, but difficulties arising from shortage of wagons should be largely removed, and the receipt and dispatch of wagons much facilitated.

REINSTATEMENT OF STOCKSBRIDGE WORKS.

You will remember that last year I informed you of the disastrous fire which had destroyed some portion of our Stocksbridge works. I am glad to say that during the past year these works have been completely reinstated, and, in common with the other light steel departments, have been fairly fully occupied during the year.

Our Yorkshire collieries and coking and by-product plants have maintained very good outputs during the 12 months, with good results to the trading profit of the combine.

The Thomas Butlin and Co. branch, situated near Wellingborough, has been engaged largely in the production of tube railway linings and general foundry work, in respect of which their geographical position is favourable.

Having regard to the fact that the whole of the works of the constituent companies have been fully maintained during the year, your directors are again of the opinion, as they stated last year, that the question of depreciation may quite prudently be left until the profits are better able to bear the burden. For this reason no depreciation other than that shown in the balance-sheet has been written off in this year's accounts.

UNITED STRIP AND BAR MILLS.

While on the subject of our works and subsidiary companies I ought to mention United Strip and Bar Mills, Limited. As you know, the extensive plant of this company started operations about two years ago. It is a plant of the most modern type for the production of steel strip and steel bars on the American principle of continuous running and mass production. In depressed times like these it has been most difficult to find sufficient trade for a plant of such capacity, and it must be remembered that this plant to a large extent was laid down with a view to supplying foreign markets.

In view of the effectiveness of competition from Europe in these markets during the last year, the output of United Strip and Bar Mills has found itself limited in the main to home supplies, and it has not been possible to operate either of the two mills at more than about one-third of their capacity, and the profit made from this limited operation cannot be taken as any indication of the results which will be obtained when the company is able to find a footing in world markets generally, and to operate the plant fully. Of course, it is understood that whatever the output of these mills be, they are a substantial customer to other subsidiary companies in respect of material.

PREFERENCE DIVIDEND GUARANTEE.

As you are aware, we have guaranteed the dividend on the preference capital of this company, and again during the past year

have fulfilled our guarantee by making payment of the net amount of the dividend. You will observe a note in our balance-sheet under "Debtors and debit balances," showing that the net amount paid in this respect since the commencement of the subsidiary company is £192,035 19s 10d. This amount is recoverable by our company out of future profits of the Strip and Bar Mills Company, and is being carried in our balance-sheet as a good debt because of our belief that the mills can make the necessary profit to repay this amount and to carry their own burden of capital, given an opportunity to operate within fair limits of their output capacity. At the same time, your directors may deem it prudent at some future date to write off this amount out of the surplus carried forward in our accounts, especially as your company owns all the ordinary capital of United Strip and Bar Mills, Limited, and such action would make no actual difference to the profits receivable.

GENERAL TRADING CONDITIONS.

Now, with regard to general trading conditions. I am not overstating the position—you all know, everybody knows—that the steel trade has suffered, and is still passing through, the worst time ever experienced in its history. A combine such as ours, doing a trade which is largely dependent on exports, is bound to feel the result of unsettled world conditions, such as we have, very much more than companies which rely largely upon home markets to absorb their output, and this is so particularly having regard to the handicap of high costs, which, unfortunately, runs through all British iron and steel production, the overwhelming burden of taxation, and the fierce competition to which our trade is subjected by foreign producers, who are unhampered by such burdens, and whose costs of production are, therefore, much lower than the cost of production in this country.

The position is constantly changing, but, looking at matters in a general way, the fact remains that over the last four years there has been a gradual, I might even say a substantial, improvement in our business, and I think that on these lines we are justified in looking forward with some confidence to the future. At any rate, there is no necessity to be unduly pessimistic.

BOARD'S SOUND POLICY.

Reverting now to the question of the surplus appearing on our profit and loss account, £903,081, the directors are well aware that the preference shareholders in particular must have felt keen disappointment on being informed in the report that, in view of the conditions obtaining, the board were reluctantly compelled again to recommend that the resources of the company should not be depleted by the distribution of any dividends. I have elaborated on these conditions in order to explain fully to you the reasons for adopting the prudent policy of conserving to the utmost the resources of the company.

I need hardly tell you that in view of the conditions to which I have just referred, although all the properties of the company have been adequately maintained out of revenue, many projects of development and expansion have been deferred during the past two years, and new capital expenditure at all our plants has been restricted solely to such schemes as promise an almost immediate return of the capital required for them.

THE FUTURE.

As to the future, I think I reflect the feeling of your directors in saying this—that we have within the combine the most exceptionally good natural resources, coupled with the most modern plant, and all in a condition of readiness to take advantage of whatever improvement in effective demand may show itself. We believe that conditions are on the upward trend, and that every day is helping towards general stability. The unsatisfied requirement in regard to steel all over the world is enormous. That this unsatisfied demand will become before long an insistent effective demand, backed by adequate purchasing power, we firmly believe, and although one may not prophesy with safety, we feel that the improvement is not so far off as we may be apt to think during a time of depression; and our shareholders may rest assured that when the improvement does come we will be in a position to meet it with the most adequate resources in raw materials and modern plant, and with an organisation fitted to make the best use of them.

I now beg formally to move, "That the directors' report and the balance-sheet, as at June 30, 1924, be adopted," and I shall call upon Mr Guedalla to second this motion.

MR GUEDALLA ON GERMAN COMPETITION.

Mr Herbert Guedalla, in seconding the motion, said that trade in this country was not a mere money or profit-making proposition. It was our exports which paid for our food; and coal, iron, and steel in the past had contributed in no small measure to that task. He must confess to a deep feeling of alarm at the latest incursion into political finance. We had participated in a large loan to Germany, and he doubted much whether the full aspect of the transaction commercially, so far as this country was concerned, had been properly diagnosed. All that Germany wanted was

credit. In many directions she was our keenest and strongest trade competitor, especially in iron and steel. Her factories were only working now to 50 per cent. of their capacity. On a comparative basis her cost of living was, and probably would continue to remain, about 25 per cent. less than obtained in this country. Her taxation burden would be less than ours, her labour was more amenable, and thus she was in the finest position for starting on the plan which they knew she had made of an intensive campaign to capture the markets of the world. "But our ship will weather this storm, I have no doubt," he said, "because I have the greatest confidence in our captain and his men, who are so loyal to their trust."

Mr Bradbury, a shareholder, urged the desirability of paying a dividend on the preference shares, and proposed an amendment that this course should be pursued. Another shareholder seconded.

The Chairman intimated that the amendment was out of order. All the proposer and seconder could do would be to vote against the resolution.

Sir Fredk. Jones urged the desirability of supporting the directors. The only effect of any such amendment as that suggested would be to depreciate the market value of the shares. The balance-sheet before the meeting was the best ever published by the company. He wished the shareholders to realise that, get it into their minds and see how it was going to influence the future of the company. He believed their works were superior to anything else there was in the country, and the only thing that was wanted was trade. If some of the shareholders could wave a magic wand and give the company trade they could have not only a dividend on the preference, but on the ordinary as well.

The resolution was carried.

The retiring directors, Sir Fredk. J. Jones, Bart., and Mr H. Barber, were re-elected, and Mr A. Blackmore was re-elected routine director.

The auditors, Messrs W. B. Peat and Co., were re-elected.

Mr Edwin Cottam, in proposing a vote of thanks to the chairman, directors and staff, said there was no chairman of any company who devoted more time to the business of the company with which he was concerned. He was a practical man. All the directors and staff had got their backs into their jobs, and were doing the best for the shareholders.

Mr Matthew Allott seconded.

The resolution having been carried with acclamation,

The Chairman expressed thanks for the vote and appreciation of the fact that their critic at the meeting had endeavoured to second the vote of thanks. He could tell the shareholders that the board had worked very hard during the year.

This concluded the business of the meeting.

CENTRAL ARGENTINE RAILWAY, LIMITED.

PROMISING OUTLOOK IN ARGENTINA.

The ordinary general meeting of proprietors of the Central Argentine Railway, Limited, was held on the 20th instant, at River Plate House, London, Sir Joseph White Todd, Bart. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the loss on the remittances amounted to £817,600, as compared with £309,000 last year. This was admittedly a heavy loss, but it was one that was quite beyond their control. Apart from remittances made by the Argentine Government for the service of its foreign debt, the price at which Argentine produce was selling to-day was somewhere in the neighbourhood of that which obtained in 1914 before the war, while the imported goods with which those exports were liquidated must still be about double the price at which they stood in pre-war days. This, in itself, must constitute a disturbing element, but it demonstrated that a return to normality in Argentina largely rested on a similar change in Europe. So long, however, as high wages, short hours, and, what was far worse, inefficient or indifferent work and doles undermined the productivity of labour and enhanced prices in manufacture, so long must exchange reflect that situation. Still, the tendency should be to improvement, always assuming that nothing happened to disturb either Argentine crops or the world's finances. To-day, however, exchange was better than it was twelve months ago. The Chairman then dealt in detail with the figures in the balance-sheet, and remarked that various important improvements of the railway had been made during the past year. Referring to his visit to Argentina, he said that he found that the President and his Ministers were fully alive to the many problems which confronted their country, and they were receiving their most serious and constant attention. Industry was growing in Argentina, and as to the land, which was the destination of all newcomers, only a small fraction of that immense territory had yet been touched. Argentina's possibilities in this respect were almost limitless.

The Argentine was a great nation and bids fair to become one of the leading ones, and with its natural gifts nothing could stop its progress and prosperity. It might have temporary setbacks—

what nation had not?—but he was more than ever convinced that its future was almost boundless. Colonists were settling along the line, and homesteads were everywhere springing up. The outlook in general could not be more promising. As to the railway itself its potentialities were immense. The latest advices from their local committee were that, although gross receipts to date were £270,000 ahead of those of last year, further increases might be expected. The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

ELECTRIFIED SERVICE—INCREASED PASSENGER TRAFFIC.

The thirty-fifth ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 21st instant, at River Plate House, London.

Sir Henry Bell, Bt., chairman of the company, presided, and in moving the adoption of the report and accounts, referring to the results of the year's operations, said he wished to call attention to the paragraph in the report dealing with their reduced interim dividend of 2 per cent. With traffics as they were to the end of December, and exchange as it then was, the directors felt that they were not justified in paying more. At the last meeting he told them that the maize crop in the Pampa districts had been practically ruined by drought. The loss of their long-haul Pampa maize handicapped them most severely at the commencement of their financial year, but subsequently the favourable wheat, linseed, and oat crops, and the increasing receipts from passenger and live-stock traffic so improved the situation that at the close of the year they were in a position not only to charge the exchange loss on remittances against net revenue, but also to recommend a final dividend of 4 per cent. and to carry forward £66,000.

The recent offer of £1,000,000 5 per cent. ten-year bearer notes at 95½ per cent. was heavily over-applied for. Within the next year their 5 per cent. terminable (1925) debenture stock and bearer debentures and the 5 per cent. Provincial Government Bonds (1888) would mature, amounting together to £1,987,750. Those securities fell due for repayment in June and July next, and they would have to make arrangements for dealing with them at the appointed date. It was not a question of increasing their capital; it amounted to a replacement of one obligation by another, and could not be regarded in any way as new money.

An outstanding feature of the year's working was the electrified service, which was open to the public in May, 1923. During the past year they had carried 13,887,000 passengers. Those were remarkable figures, and when he mentioned that in March last they had carried 1,304,000 passengers, shareholders would have some idea of the problems which had to be faced.

As to the future, they could not remain stationary; the country was developing, and they could not avoid their obligations to assist in its expansion, nor did they wish to do so. Their considered view was that at the present time they should endeavour to open up to agriculture those areas remote from existing lines where the soil was suitable to grain.

According to their latest advices, their receipts in the current year showed a gross increase of £323,000.

The resolution was unanimously adopted.

CENTRAL URUGUAY RAILWAY OF MONTE VIDEO, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The ordinary general meeting of the Central Uruguay Railway Company of Monte Video, Limited, was held, on the 21st inst., at River Plate House, Finsbury circus, London, Mr Frank Henderson, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and the statement of accounts, said that the gross receipts of the main line were £92,000, or 6.71 per cent. in excess of those for the previous year. There was an increase of £73,000, or 8.46 per cent., in the working expenses, which left a net profit of over £18,000, or 3.69 per cent. more than last year, the ratio of expenses to receipts having been 64.39 per cent., or 1 per cent. higher, which, he thought, they might consider satisfactory, having regard to the fact that a very large proportion of the increase in the tonnage of goods carried was in low-rated traffic. The two outstanding features were the substantial increases in both goods and livestock traffic, which, he thought, clearly indicated the improvement that had taken place in the whole trade and economic condition of the Republic. Unfortunately, owing to the depreciation of the dollar, they again incurred a very substantial loss in remitting their funds to London.

A cheerful aspect at the moment regarding this all-important factor in the accounts was the steady improvement that had taken place in the value of the dollar. There would, no doubt, be fluctuations, but all the same they had started the year well, and, with the balance of trade in favour of Uruguay, a similar condition of prosperity in the Argentine (and, perhaps, in a minor degree,

in Brazil also), there would seem to be a reasonable prospect of the dollar maintaining an improved value as compared with last year, and if this were fulfilled it would have a beneficial effect on the company's financial position. A few days after the last meeting he sailed for the River Plate to study with the management a programme of renewals and improvements to cover the next few years. The renewal fund stood to-day with a credit of £643,000, and the time had now come to spend a portion of that money.

After providing for the loss on exchange and all other charges, the balance remaining on net revenue account amounted to £147,314, out of which the board proposed to place £20,000 to the general reserve fund, and to pay balance dividends of 2½ per cent. (making with the interim dividend 5½ per cent.) on the preference shares for the year, and 3 per cent. (making with the interim dividend 5 per cent.) on the ordinary stock, both less income-tax, carrying forward a balance of £45,314, which, he hoped, the proprietors would consider satisfactory.

Mr Henry C. Allen seconded the resolution, which was unanimously adopted.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED.

RECORD OF PROGRESS.

The thirty-fifth ordinary general meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held, on the 24th instant, at Winchester House, Old Broad street, London, the Viscount St Davids, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: As it is the last time probably that I shall address the Bahia Blanca shareholders, I hope you will allow me to give a short *résumé* of what has happened since I first became your chairman in January, 1900. At that time the length of the line was 234 miles, and the price of the stock, which was preference stock, was 40. We had to do something, and eventually in July, 1904, we leased the line to the Pacific with the guarantee of dividends which were to begin at 3 per cent., and gradually rise to 4½ per cent, and, as from the year 1917, the dividends have been 4½ per cent., and have always been regularly paid. When we leased the line we built up a big line to connect the old Bahia Blanca with the Pacific, and we built branches so that now the length of the line has increased from 234 miles to 764 miles. To-day at Galvan there is a first-class port, solidly built of concrete with a capacity for 13 ocean-going vessels besides coasting craft. We have got all the berths electrically equipped, and we can load 1,000 tons of grain per day in each vessel. We have four electrically worked elevators, each of which can ship 5,000 tons per day. We have electric cranes and storage capacity for 65,000 tons of grain. When I became connected with this line the goods traffic which we handled in the year was 30,000 tons; last year it was 1,700,000 tons. Then we carried in the year 16,500 passengers; last year we carried 740,000 passengers. Our capital in 1900 was £1,800,000; now it is £10,050,000.

As to the future, we are transferring the lease to the Buenos Ayres Great Southern. I need not tell you that their guarantee of your interest is a perfectly safe one. The stocks stand to-day at 83, and there is no doubt that gradually as capital accumulates again in the country, and money becomes cheaper, and the rate of interest becomes lower, a stock with 4½ per cent. guaranteed by the Buenos Ayres Great Southern will some day or other come to par or over. Therefore, I think I may fairly claim that as the result of 24 years of work, I have given the shareholders a very substantial record of achievement and success, and I think I am leaving you in a first-class position. I think, also, that we are all entitled to congratulate ourselves.

The report and accounts were unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held on the 22nd instant, at River Plate House, London, the Chairman (Mr H. C. Allen) presiding.

The Chairman, in moving the adoption of the report, said that the results of the working for the past year were eminently satisfactory, the gross receipts, for the first time in the history of the company, considerably exceeding £10,000,000. The net receipts were £4,296,331, compared with £3,643,913. Allowing for the exchange loss on remittance each year, the balance was £3,540,598, compared with £3,242,620. These very satisfactory results were arrived at after making increased allocations to the renewal and analogous funds; the contributions from revenue under those headings aggregating £734,355 this year, compared with £569,894 for the previous period. The amount now standing to the credit of the general renewal fund exceeded £4,500,000. The other funds of a like

nature all showed increases, and the totals amounted to over £5,250,000. There was undoubtedly a tendency towards greater stability in all foreign exchanges, as—after the dislocation caused by the war and its aftermath—international finance gradually worked back towards the gold standard. This made it the less likely that in future they would find themselves the victims of disturbing fluctuations such as they had experienced in recent years. The results for the past year reflected not only on the favourable crop conditions the company has enjoyed, but also on the very great advantage not only to them, but to the country generally of a sound, stable, and yet progressive administration. The directors were of opinion that the time was now ripe for resumption of a railway expansion, and that petitions had been presented to the Argentine Government for concessions for the construction of three extensions. In the aggregate those three extensions would amount to some 350 kilometres, and the capital cost should be in the neighbourhood of £2,000,000. With regard to the prospects of the current year, he thought the proprietors might with a certain amount of confidence look forward to as good, if not better results, than those they had just been considering.

The report and accounts were unanimously adopted.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED. EFFECT OF REDUCED OIL PRICES.

The fifteenth ordinary general meeting of the Kern River Oilfields of California, Limited, was held, on the 22nd instant, at Kingsway Hall, Kingsway, London, Mr Henry H. Haldin, K.C., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net amount of oil produced showed a diminution of 17,127 barrels, which at \$1 per barrel made a difference of only £3,000, whereas the decrease in gross profit was about £41,000. It would be seen, therefore, that the profits had been reduced, not so much by loss in production as by the drop in the price of oil, for which they were in no measure responsible. However, the peak of production had been passed in California, and they expected that in the near future the price of oil must rise.

The fall on the old Kern field was hardly noticeable, a mere 9,500 barrels, which was not 2 per cent. on last year's production. Considering the many years this field had been in production, it might fairly be described as miraculous. The big fall was in the St. Helens, where the drop was from 716,949 to 556,441 barrels. On the Garnier lease two wells were drilled, both of which failed to produce, and the lease was surrendered. On the Montebello property another deep well had been drilled, which had taken more than two years' work, and they had hoped that production would be obtained there. They had acquired certain other properties on behalf of the St. Helens Company.

The difficulties of producing in California were: (1) depths to be drilled 50 per cent. deeper, (2) cost of material increased 33 per cent., (3) wages still up 50 per cent., (4) the difficulties of acquiring new land owing to the Naval Reserve Act, and (5) all prospective lands outside the Naval Reserve, but near to development, were held for fabulous sums. They could congratulate themselves on having foreseen these eventualities, which had completely justified their policy of going farther afield for production. Mr Ivey had paid a visit to California, where he effected certain valuable rearrangements with the local administration, and was largely instrumental in the acquisition of land in the Edison district of Kern County. For the second time they had brought

in a large sum in respect of the McLeod lease to the credit of the St. Helens profit and loss account, which had helped the Kern dividend and enabled them to write off a substantial sum by way of depreciation. Their patience and perseverance in Mexico had at last been rewarded, and it looked as if the west side of their property would amply repay them for the money spent. In Trinidad their revenue was equal to their expenditure, and there was scope for considerable development in the large areas they possessed in that island.

The report and accounts were unanimously adopted.

Reports and Notices.

Mr H. S. Saunders has been appointed an auditor of the General Life Assurance Company, to fill the vacancy caused by the resignation of Mr A. L. Gunn.

Mr Robert Grant, jun., a partner in the firm of Messrs Higginson and Co., merchant bankers, 80, Lombard street, E.C. 3, has been appointed a director of the Phoenix Assurance, Limited.

The resignations of the following directors were accepted at a board meeting of the Eileen Alannah Mining Company, held on October 20, viz.:—Lieut.-Col. A. Weston Jarvis, C.M.G., M.V.O., G. Seymour Fort, Esq., C.B.E., G. R. Saunders, Esq.

The Rt. Hon. Lord Meston, K.C.S.I., has been elected to the vacancy on the board of the Bengal and North-Western Railway Company, Limited, caused by the death of Sir Thomas Holderness, Bart., G.C.B., K.C.S.I.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the October instalment of the Debt service in respect of the half-year ending December 31, 1924.

CZECHOSLOVAK 8 PER CENT. STATE LOAN OF 1922.—The Customs receipts for the second quarter of the current year amounted to 211,351,841 kr, against 189,090,230 kr for the corresponding period of 1923, and the net revenue from the tobacco monopoly was 286,621,714 kr, in comparison with 288,706,323 kr, making a total received from both sources for the first half of 1924 943,591,238 kr, compared with 905,952,676 kr received for the first half of 1923.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31, 1924, compared with those from January 14 to August 31, 1923:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross receipts, August, 1924	7,993,327.95	(a) 33,396,537.00
Do do do 1923	10,681,697.90	(d) 20,290,000.00
Estimated receipts for eight months (Law of Control) 1924	19,266,666.67	7,133,333.33
months (Law of Control) 1923	18,237,351.67	6,753,223.78
Actual receipts for 1924 (eight months)	69,938,244.60	(b) 264,100,894.05
Actual receipts for 1923 (eight months)	61,716,950.70	(c) 150,885,759.20

Note. Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. Owing to the change in the Greek Calendar from Old to New Style, both the estimated and actual receipts in the above statement are for 13 days less in 1923 than in 1924. As regards receipts subject to the system of plus-values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed in order to guarantee the plus-values against eventual diminution in consumption. (a) (b) (c) (d) (e) In addition to these amounts, import duties equivalent to £13 9s 1d in the case of (a), to £6,211 5s in the base of (b), to £3,424 11s in the case of (d), and to £39,522 16s in the case of (e) were paid in gold at the Piræus Customs.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the fifth fortnightly instalment of the Debt service payable to the Council in respect of the half-year ending December 31, 1924.

RAILWAYS.

ILLINOIS CENTRAL RAILROAD.—The following is copy of telegram received by Messrs Baring Brothers and Co., Limited, from the Illinois Central Railroad Company, dated October 7, 1924:—“Directors Illinois Central to-day authorised issue, subject to approval Inter-State Commerce Commission, of additional common stock for subscription at par by common stockholders to amount of 10 per cent. of common stock, as registered at close of business October 22, 1924. Subscription warrants to be mailed shortly after October 22nd. Payment in full due December 10th. Explanatory circular will be mailed with each warrant.”

BENGAL-NAGPUR RAILWAY.—The following statements show the traffic for the year ending March 31, 1924, and also for the four preceding years:—

Year Ending		Gross Earnings.			Working Expenses.		Net Earnings.
		Total.	Averages.		Rs.	Per cent. on Gross.	
			Per Mile per Week.	Per Train Mile.			
		Rs.	Rs.	Rs.			Rs.
March 31, 1920.....		6,57,56,972	469	5.46	3,84,96,350	58.54	2,72,60,622
March 31, 1921.....		6,42,66,227	458	5.39	4,24,08,509	66.00	2,18,57,718
March 31, 1922.....		6,77,00,233	482	5.63	4,84,29,146	71.53	1,92,71,087
March 31, 1923.....		7,60,76,669	539	6.01	4,88,51,381	64.21	2,72,24,688
March 31, 1924.....		7,79,00,897	543	6.37	5,10,08,105	65.48	2,68,92,792

The ordinary stockholders receive 5 per cent. for the whole year, as against 6 per cent. for preceding year.

CORDOBA CENTRAL.—Converting Argentine currency into sterling at par, the results of working for year ended June 30, 1924, as compared with those of the previous year, were as under:—

	1922-23.	1923-24.
Gross traffic receipts	£ 3,071,699 12 8	£ 3,168,601 19 4
Working expenses	2,274,393 4 3	2,317,971 0 7

Net receipts 797,306 8 5 .. 850,630 18 9
Percentage of working expenses 74.04 % .. 73.15 %

Loss on exchange amounted to £163,522.

ARGENTINE GREAT WESTERN.—The report for year ended June 30, 1924, shows that the preferred and ordinary stocks of this railway are to receive 6 per cent., the same as for preceding year. For year 1921-22 stockholders received 5 per cent. dividend. The number of passengers carried was 3,049,871, against 3,098,747. Goods and live stock traffic was 1,820,760 tons, against 1,685,358 tons.

RUBBER.

SUMATRA PARA RUBBER PLANTATIONS.—The report of this concern just issued for year ended June 30, 1924, provides an interesting table showing crops and dividends for the past 18 years. From this compilation we gather the crop for 1906-7 was 21,900 lbs, and rose steadily year by year until 1919-20, when 1,200,454 lbs of rubber was secured. The crop for season 1923-24 was 1,000,099 lbs. Dividends have been as high as 4½ per cent. Nothing has been paid on three occasions. The dividend for 1923-24 is 6½ per cent., against 10 per cent. for preceding year. The net profit for year 1923-24 is £13,250.

MISCELLANEOUS.

CARLTON HOTEL, LIMITED.—The net profit for year ended August 31, 1924, after payment of debenture interest is £59,655, against £46,065 in preceding year. The dividend and bonus on ordinary shares is 12 per cent., against 10 per cent. for preceding year. The sum of £13,983 is carried forward, against £15,233 brought in. The sum of £20,000 has been transferred to general reserve, while £5,905 is transferred to reserve for amortisation of leases of Carlton Hotel.

RAPHAEL TUCK AND SONS.—The report for year ended April 30 1924, shows a net profit of £39,356, against £41,481 for preceding year. The dividend on the ordinary shares is 8 per cent., against 10 per cent. for preceding year. The sum of £5,000 is transferred to general reserve, and £1,869 is transferred to special dividend reserve fund. The reserve accounts now are:—Capital reserve, £8,845; special dividend reserve, £63,021; general reserve, £40,042.

ANTWERP WATER WORKS.—The working for the six months ended June 30, 1924, subject to debenture interest, British taxation, trustees' fees, sinking fund contributions, and commission, shows a

† Free of tax.

net profit of £23,018. The profit for the same period of last year was £12,042. The average daily rate of exchange over the half-year has worked out at 99.40 to the £1. During the first three months the fall in the value of the franc was exceptional, the rate at one time touching 139 to the £1. The sum of £24,426 was received from the Treasury on account of German Reparations, on May 30th, and on the following day an interim dividend of 5 per cent. was paid on account of the current year. Considering the extremely adverse exchange, the directors consider the result of the half-year's working as satisfactory, and but for the fact that an interim dividend has already been paid out of the money received for German Reparations, the board would have felt justified in declaring a small interim dividend out of the profits of the half-year, but considering the unstable condition of the franc, they think it more prudent to await the final accounts for the year.

GRAMOPHONE COMPANY, LIMITED.—The result of the trading for year ended June 30, 1924, is a credit balance of £229,646; add balance from last account, £289,738, making £519,384. From which the following must be deducted:—Debit stock interest, £15,000; debenture sinking fund instalment, £7,800; directors' remuneration and tax, £5,700; dividend on preference shares for the year ended June 30, 1924, £5,000; dividend of 15 per cent. on ordinary shares for the year ended June 30, 1923, £163,500; corporation profits tax, £6,000; leaving a balance of unappropriated profits of £316,374. The directors recommend there be paid (less income-tax) a dividend of 15 per cent. on the 750,000 fully paid ordinary shares, and on £340,000, the amount paid up on the remaining 850,000 ordinary shares.

OIL OUTPUTS.

THE CALTEX OIL COMPANY.—September production, 3,575 barrels, or 567 tons, all wells being temporarily closed part of month on account of rainy season.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 8, 1924, amounted to 878 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine open weather continued throughout the week, and good progress has been made with ploughing and sowing operations in most parts of the country. Native wheat is in moderate supply, especially suitable milling qualities which rule at 13s to 13s 4d per 112 lbs, free on rail. Business, however, made quiet progress, owing to declining prices for all imported cereals.

Values of North American wheat registered a sharp drop in view of lower forward offers, while other descriptions also tended in buyers' favour. No. 1 Northern Manitoba quoted 69s. No. 2 hard winter 61s 6d, and choice white Karachi 65s, all ex ship per 406 lbs. In the floating and forward section buyers adopted an attitude of reserve in face of lower American advices, and which was reflected in prices on this side. White sorts, however, were less depressed, and a moderate business resulted in new crop Australian, and steamers of this quality, January, sold 64s 9d, January-February 64s 3d to 64s 6d, while a part cargo of white Pacific December 64s per 480 lbs c.f. and i. Flour in generally quiet request, and prices ruled easier in sympathy with wheat. London standard straight run quoted 52s, patents 54s to 55s, town whites 52s per sack delivered in metropolitan area. Of imported, Manitoba patents range from 49s to 52s, as to quality, and Australian 47s per 280 lbs, ex store. Maize cargo market depressed in view of favourable weather conditions in Argentina combined with some pressure to realise near positions. Steamers of La Plata November-December changed hands at 47s 9d, and December-January 49s 6d to 48s 9d per 480 lbs c.f. terms. Barley weaker. Californian quoted at 69s-71s, and Chilean brewing 67s both ex ship per 448 lbs. Danubian ex ship 42s, ditto landed 43s 6d. American malting 48 lbs ex ship to arrive 42s, and Persian ex ship 41s per 400 lbs. English quoted at 13s-23s per 112 lbs free on rail. Oats dull and lower. Plate ex-ship quoted at 112 lbs free on rail. 33s, No. 2 Canadian Western ex-ship 36s, white American 38 lbs 31s 6d, landed 33s 9d per 320 lbs. English quoted at 10s-11s per 112 lbs, free on rail. Maize depressed. Plate ex-ship 45s 6d, ditto landed 47s, Bessarabian 47s 6d, and Odessa 47s, both landed per 480 lbs. Oatmeal quiet. London made flaked 21s, rolled oats 20s 6d, medium and fine cut 20s 6d, coarse and medium pinhead 20s 6d, ordinary Scottish oatmeal 20s 6d-21s per cwt. Millers' offals steady. Broad bran quoted at 10s, middlings 10s 6d, fine ditto 13s, bags included ex-mill, light oats 9s 3d, powdered oat husks 9s 3d, feed oatmeal 12s 9d, ground oats 15s 3d per cwt free on rail.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

	1924-1925.	1923-1924.	1922-1923.	1921-1922.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 23rd, is as follows:—Pig-iron: In the throes of a General Election, what little business might be passing is seriously interfered with. Ironmasters are not prepared to reduce their prices, and thereby increase their losses any further, and are maintaining their quotations for—No. 3 Cleveland G.M.B., at 80s per ton, and East Coast mixed numbers hematite at 87s 6d per ton. Manufactured iron and steel: The recent reductions in prices have not brought forth much business except for constructional steel. There has been a further drop of 10s per ton in bar iron, otherwise prices remain as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron Ore: Imports are lower at present than for a very considerable time past, as consumers are endeavouring to reduce their stocks before taking in further deliveries. Consequently, there is practically no new business, and sellers' quotations are purely nominal on the basis of 21s 6d per ton for best Bilbao rubio c.o.f. Tees.

Our Sheffield correspondent writes:—While no change in the actual conditions of the iron and steel industry can be reported, the outlook is regarded as much brighter, and confidence is returning. The head of one of the largest companies in the kingdom publicly stated this week that he believed that the revival of trade was a good deal nearer than people supposed. Forward buying, however, remains at a standstill, and the business passing is for small lots. Pig-iron prices are rather easier on the week, and it would appear that the advantage of the lower coke prices has been passed to the consumer of iron. The export trade in pig-iron is quiet. Trade is extremely dull in the high-grade tool steels, which are too dear to be bought in Continental countries. The principal lines which are at all active are those supplying steel material and tools to the motor industry and to the railways. The coal market is slumping badly, and at many collieries huge stocks of small fuel have accumulated, for which no market can be found except at nominal prices, consequently great bargains can be obtained by users of nuts or slacks. The demand for house coal is small for the time of year, and sales of steam and gas coals and coke are on a limited scale. Market quotations are now nominal for the most part, and cannot be relied upon as an index to values.

Our Glasgow correspondent writes:—A slightly better tone prevails in the iron and steel markets. Pig-iron is in better demand, and no further fall in price is reported. The shipments from the Clyde last week were 760 tons, of which 594 tons were for overseas. The corresponding figures for the previous year were 1,795 and 1,695 tons respectively. Following on the reduction in steel plates and sheets, bar iron makers in Glasgow dropped their prices 10s per ton this week. The sheet trade is not so well off. The recent fall in the franc is enabling Belgians to quote some extraordinarily low figures for semis, offers of considerable quantities at below £5 15s delivered this district having been made. Among contracts placed on the Clyde within the last week are two steamers, each about 5,500 tons dead weight, placed with Messrs Lithgows, Limited, by Messrs Hogarth and Co., Glasgow: and two steamers, each of about 8,000 tons dead weight, placed with the Clyde Shipbuilding and Engineering Company of Port Glasgow by the Lloyd Triestino of Trieste.

Our Cardiff correspondent writes:—There has been very little movement in business this week on the Cardiff coal market. Middlemen are reported to have secured a contract for the supply of 140,000 tons of through coal, 30,000 tons of large coal, and a quantity of patent fuel over next year at prices which are approximately equivalent to the current quotations for the lowest grade of steam coals, but the colliery companies are refusing to look at any business over 1925 at the prices which contractors are offer-

ing; they prefer to take the risks of the market in view of the fact that the prices recently ruling and those now offered by buyers are involving the collieries in heavy losses. Employment in the coalfield has been irregular, and shipments are abnormally low. The depression is as acute as ever.

The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; seconds, 25s to 26s; best dries, 27s 6d to 28s; Black Veins, 24s 6d to 25s; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 23s 6d; best bunker smalls, 15s to 15s 6d; ordinary cargo smalls, 11s to 13s; coking smalls, 15s to 15s 6d; anthracite big vein, large, 47s 6d to 50s; Red Vein, large, 34s 6d to 35s 6d; French nuts, 60s to 62s 6d; ruddy culm, 11s 6d to 11s 9d; coke for export, 50s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 25s 6d to 27s 6d; pitwood, ex ship, 26s to 26s 6d.

In the tinplate industry the position is practically unchanged. The works are fairly fully employed, but prices are a shade easier at the minimum rates, and merchants are withholding specifications for new orders pending a revision of the present scale of commission allowed by the manufacturers.

METALS.

The market for tin displayed firmer features in sympathy with higher Eastern cables, combined with a good demand, especially for distant positions. Standard cash sold from £249 10s to £256 2s 6d, and three months £251 to £256 and £258. Copper firm, though slightly irregular, with dealings on a liberal scale. Standard cash fluctuated between £62 18s 9d to £62 12s 6d, and £63 3s 9d, three months £63 17s 6d to £64-£63 15s, and at £64 7s 6d. Electrolytic £67 5s to £67 10s, wire bars £67 10s, best selected £66 15s-£68. Strong sheets £92. Lead active and firmer. Good soft foreign pig quoted £37 15s to £35 13s 9d as to position, and English £38 15s. Spelter firmer at £34 1s 3d to £33 15s per ton as to position. Antimony firm. English specials £57 to £60, and foreign £49 to £50. Aluminium steady. Home trade £125, exported £130. Quicksilver spot £11 10s per bottle.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—It seems that arrangements have been made in Australia to get over the difficulty which had arisen in financing the clip, and the latest reports from the principal selling centres reveal a firmer tone and better competition. More interest is also being taken in the raw material in this country, and during the week some fair weights are reported to have been sold on export account, both to the Continent and to the United States. There is also a better tone in the local market for tops, but actual business is still being governed by immediate requirements. Users appear to show no desire to enter into forward contracts, even though tops are being offered in some cases at quite attractive prices for delivery in the first two or three months of next year. There is not much change in topmakers' quotations as compared with those ruling a week ago, but, if anything, the position favours the buyer. Warp 64's tops are slightly easier at 77d to 78d, with average at 76d to 77d. There is practically no change in carded descriptions, while as regards prepared sorts, 46's to 50's are about 1d down, the others being steady at recent rates. There is not a great deal of business passing in home-grown wools, but quotations are generally steady with a hardening tendency in deep lustre classes. Spinners are not doing much in the way of new business, and the white Botany section is badly off for work. On the other hand, there is quite a fair amount of activity in coloured yarns, and relatively better prices are obtainable. Quotations, however, show considerable irregularities, and it is not possible to do much on to-day's basis. There is no material change in the piece goods trade, buyers still operating with great caution and in small quantities.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The course of the Australian auctions is being watched very keenly, particularly in view of what has happened during recent weeks. Private cables were received last week-end from Sydney and Melbourne, stating that there would be no more trouble over financing wool credits, and that better competition and freer buying was expected during the ensuing week. Melbourne and Sydney cables since received indicate better competition, prices tending rather in sellers' favour. Apparently the wider competition has been responsible for the catalogues being successfully cleared, but private cables indicate that wool is selling in Sydney on the

RUBBER OUTPUTS AND DIVIDENDS

In the table below we give the outputs for last three complete years, and monthly outputs for July, August, and September, 1924, and Oct., 1923, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR OWN CORRESPONDENT.)

The unwieldy supplies of building woods have had a considerable influence in bringing the spot market to its present unhealthy condition. Yet, if we take London as a criterion of the state of the wood trade generally (and it is generally taken so), it is surprising, in these times of bad trade in our leading industries, how well the demand keeps up. To September this year the deliveries from the docks are not only better than for the corresponding period of 1923, they are considerably better than for the pre-war year of 1913, so that when our leading industries *do* start in earnest, more timber will be wanted for them, which should be noted by Swedish and Finnish mill owners, who, in sheer disgust at this season's trading, have threatened (some have really started) to restrict their cut for next year.

All shipbuilding woods are slow of sale, which is not surprising considering the state of that industry. Stocks of teak are light, and prices, therefore, are firm. In American pitch pine, stocks are fairly large, but prices are firming up both in the States and here. Stocks of Oregon pine logs are fairly heavy, but the call for these is not large owing to depression in the above-mentioned industry.

In the furniture woods markets, stocks have shown a slight decline over the month, but the imports this year have been very heavy, especially from the United States. Stocks are stated to be not large, and prices have shown a tendency to increase both in the States and on the spot. In the mahogany market, prices for logs have an upward tendency, the quantity of imports not being sufficient for present rates of consumption; mahogany, in log form, is the brightest spot in the wood market. For cutwood, *i.e.*, imported planks and boards of this wood, the demand is only moderate, and values for the time being do not show much change.

In colliery timbers the import for the month is much heavier than in September last year, but the nine months' imports show a decided decrease compared with twelve months ago. The pit-wood market is decidedly dull, similar to its customer—the coal trade.

MANCHESTER, October 23.

Business in the market during the past week has been rather irregular. Spinners and manufacturers have again been well supplied with inquiry. In some quarters there seems to be an expectation of lower values in manufactured goods, as a result of the longer working hours in the spinning section. There is every probability, however, of the larger yarn output being well absorbed. For India a considerable trade has been offering in piece goods, and fairly encouraging contracts have been put through in grey shirtings, light bleaching descriptions, and printing cloths for Calcutta, Bombay, and Madras, with exceptional sales for Karachi. Demand for China continues rather more promising, but merchants are afraid to commit themselves to orders of weight. In moderate lots there has been rather more activity for Egypt, Turkey, and South America. Manufacturers continue to strengthen their position. American yarn quotations have been stiffly held, and there are no indications of the shortage of supplies being relieved. Buying has been patchy. A steady business has been done in Egyptian spinnings at late rates.

(I.) Comparative Statement of the Cotton Trade.

(II.) Compared with Previous Years.

HIDE, LEATHER, AND ALLIED TRADES.

Whilst there is as yet no decided sign of ease in hide prices, buyers seem to be getting cautious, as only two classes of best ox hides sold at the Bermondsey auctions on Thursday, these making 9½d per lb. Three classes were withdrawn in the absence of suitable bids. Seconds made from 6½d to 8½d, but best cows were unsold. Calf (best) were steady from 8½d to 15½d, but the 9/16 lbs class were unsold. Wools made from 7s 7d to 16s, and hogs from 8s 3d to 18s each. There is a slight depression in the imported hide market, and buyers both here and on the Continent are holding off in anticipation of lower prices. About 30,000 ox have been sold of late to England and the Continent, 8½d having been paid for Argentine ox, and 9½d for Montevideo ox. Business has been good in dry River Plates, and Australian wet salted have also come in for some attention this week. Dry Africans have sold on a basis of 8½d to 10½d according to origin. The Chicago position is cabled as strong, best heavy packers now selling at 16½ cents, an advance of ½ cent on last prices.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 24.

SUGAR.—The market developed a generally quieter tone after recent steady absorption, and of British refined, Messrs Tate and Lyle's reduced spot quotations 6d per cwt, also granulated month forward. Here, particularly in standards, a fair business was effected. Cubes now quoted 41s 3d to 42s 3d; crushed, 39s 9d; nibs, 41s 9d; granulated, stoved, 39s 7½d; fine and coarse grain, 37s 10½d; No. 1, 37s 7½d; No. 2, also London and T.L., 37s 4½d; ditto month forward, 37s 4d; second half November, 36s 6d; December, 36s; yellow crystals, spot, 34s 4½d; caster, finest, 41s 1½d; A, 40s 7½d; B, 39s; pulverised, 39s 9d; mineral water, 37s 9d. White Java, spot, 34s d to 34s 9d; May-June, steamer, 20s, c.f. and i. London. American granulated, spot, 36s 9½. Czecho, granulated, ready 22s 9d; first half November, 21s 6d; November, 21s 1½d; December, 20s 10½d, f.o.b. Hamburg. Dutch granulated, J quality, spot, 35s 9d; C.B.S., ready shipment, 22s 6d, f.o.b., Rotterdam. Belgian granulated, October, 21s 1½d; first half November, 20s 4½d; November-December, 20s, f.o.b., Antwerp/Ghent. White Java, October-December shipment, to India, quoted 22s; January-March, 22s 3d, c. and f. terms. Hungarian crystals January-March, India, quoted 21s 6d, c. and f. terms. A steamer cargo Mauritius crystals, November shipment, to Calcutta, changed hands at 21s. c. and f. terms. Raw refining kinds remain a quiet market, and it was reported that a steamer cargo Cuban, basis 95 per cent., consigned to the U.K., has been ordered to New York. Polish beet, 88 per cent., prompt, quoted 18s 3d; and November, 17s, f.o.b. terms. 500 tons German granulated, F.M.S. brand, was disposed of to the U.K., prompt shipment. White terminal market quiet and easy. October buyers, 22s; December, sold, 20s 1½d; March, 19s 9d; May, 19s 10½d cwt.

COFFEE.—There is a good, steady demand for all the finer qualities, chiefly on home trade account, and market continues very firm, but only a slow movement takes place with regard to inferior. Fine bold Co'ombian sold, 165s; fine peas, 171s 6d. Unwashed San Paulo, quay terms, 132s.

COCOA.—Market firm on spot, with a fair demand, and fine Trinidad sold, 78s to 80s; summer Arabia, 100s; fine Accra, 46s to 47s; Accra, F/F grade, November-January and December-February, sold up to 43s; and later down to 40s, then 41s, f.o.b. terms.

TEA.—62,600 packages Indian were brought to auctions during the week, and, with a quieter demand, prices manifested a weaker tendency, common and low medium teas being fully $\frac{1}{4}$ d per lb lower. Pekoe sold, 1s 7d to 2s 1 $\frac{1}{2}$ d; broken orange pekoe, 1s 8d to 2s 9d; fine to choice, 3s to 4s 8d. Ceylon sales of 17,200 packages elicited fair support for leaf kinds at about steady rates, but otherwise rates declined $\frac{1}{4}$ d per lb. Pekoe sold, 1s 7 $\frac{1}{2}$ d to 2s 1 $\frac{1}{2}$ d; broken orange, 1s 9 $\frac{1}{2}$ d to 2s 7d. 4,100 packages Java and Sumatra auctioned elicited generally good support, and a firm tone prevailed all round. Pekoe sold, 1s 6d to 1s 7d; broken ditto, 1s 5 $\frac{1}{2}$ d to 1s 7 $\frac{1}{2}$ d; pekoe souchong, 1s 6d to 1s 7 $\frac{1}{2}$ d; orange pekoe, 1s 7 $\frac{1}{2}$ d to 1s 9d; broken orange, 1s 7d to 1s 8 $\frac{1}{2}$ d per lb. in bond.

RICE.—Market firm, but general course of trade is quiet. Two Stars, spot, 18s. 1,000 tons No. 3, cleaned Rangoon, October-November, double bags, to the Levant, sold, 16s 7½d, and now 16s 9d, c.f. and i., asked. Spanish and Italian firmly held. Japanese peas, November-December, 25s 6d per cwt. Rangoon bran, firm forward at late rates.

SPICE.—Pepper continued in demand, and market ruled again dearer. Black Singapore, f.a.q., October-December, quoted 53d; L.S., ditto, 55d. Lampong, January-March, sold, 53d to 54d; Muntok, spot, done, 11½d; October-December, steamer, 11½d to 11½d, 11d; January-March, 11½d to 11½d Zanzibar cloves dearer. Spot, 1s 1d to 1s 1½d; October-December, sold, 11½d per lb. Tapioca quiet, steady. Singapore flake, December-January, Havre, 28s 6d. Penang seed to London, 24s. Sago flour, October-December, quoted 17s 4½d. Desiccated coconut steady. Spot halves, 43s per cwt. Ginger remains firm.

JUTE.—Market presented quiet features, and prices favoured the buyer. Firsts, September-October, Continent, sold, £41 15s; October-November and November-December, £41 15s to £41 5s, and £41 10s ton. Hessians steady. B twills, April-June, sold, 102s 9d per 100 bags.

HEMP.—Manila held for steady prices, but there is not much response from buyers. J grade, October-December, quoted £56 10s; K and L, £55 10s; M, £54. New Zealand and African Sisal steady at late rates. Indian hems in demand, and firm, with sellers indifferent. No 2 Benares, November-January, quoted £41 ton.

SHELLAC steady. T.N., spot, 330s to 335s; December, 315s; March, 305s cwt.

COPRA remained in a generally quiet state. F.M.S. Straits, October-December, to Rotterdam, sold, £32 25 6d to £32 35 9d and £31 175 6d. Dutch East Indies, October-December, quoted £31 135 9d. Ceylon, October-November, £33 5s. South Sea F.M.S. ditto, £31 10s. Palm kernels quieter. October-December, to Liverpool, quoted £23 135 9d; December-February, £23 10s ton.

RUBBER generally quieter and rather unsettled, with some profit-taking in force. Standard plantation, crepe and sheet, spot, also October, sold, *rs* 53^d; November, *rs* 54^d to *rs* 58^d; December, *rs* 58^d to *rs* 53^d; January-March, *rs* 53^d to *rs* 58^d and *rs* 55^d; April-June, *rs* 58^d to *rs* 53^d. To New York: Standard estate, sheet, November-December, buyers, *rs* 53^d; December-January, *rs* 58^d per lb. c.f. and i. Wild steady.

EGG PRODUCTS.—Dried yolk, old season's, spot, 11d; new, 1s 1d; prime hen albumen, spot, 4s 10d to 4s 10½d per lb.

GAMBIER.—Block, October-November, quoted 73s cwt, c.f. and i. terms, U.K.

CARDAMOMS very firm. Green Aleppy, spot, sold, 5s 6d; seeds-quoted 7s; good bold pale Mysore quoted 8s 9d; medium, 8s; small, 6s 6d to 7s lb.

QUININE steady. Sulphate, spot, 2s 2d to 2s 3d per oz.
FRUIT (Dried).—The market for currants ruled quietly steady.
 New crop, Amalia, $\frac{1}{2}$ cases, quoted 46s to 47s; Patras, ditto, 49s to

50s; Gulph, 52s to 54s; finest, 57s; Vostizza, 65s to 68s; fine, 70s to 71s. Sultanas are much higher in price than last week, the market being influenced by reports that two-thirds of the crop has been disposed of already. Selection on offer is not on a par with previous consignments. Old crop, Smyrna, 53s to 55s; fine, 60s; new, fair quality, 51s to 53s; finer, up to 63s; fine Cretans, 88s to 90s. Valencia raisins show no change from last auctions. Australian, 41s cases, quoted 44s to 46s; fine, 52s; old crop, Greek, 41s. Figs: Natural, in bags, 36s to 40s. Market for dates remains very quiet, but sellers require previous prices. Evaporated fruits: Californian standard apricots, old crop, 75s to 78s; choice 87s; extra ditto, 96s; new crop, extra choice, 105s. Peaches, old crop, choice, 48s; new extras, 57s; fancy, 65s. Plums, Oregon, size 30/40, quoted 65s; 40/50, 54s; Californian, 60/70, rule at 42s 6d; 70/80, 40s; 80/90, 36s cwt.

CANNED GOODS.—The market in general remained very steady, with a moderate business in force. Sardines: Portuguese ½-flats quoted 35s to 45s; clubs, 4s to 4s 3d; 12 oz, 5s 9d to 7s 6d; 18 oz, 10s to 12s per dozen tins. Salmon: 1 lb flat reds, labelled, 55s to 60s; ditto, tall, 47s 6d to 48s 6d; 1 lb tall pink, 25s 6d to 2s; cases of 96 ½ lbs, 28s to 30s per case. Lobster nominal. Canned Fruits: Singapore pines, 48 ½s, quoted 54s 4d to 5s 6d; cubes, 24 ½s, 10s 6d to 10s 9d; slices, 48 ½s, 5s to 5s 3d. Californian apricots, 2½s, 8s to 11s; ditto, 1½s, 5s 3d to 5s 6d. Pears, 2½s, 13s 6d to 16s 6d. Peaches, 2½s, 9s 9d to 11s 6d; ditto, 1½s, 6s 6d. Fruit salad 1½s, 19s to 20s; ditto, 1½s 10s 6d per dozen tins. Canned meats steady. Lunch tongues meet a fair demand.

MISCELLANEOUS.—Coconuts quoted 20s per 100. Coir yarn: Ceylon, £21 to £37 10s; Cochín, £20 to £45. Ceylon bistle, £22 to £29; cinnamon leaf oil, 54d; Citronella: Ceylon, 3s 0d; Java, 5s 7d.

OILSEEDS.—Linseed opened steady, but subsequently became quiet and easier, and new crop prices were irregular. Calcutta, afloat, £24 7s 6d; October-November, £24 7s 6d. Plate afloat, £21 15s; October-November, £21 15s. November-December, £21 15s; January-February, sold, £22 to £21 2s 6d. Rapeseed firm, and sellers reserved. Toria, October-November, quoted £24 17s 6d; and real bold Ferozepore, ditto, £24 5s. Cottonseed in export, with a fair demand. Egyptian, black, new, October, £14 15s; November-January, £14 10s. Sakellaridis, November-January, £14 5s. Bombay, December-January, £11 17s 6d to £11 15s paid. Gingly seed steady. Chinese, new crop, October-November, £29 17s 6d. Groundnuts steady. Coromandel, machine-dried, October-November, £8 10s; Chinese decorticated, f.a.q., December-January, £25 2s 6d; East African, October-November, £28 15s. Soya beans firmer. Manchurian, October-November, £24 2s 6d; December-January, £13 7s 6d. Castor seed quiet. Bombay, October-November, £30 10s; Calcutta, ditto, £30 5s per ton.

OILS.—Linseed easier. Spot, net, naked, 45s; October, 44s; November-December, 44s; January-April, 44s. Rape firmer.

Crude, spot, 52s 6d, refined, 55s 6d. Castor-oil steady. First pressure, spot, quoted 73s; second pressure, 71s; and pharmaceutical, 78s per cwt. Hull, with London 2s per cwt extra. Cotton dearer. Crude Egyptian, spot, 45s 6d; Bombay, 43s 6d; common edible 51s; deodorised, 53s. Chinawood dull. Hankow, spot (barrels), 85s; October-November, 80s. Cocoa-nut firmer. Ceylon, spot, 50s; October-November, 48s; Cochín, ditto, nominally 60s. Soya firmer. Oriental, barrels, November-December, 49s; bulk, 44s. Cod firmer. English, spot, 36s to 37s. Groundnuts firm. English, cru hed, naked, spot, 55s; deodorised, barrels, 64s. Turpentine regular. American, spot, 62s 6d; November-December, 63s; January-April, 63s 6d. Rosin firmer. American, grade B, 16s; G. 16s 6d; W.G., 19s; W.W., 20s 6d per cwt. French W.W., nominal per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on October 22nd as follows:—The tallow market was firm during the week, and prices were 1s 3d dearer to-day. The scarcity of spot offerings is still being acutely felt. Shipments of tallow from Australia during September amounted to 2,000 tons, against 1,400 tons during the corresponding month of last year. At auction to-day 1,018 casks tallow were offered, and 917 were sold. Quotations are:—Australian mutton: Fine, 52s 6d; good to fair, 51s 6d to 50s; dull to dark, 48s 3d to 4s; hard, 52s 6d. Australian beef: Fine, 52s 9d; good to fair, 50s 6d to 50s; dull to dark, 48s to 45s; sweet, 53s. Present shipment from Australasia: Good mixed, 49s. Present shipment from South America, 49s to 47s. The market letter is dearer for tallow, 1s; stuff, 6d. Town tallow, 40s per cwt. Rough fat, per 8 lbs, 6½d; melted stuff, 35s per cwt. Quotations are:—Town, 45s 6d, net cash, naked, ex works. Country: Frail casks, 46s; home melted, shipping casks, net, f.o.b., good coloured, 48s 6d; fair to dull, 47s to 46s. Bone fat: White, none; pale, none; benzine, 40s 6d; melted stuff, 41s, f.o.b.

of December Treasury bills; this addition to credit is still available, and may account for the fact that withdrawals by the banks for balance-sheet purposes were on a small scale. The discount market was distinctly easier, with fine three months' bank bills taken freely at $3\frac{1}{4}$ per cent., in spite of generally reported plenty of commercial paper coming forward; and the Treasury bill tender reflected this ease.

	Oct. 31, 1924.	Oct. 24, 1924.	Oct. 17, 1924.	Oct. 10, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank returns showed a decrease in the Reserve, chiefly due to an efflux of notes at the end of the month, of £690,000. Government and Other securities declined by £680,000 and £912,000 respectively, and Public and Other deposits by £769,000 and £1,516,000. There was a reduction of £193,600 in currency notes outstanding this week to £285,024,700, which includes £1,365,513 for notes called in, but not yet cancelled. The fiduciary issue is £234,209,200, or £13,981,700 below the maximum.

THE STOCK MARKETS.

The unexpected result of the General Election produced a pronounced rise in prices throughout the Stock Exchange, which, in the case of the investment markets, follows a steady advance during the preceding fortnight. British Government Stocks have scored substantial advances under the lead of $3\frac{1}{2}$ per cent. Conversion Loan, despite the reported imminence of a large volume of new issues, and both Home and Foreign Rails have risen sharply. Industrials generally were included in the upward movement, and a large business has been done in rubber shares, while oils have been better, with the exception of Mexican Eagles, which fell on uncertainty as to payment of the half-yearly preference dividend. Mines, as a whole, have shared in the better tendency.

THE COMMODITY MARKETS.

Markets have been somewhat restricted on account of much attention being given to the political situation. The undertone on the Cardiff coal market is improving, but there has not been any notable movement in prices. In pig-iron, prices are showing signs of better business, while the position of manufactured iron and steel is reported as "more favourable" by our Middlesbrough correspondent. Tin opened the week very steadily, but later prices displayed irregularity. Copper was in good demand. In spite of uncertainty as to the future level of values in the raw material, the market is inclined to firmness. Our Bradford correspondent reports that traders as a body appear to have regained confidence in the wool position. Wheat, influenced by the improved exchange rate and political situation, moved up and down, but was fairly even on balance. Rubber maintained a steady demand. Jute prices gave way under selling pressure. Further details will be found on later pages from our special correspondents.

FOREIGN EXCHANGES.

An anticipatory lull, pending the result of the election, characterised the foreign exchange market in the earlier part of the period under review, the feature being the maintained firmness and gradual improvement of sterling against the dollar. As mentioned last week, the United States have been bullish of sterling ever since the Government decided to go to the country, and this, in combination with the continued interest shown by American capital in Europe, would be sufficient to account for the tendency mentioned. The feature, after the election results began to come in, has been the sudden sharp improvement in the dollar rate, and the general movement, in greater or less degree, of most Continental currencies in our favour. Opening at 4.49½ on 25th, the dollar rate improved gradu-

ally to 4.49½ on 27th, 4.50½ on 28th, and 4.50½ on the morning of the 29th, closing the day at 4.50½. On the 30th, when the publication of the first results left the final issue less in doubt, a further sharp improvement to 4.52½ took place. At the time of writing this hardening tendency shows signs of continuing, and the rate is now 4.52½. Paris opened with a weakish tendency at 86.25, but subsequently a slight improvement set in, the rate hardening to 85.85, but in response to the general strength of sterling it weakened again to 86.20 on Thursday and 86.50 yesterday. The recovery and comparative firmness in the middle period is believed to be traceable to official intervention in the market, presumably with the object of creating an "atmosphere" for the projected internal loan. But for such intervention it is possible that the subsequent reaction might have carried the rate much higher. Belgium and Italy followed Paris fairly closely, showing similar reaction to sterling. The former weakened from its opening rate of 93.70 to 93.80 on Tuesday, recovered to 93.50 on Wednesday, and went to 94.30 yesterday. The lira, after opening at 103.85, stands at 104.15. Amsterdam weakened sharply with the dollar from 11.45½ to 11.48½ on Thursday, but has recovered again to 11.47½-11.48. Similarly Berlin, Warsaw, Stockholm, and Geneva, all "dollar" currencies, moved in our favour; Berlin from 18.85 to 19.10, Warsaw from 23.35 to 23.40, Stockholm from 16.92 to 16.98, and Geneva from 23.41 to 23.50, on the two days mentioned. Christiania, after improving to 31.51, also reacted to the general strength of sterling, to 31.58 on Thursday, and is slightly better at 31.56. Copenhagen similarly reacted, but improved to 26.05 yesterday. The leu remains firm at about 800-810. The peseta is weaker at 33.61, a reflection of the recurrence of difficulties in Morocco. Rather heavy forward offerings of this currency point to anticipations, in quarters which should be well informed, of a still further decline in its value. Other European exchanges call for no remark. In the Far East the rupee remained firm at 1s 6 1-32d throughout, and Hongkong at 2s 4½d. Shanghai was a little weaker on balance at 3s 4½d on Thursday, after opening at 3s 4½d; and at 3s 4½d yesterday reflects the continued uncertainty of local conditions. Singapore is unchanged at 2s 4½d. The yen has again developed weakness at 1s 8½d, after opening at 1s 8 23-32d, presumably as a result of further rice and cotton purchases in India and reconstruction materials elsewhere. If this assumption is correct, it presages healthier conditions before long. The South American exchanges showed little signs of life, Buenos Aires remaining firm at about 44½, Monte Video at 47½. In the silver market prices showed a considerable and rather unexpected decline, sales being persistent and on a fairly heavy scale, on China account. Spot closed at 34½d, as against 35½d only a week ago. No support was forthcoming from the United States, which came in as a freer seller; and, unless the Continental mints are to be attracted by the lower price levels now prevailing, there seems to be little capacity of resistance in the market to any continued selling on China account.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 25th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	6,000	From Revenue	10,445
Interest, &c., on Debt	415	Decrease in Exchequer balances	246
Sinking Fund	49		
Sundries	753		
Reduction in Debt	3,444		
	10,691		10,691

The Revenue for the week amounted to £10,444,600, as compared with £11,484,000 for the corresponding week last year. Customs were well maintained, at £2,835,000, against £2,892,000, and Excise was slightly higher, at £1,596,000, against £1,534,000. The Estate, &c., Duties were lower, at £1,230,000, as compared with £1,440,000. Property and Income-tax brought in £1,545,000, against £2,326,000, and Super-tax was down by £3,000, at £370,000. Post Office receipts were the same, at £1,500,000. Ordinary receipts were down, at £308,606, as compared with £330,000, while Special receipts amounted to £500,000, against nil last year.

The week's operations reduced the National Debt by £3,444,000, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Treasury Bills	2,885	Public Department Advances	5,799
National Savings Certificates	50	National War Bonds repaid	100
		Telegraph Money	400
		Sundries	80
	2,935		6,379

The floating debt was reduced by £2,899,000 to £789,050,000.

FINANCIAL YEAR, 1924-1925 (April 1 to October 25).

£		£	
Total Expenditure ..	421,566,396	Raised by Revenue ..	398,855,327

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE VERDICT OF THE COUNTRY.

In the matter of electoral miscalculation Mr MacDonald has surpassed Mr Baldwin. A year ago Mr Baldwin, enjoying a sufficient majority in the House of Commons, suddenly appealed to the country, and came back with only 259 seats in a House of 615. This time Mr MacDonald, who was in a position to remain in office and prosecute many good objects, both in the foreign and domestic sphere, gratuitously invited defeat in the House and went to the polls, with the result that the Conservatives return to Westminster with a clear majority of more than 200 over all possible combinations. Future Premiers will, we predict, be very chary of playing unnecessarily with the fires of electoral fortune. Thus we return in very definite fashion to the old-style majority Government. The first experiment in minority government is over, but the second, perhaps, will come at least within a decade.

For his signal defeat Mr MacDonald has one consolation. He was out frankly and avowedly to smash the Liberal party. His success in that direction has exceeded his wildest hopes. But the smashing has not been done quite according to plan. The terrific blows which the Liberals have sustained have been received not at the hands of Labour, but at the hands of the Conservatives. That is where the Labour calculations went wrong. Of the 110 seats, which up to the moment of writing the Liberals have lost on balance, the Conservatives have gained no less than 103. As compared with this, the net gain of seats by the Conservatives from Labour was 55. It was the great swing from Liberal to Conservative that decided the Election. This movement has undoubtedly amazed the country by the proportions which it assumed. No party prophet foresaw its extent, but with the figures of nearly the whole of the contests before us the explanation is clear. In the first place, there has been an enormous poll. On an electorate only 775,000 larger than a year ago nearly two million more votes were actually recorded. This net increase corresponds roughly with the increase in the aggregate Conservative vote, the Liberal poll having fallen and the Labour poll having risen by well over 1,000,000. Part of the swing of seats

from Liberal to Conservative, especially in Lancashire and the Western counties, is accounted for by the disappearance of Free-trade *versus* Protection as a major issue. Probably a larger part still is due to the inherent difficulties of a central party in an Election which was in its essence a clash between two extremes. In the public eye the Election resolved itself into a single struggle between Socialism and anti-Socialism. The proposed Russian Treaty in itself created an alarm which was worth hundreds of thousands of votes to the Conservatives, while in the last stages of the contest the Zinovieff letter stimulated this alarm with such potency that it not only brought out to the polling booths large numbers of the apathetic men and women who normally abstain from voting, but also induced a big bloc of voters who usually do not vote Conservative, to fly to the support of candidates whose standpoint was as far as possible removed from that of the Labour Party. Add to this the facts that the country saw in the Conservative Party the only Party at all likely to achieve a clear majority; that the Liberal Party placed the Labour Government in power, and that the Liberal leadership was never clear or inspiring, and you obtain full and abundant explanation of the Liberal débacle. No impartial observer will believe that the 2,900,000 or so votes polled by the Liberal party represents the true strength of Liberalism in the country. Nor, we imagine, will any but the most partisan of Conservatives pretend that the 7,400,000 total does not greatly exceed the figure of the true supporters of Conservative doctrine. As to Labour, it may be said that the present election shows that the time when that Party may hope to obtain a clear majority in Parliament is yet far distant. But its leaders may justifiably hail the increase of well over a million in its aggregate poll as a step along that road.

Thus the verdict of the country in favour of an anti-Socialist Government is clear enough. But it is nothing like so clear as the figures of the new Parliamentary representation suggest. The election has indeed produced the most glaring example that has yet been seen of the faulty working of our electoral system. Of the 568 contested elections, whose results are at the moment to hand, the Conservatives have won 403, Labour 150, Liberals 36, and other parties (including "Constitutionalist") 11. Had the aggregate votes cast for the various parties been reflected in the proper proportions in the number of members returned, the 568 seats would have been divided as follows:—Conservative 262, Labour 194, Liberal 103, other parties 9. Adding the 32 unopposed returns, according to party, we should have the following division of 600 of the 615 seats in the House of Commons:—Conservatives 278, Labour 203, Liberals 109, other parties 10. The Conservative Party would still have won enough seats to claim the election as a victory, but they would not have had a clear majority, and the possibility of a Labour Government continuing in office with Liberal support (a condition of the dropping of the Russian guaranteed loan) would not have been impossible. The election results reinforce a hundred-fold the urgent need for electoral reform. The present system has on this occasion worked overwhelmingly in favour of the Conservatives. Circumstances might arise in which it would work otherwise. But in any case we trust that Mr Baldwin will put the interests of the country before those of his party, and pass legislation that will ensure that future Houses of Commons will reflect the will of the people. To maintain the present system in face of the figures of this latest election is utterly incompatible with democracy, and also presents a formidable weapon to the enemies of parliamentary institutions.

The casualties of the election have been notable. Women candidates have been signally unsuccessful, and their number in the new House is reduced to four. The Labour Cabinet has fared surprisingly well, and emerges with the loss of only one member, the First Commissioner of Works. But a number of junior members of the Government disappear, including Miss Margaret Bondfield and

Mr Frank Hodges; while prominent Trade Union leaders, such as Mr Ben Tillett, Mr Purcell, and Mr Ben Turner, are among the vanquished. On the Conservative side the tidal wave carried all the protagonists to safety, though Mr Neville Chamberlain had a narrow escape in his Birmingham stronghold. Naturally the Liberal casualty list is very severe, the crowning disappointment being the wholly unexpected defeat of Mr Asquith at Paisley. We cannot regard as satisfactory any House of Commons which does not contain the greatest Parliamentarian of the century, and trust that an early opportunity may be found to enrich the assembly with his presence. With their leader fell many of his most prominent lieutenants, but the debating power of the Liberal remnant is increased by the return of Mr Walter Runciman, who recorded in Swansea one of the few Liberal gains. But the most striking addition to the *personnel* of the House is the return of Mr Winston Churchill, whose spell of electoral misfortune has now been broken. He returns as an "anti-Socialist constitutionalist," and few things would be less surprising than to find that, when the list of Mr Baldwin's Cabinet is announced, this cumbersome designation has definitely faded into the single equivalent of Conservative, and that Mr Churchill will take high office in the party which first introduced him to politics.

It is expected that Mr MacDonald will resign on Tuesday and not wait to meet Parliament. During the election Mr Thomas announced that the Labour Government would in any case adopt the latter course, for which there are precedents in the case of Mr Baldwin last year, and of Lord Salisbury 30 years ago. But the size of the Conservative majority will probably incline the Premier towards immediate resignation. We stand, therefore, on the threshold of a period of Conservative Government, which, in spite of the adage concerning the danger of unwieldy majorities, is hardly likely to last less than four years. They cannot be four years of tranquillity, for the problems which Mr Baldwin inherits are many and urgent. He will not, we trust, misconstrue the verdict of the country as a mandate for reaction; and we hug the hope that recent electoral experience will dictate the utmost caution in tampering with the Free Trade system. We cannot, however, dismiss from our minds the anxiety aroused by his manifesto declarations in favour of the safeguarding of industry and Imperial Preference; an anxiety which in the minds of Free Traders may be qualified with maliciously joyous eagerness to see how Mr Baldwin will combine the two contradictory pledges of "Imperial Preference" and "No food taxes." But the most crucial test awaiting the coming Conservative Government lies in the sphere of foreign policy. A complete change has come over the European scene in the eleven months since Lord Curzon left the Foreign Office. We hope that he will not return to that office, because we doubt, and more than doubt, his ability to adjust his policy and outlook to the new conditions and the new atmosphere. Already the French Press is nervously asking whether the political change here will jeopardise the new harmony of Anglo-French relations. For this country to meet the changed conditions and the new stage of international development with what we think of as the Curzonism of a year ago, would spell a set-back to the cause of international peace, and a disaster both to Europe and this country. Profound interest, therefore, attaches to the rumour (which is a little difficult of acceptance) that Viscount Grey may figure as Mr Baldwin's Foreign Minister. The country will not forgive the future Conservative Cabinet if it fails to continue those lines of policy which Mr MacDonald has successfully pursued in European affairs, nor is it, we believe, in the temper to tolerate protection or reaction at home. If Mr Baldwin grasps these facts, and succeeds in keeping the die-hard element of his party in reasonable subjection, he will be building in the surest way a bulwark against that wave of extreme Socialism, which any less enlightened course might, during four or five years of Conservative rule, swell to very formidable proportions. He will find his safest guide in the remembrance that, huge though his Parliamentary majority is, more than half the electorate polled for the two progressive parties.

THE POLICY OF FRANCE.

By a striking coincidence, the exchange of telegrams between the Governments of the French Republic and the U.S.S.R. was published, last Thursday morning, in the same issues of the daily Press as the election results in this country, which have turned so largely upon the relations between Soviet Russia and Great Britain. That this was a coincidence and nothing more would hardly be worth saying, if certain people in France and England had not hinted that there was some dark design, with a bearing on British internal politics, in the date chosen by M. Herriot for his telegram to Moscow. Such a suggestion might be dismissed *a priori*, even if we did not know the antecedents of the French Government's action, but, as a matter of fact, these antecedents go back a long way. It will be remembered that M. Herriot visited Soviet Russia during the Poincaré régime, and that a sincere attempt to arrive at an understanding with the Soviet Government has always been an important point in the policy of the present French Prime Minister and his supporters. After this Government took office, a committee was set up at the Quai d'Orsay to study the problem, and the present overture is the result of several months' deliberation.

It will be noted that the French recognition (following in this the British precedent) has been given in guarded terms. The Government of the U.S.S.R. is recognised *de jure* "as the government of the territories of the old Russian Empire where its authority is accepted by the inhabitants, and, in those territories, as the successor of the former Russian Governments." This clearly excludes the Polish, Lithuanian, Lettish, Estonian, and Finnish territories of the former Russian Empire, which the U.S.S.R. itself has already recognised as belonging to the new succession states; but what does it mean in such cases as that of Georgia? In Georgia, there exists a Soviet Government, linked up with Moscow in a complicated federal hierarchy, and Moscow claims that this Government represents the popular will of the Georgian nation; whereas the Georgian Menshevik Government (whose headquarters in exile have hitherto been in Paris) maintains that its Soviet successor is only another name for a Russian military occupation. This ambiguity in the terms of recognition will no doubt cause trouble later; but the immediate issue, in the negotiations which are to take place in Paris, will be the obligations to which M. Herriot intends to hold the U.S.S.R. "as the successor of the former Russian Governments." His reservation of the rights of French citizens and of the French Government is precisely worded, and, from what we know of the temper of the French bondholders, we should guess that the French negotiators will not be given so free a hand in this respect as Mr. MacDonald's Government took to itself—as it has turned out, to its own undoing. It is significant that Moscow, in accepting recognition, and agreeing to negotiations in Paris, has made no specific reference to M. Herriot's observations on the question of French claims, but has preferred vague references to the advantages of a general accommodation. At any rate, the French Government will have the benefit of our own Government's experience during the last months; and the investigations into the authenticity of the Zinoviev document will be followed in Paris with considerable interest, since "non-interference in internal affairs" has been stipulated by the French Government and accepted by the Soviet Government as a condition of the forthcoming negotiations. Moreover, it has been agreed, on M. Herriot's initiative, that regular diplomatic relations shall be opened by the reciprocal appointment of ambassadors before the negotiations begin—an arrangement which would render any breach of the "non-interference" clause more serious in its consequences.

At this stage it would be idle to speculate whether the negotiations are likely to prove a genuine—or even a nominal—success. At the actual moment, British observers will be acutely sceptical in the light of recent British experience; but such scepticism may prove to be mistaken, for France, as a Continental Power, has abid-

ing motives for a reconciliation with Russia which transcend differences of political principle, and may even prove stronger than the interests of private bondholders. This is one form of that fundamental issue between "reparation" and "security" between which the mind of France is perpetually divided. No "Continental system" can give France so much security as a Franco-Russian entente, and M. Herriot touched upon this aspect of the question in declaring that his Government, "true to the friendship which binds the Russian people to the French people," accords *de jure* recognition to the Government of the U.S.S.R. Immediately after the Armistice, France looked to a Poland, restored in the grand manner, to replace the Russian Czarism as her principal ally on the eastern flank of Germany, but the past six years have produced a certain disillusionment on both sides, and it is conceivable that, if the relations between France and Germany were to remain what they were until the London Conference last summer, the relations between France and Russia might return to what they were before the Bolshevik Revolution, and the peace of Brest-Litovsk. From this point of view the conversations which have been taking place between French and German representatives in regard to a commercial treaty may influence the forthcoming negotiations between France and Russia. If there proves to be a real prospect of a Franco-German understanding when these conversations are resumed on November 5th, the political motive, on the French side, for a Franco-Russian understanding, will be weakened in proportion, and the claims of the French bondholders will then be asserted, no doubt, with greater determination.

These Franco-German conversations have been necessitated by the fact that the special economic advantages secured to France under the Versailles Treaty (the most important of them being the free entry into Germany of the products of Alsace-Lorraine) are due to lapse on the 10th of next January, when the Treaty will have been in force for five years. France is thus compelled to negotiate, and Germany has a certain hold over her which she is evidently not neglecting to use, but the spirit which has animated the conversations so far has not been so negative as those circumstances might suggest. The new frontiers have permanently destroyed the industrial self-sufficiency of the two countries, and French and German industrialists and financiers, disillusioned with the results of five years' attack and defence in the battle of Reparations, are becoming increasingly favourable to the idea of co-operation. So far the conversations have revealed differences of opinion on important technical matters. The Germans want a commercial treaty on the basis of "Most-Favoured-Nation" treatment, while the French want a tariff convention, in which the duties on every item in the list shall be the subject of a separate bargain. It is possible that the negotiations may break down on this; the history of the commercial negotiations between France and Belgium since the war illustrates the difficulty of arriving at a mutually satisfactory agreement by the French method, even when the political environment is as favourable as it can be. On the other hand, the political relations between France and Germany have sensibly improved, while the desire on both sides for an economic agreement is now undoubtedly very strong. On the balance, it seems probable that an agreement will be made, and the spirit in which it is made will be of great moment to this country.

A Franco-German economic agreement conceived as one step towards a general co-operation between the leading industrial Powers would be in absolute accord with the standing policy of Great Britain. It would bring within sight that restoration of our Continental market for which we have been hoping against hope for half-a-dozen years. On the other hand, anything in the nature of a Franco-German economic hegemony on the Continent, with a policy of excluding the overseas industrial Powers, would not only be a grave menace to our own prosperity, but would, we believe, be as fatal in the long run to the interests of Europe as the chaos which had preceded it. From our point of view, it is fortunate that it has fallen to M. Herriot's Government to handle the situation created by the expiry of the Versailles clauses, for we do not believe that M. Herriot will come to an understand-

ing with Germany in a spirit hostile to us. The course of his foreign policy since he took office indicates that he is working for a good understanding with his neighbours all round, and not for any reversal of alliances or regrouping of forces. This was the impression made by the conduct of the delegation which represented France so brilliantly in the last Assembly at Geneva, and we draw the same augury from the news that the French Government has now agreed to submit to arbitration the long-drawn-out dispute with Switzerland over the Savoy Free Zones. In this controversy with a small and friendly nation, M. Poincaré's Government did not represent France at her best, and the new departure taken by M. Herriot is a straw which shows which way the wind is blowing. So long as French policy continues to travel in this direction, it may be sure of British sympathy and support.

INDIAN CURRENCY AND EXCHANGE.

THE fact that the exchange value of the rupee has for some time past fluctuated between 1s 5d and 1s 6d has led to the usual demand for a Government Commission to consider the advisability of reverting to the pre-war ratio of 1s 4d per rupee, or 15 rupees to the £1. But Sir Basil Blackett is apparently not convinced of the expediency of the proposal. He pointed out in his statement to the Legislative Council that during the last export season a reversion to the pre-war rate could only have been attained by a contraction of the currency, while those who desire a return to the 15 rupee to the £1 basis, apparently demand that such a step must be accompanied by an expansion of the currency in order to ensure adequate funds for the financing of the abounding trade. The Finance Minister frankly admitted that the 2s ratio that had been fixed as the outcome of the recommendations of the Indian Committee on Exchange and Currency of 1919, was not only ineffective, but harmless, and he certainly held out no hope of a change until a more definite stabilisation of international relations prevailed, by which we understand that no alteration would be countenanced until England returns to the full gold standard.

In any consideration of Indian exchange and currency it is essential to examine the basis of India's system. The main object which the Indian authorities have tried to keep before them in working their standard is the maintenance of the exchange value of the token rupee in meeting foreign payments. It has been stated, in fact, that the cardinal feature of the system is absolute security for the convertibility into sterling of so much of the international currency as may be at any moment required for the settlement of India's external obligations. Admitted that the system has broken down on several occasions—what are the causes? The reply is principally the Government's inability to keep up its supplies of exchange. The Indian Government is, rightly or wrongly, a large dealer in exchange. Briefly, it endeavours to maintain exchange by selling India Council bills and telegraphic transfers. The original idea was to enable the Secretary of State for India to provide for his home charges by selling these remittances in London to merchants and bankers who required funds to be available in India. We have, so to speak, two bodies in the money market: on the one hand, the Indian Government requiring sterling for the purposes of paying for its purchases in London, interest on loans contracted here, pensions due, and for services rendered. On the other hand, we have a group of bankers and importers of Indian produce requiring funds in India to meet their indebtedness in that country in rupees. By means of the sales of Councils both parties are satisfied. However, it cannot be too strongly urged that Council remittances are primarily not sold for the convenience of trade, but to provide for the home charges in the widest sense of the term. There is no obligation upon the Government to sell drafts to meet all trade demands, notwithstanding the fact that the currency and exchange problem with India has led to an extension of the system.

There is a good deal of misunderstanding because this selling of exchange by the Government, although rightly employed in times of monetary stringency and of redundancy of money to expand and contract the currency of India, seems to have been taken to involve both the provision of funds for the Secretary of State for India, and also the satisfaction of the demands of trade up to such an amount as would enable the balance of trade in India's favour, over and above the home charges, to be settled without the export of more gold than was actually required in India for absorption by the public. In seasons of ordinary prosperity, no effort is needed for the maintenance of the exchange value of the rupee, since the balance of trade, which is then usually in India's favour, ensures that. It is only when the favourable balance of trade is seriously diminished, or the balance becomes temporarily unfavourable, that Government action is necessary.

In effect—we are speaking largely of the pre-war period—the Government has endeavoured to fix the upper and lower limits of exchange by entering the exchange market as an operator whenever the price of sterling rose or fell below certain limits. In normal times, as we have shown, no special steps were necessary, and Council remittances were sold to realise about the amount required by the Government to meet its home charges. When exchange was in excess supply, that is when sterling export bills were offering in large quantities, the Indian Government endeavoured to keep the rupee from rising to too high a level by itself taking the surplus sterling exchange off the market. This was partly accomplished by increasing the sale of Council remittances in London, and partly by the Government's taking over gold imported into India at a fixed price in rupees. By these means the currency was expanded, and the rupee exchange, to put the matter bluntly, forced down. If demand for sterling was in excess supply in India, that is, if the rupee exchange showed a continuous fall due to heavy imports, the Government itself sold sterling by offering for sale Reverse Councils, that is, drafts and telegraphic transfers drawn from India on London, and by giving sovereigns in exchange for rupees at fixed rates. The currency was thus contracted, and the rupee exchange forced up.

The system broke down during the war. First it became necessary to support exchange; then, later, owing to India's favourable balance of trade, exchange rose to unprecedented levels. The Government was obliged to retire from the exchange market. The usual Commission on Exchange followed—there have been many such in India's monetary history; and, following the Commission's report on December 22, 1919, an endeavour was made to divorce the rupee from the pound sterling paper and to link it with the pound sterling gold. It was decided to give the rupee a gold basis of 11,300.16 grains of pure gold, that is, 1-10th of the gold content of the British sovereign. But, as if actuated by malevolent intent, exchange then began to turn in the reverse direction. From its high level of over 2s 9d the rupee gradually fell away as trade decreased, and as we write it is back to 1s 5 31-32d. The divorce has evidently not been made absolute, and so we get the usual demand for a Committee to examine the reasons for the rupee's vagaries.

It is doubtful whether the Committee of 1919 expected finality to have been reached when they gave the rupee a 2s gold basis, since in their Report they stated that while sterling is divorced from gold, the fixing of the rate of the rupee in terms of gold would be based on the sterling cost of shipping gold to India. When the pound sterling is again equivalent to gold, they say, the minimum exchange rate for the rupee would remain fixed, and the price obtained for Council bills would vary between the gold points according to the demand. The pound sterling, it will be recognised, is still divorced from gold, and the assumption is that a definite alteration in the rupee basis is dependent upon a return to the gold standard by England. Actually, the Indian Government has for many years endeavoured to encourage the circulation of gold in India, though, at the present time, little gold, if any, is in circulation—certainly it is not acting as a medium of currency, the actual circulation consisting of silver rupees and rupee notes.

The difficulty about the whole business is that no one seems to have a very definite idea of the basis upon which exchange should or could be satisfactorily fixed. The old ratio of 1s 4d (gold) has, in theory, been replaced by the new one of 2s (gold), but, although Government accounts are kept on the 10 rupee basis, the ratio is not effective from the standpoint of trade. Curiously enough, as one Indian writer has pointed out, the parities of gold and silver are sometimes above and sometimes below the market rate of exchange, the vagaries of which are impossible to anticipate and difficult to explain even in retrospect. One thing alone is clear; that is, the Government recognises its inability to fix exchange on the 2s per rupee gold basis.

The gold question with India is a vexed question—far too long to explain within the limits of an article, but quite briefly it may be stated that there is no prohibition on the export of gold; neither is there any restriction on its importation, as is evident from the large amount of gold at present entering India from South Africa and elsewhere. The bulk of the gold imported is absorbed by the native dealers, as naturally, although the Government is prepared to take over imports, the acquisition rate while the gold basis of the rupee is theoretically 11,300.16 grains of pure gold, is 10 rupees to £1, and with exchange at its present level, no importer is likely to hand over his gold at that rate. Sovereigns, presumably, would still be given in exchange for gold at the fixed rate. But, here again, there is the difficulty that the present system works only one way. The Government stands ready to give rupees in exchange for gold, but one cannot take 10 rupees to the Government and demand in exchange one sovereign.

In the light of what we have written, it will possibly be clear that the main reason for the rupee exchange ruling around 1s 6d is India's present trade position. Then, again, that there is some connection between the movements in American exchange on London and the rupee rate is also evident, as a short explanation will show. As demand for dollars in India is small, the banks there are probably unable to sell all their purchases of dollar bills. Resort then is had to the London market, where the bills can be ultimately sold for sterling, while sterling is sold in the Indian exchange market to importers. The rupee dollar transaction thus develops into a rupee sterling one, and further perplexity is introduced into an already intricate problem. Our own view is that the influence nowadays of the price of silver on the rupee exchange is relatively slight, since with the rupee on a theoretical basis of 2s the bullion content is considerably below that at which it would be profitable to export rupees for the purposes of sale as silver. At the present time there seems little danger of the price of silver rising to such a point as would cause the bullion value of the rupee to exceed 2s gold.

In the meantime, as some people have exclaimed, "first the Indian Government sells Council remittances, then stops for a period, and later again starts selling. Why is there no continuity in their policy?" Admittedly, the sudden offering of Councils and the equally abrupt cessation of sales is puzzling. The explanation seems to be that while the Government acts when it may be considered expedient to influence exchange by selling Councils in London drawn on India, when the currency in India has been expanded sufficiently to bring about the desired result, it is equally expedient to stop sales, particularly when the state of trade in India is such as to warrant a cessation of this form of remittance. In any case, there would be no point in the Government's continuing sales and so piling up funds in London for which it might have been in the busy seasons that it has been necessary to assist exchange by taking excess sterling off the market in exchange for rupees, and when sufficient expansion has been brought about to retire from the market. If contraction of the currency, on the other hand, be considered advisable, the Government can equally well accomplish it by selling telegraphic transfers on London.

We do not claim that the present position is anything but unsatisfactory, but it is no more unsatisfactory than that of many European currencies, and until the principal European nations have stabilised their monetary units by a

return to the gold standard, we do not look for any alteration in the Indian system. Much as we sympathise with the Indian operators in their position, we argue that India must wait on Europe, and it is unthinkable that she could commit herself to a new ratio until the pound sterling paper has been fully replaced by the pound sterling gold. To attempt a revision of the ratio at this moment when the currencies of Europe are in a state of transition would, we imagine, lead to chaos, and the last state of India's currency and exchange would be worse than the first.

THE QUANTITY AND VALUE OF OUR OVERSEAS TRADE.

THE use made of the Board of Trade's returns of our overseas commerce by all three political parties at this week's election furnishes an example of the greatly enhanced popular interest in these figures during recent years. At the same time, the fact that diametrically opposite conclusions were frequently drawn by different speakers from the same sets of figures should serve as a warning that the returns, as they stand, contain innumerable pitfalls for the unwary, as for the biased observer. In particular, the unprecedented rapidity with which prices have changed during the last eventful decade makes it imperative to distinguish between apparent increases and decreases in the trade figures, and the true quantitative variations, after differences due to price movements have been eliminated. Ten years ago the *Economist* published the results of an inquiry into the fluctuations in value and volume of our overseas trade since the year 1880, and it is now proposed to supplement the figures there given by corresponding figures covering the year 1913 and every year since the war. In the earlier article the plan followed consisted in the calculation of what the total value of our imports and exports in any particular year would have been if the price of each article had remained as in the previous year. A figure was thus obtained showing the proportionate increase in the quantity of our trade as a whole, and also indicating the change which had been recorded in average import and export prices. Since the war the Board of Trade has from time to time published in its "Journal" the results of similar recalculations of post-war trade totals at 1913 prices, and these serve as the basis of the figures for 1919 and subsequent years given in our table below.

The earlier figures may first be briefly recapitulated. The table which follows sets forth for each year between 1880 and 1896 (1) the proportionate increase in the Board of Trade returns for imports and exports respectively; (2) the increase in the volume or quantity of trade calculated on the basis of unchanging prices; and (3) the percentage change in import and export prices shown in each year's figures. The first two points are indicated by index numbers, taking the trade of 1880 as equal to 100. The subsequent figures show at a glance the percentage changes as compared with that date:—

COMPARATIVE CHANGES in the VALUE and VOLUME of TRADE—1880-96.

Year.	Imports.			Exports.		
	Value Recorded.	Volume of Trade.	Percentage Change in Import Prices.	Value Recorded.	Volume of Trade.	Percentage Change in Export Prices.
1880.....	100	100	..	100	100	..
1881.....	97	97	..	104	110	.. 6
1882.....	100	103	.. 3	108	114	.. 4
1883.....	104	110	.. 6	107	117	.. 4
1884.....	95	107	.. 5	104	118	.. 4
1885.....	93	108	.. 5	96	114	.. 5
1886.....	85	108	.. 5	96	120	.. 5
1887.....	88	114	.. 1	100	126	.. 1
1888.....	94	119	.. 3	104	132	.. 2
1889.....	104	130	.. 1	112	137	.. 2
1890.....	103	129	.. 1	118	137	.. 6
1891.....	106	133	.. 3	111	139	.. 1
1892.....	103	134	.. 4	102	135	.. 5
1893.....	99	132	.. 2	98	132	.. 1
1894.....	99	143	.. 8	97	136	.. 4
1895.....	101	151	.. 3	101	137	.. 3
1896.....	108	158	.. 1	107	144	.. 4

The table shows that during the 17 years in question, neither imports nor exports showed any marked upward tendency, but fluctuated around the 1880 level. But as prices were falling all the time—except during the period of good trade that culminated in 1890—the apparently stationary values concealed the fact that, quantitatively, by 1896 imports had increased nearly 60 per cent. and exports nearly 45 per cent. From the figures given the conclusion seems to be that import prices fell more rapidly than export prices, thanks to the opening up of new countries and to improvements in transport. The net result of these changes in the terms of international trade was an improvement of our own relative position, since we were enabled to purchase a larger quantity of imports for a given quantity of exports. The figures for the succeeding period, from 1896 to 1913, are shown below, the basis for the "value" and "volume" columns being the same as before, viz., 1880 = 100:—

COMPARATIVE CHANGES in the VALUE and VOLUME of TRADE, 1896-1913.

Year.	Imports.			Exports.		
	Value Recorded.	Volume of Trade.	Percentage Change in Import Prices.	Value Recorded.	Volume of Trade.	Percentage Change in Export Prices.
1896.....	108	158	.. 1	107	144	.. 1
1897.....	110	162	.. 2	104	142	.. 1
1898.....	125	168	.. 4	104	142	..
1899.....	118	171	.. 3	118	149	.. 6
1900.....	128	171	.. 2	130	143	.. 1
1901.....	127	177	.. 3	125	145	.. 5
1902.....	128	180	.. 1	126	155	.. 5
1903.....	132	184	.. 2	130	156	.. 1
1904.....	134	186	.. 2	145	162	.. 3
1905.....	138	199	.. 3	148	173	.. 3
1906.....	148	194	.. 3	168	193	.. 4
1907.....	157	199	.. 3	191	205	.. 6
1908.....	145	191	.. 4	169	189	.. 3
1909.....	152	200	.. 1	171	188	.. 3
1910.....	164	216	.. 5	195	206	.. 3
1911.....	165	211	.. 2	205	218	.. 2
1912.....	181	226	.. 2	220	220	.. 2
1913.....	186	233	.. 1	237	228	.. 4

The "recorded value" figures in this case, show an apparent increase of about 80 points in the case of imports, and of about 130 in the case of exports. But these results greatly exaggerate the real increase in the volume of trade, owing to the rapid rise of prices. Broadly speaking, the imports for 1913 showed a rise, as compared with 1896 of 70 per cent. in value and only 50 per cent. in volume, while exports rose by 120 per cent. in value and 60 per cent. in volume. The table also shows that during the last few years before the war our overseas trade was tending to expand quite rapidly. By 1913 something approaching a "boom" was in progress. This fact should be borne in mind when the figures given in our next table, covering the period since the war, are being examined:—

COMPARATIVE CHANGES in the VALUE and VOLUME of TRADE—1913 and 1919-1924.

Year.	Imports.			Exports.		
	Value Recorded.	Volume of Trade.	Percentage Change in Import Prices.	Value Recorded.	Volume of Trade.	Percentage Change in Export Prices.
1913.....	186	233	.. 4	237	228	.. 4
1919.....	426	206	.. 140	360	125	.. 177
1920.....	505	206	.. 19	602	162	.. 25
1921.....	283	173	.. 33	317	114	.. 22
1922.....	262	200	.. 20	324	157	.. 26
1923.....	286	223	.. 2	346	175	.. 4
1924*.....	330	250	.. 2	360	185	.. 1

* On basis of first nine months.

A word of caution must be given as regards some of the earlier post-war figures, which are based on a re-calculation of quantities at 1913 prices, since the quality of certain goods covered by an identical designation may have changed to some extent during the period. The altered position of the Irish Free State, again, affects the returns for 1923 and 1924, though not to a material extent. The 1924 figures, based on the returns for the first nine months, may conceivably be modified when the whole year's totals

are available, owing to price changes which are now in progress, affecting important commodities, such as wheat, wool, and cotton. The "boom" years, 1919 and 1920, were remarkable on account of the extremely high prices recorded, the increase over 1913 being greater in the case of exports than of imports. The volume of trade was, however, much less than in the pre-war year, imports in 1919 falling short of the 1913 figure by 12 per cent., and exports by no less than 45 per cent. From 1921 onwards prices have been falling—much less rapidly, however, in the last two years, and import prices in 1924 showed a slight movement in the opposite direction. In 1921 the fall in prices was accompanied by a considerable decline in volume, but since then the quantity of both imports and exports has expanded fairly consistently. The present position may be summed up by saying that while our import trade has more than recovered its pre-war volume, exports have still a considerable lee-way to make up if our position is to be as favourable as in 1913. The disadvantages of the present position have been off-set to some extent by the higher relative prices we have been able to obtain for our exports since the war, but such a state of affairs is far from being an unmixed blessing.

THE OUTLOOK FOR SUGAR PRICES.

A CLOSE scrutiny of the world sugar position shows that the long period of high prices is drawing to a close, and that there is a reasonable prospect that next year markets will turn in favour of consumers. Indeed, it would be very surprising if users were not able to fill their requirements on terms more in line with the pre-war average cost of this important commodity than anything recorded since 1914. Probably another few months will elapse ere the prospects of much heavier Continental crops make their influence felt, and by that time another big Cuban crop of cane sugar will be coming on to the market. It is perfectly obvious to the careful student of this particular article of every-day consumption that such a combination will put the market to a very severe test, and the increase in supply will have the inevitable effect on prices unless there is a surprising expansion in the demand.

No matter which way the position is looked at, there is no denying the fact that the situation in regard to sugar has been greatly modified in favour of the consumer since the recent authoritative forecasts of the new Continental crops were made. Careful examination shows that the resources for the 1924-5 season promise to run well into pre-war figures in the case of the beet sugar production, and this suggests that the course of the market in the long run will have to be downwards in view of the much increased capacity for the production of cane sugar which has taken place in recent years in the leading cane-growing countries. Further, it is quite likely that such places as Cuba and Java will show during the coming season a further increase in their output. Reports from Cuba indicate that very liberal rains have fallen, and that the weather of late has been excellent for the growing cane. From this it may be deduced that the coming crop, the cutting of which will begin in December, should easily establish a new high record as regards the tonnage produced. It is, however, premature to expect the general market to be influenced by this possibility, as the American position is still more or less governed by the relative scarcity of sugar at the leading United States centres owing to the heavy consumption that has prevailed this year, estimated at well over 5½ million long tons. The American refiners are, as a matter of fact, faced with some little difficulty in securing adequate supplies of raw sugar, and they are relying on the comparatively small surplus of old-crop Cuban sugar to carry them over the remainder of the year. The American stocks at the present time are low, and this remark may also be applied to the supplies in this country. Proof of this may be seen in the diverting of a cargo of Cuban sugar intended for the United Kingdom to the American ports and the purchase of a fair quantity of German granulated sugar for shipment to the United States markets.

The delay that has occurred in bringing about an adjustment in the American markets, while the remainder of the Cuban crop remains in firm hands has failed, however, to stem the decided undercurrent of weakness that has developed in Europe, where chief attention is being centred upon the good prospects of the beet sugar crops. In spite of the scarcity of imported sugar offering on this side, the British refiners during the past month reduced their prices by 3s to 4s per cwt, but this notwithstanding the trade demand has been strictly confined to actual needs, buyers obviously holding off in anticipation of the freer circulation of Continental sugar towards the close of the present year. It is very significant that raw Continental beet sugar has been offering on this side for some weeks past on terms round about 17s per cwt f.o.b., and needless to say the home refiners have taken every advantage of this sugar, which is relatively cheaper by a good deal than the current cost of Cuban raw sugar as imported by America. The remarkable change that has taken place in the European beet industry may be gauged from the fact that Mr Licht's recent forecast of the total crops of 6,700,000 metric tons was followed a few weeks later by a revision which placed the prospective yield as high as 6,845,000 metric tons. This must be compared with the actual production of 5,065,334 metric tons, representing the output for the previous season, and the figures would indicate a big step forward. This season's production would, assuming that all goes well, be about 1,100,000 tons short of that secured during the one which preceded the war. The German yield for that period was well over 2,600,000 tons, whereas the crop this season is estimated at barely 1,500,000 tons. This estimate shows an increase of 340,000 tons against last season's return, according to Mr Licht's forecast. There has been very little alteration in the German sowings, which have had to be kept down under the adverse economic conditions, and no doubt the German beet growers have been very much discouraged by the poor remunerative results that were secured during the last season under conditions of Government control. There is every reason for believing that larger sowings will be made in the coming year for the next crop; thus it may be claimed that the complete restoration of the Continental beet industry is well in sight.

The most striking feature about the recuperation that has taken place already in the Continental crops is the astonishing advance made by Czecho-Slovakia. The production of that country has doubled in two seasons. The Czecho-Slovakian beet crop this season is estimated at 1,450,000 tons, which is practically equal to the German crop, and to be compared with well over a million tons for last season. This should give an exportable surplus of no fewer than 1,000,000 tons, as the domestic needs of Czecho-Slovakia are not likely to absorb more than 450,000 tons. Making allowance for a moderate further increase in the Cuban and Java crops, given a continuation of normal weather conditions in the growing areas, and allowing for the possibility of the European beet crops not turning out fully equal to anticipations, the world's total production of sugar for the current crop year should reach 21½ million tons, against 19,650,000 tons for the past season. On this basis the returns for the three seasons which preceded the war—which varied between 16,000,000 tons and 18,500,000 tons, will be substantially exceeded. Messrs. Willett and Gray, the well-known American trade authority, according to their last conservative estimate, put the increase in this season's world production at close on 1,600,000 tons. This would make the aggregate outturn about 21½ million tons, but their returns relating to the European beet crops will have to be revised in the light of the latest estimates from the recognised Continental experts. More recent news from the Continent states that the roots still in the soil are autumnal weather, and the figures given above will turn out to be approximately correct. The favourable comparison it is now possible to make with the pre-war sugar resources are extremely interesting, and they suggest that the time is coming when the European markets will be more independent of American speculative influences, notwithstanding the fact that the proportion of cane crops to the world's sugar production is much greater than it

was before 1914. The matter of the speedy restoration of the Continental beet industry is one that deserves the closest attention, having regard to the future of the world's commodity markets, and the influence upon the industry in this country. Summing up every point for and against the actual commodity, the prospects of cheaper sugar in the coming year are hopeful, and it is doubtful whether the United States will be able to influence world parities in the way she has done for several years.

THE AMERICAN PRESIDENTIAL CAMPAIGN.

(BY A CORRESPONDENT.)

WITH election day in the United States less than three weeks distant at the time of writing, the most experienced observers find the political visibility still distressingly low, but the devout partisans of the contending parties all profess serene confidence in their prospects, and produce impressive figures in confirmation of their optimism. The campaign has had all the usual complications of a three-cornered fight. The Democrats and the Progressives have, save in isolated patches of the country, tended to leave one another severely alone. Mr Davis, while confessing an admiration for Senator La Follette's services, has bewailed his strictures upon the Supreme Court, and Mr La Follette, while declaring that Mr. Davis is a highly estimable person, has regretted his hopeless subservience to Wall Street; but they have sedulously avoided any mutually destructive campaign of abuse and recrimination. Each of the opposition parties has reserved its main fire for the Republican administration and sought to take full advantage of the many joints in its armour which administrative corruption and misfeasance have exposed. The Teapot Dome episode which forced the resignation of two Cabinet Ministers, the scandal of the Veterans' Bureau, the admitted corruption of the Attorney-General's Department, and other seamy disclosures have revealed fields of official iniquity ready for the sickle of the reformer. The Republican party has, therefore, been on the defensive from the first, and since Mr Coolidge's platform gifts are not conspicuous, it has put the energetic and vivacious General Dawes in the forefront of the battle. General Dawes was in politics long before he was a banker; indeed the Controllorship of the Currency, which was the prelude to his banking career, came as a direct reward for his services to McKinley during the 1896 campaign. Therefore the game comes easily back to him, and he has the gift of forceful and picturesque speech. Up to date he has applied it chiefly to the verbal demolition of the Progressives. He has fastened upon Senator La Follette's proposal to draw the teeth of the Supreme Court in regard to its powers of veto upon Federal legislation, and has been appealing for a nation-wide rally to its defence, to all the strange fund of reverence for the Constitution which is implanted in the American bosom. Curtail the powers of the Supreme Court, he argues, and the waters will be let loose, liberty will be endangered, the sacred rights of property will be in constant peril at the hands of revolutionaries, and the very foundations of the Republic will crumble and decay. The open support of La Follette by the Socialist party has also given him another useful weapon, and he and his allies are denouncing La Follette as a red revolutionary (from which he is very distantly removed), and branding him as a complaisant ally of the Bolsheviks. But the supreme Republican card is the old prosperity and "full dinner-pail" cry. Strenuous efforts are being made to persuade not only the business and professional classes, but also the workers that whereas the re-election of Coolidge will mean a renewed burst of great prosperity, his defeat will spell immediate commercial depression and serious unemployment. Undoubtedly the rapid rise in grain prices has been a very fortunate development for the Republicans, and they are seeking in devious ways, which scarcely bear examination, to claim credit for it. Some play is also being made with recent events at Geneva, and it is pointed out that if Republican wisdom had not kept the United States out of the League

Every Description of Home and Foreign Banking Business transacted

in 1919 its withdrawal would now have become imperative owing to the attitude of Japan and the new protocol.

Mr Davis, the Democratic candidate, has been making very able speeches, and has probably made many converts among his audiences, but in a vast country like the United States the platform appeal is limited in its effect. He has with great courage continued to advocate American adherence to the League, but his party and his chief associates are less enthusiastic about it, and prefer to concentrate upon the domestic misdeeds of the Republicans. Mr Davis has very sound fiscal views, and his arraignment of the iniquities of the Fordney-McCumber tariff has been very effective, but the tariff is not a serious issue in the present contest. Prohibition and the Ku Klux Klan are important local issues in many States, but have no national significance. The Democrats promise better and more honest government, but they make no suggestions of radical changes in the administrative system or economic structure of the country. On the other hand Senator La Follette and his allies boldly assert that their goal is the rescue of the country from the monopolistic and oppressive grip of a group of powerful privileged interests which, working their will through the politicians of the two old parties, have controlled the destinies of the Republic for half a century. They have not followed the example of Roosevelt's Progressive party in 1912, and propounded an extensive and definite programme of reform, but content themselves with declaring that the first task is to change the spirit and personnel of the administration at Washington, and that the reforms will follow. Senator La Follette has now found himself able to make a series of speeches at important centres, and at present he is occupying the limelight with his vigorous attacks upon the existing political and economic order. The Republicans are charging that a secret bargain has been arrived at whereby if the election is thrown to Congress the Democrats will be given the Presidency and all the power and patronage associated with it under promise of pursuing a radical programme; but the charge is strenuously denied on both sides. However, there is evidence of some local bargaining in different States, especially where the Progressives are running no candidates for the Houses of Congress. Supporters of La Follette will support Democratic candidates for the Senate and House of Representatives, and expect that their candidate as a *quid pro quo* will be backed by the beneficiaries at the expense of Davis. The Republicans are devoting much energy to convincing conservative Democrats that Mr Coolidge is the only effective bulwark against menacing forces of darkness; but it is a difficult task. It is perhaps easier than the accurate appraisal of party prospects for November 4th, but out of the wealth of material offered by various appraisers in the American Press some forecast may be attempted.

President Coolidge naturally finds his greatest strength in the New England tier of States and the central industrial regions, where the stiff Protectionism of the Fordney-McCumber tariff is highly palatable; New England also has a special partiality for him as native son. Accordingly, there may be credited with reasonable certainty to the Republican column the six New England States with their aggregate of 42 votes in the Electoral College, and likewise New Jersey (14), Pennsylvania (38), Ohio (24), Indiana (15), Michigan (15), and Illinois (29). Ohio and Indiana are less certainly Republican than the others, but the intervention of La Follette will probably enable the

Republicans to carry them by a minority vote. Outside of these areas, Oregon is a traditionally Republican State, and Utah and Wyoming, in their anxiety to preserve the high duties on sugar and wool respectively, are likely to yield substantial majorities for Coolidge. Therefore, the Republican quota of safe votes can be placed at about 189, which is still 77 short of the required moiety of the Electoral College.

Mr Davis, the Democratic candidate, on his part, is equally certain of 139 votes from a dozen States located in the area known as the "Solid South." Of this dozen, only two (Tennessee and Kentucky) have ever deviated since the Civil War from their steadfast allegiance to the Democratic Party. He has also excellent prospects in a group of half-a-dozen designated "border States," because they impinge upon the "Solid South," and have many economic and social contacts with it. Local sentiment will give him the eight votes of his home State of West Virginia, and on the same side should be found Maryland (8), Missouri (18), Oklahoma (10), Arizona (3), Nevada (3), which would add altogether 50 votes to Mr Davis's total, and bring him to a parity with Mr Coolidge. Leaving the West, with its hundred odd votes, out of consideration for the moment, the possession of a lead in the East and South will mainly depend upon the issue of the crucial contest in the great State of New York, with its 45 votes. It is generally accepted that it will go to one of the two old parties like the other Eastern States, and the one which captures it will thereby be brought within a measurable distance of a clear majority in the Electoral College. In the past, New York has been very fickle in its political allegiance; the city itself usually gives a large Democratic majority, but the hinterland is staunchly Republican. The Democrats have a great asset in Governor "Al" Smith, who was a formidable candidate for the presidential nomination of his party, and is now running again for his present office, and is expected to defeat Theodore Roosevelt, Jr., the Republican candidate, for the Governorship. The calculation of the Democrats is that Governor Smith's popularity and skill as a campaigner will carry their presidential ticket to victory in New York; but the Republicans aver that thousands of working-class voters who will support Governor Smith will mark their Presidential ballot for La Follette and throw the State's vote to Coolidge. But there is one vital difference in the position of the Republicans and the Democrats. Whereas the former have some prospect, if they carried New York, of making up the balance of the required 266 votes from the region known as the West, the Democrats can cherish no such hope. In many Western States the Democratic Party has suffered wholesale erosion through the attraction of the voters which normally support it to the Progressive movement, and only the skeleton of an organisation remains. In the West the only serious battle is between Coolidge and La Follette, and, therefore, even if the Democrats carried New York, it is difficult to see how Mr Davis, unless aided by supernatural luck or an unexpected landslide, can secure more than 240 votes in the College.

But unless the portents deceive, President Coolidge's chances of a clear majority are not markedly better. Even if he carried New York, in addition to the States allocated to him, he would still be some 30 votes short of the clear majority, and it will be a very hard task to wrest this number from the West in its present mood. To La Follette his opponents concede Wisconsin (13), Minnesota (12), N. Dakota (5), Montana (4), and Washington (7), and his chances in Iowa (13), Nebraska (8), Kansas (10), and S. Dakota (5) are rated excellent. Iowa is a pivotal State, which has usually given a large Republican majority, but, to-day, candid Republicans regard it as almost lost beyond hope to the Progressives, since Senator Brookhart, a Republican who is seeking re-election, broke into open rebellion, attacked General Dawes for his complicity in a strange banking transaction in Chicago, demanding his resignation as Vice-Presidential candidate, and assailed President Coolidge as the subservient tool of Wall street. Brookhart, who is a prominent agrarian leader, has been repudiated by his party, and is now ranked as an ally of La Follette; he commands, however, great influence with the farmers of

the Middle-West, and the prediction is freely made that his open defection will cost the Republicans not only Iowa, but also the adjacent States of Nebraska, Kansas, and S. Dakota, which are similar in economic structure and political tendencies to Iowa. La Follette would be the beneficiary of this insurgency, and such a development would give him 77 out of the hundred odd votes available in the West. Even if he failed to pick up some more from California (13), Colorado (6), and Idaho (4), he would be in a position to veto the election of Coolidge and throw the issue to Congress. To-day, Coolidge can only rely with any certainty upon three small States in the West, and half-a-dozen are clearly hostile; to possess a chance of victory, he must carry the majority of a group of Western States, where the odds are decidedly against him, and the task seems almost beyond his power.

Indeed, it is noticeable that even zealous Republican partisans do not claim for their candidate many more than 300 votes in the Electoral College, and some, even including such doubtful States as New York and California, pitch their estimate as low as 290; even 300 leaves an ominously narrow margin of safety. Colonel George Harvey, lately American Ambassador in London, who enjoys a great reputation as a political prophet, has publicly proclaimed his opinion that President Coolidge will fall 48 votes short of a clear majority unless a remarkable change in public opinion takes place before election, and Republican papers and orators have been basing on this an appeal to the electors to vote Republican, and thereby avert the perils and confusions of an election by Congress. The Democrats and Progressives, however, have available the damaging retort that under no circumstances is the Republican Party likely to control Congress, and that the re-election of Coolidge simply means government by deadlock and worse confusion.

Notes of the Week.

Some Election Statistics.—The election figures are as yet incomplete, and we must defer until next week a detailed analysis of them. But it is possible now to set out, for the 600 seats for which results have been declared, the main statistics and their meaning. A summary of votes given and seats obtained reads as follows:—

	Conservative.	Liberal.	Labour.	Other Parties.
Aggregate votes.....	7,367,569 ..	2,897,193 ..	5,471,180 ..	181,040
Seats.....	403 ..	36 ..	150 ..	11
Percentage of votes obtained	46.1 % ..	18.1 % ..	34.2 % ..	1.6 %
Percentage of seats obtained	67.2 % ..	6 % ..	25 % ..	1.8 %

From this it will be seen that our present system of voting has been of very great assistance to the Conservatives, and has worked to the great detriment of Liberals and Labour. Indeed, if seats were in strict proportion to aggregate votes, the Liberal party would have obtained more than three times as many seats as actually fall to their lot. Another striking point in the statistics is the heavy polling. Leaving aside Northern Ireland and the uncontested seats, the total electorate in the 600 constituencies was 19,948,798, as compared with 19,173,754, an increase of 775,044. But the total number of votes recorded rose from 14,186,438 to 16,016,992, an increase of 1,830,554. The poll was therefore around the 80 per cent. level for the whole country—an unusually high proportion. The movements in the polls of the various parties as compared with a year ago are as follows:—Conservatives, + 2,007,879; Labour, + 1,122,801; Liberals - 1,354,380. For those who like to trace the fortunes of the parties a little further back, the following comparison of representations in the House of Commons may be of interest:—

	At Dissolution.	Elected
	1922.	Oct. 1924 (a)
Conservative ..	505	403
Coalition	396	258
Liberal	35	36
Labour	75	150
Others	92	11

* Including Irish members, of whom 73 were Sinn Féiners.
(a) 15 results to be declared.

If we deduct the 50 Coalition Liberals from the Conservative Coalition figure for 1923, we get at that time a Conservative total of 346. Mr Baldwin's plunge robbed him of 88 seats. Mr MacDonald's plunge has restored to him these 88 seats and 57 more. The Liberals are reduced practically to the figure to which the Independent Liberals had climbed through by-election victories by 1922 after the terrific rout of 1918.

Security Prices and the Election.—The monthly calculation of the market valuation of securities conducted by the *Bankers' Magazine*, though only taking us to October 20th, shows the remarkable difference between the effects of an approaching Election upon security prices this year and in December, 1923. We set out below the indices for the pre-election months of 1923 and 1924:—

	Fixed Interest.	Variable Dividend.	Total.
1923.			
October	114.8	117.0	115.5
November	111.8	117.1	113.6
1924.			
September	113.1	120.7	115.6
October	113.5	121.9	116.2

The Election of 1923 was held in the first week of December, and the bulk of the fall in the total during November was due to the drop in gilt-edged securities. This year, up to October 20th, there has been a substantial rise in both sections. In the month ended October 20, 1924, the market value of 365 representative securities increased by £33,723,000, or 0.5 per cent., fixed interest stocks rising by £11,857,000, or 0.3 per cent., and variable dividend securities by £21,866,000, or 1.0 per cent. British and Indian Funds alone rose in market value by £8,335,000, or 0.2 per cent. From October 20th onward there was a general hardening tendency, which was followed on Thursday, when the nature of the Election results became known, by a sharp upward movement all round, as may be seen from the following table of prices at various dates of a few representative securities:—

	Lowest, 1924.	Price Oct. 1, 1924.	Price Oct. 28, 1924.	Price Oct. 30, 1924.	Price Oct. 31, 1924.
5% War Loan	98½	102½	100½	100½	101½
3% Local Loans	62½	66½	66½	67½	67½
3½% Conversion Loan ..	74½	77½	78½	79½	79½
4% Funding Loan	84½	89½	90	90½	91
India 3%	52½	55	56	56½	58
London, Midland, and					
Scottish, Ord.	94½	97	100½	102	102½
Watney, Combe, Reid,					
Def. Stock	161½	251½	247½	265½	265½
Vickers, Ord., £1	8/3	9/3	10/6	11/-	12/-
Fine Cotton Spinners, £1	2½	2½	2½	2½	2½

Five per cent. War Loan was quoted ex-dividend on Tuesday, and this brought in buyers at a price which looked relatively cheap. This week's sharp rise has sent prices to a figure which exceeds in many cases the highest hitherto recorded this year.

Mexico and Great Britain.—A correspondent writes:—President Obregon's Government has retaliated on Great Britain for her postponement of recognition in an unforeseen but characteristic fashion. All the Mexican Consulates in Great Britain will be closed henceforth, and the officials are leaving the country, save one, who remains as "archivist"—a Mexican Mr Cummins. The British Consuls in Mexico, however, will be allowed to remain if our Government should so decide. The present Mexican Government is ultra-Nationalist and self-confident, and President Calles, so far as can be judged, will adopt the same attitude. Moreover, his visit to Berlin has brought him under the influence of the German commercial classes, who are doubtless not sorry to see a hindrance imposed to the competition of British goods. The decision, probably owing to the elections, has attracted little attention in the English Press, and Mexican securities have not been much affected. British goods, as has been pointed out, can still reach Mexico, though the Customs formalities will be more complicated, and their cost will be shifted to the importer. But the present interruption cannot last long. A strong feel-

BANK OF ATHENS

Paid-up Capital
Drs. 72,000,000

With offices in all the principal towns in Greece, Egypt, Cyprus and Crete, the Bank extends exceptional facilities for Export and Import Trade between Great Britain and the Near East generally.

ing has repeatedly manifested itself in the City in favour of the full resumption of diplomatic and commercial relations. British interests in Mexican undertakings are large, and must remain so; and the growing dependence of Mexico on the United States must increase the American readiness to take over Mexican securities, while a stable Mexican Government will come to a saner view of the interests of Mexican trade.

The Chinese Civil War.—In Northern China the situation changes almost daily, but its salient feature is the failure of the efforts of Feng Yu-hsiang, "the Christian general," to stop the war. Wu Pei-fu, transferred to a command in Tibet by a decree which President Tsao-Kun was apparently kept in office to sign, has made preparations to recapture Peking, besides holding back Chang Tso-lin's advance. He is said by his adherents to be supported by the Tuchuns and armies of six or seven provinces, and by virtually the whole Chinese fleet, though its support cannot help him much. Troops from these armies are stated to be moving northwards to support him, and he himself is directing operations from Tientsin. Meanwhile, however, his troops on the Shanhaikwan front have been outflanked and taken in rear by a section of Chang Tso-lin's army, which now occupies Langchow, about 100 miles south-east of Shanhaikwan, and 120 miles from Tientsin, on the railway connecting these two points. Wu Pei-fu, however, had already moved most of his troops from Shanhaikwan in time to save them; so they are still available to resist Chang Tso-lin's advance. President Tsao-Kun has now resigned—the report that he had done so last week was premature—but Feng Yu-hsiang is maintaining the Peking Cabinet in office pending the arrival of Tuan Chi-jui, ex-Premier and leader of the Anfu party, who may be the head of a new Government. Feng Yu-hsiang has offered large rewards for Wu Pei-fu's capture or assassination, thereby losing what was left of his character as a Christian general. Chang Tso-lin's relations with Feng Yu-hsiang are doubtful, but it seems clear that, whichever side wins, he means to maintain his hold on Manchuria. Meanwhile, the telegraph and telephone lines from Peking are open, and foreigners are freely going in and out. Arrangements are being made to defend the Legation quarter, and a small Japanese force is guarding the railway to Tientsin and a zone around it, in conformity with the agreement made after the Boxer rising of 1900. No Power proposes to intervene further than may be necessary to protect the lives and property of its subjects, and the Chinese preference of negotiation to fighting gives hope that some sort of

settlement may be reached—though the individualism of the Tuchuns, and the weakness of the politicians, indicate that it may not be lasting.

Another Estimate of National Income.—At his address to the Institution of Civil Engineers on Tuesday last on "The Economic Position of Great Britain," Mr Edgar Crammond, in reviewing the principal economic changes which have taken place since 1914, put forward some estimates of the movements in the total national income. Starting from a nominal amount of £2,400 millions in 1914, he estimated that it rose to its maximum of about £4,600 millions in 1920, and after falling below £3,000 millions in 1922, rose to £3,300 millions in 1923. These figures are similar for most years to our estimates published in the *Economist* of October 24th, the principal difference being that for 1920, our figure for that year being £5,225 millions. Mr Crammond also gave estimates of national expenditure for 1923, and compared it with a previous estimate for the year 1907. According to these figures, national services required 19.4 per cent. of the national income in 1923, as against 8.5 per cent. in 1907. The amount going to depreciation and maintenance of capital and to new investments at home and abroad he puts at only 9.7 per cent. of the total, as against 23.7 per cent. for 1907. This bears out our suggestion in last week's issue that the savings of the nation are now on a very much smaller scale than before the war.

American Cotton Crop.—Our Manchester correspondent writes:—The Department of Commerce of the United States Government has published a further report on the cotton crop for this season, the condition on October 16th being given as 54.7 per cent., against 53.5 per cent. on October 1st, and 55.4 per cent. on September 16th. No statement was issued at a corresponding date last year, but on October 25, 1923, the condition was given as 47.8 per cent. After allowing 4.56 per cent. for abandoned acreage, the indicated crop is 12,675,000 bales, exclusive of linters, against 12,499,000 bales a fortnight earlier, and 10,248,000 bales on October 25, 1923. According to the Government, during the fortnight warm and dry weather was exceptionally favourable to the plants, especially in the eastern sections of the belt. Picking and ginning are progressing rapidly. Up to October 17th a total of 7,600,000 bales of cotton has been ginned, compared with 6,409,000 bales at the same time last year. On these statistics being published there was a fall in prices in the New York market, but a little later the loss was recovered, chiefly owing to extensive trade buying at the lower prices. The estimates of the United States Government relating to the cotton crop are generally conservative, and most people expect a yield of about 13,000,000 bales, exclusive of linters, as compared with 10,200,000 bales for last season.

The Prospects for Stock Exchange Markets.—Our Stock Exchange correspondent writes:—The dust of political conflict aroused by the intensive General Election campaign will subside the more quickly by reason of the fierceness with which the storm blew in every conceivable direction; the temporary influences that the Election exercised over Stock Exchange prices will now give place to a calmer and more settled consideration of the outlook. Instead of markets being dull and dispirited for lack of attention during the campaign, the spirit of financial enterprise waxed, rather than waned, during the three weeks that led up to the Election. Many Stock Exchange members have enjoyed the busiest month which this year has brought them up to the present. November is regarded as a time in which investment and speculation should be reasonably active, and, from the purely investment point of view, the prospects indicate that the new month which starts to-day is not likely to fall short of expectations in the way of maintaining seasonal tradition. The pressure to buy gilt-edged stocks is remarkable, and the Treasury must be observing with quiet satisfaction the advance in such prices, since this will enable the successful carrying on of its policy to induce holders of the 5 per cent. War Loan to exchange their stock into the 4½ per

cent. Conversion Loan. This latter pays £4 12s 6d per cent. on the money, or 3s 6d per cent. more than the longer-dated 3½ per cent. issue. Other British Government securities, Funding, Victory, Local Loans, &c., yield barely 4½ per cent. There are few Colonial Trustee stocks that pay the round 5 per cent. on the money, and the Union of South Africa's offer of the large amount of eight millions stock in 5 per cents. at 99½ met with a remarkably flattering response, while the recently-offered Queensland Fives, which came out at 97½, stand at 3 premium already. In the Home Railway list, the gilt-edged debentures yield barely 4½ per cent.; the best-class preferences just under 5 per cent. In the groups of commercial and industrial companies, some of the safest preferences return no more than 5 to 5½ per cent. on the money. In spite of the continual new issues that are being made—some publicly and others semi-privately—the demand from the investor is sufficient to absorb practically everything which is offered. The Stock Exchange broker knows the difficulty that exists for finding really good stock to pay 6 per cent. on the money with safety, and, although special circumstances obtain in the rubber list, expectation being fastened on future prospects, the yields now obtainable from the leading shares in that department are astonishingly small considering the speculative character of the trade. These various examples are quoted in order to show how ready investment is at the present time to take sound stock, and the same line of country is perceptible amongst people who favour industrial ordinary shares. Such companies as Courtaulds and Imperial Tobacco, with their huge following of shareholders, are as popular as ever, in spite of the modest return which the shares offer at present prices. Fortunately, the public predilection for purchases of industrials is strongly marked in favour of solid concerns. During the past six months there has been very little disposition to buy mere gambling counters, and, without wishing to disparage good-class mining shares, it is worth mentioning that the speculative investor prefers to put his money into companies whose shares offer better security than can be obtained from mines. For at least two years the impression has prevailed that Stock Exchange prices are bound to give way as soon as industry revives sufficiently to demand capital for its own uses, and the same argument is heard to-day in protest against the levels to which gilt-edged and many other stocks and shares have attained. Nevertheless, the Stock Exchange markets give no indication of any setback in the prices of genuine investments, and, with the winter at hand, the chance of a sudden capital-demanding revival in the national industries is not likely to check the flow of money into Stock Exchange securities.

The Revised York-Antwerp Rules.—The revision and enlargement of the York-Antwerp Rules, 1890, which, as recorded in the *Economist* of September 20th, was carried out at the Stockholm Conference of the International Law Association, seems to be meeting with the approval of those who incorporate these rules of general average in their shipping and marine insurance contracts. The lead in the matter was given, after the Stockholm Conference had submitted the amended Rules for the consideration of commercial and shipping interests in general, by France. The Paris underwriters, as represented by the Comité des Assureurs Maritimes de Paris, passed the first resolution in favour of the adoption of the York-Antwerp Rules, 1924. Similar action was taken by the French shipowners, the Conseil du Comité Central des Armateurs de France a few days later recommending its members to replace the date 1890 by the date 1924 in charter-parties and bills of lading. A further resolution by a body representative of all the underwriters who do business in France followed. In the meantime, no steps were taken on this side of the Channel, except by the British National Committee of the International Chamber of Commerce, which referred the matter for investigation to a sub-committee. On Thursday last, however, the Committee of Lloyd's Underwriters' Association expressed their approval of the new Rules. The Institute of London Underwriters is also understood to be taking the matter into consideration, and it may be anticipated further that

the organisations representative of shipowners and of various bodies of commercial men will shortly make known their views. The "Institute clauses" commonly incorporated in marine insurance documents will need some revision of wording, besides the insertion of the date 1924 in the title of the Rules, and it will probably be convenient that some definite date should be adopted as from which the use of the new Rules should become general, though, of course, it is already open to any contracting parties to incorporate them at any time as part of the terms of their contract. The reference hitherto has been, in many instances, to "the York-Antwerp Rules," without naming any date by way of more complete identification. Now that a revised version, denoted by the date "1924" as part of the title, has become current, it will certainly be desirable, for the avoidance of doubt and disputes, that the full title, including the year, should be used in any incorporation of the Rules by reference.

Brewing and Barley Prospects.—An agricultural correspondent writes:—To-day the Barley and Brewers' Exhibition opens at Islington, remaining open till Friday next. The occasion, which recurs annually, is one for much debate and consideration as to the area to be sown with barley for the forthcoming year. On the present outlook it is possible to encourage sowings. The consumption of beer in Great Britain is not diminishing, and, with increased economic stability, is likely to improve. On the Continent such consumption is increasing. The Latin countries are drinking beer more and more every year. Continental exports of malting barley to Great Britain in 1925 are likely to be quite trivial, for while Czecho-Slovakia and Poland increase their production, demand anticipates this, and German breweries book the produce in advance. Anatolia, which once took the International Barley Prize at this same show (the exhibit of English growers in N.W. Anatolia, not far from the site of Troy!), has an extent of fit and friable soil, but since the Greco-Turkish War all progressive agriculture has ceased. The United States' barley-growers have been more or less converted by prohibition into cultivators of low-grade feed for pigs. They used to grow 448 lbs barley, aiming at 20 bushels per acre and 15s per cwt. They now grow 384 lbs barley, aiming at 28 bushels, to balance a fall in price to 10s per cwt. On a broad view of agriculture, there is a net decline from 5 to 4, only, but in Great Britain malting barley imports alone need be considered, and America in 1925 will send us no appreciable quantity of malting barley. The Canadian Dominion is in a state of anarchy over prohibition, and until the "wets" or the "dries" obtain, either of them, a decisive victory, malting barley cultivation will languish. In 1924 Canada has sent us practically no malting barley. South America sends a small quota of Chilean, worth 20s to 24s per cwt, and most highly esteemed, but no English grower need be concerned over these few and precious quality consignments. Argentina grows feeding barley almost exclusively. Australia and New Zealand can grow splendid malting barley, but they only produce very sparingly. Good barley needs laborious tillage, and shoulder work is not at a premium in Australasia. The British grower for the maltster has no occasion to occupy himself with barley from this quarter. The conclusion, therefore, is that no crop capable of yielding well on British soil affords at the present moment a better prospect of paying a good dividend than malting barley. This crop exacts little or no manure, but "lives" by its three ploughings, its good harrowing, and its careful threshing. These things depend on agricultural labour, which at the present time in Great Britain is plentiful, efficient, and, alas! almost too cheap.

Cotton Mill Shares.—Our Manchester correspondent writes:—Increasing activity has shown itself in the cotton mill share market in Oldham and Manchester during the past week. Dealings have been on a big scale, and nearly equal to the boom of 1919-20. The extensive buying has been due to the distinctly brighter outlook for the industry, which has been confirmed by the decision of the Master Spinners' Federation to recommend the owners of mills using American cotton to work

longer hours. In your issue of September 20th you published a table of comparative share quotations. Below is given the same table with the current quotations for the shares. It should be mentioned that in each case the shares are of the nominal value of £1, on which 10s has been paid up:—

	July 30, 1924.	Sept. 17, 1924.	Oct. 29, 1924.
Argyll.....	2 3 .. 3 7½ .. 8 4½		
Belgian.....	0 7½ .. 1 6 .. 3 3		
Boundary.....	1 3 .. 3 1½ .. 5 0		
Briar.....	2 3 .. 4 6 .. 6 1½		
Butterworth Hall.....	1 1½ .. 2 4½ .. 4 4½		
Cairo.....	5 0 .. 6 9 .. 8 4½		
Cavendish.....	0 6 .. 1 7½ .. 4 0		
Commercial.....	2 9 .. 4 9 .. 6 6		
Crown.....	4 6 .. 6 3 .. 7 10½		
Fern.....	5 1½ .. 7 6 .. 9 6		
Ivy.....	1 7½ .. 3 0 .. 4 0		
Melbourne.....	5 3 .. 6 4½ .. 8 6		
Monarch.....	5 7½ .. 7 7½ .. 8 9		
Ram.....	1 4½ .. 2 7½ .. 5 7½		
Swan.....	8 10½ .. 10 3 .. 15 9		
Warwick.....	2 4½ .. 3 4½ .. 6 4½		

The rise in certain instances has been striking, and some dealers who bought heavily rather more than a month ago have been able to secure big profits. It is feared in some quarters that the upward movement in values is being overdone, but it must be remembered that many of these companies, after running their mills at a loss for three years, are now selling their production at a fair profit. In numerous instances substantial adverse balances will have to be removed before dividends can be paid, but the outlook from the point of view of shareholders is undoubtedly healthier than for a long time back.

Dalgely's Progress.—Dalgely and Co., Limited, continue to follow their prosperous course. This well-known firm of Australasian merchants are able to present record figures in their accounts for the year ended June 30, 1924. Shareholders are rewarded by having a distribution of 17 per cent., free of tax, as against 15 per cent. a year ago. This is made up by the usual dividend of 10 per cent., and a bonus of 7s per share, which is equal to another 7 per cent. A summary of past years' results is set out below:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Deben- ture Interest.	Prof. Div.	Ord. Div.	Rate.	Reserve, £s.	Carried Forward.
1906....	£ 371,591	£ 148,171	£ 114,439	£ ..	£ 70,000	7	£ 40,000	£ 55,381
1910....	542,534	198,362	122,364	25,000	80,000	8	110,000	77,579

1920....	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921....	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112
1922....	775,660	408,280	114,591	25,000	150,000	15	60,000	101,901
1923....	920,977	552,587	114,228	25,000	150,000	15	65,000	116,063
1924....	986,979	551,039	111,952	25,000	170,000	17	75,000	170,052

Overhead expenses are £392,493, as against £380,190 for the previous year. Interest absorbs £111,952, as compared with £114,228, while taxation is slightly lower at £158,545, as against £172,397. The reduction here is on account of English taxation. Australasian taxation is £68,943, as against comparative figures of £60,341, a slight increase, while home taxation is down to £89,603, as compared with £112,055. The balance-sheet will be found fully analysed in our usual column. It is to be noticed that cash at £812,470 is lower, while bills, debtors and advances are higher. The report states that seasonal conditions in Australia for the past year have, on the whole, been favourable. The North-West of West Australia suffered, and is still suffering, from a very severe drought, but the rainfall in the rest of the State, and in the other States of the Commonwealth, may be described as satisfactory. Splendid rains have recently fallen over nearly the whole continent, and a bounteous harvest seems assured, whilst the wool clip promises to show a substantial increase over last year. Prices for all the commodities in which the company is interested have ruled on a high

level, and the community generally should be prospering. In New Zealand, broadly speaking, the season has been good. Prices for lamb have been maintained, whilst beef has recently shown a welcome improvement. Dairy produce exports have shown excellent returns. The exchange position still continues to be most unsatisfactory, and, although measures have been taken in Australia to extend the selling season, wool buyers may have great difficulty in arranging adequate credit facilities. It has been announced, however, by the chairman of the Commonwealth Bank that the clip and crop will be lifted without undue dislocation, as a satisfactory arrangement has been come to by all the Australian banks.

Castner-Kellner Alkali.—The directors are able to show a record in the profits of the Castner-Kellner Alkali Company, Limited, for the year ended September 30, 1923. The report vouchsafes no information as to the year's trading, or as to the reason for the improvement, but from the table below it will be seen that in the past few years there have been considerable fluctuations in earnings:—

	Profit.	Debt Interest.	Renewal and Depreciation.	Reserve and Carry Forward.	Dividend.
	£	£	£	£	%
1905	52,358	10,153	23,205	1,000	18,000
1909	134,154	9,313	35,000	26,841	63,000
1910	164,554	8,986	32,500	44,318	78,750
1911	178,853	8,789	32,500	47,564	90,000
1912	177,063	8,682	32,500	45,880	90,000
1913	172,348	8,372	32,500	29,382	106,094
1914	174,150	8,275	32,500	21,917	116,458
1915	260,805	8,056	50,000	52,749	150,000
1916	262,208	7,706	50,000	23,252	181,250
1917	263,322	7,648	50,000	45,078	200,000
1918	261,339	7,598	50,000	48,819	200,000
1919	190,655	7,598	50,000	51,876	130,000
1920	283,854	7,598	60,000	48,132	220,000
1921	153,086	7,512	50,000	13,706	130,000
1922	249,225	7,436	nil	55,494	200,000
1923	272,990	7,351	nil	101,331	200,000
1924	297,343	7,351	nil	111,331	200,000

The report states that the directors consider the depreciation reserve account, now standing at £737,500, is at the present time ample, and therefore they do not propose to add to it on this occasion. But £75,000 has been allocated to a suspense account. We have previously drawn attention to the fact that this balance-sheet might show a more liquid position. Total assets amount to £2,890,734. Out of this there is a "cash" item of £49,224, bills receivable £1,042, debtors £169,272, against creditors £678,782, a reserve investment account of £79,364, and "other investments" £227,659, which may or may not represent marketable securities. The analysed balance-sheet will be found on a later page.

Broken Hill Proprietary.—Our mining correspondent writes:—The affairs of this important Australian enterprise have come to the front during the past week in connection with the receipt of the full text of the annual report and the proceedings at the meeting, as well as the news of a possible arrangement with Vickers, Limited. In regard to the latter, the general manager of the Proprietary company, at a luncheon given in Sydney, announced that Vickers had offered to associate with the company for the purpose of the manufacture of armour plate and shells at its Newcastle works (N.S.W.). From this it would appear that the scheme is as yet quite in the tentative stage; still, the statement exerted a favourable influence upon the market price of the shares. The actual report and accounts, of course, enable a better comparison to be made with the results of 1922-23. The balance brought in from working account figures at £529,800, as against only £157,700, and this was supplemented by £149,300 "taxes over provided and refunds," as well as by £15,000 law costs put back. The great bulk of these two items was swallowed up by a special depreciation allowance; nevertheless, a net profit remained of £279,300 in place of a loss of £106,100. Then £100,000 taken from reserve last year was replaced, leaving £201,200 to be carried forward. Thus the way has been cleared for the resumption of dividends. By further redemptions, the "A" debentures first series have been reduced to £296,500, the second

series to £223,900, and the "B" debentures to £1,255,800. The surplus of cash assets over liabilities (excluding the debentures) amounts to rather more than £1,000,000. In previous years, operations at the steel works have been interrupted by disputes amongst transport and other workers; during the twelve months ended April 30, 1924, continuity was obtained in all departments. Hence a noteworthy expansion occurred in the output—not only as compared with 1922-23, which suffered in a particular degree from labour trouble, but also as compared with 1921-22. In addition, work—on somewhat changed lines—was resumed at Broken Hill, where it had practically been in abeyance since 1919. The shareholders will doubtless note with satisfaction that the demand for steel is such as to impel the erection of two open-hearth furnaces, supplementary to the three in operation. In the course of his address at the meeting, the chairman of the company, dealing with the question of competition, said: "One semi-finished product being imported into England is steel wire rods. These subsequently are drawn into wire and wire products. About 25 per cent. of British manufacture is added to these dumped Continental rods, and the products are, in turn, imported into Australia under the British Preferential Tariff." A pointed illustration of the difficulties attendant upon protection!

Sherwood Starr.—From the low level of 2½ established earlier in the year, the shares of this Rhodesian enterprise have lately advanced to well over £4. In part the movement has been due to the expanding profits, and in part to the expectation that the report to June 30th would make a good showing. As crushing did not commence until March last, the earnings naturally do not run into big figures; the net profit amounts to £9,700, of which £6,000 is placed to reserve. In some quarters an interim dividend is hoped for in December. The ore reserves are estimated at 60,700 tons, average value, 22.3 dwts. The quantity represents about 2½ years' supply for the mill at the current rate of output. Without going into technical details, the "profit in sight" may be stated at some £180,000. Consequently, a purchaser of the shares at present price would be paying about £2 5s for the possibilities of the future. It seems quite enough, especially having regard to the erratic nature of the deposits in Rhodesia.

Oversea Correspondence.

UNITED STATES.—FOREIGN TRADE—AN INVESTMENT TRUST ORGANISED—EUROPEAN LOANS — PROPOSED RAILROAD CONSOLIDATIONS — CRUDE RUBBER ADVANCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 21.

AMERICAN export trade showed an abnormal increase in September. According to Department of Commerce figures, the total value of exports was \$427,000,000, representing a gain of \$97,000,000, or nearly 30 per cent. over August of this year, and of 12 per cent. over September a year ago. The total is slightly larger than that for December, 1923, when export trade reached the greatest value recorded since February, 1921, while the increase over August is the largest reported for any month since 1920. The big gain last month probably reflects the unusually heavy movement of grain to Europe, principally wheat. Imports also increased, the total value amounting to \$285,000,000, or 12 per cent. more than in August, and also 12 per cent. above September, 1923, but considerably below the monthly totals from October, 1923, to May, 1924. The September returns show that gold imports declined to the lowest monthly total of this year, aggregating only \$6,550,000, as against \$27,800,000 in September of last year. American export and import trade combined, Secretary of Commerce Hoover says, shows an increase of about 30 per cent. over pre-war figures, representing roughly a 40 per cent. gain in imports and 20 per cent.

in exports; this, he believes, is a greater quantitative increase over pre-war totals than is shown by any other country. These figures, he remarks, seem to indicate that the United States is taking a larger position in the world's foreign trade, and this position has been improving in the last three years.

Organisation of a \$30,000,000 investment trust, known as the United States and Foreign Securities Corporation, has just been completed by a group of New York bankers and associates. The new concern is patterned after the investment trusts which have long been in operation in England and on the Continent, and is the first undertaking of its kind in the American market. It has been financed through the public offering of 6 per cent. cumulative first preferred stock at \$100 a share, with a bonus of one share of common stock with each share of first preferred. Its capitalisation consists of 250,000 shares of 6 per cent. cumulative first preferred, 50,000 shares of 6 per cent. cumulative second preferred, and 1,000,000 shares of common, all of no par value. The entire offering was quickly taken, subscription books being closed almost immediately after the formal opening. The corporation's business will be international in scope, buying diversified securities and paying dividends from the return on such holdings. The board of directors includes prominent bankers, trust company officials, and industrialists in leading business and financial centres of this country, including New York, Chicago, Cleveland, and San Francisco. Some of the bankers identified with the recently formed American and Continental Corporation are also interested in this new enterprise, but the only connection between these two corporations, it is said, will be the ownership of about 25 per cent. of the stock of the American and Continental by the investment trust corporation. The former was created to carry on a foreign and international banking business exclusively, with Germany as its first field of operations, whereas the United States and Foreign Securities Corporation will be more strictly an investing institution, that is, its principal function will be to invest its funds rather than to do a commercial business. While the bulk of this investment trust's holdings will probably be in domestic securities, including Government, State, railroad, and high-grade industrial bonds and stocks, about one-quarter of its holdings, according to present plans, will be in foreign bonds and stocks of proved value. Care will be exercised not to invest in securities which might impose upon the holder unlimited liability.

The above concerns are only two of a number of new enterprises which have been undertaken or are contemplated as a result of the improved European situation and outlook brought about by the adoption of the Dawes Plan and the successful flotation of the German international loan, together with increasing confidence that unusual opportunities are now presented for broadening American foreign trade. Another concern that is being organised here is to be known as the Equable Acceptance Company, with an initial capital of \$1,000,000, whose object will be to conduct in New York a business similar to that of the British merchant banker. Well-known domestic and international bankers are forming this company, which will seek to render an associate service in promoting domestic and foreign commerce of the United States "on a basis consistent with ethical acceptance and credit house practice." This service, it is said, will supplement financial facilities afforded by standard banking interests, with whom the new company will aim to co-operate, rather than compete. The new acceptance company will not receive deposits; it will operate on a secured basis only, and in addition to its other activities, it will serve, it is understood, as a representative of financial interests, including foreign.

Virtually all of the large banks here engaged in international business are receiving many requests for loans and credits from European countries, the applicants being Governments and municipalities, railroads, hydro-electric concerns, and various industries. The number of such requests has greatly increased since the German loan was floated recently. Most of the prospective borrowers are located in Central Europe, and it is reported that many bankers from Germany, Austria, Poland, and other countries contemplate visiting New York to negotiate loans and credits.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$14,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

According to statistics just published by the Rubber Association, shipments of cord and fabric casings exceeded production in August for the third month in succession. With the publication of these figures, the crude rubber market here displayed further strength, smoked sheets selling at 32 cents a pound, a new high record for this year, and representing an advance of 1½ cents over the previous price. During the past month, crude rubber has soared about 5 cents a pound, the upturn being attributed principally to reports of depleted stocks here and in London, and to exceptional activity among automobile tyre manufacturers. The association's figures place tyre shipments in August at 3,757,542 tyres, as against 3,167,978 in July and 2,852,034 in August of last year. Production of casings in August reached 2,733,575, as compared with 2,187,116 in July and 2,355,915 in August a year ago. Shipments of balloon tyres have shown a marked increase. Since March of this year, when figures for this comparatively new type of casings were first compiled and published, monthly shipments have increased from 191,272 to 435,572 in August. In July they totalled 393,132. High-pressure tube inventories, as of August 31st, were 5,006,578, against 5,084,015 in July and 4,350,320 in August, 1923. In the solid tyre branch of the industry, inventories at the close of August amounted to 183,159, as compared with 202,850 at the end of July and 262,810 on August 31st of last year.

As a result of numerous conferences recently between officials of railroads concerned, and with the Inter-State Commerce Commission in Washington, plans have been submitted to the commission by three of the four largest trunk line interests for the formation of four principal Eastern systems. The suggested groupings differ materially from the consolidations originally proposed by the Commerce Commission. The fact that they have been approved, in the main, by the largest trunk line interests in this section will, no doubt, carry considerable weight with the commission in reaching a final recommendation regarding such consolidations.

FRANCE.—NEW LOAN—SOCIALISTS AND THE BUDGET—THE PRICE OF BREAD—WAGES.

(FROM OUR CORRESPONDENT.)

PARIS, October 29.

THE Chambers are due to meet again next Tuesday, and from then until Christmas, at least, a large proportion of the time of the Lower House will in all probability be occupied with the Budget Bill for 1925. The Finance Minister, M. Clementel, as set forth in this column a few weeks ago, has laid before the Finance Commission of the Chamber a comprehensive set of proposals, which he estimates will be sufficient to enable all the necessary money to be secured to meet the year's expenditure, and to leave a small surplus at the end of the period covered. The deficit on the current year is to be got rid of by the issue of some 4 milliard francs of ten-year bonds, redeemable (after the expiration of five years) by means of drawings, with a premium or bonus of 50 per cent. of their nominal value. What the rate of interest carried by these bonds will be has not yet been announced, although it is asserted that the new issue will be made early in November. It has now been discovered that, by a special provision of last year's Finance Act, Parliamentary authorisation will not be required for this issue (although it was officially and expressly stated a week or two ago that the projected loan could not be issued until after the sanction of Parliament had been secured). So far no serious objection has been raised to the Finance Minister's proposals in regard to the projected loan, but unfortunately the same thing cannot be said of the rest of his plans.

It is no secret that the Socialist section of M. Herriot's supporters are bitterly disappointed with M. Clementel's proposals in connection with the new Government's first Budget. They gave invaluable support to M. Herriot at the elections last May on the express condition that he would not only recognise the Russian Soviet Government, in the event of his being returned to power, but that he would also carry through a very wide sweeping general amnesty Bill (including the rehabilitation of MM. Caillaux and Malvy), and that his Budget should be unquestionably Socialist in character. In hundreds of constituencies the voters were told that sweeping reductions of taxation would follow the return of the Bloc des Gauches to power, and there was more than half a promise to the wage-earning classes that this should be ensured by some kind of tax on capital. The Socialists now insist that there is no sign in M. Clementel's proposals of this undertaking being carried out, and they are calling on M. Herriot, with no uncertain voice, to fulfil his election promises in this respect. The result is that at present there is a possibility that within the next few weeks, unless the Budget proposals now under consideration, are drastically modified, M. Herriot may find himself in much the same position as Mr Macdonald, when the latter was abandoned by the Liberals. The parallel is not exact, of course, because M. Herriot can rely on the circumstance that exactly those points in his fiscal programme that would be regarded as poison by his Socialist friends would probably be accepted as worthy of support by a large section of the official Opposition on the Right. The latter are by no means anxious to keep M. Herriot in office, however, and it is now regarded as quite within the bounds of possibility that he may be replaced by a "Ministry of Concentration" that would be less dependent on Socialist support.

The extent to which the revolt of the Socialists has gone may be judged from the fact that strong pressure has been brought on M. Clementel during the past few days with a view to the complete recasting of the Budget proposals. The proposal was actually made, at a meeting of deputies who form the "cartellist" majority of the Finance Commission of the Chamber, that this should be done, but it was not pressed to a vote. It was agreed instead that the Finance Minister should be asked to

adopt certain modifications that would be submitted to him. At a subsequent meeting, which took place at the Palais Bourbon last Saturday, and at which M. Loucheur (who is known to have ambitions to assume charge of the national finances) was present, these proposed modifications were discussed in detail. As the result, a letter was sent to M. Clementel urging him to embody in his Budget proposals a tax on capital and acquired wealth, a higher scale of assessment for income-tax in the case of large fortunes, an increase in the succession duties, the suppression of the exemption from taxation now enjoyed by holders of Rentes and other State Funds, and provisions for the transformation of all bearer bonds, or at least the coupons attached to them, into nominative securities, with a view to preventing fraud on the revenue authorities.

The wheat, flour, and bread prices problem is continuing to defy all attempts at solution. The price of bread, which is subject to periodical modification by prefectorial decree, according to changes in the wholesale prices of wheat and flour, has now been fixed at 1fr 35c per kilogramme in the Paris area. A further rise of a sou is expected shortly. These prices are considerably higher than any previously registered in this country. Many experts believe that before another three months the cost of bread will rise to such a figure as to be a serious danger to public order. In the grain trade it is predicted that bread will rise, in view of the general situation, to between 2fr and 2fr 50c per kilogramme. No attempt has been made to fix the price of wheat, and none is likely to be. The system of officially fixing the sale price of flour, which was adopted a few weeks ago, has been found unworkable, as millers found it possible to refuse deliveries, and many bakers were faced with the necessity of closing their shops. It has been replaced by a new law which requires the newly constituted Office des Céréales Panifiables to submit to the National Millers' Association a quotation for flour which, if it is agreed to by them, is established as the working basis. If, on the contrary, the millers' association declines to accept the price, the Office des Céréales has power to take the matter into its own hands and fix a price which is compulsory on the millers. This "semi-official quotation," as it is termed, is based on the average price of wheat during the previous fortnight, and was announced for the first time last Saturday, the figure accepted by the millers being 146fr per quintal. Yesterday this semi-official quotation was increased to 148fr, the daily average wheat quotations (as fixed by the Sworn Wheat-brokers' Association) having risen from 115fr 30c on October 15 to 119fr 25c on October 22. If this quotation is maintained, a further rise in the price of bread is inevitable.

Although the official index figure of retail prices now stands at 370 (as compared with 100 in July, 1914), all efforts to raise wages continue to be limited to political and constitutional means, and there is no sign of serious hardship. The Government, as might be expected, is showing distinctly favourable attention to demands on the part of various categories of public servants for improved conditions of service, and further rises in commodity prices may be expected to follow. Representations for increased pay by the employees on the State railways have been met by the Government by the promise of an immediate inquiry and of favourable consideration of their demands. The staffs of the private companies, it is anticipated, will also benefit. Out of a total of 420,000 railwaymen employed in this country, 350,000, it is alleged, are in receipt of less than 20fr a day, while many of them receive only 15fr. The pay of an unskilled railway employé, which was 4fr 85c in 1914, is now 15fr 96c per day. Most of the French pre-war strikes were ostensibly based on a demand for a minimum wage of 5fr per day.

French foreign trade returns for the first nine months of 1924 disclose that Great Britain remains France's best customer, and that she has absorbed exports to the value of 5,844,697,000fr this year, or 1,325,293,000fr more than during the corresponding period of 1923. British exports to France, on the contrary, have decreased by over 213,450,000fr this year, as compared with the first nine months of 1923, and amounted to only 3,581,000,000fr, as compared with 4,024,415,000fr worth sold to France by the United States.

GERMANY.—POLITICS—FINANCES—NEW REICHSBANK—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 28.

PREPARATIONS for the Reichstag elections are proceeding without much spirit. Out of the argument of the middle parties and the Socialists that the issue is for or against the Republic, no effective battle-cry can be made, in view of the ambiguous policy of the Cabinet in regard to collaborating with the German-Nationals, who are the most numerous of the parties which reject the Republic, and owing indeed to the ambiguous policy of the latter in their rejection policy. The Tariff and Commercial Treaties question also plays a very small rôle; the Socialists are still strongly against the proposed re-imposition of the food duties, but since the rise in grain prices, and the restoration of the export prohibition on grain, they have themselves hardly believed that the duties can be re-imposed. The Agricultural Council, which met last week, almost unanimously demanded the duties, but Prof. Sering, of Berlin, one of the most distinguished members, declared that duties would not help the farmers, and that it would be better to aim at reduction of production costs, to revise taxation with this aim, and to abolish altogether the injurious Sales Tax. A representative of the Government announced that there is no prospect of reducing taxation. The elections for the Hamburg State Council show a marked weakening of the Nationals, National Freedom party (extreme Right), and Communists, all opposition parties in the Reichstag, since the May General Election, and are interpreted as foreshadowing an increase of the middle parties in the coming Reichstag.

The Finance Ministry's return for the ten-day term October 11th-20th shows a large surplus due to the quarterly income, corporation, and sales tax payments. Receipts totalled 233,429,700 gold marks, and expenditure 179,731,100 gold marks, of which 120,000,000 gold marks were subventions to the states and municipalities. The separate account for posts, telegraphs, and telephones shows for the first five months of the financial year (April-August) a surplus of 50 million gold marks. This department is going over to commercial methods of accountancy, but the change has so far been only partly made. The official wholesale prices index number for October 21st had fallen further to 131.1, against a maximum this year of 133.7 on the 7th; the cost of living index number on the 22nd remained unchanged at 123, its highest point this year. The Prussian State Bank (Seehandlung) has followed the other banks in keeping accounts, henceforth, only in the new Reichsmark. The interest rate in business is still tending slowly to fall. The granting of the expected foreign credits to industry is not proceeding as rapidly as was expected after the success of the Reparations Loan; the Reichstag dissolution seems here to have had a delaying effect. The Gold Discount Bank has given notice to terminate the \$25,000,000 rediscount credit, which it received in New York. The same will probably be done in London and Zurich. This will have no effect upon the prolongation of existing exchange credits here. Only a small part—about 10 per cent.—of the credits were placed abroad, the main rediscounting being with the Reichsbank.

The Reichsbank's return for October 15th comes out in an entirely new form, assets and liabilities, regardless of their nature, being booked uniformly in new Reichsmarks. Therewith the anomaly of booking the gold reserve at its nominal total in paper marks beside the swollen totals of all other items disappears. The capital has been reduced from 180 million "marks" to 90 million Reichsmarks, and the intended addition to capital of 210,000,000 Reichsmarks is entered both as asset and liability. The gold reserve is booked at the rate of 1,392 Reichsmarks per metric lb of fine gold, the old 10 and 20 mark gold coins being booked as new Reichsmark coins of the same value. In the week preceding the return 18,900,000 Reichsmark of gold was acquired. Of the bank's holding of exchange, 204,541,000 Reichsmark are booked separately as "exchange valid as legal cover" (*deckungsfähig*), so that the legal cover total is 818,166,000 Reichsmark, while the rest of the exchange held is booked as heretofore under

"other assets." The gold cover of the note circulation is 43.9 per cent., the total legal cover 58.6 per cent. The bank's holding of Rentenmark notes now appears in "other assets." State and private deposits are no longer separated. The following is the complete return:—

	Reichsmarks.
Unpaid capital.....	210,000,000
Gold reserve (whereof 172,143,000 un-pledged abroad.....)	613,625,000
Legal cover exchange.....	204,541,000
Other bills and cheques.....	2,153,943,000
German token coins.....	59,359,000
Notes of other banks.....	15,947,000
Advances.....	77,517,000
Investments.....	929,901,000
Other assets.....	90,000,000
Old capital.....	210,000,000
New unpaid capital.....	900,000
Reserve funds.....	1,396,748,000
Note circulation.....	828,511,000
Deposits.....	800,000,000
Debt to Rentenbank.....	938,674,000
Other liabilities.....	

The employment figures from Berlin and some other towns indicate a continued improvement in industry. Definitive figures show in unoccupied territory 1,533,495 unemployed on January 1st (estimated in occupied territory, 1,500,000); March 1st, 1,167,785; June 1st, 208,258 (lowest figure of the year); August 1st, 328,028; October 1st, 319,553. For the whole Republic the first figures published are 566,957 for August 1st, and the last figures for October 1st, 519,161. The number of unemployed is, therefore, one-fifth or one-sixth of the number at the beginning of the year. New activity is reported in iron and steel, especially in rails, for which orders are booked for three months ahead. Textiles are also somewhat better. The Government's tariff plan foresees high duties on finished textiles, and the *Vorwärts* points out that fine yarns, which have largely come from England, are to bear higher duties than the qualities made at home. A number of prominent industrial leaders have protested against the plan to ratify the Washington Eight Hours' Day agreement. Raw sugar production in the new sugar year 1924-25 will reach, according to an estimate, 1,489,850 metric tons, against 1,146,891 tons in the past year.

Foreign trade in September showed a renewal of passivity. This was expected, owing to the recent decline in imports of raw and half-finished materials and manufactured goods and exhaustion of stocks. All these imports recovered in September, and there was a big increase of imports of foodstuffs as a result of the belated and unfavourable crops. Exports, with the exception of half-finished goods, declined. The figures are:—

	(In Thousands of Gold Marks.)		
	Sept.	Aug.	Jan.-Sept.
Live stock.....	7,934	4,945	60,540
Food and drink.....	206,684	152,426	1,544,229
Raw materials.....	223,901	148,317	2,575,793
Half-finished materials.....	58,537	42,371	587,814
Manufactures.....	121,436	89,142	1,275,735
Gold and silver.....	4,930	11,023	65,836
Totals.....	623,422	448,224	6,109,947
Live stock.....	1,550	1,957	6,928
Food and drink.....	34,543	50,398	284,465
Raw materials.....	40,607	43,835	295,281
Half-finished materials.....	42,766	37,054	297,413
Manufactures.....	442,822	454,687	3,658,015
Gold and silver.....	1,768	1,430	11,903
Totals.....	564,056	589,361	4,554,005

The largest increase (in value) in raw materials, as compared with August, was tobacco, but there were also large increases in cotton, silk, pelts and hides, oil seed, and coal. Exports of textiles slightly increased, and also leather goods, furniture, dyes; while rubber, pottery, and glass declined. Exports of rolling mill products and iron wares (other than machinery) were 97,485 metric tons, against 144,030 tons in August, and a monthly average of 193,097 tons in 1923; exports of machinery, 21,964 tons, against 24,224 tons in August, and a monthly average of 39,895 tons in 1922. Owing to conditions in occupied territory, this report, like all issued since the Ruhr occupation, is imperfect.

NORWAY.—NEW PARLIAMENT—ANOTHER BANK FAILURE.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 24.

THE final results of the General Election held on October 20th for the new triennial Parliament (Storting), of Norway, that is to meet early next year, compare with those of the 1921 election as follows:—

	1921. Members.	1924. Members.
Conservatives and Liberals (Coalition)	57	54
Left (Radicals)	37	34
Socialists	8	8
Agrarians	17	22
Radical Labour Party	14	24
Communists	15	6
Radical People's Party	2	2

The most noteworthy features are the great reduction of the Moscow Communist Party, which has been deprived of its parliamentary leader, and the advance of the Agrarians. As will be seen, no individual party has obtained a majority, so that a coalition is inevitable. It may be anticipated that the Conservatives and Liberals will in most cases work harmoniously with the Agrarians, and if so, this coalition would give 76 votes, or the barest majority. And even the Left, in extreme cases, would side with them in opposition to the Communists, &c. On the whole, there is no likelihood of revolutionary or very radical legislation by the new Storting. Great doubt as yet exists as to how Prohibition—which was one of the chief objects of contention before the election—will fare; this will be known only when the question is put to the test.

Further bank troubles have to be recorded. Den norske Handelsbank has had to seek shelter under the Administration Act. When, a year ago, new directors were appointed and a considerable sum of money provided, it was hoped that confidence would return, and that the bank would be able to overcome its difficulties. The Communist party journal, it is claimed, is largely responsible for the calamity, having published leading articles of a very alarming nature concerning the bank. For a couple of years there has been a steady diminution in the amount of business done by the bank, so that the stoppage of payment did not cause much surprise, nor any serious financial difficulties for the community.

GREECE.—THE REFUGEE LOAN—PUBLIC WORKS—GREEK BANKS—FOREIGN TRADE—COST OF LIVING—EXCHANGE.

(FROM OUR CORRESPONDENT.)

ATHENS, October 23.

THE Governor of the National Bank of Greece is leaving Athens in a day or two for London, in connection with the raising of the Refugee Loan, which will be concluded during November. The loan will be issued by a group of banks, headed by the Bank of England. A portion of the loan will be issued in America.

In consequence of negotiations carried out in London early this year, an English syndicate has sent to Athens during the summer two expert engineers for studying the question of erecting new plants for the generation and distribution of electric current in Athens and Piræus, as well as for the extension and development of the tramways. The present electric company is a Greek concern, while the tramways belong to a Belgian company. Negotiations are now in progress for a participation of

British, Belgian, and Greek capital in the above scheme. Similarly, proposals have been submitted by various foreign syndicates, including an American group, for the supplying of water to Athens. This matter is very pressing as the population is suffering greatly from the want of water, even for its most elementary needs. A decision on the proposals submitted is expected to be taken at the end of the month. To facilitate the study of the various public works of which Greece is in great need, and the collaboration of foreign capital in the construction of such works, a syndicate has been recently formed by the Greek banks under the leadership of the National Bank of Greece.

The progress of Greek banks since 1914 is shown in the following table containing figures for the principal banks in Greece:—

	End of 1914.	End of 1923.
Number of banks	7	20
Share capital and reserve funds	107,000,000 drachmæ 25,000,000 francs £551,000	533,000,000 drachmæ 30,000,000 francs £656,000
Deposits	481,000,000 drachmæ 6,000,000 drachmæ £25,000	4,659,000,000 drachmæ 132,000,000 drachmæ £50,000
Net profits	5,000,000 drachmæ £24,000	49,000,000 drachmæ £34,000
Profits distributed		

Foreign trade returns for the first six months of 1924 show some improvement as compared with the corresponding period of 1923, as the following table shows:—

(In million drachmæ).

	January to June.	1923.	1924.	Difference in 1924.
Imports	3,221	3,143	—	78
Exports	891	1,055	+	164
Excess of imports	2,330	2,088	—	242

Although the visible balance of trade is unfavourable for Greece, there is still a credit balance, owing to the invisible items of export. The principal of these are emigrants' remittances, estimated for 1923, one of the worst years, at not less than £5,000,000, and expected to exceed in 1924 £10,000,000. Moreover, the profits of the mercantile marine and the interest on Greek capital invested abroad are largely contributing towards turning the balance in favour of the country.

Index numbers for the cost of living in Athens have moved slightly downwards from 1,357 in August to 1,330 in September, as against 1,194.3 a year ago, 1,348.1, the record figure, in April, 1923, and 100 in 1914, the basis year. Exchange on London is rather steady at something less than 260 drachmæ to the pound sterling.

Letters to the Editor.

COLONIAL STOCKS AND SINKING FUNDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—During the early months of this year several Colonial loans matured, but in the case of some of the largest, amounting to no less than £33,000,000, no more than £320,000, barely 1 per cent., was actually paid by the borrower.

Beyond this latter comparatively insignificant sum, the whole was discharged by re-borrowing. It becomes, in fact, closely allied to a permanent debt, with, in addition, a recurring risk of difficulty arising on every date of maturity.

Although possibly allowable to a young and struggling community, this cannot be called sound finance in the case of a mature Dominion.

It will be thought, no doubt, that there are valuable assets, e.g., railways owned by the borrowers; but these are not readily realisable nor turned into cash to meet the liability; if the colony found a difficulty in borrowing, the same circumstances would be likely to cause a difficulty in the realisation of the assets of value.

The question of a sinking fund is not touched on in the Colonial Stock Act, 1900. Some revision of this Act, as well as consideration of the question by the borrowers, would seem very advisable.—Yours, &c.,
50 Cornhill, E.C. 3. ALFRED F. BUXTON.

Books and Publications.

RUSSIAN DEBTS AND RUSSIAN RECONSTRUCTION.*

THIS book is intended to furnish answers to three fundamental questions, viz.: (1) What are the amounts which any Russian Government would have to pay abroad on account of the various foreign obligations for which Russia is now held responsible? (2) What is involved in obtaining these amounts within the country by means of budgetary surpluses? and (3) what is involved in making these surpluses available abroad, and what is the probable Russian capacity to make such payments?

In endeavouring to answer these questions the authors find it necessary to discuss certain controlling factors in the economic history of Russia since the middle of last century, and particularly since the beginning of Russia's industrial revolution, which received its impetus under the régime of Count Witte just before the end of the century. A valuable chapter and appendix are devoted to the study of Russia's foreign indebtedness. The conclusion, answering question (1), is that Russia's obligations to foreign countries amount to 13,823 million gold roubles, of which 6,681 millions are for war borrowings and 7,142 millions for pre-war debts, both public and private. The principal creditors are Great Britain, France, the United States, and Belgium. The pre-war Government debt is held to the extent of 80 per cent. in France and 14 per cent. in Great Britain, and the war debt to the extent of 70 per cent. in Great Britain, 19 per cent. in France, and 7 per cent. in the United States. The industrial securities are held to the extent of 32 per cent. in France, 25 per cent. in Great Britain, 16 per cent. in Germany, 15 per cent. in Belgium, and 6 per cent. in the United States. The interest charges, making no allowance for amortisation, amount to 400 million roubles on the war debt and 320 million roubles on the various pre-war obligations.

With regard to Russia's future budget, the authors make the very questionable assumption that military and naval expenditure will be reduced to as little as one-quarter of the pre-war amount, which was 962 million roubles in 1913. Internal expenditure, as they point out, is reduced by the wiping out of the internal debt through inflation. As to revenue, they are fairly hopeful. Conditional on a rather speedy economic recovery of the country—a recovery which depends upon a substantial stabilisation of the currency and an efficient application of whatever loans may be extended for reconstruction—they believe that the total revenues may approximate to the 3,000 million roubles which they estimate to be required for the purpose of meeting expenditure. So far as the internal budget goes, therefore, the authors conclude that Russia may obtain a surplus sufficient to meet the interest on a considerable part, at any rate, of her foreign obligations.

But they do not think that she will be able to remit this surplus, since to do so would require a large excess of exports over imports, which is not likely to be capable of attainment. They point out that there was not a single year between 1892 and 1905 when the trade balance was sufficient to meet the service charges and the interest on the foreign indebtedness, and that there were only three years at the most, during the entire period to 1914, when resort to new borrowing was not necessary. The reason for this borrowing abroad was not, they maintain, that Russia set out to promote internal development, thus ex-

panding imports and giving rise to temporary difficulties in meeting foreign payments.

"In common with Russian economists, we are convinced that the process was the other way round. The Russian bureaucrats were quite content with the feudal economic system of the country; they were not interested in internal development, nor in modernisation of the Russian economic system. If anything, they were opposed to such development on the ground that it might undermine the existing political system. But they were vitally interested in keeping out of international bankruptcy, and in maintaining Russia's position in the world as a first-rate power."

Yet Russia was, in their view, undoubtedly exporting before the war to her maximum capacity. It was the generally accepted opinion both of Russian economists and of foreign students of Russian conditions that Russia was exporting more than the economic condition of the country warranted. As regards the future, the authors think that it must be a long time before Russia can export on the pre-war scale, because agricultural output will not, as they think, equal that of pre-war years for many years to come. In this connection, we are not sure that the authors make sufficient allowance for the notorious rapidity of recovery in agricultural countries when revival once begins. Making estimates on the assumption that with the aid of reconstruction loans Russia does return to the pre-war scale of economic activity, the authors believe that her favourable trade balance would not greatly exceed 100 million roubles a year. This amount, as they say, is sufficient merely to cover the interest charges on a reconstruction loan of about 1,400 million roubles, allowing for no margin of income above interest obligations. Thus, even if Russia should honour her existing debts, she cannot pay them.

It is no doubt true that a large part of foreign holdings in Russia must inevitably be written off as lost, but if Russian credit were to revive, following an acknowledgment of debts, we are inclined to think that part would be recoverable in course of time. We doubt whether Russia's capacity to make payments abroad, if and when revival occurs (say, in ten years' time), can really be predicted with any approach to accuracy.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
November 5.

ACCOUNT,
November 6.

THE unexpected result of the General Election caused lively excitement and a pronounced rise throughout the Stock Exchange. Business suffered a good deal of interference by reason of the political fervour of the week, and on Thursday, when the figures were coming through every few minutes, it was not always an easy matter to deal, the difficulty being accentuated by the fact that prices were so good that holders of stock felt no disposition to sell. The volume of business before the results were published was of satisfactory dimensions, except in the mining markets. The Stock Exchange looks for a few years of stable government, and, therefore, of improving prices, allowance being made, of course, for such occasional setbacks as may come—for instance, when the immediate excitement aroused by the present election begins to subside.

Quotation of the War Loan ex dividend last Thursday morning gave the stock a cheap-looking appearance, and the price advanced to 101. Conversion $3\frac{1}{2}$ per cent., however, took the lead in this market with a substantial advance. Other British Government stocks became almost buoyant in tone. Union of South Africa scrip has risen to $\frac{1}{2}$ premium; the new Queensland to $3\frac{1}{2}$ premium. Gilt-edged stocks of every description and industrial debentures and preferences are in demand, and this in spite of statements that a mass of new issues is on the point of making its appearance. India Government stocks rose from $\frac{1}{2}$ to 2 points.

German sevens, after a dip to $4\frac{1}{2}$ premium, easily recovered to the extent of 10s per cent. French bonds are quiet, the railway issues showing strength. Russians are marked lower. Greek bonds have improved, in spite of rumours to the effect that there is a Greek loan coming before long.

The election news had the effect of causing sharp rises in Home Railway stocks. Great Western and North-Western led the way. Their rises were followed by improvements in Underground Income bonds and in the deferred stocks of the North-Eastern and Southern Railways. The market is good throughout. Argentine rails are also better, and a mild sensation was caused by violent rises in Cordoba Central and Entre Rios stocks. Grand Trunk Pacific 4 per cent. debentures shot up from 60 to 68 upon publication of the report on the company by Messrs George A. Touche and Co. Brazilian Railway stocks are firm, and other foreign rails mostly hold their prices.

Rubber shares have enjoyed a miniature boomlet, with a substantial amount of business going on day by day, and the market showing signs of broadening. Tea shares have recovered from their flatness, and are again rising. A jump in the price of coffee this week attracted the attention of speculative investors, and prices of coffee shares are better. Textile shares are strong, a number of rises occurring in the popular favourites. Another spurt in tobacco shares fastened particularly upon Imperials, where dividend anticipations are declared to be responsible for the rise this week in the price of the shares.

The iron and steel market keeps good, advances occurring every day. Banking and insurance descriptions are higher where they have moved at all. The scarcity of insurance shares is becoming more and more marked. There is nothing much going on in the shipping department. Brewery stocks have moved up, hotels are harder, and the shares in the principal stores companies remain steady. Sudan Plantations improved, on the declaration of a dividend making 20 per cent. for the year, an increase of $2\frac{1}{2}$ per cent. Cable stocks are a strong market, and the wireless division firmed up, owing to the impression that the General Election has given broadcasting such an advertisement as is likely to reflect favourably upon Marconi profits. Amongst oil shares, one feature was a drop in Mexican Eagles by reason of the uncertainty felt as to the payment of the half-yearly dividend on the company's 7 per cent. first preference shares, due yesterday (Friday). Other oil shares, however, are better, and a long string of advances has occurred. Some of the trust companies' stocks show gains of several points. Various industrials have advanced, on the idea that protection of trade may become more general in the new Parliament.

The Kaffir Circus shared in the better tendency displayed by the House as a consequence of the General Election. The feature amongst South Africans is the way in which Tanganyikas and Zambesias have appreciated. The buying is thought to have come partly from New York, where the purchasers are said to be intrigued by the outlook for copper—the metal—over the next few years. Mexican Mining shares, after going better, reacted, but the movements were small in both directions. Malayan tins keep good, there being a continuance of Middle Eastern support. In other mining groups, both business and interest have been on a meagre scale.

Union of South Africa 5 per Cent. Inscribed Stock, 1940-1960.—Issue of £8,000,000 at £99 10s per cent. It is stated that £1,000,000 will be allotted to the Public Debt Commissioners of the Union. The loan is required for railways, harbours, irrigation works, land settlement, and other public works. Interest is payable on January 1st and July 1st of each year, and the principal is repayable in London at par in 1960, the Government of the Union of South Africa having the option to redeem the stock, in whole or in part, at par on or after July 1, 1940. It is pointed out in the prospectus that Union of South Africa debentures and stock, issued and payable in London, and the interest, the property of persons not domiciled in South Africa, are not subject to any taxes in the Union. The accumulated sinking funds for the redemption of debt amount to £11,647,000, and, in addition, debt has been extinguished to the extent of £18,436,000. An excellent trustee security at a reasonable price.

London County Council.—Issue of £3,000,000 London County bills. The London County Council give notice that tenders will be received at the Bank of England on Tuesday, November 4th, for London County bills to the amount of £2,000,000, to provide funds for capital expenditure in the current financial period. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated November 7, 1924, and will be payable at 12 months after that date, viz. on November 7, 1925. Tenders must specify the net amount per cent. which will be given for the amounts applied for; and tenders of private individuals must be made through a London banker. Bills will be issued and paid at the Bank of England.

Antofagasta Nitrate Company.—Registered under the laws of the Republic of Chile. Share capital, \$96,000,000, at \$40 to £1, equals £2,400,000. There are 6 $\frac{1}{2}$ per cent. debentures outstanding for £466,700. For public information only, particulars are published in the Press of an issue of £400,000 of 7 per cent. second mortgage debenture stock. This debenture stock will rank immediately after the 6 $\frac{1}{2}$ per cent. first debentures, and will constitute a second charge on all the eight oficinas owned by the company, with lands and nitrate grounds covering an area of about 64 square miles. Redemption by purchase up to or drawings at 102 per cent. will be effected by a sinking fund of not less than £28,000 per annum, to begin in 1926 and end by 1940. The proceeds of the issue are being applied to the enlargement of plants on two existing oficinas and the erection of a new oficina on other grounds. For 1923 the company made a net profit of £520,000 after the payment of debenture interest, and after providing for depreciation, 12 per cent. was distributed on the share capital and £179,800 transferred to reserves. Interest and sinking fund charges on the first debentures require about £64,000 per annum, the interest item being reduced annually by the operation of the sinking fund, while interest and sinking fund on the 7 per cent. debentures will require about £56,000 per annum. This stock has been acquired from the company at 94 $\frac{1}{2}$ per cent., and placed at 98 $\frac{1}{2}$ per cent. There are risks involved, but the issue is not without attractions.

The York Town and Blackwater Gas Company.—This is an offer for sale by tender of £10,000 of 5 $\frac{1}{2}$ per cent. perpetual debenture stock, at a minimum price of par, and £10,000 of new ordinary additional shares, which are of £10 each, and rank for a standard dividend of 7 per cent., subject

to a sliding scale. The ordinary shares are offered at a minimum price of issue, namely, £12 per share, which indicates a return—the present dividend being 8 $\frac{1}{2}$ per cent.—of £7 5s 10d per cent. As against a net revenue of £6,400, taken on the basis of 1923, the debenture stock interest, including that on the amount now offered, requires only £1,900. The company has been working since 1859. Two small issues, suitable for local investors, but regard should be paid to the narrow market for such securities.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

GROSS EARNINGS RECORD.
EFFICIENT OPERATING METHODS.

The sixty-sixth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held, on the 30th ultimo, at the company's offices, 132 Gresham House, Old Broad street, London, E.C., Mr Robert Miller (the chairman) presiding.

The secretary (Mr R. C. Volkers, C.I.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—The report of the directors on the accounts of the undertaking for the year 1923-24 has been sent to all the shareholders, and, with your permission, I propose to take it as read.

The report sets forth in detail the results of the working of the undertaking for the year; but, before asking you to approve and adopt the report, together with the accounts and balance-sheet which accompany it, I propose, according to my usual custom, to touch on the more salient points and to add for your information such remarks on the future prospects of the undertaking as may be of interest to you.

The gross earnings for the year were Rs. 779 lakhs, which gives an average of Rs. 543 per mile per week, and Rs. 6.37 per train mile. This figure of gross earnings exceeds the corresponding figure of the previous year by Rs. 18 lakhs, and is the highest on record. You will see from the results given on page five of the report that during the five years ended March, 1923-24, the gross earnings have increased by nearly Rs. 121.5 lakhs, or 18.45 per cent., against an increase in the mean mileage worked of 63.88 miles, or 2.37 per cent. That is a very satisfactory result in face of the tardy recovery of universal trade. Although, as I have said, the gross earnings of the year 1923-24 are the highest on record, they are to some extent a disappointment. We had been in expectation of attaining gross earnings of about Rs. 800 lakhs; but, as you are doubtless aware, the East Coast line for a length of some 175 miles was practically wrecked by the unprecedented cyclone of November 17 and 18, 1923. That catastrophe, apart from adding considerably to the working expenses in carrying out the reconstruction of the line and bridges both in the year the accounts of which we are now considering and in the following year, resulted practically in the suspension of all traffic on the East Coast line for a period of five weeks, a factor which contributed largely to the gross earnings realised for the year falling short of expectations. That the loss was not, in fact, greater was due entirely to the expedition with which the line was rendered fit to restore through traffic, and our engineers are to be congratulated on the efficient and rapid manner in which they carried the work through in face of great difficulties and with much privation and hardship to themselves. The line has now been completely restored and fortified.

Passenger traffic shows an increase for the year of 467,000 in total numbers carried, and of Rs. 11½ lakhs in fares received. Goods traffic, too, shows an increase both in total tonnage carried and in freights received, the former being 911,000 tons and the latter Rs. 6 lakhs. The improvement in total gross earnings during the year amounts to Rs. 18½ lakhs, or 2.40 per cent. This increase, though relatively small, is hopeful, as indicating the gradual, if tardy, recovery of trade.

WORKING EXPENSES.

Working expenses during the year show an increase of Rs. 21½ lakhs, or 4.41 per cent. To some extent the restoration of the East Coast line accounts for the expense, as a substantial portion of the expenditure incurred on that account had to be met from the revenue of the year. I would, however, remind you of the warning I gave last year as to the impossibility of retaining for long, without detriment to the efficient upkeep and working of the railway, the reduction, more or less arbitrarily made, in the legitimate requirements for ordinary working expenses, in order to compensate, as far as possible, for the slow revival of trade, and at the same time to make provision for carrying out the arrears of renewals and replacements that had, perforce, to be postponed during the period of the Great War. You will recognise, I am sure, that there is a claim—I may even say a first claim—on any increase in gross earnings to ease the existing strain on the curtailed provision for working expenses of keeping the line up to a standard of safety and providing for the efficient working of the traffic till such time as equilibrium is restored.

PROSPECTS.

As regards the prospects of the railway during the current year 1924-25, I am glad to be able to tell you that, so far, the gross

earnings show a marked improvement in the corresponding figures of the previous year. The total increase up to September 20, 1924, amounts to the very satisfactory figure of Rs. 34.25 lakhs. This improvement has been brought about in large measure through the introduction of up-to-date methods of operating traffic. During the last two or three years the system of train control has gradually been installed on the main line, and a marked improvement has resulted in the working of trains. Then it became evident that, in view of the great increase that has occurred in the volume of traffic in recent years, the time had come for the separation of the work of operating traffic from the commercial part of traffic working, as is done on the principal railways in this country and also in America. Accordingly, we have evered the two businesses and appointed a transportation manager to initiate and carry through the work of operating traffic, and the results have been very satisfactory. We have better distribution of empty wagons, less empty running in trains, and a more rapid movement of traffic. It is an axiom on railways that traffic breeds traffic, and I might enlarge on this and say that the rapid movement of traffic does more towards the growth of traffic than anything else. Nothing inspires traders with greater confidence than the knowledge that they will get their goods moved to destination without delay. With this assurance in mind they can confidently take advantage of a rising market to purchase the commodity in demand at the source of its production, and to consign it by the transporting agency to the place where it is required for use or for export. In forming the separate transportation department we are aiming to give the trader that confidence so far as transportation by the railway is concerned, and in order that we may have the means of operating effectively on the traffic we are adding regularly to the rolling stock of the line. Thus you will notice from the report that 30 locomotives and 532 wagons of the 5 foot 6 inch-gauge were under supply last year. These are now coming into use on the line. This year we have under order 47 locomotives and 579 wagons of the same gauge, which will be shipped before the close of the year.

PROGRESS OF NEW LINES.

In the matter of new construction, substantial progress has been made in the construction of the lines leading to the South Karanpura coalfield. The Talchir coalfield railway is also progressing satisfactorily. We confidently expect, as soon as these lines have been carried through to completion, a very considerable increase in the coal traffic. The Amda Jamda Railway is expected to be completed throughout in a month or two, and is already carrying a fair volume of traffic, principally iron ore. It has also made possible the mining of manganese in the vicinity of Jamda, and a traffic in that mineral is springing up.

I believe the time has now come when we may look for the early commencement of work on the Raipur Parbatipur Chord from the Central Provinces to Vizagapatam and on the harbour to the latter port. These two schemes I might aptly describe as the coping stones of the work represented by the Bengal-Nagpur Railway system. They will add materially to the prosperity of the railway, the former by opening out a new country of very great area, which at the present moment is stagnant for the want of efficient means of transportation, and the latter by providing a convenient port for the exportation of the produce which will be forthcoming when the Chord line is built.

With these remarks, and if none of you have any questions to ask or remarks to make, I now beg to move: "That the report of the directors, together with the accounts and balance-sheets appended thereto, be approved and adopted."

Mr Frederick Schooling seconded the resolution, which was carried unanimously.

DIVIDEND RESOLUTION.

The Chairman next moved: "That the sanction of the company be and is hereby given to the declaration by the board of a final dividend at the rate of 15s per £100 ordinary stock for the financial year ended March 31, 1924, in addition to the guaranteed interest and interim dividend already paid for such period, such amounts to be paid to the members on the register on December 31, 1924, with half-year's guaranteed interest at the rate of 3½ per cent.

per annum then payable, less English income-tax on the whole amount."

Sir T. R. Wynne, K.C.S.I., K.C.I.E. (managing director), seconded the resolution, which was unanimously adopted.

On the motion of Sir T. R. Wynne, seconded by Sir Charles Stewart-Wilson, K.C.I.E., the retiring directors (Mr G. A. Anderson and Mr A. Brereton, C.S.I.) were re-elected.

Mr D. McGechie proposed that the auditors (Messrs Gérard Van de Linde and Son and Messrs W. B. Peat and Co.) be reappointed, which was seconded by Mr A. C. Carr, and passed unanimously.

The proceedings then terminated.

UNITED DAIRIES, LIMITED.

SUCCESSFUL YEAR'S RESULTS.

INCREASED TURNOVER AND PROFITS.

The ninth ordinary general meeting of the shareholders of United Dairies, Limited, was held, on the 30th ultimo, at the Connaught Rooms, Great Queen street, London, Mr Joseph H. Maggs (chairman of the company) presiding.

The secretary (Mr John Butler, A.C.A.) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said: The net profit brought into this year's balance-sheet—omitting shillings and pence—amounts to £506,541, an increase on last year's figures of £37,917. To this must be added the £101,544 brought forward from the previous year, making a total of £608,085. After providing for the final dividend on the ordinary shares at the rate of 9 per cent., we have recommended the transfer of £100,000 to reserve and the provision of £30,000 for scholarships at agricultural colleges, leaving a balance to be carried forward of £73,603. The reserve fund will then stand at £350,000, plus the premiums on the recent issue of ordinary shares, less the expenses of the issue.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, you will note that the issued capital, other than the recent public issue, has been increased by 78,596 preference and 30,494 ordinary shares, this increase being mainly in respect of the purchase of shares in the Belgravia Dairy Company, Limited, and the preference shares of Thew, Hooker, and Gilbey, Limited.

What is usually the next item on the balance-sheet, mortgages, has entirely disappeared, and I think you will agree with me that the balance-sheet looks nicer without it.

Sundry creditors and credit balances are higher by £316,600. These are, as I have previously explained, mainly in connection with subsidiary companies; their dividends and management charges not being actually paid at the date of the balance sheet, the figure is at its highest point then. Under this heading is also included provision for taxation. The insurance fund is higher by about £6,000.

On the asset side, investments and loans in subsidiary companies are about £250,000 higher. The increase in investments is mainly due to the purchase of the Belgravia Dairy Company's shares, and loans are higher by £141,000.

Our 5 per cent. War stock at £209,385 is unaltered, and we have added to our gilt-edged investments £100,000 of 3½ per cent. 1925-28 War stock. These investments are in the balance sheet at cost price, which at the date of the balance-sheet was about £2,700 below market price.

Freehold and leasehold properties at £471,523 are up by £94,500. In this connection it will be of additional interest to those of you who are temperance enthusiasts to know that in connection with our bottled milk developments we have purchased during the year a large factory with a railway siding in West London which was built for beer bottling, and a fine freehold brewery in South London with a magnificent water supply, so essential for refrigeration purposes.

NEW SITE PURCHASED.

To cope with our ever-increasing utensil business we found it necessary to obtain additional works, and were fortunate to find them close to our Park Royal factory. These magnificent premises are being rapidly equipped for our purposes, and will be a great help to the Dairy Supply Company.

We have purchased a large site in East London, big premises for distributing in South-West London, and in several cases have acquired the freeholds of shops occupied by various subsidiary companies. I have no hesitation in saying that these freeholds have been acquired on very favourable terms. Considerable capital expenditure will be involved in equipping these properties, for which purpose the new issue provides.

Sundry debtors and debit balances.—This item is up by £182,000, and in the main represents subsidiary companies' transactions. Cash at £274,227 is higher by £120,000, and includes the amount received in respect of the new issue. Expenses of issue is only

HEAD OFFICES: LIVERPOOL AND LONDON

ROYAL
INSURANCE COMPANY, LIMITED
ALL CLASSES OF INSURANCE EFFECTED

a temporary entry, and will be cleared against premiums on the issue.

INCREASED TURNOVER AND PROFIT.

The profit and loss account reflects the increase in business, and is helped by the reduction in corporation profits tax and profit on temporary investments. The increase of £37,917 (except for a portion of the "twopences," the remainder having been brought in last year) has been earned on a turnover exceeding that of the previous year by over £1,600,000. It is by the frequent turnover of our capital, at a very small rate of profit, that we are enabled to achieve results which in the aggregate allow of the payment of satisfactory dividends on that portion of our capital represented by ordinary shares, many of which, of course, were issued to the public and the shareholders at a premium.

Our butter sales show an increase of over 4,500,000 lbs, and our sales of eggs are higher by 20 millions. These figures show that our buying departments are soundly organised, and that the public is quick to appreciate the value given in our shops.

MILK CONSUMPTION.

Deliveries of milk by farmers to our subsidiary companies exceed those of the previous year by over 10,000,000 gallons. Although looming largest, perhaps, in the eyes of the public, our retail milk sales represent comparatively only a small percentage of our large turnover.

Milk is one of the few commodities of food in daily use that has not advanced in price this year, and undoubtedly represents the best food value obtainable for the money expended. I would take this opportunity of urging every milk distributor and milk producer to support the publicity campaign, for which it is clear there is vital need.

Colonel Arthur S. Barham, C.M.G., seconded the resolution, which was carried.

RAPHAEL TUCK AND SONS, LIMITED.

INCREASED BUSINESS—SOUND POSITION.

The twenty-third annual ordinary general meeting of Raphael Tuck and Sons, Limited, was held, on the 28th ultimo, at Winchester House, London, Sir Adolph Tuck, Bart. (the chairman), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: Your directors are meeting you to-day under conditions which, contrary to expectation, are very little different from those which have prevailed for quite a number of years, and which are necessarily reflected to the same degree in the report and balance-sheet of the past year's trading which we are placing before you. I refer to the Christmas, New Year, birthday, and general greeting card department. This, as ever, leads the way in the extent, volume, and value of its turnover, and continues to constitute one of the strong pillars of the business of the company. It is fortunate that the efforts of the Christmas and greeting card department are so well continued, for the book and calendar departments are endeavouring to run it a close race.

The volume of the trade of this department during the past year suffered, as it was bound to suffer, from the high rate of postage on picture postcards, which all our efforts of the past four years have not yet succeeded in bringing down. It is sincerely to be hoped that, whichever of the great parties of State succeeds in gaining the suffrages at to-morrow's eventful election, will at last decide to deal with this important question of postage in an imperial spirit, and recognise that cheap postage and good trade go hand in hand. In the interval we have fully maintained the production of the necessary range of novelties so essential in this fascinating picture postcard department, paying particular attention to the publications of standard subjects, the regular call for which may be relied upon from year to year.

This new department, equipped with the latest machinery, is now in full running order, and the beautiful designs in doyleys, dish papers, and plate papers turned out by this department have already taken a leading position in the market. The new wing of Raphael House, quite an important structure, is all but completed, and while the recent builders' strike has somewhat delayed operations, it is now only a question of two or three months before this valuable additional site is occupied.

CURRENT YEAR'S BUSINESS.

The business in the current year has shown quite a considerable advance over every one of the corresponding months of last year, and the actual goods already dispatched amount to an appreciable percentage over the same period. This I consider a highly satisfactory showing, due largely to the very splendid collection of novelties we are showing in all departments, but partly also to the added impetus given by our admittedly fine and well-placed exhibit at the British Empire Exhibition, fitly entitled a Temple of Art. The concentrated show of our varied art departments in this structure, admittedly one of the most concise and beautiful in the whole Palace of Industry, has given to millions of visitors, many of them from overseas, a real idea of the world's art service carried on by this company at Raphael House, and there can be little doubt that this valuable propaganda will bear fruit for years to come.

Having reviewed the salient features of the balance-sheet, the Chairman said: I venture to think you will recognise that in the presentation of this report your directors have been guided by the claims of sound finance, and that the advent of better conditions in the world's trade will continue further to strengthen the very satisfactory position of your company. The recommendation of your directors is the payment of a final dividend on the ordinary shares for the six months to the end of April, 1924, at the rate of 11 per cent. per annum, making with the interim dividend paid a dividend of 8 per cent. per annum.

Sir Arthur Conan Doyle seconded the motion. In doing so he said there had been a very remarkable increase in business during the current year—both in orders received and in the actual output of goods. He thought the company might look forward to a "bumper" year. He wished, in connection with the accounts, to draw particular attention to the company's tremendously powerful position in the matter of reserves, which were sufficient to cover eight or nine years' dividends on the preference shares.

The resolution was carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr Gustave Tuck (vice-chairman), who proposed the re-election of Sir Arthur Conan Doyle and Mr Desmond A. Tuck as directors, said that Raphael Tuck's books and calendars were more popular than ever. For lovers of Dickens they had recently published a beautiful volume of "Character Sketches from Dickens." This book had been edited by Mr B. W. Matz, the greatest living authority on Dickens and his works. Mrs Kate Perugini, Charles Dickens's daughter, had specially written an introduction in which she dealt with the home life of her father and his writings. All the coloured drawings, which numbered 30, were the work of Mr Harold Copping. The Raphael House Library stood unrivalled, with its 32 peerless volumes.

The motion was duly seconded, and passed unanimously.

ENGLISH AND DUTCH MEAT COMPANY, LIMITED.
SUCCESSFUL RESULTS OF THE FIRST YEAR'S TRADING.

The first annual ordinary general meeting of the members of the English and Dutch Meat Company, Limited, was held, on Tuesday, the 28th ultimo, at Holland House, 1-4, Bury street, London, E.C., Mr A. G. Kroller (chairman of the company) presiding.

The secretary (Mr P. E. Lechner) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—With your permission I propose to adopt the usual course and ask you to take the report and accounts as read. (Agreed.) This is our first annual

general meeting, and I am indeed glad to be able to present to you accounts as satisfactory as those which are now before you for the first year's trading. This, as you know, in a new undertaking, is always a difficult period, as it takes some time before everything is thoroughly organised and the different departments work harmoniously together; but we have been able in this instance to bring to the assistance of the company the whole organisation of William H. Muller and Co., both in the Argentine and in Europe, as well as the thorough knowledge of our English agent of the meat trade.

COMPANY'S MODERN EQUIPMENT.

We have, at the same time, modern storage capacity at the Hook of Holland and in Bremerhaven in Germany; we are equipped with refrigerating cars, and in times of reduced demand in the meat market, which happens periodically, without such storage accommodation the meat would have to be realised at the best prices possible. The factory we purchased in the Argentine has now been thoroughly equipped, and although, in order to bring it on to entirely modern and economic lines we shall have to invest some more capital in the plant, we can say that, on the whole, it has been working very well during the last nine months, and we are confident that our cost of production of frozen meat, f.o.b. steamer is as low as that of any other factory out there.

CATTLE PRICES.

During the first half-year cattle prices in the Argentine ruled low, as for years past there has been a considerable over-production of cattle, more or less a reflection of the war period, when the demand for frozen and chilled meat for the fighting armies was so great; but, latterly, cattle prices have stiffened, and, the rate of exchange having also improved, the margin of profit was reduced. On the other hand, selling prices on the Continent have since moved upwards, and I have, therefore, every confidence that the coming year will again show satisfactory results.

BALANCE-SHEET ITEMS.

There are a few items in the balance-sheet upon which you may wish to have some explanation, viz., the trade investments at cost on the assets side, these represent the two cold stores with complete equipment to which I have already referred, which are situated in Holland and Germany. The stocks are taken at cost, and, therefore, compared with realised prices, contain an appreciable reserve. You will notice that the cash position of the company is a good one, and that our credit facilities are satisfactory, which, in a business like ours, is a very essential matter, seeing that at times there are heavy stocks to carry and that there are always big shipments afloat which have to be financed.

THE PROFIT.

The trading profit of approximately £290,000 covers our requirements for debenture interest nearly five times, and the net profit, which is arrived at after allowing £48,000 for depreciation, will permit us to declare a dividend of 8 per cent. per annum on the shares. We also propose to write off £20,000 for preliminary expenses, and £11,000 off the goodwill; the balance of about £80,000, subject to provision for taxation, it is proposed to carry forward to the next account.

The Chairman concluded by moving the adoption of the report and accounts, and the payment of a dividend of 8 per cent., less income-tax.

Lieut.-Colonel Woodbine Parish, C.B.E., seconded the resolution, and it was carried unanimously.

The election of Mr Walter Henderson-Cleland as a director was confirmed, and the auditors, Messrs Whitney, Smith, and Whitney, having been reappointed, the proceedings terminated.

Total declared value of imports	Total declared value of exports
458,507	140,741

Messrs. Samuel Montagu and Co. write, on October 29th, as follows:—

GOLD.

The moderate supplies of gold available this week have been taken on account of India, the Continent, and the trade.

SILVER.

Owing to persistent sales on China account, and to a lack of the support given in recent weeks from the United States, a considerable fall has taken place in prices. Indian inquiry has not been active, and bear covering has naturally been reluctant in the face of the uneasy tendency shown by the market. It remains to be seen whether the lower level now reached will attract the Continent, which has of late taken but little interest. Unless renewal of demand sets in on Continental coinage account, prices cannot resist China selling, and a better market must await the time when China reverses its attitude owing to a price being reached which encourages bear covering. The silver production of Czechoslovakia for 1923 is returned as 21,844 kilogrammes, valued at Kc. 15,287,999.

Reports and Notices.

We are officially informed that the period for the deposit of Portuguese Government bonds for stamping in accordance with the decrees of June 3, 1924, has been extended to December 31st next.

The directors of the Bank of Liverpool and Martins, Limited, announce that Mr Edward B. Orme has been elected to a seat on the board.

The British South Africa Company will cease to act as agent for the Southern Rhodesia Government on October 31, 1924, after which date all communications concerning that territory as regards administrative matter should be addressed to the Secretary to the High Commissioner for Southern Rhodesia, Crown House, Aldwych, London, W.C. 2.

On and after to-day the registered office of the Bahia Blanca and North-Western Railway Company, Limited, will be situated at River Plate House, Finsbury Circus, E.C. 2.

GOVERNMENT STOCKS, &c.

BAHIA (STATE OF).—Under the scheme arranged with the State of Bahia in December last, further funds have been received by the Ethelburga Syndicate, Limited, sufficient to pay the coupon dated November 1, 1922, on the bonds of the 1904 loan. The total amount received under the scheme to date is 6,500 contos of reis, equivalent to approximately £157,000.

BULGARIAN 6 PER CENT. LOAN, 1892.—Bondholders are notified that all coupons and drawn bonds due for payment up to and including July, 1918, will be payable on and after February 1, 1925, in Sofia only. The Imperial Ottoman Bank, 25, Austin Friars, E.C. 2, therefore notify holders that on and after that date such coupons and drawn bonds will only be received for collection of the sums due from the Bulgarian Government.

GUATEMALA (4 PER CENT. EXTERNAL DEBT).—The Council of Foreign Bondholders have received the sum of £56,240 for the service of the above debt for the year 1924-1925.

NICARAGUA GOLD BONDS, 1909.—The Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the October, 1924, instalment of the debt service in accordance with the arrangement of May 25, 1912.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

(with which is incorporated the AFRICAN BANKING CORPORATION, LTD)

Bankers to the Government of the Union of South Africa in Cape Province; to the Imperial Government in South Africa; and to the Administration of Rhodesia.

fully-paid shares representing one-third of the ordinary share capital of the new company.

IMPERIAL AIRWAYS, LIMITED.—Number of miles flown for the month of September was 110,345; miles flown since April 1st, 544,130. Ton miles for September, 58,793; ton miles since April 1st, 277,433. Receipts for September, £36,319. Total receipts since April 1st, £153,395.

LAGUNAS SYNDICATE, LIMITED.—Having been debarred by its obligations to its debenture holders from paying any dividends to the shareholders for some years, the company proposes to ask the debenture holders to agree to a modification of those obligations. In return for this concession, the company would at once redeem at par about a third of the outstanding debentures and increase the interest on the balance to 6 per cent., whilst guaranteeing to redeem the whole issue within 10 years. A meeting of the debenture holders has been called for Tuesday, November 4th next, at 12 o'clock, at Winchester House, E.C.

MONTEVIDEO TELEPHONE.—The report for year ended July 31, 1924, shows a net profit of £22,700, against £17,182 in preceding year. The ordinary dividend is again 5 per cent. The sum of £10,000 is put to reserve, and £11,950 carried forward, against £10,107 brought in. In the last report the directors informed the shareholders of the losses sustained by the company as a result of the action of the Uruguayan Government. The directors are pleased to state that the loss in subscribers has now been made good, but the abnormal working expenses have prevented any material improvement being shown in the profits. At the last meeting of shareholders the chairman explained the position of the company with regard to the ad-referendum agreement entered into with the Postmaster-General on June 30, 1922, for the sale of the company's undertaking in Uruguay, and at the present time the position remains unaltered.

SENA SUGAR ESTATES.—After deducting London expenses' debenture interest and providing for redemption and taxation, the profit for the year 1923 amounted to £253,020, as compared with £35,125 in preceding year. The balance of Corporation Profits Tax has been agreed with the Inland Revenue at £3,960, thereby reducing the amount carried forward from 1922 to £11,162. An adjustment of excess profits duty liability resulted in a refund to the company of £5,866. This, together with the net profit for the year and the carry forward previously mentioned, gives a total amount of £270,048 to be appropriated. The directors are transferring £30,000 to general reserve, £30,000 to depreciation reserve, and recommend a final dividend of 8 per cent., less tax, making, with the interim dividend of 7 per cent., less tax, paid in April last, 15 per cent., less tax, for the year, as compared with 2½ per cent. for 1922. There will then remain £30,048, which it is proposed to carry forward to 1924.

SUDAN PLANTATIONS SYNDICATE.—The report for year ended June 30, 1924, reveals a net profit of £112,934, against £85,082 in preceding year. The ordinary dividend is 20 per cent. for the year, which absorbed £105,000. This compares with a dividend of 17½ per cent. in preceding year, which absorbed £78,750. The carry forward is £176,565, against £168,631 brought in to the accounts. In May last 150,000 new shares (£1) were offered to shareholders at £3 10s per share, all of which were taken up. The issued capital now stands at £600,000.

TOKYO ELECTRIC LIGHT COMPANY, LIMITED.—Gross revenue for September, 1924, kw. hours sold, 115,002,000, 4,213,000 yen. Sterling equivalent at par of exchange, £431,481.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS.—Well No. 32 on the El Mene Field, Buchivacoa, was brought into production on October 22nd, with an estimated daily output of 1,500 barrels. The well is under perfect control, and the oil shows a gravity of 35 deg. Beaume.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions generally have not been altogether favourable for agricultural pursuits, but farmers were able to make fair progress with autumn cultivation during fine intervals. With threshings on a larger scale supplies of native wheat were more plentiful, but trade proceeded quietly, with prices ranging from 12s 6d to 13s per 112 lbs, free on rail. Imported descriptions generally firm, in sympathy with higher forward offers, though somewhat irregular. No. 1 Northern Manitoba quoted 66s 6d, No. 2 hard winter 60s, No. 1 Northern Duluth 62s, ex ship, and choice white Karachi landed 64s, all per 496 lbs. In the floating and forward cargo section business was somewhat restricted, but holders generally

adopted an attitude of reserve in face of firmer cables from North America and Argentina. Sales include No. 2 hard winter November at 59s 6d, Australian early January 63s 6d net, and ditto January-February 15th 63s 7½d per 480 lbs, c.i.f. Maize cargoes in better support, and prices hardened. Steamers of La Plata early October sold 44s and resold at 45s, November-December 47s 3d to 47s 6d, December-January 47s 9d to 49s, and January-February 48s 10½d per 480 lbs, c.i.f. terms. Flour trade quiet, and official prices of standard straight run reduced by 1s per sack to 51s, patents quoted 53s to 54s, town whites 51s, delivered in metropolitan area. Imported quietly steady. Manitoba patents range from 49s to 52s as to quality, Minnesota 50s to 51s, Australian 47s 6d, all ex store, and Kansas straights 47s to 48s, all per 280 lbs. Barley dull and feeding descriptions again easier. Californian quoted 70s to 72s, Chilian Chevalier 83s to 88s, Polish 60s to 70s, ex store per 448 lbs. Danubian ex ship 40s, ditto landed 41s 6d, American malting 48 lbs ex ship to arrive 40s, Persian ex ship 40s. Russian landed 43s per 400 lbs. English ranges from 12s 6d to 24s as to quality, per 112 lbs free on rail. Maize steady, quiet. Plate ex ship 46s, landed 47s 6d, Bessarabian 48s 6d, Odessa 47s 6d, both landed, all per 480 lbs. Oats quiet and easier. Plate ex ship 29s 6d, landed 32s, No. 2 Canadian Western ex ship 34s, white clipped American 38 lbs 30s 6d, landed 33s per 320 lbs, English 10s to 11s per 112 lbs, free on rail. Oatmeal quiet. London made flaked 20s 6d, rolled oats 20s, medium also fine cut 20s, coarse and medium pinhead 20s, ordinary Scottish oatmeal 20s 6d to 21s 6d, American rolled oats 20s per cwt. Millers' offals quietly steady. Broad bran quoted 9s 9d, middlings 10s 6d, fine ditto 13s, bags included, ex mill. Light oats 9s 3d, powdered oat husks 9s 9d, feed oatmeal 12s 9d, ground oats 14s 9d, all per cwt, free on rail.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 30th, is as follows:—Pig-iron: Prior to the Election results, there has been more business doing in pig-iron, and still more inquiries are coming out. Prices are stiffening, and makers will not sell No. 3 Cleveland G.M.B. below 80s, and are holding out for 88s for mixed numbers East Coast hematite pig-iron. Manufactured iron and steel: The position is more favourable, and a good many negotiations are going on, which are expected to result in business. Prices are quoted as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; steel rails, £9; iron bars, £12. Iron ore: This market is still idle, but with the improved signs in the iron and steel trade, it is expected that consumers will shortly come on to the market for their requirements of iron ore. Meantime stocks are fairly heavy. The nominal price of best Rubio is 21s 6d per ton c.i.f. Tees.

Our Cardiff correspondent writes:—The undertone on the Cardiff coal market is improving. There has not been any notable movement yet in current prices; smalls are decidedly firmer, and quotations for large coal qualities are steady; but contracts are being placed on an extending scale for supplies over next year, and merchants are becoming more eager to cover for their future requirements. The Admiralty authorities have this week applied for tenders of prices and quantities for the service of the fleet and the depots, and although the quantity of coal now supplied to the British Admiralty is relatively small compared with that supplied in pre-war years, it is large enough to exercise a considerable influence on the level of 1925 contract values. The current quotations of best Admiralties for next year's supplies are in the neighbourhood of 27s, for second-class Admiralties between 26s and 26s 6d, and for smalls they range between 14s and 16s. These are low prices when related to the prevailing cost of production, but with more regular work costs may be reduced. The market this week has been more interested in the General Election than in current business, and the general impression is that the return of a Conservative Government with an independent majority will have a stimulating effect on enterprise, and that this will re-act favourably on the coal trade.

The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; second Admiralties, 25s to 26s; best drys, 27s 6d to 27s 9d; Black Veins, 24s to 25s; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 23s 6d; best bunker smalls, 15s to 16s; ordinary cargo smalls, 11s to 13s; coking smalls, 15s 6d to 16s; anthracite Big Vein, large, 45s to 50s; Red Vein, large, 34s 6d to 35s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; rubbly culm, 11s 3d to 13s 9d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 47s 6d to 50s; patent fuel, 25s 6d to 27s 6d; pitwood, ex ship, 26s 9d to 27s. There has been no material change this week in the Welsh steel and tinplate markets. Tinplate prices have been firmly maintained at about the minimum figures, and there are a fair number of inquiries from Continental buyers. The steel trade outlook is a little brighter.

Our Sheffield correspondent writes:—The overseas demand for railway steel continues on a restricted scale. Business in mining steel is poor, with the exception of hollow drill steel for the South African goldfields. The market for ferro-alloys used in special steels is quite at a standstill. The output of Sheffield in the aggregate is undoubtedly lower than a few months ago. The call for steel sheets, cold-rolled steel, motor steel, wire, and hand tools continues fairly good, and some Russian orders for files, saws, and engineers' small tools are on hand. Plate and cutlery makers are well employed on season orders, but not much business is coming forward for silverware. Coal trade conditions are the same as last reported, with a tendency downward rather than upward, and prices vary according to the prospects of immediate business. The market may be said to have gone to pieces as regards secondary qualities and small fuel. The least unsteady are hards, gas, and house coal.

Our Glasgow correspondent writes:—A better tone is noticeable generally in the iron and steel markets—pig-iron orders have increased, and although the output is still on a restricted basis, there is a tendency towards steadier conditions. The shipments from Glasgow last week totalled 1,243 tons, of which 1,006 tons went abroad. Steel works have been having a very thin time, but inquiry is somewhat improved, and the elections being now out of the way, anticipation of better business is general. Structural firms have good work in hand, and a considerable amount of important inquiry is being dealt with in this line, which is reckoned a good sign of reviving trade in iron and steel. Bar iron makers are doing very little, and as regards sheets, a few of the makers, having finished the contracts which have kept them busy for the last few months, are finding new work very difficult to procure, despite the

recent reduction in prices. Galvanised sheet makers are well booked up, but prices have been forced down, and, despite the advance in spelter, orders cannot be got for December delivery at more than £17 15s per ton. Offers at 10s below this figure are being made from India, but no business is done at this basis. Two cargo steamers of special type have been secured by Clyde shipbuilders this week.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

A slight change for the better in the hematite pig-iron trade in the north-west of England is to be detected in the last week of this month. It is true that the production of the eleven furnaces that are in operation between Workington and Carnforth is in excess of demand, and that in consequence additions are still being made to the stocks, now amounting, it is stated, to 70,000 tons; but there does appear at last to be a prospect of more orders, and larger orders being available, and of a return, however slow, to more favourable conditions than have been experienced for over a year. The outlook in the local steel trade, it is said, is brightening, and makers are talking of greater activity in their rolling mills. If that really proves to be the case there will, of course, be a considerable local outlet for the make of iron, the larger portion of which is at present going to the Midlands and Scotland, and a very small part of which is being exported to America and to the Continent. The volume of inquiry is reported to be more satisfactory this week. As confidence is restored, the disposition of users to contract at present prices for future needs will undoubtedly harden. It will be a pleasant experience, whenever it comes, for smelters to do business on other than a hand-to-mouth scale. Prices are not yet affected, and Bessemer mixed numbers remain at the low level to which they have recently dropped. That is to say, Bessemer mixed numbers are £5 per ton delivered at Glasgow, £5 5s per ton at Sheffield, and £5 10s at Birmingham. Low-phosphorous iron is in fairly steady request by high-class steel makers in the Sheffield district. As far as the steel trade is concerned, operations are on an unimportant scale, and rails are not being rolled at either Workington or Barrow. Native hematite iron ore is largely in local demand. Owners complain of the prices at which they are having to sell. Thus, superior sorts of low-phosphorous ore are quoted between 21s and 23s 6d per ton, and ordinary kinds at 16s 6d to 17s 6d per ton. No change is recorded in the state of the coal trade, which is as hard hit as ever by the successful competition offered in the Irish market by Scotch and Lancashire collieries. Little coal can be sold for export to Ireland at a time when best round at 25s, f.o.b., house nuts at 23s, and steam nuts at 21s, f.o.b., are fully 3s per ton above the Lancashire and Scotch figures. Best gas coal for shipment to Ireland is 25s, f.o.b., and 29s to 30s at local works. Best round locally is 38s 2d at pit. Best steam for the local works is 30s, and washed steam 29s per ton delivered. Coke, the whole make of which is absorbed by the smelters here, is 23s to 24s per ton, according to carbon content. East Coast coke supplies to the district are again above 6,000 tons this week.

METALS.

The market for tin opened the week with a very steady tone, but subsequently displayed marked irregularity in sympathy with fluctuating Eastern advices, though prices ruled firmer on balance, with a fair business passing especially in forward positions. Standard, cash, sold from £256 to £253 and up to £258 5s, with three months fluctuating between £260-£255 and £260 15s. Copper in good demand, but prices slightly irregular, with dealings in standard, cash, at £63 17s 6d-£62 12s 6d, and finally registered at £63 11s 3d, three months £65-£64 7s 6d and £64 15s. Lead active, irregular and easier. Good soft foreign pig quoted

THE MONEY MARKET.

LACK of maturing Treasury bills soon used up the surplus of credit, and on Wednesday a large amount had to be borrowed from the Bank of England. After that the market, having apparently borrowed more than was necessary, found itself amply supplied with funds. Discount rates, having been slightly harder, eased again, and fine three-months' bank bills were quoted at 3 1/4-3 1/2 per cent., with the accent on the lower fraction. The London

County Council placed £2,000,000 yearling bills at a fraction under 4 per cent., and was thought to have done very well.

	Nov. 7, 1924.	Oct. 31, 1924.	Oct. 24, 1924.	Oct. 17, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	3½	3½	3½	..

The Bank return showed increases of £255,000 in the note circulation and £10,000 in the stock of gold, and a consequent decrease of £245,000 in the Reserve. Other securities rose by £2,388,000, a good deal less than is believed to have been borrowed on Wednesday, and Government securities declined by £1,330,000. Nevertheless, Public deposits expanded by nearly 2½ millions, and so other deposits were over a million and a half lower on balance. Currency notes outstanding were increased this week by £2,387,000 to £287,411,700, which includes £1,364,700 for notes called in but not yet cancelled. The fiduciary issue is £236,597,000, or £11,593,900 below the maximum.

THE STOCK MARKETS.

A large volume of business has been transacted on the Stock Exchange this week, and the settlement is spoken of as the biggest this year. Most of the business has been of the buying order, but towards the end of the week there has been some profit taking, and the slight reaction in prices can only be described as wholesome and salutary after the unchecked and rapid advance of the past fortnight. All sections have taken part in the upward movement, industrials being particularly in demand this week. Gilt-edged stocks and home rails close a trifle below the best, but the tone is firm. Rubber shares have been very active on the further rise in the price of the raw material, but oils show a little irregularity owing, it would appear, to the erratic movements of Mexican Eagles. Considerably more attention has been paid to the Kaffir market, and buying from the Cape and Paris has assisted the upward movement in prices.

THE COMMODITY MARKETS.

Although in some sections of industry recent political events have influenced markets, our Manchester correspondent reports that business in the cotton trade is quieter, adding that there is still a disposition to anticipate lower values. Our Bradford correspondent, however, reports that "the clearing up of the political situation here and in the United States" has improved the market. The pig-iron market is brisk, prices having moved upward during the week, while in manufactured iron and steel conditions are much better. Our Sheffield correspondent strikes a note of caution, referring to the "tide of confidence," and suggests that time will show whether this sentiment is justified. Tin is lower, and copper shows signs of weakness. Linseed oil is easier on the week. Brisk competition was noticeable for tea, while the rubber market, although opening firm, assumed a quieter tone later. Other details of markets and prices will be found in those pages of our paper devoted to the reports of our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market the outstanding feature has been the further rapid improvement in sterling values. As measured by the dollar, the market was quiet for the first half of the week, although between October 30th and November 4th the rate had moved up from \$4.52 3-5 to \$4.54 1-8. On Wednesday there was another sharp rise to \$4.56 1-8, and at one time on Thursday the quotation was as high as \$4.57 1-8, though afterwards there was some reaction to a closing price of \$4.56 1-8. Yesterday morn-

ing the rate was again slightly firmer at \$4.56 1-8. Forward quotations are 1/8 cent per month below spot. Although the improved trade position and the greater freedom with which America is now lending money abroad may to some extent justify this movement, there is no doubt that a large part of the rise is a sentimental reaction from the election results, and a general feeling that stable conditions and trade development may be expected. It is possible that this optimism may continue and find a further reflection in still higher rates, but on the whole perhaps some slight reaction may be expected. Of the currencies moving with the dollar, Switzerland, as was to be expected, has gone in our favour from 23.51 1/2 to 23.70 1/2, Stockholm from 17.00 to 17.05 1/2, Vienna from 319.500 to 322.000, Warsaw from 23.50 to 23.75, Berlin from 19.05 to 19.20. Amsterdam, however, has moved against us from 11.48 1/2 to 11.47 1/2. After some slight recovery the Paris rate became unsteady, and an unfavourable view of the Government's financial position and the new loan proposals drove up the quotation to at one time on Thursday as high as 87.85, compared with 86.30 on the 30th. Afterwards there was some recovery, and yesterday morning the quotation was given as 87. During the same period Brussels moved from 94.05 to 94.95. For Paris francs one month forward were quoted at 30 centimes, for Brussels at 10 centimes, over spot. After its recent depreciation to 104.17 1/2 on the 30th, the lira at first showed some recovery, but in the last two days has broken away again to 105 1/8 yesterday morning, and in general the position in Italy is looked on with some misgiving. Madrid, too, has continued to depreciate from 33.58 to 33.82 1/2. In Northern Europe, Copenhagen and Christiania rates are only slightly higher, but Helsingfors shows a move up from 179 1/2 to 181 1/2. In Eastern Europe, Budapest maintains its stable ratio with sterling, while both Prague and Belgrade have depreciated slightly. Bucharest, after some recovery, remains about the same at 805. In the East the rupee has fallen in value from 15 6 3-64d to 15 5 31-32d, and the yen is also cheaper at 15 8 1-2d, as compared with 15 8 17-32d. Selling from China and America brought down the price of silver, and although there was a slight recovery after the middle of the week, the tone remains easy. Hong-kong stands at 25 4 1-2d, as compared with 25 5 1-2d, and Shanghai at 35 4 1-2d, as compared with 35 5d a week ago. In South America, Rio has moved down very slightly from 5 31-32d to 5 27-32d. Buenos Aires, on the other hand, has appreciated from 44 11-32d to 44 1-2d, and Monte Video from 48 1-2d to 48 3-4d, while Valparaiso, after some depreciation, has recovered to 39.60, as compared with 39.70 pesos a week ago.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 1st:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	8,350	From Revenue	10,082
Interest, &c., on Debt	7,337	Increase in Debt	6,930
Sinking Fund	500		
Sundries	782		
Increase in Exchequer balances	43		
	17,012		17,012

The Revenue for the week was well maintained at £10,082,000, against £10,900,142 in the corresponding week last year. Customs were slightly lower at £1,810,000, against £1,959,000, but Excise was up at £1,491,000, against £1,343,000. Estate Duties brought in £850,000, as compared with £880,000. Property and Income-tax was lower at £3,147,000, against £3,916,000, and Super-tax at £350,000, against £360,000. Post Office receipts amounted to £1,500,000, there being no change as compared with last year. Ordinary and Special receipts were both nil, against £247,823 and £57,841 respectively last year. The week's operations increased the National Debt by £6,930,500, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Public Department Advances	5,510	Treasury Bills	461
Bank of England Advances	1,750	National War Bonds repaid	51
Sundries	175		
	+ 7,435		- 511

The floating debt was increased by £6,810,000 to £705,860,000.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MR BALDWIN'S CHOICE.

THE political situation has developed according to plan. After a delay of a few days devoted to an inconclusive investigation into the authenticity of the Zinovieff letter, Mr Ramsay MacDonald tendered his resignation to the King on Tuesday. Mr Baldwin within an hour accepted His Majesty's invitation to form a Government, and has shown such promptitude in the task that his cabinet yesterday took over the seals of office from their Labour predecessors. Mr Baldwin enters on his second Premiership not only with the greatest homogeneous majority enjoyed by any Conservative Premier since the Reform Bill, but also with the confidence of the business world behind him, with the goodwill of a great majority of the country, and with a general respect which his reputation for candour and integrity have earned for him. He is thus presented with a unique opportunity. Equally he is faced with a unique responsibility. To sacrifice a comfortable majority and to return to office with his majority multiplied five-fold, all within the space of ten months, is an experience unprecedented in English political history. It is an experience from which Mr Baldwin will only profit if he does some very hard thinking about the chain of circumstances which has played into his hands in so amazing a fashion. To appraise his responsibility he must clear his mind of the elation of victory and fasten his vision on the time four or five years hence when he must submit the account of his stewardship to the judgment of the people. Fortune will never forgive any party for two consecutive political miscalculations. The miscalculation of last year has been retrieved; but a lack of vision and of a sense of proportion in the policy of Mr Baldwin's second administration would in all probability lead to something far more serious than mere party disaster.

To realise the truth of this fact it is necessary to study the election statistics, which we analyse on a later page. In a contest which was taken by the country to be first and foremost a battle between Socialism and anti-Socialism, the Socialist party won more than a million new adherents and polled over 5½ million votes out of a total poll of a little more than 16½ millions. The rise in the Labour vote is a feature of the election, to which the Conservative Press have paid most inadequate attention. It rests more with Mr Baldwin than it does with Mr MacDonald or any other man whether at the next election there is to be another and far more sensational advance in the vote for Socialism. He inherits office with a majority abundantly sufficient to carry any measure he may propound, and at a time when economic, industrial, and social problems cry out for enlightened and progressive handling. He has, at the same time, among his followers a powerful element of the "Die Hard" and the reactionary. If this element is allowed to call the tune of Conservative policy and to guide it in the direction of retrograde measures and non-progressive administration, then one thing is tolerably certain: During the period of this Government's rule the

ranks of Socialists will be steadily swollen, not merely by the normal workings of distress, discontent, and class antagonism, but by the accession of the young and the ardent spirits, who, seeing reaction on the right will revolt to the far left. If cause for such a movement is given by the new Government it may easily gather a momentum which will sweep aside the Liberal party's efforts at revival, and swing the pendulum so far from right to left as to bring a Socialist Government not only into office, but into power with an independent majority. That this danger is not imaginary is shown by the undisguised rejoicing with which the British election results have been hailed in Moscow. This rejoicing is based on the view that moderates have been eliminated and that Britain is left with a naked struggle between the classes, which in due course will lead to victory for the extreme left. If the new Government carries into its legislation and administration the spirit of class antagonism in which some of its supporters fought the recent election, the Moscow prophecy may come dangerously near to fulfilment. We retain our belief in the underlying commonsense and sound judgment of the British people. But it is possible to conceive a position in which the blunders of politicians might give these national characteristics inadequate opportunity to function. Those on either wing of politics who try, as many on both extremes tried in the recent election, to degrade British politics into a mere death struggle between Socialism and capitalism, between the "haves" and the "have nots," are lighting a conflagration which even the underlying soundness of the nation might not succeed in quenching.

Look at the matter from another angle. We hear from the Labour party to-day two voices. On the one hand we have Mr Thomas, one of the outstanding successes of the Labour Cabinet, who said, at the Cutlers' Feast at Sheffield, on Tuesday: "We have got to establish confidence. Don't let us keep up this damnable talk of class warfare." And, on the other hand, Mr Wheatley, who at a Glasgow meeting on Sunday consoled himself with the thought that the overwhelming Conservative victory "would considerably hasten the end of the capitalist system of society." We have also the Liberal party, which, though insignificant in Parliamentary strength, still polled three million votes under the most adverse circumstances imaginable, and is entering on a struggle to build up public support for a policy of sane progress without revolution, fiscal, economic, or social. Mr Baldwin will not hold the reins for ever. There must be an alternative Government. Into whose hands will Conservative policy play? Will it arm or disarm the extremists of the left? That is the fundamental problem which Mr Baldwin has to face. We look to him to face it with honesty, imagination, and courage. He is not lacking in these three qualities. We venture to suggest to him that the most propitious approach to his great task would be through a gesture which demands all three qualities. No move would create more assurance in the country regarding his devotion to democratic principles than the promise of immediate legislation to reform our electoral system, and to ensure that, be his party interests what they may, all future Parliaments will faithfully reflect—as this Parliament so signally fails to do—the real will of the electorate.

The personnel of the Cabinet goes some way towards allaying our fears as to the spirit in which Mr Baldwin shoulders his task. Of Mr Churchill's political gyrations we have been among the severest of critics. But he is a strong, efficient, and fearless administrator, and as such should be capable as Chancellor of the Exchequer of insisting that the field for public economy is fully and relentlessly explored—a task for which his abundant experience of the spending departments further qualifies him. There are two other important aspects of his appointment. In a career not noted for political consistency he has hitherto shown a consistent devotion to Free Trade principles of which he has displayed a thorough grasp, and his presence at the Treasury should be a safeguard against flirtations with tariff tinkering, the fears of which would otherwise be increased by the presence of Mr Amery, that unrepentant apostle of Protection and Imperial Preference, at the Colonial Office. The other point is that in making this appointment Mr Baldwin (undaunted by the storm raised by his offer of office to Mr McKenna in his previous

Government) has at the outset shown himself strong enough to override the claims of mere party loyalty, and to face the acute displeasure of the Die Hard element in his party. Of the other appointments the most notable are those of Mr Austen Chamberlain as Foreign Minister, and Lord Birkenhead as Secretary of State for India. The former is definitely preferable to Lord Curzon. Mr Chamberlain approaches the intricate problems of European policy with a clean slate, without any load of past mistakes and mistrust, and with, we believe, a mentality capable of recognising and continuing the good work in Europe which Mr MacDonald has begun. We are glad to see that his appointment has had a quite favourable reception in Paris. With him, we hope (although an official statement is lacking at the moment) he will have Lord Robert Cecil, whose deep knowledge and understanding of the League of Nations Mr Baldwin will do exceedingly well to utilise. The introduction of Lord Birkenhead to the India Office is a bold experiment that promises well for the enlightened conduct of Indian affairs at a crucial moment, if we may base our judgment on his memorable speech in the House of Lords in 1920 on the Amritsar massacre.

Altogether we believe that the country in general, and in particular the business community, which does not greatly concern itself with conflicting claims of individuals on the score of party loyalty, will consider that Mr Baldwin has, on the whole, made a good beginning. When he meets the House we trust that both he and Mr Austen Chamberlain, who was naturally marked out as Leader in the Commons, will remember both the lessons of the last Parliament and the circumstances of the recent election. Mr MacDonald fell because he and his lieutenants refused to take into account the implications of their position, and, spurning the normal method of consultation, rushed beyond the limits that could be tolerated by those on whose votes they depended. Let Mr Baldwin and Mr Chamberlain reflect that, if the votes cast at the polls were accurately and proportionately represented at Westminster, they would not have a clear majority over all parties. If they bear this constantly in mind they will guide their policy so as not to outrage either by retrograde measures or by fiscal revolution, those upon whose votes, under a more perfect electoral system, they might have been dependent in the House of Commons.

THE AMERICAN ELECTION.

THE overwhelming victory of Mr Coolidge this week seemed as unlikely last spring, when the "Oil Scandal" was in full hue and cry, as Mr Baldwin's victory seemed after the decisive vote given against Protection by the electorate of Great Britain. Latterly, students of economic and social tendencies have been warning the American people that the margin of undeveloped wealth on which they have lived for a century is coming to an end, and that they will have to adapt themselves to the conditions already existing in Europe. The horizon of politics, however, is notoriously shorter than that of scientific observation, and the present election results are an illustration of this fact, which economic observers, especially, are tempted to overlook. The returns mean that the average American elector has not yet begun to feel the pinch of the shoe, or at any rate not to realise which shoe it is that pinches. He still prefers the opportunities of his traditional system to the untried paths of social and constitutional change. The Fordney tariff may penalise the consumer to the profit of big business; members of the administration may corruptly play with the nation's oil reserves; the Senate may indulge its sensitiveness for its constitutional prerogative by sabotaging the relations between the United States and Japan; the Klansmen may emulate the Fascisti. But still there seems enough prosperity to go round if the little fish are only left alone to browse quietly by the side of the great sharks and whales. Oil-wells still seem bottomless, the Pacific an impassable gulf, the American constitution sacred, American liberty

impregnable. The ordinary American citizen is not yet disturbed by the big problems beyond his horizon, but he is outraged by proposals to remodel (if ever so little) the familiar foreground of political and social institutions in which he still expects to lead a profitable existence.

These broadly are the considerations which appear to mould, almost unconsciously perhaps, the general attitude of the people of the United States towards political problems. Of the actual influences that decided the result of this particular election campaign, a clearer and more definite analysis is possible. Mr Coolidge's victory was due perhaps more than anything else to the intense propaganda directed towards showing that, while his return would provide the conditions necessary to continued prosperity, no other party could hope for victory outright, and that if an inconclusive result threw the election into Congress, economic progress would be seriously impeded by the prolongation for several months of political uncertainty. The rise in wheat prices was a stroke of good fortune for the President, for it took the edge off the farmers' discontent, while the maintenance of high wage levels and signs of reviving trade restrained the forces of Labour from deserting the Republican candidate. In the long run the oil scandals, the supposed trump card of the Progressives, played a comparatively small part in influencing the result. As an election factor they were outweighed by the public belief in the personal integrity of the President—a belief which was reinforced a fortnight before polling day by the publication of an income-tax return showing Mr Coolidge's liability to tax to be on a small scale. Much has been said in this country of the influence of the British swing to conservatism on the result of the American elections; but well-placed observers in the United States consider this influence to have been slight. The part played by Ku Klux Klan has been greatly exaggerated, while the prohibition question and the League of Nations were largely avoided by party speakers, and did not figure as prominently as was expected. The Republicans directed much of their fire against Mr La Follette's proposal for railway nationalisation, and an effect was produced by the argument that higher wages for the employees would lead to an increase in farmers' freight charges. Fierce resistance was also offered to the Progressive proposal to give Congress the power to override the decisions of the Supreme Court. The sum total of these various factors affords sufficient explanation of Mr Coolidge's triumph. Much was made during the campaign of the fact that in 1920 less than half the electors voted, but the fact is that the ballot paper is so extraordinarily complicated that it inevitably disfranchises a large proportion of the lowest class voters.

The electoral votes secured by the Progressives, like the seats secured by the Labour party, may not give a full measure of the real support which they have won in the country, and the electoral factor just mentioned must be taken into consideration. But the return of a Progressive President or a Progressive Congress will not be practical politics for many years. The Democrats, again, may be in danger of suffering severely from the squeeze between the Progressives and the Republicans; but the inroads so far made upon their domain are trifling compared with those which British Liberalism has suffered, and they can still rely upon a solid South. By implication, the Republicans themselves have a longer rope than Mr Baldwin.

In home politics, Mr Coolidge's victory means "no change" for four years. The Fordney Tariff will continue, the farmers' revolt has missed fire. The nation will rest secure in the feeling that the "Reds," and even the "Pinks," have been put in their place; and the Administration, which in these circumstances would anyway not be stimulated to violent legislative activity, will be further restrained by the fact that the Republicans will not in all probability retain the initiative in the Senate when the new Congress assembles next year. It is more interesting, perhaps, to estimate the bearing of the Presidential election on American foreign policy. The defeat of Mr Davis is, of course, in a way a set-back to the cause of the League, for the Democratic candidate was in favour of American participation, and had the courage to say so in his acceptance speech. On the other hand, this was a personal policy in which his party were following him—after past experiences—with some hesitation. The

exigencies of office might have compelled Mr Davis to modify his policy—at any rate, until it became apparent whether the present members of the League were going to adopt the Arbitration Protocol. Meanwhile, Mr Coolidge's victory has carried General Dawes to the vice-presidency, and whatever may have been his share in producing the celebrated report which bears his name, it is evident that an administration in which he holds that position must continue to support, from a safe distance perhaps, that policy of European reconstruction for which the Dawes Report stands. It is even more important that Mr Hughes will presumably remain at the head of the State Department. As the originator and guiding spirit of the Washington Conference, he has shown himself a master of constructive international statesmanship; but he is at the mercy of the Senate, which has the last word on foreign policy, and only this year the Senate, in their handling of the Japanese problem in connection with the new immigration law, have undone some of his most important work. The last Senate, indeed, has done much towards wrecking the foreign policy of the Administration, and it is here that the sense of a boundless margin, which still dominates the American mind, is likely to have the most dangerous consequences, for in regard to the Pacific this is nothing but a delusion. The international situation round the shores of the Pacific is as tense and strained as it is on the Continent of Europe; but the last Senate has not shown that spirit of restraint, accommodation and constructive purpose which was so conspicuous in the proceedings of the last Assembly at Geneva. Much, therefore may turn upon the composition of the new Senate which is to meet next year. At present it is conjectured that, while the Republicans will have a small plurality over the Democrats, the Progressive senators will hold the balance between them. If this forecast proves right, Mr Hughes may have an easier task; and while we cannot yet look forward to the entry of America into the League, we may hope that the spirit of the Washington Conference will assert itself powerfully in the conduct of her foreign affairs. There is a considerable body of opinion in the United States favourable and sympathetic towards the League, and we may feel disappointed that it has not operated more effectively in the election campaign. But we see no reason why Europe as a whole, and Britain and France in particular, should not share the feelings of confidence and satisfaction with which the American people are entrusting the conduct of their part in international affairs to the experienced and statesmanlike hands of Mr Hughes and General Dawes.

INSURANCE COSTS AND PROFITS.

No subject is of greater importance to insurance companies with great fire and accident departments than the relation of working costs, including taxation, to the margin of net profit realised on the premium income. Working costs in proportion to net premium income have for many years past shown a strong tendency to rise. The peak now seems to have been passed, and some reduction to be in sight, but relatively to net premiums costs of working, including commissions to agents, are from eight to ten per cent. of the premiums higher than they were even thirty years ago. And seeing that the net profit, out of which conflagration and other emergency reserves have to be built up, comes from what is left of the premiums after claims, working costs, taxation, and provision for current liabilities have been deducted, the problem before insurance managers of securing an adequate margin has become increasingly delicate and difficult.

It is significant that the problem of working costs and profits has in its various aspects formed the subject of the presidential addresses to the Insurance Institute of London both by Mr Sketch, of the Phoenix and Norwich Union Companies, in October, 1923, and by Mr Reynolds, of the Guardian, in October, 1924. Mr Rutter, Governor of the London and Lancashire, and one of the most

eminent insurance managers of his generation, also discussed the same problem at the general meeting this year of his company. It is all to the good that insurance managers should place their cards on the table, and take the public into their confidence. For the security and efficiency of insurance as an essential part of the business machine depends wholly upon public confidence in the men who conduct it, and on the principles by which they work.

Mr Sketch pointed out that, according to the tabulated returns of the leading fire companies, the ratio of working costs to net premiums was 30 per cent. in 1883, and had risen to 41.5 per cent. in 1922. He was at some pains to explain that part of this advance in the figures as shown was misleading. Forty years ago there was little reinsurance except between the companies; now the greater part of the large reinsurance business which has developed is placed by treaty with reinsurance companies which transact no direct business at all. "Although," he said, "the reinsurance company pays a higher commission than is paid away by the direct writing company, the excess commission does not equal the overhead cost of the direct writing company, and therefore the cost of the net business is increased." From information placed privately at Mr Sketch's disposal by the companies, he concluded that the distribution of reinsurance now adversely affects the net expense ratio by no less than 6 per cent. of the net premiums as shown in the companies' accounts. So that the true comparative increase in the proportion of working costs to net premiums in the 40 years was not 11.5 per cent. of the net premiums, but no more than 5.5 per cent. Of this actual increase, 2 per cent. was represented by taxation, which was out of the control of the companies. Mr Sketch made the further point—one quite admissible as between the public who pay premiums and the companies which administer fire insurance business—that the profits in terms of the premiums should be distributed over a much larger premium income than that set out in the published accounts (which, under the Assurance Companies Act are net), and that the percentage of profit earned on the turnover is considerably less than that applicable to the net income. And when we are considering the question of net profits actually realised, it should be borne in mind that taxation of all kinds on underwriting profits advanced from 23 per cent. in 1914 to 47 per cent. in 1923.

Mr Rutter, of the London and Lancashire, approached the subject of the relation of net profits to net premiums from a different angle. He endeavoured to bring out what the proportion of the net premiums remains to the companies as available profit, as shown in the actual published accounts in normal years, years, that is to say, which are free from great conflagration, or from the direct disturbances of war. For his examination Mr Rutter took the five years 1910 to 1914 (a period subsequent to the devastating fire in San Francisco), and the five years 1919 to 1923. His figures took in 20 companies for 1910-1914, and for 1919-1922, but he had not before him for 1923 more than the figures for 16 companies. Mr Rutter came to the conclusion that "totalling those ten years for all those companies representative of the best administration in this or any other country, we find that after deducting all charges of every kind and taxation, there remains a net residue, available to the companies for their own use and benefit, of actually not more than 4.78 per cent. of the net premiums."

Then we have Mr Reynolds, of the Guardian, as the latest exponent of the net earnings of fire insurance companies. Mr Reynolds took the ten years 1914-1923 for 17 companies, a period which included the abnormal years of the war. He made his calculations in the same manner as that adopted by Mr Rutter, and obtained the result that the surplus worked out at 5 per cent. of the net premiums, or only about one-fourth of 1 per cent. higher than Mr Rutter's figure for normal years before and after the war. Incidentally during Mr Reynolds' ten-year period large sums had to be provided for the depreciation of securities, a depreciation which the subsequent market advance in security values fortunately made good. "It does not necessarily follow," he said, "that when trade is good throughout the world the insurance companies' underwriting profits are certainly higher (they may, in fact, be lower), but it invariably implies a

fall in the prices of Stock Exchange securities," which has to be provided for out of the underwriting surplus.

The valuable statistical researches of Mr Sketch, Mr Reynolds, and Mr Rutter clearly bring out certain points which are worthy of attention. Much of the increase in working costs may be accounted for, but it remains as a charge on net premium income. We may agree with Mr Sketch that 6 per cent. of the increase in expense ratios to premiums is due to the development of reinsurance, and that a further 2 per cent. is accounted for by increased taxation. Yet for the moment both these occasions for increase remain, and have to be dealt with. They must be met somehow, and do in practice involve a reduction in the margin of underwriting profits, out of which alone emergency reserves can be built up, and the incalculable risks of the future be anticipated. This underwriting surplus, taking one year with another—whether it be Mr Rutter's 4.78 per cent. of the net premiums in normal years, or Mr Reynolds' 5 per cent. in years that were some normal and some abnormal—is not divided among shareholders in the form of dividends. Dividends are paid almost entirely out of the receipts from interest on invested reserves. The underwriting surplus is the basis of security for the future. Current liabilities are provided for by means of the reserve of premiums set aside for unexpired risks. But the liabilities of the unknown future—the risk of conflagration, of wars, of depreciation of assets of political disturbances, of adverse legislation—could not be confronted at all were it not for this essential underwriting surplus of net premiums which, taking one year with another, leaves about 5 per cent. of those premiums at the disposal of insurance managers and directors. Five per cent. of net turnover is a very narrow margin upon which to finance a business which involves all the incalculable risks of fire insurance. We can understand with this narrow margin before them fire insurance managers are doing their individual and collective utmost to cut down the too high percentage of working costs.

OUR INDEX NUMBER.

A FURTHER substantial advance in wholesale prices of commodities in October has produced an increase of 118 points in our Index Number, raising the total to 4847. This is the highest point touched since September, 1921, and compares with 4320 at this time last year. Last month increases were the general rule, only a few minor declines being registered, and the tone in most markets points to an improvement in the outlook. The table appended shows the changes in the five groups, and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914 ..	579	352	616 $\frac{1}{2}$	464 $\frac{1}{2}$	553	2588	118.6
Dec., 1915 ..	897	446	731	711 $\frac{1}{2}$	848 $\frac{1}{2}$	3634	165.1
Nov., 1918 ..	1289	782 $\frac{1}{2}$	1848	903	1389 $\frac{1}{2}$	6212	282.6
Dec., 1917 ..	1286 $\frac{1}{2}$	686	1684 $\frac{1}{2}$	839 $\frac{1}{2}$	1348 $\frac{1}{2}$	5845	265.2
Mar., 1920 ..	1508	914	2074 $\frac{1}{2}$	1246	1709 $\frac{1}{2}$	6352	379.6

Aug. ..	941	744 $\frac{1}{2}$	1385 $\frac{1}{2}$	781	774	4626	210.8
Sept. ..	1003	777 $\frac{1}{2}$	1395 $\frac{1}{2}$	762 $\frac{1}{2}$	790 $\frac{1}{2}$	4729	214.9
Oct. ..	1027 $\frac{1}{2}$	786 $\frac{1}{2}$	1442 $\frac{1}{2}$	782 $\frac{1}{2}$	808	4847	220.8

More than half the month's increase occurred in primary foodstuffs and textiles. In the former group, potatoes and cereals, with the exception of barley, were mainly responsible for the increase of 24 points in the total, but meat was lower. Flour prices, though a trifle higher on balance than at the end of September, have been reduced during the last week. In subsidiary foodstuffs, a sharp rise in coffee was partially offset by slight reductions in tea and sugar. In the textile group, cotton and cotton

manufactures were higher, and jute and flax also advanced, but wool was practically unchanged. According to Messrs W. F. Malcolm's flax market report, the general tone of the flax market has been considerably firmer during the past fortnight, and a number of transactions in the new crop has been carried through in this country. Crop reports are everywhere good. On the cotton trade, Messrs Robt. Barbour and Brother, Limited, write in their monthly report:—

Fluctuations in the raw material have been numerous and at times incisive, but whilst spinners have shown an adaptability in raising their rates on a rise, they have also displayed a marked aversion to lower them on a decline. The end of the season is now in sight, and prices should tend to become more stabilised, but larger crop ideas have certainly been revived, and the ideal weather conditions which have prevailed in the cotton belt during the first fortnight of the month are reflected in the latest Bureau figures indicating a yield of 12,675,000 bales, exclusive of linters. Assisted by good harvests and the rise in exchange, the aggregate business put through for India has been quite considerable and varied in character. The demand for printing cloths has been one of the conspicuous features of the month, and Egypt, the Levant, South America, and West Africa have all shared in the welcome activity in this section. China, of course, continues to disappoint, but, according to present advices, auctions are to be resumed, and the smallness of stocks in Shanghai—only a fraction of what they were in 1913—gives promise of free operations as soon as peaceful conditions are restored.

In the minerals section, though iron prices are a trifle lower than a month ago, reports from all the principal centres speak of a change for the better during the latter part of the month, and of a growth in demand. Both lead and tin are substantially higher on the month, and there was a slight rise in copper. Some explanation of the sharp rise in lead prices is given in a Note of the Week in a later column. In the miscellaneous section the most prominent feature was a rise in the price of raw rubber, but owing to the low level to which the quotation has fallen in relation to the base figure, the effect of the change upon the group total is proportionately small. Oils, oilseeds, and tallow are also higher.

In the next table we show the changes in the index number of each separate commodity in comparison with the figure for the end of September, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	110 $\frac{1}{2}$	+ 1 $\frac{1}{2}$	Cotton, A	125	+ 2	Copper	53	+ 1
English	100	+ 1	Cotton, B	178 $\frac{1}{2}$	+ 8	Minerals	782 $\frac{1}{2}$	+ 20
Flour	100	+ 2	Yarn	148 $\frac{1}{2}$	+ 8			
Barley	132 $\frac{1}{2}$	+ 7 $\frac{1}{2}$	Cloth	138 $\frac{1}{2}$	+ 5			
Oats	84	+ 6 $\frac{1}{2}$	Wool, Eng.	185	+ 2	Baltic timber	103 $\frac{1}{2}$	..
Potatoes	119	+ 19	Do Aust.	159	+ 2	Amer. timber	59	..
Rice	134 $\frac{1}{2}$	+ 9 $\frac{1}{2}$	Silk	107	+ 3 $\frac{1}{2}$	Leather	50 $\frac{1}{2}$	..
Beef	73	+ 6	Flax	181 $\frac{1}{2}$	+ 3 $\frac{1}{2}$	Petroleum	108	..
Mutton	84	+ 2	Hemp	79	..	Oils	61	+ 4 $\frac{1}{2}$
Pork	84	+ 11	Jute	140 $\frac{1}{2}$	+ 15 $\frac{1}{2}$	Oilseed	94	+ 6 $\frac{1}{2}$
Cereals & meat	1,027 $\frac{1}{2}$	+ 24 $\frac{1}{2}$	Textiles	1,442 $\frac{1}{2}$	+ 47	Tallow	81 $\frac{1}{2}$	+ 4 $\frac{1}{2}$
Tea	164 $\frac{1}{2}$	+ 2	Pig-iron	86	+ 1 $\frac{1}{2}$	Indigo	87 $\frac{1}{2}$	..
Coffee	140	+ 17	Steel rails	75	..	Crystals	85 $\frac{1}{2}$	+ 2 $\frac{1}{2}$
Sugar, cane	123	+ 4	Iron bars	92 $\frac{1}{2}$	+ 3 $\frac{1}{2}$	Rubber	18	+ 2 $\frac{1}{2}$
Sugar, beet	132 $\frac{1}{2}$	+ 2 $\frac{1}{2}$	Coal, steam	132	+ 4 $\frac{1}{2}$	Miscellaneous	808	+ 17 $\frac{1}{2}$
Butter	110	+ 3	House coal	88	..	Total	4,847	+ 118
Tobacco	116 $\frac{1}{2}$	..	Lead	154	+ 18			
Other foods	786 $\frac{1}{2}$	+ 9	Tin	102	+ 10 $\frac{1}{2}$			

These changes raise the percentage increase over the pre-war level from 84.4 to 89 per cent. Recent movements in this figure, and in similar percentages for the individual groups, may be seen in our final table, in which the indices for July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914 ..	100	100	100	100	100	100.0
Dec., 1918 ..	226	222	293	186	241	237.5
Dec., 1919 ..	249	250	396	247	263	287.1
Mar., 1920 ..	261	260	484	269	309	325.6
Dec., 1921 ..	233	229	209	261	230	230.9
Dec., 1922 ..	159	180	180	164	168	169.6
Dec., 1923 ..	149	200	193	152	146	166.2
Dec., 1924 ..	148	231	225	167	136	178.6
Mar., 1924 ..	155	240	213	173	141	181.0
June ..	158	210	219	164	139	176.6
July ..	164	208	231	167	140	181.6
Aug. ..	162	211	225	168	140	180.4
Sept. ..	173	221	226	164	143	184.4
Oct. ..	177	224	234	169	146	189.0

Twelve months ago the increase shown in the total over July, 1914, was 67.6 per cent., and those of the five groups were as follows:—Cereals and meat, 42 per cent.; other food, 122 per cent.; textiles, 97 per cent.; minerals, 58 per cent.; miscellaneous, 34 per cent.

THE STOCK EXCHANGE BOOM.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE pressure of Labour apprehension which bent down prices to the point of nervousness having been relaxed by the assumption that a stable Government is now in power, both prices and business have sprung violently upwards, and the Stock Exchange settlement on Thursday turned out to be, in many offices, the heaviest which this year has afforded. City hotels were full of Stock Exchange staffs on Wednesday night, and the City electric light companies should do well by reason of the burning of the midnight current far into the small hours of the morning. Appearances point at present to the probability of the end-November settlement being a still heavier one than that which has just concluded.

These matters of domestic interest have an application to circles wider than those intimately connected with the House, in that they give the public an idea of what is happening, and of the fact that the marking-up of prices is not a purely artificial affair, but is due to the volume of actual business that is taking place. One popular explanation of the rise is that prices had been lowered to levels which were unjustified, though, where uncertainty and political nervousness clouded the atmosphere, it was a difficult matter to say to what extent this fall in values had been overdone. It is easier, however, to take it for granted that the present recovery has gone too far. On paper, many prices are standing higher than they ought to do, regarded from the standpoint of dividend performance and future outlook. Ordinary shares in industrial companies ought, theoretically speaking, to pay from 8 to 10 per cent. on the money, for the risk involved in the purchase of junior stocks and shares must be compensated by the high return which these should yield to the purchaser. Eight to ten per cent. on the money, however, is a criterion that the public are declining to bother about at the present time. Such fireworks displays as this week has provided in tobacco shares, for example, in many of the textiles, in iron and steel shares, in breweries—to take only a few of the most prominent examples—has carried prices well beneath the 10 per cent. standard of yield. Such popular speculative counters as Shells, Courtaulds, Imperial Tobacco, Anglo-Dutch, and others yield so much less than double figures that present prices would seem to be decidedly over-valued if dividends only are taken into account. It will require, moreover, very considerable additions to the dividends which are at present being paid for the rates to give a purchaser at to-day's prices anything approximating 7 $\frac{1}{2}$ per cent. on the money. In the fever of financial excitement, in the keen desire to get into the swim of speculation where money-making on the bull tack seems to be so easy and so rapid, the public are in danger of losing that sense of financial proportion which can be relied upon to keep prices at reasonable levels when optimism no longer calls the tune.

The sensational rises will have the effect of bringing out quantities of new issues. Already it is known that a dozen or more of new companies contemplate immediate application to the public for capital requirements. Diverging into the field of prophecy, it may be supposed that one of the effects of the Unionist resumption of power will be the formation of a number of trust companies. The opportunities which open out on every side are tempting to this particular form of finance. They are likely to attract the support of the public, who, being desirous of spreading their risks as widely as possible, are not averse from undertaking such a policy through the medium of investment in trust companies' shares. The existing list of stocks in trust companies is a lengthy one, but so tightly held are these stocks that it is no exaggeration to say there is hardly any appreciable amount of supply with which to satisfy the demand that now exists. New trust companies are not likely to engage

BANK ESTABLISHED IN 1884.

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

in the purchase of ordinary stocks and shares commanding high prices in the markets to-day. The companies' main aim will be to finance new ventures, and to pick up low-priced stocks in which there is a fair chance of capital appreciation, rather than to put money into the stocks and shares after which the public is rushing so ardently to-day. It may seem a little unkind to suggest that, after the way in which investment and speculation have wandered in the wilderness during the period of Labour uncertainty, the first buoyancy should have carried prices too far. Holders of the stocks and shares in which there has been such remarkable activity during the past few days may be advised, however, to consider the question of taking profits upon a part of their holdings. The balance will then remain at prices which can be regarded with complete complacency, and the money realised by this policy can be employed in those markets to which the breathless bullishness of the post-Election boom has not yet extended.

ELECTION STATISTICS.

In our last issue, in a Note of the Week, we gave some of the main statistics of the General Election so far as they were then available. The results for the three seats for the Scottish Universities will not be known until next Thursday, but we now have the figures for 612 seats. The anomalous results produced by our present electoral system have never been so strikingly illustrated as they are by the figures for the 1924 election, which we give below, comparing this year's votes and seats with those of the 1923 election, when the division of seats corresponded considerably more closely with the voting:—

	December, 1923.				
	Votes.	Candidates.		Seats.	
		Contest-ing.	Unop-posed.	Won.	Total.
Conservative	5,544,540	500	35	223	258
% of total	(86 %)	(:6 %)	(70 %)	(89 $\frac{1}{2}$ %)	(48 %)
Labour	4,508,504	420	3	189	192
% of total	(8 %)	(80 %)	(6 %)	(33 $\frac{1}{2}$ %)	(31 %)
Liberal	4,314,202	443	11	146	156
% of total	(24 $\frac{1}{2}$ %)	(32 $\frac{1}{2}$ %)	(28 %)	(26 %)	(26 $\frac{1}{2}$ %)
Other	265,420	30	1	7	9
% of total	(1 $\frac{1}{2}$ %)	(2 %)	(2 %)	(1 %)	(1 $\frac{1}{2}$ %)
	14,632,666	1,393	50	565	615

	October, 1924.				
	Votes.	Candidates.		Seats.

% of total	(2 %)	(3 %)	(3 %)	(2 %)	(2 %)
	16,642,184	1,393	32	580	615

The Liberal party has been by far the greatest sufferer, having secured 17 per cent. of the total vote, but a representation of only 6 per cent. The Labour party has suffered in a less degree from the split vote, which has, on the other hand, been of immense advantage to the Conservatives, who, with 48 per cent. of the total poll, secure 68 per cent. of the contested seats. Last year the contested Conservative seats cost on the average 24,900 votes, this year the figure is 20,000. Last year's Labour seats cost 24,000 votes, and this year's 39,700; last year's Liberal seats cost 29,500 votes, and this year's no less than 87,900. The total electorate had increased by about three-quarters of a million, the votes polled rose by over two millions, the proportion of abstainers being reduced to an unusually low level.

The mere fact that 8½ million votes were polled for Labour and Liberal candidates, who obtained 187 seats, and that less than 8 million votes polled for the Conservatives obtained for them 411 seats, should stamp the present system of electing members to the House of Commons as one that no Government should tolerate, especially a Government which bases itself upon its "stability." With so large a majority of the electors at the mercy of the Government chosen by a minority of the voters, one of the principal elements of "stability" is clearly absent. The Conservatives last year polled 5½ million votes and obtained 258 seats; the Labour party polling about the same number of votes this year obtain only 150 seats. The Conservatives increased their poll by about 2 million votes, and have secured at least 150 more seats. The Labour party have increased their total poll by a million votes, and have 40 seats fewer than last year. The Liberal party polling about three million votes, obtain less than 40 seats, a result which compares most unequally with either the Conservative or Labour representation in the House of Commons. It would be a wise and statesmanlike act for the Conservative Government to introduce as soon as possible a Bill to amend the present electoral system, so as to secure a near approximation to the principle of "one man, one vote," which is supposed to be the law of this country.

In our issue of September 27th we presented a series of tables showing how the counties of Great Britain were represented in the House of Commons which was elected last December. The great change that has taken place in the constitution of the House appears from the following tables, which are constructed upon the same lines:—

TABLE I.—Containing 12 COUNTIES OF GREAT BRITAIN which each Return from 14 to 66 MEMBERS to the HOUSE OF COMMONS.

Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.	Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.
Lancashire	66	42	19	5	Stafford	18	6	10	2
London	62	39	20	3	Middlesex	17	14	3	..
Yorkshire	57	27	24	6	Warwick	17	16	1	..
Lancark	22	9	13	..	Glamorgan	16	4	12	..
Essex	20	15	4	1	Kent	15	15	..	..
Durham	18	7	10	1	Cheshire	14	14	..	..
Total of above	245	139	90	16	Total of above	97	69	26	2

1923 Election.

245	68	104	53	97	49	33	15
-----	----	-----	----	----	----	----	----

The Conservatives now hold 208 seats out of the total of 342 shown in the table, the Labour party 116, and the Liberals 18 seats. The Conservatives have gained 71 seats in these 12 counties, 50 at the expense of the Liberals and 21 from Labour, and actually hold 4 more seats in Lancashire than they held in 1922, 3 more seats in Yorkshire, 4 more seats in Lancarkshire, 2 more in Essex, 3 more in Durham, 1 more in Staffordshire and in Kent, and 3 more in Cheshire, but have lost 5 seats in London since 1922, and 1 in Warwickshire, and retain the same number of seats in Middlesex and Glamorgan. We hope that Mr Baldwin will realise that his Lancashire sweep (among others) would have been impossible had not Lancashire believed implicitly in his pledge not to introduce a tariff.

TABLE II.—Containing 16 COUNTIES OF GREAT BRITAIN which each Return from 6 to 13 MEMBERS to the HOUSE OF COMMONS.

Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.	Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.
Hampshire	13	13	..	..	Sussex	9	9	..	..

1923 ELECTION.

85	48	16	21	57	24	15	18
----	----	----	----	----	----	----	----

Of the 142 seats in these 16 counties, the Conservatives now hold 112, compared with 72 at the 1923 election; the Labour party hold 25 compared with 31 last year; and the Liberals hold only 5 seats compared with 39 at the December election. The Conservatives hold all the seats in 6 of the 16 counties, the Labour party have gained 2 seats in Northumberland, and held their own in Lincoln, Nottingham, and Midlothian, but have lost 3 seats in Norfolk and 1 in each of the counties of Gloucester, Derby, Leicester, Somerset, and Suffolk.

TABLE III.—Containing 25 COUNTIES OF GREAT BRITAIN which each Return from 2 to 5 MEMBERS to the HOUSE OF COMMONS.

Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.	Counties of Great Britain.	Total Seats.	Con.	Lab.	Lib.

1923 ELECTION.

58	19	18	21	30	9	7	14
----	----	----	----	----	---	---	----

Of the 88 members returned by the 25 counties, and grouped counties in the above table, the Conservatives now claim 64, compared with 28 returned to the last Parliament. In that Parliament Liberals held 35 seats, against the 10 which they now hold; and the Labour party held 25 seats, compared with the 13 which they still retain. They lost 2 seats in Cumberland and 2 in Northampton, and 1 in each of the counties of Ayr and Bute, Renfrew, Stirling and Clackmannan, Shropshire, Berkshire, and Dumbarton and Denbigh.

TABLE IV.—Containing 19 COUNTIES and GROUPS of COUNTIES OF GREAT BRITAIN, which each Return 1 MEMBER to the HOUSE OF COMMONS.

1923 ELECTION.

2	2	6	1	..	8
---	---	---	---	----	---

At the election in last December the Liberals won 14 of the 19 seats; they now hold only 6, the Conservatives having won the other 8 seats as well as the 2 seats won by Labour last year. The keenness with which the election was fought is testified to by the fact that in only 5 of the 71 Scottish county and burghs did the majorities of the successful candidates fall below a thousand votes, and that Wales polled almost as well by giving majorities

over 1,000 in all except three instances. Time alone I show whether the Liberal land policy failed to appeal to the agricultural areas, or whether it merely failed to get the polling because it was produced too late to be derstood.

CONDITIONS IN CUBA.

(BY A CORRESPONDENT.)

THE advices received from Cuba indicate that the financial like the political—conditions of that country remain in unsatisfactory and unsettled state. Economic circles would appear not, as yet, to have recovered from the crisis which, owing to speculation in sugar, occurred out this time of the year in 1920. It will be remembered that a moratorium was proclaimed, first until December 1, 1920, and thereafter prolonged until February 1, 1921. The political agitation in progress since early in 1922, accompanied by violent charges of corruption against members of the Government; the removal of General Carlos García-Vélez (formerly Cuban Envoy Extraordinary and Minister-Plenipotentiary in London) from his administrative post, and his subsequent appearance as an active opponent of the Executive; have had, of unnaturally, their repercussion upon the economic situation. The affairs of certain banking firms, largely engaged in sugar, tobacco, and other speculative undertakings, remain unliquidated, although it is thought that less unforeseen complications arise in the particular case mentioned, matters will be adjusted by the end of the current year.

In an island of such vast natural resources as that of Cuba, one that is capable of attracting large investments of foreign capital, the absence of any sound banking system is remarkable. From this drawback the Republic has suffered ever since its emancipation from Spanish rule. There has been no precise or categorical legislation which would serve as a guarantee for the influx of that capital which is of such vital importance to the welfare of any young and progressive State. In an almost entirely agricultural country it is felt that banks, founded for the purpose of making long-time loans or loans on mortgage, ought not to be permitted to issue notes payable to bearer on demand. The amount of call deposits sanctioned should be correspondingly restricted. The commercial community in Cuba is still seeking a well-devised banking system sufficiently armoured for safeguarding the interests of the public in these and other respects, thus rendering the monetary institutions of the island of real use. In spite of certain minor reforms that have been introduced (but not always observed), the complaint is still rife that banking in Cuba is conducted under loose conditions. The laws in force are, at best, cumbersome, vague, and but inadequately adapted to the urgent needs of the financial community. Powers possessed by the banks are deemed to be too broad to inspire complete confidence; while the different classes of business handled, in which clients' funds are invested, are not clearly enough defined. Banking operations are not subject to the careful regulation and official inspection which prudence requires, with the result that there is an ever-present danger of mismanagement, injudicious investment, and incurrence of bad debts.

Towards the end of 1922 a tentative central banking system for Cuba was suggested. The institution was to be known as the Central Bank for Cuba, and to have a \$4,000,000 capital, paid up at once, one-half to be held by the Government; one-quarter by banks (including branches of foreign banks); and one-quarter by the public. Foreign capital was to be invited to participate in the public shareholding, and the shares were to be exempt from all Cuban taxes. Much opposition, however, has always been manifested to the establishment of a central bank with note-issuing power, on the ground that this might be used to the country's detriment. On the other hand, plans similar in many respects to the United States Federal Reserve system have been proposed.

Something of the difficulties experienced in the liquidation of the 1920 financial débâcle may be gleaned from the notice recently issued by the Liquidation Board of the Banco Español de la Isla de Cuba. This institution, like others that then failed, has been in the hands of the Bank Liquidation Commission. Much ill-informed criticism has been passed upon the alleged slowness of procedure.

The Commission, however, has had under its control 18 banks and no fewer than 300 branches, with assets aggregating \$170,664,962 and liabilities of \$142,118,004. No fewer than 3,998 cases were submitted; of these by far the greater part have now been decided. Considering the difficulties that the Commission has encountered, more particularly in the direction of finding a market for many of the highest-class securities held by the banks, there appears to exist little cause for the severe strictures passed upon its necessarily extended operations.

There are at present over 120 banks (compared with more than 360 before the 1920 crash) actively operating in Cuba. In this total, foreign branches are included. The Royal Bank of Canada, for example, which took over many of the Trust Company of Cuba's accounts relating to real estate and various fields of insurance, has about 60 such branches in various parts of the island; while the National City Bank of New York operates about 23 branches, having abandoned two. The failure of domestic institutions has naturally brought about a more favourable view concerning foreign banks. Two new houses are about to be established, one, dedicated particularly to the interests of retailers, to be known as the Banco-Hispano Cubano, with an authorised capital of \$5,000,000 and its principal office in Habana; and the other a branch of the Chinese Merchants' Bank, Limited, with a capital of \$500,000 and head offices in the capital. It is thought that Chinese participation in banking arrangements will become much more extensive in the near future, particularly in regard to the increased trade now established in the shipment of rice to the island.

The process of debt liquidation has been aided latterly by the improved trade position still prevalent. For the past financial year the foreign commerce of the country resulted in a total importation of \$267,627,876, against \$180,757,840 for the previous year; but exports increased over the same period from \$331,379,091 to \$418,119,979. Of this considerable volume of trade the United Kingdom claimed exports of goods to Cuba to the value of \$13,051,901, compared with \$9,106,000 for the previous year; while Cuban exports to the United Kingdom fell away from \$37,964,250 to \$30,407,435. As might have been expected, the United States, with its extraordinarily favourable position under the Cuban tariff, considerably increased the volume of its commerce with the island, importing goods worth \$366,639,782, against \$266,510,511 for the previous year; and exporting commodities worth \$180,230,840, compared with \$120,713,766 for the same period in 1922.

GLASS TRADE PROGRESS.

THERE are signs of slow but steady progress in the British glass trade. This industry, which has long been looked upon as a sort of Cinderella in the commercial world, has undoubtedly had a chequered history. During the 'fifties of last century its position appeared to be secure enough, but for 10 or 15 years afterwards competition from abroad made itself felt more and more acutely. After a lull, which continued for a full decade, this increased again in the succeeding years right down to 1903. A reverse process then began, and the industry's fortunes improved steadily for a whole decade, until the terrible war of 1914 imposed its paralysing ban. Now that more normal conditions in trade and commerce are being gradually re-established, it is satisfactory to find that the progressive tendency has been resumed. Here are the overseas trade records for the nine months to September in the last three years:—

GLASS and GLASSWARE (in Thousand £).				
Nine Months to September.				
	1922.	1923.	1924.	
Imports	3,288	3,135	3,276	3,276
Re-exports	49	55	73	73
Net imports	3,239	3,080	3,203	3,203
British exports	1,545	1,795	1,877	1,877
Excess of imports	1,694	1,285	1,326	1,326

The steady rise of exports is particularly noticeable, as contrasted with the comparatively stationary imports. They were in 1922 considerably under one-half of the net

imports, and are this year materially over one-half of them. This will appear sufficiently striking when we remember that about the beginning of the present century exports were substantially less than one-third of the net imports.

This improvement apparently has no connection with the efforts made during the post-war boom to stimulate the industry by introducing large amounts of new capital. That movement might have done much good had it been wisely managed. It was spoiled by rash financial methods, and has quite probably done more harm than good to the trade, as it certainly has to the investing public.

A wide survey of the industry's records, covering the past 65 years, will show that the renaissance began about ten years before the war. Here are the imports and exports since 1859:—

BRITAIN'S OVERSEA TRADE IN GLASS AND GLASSWARE.
(Thousand £.)

Five-year Averages.	Imports.	Exports.	Excess of Exports.

Re-exports are not easily available for the whole of this period, and are not of material consequence, so they have been omitted.

It will be seen that after a slight struggle, which decreased the excess of imports during the 'seventies and 'eighties, the trade steadily lost ground, until in the five years to 1903 exports were only 30 per cent. of the imports. In the next five years the proportion rose to nearly 40 per cent., and during the five years ending with 1913 advanced still further to 50 per cent. This more favourable proportion was lost during the post-war boom, but it was more than re-established in 1923, when exports were nearly 54 per cent. of the imports. Reference to the first table will show that even this has now been bettered, for during the nine months to September, 1924, exports were about 57 per cent. of the imports. It seems clear that since the opening years of the present century our glass-makers have gained materially in competitive strength. It is to be hoped that they will improve their organisation and methods still further, for with the expected settlement of European affairs competition will probably be more keen in the coming years, though Continental producers will certainly not have everything in their favour.

In the year before the war (1913) more than three-fourths of the goods landed on these shores came from Belgium and Germany—Belgium having slightly the advantage over her fellow-competitor, in that she supplied us with about 42 per cent. of our imports, against Germany's 36 per cent. Experience since the war seems to indicate that these two countries and Czecho-Slovakia will in future be the main shippers to this market. If so, then a few considerations with regard to them will be of much interest to our producers. At times since the close of the war Belgian exporters have been temporarily assisted by a rapid depreciation of their currency in the money markets of the world. But since the comparative steadiness of the Belgian franc around 90 has been achieved, the internal and external value of the currency seems to have been approximately equalised, so that this advantage will no longer be enjoyed by Belgian producers. Indeed, any improvement in currency which the European settlement brings about may be expected to operate as a check to them temporarily, at all events. As to Germany, her reparation and other burdens are sufficiently onerous to prevent her from sweeping everything before her. She

will have to make all possible efforts to increase her exports in this as in every other trade, but how far the existing handicaps will permit her to do so remains to be seen. It seems, at all events, quite probable that competition from that quarter will be no keener than in pre-war days. That this was not insuperable is shown by the achievements of our manufacturers during the ten years to 1913, as recorded in the table already considered, and what our producers did then they should be able to do again.

A convincing proof of the progress already made is obtained by contrasting the average excess of imports for the five years to 1903 (£2,431,000) with the excess of £2,013,000 shown for last year. Excluding bottles, imports in 1900 were valued at a little under £1 2s per cwt. The corresponding figure for 1923 was over £2 5s per cwt. Plainly, the excess of imports last year must have been in quantity much less than half of what it was at the beginning of the century. Or, to put it in another way, we may say that if the prices of 1900 had continued to prevail, the excess of exports in 1923 would have been, not £2,013,000, but £984,000.

Unfortunately, the records of quantities are not sufficiently perfect to be given in great detail, but in three large groups they may be used without undue distortion of results. Here, then, is a comparison with the last pre-war year, 1913:—

IMPORTS.	1913.			1923.			Dec.
	Thous. Cwts.	£.	per Cwt.	Thous. Cwts.	£.	per Cwt.	
Plate and sheet*	1,684	1,249	0.8	876	1,576	1.8	808
Other glass	997	1,385	1.4	658	1,963	3.0	339
	2,681	2,634	1.0	1,534	3,539	2.3	1,147
	Thous. Gross.	£.	per Gross.	Thous. Gross.	£.	per Gross.	Thous. Gross.
Bottles and jars	1,924	815	0.4	1,090	827	0.8	834
	Thous. Cwts.	£.	per Cwt.	Thous. Cwts.	£.	per Cwt.	Thous. Cwts.
Plate and sheet*	852	895	1.0	750	1,642	2.2	102
Other glass	83	313	3.7	40	413	10.3	43
	935	1,208	1.3	790	2,055	2.6	145
	Thous. Gross.	£.	per Gross.	Thous. Gross.	£.	per Gross.	Thous. Gross.
Bottles and jars	974	606	0.6	266	298	1.1	708

* A small and unimportant amount of glass "not elsewhere specified" is unavoidably included in imports and exports.

It will be seen that quantities show a considerable reduction all round. But whereas imports of foreign goods have fallen by 1,147,000 cwts, exports of British goods have dropped by only 145,000 cwts. It is in plate and sheet glass that the efforts of our manufacturers have met with most success. In 1913 they shipped only half the quantity imported, while in 1923 the proportion was raised to seven-eighths.

As to prices, it may be said that they have roughly increased by about 100 per cent. all round, though too much stress must not be laid on the average figures, because of the many different qualities of glassware they cover.

Unfortunately, we do not yet know whence the imports for 1923 were derived. For 1922, however, Belgium still sent us about 42 per cent. of the total value, while Germany's proportion had sunk to about 17 per cent. It is notable, however, that Czecho-Slovakia appears as the supplier of no less than 21 per cent. of the total value of imports. Thus these three countries were responsible for 80 per cent. or more of the shipments landed here in 1922.

As regards the varieties of goods supplied, Germany's contribution was well spread all over the list, whereas Czecho-Slovakia's was mostly concentrated on domestic and fancy glassware, globes and shades. Vastly the greater proportion of Belgium's consignments consisted of plate and sheet glass, though in domestic and fancy glassware she also sent a large amount, the value being second only to that from Czecho-Slovakia, while Germany ranked as a very bad third.

Evidently these are the three countries to be watched in future—and mainly in domestic and fancy glassware, where imports greatly exceed exports. In the value of

plate and sheet glass, as shown by the preceding table, British firms have established a balance of exports, and the experience of the last four years is instructive:—

PLATE AND SHEET GLASS (Thousand £.).					
	1920.	1921.	1922.	1923.	
Imports	2,280 ..	1,355 ..	1,548 ..	1,526 ..	
Exports	1,548 ..	1,048 ..	1,230 ..	1,602 ..	
Excess of imports ..	732 ..	307 ..	318 ..	..	
" " exports ..	..	..	..	..	76

There seems to be no essential reason why our manufacturers should not ultimately do as well in domestic and fancy glassware as they have done in plate and sheet glass. That they will succeed in this is the hope of all who believe in the future of the British glass trade.

Notes of the Week.

The New Cabinet.—Mr Baldwin issued on Thursday night the list of his new Cabinet, which is as follows:—

Prime Minister, First Lord of the Treasury, and Leader of the House of Commons.	Rt. Hon. Stanley Baldwin, M.P.
Secretary of State for Foreign Affairs and Deputy Leader of the House of Commons.	Rt. Hon. Austen Chamberlain, M.P.
Lord Privy Seal.	Most Hon. the Marquess of Salisbury, K.G., G.C.V.O., C.B.
Lord President of the Council and Leader of the House of Lords.	Most Hon. the Marquess Curzon of Kedleston, K.G., G.C.S.I., G.C.I.E.
Lord Chancellor.	Rt. Hon. Viscount Cave, G.C.M.G., K.C.
Chancellor of the Exchequer.	Rt. Hon. Winston Churchill, C.H., M.P.
Secretary of State for Home Affairs.	Rt. Hon. Sir William Joynson-Hicks, Bt., M.P.
Secretary of State for the Colonies.	Rt. Hon. L. C. M. S. Amery, M.P.
Secretary of State for War.	Rt. Hon. Sir L. Worthington-Evans, Bt., C.B.E., M.P.
Secretary of State for India.	Rt. Hon. the Earl of Birkenhead, K.C.
Secretary of State for Air.	Rt. Hon. Sir Samuel Hoare, Bt., C.M.G., M.P.
First Lord of the Admiralty.	Rt. Hon. W. C. Bridgeman, M.P.
President of the Board of Trade.	Rt. Hon. Sir Philip Lloyd-Greame, K.B.E., M.C., M.P.
Minister of Health.	Rt. Hon. Neville Chamberlain, M.P.
Minister of Agriculture and Fisheries.	Rt. Hon. E. F. L. Wood, M.P.
Secretary for Scotland.	Rt. Hon. Sir John Gilmour, Bt., M.P.
President of the Board of Education.	Lord Eustace Percy, M.P.
Minister of Labour.	Sir Arthur Steel-Maitland, Bt., M.P.
Attorney-General.	Rt. Hon. Sir Douglas McGarel Hogg, K.C., M.P.

On a previous page we have passed comment upon the appointments of Mr Churchill, Mr Austen Chamberlain, and Lord Birkenhead. With one or two reservations, we should describe Mr Baldwin's team as the strongest that could have been chosen from the available candidates. Inevitably, one regrets the absence of the veteran Earl Balfour, who only this week, in a speech at a complimentary dinner to Mr Owen B. Young, proved that he has lost none of the vision, mental alertness, and eloquence of past days. Lord Derby, in view of the Conservative sweep in Lancashire, is a surprising absentee, while Sir Robert Horne finds himself unable to relinquish his business obligations. Lord Robert Cecil's name does not appear, but we hope to hear that he will resume his work as liaison officer with the League of Nations. Apart from these omissions, and from the unexpected appointment of Mr. Bridgeman at the Admiralty, the list provides little powder and shot to the critic, unless he be swayed by the obsession of party claims. It is, without doubt, a stronger Cabinet—stronger both in administrative and debating power—than that over which Mr. Baldwin presided a year ago; and it is far happier as regards the division of strength between the Lords and Commons. Mr Baldwin has obviously been at pains to correct the weakness of the Treasury Bench, which was at times painfully obvious during his last administration. Of prentice

hands there are only two. Lord Eustace Percy is a new, and young, broom at the Ministry of Education, where he will find scope for the streak of liberal thought of which in the more hide-bound sections of his party he is sternly suspected. The other newcomer to high office is Sir Arthur Steel-Maitland, who, at the Ministry of Labour, will have no reason to complain of opportunity to win his spurs. How the team will pull together remains to be seen. The task of driving it will tax to the full those qualities of courage and independence which the new Premier has shown in its selection.

The Municipal Elections.—The annual municipal elections were held last Saturday in all the boroughs of England and Wales outside London. Statistics of four score of electoral areas show that there were about 950 seats to be filled, and 1,678 candidates sought to obtain them. Of these, 300 were returned unopposed, Conservatives 127, Liberals 69, Labour 54, and Independents 50. In the contests for the remaining 650 seats Labour appears to have run little short of 500 candidates, of whom only 154 were elected. There is a tendency in the Press to regard this as a dramatic failure of Labour's "massed attack." But a careful study of such figures as are available shows that commentators who take this line are as far from the heart of the truth as those who, in their appraisal of the Conservative success in the Parliamentary elections, ignore the increase of a million votes in the Labour poll. Labour, it appears, made in these areas a net gain of about 20 seats, the Conservatives gaining 8, Liberals losing 24, and the Independents 4. If there is any room for surprise in these figures it is not that Labour failed to record bigger gains, but that the Conservatives' sweeping victory in Parliamentary representation failed to reflect itself more clearly in the very same week in the choice of representatives for municipal councils. The Liberals, it will be seen, while suffering a loss of seats which was inevitable under the circumstances, suffered very much less severely than in the Parliamentary contest.

The League Council and Turkey.—A correspondent writes:—The special meeting of the Council of the League of Nations, summoned at the request of the British Government, took place in Brussels last week, and cleared up satisfactorily, at any rate on paper, the two questions upon which complaints had been lodged against the Turkish Government. The first was the settlement of the differences of interpretation regarding the *status quo* line to be observed between Turkey and Iraq pending the final settlement of the frontier by the Council, and the other was a complaint from the Greeks that the Turkish authorities had violated the Lausanne Agreement dealing with the compulsory exchange of Greeks and Turks. In both cases the Council was in the happy position of having the declaration of all parties in advance that they would accept its decisions. The Turks tacitly abandoned their ridiculous claim that the *status quo* intended was the one existing at the time of the Council's resolution last September, just after they had sent their troops into territory hitherto administered by Iraq, and instead took the ground, which was by no means so unreasonable, that Great Britain had frequently varied and extended her claims regarding the frontier line. They declared themselves quite ready, however, to accept the *status quo* as it existed in July, 1923, at the date of the signature of the Treaty of Lausanne—as obviously

intended by the Council's resolution of last September—and what the Council had to do was as far as possible to define that line. This was roughly in accordance with the proposals presented to the Council by Lord Parmoor, with a little modification of 10 kilometres in favour of the Turks in the western end and a small modification in favour of the British in the middle-east of the line. The line was accepted by both parties, and it means that the Turks will have to withdraw their troops from the area where recent incidents have occurred. It is to be hoped that they will observe this decision without any more quibbling. The Greek case regarding the Greeks in Constantinople was not too strong. The Lausanne Convention excluded from the compulsory exchange all Greeks who were established in Constantinople in October, 1918, and the Greeks asserted that the Turks had rounded up a large number of these and other Greeks on their own initiative and without the authority of the Mixed Commission, which has full competence to decide all matters involving exchanges. This Commission is comprised of four Greeks and four Turks, with three neutrals appointed by the Council of the League, and it has been endeavouring to settle for some time the interpretation of the word "established," upon which differences have arisen. The Greeks say that the Turks had, by the withdrawal of their first delegate, caused a cessation in the meetings of the Commission in order to have their hands free, but General De Lara, the Spanish President of the Commission, said that the Commission was still studying the problem, and that, with regard to the rounding up of Greeks in Constantinople, they were mainly those who had been designated for compulsory exchange, but who had not left within the time limit prescribed by the Commission. Turkish police had certainly made some serious mistakes which the Commission had succeeded in having put right, but he informed the Council that, apart from this, the Turkish authorities had done nothing to encroach upon or impede the work of the Commission. General De Lara, in fact, seemed somewhat annoyed that the matter should have been brought to the Council over the heads of the Commission. The Council received from both the Greek and Turkish delegates expressions of confidence in the Commission, and it therefore asked the Commission to hurry up with its decision on the interpretation of the word "established," informing it that if it found legal difficulties too great, it could always go to the Court, through the Council or through the two Governments, for a decision. It asked the Commission to keep it informed of the progress that was being made, and General De Lara promised that this should be done. It also expressed the hope that nothing would be done meanwhile to prejudice the effects of such a decision, and both parties agreed. Incidentally, both parties raised the question of the treatment of properly established Greeks in Constantinople and Turks in Western Thrace under the heading of protection of minorities, each party accusing the other of non-fulfilment of treaty terms. They were invited to send to the Secretary-General of the League detailed statements, so that the Council may take up the matter at its next meeting in Rome on December 8th.

The New Phase in China.—The developments that have taken place at Peking are more surprising than ever. For the moment, at any rate, the civil war appears to be practically suspended, not as had been expected, through a victory for Wu Pei-fu, but by his decisive defeat. Some 30,000 of his troops were surrounded towards the end of last week at Shanhaikwan by Chang Tso-lin's forces, and compelled to surrender; the rest, said to have numbered 50,000, were attacked by Feng Yu-hsiang's army near the mouth of the Pei-ho, at Taku; and the forces sent to relieve Wu by the Tuchuns of the Central Provinces were blocked at Langchow, the junction of the Lung-hai and Tientsin-Pukow railways, by Shantung troops supporting Feng Yu-hsiang. Wu Pei-fu himself escaped on a Chinese cruiser, and was able to embark a portion of his army on transports; and he has gone southwards with them to continue his resistance, but it seems probable that any attempt to land them will be withstood. The Tuchun of Hupeh is stated to have sent troops north-

wards, who have occupied Lo-yang in Wu Pei-fu's interest, but it seems very doubtful if they can do more. Meanwhile, Chang Tso-lin's advance guard has reached Tientsin; Dr Yen, the Chih-li Prime Minister, has followed the example of President Tsao-Kun by resigning, and Feng Yu-hsiang has set up a new Ministry, which, contrary to expectation, contains no member of the growing Anfu party, but is made up of two of his own supporters, Huang Fu and Dr. C. T. Wang, who respectively are Premier and Foreign Minister, two supporters of Chang Tso-lin, who become respectively Ministers of the Interior and of Agriculture and Commerce, one member, the Minister of Justice, who is non-partisan, and one, the Minister of Marine, who has supported Wu Pei-fu. The first two are Westernised Chinese, who have studied for years in Japan and the United States, and have had some political experience; the Minister of Agriculture and Commerce, Wang Nai-Ping, has held the same office previously, but does not appear to have studied abroad. This Ministry is regarded as provisional, pending the election of a new President, and the Peace Conference, which will not assemble, however, till two months hence; its first act has been to take over the Imperial quarter of Peking, and compel the young Emperor—stripped in 1912 of all but his religious functions—to abdicate altogether; it has reduced the allowance (never yet paid) appropriated in that year to the disestablished Manchu dynasty, and granted him permission to reside anywhere within the jurisdiction of the Chinese Government. Probably this step is intended to preclude a restoration of the Monarchy, and is due to the influence of the envoy of Soviet Russia. Sun Yat-sen is coming North to attend the Conference, but it seems hardly likely that he can retain his hold on Canton meanwhile. But will the Tuchuns of the Central Provinces accept Wu Pei-fu's defeat, and will Feng Yu-hsiang and Chang Tso-lin come to an agreement? And will Tuan Chi-jui, the leader of the revived Anfu party, claim a share in the Government? As the Chih-li party has gone to pieces, it is possible that an Anfu Government may be set up with Tuan Chi-jui as President, and more or less accessible to Japanese influence, but subject to Chang Tso-lin's control. The future rests not with the politicians, but with the military leaders, and they will negotiate rather than resume warfare. But it seems likely that whatever Government emerges will be demonstratively Nationalist.

Conditions in Hong Kong.—Our correspondent, writing on October 1st, says:—We are constantly reminded by our local orators that "Shipping is the colony's life-blood," and the busy state of the harbour of Hong Kong fully confirms this. One day last week there were no less than 101 ocean-going vessels in port ranging from a Pacific liner of 22,000 tons down to the humble coaster. British steamers, of course, preponderated, there being 38 of them, while the Japanese numbered 14, American 11, Portuguese and Chinese 9 each, Norwegian 8, Dutch 5, Swedish 3, and Chilean and Danish 2 each. Of the nations not represented, France, Italy, Spain, and Germany each have one or more lines which call here, and a Russian steamer has since come in showing us for the first time the Soviet flag. The presence of so many vessels involves the employment of numerous small craft, and the constant coming and going of launches, lighters, junks, and sampans gives the impression that business is brisk. Yet the opposite is the case, and most of the cargo arriving is added to the heavy stocks lying in the godowns, while there is very little China produce to be loaded for Europe or America. The past few weeks have seen large arrivals of woollen piece-goods, and, according to Bradford advices, exports to the Far East during July exceeded all previous records. It is at present too early to judge whether the big quantities of woollens ordered for this winter can be digested by the market, but clearances for the past month have been quite up to the average, and the position may be better than appears on the surface. Everything depends on the political situation, and the one hopeful sign is that the running sore of maladministration is coming to a head in Canton, leaving the other cities and towns of the province in a healthier condition than they have been for some time past. Apart from an occa-

sional piracy and bandit outrage, there has been a period of quietness for most districts outside the Canton area during the past month or six weeks. If, therefore, Sun Yat Sen can be forced to depart from Canton, or persuaded to take a trip abroad, there is no reason why Kwantung should not enjoy a breathing space which would enable the city fathers of Canton to consolidate their position, and out of the present chaos evolve an administration in closer accord with the wishes of the people, and one which will afford some protection to the commercial interests of the province.

Index of "Free" Shipping Freights.—The October figure of our Index of Shipping Freights, based on fixtures in the free market for whole cargoes, is 134.43. The rise for the month amount to 4.56 per cent., the average level of freights, as measured by our index, being now 7 per cent. higher than in the corresponding month of last year. The movements of the various groups in the index are indicated in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34

February.....	138.11	146.26	145.36	129.28	142.17	162.91	144.01
March.....	143.72	147.62	145.92	132.08	135.20	147.77	142.05
April.....	141.67	146.28	142.35	127.36	128.79	131.75	136.37
May.....	134.96	148.71	139.02	127.67	124.45	122.85	132.94
June.....	128.56	135.80	129.22	129.47	118.33	118.84	126.37
July.....	123.66	121.87	121.91	120.13	114.69	121.96	120.70
August.....	120.45	128.10	119.94	118.97	113.31	128.19	121.49
September.....	117.90	138.94	123.20	124.93	122.19	144.22	128.56
October.....	118.80	143.09	125.96	126.59	135.47	156.68	134.43

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	103.70	- 4.92	S. America—outwards.....	98.63	+ 4.38
Bay—outwards.....	128.44	- 1.83	" homewards.....	153.29	+ 1.35
" homewards.....	128.91	+ 1.47	India—outwards.....	117.90	- 1.39
Mediterranean—outwards.....	142.71	+ 6.46	" homewards.....	135.98	+ 7.51
" homewards.....	108.44	+ 6.32	Far East, &c.....	135.47	+ 13.28
North America.....	143.09	+ 4.15	Australia.....	156.68	+ 12.46

The volume of space chartered during the month fell short of the exceptional amount taken up in September. Shippers were disposed to await the outcome of the various imminent elections before extending their commitments, while sharp fluctuations in grain prices following the recent heavy purchases on European account tended to restrict forward chartering by merchants. In the latter half of the month freights from both Americas registered a moderate reaction, but there were no signs of any undue excess of tonnage as yet pressing on markets, in spite of the substantial amount of idle shipping recommissioned during the third quarter of the year. The requirements of Australian exporters, and of the Burmah rice crop, caused a sharp advance in the Far East and Australian groups. The indices for outward routes, particularly in near European waters, continued, as a whole, to reflect slow exports of British coal, but coal freights to the Mediterranean were slightly firmer, and there were signs of broadening in the volume of homeward ore cargoes forthcoming from that quarter, though without much effect on rates. A comparison between the outward and homeward indices for the Mediterranean and South America respectively in the above table illustrates curiously the effect which relative changes in the volume of homeward cargoes appear to have had since our pre-war base period on the transportation costs which different purchasers of British coal have to bear. The autumnal rise in tramp freights would already seem to have made more than normal seasonal progress. Having regard to the early closing of the St Lawrence, it is doubtful if freights during the remainder of this year can be raised to any materially higher figure through movements of grain alone. While the results of European harvests indicate the necessity for substantial transportation of cereals from overseas throughout the winter, assured recovery of tramp shipping to a stable margin of profit is conditional on a further general increase in the demand for raw materials on the part of producers.

Customs and Excise Duties.—The annual report of the Commissioners of His Majesty's Customs and Excise for the year ended March 31, 1924,* elaborates in detail the figures already given in the Finance Accounts for 1923-24. As a result of adjustments with the Free State in respect of Customs and Excise revenue in 1922-23 there was a net amount of £2,888,000 due from the Free State. Of this sum £2,250,000 was paid in 1923-24, and the balance carried forward to the current year. We reproduce in the table below some interesting figures given in the report showing the consumption of Empire and foreign goods in 1923-24 under Imperial preference:—

	Quantities Retained for Consumption.			Proportion of Empire Goods to Total.
	At Full Rate.	At Preferential Rate.	Total.	
Spirits.....galls.	1,023,000	1,494,000	2,517,000	58.3
Wine.....galls.	13,120,000	715,000	13,835,000	5.2
Tea.....lbs.	44,592,000	332,411,000	377,003,000	88.2
Raw cocoa.....cwts.	64,000	796,000	860,000	92.6
Coffee.....cwts.	163,000	149,000	312,000	47.9
Sugar.....cwts.	21,646,000	7,354,000	29,000,000	25.4
Dried fruits.....cwts.	2,507,000	301,000	2,808,000	10.7
Tobacco.....lbs.	119,441,000	9,369,300	128,810,000	7.3
Motor cars.....£	3,117,000	1,787,000	4,904,000	36.4
Musical instruments.....£	967,000	5,000	972,000	0.5
Cinematograph films ft.	100,331,000	249,000	100,580,000	0.2

Imperial preference was instituted by section 8 of the Finance Act, 1919, and has been in force since June 2, 1919, for tea, and since September 1, 1919, for the other articles to which it applies. Most of the foreign tea in

* H.M. Stationery Office. 4s net.

1923-24 came from Java and Sumatra, and only about 3 per cent. from China. India sent 60.84 per cent. of the total and Ceylon 27.48 per cent. The quantity of beer consumed in 1922-23 was 19.8 million standard barrels, and the consumption in 1923-24, if the duty had not been altered, was estimated at 19 million barrels. The reduction of duty was expected to cause consumption to rise to 20.9 million barrels, and in the event this was slightly exceeded, the actual amount being 21 million barrels, an increase of 6 per cent. on the consumption of the previous year. The consumption of wine has been rising continuously since 1921-22. In 1922-23 it was probably about 12 million gallons, and the Budget estimate for 1923-24 was placed at £3 millions, representing a consumption of 12½ million gallons, but the actual receipts were £3,369,000, representing 13.8 million gallons. The duties on dried fruits—currants, raisins, figs and plums—fluctuate considerably from year to year. In 1923-24 all headings except plums yielded more, and the total revenue was £928,000, against £816,000 in 1922-23. The report adds that the quantities of raisins received from Australia and South Africa, and of currants from Australia are increasing steadily, and represented about 19 per cent. and 7 per cent. respectively of the total consumed in 1923-24. The quantity of Empire preserved plums, mainly from South Africa, has also increased, and amounted to nearly 5 per cent. of the total, but there were no Empire dried figs. The quantity of home-grown tobacco retained for consumption was only 5,000 lbs, representing a revenue of £1,400, as compared with 15,000 lbs and a revenue of £5,000 in the preceding year. No further orders were issued by the Board of Trade under the Safeguarding of Industries Act, 1921. Depreciated Currency Duty remained in force, as regards the articles of German origin specified in the orders previously issued, the amount received being £248,000, of which over £117,000 was for fabric gloves. The revenue from the Key Industry Duty was £383,000, against £334,000 in 1922-23.

Coal Trade Finances.—The joint audits for the South Wales coalfield continue to show losses. That for September has been announced this week, and it gives a deficit of £158,552 on an output of 3,779,447 tons. This is the fourth month in succession when the revenue of the industry has been less than the outlay. In June there was a loss of £241,198, in July of £72, in August of £230,021, and in September of £158,552, making a total loss for the four months of nearly £630,000. There is no precedent for so heavy a loss, averaging, as it does, about 10d per ton, over so long a period. The output in September was slightly greater than in August, when production suffered a great deal from the holidays, and this fact was responsible for a decrease of about 2d per ton in the labour cost of production, and of 2½d per ton in other costs. The average price realised was, at 18s 10d, about 1d per ton higher than that obtained in August. The general wage rate in November is maintained at the minimum of 42.22 per cent. on the 1915 standard rates, but the wage certified by the auditors as payable within the terms of the national agreement was only 17.6 per cent., or 24.62 per cent. less than the minimum, and that difference has to be met by the sacrifice on the part of the owners of both their standard profits and their share of the surplus available after meeting standard charges, and the total deficiency carried forward has been increased as a result of the September audit to over £2,500,000.

Trade Prospects in India.—Mr T. M. Ainscough, the British Senior Trade Commissioner in India, has this week issued his report* for the year ending June last. In his opinion, there is an immense amount of latent purchasing power in the country which will be translated into actual buying if only manufacturers' prices can be reduced, and if only some degree of stability in cotton goods prices could be reached which would engender confidence. After four years of unprecedented depression it is now possible to sound a note of guarded optimism.

* H.M. Stationery Office. 3s net.

Stocks of imported cotton goods throughout India are very light. During the past year the demand has been insistent, and the relative meagreness of the actual transactions put through is solely due to the high and fluctuating prices caused by the constant variations in the value of raw cotton. It is pointed out that during the last three years India has experienced good monsoons, and considerable prosperity in the country districts. In discussing the tariff question, Mr Ainscough says that recent debates in the Assembly on the Steel Industry (Protection) Act show clearly that the members are by no means unanimously Protectionist in their sympathies, and representatives of the agricultural provinces have voiced the case of the poorer classes, for whom Protection in any form would be disadvantageous. Reference is made in the report to political influences on trade in India. The boycott of foreign goods for a time appeared to have serious possibilities, but the results have not been so detrimental to the Lancashire trade as might have been expected. In the opinion of Mr Ainscough, it is doubtful whether this movement has so far had any appreciable effect on the imports of British goods. The system of organised opposition to British trade and influence is merely a temporary phase which will pass away.

Egyptian Cotton Crop.—Our Manchester correspondent writes:—The Egyptian cotton crop for this season is not likely to be so large as expected a month or two ago, when it was thought in some quarters that the output would be nearly 8,000,000 cantars and a record. This week the Alexandria Produce Association has published an estimate of 6,970,000 cantars. From the point of view of Lancashire spinners, a serious development is the decline in the production of Sakellaridis, and it is probable that the amount of this quality will only be about 3,000,000 cantars, against 4,500,000 cantars in 1923-24. Prices for Sakellaridis have recently advanced rapidly, and are now at a premium of nearly 8d per lb on brown descriptions. Numerous spinners who have produced yarns from Sakellaridis are turning their machinery on to other qualities. A move of this kind, however, is not easily accomplished, and the shortage of supplies is having a very disturbing effect upon trade. It is rather difficult to obtain reliable information, but extensive speculative operations are undoubtedly taking place in the Alexandria market, and there is a fear of a break in prices any day. It may be mentioned that with regard to the mills in Lancashire using American cotton, the increase in working hours has come into operation this week, the factories now running 32 hours a week instead of 26½. It is not likely that the Masters' Federation will make any further change in the short time scheme just at present, but the trade situation is being watched very closely, and when the facts justify an alteration a further recommendation will be made. Trade conditions remain healthier, but it is realised that progress in increasing output will have to be accomplished slowly in order to avoid the loss of the ground recently gained.

The Changed Outlook for Oil.—The depression in the American oil industry seems to be passing. It had been part of the measures taken to curtail over-production that pipe-line runs should be "pro-rated" by some pipe-line companies, and that other purchasing companies, while taking delivery of crude oil offered by producers, should pay for only half, charging a monthly storage rental on the unpurchased half. During last month "pro-rating" came to an end, and purchasing companies generally took and paid for all the crude oil offered. These were the first signs of better conditions. Since September 13th there has been a steady decline in the daily average rate of American crude oil production. The following figures are those of the American Petroleum Institute:—

U.S. DAILY AVERAGE CRUDE OIL PRODUCTION IN BARRELS.			
September 13	2,041,460	October 4	2,010,450
" 20	2,038,850	" 11	1,984,000
" 27	2,024,350	" 18	1,971,350
		" 23	1,957,700

A decline of 83,750 barrels in the daily production within this short period is an important consideration. Another is the continued increase in the consumption of fuel oil. The

seasonal falling off in gasoline consumption generally commences in November, but the demand for fuel oil is said to be much stronger now than at this period last year. There has developed a more extensive use of fuel oil for firing the boilers that heat public buildings, hotels, apartment houses, and even private houses. From the domestic labour-saving point of view, the advantages of fuel oil over coal are immense. At the same time, the demand for fuel oil for ships' bunkers steadily increases as more and more ships are converted to oil burning or constructed with Diesel engines. Fuel oil is a product which in bulk accounts for over 50 per cent. of every barrel of crude oil produced. It is therefore possible that this changed demand may lead to an actual increase in the winter consumption of crude oil by refineries, and so obviate the seasonal banking up of stocks. The existing accumulation of stocks is, however, enormous. At the beginning of the year stocks of both crude oil and refined oil products in the United States amounted to 475,278,236 barrels; at the end of August they amounted to 515,899,304 barrels, the equivalent of nearly eight months' supply at the August rate of consumption. During September it is reported that, for the first time this year, stocks of crude oil have been drawn upon. Already prices have begun to move in an upward direction. The heavy crude oils, from which fuel oil is manufactured, were the first to reflect the changed conditions. At the end of September the price of Smackover (Arkansas) crude oil was advanced by 15 cents, and on October 11th by 10 cents, reaching 85 cents a barrel. Higher prices were subsequently demanded in fuel oil bunkering contracts, both in this country and America, for deliveries in 1925. Light crude oils have not yet been advanced, but the reduction in the price of mid-Continent crude oils on September 27th was believed to be the end of the downward wave in the price cycle. The price range of mid-Continent crude oils at the beginning of the year was from 75 cents to \$1.25 per barrel. By March 8th it had risen to \$1.25-\$2.25 per barrel. In May it began to decline, and at the end of September was back at the range of 75 cents to \$1.25 per barrel. The wholesale prices of gasoline have also begun to rise in certain districts. The existing accumulation of surplus stocks are, however, a sufficient safeguard against any sharp rebound in oil prices generally, and there is still the possibility of the daily crude oil output rising again above the 2,000,000 mark as new discoveries or extensions of the newly-discovered fields are made.

The Lead Market.—Considerable interest has this week been displayed in the lead position. Supplies, despite the high level of prices, continue on a very small scale, the arrivals for October having been very moderate. The supplies in public warehouses are down to one single ton, and this shows how acute the general position is, although there are stocks in other hands. English lead has again touched £40 per ton, and foreign for very prompt arrival made anything from £38 up to £38 17s 6d. There has been a very heavy turnover, with a lot of speculative buying, but, of course, at this high level the position must be regarded as somewhat dangerous. The market in the States is very strong, and while this has no direct bearing on the course of the market here, it has a sentimental influence, and the active demand in American circles attracts the bulk of the Mexican supplies. Germany is a very heavy buyer of lead, and all of this is not for speculative account. The returns show that Germany last year only produced about 35,000 tons of lead, against 188,000 tons in 1913, and there has been no material expansion this year. Germany is likely to require large quantities of pig-lead for some time to come, and there is not the slightest sign of any change as regards supplies. In 1920, lead on the London market went over £50 per ton, and it is quite likely that foreign lead will rise to over £40 here before the close of the present year. The highest touched in 1921 was £31, and in the following year prices never went above £27. Last year the market advanced to close on £32 for a brief period, and current rates may be regarded as very satisfactory to the base

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

metal producers. There is absolutely no surplus anywhere, and if the demand goes on expanding there is bound to be a serious shortage.

The American Cotton-Growers' Exchange.—The Federal Trade Commission, amid its numerous other activities, useful and otherwise, has lately completed an investigation of co-operative cotton marketing associations, writes a correspondent, and has compared the operating costs of these associations with those of private firms for the season 1922-23. This comparison seems to show that co-operative selling is more profitable than individual selling, and the F.T.C. therefore accords its blessing to these associations. The State Bank Division of the American Bankers' Association has also affirmed its faith "in the wisdom of the orderly marketing of crops, and in the efficiency of the co-operative marketing idea." And the American Cotton Manufacturers' Association is of the same mind. With such stately approval the newly-formed exchange should go on its way rejoicing. The exchange consists of a federation of numerous co-operative associations, with a total membership of about 250,000 cotton growers, and it has just lately moved its headquarters to Memphis. The total business transacted has increased from \$40,000,000 three years ago, when the exchange was first established, to \$120,000,000 for the season just closed—1923-24. Offices and branches have been established in nearly every important spinning centre in the world, including Liverpool, Bremen, Havre, and Kobe. Every type of cotton grown in the States is handled by the exchange, and a special form of contract with the farmers has been drawn up, under which the farmers undertake to deliver their entire crops for a period of years. The main policy of the exchange is to avoid speculation and violent fluctuations, to obtain a fair price for the grower, and—implied in this latter—to avoid also what is called "country damage," by prompt warehousing without undue exposure to the weather. The cotton from each member is graded and placed with other lots or pools of cotton of like quality, grade, or staple. Each pool is handled separately, and the farmer gets the average price of the season that is obtained for the pool into which his cotton is placed.

Low Temperature Carbonisation.—It is important, because it is rare, to obtain an impartial, disinterested opinion on the merits of the low temperature carbonisation of coal process. The Department of Scientific and Industrial Research, which has been empowered by the Government to make tests at the public expense of plants for the low temperature carbonisation of bituminous coal, has lately published a test carried out by the Director of Fuel Research on the plant of the Low Temperature Carbonisation, Limited, at Barnsley.* This company claims to have established the commercial success of its process. It has made much of its fourteen year contract with the City of Nottingham for the supply of gas for which it is erecting a low temperature carbonisation plant to treat 1,000 tons of coal a day, and is making arrangements for the disposal locally of the output of smokeless fuel. It is, therefore, important at this stage to have the unbiased opinion of the Director of Fuel Research. The test he made was carried out on an installation of "Parker" low temperature retorts at the Barnsley works, consisting of two units, each capable of carbonising 50 tons of coal per 24 hours. The coal used was Dalton Main (Rother-

* H.M. Stationery Office. 9d net.

ham). The products obtained were regarded by the Director as satisfactory both in quantity and quality. The yields per ton of coal were as follows:—Coke, 13.92 cwt.; gas, 5,620 cubic feet, or 39.6 therms; tar, 18.62 gallons; liquor, 26 gallons; crude spirit, 1.78 gallons; and ammonium sulphate, 13.55 lbs. These yields were on the average slightly better than those which have been obtained with similar coal on an intermediate scale at the Government fuel research station. The coke or smokeless fuel produced was of a suitable size—in one to three inch pieces. It was not friable, and when burnt in a household grate was readily ignited and gave a good hot fire, though without much flame. Certain defects in the plant showed themselves during the course of the trial, but it is considered there should be no difficulty in overcoming these defects in future designs. These results are certainly encouraging, but Dr C. H. Lander, who succeeded the late Sir George Beilby as Director of Fuel Research, was careful to point out in his report that no attempt was made to pronounce on the commercial possibilities of the plant. The likelihood of commercial success, he stated, could only finally be judged after working the plant under a steady load for a long period, and comparing local costs of operation with prices realised for the products in available markets. The test merely demonstrated that the products obtained from the Dalton Main (Rotherham) coal were satisfactory in quantity and quality, but whether the process of Low Temperature Carbonisation, Limited, is capable of treating satisfactorily the various qualities of coal produced in Great Britain is still unproved. There is nothing, in fact, in this latest test to cancel the opinion previously expressed by the Fuel Research Board that "no single process (of low temperature carbonisation) has yet become established which would be suitable for application on a national scale." The best demonstration of the commercial success of the process will be when the Low Temperature Carbonisation, Limited, produces a balance-sheet with a substantial surplus.

Recovery in Japan.—The report from the Acting-Commercial Counsellor of the British Embassy at Tokyo, just issued by the Overseas Trade Department,* necessarily deals in the main with the consequences of last year's earthquake, and their bearing on production, exchange, and foreign trade. The area primarily affected measured 6,000 square miles, with 420 miles of railway; the losses in killed and wounded—some 200,000—and in property exceeded those in the Chinese and Russian wars together; three-fifths of Tokyo was destroyed, and the whole of Yokohama; the direct loss, naturally exaggerated at first, is estimated in the Report as between 2,500 and 5,000 million yen. Enormous stocks of warehoused goods of all sorts were destroyed, chiefly sugar, rice, piece goods, raw wool, timber, and petroleum—the loss is estimated at 111 million yen in one company's warehouses alone. The railway lines, bridges, and rolling stock suffered severely; but, though many small factories were destroyed utterly, and large ones crippled, the productive capacity of the country is not so, for the chief industrial region was untouched. British and foreign firms are recovering, but there is a tendency to shift their headquarters to Kobe. The disaster followed a season of diminished cereal crops. The relief measures are fully described, and the attention of economists directed to their effects, many of them unforeseen. Reconstruction is proceeding slowly, ambitious plans having been turned down as too expensive; the expenditure allotted is 1,295 million yen, spread over ten years. The rebuilding has been rapid, but not solid. The disaster naturally intensified the adverse trade balance, which has existed since 1920, and has caused much alarm, and also its effects on the national finances, and the foreign exchange. Japanese as well as European observers attribute it mainly to the high cost of native products, and the low efficiency of native labour, features which appear throughout the accounts given of the various trades; but the Report ascribes the first rather to defective organisation and high rates of profit, and points out that Japan is affected by the world-wide trade depression, that raw material, fertilisers, and some other imports ultimately tend

by their use to readjust the balance, that "invisible imports" are apt to be overlooked, and that the workers' standard of life is rising permanently—so that, we presume their efficiency may be increased. But some articles, formerly little consumed and all imported, are now largely consumed and made in Japan. Efforts were made by the Bank of Japan and the Yokohama Specie Bank, under Government influence, to modify the adverse exchange by refusing to finance certain import transactions, and by "pegging" the exchange rates. They do not appear to have been altogether successful, and they led to the raising of loans abroad at rates disquieting to Japanese observers. Efforts have been made by industrialists and others to attract foreign capital, for which the Report regards Japan as a profitable field. All this part of the Report deserves careful study by professed economists, but no adequate summary of it is possible here. The import trade is now necessarily abnormal; building materials, and some foreign articles, formerly luxuries, will continue to come in, but the depreciated exchange will reduce the volume of imports, and the Government, for reasons of economy, will endeavour to check them. British importers "must come for the trade, not write for it"; a hasty visit will not suffice, and they should maintain a local representative. Among the exports, of which very full particulars are given, we can only mention silk, the staple export, raw silk alone in 1921-23 being over one-third the value of the whole export of goods. Before the earthquake it had suffered from high prices and declining quality, and the destruction of 30,000 bales raised the price and encouraged the use of substitutes; artificial silk is a dangerous competitor. Interesting reports are appended on the trade of Formosa and Dairen. Both received a severe set-back from the disaster, but there was a notable increase in the exports from Dairen.

Conditions in Colombia.—A correspondent writes:—While financial conditions in Colombia remain far from satisfactory, as may be judged from the closing down by the Royal Bank of Canada of its Barranquilla—and only—branch in that Republic, late reports show that some improvement has been noted. With a population of six millions, the national foreign debt of Colombia stands at \$8.39 (gold) *per capita*, which is less than that of any of the other South American States, comparing favourably with \$52.14 *per capita* for Brazil (population 30,350,000), and with \$86.51 *per capita* for Chile (population 4,127,000). Continuance of the present trade improvement, however, depends largely upon coffee prices. At time of writing these are high, and the condition of the crop, which is said to be exceptionally large, is placed well beyond any danger from unfavourable weather. The increase in the consumption of Colombian coffee abroad, particularly in the United States, has become very marked of late. Whereas in 1920 North America took from Colombia 12.9 per cent. of the total quantity and 13.1 per cent. of all imported values (against 60.2 per cent. and 61.5 per cent. derived from Brazil), the figures for 1921 rose respectively to 15.7 per cent. and 20.7 per cent., and in 1922 to 18.9 per cent. and 23.8 per cent. It is clear that, with an average export trade of 147,187,386 lbs, Colombia, in regard to coffee exports, has now become an active rival to Brazil, and stands second on the list of the world's coffee producers. To-day, Colombia supplies about one-fifth of all the Americans' coffee requirements, and in return for which receives nearly one-fourth of expenditures by the United States upon this produce. For the current calendar year the Colombian Government anticipates a national income of 38,285,397 pesos* and an expenditure of 42,965,953 pesos, thus leaving a deficit of 4,680,556 pesos. This will, it is hoped, be covered by a foreign loan now being negotiated.

The Warble Pest in Cattle.—For many years past butchers and tanners have been agitating for official action to prevent the huge losses caused by the action of the warble fly in cattle. Thousands of hides are annually damaged by warble holes in the prime parts, whilst warbled meat is another fruitful source of loss to

* 1 peso = \$0.973 United States currency, or 1.0266 pesos to \$1; the average during the month of March last was 1.0121; in February, 1.0270; and in January, 1.0254.

the butcher, to say nothing of the pain inflicted on cattle by this pernicious maggot. The matter was again brought into prominence at the recent meeting of the Scottish Federation of Meat Traders, when the chairman referred to the interest taken by the Government, since the war, in agriculture. He thought the time had come for legislation to extirpate the warble fly in cattle, as he considered it was the cause of an annual loss of about four million pounds to the community. He held that farmers should be compelled to treat cattle for the warble fly, just as they had been forced to do in the case of sheep scab. The difficulty in finding the right preparation had been overcome, but they were told its application would mean an increase in officials to see that its application was enforced. During the conference an interesting letter was read from the manager of the Danish Hide Association, in which it was stated that for upwards of 25 years efforts had been made to interest Danish peasants in the warble question without result. Four years ago, however, the Danish Parliament passed an Act making it compulsory on the part of owners to treat their cattle, and statistics showed that in four years Denmark was practically free from warbles. In September, 1920, the proportion of infected cattle was 16½ per cent., whilst in September, 1924, this had fallen to 2½ per cent. One member of the federation stated that he had experimented on a herd of 53 cows, and that he found not a single beast was infected with the warble maggot. The feeling was general that the time was now opportune to press upon Parliament the necessity for legislation, and a resolution was carried to this effect.

Mersey Docks and Harbour.—The accounts for the year ended July 1, 1924, of the Mersey Docks and Harbour Board show that rates and dues produced £2,460,700, an increase of £60,300 over the previous year. The report suggests that this figure, which is our barometer of the state of trade, "is even more satisfactory than it appears, as the increase is not only in the dues on vessels, but in the dues on goods—and the increase follows on the increase of the previous year." The tonnage of ships paying dues is the greatest, with the exception of 1914 and 1915, and amounted to 18,574,144 tons, an increase of 494,565 tons on the previous year. Total receipts, at £3,301,000, are £37,100 higher than in the previous year, and the surplus of revenue over expenditure, after transferring £100,000 to sinking fund, is £15,800. The board have decided to spend about £30,000 in the provision of up-to-date electric machinery for the grain discharging and handling plant at the Birkenhead Grain Warehouses. The quantity of grain dealt with by the Board during the past year was about 50 per cent. more than in the preceding year.

United of Havana.—The report for the year ended June 30th of the United Railways of the Havana and Regla Warehouses, Limited, bears out the favourable impression created by the raising of the ordinary dividend from 6 to 7 per cent. There was an increase of over 14 per cent. in gross receipts and of 9 per cent. in expenditure, the profit per train mile working out at 5s 10d, or 10d more than in the preceding year. Net receipts thus rose by £305,300, or 23.4 per cent., the ratio of expenditure to receipts falling from 65.42 to 62.58 per cent. These good results are enhanced by the gain in exchange, which amounted to £188,300, as against £54,600 in the preceding year. The balance available is thus £451,000 higher at £1,825,100. The following table compares results for the past four years:—

	1920-21.	1921-22.	1922-23.	1923-24.
	£	£	£	£
Railway receipts	6,329,669	3,893,949	3,765,534	4,296,094
Railway expenses	4,848,142	2,729,956	2,463,264	2,688,548
Ratio	(76.59 %)	(70.11 %)	(65.42 %)	(62.58 %)
Other receipts (less charges)	1,481,527	1,163,993	1,302,270	1,607,546

British and Cuban taxes require £262,500, or £26,500 more, and the general renewals reserve account is credited with £350,000, as against nothing a year ago. After making these appropriations, and paying the 5 per cent. preference dividend, and the 7 per cent. ordinary dividend, there remains £234,500, or £17,500 more, to be carried forward. The increase in total receipts reflects the prosperous state of the country throughout the year. Passenger receipts increased by £102,600, while the tonnage of goods and livestock traffic rose by 1,766,200 tons, with an increase in receipts of £334,200 tons. Of the increase of £225,300 in expenditure, £127,900 occurs under the head of locomotive running, and £76,700 under traffic expenses. The outstanding feature of the year for the company was the increase in the Cuban sugar crop, which at the time of writing amounted to 4,060,000 tons of an estimated value of \$400 millions, compared with last year's figure of 3,700,000 tons of an estimated value of \$410 millions. Sugar cane and products supplied over 78 per cent. of the total tonnage moved, but only 46 per cent. of the freight revenue. Revenue from sugar traffic increased by £195,800, or 22 per cent. The manager's report states that since the close of the financial year weekly receipts have shown satisfactory increases. "The prospects for an increased sugar crop are good, and estimates of 4,500,000 tons are being made."

Broken Hill Prosperity.—Our mining correspondent writes:—The strength recently exhibited by the market for the shares of the Barrier Range group of silver-lead-zinc-producing companies is in some cases a reflex of increased dividends and in others an anticipation of benefits to come. Thus the premier undertaking—the North Broken Hill—has declared a distribution of 4s per share, following upon three others this year of 3s apiece. The Broken Hill South's latest dividend—2s 6d per share—showed no increase upon the two preceding declarations, but the balance carried forward at June 30th last was double that brought in. The full text of the report for the past financial year is now available, and contains much interesting information. There is, for example, the point that considerably more than one-half of the gross profit came from crude ore, whereas in the immediately preceding periods the greater proportion was derived from the treatment of dump slimes. Including somewhat increased receipts relative to earlier operations, the gross profit for 1923-24 amounts to £536,200, in place of £382,900. Depreciation absorbed much the same as before, but taxation called for £70,000, as against only £30,000; at £80,000, the appropriation for plant and development shows no change. The net earnings figure was £458,400, as compared with £322,800 in 1922-23. The expansion is due mainly to the advance in the price of lead, the average for the other metals being virtually as before, while the effect of the enhanced production from crude ore was partially offset by the decrease in the yield from dump slime. The last of the unoxidised portion of the material just mentioned was put through in April. On the other hand, the granular zinc flotation plant started regular work in March, and the results are reported to be satisfactory. Owing to the fire at the Central mine, the cost of producing lead concentrates rose by about 7s per ton; but for this, the directors state, there would have been a reduction. The mine is now in a position to supply 6,000 tons of crude ore per week, as against an average of 4,600 last year; the current session will also get the full benefit of the treatment of the current production of zinc. At 3,650,000 tons, the ore reserves display a moderate increase; the total represents something like 12 years' supply for the mill. Exclusive of shares in other companies costing £392,900, the cash assets show a surplus of £840,500, as against £596,400 twelve months previously. Of the increase, £52,500 is accounted for by the sale of the shares taken up in the British-Australian Broken Hill, since absorbed by the North Broken Hill—though why these shares should have been realised is not quite clear. On the basis of the recent rate of dividend, the shares give the attractive yield of 15 per cent. Other companies of the group are the Sulphide Corporation and the Zinc Corporation. The former, which is also, of course, a treatment undertaking,

* H.M. Stationery Office. 2s 6d net.

has lately resumed production at its Central mine. The latter paid one-half the fixed dividend on its preference shares in June last, whereas in respect of 1923 the shareholders had to wait until October; the balance dividend on the preference, with 2s interim on both classes of shares, has just been declared. The reorganised mill commenced the yield of lead and zinc concentrates about the middle of the current year.

Gold Fields Rhodesian.—The shareholders in this finance enterprise, which had paid a steady 10 per cent. for some half-dozen years, lately received a shock in the shape of the announcement that there would be no final dividend for 1923-24. Nor was the effect of the news much diminished by the declaration of an interim dividend at the reduced rate of 2½ per cent. The accounts issued during the past week show a profit of only £84,900, in place of £127,300, and the increased amount of £36,500 falls to be written off mining properties. These include the Legion claims, taken up some twelve months ago, upon which a large amount of exploratory work was done with disappointing results. With the exception of the Falcon Mines—whose future is described by the consulting engineer as doubtful—the position of the undertakings in which the company is principally interested appear hopeful. The directors announce that since the close of the financial year, the company's holding of shares (30,000) in the Cam and Motor "has been disposed of at satisfactory profit." The realisation was certainly not carried out in such a way as to occasion the minimum of disturbance to the market.

A MEETING of the Institute of Bankers will be held on Wednesday, November 12, 1924, at 5.30 p.m., in the Hall of the Grocers' Company, Princes street, E.C., at which the Inaugural Address will be given by the President, Sir Herbert Hambling, Bart.

At the meeting of the Royal Statistical Society, on the 18th inst., to be held in the hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m., the president, Mr G. Udny Yule, C.B.E., M.A., F.R.S., will deliver his inaugural address, "The Growth of Population and the Factors which Control It."

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, November 11, 1924, at 3.30 p.m., at which a paper on "The Development of Tropical Agriculture in the West Indies" (with lantern illustrations), will be read by Sir Arthur Shipley, G.B.E. Sir Harry Wilson, K.C.M.G., K.B.E., will preside.

Oversea Correspondence.

UNITED STATES.—CROP CONDITIONS—TRADE AND INDUSTRIAL OUTLOOK—INCOME-TAX PUBLICITY—SUGAR COMPANIES MERGE.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 28.

LATEST reports as to grain crops indicate that the condition of corn has improved over most of the belt since October 1st, as a result of mild, clear weather, and a large acreage has matured under better conditions than had been anticipated. Generally the crop has dried well and is now being harvested. Except in northern sections, chiefly Illinois, Indiana, Iowa, Minnesota, and North and South Dakota, no extensive damage from frost has been reported, although a hard frost on October 20th injured the late unmaturing corn. One authority estimates the total yield at 41,000,000 bushels over the Government's October 1st forecast, in 12 States. He figures the crop for that area at 1,754,000,000 bushels, as against the Government's report of 2,180,000,000 last year. Of merchantable corn there is said to be 1,090,000,000 bushels, or 62 per cent. of the total crop, as compared with 1,750,000,000 bushels last year. This would point to a total corn harvest of 2,500,000,000 bushels, as against

3,046,000,000 last year. Farm reserves at present are placed at 120,000,000 to 125,000,000 bushels, compared with 83,000,000 bushels a year ago. Winter wheat seeding is progressing well and nearing completion; early seeded winter wheat has a good stand throughout most of the South-West. During the past week prices of all grains have declined under liquidation, profit-taking and short-selling. At Chicago, cash premiums on hard winter wheat have disappeared. Export buying of grains continues fairly active, but the volume of business is not so large as heretofore. Marketing of grains is still heavy and greater than the average, with the result that farmers in the North-West are being urged to limit sales of grains destined for terminal points in order to prevent congestion at the latter. In this connection it is noteworthy that for the week ending October 23rd exports of wheat, including flour, from the United States and Canada, according to *Bradstreet's*, again broke all records, totalling 17,739,823 bushels, as compared with 13,497,277 bushels in the preceding week, and 10,040,935 in the corresponding week of last year. For the 16 weeks ended October 23rd exports aggregated 146,531,600 bushels, against 108,543,748 in the like period a year ago.

The Department of Agriculture reports that the composite condition of all crops in this country on October 1st, or at time of harvest, was 3½ per cent. below their 10-year average on that date, as against a condition of 4 per cent. below that average on September 1st. Final yields per acre last year were approximately 3.9 per cent. under the average. This year's total acreage in cultivated crops was about one-tenth of 1 per cent. less than last year's. Taking 100 as representing the average, the highest condition shown for this year is that reported for North Dakota, 141.9 per cent.; Kansas is second with 119.8 per cent., and Oklahoma third with 116.2 per cent. Washington shows the lowest condition, 68.7 per cent.

Several favourable developments recently seem to promise a quickening of trade and industry after the election. If the results be encouraging and reassuring, many orders that have been deferred will undoubtedly be placed, and will serve to stimulate business, at least for a while, in various directions; but no big boom seems likely in the immediate future.

Although the trade and industrial revival which began late in the summer has been checked, the volume of business this autumn has been considerably larger than a year ago. Railroad freight traffic during the week ended October 18th was, in fact, the largest ever recorded, according to statistics compiled by the American Railway Association. In its summary, issued this week, of general business and financial conditions in the twelve Federal Reserve districts of this country, the Federal Reserve Board in Washington reports that its index of production in basic industries, after allowing for seasonal variations, rose 9 per cent. in September—the first increase recorded since last January. Factory employment increased 2 per cent., reflecting larger working forces in nearly all reporting industries, and average weekly earnings of industrial workers were slightly higher owing to a decrease in part-time employment. Building contracts awarded showed a small seasonal decline in September, but were larger than a year ago. Wholesale trade was 11 per cent. greater than in August, while retail trade showed more than the usual seasonal increase, and sales of department stores and mail order houses were considerably above those of September a year ago.

As previously mentioned in this correspondence, the textile industry, except possibly in some sections of the South, has not shared in such improvement as has taken place. Following the passing of the American Woolen Company dividend last month, the recent action of the Amoskeag Manufacturing Company—the largest cotton goods producer in the United States—in suspending dividends for the first time in 84 years, very plainly shows how acute has been this year's depression in the New England cotton, woollen, and worsted manufacturing industries, while the past four years, in fact, have been extremely poor ones.

About a week ago, one of the most obnoxious provisions of the Revenue Act passed at the last session of Congress, namely, that providing for publicity of

Federal income-tax payments, was put into force through an announcement by the Internal Revenue and Treasury Departments at Washington that lists of taxpayers, showing the amounts of income-tax paid by each, had been opened to public inspection. Many newspapers here and elsewhere immediately printed long lists, selected from the records, and continue to do so. Publication of this income-tax data has raised a storm of indignation and resentment all over the country. All the objections to this radical feature of the law, voiced while it was pending, are now being expressed even more vehemently. A great deal of confusion and difference of opinion, even among high Government officials, exists, owing to the fact that one section of the law makes it a misdemeanour for any Government official to divulge or for any person to publish, any income return or any part thereof, or source of income, profits, losses or expenditures appearing in any income-tax return; while another section apparently provides, or has been so interpreted, for such publication. This particular feature of the Act was strongly condemned by President Coolidge when he reluctantly signed the Bill, and in view of the widespread protests which its enforcement has aroused, efforts will no doubt be made to repeal or modify it.

Another European loan has just been floated here, consisting of \$30,000,000 Swedish Government 30-year 5½ per cent. gold bonds, and representing a new external loan. The bonds, dated November 1, 1924, were priced to investors at 99½, and interest to yield slightly more than 5.50 per cent. The proceeds, it is stated, are to be used for meeting, partly, recent capital expenditures by the Swedish Government for posts, telegraphs and telephones, State railroads, hydro-electric developments, loans to aid agriculture, loans to privately-owned railroads and miscellaneous State enterprises.

The merger of two large sugar companies operating in Cuba and other islands of the West Indies has just been consummated here. The concerns are the Cuban Dominican Sugar Company and the Sugar Estates of Oriente, Inc., whose combined assets are placed at \$90,000,000. In connection with this consolidation, the Cuban Dominican Sugar Company successfully floated an issue of \$15,000,000 first lien, 20-year sinking fund 7½ per cent. gold bonds dated November 1, 1924, which were offered for public subscription at 97½ to yield about 7½ per cent. The combine, designed to effect substantial operating economies, makes the Cuban Dominican, through its control of developed mill properties and cane lands, one of the world's largest producers of raw cane sugar. It gives this company twelve modern sugar centrals, of which seven are located in Cuba and the others in the Dominican Republic; these centrals will be supplied from acreage which during the 1924-1925 season will produce, it is estimated, 2,400,000 bags of raw sugar. The consolidation involves a total of 510,877 acres of owned and controlled lands.

FRANCE.—AUTUMN SESSION—PROPOSED FRANCO-GERMAN STEEL TRUST—IRON AND STEEL OUTPUT—NEW LOAN TERMS.

(FROM OUR CORRESPONDENT.)

PARIS, November 5.

THE Chambers re-assembled yesterday for the special autumn session, and there is every indication that legislators, so far as the Chamber is concerned, are likely to experience an exceptionally lively time. Socialists and Communists gave every sign, by disorderly scenes at this initial sitting, that they are determined to leave no stone unturned to transform at least some of their projects into law, and it will evidently require all M. Herriot's firmness to enable him to keep his mixed and unruly followers in order. The prospects of the Cabinet are nevertheless rosier than they appeared likely to be a week ago. The Socialist Federations, who seemed at one time likely to vote a very conditional kind of support to the Government during the coming session, have apparently reconsidered their attitude. After a good deal of discussion, their national congress on Sunday decided by a large majority to continue to accord M. Herriot their support, and even to vote the Budget, which is a step the French

Parliamentary Socialists have refused to take for many years past. The dissatisfaction of the Socialist wing of M. Herriot's supporters with the Budget proposals at present before the country is as keen as ever, but reflection has convinced the advanced section of the majority that to abstain from voting the Budget because it does not in their opinion impose sufficiently heavy extra burdens on the hated bourgeoisie would only lead to the Herriot Government being replaced by a Cabinet with tendencies far more distasteful to Socialist ideas than the present one. On the principle that half a loaf is better than no bread, the Socialists have decided to continue to support M. Herriot.

Exactly what amount of foundation there is for the persistent and circumstantial reports that are in circulation concerning negotiations between French and German iron and steel magnates, with a view to mutual action, it is difficult to ascertain. Reports published here from the Ruhr, from Berlin and other sources, insist that definite pourparlers have been in progress for some time with a view to the formation of a definite Franco-German Steel Trust, and that the plans are very far advanced. According to the *Matin*, it is proposed to divide the foreign markets into zones, and to arrange for export trade to be carried out on the basis of international agreements, of the kind urged some time ago by M. Loucheur. M. F. de Wendel, one of the moving spirits of the Comité des Forges, has taken the trouble formally to deny, in a letter to the *Echo de Paris*, that negotiations have at any time been in progress between French and German metallurgists with a view to forming a steel trust. The statement published by the *Vossische Zeitung* of Berlin, in a telegram from its Cologne correspondent, to the effect that French, German, Swedish, and Luxemburg steelmasters have agreed to enter into a working agreement, but that British metallurgical leaders have refused to join, while the Belgians have not yet replied, is also stated here to be without foundation.

It may be taken for granted, however, that in spite of official denials, there is good ground for believing that some kind of combination of the sort referred to is practically certain to be brought about in the near future. The steel and iron industries of the Ruhr have as great a need of French ore as the French steel and iron magnates have of coke and coal from the Ruhr. In the circumstances, common action on some well-organised plan is merely a question of time. In steel and iron circles here it is stated that the reports that have been published are at least premature, and that no negotiations have yet been begun on the important scale referred to in the reports that have been received from Germany. What is admitted, however, is that it is hoped that, within the next few days, agreements may be concluded for the reconstitution of the railway metal consortium as it existed before the war, and to which French, German, and Belgian producers belonged. This would obviously be a very significant first step towards the conclusion of agreements of a wider scope. It is not lost sight of here that any Franco-German steel and iron combination would inevitably find a policy of common action extremely valuable in aiding it to secure control of the Russian market, on which the attention of both French and German industrialists is now more keenly fixed than ever, by reason of the recent recognition of the Soviets by the Herriot Cabinet.

French steel production returns for September show that the total output for the month was 598,327 tons, as compared with 581,713 tons during August. This total includes 208,315 tons from liberated Lorraine, against 189,721 tons in the previous month. The total output of iron was 641,453 tons (of which 254,620 tons was from Lorraine), as compared with 655,829 tons (including 257,480 tons from Lorraine) in August. The output of steel for September, it will be noted, was within 100 tons of the record figure reached in May last.

The details of what the Finance Minister himself has described as "the first of the great consolidation loans" have now been published, and will be found curiously interesting. The loan, which is intended to liquidate the deficit of about four milliards arising from the present financial year, will consist of 10-year 5 per cent. Treasury bonds, issued in denominations of 500f, 1,000f, 10,000f, and 100,000f. The bonds, which are quite a new de-

parture in this country, will be issued at par, and will be redeemable by periodical drawings, as from the end of the fifth year after issue, with a bonus of 50 per cent. of the nominal value. Twenty thousand bonds of 500f, out of each million bonds issued, will be drawn for redemption during the sixth year after issue, 30,000 during the seventh, 40,000 during the eighth, 50,000 during the ninth, and the balance of 86,000 bonds during the tenth year. The Treasury, further, will buy in bonds from the Bourse, at par or below, to the extent of 3½ per cent. every year of the total nominal capital subscribed. These bonds, as usual with French Government issues, will be exempt from taxation, and the first half-yearly interest payments will date from October 25th last. The subscription lists will open on November 12th, and will remain open until December 10th, unless the Government shall think fit to close the lists meanwhile. The issue will be made in lots of 500,000f, and will be limited to France itself and Corsica. The bonds, which will be issued either to bearer or to order, must be paid for entirely in cash at the time of purchase.

The new issue, as will be seen, is ingeniously arranged to include many attractive features, and there is little doubt it will prove extremely popular. The yield works out at about 7.65 per cent., but French taste will undoubtedly be keenly interested in the fact that investors can rely upon increasing their capital by 50 per cent. within ten years, and in some cases in just over half this period. The effect of the announcement of the new issue on the quotation for the rente, however, has been serious. The Three per Cents., which stood at between 54 and 55 just before the elections last May, were quoted this evening at 48, the 1915 Fives have dropped from 71 to 58.70 in the same period, the 1920 Fives from 85.30 to 72.25, and the 1920 Sixes from 87.65 to 72.20. Much of this falling off has been due to the change of Government, but the drop has been considerably hastened during the past two or three weeks through enormous sales by small holders who are anxious to secure the ready money to invest in the pending new and more attractive issue.

GERMANY.—POLITICS—FINANCES—CURRENCY AND LOANS—INDUSTRY—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 4.

THE outcome of the English elections is not expected to have any material influence on international political affairs, except upon Anglo-Russian relations. Mr Ramsay MacDonald's policy in the Reparations question was not considered more favourable to Germany than would have been the policy of a Conservative or Liberal administration, and the Nationalists have not forgiven Mr MacDonald for putting through the Dawes plan without securing guarantees for immediate evacuation of the Ruhr. Concerning the effect upon international trade relations different views are held. Although the question of Free Trade *versus* Protection played no rôle in the elections, it is expected that in view of the wide room between the two extremes, of Mr Baldwin's past statements, and of the numerous new methods devised since the war for imposing indirect, unacknowledged Protection, England's policy in the next few years may take a semi-Protectionist colouring; and an agitation against foreign imports is expected. The electoral position here has undergone no change, and of tariffs and commercial treaties as factors influencing the result practically nothing is heard. The Government has issued new rules for execution of the "Industrial Burdens Law," under the Reparations settlement. As concerns bearing the bonds liabilities are defined: all "undertakings" (*Unternehmungen*), with the exception of agriculture, forestry, gardening, fisheries, viniculture, theatrical and other entertainments, banks, insurance, hotels, restaurants. Shipping, private railways, and tramways count as undertakings, but other communication concerns do not. The limit of exemption remains at 50,000 gold marks net property, as assessed under the Property Tax. As already reported, the above exempted undertakings, other than agriculture, are to be liable for contributing to the interest burden (though not liable for

capital), under another law; and the exemption limit in this case is lowered to concerns with net property of 20,000 gold marks. Thus, all except the smallest concerns will contribute towards the interest. The distributing of the liability will be done by the Finance Bureaux, the local taxation organs of the Finance Ministry.

The Cabinet has begun negotiations with the States for revising the subvention system. Reductions are proposed of the income-tax, corporation income-tax, and sales-tax, part of the yields of which go to the local governments. It is expected that the sales tax, which was lately reduced from 2½ to 2 per cent., will be fixed provisionally at 1½ per cent. At present there is practically no real income-tax, other than the 10 per cent. deducted quarterly from wages and salaries of up to 2,000 gold marks per quarter, and 20 per cent. over that sum. Trading and industrial concerns pay quarterly in advance sums based upon past business done, on the ground that the actual profits are not calculable quarter by quarter; and it is suspected that these payments, which are practically only a second sales tax, are being transferred to the consumers' shoulders. The Second Taxation Decree of last winter promised a regular income-tax and reassessment thereunder, the quarterly payments already made to be booked on account; but under this system some persons and concerns have paid in advance more than they can be assessed for. Even for wage and salary earners the present deduction tax is not properly graduated. The Finance Ministry has foreshadowed immediate slight abatements in the Bourse transfer tax, to be followed by a complete revision with the new Reichstag's consent. The Ministry declares that it is not altogether the undue height of the tax which injures Bourse business; the number of brokers and banks (which here do an active brokerage business) in Berlin has increased since 1914 nearly threefold, and is more than business can support.

The ordinance restoring freedom of dealing in exchange has been published, though it is not yet officially in force. Certain restrictions remain. Dealings in exchange may be effected only through authorised banks ("exchange banks"). Sales and purchases continue to be at the Bourse official rate. Dealings in futures are still forbidden, and the regulation of money-changing offices which deal in notes, coins, and travellers' credits continues. The right to buy foreign exchange freely without permission of a Finance Bureau is restored; the obligation to prove the economic necessity of an exchange purchase is removed, and banks are freed from the obligation to report exchange transactions. Sales of marks abroad are again legal, and travellers' rights to take money with them are no longer limited. The former provision makes it possible for exporters to give credit in, and to invoice in, marks. The continuing centralisation of exchange business in the hands of a limited number of banks will facilitate official intervention in case the new mark's stability is threatened.

Following the Prussian Government's pronouncement against unregulated municipal borrowing abroad, the Federal Government has decreed that States and municipalities may contract foreign loans only with the consent of the Finance Minister. A refusal of consent, however, requires the sanction of the Reichsrat. This decree (really a new law) comes out under Article 48 of the Constitution, which authorises the President of the Republic to over-ride the laws when security and order are threatened, and it is the most remarkable of many elastic applications of that Article. The Reichsbank's attempt to borrow money abroad. Berlin Municipality reports that it borrowed \$3,000,000 in New York before the above-mentioned decree appeared. Side by side with official agitation continues against foreigners for "speculating," charging usurious interest, and profiteering. The highest interest rates charged by foreigners are usually less than half of those Germans charge to one another. Newspapers have of late taken to publishing, for special opprobrium, the names of foreigners alleged to have made money, in quite legal if speculative ways, out of the former currency chaos, but the fact is ignored that Germany, by means of the easy speculation of re-

putiating her debts, has extracted vast sums out of the pockets of other, and sometimes of the same, foreigners. The note of the Press and of public bodies in this matter is false and improper, and is particularly inopportune at a time when foreigners are being again asked to trust German good faith.

The wholesale prices index number has fallen further to 128.5 (on October 28th). Nominal wages have of late risen by a very small percentage, but real wages have slightly declined. The industrial improvement continues. The last Berlin report shows a considerable drop in the number of publicly-supported unemployed. Bankruptcies in September numbered 850, against 895 in August; in the first half of October, 356. Railway traffic statistics show an increase after June. The Reichsrat has sanctioned the measure restoring dealings in futures in wheat, rye, oats, maize, and rye flour. This measure is expected to restore Berlin's pre-war position as a great centre of the Continental grain trade, and is a considerable gain to farmers. The negotiations for revival of the Steel Syndicate have led to an agreement, covering all home production of Thomas-Bessemer and Siemens-Martin raw steel. Details have not yet appeared. Only feelers have so far been made for an agreement with the French iron industry. The next step will be to negotiate for creation of separate syndicates for semi-finished material, construction forms, rails, bars, sheets, wire, and hoops. The interested concerns have demanded better Protection in the coming Tariff, including an increase of the pig-iron duty from 1 gold mark to 1.50 gold marks per double-centner. At a recent Dusseldorf meeting a similar demand was made, but iron and steel manufacturers are creating a special organisation to protect their interests against the raw material and half-finished material producers.

Foreign trade figures (including gold and silver) classified by Continents and countries have been issued for the first half of 1924 (in millions of gold marks):—

	IMPORTS.			EXPORTS.	
	Jan.-June, 1924.	Half-year's Average, 1913.		Jan.-June, 1924.	Half-year's Average, 1913.
Europe	2,418.6	3,116.7	Europe	2,063.6	3,885.3
America	1,217.1	1,530.5	America	451.5	779.7
Asia	428.6	534.5	Asia	242.1	274.1
Africa	211.7	257.6	Africa	59.3	108.1
Australia	206.7	163.8	Australia	10.8	52.1
	4,482.7	5,603.1		2,827.3	5,099.3

The proportions of trade on both sides with the chief Continents has not changed much. The United States leads as seller, with 17.8 per cent., against 15.3 in 1913; England's percentage is 9.9, against 9.7; and Argentina comes third with 6.2, against 4.8. France's percentage has fallen from 5.3 to 2.0. Chief buyers are the Netherlands, with 9.7, against 6.9; England, with 8.1, against 14.2; United States, 7.2, against 7.0; Czechoslovakia, 5.9; Switzerland, 5.5, against 5.3. France's figure, including Alsace-Lorraine, is 1.6, against 7.8 without Alsace-Lorraine, but the former figure does not include Reparations deliveries.

CANADA.—WEATHER AND CROPS—AUSTRALO-CANADIAN COMMERCIAL TREATY—THE DRIED FRUIT PREFERENCE—FEDERAL REVENUES—FORESTRY INDUSTRIES.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 27.

WESTERN Canada has some reason to feel aggrieved at the luck which has been vouchsafed her farmers this year. The crop started well, but a series of misfortunes reduced it to modest dimensions. Then came compensation in the shape of a steady rise in prices, and there was every hope that the 1924 crop would be more profitable than that of 1923. Now, however, further misfortune has come in the shape of almost continuous wet weather, interrupted

only by two fine days at the end of September, and aggravated by some bad snowstorms, and the third week in October finds nearly half the crop unthreshed. Moreover, the extra harvest hands, tired of the lack of work, are drifting back in large numbers to the East and the United States, and in many districts threshing will be retarded through lack of help. The wet weather has done considerable damage to the grain, and reduced the grade of millions of bushels; an ominously large proportion of the ears already inspected have graded above No. 3, and many farmers who expected at least No. 3 will have to be content with No. 6, which cuts down their returns very seriously. What is equally serious, a very small part of the crop has been marketed, not one-third of the quantity at the corresponding date last year, and the prospect of so small a percentage of the crop being able to utilise the water route this autumn is worrying both the grain trade and the farmers. Since the stream of wheat supply from the country elevators has fallen to very modest dimensions, grain boats at the Lake ports cannot get cargoes, and freights have tumbled to 2½ cents per bushel down the Lakes. However, the ocean boats at Montreal are not similarly affected, because a great deal of American grain is being exported through Canadian channels. But the unfortunate delay in marketing the western crop has serious consequences for the business community, apart from the impairment of value. Farmers, being unwilling to increase their debts, will not purchase their winter supplies until they get their crop money, and until the farmers show a disposition to purchase freely, the country storekeepers will not place orders on any extensive scale. Hence wholesalers and manufacturers in the East are disappointed in not feeling the stimulus which they expected from the high prices available for the western grain crop. But they do admit that as the result of good crops in Eastern Canada, which have been safely housed and marketed, business conditions in the country districts show a marked improvement. A spell of good weather and a prolongation of navigation on the Lakes would soon remedy the situation in the West. The latest estimate of the western wheat crop comes from the North-West grain-dealers' Association, which puts it at 266,125,000 bushels, being some 25 millions less than the figure of the Dominion Bureau of Statistics; the explanation is found chiefly in a large reduction of the acreage figures, presumably land which was sown but bereft of a crop of any value by the drought.

The long-drawn negotiations between the Canadian and Australian Governments have at last borne fruit in a commercial treaty which will come into force on a date to be fixed by mutual agreement. The chief beneficiaries in Canada will be the pulp and paper manufacturers, the exporters of canned fish and the motor manufacturers. For the latter, however, there is one fly in the ointment: the Australian Government insists that motors and their parts can only claim the benefit of the new preference when 75 per cent. of British labour has been employed in their manufacture. Hitherto only 25 per cent. was necessary, and the larger motor establishments in Canada, which are branches of great American corporations, will be seriously affected. It has been their practice to make up most of the parts in the United States, transport them to Canada, where the work of assembling is done, and then when the car was exported claim a 99 per cent. drawback on the duty paid on the parts. These happy arrangements may now have to be radically altered. The concessions made to Australia in connection with raisins and other dried fruit have had a mixed reception in Canada. Hitherto Canada has secured most of her dried fruit from California, under a duty of two-thirds of a cent per club. The duty on foreign imports of dried fruit is now raised to 3 cents, under powers secured in a Budget in anticipation of the Australian demand, and Australian dried fruit will enter free. The result hoped for

from this change is the transference of the Canadian market from Californian fruitgrowers to Australian, and the experiment should offer a good test of the preferential system. Meanwhile, there is a strenuous outcry from dealers and heavy consumers of dried fruits, who have contracted ahead for their supplies, and now face the prospect of paying higher prices or abrogating their contracts. Pressure is being employed at Ottawa to delay the operation of the Treaty at least till after the next Budget.

The first half of the present fiscal year closed on September 30th, and the Finance Department reports the collection in that period of ordinary revenue amounting to \$187,165,872, as against \$213,092,087 for the first half of the previous year. The decline already visible is more than the total decrease allowed for the whole year, and it does not improve matters that ordinary expenditures have risen from \$134,886,769 to \$136,385,123. The capital expenditures are just as high, and already the earnings of the national railways are 7½ million dollars behind last year's figures, so that the outlook for a good balance-sheet next March is dark. The chief source of revenue decline is found in the sales tax, where the changes both in the rate and the method of levy have cost over 20 million dollars already. The lumber business has struck a dull period. The Japanese demand, which was very brisk for months, has fallen off, and the civil war in China has affected the market there. With the slackening of the building boom in the United States exports to that market are much lower, and only the Australasian market has maintained its activity. However, with more and more prairie farmers turning to mixed agriculture, new buildings for stock are creating a good demand for lumber in these regions. But the expectation is that since stocks are fairly high, this winter's cut of lumber will be small. The pulp and paper industry is also feeling the effects of European competition in the American market, and newsprint is expected soon to be selling at \$70 per ton. In August exports of pulp and paper were valued at almost half a million dollars less than in July, and for the first eight months of 1924 they show a drop from 93 to 91½ million dollars.

AUSTRALIA.—TARIFF CHANGES—MONETARY CONDITIONS AND EXPORT TRADE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 2.

ON September 26th the Commonwealth Government placed before Parliament (subject to future ratification) an agreement with Canada for tariff preferences on certain articles. The subject has been under consideration for many years past, and hitherto without result, so far as Australia is concerned. An arrangement between Canada and New Zealand was made some years ago, one of the effects being that New Zealand butter entered Canada at a lower rate of duty than Australian. Recently, however, the Australian Government has been desirous of obtaining a preference for Australian fruits in Canada, which is now to grant a preference of 1½d per lb on currants and raisins, 15 per cent. on dried apples, and ½d per lb on canned fruits. The preference in favour of Australian meat will be 1½d per lb; canned meats, 12½ per cent.; lard, 1d per lb; tallow, 10 per cent.; cheese, 1d per lb; butter, 1d per lb; and onions, 30 per cent., besides minor preferences. Australia will give preferences on Canadian fish, textile gloves (but not leather gloves, in which Australia has a growing industry), printing machines, newsprint paper, writing and typewriting paper, corsets, iron and steel pipes, goloshes, rubber sand boots, &c., and chassis and other vehicle parts. The preference on newsprint paper is expected to operate at the expense of Scandinavian paper imported into Australia, but not to affect imports from Britain. No preference is to be given by Australia on Canadian agricultural machinery. Altogether, the reductions in the Commonwealth tariff apply to twelve items, while the Canadian tariff is reduced on fourteen items. A considerable trade in Canadian goods has been built up in Australia without preference, the imports of Canadian origin for 1922-23 amounting to £5,064,253,

against £3,146,450 for 1921-22, £4,425,262 for 1920-21, £2,640,280 for 1919-20, and £2,844,050 for 1918-19. Australian exports to Canada are relatively small, amounting to £361,155 for 1922-23, against £365,451 for 1921-22, £139,068 for 1920-21, £302,033 for 1919-20, and £888,016 for 1918-19.

A change in the application of British preference was announced in the Commonwealth Parliament on September 30th by the Minister for Customs, Mr Pratten. In the case of goods partly manufactured in the United Kingdom, the proportion of labour and material required to entitle them to the British preferential rates is to be raised from 25 to 75 per cent. Where it is proved on inquiry that all possible processes of manufacture have been performed in the United Kingdom, preference will be allowed, provided that no goods of a kind produced in Australia will receive preference unless at least 50 per cent. of the works or factory cost consists of British labour or material. In the case of goods which have entered into the commerce of, or undergone manufacture in, a foreign country, and have been returned to the United Kingdom for completion, the total value of British labour and material will be taken into account, instead of as at present that portion added after return to the United Kingdom. This alteration does not require Parliamentary sanction, but will be carried out by a regulation which will come into operation on April 1, 1925. The new conditions will also apply to the reciprocal tariff agreements with New Zealand and South Africa.

The change has been criticised on the ground that, being made by regulation, it leaves no voice to Parliament, but the Prime Minister, Mr Bruce, has announced that the Ministry is considering whether it will be possible to afford an opportunity for discussion. The tendency of the change will be to increase the degree of protection in favour of Australian manufacturers, some of whom have desired the change for a considerable time past. The probable exact effect of the change in working is obscure, but iron and steel goods and textiles will be mainly affected.

The Australian maize market has declined during the last few months, owing to the larger crop, and to relieve the position, shipments are being made from Queensland to England. Some time ago a dumping duty was imposed on maize imported into Australia from South Africa, and the Australian growers are now agitating to have the revenue thus collected applied as a bounty on the export of Australian maize. It is also desired that the agreement with South Africa should be revised in order to give more protection to the Australian article. This year's sugar crop is also in excess of local consumption, and shipments are being made on a considerably lower basis than Australian local prices.

The monetary position continues somewhat stringent, three important factors being the heavy demand for financing exports of wool and other Australian produce; the Commonwealth loan of £10,300,000 closing on October 15th to provide, in part, for public works expenditure by the six States, and the steps that will require to be taken early next year to prepare for a conversion loan to meet War Loans for £68,813,950, maturing locally in December, 1925. The financing of wool, wheat and other exports is complicated not only by the high prices and ruling, but also by the currency restriction. It has been announced that the Note Issue Board has decided to increase the issue of notes up to £5,000,000, to be advanced to the banks as required at a rate of interest not exceeding 2 per cent. above the highest rate allowed by the £3,000,000 not later than June 30th, and as to securities to be lodged by the banks in London, against any advances so made in Australia. The rate of interest, in practice it is understood a lower rate would be charged. The requirement of a return of the notes by June and July next, however, gives rise to some question. As the tendency of bank deposits is to grow from year to year, especially with a good producing season, a larger amount of cash is required to be held by the banks to preserve their customary ratios to liabilities, whereas a limitation of the note currency (fresh gold being unobtainable as a practical business matter while the premium lasts) means

declining ratios. There is a tendency, therefore, to regulate operations without reference to the additional £5,000,000 of notes available under the above scheme, except for extreme use. This means a close regulation of wool credits, especially in their issue in the first place, and in many cases they are limited to December. Meanwhile the wool sales have opened at prices averaging between £35 and £40 per bale, which is much heavier than the average of a little under £30 for the 1923-24 season, and the wool bills coming to the banks are already running into large figures. The situation will be reviewed in November, when the programme of wool sales after Christmas will be considered, but from a financial point of view it is regarded as most desirable that the sales should be spread up to May or June next, in order to give opportunity for a more even balance between Australian import and export trade than with an earlier closing of the wool sales. The wheat crops, after the rainfall during September, now promise to yield well, while the area under crop is larger than last year. For a really good yield, however, a cool spring is wanted, which would not mean an early harvest.

DENMARK.—AGRICULTURAL EXPORTS—COMMODITY PRICES—NATIONAL ACCOUNTS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 22.

THERE appears to be some inclination to believe that improvement in economic conditions is about to set in, and this may benefit industry, as it has already benefited the freight market. Agriculture in particular shows an improvement. For some weeks the butter market has been weaker, but on the 16th inst. there was once more a strong rise, which is only partly due to the rise of the sterling rate. As will be known in England, it is not only the strong English demand which entails a higher price for butter. The sale of Danish butter in the German market throughout the year has been very considerable. A consular report from Hamburg states that as far as can be seen about one-fifth of the Danish butter exports have gone to Germany, but from this must be deducted re-exports to the United States. During June and July the demand was smaller, and the natural explanation is that during these summer months the German production was considerable. Subsequently, however, Danish butter has met with an increased demand, and according to this report a strong demand is expected during the coming winter.

This information may be supplemented with some figures from the last published trade statistics, from which it appears that during January-August this year Denmark has exported Kr.445,400,000 of butter, cream, milk and cheese. The exports of Danish butter in casks and boxes aggregated 83,900,000 kilos, of which the United Kingdom purchased 59,700,000 kilos and Germany 15,900,000 kilos. During the corresponding period last year the total exports were 75,000,000 kilos, of which 62,700,000 kilos went to England and only about 500,000 kilos to Germany. For a number of other articles Germany has likewise become of importance for Danish agricultural exports. Its imports of living pigs were 3,844 head during January-August, 1923, while during the corresponding period this year the figure was 40,065 head. The quantity of cheese supplied was doubled, i.e., increased from 2,100,000 kilos to 4,200,000 kilos, and the exports of eggs were increased from 146,400 scores to 5,400,000 scores, while the United Kingdom purchased 24,200,000 scores in the eight months of 1923, but only about 21,000,000 scores this year, out of total exports of 26,200,000 and 27,200,000 scores respectively. The exports of pork were increased from 110,300,000 kilos to 130,800,000 kilos; of this 109,800,000 kilos and 129,400,000 kilos respectively went to the United Kingdom and 79,100 kilos and 750,700 kilos to Germany.

During September the wholesale price index of the *Finanstidende* shows a rise from 231 to 234 points. This increase is, however, entirely due to the figures of the food section, notably cereals, butter and eggs. Of other goods, only wool and cattle feeding stuffs show rises, the remainder either having maintained their price or declined slightly. The greatest declines have been for spun cotton, hides, petroleum, and metals. The Danish wholesale price

level is now 14 per cent. above that of the same time last year. In its trade report for September the *Finanstidende* points out that the number of unemployed is still appreciably lower than at the same time last year, viz., about 15,000, as against about 20,000, but there has been a slight seasonal increase.

It is possible that the credit restriction measures adopted by the Nationalbank and the private banks may to some extent retard business enterprise. Up to the present, however, it does not appear to have been a decisive hindrance. The net earnings of the Nationalbank have amounted to Kr.12,700,000, which amount has been written off on shares and foreign exchanges. Consequently there is no surplus for the year. In consideration of the generally satisfactory condition and prospects of the bank, the board has, however, considered it justifiable to distribute a dividend of 8 per cent. out of the dividend regulation fund.

At the opening of the Rigsdag early in October the State accounts for the financial year 1923-24 were produced. These accounts show an income of Kr.389,700,000 and an expenditure of Kr.402,300,000. The excess of expenditure has thus been Kr.12,600,000, to which must be added a deficit of Kr.33,400,000 on asset acquisition account, making a total deficit of Kr.46,000,000. Interest and other income from holdings and claims show a deficit of Kr.32,300,000, against a Budget surplus of Kr.7,300,000. But this is due to the writing off of the Kr.40,000,000 preference shares in the Landmandsbank, taken over by the State at the reconstruction of the bank in 1922. Without this writing off the working accounts would have shown a surplus of Kr.27,400,000. The dominant item of the income side of the accounts is, as usual, taxes and duties, which in 1923-24 brought an income of Kr.401,200,000 against the Budget figure of Kr.397,600,000.

The Budget for 1925-26 has been drawn up, partly on new lines, and a direct comparison with previous Budgets is therefore not possible. Income is put at Kr.368,800,000, and expenditure at Kr.360,800,000. The Budget surplus is thus Kr.7,800,000, which amount practically corresponds to a deficit on the asset acquisition account.

Letters to the Editor.

IMPORT AND EXPORT PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In an article dealing with overseas trade printed in your issue of November 1st, you give figures showing that from 1880-1924 the average price of our exports has been continuously rising relatively to the average price of our imports, so that there has been a continuous increase in the quantity of imports brought home in exchange for a representative ton of our exported produce.

The natural inference from these figures is that this persistent alteration in relative prices indicates a change in the conditions of international trade, which results in a substantial gain to this country. You throw out hints to the effect that this conclusion is subject to some qualification. May I suggest that when these qualifications are set out more fully their effect is so considerable as largely to destroy the favourable character of the conclusion? Leaving out of account that effect of the change which diminishes the volume of our exports and results in unemployment in our exporting trades, these qualifications may be set down under three heads:—

1. It would seem that such commodities as wheat, cotton, wool, ores, timber, and so on, which together make up about one-half of the value of our imports, can have undergone no appreciable change in quality; whereas there must have been during the period in question a very great improvement in the quality of the cotton and woollen goods, the machinery, railway material and ships which formed the bulk of our exports. Of this alteration in the quality of the representative ton of exports the Board of Trade returns take no account.

2. A part of the fall in the average price of imports relatively to that of exports must be due to the inclusion in that price of the cost of ever-cheapening transport services. If those services were supplied wholly by foreigners

the inclusion of their cost would be appropriate. But as the services are supplied mainly by ourselves, it would seem that a significant comparison of changes in import and export prices would require that both should be reckoned f.o.b. Assuming that to be done, there still remains a final qualification.

3. Our greatest single export, the value of shipping services supplied by us to foreigners, is not included in the exports, whose average price is given. If it were included, as it should be for the purpose of this particular comparison, it seems very probable that the average values of our exports, especially in the last few years, would be substantially lower than they are.

It is not suggested that these three qualifications destroy the possibility that we have been making some gain from a more favourable rate of interchange between exports and imports. But they do seem to suggest that the probable amount of that gain is far less than appears from a comparison of the raw figures.—Yours, &c.,

Emmanuel College, Cambridge, F. LAVINGTON.
November 3rd, 1924.

Books and Publications.

"IS UNEMPLOYMENT INEVITABLE?"

THE slow but steady improvement in the weekly statistics of unemployment during the first half of 1924 has lulled many observers into the feeling that the disease is gradually curing itself by a kind of economic *vis medicatrix* while doctors busy themselves with diagnosis, prescription and consultation. Others, less easily satisfied, have realised that there has been little more in this improvement than that kind of seasonal change the movement from winter to summer conditions would "normally" bring about, and the fundamental betterment for which we all look eagerly is still tarrying. A slight set-back in June, and a more definite one in recent weeks, turn our thoughts to the doctors, and even the surgeons, once again with a desperate feeling that we are still only fumbling, rule of thumb fashion, at the most baffling problem of our times. But we know, at the same time, that with the best knowledge, and no mistakes, with the best surgery, and no reactions, all cures must take time and infinite study and patience; and even those practical business men who are intolerant of all highbrow efforts to register exact facts and draw generalisations therefrom, and of other similar academic and professional pursuits, are dumb before the present prospect and the utter futility of meeting it with the puny and irrelevant "experience" upon which they would like to rely. No greater service to our age can be rendered than patient work in a scientific spirit on the problem. No greater disservice is possible than the hasty prescription of remedies, ill-considered and conceived in a spirit of social prejudice or political animus. The authors of the "Third Winter of Unemployment" form a band whose experience and knowledge touch most aspects of the subject. Messrs W. T. Layton (chairman), J. J. Astor, A. L. Bowley, Robert Grant, J. H. Jones, S. J. Pybus, B. Seeborn Rowntree, D. Spring Rice, and F. D. Stuart, have devoted themselves to a continued attack upon the problem, in a new volume, "Is Unemployment Inevitable?—an Analysis and a Forecast," bringing their investigations up to date. Their method has been to obtain economic and statistical memoranda from distinguished authorities on particular problems, notes upon the prospects of staple industries from well-known representatives, and to present them with an introductory report of a general character. Professor Pigou contributes a characteristic chapter on "Correctives of the Trade Cycle," which incidentally does much to reveal his present position on the problem of stabilisation and managed currencies. Even a "discount policy directed towards price stabilisation.....must involve (for the Bank of England) a course of action considerably less consonant with its own private interest than has ever been required of it up to the present time." It probably carries with it "supersession of such institutions by central

* Macmillan and Co., Limited. 8s 6d.

banks definitely organised as departments of Government." His examination of deliberate alterations of "time demands" and "time supplies" by consumers and producers is clear and original, but action to be effective (and not to entail undue sacrifice upon those who take it) must be general and concerted. Professor Cassel's article, "The problem of finding employment," will be for many British readers the most important single contribution in the volume, for the simple reason that the trenchant statements on British conditions come with greater force from a foreign critic. His comments on the relation between reparations and protection, on German competition, on the effects of taxation on cost of production, will be unpalatable reading for many business men, and there is hardly a fallacy (or partial truth) finding expression in industrial circles to-day which is not severely handled. Professor Moritz Bonn writes on "The Effects of Currency Inflation," mainly as illustrated in Germany's recent experience, but the contribution is more effective as a summary of past events than any kind of answer to the subject question of the book. Dr. C. K. Hobson is responsible for "The Export of Capital in Relation to Unemployment," dealing with the reaction of the development of other countries upon our conditions, and the desirability of the exercise of governmental control over export of capital. Professor J. H. Jones takes the "Future of British Industry," and deals especially with the fears that arise from the burden of heavier direct taxation than our competitors, which, while not exactly groundless, are only too prominent a feature in our industrial pessimism.

This is a solid book of nearly 400 pages, and only a small proportion of business men will read it in this form. Several of the chapters are suitable to make a series of pamphlets which, to those who like their economics in manageable doses, might reach a wider public. They would be valuable in clearing away misapprehensions and erroneous views, and do not rely for their force upon their cumulative effect.

Part III. consists of very detailed and thorough studies of the position and prospects of various industries. "Agriculture" (Sir A. D. Hall) shows that British farming can contribute but little of practical importance to the unemployment problem. "The Coal Industry" (Mr Wallace Thornycroft), "Iron and Steel Trade" (Mr Harold Jeans), "Engineering" (P. Horsfall), "Shipbuilding" (Professor J. H. Jones), "Cotton" (Professor G. W. Daniels), "Woolen and Worsted" (Mr A. N. Shimmis), "Port Facilities" (Mr Clement Jones) make a group of studies of great value. Their combined effect tends to lead to more pessimistic conclusions than the general chapters dealing with conditions as a whole, in the earlier part of the book.

Part IV. contains Dr Bowley's invaluable statistical inquiries into future population, the effect of adjusting rates of wages in accordance with the level of prices and the state of trade, and (with F. D. Stuart) the possibility of regularising the demand for labour by advancement or retardation of public works. One of his most important conclusions tends to set at rest the concern raised by Mr Keynes in the *Manchester Guardian* Supplements in the view that for many years to come over a quarter million new workers would come into production as a net addition. Dr Bowley shows that if emigration continues on the same scale as in the years preceding 1911, there will be a net annual increase of 65,000 men and 88,000 women up to 1931, and thereafter a diminution of 6,000 men and 12,000 women annually up to 1941. Even without any emigration the first annual increase would be 140,000 men and 40,000 women seeking employment, and 47,000 men per annum thereafter. With emigration at recent rates, the next ten years holds out the prospect of an increase of 90,000 men and 30,000 women seeking employment. The Committee's conclusion is that the problem of an increase in the working population is one of the next few years only, and that normal emigration should reduce this to small dimensions—indeed, to the dimensions of a problem which would disappear if the school age were raised to 16. While these facts are of great importance, there is in this work, as in other works on the whole treatment of population, a failure to state the position which lies beyond the fixed

"work-fund" idea. This is not, of course, intentional, but it means that those who instinctively hold the notion that there is a certain quantity of work to go round, would not repeatedly find a correction of their fallacy in such a way as other fallacy-holders would be brought up short, again and again in these pages. It would have been useful to insist first upon the main principle that every addition to the population is not only a potential producer but also a potential consumer, and that an increasing population makes work for itself. This leads direct to the real problem whether in an already well-developed country the association of land and capital and general industrial institutions with these population increases, is capable of maintaining an undiminished *per capita* figure of combined yield. In other words, while the annual amount of production in the country may increase, can it increase otherwise than at a diminishing rate per head? At what point of development does a country pass its optimum *per capita* yield? Some recent American writers have held the view that even in the United States this maximum average has been passed, and that it is better to prohibit further immigration and maintain the present balance between human and natural forces in production than seek absolute increases in wealth with a diminishing amount per head of the population.

The anonymous survey and forecast summarising the whole matter, occupying the first 85 pages of the book, is an extremely competent piece of work, and the reader is left speculating as to the dominant responsibility for it. It may be said that it leads the reader to a somewhat more optimistic frame of mind than the separate contributions relating to the different industries.

What is the answer to the subject title "Is Unemployment Inevitable?" It cannot clearly be drawn by the casual reader. Every reader must work hard to secure his own answer, but it appears to be "Yes, within limits. But those limits may be considerably less than we experience to-day, and may be progressively diminished." The ways in which the point of minimum unemployment may be lowered cannot be sketched in a review. We can see clearly the irrevocable dependence of our population upon its foreign trade if the present high standard of life is to be continued. The necessity for a wider knowledge of economic facts on the part of all who lead our commercial life in their own protection and that of the workers, and also the necessity for a wider appreciation of economic facts on the part of the workers if they are not to make business impossible is patent. This book should go a long way in the campaign of enlightenment.

It is not too much to say that "Is Unemployment Inevitable?" is a positive arsenal of facts and principles, the most comprehensive we have available, and that within its pages the reader of one hundred years hence will find more clearly and graphically than anywhere else a statement of Britain's economic position and the hopes and fears which filled our minds five years after the conclusion of the Great War.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, November 19. ACCOUNT, November 20.

STOCK EXCHANGE markets have been called upon this week to deal with a very considerable volume of business, the bulk of which has been concerned with the purchase of stock by people who are feeling more confident than they have done for years past in the matter of home politics. The return to power of the Unionist Government served to set alight a flame of optimism which carried up prices to high levels in the industrial market. Other parts of the House shared in the buoyant feeling, and Stock Exchange members have been overwhelmed with business, mostly, as already mentioned, of the buying order. Towards the end of the week, a slight check was administered to the upward career of prices, and the stiffening of money rates has been quoted as a reason for the assumption that it may be well to display a little caution on the top of the hundreds of rises which the markets display. Many Stock Exchange staffs worked continuously, without going home, from Wednesday morning until Thursday night.

The War Loan has remained close to 101 throughout the week, and British Government stocks are firm, without any special feature. Indian Government securities went up without exception, and this resulted in a hardening of prices amongst Indian railway stocks. The latest issued Union of South Africa scrip strengthened to $\frac{1}{4}$ premium, the new Queensland to $\frac{3}{4}$ premium, but there are well-informed whippers of substantial new issues to come in the near future, and these have the effect of keeping back a certain amount of capital that prefers to wait for what opportunities may be offered in the near future for the employment of money. The Stock Exchange is not looking for any rise in the Bank rate this year; at the same time, the hint of dearer money afforded by renewed borrowing from the Bank of England is not lost upon the investing public.

In the foreign market, German Sevens touched 6 premium on the issue price of 92 before the price shaded off a little. Dealings have begun in the French portion of the German loan; the price of the fully-paid scrip stands about a couple of points, allowing for the £2 English stamp duty, below that of the British portion. French bonds have been dull. Paris has taken a hand in some of its favourite stocks, and hoisted Tintos on account of the rise in copper. Peruvian Corporations have been strong, and the $\frac{7}{8}$ per cent. Hungarian spurred to 92.

Home Railways came in for investment attention, and a long catalogue of rises is the result. London, Midland, and Scottish touched 105 before the price gave way on official denial of the rumours that the directors intended to split the stock. Argentine Railway stocks are good, more particularly Cordoba Centrals, Entre Rios, and Central Uruguay. The Canadian Railway bonds, after a brisk recovery, went back on profit-taking. Mexican Rails are a little better. Anto-

fagasta, Leopoldina, and United of Havana have been advanced.

The rubber market is seething with bullishness by reason of a rise in the produce to 15 6d per lb. There has been an enormous turnover of shares during the past few business days. The tea market is also better, and dramatic rises took place amongst the few coffee shares in which there is anything approaching a Stock Exchange market. The oil market complains that it is being damaged by the way in which the price of Mexican Eagles moves violently up and down on wire-pulling by people who get advance information. Strength in Shells was offset by an abrupt drop in Venezuelans, where many thousands of shares were turned out in the course of one half-hour. The tobacco market has been booming, and textiles were run up to what seemed—on the companies' dividend performances—very exalted figures. The iron and steel market, after a continuous rise of several days, halted in its stride, and prices fell below the best, in company with those of many other industrial shares.

Dunlops were run up; stores shares went steadily ahead; the brewery market provided a dozen strong features; electric lighting shares expanded, on the idea that the two London Bills will be safely passed by the new Parliament; Hudson's Bays enjoyed a mild boomlet; shipping shares, insurance, and banking made less sensational improvements, but all moved on the same upward plane.

Shrewd people who have been taking substantial profits on previous purchases of industrial shares are regarding Kaffirs with a certain amount of favour, in consequence of the high yields which most of the dividend-payers afford. Buying on this account, supplemented by support from the Cape and Paris, has served to put a brighter complexion upon the price-list as a whole, and there are a good many rises shown by South Africans, more especially those in the gold market. The sharp rise in sterling suggests, of course, that gold will come down, but for the moment this factor is either disregarded as a practical consideration, or else countered by the consolatory expectation that a fall in gold will automatically help to reduce costs. Chartered are now ex dividend, and attract a measure of support by those who consider the shares a good lock-up. The excitement in Tanganyikas and Zambesias subsided to some extent. Shares in certain of the land companies responded with sharp rises to a little demand, some of which came, curiously enough, from the Middle East, which hitherto had been confining its attentions mainly to tin shares, where further improvements stand out in most of the good Malaysians. West Africans are also a little better. There is not much doing in Mexican or Canadian mining shares, but the mining markets, speaking generally, are enjoying more public interest than they have done for some time past.

The Stock Exchange Committee have confirmed the rule permitting a broker to charge, at his discretion, one commission only on the purchase and sale of shares effected in the same account or in the account following.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	£163,257,309	..	..	..
ISSUES OF THE WEEK—				

NATIONAL SAVINGS CERTIFICATES.
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED NOVEMBER 1, 1924.

April 1, 1924, to Nov. 1, 1924, Dr £2,450,000	Nil	Nil	Nil	Nil
To the Public—				
Southern Railway, £2,000,000 5% Pref. Stk. (less £1,000,000 for redemption of existing Pref. Stk.) (red. at par, 1924), issued at 98½ %	1,000,000	995,000	50,000	945,000
Great Northern Investment Trust, 75,000 Shares of £10, at par	750,000	750,000	37,500	712,500

1920	968,538,103	1920	1,393,381,441	..

Southern Railway Company.—This is an issue of £2,000,000 5 per cent. "redeemable" preference stock at 99½ per cent. The net proceeds of this issue will be applied in redeeming the existing £1,000,000 5 per cent. redeemable preference stock (1924), and in providing for the general purposes of the company's undertaking. The new stock, which constitutes a trustee investment, will rank *pari passu* with the existing 5 per cent. preference stock, and will be redeemed at par on December 31, 1924. The dividend will be payable half-yearly in August and March "only out of the amount available for dividend in each year." The issue has been underwritten for 1 per cent. together with an overriding commission of ½ per cent. An excellent security which was well received.

The Great Northern Investment Trust, Limited.—Authorised share capital £1,000,000, divided into shares of £10 each. This is an offer for subscription of 75,000 shares at par. The prospectus states that applications for 50,000 shares have already been received, and will be allotted in full. When fully paid, the shares will be converted into preference and ordinary shares in the proportions of 60 per cent. of the former and 40 per cent. of the latter. The preference shares will be entitled to a cumulative dividend of 5 per cent. and to priority as to capital. The articles of association provide that except in the case of British Government securities, not more than 10 per cent. of the combined subscribed share capital, debenture capital, and loans for the time being shall be invested in any one security, and no investment shall be made in any security upon which the liability is unlimited. This company has been formed to conduct the usual business of an investment company. Preliminary expenses are estimated at £13,500, and will be borne by the company. Some prominent business men are on the board, and shareholders have reasonable grounds for optimism.

Matthew Brown and Co., Limited.—Authorised share capital £800,000. There have been already issued 395,004 ordinary shares of £1 each, and there are now offered 150,000 7 per cent. cumulative preference shares of £1 at 21s each. The company has no debentures. The additional money is required for the purpose of providing funds for the purchase of a property at Hindley. The original business was established in Preston in 1830, and was formed into a limited company 45 years later, since when several kindred undertakings in Preston and Blackburn have been acquired. The company, it is stated, has paid regular dividends on its ordinary capital, recent rates of distribution having been 14 per cent. for each of the two years to September 30th last and 15 per cent. for each of the three previous years. Profits are shown for the past six years. These are amply sufficient to cover the preference dividend. Net assets amount to £586,800, which, together with the sum received from the present issue, provides a very substantial margin for the present preference issue. A well-secured industrial share, but consideration should be paid to the future of the industry.

Amalgamated (Rubber) Finance Company, Limited.—Authorised capital £250,000, divided into shares of 2s each. Particulars are published for information only of an offer of 2,500,000 shares of 2s each. The above shares are being offered as "rights" to the shareholders of the Amalgamated Rubber Estates, Limited, in the proportion of one share for every two shares held in Amalgamated Rubber Estates. The object of the company is to provide any necessary finance which may be required in the acquisition of estates so geographically situated that they can be amalgamated with the estates already held by Amalgamated Rubber Estates, Limited. The subscription of 625,000 shares of 2s each has been guaranteed by Messrs Zorn and Leigh-Hunt for a commission of 6 per cent.

Warth Mills (1924), Limited.—Authorised capital £90,000, divided into shares of 10s each. This is an issue of 179,597 shares at par. The Warth mills are at Bury, and for many years they were run by J. and J. Mellor, Limited. They were closed in 1923 by a company, bearing a similar name, who acquired them in 1920. It is stated that the plant and machinery have been maintained in excellent condition. According to the rating of the Spinners' Federation, the mills contain the equivalent of 91,682 spindles (part being ring and part mule), and also 736 looms. They have an adequate water supply, and skilled workers living in close proximity to the mills are available. It has also been decided to issue first cent. per annum, free of tax. The proceeds of the two issues will be applied in satisfaction of the purchase price—namely, £160,000—and to provide working capital. A speculative, but interesting venture.

The Bukit Tupah Rubber Estates, Limited.—Capital £85,000, divided into shares of £1 each. This is an issue of 77,000 shares. The company has been formed to acquire as a going concern, as from October 1, 1924, the Bukit Tupah and Tupah Bahru Rubber Estates, situated in the district of Bedong in the State of Kedah, Malaya. The estates are held under Government grants in perpetuity at a quit rent of about 1s 2d per acre, and have a total area of 2,064 acres.

The Bukit Tupah Rubber Estates is a property that was jointly acquired and developed by the Eastern International Rubber and Produce Trust and the British and Continental Plantations Trust, each of which owns a 50 per cent. interest. These two concerns will retain a large interest in the company, as out of the total share issue of 77,000 of £1 each, 50,000 will go to the two vendor companies, and the balance of £27,000 is offered for public subscription at par. Applications from shareholders of the two trusts referred to will receive special consideration. The purchase price of £60,000 is equal to about £36 10s per acre. A proposition which no doubt was supported by shareholders in the trusts.

East Worcestershire Waterworks Company.—This is an offer for sale by tender of £28,000 of 5 per cent. irredeemable debenture stock. The minimum price at which offers will be received is 95, at which level the stock, if obtained, would yield £5 5s 3d per cent. running income in perpetuity. The company was incorporated in 1877 to supply a district of about 120 square miles in the area named in the title. During the year ended June last the company earned a net revenue of £8,025. Debenture interest, including that on the issue now to be made, requires £1,640, thus leaving a satisfactory margin for safety, but regard should be paid to the narrow market for such an issue.

ACTIVE SECURITIES.

of 1s 3d was certainly very satisfactory. The realised price for the coffee was £3 3s 9d per picul, being 1s per picul less than the amount realised the previous year. This price of £3 3s 9d was, however, a very good one, as the coffee market was in rather a depressed condition during the autumn of 1923, and in any case the slight decrease in price was more than offset by the very much larger crop.

The final result of the year's working was a profit of £20,587, which, added to the balance brought forward from last year, gave a total of £29,745. Out of this sum it was proposed to declare to-day a dividend of 10 per cent., which would absorb £16,000, and to carry forward the balance of £13,745 to next year.

Dealing with the current year, the Chairman said it would be noted that the company, which was voluntarily restricting its output in accordance with the R.G.A. policy, was entitled to produce 665,000 lb of rubber for the current year on a 60 per cent. basis. No forward contracts were in existence for the current year, but when he told them that a very large portion of this year's crop was still in hand unsold, he thought shareholders might take it that a fair average price could be relied upon for the year's output. Their output for 1924 would be slightly lowered by the reduction in the export allowance which took place on the 1st of this month, but they would be amply recouped by higher prices. There need be no fear in the minds of the shareholders that this reduction in output allowances would not be made good by several releases during 1925, when everybody expected that still higher prices would be forthcoming, and several 10 per cent. releases were expected to take place; should this not be so, a shortage of rubber must ensue, as the motor trade was advancing by leaps and bounds all over the world. They were hoping that the export allowance for 1925 would average not less than 70 per cent., and this added not only 10 per cent. to the figures they gave to the shareholders, but would add one-sixth to the allowance for 1924. Their rubber interests were therefore extremely promising. With regard to coffee, the position also looked very healthy, and this year showed a distinct improvement on last year. The condition of the estates generally was entirely satisfactory.

The report was unanimously adopted.

NORTH ANANTAPUR GOLD MINES, LIMITED. AMALGAMATION OF COPPER INTERESTS.

The seventeenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 4th instant, at 6 Queen street place, London, Mr V. Herbert Smith (chairman of the company) presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: In the directors' last annual report shareholders were informed that mining and milling operations at the North Anantapur mine had been discontinued, and that a limited amount of exploratory work had been carried out at the Gooty property, situate in Madras Presidency, over which the company holds a prospecting licence from the Government. Work has been continued, as explained in the directors' report, and I think you will agree that the results obtained offer considerable encouragement. A special inspection of the property has been made by a consulting mining engineer from the Kolar goldfield, who states that the Gooty area certainly merits further testing. It is the directors' intention to carry on further exploratory work.

Referring to the Sideshur copper area, he said:—It having become evident that many advantages would be found in an amalgamation of interests with the Indian Copper Corporation, Limited, who are the owners of the adjoining mining property, an arrangement was arrived at which is set forth in the directors' report. Each company has been allotted its due proportion of shares of 2s each, credited with 1s per share as paid, and under the scheme every shareholder has the same liability per share. Our proportion is 300,000 shares of 2s each in the Indian Copper Corporation, Limited, which company has a nominal capital of £225,000. Our company is subscribing £15,000 to be used in the development of the amalgamated properties as a whole, and under this agreement the Indian Copper Corporation, Limited, defray all mining expenses at the Sideshur block as from June 30, 1924.

The Mosaboni mine, which is the most important area owned by the Indian Copper Corporation, Limited, we are informed, is developing in a most satisfactory manner. The reserves are computed at 188,106 tons of profitable ore, and the present mining operations are rapidly adding to this total.

With regard to the Anglo-Canadian Explorers, Limited, the chairman of that company, at the last annual meeting, stated that the outlook was very encouraging, and offered good ground for satisfaction.

A circular issued this month by the Sumatra Mining Exploration, Limited, discloses an encouraging position at the property in Sumatra.

The Chairman then gave particulars from Mr Thomas Pryor's report, and after dealt with Mr Grimshaw's circulars.

The Hon. Lionel Holland, J.P. (vice-chairman) seconded the resolution, which was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Nov. 10—Nov. 15 were opened on Nov. 7, 1924, and the total amount applied for was £59,080,000. For bills at three months dated Monday to Friday at £99 1s 3d, about 60 per cent., and above in full; Saturday £99 1s 6d and above in full. The amounts allotted were as follows:—In bills at 3 months, £34,000,000; in bonds £1,000,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Oct. 3, 1924.	£40,000,000	59,345,000	3 14 3-89	94 10 0
Oct. 10.	35,000,000	60,710,000	3 13 9-13	nil

		Egypt	4,600
		Aden	1,000
		British India	402,328
		Other countries	1,600
Total declared value of imports	485,160	Total declared value of exports	558,263

Messrs Samuel Montagu and Co. write on November 5th as follows:—

GOLD.

A moderate amount of gold came on offer this week, and was absorbed by India, the Continent, and the trade. Ontario's gold production during the first half of 1924 is reported as follows:—Ore, 1,376,326 tons, 571,248 ounces; value, \$11,810,054.

SILVER.

A renewal of selling from China, owing probably to the course of events arising from the civil war in that country, coincided with a strong recovery in the sterling rate with the United States of America, and fresh falls ensued in the price of silver. The quotations for cash and forward reached 34½d on the 3rd inst. (a lower figure than any recorded since the date exactly two months previous). The mark, however, was overshoot, and a rally occurred yesterday of ½d. To-day, however, there was a slight reaction of ¼d. Some support has come from the Continent during the week, and naturally bear covering was encouraged by lower prices. America has been rather disposed to sell.

INDIAN CURRENCY RETURNS.

NOTICES.

On and after Monday, November 10th, the business of the Power of Attorney Office, Bank of England, will be conducted at 18 Finsbury circus, E.C. 2.

The Midland Bank announces the opening of new branches as follows:—140 High street, High Barnet, Herts (Mr H. W. Allaway, manager); 91 High street, Thornton Heath, Surrey (Mr J. W. Binney, manager); 76 Westow hill, Upper Norwood, London, S.E. 19 (Mr L. Taylor, manager); 65 Mutley Plain, Plymouth (Mr P. Scutt, manager); and 140 Sutton road, Chester road, Birmingham (Mr B. Vause, manager). Additional offices have also been opened in Burbage, near Hinkley; 102 High street, Cricklade, Wilts; and in Canterbury road, Lymington, near Folkestone. The business of the two Wakefield branches has been amalgamated, and is now conducted in new premises at 66 and 68 Westgate.

Lloyds Bank, Limited, announce that a sub-branch of the bank is now open at 397 Wimborne road, Moordown, Bournemouth, under the management of Mr R. Dobell, of the Winton branch, Bournemouth.

The Bank of Montreal has been advised by their head office in Montreal, by cable dated November 3rd, that Major-General S. C. Mewburn, K.C., C.M.G., of Hamilton, Ont., has been elected to this bank's board of directors.

BROWN, BAYLEY'S STEEL WORKS.—The directors propose to pay five months dividends on the preference shares, amounting to £10,417, thereby discharging the arrears down to July 31, 1922.

ISLE OF THANET ELECTRIC SUPPLY.—Company announces dividend for year ended Sept. 30, 1924, on 6 per cent. cumulative preference share capital. (At June, 1924, the preference dividend was in arrear from July, 1910. Arrears were satisfied by issue of preference shares from reserve, the rate also being increased from 5 to 6 per cent.)

ZINC CORPORATION.—Dividend of 2s per share on the preference shares, being the last half of the fixed preferential dividend for 1924, and also an interim participating dividend of 2s per share on both the preference and ordinary shares, payable on January 1st, less tax at 2s 8d in the £.

Transvaal Silver	478	Long tons of silver lead, containing 54,368 oss of fine silver.

BROKEN HILL SOUTH.—19,620 tons crude ore and 10,424 tons of de-leaded alloy residues were treated and produced 3,430 tons of lead concentrates, assaying 47 per cent. lead and 19 oss silver per ton; also 5,515 tons of zinc concentrates assaying 47 per cent. zinc.

BURMA CORPORATION, LIMITED.—22,876 tons of ore were mined. 21,880 tons of ore were milled, producing 10,836 tons of lead concentrates. 10,297 tons of lead-bearing material were smelted, producing 4,267 tons of lead. Refinery produced 23,000 oss were recovered from the treatment of copper matte. Experimental plant produced 1,865 tons zinc concentrates, assaying 10-37 oss silver, 8-58 per cent. lead, and 45-51 per cent. zinc. In addition to above 315 tons copper matte was produced from the treatment of 1,297 tons copper ore and accumulated smelting products, as well as 200 tons antimonial lead.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of October was approximately 10,450 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 7,650 tons.

GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—The estimated gross production of crude oil for the month of October was approximately 1,400 tons, and the oil delivered to United British Refineries, Limited, amounted to about 955 tons.

LOBITOS OILFIELDS, LIMITED.—The production for October is cable as 17,478 tons.

STEAUA ROMANA.—The production of the Steaua Romana Company, Bucharest, for the month of October was 24,420 tons, as compared with 24,120 tons during the month of September.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during October, 21,200 tons; oil purchased during October from other companies, 7,850 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—The combined production for week ending Wednesday, October 29, 1924, amounted to 862 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production of crude oil from the La Rosa Field for the four weeks ending October 25, 1924, was 47,504 metric tons. (Production for the previous five weeks having been 72,504 metric tons.)

Reports and Notices.

Mr W. G. Walton, F.F.A., who since 1902 has held the position of actuary to the Scottish Provident Institution, has expressed his desire to retire after 50 years of active business life 37 of which have been spent in the head office of the institution. To succeed Mr Walton the board have appointed Mr John R. Armstrong, F.F.A., and Mr. James Davie, F.F.A., has been appointed assistant actuary. Mr Armstrong and Mr Davie have for many years been members of the head office staff.

Lord Stanley, M.C., M.P., has joined the board of directors of the London and Lancashire Insurance Company, Limited.

Mr George Glass Hooper has been elected chairman of the Barranquilla Railway and Pier Company, Limited, in succession to Mr James Anderson, retired, and Mr Frederick Belcher has been appointed managing director.

† Free of tax.

HOTEL CECIL, LIMITED.—The report to August 31, 1924, shows that the profit from trading account is increased from £76,673 to £97,429. The net profit, after providing for debenture interest, and other charges, including a sum of £20,000 appropriated for plant renewals, is £51,774, against £51,320 last year; to which has to be added the balance brought forward of £26,485, making a total of £78,260. The directors recommend this amount be appropriated as follows:—Dividend at the rate of 5 per cent. on the preference shares, £25,000; dividend at the rate of 6 per cent. on the ordinary shares, £24,000; carried forward, £29,260.

HUDSON'S BAY COMPANY'S LAND SALES.

	For Quarter Ended October 31, 1924.		For Nine Months Ended October 31, 1924.

Total receipts	£74,638	£58,295	£247,894	£246,849

INVESTMENT TRUST CORPORATION, LIMITED.—The present authorised share capital of the corporation is £2,000,000, all of which has been issued and fully paid up and converted into £1,200,000 preferred stock and £800,000 deferred stock. The directors consider that it would be advisable that the stockholders should now authorise an increase in the share capital by the creation of a further 200,000 shares of £5 each, such additional capital to be issued in such amounts, at such times, and on such terms as the directors may decide. An extraordinary general meeting to authorise the proposed increase will be held on November 12th at Gresham House, Old Broad Street, at half-past two.

LISBON ELECTRIC TRAMWAYS.—A notable improvement has taken place in the results of this Portuguese tramway undertaking during the year 1923. The net profit, after payment of debenture interest, has risen from £9,748 to £63,774. At end of 1922 the debit of profit and loss was £38,708. Thus there is now a credit of £25,066, which is carried forward. No dividend has been paid on the 6 per cent. cumulative preference shares since the 2½ per cent. paid for 1917. The dividend on the preference shares is £425,553 in £1 shares. The ordinary issued share capital is £634,026 in £1 shares. The ordinary shareholders have received no dividend since the 4½ per cent. paid for the year 1915. Passenger traffic increased from 75,862,877 in 1922 to 89,666,215 passengers for 1923. The rate of exchange at the beginning of 1923 stood at 2 11-32d, but by the end of the year had fallen to 1 57-64d. The report points out that "the improvement in the company's position recorded in the accounts was due to earnings in the early part of the year. The subsequent

fall in the exchange added considerably to the working costs, and brought about demands for higher wages, owing to the increased cost of living. Under the terms of the contracts existing at that time, this necessitated an application to the Municipality of Lisbon for an increase of tariffs, but our claims in this respect were only partially agreed to. The increase obtained took effect as from October 7, 1923, but did little more than cover the additional wages granted."

NATIONAL DISCOUNT.—The directors have decided, in view of the growth in the business of the company, to propose to the shareholders to authorise an increase of capital by the creation of a further 100,000 "B" shares, and to issue shortly approximately 55,000 of such shares. Detailed proposals to this effect will be laid before shareholders at the time of the general meeting in January next. If the proposals are approved, my directors intend to offer these shares to existing "A" and "B" shareholders, in accordance with the articles of association, in the proportion of one new share for every six held, at a premium of £3 10s, i.e., at the price of £6 per share.

SKODA WORKS.—We are informed that the amount necessary to meet the half-year's interest on the 8 per cent. first mortgage sterling debentures of the Skoda Works, due January 1, 1925, has been deposited with the National Provincial Bank, Limited, two calendar months prior to the date of payment, in accordance with the terms of the prospectus.

TRINIDAD LEASEHOLDS, LIMITED.—Subject to final audit, the net profit for the year ended June 30, 1924, after writing off depreciation on buildings, refineries, wells, pipelines, tanks, and other plant, and allowing for corporation profits tax, amounts to £205,230. After adding the balance of £41,749 brought forward from the previous year, the total amount standing at the credit of the profit and loss account was £246,979, from which an interim dividend of 5 per cent. (less Trinidad and British income-tax), absorbing £52,462, was paid on June 24, 1924. At the annual general meeting to be held on Thursday, November 20, 1924, the directors will recommend the payment of a final dividend of 12½ per cent., less remuneration due to the directors under the articles of association, there remains £54,180 to be carried forward.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—For the month of September, 1924, the following are the approximate net operating returns of the companies in which Whitehall Electric Investments, Limited, is interested:—Operating in Chili—Cia. Chilena de Electricidad, Limitada, £49,000; Cia. de Electricidad de Valparaíso, £9,500; Cia. Hidro-Eléctrica (Rental), £6,000. Operating in Mexico—Cia. Eléctrica de Tampico, S.A. (not received); Puebla Light, Power and Traction Company, £10,300; Vera Cruz Electric y Fuerza Motriz de Orizaba, S.A., £1,900; Cia. Eléctrica de Córdoba, S.A., £330. (Bullion exchange calculated at \$42.10 equal £1; Mexican exchange calculated at \$1 equal 24.5d.)

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine but cold weather has enabled farmers to resume field work, but owing to recent heavy rains ploughing and sowing operations are rendered difficult. Threshings, however, are on a fairly liberal scale, and increased quantities of native wheat are coming forward. Many of the samples are damp and unsatisfactory for milling purposes, and prices generally continue in a downward direction, while ranging from 11s 8d to 12s 6d per 112 lbs as to quality, free on rail. Imported grades move off quietly, and prices have further given way, though towards the close some recovery was made in view of higher forward offers. No 1 Northern Manitoba quoted 67s 9d, No 2 ditto 66s 6d, No 2 hard winter 63s, No 1 Northern Duluth 63s, and choice white Karachi 63s, all ex-ship terms per 496 lbs. Business in the floating and forward cargo section was confined to very moderate limits, buyers adopting an attitude of reserve owing to fluctuating advices from North and South America, but towards the close of the week a firmer tone set in with rather more inquiry from the near Continent. Steamers of Australian January-February 15th sold 62s 3d, No 2 hard winter October 9th bill of lading 57s, No 1 Northern Duluth October 22nd, 58s, and Barusso 63½ lbs January-February 59s, all per 480 lbs. Maize cargoes dull and easier on selling pressure. Steamer Plate December-January sold at 46s 10½d. Flour trade quiet, and prices again easier for all descriptions. London standard straight run quoted at 49s, patents 51s to 52s, town whites 49s per sack, delivered in Metropolitan area. All English country straights 43s 6d to 44s per sack, free on rail at London stations. Of imported, Manitoba patents range from 48s 6d to 51s, Minnesota 49s to 50s, and Australian 46s 6d to 47s, all per 280 lbs ex store. Barley dull and again easier. English quoted 12s to 22s 3d per 112 lbs, free on rail as to quality. Californian 70s-72s, Chilian Chevalier 80s to 88s, Polish 60s to 68s, ex store per 448 lbs. No 4 Canadian Western ex ship 39s, landed 40s 6d, Danubian ex ship 39s, American malting 38 lbs ex ship 39s, and Persian ditto 39s per 400 lbs. Maize quiet and easier. Plate ex ship 44s 6d, landed 46s, Bessarabian 47s, Odessa 40s, both landed per 480 lbs. Oats quietly steady. Plate ex ship quoted 20s 3d, landed 32s 3d, No 2 Canadian Western ex ship 33s 6d, landed 35s, white clipped American 38 lbs landed 32s, per 320 lbs. English quoted 9s 8d to 10s 9d per 112 lbs, free on rail. Oatmeal in better request. London made flaked, 20s, rolled oats 19s 6d, medium also fine cut 19s 6d, coarse and medium pinhead 19s 6d, ordinary Scottish oatmeal, 21s, American and Canadian rolled oats 20s cwt. Millers' offals quiet. Broad bran quoted 9s 3d, middlings 10s 3d, fine ditto 13s 3d, bags included ex mill. Light oats 9s 3d, powdered oat husks 9s 9d, feed oatmeal 12s 9d, and ground oats 14s 9d, all per cwt free on rail.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1924-25, 1923-24, 1922-23, and 1921-22:—

	1924-1925.	1923-1924.	1922-1923.	1921-1922.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 6, 1924, is as follows. Pig-iron: There has been a continued demand for pig-iron this week, and a considerable business has been done, with the result that makers have increased their prices, and No. 3 Cleveland G.M.B. is now put at 82s for prompt and 82s 6d for forward delivery. The position of the hematite market is also improved, and the price of mixed numbers East Coast hematite is now 88s. 6d. per ton. Manufactured iron and steel: In this department there is a much healthier tone, and one local works has just received an order for 24,000 tons of steel rails and sleepers. Prices, however, remain unchanged.—Steel ship plates, £9 15s.; steel ship angles, £9 10s.; iron bars, £12; steel rails, £9. Iron ore: The consumers still have large stocks, and are not making

further purchases for the time being, but prices are slightly firmer, with best Bilbao Rubio offered at 21s 6d per ton c.i.f. Tees.

Our Sheffield Correspondent writes:—The tide of confidence and buoyancy throughout the iron and steel trades continues to flow, but another week or more will be required to show whether this sentiment is justified. Up to the present time its only effect has been to increase the number of inquiries for raw and semi material, these being more numerous than for a long time past. So far as work and sales are concerned, the position is unchanged, and the volume of business passing is as restricted as ever. Higher prices for pig-iron are, however, being asked, especially for long contracts covering six months or so. The slump in crude steel has made no further progress, and the number of furnaces operating remains the same as before. Business in tool steels is poor, particularly on export account, and the call for saws, spades, shovels, farm and excavating tools has eased off lately, although the output continues fairly large, and overseas countries are buying on a considerable scale. There is a steady demand for railway steel, engineering castings and forgings, cold rolled steel, builders' tools and castings, and tramway trackwork. The requirements of the motor industry are heavy, and tending to expand, especially in the lorry and van departments. Coal owners are making heavy sacrifices in order to dispose of accumulations of fuel which are blocking their sidings. Market quotations are nominal for most qualities. Coke is almost a drug on the market, the stopping of so many furnaces lately having brought about an excess of production.

Our Glasgow correspondent writes:—No very tangible evidence of revival in the iron and steel trade to account for the feeling of hopefulness engendered by the conclusion of the elections can yet be said to exist. Certainly the pig-iron market has picked up somewhat, but that was only to be expected after the deep depression recently passed through, and there is a slight improvement in the home demand for finished iron and steel, but the export trade remains more or less dormant. Indian buyers are showing a little more interest, and some orders for sections and plates have been placed, while galvanised corrugated sheets have been bought for Calcutta at about £17 per ton. Black sheet makers are doing slightly better for home trade. Structural engineers are well employed, and this class of steel is in good demand. A large tonnage of shipbuilding was launched on the Clyde during October, but new contracts secured during the month were not sufficient to fill the gaps. The shipments of pig-iron from the Clyde for the week ending November 1st totalled 1,187 tons, of which 912 tons were on overseas account.

Our Cardiff correspondent writes:—There has been no material change in the position this week on the Cardiff coal market. For spot positions, prices have been unfavourably affected by the dearth of tonnage. The recent heavy gales have impeded the movements of shipping, particularly from the Bay ports, while a large number have been sheltering off the South Coast. Shippers with prompt vessels have been able to obtain parcels at "cut" prices, but for forward business colliery quotations have been maintained at their recently improved level. Although reduced, the output continues in excess of the demand, and it is feared that some more of the older pits will be abandoned. The September audit showed a heavy loss, and a further loss in October is inevitable.

The following are the current approximate quotations:—Best Admiralties, 27s to 27s 6d; seconds, 25s 6d to 26s 6d; best dries, 27s 6d to 27s 9d; Black Veins, 24s to 25s; Western Valleys, 23s 6d to 24s; Eastern Valleys, 23s to 23s 6d; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 12s 6d to 13s; coking smalls, 16s to 16s 6d; anthracite Big Vein, large, 45s to 50s; Red Vein, large, 33s 6d to 35s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; stove nuts, 60s to 61s; rubbly culm, 11s 3d to 11s 9d; coke for export, 47s 6d to 50s; inland blast furnace coke at ovens 30s to 35s; patent fuel, 25s 6d to 27s 6d; pitwood, ex ship, 26s 9d to 27s.

In the tinplate trade business has been comparatively quiet, although inquiries have been a little more active. An important development has been the association of F. W. Gilbertson and Co., Limited, with the Grovesend Steel and Tinplate Company, for the sale of galvanised, corrugated, and plain steel sheets. The Grovesend Company is now a subsidiary of Richard Thomas and Co., and the combine controls between 50 per cent. and 60 per cent. of the tinplate output.

METALS.

The market for tin opened with a steady tone, but subsequently became irregular and easier on selling pressure, and values are under those ruling at the close of last week. Offerings, however,

were fairly well absorbed, and business included standard cash at £259 10s, £257 15s, £256 and £257, and three months, £263 to £260 15s. Sales in the East were reported at £262 15s to £265, and down to £258 10s, c.i.f. terms. Copper: A fairly liberal business was done during the week, but values on balance disclosed slight weakness. Dealings in standard cash show an irregular decline at £64 to £64 1s 3d, £63 15s, and £63 7s 6d, with three months fluctuating between £65 to £65 3s 9d, £64 15s, and £64 10s per ton. Lead firmer, with moderate dealings. Good soft foreign pig quoted £38 12s 6d to £36 12s 6d as to position. English, £40 per ton. Spelter quiet and rather easier at £34 12s 6d to £34 6s 3d as to position. Antimony firm. English special brands quoted £59 10s to £60, foreign £50 to £51. Aluminium steady. Home trade quoted £125, export £130 ton. Quicksilver quiet. Spot, £10 10s to £11 per bottle.

THE COTTON TRADE.

OILS.—Linseed irregular and easier. Spot, net, naked, 45s 3d; November-December, 43s 9d; January-April, 44s. Rape nominal.

TALLOW.—Messrs Colchesters and Woolner write on November 5th as follows:—The tallow market was quiet during the week, and prices were about 1s lower to-day. The best sorts have not declined to the same extent as inferior sorts. The stock in London on October 31st, as returned by the wharves, amounted to 8,077 packages, showing a decrease during the month of 2,151 packages. At auction to-day 1,288 casks tallow were offered, and 510 were sold. Quotations are:—Australian mutton: Fine, 52s 6d; good to fair, 51s to 48s 6d; dull to dark, 45s to 44s; hard, 52s. Australian to 44s; sweet, 53s. Present shipment from Australasia: Good mixed, 49s. Present shipment from South America, 49s to 47s. 45s per cwt. Rough fat, per 8 lbs, 6d; melted unchanged. Town tallow, Quotations are:—Town, 45s 6d, net cash, naked, ex works. Country: Frail casks, 46s; home melted, shipping casks, net, f.o.b., good coloured, 48s 6d; fair to dull, 47s to 46s. Bone fat: White, none; pale, none; benzine, 40s 6d; melted stuff, 41s, f.o.b.

37 Avenue de L'Opera.

MONEY was plentiful in the early part of the week, but after a large amount had been repaid to the Bank of England, the supply was not too abundant. The discount market was not very receptive, partly owing to the low level at which the Other deposits were shown in the Bank return, and fine three months' bills were not taken below 3½ per cent.

	Nov. 14, 1924.	Nov. 7, 1924.	Oct. 31, 1924.	Oct. 24, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills	3½	3½	3½	3½	..

The Bank return showed a decrease in the circulation, and a consequent increase in the Reserve of £976,000. Repayments by the market to the Bank were reflected in a decrease of 5½ millions in the Other securities, but there was a small increase in Government securities. Public deposits declined by half-a-million, and Other were nearly 4 millions lower. Currency notes outstanding were reduced by £44,000 to £287,368,000, which includes £1,363,600 for notes called in but not yet cancelled. The fiduciary issue is £236,554,200, being £11,636,700 below the maximum for 1924.

At their meeting on Thursday, the directors of the Bank of England decided to recommend to the Court of Proprietors in April next that the Right Hon. Montagu Collet Norman be re-elected Governor for the ensuing year, 1925-26, and that Sir Alan Garrett Anderson be elected Deputy-Governor, in succession to Mr Cecil Lubbock, who will have held the Deputy-Governorship for two years. The decision to extend Mr Norman's period of office to six years, which is an unprecedented term, will be universally welcomed in financial circles, for continuity of control is as the present time just as desirable as ever, and Mr Norman has carried out his duties with conspicuous success. It is to be regretted that Mr Cecil Lubbock finds himself unable to continue his duties as Deputy-Governor owing to the pressure of his private business interests, but he will have an exceedingly able successor in Sir Alan Anderson, who is a partner in the firm of Anderson, Green, and Co., managers of the Orient Steam Navigation Company and a director of the London, Midland, and Scottish Railway.

The monthly statement for October of average weekly balances of the London clearing banks, printed in full on a later page, shows a considerable increase both in deposits and advances, as may be seen from the summary below of the figures of the nine English banks:—

(Million £.)

	Dec., 1923.	Mar., 1924.	June, 1924.	Aug., 1924.	Sept., 1924.	Oct., 1924.
Capital and reserves	116.3	118.7	119.2	119.4	119.4	119.4
Acceptances	96.1	99.2	85.3	75.7	75.5	83.2
Deposits (incl. undiv. profits, &c.)	1,673.1	1,603.2	1,651.9	1,616.9	1,612.4	1,634.5
Total liabilities	1,885.5	1,821.1	1,856.4	1,812.0	1,807.3	1,837.1
Coin, notes, balance at bank, and cheques in course of collection	254.2	230.2	249.1	234.0	235.3	240.4
Money at call	111.3	93.5	108.1	101.7	107.9	103.8
Investments	363.8	361.7	349.3	346.0	340.1	336.6
Discounts	276.3	224.0	245.0	234.5	225.3	237.6
Loans and advances	756.5	785.5	791.7	792.0	794.8	807.0
Cover for accept., premises, &c.	123.4	126.2	113.2	103.8	103.9	111.7
Total assets	1,885.5	1,821.1	1,856.4	1,812.0	1,807.3	1,837.1

Advances, which have risen by over £12 millions, are at the highest point touched since the middle of 1921. Discounts have risen by a similar amount, and cash is £5 millions higher. Money at call and investments are each about £4 millions lower. Acceptances have increased by nearly £8 millions.

THE STOCK MARKETS.

A pronounced lull in the buying movement which followed the General Election has occurred in the Stock Exchange this week, and the volume of business has been considerably reduced. A large output of new capital issues, however, has been readily subscribed, and premiums established on those in which dealings have already begun. Gilt-edged stocks have been fairly steady, with a slight downward tendency, and Home Rails have receded after an early rise, but the reaction has been most pronounced in the industrial section. Rubber shares, too, have suffered from selling on a relapse in the price of the raw material, and oils have been erratic. Kaffir shares have suffered from the drop in the price of gold consequent on the rise in the dollar exchange, but there was a turn for the better towards the end of the week.

THE COMMODITY MARKETS.

After considerable business in pig-iron during the last fortnight, the market is somewhat steadier. Orders for steel continue to be placed, and the position is said to show signs of improvement. Our Sheffield correspondent refers to the confident sentiment in the iron and steel market. Tin prices, on balance, were better. The cotton industry this week has been under the influence of a hardening movement in the raw material. Our Bradford correspondent reports that wool is steadily moving to a higher level. Wheat inquiry improves, and maize is steady. Linseed oil is in better demand, and the market remains firm. The rubber position was easier, and sugar displayed further weakness, but brisk support was afforded to tea. Further details of markets will be found on later pages from our trade correspondents.

FOREIGN EXCHANGES.

There has been considerable activity in the Foreign Exchange market during the week, in connection chiefly with the sterling-dollar rate, and the feature has been, as before, the strength and steady appreciation of sterling. A good deal of speculation has been evident, and it has been said with some truth that the pace is being made too hot to last. With regard to this, we will confine ourselves to pointing out that the strength of sterling has up to now been sufficient to overcome the combined bear tendencies of heavy seasonal imports, which the October trade figures show to be heavier than usual, and diminished exports of gold. Secondly, much of the confidence displayed seems to be based on political and sentimental, as opposed to material and economic, factors. Finally, whilst the prospect of some continuity and stability of Government in the two countries, which are most important financially, justifies some optimism at the present time, the fact must not be overlooked that the improvement in the exchange rate of sterling has been disproportionate to its purchasing power in comparison with the dollar. Opening at 4.59½ on Saturday last, the rate advanced still further to 4.62½ on Monday. On Tuesday there was a slight setback, due to profit-taking, but on Thursday there was a recovery to 4.62½, and yesterday record high levels were reached at 4.64½. At the time of writing there has been a slight reaction to 4.63½. The franc has suffered throughout from a weakness which is more apparent than real, for it has maintained its previous levels in relation to the dollar almost unchanged. The apparent weakness is due to the fact that sterling has been stronger than both. The real position is, perhaps, better reflected in the latest returns of the Banque de France, which show a diminution of 100 millions under advances to the State, and a decrease of 70 millions in the note circulation. If the anticipations are realised of the issue of a large Government loan in New York, stated to be in the neighbourhood of 150 million dollars, the Banque de France would have at its disposal a permanent reserve abroad by means of which it should be possible to maintain a definite currency policy with lasting results in the direction of stabilisation. Paris opened at 87.65 on Saturday, improved to 87.10 on Tuesday, weakened again to 87.60 on Thursday, and yesterday was rather better at 87.50. Belgium moved generally in fairly close sympathy with Paris, the rate yesterday being 97.65. The lira showed hesitation and uncertainty in reflection of the clouds on the political horizon, and after opening at 105.80, broke to 107.40. A slight improvement was evident, but yesterday renewed weakness at 106.70. Similarly, Spain's troubles, internal and external, were reflected by the rate passing 34 pesetas to the £. Amsterdam, Switzerland, and Stockholm have all moved in our favour, the first from 11.48½ to 11.56, the second from 23.73 to 24.10, and the last from 17.07 to 17.30. Christiania has improved from 31.48 to 31.25; but nearly all the other Continental currencies have moved slightly in our favour. Of the South American exchanges, the milreis has been remarkably steady, considering the further news of revolutionary outbreaks; and after opening at 5½d, is better on balance for the week at 6 1-32d. Buenos Aires is rather weaker at 44½d, as against the opening

rate of 44½d. In the East, the rupee is ½d weaker at 15 5½d, and the yen is rather worse at 17½d, as against the opening rate of 18½d. The silver market has been influenced chiefly by the sterling-dollar exchange, and selling has followed freely from the States on the appreciation of sterling. The Continent has been both a buyer and a seller, and though India and China have also appeared as sellers, China has been buying on a small scale. Prices, which advanced to 34d on Wednesday, after showing a downward tendency during the week, are consequently again uncertain, but it is possible that present levels may be maintained. Hongkong and Shanghai both recovered ½d during the week, and now stand at 2s 4½d and 3s 3½d respectively.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 8th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	9,508	From Revenue	10,715
Interest, &c., on Debt	2,180	Increase in Debt	1,215
Sinking Fund	100		
Sundries	5		
Increase in Exchequer balances	137		
	11,930		11,930

The Revenue for the week amounted to £10,715,359, as compared with £10,788,014 for the corresponding period last year. Customs and Excise were slightly lower at £2,324,00, against £2,557,000, and £1,389,000, against £1,546,000, respectively. Property and Income-tax was up at £1,195,000, against £1,740,000, while Super-tax brought in £570,000, against £440,000. Post Office receipts stood at £1,300,000, showing an increase of £50,000. Ordinary receipts amounted to £238,277, as compared with £13, and Special receipts to £1,230,086, against £1,370,001. The week's operations increased the National Debt by £1,214,522, and caused the following changes:—

(000's omitted.)			
	£		£
Public Department Advances	2,300	Bank of England Advances	1,750
Treasury Bonds	1,413	Treasury Bills	4,379
Other Debt	3,700	National War Bonds repaid	132
Sundries	58		
	+ 7,476		- 6,261

The floating debt was reduced by £3,790,000 to £792,070,000.

FINANCIAL YEAR, 1924-1925 (April 1 to November 1).

	£		£
Total Expenditure ..	450,327,907	Raised by Revenue ..	419,652,686

		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—United Railways of the Havana and Regla Warehouses, London Maritime Investment, Dalgety and Co., and Sudan Plantations Syndicate. The Hon. Edmund W. Parker, at the meeting of Dalgety and Co., said that wool values were now on a very high level, but, according to reliable statistics, the world consumption of wool had far outstripped the production. There was at present a strong demand for fine wool, but an even keener demand for crossbreds, and this had resulted in the clearance of the whole of the stocks of B.A.W.R.A. wool. Mr F. Eckstein, at the meeting of the Sudan Plantations Syndicate, in answer to Press criticisms of their increase of capital, said that their concession had not yet begun, and that, as he had warned them in 1920, the remaining 150,000 shares would in time have to be issued.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE SECOND CHANCE.

SUCCESSIVE anniversaries of Armistice Day cast back our memories, with no loss of vividness as yet, to the day when the peoples of the world heaved their great sigh of relief that the fighting was over. Amid the exuberance of rejoicing for the war's conclusion clear thinking was hardly to be expected; and the public mind jumped to the hasty conclusion that the end of active war and suffering heralded the near return of real peace and happiness. As each year we recapture for a moment the emotions of that time, we cannot but feel a shock of disappointment at the measure of progress and recovery which the six intervening years have brought. To those who live through them six years are an age; to posterity they will seem but a brief period. And we doubt whether the historian who, free from the emotions and illusions of contemporaries, looks back with calm judgment upon these years, will pronounce the pace of progress and recovery, especially in our own country, to have been slow beyond reasonable expectation. We deem it slow to-day, because we could not assess the difficulties of restoring peace and calm in a Europe storm-tossed with passion. Nor could we rightly judge the extent of world impoverishment and its far-reaching effects. It has taken us six years to descend from the skies of illusion to the earth of hard facts. That the process was not quicker is due in part to the politicians. But politicians are but human beings, and in their search for short-cuts to prosperity they did but interpret the temper of the people, and fate for a time exaggerated their efforts. In 1918 the Coalition leaders cheerfully promised all the ingredients of a new heaven and a new earth, and sailed into power with overwhelming strength. In 1920 the temporary boom, caused by the emergency demands of the world's depleted markets, seemed for the moment to justify their boasts. Not until the boom waned did illusion really begin to fade. But even thereafter we had two Prime Ministers and two Governments each with their panacea for the unemployment which is the outward and visible sign in Great Britain of the internal ills of the economic world. Both have learnt their lesson, and so, we believe, have the people of this country. They know now that there is no short cut, fiscal, social, economic, financial, or political, to the restoration of prosperity. The main road is a painful one, but the only one; and the most that politicians can do is to face the facts honestly, to teach all sections of the nation to do the same, and to bend all their efforts towards guiding both internal and international forces into the channel of harmony and co-operation.

We are glad to be able to read something of this spirit of realisation into Mr Baldwin's review of his Government's task at the Guildhall banquet on Monday. He no longer proposes to restore prosperity by fiscal revolution. He no longer listens to the doctrine of tranquillity, which, though still dear to some of his followers, is as absurd in face of the problems of the day as was the glittering gamut of promises in the Coalition's programme of 1918, or Labour's election programme of a year ago. With the exception that Mr MacDonald and M. Herriot, as Mr Baldwin generously acknowledged, have given us a new basis of stability on the Continent, the new Premier faces very much the same problems as he faced during his last tenure of office. In a way that few men have had it before, he has his second chance. Many of us—most, perhaps—believe that, given a second chance, we should make a better use of our opportunities and avoid our failures. Sir James Barrie, in his great play, has reminded us that the fault "is not in our stars, but in ourselves," and that he is an exception who will not use his second chance just as he used his first. Will Mr Baldwin prove himself to be the exception? He can, and will, if he

adheres unflinchingly to the grasp of the situation, to the understanding of the meaning of the election, and to the determination for "ordered progress, not stagnation," which formed the theme of the first public speech of his second Premiership.

We do not propose to follow Mr Baldwin through his survey of his Government's task, which was on the whole admirable in tone and liberal in interpretation. That speech was made, perforce, before he had even met his Cabinet. Contact with colleagues and with his party stalwarts will bring him, we fear, within earshot of the siren voices that would lure him away from his course. In all the three main spheres of policy, foreign, Imperial, and social, these voices will be heard, and he will be put to the test. In the foreign sphere, the new Anglo-French harmony and the initiation of the Dawes Scheme is but a beginning. Problems such as those of the division of reparations, of inter-Allied debts, and of the Arbitration protocol, call for the full exercise of enlightened statesmanship in tune with a new atmosphere. Nor can the Russian problem be handled by a pure negation of the Labour Government's policy. For the blunder of the guaranteed loan must be substituted a firm but constructive policy, aimed at restoring on a proper basis the foundations of Anglo-Russian trade. Yet Mr Baldwin will, we know, be forcibly told that the election was won on the cry, "No dealings with Bolsheviks." Moreover, as we suggest in a later column, Mr Austen Chamberlain is not left free from the associations of the Curzon régime. In the Imperial problems the trial of strength will not be less severe. In India affairs have reached a stage where even the suspicion of retrograde policy might have the direst consequences. Mr Baldwin's references to Indian affairs were unexceptionable, and, as we have said before, Lord Birkenhead has given ground for hopes that such a blunder will not be committed. But the "Die-Hards" whom the new Secretary of State for India defied in 1920 have not changed their views or relaxed their energy. Dominion questions, too, have come to a point where important developments are over-due; and it is not altogether reassuring that the delicate questions of the machinery for liaison, consultation, and co-operation in matters—especially foreign affairs—which affect the Empire as a whole, will come mainly under the purview of a Colonial Minister whose obsession it is to look out upon Imperial matters through the blurred and distorted spectacles of Preference and Protection. In home affairs, while Mr Baldwin adumbrates lines of thoughtful and careful progress, there are those in his camp whose vision goes no further than demands to cut "the dole" and reduce the income-tax.

The more resolutely that Mr Baldwin resists dark counsels of reaction, the more assuredly will the country rally behind him. He will need all the support the country can give him. He will derive strength, we believe, from his Foreign Secretary (whose speech at Glasgow on Thursday, to a party meeting, showed balanced judgment in the face of temptation), and from his Chancellor—whom he calls, scarcely, perhaps, with the universal approval of his followers, the "Gog and Magog" of his Government. He will, we trust, receive even more efficacious help to steer his course from the Opposition, both at Westminster and in the country. Mr MacDonald and Mr Thomas, whose temper in defeat has been admirable, have shown in their post-election speeches a sound realisation of the services which the country expects his Majesty's Opposition to perform. Outside Parliament, the battle-scarred Liberal Party will be engaged in a giant effort to re-win public support for a national policy of progress without taint of extremism. If Mr Baldwin will keep his ear to the ground he will hear, as, indeed, he may learn from recent electoral experience, that the country is calling upon him to fulfil his Guildhall promise of ordered progress, to eschew rash experiment, but, above all, to avoid the error—which, rightly or wrongly, the country imputes to Mr MacDonald—of moving too far towards the extremists of his party.

THE POSITION OF ITALY

It was a happy circumstance that, at a moment when Italy was again approaching a crisis in her internal affairs, Mr Baldwin was able to look forward to action on our part which will confirm the good relations between Italy and Great Britain. All parties will approve the Prime Minister's announcement at the Guildhall Banquet that he intended to ask Parliament for an early ratification of the Jubaland Convention. By the cession of this strip of Kenya Colony to Italy we shall be discharging in full our obligations under the Treaty of London, in virtue of which Italy entered the war in 1915, and which laid down that she should receive equitable compensation from Great Britain and France, in the form of a rectification of frontiers, if these two Powers increased their holdings in Africa at Germany's expense as a result of the war. This obligation, which was rendered effective by the territorial terms of the Treaty of Versailles, has already been discharged by France, through a rectification in the frontier between Tunis and Tripoli. There will be a general agreement in this country that the performance of our part of the bargain ought not to be too long delayed.

From the point of view of Italian foreign policy, the completion of the Jubaland Convention will be a notable success for Signor Mussolini's Government. It will clear up satisfactorily the position of Italy in Africa, just as the final settlement of the Fiume question last March has cleared up her position in the Adriatic. At the same time, these territorial questions, important though they are, touch the prestige rather than the vital interests of Italy in her international relations. For Italy to-day one international problem dominates all the rest, and that, of course, is the problem of emigration. The blow which Italy suffered from the United States Restriction Law of 1921 has been repeated in the still more stringent law of 1924. In fact, the principal outlet for the growing surplus of the Italian population during the past quarter of a century has been practically closed, and no equivalent outlets are immediately available. The Argentine and Brazil cannot absorb the whole stream of Italian migration that is being diverted from North America; and the increasing stream which Italy is sending to the French Possessions in North-West Africa, and to France herself, is in danger of being permanently lost to the mother country. Thus Italy has still to solve the gravest problem of her international relations, and therefore she can hardly afford the indefinite continuance of that internal waste of energy which she has suffered since the war through the violent oscillation of her home politics from Communism at one extreme to Fascism at the other.

Whatever high doctrine may be preached by a Lenin or a Mussolini, a democratic parliamentary government is the only satisfactory political system for a great Western nation in the present age. For good or evil, this is the channel to which we have all of us committed our political progress, and at this stage progress cannot possibly be assisted by violent attempts to divert the current to the left or right of its established bed. This year, however, a series of fatalities has attended the struggle for the restoration of constitutionalism in Italy. The opening of Parliament last June was anticipated by the murder of Signor Matteotti, with the result that the Constitutional Opposition boycotted the Chamber, and the session was adjourned for six months; and now, again, the opening of Parliament on last Wednesday, November 12th, has been heralded by the unseemly disorders which attended the celebration of the victory demonstrations in Rome and Milan during the preceding week.

In Rome, on November 4th, a procession of ex-Service men, who were marching to lay a wreath on the grave of the Unknown Warrior, with a grandson of Garibaldi and the Italian counterpart of a "V.C." at their head, were attacked and dispersed with revolver shots by a party of Fascisti specially imported from the Veneto. With great difficulty the Carabinieri (assisted by the personal intervention of high Fascist functionaries) succeeded in restoring order and making it possible for the celebrations to proceed; but the incident is significant as the first open

breach between Fascism and the Association of Ex-Service Men, or Combattenti.

When the Fascist movement rose to prominence after the war, the main plank in its platform was that it stood for the ex-Service men against the Communists, and for the fruits of victory against defeatism; and, at the high tide of the national reaction against the Communist excesses of 1920, this claim was broadly accepted by the Italian people. The course of events since then demonstrates—what was suspected all along by sober observers in Italy and abroad—that Fascism was a mere symptom of this reaction, and that it therefore could not be a permanent factor in Italian political life. The Combattenti Association, who may claim with some justice to represent the ripe and experienced manhood of the country, supported Fascism so long as the fear of Communism remained the dominant feeling in the Italian mind; but, as this feeling wore off, the generation of Italians who had taken an active part in the war began to ask themselves whether there was really no safeguard against Communism except a perpetual Fascist dictatorship; and the murder of Signor Matteotti last June raised the further question whether the principal danger of lawlessness was not now to be found on the Fascist side. A few weeks after the murder, a Congress of the Combattenti Association was held at Assisi; a motion hostile to Signor Mussolini's Government was proposed, and, although the Fascist element in the Congress offered a strenuous resistance, a compromise resolution was eventually passed which demanded the full and absolute restoration of the authority of the law. Signor Mussolini did not fail to express his displeasure at this resolution, and, in the disturbances of last week, Fascism gave practical form to this censure by those methods which are peculiarly its own. This time, however, the Fascisti have joined battle against odds which they have not had to face before, for the phalanx on which they have hitherto relied is now arrayed in the opposite ranks. The ex-Service men have definitely gone into opposition, and Fascism has been left to depend upon the violence of inexperienced youths who have grown up since the war, and who are as ignorant of what they are doing as their contemporaries and fellow-dupes who have become the gladiators of Communism. This dependence, in the last resort, upon boys is characteristic of all the extreme reactionary movements in post-war Europe, and when it comes to a battle between the Young Guard and the Old Guard, the issue cannot be in doubt. Already the ex-service men are taking energetic measures. "The war was won by four million Italians, and not by boys in black shirts" is their watchword, and it shows a welcome return of common-sense. The leaders of the association, whose adherence to Fascism had been of inestimable value to that movement, have promptly resigned from the Fascist organisation, and last Monday, November 10th, the association published an exceedingly strong resolution regarding the outrages on the 4th. In this document the outrages are expressly asserted to have been the work of the Fascist party; the association goes on to declare, in the spirit of the Assisi resolution, that it will not be the tool of any political party, and it calls upon Parliament to take effective measures for the immediate restoration of the reign of law and the repression of factions.

This rally of the Italian ex-service men to Parliamentary Government is an encouraging sign, and it may be expected to strengthen the hands of the Constitutional Opposition very greatly. Signor Mussolini has retorted by prohibiting all political meetings until further notice, and repressive action against the Press; but, in the new temper of the Italian people, this will hardly assist his cause. Meanwhile, Parliament re-assembled last Wednesday (the 12th). The occasion was marked by the absence not only of the declared opposition (whose boycott continues), but of Signor Giolitti, who has been numbered officially among the Government's supporters. It remains to be seen whether the Government can carry on with the sole participation of the Fascist majority, and also whether that majority will hold together, or whether the revolt of the ex-service men will reflect itself among the parliamentary representatives of the Fascist party. On the whole, we may look forward with some confidence to important changes in the internal situation of Italy in the

near future. A constitutional régime seems in a fair way to being restored; and, as convinced constitutionalists ourselves, we may legitimately hope for this development, in the belief that it will be in the truest interests of Italy and her people. The road to this goal may not be altogether a smooth one, but they will, we believe, surmount the roughnesses and obstacles, and as they do so they will have with them the sympathy of the British people.

OUR OVERSEAS MARKETS.

THE Board of Trade returns for October do not show any signs whatever of being affected by the domestic political upheaval during the month. As compared with September, imports are nearly £20 millions up at the second highest total of the year, exports show an increase of over £5 millions, while re-exports are £3½ millions higher. The figures, however, are from some aspects not as satisfactory as could be desired, for although exports have expanded as compared with the previous month, they are by no means keeping pace with the expansion in imports. As compared with October, 1923, moreover, imports are £20 millions higher, but total exports are nearly a million lower, and we have an adverse balance of nearly £39 millions for the month, as compared with less than £17½ millions in the corresponding month last year. The figures for October and for the ten months compare with last year's totals as follows:—

MONTH OF OCTOBER.

	1923.	1924.	Increase or Decrease in October, 1924.	
	£	£	£	%
Imports	99,927,488	120,458,328	+ 20,530,840	+ 20.6

FIRST TEN MONTHS.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	887,099,289	1,029,749,884	+ 142,650,595	+ 16.1
British exports	637,445,312	657,905,899	+ 20,460,587	+ 3.2
Re-exports	98,004,852	115,769,813	+ 17,764,961	+ 18.1
Total exports	735,450,164	773,675,712	+ 38,225,548	+ 5.2
Excess of imports over total exports	151,649,125	256,074,172	+ 104,425,047	+ 68.8

Some satisfaction may be derived from the fact that the increase in imports occurs almost entirely under the head of food and raw materials, the former category showing an increase of £12 millions, and the latter an increase of over £6½ millions as compared with October last year. Imports of grain and flour alone are up by nearly £5½ millions, which is to a considerable extent accounted for by higher prices, for while the quantity imported rose from 16.4 million cwts to 20.5 million cwts, the value rose from £7.8 millions to £13.2 millions. Among raw materials, wool imports show an increase of over £2 millions, cotton imports are nearly a million higher in value, and oils and oilseeds have risen by over a million. Rubber imports declined by £577,700. The conspicuous feature in imports of manufactured goods, which show an increase of over £2½ millions, is an increase of nearly a million in iron and steel. The decline in British exports for the month is due entirely to coal and iron and steel, which are down by £3½ millions and £1.4 millions respectively, France, Germany, Italy and Russia accounting for the greater part of the former. The rise in re-exports is due largely to rubber, which increased by £855,000, wool, cotton, and hides and skins.

The increase in imports for the ten months is made up of £43½ millions in food and drink, £64 millions in raw materials, and £34½ millions in manufactured goods. On the export side, food and drink are £10 millions higher, but owing to a drop of over £23 millions in coal exports,

raw materials show a decline of over £21 millions, but manufactured goods are £30½ millions higher than in the corresponding period of last year. Raw cotton, hides and skins and meat contribute substantially to the ten months' increase in re-exports.

The October returns contain the usual quarterly statistics giving the countries of origin and destination of our imports and exports. The official figures show foreign countries and the Dominions separately, and we have divided the former into two groups in order to show our trade with European countries separately. Our first table shows our imports from and exports to Continental countries in the first nine months of this year, together with the figures for the corresponding periods of preceding years:—

JANUARY TO SEPTEMBER (000's omitted).

Many interesting points are brought out in this table. The first is the steady growth in the capacity of Europe to export, our total imports from the Continent having increased by nearly £33 millions as compared with 1923, and by £75½ millions as compared with 1922. The second is that Germany has not contributed to this year's increase, our imports from Germany in 1924 being actually slightly lower than in the corresponding period of last year. It may also be observed in passing that imports from Germany this year have been little more than half the value recorded in the first nine months of 1914, despite the increase in prices. The countries mainly responsible for this year's increase in imports are France, Belgium, Czechoslovakia, and Russia, the last-named country showing a surprising increase from £4.8 millions to £13.3 millions. Only seven countries in the list show a decline on the import side, and these are all on a small scale. On the export side, the decline of £5 millions in the total is doubtless more than accounted for by the drop in coal exports, conspicuous declines being recorded in exports to France, Italy, Belgium, and Germany. Our exports to Germany are substantially higher than in 1914, though the increase is not commensurate with the change in prices. Russia has taken very slightly more than last year, but the amount imported by Russia is very small in comparison with her exports to us. It will be seen from a later table, however, that our re-exports to Russia have increased from £1.4 million to £5.8 millions. British exports to Holland show a substantial drop for the second year in succession.

Our next table gives the figures for the United States and other foreign countries:—

JANUARY TO SEPTEMBER (000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
United States ..	95,789	158,849	142,985	160,787	27,253	40,735	45,027	39,188
Cuba	3,744	9,951	8,061	11,055	1,281	969	2,208	2,778
Mexico	1,422	7,185	4,777	4,739	484	1,544	1,969	1,751
Argentina	25,895	44,188	49,893	60,903	12,322	16,425	21,723	20,324
Brazil	6,230	6,028	4,828	4,253	5,281	7,572	8,255	9,487
Chile	4,370	3,641	4,581	9,280	3,385	4,052	5,158	3,882
Colombia	2,141	4,516	5,101	6,779	921	1,185	1,919	1,969
Peru	2,170	3,654	3,941	4,864	1,439	1,971	2,473	2,379
Uruguay	3,172	6,363	5,217	5,819	7,066	18,411	18,632	20,533
Japan	3,581	6,867	9,134	9,374	11,237	18,818	13,390	16,311
China	2,171	201	733	937	3,620	176	607	681
Turkey (Asia) ..	13,472	20,455	19,884	23,188	5,458	11,492	10,932	11,132
Siam	7,718	18,509	21,993	28,568	11,261	13,470	13,505	15,252
Other countries ..	171,875	290,407	281,128	330,546	91,008	136,820	145,858	145,867

There is here an even greater increase in imports, which is spread fairly evenly over the list. The increase in imports from the United States, taken in conjunction with the decline in British exports to that country, makes the firmness and recent spurt in the dollar exchange appear the more remarkable: doubts must, indeed, exist in face of such figures as these whether the present level of the exchange can be maintained. Imports from both Japan and China have slightly increased, while exports have in both cases expanded, but the increase in exports to Japan is, perhaps, not so marked as might have been expected. Exports to South America are a little lower.

The next table shows trade with the Dominions:—

JANUARY TO SEPTEMBER (000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.

Straits Settlements ..	1,893	1,871	1,114	1,941	1,765	2,418	2,581	2,638
Malay States	1,880	3,672	4,788	3,941	1,765	2,418	2,581	2,638
Other Possessions ..	6,106	11,841	13,590	15,479	10,477	18,423	23,871	22,342
Total	140,810	214,584	239,993	279,793	137,663	198,515	218,323	246,580

The very large increase shown in trade with the Irish Free State is due to the fact that the 1923 figures are for six months only, the separation in the statistics having only been made as from April 1st of that year. But after making allowance for this the expansion is of very satisfactory dimensions. For the last quarter imports are up by £5½ millions, and exports by £3 millions. In other directions also the figures have a healthy appearance. Among the imports there are only three decreases—Mauritius, Malay States, and West Indies—while in exports West Africa alone takes less from us. Imports from the Dominions represent 30.7 per cent. of total imports, as against 30.4 per cent. at this time last year, while exports to the Dominions are 41.8 per cent. of the total as against 38.5 per cent. last year.

Our final table gives re-exports to the principal countries:—

RE-EXPORTS—NINE MONTHS.
(000's omitted.)

To	1914.	1919.	1920.	1921.	1922.	1923.	1924.
France	7,629	23,489	34,261	8,050	13,728	13,933	13,048
Italy	764	3,576	4,696	1,095	1,296	1,485	1,764
Belgium	4,888	9,927	15,713	6,832	8,352	6,857	7,688
Germany	13,347	4,135	20,174	17,352	13,643	14,308	21,293
Russia	5,419	2,488	3,782	821	623	1,373	5,833
Sweden	631	3,646	3,951	1,341	1,158	1,259	1,249
Norway	408	1,449	1,528	572	534	554	484
Denmark	474	4,916	3,389	1,084	906	1,371	1,289
Netherlands	3,831	17,408	10,411	6,676	4,744	5,682	5,647
United States	24,525	25,382	48,501	14,919	14,650	20,906	17,139
Japan	146	1,147	1,491	569	225	199	217
Other countries	4,864	5,435	12,370	8,731	6,477	6,669	7,778
Total for foreign countries	67,096	93,000	160,267	68,042	66,336	72,596	83,429
British Possessions	9,700	5,253	20,192	9,598	11,538	14,262	19,409
Total	76,796	98,253	180,459	77,640	77,874	86,858	102,838

The bulk of the increase in re-exports to foreign countries is accounted for by Germany and Russia, the figures for the United States showing a drop of nearly £4 millions. Of the increase in the case of the Dominions over £4 millions is in the Irish Free State figures. Re-exports to Australia are over a million higher, but elsewhere there is little change.

THE LIBERAL LAND POLICY.—I.

(BY AN AGRICULTURAL CORRESPONDENT.)

THE statement of policy issued by each of the three parties for the General Election contained more or less explicit indications of their proposals with regard to agriculture. The Labour party, in brief and rather vague terms, declared their intention of dealing with agricultural land so as to "secure its maximum productivity," a phrase which, in view of their previous declarations, was no doubt intended to cover the nationalisation of the land and of the means of agricultural production. Mr Baldwin pledged

the Unionist party to summon a conference in the hope of arriving at an agreed policy, and also gave his support to several practical proposals for the benefit of farmers. In both cases the questions dealt with were familiar, and have long been the subject of animated discussion. The manifesto of the Liberal party alone broke fresh ground, and threw into the arena of controversy a proposal which was entirely new in the country. From the political point of view, as representing the proposals of a party which, for the duration of the new Parliament, can have but little hope of influencing public policy, the suggestion may have only an academic interest, but nevertheless those who try to consider agricultural questions without party prejudice will be prepared to examine any new idea irrespective of its origin.

For long past many of those who are concerned for the future of British agriculture have been dubious about the continuance of the present land system in its present form. The land system of this country has been evolved from the old manorial system, and is, broadly speaking, based on tenancy, with a comparatively small leavening of occupying ownership. It has often been suggested that it would be in the national interest to increase very greatly the number of occupying owners, and indeed enthusiasts have sometimes advocated—or appeared to advocate—the wholesale substitution of peasant proprietors for the existing tenants. Another school of agrarian reformers has urged that large-scale farming should replace the existing diversified system of heterogeneous holdings. Much has been written in support of both these ideals and the advantages and disadvantages of both have been voluminously and volubly explained. But amid all the discussion no one has thought it necessary to suggest the means of attaining the desired object. It should be evident that a land system cannot be altered merely by argument. In the course of centuries, no doubt, the land system of any country will gradually adapt itself to changed conditions. Those who advocate drastic change give no indication of a desire to wait for the chances of slow evolution. They all profess to be in a hurry, but only those who propose nationalisation as a panacea have hitherto suggested a definite scheme.

In the Liberal land policy a definite scheme is propounded. It is claimed for it that it will adapt the present land system to modern requirements with the least possible disturbance of existing conditions. Such a claim is at least worthy of careful examination. The circumstances in which the scheme was put before the public were unfavourable to its impartial consideration. During an election it was not likely to be regarded without party bias, and neither commendation nor criticism could be entirely frank. It must be admitted also that it was first stated in terms which gave a minimum of information. The party manifesto, after the customary exordium about "the long-standing neglect of agriculture"—which, incidentally, is not accurate—proceeded to state that "real improvement.....can be achieved only by securing to land workers the fruit of their energy and enterprise

through a complete alteration in the system of land tenure. That system must be modified in accordance with modern necessities. The Liberal land policy contemplates a land tenure which would combine the advantages of ownership and of tenancy without the disadvantages of either.....The Liberal policy is to liberate farmers from the restrictions of an out-of-date land system; to liberate agricultural labourers from poverty and lack of opportunity; and to make the best use of all the land of the country in the interests of the whole community."

The phraseology of political proclamations must, of course, be judged by the rules of the game, and all of them are clouded with ambiguity. It would be difficult for anyone to gather precisely what the "complete alteration" alluded to meant. An explanation was offered in a statement issued immediately afterwards by the Liberal Publication Department, from which it could be gathered that it was proposed to establish a system of cultivating ownership to replace the present landlord and tenant system. The main outlines of the scheme are as follows:—

Every tenant of agricultural land will be converted into a "cultivating owner" with absolute security and full rights of ownership, including the right of their heirs to succeed, subject to two conditions:—

1. The payment of an annual rent equivalent to the present rental less "an allowance for repairs and management"; and
2. The proper cultivation of the land to the satisfaction of "competent local experts."

Landowners will be compensated "on the fair terms of receiving for themselves and their heirs the annual payment of their present net rents."

Farmers who now own their land will not be affected, but it is suggested that those who are handicapped by having bought their farms at high prices may have the option of being bought out by the State, "on the basis of the price paid by them," and given the status of cultivating owners.

The scheme assumes that two objects are desirable: (1) To give every occupier of agricultural land the incentive to ownership, and (2) to ensure that all agricultural land is put to its full economic use.

As to the desirability of these two objects, there is general concurrence, but it is commonly assumed that they cannot be attained without great disadvantages. The objections to ownership usually made are that it ties up capital which can be more profitably used in working the farm, and that it places the land under the absolute control of a man who may misuse or neglect it. To any suggested measures for ensuring the proper use of the land, it is objected that they involve interference with individual liberty and all the evils of State control.

The scheme outlined in the Liberal policy meets the first objection by establishing the occupier as an owner without compelling him to purchase the land. He would become, in fact, a perpetual tenant without any restrictive covenants or risk of eviction either by the will of the landlord or by a change in the ownership of the land. He would be in much the same legal position as a copyholder except that in place of "fines" at irregular intervals he and his successors would pay a fixed annual rent.

There are unquestionably practical administrative difficulties in devising means to prevent the misuse or neglect

of the land. Many farmers immediately assume that it involves dictatorial control such as that exercised during the war under "Dora." They have forgotten that the ephemeral Agricultural Act, 1920, included elaborate provisions enabling the Minister of Agriculture to interfere with, and if necessary evict, the occupier (whether owner or tenant) of any land which was not being cultivated according to the rules of good husbandry, and to deal in the same way with the owner of any agricultural estate which was "grossly mismanaged" so as to prejudice the production of food or the welfare of those engaged in the cultivation of the estate. These drastic powers were never exercised, because the Act was repealed almost as soon as it was passed, but they remain on the Statute Book as evidence of the assent of Parliament to the principle that the State has a right, and indeed a duty, to intervene if agricultural land is neglected or misused.

The importance to the nation of ensuring that all the small and steadily diminishing area of available agricultural land is properly used cannot be over-emphasised. There is one point in this connection which may be noted. The whole case for land nationalisation, as put forward by its advocates, rests on the argument that by that method—and by that method only—can the nation secure the full use of the land. There is no district where examples cannot be found of land which is either inefficiently farmed or deliberately neglected.

These are the stock-in-trade of Socialist orators. That there are other remedies for the admitted evil they either cannot see or will not admit. The scheme embodied in the Liberal policy is in consonance with the characteristic principles of Liberalism, i.e., to interfere with private enterprise only where the national interests imperatively demand it, and then only so far as, and no farther than, is necessary to achieve the object.

But acceptance of the desirability of the end in view and approval of the general principles on which the scheme is based are not sufficient to dispel the reasonable doubts of the community as to its practicability. It will be advisable, in another article, to examine it more closely in detail.

THE WORLD'S PRODUCTION OF CEREALS.

THE recent rise in cereal prices has called attention once again to the general problem of the world's food supply. It will be remembered that the virtual elimination of Russia, which before the war provided about 40 per cent. of the wheat which entered into international trade, led some people to take a very gloomy view of the future. For the time being, however, the great increase in the acreage down to cereals in Canada and the United States, together with a series of excellent harvests, enabled the New World to redress the balance of the Old. Last year, indeed, Mark Lane was filled to overflowing, and, as was pointed out in these columns recently,* wheat changed hands at a price equal to only some 125 per cent. of the 1913 level at a time when general prices stood at about 175 per cent. Not only was this the case, but the "noble cereal" had also fallen in value relatively to all the other principal cereals. This year, however, the situation is very different, and the statistics published in the current number of the "International Crop Report" of the International Institute of Agriculture merit the most careful attention. They relate, of course, only to the Northern Hemisphere, for really reliable data as to the probable crops in other producing centres will be available only in a few weeks' time.

The aggregate figures for the countries for which returns are to hand compare unfavourably with the corresponding totals of last year, as the following table shows:—

Crop.	Current Harvest as Percentage of Production in	
	1923.	Average, 1918-22.
Wheat	90.4	102.5
Rye	81.6	93.6
Barley	91.7	103.7
Oats	100.3	112.3
Maize	83.2	90.3

* Vide *Economist*, October 11, 1924, p. 564.

If we exclude Russia, about which reliable statistical returns are unobtainable, the countries which are included in the compilation of this table represent about 96 per cent. of the total wheat produced in the Northern Hemisphere, about 98 per cent. of the total rye, 85 per cent. of oats and maize, and 75 per cent. of barley. They therefore provide a fair indication of the general nature of this year's harvest, and, even as far as Russia is concerned, the vague official statement that the cereal crops in general are about 9 per cent. below those of last year bears out the general conclusion. The results themselves are due in the main to unfortunate climatic conditions, though in certain cases a reduction in acreage has also played its part.

In the following table will be found the area down to wheat during the last two years in the principal countries, together with the figures of total yield. Save in the case of India and of certain Eastern European countries, the acreage this year was slightly less than in 1923, the most noticeable falling off occurring in the United States. Curiously enough, however, this was one of the few countries to show an increase in the crop raised. The improvement in acreage in Roumania, on the other hand, is perhaps an earnest that that country, which was the fifth largest exporter in pre-war days, will once again come on to the world market in the not very distant future.

* 1 cental = 100 lbs.

These figures of yield, it must be remarked, are at present only preliminary, and may be subject to some adjustments later. The Canadian crop, for instance, on the basis of the most recent official estimate, is not likely to amount to much more than 164 million centals.

The position in the Argentine and in Australia promises fairly well at present, and, with an acreage slightly in excess of that of last year, a good average yield is hoped for. Should this indeed prove to be the case, the world's available supply of wheat, including stocks on hand, should be somewhere in the neighbourhood of the world's requirements. There does not thus appear to be any particular ground for anxiety, though the position is decidedly inferior to that last year, when the harvest sufficed to meet the demand and to provide a certain carry-over in addition. Finally, it is, of course, possible that increased prices will react on the demand, though this seems the less likely on account of the unsatisfactory nature of the rye crop. With but a trifling falling off in acreage, the yield in both Germany and Poland was decidedly less than last year. (Germany, 132 million centals, as against 158 millions; and Poland, 84 millions, compared with 131 millions in 1923.) In fact, rye did worse than any other of the principal cereals.

Despite one or two increases in acreage, the barley crop in the principal European countries was also inferior to that last year, though this cereal did well in America.

The outstanding importance of the Argentine as a maize exporting country makes a summary of the available statistics relating to this cereal well-nigh worthless. In the United States, however, a slight increase in acreage has not prevented a very great fall in production (1,377 million quintals as against 1,710 millions last year), though both Hungary and Italy, whose figures appear tiny by comparison, have an increased yield to their credit, while reports from Roumania and Yugoslavia are decidedly favourable. The one cereal which did better this year than last is oats, though in this case the improvement, such as it is, appears to be due primarily to an increase in the area sown.

The relative failure of this year's cereal crop has, of course, already made itself felt upon prices. Not only have these moved more into line with the general price level, but in the case of certain quotations they are at present actually above the general index number, taking 1913 as the base year. While the poor quality of the wheat crop in certain European countries has prevented local agriculturists from taking full advantage of this change, it is, nevertheless, clear that much has already happened to get back to something more nearly approaching the pre-war relationship between the prices of cereals and those of manufactured goods. In addition, moreover, the prices of the different cereals, when compared with one another, are also much nearer the pre-war ratio than they were a year ago. This general process of returning to normal in the matter of the prices of essential foodstuffs is certainly somewhat painful, but it is none the less indispensable, and, from this point of view, this year's harvest returns are not therefore an unmixed evil.

THE NEW ZEALAND EXCHANGE PROBLEM.

(BY OUR CHRISTCHURCH CORRESPONDENT.)

THE exchange situation at the present time between London and New Zealand has caused a good deal of concern and comment, particularly among the farmers and exporters generally. The present rates of exchange show a considerable discount amounting to 45 per cent. in the local value of a London draft, and exporters are naturally concerned at this deduction from their cheques. There is a very great deal of popular misconception regarding exchange, and much loose talk about the toll that the bankers are said to be levying upon the farming community. The chairman of the Associated Banks has therefore found it necessary to issue a statement through the Press Association explaining the exact position, and showing that the New Zealand exporter, though undoubtedly in a difficult position, is better off than his fellow in Australia or South Africa.

The New Zealand exchange position is always tied very closely to that of Australia, since four of the six banks operating in New Zealand are primarily Australian institutions. There is also a natural tendency to use New Zealand and Australian demands for exchange accommodation in a compensatory manner. Much of the New Zealand difficulty at the present time is therefore to be found in Australian banking conditions, though New Zealand has contributed to the trouble. The outstanding fact of the situation is that funds have accumulated, largely by Government and local body borrowing in London, to such an extent that it is difficult to shift the credits to Australia and New Zealand.

In the endeavour to shift the credits overseas, the banks resort to a timid application of the time-honoured device of adjusting the exchange rates in order presumably to check the demand for money in New Zealand and en-

courage the demand for money in London, or in other words to discourage New Zealand exports and encourage imports. Until recently the margin between the buying and selling rates appeared, after allowance was made for interest, to be on the excessive side. Criticism was freely levelled against the banks in this particular, though the fact that keeping so much money in London earning low rates deprived the banks of the opportunity of lending at the higher New Zealand rates, and must have taken away from any undue profit gained from the wide rates. The profits of the banks from all sources have, however, been substantial, and in the new rates just made public there has been a welcome narrowing of the margin that places this criticism of the banks out of court.

It is still open to question, however, whether in moving the rates of exchange timidly against exporters and in favour of importers the banks have accomplished much beyond irritating local opinion. The inducement given to increased importation is small, and not likely to be effective, while the only discouragement to export will be that a certain proportion of the producers' returns will be swallowed up in exchange. There will be little discouragement of import into Britain, because the effect on prices will be small.

The fact is that New Zealand and Australia have, but do not recognise, a credit-exchange standard which works in a similar way to the more familiar gold-exchange standards of pre-war times. The rates of exchange are virtually fixed, and the level of prices in the Dominions is kept at a stable relation with British prices by the use of a credit fund in London. When this credit fund accumulates the banks in New Zealand loosen their policy of advances, the increased purchasing power thus made available stimulates imports, and so the credit fund in London is reduced. This process is quite simple and logical, and there is no necessity for any shift in the exchange rates at all. Readjustment can be brought about more easily and directly by alteration of the banks' policy in New Zealand.

Such shifts in the exchange rates as have occurred recently are too trifling to bring about effective readjustment. If it was seriously intended to use them for this purpose the premium on imports would have to be much higher than it is at the present time, and the check to exports much greater. But, as a matter of fact, the alteration which has taken place is largely formal and traditional, or, in the political slang of the day, merely a gesture of good intentions. There is no reason why the banks in New Zealand should not institute a fixed exchange rate at par, with just sufficient margin between the buying and selling rates on either side of par to give them current interest and a reasonable commission. This would mean the recognition of the fact of a credit exchange standard, which would clear the way for steps to be taken to get at the real source of the difficulties, instead of timidly following traditional banking practice.

The main difficulty has already been indicated in the large borrowings of recent months on behalf not only of the Commonwealth and Dominion Governments, but also of the separate States and of local bodies. Such borrowings can be transferred to New Zealand and Australia only by an increase of imports relative to exports, and there is, as previous communications to the *Economist* have indicated, a marked indication in the trade returns that this process is going on. Such a transference may be effected directly by the import of constructional materials for Government enterprises, such as the various public works, or indirectly by the freer advance of credit in New Zealand to the Government for the payment of labour, local contracts, &c., increasing the volume of purchasing power available, and so stimulating the demand for imports of a general character.

The direct process is going on freely at the present time; but there are various hindrances to the indirect process of stimulating imports. Many of these hindrances are to be found in the rather difficult financial condition of most businesses after the depression of 1920-1; but the chief obstacle is undoubtedly the policy of cautious advances being pursued by the banks. The action of the Commonwealth Notes Board in resisting the demand for extra currency sufficient to give a basis for the necessary extra credit to bring in the imports is typical; but, though there is so much restriction on note issue in New Zealand, the same effect is produced by the cautious limitation of advances.

It must be remembered also that all restrictions upon imports such as are imposed by a high protective tariff have a boomerang effect in this connection. The Australian tariff is higher than that in New Zealand, Australian interference with the credit exchange standard is more direct, and therefore the exchange position of Australia is worse. If the primary producers of these Dominions ever had any doubt as to who bears the cost of protection to local industries, the present exchange position ought to prove to them quite clearly that in order to keep British imports from coming into their countries they must consent to a substantial deduction from their cheques for the produce they export.

The remedy for the exchange situation, in other words, does not lie in any new scheme for Imperial currency (most of such schemes smelling strongly of inflation), or even in a return to the gold standard, but simply in an equivalence of imports and exports once more. This equivalence can be reached only by one of two methods, or a combination of both of them—viz., a heavy reduction in the volume of borrowing upon the London market, or else the removal of the existing barriers to the freest possible importation of goods from overseas. In other words, the Australasian colonies are being taught the old lesson that they cannot expect to borrow from other countries and refuse to take their loans in the shape of imports. The combination of extensive borrowing with efforts at local self-sufficiency would be ludicrous if the joke were not so patently upon the farmer, who has had difficulties enough in recent years.

The latest New Zealand banking statistics illustrate the truth of the contentions put forward above. As pointed out months ago in the *Economist*, the seasonal strain has come round again, and has reduced the margin of deposits over advances to very nearly the same low point as in the corresponding quarter of 1923, with every prospect of strain developing in the last quarter of the year once more. The actual figures are:—

Quarter.	Deposits. £ m.	Advances. £ m.	Excess Advances. £ m.	Deposits. £ m.
March, 1923 ..	43.5	42.5	..	0.9
June, 1923	45.7	41.7	..	4.0
Sept., 1923	43.9	42.8	..	1.1
Dec., 1923	42.8	46.2	3.3	..
March, 1924 ..	47.0	44.4	..	2.6
June, 1924	47.6	43.9	..	3.7
Sept., 1924	45.1	43.9	..	1.2

In this table the stability of the advances, except for the period of heavy importation in December quarter, 1923, and March quarter, 1924, will be evident at a glance. This stability is the result of the firm hand kept by the New Zealand banks over advances which lie within their power more perhaps than in any other country. The ominous seasonal movement will also be evident.

PROBLEMS OF THE RUSSIAN ECONOMIC SITUATION

(BY A CORRESPONDENT.)

VERY significant developments have marked the economic policy of Soviet Russia since the beginning of this year. Lenin's much-boasted New Economic Policy, initiated some three years ago, had permitted to a large extent a return to private enterprise in industry and internal trade. The beginnings of a new, if limited, prosperity in Russia can be traced from the time of this change. But following closely upon the death of Lenin in January this year, there was a further turn in the situation. The more extreme elements in the Communist Party gained the upper hand, and private enterprise again fell into disfavour. The view was taken that the New Economic Policy had done its work, and that the country had recovered sufficiently to make possible the re-introduction of Communistic principles into economic life. Accordingly, since the early part of this year the State has been steadily expropriating and resuming control of industry and internal commerce. The present position may be summarised as follows: Retail trade in towns, and even in the country, has to some considerable extent been taken over by the Government and its subsidiary organisations; industry and wholesale trade are now almost entirely in the hands of the State.

Some of the more outward manifestations of the improved economic situation that had been reached early this year are well known. Improved transport and improved labour conditions, and, above all, the substitution of a stable currency in the form of State banknotes (chervontsy) for the depreciating Soviet paper—a change that was finally completed in the summer—were some of the most noteworthy improvements; but better technical methods in the Finance and certain other Departments, as well as the very definite rise in production, were also signs of great interest. The effect of these changes of policy during the past year and a half may be traced by the published statistics of the Soviet Government:—

Index.	Average, January to March, 1923.	Novem- ber, 1923.	Average, January to March, 1924.	June, 1924.
Production, heavy industries....	100	142	148	153
Do light industries	100	129	132	127
Turnover on Moscow wholesale trade market	100	154	175	139
Trade (generally)	100	169	164	147
Rail transport, combined index..	100	127	123	132

The maximum was reached in the early months of the present year. Since then there has been no definite progress; there has in nearly every case been a falling off in production, though the traffic carried by rail appears to have risen.

The main facts of the present position of the currency are already well known. Issues of depreciating "Soviet" notes ceased in March, and were gradually exchanged at a very low rate for the new "Treasury Notes," silver and copper coins, and temporary copeck "bonds." These new issues were in roubles and copecks, having the fixed relation of ten roubles to the chervonet; this established the rouble at the nominal gold equivalent of the pre-war rouble. Issues of silver coin amounted, up to October 1, 1924, to 49 million roubles; the issues of copper coins and "bonds" (small change) were not large. Accurate accounts of these Treasury issues are published. The account for October 1st shows that the total was 276 million roubles, of which 202 millions consisted of Treasury notes. The State Treasury held chervontsy to the amount of 130 millions as cover for the issue. The total of chervontsy in circulation was 346 millions on October 1st; thus the total circulation was 622 millions. Regarded per head of population, this issue appears small—approximately four roubles, as compared with about 13½ just before the war.

The issues of chervontsy, on which the whole circulation is based, have grown steadily up to the present

month. The total issued (including those held by the Treasury and by the State Bank), amounted to 235 millions on October 1, 1923, 280 millions by January 1, 1924, 338 millions on April 1st, and 518 millions on October 1st. The State Bank (Gosbank) issues accurate monthly statements which are of considerable interest as giving an indication of the way in which issues took place. From October 1, 1923, to April 1, 1924, issues were made mainly against precious metals and foreign currency; issues increased by 103 millions, and the holding of precious metals, &c., by 143 millions. Since April the item precious metals, &c., has remained practically unchanged, but issues increased in the five months to September 1st by 124 millions. Loans and discounts, on the other hand, increased by 135 millions in the same five months. The whole expansion is in part attributable to the development of trade, as well, of course, to the necessity of making up for the enormous denudation of currency following upon extreme depreciation. Whereas, however, trade expansion accounts for much of the increase up to April 1st, it is clear that this is not strictly the case after that date; industry and trade have, during this second period, been "financed" to the extent of some 135 millions without any increase of production—at a time when, in fact, there was a small falling off in trade and industry. This latter period coincides with the renewed effort to put Communism into stricter practice in Russia, and critics of the Soviet Government will be quick to notice that the change of policy has been followed, apparently, by an increase in the demands of State-run industries for support from the banks, together with a definite check to the partial recovery of trade and production that marked the year 1923.

It is too soon at present, however, to draw final conclusions. The check to prosperity which commenced last spring, and the consequent necessity of supporting the State-run industries by the expansion of banking credits, may also be traced in some measure to the rise in prices during the past 18 months. The official wholesale price-index rose from 129 in March, 1923 (1913 prices = 100), to 167 in October, 1923, 180 in January, 1924, and a maximum of 213 in May last. In June and July the figure fell to just below 200, but was 209 in August. The cost-of-living figure for Moscow also reached a maximum of 225 in May, and in August was 216. High costs have undoubtedly had a depressing influence on trade during the summer.

The test of the new policy of the Soviet Government lies in the near future. It is not likely to be abandoned at present; on the contrary, it will probably be pursued in the most thorough-going way. Great interest centres, therefore, in the programme for the financial year that began on October 1st last. The published figures of expenditure for the previous twelve months show that the Treasury subsidised industry to the extent of 212 million roubles. To this must be added the support which, as explained above, has been derived from the Government banks. The question arises how far it will be possible to continue one or both of these forms of assistance during the present financial year. We must first consider the possibility of the continuance of support from the banks. This would involve the continued expansion of credit and of the circulation, a prospect which, having regard to the small total circulation compared with the pre-war total, might at first sight be regarded as not undesirable. But the factors involved in the comparison are very complicated, and the main guide must be the visible signs—in particular, the course of internal prices. The steady rise of prices that has already accompanied the expansion of the currency is very significant. The check administered to this rise since May is also interesting, but may be only temporary; it is certain that the Government has made great efforts to arrest the upward tendency, and that these efforts will not be relaxed in the future. The future course of prices would appear to be connected insolubly with the big underlying problem of the future of industry and with the closely allied problem of the State Budget.

In the Budget of 1924-25, out of a total expenditure of 1,267 million roubles (railways taken net), 170 millions is provided for subsidies to industry. (The Government's published figures have been adopted.) Below are figures

showing this Budget compared with the actual out-turn for 1923-24. (Published figures have again been taken.)

	Actual Revenue, 1923-24.	Estimated Revenue, 1924-25.	Actual Expenditure, 1923-24.	Estimated Expenditure, 1924-25.
Taxation	609	821	341	362
Post Office and other revenue	161	236	389	465
Internal loans, issues of currency, & other special receipts covering deficit of ordinary revenue ..	462	210	38	..
	1,231	1,267	1,231	1,267
Army and Fleet			217	270
Civil departments			212	170
Railway deficit			34	..
Reserve funds and Treasury expenses Subventions to In- dustry, &c.				
Other expenditure...				

The reduction of subventions to industry from 212 millions to 170 is a sign that the outlook of the framers of the Budget was optimistic. This optimism is seen also in the greatly increased estimated returns of taxation, and in the anticipated disappearance of the railway deficit. As a result of these increases, provision has been made for additional expenditure.

It is worth while noticing on what grounds these estimates are based. It has been explained in an official publication that, as a rough estimate, the national income may be expected to increase by 500 million roubles in the twelve months commencing October 1st. This estimate is itself based on the assumption that the income of agriculture will remain stationary, but that there will be a rise of 25 per cent. in industrial production. In view of recent published figures (quoted above), it would be difficult to regard this forecast as having any very sure foundation. Two-fifths of this increase is to go to swell the yield of taxation. Of this 200 millions, however, some 80 millions is to be derived from the tax on agriculture which does not coincide with the anticipation that the revenue of agriculture will remain stationary. Moreover, the poor harvest this year makes the 80 millions increase seem very unlikely in any case, and estimates will very probably have to be revised when more accurate statistics of the harvest are available.

It is similarly anticipated that increased trade and production will wipe out the railway deficit. On the expenditure side, increased wages and salaries account for a large part of the additions; another cause is the general increase in prices. It is clear that the actual working out of the Budget will be the cause of considerable anxiety to the Government.

Russia is at the moment still benefiting from the revival of prosperity that resulted from the return to private enterprise, limited though it was, three years ago. Some order has in that time been brought to the finances of the State, and—the sign of the revival most striking in the popular view—the currency was reformed. The reversal of policy at the beginning of this year, and the new experiment in State expropriation and control, seems already to have checked the upward movement; but it cannot yet be said that the experiment has failed—still less that it has succeeded. It was started in favourable circumstances, and the State industries have benefited by the expansion of credit and the increase of the circulation to a point not, perhaps, very far from the present requirements of the country. Just where that point lies it would be hazardous to guess, though high prices suggest that it may be quite close now. The problem of the near future is whether the demands, hitherto insatiable, of the State-run industries and the State Budget will permit of a check being placed in time to avoid a repetition of the complete economic chaos of three years ago.

Notes of the Week.

Completing the Ministry.—By the appointment of a Chancellor of the Duchy and of 26 Under-Secretaries and junior members of the Government, Mr Baldwin has completed his Ministry, and he has done nothing to spoil the impressions derived from his original Cabinet selection. In appointing Viscount Cecil to the Chancellorship of the Duchy, a post which leaves its occupant leisure to become a free-lance, the Premier has it in mind, we presume, that he should act as the liaison officer between the Cabinet and the League of Nations and as principal British delegate at Geneva. This appointment, though obvious, is very welcome. During the last exceedingly important League Assembly we had occasion to complain of Great Britain's inadequate representation, and of the lack of cohesion between the Government and the delegates. These very serious faults should now be removed. Of the junior appointments, that of the Duchess of Atholl to be Under-Secretary of Education is one of the most interesting. It is a post to the solution of whose problems a well-qualified woman can bring a special contribution, and the Duchess is by no means lacking in qualification. Nevertheless, it is perhaps a little surprising that the choice both of the Secretary and of the Under-Secretary for Education should have been made from the ranks of those without Ministerial experience. Colonel Ashley, who was Parliamentary Secretary to the Ministry of Transport when the London Traffic Bill was drafted, becomes head of that department, while Lord Bledisloe places his wide agricultural experience at the service of the nation as Under-Secretary for Agriculture. Mr Ronald McNeil returns to the post of Under-Secretary for Foreign Affairs, which he held under Lord Curzon, and the fact of both official spokesmen for the Foreign Office being in the House of Commons presumably means that Lord Curzon will again answer for the Foreign Office in the House of Lords. We could have wished that Mr Austen Chamberlain had been left more free from the tentacles of the old régime. In this, we think, Mr Baldwin has made one of his very few obvious mistakes in completing his Ministry.

Wembley's Fate.—It has been assumed in some quarters, even among the higher officials of the Exhibition, that Mr Baldwin's Guildhall statement definitely assures the re-opening of Wembley next year. Such an interpretation cannot fairly be read into the Premier's careful phrases. What he did was to affirm the Government's intention of giving the Exhibition a new lease of life providing—and the proviso is all-important—that they were properly supported in other quarters. It may be as well to put on record his actual words:—

We do not intend that this great enterprise shall come to an untimely end. Practically the whole of the capital expenditure has already been incurred, and the cost of reopening the Exhibition next year, and allowing many more millions of people to see it, will not be great. In this matter we do not stand alone, and we cannot ourselves assume the whole burden, but if the Dominions and the great industries of this country are prepared to do their part, we will do ours, and we will ask Parliament to provide a fresh and sufficient guarantee in addition to that already promised, provided that we are adequately and properly supported by the other parties concerned. We believe that, taking the long view of the future of our country, the assumption of this potential liability is fully justified, even in times when the strictest economy is indispensable in the public service.

But what are the chances that Mr Baldwin's proviso will be fulfilled? South Africa, India, and New Zealand have decided not to participate again, while Lancashire, according to the *Manchester Guardian* (whose pronouncement is supported by evidence from other quarters), is dead against it, and in some other leading industrial areas the proposal for a re-opening is viewed with distinct disfavour. On the other hand, Canada, Australia, London (for obvious reasons), and the British chambers of commerce favour it. There is no doubt that, while exhibitors in certain lines are well satisfied, hosts of manufacturers in some of the big industries feel that the results received from their large expenditure at Wembley do not warrant its repetition. Of course, weight attaches to the argument that re-opening, while demanding comparatively small addition

to capital expenditure, would recoup guarantors from loss. To leave the great artificial city derelict after one year savours of economic waste. Moreover, the continuance of so magnificent an advertisement of British and Imperial wares, and so telling an educational instrument cannot fail to appeal to us. Nevertheless, we doubt very much whether an unrepresentative and emasculated Wembley is worth re-opening or a worthy object for fresh grants from public funds. As Mr Baldwin's words imply, the question of re-opening must mainly depend on whether "adequate" support will be forthcoming. At present it looks as if it will not. But it will not be an easy problem for the Government to decide what degree of support merits the epithet "adequate."

A Banker on Unemployment.—To say anything new about the elements of the unemployment problem is well-nigh impossible. But if Sir Herbert Hambling fell short of this miraculous achievement in his Presidential address to the Bankers' Institute, on Wednesday, he at least succeeded in grasping essentials with a sure touch, and illuminating his theme with a wealth of lucidity and sound economic reasoning. Let us quote: "We as a nation must export in order to live, and the foreign consumer will not buy goods from us when he can get the same goods cheaper elsewhere. We can only continue to work shorter hours and receive higher wages than our competitors if we can turn out goods in those shortened hours of at least equal quantity and quality, and at no higher cost per unit. There are no short cuts to prosperity, and if we are to maintain or improve our standard of living it can only be done by maintaining or increasing our efficiency. This is the very first step in the cure of our social disease. We must improve our general standard of living by earning higher wages or higher profits, not merely by demanding them. We cannot, in short, consume more than we produce." From the doctrine of full value in work and service for wages received, Sir Herbert Hambling turned to the equally vital question of the removal of the suspicion which obstructs the full co-operation of Labour and Capital. In this connection he pleads for a "wider diffusion of knowledge"—a phrase which we hope he would agree to extend to cover the fuller publicity regarding the finances and operations of industrial enterprises—and proceeds to the following argument:—"Labour and Capital are partners in industry. Each has its function—each is indispensable, and each is entitled to its just reward. Disagreement is due to a lack of appreciation of the fact that the interests of Capital and Labour are identical. The partnership breaks down when either party acts in the belief that its own sectional interest can be served at the expense of the other. That exploitation of the worker has existed in the past, no student of industrial history can deny. I believe also that no student of industrial history can doubt that in the long run it has been as disastrous for the employer as for the employed. Yet there is the other side, and I think this also cannot be denied. There is a possibility of exploitation by Labour—exploitation of the employer and exploitation of the community. This also is disastrous to Labour as well as to Capital. Industrial peace depends upon a willingness to co-operate, and co-operation is the recognition of mutual interest. When it is fully realised that high wages and high profits go together—that they are indeed dependent upon each other—there should be less room for acute disagreement. Labour is suspicious that effort on the part of the wage earner enriches only the employer, and while there are employers who attempt to increase profits, not by better organisation, but merely at the expense of Labour, this suspicion will continue. It is suspicion at the root of the fallacy that there is only a certain limited amount of work and that the less one man does the more there will be for another—a misconception which is so largely responsible for low wages, small total profits and much unemployment. This suspicion must be removed, and it can only be removed by the mutual acceptance of the fact that the wages fund is the product of co-operation between Labour and Capital." Sir Herbert believes that a reduction in production costs is not synonymous with a reduction in wages, and holds the maintenance of a high standard of living to be not incompatible with increased trade, and the absorption of

the surplus over normal unemployment. "We have to realise that only when we can produce at a price that will enable the world to buy, can we hope to reduce to the normal the percentage of workers unemployed. The first thing we must do, therefore, is to face the necessity of reducing costs of production. This, I firmly believe, is not a question of cutting down wages or reducing profits—it is certainly not a question of cutting down the total wages or the total of profits. But it is a question of giving greater value for the wages paid and more efficient service for the profits earned." The address did not lose in value because a strain of optimism mingled with a stern facing of economic fact.

Irish Free State Problems.—Our Dublin correspondent writes:—There is a large number of bye-elections pending in the Free State which will afford a fairly comprehensive test of the development of opinion. Five constituencies—four in the West, both north and south, and one in Dublin—poll next week. Soon after nine more follow suit for the purpose of replacing Mr Joseph M'Grath's National group, which recently resigned. There are many voters with grievances, and more with criticisms—both having their origin in Government administrative policy. Some months back the *quidnuncs* were busy prophesying the coming of a de Valera triumph for this very reason, but at present his prospects are not very bright. More and more the general public realises that in the view of himself and his rather irregularly regimental followers everything hinges upon the immediate obtaining of "independence," and that this involves denouncing the Treaty and a resumption of war conditions. Even the most exasperated critic or grievance monger cannot see how that would improve matters, or ease the pinching of the administrative shoe. Consequently, although, as before, the de Valera candidates may have fairly substantial minorities of youngsters and soreheads and feminists, their only hope or chance of success—save in isolated cases—depends upon the apathy of the electorate. Stability is, more and more, becoming the desideratum of the public which realises that it is the condition precedent to the effecting of reforms or the redress of grievances. The bye-election campaign is bringing out bit by bit the plans of the Government as to internal policy. For a Government depending upon popular support it does little to keep touch with its public, and it uses the popular Chamber less as a representative centre for deliberation, and the formation of opinion, than as an instrument for recording its approval of policies evolved and adopted in private. Piecing together the fragmentary allusions to coming policy, one can perceive the general outlines of a policy which, if boldly and comprehensively stated, might do much to commend the Government to the voters at large. It aims apparently at economic development by Government-aided schemes, and by an extension of the existing tentative system of protective tariffs for the assistance of industries which do or should exist locally. Thoughtful economists have long realised that Ireland represents a very special case, which cuts somewhat athwart conventional lines of fiscal controversy. Ireland, owing to the bad harvest and lack of employment, is threatened this winter with a widespread prevalence of distress which will emphasise the urgency for Government action. The Government is promising improvement loans to farmers, arterial drainage schemes, the subsidising of a sugar beet industry, and a great Shannon electrical power scheme which is to produce a huge volume of unprecedentedly cheap electrical power. It is doubtful, of course, if any of them can help, save by inspiring hope, during the coming winter. But with improving world conditions and stability assured at home, a programme of this sort, if executed with energy, prudence and insight, should go far after a while to give a most needed stimulus to a healthy development of economic activity. Whatever may be thought of fiscal experiments from the standpoint of pure theory, there can be no doubt of the benefits which may accrue from providing cheap power, and from arterial drainage, and land improvement.

Remuneration in Government Service.—A correspondent writes:—The fate of the Report of the Committee on the Pay of State Servants evokes the saddest reflections on the paralysing influence of the present phase of democratic politics on governments of the Right and Left alike. This Committee of business men (Sir Alan Anderson, the Hon. Sir Herbert Lawrence, and Sir W. Peter Rylands), appointed to review the standards of remuneration of the civil service and fighting forces, reported more than a year ago that the average cost per head (officers and men) of the Navy had increased since 1914 by 140 per cent., the Army by 115 per cent., and the Civil Service proper by 63, or, including manipulative and industrial staffs, by 102 per cent. The cash paid to the individual A.B. in the Navy and to the infantry recruit stood at 175 per cent. over 1914 levels, though wages in the mercantile marine, after rising in 1919 to a peak increase of 174 per cent., had by 1923 fallen to 70 per cent. above 1914; while if the total emoluments of the sailor, soldier and airman in cash and kind are taken into account, including the new allowances to married men, the disproportion is still more striking. Official evidence before the Estimates Committee of the House of Commons (Third Report, July, 1923) gave the emoluments of a fully trained infantry private, with wife and two children, as 69s a week as compared with an average of 43s for industrial unskilled labour; and for an Army mechanic similarly circumstanced, 83s as against a civilian average of 59s. The Committee accordingly recommended, for all the fighting services, important reductions in the pay of future entrants, both men and junior officers, based on a scheme which the heads of the Army had themselves put forward. The pay of civil servants of the administrative and clerical classes, falling automatically with the cost of living as it does under the bonus system, and the wages of industrial staffs, based mainly on the rates paid in private employment, were found to be generally reasonable; but in some important instances the wages of large manipulative classes, following too exclusively the path of the sheltered trades, needed reconsideration of unnecessarily high maxima. Apart from this, the most important recommendation for the Civil Service was an extension of the working hours in London from seven to eight hours daily, as in the provinces. These recommendations, if adopted, would have led to reductions of millions in the annual estimates, and nowhere in the whole Budget is there so clear a case for savings on such a scale; but nothing is so unpopular as the actual carrying through of economies, and the Conservative government last autumn effectually shelved the report by referring it for consideration to a fresh Cabinet Committee, appointed under the shadow of imminent dissolution, while the Labour Government neither announced reference of the Report to a new Committee, nor took any steps to act on its recommendations. The cut of 5½ per cent. in the pay of all officers of the fighting services, made last July, is a routine cost-of-living adjustment of which notice was given in 1919, and does not affect men; but to pass over such an obvious opportunity for introducing the lower scales of pay recommended by the Committee seems to show that there is no definite intention of giving the taxpayer his due relief in this matter. On the other hand, the Labour Government has not entirely abstained from action counter to the Report. The practice, founded on a resolution of the House of Commons, by which the wages of government industrial

employees are based on those paid by good private employers, was accepted by the Committee as satisfactory, but it led to the men in the Woolwich factories suffering the same large cuts as those in the outside engineering industry. On appeal by the Woolwich men, the Labour Government, without reference to the Industrial Court or other independent authority, and without formulating any new principle for the determination of wages, granted an arbitrary increase of 6s a week above the level paid in the industry, thus destroying the non-political basis on which the wisdom of former Parliaments had placed government wages, and leaving them to the operation of the forces which have made municipal wages in certain localities a byword. Unfortunately, in all these matters, which so closely affect the incomes of considerable bodies of voters, neither of the other parties has so far identified itself openly with the interests of the taxpayer, while the advocates of economy in the last House remained in the position described by Speaker Lowther in 1918*: without a properly equipped Estimates Committee, they "get no look-in, and have no ties binding them together, and no influence with the Whips." Everything points towards an era of painful lessons to be learned before we are willing to work out in earnest our economic salvation. Will the new Parliament be any better in this respect than the last?

Cotton Trade Hours.—Important developments are taking place at the present time in the spinning mills using American cotton in Lancashire. From last February up to the end of October the factories worked only 26½ hours per week instead of the usual 48 hours. Owing to the improvement in trade, there was an agitation for the Masters' Federation to revise the short-time scheme, and it was decided that from the beginning of November the mills should run 32 hours per week. Since that decision was reached, it has been urged that production should be increased to a further extent. The position has been considered by the Masters' Federation, and it has been decided to take a ballot of the members using American cotton, the proposal being that from the beginning of December the mills should run 39½ hours per week, leaving production curtailed to the extent of 8½ hours per week, which is equal to one day. The Committee of the Federation strongly recommend the members to vote in favour of this scheme, and to be carried it will be necessary for it to be supported by the owners of 80 per cent. of the spindles. The result of the ballot will be announced on November 24th. In trading circles there is some fear that the necessary percentage of votes will not be obtained. Numerous companies are now anxious to make their own arrangements as to production. If the mills go on full time, however, there is a danger of the benefits recently derived from concerted action being lost, and in the opinion of the Federation Committee full-time working will mean the accumulation of unprofitable stocks of yarn. It is pointed out that there is a great shortage of weavers, which accounts for many looms being stopped. This means that the requirements of cloth manufacturers for yarn must, to some extent, be limited. It may be pointed out that out of the 56,000,000 spindles in Lancashire about 36,000,000 use American cotton. Short time means high overhead charges, and if sufficient work can be obtained to warrant full production, the costs of spinners will be considerably reduced, and they will be able to sell yarn at lower prices than at present.

American Cotton Crop.—Our Manchester correspondent writes:—Late last week the Department of Agriculture of the United States Government published important statistics relating to the cotton crop for this season. The condition of the growth on October 31st was given as 55.9 per cent., against 54.7 per cent. on October 18th and 53.5 per cent. on October 1st. The current report indicates an output of 12,816,000 bales, excluding linters, against a final production for last season of about 10,200,000 bales. It has also been announced that up to the end of October the amount of cotton ginned was 9,695,000 bales, as compared with 7,601,000 bales a fortnight earlier. Although these figures were, if anything, rather better than expected, prices have tended to advance.

* Ninth Report of the Select Committee on National Expenditure.

In trading circles more attention is now being centred on the question of consumption during the next twelve months. The mills in Lancashire are likely to run longer hours, and there are reports of signs of a trade revival in the United States. Last season the consumption of American cotton was about 11,200,000 bales, and was much smaller than for several years back. According to some authorities, the requirements of users this season will be fully 12,500,000 bales.

The Development Commission.—The fourteenth report of the Development Commissioners for the year ended March 31st last* shows that the total advances recommended during the year amounted to £480,700, of which £387,200 was for agriculture and rural industries, £93,200 for fisheries and harbours, and £300 for reclamation of land. The total in 1922-23 was £511,600. Administrative expenses were £10,100, as compared with £11,600 in the preceding year. The report explains that advances from the Development Fund for the present fall into two categories, those from the original Fund set up by the Act of 1909, and those from the Fund provided by the Corn Production Acts (Repeal) Act, 1921. The latter, or Special Fund, is restricted in its application to England and Wales. It is used to extend work of a type that was initiated or aided by grants from the original Fund, and thus forms, in part, a supplement to the original Fund, but it cannot be used for all the purposes contemplated by the Act of 1909. Although there was a balance of £748,800 in the Special Fund at March 31, 1923, it was necessary to add to the original Fund during the year, in order that continued support might be given to the objects aided from it, and a sum of £250,000 was voted by Parliament for the purpose. This was the first payment into the Fund made since 1911-12. The Commission's activities are mainly centred upon assistance in the development of agriculture and rural industries, and it is claimed that the attempt to create an Intelligence service, competent to advise on the technical and economic questions affecting these industries, has been amply justified. During the past year nearly 2,000 inquiries were received, and some 30,000 pamphlets dealing with the practical aspects of various country industries were circulated. The grants made from the Development Fund are largely expended in assisting agricultural research and education. The total of the grants recommended for these purposes in the year amounted to £372,200. Under the direction of the Ministry of Agriculture and Fisheries, and of the Scottish Board of Agriculture, much has recently been done to improve the system of agricultural education. New institutions have been created, the staffs at existing teaching centres have been strengthened, while travelling lecturers have been provided in nearly all counties. The teacher's task, however, is a difficult one, and it has been found that satisfactory education—satisfactory, that is, in the sense that it reacts on the industry—is only possible when research is in progress, and the Commissioners justly claim that, apart from the demands of the industry itself, "the expenditure of a small share of the nation's funds in promoting agricultural research is justified by way of an insurance policy." Much importance is attached to securing publicity for the results of research, and great efforts in this direction are being made by the agricultural departments. Among the agencies for bringing the results of research to the direct notice of farmers, the Advisory Service is specially effective, and this service is being extended both by the inclusion of new subjects, such as economics, and by making further appointments in connection with subjects like agricultural chemistry, to which the farmer has long been accustomed to look for aid.

Scandinavia and U.S. Customs Inquiries.—A Swedish correspondent writes:—The procedure of making investigations into the costs of production of goods made abroad, which is prescribed in the U.S.A. customs legislation, has aroused serious dissatisfaction in the Scandinavian business world. It has recently been the object of common action on the part of the National Committees of the International Chamber of Commerce for the countries

* H.M. Stationery Office. 4s net.

of Sweden, Norway, and Denmark. American legislation presupposes that the U.S. Treasury Department shall be entitled to carry out investigations abroad with regard to such articles of commerce as are imported into the United States, and further lays down in Article 510 of the American Customs Tariff now in force, that the Secretary of the Treasury may issue import prohibitions against the goods of such manufacturers as refuse to place certain information at the disposal of the Treasury Department's representatives. The authority to carry out such investigations abroad is also enjoyed by the U.S. Tariff Commission for the purpose of obtaining general material and information on customs matters or for investigations concerning the possible grounds for imposing additional customs charges. In a communication addressed to the International Chamber of Commerce, the above-mentioned National Committees therefore point out that on repeated occasions they had had their attention drawn to cases in which representatives of the U.S. Treasury Department have visited Scandinavian industrial undertakings with the object of eliciting particulars as to the costs of production, export, and manufacture. In such cases it has happened that the representatives of the Treasury Department have demanded access to the books and documents of the undertaking, under the threat that if this were not agreed to, the particular undertaking should be prevented from importing into U.S.A. Apart from the question of whether it is in conformity with accepted international custom that officials of a foreign country—even outside the ranks of ordinary diplomatic representation—should, under the threat of reprisals according to the law of their own country, take such official action as has been indicated within the jurisdiction of another country, it has been pointed out, with force, that to accede to the claims made from the side of U.S.A. would imply a revelation of business secrets to which the directors and controllers of several undertakings do not consider that they can agree, both on practical grounds and from reasons of principle. This point of view has been considered so much the more decisive, as the home authorities of the various countries do not exercise any such compulsion. For these reasons, the National Committees urge that, *inter alia*, the International Chamber of Commerce should make known to the proper American authorities, in a suitably framed representation, through the U.S. Chamber of Commerce or otherwise, the strong dissatisfaction called forth by the American methods of investigation as practised. Investigations of this kind have also been made in several other European countries, and it is said that they have called forth a great indignation in the business world of these countries, the more so since their own authorities are not supposed to be allowed to demand corresponding information. It is, therefore, to be expected that these countries, too, will join the Scandinavian countries in their action in this matter, which, with regard to its consequences, is certainly of international importance.

Coal, Iron, and Steel Output.—When allowance is made for the extra working day, the figures of production of iron and steel, just issued by the National Federation of Iron and Steel Manufacturers for October, show very little change compared with September. Pig-iron production amounted to 586,400 tons, compared with 569,200 tons, and steel production to 678,500 tons, compared with 645,000 tons. There was a net gain of one in the number of furnaces in blast at the end of the month, seven furnaces having been blown in as against six damped down or blown out; this is the first occasion since February when an increase in the number of furnaces operating has been recorded. The imports of iron and steel in October amounted to 241,300 tons, a figure which has only once been exceeded—viz., in May last, when they amounted to 300,100 tons. Imports so far this year have averaged 200,000 tons per month, or some 14,000 tons monthly more than in 1913. Exports, on the other hand, which were 309,200 tons in October, have averaged 324,000 tons, compared with 414,100 tons monthly in 1913. These figures are extremely disappointing when the war-time extensions are remembered, and the only redeeming feature seems to lie in the probability of an increase in Continental costs, and therefore of prices. It is generally believed that prices on the Continent are unremunerative,

and this seems to be the explanation of the widespread rumours which have appeared, but been promptly denied, as to the formation of an international iron and steel trust. The belief that tariffs will be imposed on Lorraine steel entering Germany after January 10th, and thus raise prices, has diverted Continental production from the British market for the present. The following table compares the imports of various classes of iron and steel in 1913 and this year:—

	Average Monthly Imports.	
	1913.	1924.
	Tons.	Tons.
Pig-iron	18,000	24,900
Billets, blooms, and slabs	42,800	59,300
Iron bars, rods, shapes, &c.	16,700	21,700
Sheet and tinplate bars	28,800	30,000
Steel bars, rods, angles, &c.	11,100	10,900
Steel girders, beams, joists, &c.	9,100	7,700
Plates and sheets	14,100	11,800
Total, including other items	185,900	199,500

It will be seen that the increases have mostly been in semi-finished material, but in recent months there has been a tendency for the imports of finished steel, particularly ship-building material, to increase. The output of coal in the five weeks ending November 1st averaged 5,098,000 tons, compared with 5,107,000 tons per week in the four weeks ending September 29th. Exports of coal amounted to 4,932,900 tons, a decrease of 165,000 tons compared with September. Of the total, 1,117,700 tons went to France, 504,100 tons to Italy, 480,500 tons to Germany, 306,200 tons to Sweden, and 301,400 tons to Denmark. Exports of metallurgical coke amounted to 168,800 tons, compared with 179,000 tons in September.

Spain and Morocco.—The plan of the Spanish Directory for reducing the extent of the occupied territory in Morocco involves the combination of strenuous efforts to withdraw the outlying garrisons with attempts to negotiate peace. Sharp fighting has taken place in the relief of the Wad Lau garrison, south of Sheshuan, in the Western region round Loraiche, and even near the road from Tangier to Tetuan; and there appears still to be some danger that the Anjera tribe, hitherto friendly as a whole, which holds the district between Tetuan and the Mediterranean, may be provoked by the punishment inflicted on one hostile section of it to rise *en masse* and cut off the Spanish communications between Tetuan and the coast. The Directory has announced that the 1921 class of the army must for the present be retained on active service, and the 1924 class called up, "for an inexorable campaign of punishment," which will, when it has succeeded, "rid Spain of a useless territory," and so relieve her of her gravest burden. To this end, meanwhile, the Marquis de Estella is reported to be attempting to negotiate with Abdul Krim, the Moorish leader, and it is to be hoped that he will succeed. For, as Marshal Lyautey has pointed out in an interview with the *Times* correspondent at Tangier (where the Marshal's ship had called on its way to Rabat), the conflict has set up serious unrest in the French Protectorate, especially in a border district on the south of the Spanish zone which France has not yet occupied; the Tangier international loan seems likely to be affected; and the unrest may, by reflex action, unsettle the whole Moslem world. To Great Britain and France this is a serious danger, and its first effects may involve complications between France and Spain. But Abdul Krim has probably been encouraged by the insurgent successes, and he is stated to allege that the presence of British subjects at his headquarters—who may be agents of mining syndicates, or merely gun-running adventurers—implies the support of the British Government. Spanish opinion appears to accept the continued fighting as a necessity, but the Press censorship, though recently somewhat relaxed, is still strict, and probably the organisers of the abortive outbreak at Barcelona last week, and of the frontier raid at Vera, counted on popular resentment at the continuance of the operations in Morocco. These outbreaks do not appear to have been dangerous; they were probably the work of Anarchists or independent

Republicans rather than Catalan Home Rulers, and as futile as the Fenian efforts in 1866 and 1867 to invade Canada and capture Chester Castle. Revolution cannot succeed without the army, and until recently it has been assumed that the army supports the Moroccan campaign.

Chinese Finance and Trade.—The "resiliency" of the trading propensities of the Chinese people amidst adverse conditions is effectively brought out in the Report (to June, 1924), just issued by the Overseas Trade Department,* from the acting British Commercial Counsellor at Shanghai. He dwells on the local disorder and brigandage, which during the 18 months under review became worse; on the deplorable plight, more especially of Szechuen and Kwangtung, of the Chinese-managed railways of the Canton merchants; and on the straits of the Peking Government, which has some \$7,000,000 of annual revenue to meet an expenditure of \$128,000,000, and can depend only on trifling local imposts and the surplus, already heavily mortgaged, of the salt gabelle. Yet at every local intermission of disturbance, trade shows signs of revival. Unfortunately, the disorder has impaired the traditional Chinese honesty; contracts are frequently repudiated, goods extensively adulterated; treaty rights are more and more disregarded; and the import and export trades and the freight market are injured (especially since the German firms resumed their activity) by excessive competition, which forces up prices and creates a false impression of demand. The railways, though officially stated to be earning large profits, find their revenues intercepted and their traffic interrupted; their permanent-way and rolling stock are deteriorating; some \$70,000,000 are due to foreign firms for material; and total default on their obligations is only averted by ruinous borrowing. Only two lines are earning a profit, the Shanghai-Nanking and the Lungshai, both under foreign control. Yet the extra-mural half of the Peking-Mukden Railway earned nearly as much in 1923-24 as the whole line did in 1922-23. The tonnage of shipping at Shanghai increased, as also the direct trade with various other ports, but the increase was mainly due to excessive competition. River and coastal traffic seems to have done better; the proposed improvement of the Yang-tse navigation, however, would be far more costly than the results would justify. Road construction is extensively projected and in progress, and affords work for disbanded soldiers; but the roads are not properly constructed or maintained, and are only fit for light motor traffic at best. Aviation is still an industry of the future, save for an instructional line started this spring between Mukden and Newchwang; wireless is desired for coasting steamers, and a school is projected at Hong Kong. Broadcasting is impracticable outside the foreign settlement at Shanghai. Industry, hampered by the disorders, has developed only near the larger Treaty ports; cotton manufacture has been kept back by the cost and adulteration of material, but was better at Wuchang and Hankow than at Shanghai; shipbuilding for coastal and river traffic and repair work did fairly well; labour agitation has lessened and strikes have been fewer, but the workers, it is said, obstruct measures for their welfare. Mining is interfered with by the disorders, and the present conditions of foreign concessions are not encouraging; coal mining, however, shows a marked increase. Full details are given of the leading imports and exports. The import of piece goods fell off, that of woollen goods increased to over-abundance; railway supplies, much needed, are restricted through the difficulty of getting payment; electric light plants in the great cities are extending, but supplied mostly by German firms; the rebuilding of the business quarters of some Treaty ports stimulates the import of building material. Of exports, black tea suffered latterly from Indian competition; green tea did better; camphor is being displaced by the synthetic product; silk suffered from a poor crop and high prices, and the severe competition of artificial silk will necessitate lowering production costs; the market was only temporarily affected by the Japanese earthquake. Among minor exports were (from Shanghai alone) nearly

two million taels' worth of sets of "Mah Jong." British manufacturers desiring to open business in China are advised, unless they establish their own sales organisation, to deal with British rather than Chinese firms, and with the latter only on a cash basis. Prophecy as to Chinese affairs is never advisable, but the "resiliency" of the Chinese trader in adversity is a hopeful sign.

Electoral Reform in Chile.—The Provisional Government of Chile has announced an important change in the Constitution. It has issued a decree fixing the election of a new President for May 10, 1925, not, as hitherto, by an Electoral College chosen by the voters—a device borrowed from the Constitution of the United States—but by a direct vote of the people. Apparently the register is to be revised—it is not clear whether the franchise is to be narrowed—and provision is to be made against bribery, forgery of names in the register, "repeating," and violence at the elections. A General Election of both Houses of Congress will be held at the same time, and the new House will act as a Constituent Assembly, and ratify or revise the new Constitutional reforms. It will then meet on August 25th as a Congress, to proclaim the new President or to elect one if the candidate who headed the poll on May 10th has not obtained an absolute majority. On September 18th the President will take office, and the Provisional Government will retire. The method of the reforms is unconstitutional, but the reforms themselves are salutary. The provisions for purity of election appear to be urgently needed; the Presidential election by two stages, devised by the founders of the United States as a check on democracy, has long become a mere form there, and in Chile in 1920 it failed to work satisfactorily. The first result gave the Conservative candidate a majority of one vote in the College; after several recounts Señor Alessandri, who has just been compelled to resign, was declared to have been elected President by a majority of two. The new arrangement will, at any rate, avoid such uncertainties—though, until the Chilean masses are better educated and more politically minded, it may be doubted whether it will check malpractices at elections.

The Copper Market.—The strength and activity in Wall Street has spread to the American copper market, and during the past week there has been a large business done both in the United States and on this side. This has had a very beneficial effect on values, and while the rise in sterling has held the advance back to some extent prices have gone ahead steadily. The statistical position of copper is very sound, the unsold surplus of refined in the States at the present time being 122,500 tons. The stocks at Havre amount to 5,832 tons, while stocks in official warehouses in this country stand at 38,078 tons; thus the total stocks for the States and Europe are about 166,500 tons. Seeing that the American refiners always have on hand 40,000 tons in the process of refining, the present state of supplies must be regarded as very favourable for producers. In New York several thousand tons of electrolytic copper have been sold at 13½ to 13¾ cents per lb, and one or two of the large producers have temporarily withdrawn offers. It would be difficult at the moment to purchase a large line of copper at anything under 14 cents for December shipment. The dealers here report a big business in fine copper, and this is a very healthy sign. During the last day or two some large purchases have been made by the cable-makers, and wire bars for December arrival have been sold at £67 17s 6d to £68, with £68 10s now asked. In view of the large amount of electrical work now in progress this demand should continue, and certainly users are not too well covered. Since electrolytic in New York crossed the 13 cents mark there has been a steady expansion in business, and the producers there have the position well in hand. There is every reason to believe that both Germany and France will take more copper over the next few months. This would help sentiment considerably, and assist the market to recover its position. The world production of copper for the first nine months of 1924 is estimated at 1,082,500 tons. Of this quantity the United States contributed 667,153 tons, South America 170,000 tons, Canada 19,720 tons, and South Africa 71,000 tons. The consumption

during that period could not have been less than 1,150,000 tons; thus, despite the full output of the commodity, with prospects of a bigger tonnage in the South American and South African sections, the general position of the markets everywhere may be regarded as healthy. The United States exports for September amounted to over 40,000 tons. Of this quantity Germany absorbed 12,000 tons, France 8,250 tons, and Great Britain 5,750 tons. The German demand is expected to expand considerably in the near future once the elections are over, and it certainly looks as though prices should go higher before the close of the year.

Potato and Root Crops.—The monthly agricultural report of the Ministry of Agriculture and Fisheries states that the dry, sunny days of the second week of October allowed the corn harvest to be completed in most parts of Wales and the North. There were still small areas to clear on high-lying farms at the end of the month. The bulk of the potatoes has now been lifted, but owing to the wet state of the ground very many have been stored in dirty condition. On the whole the tubers are small. Over the whole of England and Wales the crop is now considered to be a little smaller than was expected a month ago, and is estimated at 5.8 tons per acre. The estimated total production of 2,615,000 tons is 143,000 tons less than last year. The pulling of mangolds was proceeding at the date of the report, but, on the whole, less than half the crop had been lifted at the end of October. The yield over the whole country is now estimated at 19.7 tons per acre, about half a ton more than a month ago, and three-fourths of a ton above average. The total production is estimated at 7,674,000 tons, against 6,944,000 tons in 1923. Few turnips and swedes have been lifted as yet, and in most districts these crops have made very fair growth during October, so that yields are likely to be rather heavier than anticipated a month ago. Early sown crops are about average in the west, but the later sowings are small. The average yield throughout England and Wales is forecast at 13.8 tons per acre, or nearly 1½ tons above the ten years' average, and the estimated total production of 11,495,000 tons is 616,000 tons more than last year. Good crops of sugar beet are now being lifted and sent into the factories; in some districts rather a large number of roots have run to seed.

Transvaal Gold Output.—A notable improvement in Transvaal gold output took place during the month of October, 1924. The output of fine gold rose from 799,422 ounces secured in September, 1924, to the October output of 827,583 ounces, which is almost up to the July figure of 829,437 ounces. The output figures for the ten months of each year since 1918 show the recovery in the gold output that has taken place during that period:—

Kaffirs and the Gold Premium.—Our mining correspondent writes:—It was expected in market circles that in the event of the recent election resulting satisfactorily from the Conservative standpoint, Kaffir shares would be given a run in anticipation of the December dividend declarations. The movement started according to programme, but was nipped in the bud by the decline in the currency price of gold resulting from the improvement in the sterling exchange on New York. For last month's production the principal Transvaal groups took a valuation of 91s 6d, a figure which compares with this year's maximum of 97s in respect of January. During the past few days the price of gold has fluctuated around 90s, the normal figure, of course, being 85s. It will therefore be of interest to indicate the extent to which the various companies are dependent upon the gold premium. We give a schedule of the more important companies, setting out the profit for the September quarter, with the proportion thereof in amount and in percentage due to the difference between the normal and the realised quotation for the precious metal—approximate figures:—

	Profit for Quarter (£)	Gold Prem. Included (£)	Proportion of A. to B. %
Aurora West	8,580	2,600	30
Brakpan	147,100	22,700	15
City Deep	204,850	31,900	16
Consolidated Main Reef	34,600	13,450	39
Crown Mines	264,400	52,500	20
Durban Deep	6,380	8,240	...
East Rand Proprietary	47,600	26,300	55
Ferriera Deep	17,500	6,900	40
Geduld Proprietary	141,600	19,800	14
Geldenhuis Deep	11,450	12,330	...
Government Areas	593,400	58,000	10
Langlaagte Estate	76,560	21,000	27
Meyer and Charlton	50,100	6,000	12
Moyar and Charlton	180,350	21,670	12
Modder B.	215,160	18,900	9
Modder Deep	12,640	7,900	60
Modder East	17,570	9,800	56
New Kleinfontein	450,000	45,900	10
New Modderfontein	118,700	19,300	16
New State Areas	14,060	11,600	78
Nourse Mines	167,550	41,770	25
Randfontein Estates	7,130	1,830	26
Robinson Gold	135,300	19,650	15
Robinson Deep	42,400	11,100	26
Rose Deep	42,400	13,100	31
Simmer and Jack	196,700	23,900	12
Springs Mines	36,070	8,320	23
Van Ryn Gold	227,650	24,070	11
Van Ryn Deep	34,900	13,820	40
Village Deep	12,070	7,720	63
West Rand Consolidated	80,950	11,550	14
West Springs	21,800	8,800	40
Witwatersrand (Knights)	34,800	9,300	27

It will be seen that in two cases—the Durban Deep and the Geldenhuis Deep—there would have been an operating loss but for the premium. In several other examples the bulk of the earnings is thus accounted for. The showing made by the richer mines—such as the Government Areas and the New Modder—is favourable. As time goes on the decline in the gold premium will be largely, if not entirely, compensated for by reductions in working costs and saving on exchange transactions. In the meantime, the earnings of some of the mines will be affected in an appreciable degree.

THE Royal Society of Arts announces that under the Peter Le Neve Foster Trust the council offer a prize of £25 for an essay on "The Effect of Trade Union Regulations on Industrial Output." Intending competitors must send in their essays not later than March 31, 1925, to the Secretary, Royal Society of Arts, John street, Adelphi, London, W.C.2.

UNITED STATES.—STEEL CORPORATION'S EARNINGS —SEPTEMBER RAILROAD FIGURES—U.S. LEND- INGS ABROAD.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 4.

ALTHOUGH it had generally been expected that earnings of the United States Steel Corporation would show a material decrease for the third quarter of the year, as compared with preceding quarters, the actual result for the three months ending September 30th is considered remarkably good in view of the depression in the steel industry last summer and the fact that lower prices for steel products prevailed in September. The corporation again demonstrated its ability to earn fairly satisfactory profits even in such periods. Net earnings for the past quarter amounted to \$30,718,415, as compared with \$41,381,039 for the three months ended June 30th, and \$47,053,680 in the third quarter of 1923. Surplus available for dividends in the September quarter of this year was \$15,078,110. Although operations of the corporation's plants dropped to about 40 per cent. of capacity in July, net earnings for that month totalled \$10,430,105, or at the annual rate of \$125,000,000 approximately. Both operations and shipments increased substantially in September, but profits were somewhat less than in July, owing apparently to the decline of about \$2 a ton in steel prices. The abolition of the "Pittsburgh plus" method of basing prices was a contributory factor. The directors declared the regular preferred and common dividends, including an extra dividend, as heretofore, of 50 cents on the common stock, despite the fact that net earnings were \$10,662,624 less than in the preceding quarter and fell short of dividend requirements by \$122,102. This deficit for the quarter compares with a surplus of \$8,575,079 for the three months ended June 30th of this year, and with \$5,078,479 for the quarter ended September 30th a year ago. The corporation's earnings statements for the first nine months of 1924 and 1923 compare as follows:—

NINE MONTHS' EARNINGS.		
	Sept. 30, 1923.	Sept. 30, 1924.
Net earnings	129,691,930 \$..	122,114,899
Depreciation, sinking fund, &c.	38,410,310 ..	36,899,200
Net income	91,281,620 ..	85,275,699
Interest, &c.	14,891,522 ..	14,503,462
Balance	76,390,098 ..	70,772,237
Prof. dividends	18,014,757 ..	18,914,757
Common divs. reg.	19,061,343 ..	26,685,879
Common divs. ext.	1,270,756 ..	7,624,536
Surplus	37,143,242 ..	25,171,601
Reserve for improvements	20,000,000 ..	..
Surplus	17,143,242 ..	25,171,601

Since last July new business has steadily increased, and operations have expanded until the corporation's plants are now running at an average of about 63 per cent. of capacity. A large volume of steel orders has been held back pending the outcome of the Presidential election, and there is now every reason to expect a further increase in bookings and operations, and possibly a firmer price tendency.

Financial results of railroad operations for the month of September have attracted more than usual attention, because the net operating income of all first-class carriers in the United States amounted to \$116,718,000. This is not only by far the largest total of any month this year, but surpasses all high records since July, 1918, when these railroads reported \$138,155,848. The showing for September compares with \$92,426,800 in the corresponding month of last year. The September net operating income is equivalent to an annual return at the rate of 5.60 per cent. on the tentative valuation of property investment, as against 4.40 per cent. a year ago. Although net income made a new high monthly record for a number of years, gross earnings for September, totalling \$540,741,000, were

\$5,225,000, or 1 per cent. less than in the same month of last year. Operating expenses, on the other hand, amounting to \$381,573,750, were \$35,052,400, or 8.4 per cent. below those of September, 1923. This decrease in operating costs was due, partly, to a cut of \$23,919,000, or nearly 12 per cent., in maintenance expenditures. In September maintenance of way expenses also showed a reduction of \$3,866,680, or 5 per cent., from the like month of last year, while the outlay for maintenance of equipment was \$20,052,300, or 16 per cent., less. The operating ratio of 70.56 compares with 76.31 in September of 1923, and is the lowest percentage reported for any month since July, 1918.

Foreign loans floated in the United States thus far in 1924 have exceeded one billion dollars in the aggregate, and indications are that the total for this year may approximate \$1,500,000,000. Among the more important issues placed here are upwards of 20, the individual amounts ranging from \$3,000,000 to \$150,000,000, the latter being the Japanese loan. The second largest offering was the \$110,000,000 German bonds, and the list includes several \$20,000,000 to \$40,000,000 loans, besides the \$50,000,000 Mexican bonds which are understood to have been sold to American investors during the past month. The 20 odd issues referred to make a total of \$675,150,000; all other foreign borrowing is figured at about \$332,769,000 in a reliable compilation just published, bringing the aggregate up to \$1,007,919,000. This is a new high record in such financing, and compares with \$242,845,000 foreign financing in American markets in 1923, \$431,305,000 in 1922, \$379,270,000 in 1921, and \$291,000,000 in 1920.

One of the largest trust companies here has gathered facts and figures which show that in liquidating portions of their war debts to the United States, and in arranging to discharge such obligations through funding agreements, European countries have actually accomplished more than, perhaps, they are generally credited with. According to these statistics, the debtor nations have thus far paid to the United States \$850,000,000 in interest on their war-time borrowings, in addition to a total exceeding \$300,000,000 on the principal. The total interest mentioned includes some \$8,000,000 from Russia, although the impression had prevailed in some quarters that not much could be expected from that country. A month or so ago, an agreement was reached between the Government of Lithuania and the United States Treasury Department for the funding of that country's war debt of some \$6,000,000. Lithuania, therefore, is the fourth of 20 countries, which secured loans from the United States in connection with the war, to arrange a definite programme for settling such accounts, with provision for interest and sinking fund payments. The other countries that have taken such steps are Great Britain, Finland, and Hungary. Owing largely to the adoption of such a plan by Great Britain some time ago, the total amount of foreign war indebtedness thus funded now exceeds \$4,593,000,000, or 38.6 per cent. of the aggregate of \$11,888,000,000 of principal and interest owed to the United States, according to the trust company's compilation.

FRANCE.—REASONS FOR THE NEW LOAN—A CAPITAL TAX?—PRICES—FRANCO-GERMAN COMMERCIAL TREATY.

(FROM OUR CORRESPONDENT.)

PARIS, November 12.

THE opening of the subscription lists for the new issue of Treasury bonds, or the new internal loan, as it is being indifferently called, which took place to-day, has given rise to a violent controversy as to the precise object for which the money is being borrowed. M. Herriot's own explanation in the Chamber was that, "after four years of incoherent finance," the present Government found itself faced with the question of "filling a deficit of four milliards which others have created," by failing to provide sufficient money to meet the expenditure of the present financial year. It is now becoming clear that this explanation of the object of the present loan is, to say the least, inaccurate, and it may be as well, to prevent mis-

leading conclusions being arrived at, that the facts concerning the origin of the loan should be stated.

So far as can be gathered, these indicate that the object of the loan is not to furnish money that ought properly to have been raised by taxation, but merely to provide the Treasury with sufficient ready money to enable it to avoid a repetition of those periods of "tightness" that have been frequent during the years since the war, and have undoubtedly resulted in considerably prejudicing French credit. The present loan was certainly authorised by Presidential decree on October 30th last, but its real initial authorisation is to be found in Article 3 of the law of December 28, 1923, by which the Minister of Finances was empowered "to issue in 1924, for the service of the Treasury, short-term bonds for an amount not exceeding 13,000,000,000." By a further law passed by the Poincaré Government on March 23rd last, the issue of 13 milliards of short-term Treasury bonds authorised for issue in 1924 was reduced to 7 milliards, with the stipulation that the term of these bonds must not exceed ten years. Of this total, 4 milliards was allocated to the Ordinary Budget and the balance to the Special Budget for Recoverable Expenditure. The 1923 Budget, it is universally admitted, actually resulted in a surplus, and there is now every reason to believe, it is claimed, that the end of the current financial year, in view of the satisfactory manner in which revenue is coming in, will also show a balance on the right side. Owing to unavoidably late distribution of the demand notes for the current year's taxes, however, and the fact that money is needed to meet heavy items of expenditure that cannot wait until cash is available from the usual sources, the present issue of new Treasury bonds has become imperative, to enable the Treasury to carry on meanwhile. The alternative, of course, would be to resort to inflation, with all its attendant evils, and this, as well as any further increase of the Funded Debt, both the late and the present Governments have determined to avoid.

An important factor in the mechanism of the new issue is that subscriptions for the new bonds, which are issued at par, must be paid in full and solely in cash. As this provision will necessarily involve payment in bank notes, the Treasury will thus be provided with means to make at the end of the year the stipulated annual reduction of the amount it has borrowed from the Bank of France (notwithstanding the fact that a large proportion of the notes thus received will undoubtedly be returned to circulation through the making of the payments which it is the object of the issue to render possible). The bonds, as already stated, are to be issued in instalments of half a milliard, and the lists will be closed as soon as sufficient have been absorbed to meet requirements. Taking into consideration that the whole issue will be redeemed within ten years at 150 per cent. of the par value, it is now officially announced that the new bonds may be regarded as yielding 8.50 per cent.

The Government's new Bill for the repression of illicit speculation has been met with a storm of opposition from the Chambers of Commerce and other organisations representing the industrial interests of the country, and is already obviously meeting with a good deal of objection in the Cabinet itself. This is evident from the fact that the Minister of Commerce, when approached on the subject, has declined all responsibility for the measure, and has referred those who have approached him on the matter to the judicial officers of the Government, by whom the Bill has been put forward. Another subject in which intense interest is being displayed is the intentions of the Government in regard to the imposition of a capital tax. The Radical and Radical Socialist group of the Chamber, after an exhaustive discussion of the Budget proposals, has sent a deputation to the Premier, urging the imposition of a "tax on wealth," to replace some of the existing taxes which bear especially on the less wealthy classes. What reply M. Herriot gave is unknown to the public, but it is hinted that the Premier has not yet decided to include it in his programme. An effort to "draw" him last Friday, and elicit a plain "yes" or "no" answer, resulted in M. Herriot refusing to deal with the question on the eve of the issue of an appeal to the investors of the country, and the discussion of the matter was adjourned by a vote of 333 to 117.

LONDON REPRESENTATIVE
2 & 3 Crosby Square, Bishopsgate,
London, E.C.3

The index number of wholesale prices for October, which has been issued by the Statistique Générale, fixes the general index figure for the 45 categories included at 507, as compared with 496 at the end of September, and 487 at the end of August. The return shows that wholesale prices have now returned to the level of January last, when it was fixed at 505. The detailed figures, based on 100, as representing the wholesale prices of the corresponding articles in July, 1914, are as follows:—

Classification.	No. of Categories.	End of the Month of—		
		Oct.	Sept.	Aug.
General index figure	45	507	496	487
Foodstuffs, general figure	20	445	440	431
Vegetable foods	8	451	425	408
Animal foods	8	434	441	427
Sugar, coffee, cocoa	4	456	469	492
Raw materials, general figure ..	25	562	545	536
Minerals and metals	7	484	458	474
Textiles	6	701	704	672
Various	12	526	502	491

The outstanding feature of the table is the extraordinary manner in which the general figure has been swollen for many months past, owing to the effect the depreciation of the franc has had in relation to the price of cotton and other raw materials imported by the textile industry. Textile raw materials, however, have been practically unchanged during the past two months, whereas metallurgical raw materials (principally copper), which fell 16 points in September, have again risen by 26 points. Speaking generally, wholesale prices now stand at a slightly higher average level than in 1920. The index figure for retail prices in Paris at the end of October, embracing 13 selected foodstuffs and other articles of common necessity, is returned by the local committee at 383 (as compared with 374 at the end of September, 384 in February last, and 392 in March), or 283 per cent. higher than in 1914. The maximum was recorded in November, 1920, with 326 per cent. increase in Paris, and 352 per cent. in great towns of over 100,000 inhabitants.

In view of the categorical denial issued on behalf of the

Comité des Forges, to the effect that not only has no collective agreement been signed between the French and the German metallurgical groups, with a view to the formation of a trust, but that no negotiations of the kind spoken of have even been entered upon, the French Press has since devoted itself principally to demonstrating that, even if the reports emanating from Germany are unfounded, such an international agreement would be nothing new. Before the war, it is pointed out, very close relations existed between French and German metallurgists, and these relations were precisely based on the exchange of Lorraine ore against Westphalian coke. French exports of iron ore enabled that commodity to be extracted at a lower cost, and consequently kept down the cost price of pig-iron. Germany's difficulty at present is that, owing to the loss of Alsace-Lorraine, she is worse off than ever for iron ore, and has to fall back on Swedish ore, the price of which is too high for ordinary manufacture. She is therefore compelled again to fall back on French ore (which has the additional advantage of carrying with it its own smelting element), if she is to recover her iron export trade. France, on the other hand, by her recovery of Alsace-Lorraine, has brought within her frontier a number of very important plants which formerly belonged to German firms. Her requirements in the form of coke are therefore much greater than before the war. Now, even in 1914, France was unable to produce sufficient coke to meet her own needs. However much the collieries in the Nord may increase their output of coke, France will still be unable, in view of her fresh responsibilities, to obtain all she requires within her own frontiers, therefore she must necessarily fall back for the deficit on Westphalia.

In these conditions it is regarded here as only natural that the pre-war system of exchanging German coke against French ore should be resumed, and French opinion fails to see in what respect this would be prejudicial to British interests. In any event, the prospect of the new Franco-German commercial treaty being concluded shortly, coupled with the belief which persists that, in spite of denials, there is still "something in" the reports that have recently been in circulation, have had a stimulating effect on the French metallurgical industry. In view of an expected rise in prices, new orders are reported on every hand, and this, together with the fact that holders are hastening to take up their options, has given rise to a feeling of unusual optimism. Whether formal negotiations have yet begun or not, it is regarded as inevitable that a policy of international agreements, so far as the metallurgical industry is concerned, will follow the conclusion of the new Franco-German commercial treaty.

GERMANY.—POLITICS—TARIFF—FINANCIAL REFORM—CURRENCY—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 11.

CABINET speakers on electoral subjects are increasingly turning their backs on the German-Nationalist Party, and proclaiming for the present coalition grouping of Centre, People's Party, and Democrats, although at best this group cannot have an absolute majority in the coming Reichstag. The reason for this policy is that there are further indications of a weakening of the German-National vote. The State elections in Anhalt brought marked increases in the Social-Democratic and German-Democratic votes, the sufferers being the Communists, who lost heavily. In this election the Right parties, including the German-Nationals, neither won nor lost; but sentiment generally seems to be moving against them. Dr Marx declares that the strengthening of the Coalition would provide guarantees for a sound policy, and expresses the hope that the three parties will co-operate in the coming Reichstag elections. The foreign policy pursued during the past year must, says Dr Marx, be maintained.

The deliberations of the Reichswirtschaftsrat on the tariff question have been provisionally concluded. The only subject under consideration, however, was a so-called "minor Tariff project," which provides for changes in about a fourth of the items in the Tariff of

1902. The result of the deliberations will be published in detail after the Cabinet has examined the recommendations; meantime, there is published only a declaration on the question of principle. Germany's policy, says the declaration, should be to work for untrammelled international trade by means of a general lowering of Tariff walls, this to be attained by commercial treaties. The high-Protectionist demands of business groups in various countries should not be allowed to hinder the attainment of this aim. Germany's interest requires a prosperous agriculture, which will, as far as possible, meet the home demand for food, and also requires that as far as possible her demand for raw and half-finished materials should be covered by home production. But measures taken to ensure these aims should not be of a kind which would hamper the export of high-value (industrial) products. Any duties which reduced the country's ability to compete abroad would be too high. Ability to export depends largely upon buying-power at home, owing to the fact that a good home market means production in great volume, making production cheap, therefore the duties on foreign industrial goods must be moderate; too high prices for such goods would burden consumers and reduce their power to buy home goods. A second resolution recommends defensive measures against dumping, and a multiplication of duty rates against countries which discriminate against German goods. The Government is understood to be considering supplementary duties against "exchange dumping," to vary according to fluctuations in the exchanges of countries with depreciated currencies.

A provisional financial reform has been rushed through under the useful Article 48 of the Constitution. Agreement with the States on this question was come to only with difficulty, opposition being both to the use of Article 48 and to the contents of the Government's scheme. The States were interested through the fact that they receive 20 per cent. of the yield of the Sales Tax and 90 per cent. of the yield of the income-tax. They consented on the condition that the Republic's subventions in December to March should not be lower than the average subventions in August and September, 1924. The reform reduces the Sales Tax from 2 (until lately 2½) per cent. to 1½ per cent., and the Sales Tax on Luxuries from 15 to 10 per cent. Income-tax collected on the basis of assessment is not reduced; but where the tax is deducted from wages the exempted part of income is raised from 50 to 60 marks a month. The exemptions on the basis of family conditions are extended. Incomes of unmarried persons are exempt up to 875 marks a year, of childless couples up to 889 marks, couples with one child 906 marks, and so on, families with eight children being exempted up to 2,000 marks. The advance income-tax instalments required from industry, trade, and agriculture are reduced 25 per cent. The Bourse transfers stamp duties have been reduced by 50 and 60 per cent., and the stamp duty on foreign exchange transactions by 75 and 50 per cent., according to class of transaction. All these stamp duties were abnormally high, being imposed during the inflation time for currency considerations, and the reduced transfer duty is still much higher than before the war. In this not on dealings in Gold Loan and Dollar Treasury Bills, have been reduced. The Government expects that the loss from the above tax reductions will be made good as the result of improvement in trade. The definitive income-tax has yet to come. The Finance Ministry's return for the third ten-day term of October shows revenue received 261,508,091 marks, expenditure 245,261,623 marks. The new mark as "Reichsmark" now appears in official accounts, and in future is to be understood under "mark" where not otherwise stated.

The demand for exchange has considerably declined as a result of the restoration of free dealing. The Reichsbank is now acquiring gold at an accelerated rate; the return for October 31st shows an addition of 63,722,000 marks, which is more than three times the recent weekly average. The large increase of 467,809,000 marks in circulation is a result of demands for month-end settlements. Gold cover is 39 per cent. of circulation, combined gold and exchange cover 52 per cent. Deposits fell by 277,663,000 marks to 708,728,000 marks. The Foreign Trade Association protests against the policy of

leht extinction and hoarding of money pursued by the Republic and the municipalities, and estimates the free funds in the hands of public bodies at 3½ milliard marks. The Railway Corporation and the Reichspost are also stated to be accumulating cash. As ground for demanding a simplification of the taxation system, the Association mentions that a person carrying on industry in his own building must annually make 67 to 78 tax declarations and 71 to 81 separate payments. The credit situation slowly improves, but the new awakening of industry and home trade is accompanied by increased demands for money. Conclusion of credit agreements with American finance are stated to be hampered by uncertainty as to the security, owing to the priority of Reparations bonds. The suggestion is made that the credit-givers acquire the Reparations bonds imposed on the borrowing concerns, and unite them with their loans as first mortgages. Several attempts by municipalities to borrow in America are held up by the recent decree requiring official sanction for such deals.

The labour market has much improved. Publicly supported unemployed in the whole Republic on October 15th numbered 473,023, against 574,424 one month earlier. In the Rhine Province there are 110,000 unemployed, of whom many have had no work for a year. Unskilled workers make up most of the total. The cost of living index number on November 5th remained unchanged at 123; the wholesale index number has dropped further to 126.6. An official report states that in September German food prices were 96 per cent. of English and 93.4 per cent. of American; German industrial raw material prices 102.6 per cent. of English and 104.5 per cent. of American. The Prussian Trade Ministry's monthly report admits only a slow improvement in industry. In the cotton industry conditions are satisfactory, and in linen improved. For silk there is a great demand, but lack of capital hampers production. Since the beginning of the month the iron and steel trade has revived, so that semi-finished material has already run short. Blooms cannot be had at all. Sheets are in great demand by home consumers, but export is dull, as is the home and export market for tubes. Prices have risen, being approximately, per metric ton ex works: blooms, 103-105 marks; billets, 108-110 marks; slabs, 118 marks; bars, 120-122 marks; thin sheets (½ mm.), 180 marks. The iron consuming manufacturers continue to oppose the demand for higher duties on raw and semi-finished materials. The existing duties on these products, they declare, add between 5 and 6½ per cent. to the production cost of machines. Prices of machinery tended to fall in October.

On the first two days of this week the stock market, after long dullness and a weak tendency, had a sudden revival, with considerable dealing and a marked rise in quotations. The reasons for this are the reduction in the transfer tax, and a new declaration by the Cabinet on the "Aufwertung" of loans. The declaration came first, and induced new speculative purchases of loans, although the Government's intentions were by no means made clear. The declaration merely said that, as a result of the favourable financial position, the already announced plan for relieving indigent loan-holders would be extended. Rumour declared that this meant some kind of all-round "Aufwertung," but the declaration implicitly denied this design by announcing that speculators, which means all persons who bought since the currency depreciation, would get nothing. The new bull movement, therefore, seems to be no better justified than the old. The Hamburg-America Company's new gold mark balance-sheet has been published. As the company has not increased its ordinary share capital in recent years, and issued only 75,000,000 marks of preference shares, the scaling down of its capital in the ratio of 10 to 3 is due to losses of shipping, not, as with most other companies, to capital inflation. The new capital is 54,000,000 marks ordinary shares and 11,000,000 preferred. The Hamburg-South America Company, which had doubled its pre-war capital of 25,000,000 marks, has scaled down to 20,000,000 marks.

An analysis published in the *Berliner Tageblatt* of 251 companies, whose shares are quoted in Berlin, which have so far issued gold mark balance-sheets, shows in general the result of the re-valuation of assets and liabilities. The 251 are just one-third of all Berlin-quoted concerns. Total

peace capital was 1,967 million gold marks, paper mark capital on the eve of re-valuation 19,337 million paper marks, new gold mark capital 2,927 million gold marks. Average scaling down is in the ratio 8.4 to 1. The ratio of pre-war to new gold mark capital is 1 to 1.17. The increase in value since 1914 of the companies' net property, as shown by the last figures, is mainly due to the fact that, while assets other than liquid capital did not depreciate in gold value, and often appreciated, secured debts declined very much. Analysis by groups confirms this. Ratio of pre-war capital of banks (of which, however, the most important have not yet published gold mark balance-sheets) to new gold mark capital is 3.3 to 1, because the banks' chief asset was their money capital, which depreciated; whereas the ratio for chemicals concerns, which have often greatly expanded their plant, is 1 to 2.8, while the ratio for light railways and tramways is 1 to 4, not because of expansion of assets, but because this group before the war had particularly heavy bonds and mortgages, which have nearly all disappeared. The gold mark balance-sheets of the four "D" banks are expected, at latest, in a fortnight.

AUSTRIA.—POLITICS—STATE FINANCE—TRADE BALANCE—STATE RAILWAYS—TARIFF BILL—NATIONAL BANK.

(FROM OUR CORRESPONDENT.)

VIENNA, November 1.

THE Social Democrat Party in Austria has recently become more active, and there have been some rather lively discussions in Parliament in which the Opposition tried to make the Finance Minister responsible for the bankruptcies of certain banks and other incidents in connection with the present financial crisis. There is no doubt that the Government's control over the banks and over the formation of companies has failed, and that the public, which believed in the efficiency of this control, has suffered severe losses. During the inflation period, however, mistakes were made not only by the Christian Socialists, but also by the Social Democrats, but the latter are trying to utilise them to their political advantage. They seem to think that the general depression caused by the economic crisis would greatly increase the number of votes in their favour in general elections, and this is, of course, a motive which greatly hinders progress in Parliamentary work.

The Budget for 1925 shows a deficit of 585 milliard kronen, as against 1,166 milliard kronen for 1924. Public administration shows a deficit of 1,255 milliard kronen, whilst the Monopoly shows a profit of 1,425 milliard kronen; the Treasury, however, has to pay subsidies amounting to 598 milliard kronen to the State Railways Company and 155 milliard kronen to State enterprises. The Finance Minister intends covering it out of the League of Nations' Loan, and hopes that the actual deficit will be lower than that estimated. Of the State enterprises, the Post, the Post-Savings Bank, and the Forestry Administration are working at a profit, whilst the mines, the State printing office, and the State theatres still show considerable losses.

The financial and economic crisis has become less acute, but, nevertheless, still continues. During October two small banks of purely local character—the Nordische-Oesterreichische Bank and the Wiener Bank, both superfluous banks founded during the inflation period—have closed down. The difficulties of the financier Castiglioni may possibly be settled; an Italian syndicate, led by the Banca Commerciale, is co-operating with some Viennese and German banks to put the necessary credits at his disposal in order to meet his obligations.

Owing to the dismissal of clerks in banks and other commercial houses, unemployment has increased from

74,181 in September to 77,968 in October. The Government is taking measures to alleviate the situation. It has reduced a number of taxes in order to lower cost of production, and, moreover, the Finance Minister has declared himself ready to forgo the Turnover Tax on flour in order to reduce the price of bread and thereby influence the general cost of living. Unfortunately the Municipal Council of Vienna still declines to consider reducing the very heavy municipal taxes by which the existence of hotels, theatres, and places of amusement is threatened. The present municipal taxes are 20,200 times as high as in 1913, whilst the factor of depreciation of money is only 14,400. At any rate, it is generally hoped that the action of the Government will bring about good results, and a certain amount of confidence can, in fact, be noted.

The statistics regarding the balance of trade for the first eight months of this year show a total value of imports of 1,446 million gold kronen, and a total value of exports of 761 million gold kronen, which corresponds to a deficit of 685 million gold kronen. The deficit for the same period last year amounted to only 397 million gold kronen. This deterioration in the balance of trade is attributable to the fact that imports of livestock, food-stuffs, liquor and raw materials have considerably increased, whilst the export of finished goods shows an increase of only 44 millions, and the export of mineral fuel and livestock have gone down nearly to half. It is true that since July signs of improvement can be noticed, but it will hardly be possible to make up the unfavourable result of the first half-year by an improvement during the last four months of the year.

Since the State railways were converted from a State enterprise into a purely commercial concern, the result of their reconstruction has made very good progress. During the first six months of this year their deficit amounted to only 27½ millions, against 375 million kronen in the same period last year. The State Railways Company now, of course, does not accept any tender unconditionally, as was previously the case, and has, by promoting competition, succeeded in forcing prices down.

Although the new Tariff Bill has already been passed by Parliament, it has not yet been put into force. The reason for this delay is that it is feared its introduction would cause a further increase in the cost of living, which during the last month has continuously risen. The Government hopes that the negotiations now pending for Commercial Treaties with the Succession States will lead to such results that it will be possible to put into force the rates agreed upon in the treaties, and not the higher rates of the Tariff Bill.

The improvement in the position of the National Bank has made further progress. The gold reserve rose between September 15th and October 23rd from 3,640 to 3,911 milliard kronen, whilst the total number of bills discounted went down during the same period from 3,052 to 2,555 milliard kronen. The Bank will, therefore, reduce the Bank rate from 15 to 12 per cent. in the near future; this is all the more feasible as bills can now be already discounted on the Stock Exchange below the official Bank rate. Private banks have in the meantime also reduced their terms for credits by 2½ per cent., which, reckoning upon the forthcoming decrease of the Bank rate, will altogether reduce the cost of bank credits by 5½ per cent.

SWITZERLAND.—IMPROVING TRADE—NATIONAL ACCOUNTS—SURPLUS EXPECTED IN 1926—COURSE OF MONEY RATES.

(FROM OUR CORRESPONDENT.)

GENEVA, November 10.

THE Swiss trade returns for the third quarter of the present year show that the general situation is gradually improving. Since the middle of last year progress was recorded at the end of each quarter, and though the present figures of foreign trade are still far from reaching the pre-war totals, they are very gratifying indeed. From July 1st to September 30th, the value of imports reached a total of £24,761,560 (619,039,000fr), compared with £20,604,120 (515,103,000fr) during the corresponding period of 1923; as for exports, they totalled £19,908,360

(497,709,000fr), as against £18,522,320 (463,058,000fr) during the third quarter of 1923. Compared with the previous quarter, the trade returns of the third quarter of 1924 show that the export of watches increased by nearly £640,000, of silk by £112,000, of cheese by £232,000, of condensed milk by £164,000, of machines by £105,920; on the other hand, there was a drop in the exportation of embroideries, cotton goods, and straw. The export of Swiss watches to England is on the increase, as it is greatly facilitated by the abolition of the McKenna duties, but, on the other hand, Britain made smaller purchases of embroideries than during last spring.

Imports of vegetable and mineral raw materials have risen, and a careful study of statistics shows that they were not only used for home consumption, but also for manufacturing and re-exporting purposes, a sign that Swiss industries had important orders from other countries. From January 1st to July 30, 1924, the value of imports amounted to £72,022,360 (1,800,559,000fr), an increase of £10,055,440 on the corresponding period of 1923, while exports totalled £61,035,960 (1,525,899,000fr) for the same period, or £10,244,480 more than in 1923. It is very encouraging to note that while imports rose by nearly 14 per cent. when compared with 1923, the rise in exports reached over 16½ per cent.; it is true that there is an adverse balance of £10,986,400, but it is partly compensated by the important receipts of the Hotel and Foreigners' Industry during the last winter and summer seasons.

The general improvement in the economic situation is also shown by the fact that unemployment has so much decreased that it is now almost non-existent in some cantons, and that—from January 1st to October 31st—customs duties yielded over £6 millions, so that it is probable that, at the end of the year, they will show an increase of nearly £1 million on the 1923 figures. This will greatly help the Federal Government to reduce its deficit for the current year; the Federal Budget estimates for 1924 provided for a deficit of £1,530,560 (38,264,000fr), which will be probably brought down to nearly £1,400,000.

The Federal Budget estimates for 1925 are the following:—

	£	Franks.
Expenditure	12,206,800	305,170,000
Revenue	11,546,400	288,660,000
Deficit	660,400	16,510,000

The expenditure for the Federal loans' services and interests is estimated at £4,680,000, that for the Army at £3,400,000, while the remaining £4,126,800 cover the expenses of the various Federal Departments and Services, including the subsidies granted to the cantons for public works, education, &c. On the other hand, the interests of the Federal properties, capital, and investments are estimated at £800,000, while Customs duties are estimated to yield £6 millions, and the taxes on "coupons," insurance premiums, &c., nearly £4 millions.

Federal Councillor M. Musy, the Chief of the Finance Department, recently stated that in 1926 revenue will far exceed expenditure, which is being progressively reduced by means of drastic economies, which are already applied in all the Federal services, and the effect of which will be felt in the course of the next two years; moreover, a second instalment of the "War Tax" will be paid up during the next two years, and add many million francs to the Federal revenue.

Since 1913 the accounts of the Swiss Federal Government have every year shown a deficit, which was partly met by borrowing, so that the National Debt rose from £5,850,800 in 1913 to £82,158,000 in 1923, and the floating debt from £2,240,000 in 1914 to £8,702,720 in 1923; calculated per head of population, the total Federal debt amounted to £17 6s in 1913, and it now reaches £43 2s. From 1913 to 1924 the deficits of the Federal Government's accounts were the following:—

	£	Franks.
1913	214,141	3,826,227
1914	901,325	3,981,470
1915	862,060	5,102,878
1916	665,818	3,176,307
1917	2,030,000	1,818,750
1918	2,475,787	1,400,000

These deficits were the consequence of the expenses resulting from the war, the mobilisation and upkeep of the army from 1914 to 1918, the general rise in prices, the increase of salaries of officials, the grant of subsidies to unemployed and industries, and so on.

There has been in Switzerland since the beginning of 1923 a gradual rise in money rates. In January, 1924, some State loans were issued at 5 per cent., but later the interest rose to 5½ per cent. in May and to 5.6 to 5.7 per cent. since then. As regards industrial loans, their minimum interest is generally 6 per cent., and the interest on banking issues oscillates between 5½ and 6 per cent., while the discount rate of the National Bank remains at 4 per cent., as in January last. The reason of that increase may perhaps be found in the fact that important investments were made abroad in 1922, when there was a menace of a capital levy, but it is more probable that it is the result of general impoverishment, of the decrease in the purchasing value of money, and in the value of income.

CZECHO-SLOVAKIA.—BUDGET—COMMERCIAL TREATY WITH HUNGARY.

(FROM OUR CORRESPONDENT.)

PRAGUE, November 6.

SINCE the reassembling of Parliament at the end of October, the most important business has been the report of the Foreign Minister (Dr Benes) on the work done at the last Assembly of the League, and the introduction of the Budget by the Minister of Finance (Dr Becka). In his speech, Dr Becka emphasised, as the greatest needs of the country in finance, that the exchange should be further stabilised, that a foreign loan should be obtained to allow of the complete removal of the uncovered note issue, and that the problem of "personal expenditure"—salaries of Government officials—must be solved.

The total expenditure for the year 1925 is estimated at 15,974 milliards Czech korun, while the total income is expected to be 15,702 milliards, leaving a deficit of 272 millions, to which must be added 1,319 millions for Government expenditure upon "unremunerative" undertakings, such as roads, buildings, &c. The total saving during the year amounts to 1,240 million Czech krns., but had there been no reduction in the national income, it would have been 1,909 millions. The figures for 1924 and 1925, in milliards of Czech krns., are:—

	1924.	1925.
Expenditure	16.99	15.97
Income	16.39	15.70
"Unremunerative" expenditure ..	2.229	1.319
Deficit	.602	.272

It is impossible to pass any criticism upon the State income for 1925, as the figures for the enterprises under Government control are not available for the years 1923 and 1924. Nor can the precise amount of the internal debt be calculated, as the Fourth State Loan is not yet closed, and the liquidation of the Austrian debt is incomplete. This lack of consolidation of the State debt is shown more clearly in every succeeding Budget, and the new foreign loan should be used primarily for consolidation purposes.

The increase of the national debt (excluding that inherited from Austria) has been:—

	1922.	1923.	1924.
In milliards of Czech krns.	+ 4.31	+ 2.70	+ 0.80
In millions of gold francs	+ 539	+ 412	+ 122

While the deficit in the Budget is small (272 million krns.), and is 330 million krns. less than for the year 1924, what is far more important is that the total amount of the expenditure is so high, and there is a reduction of the national income. The whole difficulty seems to lie in the failure to adapt State finance to the increased exchange. After 1919 the exchange was adapted to the post-war conditions then prevailing. The value of the exchange sank low, but this decrease had to be balanced by an increase in Budget expenditure in 1921. Three years ago, when deflation was decided upon, it was forgotten that under the circumstances a "deflation Budget" was necessary, and time is bringing in its revenge. If the Czech crown could have been stabilised at 8-10 gold francs per 100 Czech krns., as Czech financiers seem to have expected, it would

have been a different matter. But the following is the actual state of things:—

Year.	Expenditure (in Billiards of Krns.).	Average Course of Exchange (100 Czech Krns. in Gold Francs).	Expenditure (in Millions of Gold Francs).
1919	8.62	23.00	1.983
1920	15.28	7.75	.854
1921	21.20	6.50	1.278
1922	22.77	12.50	2.847
1923	22.20	15.25	3.386
1924	19.30	15.25	3.043
Total	97.71	..	13.391

Assuming that the gold franc exchange becomes stable at about 15, it can be seen that to get back to the 1922 position, expenditure must be reduced to 13 milliard krns. Only then can real savings be talked of, and the present taxes are a levy on capital. It is impossible to reduce one very heavy item—the interest and amortisation of the State debt. This debt has increased in its internal value parallel with the exchange, and now represents an annual expenditure of 1½ milliard krns.

Mere financial considerations clearly point to a decrease in "personal expenditure"—which, in the last and the present Budgets, amounts to 8 milliards. But political reasons prevent a radical treatment of this question. Only a gradual reduction of the number of State employees (their salaries are already too low), and a reform of State administration, can accomplish anything. All reductions in expenditure up to the present have been in real expenditure. The State has become a smaller consumer and production is lower. The period of deflation has been marked by an increase of unproductive, as against productive, expenditure. The danger from the uncovered bank-notes is not yet removed, and if the estimated income given in this year's Budget is not reached, then something drastic may be necessary in a year's time.

The proposed Commercial Treaty with Hungary will be based upon a reduction of Czech agricultural duties in return for a reduction of Hungarian taxes, which at present are exorbitant. Taxes reach in some cases to 100 per cent. of the cost of the goods. But Hungary cannot supply herself with industrial products (especially textiles), and if the Czech manufacturers can give the long credits which the Hungarian traders really need, then an important and increased market will be opened to Czecho-Slovakia.

Books and Publications.

IMPERIAL ECONOMICS.

A BOOK, even a book on economic history, is a work of art, and to discuss half of it is difficult, though, no doubt, there were good reasons for publishing the first volume of Professor Knowles' "Economic Development of the British Overseas Empire,"* while the second volume was only partly written. The half-book is welcome, but not till the other volume is available can the work be fairly viewed.

That the writing is able, the materials well digested, and the information clearly presented, no one will doubt who knows Professor Knowles' similar work on Great Britain which was issued three years ago. The present is a mightier task. The materials were scattered and not easily accessible, or even lacking entirely, in the sense that the economic history of large parts of the Empire has not yet been reduced to literary form. The task of the reader, it may perhaps be said in passing, would have been lightened by clearer sub-division of the text, along with a freer use of sub-headings, or the introduction of side notes. The authoress possibly was so immersed in the subject that she failed to appreciate how helpful these aids may be to a student. She has tackled the immense problem bravely, and has not sought to narrow it. She has wisely lived up to her faith that "all modern economic history should be treated on comparative lines." She has not forgotten, as so many writers on Empire do forget, that

* "The Economic Development of the British Overseas Empire." By L. C. A. Knowles. (London) George Routledge and Sons Limited. 1924. 10s 6d net.

there is, after all, the rest of the world, that other part, on sea trading intercourse with which the very existence of Great Britain depends.

The present volume contains an introductory part on the Empire as a whole, and then deals with the Tropics and Sub-tropics. A large section is devoted to India. The further volume yet to come is to sketch the economic histories of Canada, Australia, New Zealand, and South Africa, the history of emigration and of preferential commercial relations.

Professor Knowles hurls at us staggering masses of detail about the British Empire, which is so vast, so varied, so complex, and, above all, in every aspect, so commercial. "The field," as she says, "is boundless," and "it is a tale of new worlds in the making." British overseas expansion, as Professor Knowles points out, did not, till late in the eighteenth century, go beyond the establishment of trading outposts. Then, for nearly a hundred years, inland Continental expansion went on, and it was not till after 1870 that, with the development of new and improved means of communication, the British Empire, besides attaining an increased coherence, reached its period of unparalleled growth. But "the new Empire, like the old, is based on commerce."

It is impossible, in following the expansion of this commerce, not to notice how involved with war and bloodshed trade has been. Under the old colonial system nations struggled for colonies in order to control markets and supplies of raw materials, and the development of the newer colonial empire by a policy of constructive imperialism has again been backed by force. For instance, the Australians, as Professor Knowles points out, could not keep out Chinese or Japanese "were it not for the naval power of Great Britain in the background." This has been expressed in similar but broader terms by another writer, who has called attention to dangers which may arise "if the whites persist in excluding the yellow and the brown races by violence from half-empty territories in which they desire to settle."

With these present-day problems of empire this history, which does not extend beyond 1914, is not directly concerned, though, in turning the pages, no one can fail to have current anxieties in mind. Though Britain in the past occupied territories in part to keep other Powers out, British policy has not been in the main one of exclusion, but of the "open door." The foundations on which British expansion has proceeded have been sounder and more likely to endure than those of some other European Powers. Detailed study of how the present position has been reached, in which this book is most helpful, is very necessary for a right appreciation of the economic factors at present operating in the world. It is essential that the historian should be as far as possible impartial. In this instance the historian does not seem to lean to any party opinion, though those who doubt the complete accuracy of the view of the world to be obtained through Birmingham spectacles may mark a query in the margin beside the reference to Joseph Chamberlain as "the great imperial statesman."

It is in its references to more recent events that this economic history opens more controversial ground, but here the fact that the work, so far as published, is not yet complete, makes it necessary to defer further comment. The problems with the historical basis of which Professor Knowles is dealing are, however, so urgent that the completion of her contribution to their study will be awaited with the greatest interest.

MILL'S AUTOBIOGRAPHY.

THE autobiography of John Stuart Mill has at last found a well-deserved place in the excellent series of "World's Classics," published by the Oxford University Press. It has unfortunately not been possible to obtain the permission of the present owners of the manuscript to reproduce the complete text verbatim, so the present edition is identical with the first, which was published by Mill's step-daughter, 51 years ago. The omissions, we are told in the able introduction contributed by Mr. Harold Laski, amount in all to some half a dozen pages, and relate principally to Mill's relations with his father and his wife. In addition to the autobiography itself, however,

this volume contains six speeches, most of which were delivered by Mill when still a very young man, before the London Debating Society, and which have not hitherto been published. They help to complete our knowledge of Mill's intellectual development during this very important period in his life. The fact, moreover, that he himself should think it worth while keeping throughout his life the manuscript of a speech delivered when he was seventeen, is typical of the interest he always took in his own intellectual development. The autobiography itself, however, is the supreme example of the way in which the author was often wont to regard himself as a case for study, and this attitude of cold detachment is almost inhuman in its scientific objectivity. But this is far from giving a complete picture of the man himself, and Mr Laski has certainly done well to bring into prominence in his short introduction the broad human sympathies and the crusading zeal of one who embodied most of what was best in his own age, and who did much to achieve what we are nowadays only apt to take for granted.

BOOKS RECEIVED.

The Constitution of the United States. By James M. Beck, LL.D. (London) Humphrey Milford. 12s 6d net.

Economics of Iron and Steel. By H. J. Skelton. Second edition. (London) Stevens and Sons and H. J. Skelton and Co., Limited.

International Trade Finance. By George W. Edwards. (New York) Henry Holt.

International Mercantile Diary and Year-Book. (London) The Syren and Shipping, Limited. 7s 6d.

Three Textile Raw Materials and Their Manufacture. Published by the International Acceptance Bank of New York.

This little book deals in a most interesting manner with the production, manufacture, and marketing of cotton, wool, and silk, the first two parts being written by Mr James P. Warburg, vice-president of the bank, and the section on silk by Mr Benjamin Strong, Jr. Numerous photographs showing the important operations involved greatly add to the interest of the lay reader.

La Lithuanie en Chiffres. Album de Diagrammes. (Lithuania) Le Bureau Central de Statistique du Ministère des Finances.

Bulletin de l'Institut International de Statistique. Tome XXI. (The Hague) W. P. Van Stockum et Fils.

Bradford Foreign Branch 13, Market Street, Bradford.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, November 19. ACCOUNT, November 20.

The tide in Stock Exchange affairs has been running less in favour of the bulls than of the bears. A very noticeable lull occurred in the previous buying movement initiated by the Unionist victory. People began to take a more sober view of values. Amongst industrials, the decline in volume of business became very marked. Yet new issues are still eagerly snapped up; every sound offer is secure of a ready response from the investor and the stag. Talk of tighter money is no longer heard.

The new Sudan Fours ran up to 2 premium when the market in them developed on Thursday. Applicants received scanty allotments, so great was the rush for the stock. Stag sales reduced the premium to 1½. On Friday (yesterday) the market opened in the new 5 per cent. preference stock recently offered at 99½ by the Southern Railway, and a modest premium was established.

The War Loan remained close to 101 throughout the week. Other British Government stocks have been dull. In the foreign market, German Sevens keep about 5½ premium. French issues hang fire. Brazilians are better in places. There is not much doing in foreigners as a whole, Chinese, Mexican, Peruvian, and other speculative bonds being somewhat neglected.

Home Rails have moved rather aimlessly. Prices went up a little, to recede very promptly. The market is what the Stock Exchange calls stupid. Argentine railway stocks took on a tired appearance as the week advanced. There was quiet selling of these and other foreign railway issues, Leopoldinas standing out, exceptionally, with strength.

Rubber shares went back unanimously, upon a decline in the price of the produce, which brought in sellers to every section of the market. The tea group is, however, harder, and the coffee shares hold a good part of their recent gain. The oil market has been disturbed by violent fluctuations in Venezuela. Business fell away in tobacco shares, taking prices with it. Textiles have been in somewhat similar case, though Courtaulds yielded none of their ground. Appointment of a Food Commission caused uneasiness to people who had been speculating in shares likely to be affected by a finding that food prices are capable of reduction. The iron and steel list drooped on the reports from the Weardale Steel, Richardson Westgarth, Platts, and Horden Collieries companies. Shipping shares keep steady. Insurance investments stand higher on the week, and the banking list continues fairly popular. Brewery stocks reacted from their recent best. The cable and wireless markets were disposed to dullness. Motor descriptions received languid attention, and the illumination shares, gas and electric, merely marked time. Bournemouth and

Poole Electric suffered a smart drop upon contradiction of the rumour that the Bournemouth Corporation will take over the company.

The Kafir market has been troubled by fears of a further drop in the price of gold resulting from the improvement, in our favour, of the New York rate of exchange. This induced mild sales, but the market turned better towards the end of the week. Rhodesian and diamond shares have been uninteresting. Amongst Canadians, Selukwes enjoyed a spurt. Burmah Corporations were the main feature of strength in the base-metal market. Mid Eastern tin shares met with a little support from Rangoon and Singapore, but the stock was readily supplied. A fall in Ropps became checked by the declaration of a third interim dividend of 20 per cent. on these 4s. shares. Indian mines have attracted no active attention. Mexicans were a little dull, and the copper share market afforded no feature of interest during the week.

The Hon. Gilbert Johnstone has resigned from the Stock Exchange Committee, and an election will be held, next Thursday week, of another member to fill the vacancy.

NEW ISSUES.

purpose of repaying sums amounting to £100,000 which will fall due before May 15, 1925. The £500,000 stock now issued is identical in all respects with £1,500,000 stock already issued, and the first interest payment on the new stock will be made on May 15th next. The stock is redeemable at par on May 15, 1960, but the Corporation will have the option of redeeming at par the whole of the outstanding amount of the issue at any time on and after May 15, 1920, on giving three calendar months' notice by post and by public advertisement. The Corporation have negotiated the sale of the stock at the price of £96 18s per cent. These details are taken from a statement advertised in compliance with regulations of the Committee of the Stock Exchange, London, in connection with an application for leave to deal in the stock.

City of Leicester.—Issue of £1,500,000 Corporation 4½ per cent. redeemable stock at 98½ per cent. The loan is redeemable between 1945 and 1955. The flat yield works out at £4 16s 5d, and, calculating for redemption at the earliest date, the return on a purchase is approximately 4½ per cent. Interest and principal of the loan are secured upon all property rates and revenues of the Corporation. The rateable value of the city is £1,386,321, and a rate of 1d in the £ produces £5,308, while its total outstanding debt is £5,888,268, of which £4,263,783 is stated to be in reproductive undertakings. A redemption fund will be established and invested under the supervision of the Ministry of Health for the repayment of the loans represented by the stock. This is an excellent investment.

City of Wellington.—Issue of £387,900 5 per cent. debentures, redeemable December 1, 1940. The Union Bank of Australia advertise particulars of this issue, describing it as the balance of the Wellington City Water Supply Loan, 1920. This loan, together with interest and sinking fund of 1 per cent. per annum, is secured on a special rate on all rateable property in the city of Wellington, exclusive of the borough of Miramar. This special rate will yield an annual sum of £51,744, but the corporation has power to increase the rate if necessary. The revenue of the city in the year 1910-11 amounted to £402,735; in 1923-24 it was £1,308,355. The population was 64,372 in 1911, but by 1924 it had grown to 90,940; the rateable value is £14,488,330, as against £9,991,484 in that year. The loan is free from all New Zealand taxes, unless held by persons domiciled in the Dominion of New Zealand.

Spillers' Milling and Associated Industries, Limited.—Authorized share capital, £5,200,000, of which £3,794,971 has been issued, and is fully paid. This is an offer for sale of £1,000,000 5½ per cent. 10-year sinking fund notes at 98 per cent. The company is an association of British interests engaged in the manufacture and distribution of flour and kindred products. The associated companies own mills, factories, and warehouses throughout the United Kingdom and Ireland, well situated to facilitate handling of raw materials and products both for export and domestic markets. The net assets of the combined companies after the present financing will amount to £8,502,302. It is stated that the average profits of the company for the last two years cover the interest requirements of the notes more than five and a-half times. The proceeds of the issue will be used for paying off bank loans incurred for the acquisition and extension of Canadian and other interests, and for additional working capital rendered necessary by increased prices of cereals. The company will each year, commencing with December 1, 1925, make payments to Barclays Bank, as trustees, sufficient, when accumulated at compound interest, to provide for the redemption of the entire issue by maturity. These sums will be invested in British Government securities, or placed on deposit with Barclays Bank, and will constitute the security for the notes. The company will reserve the right to apply the whole or any part of the sinking fund in the purchase of notes on the market. Notes purchased will be cancelled and delivered to the trustees. The trust deed will provide that if the company shall create any mortgages or charges (except in favour of bankers to secure temporary loans and overdrafts in the ordinary course of business) the notes shall be secured as to principal and interest *pari passu* with or in priority to such mortgages or charges. A good industrial security.

The Mid-European Corporation, Limited.—Authorized capital, £1,000,000, in shares of £10 each. The issued capital amounts to £400,000, and 60,000 shares of £10 each are now offered at £10 10s per share. The undertaking was formed in June last for the purpose of investing its funds in Central Europe to take advantage of the high rates of interest offered for capital on the Continent. The authorized capital was originally £500,000 in £10 shares, 40,000 of which were subscribed privately at par; 39,990 of these shares have been called up to the extent of £7 10s per share, and the remaining ten have been paid up in full. The uncalled balance of £99,975 will be called up so as to be payable with the final instalment payable on the shares of the present issue. The bulk of the available capital, it is stated, has already been employed in making advances to various Continental undertakings of good standing, and in connection with these advances the corporation has

acquired options over blocks of shares. To enable the corporation to deal with business now offered by some of the most important concerns on the Continent, the directors decided to increase the capital to £1,000,000. The corporation is in co-operation with the following banks and bankers abroad:—L. Behrens and Sohne, in Hamburg; Niederösterreichische Escompte-Gesellschaft, in Vienna; Comptoir d'Escompte de Geneve, in Geneva; and Pester Ungarische Commercial Bank, in Budapest. The names of the directors are an indication that shareholders will have men at the helm who understand economic conditions prevailing on the Continent.

Automatic Telephone Manufacturing Company, Limited.—Authorized capital £1,000,000, of which £700,000 has been issued. The loan capital is £500,000, in 6½ per cent. (free of income-tax) first mortgage bonds. An advertisement in the Press gives details of the issued bonds. These amount to £350,000, in 6½ per cent., tax free, first mortgage bonds, which were sold as to £210,000 for cash at 90 per cent. between January and November, 1921, the remaining £140,000 being issued and available as security. The issue is secured as a specific charge on freeholds, and as a first floating charge on the undertaking, property, and assets of the company. The bonds are redeemable at 102 on January 1, 1936, or on any January 1 or July 1 before that date. The profits of the company, before paying debenture interest, were £92,317 for 1923, £40,938 for 1922, and £26,018 for 1921. What the value of the assets may be we are not informed.

Wandsworth, Wimbledon, and Epsom District Gas Company.—Authorized stock capital £1,812,471, of which there has been paid up (including premiums) £1,262,003. The authorized loan capital is £906,235, of which there has been borrowed £268,590. Tenders are invited for £280,000 of new capital. This comprises £150,000 4 per cent. irredeemable debenture stock at the minimum price of 79 per cent., £100,000 of 5 per cent. preference stock at the minimum price of 94 per cent., and £30,000 of ordinary stock at the minimum price of 102 per cent. The company's profits for 1923 were £101,000, and exceeded debenture and preference charges, including those on the stocks now issued, by £76,500, and a dividend of £6 9s 6d was paid on the ordinary capital. On the basis of the minimum prices at which tenders will be accepted, the preferred debentures yield £5 1s 3d per cent., the preference stock £5 6s 5d per cent., and the ordinary stock £6 7s per cent. The sales of gas for the year ended December 31st last were 14,137,459 therms, equivalent to 3,007,970,000 cubic feet, an increase of 5.7 over the previous year. The new capital now being raised will be utilised in repaying mortgages and part of a loan from the company's bankers obtained for extensions of the works, plant, mains, &c., necessary to enable the constantly increasing demands for gas to be met. A good utility undertaking investment.

Consolidated African Selection Trust, Limited.—Authorized capital £250,000, divided into 1,000,000 shares of 5s each. The issued capital amounts to £224,335. Debentures have been authorised for £150,000, of which £125,000 have been issued. The company has been formed to acquire the issued share capital of African Selection Trust and Anglo-African Exploration, the note issue of the former company and the debentures being secured as a specific first charge on the whole of the shares and notes so acquired, and as a floating charge over the undertaking and other assets of the company. All the debentures issued have been subscribed at 95 for cash, and are repayable at 110 by March, 1941, by annual drawings; the right is reserved, however, to pay them off at 110 at any time on three months' notice. In the voluminous details published in the Press to comply with Stock Exchange regulations, it is mentioned that the African Selection Trust and the Anglo-African Exploration were formed to acquire mining concessions covering alluvial diamond deposits in the Akim district, Gold Coast, West Africa. In a paragraph we notice it is stated that "Prospecting in the concession has put in sight in excess of 2,500,000 carats." To what extent debenture holders can regard these deposits as security is a matter which no doubt has already been discussed.

Hide and Co., Limited.—Authorized capital, £100,000, divided into 100,000 8 per cent. cumulative preference shares of 10s each and 400,000 ordinary shares of 10s each. This is an issue of the whole of the capital at par. This undertaking has been formed to acquire the business of Hide and Co., drapers, costumiers, milliners, furriers, and furniture and carpet warehousemen, of Kingston-on-Thames. Of the ordinary shares, 240,000 have been subscribed in cash by the directors and others, and the remaining 160,000 are now offered at par to subscribers for preference shares. The business, which was established about 1740, is being acquired as from August 15, 1924, free from all liabilities up to that date. The advertised abridged prospectus states that "the purchase consideration payable by the company has been fixed under agreement No. 2, specified in the full prospectus." Yet it is suggested to investors that they should subscribe on the information given in the abridged prospectus!

Maidstone and District Motor Services, Limited.—Authorized share capital £250,000, divided into shares of £1 each, of which 175,000 are issued and fully paid. The company has not issued any debentures, and we are informed that the assets are free from charge. This is an issue of 35,000 ordinary shares at par. The company was formed in 1911, and the present issue will rank *pari passu* with the existing ordinary shares. The fleet of omnibuses and motor coaches owned by the company numbers 137. Profits are shown in the prospectus for the past four years. It is stated that the dividend for the year to March 31st last was 10 per cent., and that an interim dividend of 5 per cent. has been paid for the current year. The issue will be utilised to purchase additional vehicles, &c. The information offered is sufficient to indicate to investors that it is a profitable utility undertaking.

North Rong River Tin Company, Limited.—Authorized capital £35,000, divided into shares of 2s each, of which 290,007 have been issued. The company was incorporated in June, 1924, to acquire mining properties in Nigeria and elsewhere. Prospecting licences have been purchased for £25,000 in cash, plus "varying royalties." The 290,007 shares mentioned above were issued privately at par. Of this number, 220,000 were underwritten. Apparently the shares will shortly be placed on the market, for these details are given in connection with announcement in the public Press having regard to a Stock Exchange quotation.

Mini Mini (Nyasaland).—Authorized capital £25,000, divided into shares of £1 each, of which 22,070 have been issued. The company was incorporated on January 1st last to acquire the property known as the Mini Mini Estate, situated at Mlanje, Nyasaland. The estate comprises 1,470 acres freehold and 115 acres leasehold, and the area planted with tea is 300 acres. The purchase consideration was £15,000, as to £5,000 in cash and £10,000 left on mortgage at 6 per cent. The crop for the first accounting period of six months was 58,549 lbs, which realised an average price of 1s. 4.34d. It is proposed to plant up an additional 145 acres during the next 12 months. The direction of the concern is in experienced hands.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

THE SUDAN PLANTATIONS SYNDICATE, LIMITED.

SOUND FINANCIAL POSITION.

FURTHER CAPITAL REQUIREMENTS.

The seventeenth ordinary general meeting of the Sudan Plantations, Syndicate, Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London, Mr F. Eckstein (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: This is our seventeenth annual meeting, and for the seventeenth time I have the privilege of addressing you and putting before you a statement which I trust you will find not wholly unsatisfactory, in spite of the fact that we are still in the stage of development, and that in the Gezira, through no fault of ours, the 1923-24 season has been a bad cotton year. On the other hand, at Zeidab, our most northerly plantation, we had a good cotton year, and this, combined with the ruling high cotton prices, enabled this station to give us a fair return for the money invested there.

In the Gezira we suffered from three misfortunes. The first adverse factor was "Blackarm," which is a bacterial disease. The second was "Thrips," which is an insect pest, and number three, our ginning factory at Wad Medani was completely gutted by fire in the middle of our picking season. Our headquarters staff in the Sudan, however, rose to the occasion, and within four weeks we had more than half of the gins running again, and two weeks later the remainder. When you consider how remote Wad Medani is from the resources of civilisation, you will, I think, agree with me that this was a notable achievement. As regards the Blackarm, we were hopeful at the beginning of the season of having found a way to stamp out this disease by a special treatment of our cotton seed, but I regret to say Blackarm has again made its appearance this year, and we have to try some other expedient. For the Thrips we have likewise so far found no remedy.

BALANCE-SHEET ITEMS.

If you will turn now to the balance-sheet you will see that our capital has been raised from £450,000 to £600,000, and to-day the whole of the 150,000 new shares have been issued and paid for, with the result that the share premium account stands to-day at £1,013,000, as against £805,883 on June 30th, the end of our financial year. When your board decided in May this year to raise fresh working capital, I noticed in the Press remarks to the effect that shareholders would be well advised if they would find out why all this money was required, considering that our concession had nearly run out. Well, ladies and gentlemen, our concession has not yet begun, and for the rest I can assure you that this additional money is not required for a joy ride. When raising the capital of our syndicate in March, 1920, from £300,000 to £750,000, I stated that in all probability the whole of this increase would in time have to be issued. That is exactly what is going to happen, and in time I shall have to come to you again for more money by the issue of the remaining 150,000 shares. May I say at once that when this takes place we hope to put before you a scheme for the rearrangement of our capital which I have no doubt will gain your full approval, and which will do away with our share premium account.

While on this subject I can tell you that we have now all the money in hand for the completion of the development and equipment necessary for the 300,000 acres area. We have, however, still to provide for a sufficient working capital, and, to give you an idea of our requirements in this respect, I want to mention just one or two items. Advances to tenants during a full working year will amount to roughly £400,000. Railway carriage and steamer freights to bring our cotton home (leaving cotton seed out of my calculation), £400,000. Ginning expenses, including sacks, bags, salaries, and other incidental expenses, will likewise run into several hundred thousand pounds. These figures need not

frighten you; they do not alarm us, because the more we have to pay in this respect the better we shall be pleased, as big expenditure under these headings can only mean big cotton crops.

The Hosh reserve account has been increased from £80,000 to £140,000. To the Wad Nari reserve account we have put down—being the first year in operation—the sum of £70,000.

STAFF PROVIDENT FUND.

Our staff provident fund stands now at £22,500, provided you again sanction this year's contribution of £7,500 towards this most necessary item. Your board is now engaged in working out a scheme by which we intend to change the present basis into a mutually contributory scheme. Roughly the idea is as follows:—Approved members of our Sudan staff will be allowed to become members of a provident fund to be invested in trustee securities in the names of trustees. To this fund equal contributions on the basis of a percentage of salary will be made by the employee and the company, and, on leaving the service of the company, a member of the fund will receive a capital sum representing his own accumulated contributions, plus, subject to good conduct and length of service, a proportion of the whole of the accumulated contributions made on his behalf by the company. If we succeed in establishing this basis, and if our staff agrees to these conditions, the present fund will disappear and we shall use the whole of this money by granting paid-up policies to some of our older employees, who have borne the burden and the heat and the ups and downs of the leaner times during which we were learning our experience. It is hardly necessary for me to commend this action to your favourable consideration, as we have and always have had an excellent and loyal staff, for whom we cannot do too much.

Creditors total £207,000, against £129,000 last year. Most of this has been settled since we closed our books.

INSTALLATION EXPENDITURE.

On the credit side you find an increase of about £5,000 in the Zeidab pumping installation account, due to the completion of the new Diesel engine. Heavy additions had to be made to the general development account, as well as to canalisation buildings and furniture, agricultural implements and light railway accounts, all due to the progress made with the big scheme.

Stock of cotton figures at £337,000, against £123,000 the year before. Our total shipments of cotton came to 17,679 bales, of which we had only disposed of 8,221 bales on June 30th. Our valuations for the unsold stock were naturally based on conservative lines. Within the last few days we have sold the balance of our stock, so that we are now starting with a clean sheet for the coming crop.

KASSALA COTTON COMPANY.

You will notice that our shareholding in the Kassala Cotton Company is unchanged. At the annual meeting of this company, held in May this year, the chairman explained to the shareholders that the board had some uneasiness regarding possible activities on the part of the Italian Government in Eritrea. These difficulties still exist, but negotiations are in progress on the subject, and we still hope for a satisfactory settlement. Meanwhile, I can inform you that the Kassala Cotton Company has this year—their first year—something like 15,000 feddans under cotton.

One very pleasing feature in connection with our work there is the apparent keen desire of the native population to become tenants under our partnership scheme. As a matter of fact, tenants offered themselves for more than double the area for which water was available.

COTTON CULTIVATION IN BRAZIL.

A new item under this heading is 15,000 shares in the Brazil Plantations Syndicate, and, regarding this holding, I would like to say a word or two, as it has been mentioned to me that our taking an active part in this new undertaking showed a feeling of distrust in our Sudan venture. Ladies and gentlemen, nothing could be further from the truth; we always had, and still have, the greatest confidence in the Sudan as a cotton-producing country, and our work there and the results we have achieved so far speak for themselves. It is, however, our ambition gradually to make our syndicate into a holding or parent concern.

The prospects for profitable cotton-growing in the world are good. You can pick and choose interests in other parts of the globe, and we have for this purpose the best staff in the world, and why should we not make use of this advantage? In this matter, too, please do not be alarmed, as your board is guided by conservative principles and acts with caution. Now, ever since I have been connected with cotton-growing, I have made it my business to keep *au courant* with what is going on in other countries in this respect, and for years past I have been convinced that in time to come Brazil will be one of the really big cotton-growing countries in the world. For the moment the Brazil Plantations Syndicate has acquired two small estates, one the Fazenda Santa Emilia, and the other Fazenda Cayua, with an area of 8,500 acres. The Brazil Plantations Syndicate is fortunate to have our colleague

Lord Lovat as its chairman. He hopes to pay his second visit to Brazil early next year, and I hope to accompany him.

FINANCIAL POSITION.

To return to the Sudan Plantations Syndicate, our financial position is good, as the figures in our balance-sheet show. Now, if you will look for a moment at the profit and loss account, you will see that our total gross profits amount to about £251,000. Against this our general expenses and cultivation expenses are a good deal higher than last year, owing to a largely increased staff and owing to the duplication of our cotton area. The net profit, after liberal writing off, is therefore £113,000. Against this we paid you, in July, an interim dividend of 10 per cent., amounting to £45,000, and we now propose to pay a final dividend of 10 per cent., which will amount to £60,000, absorbing £105,000 in all.

The balance carried forward stands now at the splendid figure of £176,500. It has been the policy of your board gradually to build up this reserve with the idea of having a dividend equalisation account, and we shall not hesitate to draw thereon in case of need. Our business is an agricultural one, which means that we are subject to good and medium crops—we never have had an entire failure—and we therefore consider it wise to take precautions.

WORK AT THE STATIONS.

Now a word or two about the work done at our stations. At Zeidab we have completed the new installation of a Diesel oil engine, and the plant is working satisfactorily. We believe that the plant will result in considerable economies in running expenses. As already mentioned, we have had a very satisfactory year, and, as far as I can judge at present, the coming season promises to be an equally good one, as we have picked already about 11,500 kantars and shipped about 1,000 bales, part of which is already sold at a fair price. In the Gezira, on the other hand, unfortunately, for the reasons already stated, our cotton crop from all stations has not been good, as I saw myself, and it resulted in a yield of just under three kantars per feddan. This year we have a similar acreage—namely, about 20,000 feddans—under cotton in the Gezira, and the latest reports from our managing director are, I regret to say, not altogether satisfactory, inasmuch as both black-arm and thrips are again general over all our Gezira cotton fields. Luckily, so far, blackarm does not appear to have done much damage, but thrips are on the increase. To summarise, I would call our prospects for this season fair.

The Sudan Government has in June this year given us definite notice that the Makwar Dam should be completed next year, and that gravitation water will be supplied to us in time for the 1925-26 crop. If this forecast proves correct, it will mean that our concession will date from July, 1925, which is important for you to know and to make a note of. Under these circumstances we are working to have a very considerable area ready for cultivation in July, 1925, and, if all goes well, I hope to be in a position to announce to you in 1926-27 that we have achieved what we originally set out to do—namely, to have 100,000 acres under cotton in the Gezira.

THE 300,000 ACRES AREA.

In this connection I may tell you that we had to remodel to some extent our previous scheme for twenty stations on the 300,000 acres area. We have added this year to our report a plan showing a division of this acreage into nineteen stations. This was done to facilitate the necessary water control, which is a highly technical matter, and on which I need not enlarge. We have started ploughing on the extended areas, and I feel sure you will be pleased to hear that of the 300,000 acres we have completed so far the development of 225,000 acres and the canalisation of 200,000 acres. In our housing programme—namely, houses, offices, stores, &c.—

of the nineteen stations we have finished about two-thirds, and the remainder will be finished by July next year. Our requirements in ploughing engines and other heavy implements are mostly on the spot, and in working order. Of our four new big ginning factories, the first one will be completed by the end of this month, the second by the end of December, and the two remaining will be finished some time next year.

RESEARCH WORK.

At our last annual meeting I mentioned that a commission, consisting of Sir John Russell, of Rothamstead, and of Dr Martin Leake, of India, and now Principal of the Trinidad Research Station, had been appointed for the purpose of advising the Sudan Government, the Empire Cotton Growing Corporation, and your syndicate regarding scientific research work relating to cotton planting. Their valuable report has been handed in, studied, and adopted in most of its recommendations. The three parties mentioned contribute towards the expenses. We, on our part, undertake the running of a seed farm under an expert. Our relations with the Sudan Government are good, and our work has been unaffected by political conditions.

COTTON POSSIBILITIES IN THE NUBA MOUNTAINS.

During my annual trip to the Sudan at the beginning of the year, Mr MacIntyre, our managing director, and I paid a visit to the Nuba Mountains Province, which is situated between the White Nile and Kordofan, with a view to investigating the possibilities of cotton growing in that district. It is our considered opinion that in years to come this province will prove a valuable cotton-growing area, and, whether we have anything to do with it or not, a large amount of cotton will be grown there. You have there the three essentials necessary for success in this respect, namely:—(1) Large tracts of land with good soil; (2) the necessary rainfall for germinating the seed and ripening into cotton; (3) real cotton climatic conditions. On the other hand, you have, as in every new country, considerable difficulties to contend with, chiefly the lack of communications. There are also other points which require careful study and investigation. But, when all is said and done, difficulties are there to be overcome, and, as mentioned before, I hope I shall live to see in the Nuba Mountains a flourishing cotton industry. What the Sudan really wants is money for the construction of lines of communication free of interest for a number of years.

Mr J. A. Hutton seconded the resolution, which was unanimously adopted.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

SUCCESSFUL RESULTS—INCREASED PASSENGER AND GOODS TRAFFIC RECEIPTS.

The twenty-seventh ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London. The Right Hon. Lord Ashfield, P.C., presided.

The Chairman, in moving the adoption of the report and accounts, said: Last year I foreshadowed that we might look for a definite improvement in our business, and that expectation, I think you will agree, has been fully realised during the year under review. You will have observed that the gross receipts of the railways have increased by £530,000, or approximately 14 per cent., over the previous year. On the other hand, the working expenses have increased by £225,000, or about 9 per cent. The net receipts show an increase of £305,000, or 23 per cent., while the ratio of expenditure to receipts was 62.60 per cent., against 65.40 per cent., or a reduction of 2.80 per cent. This improved result is

The Anglo-South American Bank Ltd.

BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

due, in a large measure, to the greater prosperity which the Island of Cuba has enjoyed, and which is reflected in the earnings from passenger and general goods traffic, and in particular to the much heavier sugar traffic.

PASSENGER AND GOODS TRAFFIC.

The earnings from passengers were £1,253,000, against £1,150,000 for the previous year—an increase of £103,000, or nearly 9 per cent. The receipts from general goods traffic were £1,257,000, against £1,118,000—an increase of £139,000, or nearly 12½ per cent. Sugar traffic produced the greatest increase, the earnings from that source being £1,078,000, against £882,000, an increase of £196,000, or over 22 per cent. The increase in sundry receipts, which is directly attributable to the heavier sugar traffic, amounts to £74,000, or 19½ per cent. With the exception of livestock traffic, ferry and Guanabacoa service, and receipts from public telegrams, which show small decreases, every item of receipts has contributed to the improvement which has taken place in the gross receipts during the year under review. This year we have carried nearly 35 per cent. of the total sugar crop of the island, compared with about 31 per cent. in the previous year. On the expenditure side of the accounts, most of the departments show an increase in costs during the year.

The total tonnage of goods traffic handled during the year amounted to nearly 13,000,000 tons, an increase of 1,726,000 tons. Of that total 9,738,000 tons is represented by sugar traffic, while public traffic, apart from sugar and livestock traffic, reached a total of 2,743,000 tons, or an increase of 349,000 tons.

I visited Cuba in September last, so that I might make myself familiar with matters connected with your undertakings. The train service appears to meet the requirements of the public, and is economically worked. The rolling stock is well maintained, and the permanent way, especially where it has been ballasted, is in good condition. Considerable ballasting and renewal of sleepers is being done, and I think that the money which is being spent for these purposes is a wise and necessary expenditure. There are several stations which are somewhat antiquated, and which do not provide proper accommodation for our passengers; these will require rebuilding. As far as the physical condition of your property is concerned, I can give you a good report. I wish that I might be able to say the same about the labour situation.

CURRENT YEAR'S PROSPECTS.

It was my good fortune to meet the President of Cuba, Dr Zayas, the President-elect, General Gerardo Machado, members of the Government, and other prominent people. Business conditions on the island are very satisfactory. In a cable recently received from the acting general manager, Mr Mason, the cane crop for the current year is estimated at a very high figure. He says: "Prospects for the coming crop are at present very favourable, and, given favourable weather conditions, I expect an increase in production of 10 per cent." When I come to place before you the prospects for the current year, I find myself in somewhat of a difficulty. Traffic receipts are satisfactory, the latest figures being for the week ended November 8th £60,625, an increase of £2,351, the aggregate for the period being £1,215,985, an increase of £121,250, but, on the other hand, our expenses for the current year will be higher owing to the increased cost of labour. You have been told that the crop for the coming season is estimated at 4,500,000 tons, and this should benefit your railways.

I mentioned last year the law which had been recently enacted, and which, amongst other things, authorised the consolidation of the existing railway systems of the island. During the months which have intervened the Cuba Railroad and its allied company and the Cuban Northern Railway have consolidated their interests, so that they may now be regarded as one system. This means that there are practically only two important railway systems on the island—yours and what is known as the Consolidated Railroads of Cuba. Of the two, yours is by far the larger and more important. No plan is under consideration which has for its object the consolidation of these two interests.

The report and accounts were agreed to.

DALGETY AND COMPANY, LIMITED. GRATIFYING RESULTS OF THE YEAR. PROSPECTS FOR THE CURRENT SEASON.

The fortieth annual general meeting of Dalgety and Company, Limited, was held, on the 13th instant, at the head office, 65-68, Leadenhall street, London.

The Hon. Edmund W. Parker (chairman of the company) presided.

The Secretary (Mr C. D. Mackintosh Gow) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his address, said that a year ago the directors had the pleasure of laying before the shareholders a very satisfactory statement of accounts, and it afforded them

greater pleasure to submit on the present occasion an even more gratifying result. Australia had, as usual, contributed largely to this result, but there had been a distinct improvement in the returns from New Zealand—an improvement which had commenced to manifest itself in the previous year. Trading in general between this country and the Commonwealth and the Dominion had, however, been severely hampered by the exchange position. Unfortunately, borrowing by the States and municipalities of the Commonwealth on the London market had continued during the year, thus adding to the funds held by the banks in London, and this, of course, had helped to aggravate the situation. If this borrowing would cease there seemed little doubt that the overseas exchange of goods would eventually rectify the exchange situation. Meantime, some temporary remedy had to be sought. The Federal Parliament had recently passed an Act which would alter the constitution of the Commonwealth Bank. This institution would now be governed by an independent board of directors, and would have control of the note issue of the Commonwealth, which up till recently had been in the hands of a body known as the Notes Issue Board. The bank had now undertaken to issue additional note currency to a substantial amount, and he hoped that this would help to relieve the situation. At the same time, it should be the policy of the Australian banks to continue reasonable restrictions of local credit, which would assist in preventing inflation, while not unduly hampering industry.

THE WOOL MARKET.

Reviewing the course of the wool market, the Chairman said it had been generally anticipated that the 1923-24 season would show a decrease in the Australian wool clip of about 250,000 bales, some estimates putting it at an even higher figure. The actual decrease, however, amounted to 138,000 bales, while the New Zealand clip showed an increase of just over 5,000 bales. Prices rose steadily after the opening of the Australian season in September, until, at the end of June, 1924, merinos showed an average rise of from 15 to 20 per cent., fine crossbreds about 25 to 30 per cent., and medium and coarse crossbreds from 65 to 75 per cent., and thus the value of the clips showed a marked increase. Actual sales in Australia and New Zealand for 1923-24 showed a decline of 207,244 bales, but the actual increase in value amounted to over £10,750,000. To put this in another form, the Australasian average value per bale for the 1923-24 season was given as £29 9s 9d, against an average of £22 9s 8d for the 1922-23 season—an average increase in value of over £7 per bale—a most satisfactory result for all growers. This year it was expected that the Australian clip would amount to somewhere about 2,000,000 bales, which would more than make up for last season's decrease. The New Zealand clip, on the other hand, would probably be about stationary. Values were now on a very high level—some people might consider them dangerously high—but according to reliable statistics the world consumption of wool had far outstripped the production. Comparing the prices ruling at the end of June, 1923, with those of to-day, merino wools were from 30 to 35 per cent. dearer, fine crossbreds 40 to 45 per cent. dearer, while medium and coarse crossbreds showed an extraordinary advance—as much as 90 to 100 per cent. There was at present, a strong demand for fine wools, but an even keener demand for crossbreds, and this had resulted in the clearance of the whole of the stocks of B.A.W.R.A. wool, the last bale being sold in Liverpool in May of this year.

ENCOURAGING NEW CLIP.

The character and condition of the first instalment of the new Australian clip were encouraging, the sheep cutting heavier fleeces generally, while the staple was sound and well grown. In many districts in the Eastern States the sheep would cut fully 2 lbs of wool per head more than last season. On the other hand, in the Northern parts of Western Australia the rainfall had been extremely light, and losses of stock had consequently been heavy.

A most important point affecting the lifting of the coming clip was the question of finance. The extreme delicacy of the financial position had naturally made it very difficult for buyers to open credits, so that in the absence of some improvement there was sure to be some difficulty in lifting the quantity allocated for sale in Australia before Christmas—namely, 850,000 bales. Prices had reached such a high level that very large sums were required by purchasers. The whole position practically depended upon the question of exchange, and he was glad to be able to state that an arrangement had been come to between the Commonwealth Bank and the Associated Australasian Banks whereby the Wool and Wheat Exchange would be partially pooled, after allowing for the varying incidence of the banks' business and resources. In order to do this the Commonwealth Bank would take its share by making available the additional currency required. Care would naturally be taken not to encourage inflation, and he expected that the issue of currency would be limited to the exceptional business to which it was intended that it should be applied. He hoped that the measures would be adequate to deal with the situation.

DAIRY PRODUCE.

The value of the dairy produce exports from the Commonwealth during the past season reached about £5,000,000. The average price realised for butter was 8s, and for cheese about 12s per cwt less than in the previous season, but, in spite of this fall, prices must still be satisfactory to producers. In New Zealand, exports of butter and cheese were about 5 per cent. less than the record figures of the previous season. The average price realised for butter showed a fall of 6s, and for cheese 10s per cwt. The approximate value of New Zealand butter imported into this country for the twelve months under review was nearly seventeen millions sterling. The Dominion still held the premier position in the world as an exporter of dairy produce; the company's business in this commodity had shown a very satisfactory expansion, and prospects for the coming season were encouraging. Prices for mutton and lamb were still at a satisfactory level for producers. The value of frozen meat exported from the Commonwealth for the period under review amounted to about £2,500,000, and from the Dominion about £8,000,000.

WHEAT CROP.

The Australian wheat crop for 1923-24 was about an average one as regarded quantity, while prices, especially towards the latter end of the season, were on a higher level than had prevailed since the war years. The total crop yield was about 126,000,000 bushels, of which some 39,000,000 bushels went into local consumption, leaving 87,000,000 bushels for export, either as wheat or in the form of flour. Good prices last season had resulted in a larger acreage being put under wheat this year, and, as the weather conditions had been most favourable, there was every indication that Australia would enjoy a bumper harvest, which should yield handsome prices, as on present appearances the world's wheat supply was considerably below the average. Considerable progress had been made in cotton-growing in Queensland.

The latest cables to hand were most satisfactory, and indicated that, with the exception of Western Australia and a small part of Queensland, the prospects for the current season in both Australia and New Zealand were very good.

THE ACCOUNTS—INCREASED BONUS.

Dealing with the accounts, the chairman mentioned that the market value of the reserve fund of £1,000,000 at June 30th last was £1,160,118. The net profits for the past year were £323,988, an increase of £69,826 upon the previous year, and, as that year's result was exceptionally good, the present figure must be regarded as approximating to the high-water mark. With £116,063 brought forward, there was an available total of £440,051. The dividend was being maintained at 10 per cent., free of English income-tax, but on this occasion the board had felt justified in recommending an increase of 2s per share in the bonus, making it 7s per share, also free of English income-tax. This bonus, however, should be looked upon as the outcome of exceptional results for the past year only, and he did not wish shareholders to regard it as a permanency. He hoped they would be able to maintain the dividend, but in a business of this nature they were exposed to so many risks, climatic and otherwise, that results must always fluctuate in a marked degree. At the same time, he did not anticipate any great falling off in the company's returns—at least during the current year. They were carrying forward the substantial sum of £170,051, in view of the grave anxiety caused by the exchange question, the directors considering it imperative for the company to be in a strong position, so as to meet any unexpected developments.

In reply to a question, the chairman said that in the current year the company should save something like £16,000 owing to the abolition of the corporation profits tax.

The report and accounts were unanimously adopted.

LONDON MARITIME INVESTMENT COMPANY, LIMITED. STEADY AND CONTINUOUS PROGRESS. LORD KYLSANT ON TRADE PROSPECTS.

The twenty-seventh annual general meeting of the proprietors of the London Maritime Investment Company, Limited, was held, on the 11th instant, at Winchester House, Old Broad street, London, E.C.

The Right Hon. Lord Kysant, G.C.M.G. (the chairman), presided.

The Secretary (Mr O. A. Hall) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—This investment company has been established over 27 years, and has made steady and continuous progress. I have had the honour to be chairman since its incorporation in 1897.

The report and accounts for the year ended September 30, 1924, which you have before you, set out clearly the financial position of the company, and do not call for special comment.

INCREASED PROFITS.

The net profit for the year shows a slight increase over that of the previous year, and amounts to £57,677, which, with the balance brought forward, makes a total sum of £62,749.

After providing for the payment of the dividend upon the preference stock and adding £7,065 to the reserve fund, we recommend the distribution of a final dividend upon the ordinary stock of 4 per cent., less income-tax, making, with the interim dividend already paid, a total of 8 per cent. for the year, and leaving £5,309 to be carried forward.

STRONG FINANCIAL POSITION.

Our reserve fund (separately invested in British Government securities) now amounts to £200,000, a substantial figure in relation to the size of our capital.

We have no debenture indebtedness, and a valuation of the company's assets showed that the capital and reserve fund were more than intact.

The company is thus in a strong financial position, which justifies the sound conservative policy we have always pursued.

TRADE OUTLOOK.

As an investment company our progress and prosperity are bound up with the general state of British trade, commerce, and shipping. It is, therefore, appropriate that I should say a few words on the present position and future outlook.

The City of London, which is still the centre of the financial world, has no politics save that it is a firm believer in business integrity, honesty, and stability, and the business community look to the new Government under Mr Baldwin to maintain these great British traditions.

No Government can secure good trade and employment, but it can ensure the conditions under which—given enterprise, hard work, and industrial peace—commerce may thrive and the prosperity of our country and Empire be not only assured, but greatly expanded.

SIGNS OF GRADUAL RECOVERY.

British business has been engaged in a severe struggle during the past three years, but I believe this country has not had since the war such an opportunity as now presents itself. There is a steadier state of affairs on the European Continent, with more stable exchanges, and there are many signs of gradual recovery in trade.

We now have in power a strong and stable Government, able to put into operation a clear and consistent policy, to which the country may turn for a period of peace and prosperity.

If, with good will, all concerned will set themselves to solve the problems that lie ahead and individually to do their best, I am confident we will see a real revival of trade, the steady reduction and gradual disappearance of unemployment, and the amelioration of the burdens of taxation which still press on industry and commerce.

I now have pleasure in proposing: "That the report and accounts for the year ended September 30, 1924, as submitted be received and adopted, and that the dividend as therein recommended be declared and paid."

Mr George Dodd seconded the motion, which was carried unanimously.

The Chairman proposed the re-election of Mr George Dodd as a director of the company.

The resolution was seconded by Sir F. Vernon Thomson, K.B.E. (manager), and unanimously approved.

The auditors, Messrs Fookes, Hickman, and Co., were

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

INDIA COUNCIL BILLS AND TRANSFERS.

Tenders were received at Bank of England on November 11, 1924, for Rs100,00,000 in bills and telegraphic transfers on India, but no applications were received. Next week 100 lacs will again be offered.

The Government of India have announced that the total remittances to the Secretary of State for India from April 1 to October 31, 1924, were as follows:—

Council bills and telegraphic transfers	£ 1,949,000
Sterling purchased in India	27,560,000
Sterling taken over in London	700,000
	30,209,000

The total includes £1,000,000 remitted on account of the paper currency reserve.

BULLION.

GOLD STANDARD RESERVE.

Statement showing the form in which the balance of the reserve was held on October 31, 1924:—

In India	Nil
In England—	£
Cash at the Bank of England	2,679
British Government securities—	
Value as on September 30, 1924	35,641,896
Since purchased (cost price)	4,538,233
	40,180,129

SIDNEY TURNER, Accountant-General.

India Office, November 11, 1924

Messrs Samuel Montagu and Co. write on November 12th as follows:—

GOLD.

The moderate amount of gold available in the market here this week was readily absorbed on account of India. Large purchases of gold, shipment from Durban, have also been made on behalf of that country. Gold valued at \$3,000,000 has arrived in New York from Holland.

SILVER.

Again the market has been dominated by the exchange with the United States, and appreciation of sterling has been accompanied with free selling from that quarter. A sympathetic influence is exerted also in other ways, for the readiness of bears to take advantage of the opportunity to take profits is checked by rapidly falling prices, and China and India attach much importance to the cross rate. On Monday the quotation reached 33½d for cash, and 33½d for two months' delivery—the lowest fixed since August 18, when the prices for cash and forward delivery were both 33½d. The Continent has bought and sold, and both India and China have placed silver in the market, though the latter has also been a small purchaser.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

* Combined revenue.

CROSSES AND WINKWORTH CONSOLIDATED MILLS.—The directors announce that although the profits of the company and its associated companies show an improvement for the first six months of the financial year, they do not intend to make any dividend payment on the preference shares on January 1st. The dividend on these shares is in arrears as from March 31, 1922.

J. B. BROOKS.—With the proposed final dividend of 7½ per cent., the total dividend on the ordinary shares will be 10 per cent., less tax (the same), in addition to which a bonus of 1s per share, or 5 per cent., free of tax, is to be paid (the same).

J. LYON AND CO.—Interim dividend of 2s per share on the issued ordinary and "A" ordinary shares, and one-fifth of this amount (4s per share) on the issued proportional profit and "B" proportional profit shares, payable on December 1st.

THE EASTMAN KODAK COMPANY OF NEW JERSEY have declared the following dividends, payable on January 2nd:—\$1.25 per share on common stock; extra dividend of \$0.75 per share on common stock.

NORTH BROKEN HILL.—For the month of October the production was as follows:—38,300 tons of crude ore were treated, producing 6,720 tons lead concentrates, averaging 63.2 per cent. lead, 29.2 ozs silver per ton, and 7.4 per cent. zinc; also 6,050 tons zinc concentrates, averaging 47.6 per cent. zinc, 6.8 per cent. lead, and 7.9 ozs silver per ton.

SOUTH AMERICAN COPPER.—During October 4,140 tons of ore were produced; 4,273 tons with approximately 1,150 tons of quartz flux added were smelted, producing 445 tons of copper matte, assaying 34 per cent. as fouled in sand moulds.

Reports and Notices.

The Rt. Hon. Austen Chamberlain, having accepted the office of Secretary of State for Foreign Affairs, has resigned his position as chairman of the British Shareholders Trust, Limited, and the directors have appointed their colleague, Sir Edmund Wyldbore-Smith, chairman of the company.

The Royal Exchange Assurance announces that Mr James Bland, of Messrs James Platt and Co., cotton merchants, Liverpool, has been appointed to a seat on the local board of directors attached to its Liverpool branch.

Mr Maurice William Henty has been appointed a director of the Central Mining and Investment Corporation, Limited.

Agreement for the amalgamation of Claudius Ash, Sons, and Co., Limited, and De Trey and Co., Limited, has now been signed, but it is subject to ratification of the shareholders.

At an extraordinary general meeting of the New Dimbula Company, Limited, held on the 11th inst., at the offices, 60 Gracechurch street, E.C., the resolutions embodying the capitalisation of part of the reserve and its distribution in the form of bonus shares were unanimously adopted.

GOVERNMENT STOCKS, &c.

BRITISH GOVERNMENT 5-15 YEAR TREASURY BONDS.—The Treasury give notice that, the Bank of England having certified that the average rate of discount at which Treasury bills were issued to the public during the half-year ended November 1, 1924, did not exceed 5½ per cent. per annum, no additional interest will be payable upon Treasury Bonds 1935 on the next interest date, viz., May 1, 1925.

BANKS.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.—The net profit for the year ended June 30, 1924, amounted to £502,502, against £430,348 in preceding year. The dividend is unchanged at 12½ per cent., free of income-tax. The carry forward is £130,102, against £112,600 brought in. The sum of £59,498 set aside last year in accordance with the articles of association has been appropriated to the purchase of £67,500 deferred inscribed deposit stock, which has been cancelled and the amount passed, as before, to the credit of bank premises. The expansion of the business calling for additional capital, the board have decided to make a further issue of shares. The issue will be one of 150,000 shares of £5 each, to be paid up to £3 per share, and will be offered in the first instance to the shareholders on the register at the date of the offer at the price of £5 per share, representing a premium of £2 per share, and in the proportion of one new share to each four shares then held. Fractions will be disregarded, and the directors will have power to deal with the shares representing the fractions, and with shares, if any, not taken up. The market price for the existing shares, £2 10s paid, was about £7½ on the 31st instant, this price including the dividend of 7½ per cent., tax free. The new shares, which will be offered on December 15th next, will rank for the final dividend to be declared in November, 1925. When the issue has been completed, it is proposed that the premium of £2 per share shall be applied in paying up 10s of the present uncalled liability of £2 10s per share on the 600,000 shares at present issued, bringing all the shares to a paid-up amount of £3 per share, with £2 uncalled, and thus, in effect, making the issue price of the new shares equivalent to par. The necessary resolution to give effect to the above proposals will be submitted to the meeting, and subsequently for confirmation as a special resolution to an extraordinary general meeting to be held on December 4th next.

MITSUBISHI BANK, LIMITED.—This Japanese banking institution has a subscribed capital of 50,000,000 yen. The paid-up capital is 30,000,000 yen. The reserve fund is 22,634,600 yen. Total assets are 387,428,040 yen. Cash stands at 25,121,738 yen. Government bonds stand at 43,058,453 yen, and other bonds and securities are at 37,809,066 yen. With regard to liabilities, deposits stand at 201,846,240 yen. The net profit for half-year ended June 30, 1924, is 4,236,374 yen. Balance brought in is 584,110 yen, making 4,820,484 yen. This has been allocated as follows:—To legal reserve fund, 500,000 yen. To special reserve fund, 1,500,000 yen. To pension reserve 200,000 yen. Bonus, 200,000 yen. Dividend, 10 per cent. per annum, 1,500,000 yen. Balance forward, 920,484 yen.

RUBBER, &c.

DJASINGA RUBBER AND PRODUCE.—The fourteenth annual report to June 30, 1924, reveals a net profit of £16,237, as against £21,591 in preceding year. The ordinary dividend is unchanged at 4 per cent. The sum of £5,000 is put to reserve and £14,138 carried forward. Cost of production was 9.75d per lb, against 8.58d per lb in preceding year. Average net sale price was 11.15d per lb, as compared with 10.93d per lb. The tea crop was 374,177 lbs, as against 392,455 lbs. Cost of production was 10.28d per lb, as against 9.30d per lb. The average net price realised was 10.89d per lb, against 11.7d per lb in preceding year. The ordinary issued capital is £436,126 in £1 shares. There are no preference shares or debentures.

TANDONG RUBBER COMPANY.—The net profit for the year ended June 30, 1924, amounted to £26,091, as compared with £27,922 in the preceding year. The ordinary shareholders receive 10 per cent., the same as for the preceding year. The sum of £26,461 is carried forward, as against £25,370 brought into the accounts. The average net sale price, including the estimated value of the unsold portion of the crop, was 12.31d per lb, as compared with 12.63d per lb for the previous year. The cost of production, free on board at port of shipment, including commission to staff, depreciation, and London administration, was 8.69d per lb, as compared with 8.23d for the previous year.

MISCELLANEOUS.

AMALGAMATED ANTHRACITE COLLIERIES.—The first report of this important undertaking for the period from June 16, 1923, to September 30, 1924, shows that the net profit is £255,988. The directors have transferred £69,530 to capital reserve fund, the dividends received from subsidiary companies out of profits earned prior to June 30, 1923. The ordinary shareholders receive 11½ per cent., absorbing £174,508, and £11,950 is carried forward. The issued capital is £2,007,507 in £1 shares. There are no preference shares or debentures.

ARGENTINE SOUTHERN LAND.—This concern has had a good year. Its net profit has risen from £33,179 to £69,559, and the dividend on the ordinary shares has risen from 5 to 8 per cent. The directors have put £25,000 to general reserve and £10,000 to livestock contingencies and renewals reserve. The sum of £18,580 is carried forward, against £26,021 brought in. The total assets are £773,999. Investments amount to £95,280, and are in British and Colonial Government stocks at or under market value. Cash is at £7,847. The ordinary issued capital is £525,000 in £1 shares. There are no preference shares or debentures.

BURBERRY, LIMITED.—The fifth report shows that the amount brought in from 1923 was £95,221. Deduct preference dividend for

six months to January 31, 1922, paid April 1, 1924, £37,500; preference dividend for six months to July 31, 1922, paid August 1, 1924, £37,500—£20,221. Add profit for the year to March 31, 1924, £98,823, which compares with £91,708 in preceding year, leaves £119,044, which the directors propose to utilise as follows:—In payment on December 1, 1924, of preference dividend for six months to January 31, 1923, £37,500; and to carry forward, £81,544. The directors consider the result of the company's operations to March 31, 1924, to be satisfactory, and state that the outlook for the future is encouraging. Having regard to the estimated present values of the freehold and leasehold premises and fixed plant, the directors have not considered it necessary to charge any depreciation in arriving at the profits for the year.

CARRONGROVE PAPER COMPANY, LIMITED.—The second annual report states that the gross profit for the year ended October 31st, 1924, amounts to £90,776, which, after adding the amount of £5,864 brought forward from last year (after realisation and writing off of investments, which now stand at nil in the company's books), makes a total of £96,640. After providing for depreciation, debenture interest, directors' fees, managing director's remuneration, and corporation profits tax, the balance available amounts to £54,657. The directors recommend the payment on December 1st of a dividend of 5 per cent. (less tax) on the ordinary shares, to carry to reserve fund £5,000, leaving to be carried forward to next year the sum of £29,507. During the year under review the directors have redeemed and cancelled £31,100 of the £300,000 debentures originally issued by the company.

HORDEN COLLIERIES, LIMITED.—This well-known concern has just issued its report and accounts to September 30, 1924. Net profits, after payment of debenture interest, amount to £250,536, against £330,903 secured in preceding year. Dividend has been reduced from 15 per cent., free of income-tax, to 12½ per cent., free of income-tax. The sum of £60,000 has been carried to reserve, making reserve £220,000, and £55,382 has been carried forward, against £52,346 brought into the accounts. The issued ordinary capital is £1,500,000 in £1 shares. There are no preference shares. There is £258,959 in 5 per cent. debenture stock outstanding. It is pointed out that the year has been marked by decreased home demand, and severe foreign competition, especially during the last few months.

INVERESK PAPER COMPANY, LIMITED.—The report for the 13 months ended October 31, 1924, shows a gross profit of £69,783, which, with the £11,368 brought forward from last year, amounts to £81,151. After providing for depreciation, debenture interest, the income-tax, &c., the balance available amounts to £52,686. The directors recommend the payment of a dividend of 12½ per cent. on the ordinary shares, payable December 1st, and to carry forward to next year the sum of £32,826. The report states that in February last an opportunity arose of acquiring a controlling interest in the Carrongrove Paper Mills, and the Inveresk Paper Co., Limited, purchased 111,333 of the 200,000 ordinary shares of £1 each in the Carrongrove Company, at a total cost of £66,902.

LIVERPOOL NITRATE.—The forty-first annual report shows that this company has had a prosperous year. The net profit for year ended June 30, 1924, is £108,157, against £41,009 in preceding year. The ordinary dividend is 22½ per cent. for the year, against 15 per cent. for preceding year. The reserve has been strengthened by £24,660, while £24,283 has been written off properties. The issue of 57,725 new shares referred to in the previous report was duly made, and the called-up capital of the company is therefore now £350,000, in 350,000 shares of £1, fully paid. The company's properties appearing under the headings of the several oficinas in the last balance-sheet are shown in the present one in a new form, under rearranged headings, which the directors consider to be more convenient and advantageous.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.—We regret to announce that Mr Godfrey Isaacs has been obliged, under doctor's orders, to resign his position as managing director of Marconi's Wireless Telegraph Co., Limited, and of the Marconi International Marine Communication Co., Limited (which positions he has held for 15 years), and deputy-chairman of the board of directors of these companies. Both companies will continue to have the benefit of Mr Isaacs' assistance in a consultative capacity whenever the boards of directors so desire. The boards of directors of Marconi's Wireless Telegraph Co., Limited, and of the Marconi International Marine Communication Co., Limited, have appointed the Rt. Hon. F. G. Kellaway, P.C., to succeed Mr Isaacs as managing director and deputy-chairman of the respective companies. Mr Kellaway has been a member of the boards of these companies for the past two years, and has taken an active part in their management.

PERUVIAN CORPORATION.—A circular has been issued by the Peruvian Corporation to holders of debentures in the corporation to the effect that a scheme has been prepared whereby it is proposed (*inter alia*) permanently to restore the original fixed rate of 6 per cent. annual interest; to continue the redemption of debentures at 105 per cent. by annual drawings until April 1, 1945, or until repayment of the whole of the debentures, whichever be the earlier; to postpone the latest date for repayment of the debentures from April 1, 1926, to April 1, 1945; and to empower the corporation to accelerate redemption of the debentures at 105, with other provisions as stated in detail in the scheme. Fuller particulars of the scheme will be found in our advertisement columns.

WEARDALE STEEL, COAL, AND COKE.—The profits for year ended September 30th amounted to £166,221 (against £263,818 in the preceding year). Debenture interest absorbs £11,492. The fixed 6 per cent. on the preferred ordinary shares absorbs £30,000, and a dividend at a similar rate on the deferred ordinary shares will take £13,500. Further dividends are proposed equal to 27 40ths per cent. on the preferred ordinary shares, and 1½ per cent.

on the deferred ordinary shares, and after placing £100,000 to reserve (against £170,000) the sum of £58,699 is carried forward. For previous year the total dividend on the preferred ordinary shares was 10 per cent., and on the deferred ordinary shares 14 8-9ths per cent.

Commercial Reports.

THE OORN TRADE.

Mark Lane, Friday Evening.

Fair progress was made during the week with ploughing and seeding operations, though field work generally is somewhat hampered by the sodden state of the soil, and particularly on heavy lands. Threshings of native wheat are on a fairly liberal scale, but condition of samples leaves much to be desired, and a good deal is unsuitable for milling purposes. The demand runs on moderate lines, but prices are firmer in sympathy with the position of imported descriptions, quotations ranging from 12s to 12s 10d per 112 lbs, free on rail, as to quality. Imported kinds experienced a fair inquiry at irregular, but generally firmer rates in view of higher forward values. No 1 Northern Manitoba quoted 70s 9d, No 2 hard winter 64s 6d, No 1 Northern Duluth 64s 9d, choice white Karachi 63s 6d, all per 496 lbs ex ship terms. In the floating and forward cargo section a firmer tone ensued on higher cable advices from the United States, and adverse Argentine crop reports, while a better demand prevailed, especially for white descriptions. Steamers of Australian January sold 63s 9d to 65s, February 64s to 64s 6d, and sailers of ditto January-February 64s 6d to 64s 7½d, Barusso 63½ lbs January-February 63s 6d, Rosafe 63½ lbs, expected to load 17th inst., 64s per 480 lbs, c.i.f. terms. Maize cargoes generally quiet, but holders required full to dearer rates. Steamers of Plate afloat sold 44s 9d to 45s, and ditto December 16th-January 47s 6d per 480 lbs. Flour in moderate request, but prices were advanced in sympathy with wheat. London standard straight run quoted at 52s, patents 54s to 55s, town whites 52s per sack, delivered in metropolitan area. Imported

Nov. 8	322,761	736,110	75,623	9 1	10 8	8 8

Our Middlesbrough correspondent's report, dated November 13, 1924, is as follows:—Pig-iron: After considerable business in pig-iron during the last fortnight, the market is somewhat steadier, although prices are firmly maintained at 82s per ton for No. 3 Cleveland G.M.B. and 88s 6d per ton for East Coast mixed numbers hematite. Stocks must have been fairly well sold, but there is not any indication of more furnaces being restarted at present. Manufactured iron and steel: Orders for steel have been placed with local works, and their position is undoubtedly showing signs of improvement. Prices are unchanged as follows:—Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: A fair amount of business has been put through for foreign ore during the last week or two, and prices are firmer. Sellers are quoting 22s 6d per ton for best Bilbao Rubio delivered c.i.f. Tees and other ores are quoted by sellers on this basis.

Our Sheffield correspondent writes:—The confident sentiment in the iron and steel market continues, and is already justified by a slight increase in actual business. Trade, however, remains severely depressed in the pig-iron, steel billet, and crucible steel branches, although producers are stiffening their attitude regarding prices, and are disinclined to quote very far forward at the current quotations. Some branches of engineering are booking increased work, and an expanding demand for special steels, files, stainless steel, and mining requisites is reported. All prices are a slight balance to the good. Export trade is variable, with like a boom is being experienced, with prices generally satisfactory. There is a heavy demand for modern stove grates and kitchen ranges, and makers of gas and electric heaters and cookers are busy. Demand is rather easier for shovels, spades, picks, and farm and contractors' tools. Conditions in the fuel market are slightly continues poor, and there is much surplus coal about. For some time past there has been over-production in foundry and blast furnace coke, and it is hard to sell even at the current low prices. Quotations in the fuel market generally are nominal. South Yorkshire hards fetch 20s to 21s, and hand-picked branch is worth 32s.

Our Glasgow correspondent writes as follows:—The buoyant tone in iron and steel market is maintained. Values in pig-iron are

MANCHESTER, November 13.

The market this week has been under the influence of a hardening movement in raw cotton rates. It cannot be said, however, that this development has stimulated business in manufactured goods. Buyers at the moment seem very nervous as to operating freely at current prices. The opinion is gaining ground that values will be cheaper in the near future as a result of the increased production of yarn. In cloth for India the demand has been disappointing, and only scattered sales have taken place. Very limited buying has occurred for China. Some fairly encouraging contracts have been arranged for Egypt, and trade for South America continues rather better. Numerous manufacturers, however, find greater resistance from customers to present prices. It has been a quiet week in American yarns for home use, and quotations remain slightly more irregular. There has been some variation in Egyptian yarn prices, and trading has not been active.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—All the cabled reports from the primary markets are definitely "bullish," and the price of the raw material is steadily moving to a higher level. The New Zealand selling season opens at

Wellington on Monday, and it is expected that demand will be keen, with prices against buyers. In this market there has been an active demand for wool and tops during the last few days, and in addition to the home requirements, some fair weights of crossbred matchings have been sold to America. It is now generally believed that United States mills will be large buyers in the near future, and this is another factor making for a strong market. Most qualities of tops have been dealt in during the week, but demand has especially favoured medium and low crossbreds, the price evidently being a strong incentive to buyers. Quotations to-day show a marked advance on those ruling a week ago. Warp 64's tops are firm at 80d, and super 60's at 81s 1d dearer at 74d. A similar rise is seen in average 56's at 51s, and 46's carded at 32d, while 40's prepared are $\frac{1}{2}$ d up at 29d per lb. All home-grown wools are firmly held, and prices show a distinct hardening tendency, stocks being comparatively light for the time of year.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Wool sales in Australia are gaining strength with the spread of confidence, and we attribute that as the chief reason for the steady, keen demand for wool at slightly advancing prices. The selling centres are now under way except those in New Zealand, where the first sale of the season opens at Wellington on Monday. Here, too, everything points to an excellent demand. Prices are certain to be higher than they were last season, and with New Zealand opening, the free sale of the new clips in Australia, New Zealand, South Africa, and South America will be well established. What amazes everyone is that wool auctions can be so well sustained at so many centres, for there appears to be no lack of buyers anywhere, and, what is perhaps as important, no lack of sterling to pay for the wool. Our advices this week from Australia indicate sales in sellers' favour, and we shall not be surprised if cables are received at the end of the week giving a slightly higher clean cost from several markets. There is no doubt that the calmer political outlook has contributed something to the spread of confidence, and although the unemployment trouble at home does not as yet show signs of much improvement, trade generally is slightly better, and we hope to see more spindles and looms running with the turn of the year.

Advance samples of wool received from Australia show that the clip is a good one, although in certain areas a fair amount of drought obtained. Still, the clip on the whole is much better than the previous one, rather deeper grown, and certainly on the majority of stations a bulkier clip has been cut. No one can find the least fault with its reception, and users generally must believe in a bigger consumption than last year, otherwise there would be some slackening in the demand in face of a certain increase on the top side of 200,000 bales. However, with political peace, and more business in the different countries in the world, the increase will all be needed.

VEGETABLE OILS AND OILSEEDS.

After a period of weakness, linseed oil has on a better demand, and influenced by dearer seed, recovered to £46 per ton naked ex Hull mill for prompt delivery and to the end of December, while oil from the new seed is at a premium of 7s 6d per ton over these prices. Demand for cotton oils during the week has been disappointing, and prices have been marked down, crude Egyptians now offering at £46 15s naked ex Hull mill. In the oilseed section old crop Plate linseed is firmly held and is dearer on the week at £22 12s 6d for shipment, while new crop has advanced to £22 17s 6d for January-February shipment. Ad-

Deposits are received for fixed periods on terms which may be ascertained on application.

verse reports as to the growing crop have largely influenced the market. In sympathy with Alexandria prices of Egyptian cottonseed have continued to decline, black now offering by shippers at £13 17s 6d November-December.

HIDE, LEATHER, AND ALLIED TRADES.

The market hide position remains firm, with a tendency toward advance. At Thursday's sales in Bermondsey, best ox again made from 7½d to 9½d, and seconds from 6½d to 8½d per lb. Best cows were withdrawn, seconds selling at 6½d to 7½d per lb. Calf were still dear, best selections selling from 8½d for heavy, to 15½d for lights. Wools sold from 8s to 17s 6d, and hogs from 8s 8d to 20s each. The imported hide market is steady, and 9½d has been paid for Montevideo ox, and 10d c.i.f. for Montevideos. Slight concessions in price are reported on dry River Plates, and this has induced business with this country. The Chicago position is cabled as steady, with best heavy packers now offering at 17 cents. Imports of wet hides to the end of October this year totalled 1,020,666 cwts, and of dry hides to 524,303 cwts.

The boot and shoe trade is patchy, but improving in centres where ladies' shoes are turned out. The export trade remains brisk, the value of British-made footwear increasing from £3,446,145 to £4,220,605 for the first ten months of 1923-24.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 14.

SUGAR.—The market for refined goods displayed further weakness, but at the lower level of prices a better demand prevailed, chiefly, however, for British standards, which show a decline of 1s 9d to 2s spot and 1s 6d per cwt forward delivery. Messrs Tate and Lyle's cubes quoted 38s 3d to 39s 3d; crushed, 36s 9d; granulated, fine, also coarse, 35s 4½d; No. 1, 35s 1½d, London; T.L.S., also No. 2, 34s 10½d; November delivery, 34s 9d; December, 34s 3d; and yellow crystals, spot, 31s 10½d. Imported continues in slow support, with white Java, spot, sold, at 32s to 32s 6d. American granulated, white, 34s 3d; Dutch granulated, 33s 6d. Forward business in Continental descriptions shows no improvement, but prices, altering being easier, marked a slight recovery. Meanwhile offerings continue on a liberal scale. Czecho granulated, ready,

CANNED GOODS.—Sardines continue very firm, and prices display a hardening tendency, in view of unfavourable fishing returns. Portuguese $\frac{1}{2}$ -flats quoted 3s 10½d to 4s 1½d; clubs, 4s 1½d to 4s 6d; 12 oz, 6s to 7s 6d; 18 oz, 11s to 12s 6d per dozen tins. Salmon in quiet request, but rates are well maintained, while values are likely to harden, so as to come into line with prices ruling for shipment. 1 lb

TALLOW.—Messrs Colchesters and Woolner write on November 12th as follows:—The tallow market was steadier during the week, and prices were 9d dearer to-day. Last week's decline attracted buyers, and since spot supplies are becoming very limited a recovery resulted. At auction to-day 842 casks tallow were offered, and 809 were sold. Quotations are:—Australian mutton: Fine, 52s 9d; good to fair, 52s to 50s; dull to dark, 46s 6d to 45s 6d; hard, 52s 6d. Australian beef: Fine, 53s; good to fair, 50s to 49s; dull to dark, 46s 6d to 45s 6d; sweet, 53s. Present shipment from Australasia: Good mixed, 49s. Present shipment from South America, 49s 6d to 48s. The market letter is unchanged. Town tallow, 45s per cwt. Rough fat, per 8 lbs, 6d; melted stuff, 35s per cwt. Quotations are:—Town, 45s 6d, net cash, naked, ex works. Country: Frail casks, 46s; home melted, shipping casks, net, f.o.b., good coloured, 50s; fair to dull, 47s to 46s. Bone fat: White, none; pale, none; benzine, 40s 6d; melted stuff, 41s, f.o.b.

MONEY has been scarce all through the week, and the Bank return shows that the Government is already piling up its balance with a view to the December interest payment on War Loan. A good deal of assistance was given indirectly to the market, indicated by a considerable increase in Other securities; but it did not suffice, and direct borrowing to a small extent from the Bank of

England was necessary on Thursday. Discount rates, however, were affected by the approach of the War Loan interest payment, and by demands based on the fact that bills are usually cheapest at this time of year. Fine three months' Bank bills were placed readily at $3\frac{1}{8}$ per cent.

	Nov. 21, 1924.	Nov. 14, 1924.	Nov. 7, 1924.	Oct. 31, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$ (Jly. 5, '23)
Market rate 3 months' bills) ..	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

The Bank return showed an increase, chiefly due to the reflux of notes from circulation of £638,000 in the Reserve. Government and Other securities increased by £870,000 and £3,173,000, and so 4 $\frac{1}{2}$ millions were added to deposits, of which Public took 3 and Other 1 $\frac{1}{2}$. Currency notes outstanding were reduced by £1,488,000 to £285,880,000, which includes £1,362,800 for notes called in but not yet cancelled. The fiduciary issue is £235,067,100, being £13,123,800 below the maximum for the year.

THE STOCK MARKETS.

Although the initial excitement which followed the declaration of the election results has to some extent subsided, business in many sections remains decidedly active, and Thursday's settlement was a heavy one. Gilt-edged stocks retain their strength in face of a strong new issue campaign, and at the same time there is a big flow of money from the investing public into a variety of industrial and speculative securities. Home Rails, however, continue to be neglected. A feature of the week has been another outburst of activity in tea shares, while rubber shares, after a relapse, rallied towards the end of the week. Oil market activity remains chiefly professional. Alternating support and sales from the Cape left leading Kafir shares mostly unchanged on the week.

THE COMMODITY MARKETS.

The commodity markets were inclined to be irregular. On account of the high prices realised for crossbred wool in New Zealand, Bradford topmakers have revised their prices accordingly. Conditions in the cotton trade are quiet. Our coal correspondent reports a slight improvement on the Cardiff coal market. Inquiry has taken place for pig-iron for export, possibly owing to the rise in the price of Continental pig-iron. Steel works are getting more orders. Tin opened firm, but subsequently weakened, and copper followed on similar lines. Sugar was firmer, and tea moved upward. Rubber was quiet and easier. Wheat has declined. The hide market shows an advancing tendency. Further details of markets, together with prices, will be found on later pages.

FOREIGN EXCHANGES.

After the recent period of excitement business on the foreign exchange market was last week again much quieter, but although there has been some slight depression in sterling, it is satisfactory to find that no sharp reaction has set in from the recent largely sentimental recovery. From \$4.64 on the 14th there was a sharp falling away in New York on a large offering of sterling bills and the closing of speculative accounts, which brought the rate in London on Monday afternoon to at one time as low as \$4.61 and to \$4.60 $\frac{1}{2}$ on Tuesday morning. After that there was a quiet recovery, till \$4.64 was again reached at one time on Wednesday, and though the rate has fallen away again, it showed yesterday morning, at \$4.63 $\frac{1}{2}$, signs of moderate firmness. Although it is still difficult to foresee the immediate future, there is an atmosphere of quiet confidence, which should prevent any too rapid relapse. Forward quotations stand at between $\frac{1}{8}$ below and par. The Paris rate, which stood at 87.55 at the close of the 14th, failed to keep up with sterling, and was as high at one time on the 19th as 88.55. Subsequently a good Bank of France

return and the expectation of an announcement of a New York loan before the end of the week brought a decided improvement to a quotation of 87.47 $\frac{1}{2}$ yesterday morning. With funds at its disposal in New York, there is no reason why for some time at least the Bank of France should not be able to maintain the franc at a satisfactorily stable level, but it is to be hoped that the mistake will not be repeated of attempting to bring about a sensationally rapid improvement. The Brussels rate has moved in much the same proportion as Paris, being quoted yesterday morning at 95.55, as compared with 95.75 a week ago. Forward quotations in Paris are 25.27 centimes per month above spot, in Brussels 5-8 centimes above. Of the currencies following the dollar, Vienna stands at 328,500, as compared with last week's 325,500, the recent political troubles having had no influence on the rate; Warsaw is 24.05 zloty, as compared with 24.00; Berlin is 19.45 $\frac{1}{2}$, as compared with 19.47 $\frac{1}{2}$. Switzerland has also moved closely with gold, and stands at 24.01, as compared with 24.05 a week ago. The lira has remained fairly steady, with a slight tendency towards improvement, having moved from 106.90 to 106 $\frac{1}{2}$. Spain, in spite of its by no means satisfactory political outlook, has also recovered from 34.07 $\frac{1}{2}$ to 33.97 $\frac{1}{2}$. Amsterdam moved sharply against us at the beginning of the week in sympathy with the dollar, and still stands at 11.52 $\frac{1}{2}$, as compared with 11.55 on the 14th. Among the northern countries, Stockholm, following the same course, is quoted at 17.24 $\frac{1}{2}$, as compared with 17.27. Copenhagen, in spite of rumours of a loan in America, has depreciated again slightly from 26.24 to 26.27 $\frac{1}{2}$. Christiania, on the other hand, has recovered a little from 31.27 $\frac{1}{2}$ to 31.22 $\frac{1}{2}$, and Helsingfors, at 184, also shows an improvement. In the south-east, Budapest maintains its steady parity with sterling of 345,000, Prague has moved slightly against us to 154 $\frac{1}{2}$, but Bukarest has shown a rapid relapse, up to now unexplained, from 845 back to 900, after its recent period of improvement. In the East, the rupee is now quoted at 1s 6d, as compared with 1s 5 $\frac{1}{2}$ d a week ago, but Japan is very slightly cheaper at 1s 7 $\frac{1}{2}$ d, as compared with 1s 7 31-32d. With the maintenance of the improvement in sterling and the absence of demand in the East and on the Continent, the silver market remains depressed, and the outlook for the immediate future is not bright. Hong Kong has moved down from 2s 5d to 2s 4 $\frac{1}{2}$ d, Shanghai from 3s 4 $\frac{1}{2}$ d to 3s 3 $\frac{1}{2}$ d. In South America, Rio, after some recovery, has depreciated to 5 31-32d, as compared with 6d a week ago. Buenos Aires, on the other hand, has improved in value from 44 $\frac{1}{2}$ d to 44 $\frac{1}{2}$ d, after being up to 45d, while Monte Video stands at 51s, as compared with 50 $\frac{1}{2}$ d, and Valparaiso has improved slightly from 40 pesos to 39.90 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 15th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	6,000	From Revenue	9,864
Interest, &c., on Debt	3,447	Increase in Debt	967
Sinking Fund	784		
Sundries	491		
Increase in Exchequer balances ..	109		
	10,831		10,831

The Revenue for the week amounted to £9,863,800, as compared with £14,981,700 for the corresponding week last year. Customs were a little higher, at £1,837,000, against £1,482,000, while Excise was considerably lower, at £1,741,000, against £6,749,000. Estate, &c., Duties brought in £1,140,000, as compared with £1,880,000. Property and Income-tax were lower at £1,217,000, against £2,204,000, but Super-tax, at £420,000, was £160,000 above last year's figure. Ordinary receipts reached £618,838, as compared with £236,750, while Special receipts brought in £1,000,000, against nil. The week's operations increased the National Debt by £967,000, and caused the following changes:—

	£		£
Treasury Bills	1,552	Public Department Advances ..	1,552
Treasury Bonds	945	Sundries	1,000
	2,497		2,552

The floating debt was increased by £350,000 to £792,420,000.

FINANCIAL YEAR, 1924-1925 (April 1 to November 15).

Total Expenditure ..	£ 461,050,017	Raised by Revenue ..	£ 429,516,524
		Decrease in Balances ..	3,466,011
		Amount borrowed ..	28,067,482
Total	461,050,017	Total	461,050,017
ESTIMATES for YEAR 1924-25.			
Ordinary Expenditure ..	£ 786,848,000	Ordinary Receipts ..	£ 764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

Company Meetings of the Week.—On later pages of this issue will be found particulars relating to the Bank of Poland and to the financial and economic situation in Greece, together with reports of the following companies:—English, Scottish, and Australian Bank; Australian Mercantile, Land and Finance Company; Killinghall (Rubber) Development Syndicate, Ansells Brewery, Piccadilly Hotel, and Hotel Cecil. Mr Andrew Williamson, at the meeting of the English, Scottish, and Australian Bank, said that the outlook for the pastoral and agricultural industries of the Commonwealth could hardly be better; for, with an increased wool clip and a bountiful harvest, record prices were ruling for wool, and good prices for wheat.

THE GOVERNMENT AND THE COST OF LIVING.

In his election address Mr Baldwin promised that, if returned to power, he would institute an inquiry into retail food prices. It so happens that he takes office at a moment when the upward curve in the cost of living is sharp, and public opinion has naturally fastened upon this pledge in no uncertain manner. The new Premier, for his part, has lost no time in redeeming it, and has already decided to appoint a Royal Commission, whose instructions are to produce an interim report as early as possible on the principal staple foods, leaving the rest of the ground of inquiry to be covered at the more leisurely pace usually adopted by such bodies. The insistence on an early interim report is obviously a wise political move. For, although we discern ground for hope that the bottom of the recent industrial depression has been passed, and that the total of our unemployed will diminish in the coming months, we have, nevertheless, to pass through another winter when unemployment, though declining, must remain on a large scale; and, unless we misread the situation, the period before us will differ from the recent winters, in that the unemployed will no longer enjoy the help of the existence of low prices for staple foods in comparison with the general level of commodity prices. Such being the circumstances, no Government, perhaps, could afford to present to the public an appearance of impotent inaction. The new Government, at any rate, is at pains to avoid conveying any such appearance.

It is to be hoped that Mr Baldwin and his colleagues will be equally careful to avoid another danger—that of allowing the public to believe that they can and will take effective artificial steps to cheapen the cost of living in a period which, one hopes, will see a steady recovery of trade. There are, it is true, some things which the directors of the nation's financial policy can do towards influencing the course of prices. But the most obvious of such steps are hardly practical politics at the moment, when the primary object must be to avoid placing any obstacles in the way of a trade expansion, which alone can reduce unemployment and lead to a justifiable rise in wage levels. To attempt the restriction of living costs by measures which might prevent expansion of trade and production would be just about as sensible as to burn down a house to roast a pig. We have no fear that the Government would be drawn into such a policy. But they would be wise, in our opinion, to educate the country frankly in the limitations of helpful Governmental action.

Assuming the rather dubious contingency of the Royal Commission reporting that in the matter of staple foods the public is being shamelessly exploited by rings and trusts, then popular clamour would drive the Government to legislative action. But with recent experience in mind, scepticism as to the efficacy of such efforts must be entertained, and the path of bureaucratic interference is in any case strewn with difficulties. Whatever the Commissioners may conclude about the "gap" between wholesale and retail prices, it is as well to remember that in a country which imports most of its food, the course of food prices depends largely on international factors. The recent rise in wheat, which is causing fears of a further rise in the cost of the loaf, is accounted for by the state of the world's harvests, which, in their turn, are conditioned mainly by the weather. Governments and Royal Commissions cannot bind the sweet influences of the Pleiades or loose the bands of Orion. The law of supply and demand is not one which they can repeal. It would be a great pity if a frame of mind which expects miracles is allowed to develop in the country.

It is absurd to expect those, employed or unemployed, workers or *rentiers*, who live on fixed incomes, to regard a rise in retail prices, especially in food prices, as anything but objectionable. Nevertheless there are aspects of the upward turn in prices, even of food prices, which are favourable points in the general trade outlook. Confidence that the fall in the general price level is over and a steady upward movement is probable is a primary condition of the expansion of enterprise; and the rather pronounced movement which has set in may in itself indicate that such expansion is beginning. Moreover, the rise in the world's price of wheat, while responsible for dearer flour and a dearer loaf, brings an overdue readjustment of the relation between agricultural produce and manufactured goods. This relation has of late been out of gear, to the disfavour of the agricultural populations. This has in itself been an important factor in restricting the overseas demand for British goods. More profitable conditions for farmers and for growers of some staple raw materials should serve to give in due course some fillip to our export trade, and consequently to bring some relief to just those British industries where unemployment is most serious.

There is, then, the bright side as well as the dark side to the picture of rising prices. It would, however, be a mistake to underestimate the difficulties which a substantial advance would entail. There is still a very large and important group of industries—mainly "sheltered" industries, or those not exposed to international competition—in which wage levels are regulated according to the movements in the Ministry of Labour's index figure of the cost of living. A sudden and substantial rise in this figure entails, after a short time lag, an equally sudden and substantial rise in the wages of an important section of the working community. Such a wage advance, if on a large scale, would in itself stimulate the rise in living costs, and give rise to fresh unrest and wage claims in the industries which are subject to international competition before those industries have felt a sufficient improvement to enable them to meet higher wage bills. If the rise in the cost of living is about to set in motion once more this train of events, which we have seen before, then the whole problem of wage standards will come to the fore as one of the most pressing of national questions. It would seem that the time has come to get away from the rigid adhesion to the cost-of-living index as a wage standard. In the long run the general level of wages must be governed by the level of wages which the export industries can afford to pay. Starting from that premise an expert enquiry is essentially desirable to explore the possibility of finding some post-war standard which, for the time being, would better reflect the economic conditions of the country as a whole. If such a standard could be found and accepted, it would, we believe, conduce far more than the present systems of wage regulation to the best interests of the wage-earning classes as a whole, and would at the same time, by eliminating sudden jolts and jars, and glaring anomalies and discrepancies, make for stability, and lessen for trade and industry as a whole their most formidable uncertainties and anxieties. Naturally the approach to

the problem is fraught with misconception and suspicion. Parliament is a body unsuited to take it up. For a Conservative Government to begin its life by appointing a Royal Commission on wages would, however carefully the *personnel* was selected, not be construed favourably by the Trade Unions or by wage-earners as a whole. Nevertheless, there is reason to believe that some Trade Union leaders (especially some of those who have just resumed their old tasks after Cabinet experience) are fully alive to the importance of those aspects of the problem upon which we have touched. We submit to leaders of industry, both of employers and employed, that the whole subject is one that would best and most fruitfully be discussed by a Parliament of Industry, such as has, on occasion, been suggested, and in an embryonic stage experimented with, by enlightened leaders of both sections. We hope the suggestion will be revived in the near future, and that wage standards will be among the first problems to engage the attention of a body, which might be an addition of immense importance to our national institutions.

THE TROUBLES IN EGYPT.

In the course of a single week, Egypt has been the scene of a rapid series of political events, all of them startling, and one of them very grave. Parliament reassembled on Wednesday, the 12th; Saad Zaghlul Pasha resigned the Premiership on Saturday, the 15th, and withdrew his resignation on the following day; on the Wednesday of the present week a murderous attack was made upon Sir Lee Stack, the Governor-General of the Sudan and Sirdar of the Egyptian Army, with, we regret to state, fatal results.

The Egyptian Parliament was opened last week, not inauspiciously, with a dignified and sensible speech from the Throne. The breakdown of the London negotiations between Zaghlul Pasha and Mr MacDonald was referred to very briefly, and while the Egyptian claim to the Sudan was reasserted in uncompromising terms, the language was not rhetorical or recriminatory. The speech went on to commend the efficiency of the internal administration of Egypt under the new *régime*, and to sketch with greater emphasis a future policy of internal development. The railways were to be improved, a merchant marine was to be established, provision was to be made for inland navigation, drainage, irrigation, the maintenance of the quality of Egyptian cotton, the increase of hospitals and dispensaries, the introduction of compulsory education, and the strengthening of the army. The concluding phrases, in which the Government was praised for having "kept the rights of Egypt intact" and "maintained cordial relations with foreign Powers," seemed to hint that Zaghlul Pasha intended to let the issues between Egypt and Great Britain lie until the Egyptian nation had put its own house in order, and had thus placed itself in a stronger position for returning to the charge on the questions of the security of the Canal and the sovereignty over the Sudan at some later date.

No observer from outside can doubt that, in the actual circumstances, this would be the wisest policy for any Egyptian Government to pursue, but, at the same time, it is probably the most difficult. Ever since the declaration of the British Protectorate over Egypt, after Turkey's intervention in the European War in 1914, Egyptian feeling has been working up towards a climax. The subsequent series of British concessions, following (if not occasioned by) successive outbreaks of violence on the Egyptian side, encouraged the false hope that the most sweeping programme of the extreme nationalists would be realised, and on this wave Zaghlul Pasha was carried into power. Both the extent and the limits of the British concessions up to date have, therefore, placed him in a difficult position towards his own followers. Since February, 1922, Egypt has been freer in her internal affairs than a statesman of Zaghlul Pasha's experience can really have expected to see her become at so early a date, and it is precisely in these internal affairs that the new national Government has most work to do. On the other hand, the Egyptian public—and especially the irre-

sponsible student class (whose undue influence is a symptom of political immaturity)—has had its attention concentrated, by many years of political agitation, upon those subjects which in 1922 the British Government reserved, and rightly reserved, because the Egyptian people cannot be in a position to deal with them properly until it has proved its political capacity in matters nearer at hand. Zaghlul Pasha, however, cannot, beyond a certain degree, disappoint the opinion that brought him into power, and that maintains him there. On some things he must speak with his followers' voice, even if the utterance leads nowhere; and this necessity largely explains the intransigence of his demands in London a few weeks ago, whereas the speech of last week may well reveal his personal appreciation of the realities. His resignation three days afterwards is a symptom of the difficulties which have long beset him in this false position.

Neither the resignation nor its withdrawal have been explained officially in any but the vaguest terms, but it is understood that the "intrigues" of which the Egyptian Prime Minister complained had emanated from the Palace, and that, as a condition of his return to office, a functionary of the King's household has been dismissed. The news of the resignation produced a national demonstration in Zaghlul's favour, as it was intended to do, and, indeed, this was only a repetition of the tactics which he pursued with the same success last June, after his position had been shaken by Lord Parmoor's blunt declaration that the British Government had no intention of relinquishing its rights in the Sudan. Zaghlul has obtained his vote of public confidence twice over, but it is a sign of weakness that he should need to have recourse to it twice over in six months, and unless he can now carry through his programme of internal reform, and at the same time bring his countrymen to see that this is the most important service that he can render them, his political future would seem to be precarious.

With Egyptian politics in this delicate state, the crime of last Wednesday has come as a shattering blow, of which it is still impossible to foresee the consequences, either for the internal politics of Egypt or for the relations between Egypt and Great Britain. The attempt was carefully prepared, and there is no doubt that it was political in character. Public opinion in Egypt, as well as in England, has already condemned the criminals, and expressed its sympathy for the Sirdar in the strongest terms, but a great deal depends on what official attitude is adopted by the British Government. While it is evident that the crime was not connived at, and still less inspired, by the Egyptian Government, or by any Egyptian subjects in positions of trust and responsibility, it might be argued that the irresponsible persons who perpetrated it had been corrupted by that atmosphere of exaltation and hatred which Zaghlul Pasha's partisans have deliberately created in Egypt in the course of their political struggle with Great Britain. In this sense the present Egyptian Government might be held responsible, and the opportunity might be seized for "making an example" with a retrospective effect, by subjecting the Egyptian Government to humiliating demands. That was how the Austrian Government argued in July, 1914—and that sufficiently condemns this line of policy. After all, if indirect responsibility is to be nicely appraised, our own mistakes and delays in the handling of the Egyptian question cannot be left out of consideration. It is more to the point to keep our eyes on the present, and to observe how the crime is actually being taken by the responsible leaders of the Egyptian nation, from Zaghlul Pasha downwards. There is no doubt, happily, that the Egyptian Prime Minister is deeply moved, that the Egyptian Government is taking energetic steps to arrest and punish the criminals, and that their action is being supported vigorously by Egyptian public opinion. Sir Lee Stack was popular in Egypt—particularly among the Egyptian officers who have served under him—and all reports affirm that the Egyptian nation is as much shocked and horrified at the crime as are its leaders. Wise statesmanship on both sides can make this grave occasion the point of departure for a better understanding, whereas an ill-considered gesture may do almost irreparable harm.

COAL UNDER THE DAWES SCHEME.

Few people seem to have a very clear idea of how the Dawes scheme and the London Agreement of last August are going to affect the coal export trade and the mining industry of this country. No authoritative statement has been published. During the recent General Election random references were made to the question by Mr Ramsay MacDonald and other Ministers in the Labour Government, but they were of a confusing and contradictory character, and instead of enlightening they confounded public opinion. There is one good reason for the failure of the Government, and of its departments, to give the trade the information it wants. They could have explained how far the arrangements under the Dawes scheme and the London agreement for the delivery of Reparation coals differ from those provided for under the Versailles Treaty and the Spa Agreement, but the Dawes plan is contingent on economic conditions in Germany, which cannot be clearly foreseen, while it also places in the hands of the Transfer Committee a discretionary administrative power which may, from time to time, fundamentally affect the policy governing the delivery of Reparation coals.

The purpose of this article will be to draw attention to some of the more important of the points in regard to which the Dawes scheme differs from that which it displaces. In the first place, the limitation of ten years imposed by the Treaty of Versailles on the delivery of Reparation coal to France, Belgium, and Italy has been, for all practical purposes, removed. Under the Treaty of Versailles, Germany was placed under an obligation to deliver to those three countries definitely specified annual quantities up to the end of June, 1929, when they would automatically cease, and complete freedom would be restored to Germany. Those terms were modified by the Spa Agreement, which fixed the total quantity to be delivered in any one year at about 20 million tons, distributed proportionately between Belgium, France, and Italy. No quantities or periods are fixed under the Dawes scheme. The programmes of Reparation deliveries are to be varied from time to time according to circumstances, and, apart from those programmes, Germany is given economic freedom to make the best commercial use out of her coal resources—as a matter of fact, she is to be encouraged in the exploitation of those resources with a view to providing maximum payments to the Allied and associated countries.

In the next place, the price principle governing the delivery of Reparation coal has been altered. Under the Treaty of Versailles the price to be paid for overland delivery was the German pit-head price to German nationals, plus the freight to French, Belgian, Italian, or Luxemburg frontiers, provided that the pit-head price did not exceed the pit-head price of British coal for export; and for sea delivery the German export price f.o.b. German ports, or the British export price British ports, whichever may be the lower. That was a principle that operated very prejudicially over a long period to the British coal export trade. France, Belgium, and Italy, but particularly France, gained enormously during the process of the depreciation of the mark. The extraordinarily low price, when measured in terms of francs or sterling, at which France obtained German coals enabled her to work a per-equation system that exercised a continuously depressing effect on British f.o.b. prices. Two steps have been taken in the Dawes scheme to prevent the recurrence of this evil. One of these is the attempt to establish a gold standard in Germany, and the other the laying down of the principle that deliveries must be made by means of commercial contracts passed under ordinary commercial conditions. In so far as these are effective they will be approved by the British coalowner and coal exporter. A gold standard will not only prevent the depreciation in the value of the mark from which the countries receiving Reparation coal benefited in the past, but it will also tend to raise the level of prices in Germany. It is true that during the 1921-23 deflation of German currency the German industrial debt was practi-

cally wiped out, but the authors of the Dawes scheme point out that the debt thus extinguished has been replaced by the new debt created for the purposes of the Dawes scheme, and by the principle of the scheme that internal taxation in Germany is to approximate to that ruling in the creditor countries. Given these conditions, the supply of Reparation coal will be not only on a nominal but on a real commercial basis.

In the third place, Germany is placed in a more favourable position than she was under the Treaty of Versailles for the exploitation of her coal resources for export purposes. The conditions in the mining industry, not only of France and Belgium, but also of Germany, are to-day vastly different from those existing when the Treaty of Versailles was signed. France is now producing practically as much coal as she did in 1913; moreover, her output, which in pre-war years had been almost stationary, is increasing at such a rate that it was recently estimated by Mr J. R. Cahill, H.M. Commercial Counsellor at the British Embassy in Paris, that two years hence it will amount to between 55 and 60 million tons, compared with a pre-war maximum output of about 41 million tons. In Belgium also the present rate of production is greater than that of 1913. Neither country is, therefore, in great need of German coal. All that France requires is an adequate supply of coke for the iron and steel industries in Lorraine. In Germany also there is at present a surplus production. The output capacity of the Reich is now at the rate of less than 130 million tons per annum, compared with the output of the German Empire of practically 190 million tons in 1913. Still, this much reduced output is beyond her requirements. The accumulated stocks of raw coal in the Ruhr alone are estimated at 3 million tons; there are also large stocks of lignite in Central and East Germany, and it is estimated that the present rate of output is approximately 800,000 tons per month more than the immediate requirements of the country. One of the chief causes of this low rate of consumption is the very depressed state of the iron and steel and other great coal-consuming industries of Germany. These are the circumstances under which the German colliery owners are being urged to exploit overseas markets, and the German Government to prohibit the importation of coal from Polish Silesia. The Dawes scheme places no obstacle in the way of the export of this surplus coal; on the contrary, it encourages such export, for the purpose of the Dawes scheme is to secure maximum Reparation payments for the Allied countries, and the Expert's Report states plainly that it is chiefly through her export trade that Germany must meet her debt obligations. While coal supply conditions on the Continent remain what they are to-day, the British coal trade must, therefore, face the certain prospect of greater competition from Germany. In that competition Germany will be helped by a longer working day in the mining industry and a lower cost of production. Much perturbation has been caused in South Wales coal trade circles by a report of an effort on the part of Germany to enter into an agreement with the Portuguese Government for a monopoly of supply to that country. The British Government has been asked to intervene in the interests of British exporters. Such intervention is impossible. It would be inconsistent with the text and purpose of the Dawes scheme. If Germany can supply coal to foreign countries at a lower price than this country can supply, we can have no grievance against her enterprise. Our only course is to offer coals at a relatively equal or lower price.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG. STOCKHOLM. MALMÖ.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr. 182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING
BUSINESS WITH SCANDINAVIA.

The situation, however, will be altered when German industries revive. In pre-war years, Germany exported over 34 million tons of coal, and, including Lorraine and the Saar, consumed 168½ million tons. She will not be able to export anything like that quantity with her mills and factories in full operation; then, and not until then, will there be offered to the British coal trade another and great opportunity for expansion.

THE LIBERAL LAND POLICY.—II.

(BY AN AGRICULTURAL CORRESPONDENT.)

THE total area of agricultural land in England and Wales is now 25,873,000 acres, being a reduction of 70,000 acres since last year. In 1914 the area was 27,114,000 acres, so that there has been a shrinkage of about 1¼ million acres in ten years. In 1923 (details for 1924 not being yet available) the land was divided into 411,673 holdings, of which 87,900, or 24 per cent., were owned or mainly owned, by the occupiers. Of the total farming area about 21 per cent. was occupied by the owners.

The proposal for enabling occupying owners to obtain relief from the burden consequent on purchase at excessive prices is an adjunct to the Liberal scheme, which may be considered separately. The number of tenants affected by the scheme would be about 324,000, although some of those who hold their land under county councils or other public authorities might possibly be excepted. The first point which arises is whether the scheme should be put into universal effect compulsorily, or whether it should be optional. If it were optional it certainly would not be universal. It may be confidently assumed that a substantial proportion of occupiers would prefer to go on as they are, and that these would include all those who had reason to fear that they would not pass the test of good cultivation. There would be some advantage, however, in beginning with an optional scheme, to become compulsory after an interval of, say, five years.

The assessment of a fair perpetual rent for each holding would be an extensive undertaking, but provided the basis were established it would present no insuperable difficulty. The basis, however, would not be easily settled. Already it has been suggested that to take the net rent as the basis savours of "confiscation." The introduction of this word was perhaps inevitable, but it is difficult to understand its relevance. Possibly some misunderstanding may account for it. It seems obvious that to charge the holding in perpetuity with the present full rent, and at the same time transfer from the landlord to the tenant the liability for maintenance and repairs, would be equivalent to a substantial increase of rent. Confusion may have arisen from the use of the word "management" instead of "maintenance." To make a deduction for the cost of management might perhaps savour of "confiscation" in a mild form. It is well known that the average landlord does not at present pocket the gross rentals. Landowners constantly complain of the very heavy cost of the upkeep of their estates, and sensational figures have been frequently published to demonstrate that gross rentals are wholly misleading as a measure of actual income. It can scarcely be argued that a landlord should be secured by the State in the receipt of his present gross rentals, and at the same time relieved of all outgoings. Of course, there is a great difference in the cost of upkeep on different estates, and also in the manner in which owners maintain them. One of the most obvious difficulties would arise in making fair assessments as between the landlord who has been niggardly and neglectful, and the landlord who has spent lavishly on buildings and equipment. To calculate a fair deduction on the basis merely of actual expenditure would give a premium to the bad landlord, and impose a penalty on the good one.

The actual assessment of fair rents would best be made in each case by a qualified agricultural valuer of the district. Long experience of, and intimate acquaintance with, the local conditions are essential for such a task. It

would probably be necessary to provide for an appeal against the valuer's decision to a competent tribunal, which should consist, mainly at least, of farmers and landlords in equal proportions.

The administrative machinery for ensuring that land is properly used may appear at first sight, to involve what is termed "bureaucratic control," which is the peculiar *bête noire* of farmers. The system set out in the Agricultural Act undoubtedly was open to this criticism, the decision being explicitly placed in the hands of the Ministry of Agriculture, qualified by an obligation to consult the County Agricultural Committees. It would not be difficult to devise a more satisfactory method. The sound principle to adopt would be that every farmer whose management was impeached should be entitled to be "judged by his peers." In other words, before being turned out of his farm for incompetence or neglect, he should have the right of appeal to a tribunal, or jury, of say three or five farmers of experience and repute in his own district. Suggestions have been made by theorists of the Labour party, and others, that judgment should be given by a body composed of representatives of various so-called interests, including "consumers." Nothing could be more absurd or unjust than to allow persons ignorant of farming practice to act as adjudicators on the question of efficient farming. It is said that farmers will not honestly judge a fellow farmer. That is an unfair aspersion. Farmers, like other Englishmen, when called upon to perform a public duty, may be trusted to perform it without fear or favour.

The arrangements for the eviction of men who misuse or neglect their holdings are at once the most essential and the most difficult part of the scheme, and will need very careful consideration. It is evident that they must include provisions for helping the farmer whose under-farming is due to misfortune and also for fair treatment of him who is proved to be incompetent.

The most damaging criticism which the Liberal land policy is likely to evoke is that it will require an "army of officials" to administer it. It is evident that it involves a somewhat extensive and elaborate organisation, but if, as is claimed, it places the land system on a basis which serves the national interest, this objection should not stand in the way. It would certainly be worth while. The nation has spent, and is spending, many millions on British agriculture. Notwithstanding all the expenditure there are those who persistently say not only that agriculture is neglected, but also that its position, and its production, get steadily worse. If this is true, the nation has been wasting money for the past thirty years. Since 1890, when a separate Department of the State was established to promote the interests of agriculture, large sums have been spent on agricultural education and research, relief of rates, improvement and protection of live stock and various other objects. An "army of officials" is now employed by the Ministry of Agriculture, the County Councils, the agricultural colleges, and the farm institutes. A special permanent commission established to promote agricultural development has disbursed, in the aggregate, a substantial sum. Notwithstanding all this expenditure and effort, the state of agriculture to-day is admittedly unsatisfactory. If real progress towards its re-habilitation could be made, the nation would not be likely to grudge the cost.

Nevertheless the scarecrow of the extension of officialdom would have to be seriously faced. Fairly examined it might well be found to be less formidable than it appears. If it were approached from the standpoint of making the fullest use of existing agencies it would be possible to construct an administrative machinery for the collection of rents from the cultivating owners, the payment of annuities to the landlords, and the inspection of farms, which would minimise the number of new officials required. The employment, for specific purposes on a "fee for the job" basis, of the thousands of estate agents and agricultural valuers throughout the country would enable the work to be done at comparatively small cost, and with only a limited number of whole-time officials.

What, above all, the Liberal land policy needs is frank discussion by those who are qualified to consider both its principles and its details. Vague commendation and uninformed or prejudiced criticism are alike useless. If the

conference of the three parties, or of the three agricultural classes, which Mr Baldwin has foreshadowed, should materialise, this contribution towards the solution of the agricultural problem cannot be excluded from their consideration.

SICKNESS INSURANCE FOR THE MIDDLE CLASSES.

IT was a happy thought on the part of the Insurance Institute of London to persuade so eminent a bodily and social physician as Lord Dawson of Penn to read a paper during the autumn session. Lord Dawson has the gift of imagination, and though his suggestions for extending sickness insurance to the middle and professional classes may seem impracticable at the moment, many other more visionary proposals have also seemed impracticable until they had been experimentally worked out and adopted. Lord Dawson pointed out that the middle classes, those earning not more than £1,200 a year, could not in present circumstances afford to be ill. Their small homes did not permit of the care for invalids and attention during sickness, therefore, had to be provided for outside the home. He did not want State aid or State control, but an organisation which had both freedom and flexibility. In short, what he had in mind was a system of sickness insurance which would be, at the same time, economically sound, and within the means of the class with which he was dealing. He suggested that some insurance company might experiment with a well thought out scheme in a selected local community. In that way an unknown insurance country would be explored. Sickness insurance would, he thought, serve to introduce life business, and to diminish life assurance claims.

The difficulties which beset Lord Dawson's interesting proposal are fairly obvious. There is already a tendency to meet under life policies periods of disability through illness. In one well-known instance a big life office is willing to advance an amount sufficient to meet the cost of a major operation. Accident companies commonly issue policies under which weekly disability payments are made when the assured are laid up by certain specified diseases. In a few cases policies have been issued covering disabilities from any kind of disease, but the cost has operated against them. As Mr Gray, of the Employers' Liability, put it in the discussion on Lord Dawson's paper, "The public showed an unwillingness to pay the price." Mr Levine, the Actuary of the Alliance, thought that the cost of the benefits which Lord Dawson would like to provide would be so great that the individual would have little left for life assurance or anything else. Sir Alfred Watson, the Government Actuary, saw great difficulty in forming a plan on which a policy could be devised and a rate of premium fixed. The solution of the difficulty of cost might, Mr Gray thought, come from the direction of collective family insurance. It seems to us, looking at the problem from a detached standpoint, that group or collective professional insurance might be a hopeful line of inquiry. If one set to work to devise group schemes of sickness insurance for, say, lawyers, or accountants, or Civil servants, or Stock Exchange men, we should at once be able to get at some reasonable data, and be able to experiment with rates. All rates of insurance, except for life assurance, are experimental, the result of trial and error. The experience upon which they may be accurately calculated has to be gained in practice.

A point, which was not made either by Lord Dawson or by his hearers, is that there exists little machinery in this country to give hospital attention and skilled medical care (especially for the middle classes) except in private nursing institutions, which are necessarily rather expensive. There are few, if any, public hospitals which take none but paying patients, and take them on the basis of actual cost. If we had a hospital service designed for Lord Dawson's middle classes, working on the basis of being self-supporting, and charging the lowest possible fees for operations, then there would at once be a basis upon which insurance policies covering the risks of sickness, involving transfer to these hospitals, could be calculated.

In Mr Henry Ford's remarkable and instructive book, "My Life and Work," he describes how he acquired and

ran just such a hospital as we have in mind. Mr Ford has in his career applied simple and sound business principles to the making of automobiles and farm tractors, to running a trade school for boys and a hospital for middle-class patients, and to making a bankrupt railway pay its way. The principles are those applied by every successful insurance company, and could be applied by every business which desires solid success rather than quick dividends. They are:—Supply the public with the best article at the lowest price, and build up the business out of its own earnings. Mr Ford started his motor factory in 1903 with a paid-up capital of \$28,000. No further capital has since been taken from outside. By 1919 the business had become so immensely valuable, by using its own earnings in development, that Mr Ford and his son had to pay \$12,500 a share (\$100 each) in order to get rid of the minority stockholders.

When Mr Ford took over the Detroit General Hospital and turned it into the Ford Hospital, he set out in characteristic fashion to make it stand on its own financial feet. He put up new buildings, so that each patient had a separate room and bath. All rooms were of one class. His twenty-one physicians and surgeons are whole-time employees of the hospital. Every patient on coming in is "vetted" independently by at least three doctors, in order to make as sure as possible of the correct diagnosis. There are no private nurses, but each case gets the nursing it requires. The fees charged cover hospital room, board, medical and surgical attendance, and nursing. Those fees, at the time when Mr Ford was writing in 1922, were four and a-half dollars (say £1) a day. The highest charge for a major operation was \$125. The hospital has a cost system just like a factory, and the charges are regulated so as just to make ends meet, including depreciation. What Mr Ford can do in Detroit we ought to be able to do in the large cities of this country. If we had "Ford Hospitals" here, then the costs of sickness among the middle and professional classes could be accurately gauged, and Lord Dawson's proposed scheme for insurance, against the expense of having to go to them, would follow as a matter of course.

CABLE COMPANIES' PROFITS.

IT is perhaps only natural to find that the great strides made by "wireless" transmission of messages are causing cable companies to commune with themselves. Occasionally the general public is taken into their confidence. Thus the Great Northern Telegraph Company have, as far as can be judged from the facts set forth, a very reasonable ground for complaint against certain Governments which have become interested financially as well as benevolently in radio stations. The Great Northern complain that—"Without competing with the cables at lower rates, telegraph administrations whose budgets have to bear the burden of non-profitable radio-stations, declare the wireless route to be the normal route, and transmit by wireless the greater part of the telegrams not expressly marked 'by cable' by the sender, thereby gaining larger gross profits. The above also applies to Sweden's traffic with Latvia and to Denmark's with Estonia."

In the figures of receipts and expenditure which we give below of some representative cable companies, there is really very little cause for alarm about wireless competition, as long as it is fair and not too heavily subsidised. In our first table we show gross receipts, working expenses, and net receipts of six representative concerns for the past three years:—

	Year.	Cuba Sub- marine.	Direct Spanish	Eastern Extension.	Great Northern (D'nm'rk)	West'n †
Gross receipts	1920	99,154	133,757	4,381,852	2,051,346	2,073,498
	1921	72,932	114,407	4,124,978	1,517,779	1,690,049
	1922	55,906	57,110	5,483,071	1,325,607	1,463,174
	1923	57,009	56,889	5,052,152	1,224,286	1,430,797
Working expenses	1920	41,347	107,446	3,512,799	1,410,671	1,330,961
	1921	50,846	121,935	2,803,446	1,079,047	1,132,501
	1922	41,018	94,267	2,491,822	856,414	1,103,185
	1923	38,906	70,848	2,061,342	1,054,136	938,572
Net receipts	1920	57,807	26,311	1,069,057	640,675	742,537
	1921	22,086	Dr 7.28	1,321,530	438,732	557,548
	1922	14,883	2,843	997,249	363,193	359,989
	1923	18,103	16,041	990,810	368,150	492,225

† Accounts made up to June 30th.

Regarding this decrease of £437,000 in the revenue of the Eastern, a certain amount of this may be attributed to the reopening of Indo-European Telegraph Company's overland route to India, the remainder to trade depression spread over the whole of the company's system.

The Great Northern can show better figures, although it inveighs against competitors and hints that it will not permit lower rates from other undertakings "to continue for any length of time."

In our next table we show working expenses, also expenses for taxation purposes during the past three years:—

	Working Expenses Proper.			Excess Profits Duty, Corporation Profits Tax, Income-Tax, &c.		
	1921.	1922.	1923.	1921.	1922.	1923.
Cuba Submarine.....	£ 33,010	£ 31,321	£ 34,684	£ 17,836	£ 9,697	£ 4,222
Direct Spanish	95,177	87,689	64,769	25,637	6,577	2,081
Eastern	2,518,101	2,194,095	1,854,972	285,345	297,727	241,015
Eastern Extension.....	1,012,371	1,075,378	985,094	184,853	231,267	200,086
Great Northern.....	1,079,047	956,414	1,054,136			
Western	871,793	906,474	782,745	260,708	196,711	155,827

It must be admitted that cable companies set an excellent example to other public undertakings in the way in which they give details of receipts and working expenses. The Western Cable Company, for instance, supplies in its accounts a statement of expenses in London, a statement of general expenses at stations, expenses concerning maintenance of cables, and a list of securities comprising reserve funds. In the case of the Western, gross receipts amounted to £1,430,797, against £1,463,174 in 1922. Thanks, however, to a saving in working expenses which totalled £938,572, in contrast with £1,103,185, net receipts were £132,236 to the good at £492,225.

How the various companies distributed their profits is shown below:—

Company.	Prior Charges, Pref. Div., &c.	Ord. Dividends.			Amount 1923 Dividend	Placed to Reserve, &c.	+ or - in Carry Forward.
		1921.	1922.	1923.			
Cuba Submarine	£ 5,000	% 7½	% 7½	% 5½	£ 8,000	£ 6,000	+ £ 477
Direct Spanish	5,000	10½	10½	10½	6,465	5,000	+ 1,576
Eastern	150,000	10½	10½	10½	500,000	300,000	+ 5,166
Eastern Extension	30,096	10½	10½	10½	400,000	250,000	+ 25,561
Great Northern.....		22	22	22	330,000	33,333	+ 2,317
Western	32,747	10½	10½	10½	311,895	150,000	- 2,416

† Free of income-tax.

The Cuba Submarine announced that in view of the possible adverse effect on its revenue on account of assisting to form the "All-Red Route" to the British West Indies and the consequent diversion of traffic from its system, the board deemed it prudent to forego the recommendation of a bonus on its ordinary shares. Other undertakings maintain their distribution rates. Allocations to reserve are lower than those of a year ago, with three exceptions. The Eastern Extension and Great Northern remain the same, while the Direct Spanish this year places away £5,000, as against £4,500 taken from reserves in their previous accounts. The Eastern reserves £100,000 less.

In our fourth table we show the principal liabilities and assets over the past three years:—

Company.		Total Capital.		Reserves.		Book Value of Cable, &c.		Cash and Investments.	
		£	£	£	£	£	£	£	£
Cuba Submarine	1921	220,000	124,529	232,876	142,049				
	1922	220,000	120,649	231,353	131,313				
	1923	220,000	127,801	231,722	134,998				
Direct Spanish	1921	94,655	166,643	90,925	158,882				
	1922	94,655	148,525	89,920	157,110				
	1923	94,655	162,210	89,920	163,988				
Eastern....	1921	9,000,000	3,069,636	11,080,159	1,737,955				
	1922	9,000,000	2,502,140	11,649,755	1,656,333				
	1923	9,000,000	2,408,691	11,336,992	1,724,699				
Eastern Extension	1921	4,752,400	3,754,018	5,053,466	3,516,176				
	1922	4,752,400	3,083,684	5,092,695	3,975,667				
	1923	4,752,400	3,101,205	5,111,109	3,845,994				
Great Northern	1921	1,500,000	4,198,854	2,019,572	5,125,890				
	1922	1,500,000	4,106,966	2,058,185	4,584,700				
	1923	1,500,000	4,286,126	2,082,976	4,936,405				
Western ..	1921-22	3,937,625	3,097,297	4,364,325	2,408,097				
	1922-23	3,937,625	2,757,264	4,346,362	2,680,407				
	1923-24	3,937,625	2,705,772	4,402,714	2,737,437				

In most cases balance-sheet figures display a monotonous regularity. A noteworthy feature is afforded by the fact that, of the six companies included in the group, none has made any change in capital for the past three years. The Eastern Extension and Great Northern have both increased reserves over the three years. A decrease is noticeable for the Eastern, while the Western, after a setback in 1922-23, has now increased reserves to £4,402,714. The Cuba Submarine, together with the International Ocean Telegraph Company, is entitled, under a perpetual agreement of 1870, to a considerable proportion of the traffic of the West India and Panama Telegraph Company. The latter undertaking has intimated its inability to continue business owing to the fact that the competitive Government service has meant the withdrawal of the subsidy and certain special grants. The directors, therefore, advise acceptance of the offer of the Cuba Submarine to purchase the ordinary and preference shares of the West India Company for 1s and 2s 6d respectively, the first preference shares at 5s and the debentures at the rate of £65 per £100.

Our concluding table shows how prices of cable securities have fluctuated over two years, pre-war prices, current quotations, and yields being added for comparative purposes:—

Name.	Prices of 1923.		Prices of 1924 (to Oct. 31).		Price July 27, 1914.		Price End of 1923.		Price Nov. 19, 1924.		Yield.	
	Hgst.	Lwst.	Hgst.	Lwst.	Hgst.	Lwst.	Hgst.	Lwst.	Hgst.	Lwst.	£	%

† Free of income-tax.

The cable share market is still one of the steadiest amongst industrial securities, and the shares are fairly closely held. The decline in values on the ordinary shares or stocks in the past year has not been so pronounced, and the following authoritative view will probably bring good cheer to those investors who have doubts as to the future. Sir John Denison-Pender, chairman of the Eastern Telegraph Company, at its annual meeting, referring in June last to wireless developments, stated:— "Nothing has transpired since last we met to alter in any way the opinions which I have previously expressed. There is little doubt that though wireless has demonstrated its great practical value in very many different ways, it still remains true that the submarine cable, with its world-wide privacy of transmission and freedom from atmospheric disturbances, is the most reliable, swift, and secret method of international communication. I can only state with confidence that the Associated Cable Companies to-day are more highly efficient in every way than during any other period in their history, and the efficiency of to-day must in future years continue to improve as it always has in comparison with the past."

BRITISH PORT FACILITIES.

WHEN, about a year ago, foreign shipowners called attention to delays at British ports owing to the absence of modern loading and discharging facilities, the Chamber of Shipping of the United Kingdom took up the challenge, and, with commendable promptitude, appointed a committee to inquire into the matter and report on the position of British as compared with Continental ports. By May the committee had dealt with British ports other than London, and its report, so far as then complete, was discussed in the *Economist* of May 31st. Since then matters seem to have moved very slowly, but the completed report has been issued this week. The earlier portion has been revised, the London section added, and some comparative figures stated in an appendix.

In its completed form the report, running to nearly 300 pages (apart from some general conclusions as to railway facilities, port entrances, docks, loading and dis-

charging methods), consists mainly of very numerous detailed recommendations as to what would be desirable in the way of such matters as replacement of cranes by others of more effective kind, improved lighting of certain sheds and quays, repair of warehouse floors, and so on. The visiting sub-committees very rightly invoked the assistance of the port authorities, and stirred up local interest. Indeed, the general drift of the report seems to indicate that the effect of the inquiry in the various ports visited was a main consideration at the expense of the comparative aspect, which is the really vital point. The committee remarks with satisfaction on the fact that its investigations quickened local interest, and helped to crystallise the ideas of the port authorities.

In the London section the committee acknowledges the assistance it received from the Port Authority, and is careful to explain that its recommendations are not tendered as criticisms of the authority. The hope, nevertheless, is expressed that the recommendations may accelerate the coming of the improvements into existence. This tone throughout the report, and the neglect of the comparative aspect, rather suggests that the foreign criticisms had a good deal of foundation.

So far as the question of comparison has been dealt with, the result brought out is that the average total port disbursements at United Kingdom ports is about 67 per cent. higher than at Continental ports. Twelve unnamed British ports are compared with Antwerp, Rotterdam, Havre and Dunkirk, and it is pointed out that if Hamburg had been taken instead of Havre, which is rather a dear port, the comparison would have been still more favourable to Continental ports.

As distinguished from questions of time and cost, the existing facilities at British ports are not compared with those at Continental ports, though this point of comparison was specifically mentioned in the resolution for the appointment of the committee. The report does not discuss the efficiency of the loading and discharging facilities at Continental ports, and it cannot be gathered that the committee has devoted any attention to this. In the London section, however, the committee observes that "the object of this report is to hasten the day when the loading and discharging facilities of the port of London will be such as will make it, from the point of view of facilities, as well as volume of trade, the greatest port in the world."

The assumption here, in the comparison which is introduced between London and all other ports, that, in volume of trade, London is the greatest, will scarcely stand examination. London, according to the statistics of net shipping tonnage entering and leaving issued by the British and by the United States Governments, is considerably outdistanced by New York, the following being the figures in millions of tons:—

	—London.—		—New York.—	
	In.	Out.	In.	Out.
1920	11.8	9.8	17.4	15
1921	13.5	11.1	16.6	15.3
1922	15	12.4	18.7	15.7

These figures, bringing the information down to the latest date covered by the official returns, relate to foreign as distinguished from coasting trade. The latter, in London, is approximately 4 millions each way. The corresponding New York figures are not published, but there is reason to believe that the inclusion of coasting trade would make the result even more unfavourable to London. It is unfortunate that the Committee, in this instance, where it did institute a comparison, should have stated the matter in a sense opposite to that which the figures establish.

Now that the report can be considered as a whole, it remains a disappointing document. It sets out to reply to a criticism, and answers it very imperfectly, tacitly admitting the charge, which indeed, as the previous reference in the *Economist* mentioned, was publicly admitted by one of the members of the committee, who stated that there was ample justification for the complaints.

If not a reply to criticism, the report may perhaps be regarded in the light in which it is put forward in the note prefixed to it, namely, as the carefully considered views of a shipowners' committee, assisted by representatives of the Federation of British Industries, and of the Associa-

tion of British Chambers of Commerce. Even so the document is marred by confusion of thought. In many instances improvement schemes are, it is stated, in operation or contemplation. Apparently a number of the suggestions in the report overlap what is already in hand, or intended to be done. The extent of this overlapping is by no means clear, and this leaves the reader in a state of uncertainty as to the extent to which the port authorities really are tackling the problems before them.

Valuable up to a point though the report may be as an expression of the views of shipowners and commercial men, the question of the modernisation of our ports—vital to our trade—requires more comprehensive and vigorous consideration and treatment. This *ex parte* statement provides a certain amount of material for consideration, but fails to give an adequate lead.

ELECTION STATISTICS.—II.

LONG after the new Parliament, whose assembly has been postponed until December 2nd, has settled down to work, the study of the remarkable figures of the recent election will continue. Let us hope, too, that the historian of the future will write of the 1924 election as the classic election which showed up the anomalies of our electoral system so clearly that it compelled Parliament to adopt a new system, better calculated to reflect at Westminster the expressed will of the people. Considerable interest has been shown in the series of tables, which we printed in our issue of October 18th, dealing with the rivalry of the parties in the counties of Great Britain as shown by the figures of the General Election of 1923. Obviously more interest still attaches to similar investigation dealing with the recent election. The following tables, therefore, are constructed on the same plan as those which appeared in our former article.

TABLE showing the COUNTIES in which each of the THREE PARTIES obtained more seats than the other TWO PARTIES in October, 1924.

Conservative Counties—48.				Liberal Counties—9.			
	Con.	Other			Lib.	Other	
Kent	15	..	Dumfries	1	..	Inverness, Ross, and Cromarty ..	3
Cheshire	14	..	Galloway	1	..	Carnarvon	2
Hampshire	13	..	Linlithgow	1	..	Demigh	2
Surrey	12	..	Moray and Nairn ..	1	..	Caithness and Sutherland ..	1
Sussex	9	..	Roxburgh and Selkirk	1	..	Orkney & Zetland ..	1
Somerset	7	..	Brecon & Radnor ..	1	..	Anglesey	1
Worcester	6	..	Flint	1	..	Cardigan	1
Wiltshire	6	..	Pembroke	1	..	Merioneth	1
Hertford	5	..	Launceston	42	24	Montgomery	1
London	39	23	London	39	23		
Berkshire	4	..	Warwick	16	1		
Dorset	4	..	Essex	15	5		
Shropshire	3	..	Middlesex	14	3		
Bedford	3	..	Devon	10	1		
Buckingham	3	..	Lincoln	8	1		
Cambridge	3	..	Gloucester	8	3		
Oxford	3	..	Leicester	6	1		
Hereford	2	..	Norfolk	6	2		
Perth and Kinross ..	2	..	Nottingham	6	3		
Westmorland	1	..	Cumberland	4	1		
Huntingdon	1	..	Northampton	4	1		
Argyll	1	..	Aberdeen & Kincardine	4	1		
Berwick & Haddington ..	1	..	Ayr and Bute	3	1		

In the corresponding table for the 1923 General Election the Liberals were seen to dominate in 23 counties, or grouped counties, but only to have obtained 48 seats in

them. Now they dominate only in nine counties, in which they hold 13 seats. The Conservatives last December dominated in 18 counties, but obtained 102 seats in them. This year they dominate in 48 counties, and hold 323 seats in them, against 70 seats held by Liberals and the Labour Party. Last year the Labour Party dominated in 11 counties and held 59 seats in them; this year they dominate in eight counties and hold 60 seats, against 37 held by the other two Parties. They have gained seats in Stafford and Northumberland, have held their own in Durham and Monmouth; have lost three seats in Lanark, and have lost their supremacy in Cumberland and Northampton and Dumfriesshire, as well as their seats in the single-membered counties of Berwick and Haddington, and Linlithgow.

The most striking feature in the table, and one not likely ever to be reproduced, is the fact that in 33 counties the Conservatives hold all the seats, and although 13 of these counties are single-membered counties, the result is no less remarkable. In eight other counties they hold 55 seats, against eight held by the other two Parties:—

Conservative.	Con.	Lab.	Lib.	Labour.	Con.	Lab.	Lib.	Liberal.	Con.	Lab.	Lib.
Derby	5	4	1	Forfarshire	1	2	1	Carmarthenshire	1	1	1
Midlothian	4	3	1	Dumfriesshire	1	1	1				
Renfrew	2	1	1	Carmarthenshire	1	1	1				
Dumfriesshire	1	1	1								

In four counties the Conservatives gained half the total of county seats; in three counties Labour gained half the total; and in Carmarthenshire the Liberals gained one out of two seats. Yorkshire returned 27 Conservatives, 24 Labour members, and six Liberals.

TABLE comparing the SEATS WON by the CONSERVATIVES in the COUNTIES in October, 1924, with those WON in December, 1923.

Counties.	1923.	1924.	Gain.	Counties.	1923.	1924.	Gain.	Counties.	1923.	1924.	Gain.
Lancashire	21	42	21	Gloucester	6	6	0	Fife	1	1	0
London	23	39	16	Nottingham	4	4	0	Stirling and Clackmannan	1	1	0
Yorkshire	20	27	7	Suffolk	2	2	0	Huntingdon	1	1	0
Essex	8	15	7	Glamorgan	2	2	0	Argyll	1	1	0
Cheshire	7	14	7	Cumberland	2	2	0	Banff	1	1	0
Devon	4	10	6	Northampton	2	2	0	Berwick and Haddington	1	1	0
Somerset	1	7	6	Aberdeen and Kincardine	2	2	0	Dumfriesshire	1	1	0
Middlesex	9	14	5	Cardinal	2	2	0	Dumfriesshire	1	1	0
Norfolk	1	6	5	Shropshire	2	2	0	Dumfriesshire	1	1	0
Leicestershire	1	6	5	Bedford	1	1	0	Dumfriesshire	1	1	0
Cambridgeshire	1	5	4	Buckingham	1	1	0	Dumfriesshire	1	1	0
Lincoln	1	5	4	Sussex	1	1	0	Dumfriesshire	1	1	0
Wiltshire	1	5	4	Stafford	1	1	0	Dumfriesshire	1	1	0
Durham	4	7	3	Derby	4	5	1	Dumfriesshire	1	1	0
Kent	12	15	3	Hertford	4	5	1	Dumfriesshire	1	1	0
Hampshire	10	13	3	Northumberland	4	5	1	Dumfriesshire	1	1	0
Lincoln	5	8	3	Dorset	1	1	0	Dumfriesshire	1	1	0
Midlothian	1	4	3	Ayr and Bute	2	2	0	Dumfriesshire	1	1	0
Berkshire	1	4	3	Worcester	1	1	0	Dumfriesshire	1	1	0
Renfrew	1	4	3	Monmouth	2	2	0	Dumfriesshire	1	1	0
Warwick	14	16	2	Hereford	1	1	0	Dumfriesshire	1	1	0
				Westmorland	1	1	0	Dumfriesshire	1	1	0
				Moray and Nairn	1	1	0	Dumfriesshire	1	1	0
				Roxburgh and Selkirk	1	1	0	Dumfriesshire	1	1	0

The above table shows the success of a political lifetime. Even the most ardent Conservative can hardly hope to see a repetition of this tremendous sweep.

TABLE comparing the SEATS WON or LOST by the LIBERALS in the COUNTIES in October, 1924, with those WON in December, 1923.

Counties.	1923.	1924.	Won or Lost.	Counties.	1923.	1924.	Lost.	Counties.	1923.	1924.	Lost.

Carmarthen	1	1	0								

With so little assistance from its Press compared with the almost universal onslaught upon Labour candidates, as the representatives of a Communism from which they had publicly dissociated themselves, it is astonishing to find that the Labour hold upon the great counties has not been greatly shaken. A gain of two in Northumberland and of one in Yorkshire and of another in Stafford is very significant. And Labour's continued hold upon Durham, Monmouth, Nottingham, and Midlothian betokens an enthusiasm on the part of its supporters that suggests further gains for that party in these areas at the next election.

Notes of the Week.

Reparations Recovery.—The first important step taken by Mr Parker Gilbert, the Agent-General for Reparation Payments, has caused something of a flutter in political circles. In a letter dated November 14th, he informed the German Finance Minister that, as from December 1st next, the German Government will not be credited with sums paid by it to exporters in reimbursement of deductions made from their invoices on account of any Reparation Recovery Acts. He states that this is a matter which is solely within the competence of the Transfer Committee under the Dawes plan. Until further action is taken by the committee, therefore, any sums which may be required for this purpose will be paid by the Agent-General himself. It is, of course, beyond all doubt that action taken by individual creditors must not be allowed to interfere with the smooth working of the Dawes plan viewed as a whole. The British Reparation Recovery Act, with its levy of 26 per cent. on German imports, has, in the past, proved one of the principal sources of payment to Great Britain under the head of reparations, though it is highly debatable how far this item has been paid by Germany, or whether it has not rather been money found, in part at least, by the British consumer of German goods. However this may be, the establishment of the Transfer Committee has changed the situation completely, and, on every count, a general settlement is greatly to be preferred to separate bargains between the several Allied Powers and Germany. A further element is added when it is borne in mind that, though the British Reparation Recovery Act represented above all an attempt to collect reparations, the same cannot be said of its French counterpart, which only came into force on October 1st last,* that is to say, after a general settlement had been reached on the basis of the Dawes Report. Deprived, thus, of its essential justification, it is not uncharitable to assume that its main purpose was to provide increased bargaining power for the French negotiators who were about to discuss a new commercial treaty with Germany. Under these circumstances a considerable amount of speculation has arisen, especially, perhaps, in German circles, as to what this latest decision of the Agent-General may ultimately lead to. The 26 per cent. duty is naturally very unpopular amongst German exporters, and there is now considerable agitation for its removal. At first sight, indeed, it hardly seems calculated to lead to that revival of international trade which, as is now fairly generally recognised, is the principal hope for European reconstruction. A further objection arises

* The French Act was actually passed in 1921, but the decree putting it into force was issued only last September.

when we consider the question of the division of the proceeds among the States entitled thereto. It is true that it has not yet happened that a country has actually received more in this manner than it was actually entitled to as total reparations during any given period. The case, however, might conceivably arise under the reduced scale of payments embodied in the Dawes plan, irrespective of any redistribution of the spoils on some basis other than that agreed upon at Spa. Practically, from the purely financial point of view, it can now make no difference either to the British or the German Governments as to whether this particular form of levy is maintained or not. The question is regarded as simply one of the mode of transfer of funds from Germany to the Allies, and has nothing to do, in principle, either with the total payments to be made, or with the redistribution of these payments as between those entitled thereto. In consequence, it would appear that the Transfer Committee has, in effect, laid down that it alone is to decide as to the extent to which the mechanism of import duties of this kind is henceforth to be utilised for the transfer of funds from Germany abroad. The official British view, however, appears to be that payments under the Reparation Recovery Act are exactly on a par with deliveries in kind. Even if this method, however, which has certain obvious disadvantages, were to be continued, it would, of course, still be open to the various Governments to impose differential import duties against German goods, but in that case it would be an avowed policy of Protection, and could not be pursued under the guise of Reparations. Under these circumstances, particular importance attaches to the discussions for a commercial treaty with Germany, which are now being carried on by both Great Britain and France. The Germans are pressing for the complete withdrawal of the differential duty, but it is as yet too soon to tell what the final outcome will be.

The New Austrian Government.—When in September last the Austrian Chancellor, Dr Seipel, returned from Geneva to Vienna, he had given two definite pledges to the League of Nations—to reorganise the Federal Constitution and to bring the State budgets and taxation laws into accordance with the Federal budget, as prescribed by the Geneva Protocols of 1922. Realising, as he said, in his farewell manifesto to the Austrian National Assembly that he has found his collaborators lacking in their grasp of the seriousness of Austria's position, and believing that the country could stand on its own feet, he has resigned office and has made his foremost critic his successor. Dr Rudolf Ramek, the new Chancellor, has for long been the leader of the Federalist section of the Christian Socialist Party. Since without the co-operation of the Pan-Germans the Christian Socialists could not command a majority in Parliament, he has formed a coalition cabinet by appointing the two leaders of the Pan-German Party, Dr Leopold Waber as Vice-Chancellor and Minister of Justice, and Dr Hans Schuerff as Minister of Trade and Transport. The important post of Minister of Finance has been given to one Dr Jakob Ahrer, leader of the Styrian Federalists, and hitherto only known as organiser of Heimwehren in his country. The only Minister of international repute is Dr Heinrich Mataja, President of the Inter-Parliamentary Union, and leader of the Viennese section of the Christian Socialist Party. Though Dr Seipel's resignation is to be deeply regretted, it is reassuring to learn that the new Cabinet has already pledged itself officially to stand by the Protocols and to carry out the decisions of the League. The political outlook, however, seems somewhat uncertain, since the Social Democratic Party, the only alternative Government, has not yet shown its hand. Much, if not all, will depend upon the tact and ability of the Commissioner-General. Since the municipality of Vienna is in the hands of the Social Democrats, who are strongly centralistic, the reorganisation and redistribution of the various State finances will be a matter demanding the most delicate handling. At present the economic and financial situation seems to be definitely improving, and it would be disastrous to Austria should confidence in its Government or business community receive another shock in the near future.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

Exchequer Bond Conversion.—Uncertainty as to how the Treasury would tackle the problem of meeting the maturity on February 1st next of £134 millions of 5½ per cent. Exchequer bonds, has been set at rest by the offer made to holders this week. Two options of conversion are offered for each £100 nominal of 5½ per cent. Exchequer bonds—either £100 of 4½ per cent. Conversion Loan 1940-44, together with a cash payment of £2 5s, or £100 4½ per cent. Treasury bonds, 1934. The latter is likely to appeal especially to holders in the money market, since the 4½ per cent. Treasury bonds may be payable on February 1st in any year from 1927 to 1933, inclusive, at the option either of the Treasury or of the holder, provided notice is given during the month of January of the preceding year. The bonds are thus virtually anything from a two to a ten year security, at the option of the holder, and are thus likely to make a strong appeal to banks and insurance companies and other large holders into whose hands a large proportion of the maturing bonds have by now probably found their way. By this conversion operation the Treasury takes a further satisfactory step in the process of reducing the burden of the annual debt charge. The list of applications will be closed on or before December 6th next, and the success of the operation would appear to be assured.

U.S. Customs Enquiries Abroad.—In our last issue we printed a comment from a Swedish correspondent on the dissatisfaction caused in Scandinavia by the demands for information made by United States Customs officials. This question was considered at a meeting of the Council of the International Chamber of Commerce at Paris on November 7th. The British delegates at the meeting included Dr Walter Leaf, Sir Alan Anderson, Sir Arthur Balfour, and Sir Algernon Firth. The following statement has been issued:—"The Council received and regarded with anxiety protests concerning investigations carried out in certain European countries by officials of the Customs and Treasury Departments of the United States Government, in accordance with the American Tariff Act. Complaints had been made as to the methods of carrying out investigation for the purpose of securing information as to exports, costs of production, &c., of firms exporting to the United States of America, and attention was drawn to the fact that, unless the demands for the production of accounts and documents are met, the commodities of the particular firms concerned would be prohibited from import into the United States of America. Apparently, the practices referred to have caused considerable feeling in a number of European countries. The Council of the International Chamber felt that requests for information concerning secrets of production go beyond the limits justified by ordinary precaution which a country may take in order to control its imports, and has appealed to the American National Committee to intervene with the competent authorities in order to make known the justifiable fears entertained by exporters in different countries." The American authorities will, we trust, realise that the anxiety expressed is real and important, and is by no means confined to Scandinavia.

The Chinese Civil War.—As some observers had expected, Feng-Yu-Hsiang and Chang Tso-lin, who now control the Peking Government, are attempting to induce Tuan Chi-jui, the leader of the Anfu party when it was

crushed by Wu Pei-fu in 1920, to return to political life as President of China; and Sun Yat-Sen is on his way north to confer with them, though it seems very doubtful if the Cantonese will permit him to return. It is stated that this Conference will propose constitutional reforms affecting the Administration, the Army, and the judicial system, and will summon a Constituent Assembly to ratify them. As this Assembly will represent the provinces, it seems likely that the reforms will tend to diminish the centralisation established by the existing Constitution, a change which will, at any rate, make the machinery of Government more easily workable. Meanwhile, Wu Pei-fu and the group of Tuchuns supporting him, who claim to control nine provinces, have set up an independent State, with its capital at Wuchang, on the Yang-tse, opposite Hankow; but it is stated that if Feng Yu-Hsiang and Chang Tso-lin could be eliminated, Wu Pei-fu would be prepared to come to terms with the Peking Government. Military operations will be suspended for the next two months of the winter, so that there will be ample opportunity for negotiation, but in Chinese affairs prediction is seldom possible.

Employment in October.—Employment, on the whole showed a further decline in October, according to the *Ministry of Labour Gazette*. The trade union percentage of unemployment rose from 8.6 at the end of September to 8.7 at the end of October, while between September 22nd and October 27th the percentage unemployed among the 11,508,000 workers covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland rose from 10.8 to 11.1. The monthly movements of the trade union unemployment percentage over a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

December ..	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Excluding coal miners.

It will be seen that the pace of the unemployment increase had by the end of October substantially slackened, and such statistics relating to November as are obtainable at the moment suggest that a slight improvement has already set in. The cotton trade figure for October is decidedly good, the unemployment percentage in this industry having declined last month by 2.7 per cent. The total of registered unemployed at October 27th was 1,247,000, as compared with 1,243,000 a month before, and 1,340,000 a year ago.

Cost of Living.—A sudden jump in the cost of living in October is recorded by the *Ministry of Labour Gazette*, whose index number rose by four points last month, namely, from 76 per cent. to 80 per cent. above the level of July, 1914. How this percentage has moved month by month over recent years is shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January ..	85.90	120	125	165	92	78	77
February ..	90	120	130	151	88	77	79
March	90	115	130	141	86	76	78
April	90.95	110	132	133	82	74	73
May	95.100	105	141	128	81	70	71
June	100	105	150	119	80	69	69
July	100.105	105-110	152	119	84	69	70
August	110	115	155	122	81	71	71
September ..	110	115	161	120	79	73	72
October	115-120	120	164	110	78	75	76
November ..	120-125	125	176	103	80	75	80
December ..	120	125	169	99	80	77	..

The increase in October is entirely due to increases, partly seasonal, in retail food prices. For food alone the average increase at November 1st over the pre-war level was 79 per cent., as compared with 72 per cent. at October 1st. The most important increase in prices affected eggs (½d each on the average), potatoes (1d per 7 lbs), flour (nearly 1d per 7 lbs), and bread (between ½d and ¾d per 4 lbs.) While sugar became on the average about ½d per lb cheaper, milk, butter, bacon, tea, and cheese all became dearer in October.

Money in the Stock Markets.—The Stock Exchange is frequently the butt for a gentle gibe from those who study questions of theoretical finance and economics, writes a Stock Exchange correspondent. It is constantly declared by the better-informed that the Stock Exchange views about money are too often those of the amateur who repeats, parrotwise, the talk which emanates from any quarter, whether it be well-instructed or not. Yet the Stock Exchange is compelled by force of circumstances to voice its own views on the subject, inasmuch as its members are daily consulted by clients who require to know the tendency of the money market as such, and who look for City opinion as a rough guide to their investment or speculation policy. The public ask, for instance, at the present time and with daily persistence, how it is that gilt-edged stocks should remain so strong, and that speculative investments, of which tea shares happen to be a typical example, continue to advance in price, the motive power in both cases being supplied, not by mere speculation, but by the actual money which is being invested in very substantial sums in the securities and the shares. The carry-over last Monday and Tuesday in this week was expected to reveal a fairly heavy, and none too substantial, bull position, owing to the rises which had occurred previously on the strength of the Unionist Election victory, rises that had been brought about by an exceptional rush of buying. The contangoes showed, however, that, contrary to general expectation, the bull account was of proportions easily manageable. There was a little selling for cash on the part of people unable to pay for their shares, or to carry them over, but this was negligible in comparison with the tide of buying that had taken place in the earlier part of the month. On Wednesday and Thursday it became obvious that the public were paying for most of the tea shares which they had bought, and this happened also in other industrials, substantial lines of stock being lifted from the markets in large and small amounts. Concurrently, subscription lists for gilt-edged stocks have closed with a snap. There are very few new issues with any pretensions to sound character which nowadays fail to secure immediate response from the public. Offhand, the reason for this eagerness to apply for new stock can be ascribed to the stags. Their activities are the bane, at the present time, of real investors who find their allotments drastically cut down in stock which they require for permanent holding, but which the energy of the stag brigade prevents them from obtaining. It is perfectly clear that the stags are out in full force, but the fact remains that when allotments appear the market in most cases starts at a premium, the stag stock is readily taken, and the price rises to a level above that at which the stock came out. Real money, that is to say, is available for the absorption of new issues, tea shares, Kaffirs, and other investment and speculative descriptions which appeal to the public. The Stock Exchange is frankly puzzled to account for the amount of money seeking employment. No doubt the position might be very different if trade and industry were enjoying material revival throughout the country. The Stock Exchange apprehension that a trade revival will lead to liberal sales of investment and other stocks, in order that the money may be released for industrial purposes, is still premature. Those who contend that gilt-edged prices stand too high, having regard to the incidence of the income and super-taxes, are fair to confess that nothing in the present aspect of markets suggests the likelihood of a break occurring amongst sound securities. That money accumulates, and at a rate more rapid than the ordinary man conceives possible, is a well-accepted axiom, though it is puzzling to understand how such accumula-

tion can take place if industry continues dormant for any lengthy period of time, and, thereby, fails to provide the fresh money which to-day is pouring into stocks and shares. That ordinary man knows, too, that if he wants to buy stock, he frequently has to sell something else in order to pay for it, but the anomaly presents itself of prices going up all round. Absorption of new issues and of industrial shares is exercising no unfavourable effect upon prices in other departments, nor is it bringing about any such accession of selling as would appear to be the obvious corollary to heavy purchases of stock in certain directions. Brokers find themselves hard put to it for suggestions that shall satisfy clients who demand sound investments to pay a reasonable rate of interest on the money, and, at the same time, that possess a chance of capital appreciation. This does not imply any gambling streak on the part of the investor. It is a natural trait which finds apt illustration in the comparative dearthness of the 3½ per cent. Conversion stock as matched against the price of the 4½ per cent. Conversion, the difference being due to the fact that in the latter case there is little chance of improvement in price, whereas the 3½ per cent. stock, standing at 79½, is deemed to possess a wider scope for a probable rise.

U.S. Ballot Complexities.—In this country voters at a General Election are only required to make one, or at most two, crosses on the ballot paper. Even so, many papers are "spoilt." After examining a facsimile of an American ballot paper used in the recent Presidential Election, we are left wondering that any American ballot paper is ever filled up without a mistake. On this particular paper the voter is asked to make no less than 48 marks, his vote being required in the case of candidates for no less than 22 offices, while two questions are put to the referendum. This, we are told, is a comparatively simple document. In one State the ballot paper contained, in addition to everything else, no less than 41 referendum questions. No longer is there any reason for surprise that less than half the American electorate goes to the poll at all. If ballot papers here were on the American pattern, we should regard 30 per cent. as a good poll. Some American authorities argue that the smallness of the poll does not matter at all. All those who are "really interested" vote. That is all that is wanted. Our American friends doubtless know their own business best. But the argument does not, in our ears, possess a democratic ring. Obviously, ballot paper complexities place a very formidable obstacle in the way of any party which relies to any great extent on the least educated classes of the population. One newspaper which has come into our hands reproduces the ballot to which we refer, and offers guidance as to how it should be marked. But its guidance is not always very definite. Of the candidates for the State Senate and General Assembly it says: "They are a poor bunch; use your own judgment."

Anglo-Persian Oil.—The speech of the chairman of the Anglo-Persian Oil Company at the annual general meeting on November 25th will be the more eagerly awaited, seeing that the accounts and report now presented for the year ending March, 1924, are singularly unilluminating. The net profit (£2,507,866) is slightly lower than that of the previous year (£2,689,143), but chiefly in view of the large saving in Corporation Profits Tax (£104,011 for 1923, as against £402,764 for 1921 and 1922), the amount available for distribution is slightly higher. The appropriation of £665,000 to debenture redemption, preference share, and general reserves, and the payment of the preference share dividends, allow the ordinary share dividend to be maintained at 10 per cent., the carry forward being £1,746,643. On this basis the ordinary shares at £3 yield only £3 6s 8d per cent. to the investor. The follow-

* E.P.D. 1919-20, £854,665, deducted. † Corporation Profits Tax, 1921 and 1922.

The balance-sheet is yet another example of the kind that conceals more than it discloses. The first item on the assets side is one of £28,159,699, and in it is hidden some of the most important operations of the company. The following record of this item, as it appeared in the last four balance-sheets, seems to call for some explanation from the chairman:—

	March, 1921.	March, 1922.	March, 1923.	March, 1924.
Purchase price of concession, shares in sundry companies	12,012,894	22,022,759	28,061,242	28,159,700
Advances to associated companies	4,542,384	..	..	..

For 1922, when the two items were lumped into one, Sir Charles Greenway stated that the advances to associated companies amounted to £7,399,938, leaving £14,822,821 as the purchase price of concession and shares in sundry companies. For 1923 he explained that the increase of £6,000,000 was due chiefly to advances to associated companies, so that a division of the item as it stands, almost unchanged, at March 31, 1924, may be roughly made as £13,300,000 for advances to associated companies and £14,800,000 for purchase price of concession and shares in sundry companies. These advances were made to avoid the issue of fresh capital by the associated companies, such as the National Oil Refineries for the construction of the Llandoverly refinery, the British Tanker Company for the building of the tankers, Scottish Oils for the construction of another refinery, and so on. If the Anglo-Persian is conducting these vast operations through subsidiary companies, which it finances to the extent of over £13,000,000, shareholders have a right to see the balance-sheets of these companies, as well as the details of the "shares in sundry companies." The public, which is interested through the Government's holding, has the right to protest against the cloaking of these important financial operations by one single unintelligible item in the parent company's balance-sheet. This sort of accountancy permitted the Anglo-Persian to sink and lose a large sum in the Scottish-American Oil and Transport Company without showing it clearly in the accounts. It is certainly more satisfactory to note, in the last balance-sheet, that no further millions have had to be written off reserves, but if the losses on prospecting opera-

tions outside Persia have now been written off, and if the writing-down of the tanker fleet, as well as the depreciation of the new and costly refineries, has been properly provided for out of profits, it is clearly in the interests of the Anglo-Persian to publish the full facts. Of the prospects for the current year no doubt Sir Charles Greenway will give some indication at the meeting on Tuesday. On the one hand, the tendency of oil prices has been downward for three-quarters of the trading year, but, on the other hand, the company is said to have completed its capital outlays on new works, while the cost of drilling operations in the Argentine is now being met out of revenue from oil and gas, at last happily produced. The continued extension of the company's main producing fields, and the discovery of oil at Kishni, an island in the Persian Gulf which is more accessible and less subject to political disturbances, are the most satisfactory items in the directors' report.

Royal Bank of Scotland.—The report for the year ended October 11th of the Royal Bank of Scotland is the first to appear since the acquisition by the bank in January last of Messrs Drummond. In April last, £440,000 new stock was issued to the proprietors, and these two events account for some of the changes shown in the accounts. The stock was issued at a premium which produced a sum of £660,000, and this has been added to the Rest. Though the acquisition of the business of Messrs Drummond has only affected the accounts for nine months of the period under review, net profits, at £452,400, show an increase of over £26,000. We are sorry to find that the bank has taken a retrograde step in the presentation of its accounts, and now follows the all too common practice of showing only net profits, instead of giving gross profits and expenditure. Unfortunately, the number of banks which give these figures, instead of increasing, is year by year diminishing. The dividend is raised from 14 to 14½ per cent., and, being paid on a larger capital for the second part of the year, requires £281,000, against £214,000 last year. A sum of £20,000 is written off premises and property, and £30,000 is carried to pensions reserve, these allocations being the same as at this time last year. The balance of £121,400 is added to the Rest, which, with the premium of £660,000 on the new stock, now amounts to £2,347,400. Messrs Drummonds were allotted £60,000 of stock as part of the purchase price, and the paid-up capital is therefore £500,000 higher at £2,500,000. Deposits stand nearly £2 millions higher at £39½ millions, and advances have risen by over a million to £14 millions, while investments in British Government securities, at £15 millions, show an increase of £2 millions. Freehold property in London has increased, as a result of the purchase of Messrs Drummonds' premises at Charing Cross, from £125,000 to £509,600.

Burma Corporation.—Our mining correspondent writes—The history of this Anglo-Indian undertaking furnishes a notable example of inflation, deflation, and substantial recovery. At one time, both in 1919 and 1920, the £1 shares of the former London registered company were dealt in around £14. Early in the last-named year the assets were transferred to a company registered in Rangoon, with a capital of 20,000,000 ten-rupee shares, whereof 13,541,700 were allotted, fully paid, in the proportion of 14 to every old £1 share. Following this transaction, the price of the shares sagged away until in both 1921 and 1922 it was in the neighbourhood of 5s. Even during the current year there have been transactions at under 9s; but in recent months the market has shown an improving tendency, until at the beginning of this week the price touched 16s, or within measurable distance of the best of 1920. The recovery in the share market has been due to a number of factors—the payment of increasing dividends, the advance in the price of lead, the expansion in the monthly returns, the expectation that the report for 1923-24 would indicate a strong position, the completion of the liquidation of a block of 100,000 shares out of the holding of a trust company, and the "tying up" of 4,000,000 shares as a result of their acquisition by the National Smelting Corporation. The optimistic anticipations with reference to the report for the year to

June 30th last prove to have been fully warranted. We summarise the results for the latest period, in contrast with those for 1922, and for the half-year to June, 1923, to which a statement was made up in pursuance of the decision to alter the date of the financial year:—

	Year 1922.	Half-Year 1923.	Year 1923-24.
Ore mined	172,000	118,600	277,200
Yield refined lead	39,200	21,650	47,100
Yield fine silver	4,191,800	2,266,900	5,114,700
Working profit	667,000	412,100	1,073,400
Debiture interest	79,000	38,050	71,400
Depreciation, &c.	128,800	71,500	199,000
Taxes	75,700	43,900	128,400
To reserve	100,000	50,000	100,000
Net profit	283,500	208,600	574,600
Dividends	..	451,000	620,700
Brought forward	..	631,000	488,200
Carried forward	631,000	488,200	442,100
Reserve	347,650	397,650	529,100

* Including bad debts.

The only item calling for comment is that of dividends. In the 1923-24 accounts, dividends Nos. 1 and 2 of 4 annas each are treated as coming out of the balance shown at the end of June, 1923, but it is obvious that the larger moiety was in reality provided by the earnings of 1922. No. 3 dividend of 5 annas was paid during August, and a further distribution of 6 annas per share is now declared for disbursement in February. Following the official procedure, we have treated this as relative to 1923-24; it will involve trenching upon the carry-forward to a moderate extent. The appropriation account might advantageously be modified, so as to give a clearer picture of the actual position. With regard to the production, last year's output of lead showed an expansion of 20 per cent. over that of 1922, silver of 22 per cent.; while taking the second half of 1923-24, in contrast with the six months ended June, 1923, the increases are 11½ and 12½ per cent. respectively. During the past half-year, refined lead averaged £32 6s, as against £26 18s for the six months ended June, 1923; the price of the metal is now about £39. Silver shows a slight falling off in price. This product, however, is of much less importance than the other. It is interesting to note that the corporation's outturn of zinc and copper is now assuming importance. Further extensions to the works are in progress. At 4,514,800 tons, value 22.5 ozs silver, 25.2 per cent. lead, and 16.6 per cent. zinc, the ore reserves show virtually no change as compared with the preceding estimate. The quantity represents something like 15 years' supply at the current enhanced scale of operations. Hence the position in this respect is a strong one; it is also strong financially. The last balance-sheet includes investments to the tune of £796,000, consisting entirely of Indian Government bonds and the corporation's own debenture stock purchased in the open market. At the same time, the current quotation of the shares, which reduces the yield to about 7 per cent., appears to discount the prospects of the near future.

De Beers Consolidated.—The report for 1923-24 of this gigantic South African undertaking, made available by cable, shows an increase of £600,000 in the diamond sales (£3,452,500), but an expansion of only £111,000 in the balance available (£1,864,200). The apparent anomaly is explained by the circumstance that during the year mining was resumed at the Wessleton property; in 1922-23, operations had been confined to washing; hence, mainly, an expansion in the working expenses from £963,000 to £1,817,000. Investments brought in the increased interest of £301,700, but profits on sales were only £4,600, as against £92,100. The earnings of the year to June, 1923, were absorbed by the accumulated arrears and the current dividends on the preference shares. Out of the profits of the past session, 10s has been paid on the deferred shares; an interim distribution of at least like amount is expected to be announced in the early future. During the post-war period of inflation the shareholders received three half-yearly dividends of 30s apiece, but after the 10s disbursed in respect of the initial six months of 1920-21 there were three barren years, due partly to the general slump and partly to the sales of stones confiscated by the Bolsheviks. The De Beers

directors report that in 1923-24 the diamond market remained steady, and they add "it is gratifying to record that there has been an increase in the sales as compared with the previous year." The selling "pool" expires on December 31st; but, doubtless, the agreement will be renewed, subject possibly to some slight modifications.

East Rand Proprietary.—Matters in connection with the agitation for a transfer of the control of this Witwatersrand concern are reaching an acute stage. To the elaborate "Memorandum" of the Shareholders' Committee the present management has issued a concise reply, and is preparing an answer in detail. An enterprising daily contemporary has published a cable from Johannesburg giving local views and comments. Our space only permits reference to a few of the more important points raised. The Shareholders' Committee lay much stress upon "lack of development," and argue this to have been responsible for the shrinkage in the ore reserves. Yet the figures they quote show that in 1915 (the last year of the alleged "Farrar" control) the ore reserves decreased by 600,000 tons to 4,800,000 tons, despite the performance of an increased development footage. In 1917, when the footage was only 2,000 less than in the previous year, the reserves dropped by 1,468,000 tons to 2,732,000 tons; while at the end of 1919, when no more than 13,900 feet of work was done, they stood at 2,634,400 tons. Thus was justified the policy of restricting development to the more promising areas. The lack of relation between the value of the reserves and the value of the ore crushed is explained by the circumstance that the tonnage available was so little ahead of the mill, and was so scattered that a large proportion of the rock crushed had to be taken from reclamation work. Then, in regard to the financial position, "cash and cash assets," upon which so much stress is laid, includes stores, sums owing, and shares in co-operative enterprises. Examination of the latest balance-sheet indicates that the actual available resources, after providing for liabilities, stood at £317,200, as against the £551,200 stated in the "Memorandum." The comparison of the results secured in recent years with those of periods when the company's ore reserves amounted to between 6,000,000 and 7,000,000 tons of higher value is as futile as the contrast between the results of the Crown Mines and of the East Rand—and for much the same reason. "Fanciful" would be a polite description of some of the statements and calculations put forward in the "Memorandum." The position of the mine—as already mentioned in our columns—has recently taken a distinct change for the better, and we consider that the transfer of the control out of the hands of the able and experienced Central Mining group would not be in the interests of the general body of shareholders.

Consolidated Gold Fields.—During the year ended June 30, 1922, the position of this Kaffir finance undertaking was such as to entail the postponement of the dividends on the two issues of preference shares. In 1922-23 matters so far improved that the directors were able to disburse 6 per cent. on the ordinary shares, and for the past year 10 per cent. is to be paid. The accounts indicate that the increase in the balance available is due more to savings than to gains. In other words, only £88,700 is now required to cover depreciation on investments, whereas in respect of 1922-23, the sum of £182,000 had to be deducted from the profits of the operating company. The profits and receipts now figure at £521,600, as against £460,200. For the difference the disbursements of the subsidiary Robinson Deep Company are doubtless largely responsible. The balance-sheet indicates that the company has reduced its cash advances, and expanded its participations, more particularly in "properties and ventures," which at £553,300, are £80,300 up. Uncalled capital on investments continues heavy; indeed, it has increased to over £1,000,000. A distinct change for the better appears to have taken place in the company's American industrial interests, several of which have gone through trying experiences. The output of the South American Gold and Platinum Company scores a further growth, and with capital expenditure practically completed, earnings should become available for distribution.

The position of the Gold Fields' principal South African interests has been dealt with in our columns as occasion arose, but reference may be made to one of the points of general interest embodied in the reports of the resident director in Johannesburg, and the consulting engineer. It is the development of the use of the "wet" heavy type of jackhammer in place of the lighter "dry" machine. The result has been an increase of more than 100 per cent. in the mechanical efficiency, irrespective of other advantages and economies. "The jackhammer," observes the consulting engineer, "possesses to a large extent the flexibility of the hammer boy, with the added advantage of requiring a comparatively small supply of native labour for breaking ground." The latter is a feature of special importance, in view of the shortage of coloured workers which handicapped several of the mines last year. One gratifying outcome of the reduction in costs is the new lease of life secured by the Simmer and Jack. With the fresh block of 542 claims the period of working—which had become very short—is expected to be extended by 16 years, and dividends of 20 per cent. per annum for some time are forecast.

Joshua Hoyle and Sons.—The higher level of profits recorded a year ago by Joshua Hoyle and Sons has been maintained in the year ended September 30th last. Trading conditions, says the report, have been more difficult than in the preceding year, and "under all the circumstances the result is considered satisfactory. An improvement, which is so far maintained, became manifest about the end of the financial year." As will be seen from the comparative summary below, profits were about £1,000 higher at £194,100, and the ordinary dividend is maintained at 5 per cent. :—

Year Ended Sept. 30.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Profit	£ 289,507	£ 108,837	£ 110,697	£ 193,187	£ 194,118
Brought forward	39,249	88,476	48,486	15,652	18,183
Debiture interest	328,756	197,313	159,183	208,819	212,301
Preference dividend....	52,315	52,315	52,500	79,371	79,696
Ordinary dividend	97,931	96,512	18,499	53,375	54,250
	(25 %)	(12½ %)	(2½ %)*	(5 %)	(5 %)
Renewals & reserves, &c.	90,034	..	20,000	27,390	25,000
Carried forward	88,476	48,486	15,653	18,183	22,355

* Free of tax.

Renewals and reserve fund is credited with £25,000, and now stands at £225,000. A drawing of debentures during the year raises the total redeemed to £35,500, leaving £1,464,500 still outstanding. Ordinary loans on the liabilities side of the balance-sheet show an increase of £85,800, but creditors have been reduced by £31,000. Cash and debtors are £120,000 higher, but stock-in-trade has fallen by £78,700. The property item at £2,189,100, shows an increase of £29,000. An analysis of the balance-sheet will be found in another column. The report mentions that the company's position regarding taxation is approaching a settlement, and it is estimated that full provision for all liability has been made in the accounts.

Wall Paper Manufacturers.—Conditions have evidently been favourable for the Wall Paper Manufacturers, Limited. In accounts for the year ended August 31, 1924, profits amounted to £751,852. For the corresponding period in 1922 these were £701,958, falling to £635,681 in 1923. Profits included a sum of £25,353, being a further amount recovered from the German Government for the company's claim in respect of the German business. The directors state that this matter has now been settled, a payment of 15s in the £ having been received through the Clearing Office and included in the profits as shown above. A final dividend on the ordinary shares of 6 per cent., making 10 per cent. for the year, and a dividend of 10 per cent. and bonus of 2½ per cent. on the deferred shares is recommended, after placing £25,000 to special reserve for income-tax, and £200,000 to the general reserve. Total assets now amount to £7,027,927, as against £6,682,743; and, viewed as a whole—with one exception, namely,

investments in subsidiary companies at £1,624,844—the balance-sheet is a fairly comprehensive statement of affairs.

India Rubber, Gutta Percha.—Again an improvement is shown in the accounts of the India Rubber, Gutta Percha, and Telegraph Works Company, Limited, for the year ended August 31, 1924. It would be interesting to know, however, to what extent refunds of Excess Profits Duty were responsible for the increase. The following table shows results over a number of years:—

	1913.	1918.	1919.	1920.	1921.*	1922.*	1923.*	1924.

* To August 31.

It is proposed to pay a dividend of 5 per cent., free of tax, which will absorb £37,500. Incidentally it should be remembered that the ordinary capital is £750,000, as against £500,000 in 1919. The report states that "there are distinct signs of improvement in the whole of the company's activities." On turning to the balance-sheet we find assets are valued at £1,942,034, as against £2,121,797. Debts owing to the company are down from £371,193 to £182,542. It is good to see that the loan to bankers has been repaid, and the directors inform us that the second mortgage debentures held by bankers as security have been deleted from the balance-sheet. Debts owing by the company have been reduced from £493,603 to £262,474. Other items in the balance-sheet will be found analysed in another column.

Aerated Bread Company.—A substantial increase in gross profits, although accompanied by a rise in expenses, has produced an expansion of nearly £24,000 in the net profits for the year ended September 27th of the Aerated Bread Company, Limited. The actual gross profit on trading was £652,200, against £595,100 in the preceding year, but dividends and sundry profits brought in £4,600 less at £29,400. The following table summarises results since 1907:—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward.
1907-8	276,252	220,365	55,886	5,000	50,409	27½	17,376
1908-9	276,101	224,822	51,279	5,000	50,167	27½	15,858
1909-10	281,852	233,348	48,504	5,000	45,425	25	13,567
1910-11	283,696	236,203	47,493	5,000	40,883	22½	14,776
1911-12	284,319	227,801	56,518	8,239	45,424	25	17,031
1912-13	308,114	234,091	74,023	8,000	54,791	27½	31,263
1913-14	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15	286,919	253,146	33,003	8,000	29,948	17½	26,598
1915-16	299,434	282,354	17,080	11,764	7,959	5	23,965
1916-17	289,199	303,882	Dr 14,683	8,000	..	..	1,271
1917-18	419,112	322,566	96,546	59,000	28,135	15	10,882
1918-19	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20	585,831	520,274	165,557	57,882	113,050	25	14,757
1920-21	728,376	582,381	155,995	40,000	102,637	15	14,150
1921-22	637,811	488,836	148,875	48,184	87,975	12½	14,639
1922-23	629,104	497,954	131,150	37,621	79,784	8½	19,499
1923-24	681,578	526,639	154,939	35,250	100,943	10	30,276

* Includes special bonus to employees.

Net profits, it will be seen, are the highest in the company's history, with the exception of the boom year 1919-20, and the dividend on the ordinary shares is raised from 8½ to 10 per cent. The preference dividend absorbs £25,200, the £500,000 6½ per cent. preference shares issued during the previous year now ranking for full dividend. Depreciation of property reserve is credited with £15,000, a provision of £18,000 is set aside for income-tax, and £2,250 is allocated to staff funds. These allocations leave a balance of £30,300, or £10,800 more, than was carried forward. During the year eight new branches were opened, and this is reflected in the property item of the balance-sheet, which shows an increase of

£124,300 at £1,281,700. The reserve fund is £40,000. Investments have been reduced by £100,700, the holding of British Government securities falling from £213,800 to £117,600, but cash stands £19,900 higher at £54,700.

Slaters' Report.—A further substantial recovery in profits is shown in the report of Slaters, Limited, for the year ended September 30th last, and the directors remark that, although the visit of provincial parties to London in connection with the Wembley Exhibition has to some extent helped the company in the past year's trading, "it is felt that the present position of the business is such that its future is assured." As may be seen from the following comparative table, the trading profit increased substantially, while there was an appreciable saving in expenses, and the net profit was over £15,000 higher at £37,900:—

Sept. 30.	Tr'ding Profit.	Interest and Divs.	Exp'ses and Inter'et Ch'rges.	Net Profit.	Prof. Div.	Ord. Div.	Rate.	Balance.
1906	£ 52,021	£ 4,513	£ 19,508	£ 37,203	£ 5,650	£ 30,281	12½	£ 1,222
1907	52,660	4,680	20,443	37,537	5,650	30,281	12½	1,066
1908	48,302	4,718	20,756	32,385	5,650	30,281	12½	2,460
1909	41,620	4,839	21,416	25,193	5,650	19,295	8	223
1910	41,068	3,097	21,834	22,443	5,650	19,200	8	Dr. 4,417
1911	39,045	2,353	21,261	20,238	5,650	16,808	7	Dr. 4,280

1913	44,065	2,169	22,648	25,673	5,650	16,808	7	1,215
1914	42,506	2,133	23,822	20,881	5,650	16,808	7	860
1915	12,785	1,556	20,988	Dr. 6,603	3,997	..	..	Dr. 1,961
1916	14,261	1,427	22,474	Dr. 6,786	..	..	..	Dr. 45,178
1917	18,006	2,554	27,337	Dr. 6,777	..	..	..	Dr. 65,966
1918	13,148	3,315	27,769	Dr. 1,306	..	..	..	Dr. 63,969
1919	68,612	3,193	29,858	48,947	..	..	..	Dr. 17,315
1920	81,306	4,435	37,260	48,481	22,050	7,140	4	7,976
1921	60,871	4,993	48,107	17,758	4,200	8,925	5	8,508
1922	47,095	12,412	50,531	8,976	5,250	9,244	5	3,791
1923	64,854	8,800	51,391	22,263	4,575	11,858	6	5,830
1924	80,409	4,943	47,475	37,876	4,650	15,810	8	17,416

The saving in expenses is accounted for by income-tax, which required only £6,800, against £10,900 in 1922-23. The increased ordinary dividend requires £4,000 more, and the balance forward is increased by £10,200, namely, from £9,800 to £20,000, after transferring £7,200 to the reserve fund, making it £53,000. The balance-sheet shows few important changes. Freehold properties have been increased by £9,200, and leasehold properties by £10,700. Goodwill remains unchanged at £124,500. The bank overdraft has been increased by £1,000 to £5,200, while cash is £600 higher at £1,500.

The Strength of Spelter.—The spelter market of late has shown remarkable strength, and trading has been more active than anything recorded for some time past. Galvanisers have been booking some very good orders, and this has called for further supplies of zinc. This business has found the market very poorly supplied, and at one time the quotation went over £35 10s. The total imports for October amounted to 8,253 tons, making 104,406 tons for the ten months. The total stocks in public warehouse are down to 675 tons, and statistically the position of the commodity is very sound. The stocks in the United States last month showed a decrease of about 7,000 tons. This is due to liberal buying by Germany, and other users, and this demand is again in evidence both in the States and on the London market. German zinc users have been also buying spelter in Belgium, and thus there is very little available for this market. All zinc ores are short and advancing; thus if the demand for galvanising purposes continues here, and the Germans buy additional quantities in Belgium and the States, there is bound to be a shortage during the next month or two, and values are expected to go higher. World stocks at the present time are not much over 40,000 tons, and most of this is in the hands of the American producers. The Belgian production runs about 13,000 to 13,500 tons per month, but with Germany a keen buyer there is not much available for this country. Certain developments are pending in connection with the British zinc industry, but the troubles as regards raw material and suitable labour are not yet over, and it will be some time yet before the output expands to any appreciable extent. If Europe has to turn to the States for her spelter supply during the next few months values should easily work to a higher level. Normally zinc is higher than lead, but at present the latter is pounds per ton above spelter.
